McCarter & English LLP on Insurance Coverage for Greenwashing Claims: It Depends on the Packaging

By J. Wylie Donald and Stephanie Platzman-Diamant

November 9, 2010

SUMMARY: This commentary discusses how the Personal and Advertising Injury Liability part of the standard commercial general liability form may provide coverage for "greenwashing" claims, and possible barriers to coverage under the Failure to Conform exclusion. ("Greenwashing" refers to claims that a product or service advertised as ecologically sound does not live up to its representations.)

ARTICLE: In an age of increased environmental consciousness, many companies believe that "green" marketing yields more greenbacks. And for good reason - in a recent survey, over 60% of consumers surveyed across eight developing and developed countries "want to buy from environmentally responsible companies." n1

Some "green" products, however, may fail to live up to their eco-friendly claims (or at least someone will say they do). "Greenwashing" is the term coined to describe the practice of companies' deceptively representing their products as environmentally friendly. n2 Besides being dishonest, engaging in greenwashing can have serious consequences for companies in the form of enforcement actions by the Federal Trade Commission ("FTC") n3 and lawsuits by both consumers and competitors.

The FTC has guidelines for environmental marketing claims, commonly known as the "Green Guides." n4 While the Green Guides themselves do not have the force of law, actions inconsistent with the guidelines may result in the FTC taking "corrective action," if, after investigation, it has reason to believe that the behavior falls within the scope of conduct declared unlawful by Section 5 of the FTC Act. n5 The Green Guides list several examples of environmental marketing that may give rise to "greenwashing" claims. These include unqualified claims of "recyclability;" deceptive claims of recycled content, "degradability," "compostability," or ozone "friendliness;" overstatement of a product's environmental friendliness; and selective description of a product's environmental safety. n6 In conjunction with FTC actions against "greenwashers," civil litigation has been filed asserting the Green Guides as the standard against which alleged greenwashing is measured. n7

Greenwashing Claims on the Rise?

The FTC has published proposed revisions to its Green Guides. It began the review process in 2008 - a year earlier than scheduled - because of an increase in claims asserting improper green advertising. n8 If adopted, the proposed revisions will make the Green Guides both stricter and broader in scope. n9 For example, while the current Green Guides permit unqualified claims that a product has a "general environmental benefit" (e.g., "green" or "eco-friendly") if the marketer of that product can substantiate all express and implied claims, the proposed revisions categorically forbid these type of claims as being "difficult, if not impossible, to substantiate." n10 The proposed revisions further state that marketers should use clear and prominent language limiting unqualified certifications or seals of approval to a particular benefit that can be substantiated. n11 Additionally, the proposed revisions provide guidance for claims regarding renewable materials, renewable energy and carbon offsets, which are not contained within the current Green Guides. n12

Consumers' perceptions of claims of environmental benefit were among the concerns driving the FTC's revision of the Green Guides. n13 The FTC conducted a study of consumers' reactions to advertisers' "green" claims. n14 The study found that 52 percent of respondents viewing an unqualified claim that a product was "green" believed that the product had a specific attribute (e.g., that the product was made from recyclable materials, or that the product was compostable). n15 Similarly, 49 percent of respondents viewing an unqualified claim that a product was "eco-friendly" believed that the product had a specific environmental benefit. n16 On the other hand, when the general environmental claims were qualified, 31 percent of the individuals surveyed believed that the claim implied specific environmental benefits in addition to the stated attributes. n17

Even without stricter regulatory guidelines, consumer claims of deceptive environmental marketing have been on the rise. For example, since 2007, at least four consumer lawsuits have alleged that companies have falsely advertised their products' environmental impact. n18 One can also expect a rise in the number of lawsuits alleging unfair competition due to false claims of environmental benefits, under both the federal Lanham Act (which permits a company to recover for damages caused by false statements made by its competitor about its product or the competitor's own product) and state enactments of the Uniform Deceptive Trade Practices Act. n19

The anticipated rise in a new type of claim naturally begets the question, "Will my liability insurance cover it?" Because greenwashing claims are of recent vintage, courts have not had the opportunity to address coverage for them under traditional commercial general liability ("CGL") policies. Whether the defense of a greenwashing claim is covered, however, will ultimately depend on how it is pled in the underlying lawsuit when compared to the relevant policy. Assuming a plaintiff is successful, whether the insurer will indemnify for any judgment or settlement will depend on how the facts themselves correlate to the policy language. In this commentary, we attempt to read the tea leaves on this emerging issue by examining cases pertaining to insurance coverage for advertising injury claims.

Personal and Advertising Injury Liability Coverage

Generally, CGL policies provide coverage for certain misstatements under the "personal and advertising injury" coverage. Those provisions provide the policyholder with coverage for damages arising out of third-party claims for injury allegedly caused by statements made by the policyholder in certain circumstances, including marketing and advertising. Greenwashing claims would fall within advertising injury liability coverage because they typically arise from a company's promotional statements.

Many liability carriers model their CGL policies on the standard CGL form published by Insurance Services Office, Inc., universally known as ISO. The most recent edition of Coverage B Personal and Advertising Injury Liability of this form as of this writing in November 2010 states: "We will pay those sums that the insured becomes legally obligated to pay as damages because of 'personal and advertising injury' to which this insurance applies." n20 The form goes on to define "personal and advertising injury" as

injury, including consequential "bodily injury", arising out of one or more of the following offenses:

* * *

d. Oral or written publication, in any manner, of material that slanders or libels a person or organization or disparages a person's or organization's goods, products or services;

* * *

f. The use of another's advertising idea in your "advertisement," n21 . . .

If one is subject to a claim for "greenwashing," one can generally see the outlines of coverage under provisions d. and f., provided that the allegation can be construed as asserting a disparagement of another's product or the use of another's advertising idea.

Showing that a claim falls within a policy's grant of coverage is only half the battle. To ultimately obtain coverage the policyholder must also avoid the application of any asserted exclusions. One potentially applicable exclusion is the 2007 ISO form's Quality or Performance of Goods - Failure to Conform to Statements ("Failure to Conform") exclusion. This exclusion bars coverage for:

"Personal and advertising injury" arising out of the failure of goods, products or services to conform with any statement of quality or performance made in your "advertisement." n22

Unfortunately, the 2007 ISO Form has not been extensively litigated so insight into the operation of its provisions must also be gleaned from decisions concerning earlier forms. Several published cases pertaining to advertising injury liability deal with language similar to that of the 1986 ISO form, which provides coverage for "personal injury" and separately for "advertising injury." The 1986 form defines "advertising injury" as

injury arising out of one or more of the following offenses:

a. Oral or written publication of material that slanders or libels a person or organization or disparages a person's or organization's goods, products or services;

* * *

c. Misappropriation of advertising ideas or style of doing business; n23

The "misappropriation of advertising ideas" coverage in the 1986 form strongly parallels the 2007 form's "use of another's advertising idea."

The earlier forms also include another form of the Failure to Conform exclusion, which excludes coverage for:

"Advertising injury" arising out of:

* * *

(2) The failure of goods, products or services to conform with advertised quality or performance. n24

Advertising Injury Cases Involving Disparagement

"Disparage" is not a defined term in either the 2007 or 1986 ISO form. Accordingly, courts have looked to dictionaries to inform their understanding. In *Virtual Business Enterprises, LLC v. Maryland Casualty Co.*, n25 for example, the Delaware Superior Court relied on an on-line dictionary to establish that a reasonable meaning for "disparage" was "to lower in rank or reputation; ... to depreciate by indirect means." n26 Further, it is not required that a specific party be named for disparagement to occur. Federal courts in California and Illinois have recognized claims

for coverage for implied disparagement, where the insured touted the superiority of its product, necessarily implying the inferiority of its competition. n27

Knoll Pharmaceutical Co. v. Automobile Insurance Co. of Hartford demonstrates the application of implied disparagement. The underlying lawsuits involved actions (mostly class actions) by consumers and third-party payors against Knoll Pharmaceutical Co. ("Knoll") and other defendants regarding the sale and marketing of Synthroid, a synthetic form of a thyroid hormone, used to treat thyroid disease. n28 The underlying complaints alleged, among other things, that Knoll "concealed or suppressed information about cheaper bioequivalent drugs, falsely represented that there were no equivalents, and charged individual consumers and their insurers more than they would have been able to [charge] if the correct information had been known, in violation of federal antitrust and racketeering laws and state fraud statutes." n29 Among other things, the underlying complaints pointed to Knoll's corporate predecessor's advertisement for Synthroid stating that "there is no substitute for Synthroid," that there was "no proven bioequivalent product," and that "no adequate and well-controlled studies have demonstrated bioequivalence among levothyroxine sodium [Synthroid's active ingredient] products." n30

Knoll's CGL policies provided coverage for "advertising injury...arising out of," among other things, "oral or written publication of material that slanders or libels a person or organization or disparages a person's or organization's goods, products or services." n31 Knoll's insurers refused to defend it in the underlying lawsuits, causing Knoll to file a declaratory judgment action, which sought various types of relief, including a declaration that the insurers had the duty to defend it in the underlying lawsuit. n32

The insurers argued that they did not have a duty to defend Knoll because the underlying claims did not fall within their policies' advertising injury coverage. n33 The insurers asserted that the underlying allegations did not constitute "oral or written publication of material that slanders or libels a person or organization or disparages a person's or organization's goods, products or services." n34 The insurers further argued that the terms "slander," "libel," and "disparagement" entail an element of reputational injury to the plaintiff or its goods, and thus, the underlying complaint must allege direct injury from these offenses in order to trigger the duty to defend. n35

The court disagreed with Knoll's insurers, holding that they owed a duty to defend Knoll in the underlying lawsuits. n36 The court reasoned that the while the underlying complaints did not allege direct injury from the offenses enumerated in the policies, the allegations nonetheless fit within the policies' definition of advertising injury:

Defamation, which includes slander and libel, has been defined as words that reflect critically upon one's integrity in her business or profession, [citation omitted] and as a statement tending to cause harm to the reputation of another in that it lowers that person in the community's eyes or deters third persons from associating with that person, [citation omitted]. Consequently, allegations claiming that . . . [Knoll] advertised that Synthroid is superior to all other drugs that treat thyroid problems [citation omitted] are disparaging in that they criticize the quality of other companies' . . . products as being inferior to Synthroid. n37

One can imagine a covered claim for implied disparagement arising in the context of greenwashing. For example, Green & Co. affixes to its products a label with a picture of a globe surrounded by the text Smart for the Earth[™]. The label does not contain any further statements that would clarify the meaning of the logo. n38 A group of consumers brings a class action lawsuit against Green & Co., alleging that the logo on Green & Co.'s products was deceptive because it led them to believe the products were environmentally superior to other, less expensive products. Putting aside the question whether Green & Co. can substantiate its claimed environmental superiority, as in *Knoll*, Green & Co. could argue that the allegations in the consumer class action are covered under a theory of implied disparagement because the class action plaintiffs are claiming injury arising out of Green & Co.'s statements that its products are better than those of its competitors. n39

Advertising Injury Cases Involving "Misappropriation of Advertising Ideas or Style of Doing Business"

Neither the 1986 ISO form nor the current ISO form defines the term "advertising idea[s]." Generally, an advertising idea concerns the solicitation of business or manner in which one advertises. n40 Cases involving misappropriation of another's advertising idea provide some guidance on how courts may find coverage for some types of greenwashing claims. In those cases, policyholders sought coverage for third-party claims alleging that they somehow falsely presented their products to the marketplace, and that the false presentation caused injury to the third-party claimant in the form of lost sales or devaluation of its product. These types of cases provide a useful framework for considering coverage for greenwashing claims because greenwashing claims typically deal with a company's overstating or misstating its product's environmentally friendly attributes.

One such case is *Atlapac Trading Co., Inc. v. American Motorists Insurance Co.* n41 There, the plaintiff in the underlying lawsuit, Tama Trading, Inc. ("Tama") alleged that Atlapac Trading Company, Inc. ("Atlapac") falsely labeled its olive oil products as "pure olive oil" when instead they consisted of blends of other oils. n42 Tama further alleged that Atlapac's false labeling and marketing included pricing its blended oils well below the prices that Tama offered for its olive oil. n43 Tama claimed damages in the form of lost sales due to Atlapac's ability to charge lower prices for its less-than pure olive oil. n44 Atlapac tendered a claim for defense in the underlying action to American Motorists Insurance Company ("American Motorists"), which denied coverage. n45

Among other things, Atlapac argued that Tama's allegations of false designation of origin, false description and common law unfair competition potentially triggered coverage under the policy provision granting coverage for advertising injury damages arising out of "misappropriation of advertising ideas or style of doing business." n46 Further, Atlapac argued that "misappropriation of advertising ideas and style of doing business" is ambiguous and should be construed to provide coverage for the underlying allegations. n47

The court agreed with Atlapac, finding that it was "objectively reasonable for [Atlapac] to have expected coverage" because Atlapac "was buying coverage against lawsuits brought for various offenses committed in the course of its advertising activities." n48 Thus, it was reasonable for Atlapac to have expected that claims for false designation of origin under the Lanham Act and common law unfair competition would be covered under the policy. n49 The court further found that Atlapac's use of "the term 'pure olive oil' could reasonably be construed as an advertising idea or style of doing business." n50 Atlapac's expectation of coverage under the policy was therefore reasonable. n51

In *American Simmental Association v. Coregis Insurance Co.*, n52 the court applied reasoning similar to that in *Atlapac* in finding that the insurance company had a duty to defend a cattle breeding association in an underlying lawsuit alleging that the association's advertising certain cattle as "fullblood" lowered the value of the underlying plaintiffs' cattle. In the underlying lawsuit, owners of "fullblood" Simmental cattle sued the American Simmental Association ("ASA") alleging that the ASA falsely advertised non-fullblood cattle as fullblooded Simmental cattle, which in turn caused the underlying plaintiffs to lose customers and sales and damaged their reputations as Simmental breeders. n53

The ASA is a not-for-profit association that registers and promotes the designation of the Simmental breed of cattle. n54 In 1988, the association's members adopted a rule to include a classification for cattle with "foreign ancestry" (i.e., originating from either Germany, Switzerland, France or Austria), which did not consider the genetic purity of cattle receiving this designation. n55 In 1991, Tom Risinger, an ASA board member, allegedly began importing German bulls and attempted to register them as "fullblood" Simmentals with the Canadian Simmental Association, which informed him that the German cattle were ineligible for "fullblood" designation because they had Angus genetics. n56 Risinger then successfully registered the German cattle with the ASA as "fullblood." n57 In 1991, the ASA amended its by-laws to replace the title "foreign ancestry" with "fullblood," which had the effect of designating cattle as "fullblood" based solely on whether the animals originated from Germany, Switzerland, France, or Austria. n58 In 1994, the ASA, through a series of rule changes, formally adopted the revised fullblood designation for cattle with the requisite proven foreign ancestry. n59 Thus, there was no longer a requirement that the "fullblood" cattle have only Simmental genetics. n60

Shortly after the ASA formally adopted the revised full-blood designation, the underlying plaintiffs, who were members of the ASA and Simmental breeders, filed a two-count complaint against the ASA and Tom Risinger. n61 Among other things, the complaint alleged that in August 1992, Risinger and the ASA published an advertisement in the official publication of the ASA, indicating that the German cattle imported by Risinger had 100 percent Fleckvieh Simmental genetics. n62 The underlying plaintiffs alleged that the defendants' representation of the Risinger cattle as "fullbloods" was false, and caused the value of their animals to diminish by at least 50 percent. n63

St. Paul Fire & Marine Insurance Company ("St. Paul") issued a CGL policy to the ASA, which provided, among other things, coverage for "advertising injury." n64 Shortly after the underlying complaint was filed, the ASA tendered its defense to St. Paul, which refused to defend. n65

After the ASA tendered its defense, the underlying plaintiffs filed two amended complaints adding counts alleging violation of the Lanham Act and negligence. n66 The Second Amended Complaint alleged that the defendants falsely designated the animals with the title of "fullbloods," in their "advertisement," "promotion," and "representation" of the Risinger cattle as "fullbloods." n67 The complaint further alleged that the ASA's false advertising and promotion was disseminated to purchasers of Simmental cattle and Simmental breeders, who were deceived by the false advertising and promotion. n68 The underlying plaintiffs further alleged that the ASA's misrepresentation was likely to influence the purchasing decisions of those to whom the false advertising and promotion were disseminated, and injured the underlying plaintiffs by causing them to lose customers and sales resulting in business losses and impairment of the underlying plaintiffs' ability to compete. n69 The underlying plaintiffs also alleged that the defendants' misrepresentations, advertisements, and promotions would likely cause the underlying plaintiffs irreparable harm by damaging their reputations as Simmental breeders, as well as the reputation of their Simmental genetics. n70 The ASA tendered the Second Amended Complaint to St. Paul, and St. Paul denied coverage, because, among other things, the complaint did not allege damages for injuries caused by any of the "advertising injury" offenses found in the St. Paul policy. n71

The district court entered a directed verdict in favor of the ASA on all causes of action in the underlying litigation, and the Eighth Circuit Court of Appeals subsequently affirmed. n72

The central issue in *American Simmental* was whether St. Paul breached its duty to defend the ASA. The relevant insurance policy provided coverage for

injury caused by any of the following offenses that result from the advertising of your products or work:

* * *

- Unauthorized taking of advertising ideas or style of doing business. n73

The court held that St. Paul had a duty to defend pursuant to the advertising injury coverage provided by the policy it sold to the ASA. Looking to the pleadings in the underlying lawsuit, the court reasoned that the "fullblood" designation "carried with it unique economic value in the hands of the rightful users." n74 The court further reasoned that the ASA designated as "fullblood" cattle that were not entitled to the designation, and that by advertising these animals as "fullblood" in its magazine and elsewhere, the ASA diminished the value of the designation in the hands of the underlying plaintiffs - the rightful users of the designation. n75 The court, therefore, concluded that "the 'fullblood' designation was a unique 'advertising idea' [or] 'style of doing business.'" n76 Thus, there was coverage under the St. Paul policy.

Atlapac and *American Simmental* are useful in showing how courts may find advertising injury coverage for greenwashing claims. n77 Both cases involve underlying claims that the insureds improperly used a designation (in *Atlapac*, "pure olive oil" and in *American Simmental*, "fullblood") to advertise a product and that the improper designation caused damage to the underlying plaintiffs in the form of lost profit or value. One can imagine analogous claims in the greenwashing context. For example, Company A advertises its aerosol air freshener as "ozone friendly."

This claim, however, is deceptive because some of the product's ingredients are ozone depleting substances. n78 Company B markets a citrus oil-based non-aerosol air freshener that contains no ozone-depleting substances, which it advertises - accurately - as "ozone friendly." Company B files a lawsuit, alleging that Company A falsely claimed in its advertisement, promotion, and representation of its air freshener that the product was "ozone friendly." Company B further alleges that Company A's false labeling and marketing included pricing its air freshener well below the prices at which Company B sold its air freshener, and claimed damages in the form of lost sales due to Company A's ability to charge lower prices.

Applying the reasoning of the courts in *Atlapac* and *American Simmental*, there may be advertising injury coverage for Company B's claims against Company A. The claims against Company A may constitute "misappropriation of advertising ideas," as set forth in the 1986 ISO form, or "use of another's advertising idea in your 'advertisement'" as set forth in the 2007 ISO form. Like the "fullblood" designation in *American Simmental*, the term "ozone friendly" conceivably "carri[es] with it unique economic value in the hands of the rightful users." n79 Like Atlapac's use of the term "pure olive oil," Company A's use of the term "ozone friendly" could reasonably be construed as an advertising idea. n80 Thus, it would be reasonable for Company A to expect advertising injury coverage for claims brought by Company B as either "misappropriation of advertising ideas" or "use of another's advertising idea in your 'advertisement.'" n81

The Failure to Conform Exclusion

Would Company B's claims against Company A fall within the 2007 Failure to Conform exclusion or the 1986 predecessor exclusion? "[F]or the failure to conform exclusion to apply, courts have held that the underlying complaint must contain specific allegations that the policyholder's goods fail to conform to the quality or performance advertised." n82 One commentator characterizes this exclusion as "the flip-side to disparagement" (i.e., making negative comments about another's product). n83 In other words, if an insured contends that its competitor's product is terrible, and faces a lawsuit, the claims against the insured would likely be covered advertising injury. n84 On the other hand, if that same insured makes promises about its own product and then fails to deliver, the exclusion may apply. n85

A recent case, *Harleysville Mutual Insurance Co. v. Buzz Off Insect Shield, L.L.C.*, n86 sheds some light on how the Failure to Conform exclusion may apply with respect to claims of greenwashing. In *Buzz Off*, the Supreme Court of North Carolina held that the Failure to Conform exclusion barred coverage for claims brought by S.C. Johnson, Inc. ("SCJ"), which markets - among other things - OFF! brand insect repellent, against Buzz Off Insect Shield, LLC ("BOIS") and International Garment Technologies (referred to individually and collectively with BOIS as "IGT"), who together manufactured and marketed insect-repellent clothing. n87 Specifically, in the underlying action, SCJ alleged that IGT promoted its product by stating that it (1) "reduce[s] or eliminate[s] the need to apply an insect-repellant product on the skin," (2) "protects uncovered skin from mosquito bites," (3) prevents wearers from "receiv[ing] any mosquito bites," (4) "is equivalent or superior in performance to topical insect repellants, such as those containing DEET [marketed by SCJ]," (5) provides protection from mosquito bites without "the 'hassle' of applying 'messy' insect-repellant products directly to the skin," (6) "is highly effective through 25 washings," and (7) "contains a version of natural insecticide that is derived from chrysanthemum flowers." n88 These claims appeared on BOIS' website and on websites and in print advertisements of entities that manufactured clothing to be treated with the process that BOIS used to make its insect-repellant clothing and the advertising material of various retailers selling BOIS' apparel. n89 Among other things, SCJ alleged damage resulting from defendants' advertisements allegedly containing false statements concerning the efficacy of BOIS apparel. n90

IGT had purchased CGL policies covering different time periods from Erie Insurance Exchange and Erie Insurance Company (collectively "Erie") and Harleysville Mutual Insurance Company ("Harleysville"). n91 After denying IGT's requests for assistance in defending SCJ's lawsuit, Harleysville filed a declaratory judgment action against IGT and Erie, claiming, among other things, that its policy excluded coverage for the injuries claimed in the underlying lawsuit. n92 Erie counterclaimed and cross-claimed that its policies did not cover the underlying allegations. n93

The Erie and Harleysville policies provided coverage for "personal and advertising injury" arising out of "[o]ral or written publication, in any manner, of material that slanders or libels a person or organization or disparages a person's or organization's goods, products, or services." n94 The policies contained a Failure to Conform exclusion, which barred from coverage "'[p]ersonal and advertising injury' arising out of the failure of goods, products or services to conform with any statement of quality or performance made in your 'advertisement'." n95

The court agreed with Harleysville and Erie that the Failure to Conform exclusion barred coverage for SCJ's claims. The court reasoned that IGT's allegedly false statements about its products were not false because IGT made representations that SCJ's products were ineffective, but because it made allegedly false claims that its products' performance was just as good as, if not superior to, that of SCJ's products. n96 The court further reasoned, "the alleged falsity of the advertisements arises from the failure of defendants' products to actually perform as well as defendants claim they perform." n97 Thus, the underlying lawsuit "alleged facts indicating that the only falsity found in the defendants' advertisements resulted from the failure of the defendants' own products to be of their advertised quality and nature, placing the falsity of those advertisements squarely within the insurance policies' Failure to Conform Exclusion," which relieved Erie and Harleysville of any duty to defend. n98

Notwithstanding the Failure to Conform exclusion's potential application to claims like those in *Buzz Off*, it should be recognized that the exclusion has no application to many claims for greenwashing that might be asserted. The Green Guides provide a variety of examples of deceptive advertising, which would not fall within the Failure to Conform exclusion:

- "A packaged is labeled, '50% more recycled content than before.' The manufacturer increased the recycled content of its package from 2 percent recycled material to 3 percent recycled material. Although the claim is technically true, it is likely to convey the false impression that the advertiser has increased significantly the use of recycled material." n99 In this example, the statement in question is technically true. Any injury allegedly caused by this statement could not arise out of the "failure of goods, products or services to conform with any statement of quality or performance," and would not therefore fall within the Failure to Conform exclusion.

- "A package of paper coffee filters is labeled 'These filters were made with a chlorine-free bleaching process.' The filters are bleached with a process that releases into the environment a reduced, but still significant, amount of the same harmful byproducts associated with chlorine bleaching." n100 The statement may be misleading but it is 100% accurate. The Failure to Conform exclusion should not apply.

- "An advertiser notes that its shampoo bottle contains 20% more recycled content." The claim in its context is ambiguous. Depending on contextual factors, it could be a comparison either to the advertiser's immediately preceding product or to a competitor's product." n101 Here, if the allegation is that the claim misleads by suggesting that the bottle contains more recycled content than the competitor, but in fact the advertiser is making a truthful comparison with the company's prior bottles (and the claimant does not suggest otherwise), then the Failure to Conform exclusion should not apply because the product does "conform" to the "statement of quality". n102 This is particularly true in light of the fact that the usual policy interpretation rules construe ambiguities in favor of the insured and exclusions narrowly. n103

Conclusion

Courts have yet to decide questions of insurance coverage for greenwashing claims. Policyholders faced with such claims should carefully review their policies and the allegations against them. Coverage can be found where the allegations disparage a competitor (even, in some jurisdictions, without mentioning the competitor) or can be said to misappropriate an advertising idea. The Failure to Conform exclusion may bar coverage for greenwashing claims if the statements allegedly giving rise to the claim bear upon quality or performance.

Prudent policyholders examine their policies when undertaking new activities to ensure potential liabilities and losses will be addressed. If coverage is limited or unavailable, then many businesses will mold their activities to bring them within coverage, or forgo the activities altogether. Familiar examples are the abandonment of asbestos, the implementation of anti-discrimination policies, and requirements for the operation of company vehicles. Marketing

decisions should be treated no differently. Before an advertiser touts its product's or service's green attributes, it may wish to consider whether it would have coverage for the same if someone sees things differently.

Reed Smith LLP on Replacement Cost Policies and the Dangers When an Insurance Company Refuses to Pay Actual Cash Value

By Jay M. Levin and Jennifer D. Katz

November 8, 2010

SUMMARY: Courts are adopting different positions concerning whether the pre-condition to payment of Replacement Cost Value, i.e., repair or replacement of the damaged property, in a property insurance policy may be enforced by the insurance company if it denies coverage or otherwise refused to pay Actual Cost Value of a loss, frequently calculated as the cost to repair or replace, less depreciation.

ARTICLE: Property insurance originally called for the insurer to pay only the "actual cash value" ("ACV") of a loss, frequently calculated as the cost to repair or replace, less depreciation. The insured would receive the value of the pre-loss property, but would usually be out of pocket for the amount of depreciation. Replacement cost coverage was developed to insure this gap. Replacement cost coverage "reimburses the insured for the full cost of repairs, if the insured repairs or rebuilds the building, even if that results in putting the insured in a better position than he was before the loss." *Rockford Mut. Ins. Co. v. Pirtle*, 911 N.E.2d 60, 65 (Ind. Ct. App. 2009) (citations and emphasis omitted). Replacement cost coverage is optional. It is "more expensive because the rate of premiums is higher and the amount of insurance to which that rate applies is usually higher Any purported windfall to an insured who purchases replacement cost insurance is precisely what the insured contracted to receive in the event of a loss." *Id.*

Most replacement cost policies require the insurance company to pay ACV once it is determined. As indicated above, these policies also require the policyholder to actually repair or replace the damaged property before the difference between ACV and the full cost to repair or replace ("RCV") is paid by the insurance company. Most policyholders, however, do not have the resources to complete repairs without the proceeds of their property insurance policies. As a result, most policyholders are unable and unwilling to begin any substantial repair project without: (1) receipt of the ACV payment from their insurance company; and (2) an agreement from the insurance company regarding both the amount of RCV and that the insurer will actually pay the RCV. These requirements are even more important now as courts are adopting different positions concerning whether the pre-condition to payment, i.e., repair or replacement of the damaged property, may be enforced by the insurance company if it denies coverage or otherwise refused to pay ACV. This article will discuss different approaches taken by courts that have addressed this issue.

In *Buckley Towers Condominium, Inc. v. QBE Insurance Corporation*, No. 09-13247, 2010 U.S. App. LEXIS 19144 (11th Cir. Sept. 14, 2010), Buckley Towers owned a pair of condominium buildings in Miami, Florida. QBE provided Buckley Towers with hurricane insurance. After Hurricane Wilma hit South Florida in October of 2005, Buckley Towers made a property damage claim. QBE refused to pay the claim. Buckley Towers' original ACV claim (noted as "Actual Cash Value Loss" on its Proof of Loss) was just over \$4.2 million. QBE neither paid nor rejected the ACV claim. Instead, QBE interpreted the claim as a demand for RCV and, therefore, responded that no money was due until repairs were completed. n1

Buckley Towers sued QBE in federal court seeking the entire RCV loss, claiming that QBE's failure to pay the ACV prevented it from completing repairs, thereby entitling it to payment of the full RCV. The jury awarded over \$11 million in ACV and, based on the argument that QBE's failure to pay ACV prevented Buckley Towers from rebuilding, awarded an additional \$8 million for RCV. The jury also awarded \$800,000 in law and ordinance damages. The District Court entered final judgment for just under \$19.4 million. n2

QBE appealed to the Eleventh Circuit, arguing that the trial court improperly applied the doctrine of prevention of performance to allow Buckley Towers to seek the full RCV loss despite its failure to repair or replace the damaged property (in contravention of the insurance policy). Despite noting that "[u]nder Florida law, the doctrine of prevention of performance may be applied when one party to a contract prevents another from performing its obligations under the contract; it bars the preventing party from availing himself of the other party's non-performance," (*id.* at *5-6 (citation omitted)), the Eleventh Circuit agreed with QBE and concluded that the District Court erred in applying the doctrine of prevention of performance. "[A]s we read Florida law, the doctrine of prevention of performance may not be wielded as a sword in a case like this one where the insured is required first to meet its obligations to repair under the policy provision." *Id.* at *11.

The Eleventh Circuit acknowledged that Buckley Towers would be unable to receive the "full range of benefits" under the policy without an advance payment, but held that this was merely "cost and inconvenience" which did not relieve Buckley Towers of the obligation to repair the building before being entitled to the full RCV. *Id.* at *7-8. The policy "unambiguously" required repair before obtaining RCV damages and Buckley Towers did not make the repairs. *Id.* at *6. The court held that:

Applying the doctrine of prevention of performance in this case would impermissibly rewrite the insurance contract on the equitable theory that it would be too costly for Buckley Towers to comply with the terms of the agreement Allowing Buckley Towers to claim RCV damages without repairing or replacing entirely removes the plaintiff's obligations under the Replacement Cost Value section of the contract. The parties freely negotiated for that contractual provision and it is not the place of a court to redline that obligation from the contract.

Nor is it a defense to say that it would be costly for Buckley Towers to comply with the insurance contract as written. Inconvenience or the cost of compliance [with contractual terms], though they might make compliance a hardship, cannot excuse a party from the performance of an absolute and unqualified undertaking to do a thing that is possible and lawful.

Id. at *7-8 (internal quotations and citations omitted). The Eleventh Circuit did not, however, address the fact that the doctrine of prevention of performance is, by its very nature, an equitable remedy. The court did not address the evidence that Buckley Towers was not able to proceed with repairs without the ACV payment, to which it was entitled. The court did not address the fact that QBE's undisputed breach of its contractual obligations to pay ACV allowed it to profit by relieving it of its liability for \$8 million in covered losses. The court also concluded that there was sufficient evidence to support the jury's finding as to ACV damages. In short, the Eleventh Circuit allowed QBE to profit from its breach of its contractual obligation to pay the \$11 million ACV loss by effectively relieving it of its obligation to pay the balance of the RCV loss.

In *Rockford Mutual Insurance Co. v. Pirtle*, 911 N.E.2d 60 (Ind. Ct. App. 2009), however, the Court of Appeals of

Indiana excused the policyholder's failure to repair under similar circumstances. Terry Pirtle bought an historic building which he insured with Rockford Mutual Insurance Company. Pirtle rented the property while he restored it. The property was damaged in a November 2000 fire. Pirtle made a claim under his policy. Rockford initially offered \$80,000 to settle the whole claim, but that was less than the amount of the mortgage and the cost to repair the building (which Pirtle's contractor estimated at over \$230,000). Rockford then offered less than \$70,000 as ACV. Pirtle rejected the offer and filed suit for breach of contract and bad faith. Rockford paid, and Pirtle accepted, \$86,146.66 in ACV, but Rockford denied liability for RCV. *Id.* at 63. The jury found Rockford breached the contract, and awarded Pirtle \$524,286.13 in damages.

The relevant issue before the *Rockford* court was "[w]hether Pirtle's recovery under the policy is limited to the actual cash value of the building *because of* Pirtle's failure to comply with the repair and replacement cost policy provision of his policy." *Id.* at 62 (emphasis added). Rockford argued that Pirtle could only recover ACV because he had not satisfied a "condition precedent" to obtaining payment from the insurance company, *i.e.*, repair or replacement of the damaged building. *Id.* at 64. The court disagreed and excused Pirtle's failure.

The *Rockford* court cited *Couch on Insurance* for the proposition that, even under replacement cost policies where actual repair or replacement must be completed before the insurers owes the RCV, the policyholder's duty to repair may be excused based on the insurance company's actions:

Even where actual replacement is mandated, compliance may be excused by the insurer's actions. The insurer's failure to advance the necessary funds to rebuild may have this effect. Replacement cost coverage was devised to remedy the shortfall in coverage which results under a property insurance policy compensating the insured for actual case value alone. That is, while a standard policy compensating an insured for the actual cash value of damaged or destroyed property makes the insured responsible for bearing the cash difference necessary to replace old property with new property, replacement cost insurance allows recovery for the actual value of property at the time of loss, without deduction for deterioration, obsolescence, and similar depreciation of the property's value.

Id. at 65. The first time Rockford made an ACV offer to Pirtle was six months after the fire, at which point the property was "in jeopardy" - "the mortgage foreclosure process had started[] and the property had been condemned by the city" - and Pirtle could not begin repairs.

The *Rockford* court held that the trial court's jury instruction on prevention of performance was correct and applicable to this situation. The court rejected holdings from other courts that a policy must be strictly construed to require completion of repair or replacement before RCV is owed. The court stated:

[w]e are convinced that equitable principles win the day in this situation; otherwise the repair or replacement endorsement paid for by Pirtle would be rendered illusory. Rockford had the ability to advance sums of money under that endorsement to assist in commencement of the rebuilding, and could have joined Pirtle in agreements entered into for repairs.

Id. at 66-67. As a result of Rockford's claims handling, specifically its actions concerning ACV payment, the jury "excused" the policy requirement of repair or replacement. *Id.* at 66. Because Rockford's failure to fulfill its obligations under the policy prevented Pirtle from repairing the property, the doctrine of prevention of performance excused Pirtle's obligation to repair or replace before full RCV was due. *See also Zaitchick v. American Motorists Ins. Co.*, 554 F. Supp. 209, 217 (S.D.N.Y. 1982), *aff'd*, 742 F.2d 1441 (2d Cir. 1983), *cert. denied*, 464 U.S. 851 (1983) (noting that policyholders "were refused any monies under the insurance contract. Not surprisingly, they were unable to replace their home. This conduct by [the insurance company] made it impossible for [the policyholders] to fulfill the condition precedent, and therefore, excuses [the policyholders] from performance of the replacement condition.")

The *Rockford* court noted, but declined to follow, *Bourazak v. North River Insurance Company*, 379 F.2d 530 (7th Cir. 1967). In *Bourazak*, North River Insurance Company ("North River") issued two policies of insurance to Edward

Shemas. One policy insured his home; the other, personal property. A fire destroyed the home and personal property. North River paid for the loss to the personal property. North River also paid the home's ACV of \$37,500. Shemas assigned any remaining interest in the policy to Mitchell Bourazak ("Bourazak"). Bourazak filed an action for additional monies under the policy.

The policy insuring the home contained an "Extension of Coverage" provision which provided that:

if the building were completely rebuilt the insurer would be liable for the repair and replacement cost, not exceeding \$22,500 [the difference between the \$60,000 and the amount paid of \$37,500]; that the insurer would not be liable for loss unless and until actual repair or replacement is completed, and that any claim for such additional liability must be made within 120 days after loss.

Id. at 531 (internal quotes omitted). The court dismissed the complaint because Bourazak did not satisfy the condition precedent of repairing or replacing the damaged property. In fact, Bourazak's complaint did not even allege that such repair or replacement was performed.

We think the conclusion thus reached is inescapable. According to the allegations of the complaint, plaintiff had 180 days from July 1, 1962 (or until about January 1, 1963) to commence rebuilding the house. Certainly the insured's expressed intention to rebuild and the removing of debris or doing excavation work preparatory to rebuilding cannot be held to be in compliance with the alleged condition.

Id. at 532 (internal quotes omitted). In addition, North River's denial of liability, though made with respect to the Extension of Coverage provision, was made two months after the conclusion of Bourazak's time to repair or replace the property and, thus, was of no import. *Bourazak* is not inconsistent with *Rockford* because, in *Bourazak*, the insurer paid ACV and there was, therefore, no claim of prevention of performance.

Pennsylvania law is even stricter, finding that the requirement to repair or replace the damaged property before receiving full RCV can be unconscionable. In *Ferguson v. Lakeland Mutual Insurance Company*, 408 Pa. Super. 332, 596 A.2d 883 (1991), lightning struck an organ inside the mobile home of Glenn and Mary Ann Ferguson. The Fergusons made a claim under their Lakeland Mutual Insurance Company homeowner's policy. Lakeland Mutual disputed coverage, resulting in the Fergusons suing. The jury awarded full RCV. The court held that the requirement of repair or replacement prior to receiving RCV was unconscionable. The court applied a "two-fold" test for unconscionability: "First, one of the parties to the contract must have lacked a meaningful choice about whether to accept the provision in question. Second, the challenged provision must unreasonably favor the other party to the contract." *Id. at 336, 596 A.2d at 885*. Relying on that test, the court reasoned that insurance policies are contracts of adhesion and the replacement provision unreasonably favors the insurance company. So, despite "clear and unambiguous" policy language, the repair or replacement requirement was deemed unconscionable.

Because Lakeland Mutual denied liability, the policyholder was faced "with the unsavory choice of either accepting the lower actual cash value of the organ or expending a large sum of money in replacement costs without a guarantee of reimbursement." *Id. at 336-37, 596 A.2d at 885*. The court noted that the policyholder could only have received the full RCV after paying everything and then bringing a coverage suit:

In fact, under the terms of the contract, [the Fergusons] could have only received replacement value in this instance after expending the replacement or repair funds and obtaining a judicial determination concerning liability.

Id. at 337, 596 A.2d at 885.

The *Ferguson* case has been distinguished by other courts. See, e.g., *Nicolaou v. Vermont Mut. Ins. Co.*, 155 N.H. 724, 931 A.2d 1265 (2007) (noting that "[w]hat was unconscionable in [the *Ferguson* case] was requiring the policyholders to repair or replace their property before they knew whether their insurer would provide any coverage at all"). Thirteen years after *Ferguson*, the Superior Court of Pennsylvania decided *Burton v. Republic Insurance Company*

, 845 A.2d 889 (Pa. Super. Ct. 2004), and relied on the insurer's payment of ACV to distinguish *Ferguson*. In *Burton*, Jeffrey and Terri Burton had a homeowners' insurance policy with Republic Insurance Company. The Burtons' home and personal property were damaged in a fire. Republic paid \$100,219 in ACV. The Burtons made some, but not all, of the required repairs, resulting in an additional payment by Republic for "withheld depreciation." *Id.* at 892. The Burtons, however, did some additional construction (which was not included in the repair estimate). The Burtons did not receive full RCV. The issue before the court was "whether the terms of Republic's insurance policy concerning replacement costs are ambiguous or unconscionable, and whether Republic's practice of requiring claimants to replace the lost property with property of like kind constitutes a breach of contract." *Id.* at 892-93. The court concluded that: (a) the policy was not ambiguous or unconscionable; and (b) the like construction requirement was not a breach of contract.

The *Burton* court held that the insurance policy "clearly, explicitly, and unambiguously conditions full replacement benefits upon the actual repair or replacement of the damaged property." *Id.* at 894. Notably, Republic had not refused to pay either ACV or replacement cost; it simply conditioned the RCV payment on actual repair or replacement. This was a basis for distinguishing *Ferguson* and finding the replacement provision of the policy was not unconscionable:

[W]e decline to extend *Ferguson* beyond the facts of that case. Instantly, [Republic] admitted liability and paid [the Burtons] the actual cash value of the damage claim at the time of the loss. It did not condition replacement cost upon receiving a judicial determination of liability; rather, it conditioned benefits upon [the Burtons'] compliance with the stated settlement procedures. Thus, unlike the claimants in *Ferguson*, [the Burtons'] replacement benefits were guaranteed to the extent [the Burtons] demonstrated that they had replaced or repaired the damaged property. Since [the Burtons] were not obligated to pursue a claim to determine liability before receiving benefits, this case is distinguishable from *Ferguson*.

Id. at 899. n4

The *Burton* court further explained that the policy requires like construction, which means that the "policyholder has to return the damaged structure as closely as possible to the condition it was in immediately prior to the loss." *Id.* at 896. n5 The requirement was deemed "reasonable" and not in breach of contract. *Id.* See also *Saleh v. Farmers Ins. Exchange*, 133 P.3d 428 (Utah 2006) (holding that policy requires payment only after repair or replacement is completed in full).

Property insurance provides a policyholder the money necessary to repair or replace damaged property. Often policyholders cannot complete repairs without the proceeds of that insurance policy. As a result, the doctrine of prevention of performance has been applied to overcome the inequitable result of an insurance company breaching its obligation to pay ACV and thereby preventing the policyholder from replacing or repairing the damaged property (which is a pre-condition to obtaining RCV). That some courts are willing to encourage insurers to withhold ACV in breach of their contractual obligations, and then profit from that breach by being relieved of their obligation to ultimately pay the difference between ACV and RCV, is surprising. The doctrine of prevention of performance was designed to prevent such an inequitable result and should be enforced when applicable.

Return to Text

n1 Buckley Towers agreed that the policy required repair before RCV damages could be sought and that it had not completed repairs.

n2 Prejudgment interest of approximately \$5.6 million was subsequently added to this award.

n3 The bad faith claim was dismissed with prejudice when the \$86,146.66 payment was made. Pirtle accepted the payment "while continuing to contest the actual cash value used." *Pirtle*, 911 N.E.2d at 63.

n4 The *Burton* court also explained that the requirement to replace damaged property with "like construction" or "items of like kind" did not create "uncertainty" about whether the Burtons would be reimbursed by Republic:

As the onus is upon the claimant to abide by the settlement procedure, no uncertainty should exist. Even where a claimant fails to comply with the terms of the settlement process and purchases property that is arguably dissimilar, the resulting uncertainty is not equivalent to *Ferguson*, where the claimants were forced to replace the damaged items *before* liability had been established.

Burton, 845 A.2d at 899 (emphasis in original).

n5 The *Burton* court also explained the rationale: "Since insurance policies are based on principles of indemnity rather than enrichment, claimants should not be permitted to exploit their losses and use them as an opportunity to remodel their homes at the insurer's expense." *Burton*, 845 A.2d at 896 (citation omitted).

McCarter & English on Pennsylvania Supreme Court Joins Growing Ranks Of Courts In American and Foreign Insurance Company v. Jerry's Sport Center, Inc. By Holding Insurer Is Not Entitled To Reimbursement Of Defense Costs Where Policy Does Not Include An Express Reimbursement Provision

By Joann M. Lytle, Nicholas M. Insua and Anne E. Matthews

October 1, 2010

SUMMARY: In *American and Foreign Insurance Co. v. Jerry's Sport Center, Inc.*, the Supreme Court of Pennsylvania refuted the reasoning under which some courts have allowed insurers to seek reimbursement of defense costs pursuant to a reservation of rights and instead joined the growing number of courts to hold that an insurer is not entitled to reimbursement of defense costs where the policy does not include an express reimbursement provision.

RELATED CONTENT: Click here for more Emerging Issues Analysis related to this Area of Law

ARTICLE: In *American and Foreign Insurance Co. v. Jerry's Sport Center, Inc.*, No. 88 MAP 2008, 2010 Pa. LEXIS 1803, at *1-*2 (Pa. Aug. 17, 2010), Jerry's Sport Center, Inc. and its subsidiaries, Jerry's Sport Center Northeast, Inc., Bonitz Brothers, Inc. Outdoor Sports Headquarters, Inc., and Simmons Gun Specialties, Inc. (collectively "Insured"), had purchased primary and umbrella liability coverage. The policy, which insured against bodily injury, did not contain a reimbursement provision. *Id.* at *2.

The Insured was one of several firearms wholesalers-distributors sued by the National Association for the Advancement of Colored People and the National Spinal Cord Injury Association, who sought to hold the firearms industry liable for injury, death, and other damages to their members on the theory that the industry's failure to distribute firearms reasonably and safely constituted the negligent creation of a public nuisance. *Id.* at *3. The associations' complaint alleged bodily injury to their members but did not seek compensation for those individuals' injuries. *Id.* at *4. Instead, the associations sought damages to establish a fund for the education, supervision, and regulation of gun dealers. *Id.*

The Insured notified its insurer of the claim. *Id.* The insurer retained counsel for the Insured and issued a reservation of rights letter, which included a purported reservation of the right to seek reimbursement of defense costs "ultimately determined not to be covered." *Id.* at *5. The insurer also filed a declaratory judgment action seeking a determination that it had no duty to defend or indemnify the Insured and was granted summary judgment. *Id.* at *7. The insurer then sought reimbursement of defense costs, which the trial court awarded. *Id.* at *9. On appeal, the Superior

Court reversed and the Pennsylvania Supreme Court granted allocatur. *Id.* at *10-*11.

The Pennsylvania Supreme Court began its analysis by examining the competing views on the issue, with *Buss v. Superior Court*, 939 P.2d 766 (Cal. 1997) representing the majority view and *Terra Nova Ins. Co. Ltd. v. 900 Bar, Inc.*, 887 F.2d 1213 (3d Cir. 1989) representing the minority view.

In *Buss*, the insured faced 27 claims, only one of which was potentially covered. *Jerry's Sport Center, 2010 Pa. LEXIS 1803*, at *26. The California Supreme Court held that because the insurer's duty to defend extended to any claims at least potentially covered, the insurer was not entitled to seek reimbursement of defense costs for the potentially covered claim; however, the insurer could seek reimbursement of defense costs for the 26 uncovered claims because, under the policy, the insurer had no duty to defend for those claims. *Id.* at *27. The *Buss* court explained that "the insurer 'has a right of reimbursement that is implied in law as quasi-contractual, whether or not it has one that is implied in fact in the policy as contractual' ... [and] that the right [runs] against the person who was unjustly enriched and in favor of the person who suffered loss thereby." *Id.* at *28 (quoting *Buss*, 939 P.2d at 776-77).

In contrast, the *Terra Nova* court expressly prohibited an insurer's claimed right to reimbursement of defense costs where a claim was deemed potentially covered and the insurer had provided coverage until obtaining a declaration that there was no coverage. *Id.* at *36. The court explained:

Faced with uncertainty as to its duty to indemnify, an insurer offers a defense under reservation of rights to avoid the risks that an inept or lackadaisical defense of the underlying action may expose it to [sic] if it turns out there is a duty to indemnify. At the same time, the insurer wishes to preserve its right to contest the duty to indemnify if the defense is unsuccessful. Thus, such an offer is made at least as much for the insurer's own benefit as for the insured's. If the insurer could recover defense costs, the insured would be required to pay for the insurer's action in protecting itself against the estoppel to deny coverage that would be implied if it undertook the defense without reservation.

Id. (quoting *Terra Nova*, 887 F.2d at 1219-20). n1

The Pennsylvania Supreme Court found *Terra Nova* most consistent with Pennsylvania's broad duty to defend and held that the insurer was not entitled to reimbursement of defense costs absent a reimbursement provision in the policy. *Id.* at *37. The Court explained that "it is the potential, rather than the certainty, of a claim falling within the insurance policy that triggers the insurer's duty to defend," *id.* at *39, and while a determination of no coverage in a declaratory judgment action "relieve[s] [the insurer] of the continuing obligation to defend[,]. . . [it does not] retroactively eliminate the insurer's duty to defend the insured during the period of uncertainty," *id.* at *43. In rejecting the insurer's attempt to define its duty to defend based on the outcome of the declaratory judgment action, the Court found that allowing the insurer to recoup defense costs absent a reimbursement provision in the policy "would amount to a retroactive erosion of the broad duty to defend in Pennsylvania by making the right and duty to defend contingent upon a court's determination that a complaint alleged covered claims, and would therefore narrow Pennsylvania's long-standing view that the duty to defend is broader than the duty to indemnify." *Id.* at *47-*48. n2

The Court also analyzed basic rules of contract interpretation, noting that because the policy contained no reimbursement provision, the insurer had no right to reimbursement under the policy. *Id.* at *49. The Court explained that no new contract was created by the reservation of rights letter, which merely "assert[ed] defenses and exclusions ... already set forth in the policy." *Id.* To allow reimbursement based on a reservation of rights absent a policy provision providing that right, the Court said, would be "tantamount to allowing the insurer to extract a unilateral amendment to the insurance contract." *Id.*

The Court, refuting the reasoning of *Buss*, likewise rejected any equitable bases for reimbursement. The trial court originally found that the insurer was entitled to reimbursement under the theory of unjust enrichment. *Id.* at *9. As the Supreme Court explained, that theory "contemplates a person who has been unjustly enriched at the expense of another [and] must [therefore,] make restitution to the other." *Id.* at *51 (citation and internal quotation marks omitted).

However, the Court found no such unjust enrichment in this case. As the Court explained, the insurer had both a right and duty to defend, the exercise of which benefited both parties, not merely the Insured. *Id.* at *51-*52. Specifically, the insurer benefited by retaining control over the defense, which provided protection to the insurer in the event that a court determined the claim was covered, and also avoided potential liability to the Insured for bad faith. *Id.* at *53.

The Court agreed with the Insured's *amicus*, Air Products and Chemicals, Inc., that recognizing a right to reimbursement outside of the policy would empower each insurer to design its own right to reimbursement as it sees fit. *Id.* at *25, *54. As the Court explained:

This is, in fact, what occurred here. [The insurer] initially claimed a right of reimbursement of all defense costs ultimately determined not to be covered, then modified this claimed right to reimbursement by stating that it would not seek reimbursement of costs incurred before it made its final coverage determination or a court concludes it was under no duty to defend, whichever occurred first, and, finally, informing Insured that it may seek reimbursement for defense costs incurred after the filing of the declaratory judgment action. A right of reimbursement outside of the four corners of the insurance contract would open the door to this kind of maneuvering by insurance companies at their policyholders' expense.

Id. at *54-*55.

Not only does the Pennsylvania Supreme Court's ruling prohibit an insurer who elects to control an insured's defense, including how and when the defense dollars will be spent, from handing its insured the bill, but it also prevents that insurer from simply walking away from a defense that it has assumed. The court stressed:

If [an insurer] believes there is no possibility of coverage, then it should deny its insured a defense because the insurer will never be liable for any settlement or judgment. ... If, on the other hand, the insurer is uncertain about coverage, then it should provide a defense and seek declaratory judgment about coverage. ... If the insurer is successful in the declaratory judgment action, it is relieved of the continuing obligation to defend. *The court's resolution of the question of coverage does not, however, retroactively eliminate the insurer's duty to defend the insured during the period of uncertainty.*

Id. at *42-*43 (emphasis added; citations omitted). The court's conclusion extends beyond the question of whether an insurer can seek reimbursement for defense costs that it has assumed and hopefully has put an end to the practice whereby an insurer who has agreed to defend takes it upon itself to later decide that there is no coverage and walks away from its policyholder.

[Return to Text](#)

n1 The Pennsylvania Supreme Court also found particularly persuasive *General Agents, Insurance Co of America, Inc. v. Midwest Sporting Goods Co.*, 828 N.E.2d 1092 (Ill. 2005), which followed *Terra Nova, Jerry's Sport Center*, 2010 LEXIS 1803, at *35-*36, and cited favorably and confirmed the holding of the Philadelphia Court of Common Pleas in *LA Weight Loss Centers, Inc. v. Lexington Insurance Co.*, No. 1560, 2006 Phila. Ct. Com. Pl. LEXIS 127 (C.C.P. Phila. Mar. 1, 2006), which also followed *Terra Nova, Jerry's Sport Center*, 2010 LEXIS 1803, at *37.

n2 The Court noted that even if it had chosen to follow *Buss*, the insurer would not be entitled to

reimbursement because the potentially covered claim in this case was like the one potentially covered claim in *Buss* for which that insurer was not allowed to seek reimbursement. *Id.* at *48.

2010 Emerging Issues 5341

SNR Denton on Cedell v. Farmers Insurance: Bad Faith Is Not Enough to Destroy Attorney-Client Privilege on a First-Party Claim in Washington

By William Barker and Ronald Kent

October 1, 2010

SUMMARY: Cedell v. Farmers has clarified WA law on discoverability of an insurer's attorney-client privileged material in insurance bad faith litigation. Under Cedell, the "insurer has a right to the attorney-client privilege in a first-party-insurer claim for bad faith absent showing an established exception to the privilege applies, such as fraud." The commentary discusses the significance of the case.

ARTICLE: *Cedell v. Farmers Insurance Co.* n1 has clarified Washington law on discoverability of an insurer's attorney-client privileged material in insurance bad faith litigation. Under *Cedell*, the "insurer has a right to the attorney-client privilege in a first-party-insurer claim for bad faith absent showing an established exception to the privilege applies, such as fraud." n2 This commentary discusses the significance of the case in the context of Washington law and the law nationally.

I. The Case

The Cedells suffered an accidental fire at their home; a year later, Farmers still had not paid their claim. They sued for bad faith. Farmers had retained Ryan Hall, an attorney, to assist it in making a coverage determination. Cedell demanded production of the claim file, and Farmers produced it with heavy redactions for privilege and work product. Farmers moved for a protective order. The trial court found adequate nonprivileged evidence to support a good faith belief that Farmers had acted in bad faith, and deemed that sufficient to invoke the fraud exception to the privilege. It then ordered an in-camera review, and concluded that, on a bad faith claim arising from residential fire, the insured is entitled to discover the entire claim file, including privileged and work product material. The court of appeals granted discretionary review, and reversed. n3

In *Escalante v. Sentry Insurance Co.*, n4 the court had reversed a denial of discovery of privileged documents, ordering further proceedings. "In general, [the attorney-client] privilege protects confidential attorney client communications from discovery or public disclosure so that clients will not hesitate to speak freely and fully inform

their attorneys of all relevant facts." But the court noted that the privilege is subject to exceptions, including where the communications pertain to future or ongoing fraud. But that exception could be invoked "only upon a prima facie showing of bad faith tantamount to civil fraud." n5 That requires a "showing of a foundation in fact for the charge of civil fraud," possibly after an *in camera* inspection of the disputed documents. n6 But an *in camera* inspection would be discretionary with the court, "requiring a a factual showing 'adequate to support a good faith belief by a reasonable person that wrongful conduct sufficient to invoke the . . . fraud exception . . . has occurred.'" n7 The *Escalante* court remanded for consideration of whether plaintiffs could make the showing necessary to pierce the privilege.

On work product, the *Escalante* court noted that there is no work product immunity for documents prepared in the ordinary course of business, rather than in anticipation of litigation. This inquiry depended on the facts of the particular case. Moreover, the nature of the issues in a bad faith case normally establishes the "substantial need" for discovery necessary to obtain access to ordinary work product. n8

As to the mental impressions of an attorney or party representative (sometimes called "opinion work product"), there is heightened but, the court concluded, not absolute protection. It held that "mental impressions, etc., are discoverable in a bad faith action if they are directly in issue, and if the discovering party makes a stronger showing of necessity and hardship than is normally required under [Wash. R. Civ. P.] 26." n9

In *Cedell*, the court rejected dicta in *Barry v. United Services Automobile Ass'n* n10 which had suggested that the privilege would not apply in a bad faith action arising from a fire insurance claim. Moreover,

An insurance company does not lose attorney-client privilege protection simply because its litigation opponent raises an issue where advice of counsel may be relevant. While an attorney's impressions may be relevant to a bad faith claim, an automatic removal of attorney-client privilege would frustrate the purpose of the attorney-client privilege without cause. The fraud exception discussed below provides a litigant with sufficient means to discover relevant attorney-client communications. We note, however, that an insurance company may not hire an attorney as a claims adjuster just to fall within the attorney client privilege. A claims adjuster's conduct is not privileged simply because the claims adjuster happens to be a lawyer. Accordingly, only information, investigation, and advice Hall gave Farmers in his capacity as an attorney is subject to the privilege. n11

Turning to application of the fraud exception to the privilege, the court applied the usual definition of "fraud":

"(1) a representation of an existing fact, (2) its materiality, (3) its falsity, (4) the speaker's knowledge of its falsity or ignorance of its truth, (5) [the speaker's] intent that [the fact] should be acted upon by the person to whom it is made, (6) ignorance of [the fact's] falsity on the part of the person to whom it is made, (7) the latter's reliance on the truth of the representation, (8) [the right of the person] to rely on it, and (9) [the person's] consequent damage." n12

This required a different showing than bad faith, and "[t]o qualify for the fraud exception to attorney-client privilege, the plaintiff must show fraud, as opposed to just bad faith." n13 On the record here, that had not been done, and the order to produce was vacated. n14

II. Analysis

Attorney-client privilege and work product protection are often cited as obstacles to discovery in bad faith cases, and plaintiffs often contest their efficacy as such. n15 A minority of courts, exemplified by *Hearn v. Rhay*, n16 hold that the privilege is deemed waived if

(1) the assertion of the privilege was the result of some affirmative act, such as filing suit, by the asserting party; (2) through this affirmative act, the asserting party put the protected information at issue by making it relevant to the case; and (3) application of the privilege would have denied the opposing party access to information vital to his defense. n17

A fairly heavy majority is to the contrary, finding waiver only where the insurer relies in some way on the content of the privileged communications. n18 *Cedell* appears to place Washington in the majority camp, by holding that "[a]n insurance company does not lose attorney-client privilege protection simply because its litigation opponent raises an issue where advice of counsel may be relevant." n19 The minority cases often seem to treat an insurer's denial of accusations of bad faith as sufficient to waive the privilege, a view *Cedell* clearly rejects.

Of course, the privilege is subject, in any context, to an exception where the client has attempted to use the attorney's services in furtherance of a crime or fraud. n20 Nothing in the usual bad faith case involves anything remotely similar to a crime or fraud. A small minority of jurisdictions have extended this exception to "crime or tort," expanding it to nonfraudulent torts. n21 Alaska has treated some types of bad faith as a form of fraud for purposes of the exception: "'bad faith legal defense to a legitimate claim by one's insured' is a form of civil fraud for purposes of the privilege." n22 In noting the availability of the exception in bad faith cases, *Escalante* had cited the Alaska case. n23 It was previously unclear whether *Escalante* intended to adopt the Alaska court's broadening of the crime-fraud exception to include some types of bad faith. *Cedell* makes clear that Washington adheres a requirement of fraud in its traditional sense.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of SNR Denton, LLP with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is the co-author of *New Appleman Insurance Bad Faith Litigation*, Second Edition. He is also a member of the Editorial Board of the *New Appleman on Insurance Law Library Edition* and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged with *Insurance Litigation Reporter*, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Ronald D. Kent heads the Litigation Department in SNR Denton's Los Angeles office. He is also Co-Chair of the Firm's National Insurance Litigation and Coverage Practice and is a member of the firm-wide Policy & Planning (Management) Committee. Since 2005, he has been named each year as a leading trial lawyer nationally and in California, based on peer and client evaluations, by *Chambers USA: America's Leading Lawyers*, the highly respected independent attorney rating organization. Mr. Kent has extensive experience representing major insurance companies on a wide variety of matters, including fraud and bad faith actions, class action and multiple plaintiff litigation, defense of toxic tort and other environmental claims, insurance coverage actions and general business disputes. Mr. Kent has tried matters in state and federal courts throughout California, and in other states, and has successfully handled in excess of 70 arbitrations to final resolution. In addition, he has briefed and argued numerous appellate matters in the California Supreme Court, nearly all California district courts of appeal and the Ninth Circuit Court of Appeals. Mr. Kent is the co-author of the second edition of *New Appleman Insurance Bad Faith Litigation*.

SNR Denton on Cargill, Inc. v. Ace American Insurance Co.

2010 Emerging Issues 5343

SNR Denton on Cargill, Inc. v. Ace American Insurance Co.: Contribution Among Insurers on Defense Costs

By William T. Barker, Robert C. Johnson and M. Keith Moskowitz

October 1, 2010

SUMMARY: Minnesota formerly adhered to a minority rule that an insurer that has performed its own duty to defend an insured has no right to contribution from other insurers who were equally obligated to defend that insured. In *Cargill*, the Minnesota Supreme Court overruled that rule. This commentary explains that this decision accords with modern unjust enrichment law and discusses its implications.

ARTICLE: Minnesota formerly adhered to a minority rule that an insurer that has performed its own duty to defend an insured has no right to contribution from other insurers who were equally obligated to defend that insured. In *Cargill, Inc. v. Ace American Insurance Co.*,ⁿ¹ the Minnesota Supreme Court overruled that rule. This commentary explains that this decision accords with modern unjust enrichment law and discusses its implications for larger issues regarding allocation of insurance coverage.

I. The Case

A. Background

The rule against contribution had been adopted in *Iowa National Mutual Insurance Co. v. Universal Underwriters Insurance Co.*ⁿ² Kneeland had been driving an auto owned by Michael Boyer, Inc. Iowa National insured Kneeland's car and Universal insured the Michael Boyer car. Universal refused to defend Kneeland, but it was later held that Michael Boyer was Kneeland's employer, making Universal the primary insurer. Iowa National sought reimbursement of its costs in defending Kneeland. There being no contract between Iowa National and Universal, it relied on principles of unjust enrichment.

The Minnesota court rejected that claim. It reasoned that the obligation to defend was separate from any obligation to indemnify, and that each insurer has a personal obligation to defend, which it is not entitled to divide with any other insurer that has a separate, similar duty. In the absence of any common obligation, it found no basis for a contribution obligation. Because the insured had suffered no injury by being defended by one insurer instead of another, it held that

the insured had no claim against the nondefending insurer to which the defending insurer could be subrogated. The amounts expended by Iowa National were expended to discharge its own duties and to protect its own interests, and were not recoverable from Universal. n3

The court later recognized an exception to the rule if the insured executed a loan receipt, authorizing the defending insurer to sue the nondefending insurer. n4 And if both insurers breached the duty to defend, they would be held equally liable. n5

B. The Facts

Cargill was sued for environmental contamination and requested 50 of its insurers over many years to defend. Several of the insurers, including Liberty Mutual, offered to pay Cargill's reasonable defense costs if it would execute a loan receipt agreement authorizing them to sue the others. Cargill refused to do so, because some of its policies were "fronting" policies which supported excess and umbrella policies but themselves provided no risk transfer. Cargill offered a loan receipt that would protect it from any claims on the fronting policies and Liberty Mutual refused. n6

The district court declared that it could impose a constructive loan receipt, requiring the other insurers to contribute. It certified to the court of appeals the question whether it could do so, and that court, over a dissent, agreed that it could. The Minnesota Supreme Court granted review. n7

C. The Decision

The court concluded that *Iowa National* could not readily be reconciled with the decision below, nor could the existing exceptions support that result. n8 But it reconsidered and overruled *Iowa National*.

One of the purposes of that rule was "to encourage insurers to 'resolve promptly the duty to defend issue.'" n9 But the rule did not serve that purpose, instead "encourag[ing] any insurer whose policy is arguably triggered to deny its insured a defense and, essentially, play the odds that, among all the insurers on the risk, it will not be selected by the insured to defend." n10

The *Iowa National* rule was a minority view: "[m]ost courts have held that an insurer has an equitable right, whether by contribution or subrogation, to recover defense costs, at least partially, when primary insurers also have a duty to defend a common insured; this has been described as 'the better-reasoned view.'" n11 The court quoted a definition of "equitable contribution" as

"the right to recover, not from a party primarily liable for the loss, but from a co-obligor or co-insurer who shares common liability with the party seeking contribution. . . . The right of contribution is not derivative of the rights of the insured, but belongs to each insurer independently to seek reimbursement from a co-insurer those sums which were paid in excess of an insurer's proportionate share of the common obligation." n12

The court concluded that allowing such a right to co-primary insurers was "supported by public policy and is the better reasoned position." n13 So *Iowa National* was overruled. The court reaffirmed Minnesota's rule that, while liability for injuries continuing across policy periods is apportioned by time on the risk, defense costs are apportioned equally among insurers whose policies are triggered. n14

Finally, the court held that "breach of the duty to defend precludes application of an equitable right of contribution." n15 Accordingly, it remanded for determination whether Liberty Mutual had breached that duty.

II. Analysis

A. Cargill's Ruling on Contribution Accords with Modern Unjust Enrichment Law

Iowa National was, of course, right that a defending insurer typically has no contractual relationship with a

nondefending insurer, so it has no contractual right to reimbursement. But that left the question of whether a reimbursement right could be found in the law of unjust enrichment. Unfortunately, there was at the time no unified theory of the law of unjust enrichment to which a court might look for guidance in resolving that question. Even the most scholarly treatments tended to describe only a variety of specific rules for particular situations, without clear connection from one body of rules to another. n16 Moreover, even these treatments were relatively little known to most practitioners and courts. Accordingly, most courts groped their way, as the *Iowa National* court did, based on whatever precedent they could find and their own intuitions about unjust enrichment. Sometimes, as in *Cargill*, those might be reconsidered in light of precedent elsewhere.

But lawyers and courts now have a new and carefully analyzed source of guidance. For the last several years, the American Law Institute has been preparing a Restatement (Third) of Restitution and Unjust Enrichment, a project which has just been completed (though the final version is not yet on line). For the first time, this offers a systematic theory of the law of unjust enrichment, which provides a basis for critical review of existing precedent and guidance for the development of the law in the future.

The *Cargill* rule accords with that endorsed by the new Restatement:

If the claimant renders to a third person a performance for which the defendant would have been liable had the third person asserted a claim against the defendant directly, the claimant is entitled to restitution from the defendant as necessary to prevent unjust enrichment if

(a) the claimant acts in the performance of an obligation owed independently by the claimant to the third person, or otherwise in the reasonable protection of the claimant's own interests; and

(b) as between the claimant and the defendant, the performance or the part thereof with respect to which the claimant seeks restitution is primarily the obligation of the defendant. n17

Applying this to the *Cargill* facts, the defending insurer (Liberty Mutual), would be the unjust enrichment "claimant" and a nondefending insurer would be the unjust enrichment "defendant." The insured would be the "third person" to whom a performance was rendered by the defending insurer but to whom the nondefending insurer would have been liable had the insured asserted a claim against it. Because the defending insurer had a duty to defend, it was acting in accordance with an obligation owed independently to the insured. If the defending insurer were an excess carrier, defending in lieu of a breaching primary insurer, it would be the case that the duty to defend was primarily the obligation of the nondefending insurer, and the claim would commonly be described as one for "equitable subrogation." But the Restatement makes it clear that the rule applies also to co-primary insurers:

A claim to "contribution" by one insurer against another insurer of the same risk is within the rule of this Section. Such a claim is one in which the performing party (the insurer seeking contribution) asserts that *a part* of its performance to the third-party obligee (the common insured) is primarily the responsibility of the defendant. In the language of insurance law, claims on this pattern are referred to by the label "equitable contribution." n18

Insurer advocates wishing to urge other courts to adopt the *Cargill* (and strong majority) rule on contribution rights for defending insurers should make use of the Restatement as strong supporting authority for their arguments. And both courts and advocates should consult the Restatement on other issues of unjust enrichment law.

B. Cargill Silently Approved Allocation of Defense Costs to Fronting Policies

The reason why *Cargill* refused to agree to a loan receipt was to protect fronting policies in some years, because *Cargill* itself would be required to pay any losses under those policies. In disputes over allocation of losses among insurers and with policyholders, the latter commonly take the position that (1) no losses (and, especially, no defense costs) can be allocated to the policyholder and (2) allocation to a fronting policy should be treated as allocation directly to the policyholder. The district court had rejected the latter argument, and the supreme court's ruling appears to have

silently affirmed that ruling. The district court had reasoned that:

"Cargill, a sophisticated business entity, has created this insurance structure, and it seems inequitable that they should now be permitted to avoid cooperating with Liberty Mutual (the insurer who[m] they have self-chosen to defend their liability claims) because of their concern that the insurance structure that they have created may have some adverse consequences to go along with the benefits they have received." n19

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of SNR Denton, LLP with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is the co-author of *New Appleman Insurance Bad Faith Litigation*, Second Edition. He is also a member of the Editorial Board of the *New Appleman on Insurance Law Library Edition* and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged with *Insurance Litigation Reporter*, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 *Duke L.J.* 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Robert Johnson heads the firm's Litigation practice in Chicago and is the former chair of its Litigation practice. He specializes in complex litigation with an emphasis on insurance and reinsurance litigation, including class actions, representing such companies as Travelers, Hartford, Swiss Reinsurance, Allstate, ACE Bermuda, Stonewall, Country Mutual and Great American. Robert has represented insurance clients in scores of environmental and asbestos coverage cases in state and federal courts in Illinois, Iowa, Indiana, Wisconsin, Michigan, Missouri, Montana, Ohio, Delaware, Pennsylvania, Connecticut, New York, Massachusetts and California. He litigates other types of coverage claims as well, including product liability, construction defect, mold, bad faith, personal injury (including advertising injury), group health and disability, and reinsurance claims. Robert also has extensive litigation experience involving such diverse subject matters as securities fraud, antitrust, bankruptcy, patent infringement, construction disputes, shareholder disputes, fair housing and unlawful discrimination claims. In addition to his trial work, Robert has an active appellate practice, having handled appeals in the U.S. Courts of Appeal for the Second, Third, Fourth, Fifth, Seventh, Eighth, Ninth and Eleventh Circuits, the Supreme Courts of Illinois and Delaware, and in each of the five districts of the Illinois Appellate Court.

Keith Moskowitz has a nationwide litigation practice with an emphasis on complex class actions and insurance coverage disputes. Keith also counsels clients on insurance claim department organizational and process issues. He has extensive experience helping clients respond to and manage catastrophic claim events. Keith was named by *Chicago Lawyer Magazine* as one of the top "40 attorneys in Illinois under the age of 40." The publication notes that he "understands the insurance industry about as well as anyone could." Keith is committed to pro bono representations with a focus on assisting U.S. military veterans and their families.

SNR Denton on McReynolds v. American Commerce Insurance Co.: Interpleader as a Safe Harbor for Multiple Demands

By Ronald Kent

October 1, 2010

SUMMARY: *McReynolds v. American Commerce Insurance Co.* presented an issue at a doctrinal intersection: multiple claims with inadequate limits and claims subject to liens. The court held that an insurer could meet its obligation to consider the multiple offers in good faith by interpleading its policy limits and continuing to defend the insured. This commentary considers the case in light of the law elsewhere on both doctrinal points.

ARTICLE: *McReynolds v. American Commerce Insurance Co.* n1 presented an issue at a doctrinal intersection: multiple claims with inadequate limits and claims subject to liens. The court held that an insurer could meet its obligation to consider the multiple offers in good faith by interpleading its policy limits and continuing to defend the insured. This commentary considers the case in light of the law elsewhere on both doctrinal points.

I. The Case

Michael McReynolds was seriously injured in an accident with Tania Ranieri, who was insured with American Commerce Insurance Co. ("ACIC"). McReynolds was treated at Flagstaff Medical Center ("FMC"), which filed a statutory lien in the amount of \$43,603.85. McReynolds demanded policy limits. ACIC tendered a two-party check (to McReynolds and ACIC) for its \$25,000 policy limit. McReynolds rejected the check, and sued Ranieri. He then made an offer of judgment for policy limits. Counsel advised ACIC that payment to McReynolds, without a release from FMC could expose FMC to liability on the lien. Within the time for acceptance of the offer of judgment, ACIC filed an interpleader and paid its policy limit into court. Eventually, FMC released its liens and the interpleader was dismissed. ACIC continued to defend Ranieri, but McReynolds obtained a judgment against her in the amount of \$469,110.67. Ranieri assigned any bad faith claim she might have to McReynolds, who sued ACIC. The trial court granted summary judgment to ACIC and the court of appeals affirmed. n2

The court saw the issue as "whether the insurer had a duty to properly manage the policy limits and, if so, whether the good faith filing of a prompt interpleader satisfies that duty." n3 McReynolds argued that, faced with multiple

claims (the personal injury claim and the lien claim), ACIC should have used the policy limits to minimize the insured's exposure by paying his claim and leaving the lien claim outstanding. The premise was that ACIC had refused to accept his policy limits demand. But the court disagreed with the premise, finding that ACIC "chose to pay everything by promptly interpleading the entire policy limits into the court and continuing to provide a defense." n4

Arizona law had not recognized any duty for the insurer to manage the policy limits, but to the extent that there was such a duty, the court concluded that it was "best considered as being part of the established duty to fairly consider settlement offers, giving equal consideration to the insured's interest." n5 In applying that duty, the court looked to out-of-state authority suggesting the utility of interpleader in multiple claimant situations. n6 In contrast, courts that had applied other rules "either create substantial uncertainty or risk unfair treatment of claimants." n7 Unfair treatment could result if payment to one or more claimants exhausted the policy limit, leaving nothing for others. Uncertainty would result if an insurer would risk bad faith liability by refusing to make a settlement with only some claimants and trying to effect a global settlement that would fully protect its insured. n8 Cases which had found jury questions on bad faith in such situations left the insurer with no safe course of action: it could be sued for settling too quickly with some claimants or for failing to do exactly that. n9

The better approach should offer greater certainty, so the court held that

(1) the prompt, good faith filing of an interpleader as to all known claimants with (2) payment of the policy limits into the court and (3) the continued provision of a defense for the insured as to each pending claim, acts as a safe harbor for an insurer against a bad faith claim for failure to properly manage the policy limits (or give equal consideration to settlement offers) when multiple claimants are involved and the expected claims are in excess of the applicable policy limits. n10

On the undisputed facts, this rule supported summary judgment for ACIC.

II. Analysis

A. Other Jurisdictions Have Not Found Interpleader So Complete a Solution as the *McReynolds* Court.

When insurers are unable to negotiate a global settlement among multiple claimants, they frequently resort to interpleader actions to allocate the available funds. n11 Indeed, some courts (like the *McReynolds* court) suggest that an insurer should attempt a global settlement and, if unsuccessful, seek judicial assistance by proceedings in the nature of interpleader. n12 There certainly are situations where interpleader could be useful in achieving a global settlement. n13 But, ultimately, interpleader cannot force a settlement where the claimants are unwilling. An interpleader can only enjoin other actions with respect to the fund interpleaded; it cannot enjoin pursuit of other sources of payment, such as the insured. n14

Thus, an interpleader leaves the insured subject to continued suit by any claimants whose full claims are not satisfied (which might well be all of them). As a practical matter, that may not be as troublesome as it sounds. If the insured is judgment proof (or nearly so), it will not be worth anyone's while to continue suit and, if necessary, the insured could usually discharge the claims in bankruptcy. And if the insured has assets reachable by creditors, the insured should be brought into the settlement negotiations. If the insurer follows the insured's direction on deployment of the policy limits, it should ordinarily be protected from any bad faith claim. n15

But one could get to much the same result, more neatly, by holding that an insurer faced with multiple claimants and inadequate limits is always entitled to hold out for a global policy limits settlement. That would force the multiple claimants to bargain among themselves or themselves ask the court to divide the offered, instead of devoting their energies to trying to set up a bad faith claim. I have argued for the latter rule elsewhere. n16

Because the rule articulated by the *McReynolds* court will likely have the same practical effect as the one I advocate, it would appear to be a reasonable alternative.

B. The Result Can Also Be Supported by the Fact That the Second Claim Here Was Not an Independent Claim, but a Lien on McReynolds' Claim.

McReynolds' theory was that ACIC should have paid him and left the lien claim outstanding, because that would have eliminated most of the tort exposure (over 90% of it, based on the ultimate verdict). One flaw in that logic is that Ranieri might have been no better off with reduced tort exposure. If she wanted to eliminate that exposure (e.g., to protect any future earnings), she would need to declare bankruptcy, and bankruptcy will eliminate a large judgment or exposure as easily as a small one. Ranieri's desire would be not to have to file bankruptcy at all, and that could only be achieved by holding out for a global settlement (or interpleading the policy limit).

But putting that aside, what McReynolds was requesting was something neither McReynolds nor Ranieri could have been entitled to. The liability limit is the most an insurer is obliged to pay to discharge the insured's liability. Had ACIC paid that to McReynolds, it would have remained exposed to the statutory lien claim by FMC, so that it would (or at least might) be required to pay more than its liability limit. By filing the interpleader, ACIC offered its limits and was entitled not to offer more. If, as FMC apparently concluded was the case, the lien would have been subordinated due to the inadequacy of the policy limits, then the interpleader would eventually have resulted in payment of the limits to McReynolds. If FMC really were entitled to a priority claim, there would have been nothing left for McReynolds. In neither event should he have been entitled to force ACIC to predict the law on this point, at the risk of either bad faith liability or double payment.

For these reasons, other jurisdictions hold that if the claim against the insured is subject to a statutory lien and the lienholder does not join in a settlement demand, the demand may be invalid and bad faith liability precluded, because the tort claimant alone is unable to provide a valid release. ⁿ¹⁷ The lienholder is viewed as a necessary party to any settlement. This is appropriate, because the insurer might otherwise be obliged to make a double payment of the lien amount, if the claimant failed to satisfy the lien claim out of the settlement proceeds. ⁿ¹⁸

Thus, the *McReynolds* result is clearly correct on its own facts, even if Arizona did not recognize the safe harbor articulated by the court.

SNR Denton on Roehl Transport, Inc. v. Liberty Mutual Insurance Co.: Wisconsin Recognizes New Form of Bad Faith

By William T. Barker

October 1, 2010

SUMMARY: In *Roehl Transport, Inc. v. Liberty Mutual Insurance Co.*, the Wisconsin Supreme Court has recognized a new form of bad faith failure to settle: failing to minimize use of the insured's deductible. This commentary critically examines that decision in light of other cases addressing an insurer's duties regarding deductibles and retrospective premiums.

ARTICLE: In *Roehl Transport, Inc. v. Liberty Mutual Insurance Co.*,ⁿ¹ the Wisconsin Supreme Court has recognized a new form of bad faith failure to settle: failing to minimize use of the insured's deductible. This commentary critically examines that decision in light of other cases addressing an insurer's duties regarding deductibles and retrospective premiums.ⁿ²

I. The Case

One of Roehl Transport's trucks rear-ended a car driven by Arthur Groth, who sued. Roehl's policy had a \$2 million limit, but a \$500,000 deductible. Liberty Mutual was entitled to control settlement, though Roehl was entitled to be consulted. A jury awarded Groth \$830,400 in damages, fully consuming Roehl's deductible. Roehl claimed that Liberty Mutual could and should have settled for \$100,000, and sued for bad faith.ⁿ³ The bad faith jury found "(1) that Liberty Mutual breached duties owed to Roehl Transport in the handling of the Groth claim; [and] (2) that Liberty Mutual's failure to perform its duties to Roehl Transport 'demonstrated a significant disregard of Roehl Transport's interests such that Liberty Mutual's failure to settle Groth's claim was done in bad faith.'"ⁿ⁴ It awarded \$127,000 in damages. Liberty Mutual appealed.ⁿ⁵

The Wisconsin Supreme Court affirmed judgment on the verdict, holding:

(1) Roehl Transport, an insured with a deductible for its liability coverage, has a cognizable bad faith claim against its insurance company when the company has control over settlement of a third-party claim and engages in bad faith conduct toward the insured, even though the judgment does not exceed the policy limits.

(2) Sufficient credible evidence supports the jury's finding of bad faith and the jury's determination of damages in this case.

(3) Judicial public policy considerations do not preclude Roehl Transport's bad faith claim. n6

Roehl argued that

in investigating and handling a claim of liability against it, Liberty Mutual may not ignore the interests of Roehl Transport. Roehl Transport contends that Liberty Mutual cannot conduct a slipshod investigation, ignore settlement opportunities, mishandle the legal defense, and engage in all manner of misconduct, thus wasting Roehl Transport's \$ 500,000 deductible, but then avoid legal responsibility for its alleged bad faith actions only because the judgment entered was within policy limits. n7

Liberty Mutual responded that Roehl had bargained for lower premiums by accepting a high deductible and ought not be permitted to complain about having to pay an amount up to the deductible. n8

The court began by examining the basis for the existing duty to act in good faith regarding settlement. That "duty is implied by the terms of the insurance policy that give the insurance company exclusive power to settle claims." n9

[T]hird-party bad faith claims arose to protect holders of insurance policies against abusive, "bad faith" practices of insurance companies in adjusting or settling liability claims against the insured when the interests of the insured are in the hands of the insurance company and may come into conflict with the insurance company's own interests. n10

In the traditional duty to settle claim, there is a conflict regarding excess exposure. If the insurer settles within policy limits, it protects its insured from excess exposure, but sacrifices its own interest in seeking a defense verdict or a lesser judgment or settlement. If the settlement opportunity is at or near policy limits, the insurer may have little or nothing to gain from settling. In light of this conflict of interests, an insurer is obliged to exercise good faith in making settlement decisions. In Wisconsin, this duty includes initiating settlement negotiations when that is the reasonable course of action. n11

In the court's view, this case was analogous to those recognizing a duty to settle, because Roehl had bargained away control of settlement and was dependent on Liberty Mutual to protect its interests. At least potentially, there could be conflicts between their interests:

The insurance company might offer an unnecessarily high settlement within the deductible to avoid the expense of diligent investigation and adjustment. Or it might expend insufficient effort to investigate a claim unless or until the insurance company's own money is at risk when the value of the claim approaches or exceeds the deductible.

The insurance company's apparent interest in settling claims below the deductible is to minimize its own costs, not necessarily to minimize the total payment to the claimant. Just as in traditional third-party excess judgment cases, the insured with a high deductible needs the protection of a bad faith cause of action to guard against the risk that an insurance company's exercise of control over a claim might favor its own financial interests over those of the insured. This possibility gives rise to a cause of action for bad faith. n12

While Liberty Mutual argued that recognizing a cause of action in this context would "'open the floodgates' to a great volume of wasteful or frivolous claims," the court concluded that insurers were adequately protected by existing liability standards: "[i]nsurers in Wisconsin need not be mulcted by extortionate or questionable claims if they adhere to the standards of care which we have set forth" n13 The court also found support in cases from other jurisdictions involving deductibles or retrospective premiums, a subject that will be deferred to the analysis of the result in *Roehl Transport*. n14

Because liability here was based on expert testimony about what Liberty Mutual "could have settled for," Liberty

Mutual argued that causation was so remote and speculative that judicial public policy considerations barred the claim.
n15 The court disagreed. n16

Liberty Mutual also challenged the sufficiency of the evidence to support a finding of bad faith. Such a challenge could not succeed "unless the court is satisfied that, considering all credible evidence and reasonable inferences therefrom in the light most favorable to the party against whom the motion is made, there is no credible evidence to sustain a finding in favor of such party." n17 The jury instruction, which Liberty Mutual did challenge and that the court said was "in keeping with case law," specified that "[t]he term 'bad faith' carries with it the suggestion of dishonest or deceitful conduct." n18

The court provided a further description of the case law which supported the instruction:

Our cases have defined bad faith by reference to "deceit; duplicity; insincerity." The cases characterize bad faith as "a species of fraud." We have said that "the knowing failure to exercise an honest and informed judgment constitutes the tort of bad faith," and that "[t]he insurance company, . . . to be liable, need not be found to have committed fraud or to have acted dishonestly" A jury may properly conclude that an insurance company's "massive failure" to carry out its identified duties constitutes a "suggestion of dishonesty" or 'a species of fraud,' within the meaning of 'bad faith.'" n19

But the jury was also instructed that:

"'[B]ad faith' is a term of broad application, and it is sometimes difficult to exactly define within the framework of every case"; that the jury must "consider whether the company, in failing to perform the duties it owed to Roehl Transport[,] demonstrated a significant disregard of Roehl Transport's rights and economic interests"; that the company's "decision not to settle should be an honest one, taking into consideration both the interests of the company and the interests of the insured;" that the company's "[negligence] alone is not enough to show the company acted in bad faith"; that the jury is to "consider the totality of the insurance company's decisions in the handling of the injured party's claim to determine whether those decisions were intellectually honest and reasonable"; that if the jurors determine that the company's decisions "were not honest and reasonable decisions, then the company may be said to have acted in bad faith"; and that if the jurors "conclude that important facts were recklessly ignored and disregarded during Liberty Mutual's adjustment of the claim, then the company may be said to have acted in bad faith." n20

Contrary to Liberty Mutual's arguments, this instruction did not require a "specific finding of deceit or dishonesty."
n21

The jury was instructed that Roehl Transport bore the burden of proving bad faith by "clear, satisfactory, and convincing evidence." n22 The court found that the evidence would have allowed the jury to conclude that

Liberty Mutual's decisions demonstrated a significant disregard of Roehl Transport's rights and economic interests and were not honest. The evidence showed that Liberty Mutual employed claims personnel on the Groth claim who had little training or experience with trucking claims; that there was high turnover in staffing the Groth claim; that Liberty Mutual failed to adequately supervise the staff's handling of the claim; that the investigation of the accident and Groth's injuries and medical condition was inadequate; that the insurance company mishandled the independent medical examination so that the extent of injury and disability liability attributed to Roehl Transport was exaggerated; that Liberty Mutual made no attempt to settle Groth's claims when it had the opportunity to do so; and that Liberty Mutual failed to retain experts, including an accident reconstructionist, who could have provided evidence limiting Roehl Transport's liability to Groth. n23

That sufficed to support the verdict. n24

II. Analysis

A. Insurer Duties of Good Faith Regarding Settlement Involve Different Considerations Under Loss-Sensitive Policies than Under Fixed-Cost Policies.

Standard liability insurance policy language both gives the insurer a right to settle when it deems that expedient and restricts the insured's ability to settle by requiring that it be done only with the insured's own funds, so that a settlement by the insured would effectively forfeit coverage. n25 These provisions vest the insurer with control of settlement.

Under fixed-cost policies, where the insured's only exposure is to liability exceeding the policy limit, and in the absence of contractual language to the contrary, the insurer's right to settle with its own funds is virtually absolute, n26 though it may not sacrifice the insured's affirmative claims or commit the insured's assets to settlement. n27 Because the insured is at risk for liability in excess of the policy limit, and because (as the *Roehl Transport* court points out) this creates a conflict of interest regarding the insurer's decisions on settlement, the law in all American jurisdictions has imposed a duty on insurers to take account of the insured's interests as well as its own. n28

But some policies, like that in *Roehl Transport*, have features providing for sharing of the risk within policy limits by the insured. That may take the form of a deductible, which the insured must reimburse, or a retrospective premium, adjusted from time to time based on the loss experience under the policy. n29 As *Roehl Transport* illustrates, such loss-sharing features generate different types of tension between insurer and insured than those found in traditional duty-to-settle cases. Prior to *Roehl Transport*, courts have considered these issues in connection with challenges by insureds to insurer decisions to settle, when the insurer sought reimbursement of amounts within the deductible or to collect a retrospective premium based on the settlement.

B. If an Insurance Policy Provides for a Deductible or Retrospective Premium, the Insurer's Ability To Collect May Depend on any Settlement Being in Good Faith

1. If the Policy Language Gives the Insurer Settlement Authority, the Insured's Consent Is Not Required

If a policy is loss-sensitive, that means that a decision to settle within limits will impose costs on the insured. Courts have not agreed on the extent to which an insurer's settlement decisions under such a policy are reviewable and, if so, under what standards.

Where the policy confers authority to settle on the insurer, almost all of the decided cases authorize it to utilize the insured's funds to do so without the insured's consent. n30 Most of these cases involve only conventional policy language on authority to settle, not specific language addressing commitment of insured's funds. Obviously, use of more specific language would be advisable. An insured who does have a right to veto settlement cannot "permit" that settlement while denying the obligation to commit its self-insured retention. n31

A few cases hold that the insured must consent to a settlement for the insurer to be able to recover the deductible. n32 They are contrary to the great weight of authority and give inadequate effect to policy language conferring on the insurer the right to settle, language agreed to by even sophisticated commercial insureds.

2. Courts Apply Varying Standards To Insurer Claims for Reimbursement or Retrospective Premiums

Most of the reported cases seem to contemplate the theoretical possibility of an attack on actual settlements when the insurer seeks payment of a deductible or retrospective premium. n33 However, most of them also hold that an insurer's decision to settle will be given considerable deference, so attacks should rarely succeed.

A few cases appear to suggest that an insured's decision to bargain for the reduced premiums which accompany both a loss-sensitive provision and the omission of any right to veto settlement preclude any challenge. n34 But the facts generally indicated reasonable conduct in each case. One case hypothesized that the insured *might* be able to attack a settlement if *no* reasonable insurer would have made it, but found no facts to support such a claim there. n35 Thus,

most of these suggestions of an absolute right to settle are arguably dicta, not fully reliable even in the courts making them. n36 One case found the actual settlement "prudent and well reasoned" (perhaps because it came in the wake of a larger jury verdict) and did not address what standard would apply beyond placing the burden of showing bad faith on the insured. n37

The most articulate case as to the applicable standard is *American Home Assurance Co. v. Hermann's Warehouse Corporation*. n38 The New Jersey Supreme Court made it clear that a settlement utilizing the insured's funds is reviewable for bad faith, but it set a high threshold, not met on the facts there. It began by noting that a conflict of interest was "built-in" to the policy structure, because the insurer could always try to save defense costs (and risks to its own funds) by too readily committing the insured's funds to settlement. But insureds purchasing such policies are generally sophisticated and able to obtain policies without deductibles and/or with settlement vetoes if they wish. An insurer's duty of good faith as regards its settlement power required no more than "ordinary diligence in performing that power when in the exercise of it." n39 The allegations raised by the insured there at most raised "a question of the carrier's judgment. Bad judgment does not equate with bad faith. Given the broad discretion that must be accorded the insurer ..., courts should not second guess a legitimate, albeit questionable, judgment call." n40

Retrospective premium arrangements commonly provide for payment by the insured of *more* than the amount actually paid out, the excess being an allowance for claim handling expenses. This means that the insurer might be able to profit by skimping on claim adjustment and inflating claim payments. As a result, some courts dealing with such arrangements have been less deferential, requiring the insurer to establish that the payments made were reasonable. n41

A leading case reasoned:

Because of the conflict of interest which is inherent in this arrangement, we believe ... that the right of the insurer to collect from the insured in the form of a retrospective premium amounts paid out by it as losses should be contingent upon proof by the insurer that the settlements so made were in good faith and reasonable. The insurer, having been charged with the responsibility for investigating and adjusting the loss, is in possession of the relevant information upon which a determination of reasonableness and good faith must be based. The insured, having delegated the right and duty of investigation and settlement to the insurer, and having agreed to pay the expense incurred in carrying out this assignment, has, by the terms of its insurance contract, put the information critical to the issue of reasonableness and good faith in the exclusive possession of the insurer. If the insured is to pay out as a retrospective premium the amounts paid by the insurer in settlement of liability claims under circumstances where, theoretically at least, the settlement of the claim has been beneficial to both (to the insured to the extent of its exposure up to the \$5,000 maximum and to the insurer to the extent of its exposure for any amount in excess of that), the insured should be entitled ... to have the insurer produce the information pertinent to the reasonableness and good faith of the settlement and assume the burden of proof on the issue. n42

Other courts have supplemented this rule by requiring the insured to bear the burden of producing evidence that a particular settlement was questionable, absent which all settlements would be presumed reasonable. n43 If a settlement is problematic, ordinary discovery should enable an insured to show that. This is more efficient than requiring the insurer to present evidence justifying the handling of every claim.

An insurer's duty to minimize retrospective premiums due to itself was distinguished from any possible obligation to take action to minimize the insured's future premiums. In finding no duty of the latter sort, the court in *New Plumbing Contractors Inc. v. Nationwide Mutual Insurance Co.* n44 reasoned that the insured "is not complaining about the receipt of benefits under the [subject] policy, rather it is complaining about what it had to pay in the marketplace for insurance in future years. This does not implicate ... any implied obligation of good faith." n45 Another case suggested that *New Plumbing's* ruling on this point may be applicable only where future premiums are determined in a competitive market, rather than pursuant to a state-imposed rating structure applicable to all insurers. n46 However, because *New Plumbing* itself involved a state-imposed rating structure, the purported distinction does not apply.

By analogy to cases regarding excess judgments, it would seem that the insurer need do no more than show that it was being as careful with the insured's money as it would be with its own. One class of cases where that would seem true as a matter of law would be those where the insurer spent at least as much of its own money as of the insured's money.

One commentator disputes that point. ⁿ⁴⁷ He asserts that the insured should have the chance to gamble on trial (which might produce a defense verdict) whenever the settlement demand exceeds the fair value of the case. On this basis, he argues that the insurer can deprive the insured of this right by spending too much of its own money. He claims that this is the logical implication of the "disregard the limits" rule.

But if that were true, the insurer would have the right to refuse to offer its limits if an above-limits demand were excessive, even if the insured were prepared to make the necessary contribution to satisfy the demand. Clearly, that is not so. Each party's funds should be committed to the full extent of the objective fair settlement value, with the other party free to supplement if it prefers to eliminate the risk of greater liability.

Where the insured has an SIR and retains the functions normally performed by a primary insurer, it would seem that the insurer ordinarily could not commit the insured's funds to settlement without its consent. The major issue would seem to be what standards, if any, govern the insured's decision whether to settle. ⁿ⁴⁸

3. Roehl Transport Is Consistent with Cases Where the Insurer Did Settle

The supposed conflict in *Roehl Transport* does not apply to the actual settlement decision (in that case, the decision not to settle, or at least not to initiate settlement negotiations). Liberty Mutual had no reason to refuse a reasonable settlement that would be fully reimbursed by Roehl. After all, failure to settle might expose Liberty Mutual to liability above the deductible (as it actually did). To the extent that there is a conflict, it concerns handling of the defense: Liberty Mutual's claim handlers might have thought that they could skimp on defense efforts, so long as they believed--mistakenly--that the claim would ultimately be resolved within the deductible. From the court's description of the facts, it appears that the jury could have found such skimping--or at least reckless failure to provide an adequate defense.

But even there, Liberty Mutual had an incentive to avoid any risk of liability beyond the deductible, so its interests were largely (though not completely) aligned with those of Roehl. Thus, as in the cases where the insurer settled and sought reimbursement or a retrospective premium, considerable deference should be accorded the insurer's decisions. That implies a high threshold for any bad faith claim by the insured. *Roehl Transport* applies such a threshold and reaches what appears to be a sound result.

SNR Denton on Insurer Recoupment of Noncovered Defense Costs and Settlements

2010 Emerging Issues 5332

SNR Denton on Insurer Recoupment of Noncovered Defense Costs and Settlements

By William T. Barker

September 30, 2010

SUMMARY: A recurring issue is whether an insurer that has provided a defense under a reservation of rights (including a reservation of the right to recoup the cost of that defense if a court finds there was no duty to defend) can in fact recover its defense costs. This commentary critically reviews two August 2010 court decisions and other recent decisions on this issue and argues that recoupment should be permitted under the law of unjust enrichment.

ARTICLE: A recurring issue in the law of liability insurance is whether an insurer that has provided a defense under a reservation of rights (including a reservation of the right to recoup the cost of that defense if a court finds there was no duty to defend) can in fact recover its defense costs. On two consecutive days in August, the Tenth Circuit predicted that Colorado law would allow such a recovery, ⁿ¹ and the Pennsylvania Supreme Court refused to allow such a recovery. ⁿ² This commentary critically reviews those decisions and other recent decisions on this issue and argues that recoupment should be permitted under the law of unjust enrichment.

I. Background of the Recoupment Issue

Liability insurers are frequently called upon to defend suits against their insureds when it is questionable whether there is actually a duty to defend. The consequences of an unjustified refusal to defend can be quite unpleasant, so insurers often defend when they believe there is no duty to do so, but fear that a court might disagree. In such circumstances, they would like to be able to obtain reimbursement (sometimes called recoupment) of the amounts they expend on defense if they later establish that no defense was owed.

Similarly, an insurer defending a case with potential for a judgment in excess of policy limits is often faced with a demand that it settle for or within policy limits, even though it questions whether the claims that would be settled are actually covered by the insurance policy. But, in many jurisdictions, failure to settle might expose the insurer to liability for the full judgment, if that judgment turns out to be covered. The insurer would like to have the option of settling the claim against the insured and then, if it can establish lack of coverage, recouping the payment from the insured.

Courts are divided on these issues. n3 The state of the law, while evolving, has been reviewed elsewhere, n4 and the Pennsylvania Supreme Court collected cases. n5 This commentary will not reexamine that topic. Instead, it will argue that, as a matter of the law of unjust enrichment, recoupment should be allowed if the insurer takes the proper steps. It will then examine the arguments presented by leading anti-recoupment cases and explain why those arguments should not defeat the right to recoup.

The recoupment issue is frequently argued and analyzed as a question whether the insured has, at least impliedly, agreed to reimburse the insurer. n6 That analysis has some utility where the insurer has reserved the right to recoup and the insured has acquiesced in that reservation. It tends to break down if the insured protests the reservation and the insurer insists on it. Does the insured have to reject the conditional payment to avoid the condition, or does rejection of the condition force the insurer to choose between an unconditional payment and making no payment at all? n7 For this reason, and because unjust enrichment analysis provides an answer that is implied in law and does not depend on agreement, that analysis seems more useful. n8 But American courts and lawyers typically do not understand unjust enrichment law very well, so they tend to overlook or undervalue arguments based on that law. n9 For insurer counsel arguing for recoupment, it would be a great mistake not to make full use of the unjust enrichment argument.

Before commencing the unjust enrichment analysis, let us put aside one issue: defense of so-called "mixed" suits, containing some claims subject to a duty to defend and some not subject to such a duty. In *Buss v. Superior Court* the California Supreme Court held that, in such cases, an insurer that properly reserves its rights may recoup any defense costs attributable solely to the noncovered claims. n10 But a dissent argued that the duty to defend is a duty to defend the entire lawsuit, so that the insured could not be unjustly enriched by the insurer's discharge of such a duty. n11 Ultimately, that question is one of interpreting the contract, which is beyond the scope of this commentary. This commentary will assume the *Buss* dissent was correct on that point, so that recoupment of defense costs is even potentially available only when the insurer has no duty to defend at all.

II. Example Cases: *Health Care Management Partners*, *Jerry's Sports Center*, *Midwest Sporting Goods* and *Frank's Casing*

The two new cases are *Valley Forge Insurance Co. v. Health Care Management Partners, Ltd.* n12] and *American & Foreign Insurance Co. v. Jerry's Sports Center, Inc.* n13 Prior to them, the two most recent and prominent cases were *General Agents Insurance Co. v. Midwest Sporting Goods Co.* n14 and *Excess Underwriters at Lloyds v. Frank's Casing Crew & Rental Tools, Inc.*, n15 both of which denied recoupment. The fact patterns of these cases will be used as examples. Most of the analysis in these decisions directly addressing unjust enrichment was offered by the Texas Supreme Court in *Frank's Casing*, but *Jerry's Sports Center* and *Midwest Sporting Goods* addressed that issue indirectly.

In *Health Care Management Partners*, the United States sued the insureds for Medicare and Medicaid fraud, and they sought a defense from Valley Forge and other insurers. The insurers disputed coverage but offered a defense under reservation of rights, including a reservation of the right to recoup their defense costs. The insureds never objected to the reservation. In this coverage action, the district court declared that there was no duty to defend or indemnify, a judgment affirmed on appeal. It awarded recoupment to the insurers but denied prejudgment interest. n16 Both sides appealed, and the Tenth Circuit again affirmed. Colorado Supreme Court opinions had stated that an "appropriate course of action for an insurer who believes it is under no obligation to defend is to provide a defense to the insured under a reservation of its rights to seek reimbursement" should it later be determined that there was no coverage. n17 Even if these statements were only dicta, they were a sufficient basis to predict the Colorado court's likely decision. n18 But there was no clear authority requiring payment of prejudgment interest on the amount recouped and requiring the insured to do so might upset the balance that the Colorado court had struck in approving recoupment. So, the Tenth Circuit declined to innovate in predicting state law on interest. n19

In *Jerry's Sports Center*, the insurers (collectively, Royal) had provided liability insurance with respect to "damages because of 'bodily injury'" caused by an "occurrence" during the policy period. Jerry's was sued (along with

other firearms wholesalers) for creating a public nuisance by failing to distribute firearms reasonably and safely. Royal provided the services of a law firm experienced in defending such actions, but also reserved the right to recoup its defense costs if there were no duty to defend. However, Royal agreed not to seek recoupment of any costs incurred before it determined that a defense was not owed. Jerry's did not object to the reservation. Royal sought and obtained a declaration that there was no duty to defend, and sought recoupment of defense costs incurred after filing of the coverage action. n20 The trial court awarded recoupment, based on the law of unjust enrichment, but the Supreme Court reversed that award.

In *Midwest Sporting Goods*, Midwest was sued for creating a public nuisance by selling guns to inappropriate purchasers. General Agents Insurance Co. ("Gainsco") asserted that there was no coverage but offered a defense under reservation of rights, specifically including the right to recoup its defense costs if it were later determined that it had had no duty to defend. Midwest accepted the proffered defense without protest. Gainsco obtained a summary judgment that it had no duty to defend, affirmed on appeal. Gainsco then pursued its claim for recoupment (stayed during the appeal) and obtained a judgment for \$40,517.34 against Midwest. The Illinois Appellate Court affirmed, but the Illinois Supreme Court reversed. n21

In *Frank's Casing*, ARCO/Vastar sued Frank's Casing for collapse of a drilling platform in the Gulf of Mexico. Frank's Casing had primary insurance with limits of \$1 million and \$10 million in excess insurance with Excess Underwriters. Excess Underwriters had no duty to defend. Coverage under Excess Underwriters' policy for ARCO's claims was then in dispute. Frank's Casing faced possible liability substantially beyond its insurance limits.

During trial, Frank's Casing received a demand that it contribute \$7.5 million to settle ARCO's claims. It was undisputed that, in relation to the liability and damages exposure in ARCO's suit, this was a reasonable amount. The primary insurance had tendered its remaining limits, and Frank's Casing demanded that Excess Underwriters contribute over \$7 million to fund the remainder of the demand. Given the coverage dispute, Excess Underwriters offered to pay \$5 million if Frank's Casing would pay the remainder. When Frank's Casing refused this offer, Excess Underwriters offered to pay the entire amount, subject to the right to recover it from Frank's Casing if a court later found no coverage. Frank's Casing refused to agree to any reimbursement obligation, but continued to demand that Excess Underwriters pay the amount necessary to settle. If Excess Underwriters refused to settle, Frank's Casing threatened to hold it responsible for any excess judgment that might result from failure to settle.

Excess Underwriters agreed to fund the settlement, but reserved the right to seek reimbursement if a court later found no coverage. Frank's Casing consented to the settlement, but denied any reimbursement obligation. It later obtained a judgment that there was no coverage, and sought recoupment. The Texas courts nonetheless denied recoupment.

III. The Law of Unjust Enrichment Supports Recoupment.

A. The Absence of Coverage Establishes a Prima Facie Claim for Unjust Enrichment.

Because there was no coverage for either defense or indemnity in any of these cases, none of the insureds had actually been entitled to any assistance from its insurer regarding the claims asserted against it. n22 Each received a substantial benefit that was never due under the insurance contract. As the Restatement (Third) of Restitution and Unjust Enrichment explains, these facts make out a prima facie claim for restitution of unjust enrichment:

Where a valid contract defines the scope of the parties' respective performance obligations, a performance in excess of contractual requirements - neither gratuitous nor pursuant to a compromise - results in unjustified enrichment of the recipient and a prima facie claim in restitution.... "Restitution in such a case does not require that the contract be set aside; instead it is a means of enforcing adherence to the contract, through ordering repayment a sum to which the recipient was not entitled under the contract." n23

On this basis, the Restatement provides that

[i]f one party to a contract demands from the other a performance that is not in fact due by the terms of their agreement, the party on whom the demand is made may render such performance under protest or with reservation of rights, preserving a claim in restitution to recover the value of the benefit conferred in excess of the recipient's contractual entitlement. n24

In *Frank's Casing*, the Texas Supreme Court, in rejecting recoupment, relied on the generally accepted rule that "[w]hen a valid agreement already addresses the matter, recovery under an equitable theory is generally inconsistent with the express agreement." n25 The premise of this rule is that "[t]o recognize an equitable right to reimbursement would require us to 'rewrite the parties' contract [or] add to its language.'" n26 If recognizing a recoupment claim would alter the allocation of benefits and burdens made by the contract, this point would have force. But, for precisely the reasons the Restatement points out, recognizing a claim for recoupment of benefits not due under the contract actually enforces the contract, rather than rewriting the contract. Indeed, the very case the Texas Supreme Court relied on for the quoted rule recognizes a widely followed exception: "*overpayments* under a contract can be recovered under a theory of restitution of unjust enrichment." n27 So, the *Frank's Casing* logic on this point is unsound and ought not to be followed.

The same point disposes of the Illinois Supreme Court's concern that it is unjust to put the insured to a "Hobson's choice between accepting the insurer's additional conditions or losing its right to a defense from the insurer." n28 The insured can preserve all of its rights by accepting a defense subject to a right of recoupment. If recoupment is ever found due, it will be because the insured never had any right to a defense. Being forced to reimburse benefits it was never entitled to is hardly unjust, so neither is being asked for an agreement to do so in return for the insurer advancing amounts it may not be obliged to pay.

B. Mere Uncertainty About Existence of Coverage Does Not Create a Duty to Defend.

The foregoing analysis presumes that the later determination that there is no duty to defend means that there was never a duty to defend. Some of the anti-recoupment cases suggest that this is untrue, that there was a duty to defend until such time as the court determined that there was not. That suggestion is unsound, for reasons that will now be discussed.

This suggestion is particularly prominent in *Jerry's Sports Center*. The court summarized the law on an insurer's duty to defend as follows:

An insurer's duty to defend is broader than its duty to indemnify. It is a distinct obligation, separate and apart from the insurer's duty to provide coverage. An insurer is obligated to defend its insured if the factual allegations of the complaint on its face encompass an injury that is actually or potentially within the scope of the policy. As long as the complaint "might or might not" fall within the policy's coverage, the insurance company is obliged to defend. Accordingly, it is the potential, rather than the certainty, of a claim falling within the insurance policy that triggers the insurer's duty to defend.

The question of whether a claim against an insured is potentially covered is answered by comparing the four corners of the insurance contract to the four corners of the complaint. An insurer may not justifiably refuse to defend a claim against its insured unless it is clear from an examination of the allegations in the complaint and the language of the policy that the claim does not potentially come within the coverage of the policy. In making this determination, the "factual allegations of the underlying complaint against the insured are to be taken as true and liberally construed in favor of the insured." Indeed, the duty to defend is not limited to meritorious actions; it even extends to actions that are "groundless, false, or fraudulent" as long as there exists the possibility that the allegations implicate coverage. n29

Based on this exposition, the court agreed with the insured

that whether a complaint raises a claim against an insured that is potentially covered is a question to be answered by the insurer in the first instance, upon receiving notice of the complaint by the insured. Although the question of

whether the claim is covered (and therefore triggers the insurer's duty to defend) may be difficult, it is the insurer's duty to make that decision. Insurers are in the business of making this decision. The insurer's duty to defend exists until the claim is confined to a recovery that the policy does not cover. Where a claim potentially may become one which is within the scope of the policy, the insurance company's refusal to defend at the outset of the controversy is a decision it makes at its own peril. n30

In the court's view,

If [the insurer] believes there is no possibility of coverage, then it should deny its insured a defense because the insurer will never be liable for any settlement or judgment. This would allow the insured to control its own defense without breaching its contractual obligation to be defended by the insurer. If, on the other hand, the insurer is uncertain about coverage, then it should provide a defense and seek declaratory judgment about coverage.

In a declaratory judgment action to determine whether a claim is covered, the court resolves the question of coverage. The court's role in the declaratory judgment action is to resolve the question of coverage to eliminate uncertainty. If the insurer is successful in the declaratory judgment action, it is relieved of the continuing obligation to defend. The court's resolution of the question of coverage does not, however, retroactively eliminate the insurer's duty to defend the insured during the period of uncertainty. n31

This discussion seems to make the existence of a duty to defend depend on the insurer's state of mind. If the insurer is confident that there is no possibility of coverage, and if the court agrees, then there never would have been any potential for coverage and there would have been no duty to defend. But if, on the same facts, another insurer believed that there was no duty to defend but was uncertain whether a court would agree, that uncertainty would give rise to a duty to defend. Apart from anti-recoupment cases, there appears to be no support for the suggestion that the duty to defend is subjective in this way. And that suggestion is inconsistent with the contractual roots of the duty to defend, roots the Pennsylvania court has lost sight of, even as it purports to rely on the contractual language.

The duty to defend is a contractual duty, so its scope depends on interpretation of the contract. The language and logic of the contract dictate that existence of the duty must ordinarily be determined from the allegations of the complaint. But courts often lose sight of both the logic and the contract itself. This can lead them into error, as it did in *Jerry's Sports Center*, where the court failed to understand the meaning of the "potential for coverage" rule and the way it derives from the contractual language.

This sort of error is not uncommon when courts deal with fact situations near the edges of the duty to defend. Understandably, they are accustomed to looking to prior cases construing the same standardized contractual provisions rather than analyzing those provisions anew in every case. This process leads to error when courts apply the general rules stated in prior cases without understanding the contractual logic that generated those rules. When the wording of the interpretive gloss is substituted for the contractual language, the meaning is inevitably distorted, especially where the court providing the gloss was concerned with a problem different from that before the court seeking to rely on that gloss. In extreme cases, courts may even forget that they are construing a contract rather than making common law that best suits judicial views of public policy.

Such courts apply the rule that an insurer must defend whenever there is the "potential for coverage" without regard for the roots of that rule in the insurance contract. They forget that "[t]he insurer's duty to defend its insured arises from the undertaking . . . stated in the contract of insurance." n32 When the duty is broad, that is because the contract makes it broad. But courts must not extend the duty beyond what the contract promises. n33

The "potential for coverage" rule is rooted in the contract, but in a way imposing limits that courts often fail to grasp. Indeed, courts often show no appreciation for the relevance of the contractual language on the duty to defend, failing even to mention that the policy contained such language.

A liability insurance policy ordinarily devotes most of its coverage-defining terms to specifying who is insured and

what liabilities an insured will be indemnified against, and on what conditions. The duty to defend is created by language promising to defend any suit against an insured alleging liabilities of the sort insured.

The "potential for coverage" rule derives from this language through a contractual construction explained by Judge Learned Hand in the seminal case of *Lee v. Aetna Casualty & Surety Co.* n34 Indeed, the Pennsylvania court acknowledged in *Jerry's Sports Center* that it was relying on that construction. n35

In *Lee*, Judge Hand reasoned that the insurer, having promised to defend, "has promised to relieve the insured of the burden of satisfying the tribunal where the suit is tried, that the claim as pleaded is 'groundless.'" n36 Consequently, "if the injured party states a claim, which, qua claim, is for an injury 'covered' by the policy . . . it is irrelevant that the insurer may get information from the insured, or from anyone else, which indicates, or even demonstrates" that the allegations of a covered basis of liability are false. n37 The duty to defend has not been discharged until the court entertaining those allegations has been convinced that no liability of a type covered by the policy exists. n38

This is the first aspect of the "potential for coverage" rule. "Potential for coverage" refers to the potential for indemnity coverage, and such a potential exists if the complaint asserts any claim that, if proven, the insurer would be obliged to indemnify against. It matters not if the claim is "groundless, false or fraudulent." The insurer must protect the insured against the covered claim by successfully defending it or by paying or settling it.

Judge Hand found uncertainty about application of the duty to a suit involving allegations of both covered and noncovered grounds for the same purported liability, but he concluded that the uncertainty should be resolved in favor of the insured. This conclusion established another of the now entrenched doctrines governing the duty to defend with respect to such mixed claims: "if the plaintiff's complaint against the insured alleged facts which would have supported a recovery covered by the policy, it was the duty of the defendant to undertake the defence, until it could confine the claim to a recovery that the policy did not cover." n39

This is a second aspect of the "potential for coverage" rule: there is a potential for coverage (and a duty to defend) if any of the claims asserted would (if established) be covered, even if other claims are asserted for which there is no coverage.

The rule requiring defense of suits asserting mixed claims is supported by strong practical considerations where, as is the norm, the covered and noncovered claims arose out of the same incident. Defense of claims intertwined in that way usually must be conducted by a single chief counsel. So if the insurer is to defend the covered claims, no one else can be in a position to defend the others.

The *Lee* reasoning is universally applied, not only to mixed claims, but also to those where, due to the relatively unspecific nature of modern pleading, one cannot be sure whether the complaint asserts a covered claim. n40 If there is doubt about what claims are asserted against the insured, and if at least one of the claims that might be asserted is one that is covered, it will be assumed that the complaint actually asserts that claim, which requires the insurer to defend.

Both where the scope of the complaint is uncertain and where the complaint asserts both covered and noncovered claims, "it [is] the duty of the [insurer] to undertake the defence, until it [can] confine the claim to a recovery that the policy did not cover." n41 But the insurer "confines the claim" by defense activity, either by establishing that the covered claim is not asserted or by successfully disposing of that claim. Nothing in the traditional construction of the duty to defend depends on whether the insurer believes there is or might be coverage nor on whether a court has resolved any uncertainty about whether there is a duty to defend.

The Pennsylvania court in *Jerry's Sports Center*, and other anti-recoupment courts that rely on similar analysis have confused the "potential for coverage," as defined in *Lee* and its progeny, with the *risk* that coverage will be found. Certainly, that perceived *risk* will sometimes induce an insurer to offer a defense under reservation when, in fact, there is no potential for coverage and no duty to defend. But there is no basis in the contract language to find a duty to defend based on the *risk* that coverage might be found if there is no actual potential for coverage that would create a duty to

defend regardless of the perceived risk. So, this basis for anti-recoupment decisions is unsound and ought not to be followed.

C. The Voluntary Payment Rule Does Not Defeat Recovery.

Establishment of a prima facie claim for unjust enrichment is only the beginning of the unjust enrichment analysis. As the Texas Supreme Court and the Restatement had previously recognized, "[t]he restitution claim to recover a payment in excess of an underlying liability ... meets an important limitation in the voluntary payment rule." n42 Under that rule, "[m]oney voluntarily paid on a claim of right, with full knowledge of all the facts, in the absence of fraud, deception, duress or compulsion, cannot be recovered back merely because the party at the time of payment was ignorant or mistook the law as to his liability." n43 The insurers' uncertainty about whether there was coverage for the liabilities asserted against the insureds in *Midwest Sporting Goods* and *Frank's Casing* was an uncertainty about how the law would be applied to the known facts of those claims. So, the voluntary payment rule could apply, if its conditions were met.

The Texas court had recently explained the reason for the voluntary payment rule: "[a] party who pays a claim is deemed to have made his own decision that it is justly due. If he thinks otherwise, he should resist. He should not pay out his money, leading the other party to act as though the matter were closed, and then be in a position to change his mind and invoke the aid of the courts to get it back." n44 Other Texas courts had held that "the rule against recovery of voluntary payments is not applied rigidly where the reasons for the rule do not exist. In some cases the payor is allowed to recover the money if he clearly never intended to surrender his position." n45

1. Payment Under Duress of Circumstances Does Not Preclude Recovery.

Regardless of how rigidly the rule is enforced, the obligation to resist the claim before paying presupposes the ability to obtain a timely adjudication, before the payor is forced to risk irrecoverable harm if payment is refused. Thus, in rejecting a claim of duress in making payments not actually due under a contract, the Texas court had previously emphasized that "[a]ppellant certainly had ample time and opportunity to have had his day in court, before the business between him and appellee was closed by the last voluntary payment made by him. Not having complained until the late date at which this suit was brought, he cannot now be heard to complain." n46

Where there has been a need to act before the payor could have his day in court and a risk of forfeiture if he failed to pay, courts have been willing to find sufficient circumstantial duress or compulsion to permit an action for restitution of contractual overpayments. It should be emphasized that circumstantial duress sufficient to permit recovery of contractual overpayments is generally *not* sufficient to support an unjust enrichment recovery when there is no preexisting obligation to provide the measure of what is just. n47 So the rule urged here would have only narrow application.

In the context of contractual overpayments, a common example of circumstantial duress is a policyholder who has a life or disability insurance policy that grants a waiver of premium if the policyholder is totally disabled. If the policyholder claims to be disabled and the insurer disagrees, the policyholder faces a risk if he discontinues payment of premiums. Should a court find that the insurer was correct in denying the waiver, the policy will be forfeited for non-payment of premiums. But if payment of the premium would be deemed "voluntary" and non-recoverable, payment would forfeit the benefit of the waiver, through preventing forfeiture of the entire policy.

A few cases deny any right to recover premiums paid while disability was in dispute, taking a narrow view of what constitutes duress for purposes of the voluntary payment rule, and refusing to recognize the coercive effect of the risk of forfeiture. n48 But the better reasoned cases permit recovery. n49

As the court explained in *Still v. Equitable*, a key consideration is the lack of any means of resolving the dispute before the policyholder must decide whether to pay; duress for purposes of restitution "'is a relative . . . term' and . . . 'where there is a necessity of acting at once, less may be considered to amount to such compulsion than in other cases.'"

n50 Applying this principle to the facts before it, the court concluded that,

a person of ordinary business sense and prudence would have weighed the consequences with the same result as did the complainant. The compulsion under which the payments were made is apparent to anyone who appreciates the value of a life insurance contract. The complainant was so situated that, if he failed to establish the permanency of his disability, he could not hope to obtain other insurance. Decision could not be postponed and time was of the essence of the matter. The payments were necessary to preserve valuable rights, and ... we hold they were not voluntary. n51

This approach is not unique to insurance cases. One of the principal authorities cited by *Still* was *Young v. Hoaglund*. n52 This involved a disputed change in the composition of a corporate board. The old members of the board, disputing the legality of a meeting at which they had allegedly been ousted, levied an assessment on the stock of the company, and threatened to essentially "foreclose" the interests of those not paying by selling their shares. Plaintiff shareholders, being uncertain of whether the old directors retained the power to do this, paid (apparently without protest) and sought recovery. The new directors established, in another action, that they had properly displaced the old directors, so that the latter had had no power to levy the assessment. The California Supreme Court held that the shareholders were entitled to restitution of the payments.

The court held that "'where, by reason of the peculiar facts a reasonably prudent man finds that in order to preserve his property or protect his business interests it is necessary to make a payment of money which he does not owe and which in equity and good conscience the receiver should not retain, he may recover it.'" n53 Application of that principle was appropriate in *Young*. If plaintiffs had refused to pay, they would have lost their stock if the assessment were found to be legal. Assuming that the old directors were honest and sincere in their belief that they retained the power to assess, "it is hardly consistent for [them] to now claim that the stockholders knew that the assessment was illegal or even had reasonable grounds of believing it to be so, and therefore that the payment was voluntary on their part." n54

A final notable case supporting restitution based on action necessary to prevent a risk of forfeiture is *Sunset Copper Co. v. Black*. n55 There, a contract purchaser of real estate had gone into possession and made substantial improvements to the property. The seller then claimed to be entitled to interest on deferred payments of the purchase price, and threatened to forfeit the contract if the interest was not paid. The purchaser paid and sued to recover the payments. The court held that the threat of forfeiture was sufficient duress to allow recovery.

In his treatise on restitution, Professor Palmer agrees:

in *Sunset Copper* the purchaser ran the risk of forfeiture only if he was wrong in his contention that the contract did not provide for interest. The legal uncertainty was an element in the coercion, as the court recognized. There was a good faith dispute in that case as to the proper interpretation of the contract, and the suggestion that he had an adequate judicial remedy is true only if he was correct in his contention. If he was not, the only safe means to protect himself from forfeiture was to pay the amount demanded. On the other hand, if the terms of the contract are clear, so that the vendor's demand for an excess payment is made in bad faith, it ill becomes him to insist or for the court to hold that the purchaser should have used another remedy in resisting the unjust demand. n56

The Restatement also recognizes such circumstances as sufficient to permit a claim for restitution of contractual overpayments:

Faced with the impossibility in many circumstances, of obtaining a determination of the parties rights and obligations before the claimed performance is due, and failing a compromise, a contracting party may be compelled by circumstances to render a performance to which the other is not entitled. Compulsion lies in the fact that the alternative courses of action - rejecting the other party's demand before the requirements of the contract can be judicially determined - would expose the [payor] to a risk of loss or liability whose expected value exceeds the amount in controversy. In such circumstances, acceding to the recipient's unjustified demand is an action "in the reasonable

protection of the [payor's] own interests." n57

The right to recovery might be lost if the recipient were lulled into the belief that the payor was surrendering its position. That is the reason why a payor that intends to seek recovery must protest the payment or reserve its rights to seek recovery. n58 So, while the anti-recoupment cases are right that a reservation of rights cannot create a right that did not exist to begin with, n59 the right to be preserved need not be a contractual right. Such a reservation can preserve a right implied in law, such as the right to recover unjust enrichment.

The cases just discussed demonstrate that it is no bar to an unjust enrichment claim that the party conferring the benefit acted in part for that party's own protection. Indeed, it is the need to act for the unjust enrichment plaintiff's own protection before the parties' rights can be adjudicated that avoids application of the voluntary payment defense.

It has been argued that:

Faced with uncertainty as to its duty to indemnify, an insurer offers a defense under reservation of rights to avoid the risks that an inept or lackadaisical defense of the underlying action may expose it to if it turns out there is a duty to indemnify. At the same time, the insurer wishes to preserve its right to contest the duty to indemnify if the defense is unsuccessful. Thus, such an offer is made at least as much for the insurer's own benefit as for the insured's. If the insurer could recover defense costs, the insured would be required to pay for the insurer's action in protecting itself against the estoppel to deny coverage that would be implied if it undertook the defense without reservation. n60

In fact, the insurer defends for the benefit of whichever party is entitled to the benefits of the defense under the terms of the insurance policy. If there was no duty to defend, there was also no duty to indemnify, and the insurer will neither have discharged any obligation by defending nor benefited from the defense. Rather, all the benefits will have accrued to the insured, who would not have been entitled to receive them at the insurer's expense. Accordingly, the insured will have been unjustly enriched and should reimburse the insurer for the cost it incurred in defending.

2. The Circumstances in All of the Cases Under Discussion Created Strong Pressure to Act Before the Parties' Rights Could Have Been Adjudicated.

The foregoing analysis depends on the payor (here, the insurer) facing a requirement to act before the dispute about the obligation to pay can be resolved. In all of the cases under discussion, such a requirement was present.

a. In All of the Duty to Defend Cases, the Insurer Was Obligated to Defend or Face a Risk of Magnified Liability.

In all of the duty to defend cases, the insured had asked the insurer to defend. If the insurer were obligated to do so, refusal would be a breach. An insurer's breach of the duty to defend subjects it to the risk that the insured will defend inadequately (or even default), despite which the insurer will be required to pay any resulting judgment within limits, if it were to be determined that the judgment were covered. n61 Moreover, a breach of the duty to defend would free the insured from policy conditions that forbid the insured to settle except at the insured's own expense; a breaching insurer may be required to pay an inflated settlement, as long as it is not fraudulent. n62 In Illinois, breach of the duty to defend could have exposed the insurer to an estoppel to deny indemnification. n63 So, a refusal to defend would have exposed any of the insurers in these cases to possibly inflated liability, if it turned out that it had a duty to defend.

b. In Texas, Excess Underwriters Risked Far Greater Liability From Refusing to Settle and Had No Clear Ability to Obtain Adjudication Before Deciding

In *Frank's Casing*, if Excess Underwriters had refused to settle, and if there had been coverage, they faced the risk of much larger liability for the likely excess judgment under Texas law governing an insurer's duty to settle. n64 So refusal to pay apparently would have exposed Excess Underwriters "to a risk of loss or liability whose expected value exceeds the amount in controversy." They claimed that they had no opportunity to obtain adjudication of their coverage

obligations before they had to make a decision on the settlement. If they were right on those two points, that should have been sufficient to preclude a voluntary payment bar to their claim for contractual overpayments.

i. It Was Reasonable for Excess Underwriters to Believe They Had No Opportunity for Early Adjudication of Coverage.

As it happens, both points were in some doubt under Texas law. As to the ability to have obtained adjudication before paying to settle the claim, Excess Underwriters received the demand in the middle of the trial of ARCO's claims, when there was surely no time to have coverage adjudicated. But Frank's Casing complained that Excess Underwriters failed to make a good faith effort to resolve the coverage issue expeditiously, once Excess Underwriters were notified of the action and reserved their rights to deny coverage. If there had been a real opportunity for Excess Underwriters to have done so, that might argue for denying relief from the voluntary payment rule.

But neither Frank's Casing nor any of its amici made any attempt to show that Excess Underwriters could realistically have hoped to obtain a coverage ruling before ARCO's claim against Frank's Casing was resolved. The coverage issue usually litigated before the underlying liability is determined is the duty to defend, which depends only on the allegations of the complaint. n65 But Excess Underwriters had no duty to defend, and the duty to indemnify depends on the actual facts, not the allegations of the complaint. n66 As the Texas Supreme Court has pointed out, a ruling on coverage must be deferred if "coverage [will] turn on facts actually proven in the underlying lawsuit." n67 If this were such a case, and Frank's Casing made no attempt to shown otherwise, Excess Underwriters would not have been able to obtain a coverage adjudication before ARCO's lawsuit was resolved.

But even if coverage did not depend on facts at issue in the underlying lawsuit, that alone would not have entitled Excess Underwriters to an early ruling on coverage. Until recently, Texas law was that the duty to indemnify could not be determined until the underlying liability was resolved. n68 The Texas court made an exception for cases in which "the insurer has no duty to defend *and the same reasons that negate the duty to defend likewise negate any possibility the insurer will ever have a duty to indemnify.*" n69 This is a narrow exception, and it appears to be the only circumstance in which the duty to indemnify can be adjudicated before the underlying action is resolved. n70 It could not apply in *Frank's Casing*, because Excess Underwriters had no duty to defend.

So it appears that Excess Underwriters had no way to obtain an early adjudication of the coverage issue. Certainly it would have been reasonable for them to think so, and that should have excused the failure to file such a suit there, even if the Texas Supreme Court were to have now held that an early adjudication would have been permissible. Nor did the court take the opportunity to minimize the future occasions when insurers might be forced to the sort of choice in *Frank's Casing*, by establishing for the future the ability to obtain an early coverage adjudication on issues other than the duty to defend.

ii. Excess Underwriters Faced a Significant Risk of Liability for a Judgment Far in Excess of Policy Limits.

Even if there were no opportunity to obtain prompt adjudication, Excess Underwriters would not have needed to act immediately if the existence of reasonable doubts as to coverage would have excused it from any duty to settle. A minority of jurisdictions so hold. n71 But Texas has not addressed the issue, and the majority rule is that:

the only permissible consideration in evaluating the reasonableness of the settlement offer becomes whether, in light of the victim's injuries and the probable liability of the insured, and ultimate judgment is likely to exceed the amount of the settlement offer. ... [A] belief that the policy does not provide coverage[] should not affect a decision as to whether the settlement offer in question is a reasonable one. n72

Under that rule, if the settlement offer is reasonable with respect to the insured's probable liability and the prospective damages, the insurer turns down the offer at its peril. If coverage is found, the insurer will be liable for the excess judgment, no matter how reasonable its belief in noncoverage.

Unless and until a state adopts the minority rule on this, any insurer faced with a demand to settle a case with doubtful coverage is under real pressure to pay the amount demanded, lest it risk far greater liability.

D. Courts Should Follow Restatement § 35, Which Is Contrary to Both *Midwest Sporting Goods*, *Jerry's Sports Center*, and *Frank's Casing*.

The foregoing analysis shows that the facts in *all* of the cases under discussion fell within the rule of Restatement § 35(1):

If one party to a contract demands from the other a performance that is not in fact due by the terms of their agreement, the party on whom the demand is made may render such performance under protest or with reservation of rights, preserving a claim in restitution to recover the value of the benefit conferred in excess of the recipient's contractual entitlement.

In fact, the Restatement expressly rejects *Texas Association of Counties County Government Risk Management Pool v. Matagorda County*, n73 which the Texas court followed in *Frank's Casing*. n74 Other courts should follow the Restatement.

IV. There Is No Good Policy Reason to Deny Recoupment.

A. Recoupment Rights Will Not Affect Impecunious Insureds.

Whether recoupment rights are good or bad for others, they will have no effect on impecunious insureds. Such insureds have no ability to reimburse the insurer, even if legally obligated to do so. No plaintiff would expend resources in suing an impecunious defendant who lacked insurance, and neither would an insurer. If either did, bankruptcy could discharge the unpayable debt.

B. Allowing Recoupment of Noncovered Defense Costs or Settlements Creates No Special Problems for Adequately Funded Insureds.

An adequately funded defendant, faced with an uninsured lawsuit, would have to defend with its own resources. It is no worse off if an insurer advances the defense costs and recovers them later. If it fears that the insurer will be extravagant in defending, it has two protections. First, the insurer should be obliged to prove that any defense expenditures not specifically approved by the insured were reasonable. Second, if the insured wishes to do so, the insured could take part in the defense decisionmaking.

An insurer that defends under reservation, including a reservation of the right to recoup is responsible for providing an adequate defense (unless the insured asks that certain expenditures be foregone). If it improperly skimps on the defense, it should be held liable for any resulting increase in the judgment.

C. Insureds Who Are Neither Wealthy Nor Impecunious Should Be Able to Protect Themselves by Settlements.

If an insured that is arguably not entitled to a defense is capable of paying some, but not all, of its defense costs, it should be able to reach a settlement with the insurer for each party to bear a share of the defense costs that is reasonable in light of the uncertainty. Both insurer and insured will need to take account of the insured's limited ability to pay as well as the risk of an adjudication.

Similar considerations apply to recoupment of settlement costs. It is not clear whether *Frank's Casing* had assets adequate to pay whatever judgment ARCO might obtain. But, if it did not, that could have been addressed by three-way bargaining. Excess Underwriters were prepared to pay two-thirds of the \$7.5 million demand and drop the coverage issue, and the primary insurer would have contributed somewhat less than \$500,000. In light of the eventual holding

that there was no coverage, it seems likely that the \$5 million offer was at least a fair estimate of the prospects in coverage litigation, and may have been generous. ARCO would likely have been willing to take a discount on its demand for an additional \$2 million+, based on the value the claim would have had against an uninsured Frank's Casing that could not have paid the full amount at issue. The fact that there was no such bargaining here suggests that the residual settlement value against an uninsured Frank's Casing was no smaller than the \$2 million+ that Frank's Casing refused to pay. If Frank's Casing did have that much ability to pay and still refused to bargain in hopes of forcing Excess Underwriters to bear the whole loss, then it would have no one but itself to blame for losing a favorable settlement opportunity. Either Excess Underwriters should have been allowed to recoup or it should have been decided that a reasonable dispute as to coverage would provide a defense against a failure to settle claim.

Insureds who have some ability to pay a judgment but not the ability to pay a full judgment will be able to protect themselves from unaffordable recoupment obligations by agreeing to participate in settlements that fairly reflect whatever coverage uncertainties may exist and also reflect their abilities to pay uninsured liabilities. That will relieve them of making Hobson's choices between consenting to unaffordable settlements or exposing themselves to excess liability without the protection of *Stowers* rights. Insurers and plaintiffs have every incentive to participate on a basis that fairly reflect the prospects if both liability and coverage are litigated.

D. Conclusion

For the reasons stated above, courts should follow the Restatement and allow recoupment of noncovered defense costs and settlements if the insurer lacked an adequate opportunity to obtain adjudication of the coverage issue before having to pay and if it properly reserved its right to seek recoupment.

n19 2010 U.S. App. LEXIS 17098, at *30.

n20 *Jerry's Sports Ctr., Inc.*, 2010 Pa. LEXIS 1803, at *1-10.

n21 *General Agents Ins. Co. v. Midwest Sporting Goods Co.*, 828 N.E.2d 1092, 1094-97, 1104 (Ill. 2005).

n22 There is a suggestion in *Jerry's Sports Center* that mere uncertainty about whether a court would find coverage is sufficient to create a "potential for coverage" and a duty to defend. 2010 Pa. LEXIS 1803, at *45.

That is unsound, for reasons discussed at Section III.B. below. While *Frank's Casing* focused solely on indemnity coverage, the insurers provided only excess coverage, with no duty to defend.

n23 Restatement (Third) of Restitution and Unjust Enrichment, § 35, cmt. *a* (Tent. Dr. No. 3 Mar. 22, 2004). While the final draft of this Restatement is now in press, only the tentative drafts are currently on line.

n24 Restatement, § 35(1).

n25 *Excess Underwriters at Lloyds v. Frank's Casing Crew & Rental Tools, Inc.*, 246 S.W.3d 42, 50 (Tex. 2008), quoting *Fortune Prod. Co. v. Conoco, Inc.*, 52 S.W.3d 671, 684 (Tex. 2000). While the quoted passage addresses equitable rules (which, strictly speaking, do not include the law of unjust enrichment), the point also applies to unjust enrichment claims: "[g]enerally speaking, when a valid, express contract covers the subject matter of the parties dispute, there can be no recovery under a quasi-contract theory." *Fortune Prod. Co.*, 52 S.W.3d at 684.

n26 *Frank's Casing*, 246 S.W.3d at 50, quoting *Am. Mfrs. Mut. Ins. Co. v. Schaefer*, 124 S.W.3d 154, 162 (Tex. 2003).

n27 *Id.* (emphasis added). As the Restatement indicates, the rule allowing recovery of contractual overpayments is generally accepted.

n28 *General Agents Ins. Co. v. Midwest Sporting Goods Co.*, 828 N.E.2d 1092, 1094-97, 1102 (Ill. 2005), quoted in *Am. & Foreign Ins. Co. v. Jerry's Sports Ctr., Inc.*, 2010 Pa. LEXIS 1803, at *35. The same objection is made in *Terra Nova Ins. Co. v. 900 Bar, Inc.*, 887 F.2d 1213, 1219-20 (3d Cir. 1989) (predicting Pennsylvania law).

n29 2010 Pa. LEXIS 1803, at *38-41 (citations omitted).

n30 *Id.* at *41-42 (citations omitted).

n31 *Id.* at *43 (citation omitted).

n32 *Zurich Ins. Co.v. Raymark Indus., Inc.*, 514 N.E.2d 150, 161 (Ill. 1987).

Howard on Missing The "Buss": Pennsylvania Supreme Court Refuses to Recognize Insurers' Right to Recover Defense Costs Expended With Respect to Non-Covered Claims

By Theodore A. Howard

September 29, 2010

SUMMARY: This commentary addresses the reasoning employed and the result reached in *American & Foreign Ins. Co. v. Jerry's Sport Center, Inc.*, No. 88 MAP 2008, *2010 Pa. LEXIS 1803* (Aug. 17, 2010), where the court refused to recognize an insurer's right to recover defense costs for non-covered claims. The commentary explains why, in the view of the author, the decision (and, by extension, others like it) is seriously flawed.

ARTICLE: With increasing frequency in recent years, courts addressing and resolving coverage disputes between policyholders and their liability insurers - especially primary carriers - have been called upon to decide claims by insurers seeking reimbursement of amounts expended to defend their insureds, subject to reservations of rights, in regard to underlying claims for which it is ultimately determined that no coverage exists. While a clear majority of the courts confronted with insurers' defense cost reimbursement claims have granted relief or, at a minimum, have recognized as a matter of principle that such claims are viable, a number of other tribunals have rejected the proposition that an insurer may compel repayment by an insured of costs expended to defend the insured against a potentially covered underlying claim based upon a *post-hoc* judicial determination that the claim is not subject to coverage. The most recent illustration of this minority view was provided by the Supreme Court of Pennsylvania, in *American & Foreign Ins. Co. v. Jerry's Sport Center, Inc.* ("*Jerry's Sport*"). n1 This commentary addresses the reasoning employed and the result reached in *Jerry's Sport* and explains why, in the view of the author, the decision (and, by extension, others like it) is seriously flawed.

Although not a completely new phenomenon, n2 the dramatic surge in the number of coverage disputes involving attempts by insurers to recoup defense costs expended on behalf of policyholders with respect to non-covered claims is commonly perceived to derive from the Supreme Court of California's decision in *Buss v. Superior Court* ("*Buss*"). n3 In *Buss*, the insurer, subject to a timely and specific reservation of rights, assumed its policyholder's defense in connection with an underlying action in which 26 of the 27 causes of action and claims for relief pled in the complaint against the insured were acknowledged by the parties to be outside the scope of the coverage provided by the insurer's general liability policies, while the remaining count of the complaint set forth a potentially covered claim. Although,

consistent with settled principles of California law, the insurer agreed to defend this "mixed" underlying action in its entirety, after the case was settled, the insurer commenced a declaratory judgment action seeking reimbursement of the costs it expended to defend the case. The trial court, intermediate appellate court and the California Supreme Court all agreed that the insurer was not entitled to seek reimbursement in regard to the one underlying cause of action, among the 27 pled against the insured, that was potentially covered under the policies at issue; however, as to the remaining 26 claims with respect to which it was undisputed that no coverage was owed, the courts were uniformly of the view that the insurer was entitled to seek reimbursement of the costs of defending those claims.

Specifically, the Supreme Court held that because the insurer's contractual duty to defend was applicable with respect to any claim potentially covered by the policies, the insurer had no right to seek recovery of costs expended to defend the insured against the single underlying potentially covered claim. n4 However, as to the remaining 26 underlying claims that were concededly outside the scope of the policies' coverage, the Court held that the insurer did not, at any time, have a contractual duty to defend for which the insured had bargained and/or paid premiums. As respects the portion of the insurer's expenditures, to the extent they could be segregated, that were attributable to the defense of the insured against the non-covered claims, the Court recognized that the insurer had a right to reimbursement "that is implied in law as quasi-contractual, whether or not it has [a right] that is implied in fact in the [policies] as contractual." n5 The Court concluded that this quasi-contractual right was enforceable in order to prevent "unjust enrichment" on the part of the insured, which had neither bargained nor paid for the benefit of a defense against non-covered claims. n6

Embracing a broad construction of *Buss*, insurers have taken the position that their potential right to obtain reimbursement of defense costs extends not only to concededly non-covered claims defended in the context of a "mixed" action, but to any *potentially covered* claim as well, as long as: (i) the defense is undertaken pursuant to a timely reservation of rights that clearly stakes out the insurer's claim of right to seek reimbursement in the event of a determination that the subject claim is not covered; and (ii) the insured accepts the defense subject to the insurer's express reservations. As noted above, the majority of courts to address the matter have endorsed the insurers' position in this regard, largely adopting and, in some instances, expanding upon the quasi-contract theory and equitable "unjust enrichment"/restitution principles invoked by the Supreme Court of California in *Buss*. n7

A lesser - but by no means insignificant - number of courts have reached a contrary conclusion and rejected the proposition that an insurer which has assumed the obligation to defend its insured in regard to an underlying claim implicating *bona fide* questions as to coverage has any right to seek or obtain reimbursement of defense costs based on an after-the-fact determination of non-coverage, even if the insurer fully reserved its right to seek such recovery and the insured accepted the defense without question or protest. n8 In *Jerry's Sport*, the Supreme Court of Pennsylvania joined that company.

The underlying claim giving rise to the dispute over defense costs in *Jerry's Sport* commenced with the filing of an action by the NAACP and the National Spinal Cord Injury Association against a host of firearms wholesalers-distributors in federal district court in Brooklyn, New York in June 2000 ("the NAACP/NSCIA action"), seeking injunctive relief and damages based on allegations that as a result of negligent marketing and distribution practices on the part of the defendant handgun dealers, members of both plaintiff organizations suffered bodily injury, death and other harms. By amended complaint filed in May 2001, *Jerry's Sport*, a major gun distributor, was named as an additional defendant. n9

Jerry's notified its general liability insurer, Royal Indemnity Co., regarding the NAACP/NSCIA action and tendered the claim for defense and indemnification under a commercial general liability policy providing primary and umbrella coverage commencing in October 2000. n10 Royal acknowledged the tender and notified *Jerry's* on June 15, 2001 that it had retained the New York firm of Leahey & Johnson to defend *Jerry's* in the NAACP/NSCIA lawsuit, based on the firm's prior experience in representing gun industry defendants in a similar prior action filed by the NAACP. In the same correspondence, Royal informed *Jerry's* that it was examining the availability of coverage under the provisions of the policy, and that it was providing *Jerry's* with a defense subject to a full reservation of rights,

including the right "to seek reimbursement for any and all defense costs ultimately determined not to be covered." n11

In light of Royal's reservations, Jerry's expressed a concern as to whether it might be better off participating in a joint defense with some of the other defendants, thereby reducing its defense cost exposure in the event it was determined that there was no coverage for the claim and Royal sought reimbursement of the amounts it advanced on Jerry's behalf. In light of information indicating that Jerry's was a "target defendant" of the plaintiffs "because of its position as one of the largest handgun distributors in the United States," and concerns that conflicts of interest might arise between Jerry's and other, less prominent defendants with respect to litigation and settlement strategy, Royal recommended that Jerry's maintain its separate representation by Leahey & Johnson. However, Royal also informed Jerry's that it could retain its own counsel to consult with Leahey & Johnson, and indicated that if Jerry's wished to shift its defense to a firm other than Leahey & Johnson, "Royal would afford [Jerry's] ample opportunity to arrange for the change in counsel." n12 Jerry's did not choose to obtain independent counsel. n13

In the meantime, Royal's assessment regarding coverage under its policy continued, and Royal reiterated that the defense it was providing Jerry's was subject to a full reservation of rights in correspondence directed to Jerry's throughout the summer of 2001. In early August, Royal indicated to Jerry's that notwithstanding its perception that no coverage existed under the policy, it would continue to fund Jerry's' defense until a final determination regarding coverage was reached, and qualified its reservation of its right to seek recovery of defense costs, stating that any defense costs incurred and paid prior to the date of its final coverage determination would not be included in any subsequent demand for reimbursement. n14

Finally, by letter of September 7, 2001, Royal communicated to Jerry's its final determination that the NAACP/NSCIA action was not covered and that Royal intended to initiate a declaratory judgment action seeking a court ruling to that effect. The action was commenced five days later. In July of 2002, Royal moved for summary judgment, requesting declarations, as a matter of law, that it had no duty to defend or indemnify Jerry's with respect to the NAACP/NSCIA claims and that it was entitled to reimbursement of all defense costs paid on behalf of Jerry's in the underlying litigation, as measured from and after the date that the coverage action was brought. n15 The trial court granted Royal's dispositive motion, in part, on February 25, 2003, "finding that Royal had no duty to defend or indemnify Jerry's Sport because the policy covered damages resulting from bodily injury, and the NAACP's suit did not seek compensation for bodily injury but, rather, sought injunctive relief and the creation of a monetary fund to educate, supervise and regulate gun dealers." The court's order did not, however, address Royal's claimed right to reimbursement of previously expended defense costs. n16

Jerry's appealed the ruling in Royal's favor, but Pennsylvania's intermediate appellate court affirmed by unpublished opinion. n17 In further trial court proceedings thereafter, Royal moved for an order requiring Jerry's to reimburse the defense costs incurred and paid in regard to the underlying action, as measured from the date of initiation of the coverage action (September 12, 2001), in the amount of \$317,540.29. n18 In August 2004, the trial court issued a preliminary ruling that Royal was entitled to recovery, based on an implied contract theory premised upon unjust enrichment and equitable restitution principles. Then, following hearings addressing quantum, the court entered a final order on June 13, 2006, holding that Royal was to be reimbursed by Jerry's in the amount of \$309,215.86, plus pre-judgment interest running from August 2004. n19

Jerry's again appealed, and this time prevailed. The Superior Court rejected the lower court's "implied contract" analysis and held that, absent the existence of an express provision in the policy establishing Royal's right to reimbursement of defense costs advanced subject to a reservation of rights in regard to a potentially covered claim for which it is later determined that no coverage was owed, an insurer in Royal's position has no entitlement to seek or obtain recovery. n20 Upon discretionary review, the Supreme Court affirmed.

After describing, in some detail, the parties' competing arguments and respective supporting authorities, the Supreme Court - relying principally upon two cases n21 - explained the bases for its decision in Jerry's' favor, citing as the key elements of its ruling the following points:

- the force of Pennsylvania's "longstanding common law rule that the duty to defend is broader than the duty to indemnify"; n22
- the absence from Royal's policy of any provision establishing a right on the part of the insurer to reimbursement of defense costs under any circumstances; n23 and
- the lack of any factual basis for a finding that Jerry's was "unjustly enriched" as a result of the defense provided to it by Royal in regard to non-covered claims, as Royal's assumption of the defense protected its own interests as well as Jerry's' interests. n24

As demonstrated below, none of these considerations constitutes a persuasive, much less compelling, rationale for rejecting Royal's defense cost reimbursement claim.

As a preface for the initial point in its three-pronged analysis, the Court observed that

[a]n insurer's duty to defend is broader than its duty to indemnify. It is a distinct obligation, separate and apart from the insurer's duty to provide coverage. . . . An insurer may not justifiably refuse to defend a claim unless it is clear from an examination of the allegations in the [underlying] complaint [against the insured] and the language of the policy that the claim does not potentially come within the coverage of the policy. n25

It is, of course, far too late in the day to question the correctness or applicability of these long-established bedrock principles of Pennsylvania insurance law, and there is nothing in the record of *Jerry's Sport* suggesting that Royal sought to do so in this instance. On the contrary, the fact that Royal readily assumed Jerry's' defense, subject to a reservation of rights, notwithstanding the fact that it harbored immediate doubts as to whether coverage existed under its policy for the NAACP/ NSCIA claims, clearly reflects Royal's awareness of and adherence to its obligation to defend its insured against a claim in regard to which coverage was doubtful.

Subject to the insured's full knowledge and consent, Royal retained experienced and competent counsel to defend Jerry's and that counsel, Leahey & Johnson, vigorously and successfully protected Jerry's' interests, securing a complete dismissal with prejudice of the underlying plaintiffs' claims against Jerry's prior to a lengthy trial in which all of the other handgun deal defendants were participants. Even after definitively determining that the NAACP/NSCIA claims against Jerry's were not covered by its policy and initiating a declaratory judgment action seeking an adjudication to that effect, Royal continued to defend Jerry's rather than abruptly terminating and withdrawing from the defense and thereby risking possible prejudice to the insured's interests in the underlying litigation. Moreover, seeking an appropriate balance between its own interests and those of its insured, Royal did not demand reimbursement of the entirety of the defense costs it advanced on Jerry's behalf upon receiving judicial confirmation as to the correctness of its no-coverage determination, but rather sought only that portion of the defense costs that were incurred and paid during the pendency of the declaratory judgment action (*i.e.*, the time period after Jerry's was fully informed of Royal's no-coverage position). Thus, even allowing Royal the partial defense cost reimbursement it sought, Jerry's would still have had the significant benefit of a substantial and effective defense against underlying claims threatening to impose serious liabilities, for which it had to bear only a portion of the expense, notwithstanding the fact that the claims in question were not covered by its liability policy in the first place - a result fully consistent with a broad conception of the duty to defend. The Supreme Court's conclusory assertion, under these circumstances, that allowing Royal to prevail on its reimbursement claim "would amount to a retroactive erosion of the broad duty to defend . . . and would therefore narrow Pennsylvania's long-standing view that the duty to defend is broader than the duty to indemnify," n26 simply ignores the realities of the situation.

In particular, the Court's perfunctory duty-to-define analysis disregards the critical distinction, in this context, between underlying claims against an insured for which there is no coverage due to the manner in which the factual allegations supporting the claim are resolved, on one hand, and underlying claims against an insured for which there is no coverage as a matter of law, on the other. As illustrated by *Scottsdale Ins. Co. v. MV Transp.*, n27 a compelling argument can be made that only the former category of cases implicates circumstances in which insurers may legitimately be precluded from obtaining reimbursement of defense costs. As lucidly explained by the Court in *MV*

Transp., where the determination as to whether a potentially covered claim is actually subject to coverage hinges on the manner in which the facts alleged against the insured are adjudicated, the insurer's duty to defend continues until the case is resolved or the insurer, at some point prior to final resolution, definitively establishes that the facts are irreconcilable with a finding of coverage. The defense obligation terminates at that point, but not before. "If it is so extinguished . . . it is extinguished only prospectively and not retroactively: before, the insurer *had a duty to defend*; after, it does not have a duty to defend *further*." n28 No right to reimbursement of defense costs advanced while the duty to defend continued in effect exists in this scenario, and nothing argued by Royal in *Jerry's Sport* suggests otherwise.

However, where the nature or essence of the underlying claim itself, as considered against the terms of the policy, reveals the absence of coverage as a matter of law, an insurer which chose to defend its insured out of an abundance of caution and in deference to the insured's interests, subject to a reservation of rights, should be permitted to seek and obtain reimbursement of the defense costs advanced once a court confirms the correctness of the insured's no-coverage position. In that situation, "[b]y law applied in hindsight, courts can determine that no potential for coverage, and thus no duty to defend, ever existed. If that conclusion is reached, the insurer, having reserved its right, may recover from its insured the costs it expended to provide a defense which, under its contract of insurance, it was never obligated to furnish." n29 Talismanic invocation of the unassailable principle that "the duty to defend is broader than the duty to indemnify" simply does little, or nothing, to advance the analysis where, due to the character of the claim against the insured, no coverage exists and a contractual defense obligation never arose.

The second major point in the Supreme Court's reasoning involves its finding "that the policy did not contain a provision providing for reimbursement of defense costs under any circumstances. Thus, the right Royal attempts to assert in this case, the right to reimbursement, is not a right to which it is entitled under the policy." n30 This finding, in turn, led the Court to hold that Royal's reservation-of-rights letters issued to Jerry's were likewise inadequate to serve as the foundation for Royal's defense cost reimbursement claim, because "Royal cannot employ a reservation of rights letter to reserve a right it does not have pursuant to the [policy]." n31

The Court's analysis in this regard seems disturbingly superficial, at best. As its decision notes, the Insuring Agreement incorporated in the Royal policy at issue expressly provided as follows:

We will pay those sums the insured becomes legally obligated to pay as damages because of "bodily injury" or "property damages" to which this insurance applies. We will have the right and the duty to defend the insured against any "suit" seeking those damages. *However, we will have no duty to defend the insured against any "suit" seeking damages for "bodily injury" or "property damage" to which this insurance does not apply.* . . . n32

Thus, the policy explicitly stated that Royal would have no obligation to defend, and Jerry's would have no basis to expect a defense, in regard to underlying actions seeking relief outside the scope of the coverage provided by the policy - *i.e.*, an action such as was brought against Jerry's by the NAACP/NSCIA, as determined by Royal and as confirmed as a matter of law by the Pennsylvania courts. Certainly it is at least implicit in the relevant policy language that defense costs advanced by Royal on a provisional basis, subject to a reservation of rights, in regard to an action asserting non-covered claims against Jerry's - and thus as to which Royal had no duty to defend and Jerry's had no right to or expectation of a defense - could be subject to recoupment by Royal.

Although neither of the appellate courts' respective decisions quote from the Royal reservation-of-rights letters with any specificity, it stands to reason that the insurer would have invoked in those letters the express admonition in the Insuring Agreement of the policy establishing that the insurer had no duty to defend non-covered claims. Thus, even if there were no provision in the policy at issue directly addressing a right to reimbursement in those precise terms, it is unclear why such an additional provision would be needed in light of the policy language explicitly disclaiming a duty to defend with respect to claims for which the policy provides no coverage. The Supreme Court's decision is silent on this point. n33

The third and last consideration accorded weight by the Supreme Court in its analysis was its endorsement of the proposition that Jerry's could not have been "unjustly enriched" by Royal's funding of its defense in regard to the non-covered NAACP/NSCIA action, thereby justifying "restitution" of any defense costs, because Royal itself derived an equal benefit from assuming the defense of the claims against Jerry's. In this regard, the Court stated, in relevant part, as follows:

As the Third Circuit explained in *Terra Nova*, an insurer faced with uncertainty about its duty to indemnify offers a defense under a reservation of rights "to avoid the risks than an inept or lackadaisical defense to the underlying action" may expose it to if it ultimately turns out that there was a duty to indemnify. 887 F.2d at 1219. Royal's ability to choose counsel allowed it to mitigate any potential future indemnification obligations. See *General Agents*, 215 Ill.2d 146, 828 N.E.2d 1092, 293 Ill. Dec. 594 (Ill. 2005) (rejecting unjust enrichment argument and holding when the insurance company tenders a defense for its policyholder it is "protecting itself at least as much as it is protecting its insured.") We further observe that by defending [Jerry's], Royal was protecting itself from the potential for a bad faith claim. In order to ensure that insurance companies assume the defense whenever there is the potential for coverage, bad faith damages are imposed where the insurer, with no good cause, refuses to provide a defense. Royal may have been subject to a bad faith action if it did not defend and a court ultimately found coverage. Accordingly, if the insurer could recover defense costs from its insured, then the insured would be paying for the insurer to protect itself. *Terra Nova*, 887 F.2d at 1219. n34

Whatever the merits - if any - of this line of reasoning in the abstract, it bears no relationship to the pragmatic reality of the circumstances in which liability insurers exercise claim-handling judgment on a day-to-day basis. In that context, the truth is that insurers, in those circumstances in which they do not simply deny coverage outright, routinely undertake the defense of their insureds subject to a reservation of rights identifying one or more grounds for possibly contesting coverage, but actually commence a declaratory judgment action seeking an adjudication that no coverage is owed in only a small percentage of those instances. Any number of variables - including, but not limited to, the fundamentally doubtful merits of the claim against the insured; the comparatively minor magnitude of the "worst case" liability confronting the insured in the event of an adverse judgment or unfavorable settlement; the insurer's disinclination to bear the additional layer of costs associated with retaining and paying its own outside coverage litigation counsel; the relative closeness of the coverage question(s); or the nature of the on-going business relationship with the insured - may cause the insurer to simply defend, notwithstanding its reservation of rights, even though an arguable basis to dispute coverage is present. As a result, the significant likelihood is that in the relatively few instances in which an insurer will conclude that pursuit of a declaratory judgment action with respect to coverage issues is warranted, the following characteristics are likely to be present: (i) defense costs are substantial; (ii) the liability claim against the insured is at least colorable if not clearly meritorious; and (iii) the insurer has a reasonably high degree of confidence in the correctness of its position that no coverage is owed as a matter of law.

However, if these premises are correct, then it is likewise apparent that in such instances, the insurer is not defending the insured for the primary purpose of protecting the insurer's own interests, because it perceives its coverage exposure to be low. By the same token, the insurer, in these circumstances, is not defending the insured in order to avoid the prospect of bad faith exposure, because if it is sufficiently confident in its no-coverage position to bring a declaratory judgment action, then the coverage issues themselves are, almost by definition, "fairly debatable" and thus not the basis for a viable bad faith claim under the substantive law of virtually all jurisdictions. n35 Thus, contrary to the Court's assumptions, the far greater likelihood in these situations is that the insurer's motivation for defending the insured, subject to a reservation of its right to seek reimbursement of defense costs, rather than simply categorically denying coverage, is almost entirely its desire to protect the insured's interests in accordance with the broad duty-to-defend principles contemplated by most states' insurance laws. Where it is then determined that no coverage is owed (and there was, accordingly, no right on the part of the insured to the defense it was provided), foreclosing reimbursement of the insurer in order to prevent "unjust enrichment" on the grounds that the insurer defended the case for its own benefit rather than the benefit of the insured gives dispositive effect to a fiction.

Ultimately, although in any situation in which an underlying claim against an insured is perceived by the insurer to

involve only a very limited possibility of implicating coverage, the insurer may exercise its prerogative to simply refuse to defend, n36 neither general principles of insurance law nor considerations of public policy favor that approach. On the contrary, insurers are not merely encouraged, but are expected, to resolve all doubts regarding coverage, however substantial they might be, in favor of the insured, and to defend under a reservation of rights rather than denying coverage outright. n37 Thus, as the Court noted, "[t]he broad duty to defend that exists in Pennsylvania encourages insurance companies to construe their insurance contract broadly and to defend all actions where there is any potential coverage." n38 By categorically foreclosing any right to defense cost reimbursement, however, the Court effectively encourages insurers to adopt the *opposite* approach, especially in any circumstances in which defense expenses are likely to be high.

Here, Royal conducted itself in as reasonable and responsible manner as was practicable under the circumstances. Notwithstanding serious (and justified) threshold doubts about whether the claims asserted against Jerry's by NAACP/NCSIA were covered, Royal:

- immediately acknowledged Jerry's notice regarding the NAACP/NCSIA action;
- arranged for Jerry's representation by experienced, competent counsel at cost-effective rates, n39 which counsel aggressively defended Jerry's and secured a complete dismissal of the claims against it, with prejudice, prior to trial;
- apprised Jerry's of its entitlement to retain substitute counsel or additional counsel to collaborate with the attorneys retained by Royal to act on Jerry's behalf (Jerry's chose neither option);
- fully and repeatedly informed Jerry's of Royal's doubts about coverage serving as the foundation for its reservation of rights and expressly reserved its right to pursue reimbursement of defense costs in the event of a non-coverage determination, without objection from Jerry's;
- completed its claim analysis and informed Jerry's of its definitive no-coverage position in a prompt manner;
- immediately initiated a declaratory judgment action seeking an adjudication of the merits of its coverage position, during the pendency of which it continued to defend; and
- after prevailing on the coverage issues, sought reimbursement of only that portion of the defense costs as were incurred and paid after Jerry's was informed of Royal's no-coverage determination.

For all of that, Royal gets nothing while Jerry's reaps the benefit of a vigorous and completely successful defense, worth hundreds of thousands of dollars, with respect to claims that were never covered in the first place, ostensibly on the grounds that allowing even partial reimbursement to Royal would be "unfair" to Jerry's.

Surely, faced with the prospect of an outcome such as this, under circumstances in which the legitimacy of its position on the coverage question *ab initio* likely insulates the insurer from the specter of bad faith exposure, a rational insurer will be more inclined to deny coverage outright and take its chances in any ensuing coverage litigation than to defend its insured pursuant to a reservation of rights that carries no weight with the courts, even if fully accepted by the insured. As a result, this ostensibly "pro-policyholder" decision may end up causing more insurers to refuse to defend their insureds in cases in which the duty to indemnify appears doubtful than would be true if some form of right to reimbursement were recognized.

In *Knapp v. Commonwealth Land Title Ins. Co.*, a pre-Buss decision of the federal district court in Minnesota involving facts and circumstances closely analogous to those presented in *Jerry's Sport*, the court sustained the insurer's right to seek and obtain reimbursement of defense costs advanced in regard to a non-covered claim, concluding that:

[t]he courts should be consistent in encouraging insurance companies to properly meet their duty to defend [their] insured[s] against third party claims and minimize unnecessary claims to enforce policy coverage. However, where an insurer has properly met its duty and subsequently successfully challenges policy coverage, it should be entitled to the full benefit of such a challenge and be reimbursed for the benefits it bestowed, in good faith, to its insured. n40

Given the overarching policy objective of insurance law, in Pennsylvania and generally, of maximizing the extent to which liability insurers honor their contractual duty to defend, even in those instances in which the existence of a coverage obligation is seriously in doubt, the approach advocated in *Knapp* and similar cases clearly reflects a more

appropriate balance between the legitimate interests of insureds and insurers, respectively, than does the result reached in *Jerry's Sport*. At least in those instances in which the insurer has, in a timely and appropriate manner, made known to the insured its intention to pursue reimbursement of defense costs advanced in regard to non-covered claims and the insured, with full awareness of the reservation of rights, accepts the benefits of the defense, *Buss* and analogous cases vindicating the right to reimbursement embody the better rule for insurers and insureds.

n31 *Jerry's Sport*, 2010 Pa. LEXIS 1803, at *49. The Court's premise that an insurer's reservation of rights can be based only upon coverage defenses that are expressly embodied in the terms and conditions of the policy is, at best, highly dubious if not flatly incorrect. For example, under circumstances in which the insurer forms the view that notification received from the insured regarding a potentially covered "occurrence" or resulting claim was unduly delayed and thus untimely, the insurer may properly reserve its rights based not only upon the notice provisions set forth in the policy but also upon the statute of limitations governing contract actions under applicable state law. The latter defense is not based on a policy provision. Likewise, if the information initially provided by the insured to the insurer concerning a potentially covered "occurrence" or claim suggests to the insurer that the insured may have misrepresented, or failed to disclose, material facts in seeking and procuring the issuance of the policy, the insurer may, and should, preserve its right to seek rescission of the policy in its reservation of rights. As with statute of limitations, such a rescission defense is not premised upon a policy provision, but the reservation of rights is no less valid on that basis.

n32 *Jerry's Sport*, 2010 Pa. LEXIS 1803, at *2-*3 (emphasis added; record citation omitted).

n33 The Court's observation that Royal's obligation under the terms of its policy "to pay, with respect to 'any suit against an Insured we defend . . . [a]ll expenses we incur'" is "arguably" *dispositive* of the defense cost reimbursement issue - see 2010 Pa. LEXIS 1803 at *43 & n.14 - is puzzling, to say the least. This standard language says nothing more than that as to claims or actions against the insured that the insurer defends under the policy, the defense provided will be complete in regard to the expenses incurred. However, if the claim or action against the insured is not subject to coverage and the defense provided was subject to a timely and appropriate reservation of rights, the policy language invoked by the Court does not, in and of itself, establish any separate and free-standing impediment to a claim for reimbursement.

n34 *Jerry's Sport*, 2010 Pa. LEXIS 1803, at *53-*54 (citations omitted).

n35 See, e.g., *Simon Wrecking Co. v. AIU Ins. Co.*, 530 F. Supp. 2d 706, 717 (E.D. Pa. 2008) ("A successful bad faith claim requires that 'the insurer did not have a reasonable basis for denying benefits under the policy and that the insurer knew of or recklessly disregarded its lack of reasonable basis in denying the claim.' *MGA Ins. Co. v. Bakos*, 699 A.2d 751, 754 (Pa. Super. 1997). . . . '[A]n insurer is not "bound to submerge its own interest in order that the insured's interests may be made paramount" and an insurer does not act in bad faith by . . . litigating legitimate issues of coverage.' *Hyde Athletic Industries, Inc. v. Continental Cas. Co.*, 969 F. Supp. 289, 307 (E.D. Pa. 1997) (quoting *Cowden v. Aetna Cas. & Sur. Co.*, 389 Pa. 459, 134 A.2d 223, 228 (1957)).").

n36 *Jerry's Sport*, 2010 Pa. LEXIS 1803, at *42 ("In some circumstances, an insurance company may face a difficult decision as to whether a claim falls, or potentially falls, within the scope of the insurance policy. However, it is a decision the insurer must make. If it believes there is no possibility of coverage, then it should deny its insured a defense because the insurer will never be liable for any settlement or judgment." (Citation omitted.)).

n37 See *Jerry's Sport*, 2010 Pa. LEXIS 1803, at *40 ("In making this determination, the 'factual allegations of the underlying complaint against the insured are to be taken as true and liberally construed in favor of the insured.'" (quoting *Frog, Switch & Mfg. Co. v. Travelers Ins. Co.*, 193 F.3d 742 (3d Cir. 1999), citing *Biborosch v. Transamerica Ins. Co.*, 412 Pa. Super. 505, 603 A.2d 1050, 1052 (1992))).

n38 *Jerry's Sport*, 2010 Pa. LEXIS 1803, at *47 (citations omitted).

n39 As noted by the intermediate appellate court, the hourly rates charged by the Leahey & Johnson partners, associates and paralegals engaged in the representation of Jerry's in the NAACP/NCSIA matter "were on the low end of rates being charged at the time by firms representing clients in complex litigation in the New York City area during the 2001-2003 time frame." See *Jerry's Sport*, 948 A.2d at 840.

n40 *Knapp*, 932 F. Supp. at 1172. See also *Hecla Mining Co. v. New Hampshire Ins. Co.*, 811 P.2d 1083, 1089 (Colo. 1991) (*en banc*) ("[T]he appropriate course of action for an insurer who believes that it is under no obligation to defend is to provide a defense to the insured subject to a reservation of its rights to seek reimbursement should the facts . . . prove that the incident resulting in liability was not covered by the policy[.]"), followed, *Valley Forge Ins. Co. v. Health Care Mgmt. Partners, Ltd.*, 2010 U.S. App. LEXIS 17098, at *10-*11.

Sonnenschein Nath & Rosenthal LLP on Nieto v. Blue Shield of California Life & Health Insurance Company: California Court Of Appeal Rejects Allegations Of "Post-Claim Underwriting" And Upholds Insurer's Right To Rely Upon Insured's Policy Application

By Daniel Feinberg

September 15, 2010

SUMMARY: The California Court of Appeals held that a health insurer did not engage in unlawful "post-claim underwriting" when it issued a policy in reliance on the insured's policy application, without investigating the accuracy of the insured's representations. The insurer was entitled to rescind its policy due to the insured's failure to disclose material information in the application.

ARTICLE: In *Nieto v. Blue Shield of California Life & Health Insurance Co.*, n1 the California Court of Appeal held that a health insurer did not engage in unlawful "post-claim underwriting" when it issued a policy in reliance on the insured's policy application, without investigating the accuracy of the insured's representations. Accordingly, the insurer was entitled to rescind its policy due to the insured's failure to disclose material information in the application. This commentary examines that case in light of contrary case law regarding health service plans.

The Case

Nieto applied to Blue Shield for a health insurance policy, failing to disclose certain information regarding her medical condition and treatment. Blue Shield followed up with Nieto several times to obtain information that was missing from the application and to request additional medical-related information. Blue Shield issued Nieto a health insurance policy, and she later submitted a claim. Blue Shield then learned that Nieto had received extensive treatment and been prescribed multiple medications immediately prior to the submission of her application, none of which had been disclosed in her application. Blue Shield sought to rescind the policy, arguing that, had the information been disclosed, it either would have declined to issue the policy or, at a minimum, requested additional information. Nieto sued Blue Shield for breach of contract, bad faith, and violation of California's Unfair Competition Act. Blue Shield moved for summary judgment on its right to rescind the policy.

In response, Nieto argued that Blue Shield had engaged in "post-claim underwriting" in violation of § 10384 of

California's Insurance Code, which provides that "[n]o insurer issuing or providing any policy of disability insurance covering hospital, medical or surgical expenses shall engage in the process of postclaims underwriting." n2 Under that statute, "postclaims underwriting" "means the rescinding, canceling or limiting of a policy or certificate due to an insurer's failure to complete medical underwriting and resolve all reasonable questions arising from written information submitted on or with an application before issuing the policy or certificate." n3

The trial court granted Blue Shield's motion for summary judgment, and the court of appeal affirmed, ruling that Blue Shield could rescind the policy on the basis of Nieto's failure to disclose material information, and, in particular, that Blue Shield was not obligated to have conducted a pre-policy issuance investigation into the information contained in the application. That ruling is significant, because the court of appeal distinguished *Nieto* (which involved a health insurer governed by California's Insurance Code) from a prior case, *Hailey v. California Physicians' Service* n4 (which involved a health care service plan governed by California's Health and Safety Code). The court thus found that *Hailey's* strict limitations on an insurer's ability to rescind an insurance contract did **not** apply in the health insurance policy context.

Hailey

In *Hailey*, Hailey sought to purchase coverage under a health care service plan for herself, her husband and their son. n5 Hailey mistakenly believed that the application requested information related only to her own health, so she did not disclose any information regarding her husband or son. Based upon the information provided, Blue Shield extended coverage. A few months later, Mr. Hailey was admitted to the hospital, so Blue Shield investigated his health. Blue Shield then sought to rescind the Haileys' health plan contract, because Mr. Hailey's medical records showed that he had a history of health issues that were not disclosed in the application. The Haileys sued Blue Shield for breach of contract, bad faith, and intentional infliction of emotional distress.

The trial court granted Blue Shield's motion for summary judgment on its right to rescind. The Haileys appealed, arguing that § 1389.3 of California's Health & Safety Code precluded Blue Shield from rescinding the contract unless it could prove that the Haileys willfully misrepresented Mr. Hailey's health when they applied for coverage. Similar to § 10384 of California's Insurance Code (which the *Nieto* court analyzed), § 1389.3 provides that

[n]o health care service plan shall engage in the practice of postclaims underwriting. For purposes of this section, 'postclaims underwriting' means the rescinding, canceling, or limiting of a plan contract due to the plan's failure to complete medical underwriting and resolve all reasonable questions arising from written information submitted on or with an application before issuing the plan contract." n6

However, unlike § 10384 of California's Insurance Code, § 1389.3 further provides that "This section shall not limit a plan's remedies upon a showing of willful misrepresentation." n7 In *Hailey*, the court of appeal held that "section 1389.3 precludes a health services plan from rescinding a contract for a material misrepresentation or omission unless the plan can demonstrate: (1) the misrepresentation or omission was willful, or (2) it had made reasonable efforts to ensure the subscriber's application was accurate and complete as part of the precontract underwriting process." n8 Thus, § 1389.3 essentially amends the general rule that **any** material misrepresentation will justify rescission, by adding the "willful" prerequisite, unless the insurer reasonably investigates the accuracy of the application.

In reaching that conclusion, the *Hailey* court first examined the purpose of the Knox-Keene Health Care Service Plan Act n9 and the purpose of § 1389.3 in particular. The court noted that the purpose of the Act is to transfer the financial risk of health care from patients to providers and health service plans, and hence, that the purpose of § 1389.3 is to prevent plans from shifting the financial risk of health care back to the patients -- which is what Blue Shield was purporting to do by rescinding its coverage.

Next, the court considered the Haileys' argument that Blue Shield had engaged in unlawful "post-claim underwriting, " which the court defined as follows:

In essence, postclaims underwriting occurs when an insurer wait[s] until a claim has been filed to obtain and make underwriting decisions which should have been made when the application [for insurance] was made, not after the policy was issued. In other words, the insurer does not assess an insured's eligibility for insurance, according to the risk he presents, until after the insurance has been purchased and a claim has been made. Although the insurer may ask an applicant for some underwriting information before it issues the policy, it will not follow up on that information until after a significant claim arises. Only after a claim has arisen will the insurer examine the application and request additional information to see whether the applicant could have been excluded from coverage. An insurer relying upon post claim underwriting, instead of looking to pay the claim ... look[s] for all the things in the application that [it] might be able to dig up ... to rescind the policy. n10

The court described the "harm" that results from "post-claim underwriting" as follows:

An insurer has an obligation to its insureds to do its underwriting at the time a policy application is made, not after a claim is filed. It is patently unfair for a claimant to obtain a policy, pay his premiums and operate under the assumption that he is insured against a specified risk, only to learn *after* he submits a claim that he is *not* insured, and, therefore, cannot obtain any other policy to cover the loss. The insurer controls when the underwriting occurs... If the insured is not an acceptable risk, the application should [be] denied up front, not after a policy is issued. This allows the proposed insured to seek other coverage with another company since no company will insurer an individual who has suffered serious illness or injury. n11

Finally, the court focused on whether the phrase "complete medical underwriting" in §1389.3 mandates that a plan investigate application information prior to issuing coverage. Blue Shield asserted that it "completes medical underwriting" by resolving any questions that arise from the answers given by the applicant on the application. The court found that, in order to effectuate the purpose of § 1389.3 and to prevent the unexpected cancellation of health care coverage at a time coverage is needed most, the phrase "complete medical underwriting" must be interpreted to "require a plan to make reasonable efforts to ensure a potential subscriber's application is accurate and complete" **before** issuing the plan contract. n12

Accordingly, the court clarified the duties and rights of applicants and health care service plans under § 1389.3 as follows:

An applicant for a health services plan has a responsibility to exercise care in completing an application. In light of the potentially catastrophic consequences of an applicant's error in filling out an application, however, we believe the Legislature has placed a concurrent duty on the plan to make reasonable efforts to ensure it has all the necessary information to accurately assess the risk before issuing the contract, if the plan wishes to preserve the right to later rescind where it cannot show willful misrepresentation n13.

As such, the court reversed the summary judgment in favor of Blue Shield because Blue Shield failed to show that it made reasonable efforts to ensure the accuracy and completeness of the Haileys' application, and there was a triable issue of fact regarding whether Ms. Hailey willfully misrepresented Mr. Hailey's medical condition when she submitted the application.

Nieto

After analyzing the *Hailey* decision, the *Nieto* court ruled that *Hailey's* "complete medical underwriting" requirement (*i.e.*, that health care service plans must take reasonable efforts to investigate information in applications **before** policy issuance) did not apply to Blue Shield (a health insurance company governed by California's Insurance Code) because it is "limited to health care service plans subject to the Knox-Keene Act." n14

In turn, the court rejected Nieto's "post-claim underwriting" argument, determining that California's Insurance Code permits insurers to rescind policies on the mere basis of an insured's intentional or unintentional failure to disclose material information on an application. Accordingly, insurers need **not** conduct pre-policy issuance investigations into

the information obtained during the application process. n15 The *Nieto* court concluded:

Governing law permits an insurer to rescind a policy when the insured has misrepresented or concealed material information in connection with obtaining insurance... [T]he Insurance Code provides a statutory framework that imposes heavy burdens of disclosure upon both parties to a contract of insurance, and any material misrepresentation or the failure, whether intentional or unintentional, to provide requested information permits rescission by the injured party... Requiring full disclosure at the inception of the insurance contract and granting a statutory right to rescind based on concealment or material misrepresentation at that time safeguard the parties' freedom to contract. [An insurance company] has the unquestioned right to select those whom it will insure and to rely upon him who would be insured for such information as it desires as a basis for its determination to the end that a wise discrimination may be exercised in selecting its risks... Courts have applied Insurance Code sections 331 and 359 to permit rescission of an insurance policy based on an insured's negligent or inadvertent failure to disclose a material fact in the application for insurance. The same result is compelled here. The undisputed evidence established that appellant made material misrepresentations and omissions on the application regarding her medical condition and treatment... On the basis of governing law and the undisputed evidence, we find no basis to disturb the trial court's conclusion: '[Appellant's] application contained material misrepresentations and omissions concerning her medical history and conditions, medications taken, and recent physician visits. Had [appellant] accurately and completely disclosed these matters, she would have been denied coverage. Based on the undisputed facts, Blue Shield Life was and is entitled to rescind [appellant's] policy.' [Citations omitted].

Nieto, 181 Cal. App. 4th at 76, 77, 78.

Implications

The *Nieto* decision is noteworthy because it re-affirmed a health insurance company's ability to rely on information within a prospective insured's application for coverage without also having to engage in a formal investigation of the information contained therein prior to issuing a policy. The *Nieto* court thus confirmed that health insurers (unlike health care service plans governed by § 1389.3 of the California Health & Safety Code) need only show that the prospective insured misrepresented or omitted information that is material to the insured risk in order to substantiate a rescission, regardless of whether such misrepresentation or omission was intentional or unintentional, and that the insurer relied on the misrepresentation or omission.

In turn, the *Nieto* court made it harder for insureds to defend rescission claims and to establish that their health insurer engaged in unlawful "post-claim underwriting." More specifically, the *Nieto* court made it perfectly clear that the *Hailey* two-pronged test that health care service plans must satisfy in order to rescind a policy (and in turn, substantiate that it has not engaged in "post-claim underwriting" under § 1389.3 of the Health & Safety Code) **only** applies to health care service plans that are governed by California's Health and Safety Code and **not** health insurance companies that are governed by California's Insurance Code. Hence, health insurers need not establish: (1) that a particular misrepresentation or omission was willful or (2) that it made reasonable efforts to ensure that the insured's application was accurate and complete as part of the pre-contract underwriting process. n16 Instead, according to *Nieto*, health insurers need only demonstrate the insured's failure to disclose material information during the application process was relied upon -- *i.e.*, that the insurer would not have issued the policy at the rate it did had the information been disclosed (possibly because it would have requested additional information before policy issuance and taken that information into account. n17 It would thus seem that, under Insurance Code § 10384, a health insurer simply needs to follow up on any questions raised by an prospective insured's application to avoid having a rescission treated as "post-claim underwriting."

Nevertheless, insureds may challenge *Nieto*'s reading of § 10384. The court based its rejection of the *Hailey* rule largely on the fact that it involved a health care service plan "subject to the Knox-Keene Health Care Service Plan Act... which was designed 'to ensure the best possible health care for the public at the lowest possible cost by transferring the financial risk of health care from patients to providers ... [and] to prevent providers from shifting the financial risk of

health care back to providers.'" n18 But it can be argued that similar policy considerations should be taken into account vis-à-vis health insurance, particularly when one considers that a health insurance policy provides similar (if not identical) coverage as that provided by a health care service plan. Additionally, the *Nieto* court relied primarily on California common law in reaching its decision, and did not account for the fact that § 10384 of California's Insurance Code contains a virtually identical definition of "postclaims underwriting" to that in § 1389.3 of California's Health and Safety Code. In particular, both definitions contain the "complete medical underwriting" phrase that the *Hailey* court found so important in finding a duty to investigate applicant information.

Accordingly, insured's are likely to raise the "post-claim underwriting" issue again and assert that *Hailey's* requirement of a pre-issuance investigation (*i.e.*, reasonable efforts to ensure that the insured's application is accurate and complete) should be imposed on health insurers, such that a policy cannot be rescinded unless an insurer can demonstrate that it has conducted such an investigation.

The Continuing Debate Over an Insurer's "Right" to Reimbursement: The Pennsylvania Supreme Court Weighs in Against Reimbursement in a Newly-Decided Case

By Sherilyn Pastor and Alissa Pyrich

September 15, 2010

SUMMARY: Courts across the country have taken two distinctly different views about whether insurers are entitled to be reimbursed for the defense of ultimately uncovered claims. This article discusses those approaches and the most current developments in the case law.

ARTICLE: Because the duty to defend under an insurance policy is interpreted more broadly than the duty to indemnify, insurance companies often provide or pay for the defense of an insured before questions of coverage under the policy are resolved. In some instances, this results in an insurer's paying for the defense of claims that are ultimately determined not to be covered. Courts across the country have taken two distinctly different views about whether an insurer in that situation is entitled to be reimbursed for the defense of ultimately uncovered claims. This article discusses those approaches and the most current developments in the case law.

Basic Principles of the Duty to Defend

Where a policy contains a defense obligation, the insurer is obligated to defend any claim that potentially falls within the scope of coverage under that policy. n1 The duty to defend is not contingent on the insured's ultimately being found liable; the insurer must provide a defense to potentially covered claims even if the claims are groundless, frivolous, illogical, false or fraudulent. n2 Where a lawsuit involves multiple claims, the duty to defend applies as long as at least one of the claims alleged against the insured are potentially covered, and persists until all potentially covered claims are eliminated. n3 The duty to defend is therefore recognized as being broader than the insurer's duty to indemnify.

Often an insurer is presented with a claim upon the filing of a lawsuit against its insured. It must then determine whether it owes a defense, often based on limited and often imperfect information - namely, the facts alleged in the complaint or other pleadings. n4 Since complaints are often not written with the defendant's insurance coverage issues in mind, it is not uncommon for insurers and policyholders to find themselves uncertain about whether the allegations

are covered in whole or part. Faced with this uncertainty, the insurer may: (1) refuse to defend; (2) defend pursuant to a non-waiver and reservation of rights agreement and await more information that might help it determine coverage; (3) file a declaratory judgment action seeking a determination of its duty; or (4) some combination of the above. n5

The insurer's pursuit of its options is shaped by the law. Because of the breadth of the duty to defend *potentially* covered claims, any doubts as to the insurer's defense obligation are generally resolved in favor of the insured. n6 An insurer who elects not to defend when it regards coverage as uncertain runs the risk of breaching its insurance contract and being liable for damages. n7 Accordingly, the usual practice is for the insurer to provide a defense pursuant to a reservation of rights until any uncertainty is resolved, usually by declaratory judgment in a coverage action filed by the insurer. n8 But with increasing frequency, insurers who defend in these circumstances are seeking to be reimbursed for defense costs if it turns out that a claim is not covered.

Demands for Reimbursement of Defense Costs

Demands that an insured reimburse its insurer for defense costs arise when the insurer initially provides or pays for a defense but a court later determines that some or all of the claims were not covered by insurance. The insurer then seeks to recoup amounts spent on the uncovered claims, on the theory that it was never obligated to defend or otherwise pay for them. Courts across the country disagree on whether an insurer has the right to recoupment, and when and how such right arises.

Despite the frequency with which this issue has arisen in recent years, most standard form general liability policies still lack express provisions dealing with the insurer's alleged recoupment rights. n9 Because the insurance contract itself is silent, courts are forced to look to other factors to decide the parties' rights and obligations. Both the decisions allowing and disallowing reimbursement of defense costs base their rulings on such diverse considerations as the perceived purpose of the duty to defend, public policy concerns, and principles of equity. The fundamental difference in the results reached by the two distinct lines of cases in this area arises from how each court views and ultimately weighs these factors.

Cases Permitting Reimbursement

Those courts that have permitted insurers to recoup defense costs from their insureds have done so based on three essential premises. First, these courts reason that an insurer did not bargain for (or receive premiums for) the obligation to defend uncovered claims. n10 Therefore, regardless of when the claim is declared uncovered, once that declaration is made, it would be contrary to the parties' contract and expectations to require the insurer to have ever defended those claims. The second and related rationale is one of unjust enrichment. Unless insurers are allowed to recoup defense costs expended on claims they should not have been defending in the first place, the insureds will receive an unfair benefit. n11

The third line of reasoning invoked by courts that allow recoupment of defense costs posits that the insurer's reservation of rights letter creates an entirely new contract, with new and adequate consideration, between the insurer and the insured with respect to uncovered claims. By the terms of this newly created contract, the insurer has reserved its right to seek reimbursement as a condition of paying for the insured's defense. n12 The insured, by accepting a defense on these terms, is deemed to have accepted this new contract. n13 To establish the right to reimbursement under this approach, the insurer must show: (1) that it had specifically reserved the right to seek reimbursement from the insured; and (2) that it had provided the insured with adequate notice of this potential reimbursement. n14 Express consent from the insured may not be required, nor is there necessarily a requirement of new consideration beyond the insurer's offer and insured's acceptance of the defense. n15

The various courts that have taken a pro-reimbursement stance give different weights to each of these rationales. The leading case allowing reimbursement of defense costs to insurers, *Buss v. Superior Court of Los Angeles County*, n16 for example, decreed that insurers could obtain reimbursement of defense costs expended on claims that were not

even potentially covered, although the insurer bore the burden of proving which costs fell into that category. The underlying case involved 27 causes of action asserted by a sports advertiser against Jerry Buss, the owner of several Los Angeles professional sports teams. n17 Of those 27 counts, both Buss and his insurer agreed that only one count was even potentially covered. n18 Buss and his insurer entered into an agreement which specifically provided that Buss would reimburse the insurer for any costs of the defense that were deemed not covered by a court decision. n19 Notably, most subsequent analyses of *Buss* overlook this significant and distinguishable fact.

The Supreme Court of California acknowledged that the "duty to defend may be as important as the duty to indemnify," and that it applies more broadly than the duty to indemnify. n20 The *Buss* Court also noted that, under California law, when an action involves both covered and uncovered claims, the insurer is obligated to defend the entire action and cannot parse out only the potentially covered ones. n21 Nevertheless, as the court explained:

As to claims that are at least potentially covered, the insurer gives, and the insured gets, just what they bargained for, namely, the mounting and funding of a defense. But as to the claims that are not, the insurer may give, and the insured may get, more than they agreed, depending on whether the defense of these claims necessitates any additional costs. n22

In an effort to effectuate the parties' bargain, the *Buss* Court concluded that the insurer is entitled to reimbursement of defense costs expended on claims that are not even potentially covered, even if they occur in a case with potentially covered claims. "With regard to defense costs for these claims, the insurer has not been paid premiums by the insured. It did not bargain to bear these costs The insurer therefore has a right of reimbursement that is implied in law as quasi-contractual, whether or not it has one that is implied in fact in the policy as contractual." n23

The *Buss* Court found that allowing the insured to retain the benefit of defense payments that were not part of the bargain would be an unjust enrichment. n24 That the law required the insurer to defend the entire action, including the non-covered claims, should not create any expectation on the part of the insured that certain defense costs would not have to be repaid later. n25 In the view of the *Buss* court, reimbursing the insurer for defense costs it had not agreed to assume was most consistent with the insurance contract.

Finally, the *Buss* court found support for its decision in public policy:

Not only is it good law that the insurer may seek reimbursement for defense costs as to the claims that are not even potentially covered, but it also makes good common sense. Without a right of reimbursement, an insurer might be tempted to refuse to defend an action in any part - especially an action with many claims that are not even potentially covered and only a few that are - lest the insurer give, and the insured get, more than they agreed. With such a right, the insurer would not be so tempted, knowing that, if defense of the claims that are not even potentially covered should necessitate any additional costs, it would be able to seek reimbursement. n26

In *United National Ins. Co. v. SST Fitness Corp.*, n27 the Sixth Circuit Court of Appeals reached the same result as *Buss* but from a slightly different vantage. As in *Buss*, the insurer in *SST Fitness* assumed the defense of the underlying case subject to a reservation of rights that specifically and expressly reserved the right to recoup any defense costs expended on claims later found not to be covered. Although Ohio law provided no guidance on the issue, the *SST Fitness* Court found persuasive the line of cases, primarily from the federal courts, allowing an insurer to recoup defense costs where it had timely and explicitly reserved its right to recoupment. n28 The *SST Fitness* court analyzed general contract law of Ohio and determined that, given the insurer's specific reservation of its right to recoup, SST's acceptance of a defense under those terms created an implied in fact contract. Under Ohio law, for an implied in fact contract to be established, "... the plaintiff must prove that the defendant either requested or assented to such conduct under conditions precluding an inference that the plaintiff acted gratuitously." n29 The *SST Fitness* Court concluded that these elements were satisfied because SST was aware that its insurer was defending subject to an express reservation of the right to obtain reimbursement of non-covered defense costs, yet accepted the defense on that condition. n30 Under this newly created implied in fact contract, the insurer was entitled to recoupment.

The United States District Court for the District of Hawaii synthesized all three of the prevailing rationales for allowing reimbursement in its decision in *Scottsdale Ins. Co. v. Sullivan Properties, Inc.* n31 The *Sullivan Properties* court began its analysis with the notion that there is no contractual duty to defend unless there is at least a possibility of coverage. From that premise, the *Sullivan Properties* court found the right to reimbursement followed logically:

An insurer does not have a contractual duty to defend claims that are not possibly covered. Because there is no contractual duty to defend claims that are not possibly covered, the right to seek reimbursement is implied by the terms of the insurance policy. n32

In reaching this conclusion, the *Sullivan Properties* court invoked generic contract law holding that, where an agreement does not specify or fully express all of the non-essential terms, the "usual terms" will be implied in law. n33

The *Sullivan Properties* court's analysis, however, did not end there. It also found a right of reimbursement had been established by the insurer's reservation of rights letter expressly reserving that right and the insured's acceptance of a defense. n34 The fact that the insured did not expressly consent to the insurer's right to reimbursement did not prevent the creation of a new contract. n35

The *Sullivan Properties* court likewise concluded that Hawaiian law would allow insurers a right of reimbursement under equitable principles. "Equitable principles weigh in favor of permitting an insurer to recoup defense costs it was never obligated to pay when the insured is clearly notified of the insurer's intention to do so and nevertheless accepts the defense." n36 Reimbursement of the insurer would not be unfair to the insured; the *Sullivan Properties* court concluded that the insured would be no worse off than if it had assumed its own defense from the beginning. n37

The *Sullivan Properties* court also opined that public policy supported the insurer's right to reimbursement because allowing for reimbursement encourages the insurer to defend in cases where coverage is uncertain. In turn, encouraging the insurer to assume the defense "transfers from the injured party to the insurer the risk that the insured may not be financially able to pay the insured's party's damages." n38 Further, the *Sullivan Properties* court reasoned that other policyholders would benefit from establishing a reimbursement right:

Allowing an insurer to seek reimbursement also makes good policy sense from the perspective of other policyholders. The premium payments of other policyholders subsidize the defense of non-covered claims. In theory, the insurer's savings from reimbursement of defense costs where the insurer never had a duty to defend under the insurance policy will translate into lower premiums for all policyholders. n39

Overall, courts that permit insurers to obtain reimbursement of uncovered defense costs proceed, whether expressly or implicitly, from a view of the insurer and insured as equals in the relationship - financial equals, equals in bargaining power, and equals in their ability to handle risk. The *SST Fitness* court expressed this view most clearly when it suggested that the insured was free to reject a defense on the conditions offered in the insurer's reservation of rights letter: "When faced with a reservation of rights, the insured can choose to: (1) decline the offer, pay for the defense and seek recovery under the policy; (2) decline the offer and file a declaratory judgment action; or (3) accept the offer subject to the reservation of rights." n40 Animated by this view of the insurer-insured dynamic, the jurisdictions treat a reservation of rights letter as a new, freely negotiated contract for the defense of claims. Their assumption that the insured is effectively equal to the insurer also explains their public policy rationales, which tend to be more concerned with protecting the insurers' bargain than with the protection of insureds from litigation.

Cases Rejecting Reimbursement

In recent years, an increasing number of courts - including most recently the Pennsylvania Supreme Court, - have rejected the position exemplified by *Buss*, *SST Fitness* and *Sullivan Properties*, and deny reimbursement of defense costs even where they are expended in connection with uncovered claims. Cases disallowing insurer's claims for reimbursement find such claims to be inconsistent with the broad duty to defend. An insurer is required to defend the entire case as long as there is at least one potentially covered claim. Although that duty expires when the covered claims

are eliminated or all of the claims are found to be uncovered, cases that hold against reimbursement take the position that this expiration should function only prospectively, not retroactively. n41

Another key rationale for rejecting insurer's right to reimbursement is the lack of any provisions in the insurance contract establishing such a right. n42 If insurers, who generally write insurance policies, do not include the right to reimbursement as an express term, they should not be entitled to enforce that right later. Courts following this rationale also reject the notion that the insurer can change or amend the insurance contract through a reservation of rights letter, even if that letter expressly reserves the right to demand reimbursement of uncovered defense costs. n43

A growing number of courts also recognize that the insurer benefits from assuming control of and paying for the entire defense just as much as the insured does. n44 In the words of the Third Circuit in *Terra Nova Ins. Co. Ltd. v. Bar, Inc.*: n45

Faced with uncertainty as to its duty to indemnify, an insurer offers a defense under reservation of rights to avoid the risks that an inept or lackadaisical defense of the underlying action may expose it to if it turns out there is a duty to indemnify. At the same time, the insurer wishes to preserve its right to contest the duty to indemnify if the defense is successful. Thus, such an offer is made at least as much for the insurer's own benefit as for the insured's. If the insurer could recover defense costs, the insured would be required to pay for the insurer's action in protecting itself against the estoppel to deny coverage that would be implied if it undertook the defense without a reservation of rights. n46

Moreover, since defending the entire case serves the insurer's interests, the insured is not unjustly enriched when it receives a defense for claims that are not potentially covered. n47

Among the first significant cases to reject an insurer's claim for reimbursement of defense costs was *General Agents Ins. Co. of America, Inc. v. Midwest Sporting Goods Co.* n48 The Illinois Supreme Court considered and rejected the analysis in *Buss* as well as the notion that an insurer's reservation of rights letter can unilaterally modify the parties' contract. That rejection relied in part on the court's interpretation of public policy:

As a matter of public policy, we cannot condone an arrangement where an insurer can unilaterally modify its contract, through a reservation of rights, to allow for reimbursement of defense costs in the event a court later finds that the insurer owes no duty to defend. . . . [R]ecognizing such an implied agreement effectively places the insured in the position of making a Hobson's choice between accepting the insurer's additional conditions on its defense or losing its right to a defense from the insurer. n49

The lack of an express provision in the insurance contract allowing the insurer to recoup defense costs was also significant. Absent such a provision, the *General Agents* court held that "an insurer cannot later attempt to amend the policy by including the right to reimbursement in its reservation of rights letter." n50 The *General Agents* court reasoned that a reservation of rights letter merely protects the insurer's right to assert the existing defenses under the policy - it does not and should not create a new right such as the right to reimbursement. n51

In addition, the *General Agents* court concurred with the Third Circuit's finding in *Terra Nova* that the insurer, by paying for or providing a defense, was serving its own interests as well as those of the insured. Given the benefit to the insurer, the *General Agents* court concluded that the insured was not being unjustly enriched by receiving a full defense. n52

Further support for its rejection of a right of reimbursement laid in the *General Agents* court's notion of how the duty to defend is supposed to function. The duty to defend, the court explained, arises as soon as the claim against the insured is made. Until a court determined that the underlying claims were not covered, the insurer had a duty to defend and its payments were properly made pursuant to that duty. The *General Agents* court rejected the insurer's effort to re-define that duty retroactively based on the outcome of a later declaratory judgment action. n53

The Fourth Circuit's ruling in *Perdue Farms, Inc. v. Travelers Ins. Co.* n54 hits many of the same notes. The

Perdue Farms court began its analysis by considering Maryland law on the duty to defend and noting that the duty to defend attached at the outset of litigation. n55 It concluded that a right of reimbursement was inconsistent with the duty to defend in several key aspects:

Under Maryland's comprehensive duty to defend, if an insurance policy potentially covers any claim in an underlying complaint, the insurer, as Travelers did here, must typically defend the entire suit, including non-covered claims. Properly considered, a partial right of reimbursement would thus serve only as a backdoor narrowing of the duty to defend, and would appreciably erode Maryland's long-held view that the duty to defend is broader than the duty to indemnify. n56

Allowing insurers to obtain reimbursement after exercising their right and duty to defend would "undermine the bargain that Maryland courts describe insurers reaching with their insureds." n57

The *Perdue Farms* court also defined the duty to defend as benefiting both the insurer and the insured. While the insured receives the most obvious benefit, the *Perdue Farm* court found that the insurer also benefits by controlling the defense because doing so allows it to minimize or perhaps avoid entirely its obligation to indemnify. n58 Allowing insurers to recoup defense costs would be "a substantial rebate on their duty to defend" n59 and would "significantly tip the scales in favor of the insurer." n60 Accordingly, the *Perdue Farms* court held that the Travelers was not entitled to reimbursement of defense costs expended on uncovered claims.

The Texas Supreme Court in *Texas Ass'n of Counties County Gov't Risk Management Pool v. Matagorda County* n61 concluded that the insurer did not have a right to obtain reimbursement of a settlement payment, relying on many of the same rationales use to deny reimbursement of defense costs. n62 As is almost always the case, the policy in question did not provide the insurer with the right of reimbursement. The *Matagorda County* court held that a unilateral reservation of rights letter could not create a right - namely, the insurer's right of reimbursement - not established in the policy itself. n63

The insurer argued that, by accepting a defense subject to its reservation of rights, the insured had consented to reimburse the insurer. The *Matagordo County* court rejected that argument. First, it concluded as a matter of Texas law that the insured's silence in response to a reservation of rights letter did not equate with consent to a new bargain. n64 Second, the *Matagordo County* court distinguished between a true reservation of rights, which can only preserve the insurer's existing rights under the policy, and an offer to create a new contract for defense of an action. It found no evidence of a meeting of the minds regarding the insurer's right to reimbursement, and thus found no new contract had been created. n65

The *Matagordo County* court's consideration of public policy issues surrounding an insurer's right to reimbursement came down squarely in favor of the insured. Recognizing that both insurer and insureds faced a difficult choice when dealing with uncertain coverage rights, the *Matagordo Country* court found that the insurer was best equipped to bear the risk of deciding whether to pay:

Requiring the insurer, rather than insured, to choose a course of action is appropriate because the insurer is in the business of analyzing and allocating risk and is in the best position to assess the viability of the coverage dispute. On balance, insurers are better positioned to handle this risk, either by drafting policies to specifically provide for reimbursement or by accounting for the possibility that they may occasionally pay uncovered claim in their rate structure. n66

The *Matagordo County* court departed from the general trend of cases ruling against reimbursement by suggesting a scenario in which an insurer could establish such a right. An insurer could obtain reimbursement, the *Matagordo Country* Court instructed, if the insured agreed to payments subject to an obligation to reimburse the insurer if the insurer prevailed on its coverage defenses. n67

Unlike the courts that have allowed reimbursement, the courts in *Terra Nova*, *General Agents*, *Perdue Farms* and

elsewhere that have rejected an insurer's right to recoupment do not view the insurer and insured as effective equals. Instead, they recognize that an insured is not necessarily in a position to reject a defense or consent to a fundamental change in the policy at the point when it has just been sued. These courts posit that the insurer, not the insured, is in the expert in its insurance policy, and in the best position to deal with uncertainty because insurers are in the business of doing precisely that. Moreover, these cases effectively acknowledge the superior bargaining power of the insurer - if insurers truly believed they had a right to reimbursement they, and not the insured, are in the position to change the policy to reflect that right. Having opted not to do so, except in rare instances, the insurer should bear the consequences of that choice.

The courts that reject reimbursement also represent a more internally consistent view of the duty to defend. The rule that the insurer must defend all claims as long as even one potentially covered claim exists is effectively gutted when the insurer must later reimburse the costs of the defense. Insureds purchase policies with defense obligations to protect them against litigation risks and uncertainty. That protection is not meaningful if it can be revoked retroactively.

The Pennsylvania Supreme Court Weighs in Against Reimbursement

In *American & Foreign Ins. Co. v. Jerry's Sport Ctr., Inc.*,ⁿ⁶⁸ the Pennsylvania Supreme Court weighed the conflicting arguments represented by cases decided in other jurisdictions and concluded that insurers are not entitled to seek reimbursement of defense costs expended prior to a court's determination that there was no coverage. The Supreme Court found that this position - whether in the majority or minority of other jurisdictions - simply was more in tune with Pennsylvania law on the duty to defend and the nature of the insurer-insured relationship generally.

Jerry's Sport Center, Inc. and its subsidiaries (collectively, "Jerry's") were among a group of firearms wholesalers and distributors named as a defendant in a suit by the National Association for the Advancement of Colored People ("NAACP") and the National Spinal Cord Injury Association alleging the negligent creation of a public nuisance.ⁿ⁶⁹ The complaint alleged that the defendants had caused bodily injury to NAACP members, and sought remedies in the form of injunctive relief and monetary damages.ⁿ⁷⁰

Jerry's notified its insurers of the NAACP lawsuit and demanded a defense and indemnification. Insurers American & Foreign Ins. Co., Royal Ins. Co. of America, Safeguard Ins. Co. and Royal Indemnity Co. (collectively, "Royal") responded by providing Jerry's with a defense subject to a reservation of rights.ⁿ⁷¹ Royal's reservation of rights letter included an express reservation of the right to "seek reimbursement for any and all defense costs ultimately determined not to be covered."ⁿ⁷²

Royal not only offered to pay for Jerry's defense, it retained a law firm to represent Jerry's in the NAACP lawsuit. Royal made the decision that Jerry's would be better served by having independent counsel than by joining in a group defense with the other named defendants.ⁿ⁷³ When Jerry's expressed concern about this tactic, Royal gave Jerry's the choice between retaining its own counsel at its own expense to represent its uninsured interests or continuing with Royal's chosen defense firm.ⁿ⁷⁴ Jerry's opted to continue with Royal's chosen defense firm.ⁿ⁷⁵

In its subsequent correspondence with Jerry's, Royal made it clear that there was uncertainty about whether the claims in the NAACP lawsuit were covered by insurance but it would continue to fund the defense of the lawsuit until the coverage question was resolved.ⁿ⁷⁶ Ultimately, Royal filed a declaratory judgment action in Pennsylvania state court seeking a determination that it had no duty to defend Jerry's against the NAACP lawsuit.ⁿ⁷⁷ The trial court found in Royal's favor on the coverage question on summary judgment, holding that the NAACP lawsuit did not fall within the scope of coverage. This ruling was affirmed on appeal.ⁿ⁷⁸

Once the coverage question was resolved in its favor, Royal sought reimbursement of the defense costs it had expended on Jerry's behalf from the date when Royal filed the declaratory judgment action forwards. The trial court found in Royal's favor on this issue as well, ultimately entering a verdict requiring Jerry's to repay Royal \$309,216 plus pre-judgment interest.ⁿ⁷⁹ Jerry's appealed this ruling to the intermediate appellate court, which reversed the ruling.

n80 The Pennsylvania Supreme Court accepted a discretionary appeal to decide the matter definitively under Pennsylvania law.

After considering closely and at length the differing rationales expressed by courts throughout the country, the Pennsylvania Supreme Court came down squarely against allowing reimbursement of defense costs. n81 As the Supreme Court explained, "we conclude that the reasoning of *General Agents* and *Terra Nova* are more consistent with the broad duty to defend under Pennsylvania law . . . when viewed in the light of the policy language of the parties' insurance contract." n82

The Supreme Court began by noting that in Pennsylvania, as in most jurisdictions, the duty to defend is broader than the insurer's duty to indemnify. n83 An insurer is obligated to defend the insured as long as the complaint "might or might not" fall within the policy's coverage. n84 An insurer "may not justifiably refuse to defend a claim against its insured unless it is clear from an examination of the allegations in the complaint and the language of the policy that the claim does not potentially come within the coverage of the policy." n85

Taking these principles into account, the Pennsylvania Supreme Court concluded that "whether a complaint raises a claim against an insured that is potentially covered is a question to be answered by the insurer in the first instance, upon receiving notice of the complaint by the insured." n86 The Supreme Court placed on the insurer both the onus of making an initial coverage determination and the consequences of that determination: "Although the question of whether the claim is covered (and therefore triggers the insurer's duty to defend) may be difficult, it is the insurer's duty to make that decision. Insurers are in the business of making this decision." n87 If an insurer is truly uncertain about whether there is coverage for a particular claim, the proper avenue, according to the Supreme Court, is for the insurer to provide a defense and then seek a declaratory judgment on the coverage question. n88

In a key holding, the Supreme Court determined that a court's resolution of a disputed coverage question cannot retroactively eliminate the insurer's duty to defend during the period when coverage was uncertain. n89 At most, a court can determine the duty to defend going forward. To eliminate that duty to defend after the fact would undermine the insured's bargained-for rights:

Where the insurance contract is silent about the insurer's right to reimbursement of defense costs, permitting reimbursement for costs the insurer spent exercising its right and duty to defend potentially covered claims prior to a court's determination of coverage would be inconsistent with Pennsylvania law. It would amount to a retroactive erosion of the broad duty to defend in Pennsylvania by making the right and duty to defend contingent upon a court's determination that a complaint alleged covered claims, and would therefore narrow Pennsylvania's long-standing view that the duty to defend is broader than the duty to indemnify. n90

The rest of the Supreme Court's decision follows logically from its essential conclusion that courts cannot retroactively deprive an insured of a defense for disputed claims.

The Supreme Court also found it significant that the insurance policy at issue did not contain provisions permitting the insurer to recoup defense costs under any circumstances. n91 Having no basis in the insurance contract itself, such a right could arise only if the reservation of rights letters sent by Royal to Jerry's created new contracts. The Supreme Court held that they did not:

Royal cannot employ a reservation of rights letter to reserve a right it does not have pursuant to the contract. . . . A reservation of rights letter asserts defenses and exclusions that are already set forth in the policy. We are persuaded that permitting reimbursement by reservation of rights, absent an insurance policy provision authorizing the right in the first place, is tantamount to allowing the insurer to extract a unilateral amendment to the insurance contract. n92

The Supreme Court likewise held that the doctrine of unjust enrichment provides no basis for requiring Jerry's to repay defense costs expended on its behalf. Jerry's was not unjustly enriched by Royal's payment of defense costs, the Supreme Court explained, because both insured and insurer benefited from Royal's assumption of the defense. n93

Royal's decision to provide the defense protected it from bad faith claims in the event that the NAACP lawsuit was later determined to be covered, and allowed Royal to exercise control over the amount of the defense fees that it was required to pay. n94 Given the benefits to Royal, the Supreme Court concluded that Jerry's was not unjustly enriched. Instead, "[i]t would be unjust to require [Jerry's] to reimburse Royal for the cost of the defense where Royal invoked its right to defend in part to protect its own interests." n95

The Supreme Court noted the potential adverse consequences of recognizing a right to reimbursement that existed outside of the policy itself. *Buss* and its progeny effectively permit insurers to re-write the insurance contract unilaterally at the policyholder's expense, an undesirable result in the eyes of the Pennsylvania Supreme Court. n96 The Pennsylvania Supreme Court, therefore, concluded that "an insurer may not obtain reimbursement of defense costs for a claim for which a court later determines there was no duty to defend, even where the insurer attempted to claim a right to reimbursement in a series of reservation of rights letters." n97 Notably, the court's ruling not only prohibits an insurer who elects to control the insured's defense from obtaining reimbursement, but it also prevents that insurer from simply walking away from a defense that it has assumed. The court recognized that making coverage decisions is part of the business of an insurer. The insurer must decide whether it will defend a *potentially* covered claim (or not) and bear the consequences if it is wrong:

If [an insurer] believes there is no possibility of coverage, then it should deny its insured a defense because the insurer will never be liable for any settlement or judgment. ... If, on the other hand, the insurer is uncertain about coverage, then it should provide a defense and seek declaratory judgment about coverage. ...If the insurer is successful in the declaratory judgment action, it is relieved of the continuing obligation to defend. *The court's resolution of the question of coverage does not, however, retroactively eliminate the insurer's duty to defend the insured during the period of uncertainty.* n98

Thus, the court's ruling requires the insurer to live up to its obligations under the policy and to provide the defense for which its policyholder's premiums have already paid.

Conclusion

As in *Jerry's Sport Center*, insurers have traditionally urged that *Buss* and its progeny represent the "majority" view on the recoupment issue. The recent trend in cases, including *Jerry's Sport Center*, suggests the current and prevailing viewing is that insurers are not entitled to reimbursement. But counting the number of written decisions allowing and disallowing insurers to obtain reimbursement of defense costs may not be a particularly useful exercise. Many decisions allowing reimbursement rely on *Buss* without mention of the express reimbursement agreement that drove that decision, and/or were issued by federal courts attempting to predict state law without any guidance from the relevant state's court. Further, resolution of the issue may well depend on the facts presented and the controlling case law (if any). What view will ultimately prevail, thus, remains to be seen on a jurisdiction-by-jurisdiction basis. What is certain, however, is that courts in the various states will continue to grapple with questions of contract interpretation, public policy and the nature of the insured-insurer relationship in order to resolve whether an insurer does and should have a right to demand reimbursement of defense costs.

Reed Smith LLP on To Stack Or Not To Stack:An Analysis of Audubon Internal Medicine Group, Inc. v. Zurich American Insurance Company

By Jennifer Katz and Michael DiCanio

August 18, 2010

SUMMARY: In Audubon Internal Medicine Group, Inc. v. Zurich American Insurance Company, the District Court in the Eastern District of Louisiana allowed the policyholder to "stack" the applicable insurance coverage. This article analyzes the court's holdings in Audubon, a decision that builds upon the logic developed in several key decisions over the years and its implications for policyholders.

ARTICLE: Zurich American Insurance Company ("MCC") sold Audubon Internal Medicine Group, Inc. and Audubon Internal Medicine Research (collectively "Audubon" or "Plaintiff") an insurance policy. After suffering a loss as a result of Hurricane Katrina, Audubon filed suit against MCC, arguing that it had at least three insured business income losses and could, therefore, "stack" the applicable coverages. In *Audubon Internal Medicine Group, Inc. v. Zurich American Insurance Company*, n1 the District Court in the Eastern District of Louisiana agreed with Audubon and allowed the policyholder to "stack" the applicable coverage. This commentary examines that decision and its implications for policyholders.

I. The Case

The hurricane loss suffered by Audubon triggered multiple time-element coverages. The policyholder argued that it could "stack" the applicable coverages, thereby maximizing its ultimate coverage. Audubon relied on the language in the Civil Authority provision and the Contingent Business Income provision (or Business Income From Dependent Properties provision). The Civil Authority provision provides, in relevant part, that "[t]his coverage will begin after the action by civil authority for a period of up to three consecutive weeks after coverage begins." n2 The Business Income provision provides, in relevant part, that the insurance company "will only pay for loss of 'business income' that occurs within the lesser of: (1) The 'period of restoration' at the 'dependent property' where the direct loss or damage occurs; or (2) 30 days." n3 Audubon argued that the 21 day maximum under the Civil Authority provision should be stacked with the 30 day maximum for the Business Income because the latter provision did not have a specific inception date. Ostensibly Audubon would have coverage for the first 21 days after the loss under the Civil Authority provision and

then coverage for the following 30 days under the Business Income provision. MCC disagreed. According to MCC, those two coverages ran "concurrently" and it was, therefore, only responsible for 30 days of loss. MCC disputed the idea of stacking by relying on the definition of "Period of Restoration." MCC's argument was essentially that the 30 day Business Income period must run from the date of loss because the Period of Restoration runs from the date of loss:

because the period of restoration beings when damage is sustained, the maximum 30 day period is also measured from the date when damage is sustained [and] the 30-day time period is qualified by its comparison to the period of restoration, which is also measured from the date of loss. n4

The Court, applying Louisiana law, determined that the policy language was "clear and unambiguous" and allowed the stacking of coverages. According to the Court, the 30 day Business Income period was "unambiguously independent" of the "period of restoration" because under the Business Income provision the "lesser of" the 30 days limit or Period of Restoration would be paid. n5 The Court reasoned that the losses "undisputedly triggered two independent coverage provisions" and the policyholder was not seeking double recovery. n6

As a general rule the claimant may recover under all available coverages provided that there is no double recovery. In this policy, different provisions have different trigger and end dates. The MCC's Civil Authority provides the trigger and end time in a single sentence; the definition of "Period of Restoration" provides the beginning time and alternative end times; and the BIDP provision provides two alternative maximum terms of coverage, one with its own begin and end time and the one in dispute, defined only by its duration, 30 days, MCC cannot simply graft a trigger date where none appears. n7

Concluding, the court held that "[t]he plain Policy language specifically grants [the policyholder] the right to choose under which Policy provisions it seeks to recover for losses covered by multiple, overlapping provisions. Louisiana law fully supports the policyholder's right to elect to arrange and "stack" multiple policy provisions so that it is fully indemnified." n8

II. Implications

The Audubon decision will have far reaching implications for policyholders and insurance companies alike. The Audubon decision builds upon the logic developed in several key decisions. n9 In *Archer-Daniels-Midland Co. v. Phoenix Assurance Co.*, n10 the policyholder whose manufacturing operations were severely impacted by flooding, was allowed to seek recovery under multiple overlapping coverages as long as it did not seek a "double recovery." n11 The policy issued by one of the defendant insurance companies provided that "[i]f two or more of this policy's coverages apply to the same loss or damage, we will not pay more than the actual amount of the loss or damage." n12 The Court held that the policies issued by the other insurance companies did not contain similar language and because the policyholder did not seek to recover under both the Extra Expense and Contingent Extra Expense sections, any potential duplication in coverage was irrelevant. n13

In *CII Carbon, L.L.C. v. National Union Fire Insurance Co.*, 918 So.2d 1060 (La. App. 2005), the policyholder's steam manufacturing plant exploded, damaging a neighboring plant and leased equipment. The leased equipment could have been replaced by November 15, 1999, but the policyholder could not being selling steam until the neighboring plan resumed operations on December 31, 2000. The trial court held that the policyholder was entitled to Business Income coverage until November 15, 1999, and entitled to Contingent Business Income coverage from November 15, 1999 until December 31, 2000. n14 Appealing the decision the policyholder argued that it was entitled to Business Income coverage for the entire period. n15 Despite losing this argument on appeal, the court assumed that the explosion triggered both Business Income and Contingent Business Income from the date of the explosion until November 15, 1999, thereby properly "stacking" the coverages triggered by the loss to maximize the policyholder's recovery. n16

Ideally most policyholders in similar situations will recognize that they have the ability and right to structure the

application of coverage provisions to maximize coverage. The policyholder's right to elect to arrange and "stack" multiple policy provisions will serve to alleviate gaps in coverage and provide the policyholder extended coverage for losses suffered. As the case law develops in this area, practitioners should be aware of these decisions and use them to the policyholder's advantage.

McCarter & English, LLP on Pentair Water Treatment Co. v. Continental Ins. Co.

2010 Emerging Issues 5157

McCarter & English, LLP on the Discovery Rulings in Pentair Water Treatment (OH) Co. v. The Continental Ins. Co.

By Louis A. Chiafullo and David A. Thomas

July 2, 2010

SUMMARY: In *Pentair Water Treatment (OH) Co., et al. v. The Continental Ins. Co., et al.*, Dkt No. 08 Civ. 3604, 2009 U.S. Dist. LEXIS 106424 (Nov. 16, 2009), the court allowed discovery into the insurer's inventory of pollution exclusion clauses used during the relevant time periods of coverage, and also allowed discovery into underwriting practices and the identification of manuals and training procedures.

ARTICLE: The United States Court for the Southern District of New York in a discovery ruling recently carved out some middle ground in a landscape that too often is heavily skewed in favor of insurers in coverage actions. In *Pentair Water Treatment (OH) Co., et al. v. The Continental Ins. Co., et al.*, Dkt No. 08 Civ. 3604, 2009 U.S. Dist. LEXIS 106424 (Nov. 16, 2009), the policyholders, Pentair Water Treatment (OH) Company and related companies ("Pentair"), sought coverage for a judgment for money damages arising out of an outbreak of Legionnaire's disease on a cruise ship attributed to a faulty water filter manufactured and distributed by the insureds.

The policyholders asked the Court to compel document and deposition discovery in three general areas: affirmative defenses; pollution exclusion clauses; and underwriting. The carrier, Continental Insurance Company ("Continental"), objected to each area of discovery and refused to produce the documents and/or a responsive witness. The Court ordered Continental to produce the discovery but with some modifications. The Court's directives are instructive and may aid in winning discovery motions if the precautions are observed.

Affirmative Defenses. Continental asserted 50 affirmative defenses and, consequently, Pentair served (a) document demands seeking any materials related to each defense and (b) a deposition notice for a Rule 30(b)(6) corporate designee to testify on each defense. The Court rejected Continental's blanket attorney work-product objection with regard to the document demand. However, inasmuch as this was the insured's second document request, the Court ruled that Continental need only produce documents not previously produced in response to the new request. The question not raised or addressed by the Court is whether Continental was required to identify by Bates label which documents were related to each defense.

The Court was more cautious with regard to the deposition notice. Of concern was that some of the defenses relied on complicated legal principles (*e.g.*, *res judicata* and *collateral estoppel*) and that the witness would either have to be trial counsel or be in a position to repeat trial counsel's thoughts about the application of facts to legal theories in the pleadings. Accordingly, the Court denied the discovery request without prejudice and indicated the discovery would be permissible if "Pentair recast[] its requests to seek information about facts rather than about legal issues." *2009 U.S. Dist. LEXIS 106424*, at *7. The Court also observed that certain other defenses (*e.g.*, payment of claims by the insured without Continental's consent) were less troublesome in that the requests "seem more likely to elicit factual information." *Id.*

Pollution Exclusion Clauses. Continental asserted a defense in which it argued that coverage was barred by the pollution exclusion in the policy. The defense relied on the definition of the word "pollutant" which was defined in the policy. Pentair requested documents pertaining to any pollution exclusion clause used by Continental in the relevant time period, as well as any specific clauses containing exclusions for injury caused by viruses, bacteria, or fungi. Continental objected to the extent that the request sought information on pollution exclusion clauses not in the policy at issue. The Court flatly rejected Continental's objection and ruled that information on Continental's inventory of pollution exclusion clauses is relevant to what Continental chose to include in Pentair's policy and how Continental might have altered the pollution exclusion from one policy to the next. The Court stated that examination of such information "could well shed light on the meaning of the exclusion in this case." *Id.* at *9. The Court also noted in a footnote that the policyholder agreed to limit the request to standard form excess liability policies used by the insured.

Clearly, the Court acknowledged the importance to the policyholder of ascertaining the meaning of terms commonly used by insurers by comparing similar policy provisions issued by the same carrier.

Underwriting. Pentair's deposition notices also requested a corporate designee to give testimony on a broad range of underwriting topics including underwriting practices and the identification of manuals and training procedures applicable to both general and excess liability policies in the relevant time period. Again, the insurer refused to provide information beyond the policy at issue. Using the same logic employed with regard to the pollution exclusion clause, the Court ruled that in interpreting the policy, the policyholder is "entitled to explore what risks Continental expected to cover when it used terms similar to those in the Policy." *Id.* at 11.

* * *

With the pollution exclusion and underwriting holdings, the *Pentair* Court provides the policyholder a significant amount of latitude to gather and compare other policies and provisions utilized by its carrier at least during the same period in which the policies were issued. Such comparisons could prove useful. Insurance contracts are not like other commercial contracts. The carrier, or more generally the insurance industry and its trade groups, craft the policy language which can be cryptic and sometimes difficult to decipher. Additionally, policies are often created in parts or by endorsements issued after the body of the contract is delivered and the premium paid, thereby further insulating the policyholder from the inside baseball that is underwriting. By focusing sunlight on this process, the insured may gain insight into terms and conditions which would otherwise appear murky.

McCarter & English, LLP on NGM Ins. Co. v. Carolina's Power Wash & Painting LLC

2010 Emerging Issues 5158

McCarter & English, LLP on NGM Insurance Co., et al. v. Carolina's Power Wash & Painting LLC, et al. and the Absolute Pollution Exclusion

By Louis A. Chiafullo

July 2, 2010

SUMMARY: In a recent decision from the U.S. District Court for South Carolina, the "absolute pollution exclusion" upon which insurers often rely to deny coverage was dealt another blow when the court held that it was unclear whether the exclusion unambiguously applied to paint fumes generated as a result of the insured's painting business.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: In the most recent decision on the scope of the so-called "absolute pollution exclusion," the United States District Court for the District of South Carolina refused to apply the exclusion in a case involving alleged injury as a result of exposure to paint fumes. In *NGM Insurance Co., et al. v. Carolina's Power Wash & Painting LLC, et al.*, No. 08-3378, 2010 U.S. Dist. LEXIS 2362 (D. S.C. January 13, 2010), the court held that because it was not clear that the absolute pollution exclusion at issue in the case unambiguously applied to paint fumes generated as a result of the insured's painting business, the insurer could not rely on the absolute pollution exclusion to deny coverage for the underlying personal injury suit.

Plaintiff NGM Insurance Co. ("NGM") issued a contractor's insurance policy to Norman Kuras Jr., doing business as Carolina's Power Wash & Painting LLC ("CPWP"). The policy provided that NGM would pay those sums the CPWP became legally obligated to pay as damages as a result of bodily injury resulting from an occurrence. Slip Op. at 2. The policy also contained an absolute pollution exclusion that excluded from coverage "bodily injury" arising out of the "actual, alleged, or threatened discharge, dispersal, seepage, migration, release or escape of pollutants." "Pollutants" was defined by the policy as any "solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste." *Id.* at 2-3.

The United States Post Office in Johns Island, South Carolina ("USPS") hired CPWP to paint the exterior and interior of the facility, and required proof of current liability insurance from the company. Several years later, two employees at the USPS filed suite against CPWP alleging they were injured as a result of CPWP's negligence. More particularly, the two employees allege that they suffered permanent, serious and irreparable bodily injury as a result of exposure to paint fumes and vapor dust, as well as other residue. After CPWP sought coverage from NGM, the insurer

brought a declaratory judgment, basing its denial of coverage on the policy's absolute pollution exclusion. *Id.* at 3-4.

After reviewing case law from other jurisdictions, the court held that the absolute pollution exclusion in the NGM policy did not exclude coverage for negligence claims where injury is alleged by virtue of the release of paint fumes during painting. The judge relied heavily on the decision in *Belt Painting Corp. v. TIG Ins. Co.*, 795 N.E.2d 15 (N.Y. 2003), which involved an individual alleging injury as a result of inhaling paint fumes while a contractor painted the interior of an office building. The insurance policy at issue in *Belt Painting* contained an "absolute pollution exclusion" nearly identical to the one in NGM's policy. *Id.* at 6.

The court placed great emphasis on the *Belt Painting* court's reasoning. The *Belt Painting* court was reluctant to adopt an interpretation of the absolute pollution exclusion that would "infinitely enlarge the scope of the term 'pollutants,' and seemingly contradict both a 'common speech' understanding of the relevant terms and the reasonable expectations of a business person." 79 N.E.2d at 20. The NGM court also found reasonable the *Belt Painting* court's reasoning that even were paint of solvent fumes correctly within the definition of "pollutant," the exclusion would apply only if the underlying injury is caused by the "discharge, dispersal, seepage, migration, release or escape" of the fumes. "It cannot be said that this language applies to ordinary paint or solvent fumes that drifted a short distance from the area of the insured's intended use and allegedly caused inhalation injuries to a bystander." *Id.*

The NGM court reasoned in granting the policyholder's Motion for Summary Judgment, the absolute pollution exclusion was subject to more than one interpretation relating to the issue before the court and, therefore, it was to be construed against the insurer. This decision is yet another in a line of cases recognizing that the absolute pollution exclusion was designed not to exclude coverage for anything that could arguably be a "pollutant," but only those circumstances involving "traditional" environmental property damage.

McCarter & English LLP on Fulton Boiler Works v. American Motorists Ins. Co

2010 Emerging Issues 5159

McCarter & English LLP on Fulton Boiler Works v. American Motorists Ins. Co: Northern District Of New York Holds That Insurers Have A Pro Rata Responsibility To Cover All Defense Costs

By Gita F. Rothschild, Brian J. Osias, Nicholas M. Insua and Anne E. Matthews

July 2, 2010

SUMMARY: In *Fulton Boiler*, insurers argued that their common insured was required to contribute the same pro rata amount towards the defense all of all claims. The U.S. District Court of Northern N.Y. ordered summary judgment and reinforced N.Y. precedent requiring insurers to pay for 100% of defense costs for any potentially covered claims unless the insurer can prove that allegations of complaint involve only occurrences during self-insured periods.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: Under New York law, an insured may be required to pay a *pro rata* share of defense costs on a case-by-case basis, but only after there has been a showing that the alleged occurrence took place at least in part during an uninsured or self-insured period. n1 Insurers in *Fulton Boiler Works, Inc. v. American Motorists Insurance Co.* n2 attempted to use this narrow rule to require the policyholder, Fulton Boiler Works, Inc. ("Fulton"), to pay a *pro rata* share of both defense and indemnity costs for all claims filed. However, in the United States District Court for Northern District of New York's recent summary judgment decision in that case, n3 the Court made clear that where at least one primary policy is potentially triggered, insurers are collectively responsible for 100% of an insured's defense costs and no share of defense costs may be allocated to the insured.

Fulton is a family-owned boiler manufacturer. It is presently the largest employer in the Village of Pulaski, New York (population 2,398 at the 2000 census), and many of Fulton's employees are second or third generation. Since the early 1990s, Fulton has been named as a defendant in lawsuits in various jurisdictions throughout the country alleging exposure to asbestos allegedly contained in its products. In the thousands of cases filed, there has never been a finding against Fulton by any court in any jurisdiction that any plaintiff has been exposed to asbestos from a Fulton boiler.

Fulton has four comprehensive general liability insurers on the risk for the asbestos claims against it -- American Motorists Insurance Company and American Manufacturers Mutual Insurance Company (collectively "Kemper"), OneBeacon Insurance Company (as successor to Commercial Union Insurance Company, "OneBeacon"), Travelers Casualty and Surety Company (as successor to Aetna Casualty and Surety Company, "Travelers"), and Employers Insurance Company of Wausau ("Wausau"). n4 Each policy at issue in the case provided that defense costs would be

paid in addition to limits and none contained any asbestos exclusions. n5 The insurers never disputed that their policies covered the asbestos claims against Fulton. Nonetheless, they argued that at least some of the defense and indemnity costs they had been paying for more than a decade should be allocated to Fulton.

Fulton filed a Motion for Partial Summary Judgment seeking "(1) a declaratory judgment that [the insurers] have an obligation to pay 100% of its defense costs in connection with the underlying Asbestos Claims as a matter of law, and (2) attorneys fees and costs incurred as a result of the current litigation." n6 With regard to the first point, Fulton argued "(1) the duty to defend must be considered separately than the duty to indemnify; (2) under New York law, the policyholder cannot be required to pay defense costs where primary insurance is triggered; and (3) any requirement that [Fulton] pay a pro rata share (or the entire amount) of defense costs must be determined on a case-by-case basis, after there has been a showing that the alleged occurrence occurred, in full or in part, during an uninsured period." n7 In respect of the second point, Fulton argued "that the insurers are obligated, pursuant to their duty to defend, to reimburse [Fulton] for the attorney's fees and costs that it has incurred as a result of this litigation because this litigation was precipitated by the insurers' attempt to free themselves from their obligations." n8

Kemper, Travelers, Wausau, and OneBeacon cross-moved for summary judgment, arguing "(1) under New York law, [Fulton] is required to contribute an equitable pro rata share to its own defense based upon uninsured or self-insured periods; (2) because the pro rata amount is determined objectively, [Fulton] must contribute the same pro rata amount to each case, regardless of the facts of the particular case; and (3) even if [Fulton] prevails on its motion, it is not entitled to attorney fees." n9

The Court granted in part and denied in part Fulton's motion, finding that the insurers must pay 100% of Fulton's defense costs but that Fulton did not establish its right to attorney fees. n10 The Court denied the insurers' cross-motions. n11

In finding that the insurers are responsible for 100% of Fulton's defense costs, the Court reiterated the rule that "so long as the allegations in a case could conceivably result in liability covered by a policy at issue, the insurer must defend [and t]he insurer thus bears a heavy burden to show that the allegations of the complaint cast the pleadings wholly within the exclusions and that there is no possible factual or legal basis for finding liability covered by the policy." n12 Applying this rule to the Fulton case, the court found not only that Fulton's Amended Complaint alleged "facts plausibly suggesting coverage," but also that the insurers "failed to meet their modest threshold burden ... by adducing at least some admissible record evidence from which a rational fact finder could conclude that the underlying lawsuits involve 'occurrences' solely during self-insured periods, and that there is thus no possible factual or legal basis for finding liability covered by the policy." n13 Finally, the Court noted that "with regard to future defense costs in the underlying lawsuits, ... so long as the allegations in a case could conceivably result in liability covered by a policy at issue, [the insurers] must defend," and allocation amongst the insurers should follow the applicable *pro rata* standard. n14

In sum, the Court's decision reinforced long-standing New York precedent requiring an insurer to pay for 100% of defense costs for any potentially covered claims unless the insurer can prove that allegations of the complaint involve only occurrences during self-insured periods. Unless an insurer can carry that burden, it and any other potentially triggered insurers have a *pro rata* responsibility to pay 100% of an insured's defense costs and cannot allocate any share of those costs to the insured.

Sonnenschein Nath & Rosenthal, LLP on World Harvest Church v. GuideOne Mutual Insurance Co.: Defense Without Reservation Estops Denial of Coverage Without any Showing of Prejudice

By William T. Barker, Paul E.B. Glad and Michael A. Barnes

July 2, 2010

SUMMARY: The GA Supreme Court held that "where an insurer assumes and conducts an initial defense without effectively notifying the insured that it is doing so, the insurer is deemed estopped from asserting the defense of noncoverage regardless of whether the insured can show prejudice." While that is said to be the majority rule, this commentary argues that the court's rationale better supports a requirement that prejudice be shown.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: In *World Harvest Church, Inc. v. GuideOne Mutual Insurance Co.* n1 the Georgia Supreme Court held that "where ... an insurer assumes and conducts an initial defense without effectively notifying the insured that it is doing so with a reservation of rights, the insurer is deemed estopped from asserting the defense of noncoverage regardless of whether the insured can show prejudice." n2 While that is said to be the majority rule, this commentary argues that the court's rationale better supports a requirement that prejudice be shown, though the showing will often not be difficult. That is also the better rule. On the facts presented, the result might have been the same.

I. The Case

World Harvest Church received large donations from perpetrators of a Ponzi scheme. When sued by a receiver to recover those payments, it sought a defense from its insurer, GuideOne. GuideOne provided a defense without an effective reservation of rights. (That question was litigated but need not be discussed here.) The result was a judgment that admittedly was not within the coverage of GuideOne's policy. The Church then sued in federal court to compel GuideOne to pay the judgment, on the ground that it was estopped from denying coverage. The federal court certified a question as to the need for a showing of prejudice, which the Georgia Supreme Court answered that there was no need for any such showing. That court concluded that:

"Three different views currently exist among the jurisdictions regarding the requirement of demonstrating prejudice: Some jurisdictions take the view that where an insurer, without reservation of rights and with actual or presumed knowledge, assumes the exclusive control of the defense of claims against the insured, it cannot thereafter

withdraw and deny liability under the policy on the ground of noncoverage, prejudice to the insured by virtue of the insurer's assumption of the defense being, in this situation, conclusively presumed. In other jurisdictions, the issue as to prejudice has been met directly, without resort to a presumption, by merely holding that the loss of the right of the insured to control and manage the defense is, in itself, prejudice without any further proof. Under a third view, where an insurer defends an action on behalf of its insured with knowledge of (a) defense to coverage, as (a) general rule it is thereafter estopped from asserting that [the] policy does not cover [the] claim if the insured has demonstrated that it has been prejudiced by [the] insurance carrier's actions." n3

The court correctly observed that the first two views are different ways of saying the same thing: existence of prejudice is immaterial. The court concluded that its own precedents supported that rule. Cases where the insurer had not been estopped were determined to be ones where, while participating in the defense, the insurer had not assumed charge of the defense. n4 The rationale for the estoppel was that:

"the insured has surrendered innumerable rights associated with the control of the defense including choice of counsel, the ability to negotiate a settlement, along with determining the timing of such negotiations, and the ability to decide when and if certain defenses or claims will be asserted." n5

In the case at hand, "GuideOne represented the Church until discovery was almost complete." n6 Under those circumstances, "'The course cannot be rerun, no amount of evidence will prove what might have occurred if a different route had been taken. By its own actions, [GuideOne] irrevocably fixed the course of events concerning the law suit for the first 10 months. Of necessity, this establishes prejudice.'" n7

II. Analysis n8

Jurisdictions requiring prejudice readily agree with the main point of *World Harvest Church*: loss of the right to control the defense can itself constitute prejudice, without any showing that the insurer mishandled the defense. n9 This recognizes that innumerable strategic and tactical decisions shape the defense of a lawsuit. In many cases, these decisions involve no clear right or wrong answers, only choices among various mixes of advantages or disadvantages dependent on unknowable future developments. The right to control these choices is itself a valuable right. If the insurer's decisions made during its exercise of control are significant and irreversible, in the sense that they *materially* limit the insured's options in further conduct of the litigation, then prejudice may be found.

The type of prejudice inherent in loss of control of the defense was emphasized by oft cited dicta in *Merchants' Indemnity Corp. v. Eggleston*, n10 on the basis for an estoppel where an insurer has assumed the insured's defense:

Control of the defense is vitally connected with the obligation to pay the judgment. Carriers contract for control, and to that end require notice of accident and prompt submission of suit papers. Success, absolute or relative, may depend upon skill in investigation, in negotiations for settlement, and in the conduct of the lawsuit. Just as a carrier would hardly agree to pay a judgment after defense by the insured, so it cannot expect the insured to pay for a judgment when it controlled the litigation. A carrier may be more confident of its handling of claims, but an insured may with equal conviction prefer the individualized attention of his own counsel as against the services furnished by an insurer in the mass handling of litigation. Personal counsel may seize opportunities to settle which might be ignored or overlooked by a carrier to which the case is just one of a great number. Moreover, whatever his estimate of lawyers in general, a man usually has faith in "my lawyer." This intangible is a valuable right. n11

If the insurer controls the defense to judgment, or even to the close of discovery, then the insured cannot alter the defense decisions that were made. The insurer's control would necessarily have limited (or entirely eliminated) the insured's ability to make choices about the conduct of the defense. But, as will be discussed, a different situation may be presented if the insurer relinquishes control of the defense at an earlier stage of the litigation.

Arguably, one might require the insured to point to some specific irreversible decision made by the insurer where the insured could show that there were cognizable reasons for adopting a different course. However, this may be

unrealistic because it requires the insured to reconstruct the situation presenting such a choice at a later time despite the lack of detailed information which results from the very fact that the insurer was then controlling the defense. In any event, no case clearly imposes such a requirement. Most courts apparently rely on a more qualitative assessment of the significance of the action taken while the insurer was in control of the defense. n12

Logically, an additional consideration in evaluating prejudice should be the extent to which the insured's own counsel is involved during the period when the insurer is controlling the defense. If the insured's own counsel was not involved, then there may be no meaningful way to determine, after the fact, whether the insured would have made different tactical and strategic choices had it been in control of the litigation. If, on the other hand, the insured's own counsel was associated in the conduct of the defense and fully concurred in all decisions, then there would be no prejudice from the insured's inability to control the choices made. n13

Even if the insured's counsel plays only a monitoring role, it would seem reasonable to require that some objection must be made to choices with which the insured's counsel disagrees before those choices may be claimed as prejudicial to the insured. This would serve the interests of the insured, by allowing the insurer appointed counsel to consider (and perhaps accept) the recommendations of the insured's own counsel. It would also allow a more focused review of whether those choices were significant and irreversible.

While the Georgia court recognizes that there should be no estoppel if the insurer never assumes control of the defense, it fails to consider the possibility that even after control has been assumed, it may be relinquished before the insured's ability to make defense choices has been compromised. Consider *Maryland Casualty Co. v. Peppers*, n14 a case involving lack of coverage for injuries intentionally inflicted by the insured. After Peppers' business insurer declined coverage, Peppers had retained his own counsel, who filed a motion to dismiss. A considerable time later, attorneys retained by Peppers' homeowner's insurer wrote Peppers that they had been retained to defend him and filed an answer on his behalf. Twenty four days later, the counsel selected by the insurer were permitted to withdraw, their answer was stricken, and the motion to dismiss filed by Peppers' own counsel (who apparently had never withdrawn his appearance) was reinstated.

The *Peppers* court found that the brief assumption of the defense by the insurer did not estop it to dispute coverage because there had been no prejudice to Peppers. It recognized that "[i]f, . . . by the insurer's assumption of the defense the insured has been induced to surrender his right to control his own defense, he has suffered a prejudice which will support a finding that the insurer is estopped to deny policy coverage." n15 However, the court found "nothing in the record to establish that Peppers was not at all times represented by his own attorney . . . or that in reliance on the attorneys hired by [the insurer] he was induced to surrender the right to conduct his own defense." n16 To be sure, by filing an answer, the insurer's attorney had assumed the right to withdraw the motion to dismiss. But, because the answer was withdrawn and the motion reinstated, no prejudice resulted.

Similarly, in *King v. Aetna Insurance Co.*, n17 the insurer had retained counsel to enter a defense against a claim that the insured's negligence had caused destruction of a building by fire. Fourteen months later, the insurer[8209]retained counsel withdrew the appearance, citing an exclusion for injury to property rented to the insured. Conceding an initial lack of coverage, the insured claimed that the insurer was now estopped to deny coverage. Apparently, no substantial activity appeared from the record during the period prior to the motion to withdraw. Accordingly, the court affirmed the order permitting the withdrawal, because some proof of prejudice was necessary to support an estoppel. It reasoned that the need for such a showing was

particularly applicable where, as in the instant case, the matter is still at the pleading stage and any defense entered may be amended under the liberal provisions of the Civil Practice Act and the Rules of the Municipal Court of Chicago. In other jurisdictions it has been held under similar facts that no prejudice resulted to the insured by a defense undertaken but withdrawn before trial by the insurer.

The complaint in the instant case does not allege prejudice, damage or injury by reason of the entry of an

appearance and defense in plaintiffs' behalf. Plaintiffs assert that prejudice may be inferred from a commitment to a defense, from the waiver of preliminary motions, and from the difficulty of investigation of a claim at a later date. None of the foregoing matters were pleaded, nor are they necessarily inferable from the mere entry of an appearance and defense alleged in the complaint. n18

The suggestion that there is no prejudice so long as the insurer relinquishes the defense before trial seems out of harmony with more recent cases. n19

Nonetheless, *King* still appears to be good law where there has been no substantial shaping of the defense, even though the period of insurer[8209]controlled representation is more than de minimis.

The point here is not that prejudice is difficult to show. Rather, the point is that if the insured cannot even make a showing that there has been some irreversible shaping of the defense, there is no good basis for an estoppel.

But irreversible shaping of the defense is not the only relevant point. Prejudice flows from an insured's surrender of the right to control the defense. If the insurer has a duty to defend, it usually has the right to control the defense. Insurers have more expertise than most insureds in managing litigation. They have stronger, more immediate incentives to manage litigation efficiently than would insureds who expect their insurers to pay defense counsel's bills. Thus, most liability insurance markets have settled on contract terms that provide for the insurer to manage the defense, and give it the "right and duty to defend."

This standard liability policy provision "gives the insurer the right to control the defense of the claim" and "the insured has no right to interfere with the insurer's control of the defense." n20 Where the insured has no personal exposure, that control "is virtually absolute." n21

But where there is a conflict of interest between insurer and insured regarding the way in which the case will be defended, the insured has a right to independent counsel. n22 A few states authorize the insured to reject the insurer's defense whenever there is a reservation of the right to deny indemnification. n23 If the insured has a right to independent counsel, the insured necessarily has the right to direct the defense, and usurpation of that right by the insurer can be prejudicial, if the defense is irreversibly shaped while the insurer is in control.

If the insurer had a duty to defend, and the coverage defense not raised was not one that would have entitled the insured to independent counsel, then the insured would not have had the right to control the defense without relinquishing both insurer funding for the defense and the possibility of indemnification (if a covered liability were found). Unless the insured could prove that timely notice of the coverage defense would have led to relinquishment of those rights, any delay in notice would not seem to be prejudicial. n24

Similar logic might apply if the coverage defense not raised initially (though not giving rise to any right to independent counsel) would have defeated any duty to defend. While the lack of a duty to defend would mean that the insurer had no right to defend and the insured, accordingly, had the right to control the defense, timely notice of that right would usually not have led the insured to reject an insurer-funded defense.

Of course, a deficient defense, if shown to have occurred, would be prejudicial. And the insured might contend that, had it been properly informed regarding the potential coverage defenses, that it would have hired personal counsel to monitor the litigation, assess the defense strategy being employed, and complain if it found the strategies being employed were inappropriate.

In *World Harvest Church*, if the insurer had a duty to defend and the Church had a right to independent counsel, insurer control of the defense until nearly the close of discovery would have been prejudicial, as the insured's defense options would have been greatly constrained. But there probably never was any right or duty to defend. While that would also mean that the insured was deprived of the right to make defense decisions, that fact alone would not show prejudice. If a showing of prejudice were required, the insured also would have been required to show either (1) that, if

the insurer's rights had been properly reserved, the insured would have foregone insurer funding for the defense in order to make those decisions or (2) that the insurer's defense was deficient.

n11 In other dicta on this subject, the *Eggleston* court noted that "most courts . . . find prejudice is inevitable when the insured is denied the right to maintain complete control of the defense Indeed some courts speak of a 'conclusive' presumption of prejudice, doubtless because, since the course cannot be rerun, they believe it futile to attempt to prove or disprove that the insured would have fared better on his own." 37 N.J. at 129. New Jersey has gone as far as these dicta suggest. But this type of statement appears quite common in addressing this issue.

n12 A detailed examination of Illinois cases (and some cases from other jurisdictions) on whether prejudice had or had not been shown may be found in William T. Barker, *Defense Without Reserving Rights: When May Insurer Deny Coverage*, 56 Def. Coun. J. 58, ____ (1989).

n13 See **AK**--*O'Neill Investigs. v. Illinois Empl'rs. Ins. Co.*, 636 P.2d 1170, 1178-79 (Alaska 1981) (no prejudice where insured did not relinquish control, even though insurer offered to reimburse portion of fees for his counsel);

GA--*Prescott's Altama Datsun, Inc. v. Monarch Ins. Co.*, 253 Ga. 317, 318 (1984) (no prejudice where two insurers both provided defenses and other insurer controlled defense until defendant insurer belatedly reserved its rights);

MN--*St. Paul School Dist. No. 625 v. Columbia Transit Corp.*, 321 N.W.2d 41, 46[#8209]47 (Minn. 1982) (no prejudice from disclaimer after three years of defense and when trial was imminent, because insured's own counsel worked with insurer's attorneys in preparing the action, although not actively engaged in defense; "We do not feel that Gulf's rather late reservation of rights prejudiced the ability of the [insured's] counsel to control the defense, had he so chosen, or to make or negotiate a settlement before . . . verdict");

NH--*Am. Ins. Co. v. Nationwide Ins. Co.*, 110 N.H. 192, 195[#8209]96 (1970) (where two insurers jointly undertook defense, no prejudice to insured or other insurer where one insurer later disclaimed; involvement throughout of counsel for remaining insurer required it to demonstrate some prejudice, which it could not do given the early stage at which the disclaimer occurred).

n14 *Md. Cas. Co. v. Peppers*, 64 Ill. 2d 187 (1976).

n15 64 Ill. 2d at 196.

n16 64 Ill. 2d at 196.

n17 *King v. Aetna Insurance Co.*, 31 Ill. App. 2d 462 (1961)

n18 *Id.* a 465[#8209]66 (citations omitted).

n19 This difference can easily be exaggerated. The *King* case was in the Municipal Court, whose jurisdictional limits would indicate that *King* was not a major case. In such cases, especially in 1961, there was likely to be much less in the way of discovery and other formal pretrial practice than is normal in larger cases today. Accordingly, it might well have been perceived that the norm for such cases would involve relatively little irrevocable shaping of the defense before actual commencement of trial. On this basis, *King* may be fully consistent with later cases, with differences in result explained by differences in how extensively the defense actually had been shaped or normally would have been shaped in a case of the particular size and type.

ARTICLE: On March 15, 2010, the Fifth Circuit affirmed the decision of the U.S. District Court for the Southern District of Texas at the preliminary injunction stage ordering Lloyd's of London underwriters to immediately commence the advancement of defense costs despite an exclusion which was arguably triggered by the misconduct of the policyholder's officers.

The underlying actions involved an alleged Ponzi scheme orchestrated by R. Allen Stanford and the Stanford Financial Group. The \$100 million directors and officers liability policy covering Stanford contained an advancement of defense cost provision. The directors and officers liability policy also contained a money laundering exclusion barring coverage for loss when "it is determined" that such acts did "in fact" occur. A former CFO of the Sanford Financial Group pled guilty in one of the underlying actions to acts which Underwriters argued fell under the policy's broad definition of money laundering.

Based on that plea, Underwriters made the unilateral determination that the exclusion applied and stopped advancing defense costs. Ultimately, the U.S. District Court for the Southern District of Texas ruled that there is no reason to treat a duty to advance defense costs differently from a duty to defend and thus applied the "eight corners" rule. In doing so, the judge disregarded the extrinsic evidence -- the guilty plea -- relied on by Underwriters.

The Fifth Circuit chose not to rule for the policyholder on the basis of the "eight corners" rule. The Fifth Circuit did, however, reject Underwriters' argument that it could unilaterally void the D&O policy's coverage on the basis of the former CFO's guilty plea. The Fifth Circuit called the policy an "awkward instrument", finding the phrase "it is

determined" unclear as to who is to make such a determination under the contract.

"We interpret a "determination" in fact" "absent language unambiguously pointing to the underwriters as decision-makers' as requiring a judicial act," Judge Higginbotham held.

The three-judge panel ordered Underwriters' to continue paying Stanford's lawyers until a lower court can formally decide the coverage issue. Further, the Fifth Circuit held that if the defendants lose their coverage dispute, they will be required to pay back Underwriters certain defense costs advancement, the amount of which would also be determined by the judge on remand.

2010 Emerging Issues 5163

Sonnenschein Nath & Rosenthal LLP on Jacobsen v. Allstate Insurance Co.: Third-Party Claimant Cannot Recover Attorneys Fees for Bad Faith Regarding Settlement

By Ronald Kent and William Barker

July 2, 2010

SUMMARY: In *Jacobsen v. Allstate Insurance Co.*, the Montana Supreme Court held that a third-party claimant cannot recover attorneys' fees for an insurer's bad faith conduct regarding settlement. In this commentary, the authors examine ways in which Montana law is unique and the reasons why it nonetheless reached the same result on this issue as other jurisdictions.

RELATED CONTENT: Click here for more Emerging Issues Analysis related to this Area of Law

ARTICLE: In *Jacobsen v. Allstate Insurance Co.*,ⁿ¹ the Montana Supreme Court held that a third-party claimant cannot recover attorneys' fees for an insurer's bad faith conduct regarding settlement. As we explain in § 2.06 of *Insurance Bad Faith Litigation* (2nd ed. 2010), most jurisdictions hold that a third-party claimant has no rights at all (beyond freedom from fraud and other forms of independently tortious conduct) regarding an insurer's handling of settlement negotiations. But Montana found an implied cause of action for third-party claimants under its version of the NAIC Model Unfair Trade Practices Act ("UTPA"), obliging the insurer to make reasonable efforts to settle claims where liability had become reasonably clear,ⁿ² and this cause of action was then supplanted by an express statutory cause of action.ⁿ³ Of course, mere allowance of a cause of action did not determine whether attorneys' fees would be recoverable.

One aspect of that question came before the court in *Sampson v. National Farmers Union Property & Casualty Insurance Co.*ⁿ⁴ The plaintiffs were injured by the insured and demanded \$125,000 to settle their claims. The insurer first refused, but ultimately agreed, but only after they had incurred \$43,500 in attorneys' fees, which they now sought to recover under the UTPA. The starting point of the court's analysis was the American Rule, under which each party must bear its own litigation expenses, absent a contractual or statutory provision allowing recovery.ⁿ⁵ While some common-law exceptions to this rule are recognized, plaintiffs did not seek to rely on any such exception, instead arguing that the statutory authorization to recover "damages" included attorneys' fees in circumstances like theirs.ⁿ⁶ In construing the statute, the court notedⁿ⁷ its decision in *Tynes v. Bankers Life Co.*,ⁿ⁸ where it had declined to permit recovery as damages of attorneys fees incurred to recover contractual benefits withheld in bad faith.ⁿ⁹ The statutory authorization to award damages for certain violations of the UTPA was enacted at the session just after *Tynes* was

decided and the legislature did not indicate any disagreement with *Tynes*. n10 Accordingly, the court concluded that the statute did not authorize recovery of attorneys' fees. n11

With the statutory route to fee recovery blocked, Jacobsen sought a common-law exception to the American Rule. He had been injured by an Allstate insured. While Jacobsen was unrepresented, an Allstate claim adjuster processed his claim in accord with Allstate's Core Claim Process Redesign and settled it for \$3500 plus 45 days of "open medical" (i.e., payment for necessary medical care during that period). A month later, Jacobsen experienced shoulder pain and asked to rescind the release. Allstate initially refused to agree, but later did so after Jacobsen retained counsel, settling the claim for roughly \$200,000. Jacobsen then sued for bad faith seeking, *inter alia*, recovery of his attorneys' fees, which a jury awarded. n12 The Montana Supreme Court reversed.

The court again began its analysis with the American Rule, also noting its holding in *Sampson*. n13 The district court had relied on two common-law exceptions to that rule: the "insurance exception" and the "equitable exception." n14 The supreme court found neither applicable.

The "equitable exception" could not apply because Jacobsen was a plaintiff:

"The equitable exception to the [American] rule is available in those unique factual situations in which a party is forced into a frivolous lawsuit and must incur attorney's fees to dismiss the claim." This exception has been narrowly construed, and its application is confined to situations in which the individual claiming fees has been forced into litigation through no fault of his own.... [A]n individual's position as the plaintiff in litigation will normally preclude application of the equitable exception to the American Rule.... In contrast to the situations in which we have applied the equitable exception, Jacobsen was not forced into litigation, notwithstanding that he felt compelled to file suit as a result of Allstate's bad faith. Ultimately, Jacobsen presents neither authority nor policy sufficiently compelling for this Court to depart from our practice of "narrowly construing" the equitable exception to the American Rule. n15

The "insurance exception" did not apply because Jacobsen had no contractual relationship with Allstate:

The insurance exception arises where an insurer breaches its duty to defend or indemnify the insured party, forcing the insured "to assume the burden of legal action to obtain the full benefit of the insurance contract" This exception is justified by the contractual relationship between the insurer and the insured, and the enhanced fiduciary obligation which arises therefrom. We refused to extend the insurance exception to third-party claimants, as it would undermine the fundamental precept of the exception and "drive a stake into the heart of the American Rule." Jacobsen argues that [this] holding ... is limited to contract theory--that it does not preclude attorney fees to a third party who proves tortious conduct by the insurer. However, our decision ... was based upon the lack of fiduciary duty running from an insurer to a third-party claimant. The same logic applies here: Allstate did not have a fiduciary duty to Jacobsen, because he was not a party to the insurance contract. The rationale underlying the insurance exception to the American Rule is the existence of a fiduciary duty, and no such duty exists here. n16

The court recognized that it was free to modify existing exceptions to the American Rule or create new ones, but it declined to do so here. "The American Rule is a foundation of our jurisprudence, and we must narrowly construe the exceptions lest they swallow the rule. Jacobsen's argument that attorney fees must be added to his recovery if the award is to truly make him whole is contrary to the generally applicable American Rule." n17

Other jurisdictions also typically deny recovery of attorneys' fees (absent contractual or statutory authorization) in cases involving bad faith regarding settlement of third-party claims, even when the claims are based on the insured's contractual and common-law good faith rights. n18

Montana frequently expands insurer liability, especially in bad faith cases. Insurers will surely be glad it has chosen not to do so on this issue.

Sonnenschein Nath & Rosenthal, LLP on Shin Crest PTE, Ltd. v. AIU Ins. Co.: Duty To Settle When There Are Multiple Insureds

By Ronald Kent

July 2, 2010

SUMMARY: Shin Crest PTE Ltd. v. AIU Insurance Co. is an unreported decision, but it relies on the reported case of *Contreras v. U.S. Security Insurance Co.* to resolve: what is an insurer's duty when it has two insureds for the same claim and the plaintiff demands the policy limit to settle claims against only one insured?

ARTICLE: *Shin Crest PTE Ltd. v. AIU Insurance Co.* n1 is an unreported decision, but it relies on the reported case of *Contreras v. U.S. Security Insurance Co.* n2 to resolve a question on which there are only a few cases and a division of authority: what is an insurer's duty when it has two insureds for the same claim and the plaintiff demands the policy limit to settle claims against only one insured? The court holds that the insurer is free, after trying unsuccessfully to get a release for both insureds to settle on behalf of the one insured for whom a settlement is offered, even if the effect is to leave the other insured exposed to liability. This commentary explores the divided authority on that issue.

I. The Case

Doreen Blair was severely injured in a fall from a dock, where she had been sitting on a folding chair manufactured by Shin Crest and sold by Sam's Club. She and her husband sued Sam's Club, alleging that the chair was defective and caused the fall. AIU insured Shin Crest and Sam's Club was an additional insured on the policy. While there was a strong defense that there was no defect and that the injury caused by Blair putting the leg of the chair too close to the edge of the dock, Blair's injuries were so severe that AIU put a settlement value of \$1 million or more on the case. The Blairs' declared strategy was to get as much as they could from Sam's Club and then to sue Shin Crest. Eventually, the Blairs demanded the \$1.8 million remaining policy limits (after erosion by defense costs) to settle the claim against Sam's Club only. After the Blairs refused to release both insureds, AIU paid the remaining limit on behalf of Sam's Club (in part due to fear of excess judgment liability to Sam's Club had it not settled). n3

The Blairs then sued Shin Crest. AIU refused to defend because its limits were exhausted. Shin Crest refused a demand for \$2 million to settle; it eventually agreed to a \$12 million stipulated judgment, not collectible so long as Shin

Crest sued AIU and shared any proceeds with the Blairs. Shin Crest then brought this suit. n4 The district court granted summary judgment for AIU and the Eleventh Circuit affirmed, relying on *Contreras*. "Because the Blairs were unwilling to settle with Shin Crest, " AIU fulfilled its duty to Shin Crest by trying, though unsuccessfully, to obtain a release for it from liability." n5

II. Analysis n6

There is a division of authority on the duties of an insurer with multiple insureds when faced with a limits demand to settle with only one insured. A few courts have held that settling for less than all insureds improperly prefers those benefiting from the settlements (or at least permits the reasonableness of the preference to be examined). n7 But the majority of courts disagree. n8

In *Shin Crest*, the governing law was that of Florida, so the federal courts looked to *Contreras v. U.S. Security Insurance Co.* n9 There, Osterman had been hit and killed by a car owned by Dessanti and driven (with Dessanti's permission) by Dale. Dale had been driving at a high speed and was charged with DUI. The policy covering the car had limits of \$10,000 per person injured and \$20,000 for all persons injured in the same accident. Contreras, the administrator of Osterman's estate demanded the limit to settle with Dessanti, while refusing to settle with Dale. U.S. Security offered the limits, but only for a global settlement, stating that it did not believe it properly could settle on behalf of only one insured. The case went to a \$1 million verdict for compensatory damages against both Dessanti and Dale and a punitive damage verdict against Dale of \$110,000 (remitted to \$5000). Dessanti filed for bankruptcy and her trustee assigned the estate's claims to Contreras. n10

In the bad faith action, U.S. Security argued that its duty to Dale had precluded it from settling on behalf of Dessanti alone. The court of appeals disagreed:

Having attempted to secure a release for Dale without success, U.S. Security fulfilled its obligation of good faith towards Dale. Once it became clear that Contreras was unwilling to settle with Dale and give him a complete release, U.S. Security had no further opportunity to give fair consideration to a reasonable settlement offer for Dale. Since U.S. Security could not force Contreras to settle and release Dale, it did all it could do to avoid excess exposure to Dale.

Having fulfilled its obligation to Dale, U.S. Security thereafter was obligated to take the necessary steps before Contreras's offer expired to protect Dessanti from what was certain to be a judgment far in excess of her policy limits. n11

Cases elsewhere addressing settlements on behalf of less than all insureds hold that such a settlement does terminate the duty to defend the remaining insureds. n12 Under Texas law, it is clear that an insurer need only consider the reasonableness of a proposed settlement in light of the liabilities that will be eliminated, without regard to the interests of other insureds. n13 Otherwise, it is thought that an insurer faced with an offer on behalf of less than all insureds will face a bad faith suit whether it agrees or refuses. n14 Courts elsewhere have also found this consideration persuasive, given the credit to the remaining insured(s) for the settlement payment. n15 Moreover, they have reasoned that any inequality stems not from a preference by the insurer of one insured, but from the differing settlement posture of the claimant with respect to the different insureds. n16 Finally, they have questioned the source of any duty to provide equal protection to different insureds. n17

The latter cases are better reasoned. The typical reason why a claimant refuses to settle with all insureds is that one or more of them have insurance other than the policy whose limits are being offered or substantial noninsurance assets that could be reached to collect any judgment against them. If the expected verdict value of a claim substantially exceeds the offered policy limits, the claimant ordinarily will not release an insured with additional capability of satisfying such a judgment. An insured with that extra capability cannot reasonably expect to be released from such a claim without a contribution reflecting that extra capability. Asking an insurer to expose other insureds to an excess judgment to enhance the bargaining power of an insured able but unwilling to contribute to a higher settlement would

unfairly treat the insureds so exposed.

The cases just discussed have assumed that the insured left exposed will at least get credit for the settlement amount. That assumption would not apply if the liability of the insureds is not joint and several but, at least in part, several and proportional to their individual fault. In such a case, it has been held to be bad faith to expend the entire policy limit to settle on behalf of one insured. n18 While this holding relies on a duty not to prefer one insured to another, such a duty is more defensible in this context than with joint and several liability. Moreover, it is commonly the case that one of the insureds is only vicariously liable for the fault of the other, removing any questions about comparative fault. n19

Sonnenschein Nath & Rosenthal LLP on Fortner v. Grange Mutual Insurance Co

2010 Emerging Issues 5165

Sonnenschein Nath & Rosenthal LLP on Fortner v. Grange Mutual Insurance Co.: Georgia Supreme Court Defines "Safe Harbor" of Insurers Faced with Settlement Demands Conditional on Acceptance by Other Insurers

By William Barker and Ronald Kent

July 2, 2010

SUMMARY: Where an insured is covered by multiple policies, plaintiffs sometimes make settlement demands that can only be accepted if multiple insurers agree. The Georgia Supreme Court has allowed an insurer wishing to accept such an offer to create a "safe harbor" for itself, leaving the other insurer(s) to make their own decisions. In *Fortner v. Grange Mutual Insurance Co.*, the court limited availability of that "safe harbor."

ARTICLE: Where an insured is covered by multiple policies, plaintiffs sometimes make settlement demands that can only be accepted if multiple insurers agree. The Georgia Supreme Court has allowed an insurer wishing to accept such an offer to create a "safe harbor" for itself, leaving the other insurer(s) to make their own decisions. In *Fortner v. Grange Mutual Insurance Co.*,ⁿ¹ the court limited availability of that "safe harbor." This commentary reviews those decisions and offers suggestions for how the law ought to treat such offers, drawing on material from Section 2.03[6][d] of our book, *Insurance Bad Faith Litigation* (2nd ed. 2010).

I. *Fortner v. Grange Mutual Insurance Co.*

Fortner was injured in an auto accident with Arnsdorff. Arnsdorff had a Grange personal auto policy with a limit of \$50,000 and his plumbing business had an Auto Owners policy with a \$1 million limit. Fortner offered to settle all claims for \$50,000 from Grange "contingent upon" Auto Owners paying \$750,000. Grange offered \$50,000, contingent upon Fortner giving Arnsdorff a full release with indemnification language. Fortner regarded this as a rejection and went to trial, winning a \$7 million verdict. He obtained an assignment of rights from Arnsdorff and sued Grange. (There is no indication of how Auto Owners responded to the demand nor of whether there was any bad faith claim against it.) The jury rendered a verdict for Grange, Fortner appealed, and the Georgia Supreme Court found instructional error, requiring a new trial. ⁿ²

The challenged instruction, based on *Cotton States Insurance Co. v. Brightman*,ⁿ³ stated that:

In responding to a settlement demand, which demand is conditional upon the response of another insurance company, an insurance company can offer its policy limits in response to the demand and then let the plaintiff negotiate with the remaining insurers. In that situation, the insurance company would have given equal consideration to its insured's financial interest and fulfilled its duty to him. And you would return your verdict in favor of the defendant. n4

In *Brightman*, Brightman was seriously injured in a collision between his car and a van owned by Martin and driven by Cumbo. Before suing, Brightman's counsel informed Cotton States that Brightman had suffered traumatic brain injury, provided medical bills of \$329,457.20, and offered to settle for \$300,000, the limit of Martin's policy with Cotton States. Cotton States declined, based on evidence that Brightman was at fault. In litigation, it was discovered that Cumbo had a \$100,000 policy with State Farm. A nonbinding arbitration found for Brightman and awarded \$2 million. Brightman then offered Cotton States a chance, with a ten-day limit, to settle for its \$300,000 limit, contingent upon State Farm offering its limit. Neither tendered its limit within the ten days, and State Farm continued to deny coverage. About a month after the settlement demand expired, Cotton States offered its limit in exchange for a general release. Brightman went to trial and recovered a verdict of nearly \$1.8 million. n5

After both insurers paid their limits, there remained an excess judgment of \$1,387,500. Martin assigned her rights to Brightman, who sued Cotton States. Brightman recovered a bad faith verdict of more than \$2.1 million against Cotton States, and the Georgia Supreme Court affirmed. It held that "an insurance company in a case involving multiple insurers may be liable to its insured on a bad faith claim when it fails to tender its policy limits in response to a settlement offer solely because the offer also seeks the policy limits from other insurers." n6 It reasoned that Cotton States could have tendered its limits, subject to action by State Farm on the portion of the demand addressed to it. Had Cotton States done this, "it would have done everything within its control to accept the plaintiff's offer and thus protect its policyholder from an excess verdict. In that situation, the insurance company would have given equal consideration to its insured's financial interests and fulfilled its duty to her." n7 Because Cotton States had not done this, there was a jury issue on bad faith, and the evidence was sufficient to support the verdict. n8

The *Brightman* court further explained that it disagreed with language in the court of appeals opinion stating that an insurer had an affirmative duty to engage in settlement negotiations when the insured faced excess liability and declined to impose an obligation to make a counteroffer whenever an insurer received an offer containing conditions beyond its control. n9 However, it concluded that

an insurance company faced with a demand involving multiple insurers can create a safe harbor from liability for an insured's bad faith claim -- by meeting the portion of the demand over which it has control, thus doing what it can to effectuate the settlement of the claims against its insured. This rule is intended to protect the financial interests of policyholders in cases where continued litigation would expose them to a judgment exceeding their policy limits while protecting insurers from bad faith claims when there are conditions involved in the settlement demand over which they have no control. n10

Applying *Brightman*, the *Fortner* court held that Grange had not brought itself within that safe harbor, because it had imposed conditions of its own, requiring a release that would have the effect of precluding Fortner from pursuing Auto Owners. Because Grange had a choice whether to impose these conditions, there was a jury question whether doing so was reasonable, a question which the challenged instruction prevented the jury from considering. n11 Accordingly, a new trial was required. n12

II. Analysis

The result in *Brightman* seems clearly correct. The general rule is that an excess insurer ordinarily has no duty to defend or settle unless and until the primary coverage is exhausted. n13 It seems clear that (putting aside whatever coverage defense it claimed) State Farm's coverage was excess. As such, State Farm had no obligation to respond to a settlement demand until Cotton States tendered its limit. And nothing about the demand called for Cotton States to pay anything unless State Farm also agreed.

Arguably, one might reach a similar conclusion in *Fortner*, without regard to the additional condition imposed by Grange. Neither insurer responded within the time limit imposed by Fortner. Because Fortner had no obligation to entertain further offers, allowing that time limit to expire potentially exposed Arnsdorff to excess liability, n14 and Grange's failure to tender its own limits seemingly obviated any duty of Auto Owners to respond.

The analysis becomes more complex if one assumes that Fortner had reopened negotiations or that Grange had made its counteroffer before expiration of the demand. The demand was contingent on acceptance by both insurers. Had both accepted, it would have been entirely proper to demand a release. And once Grange tendered its limits, any failure to settle would have resulted, not from Grange's condition, but from failure of Auto Owners to also accept. So Grange arguably would not have been the cause of the failure to settle and ought not to be liable.

But there is another consideration that the *Fortner* court does not mention. Georgia has a statute that permits a limited liability release, which releases a settling insurer and also releases the insured tortfeasor *except to the extent of any other applicable insurance coverage*. n15 Had Grange offered its limits in return for such a release, that would have satisfied the purposes of the *Brightman* "safe harbor," and should have protected Grange. In the absence of a general duty to make offers or counteroffers, it might still be open to a jury to conclude that failure to make this kind of offer constituted bad faith, even if it were clear that Auto Owners would not have agreed to settle.

In sum,

Where multiple insurance policies do or may cover the same injuries, a claimant may make a demand requiring acceptance by two or more insurers. Even if one of the insurers refuses the demand, that may not excuse the other insurer from responding: unless the jurisdiction insists strictly on a demand that could have been accepted, there may be a question of fact whether an offer by one insurer might have led to a settlement. If the response by the other insurer is not yet known, the insurer could still accept conditional on joinder of the other insurer; whether such an acceptance would have produced a settlement could be a question of fact. Insofar as the issue is whether another necessary party would agree to the settlement, it has been held that an offer is not impermissibly conditional unless it requires the insurer to make payment without first receiving assurance that the payment will result in full settlement.

If a settlement would require court approval, any acceptance may be conditioned on getting that approval; if the settlement is rejected, there will be a question of fact whether approval would have been granted had the settlement been accepted. n16

A wise primary insurer, faced with a demand calling for participation by an excess insurer or co-insurer should decide on tendering its limits without regard to what the other insurer may do. The tender, if made, should be conditional on either the other insurer's participation in a full settlement or on some form of settlement that protects the insured, without cutting off the claim against the other insurer.

ARTICLE: In *Captain v. United Ohio Insurance Co.*, n1 the insured was clearly at fault in an accident that killed two people and seriously injured two others. The policy limits were \$12,500 per person and \$25,000 per accident. United Ohio interpleaded the limits, which were distributed to the claimants, and then defended the insured when two of them pursued tort claims, resulting in judgments of \$1,200,000 and \$1,000,000. United Ohio nonetheless got summary judgment on bad faith. This commentary discusses the case, in the context of the law outside of Ohio.

I. The Case

United Ohio insured Willey, whose car crossed the center line and hit an oncoming car, killing two of Willey's passengers (Everhart and Waddell) and seriously injuring a third passenger (Captain) and the driver of the other car (Harp). United Ohio's adjuster quickly determined that Willey was solely at fault and that the damages far exceeded his \$12,500/25,000 limits. He concluded that they were unlikely to accept offers from him and would be more amenable to a judicial division of the policy limits. Because Willey had few, if any assets, the adjuster thought further litigation unlikely. So he interpleaded the \$25,000 limit and obtained a declaratory judgment that this terminated the duty to defend (pursuant to policy language so providing). The claimants agreed on division of the \$25,000, but Captain and the Everhart estate cross-claimed against Willey and took their tort claims to trial, which United Ohio defended, recovering judgments of \$1,200,000 and \$1,000,000. Willey assigned his rights against United Ohio to them, and they sued for bad faith. A summary judgment for United Ohio was affirmed. n2

The trial court's reasoning was unclear, and the court of appeals assumed that it may have concluded that an

interpleader was per se good faith. That would have been error, as the court concluded that "the appropriate inquiry is whether United Ohio lacked a reasonable justification for its actions (or inaction) in handling the claim against Willey." n3 But any error was harmless, because plaintiffs had failed to create an issue of material fact as to bad faith. n4

They contended that Captain and Hart (who both had underinsured coverage) might have settled for \$1000 each, leaving more for the other claimants and enabling United Ohio to obtain releases from all claimants. But they could not have done that without the consent of the UIM insurers, who had no reason to agree. So it was not unreasonable of United Ohio to refrain from trying to orchestrate such a settlement. n5

Plaintiffs also contended that United Ohio could have obtained a global settlement, with releases, without filing the interpleader. Even if that were true, it would "only reinforce[] the reasonableness of United Ohio's decision." n6 If the claimants would have been willing to accept a voluntary equitable division of the \$25,000 without further litigation, then it was reasonable for United Ohio to think they would be equally willing to accept an equitable division by the interpleader court. n7

II. Analysis n8

Captain deals with a perennial and difficult problem regarding the duty to settle. Multiple claimants with serious claim can cause special problems regarding that duty. n9 Liability insurance policies commonly have both "per person" or "per claim" limits, as well as (usually larger) "per occurrence" and, sometimes, "aggregate" limits. If there are several claims or injured persons, there is no special problem if any "per occurrence" or "aggregate" limits are large enough to cover a "per person" or "per claim" limit for each person or claim. In that event, settlement of one claim does not affect any other. But, if there is no "per person" limit or if the "per occurrence" or "aggregate" limits are not large enough, the settlement of one claim may reduce the funds available to pay others. So, if the policy limits are \$25,000 per person and \$50,000 per occurrence, and five people are injured, three seriously, the insurer might settle the two most serious claims for \$25,000 each, leaving nothing for the others. n10 Or, the insurer might refuse their policy-limits demands in an attempt to equitably resolve all of the claims, possibly exposing the insured to an excess judgment if the spurned claimants choose to take their claims to judgment. Inevitably, someone is going to be unhappy with the result and may sue the insurer for bad faith. n11

In asking whether United Ohio lacked a reasonable justification for its actions, the *Captain* court employed a standard normally used in first-party bad faith cases, where the insurer has delayed or denied payment of benefits to an insured for the insured's own losses. n12 Different standards are normally used where the insurer is alleged to have failed to act properly to protect its insured against an excess judgment. n13 But the latter standards are designed to assess the propriety of a decision not to offer the policy limit (or some lesser amount) in satisfaction of the claim. They are not really appropriate where, as in *Captain*, the insurer is offering the policy limit but faces an obstacle to obtaining full releases in return.

A. Most Courts Give an Insurer Wide Discretion in Handling Multiple Claims with Insufficient Limits

In fact, courts outside Ohio have not applied the usual duty-to-settle standards in multiple claimant cases. The cases are essentially unanimous in holding that an insurer owes no duty to claimants to refrain from depleting the policy limits by disproportionate settlements with other claimants. n14 Any such duty would be inconsistent with the insurer's duties to its insured. n15 Nor can a claimant who has not obtained a judgment obtain an injunction against disproportionate settlements with other claimants. n16

Most courts hold that an insurer acts consistently with its duty to its insured by making reasonable settlements with some claimants, even if that depletes the limits available for other claims. n17 In particular, insurers are generally permitted to make reasonable settlements on a "first come, first served" basis. n18 This is especially true where claimants have deliberately chosen to pursue claims piecemeal. n19 Courts are reluctant to delay settlement with some claimants based on the possibility that other claimants or potential claimants might be adversely affected by depletion of

the policy limits. n20 Nor are they prepared to require insurers to refuse reasonable demands, at the risk that refusal might later be found to be bad faith. n21 Of course, an insurer cannot hastily make excessive settlements that deplete its limits in order to relieve itself of the responsibility of further protecting its insured. n22

Texas expressly holds that the reasonableness of any settlement is to be judged solely on the merits of the particular claim, without regard to its relation to other claims. n23 That appears to be the standard applied in other states, but the cases elsewhere have not articulated the standard for judging reasonableness.

These cases are not exactly apposite in a situation like *Captain*, where the insurer has not obtained any releases. But they are somewhat supportive of an analysis that shields the insurer if it had a reasonable justification for its action.

Under the foregoing standards, it is typically not difficult for insurers to handle multiple claims without incurring bad faith liability. But some courts impose more demanding obligations. The leading case of this sort is *Liberty Mutual Insurance Co. v. Davis*. n24 The policyholder, an itinerant fruit-picker, had injured two couples. The more seriously injured couple demanded the full \$20,000 per-accident limit, but the insurer sought to achieve full resolution of all claims. It refused to leave the policyholder subject to the substantial, though smaller claims of the other couple. Each couple then obtained a judgment in excess of the limit, and the insurer was sued for breach of the duty to settle. The insurer unsuccessfully sought a directed verdict on the ground that it acted properly in seeking a full release by all claimants, and the Fifth Circuit affirmed the resulting verdict against the insurer.

The court recognized that, in a multiple claimant situation, the usual conflict of interest between insurer and policyholder over settlement is not present: "rejection of a single offer to compromise within policy limits does not necessarily conflict with the interest of the insured." n25 Nonetheless it reasoned that the insured would want "the insurance fund used to compromise as much of his potential liability as possible." n26 While settlement of all claims would be ideal, court thought that the insured would be best served, if no such settlement could be achieved, by having "the leverage of his insurance money applied to at least some of the claims, to the end of reducing his ultimate judgment debt." n27 On this analysis, an insurer could be liable for unreasonably failing to effectuate the most favorable possible partial settlement.

But that analysis is fatally flawed. It fails to consider the true interests of a judgment-proof policyholder, like the itinerant fruit-picker in *Davis*. Such a policyholder has no reason to care about the amount of the ultimate judgment debt, so long as it is significantly more than the policy limits. Any significant excess judgment will leave no alternative but bankruptcy, and bankruptcy will wipe out a large judgment just as easily as a small one. (Bankruptcy is not available to wipe out certain nondischargeable debts, notably those for injuries from drunken driving; n28 so this analysis does not apply to those debts.) The only benefit which such a policyholder can hope for is not to have to file for bankruptcy at all, and that benefit can only be obtained if the insurer successfully holds out for a full release from all injured parties. Accordingly, an insurer should at least be free to insist on that when the insured is judgment proof. Allowing that has the further benefit of encouraging an equitable division of the limited funds among the claimants, rather than expending the policy limit on the most serious claims and leaving the others completely uncompensated.

The *Davis* rule is also unfair to insurers in cases where there are many serious claims. n29 The claimants have every incentive to jockey with one another and with the insurer to maximize their recovery, ideally by obtaining a bad faith verdict that will remove the policy limits. An insurer that has no conflict of interest and is simply trying to protect its insured and distribute the meager policy limits fairly ought not to be placed at the mercy of a jury's later decision (aided by self-serving testimony from the claimants) that it could have eliminated more liability by a different settlement strategy. If one seeks to analogize such an insurer to a fiduciary, the appropriate analogy is to a corporate officer or director, trying to outmaneuver other businesses in a competitive market. The latter are not subjected to jury hindsight second-guessing of their business decisions, but are shielded from liability so long as were within the range of reasonable business judgment. n30

These reasons for rejecting a requirement to minimize potential excess judgments add further support to *Captain's*

adoption of a rule that shields the insurer if it had a reasonable justification for its action.

When insurers are unable to negotiate a global settlement, they frequently resort to interpleader actions to allocate the available funds. n31 Indeed, some courts suggest that an insurer should attempt a global settlement and, if unsuccessful, seek judicial assistance by proceedings in the nature of interpleader. n32 There certainly are situations where interpleader could be useful in achieving a global settlement. n33 But, ultimately, interpleader cannot force a settlement where the claimants are unwilling. An interpleader can only enjoin other actions with respect to the fund interpleaded; it cannot enjoin pursuit of other sources of payment, such as the insured. n34

That limitation on interpleader is the source of the problem in *Captain*. But an insurer faced with such a situation would be better advised to offer the claimants a global settlement, if they can agree on a division of the policy limits, rather than immediately interpleading. By doing that, the insurer avoids any later question (like that raised in *Captain*) whether such an offer would have achieved a settlement. If the claimants are unwilling or unable to agree on a settlement, the insurer can then consider whether to interplead or to simply hold out for a global settlement and defend until that is achieved or a judgment is entered.

Reed Smith LLP on Rivelli v. Twin City Fire Insurance Company

2010 Emerging Issues 5161

Reed Smith LLP on Rivelli v. Twin City Fire Insurance Company

By Mark Hersh

July 2, 2010

SUMMARY: D&O and E&O insurance carriers sometimes require their insureds to provide "warranty letters" in connection with their application for insurance. In one recent case, *Rivelli v. Twin City Fire Insurance Company*, 2009 U.S. App. LEXIS 23559 (10th Cir. Oct. 26, 2009), the Eighth Circuit affirmed a district court ruling that a D&O insurer had properly denied coverage based on a warranty letter.

ARTICLE: D&O and E&O insurance carriers sometimes require their insureds to provide "warranty letters" in connection with their application for insurance. Though the language of these warranties may vary, they typically warrant that no insured has knowledge of facts that may give rise to a claim under the policy, or a basis to believe that a claim under the policy may be made, and they further provide that if any insured has such knowledge, any claim later arising from such facts will be excluded from coverage. Sometimes this is achieved through a "prior knowledge" policy exclusion, rather than a warranty letter. In either case, the prior knowledge warranties and exclusions have generated some litigation. In one recent case, *Rivelli v. Twin City Fire Insurance Company*, 2009 U.S. App. LEXIS 23559 (10th Cir. Oct. 26, 2009), the Eighth Circuit affirmed a district court ruling that a D&O insurer had properly denied coverage based on a warranty letter. This commentary examines *Rivelli*, and in particular its very questionable reasoning that the exclusion in the warranty was triggered by the mere allegations against the insureds, without any findings of fact.

I. The Case

The plaintiffs in *Rivelli* were directors or officers of Fischer Imaging Co., which was the subject of shareholder class action lawsuits and an SEC enforcement action based on an alleged accounting fraud scheme involved improperly recognized revenue that inflated the company's stock price. The class actions eventually were dismissed and not refiled. The Eighth Circuit decision does not mention any resolution of the SEC matter.

At the time of the lawsuits, the company had a \$5 million primary D&O policy with Federal Insurance Company, and a \$5 million excess policy with defendant Twin City. The top \$2.5 million of the \$5 million in excess coverage had been added when the company renewed its policy in May 2002. In connection with that additional \$2.5 million in

coverage, the company provided Twin City with a warranty letter, representing that "[n]o person or entity for whom this insurance is intended has any knowledge or information of any act, error omission, fact or circumstance which may give rise to a claim which may fall within the scope of the proposed insurance detailed above." The letter further provided: "It is agreed that if such knowledge or information exists, any claim arising therefrom (whether or not disclosed herein), in addition to any other remedy the insurer may have, is excluded from the proposed coverage." n1

The company burned through the first \$7.5 million defending the lawsuits, and when it reached the last \$2.5 million, Twin City denied further coverage based on the warranty letter and the allegations in the SEC's complaint. A coverage lawsuit ensued and, applying Colorado law, the district court granted summary judgment to Twin City. The linchpin of its decision was the application of Colorado's "complaint rule," in which an insurer's duty to defend is determined by the allegations in the complaint. Where an insurer relies on a policy exclusion, the district court stated, "The insurer has a duty to defend unless the insurer can establish that the allegations in the complaint are solely and entirely within the exclusions in the insurance policy." Based on this principle, the district court reasoned that "the applicability of the Warranty Letter's exclusion must be determined based on the 'four corners' of the SEC's Complaint and Amended Complaint, without resort to extrinsic evidence." The court then recounted the SEC's allegations, and concluded as follows: "These allegations and others, when read together, show that Rivelli and Johnson knew of wrongful activities at Fischer that could give rise to a claim under the Twin City Policy before May 1, 2002."

The Eighth Circuit affirmed the district court's ruling in every respect, finding that the district court properly applied the "complaint rule" to the warranty issue. It explained, "The district court held that the exclusion in the Warranty Letter was triggered by the allegations in the SEC's amended complaint," and it agreed that the SEC's claims "when read together-compelled the conclusion that the SEC's allegations were within the exclusion of the Warranty Letter." In finding the warranty exclusion applicable, it clearly and repeatedly relied entirely on the unproven allegations in the SEC's complaints, stating "the allegations in the SEC's amended complaint are overwhelming in outlining what plaintiffs knew at the time they entered into the Warranty Letter."

II. Analysis

The trial and appellate court decisions in *Rivelli* suffer from an egregious flaw in reasoning and are contrary to well-established case law. The courts mechanically misapplied Colorado's "complaint rule" to determine that the warranty exclusion had been triggered.

As the district court observed, in Colorado (and most or all other states) an insurer's duty to defend is determined by the allegations in the underlying complaint. This rule reflects that certain types of claims are designed to be covered or not covered by certain kinds of policies, and this often can be assessed based on the allegations. So, for example, if a claim clearly alleges professional malpractice, it may be plainly excluded from a D&O or CGL policy that has an exclusion for professional errors and omissions claims. Importantly, this rule gives the benefit of any doubt to the insured; as both courts in *Rivelli* observed, unless it is clear from the allegations that the claim is not covered, there is a duty to defend.

While it makes sense to apply the "complaint rule" to many or most policy exclusions, a warranty exclusion is different. It is apparent from the plain language of the warranty exclusion that it is triggered based on what insureds actually knew, not what they were alleged to have known. There is simply no other reasonable interpretation of this provision, and other courts that have interpreted warranty exclusions have agreed. These courts have held that the insurance carrier has the burden of proving that a warranty on an insurance application was false, and to meet that burden the insurer must prove what the insureds actually knew. n2

In *Rivelli*, the district court and court of appeals acknowledged that the proper inquiry was what the insureds subjectively knew at the time of the warranty. However, they then concluded that insureds knew of facts that could give rise to a claim based entirely on unproven allegations by the SEC. As the Eighth Circuit stated, "It does not matter what the insureds believed, only what the SEC's amended complaint alleged they knew." Thus, the insureds lost

valuable insurance coverage not because the claims against them were of a type not covered under the policy, or because they were proven to have engaged in wrongdoing, but because the court essentially accepted unproven allegations of their wrongdoing as true without requiring actual proof. This was a misapplication of the "complaint rule" "which is designed to protect insureds" and an unjust result. n3

[Return to Text](#)

n1 This exclusionary language is in the district court opinion but not the appellate opinion. See *Rivelli v. Twin City Fire Ins. Co.*, No. 08 cv01225-RPM, 2008 U.S. Dist. LEXIS 99678 (November 21, 2008) (unpublished).

n2 For example, in *American Guarantee & Liability Ins. Co. v. Fojanini*, 90 F.Supp. 2d 615 (E.D. Pa. 2000), just four days before the defendant company signed a warranty indicating that there were no claims foreseen, its directors had received a letter from the soon-to-be plaintiff stating that the company had made misrepresentations and breached agreements, though the letter ended in a plea for amicable resolution rather than a threat of litigation. The court held that because there was no "deposition testimony or affidavit on the record as to the state of mind of" any company official, the insurer failed to show that there was a genuine issue of fact regarding whether any insured subjectively knew of an impending claim, and it granted summary judgment for the insured. *Id.* at 622. *Selko v. Home Ins. Co.*, 139 F.3d 146 (3d Cir. Pa. 1998) is often cited for the proposition that a mixed standard is applied to warranty exclusions, in which only the actual facts subjectively known to the insured are considered, but an objective reasonableness test is then used to determine whether the insured reasonably could have expected a claim to arise based on the known facts. See also *Great American Ins. Co. v. Gross*, 2008 U.S. Dist. LEXIS 10079 (E.D. Va. Feb. 11, 2008); *Bank of America Corp v. SR International Bus. Ins. Co.*, 05 Cvs 5564, 2007 NCBC 36; 2007 NCBC Lexis 36 (N.C. Super. 2007). See also *Pereira v. National Union*, 2006 U.S. Dist. LEXIS 49263 (S.D.N.Y. 2006); *Westport Ins. Corp. v. Lilley*, 292 F.Supp.2d 165, 172-74 (D.Me. 2003).

n3 It may well be that the SEC allegations were well-founded and the insureds engaged in an accounting fraud scheme. The point here is that the courts should not have assumed this and deprived the insureds of their coverage based on unproven allegations; the insurer has the burden of proving that the exclusion applies.

Sonnenschein Nath & Rosenthal on Independent Counsel Rights Under New York Law

2010 Emerging Issues 5166

Sonnenschein Nath & Rosenthal, LLP on *New York Marine & General Insurance Co. v. Lafarge North America, Inc.*: Independent Counsel Rights Under New York Law

By William T. Barker

July 2, 2010

SUMMARY: This commentary examines the limits of an insured's right to be defended by independent counsel, rather than counsel appointed and directed by the insurer, in light of the Second Circuit decision in 2010 applying New York law in *New York Marine & General Insurance Co. v. Lafarge North America, Inc.*

ARTICLE: In *New York Marine & General Insurance Co. v. Lafarge North America, Inc. ("NYMAGIC")*,ⁿ¹ the Second Circuit pointed out limits to an insured's right to be defended by independent counsel, rather than counsel appointed and directed by the insurer. Some New York cases have overlooked those limits, and the Second Circuit's opinion should help correct such neglect. This commentary examines independent counsel rights under New York law.

I. The Case

Lafarge owned a barge that allegedly smashed through a levee wall during Hurricane Katrina, contributing to the flooding of New Orleans. This created potential liability for Lafarge that threatened Lafarge's existence. It retained national and New Orleans counsel to investigate and preserve evidence. Its primary insurer, NYMAGIC, wished to assign counsel from its panel to defend the ensuing litigation. Lafarge continued to retain its chosen counsel and directed them to cooperate with NYMAGIC's panel counsel. The primary limits were exhausted paying panel counsel and retained experts. The excess insurers refused to pay Lafarge's chosen counsel, whose fees exceeded \$10 million. The district court ordered the excess insurers to pay those fees.ⁿ²

The Second Circuit determined that some, but not all, of the fees in question were covered. Specifically, immediate retention of counsel to investigate, retain experts, and preserve evidence was a covered means of loss mitigation.ⁿ³ But NYMAGIC had the right to retain mutually acceptable counsel to defend the litigation, and Lafarge's refusal to consider any of the firms offered breached the contract.ⁿ⁴ To reach those conclusions, the court construed policy language that differs from that of standard liability policies and different but interacting language of the primary and excess policies. For purposes of this commentary, the details of that policy language and how the court reached those

conclusions is not material.

But Lafarge argued that, even if the contract entitled NYMAGIC to select counsel, Lafarge was nonetheless entitled, pursuant to New York law, to independent counsel of its own selection. Lafarge argued that there was an inherent conflict of interest between itself and its insurers, because Lafarge's exposure was billions of dollars and the insurer's coverage was only \$30 million. The Second Circuit disagreed. n5 The New York Court of Appeals has held that "[i]ndependent counsel is only necessary in cases where the defense attorney's duty to the insured would require that he defeat liability on any ground and his duty to the insurer would require that he defeat liability only upon grounds which would render the insurer liable." n6 In this case, NYMAGIC and Lafarge had a common interest in defeating the entire claim, and there were no grounds that would render Lafarge alone liable. The substantial exposure in excess of limits did not create a conflict: "[W]here multiple claims present no conflict—for example, where the insurance contract provides liability coverage only for personal injuries and the claim against the insured seeks recovery for property damage as well as for personal injuries—no threat of divided loyalty is present and there is no need for the retention of separate counsel. This is so because in such a situation the question of insurance coverage is not intertwined with the question of the insured's liability." n7

Settlement negotiations might create a conflict, but no such issue was presented here. "Lafarge therefore did not have a right to pursue independent counsel whose legal fees would be covered by the primary policy." n8

II. Analysis: Conflicts of Interest and Rights to Independent Counsel n9 A. Under Standard Policies, and Absent a Conflict of Interest Regarding the Defense, the Insurer Has the Right to Select Defense Counsel for the Insured and to Control the Defense

Individuals and businesses purchase insurance to shift financial risk to their insurers. To an insured, the cost of lawyers necessary to defend covered claims is part of the risk to be shifted. To the insurer, defense lawyers are critical to controlling insurance costs by defeating or limiting insureds' liability on covered claims. Even so, the cost of defense counsel is a cost ultimately passed on to the insurance-buying public as part of insurance premiums. Thus, it would be wasteful to spend more on defense activities than those activities are expected to yield in reduced indemnity costs, i.e. the cost of judgments or settlements. Both costs are ultimately borne by the insurance-buying public in premiums.

Insurers have more expertise than most insureds in managing litigation. They have stronger, more immediate incentives to manage litigation efficiently than would insureds who expect their insurers to pay defense counsel's bills. Thus, most liability insurance markets have settled on contract terms that provide for the insurer to manage the defense, and give it the "right and duty to defend."

This standard liability policy provision "gives the insurer the right to control the defense of the claim" and "the insured has no right to interfere with the insurer's control of the defense." n10 Where the insured has no personal exposure, that control "is virtually absolute." n11 The right to select and direct counsel includes the right to change counsel. n12

Except in the unusual case where insurer and insured have a conflict of interest precluding joint representation, the law in most jurisdictions recognizes both as clients of defense counsel. n13 Thus, both as a client and pursuant to the insurance contract, the insurer usually has the right to make expenditure and strategic decisions.

This works well for insureds, who typically have no interest in how a claim is defended, as long as the insurer pays any resulting judgment or settlement. The vast bulk of cases defended by insurers are fully covered. n14 And even where there is some risk of personal financial exposure to an insured, the latter typically relies willingly on the insurer to manage the defense. This is not surprising. The insured has significant protections in situations where the claim is not fully covered. These protections include (1) the insurer's obligation to pay covered settlements or judgments, (2) its duty to accept reasonable settlement demands within policy limits, and (3) its responsibility for any increased liability of the insured resulting from an inadequate defense. n15 (Where the strategy chosen results in collateral damage to the

insured, there may be circumstances where defense counsel or the insurer could be liable for that damage.)

B. Defense Counsel Owes the Insured a Duty of Loyalty

Because the insured is a client (and regardless of whether the insurer is also a client), defense counsel, even if appointed by the insurer, owes the insured undivided loyalty. n16 In ordinary cases this presents no problem, for the insurer's interests in the conduct of the defense will be fully consistent with those of the insured. As a California court has explained:

In the insured-insurer relationship, the attorney characteristically is engaged and paid by the carrier to defend the insured. The insured and the insurer have certain obligations each to the other, as previously noted, arising from the insurance contract. Both the insured and the carrier have a common interest in defeating or settling the third party's claim. If the matter reaches litigation, the attorney appears of record for the insured and at all times represents him in terms measured by the extent of his employment.

In such a situation, the attorney has two clients whose primary, overlapping and common interest is the speedy and successful resolution of the claim and litigation. Conceptually, each member of the trio, attorney, client-insured, and client-insurer has corresponding rights and obligations founded largely on contract, and as to the attorney, by the Rules of Professional Conduct as well. The three parties may be viewed as a loose partnership, coalition or alliance directed toward a common goal, sharing a common purpose which lasts during the pendency of the claim or litigation against the insured. Communications are routinely exchanged between them relating to the joint and common purpose—the successful defense and resolution of the claim. Insured, carrier, and attorney, together form an entity—the defense team—arising from the obligations to defend and to cooperate, imposed by contract and professional duty. This entity may be conceived as comprising a unitary whole with intramural relationships and reciprocal obligations and duties each to the other quite separate and apart from the extramural relations with third parties or with the world at large. Together, the team occupies one side of the litigating arena. n17

While defending the normal case involves only commonality of interests between the insurer and the insured, counsel must be alert for divergences of interests that may occur in particular cases. The duty of undivided loyalty means that defense counsel may do nothing that injures interests of an insured client without informed consent of that client. n18

Because coverage issues inherently involve conflicts between the insurer and the insured, defense counsel must avoid any involvement in those issues. In particular, defense counsel must not assist the insurer in defeating coverage, as such assistance would breach the duty of loyalty to the insured. n19

C. When There Is a Conflict of Interest Regarding the Defense, the Insured Is Entitled to Independent Counsel 1. The Rules of Professional Conduct Preclude a Conflicted Representation

The first question that any lawyer must answer when asked to undertake a representation is whether that representation will involve a conflict of interest. Insurance defense counsel is no different from any other lawyer in this respect. If representing the insured and the insurer jointly would create a conflict of interest, then joint representation is impermissible, absent informed consents by both. Independent counsel, representing only the insured, must be paid by the insurer to discharge its duty to defend. Otherwise, the insured would be put at risk that counsel's advice about the representation might be affected by counsel's loyalty to the insurer. Essentially the same analysis applies even if local law does not consider the insurer to be a co-client. If there is a conflict that would preclude joint representation, that conflict would also preclude, absent informed consent by the insured, acceptance of insurer direction by counsel. n20 And if counsel has an ongoing relationship with the insurer, the lawyer's personal interest in pleasing the insurer may create a conflict in the same way that a legal duty of loyalty does.

The governing standard is stated in ABA Model Rule 1.7, which is substantively identical on this point to the relevant law in all states. That rule provides that:

(a) Except as provided in paragraph (b), a lawyer shall not represent a client if the representation involves a concurrent conflict of interest. A concurrent conflict of interest exists if:

(1) the representation of one client will be directly adverse to another client; or

(2) there is a significant risk that the representation of one or more clients will be materially limited by the lawyer's responsibilities to another client, a former client or a third person or by a personal interest of the lawyer. n21

A material limitation (as that term is used in paragraph (a)(2) of the rule) exists when a lawyer "cannot consider, recommend or carry out an appropriate course of action for the client because of the lawyer's other responsibilities or interests." n22 In applying this standard to insurance representations, courts have demanded special sensitivity to any situation where the choices made by defense counsel could benefit the insurer at the insured's expense.

Where the existence of divergent interests in the conduct of the defense is inherent in the case, the conflict of interest rules require that the representation be declined, unless all affected clients give informed consent.

2. A Disabling Conflict Exists When Insurer and Insured Have Divergent Interests in the Way the Case Is Defended

The primary example in insurance representations occurs when some factual issue bearing on the insured's liability also bears on the existence of coverage. A fact of this sort has been described as a "pivotal fact," n23 whose existence is the most common source of conflicts requiring independent counsel. For example, if the insured is sued on alternative theories of negligence and battery, the former will typically be covered but the latter will not. Of course, the insurer and the insured share an interest in defeating the suit entirely and in minimizing any judgment. But if liability is found, the insured would prefer that it be based on (covered) negligence, while the insurer's interest would be served if it were based on (noncovered) battery. Because the way in which the case is defended has a real possibility of affecting the basis on which any liability would be found, this divergence of interest creates a conflict of interest for any defense counsel seeking to advance the insurer's interest as well as that of the insured. n24 More complicated examples must also be considered. n25

But the mere existence of some question as to coverage does not create a conflict. Only if the way in which the insured's defense is handled would affect the determination of coverage does a conflict exist, n26 and many coverage questions are unrelated to the matters at issue in the tort action.

For example, counsel may be asked to defend a case involving an auto accident in which the insured's cousin was injured when the car operated by the insured ran into a tree. The cousin had been living with the insured while attending a nearby school for a semester, but has returned to his parents' home after being released from the hospital. The claim representative assumes the insured's defense, but reserves the right to deny coverage under the policy's exclusion for injuries to relatives residing in the insured's household. Coverage counsel brings a declaratory judgment action to resolve that issue. Because the resident relative issue does not overlap with the issues in the tort action, it does not create any Rule 1.7 conflict of interest, and independent counsel is not required to comply with Rule 1.7 (or its equivalent). n27 (Moreover, because the insured's residence is irrelevant to the tort action, counsel is under no duty to disclose information on that subject to the claim representative, even if unfavorable to the insured. Any such disclosure would breach the duties of loyalty and confidentiality owed to the insured.)

Excess exposure, standing alone does not create a Rule 1.7 conflict for defense counsel: defense counsel seeks to do either of two things: "either win the case or keep the damages as low as possible. Everything he does in fulfillment of either objective must of necessity benefit both clients." n28 But insurer and insured do have differing interests regarding settlement whenever the insured has excess exposure, and counsel must act carefully in dealing with that subject. n29

But, if the case involves a "pivotal fact," there will typically be an irreconcilable conflict. Counsel must advocate a

position regarding the pivotal fact and any position will be contrary to the interests of one client or the other. By shaping the defense, counsel could thus shift liabilities found by the court between covered and noncovered status. Where the coverage issues present such an opportunity, the insured is entitled to independent counsel unless the insured gives informed consent to the conflict.

Some courts have concluded that conflicts of this sort can also arise in auto accidents where the insured has a claim that the other party is (1) at fault *and* (2) either is an uninsured motorist ("UM") or an underinsured motorist ("UIM"). Because the UM or UIM claim could give the insurer an interest in establishing the insured's contributory or comparative fault, there could be an incentive to defend the claim against the insured less vigorously. n30 Similar problems can arise in situations where two of the insurer's insureds assert covered claims against one another based on the same incident n31 or where two insured defendants have inconsistent defenses. n32 The facts in each case must be carefully analyzed to determine whether there is any substantial basis for concluding that the insurer has an interest that could be served by an impaired defense. If so, independent counsel should be provided. n33

3. Some Jurisdictions Grant the Insured a Right to Independent Counsel Whenever the Insurer Reserves the Right to Deny Indemnification

A few states authorize the insured to reject the insurer's defense whenever there is a reservation of the right to deny indemnification. n34 In jurisdictions which follow this rule, the insured is *never* obliged to accept a defense under reservation of the insurer's rights to deny indemnification for any judgment rendered. Under this view, the insured's rejection of a defense under reservation may require the insurer either to affirm coverage unconditionally and defend or to disclaim coverage and refuse to defend, at the risk of breaching the policy if there actually was a duty to defend. Some jurisdictions permit the insurer to avoid the latter risk by agreeing to pay for a defense conducted by counsel selected and controlled by the insured. But none of the jurisdictions adhering to this rule permit the insurer, over the insured's objection, to control the defense when there is any question of coverage for the liabilities asserted in the action to be defended. The insurer's role is limited to payment of counsel who represents and is directed by the insured alone.

The doctrine just described is sometimes said to be generally accepted. n35 But that is not so. Several states have explicitly rejected the contention that an insurer's reservation of rights is ineffective if the insured objects. n36 Moreover, cases adopting the "reject the defense" rule were mostly decided before development of the more precise conflict of interest rule, so the latter is the clear modern trend. n37

4. The New York Rule a. Independent Counsel Is Required Only Where Coverage and Liability Issues Are Intertwined or There Is Some Other Rule 1.7 Conflict

New York first addressed the right to independent counsel in *Prashker v. United States Guarantee Corp.*, n38 where an insured was alleged to have negligently operated a plane, resulting in a crash which killed both pilot and passenger. Among the grounds of negligence alleged was violation of federal regulations limiting flying in certain conditions to pilots licensed for instrument flying, which the insured was not. Operation in violation of the instrument flight rules was also excluded from coverage (making it a "pivotal fact"). In a declaratory judgment action, the insurer sought to be relieved of both the duty to defend and the duty to indemnify. In support of its request, it urged, *inter alia*, that requiring a defense "would subject to divided loyalty any attorneys who might defend the action, in that their duty to the assureds would be to endeavor to defeat recovery on any ground, whereas their duty to the insurance company would be to defeat recovery only upon such grounds as might render the insurance company liable." n39

The New York Court of Appeals declined to relieve the insurer of the duty to defend plainly imposed by the covered allegations of the complaint or to permit piecemeal adjudication in the declaratory judgment action of the question, properly included in the underlying action, of whether the pilot had violated the instrument flight rules. As to the conflict of interest problem, it pointed out that this could be solved by use of attorneys responsible only to the insured, with the insurer being liable for the reasonable value of their services. n40

The Court of Appeals again addressed the right to independent counsel in *Public Service Mutual Insurance Co. v. Goldfarb*.ⁿ⁴¹ Goldfarb was a dentist sued by a patient who alleged that, in the course of providing dental treatment, he had sexually abused her.ⁿ⁴² The court held that Public Service had a duty to defend, but no duty to indemnify against the alleged intentional wrongdoing. It then held that, "inasmuch as the insurer's interest in defending the lawsuit is in conflict with the defendant's interest-the insurer being liable only upon some of the grounds for recovery asserted and not upon others-defendant Goldfarb is entitled to defense by an attorney of his own choosing, whose reasonable fee is to be paid by the insurer."ⁿ⁴³

In a footnote, the court then summarized the standard for determining whether the insured has a right to independent counsel: "That is not to say that a conflict of interest requiring retention of separate counsel will arise in every case where multiple claims are made. Independent counsel is only necessary in cases where the defense attorney's duty to the insured would require that he defeat liability on any ground and his duty to the insurer would require that he defeat liability only upon grounds which would render the insurer liable. When such a conflict is apparent, the insured must be free to choose his own counsel whose reasonable fee is to be paid by the insurer. On the other hand, where multiple claims present no conflict-for example, where the insurance contract provides liability coverage only for personal injuries and the claim against the insured seeks recovery for property damage as well as for personal injuries-no threat of divided loyalty is present and there is no need for the retention of separate counsel. This is so because in such a situation the question of insurance coverage is not intertwined with the question of the insured's liability."ⁿ⁴⁴

The requirement that the coverage issue be "intertwined with the question of the insured's liability" indicates that disqualification ordinarily should turn on the presence of a "pivotal fact," involved in both questions (or, presumably, on other facts indicating the presence of a Rule 1.7 conflict). This is supported by *Prudential Property & Casualty Insurance Co. v. Godfrey*,ⁿ⁴⁵ where the Appellate Division found independent counsel unnecessary. Charles G. Godfrey, Jr., was injured while riding as a passenger on an all-terrain vehicle ("ATV") driven by the ten-year old son of George and Paula Knapp. The Knapps were sued for both negligent entrustment and negligent operation of the ATV. The Knapps sought a defense from Prudential, their homeowners' insurer. The court held that there was coverage for the negligent entrustment claims (but, apparently, not for the negligent operation claims). But, "[i]nasmuch as [Prudential's] interest in disproving negligent entrustment of the ATV does not conflict with [the Knapps'] interest in defeating both the negligence and negligent entrustment claims, there is no need for independent counsel."ⁿ⁴⁶ That is, Prudential had no interest in the success of the negligent operation claim, even if it did not cover that claim; indeed, defeating the negligent operation claim might defeat, or at least undermine, the negligent entrustment claim.

Nonetheless, there are a number of Appellate Division cases that disregard the requirement of intertwined coverage and liability issues, indicating that *whenever* "an insurer defends under reservation of rights, the insured is entitled to retain its own counsel."ⁿ⁴⁷ Other cases suggest that rule by holding that independent counsel was required, without indicating the nature of the coverage issue or other circumstances creating a Rule 1.7 conflict.ⁿ⁴⁸ Any such suggestions are contrary to the rule announced by the New York Court of Appeals in *Goldfarb* and applied by the Second Circuit in *NYMAGIC*.

And there are some New York decisions that ignore the *Goldfarb* requirement for requirement of intertwined coverage and liability issues. For example, *69th Street & 2nd Avenue Garage Associates, L.P. v. Ticor Title Guarantee Co.*ⁿ⁴⁹ found a conflict based on the insured's business need for a quick resolution, as contrasted with Ticor's ability to proceed in a more leisurely fashion. (The insured's counsel had, by the time the independent counsel issue was litigated, succeeded in obtaining an expedited adjudication that cleared the cloud on the title, in a federal case Ticor's counsel had proposed to dismiss.) The insurer, however, had no interest in delaying the litigation. There was, at most, a difference of opinion on strategy, and such differences do not constitute conflicts under the *Goldfarb* test or Rule 1.7.ⁿ⁵⁰

b. Where Independent Counsel Is Due, the Insured Must Be Notified of That

Elacqua v. Physicians' Reciprocal Insurers n51 held that an insured is entitled to be informed of any right to independent counsel. Elacqua and Hennessey were physicians and members of a partnership which employed nurse practitioner Szary. Hytko was treated by Szary and later sued Elacqua, Hennessey, Szary and the partnership for malpractice. The partnership was an additional insured under the policies of Elacqua and Hennessey, and the insurer provided a defense. But it did not insure Szary individually and claimed that it would have no duty to indemnify the partnership if only she were found negligent. n52 On that basis, if Szary were found liable, the partnership would be better off if one of the doctors were also found liable, whereas the insurer would prefer that Szary alone be found liable. That created a right of independent counsel. n53 The insurer had not informed the insureds of this right in its (belated) partial disclaimer, and the court held that the insurer "was required to advise [the insureds] of that right. To hold otherwise would seriously erode the protection afforded." n54

The facts were presented more fully in a decision after the remand, in which it was held that the failure to advise was an unlawful deceptive trade practice. n55 The insurer did not raise the coverage issue until shortly before trial and did not inform the insureds of their right to independent counsel. When defense counsel perceived a conflict among the insureds, it retained separate counsel for each of them. Counsel for the doctors then made a successful summary judgment motion on their behalf, a motion not opposed by counsel for the partnership. n56 At trial, only Szary was found negligent, n57 and a verdict of \$1,899,100 was rendered against the partnership; by the time of the suit against the insurer, interest had brought this amount to over \$3 million, which the insurer settled for \$2.4 million after the first appeal. n58

Despite the settlement, the insureds amended their complaint to allege that the failure to inform them of their right to independent counsel was a deceptive practice in violation of General Business Law § 349. The trial court then dismissed that claim for failure to show any resulting harm. n59 The Appellate Division reversed.

To establish such a claim, the insureds were required to show an act or practice that is "'consumer-oriented,' that is an act having the potential to affect the public at large, as distinguished from merely a private contractual dispute," n60 and that the practice was "'deceptive or misleading in a material way and that plaintiff has been injured by reason thereof.'" n61 The insurer admitted that it routinely failed to inform insureds of rights to independent counsel, so the trial court properly found the practice "consumer oriented." n62 Given the affirmative obligation to disclose previously found, the practice was also deceptive. n63 Failure to inform "was certainly 'likely to mislead a reasonable consumer acting reasonably under the circumstances.'" n64 Thus, the issue was the one identified by the trial court: harm.

While plaintiffs were required to show harm, it need not be pecuniary. Divided loyalty of the lawyers retained by the insurer to represent the insureds constituted harm for purposes of the statute. In particular, the lawyers for the doctors moved for summary judgment and the lawyer for the partnership joined (despite having grounds to oppose), without anyone pointing out that success on the motion would leave the partnership exposed to uninsured liability. Thus, despite having separate lawyers, the insureds were not protected against the conflict between their own interests and those of the insurer. n65

The case focused on the insurer's duty to inform. But the lawyers also had such a duty. Under the Model Rules, which were not then in effect in New York, a lawyer is required to "promptly inform the client of any fact or circumstance with respect to which the client's informed consent ... is required by these Rules" and to "explain a matter to the extent reasonably necessary to permit the client to make informed decisions regarding the representation." n66 The same requirements existed under the common law apart from the Model Rules. n67 Because making the motion could adversely affect the insureds' interests, doing so implicated counsel's duty of loyalty and required the insureds' informed consent. n68 Moreover, precisely because the insured had a right to independent counsel, the insured's informed consent was required before counsel could proceed with the representation. Thus, the lawyers had a duty to inform. n69 c. Conclusion

Counsel and courts considering independent counsel issues in New York should apply the *Goldberg* test in determining whether independent counsel is necessary. If so, both insurers and defense counsel should inform the

insured of the right.

n14 Samuel R. Gross & Kent Syverud, *Don't Try: Civil Jury Verdicts in a System Geared to Settlement*, 44 *UCLA L. Rev.* 1, 21-22 (1996) (in sample of litigated cases, insurance was involved in 80%, with lawyers on both sides agreeing that the claim was completely covered in 59%, so that just under 75% of the cases where insurance was involved were fully covered). Of the remainder, some may have involved either *Cumis* counsel or indemnity policies (under which the insured controls the defense as a matter of contract), precluding any tripartite relationship and, so, any possible problems arising from that relationship. Additionally, lawyers are more likely to mention doubts about adequacy of coverage when such doubts are objectively insubstantial than they are to omit mention of doubts that are objectively substantial. So the 75% figure is probably a significant understatement of the fraction of tripartite relationship claims where coverage is, objectively speaking, both clear and clearly adequate. And even when there is a genuine risk of exposure beyond the policy's coverage, cases are normally resolved without any payment by the insured.

Sonnenschein Nath & Rosenthal, LLP on Allstate Insurance Co. v. Miller: Failure to Inform Insured of Settlement Opportunity as a Basis for Excess Judgment Liability

By William T. Barker and Ronald D. Kent

April 5, 2010

SUMMARY: In *Allstate Insurance Co. v. Miller*, the Nevada Supreme Court held that the jury could properly have found Allstate liable for an excess judgment as a result of its failure to adequately inform its insured of a settlement opportunity. This commentary examines the law in Nevada and elsewhere on an insurer's duty to inform the insured of settlement opportunities and when failure to do so can expose the insurer to excess judgment liability.

ARTICLE: In *Allstate Insurance Co. v. Miller*,ⁿ¹ the Nevada Supreme Court held that the jury could properly have found Allstate liable for an excess judgment as a result of its failure to adequately inform its insured, William Miller, of a settlement opportunity. This commentary examines the law in Nevada and elsewhere on an insurer's duty to inform the insured of settlement opportunities and the circumstances in which failure to do so can be used to impose excess judgment liability on the insurer. It also criticizes a burden of proof rule articulated in *Miller*.

I. THE CASE

Miller had an auto accident in which Mark Hopkins was severely injured. Allstate promptly offered Miller's \$25,000 policy limit. Miller was first represented by Steven Karen but switched to David Sampson. At the time of the switch, Karen notified Allstate of an attorney's lien of \$8,325. The hospital notified Allstate of a lien in the amount of \$67,564.84. Allstate sent a \$25,000 check jointly payable to Hopkins, Karen, Sampson, and the hospital. Sampson rejected this check but offered to release Miller if Allstate would file an interpleader action to determine the rights of all claimants to the policy proceeds. Allstate initially refused to do this; by the time it agreed to do so, the offer had expired. Hopkins then offered Miller an opportunity to stipulate to an excess judgment, in return for a limitation of his liability to the proceeds of any bad faith suit against Allstate. Allstate warned Miller that any settlement without its consent would jeopardize coverage, and Miller did not agree to the judgment. Hopkins later obtained a verdict against Miller of \$703,619.88, and Miller sued for bad faith. ⁿ²

Miller asserted three grounds for liability: (1) Allstate's failure to bring an interpleader action; (2) Allstate's failure

to adequately inform him of the interpleader offer; and (3) Allstate's refusal to agree to allow him to stipulate to an excess judgment. All three theories were submitted to the jury. Allstate asked for special interrogatories to determine, if the jury found liability, which theory or theories it relied on. The trial court refused those interrogatories, and the jury returned a general verdict of \$1,079,784.88 against Allstate. n3

The Nevada Supreme Court determined that Allstate had no duty to bring an interpleader action and was entitled to refuse consent to an excess judgment. n4 But liability could properly have been based on failure to inform. n5 The refusal of the special interrogatories made it impossible to determine the basis of the verdict, so a new trial was required. n6

The fact that Allstate had promptly offered its policy limits did not exhaust its duties to Miller. The court concluded that the duty to defend includes an obligation to adequately inform the insured of settlement opportunities that might avoid or reduce exposure to an excess judgment. n7 This duty attaches when the insurer learns of a settlement demand, even if no suit has yet been brought. n8

Here, Miller claimed that Allstate had told him that Hopkins had made an offer, but did not explain the request for an interpleader, stating only that Hopkins had asked Allstate to do things it does not do; Allstate's file did not document what Miller was told. n9 There was no evidence that Miller could not himself have filed an interpleader action or contributed to the filing of one. n10 Sampson testified that Hopkins would have released Miller if Allstate had either filed the interpleader or paid the funds to Sampson conditioned on his filing the interpleader. n11 Or Allstate might have offered Miller the option of initiating an interpleader after Allstate deposited the funds in court. n12 Miller testified that, if fully informed, he could and would have paid the costs for Allstate to file an interpleader. n13 Failure to follow one of the available courses of action at least might have been the proximate cause of the excess judgment. n14 Thus, there was a viable theory for liability. n15

There remained a question of burden of proof. The court concluded that doubts as to the insured's ability or willingness to settle should be resolved in favor of the insured "unless the insurer can show by affirmative evidence that there was no realistic possibility" of the insured doing so. n16 Here, Sampson testified that Miller would have been released if Allstate had filed or facilitated the filing of an interpleader. Allstate did not refute that evidence. While Allstate established that Miller did not know how much it would have cost to bring an interpleader action, it did not establish what the limit of his capability was or that the cost would have exceeded that limit. Accordingly, there was an issue of fact which the jury could have resolved in favor of liability. n17

II. Analysis n18

A. It Is Generally Agreed That an Insurer Must Keep Its Insured Informed of Developments Regarding Settlement That May Affect any Excess Exposure

The insurer has a duty to provide the insured with certain basic information regarding settlement opportunities. n19 (Defense counsel has an independent, and possibly more extensive duty in that regard. n20) In stressing the importance of informing the insured, one court explained:

An insured who is kept informed may have further information to give the carrier; he may use powers of persuasion upon the carrier to increase its offer; he may engage counsel; he may have other courses of action open to him. n21

Ideally, the insured should be informed whenever there has been a demand for settlement within policy limits if there is any likelihood that the recovery might exceed such limits. But one court has held that an insurer was not in bad faith when it failed to notify the insured of what was then a clearly excessive demand for an amount well within limits. n22 Furthermore, the insured should be told about any demand made for a sum in excess of policy limits so that he may have an opportunity to consider contributing to the excess amount to avoid litigation. n23

The insurer should point out to the insured the conflict of interest between itself and the insured. n24 When the insurer rejects a settlement offer and there is a risk that the judgment might exceed policy limits, the prudent insurer should (1) advise the insured of the risk of an excess judgment, (2) explain how this may affect the insured's rights, and (3) apprise the insured that he may secure private counsel to represent his interest in the litigation. n25 In particular, where a demand is above policy limits, the insured must be advised and given the opportunity to make a contribution sufficient to settle the case. n26 If there is an offer of contribution by another party which would reduce the contribution necessary from the insured, the insured should be told. n27

The information provided to an insured has been found deficient for reasons such as:

- insured never advised regarding exposure to noncovered punitive damages n28
- no evidence that insurer explained that the claimant's injury might not be diagnosed for a long period of time, that the amount of the damages might exceed the policy limits or that the claimant had offered a settlement within the policy limits; n29
- insured was not informed of the (never offered) value the insurer put on the case and, so, could not consider the possibility of supplementing that amount to achieve a settlement; n30 and
- the insured was not told that defense counsel was an insurer employee. n31

The duty of good faith and fair dealing requires an insurer to advise and inform its insured so that the insured will have sufficient information to make intelligent decisions to protect his own interests. n32 The information communicated to the insured must include the extent of the insured's potential exposure in the third party action and the status of settlement negotiations; without this information, the insured will not be able to make a meaningful decision regarding settlement. n33 When the insurer does not keep the insured sufficiently informed, the insurer cannot avoid liability for an excess judgment on the ground that the insured did not consent to settle the action. n34 Furthermore, the insurer must inform the insured in a timely manner so that the insured will be able to use the information effectively. n35 If the insured is unaware of the potential adverse liability to him and what steps the insured may take to protect his own interests, the insurer has not carried out its responsibilities to the policyholder. If an insurer misinforms the insured of facts regarding settlement and harm results, the insurer may expose itself to punitive damages. n36

B. The Duty to Inform Has Its Limits

When the insured has a limited ability to comprehend legal matters, the insurer must carefully explain to the insured the significance of information it conveys. n37 But while the duty to represent the insured in good faith includes the duty to explain clearly and simply the legal choices facing the insured[,] it is not an absolute duty to enlighten where enlightenment may be impossible because of the insured's refusal to listen or his incapacity to understand the most patient and lucid explanation. n38

When an insurer *has* fully informed the insured of the risks involved in litigating a claim as opposed to accepting a settlement, and the insured elects to litigate, a bad faith action against the insurer is normally precluded. n39

If the insured advises defense counsel that the insured is judgment proof and has no interest in contributing to any settlement, the insured may not need to be kept informed. n40

It has been suggested that there is no duty to inform the insured of settlement demands unless the insured faces a serious risk of excess exposure. n41 And one commentator has argued that there should be no obligation to inform the insured of unreasonable settlement demands:

While it is theoretically true that the insured might, at his or her own expense, have accepted an unreasonable settlement offer that the insurer properly rejected, thereby preventing an excess judgment, an insurer should not be held liable for an excess judgment on the basis of an insured's testimony to that effect. If for no other reason, the insurer should not be liable in that event because the insured's damages either would not have been sufficiently foreseeable or

would not have been proximately caused by the insurer's actions. n42

Both of these arguments should be rejected, unless the insured has agreed that no notice is necessary (e.g., because the insured lacks any ability or willingness to contribute to any settlement). The insurer's duty to accept a settlement is generally determined by whether a reasonable insurer, without policy limits, would do so. n43 But an insurer has a diversified portfolio of risks and is therefore assumed to be risk-neutral. An insured typically faces only a single risk and is usually risk averse. So it is to be expected that, if able to do so, insureds will often be willing to contribute to pay somewhat more than the reasonable settlement value of a case (as long as the insurer pays the reasonable value) and that they will sometimes be willing to make some payment to eliminate even a remote risk of excess exposure. An insured who is able and willing to make a contribution for that purpose would be denied the opportunity unless the insurer informed it of every settlement demand. Moreover, doing so involves almost no extra burden on the insurer, and defense counsel is typically obliged to communicate every settlement demand received. n44

It has been held that, where the apparent claim value is close to the policy limit, an insurer bargaining for a settlement modestly below that limit need not keep the insured and excess insurer informed of the details of negotiations. n45 For reasons just stated, this is unsound.

C. No Liability Flows from Failure to Inform Unless Harm Results

Failure to inform the insured of a settlement opportunity, standing alone, is not a basis for liability unless that failure caused harm to the insured. n46 Generally, there is no harm unless the insured would have been able and willing to contribute an amount (in addition to what the insurer was willing to pay) sufficient to induce the plaintiff to settle. n47 Where the insured and the claimant had a familial relationship that would have kept insured informed of settlement offers, the insurer's failure to do so was not prejudicial. n48 But, if the plaintiff asks for information about other insurance or the insured's assets, failure to obtain that information can be a cause of failure to settle and, hence, of an excess judgment. n49

There is authority that, once the insured has been advised of a settlement demand exceeding policy limits, the insurer has no liability unless the insured tells it of willingness to contribute the excess. n50 But, as between primary and excess insurers, the practice (and, arguably the legal rule) is that the primary insurer must tender its limits before the excess insurer is obliged to consider settlement. n51 This seems a logical rule for insureds as well, particularly because, in dealing with primary insurers, excess insurers are typically deemed to stand in the insured's shoes. n52

Failure to inform the insured is routinely listed as a factor that may be considered evidence of bad faith. n53 Analytically, failure to inform says nothing about whether a particular settlement amount would have been objectively reasonable. To the extent that objective reasonableness is the critical inquiry, as it is under the "disregard the limits" standard n54, that would indicate that failure to inform should be irrelevant unless the insured would have been willing and able to make a contribution sufficient to achieve a settlement. But, to the extent that the insurer's subjective intent is relevant, failure to inform could be evidence that the insurer did not properly regard the insured's interest.

D. *Miller's* Result May Be Correct, but Its Burden of Proof Rule Is Not

1. *Miller* Revisited

There is limited authority on who bears the burden of proof on whether a failure to more fully inform the insured caused any harm. Because causation of injury is part of a tort plaintiff's prima facie case, one would think it should be the plaintiff's burden to show that informing the insured would have made a difference. But *Miller* and several other cases not only put that burden on the insurer, but make it a very heavy one: doubts as to the insured's ability or willingness to settle should be resolved in favor of the insured "unless the insurer can show by affirmative evidence that there was no realistic possibility" of the insured doing so. n55 In *Miller* itself, it does not seem to have been necessary to address burden of proof. If there was any evidence that could have supported the verdict on the failure-to-inform theory, Allstate was not entitled to a judgment as a matter of law. Sampson had testified that a release could have been

obtained, without any extra expense to either Allstate or Miller, by paying the funds in a way that would have allowed Sampson to initiate the interpleader. One would think that the jury could have inferred that this possibility would have been discovered had Miller been informed of the possibility of interpleader and attempted to explore the option of funding that himself. The court might also have taken judicial notice that interpleaders where a disinterested stakeholder pays the funds into court are usually not very expensive for the stakeholder. Under either theory, the possibility that Miller might have had limited funds to finance the interpleader might not have created a barrier to recovery for failure to inform.

2. *Young v. American Casualty Co.*

The *Miller* court quotes the Couch treatise as specifying the burden of proof. Based on the cases cited there (and the cases they cite), the quoted language seems to have first appeared in *Young v. American Casualty Co.* n56 Quigley and Walker had operated the York Laundromat as partners, and American Casualty insured York with a limit of \$20,000 per person injured. Flynn slipped and fell on the premises and sued for severe injuries. Her counsel demanded \$40,000, and the lawyer hired by American Casualty responded that York did not have that kind of money or insurance. He never disclosed what the insurance limits was, never made any counter-offer, and never told Quigley and Walker of the demand or gave them any opportunity to contribute to a settlement. Flynn recovered a judgment of \$90,330.25, of which American Casualty paid \$20,000.

Quigley and Walker liquidated the laundromat and applied the proceeds, roughly \$7200 to the judgment. They then filed for bankruptcy and were discharged. The bankruptcy trustee then sued American Casualty for bad faith and recovered a judgment of \$70,330.25, the amount of the judgment, less American Casualty's payment. The Second Circuit affirmed. The jury could have found that the failure to properly investigate, to make any effort to settle within limits, or to inform the insureds of the possibility of a contribution was bad faith. On the issue of causation, the court wrote

American, ... having failed to make any response to Flynn's demand, and having failed to inform the insured of the possibility of settlement, should not now be heard to claim that bad faith cannot be found absent proof by the insured that a settlement within the policy limits was possible, or, in the alternative, that the insureds were willing and able to contribute any excess required to effect a settlement beyond the policy limits. Plaintiffs herein did not offer proof that either alternative could have been attained.

To require the insured to establish his willingness to contribute toward a settlement presupposes a settlement figure toward which contribution may be made. The personal injury plaintiff's initial demand is not the settlement figure against which proof of an insured's willingness to contribute should be measured. Had the insurer attempted to fulfill its responsibility by preliminary negotiations of the initial demand figure, the resultant settlement might well have been within the policy limits or, at worst, within the ability of the insured to make sufficient contribution to effect a settlement. *Any doubt which admittedly exists in speculating on these possibilities should be resolved in favor of the insured unless the insurer, by some affirmative evidence, demonstrates that not only was there no realistic possibility of settlement within the policy limits, but also that the insured would not have contributed to whatever settlement figure could have been obtained.* There was no basis for American to act as if the possibility of settlement was foreclosed by the initial demand of Margaret Flynn's counsel for \$40,000. n57

The court failed to recognize that the evidence before it went a considerable ways toward showing that there was a realistic possibility of settlement. There was only \$20,000 in insurance and, as liquidation of the laundromat and the bankruptcy demonstrated, the insureds had very limited assets. Tort plaintiffs usually have little interest in going to trial solely to obtain judgments for uncollectible amounts. The jury certainly could have inferred that, if informed of the limited funds available to pay any judgment, Flynn would have settled for policy limits (with, at most, a modest contribution from the insureds).

But, if that was not enough to support the verdict, why should the trustees have been excused from proving their

case. The sole creditor of the estate was Flynn, n58 so she had every reason to cooperate in the litigation. If she would have settled for policy limits or with a small contribution from the insureds, she could have so testified. The insureds stood to be reimbursed for the payment they had made on the judgment, so they, too, had an incentive to cooperate. If willing to make a contribution to the settlement, they could have so testified. Why should American Casualty have had the burden of inquiring about those facts? Indeed, one reason why there is so little law on the burden of proof issue may be that it is so easy for bad faith plaintiffs to provide the evidence that a settlement was possible.

A Florida case argues that testimony about what a party would have done had the insurer acted differently is "speculative," and that it is preferable to focus[] not on the mindset of the injured party, but on the conduct of the insurer under the circumstances. That is, rather than trying to conjure the secret intent of the injured party, courts simply ask whether under all the circumstances known to the insurer would reasonable diligence and ordinary care dictate an offer to settle within policy limits. The victim's unwillingness to settle, however, is not completely ignored under Florida law. The unwillingness to settle will become a factor only in the unlikely case where the insurer is able to conclusively prove the unwillingness to settle for the policy limits.

This allocation of the burden by the Florida courts makes sense, since foisting the burden on the plaintiff would make it virtually impossible for plaintiffs to succeed in cases where the insurance company simply chooses to ignore the injured party after an accident. In such cases, if the plaintiff does not make a formal offer to settle, she would (under the defendant's argument) be foreclosed from making a later bad faith claim simply because her testimony of her desire to settle would be perceived as speculative. The result of this would be to put the onus of initiating settlement negotiations back on the plaintiff, rather than the insurer. But ... Florida courts intend the burden to initiate settlement discussions be borne by the insurer, not the injured party. n59

The conduct of the insurer under the circumstances may prove breach of duty. But, standing alone, it says nothing about whether any breach caused harm. It is the insured and the injured party who know the facts that would establish whether any harm was caused. It would be strange to impose on the insurer the burden of eliciting that evidence from them. So, imposing on the insurer a duty to initiate negotiations does not require also giving it the burden of showing whether such negotiations could have succeeded. And, even if one were to impose such a burden, it is almost unheard of to require a party in a civil case to prove anything "conclusively."

In short, the result in *Young*, like that in *Miller*, may be justifiable, but the burden of proof rule announced there is not.

3. *Rova Farms Resort, Inc. v. Investors Insurance Co.*

The burden of proof rule announced in *Young* was quoted approvingly in *Rova Farms Resort, Inc. v. Investors Insurance Co.*, n60 but in dictum. Rova Farms Resort had a \$50,000 liability policy with Investors Insurance. Lawrence McLaughlin had a diving accident which rendered him a quadriplegic and sued Rova. Defense counsel and the court both urged a policy limits offer. On the first day of trial, Investors made its only offer, \$12,500, which was refused. The jury returned a verdict of \$225,000. Investors made no further offer. The New Jersey Superior Court, Appellate Division, granted a new trial. Defense counsel pointed out that this could result in an even larger verdict. Investors made no further offer. The New Jersey Supreme Court reinstated judgment on the verdict. Investors paid its \$50,000 limit, leaving Rova with a judgment of \$197,150.68 (including interest). Rova, which was affiliated with a national membership organization, succeeded in mortgaging its property and raising contributions to pay the judgment, after which it sued, recovering a bad faith judgment. n61 The New Jersey Supreme Court affirmed. n62

Rova was represented by its own counsel, Roth, as well as the defense counsel appointed by Investors. McLaughlin's counsel said he would recommend a policy limits offer to McLaughlin. McLaughlin had authorized his lawyer to accept \$75,000. Rova was cash-poor, but had the ability to raise funds. It authorized Roth to add \$25,000 if Investors offered its limit. (It did not tell Investors lest it be pressed for a contribution to a within-limits settlement, something Investors did anyhow.) So, settlement was possible for \$75,000 had Investors offered its limit. n63 After

describing the litigation and settlement opportunities in detail, the court commented that "the opportunities for settlement were so viable that it took a special genius at intransigence to kill them." n64

Investors argued that it should not be liable because McLaughlin never made a firm demand. The New Jersey Supreme Court rejected that argument: "[w]e ... hold that, that an insurer, having contractually restricted the independent negotiating power of its insured, has a positive fiduciary duty to take the initiative and attempt to negotiate a settlement within the policy coverage." n65 The court continued by stating the burden of proof rule previously stated in *Young*:

Any doubt as to the existence of an opportunity to settle within the face amount of the coverage or as to the ability and willingness of the insured to pay any excess required for settlement must be resolved in favor of the insured unless the insurer, by some affirmative evidence, demonstrates there was not only no realistic possibility of settlement within policy limits, but also that the insured would not have contributed to whatever settlement figure above that sum might have been available. n66

But, as just explained, there was no such doubt in *Rova Farms*. And the court noted this: "[f]rom what has been said it is clear that an opposite pattern of fact existed here." n67 Because the existence of a missed settlement opportunity was clearly established, the comment about burden of proof when that was in doubt was clearly dictum, n68 which merely added emphasis to the refusal to insist on plaintiff making a settlement demand.

Other cases which have employed this language have typically done so in the course of rejecting any requirement of a firm demand from the injured party. n69 Notably, *Alt v. American Family Mutual Insurance Co.* n70 quoted that language n71 in a case whose sole issue was whether a summary judgment had been properly granted to the insurer based on lack of a binding offer on behalf of the injured child. n72

Many jurisdictions do require a demand, and there is a substantial argument in favor of such a requirement. n73 In those states, the burden of proof issue addressed in *Rova Farms* would not arise except with regard to such things as failure to inform the insured of settlement opportunities.

III. CONCLUSION

Miller properly holds, in accord with the law generally, that failure to keep the insured informed regarding settlement opportunities can be a basis for excess judgment liability. But the court articulates a burden of proof rule that has crept into cases and treatises without real analysis. That rule is unsound and relieves the bad faith plaintiff of the obligation to show that harm was caused by an insurer's breach of duty to attempt settlement. Other courts should reexamine and reject that rule.

n59 *Snowden v. Lumbermens Mut. Cas. Co.*, 358 F. Supp. 2d 1125, 1129 (N.D. Fla. 2003). The court relied on *Powell v. Prudential Prop. & Cas. Ins. Co.*, 584 So. 2d 12, 14 (Fla. Ct. App. 1984), which noted that Florida rejects any requirement of a demand from the injured party and quoted the language on burden of proof, even though there was no burden of proof issue in the case. Even though the language was dictum in *Powell*, *Snowden* treated it as authoritative.

n60 *Rova Farms Resort, Inc. v. Investors Ins. Co.*, 65 N.J. 474, 496 (1974).

n61 *Id.* at 478-783.

n62 *Id.* at 507.

n63 *Id.* at 485-486.

n64 *Id.* at 494.

n65 *Id.* at 495.

n66 *Id.*

n67 *Id.*

n68 While theoretically dictum, the *Rova Farms* language was quoted as authoritative on a bad faith issue arising in the context of liability for prejudgment interest. *New Jersey Mfrs. Ins. Co. v. Nat'l Cas. Co.*, 393 N.J. Super. 340, 353 (App. Div. 2007). The issue was not whether a settlement could have been reached, but whether the primary insurer was obliged to offer its limit, allowing negotiations with the excess insurer. So, burden of proof was not an issue and the language on that subject was, again, dictum.

The *Rova Farms* language on burden of proof was also quoted as authoritative in *Venetsanos v. Zucker, Facher & Zucker*, 271 N.J. Super. 459, 474-475 (App. Div. 1994), also primarily on the point that no demand was necessary. Moreover, the documentary evidence "leans heavily to the belief that a tender [of the primary limits] would have materially enhanced settlement possibilities" and there was no contrary evidence. *Id.* But, because summary judgment had been entered for the plaintiff, the affirmance may have rested on the burden of producing evidence set forth in the *Rova Farms* language.

n69 *E.g., Morrell Constr., Inc. v. Home Ins. Co.*, 920 F.2d 576, 580-581 (9th Cir. 1990) (ID law).

n70 *Alt v. American Family Mutual Insurance Co.* 71 Wis. 2d 340 (Sup. Ct. 1976).

n71 *Id.* at 351-352.

n72 *See id.* at 342.

n73 *See* William T. Barker & Ronald D. Kent, *Insurance Bad Faith Litigation*, Second Edition, § 2.03[6][d][iii]. The *Rova Farms* language on burden of proof is sometimes quoted when the subject of the discussion is not burden of proof, but merely whether a demand by the tort plaintiff is necessary to create a duty to settle. *E.g., Venetsanos v. Zucker, Facher & Zucker*, 271 N.J. Super. 459, 474-475 (App. Div. 1994); *Alt*, 71 Wis. 2d at 351-352.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of the New Appleman on Insurance Law Library Edition and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and

litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Ronald D. Kent heads the Litigation Department in Sonnenschein's Los Angeles office. He is also Co-Chair of the Firm's National Insurance Litigation and Coverage Practice and is a member of the firm-wide Policy & Planning (Management) Committee. Since 2005, he has been named each year as a leading trial lawyer nationally and in California, based on peer and client evaluations, by *Chambers USA: America's Leading Lawyers*, the highly respected independent attorney rating organization. Mr. Kent has extensive experience representing major insurance companies on a wide variety of matters, including fraud and bad faith actions, class action and multiple plaintiff litigation, defense of toxic tort and other environmental claims, insurance coverage actions and general business disputes. Mr. Kent has tried matters in state and federal courts throughout California, and in other states, and has successfully handled in excess of 70 arbitrations to final resolution. In addition, he has briefed and argued numerous appellate matters in the California Supreme Court, nearly all California district courts of appeal and the Ninth Circuit Court of Appeals.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients' interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in Chambers USA: Americas Leading Lawyers for Business. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

McCarter & English LLP on Limiting the "Absolute" Pollution Exclusion

2010 Emerging Issues 4926

McCarter & English LLP on Limiting the "Absolute" Pollution Exclusion to "Traditional" Pollution

By Louis A. Chiafullo and David C. Kane

March 24, 2010

SUMMARY: A growing number of courts are refusing to construe the breadth of pollution exclusions in insurance liability policies beyond "traditional" environmental pollution. Those courts have found that pollution exclusions do not bar coverage for claims arising from exposure to painting and sealing fumes, toxic chemicals, carbon monoxide, and pesticides.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: The scope of pollution exclusions has been in dispute for decades, centering first on the "sudden and accidental" pollution exclusion that appeared in the 1970s, and next on the so-called "absolute" pollution exclusions that became relatively standard in liability policies in the mid-1980s. The latest battles have centered on whether claims arising out of "non-traditional" pollution -- that is, not the traditional property damage caused by hazardous waste -- come within the purview of the exclusion.

Carriers argue the "plain language" of the exclusion, when read broadly, includes both "traditional" and "non-traditional" pollution. A growing number of courts, however, refuse to construe the breadth of pollution exclusions beyond "traditional" environmental pollution. Courts generally reach this conclusion based on the originally stated purpose of the exclusion and policyholders' reasonable expectations, though some rely solely on the language of the exclusion. This article addresses recent judicial opinions in which courts refused to apply the exclusion to specific types of "non-traditional" pollution, such as: (1) painting and sealing fumes; (2) toxic chemicals; (3) carbon monoxide; and (4) pesticides.

I. Painting & Sealing Fumes

The New Jersey Supreme Court addressed the "traditional" versus "non-traditional" issue squarely in the 2005 case *Nav-Its, Inc. v. Selective Insurance Co. of America*. n1 The issue addressed by the court was "whether we should limit the applicability of the pollution exclusion clause to traditional environmental pollution claims." n2 The court

concluded the pollution exclusion precluded recovery only for "traditional" types of pollution and refused to find that the exclusion was applicable to the claims by the policyholder.

The policyholder, a construction contractor, hired a painting subcontractor to perform painting, coating and floor sealing work in an office building. n3 A physician within the office space suffered "nausea, vomiting, light-headedness, loss of equilibrium, and headaches" during performance of the work. n4 The physician subsequently filed a complaint against the insured for personal injuries from exposure to fumes. n5 The insurer relied on the pollution exclusion as a basis for denying coverage under its comprehensive general liability ("CGL") policy. n6

The policy's pollution exclusion barred coverage for damage "to persons or property" arising out of, or which would not have occurred but for, the "pollution hazard." n7 The policy defined "pollution hazard" as "an actual exposure or threat of exposure to the corrosive, toxic or other harmful properties of any 'pollutants' arising out of the discharge, dispersal, seepage, migration, release or escape of such pollutants." n8 Pollutants included "any solid, liquid, gaseous, or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste." n9 The insurer argued the fumes constituted a "pollutant" within the scope of the pollution exclusion.

The trial court disagreed and granted summary judgment in favor of the policyholder. n10 As the trial court explained, "the pollution exclusion clause in the policy applied only to traditional environmental pollution claims." n11 The Appellate Division reversed, finding the pollution exclusion was not limited to the cleanup of traditional environmental damage. n12

The Supreme Court of New Jersey began its analysis with a review of the drafting history and purposes behind pollution exclusions. It cited to assurances by the insurance industry to New Jersey insurance regulators during the approval process for the absolute pollution exclusion that "[the purpose of the change in policy language in the absolute pollution exclusion] is to introduce a complete on-site emission and partial off-site exclusion for some operations" and "the exclusion would not preclude coverage for liability for a policyholder's products and completed operations." n13 Also persuasive to the Supreme Court was the fact that carriers developed the absolute pollution exclusion to address expanding liability under the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"). n14 The Supreme Court concluded that the pollution exclusion clause "in its various forms demonstrates that its purpose was to have a broad exclusion for traditional environmentally related damages." n15

According to the court, painting and sealing fumes did not constitute "traditional" forms of pollution. Thus, it considered the insurer's interpretation of the pollution exclusion "overly broad, unfair, and contrary to the objectively reasonable expectations of the New Jersey and other state regulatory authorities that were presented with an opportunity to disapprove the clause." n16 The pollution exclusion therefore did not bar coverage for the bodily injury resulting from exposure to fumes.

In *Belt Painting Corp. v. TIG Insurance Company*, the Court of Appeals of New York similarly refused to apply the pollution exclusion to bodily injury resulting from fumes. n17 One of the policyholder's workers alleged injury due to inhalation of paint or solvent fumes while performing work in an office space. n18 In the insurance coverage declaratory judgment action that followed, the trial court granted summary judgment to the insurer on the ground that the claim fell within the pollution exclusion. n19 The Appellate Division reversed, finding the pollution exclusion "applies only where the damages alleged 'are truly environmental in nature' or result from 'pollution of the environment.'" n20

The Court of Appeals surveyed nationwide judicial interpretation of the pollution exclusion, noting courts have split on whether it applies to "non-traditional" pollution. n21 The Court of Appeals fell in line with case law denying application of the exclusion to "non-traditional" pollution, finding the exclusion ambiguous as applied to the fumes at issue. n22 Though the policy broadly defined "pollutants" to include "fumes," the Court of Appeals was "reluctant to adopt an interpretation that would infinitely enlarge the scope of the term 'pollutants,' and seemingly contradict both a 'common speech' understanding of the relevant terms and the reasonable expectations of a business person." n23 The

Court of Appeals ultimately held "[i]t cannot be said that this language unambiguously applies to ordinary paint or solvent fumes that drifted a short distance from the area of the insured's intended use and allegedly caused inhalation injuries to a bystander." n24

In a recent decision, the federal court for the District of South Carolina dealt with application of the absolute pollution exclusion in a contractor's insurance policy to bodily injuries arising from paint fumes. In *NGM Insurance Co. v. Carolina's Power Wash & Painting, LLC*, the policyholder faced potential liability for alleged injuries suffered by postal workers during painting of a post office. n25 The definition of "pollutant" included any "irritant or contaminant" as well as "fumes." n26 The insurer argued the paint fumes constituted a "pollutant" within the exclusion.

Under South Carolina law, the reasonable expectations of a policyholder have no bearing on the interpretation of an insurance policy. n27 Furthermore, no South Carolina case law addressed the "traditional" versus "non-traditional" pollution issue. Thus, the District Court reviewed judicial opinions nationwide and relied most heavily on *Belt Painting, above*, which involved a nearly identical exclusion, to reach its conclusion that the pollution exclusion did not bar coverage. It focused on the New York Court of Appeals' analysis that the insurer's interpretation of the exclusion was over inclusive. n28 It also found persuasive the New York court's finding that when fumes drift a short distance from the work area, no "discharge, dispersal, seepage, migration, release or escape" unambiguously occurs. n29 As a result, the District Court found the exclusion ambiguous and, in accordance with basic tenets of policy interpretation, construed it in favor of the policyholder.

Though it did not frame the issue this way, the federal court for the Southern District of Texas recently refused to apply the pollution exclusion to "non-traditional" pollution, addressing the issue from a purely textual approach. In *National Casualty Insurance Co. v. Orion Transport, Inc.*, the policyholder's trailer exploded and killed a maintenance worker. n30 The estate filed suit, alleging the trailer had been used to transfer oil that left a "dangerous and potentially explosive residue" in the trailer." n31 The insurer filed a declaratory judgment action, alleging it had no coverage obligations because of the pollution exclusion. n32

The District Court focused on the language of the policy, stating:

"Pollutant" is defined by the Policy to mean "any solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste. Waste includes materials to be recycled, reconditioned or reclaimed." There is no dispute that the "dangerous and potentially explosive residue" that [the underlying complaint alleges] "remained in the trailer" is a "pollutant" under the Policy. n33

Nonetheless, the District Court held the pollution exclusion did not bar coverage. By its language, the exclusion applied to "bodily injury or property damage arising out of the...discharge, dispersal, seepage, migration, release or escape of pollutants." n34 The underlying injury did not involve a "discharge, dispersal, seepage, migration, release or escape." n35 The pollution exclusion therefore was inapplicable. Though the opinion rests solely on policy language, it is in agreement with cases finding the exclusion applies only to "traditional" pollution discharged into the environment.

Similarly, the Sixth Circuit held in *Meridian Mutual Insurance Co. v. Kellman* that the absolute pollution exclusion did not preclude coverage for injuries caused by toxic substances confined within the general area of their intended use. n36 In that case, a teacher sued a contractor for alleged injuries arising out of fumes from chemicals used to seal a floor in the school where the teacher worked. n37 The insurer denied coverage to the contractor based on the absolute pollution exclusion. n38

The parties agreed the sealer constituted a pollutant. n39 Nonetheless, the trial court ruled for the insured, stating:

[T]he pollution exclusion clause is intended to protect the insurer from liability for the enforcement of environmental laws. The exclusion contains environmental terms of art because it is intended to exclude coverage only as it relates to environmental pollution. When a toxic substance is confined to an area of intended use it does not come within the exclusion clause. n40

The Sixth Circuit agreed, stating "no reasonable person could find that the insurance policy at issue unambiguously excluded coverage for injuries suffered by an employee who was legitimately in the immediate vicinity of the chemicals, and where the injury occurred only a few feet from where the chemicals were being used." n41

II. Toxic Chemicals

In perhaps the most recent opinion to address the "traditional" versus "non-traditional" issue, the federal court for the Northern District of Illinois denied application of the pollution exclusion to toxic chemicals. *Pacific Employers Insurance Co. v. Clean Harbors Environmental Services, Inc.* involved an underlying complaint for bodily injury due to inhalation of poisonous and toxic fumes emitted from fuel at the insured's facility. n42 In the coverage action, the District Court was bound by an Illinois decision that found, based on the drafting history and over-inclusiveness of the pollution exclusions, the exclusion applied "to only those hazards traditionally associated with environmental pollution." n43

Thus, the issue before the court was whether fumes from toxic chemicals constituted "traditional" pollution. n44 The District Court drew a distinction between environmental pollution and injuries sustained during day-to-day operations of a company, even if they arguably resulted from pollutants. n45 The injuries at issue occurred during the day-to-day duties of the injured party. n46 Hence, the pollution exclusion had no bearing upon the insured's claim for coverage because the toxic chemicals did not constitute "traditional" pollution. n47

III. Carbon Monoxide

The United States Bankruptcy Court for the District of Delaware's recent opinion in *In re IdleAire Technologies Corp.* reached a similar conclusion in a case involving bodily injury arising from carbon monoxide. n48 The insured produced HVAC delivery systems that provided heating, cooling, and ventilation for trucks at rest stops while drivers slept. n49 Two drivers suffered injuries from carbon monoxide that allegedly resulted from the insured's HVAC unit. n50 The insurer argued the pollution exclusions in its CGL and umbrella/excess policies precluded coverage. n51

Like the New Jersey Supreme Court, the court began with a review of the history of pollution exclusions. n52 During the approval process of the absolute pollution exclusion, regulators were aware of "the possibility of over-broad application of the exclusion." n53 In response, the insurance industry represented that "coverage would not be denied for events outside of the traditional understanding of environmental pollution." n54 Approval of the exclusion was based in part upon these reassurances. n55

The court then addressed the policyholder's reasonable expectations. It concluded the policyholder had a reasonable expectation of coverage for two reasons: (1) the insurance industry's representations during approval of the exclusion; and (2) the fact that the policyholder was not a "polluter" but rather an HVAC producer. n56 Next, the court found the exclusion ambiguous because the terms "irritant" and "contaminant," excluded from coverage under the pollution exclusion, "are virtually boundless in their inclusion, for there is virtually no substance or chemical in existence that would not irritate or damage some person or property." n57 Thus, it applied a "limiting principle," which it termed the "common sense approach," to conclude "the circumstances are too far removed from the common understanding of pollution and applying the exclusion here would lead to an absurd result." n58

On March 4, 2010, the federal court for the District of Nevada, applying Nevada law, construed a pollution exclusion in favor of coverage when the insurer attempted to apply it to bodily injury resulting from carbon monoxide exposure. In *Century Surety Co. v. Casino West, Inc.*, four individuals died from inhalation of carbon monoxide in a hotel room. n59 The carbon monoxide arose from the motel's pool heater and entered the room because the air intake openings were blocked. n60 The motel's insurer denied coverage under a CGL policy and filed a declaratory judgment action. n61

The pollution exclusion barred coverage for bodily injury "arising out of the actual, alleged or threatened discharge, dispersal, seepage, migration, release or escape of 'pollutants.'" n62 The exclusion contained an exception

for bodily injury "sustained within a building and caused by smoke, fumes, vapor or soot from equipment used to heat that building." n63 The insurer argued the exception evidenced "an intent to apply the pollution exclusion to all indoor air quality issues *except* when the fumes are generated by the building's heater." n64

The District Court directly refuted the insurer's argument, holding:

While a reasonable person of ordinary intelligence might understand carbon monoxide is a pollutant when emitted in some settings, an ordinary policyholder may not reasonably characterize carbon monoxide emitted from a motel pool heater as pollution. Additionally, a reasonable policyholder might not view the exception regarding fumes from the building's heater as an indication that all other possible types of indoor fumes would be excluded as "pollutants." n65

Concluding the exclusion was subject to more than one reasonable interpretation, the District Court found it ambiguous and construed it against the insurer. n66

Langone v. American Family Mutual Insurance Company also involved the potential application of the pollution exclusion to carbon monoxide. The Langone brothers suffered injury, and one died, after they inhaled carbon monoxide in a residential apartment. n67 The Langones sued the building's owner and the owner's insurer. n68 The insurer contended it had no coverage obligation as a result of the absolute pollution exclusion in the policy, arguing carbon monoxide constituted a "pollutant." n69

The policy defined "pollutant" as "any...gaseous or thermal irritant or contaminant, including...vapor [and] fumes." n70 Even with this broad definition, the court found "[t]he policy and dictionary definitions of the term 'pollutant' do not suffice to unambiguously categorize carbon monoxide as pollution under the facts of this case." n71 Essential to the court's decision was its recognition that:

...most people are exposed to carbon monoxide in small quantities every day. Like carbon dioxide, carbon monoxide is colorless, odorless, and present in the air around us. According to the Environmental Protection Agency, homes without a gas stove have average carbon monoxide levels between .5 and 5 parts per million while areas near a properly adjusted gas stove may have levels as high as 5 to 15 parts per million. Thus the concentrated level of carbon monoxide in the Longones' apartment could be described as a normal condition gone awry. n72

The court concluded carbon monoxide "becomes harmful when levels are abnormally high or exposure is unusually extended" and the extraordinary concentration of carbon monoxide at the residence "would not ordinarily be characterized as a 'pollutant.'" n73 Thus, the pollution exclusion did not bar coverage.

IV. Pesticides

In *MacKinnon v. Truck Insurance Exchange*, the policyholder's tenant died from exposure to pesticides during extermination of bees. n74 The insurer argued the pollution exclusion applied because pesticides are "chemicals" that may constitute an "irritant" and "pollutant," and the spraying constituted a "discharge" or "dispersal," within the exclusion. The Supreme Court of California, however, refused to apply the pollution exclusion to permit the insurer to avoid coverage.

In its review of the pollution exclusion's purpose, the court found "[e]ven commentators who represent the insurance industry recognize that the broadening of the pollution exclusion [from the 'sudden and accidental' to 'absolute'] was intended primarily to exclude traditional environmental pollution rather than all injuries from toxic substances." n75 Like the New Jersey Supreme Court, the California court noted the broadening of the exclusion arose largely from the passage of CERCLA, which addressed remediation of environmental pollution. n76

The court then recognized the absurdity of the insurer's position, finding "[v]irtually any substance can act under

the proper circumstances as an 'irritant or contaminant.'" n77 Next, the court found that neither dictionary definitions nor common usage of "disperse" or "discharge" included "spray" or "apply." n78 Thus, the court held that "the plain meaning of the pollution exclusion...turns on the meaning of the term 'pollutant.'" n79 In the court's view, this term did not include pesticides. Therefore, the court limited the pollution exclusion to "traditional" pollution in accordance with "the purpose of CGL policies -- which 'is to provide the insured with the broadest spectrum of protection against liability for unintentional and unexpected personal injury or property damage arising out of the conduct of the insured's business.'" n80

V. Conclusion

Although courts are still split on application of the pollution exclusion to "non-traditional" pollution, a broad consensus has emerged that the exclusion applies only to "traditional" environmental pollution. Courts recognize that while the language of the exclusion may be broad, the purpose, as evidenced by the insurance industry's assurances, was to preclude coverage for "traditional" pollution. Furthermore, inclusion of "non-traditional" pollution within the purview of the exclusion does not comport with the reasonable expectations of policyholders and often defies the text of the exclusion.

Reed Smith LLP on the "Four Corners" Rule and the Duty to Pay Defense Costs -- A Potent Tool for Policyholders Under D&O Insurance Policies

By John B. Berringer and Jill N. Averett

March 19, 2010

SUMMARY: Courts around the country have refused to allow D&O insurance companies to walk away from their defense obligations based upon their unilateral conclusion that the allegation of officer or director misconduct triggering an exclusion has "in fact" taken place.

ARTICLE: INTRODUCTION

Officers, directors and their corporations routinely are denied the full benefits of the D&O Insurance Policies they purchased at great cost when lawsuits naming them as defendants include allegations of intentional wrongdoing which arguably trigger policy exclusions. Even though such exclusions routinely provide that coverage will not be forfeited until it can be shown that the wrongdoing triggering the exclusion has "in fact" occurred, insurance companies will often refuse to honor their contractual promise to pay defense costs based upon their unilateral conclusion that the allegations of misconduct are well-founded. Courts around the country, however, have refused to allow insurance companies to walk away from their defense obligations based upon the insurance company's unilateral conclusion that the allegation misconduct triggering an exclusion has "in fact" taken place.

REASONING

The decision by these courts is firmly rooted in traditional black-letter law in many states concerning the defense obligations of liability insurers. In fact, it is black-letter law in jurisdictions around the country, including Texas and New York that, Texas' "eight corners" ⁿ¹ rule, as long as "the complaint alleges at least one cause of action within the Policy's coverage, the insurer must defend the insured". ⁿ²

This result is consistent with the law in other jurisdictions applying the "eight corners" rule. ⁿ³ Neither can an insurer argue that the "eight corners" rule does not apply, or should be applied in a different fashion, because D&O policies generally impose a duty to pay defense costs, in contrast with a duty to defend, in connection with the

underlying claims. As noted by the New York Appellate Court in *Federal Insurance Co. v. Kozlowski*, the "effective difference between [these] two defense obligations is who chooses and pays the defense attorney, not whether a defense obligation lies with the insurer." n4 Accordingly, both an insurer's duty to defend and to pay defense costs must be construed broadly in favor of the policyholder. n5 Indeed, in *Julio & Sons*, a case involving the duty to advance defense costs under a D&O insurance policy, the court noted that

[it] has found no decisions by the Texas courts concerning a different standard for a duty to advance defense costs, and the reasons for applying the eight corners rule to duty to defend disputes appear to apply equally to the duty to advance described in the Policy. n6

In determining coverage under the "eight corners" rule, Texas courts "focus on the factual allegations that show the origin of the damages rather than on the legal theories alleged." n7 Furthermore, Texas courts have acknowledged that the factual allegations in an underlying case should be given a liberal reading to protect a policyholder from the vagaries of a plaintiff's choice of terminology: "[I]n case of doubt as to whether or not the allegations of a complaint against the insured state a cause of action within the coverage of a liability policy sufficient to compel the insurer to defend the action, such doubt will be resolved in the insured's favor." n8 "[I]f the pleadings do not state facts sufficient to bring the case clearly within or without the coverage, the general rule is that the insurer is obligated to defend if *potentially* there is a case under the pleadings within the coverage of the policy." n9

Insurers bear the burden of proving that coverage is precluded under a policy exclusion. n10 And unlike coverage grants, Texas, like most other states, requires that exclusions be narrowly construed. n11 With respect to exclusions, "[t]he court must adopt the construction of an exclusionary clause urged by the insured as long as that construction is not unreasonable, even if the construction urged by the insurer appears to be more reasonable or a more accurate reflection of the parties' intent." n12

Thus, if the underlying allegations could even potentially trigger coverage, and do not on their face **conclusively** activate a coverage exclusion, then the insurer must defend the insured against the underlying lawsuit. n13 It is only when the underlying complaint alleges facts that, **prima facie**, exclude the insured from coverage that there is no duty to defend. n14

It is well established that an insurer's obligation to contemporaneously fund the defense of litigation - whether through a duty to defend or a duty to advance defense costs - is crucial to the coverage offered by a D&O Policy. As the court observed in *In re WorldCom, Inc. Securities Litigation*, "where a contract of insurance includes the duty to defend or to pay for the defense of its insured, that duty is a 'heavy' one." n15 It added: "the duty to pay defense costs is 'construed liberally and any doubts about coverage are resolved in the insured's favor.'" n16

In *National Union Fire Insurance Co. v. Brown*, the court reasoned that allowing insurers to defer payment "is unreasonably favorable to the insurers, who may blithely disclaim responsibility for the insured's enormous financial burdens while the insured must fight on." n17 Hence, an insurer's obligation to pay defense costs as they are incurred exists whether the policy is a "duty to defend" or a "duty to advance" policy. n18

Thus, where the allegations of a complaint in an underlying action fall squarely within the terms of a D&O Policy, and the insurer's duty to advance defense costs thereby is triggered, courts have consistently held that an insurer cannot walk away from that obligation with impunity merely because of unproven allegations of wrongdoing. Indeed, authority nationwide squarely rejects any rule that would permit an insurer to unilaterally relieve itself of its defense obligation to its policyholder.

In the *Adelphia* n19 case, the court found a duty to advance defense costs at least until the coverage issues were resolved. The insurers in that case had raised two exclusions, the Prior Knowledge Exclusion and the Fraud Exclusion. The policy provided that the Fraud Exclusion could not be triggered without a "final adjudication," but the Prior Knowledge Exclusion contained no such explicit requirement. The court concluded that in the absence of policy

language indicating how and when the determination of "prior knowledge" must be made, the policy was ambiguous and must be construed in favor of the insured. It stressed that "the Carriers have a duty to contemporaneously pay defense costs, unless altered by other language in the policy." n20 It reasoned: "It would be possible for carriers issuing D&O policies to explicitly reserve to themselves the unfettered discretion whether to advance defense costs - but that language does not appear in these policies." n21 It further noted, quite sensibly, that "a policy with such a draconian power" might be hard to sell. n22

The court's decision in *In re WorldCom* is instructive in that regard. n23 There, the insurer sought to rescind the policy and avoid coverage *ab initio* and on that basis to avoid its duty to pay defense costs. The District Court for the Southern District of New York found that "[u]ntil the issue of rescission is adjudicated, a contract of insurance remains in effect and the duty to pay defense costs is enforceable." n24 The court rejected the insurers' arguments that the insureds were not entitled to payment of defense costs while the rescission claim was pending, or alternatively, that the insureds should have to post a bond for the amount of the defense cost payments. Holding, instead, that "the obligation to pay . . . arises as soon as the insured incurs the liability for the loss," the court ruled that the insurer is required to pay the insured's defense costs until the insurer's rescission claim is litigated and resolved. n25[25] The court also noted that "[a]ny cases interpreting New York law and arriving at a different conclusion are readily distinguishable based on their specific policy language." n26

The *In re WorldCom* court relied in part on the New York Appellate Division's decision in *Federal Insurance Co. v. Kozlowski*. n27 In that case, the policyholder, Dennis Kozlowski, sought defense coverage under D&O insurance policies sold to Tyco International, Ltd. ("Tyco"). The insurance company had responded to the request by purporting to unilaterally rescind the policies, tendering the premium to Tyco, and filing a declaratory judgment action seeking "a declaration confirming that the Policies are rescinded and void *ab initio*" because of alleged misrepresentations made in the applications for the policies. n28

The trial court found, and the New York Appellate Division affirmed, that an insurance company could not avoid its obligation to advance defense costs merely by issuing a notice of rescission prior to obtaining a judicial determination of rescission. The insurer asserted that, by issuing a notice of rescission based on fraudulent misrepresentations made by the company in public financial statements, it was relieved of its duty to defend actions alleging breach of fiduciary duties. Distinguishing cases in which common-law rescission by notice had been held to be effective, the court pointed out that those cases involved rescissions that took place shortly after the contracts were made, before any change in the respective positions of the parties. In contrast, in the instant case the insurer attempted to rescind the policy by notice two years after its inception, after claims had been filed against the insured. The court concluded that the company that issued the policy was required to advance defense costs during the pendency of its action for rescission. n29

Finally, this duty to advance defense costs exists even where an exclusion only requires that the wrongdoing "in fact" occurred, and does not explicitly require a "final adjudication." Indeed, several courts have held that the "in fact" requirement in many D&O policies is functionally the same as a "final adjudication" requirement. n30 In *PMI Mortgage Insurance Co. v. AISLIC*, plaintiffs asked the court to find that the "in fact" language required a final adjudication and cited to *Alstrin* and *American Chemical Society*. n31 The defendants urged that mere allegations were sufficient to trigger the "in fact" exclusions, relying principally on *Brown & Lacounte L.L.P. v. Westport Insurance Corp.* n32 In rejecting *Brown* and adopting the reasoning of *Alstrin* and *American Chemical Society*, the *PMI Mortgage* court held:

On balance, the court is persuaded that the instant case fits more within the contours of the cases cited by PMI than it does within those cited by defendants[9472]e.g., *Brown*. . . . The court finds that the reasoning in cases such as *St. Paul Mercury Ins. Co.* and *Am. Chem. Soc'y*, which require an actual adjudication or determination of fact prior to application of the profit or advantage exclusion, more appropriately effectuate the goal of giving the phrase "in fact" its ordinary and popular meaning. This reasoning is further strengthened by the fact that the phrase "in fact" is not to be found in every exclusion enumerated within the AISLIC policy, a factor that counsels in favor of investing the phrase

with some added meaning and by extension, with the added requirement of a final adjudication or determination. n33

In addition, the court noted that, as in *St. Paul Mercury Insurance Co.* and *American Chemical Society*, the existence of the excluded conduct was at issue in the underlying litigation, which further supported the holding that "in fact" requires a final adjudication or determination. n34

The insurer in *PMI Mortgage* argued against interpreting "in fact" language as requiring a "final adjudication" because another, different clause in the insurance policy at issue used the phrase "judicially determined." The insurer thus argued that reading "in fact" to mean "final adjudication" would render the phrase "judicially determined" unneeded surplusage. n35 In rejecting the insurer's argument, the court stated:

[W]hen read according to its ordinary and popular meaning, the phrase "judicially determined" necessarily limits any final adjudication or factual determination to one that is made by the judiciary, whereas the term "in fact" includes adjudications or determinations that are not made judicially, and is therefore broader in scope. In short, the court holds that the term "in fact" within the context of the exclusion here should be read to require *either* a final adjudication, including a judicial adjudication, *or* at a minimum, at least some evidentiary proof that the insured reaped an illegal profit or gain. n36

CONCLUSION

Policyholders have a right, under most D&O insurance policies, to be reimbursed on a current basis for their legal expenses in defending lawsuits triggering coverage under their policies. This right should not be subject to unilateral termination based upon an insurer's determination that misconduct triggering an exclusion has "in fact" occurred, but should continue until it has been objectively determined that such an exclusion applies.

ARTICLE: Maryland common law never recognized a cause of action for first-party insurance bad faith. n1 But Maryland created private statutory rights, effective October 1, 2007. A federal district court has recently decided the first significant case under the statute. n2 This commentary reviews that case and analyzes the statutory standard of liability in light of the case. n3

THE MARYLAND BAD FAITH STATUTE

The Maryland first-party insurance bad faith statute ("Statute"), Senate Bill 389, was entitled "Civil Actions [#9472] Liability of Insurer Failure to Act in Good Faith." Among other things, the Statute: (a) amended the Courts Article to provide jurisdiction for actions to be brought in Circuit Court for first-party insurance claims, including claims that the insurer failed to act in good faith; (b) amended the Insurance Article to make it an unfair claim settlement practice for an insurer to fail to act in good faith in settling a first-party claim under a property and casualty policy; and (c) created an administrative procedure by which the administrator can determine whether an insurer has properly adjusted a claim in good faith and authorizes the administrator to determine the amount that should be paid for the claim and grant other specified relief to the insured.

Amendments to the Courts Article

As amended, the Courts Article provides that:

"Notwithstanding any other provision of the law, if the trier of fact in an action under this section finds in favor of

the insured and finds that the insurer failed to act in good faith, that insured may recover from the insurer:

"(1) Actual damages, which actual damages may not exceed the limits of the limits of the applicable policy;

"(2) Expenses and litigation costs incurred by the insured in an action under this section or under § 27-1001 of the Insurance Article or both, including reasonable attorney's fees; and

"(3) Interest on all actual damages, expenses, and litigation costs incurred by the insured, computed:

"(I) At the rate allowed under § 11-107(A) of this article; and

"(II) From the date on which the insured's claim would have been paid if the insurer acted in good faith." n4

"Good faith means an informed judgment based on honesty and diligence supported by evidence the insurer knew or should have known at the time the insurer made a decision on a claim." n5 The Statute also provides that: "An insurer may not be found to have failed to act in good faith under this section solely on the basis of delay in determining coverage or the extent of payment to which the insured is entitled if the insurer acted within the time period specified by statute or regulation for investigation of a claim by an insurer." n6

Amendments to the Insurance Article

The Insurance Article was amended to make it an unfair claim settlement practice and a violation of the subtitle, for an insurer to: "fail to act in good faith, as defined under § 27-1001 of this title, in settling a first-party claim under a policy of property and casualty insurance." n7 The Statute also makes it an unfair claim settlement practice for an insurer or nonprofit health service plan, "when committed with the frequency to indicate a general business practice," to: "fail to act in good faith, as defined under § 27-1001 of this title, in settling a first-party claim under a policy of property and casualty insurance." n8 Good faith is defined in the same way as in the Courts Article. n9

Section 27-305 of the statute authorizes various remedies, including penalties not exceeding \$125,000 for each violation and restitution including (1) actual damages, not exceeding limits of the policy; (2) expenses and litigation costs, including reasonable attorneys fees, and (3) interest, at the rate allowed under § 11-107(A) of the Courts Article, from the date on which the insureds claim would have been paid if the insurer acted in good faith.

The Statute creates an administrative procedure for processing claims under the Statute. Specifically, it creates an administrative procedure for considering complaints from insureds to determine (1) whether the claim is covered, (2) the amount the insured is entitled to for the first-party claim, (3) whether the insurer breached its obligation to pay the underlying covered first-party claim, (4) whether an insurer that breached its obligation failed to act in good faith, and (5) the amount of damages, expenses, litigation costs, and interest due the insured. n10 There is a right to appeal an adverse decision to a circuit court. n11

CECLILA SCHWABER TRUST TWO V. HARTFORD ACCIDENT & INDEMNITY CO.

Ceclila Schwaber Trust Two v. Hartford Accident & Indemnity Co. n12 sought benefits for snow and ice damage to a warehouse roof in 2003 and for bad faith in adjusting the claim. Initially, Hartford denied the claim on the ground that the damage resulted from long-term water damage. It later agreed that about 5% of the damage was covered but concluded that the remainder of the loss was attributable to faulty workmanship, maintenance, and wear and tear. The property was then sold at a discount in the amount of the estimated cost of replacing the roof, and suit was filed. n13 The court found material issues of fact on coverage, precluding summary judgment for either party. n14

When the case was filed, Maryland law did not authorize recovery for bad faith. But, in conjunction with the summary judgment motion on coverage, a claim was asserted under the new Statute. At the time of the amendment, the court reserved the issue of retroactivity (and related constitutional issues). Following completion of discovery, Hartford

moved for summary judgment on the grounds that, (1) because there was a genuine dispute as to coverage, there was no bad faith, (2) that the Statute did not apply retroactively, and (3) that retroactive application would be unconstitutional. n15 The court reserved the issue of whether retroactivity was prohibited under the Maryland constitution (to be reached, only if necessary, after trial of the case) and otherwise denied the motion. (Apart from describing the court's ruling, this commentary will not address the retroactivity issue.)

The Fact That the Claim Was Fairly Debatable Did Not Preclude a Finding of Bad Faith

The court recognized that other jurisdictions generally hold that when a claim is fairly debatable, then "the insurer is entitled to debate it' and will not be subject to liability for acting in bad faith." n16 But the court found no indication that the Maryland General Assembly intended this narrow construction of the Statute. In its view, the statutory definition "focuses on the actions taken by the insurer in forming a judgment as to coverage, as well as what the insurer knew or should have known at the time it denied coverage to its insured. In the cases cited above, the fairly debatable standard was created by courts simultaneously with the creation of a common law cause of action for bad faith; there was no controlling statute. In this case, however, the cause of action arises pursuant to a statute, and the court must follow the statutory language. Moreover, the action here is for failure to act in 'good faith,' as opposed to an action for 'bad faith.' Maryland courts have indicated that the two are not the same." n17

It found an apt comparison in a "Florida first-party bad faith statute providing that an insurer has not acted in bad faith if the insurer has 'acted fairly and honestly toward its insured and with due regard for [the insured's] interest.'" n18 Under that statute, the Florida Supreme Court rejected the "fairly debatable" standard and adopted a "totality of the circumstances" approach requiring consideration of the following factors: "[(1) efforts or measures taken by the insurer to resolve the coverage dispute promptly or in such a way as to limit any potential prejudice to the insureds; [(2)] the substance of the coverage dispute or the weight of legal authority on the coverage issue; [and] [(3)] the insurer's diligence and thoroughness in investigating the facts specifically pertinent to coverage." n19

The court found this comparable to the Maryland standard, because "[a]n evaluation of whether an insurer made an 'informed judgment based on honesty and diligence supported by evidence the insurer knew or should have known at the time' of its coverage decision requires, for example, an evaluation of the insurer's efforts to obtain information related to the loss, [to] accurately and honestly assess this information, and [to] support its conclusion regarding coverage with evidence obtained or reasonably available." n20

The court observed that its conclusion that there was a genuine issue of fact did not evaluate what Hartford knew or should have known when it made the claim decision, did not evaluate its investigation, the reasons for any delays, and what the Trust alleged was "selective use of expert witnesses, failure to interview crucial witnesses, [and] failure to handle the claim in accordance with industry standards." n21 The fact that Hartford's decision was justifiable at the time of the court's decision did not mean that this was so when Hartford made its decision. n22 While the jury would not be permitted to find bad faith unless it found coverage, n23 if it did find coverage then the fact that the claim was fairly debatable would not preclude a finding of bad faith. n24

The General Assembly Intended Retroactive Application

Turning to the issue of retroactive application, the court noted that Maryland applies a four-part test:

"(1) statutes are presumed to operate prospectively unless a contrary intent appears; (2) a statute governing procedure or remedy will be applied to cases pending in court when the statute becomes effective; (3) a statute will be given retroactive effect if that is the legislative intent; but (4) even if intended to apply retroactively, a statute will not be given that effect if it would impair vested rights, deny due process, or violate the prohibition against *ex post facto* laws." n25

Based on the text and history of the Statute, the court found a legislative intent to apply the Statute retroactively to damage claims. n26 The Statute precluded retroactive application in imposition of civil penalties: "the provisions of this Act providing for administrative penalties and license sanctions that may be imposed by the Maryland Insurance Commissioner apply *only to an act or omission occurring on or after the effective date* of this Act." n27 In the court's view, the absence of any similar restriction as to other provisions of the Statute implied a legislative intent that those provisions apply retroactively. n28 Moreover, the Maryland Senate rejected an amendment that would have explicitly limited the Statute to prospective application. n29

Retroactive Application Did Not Impair the Contract in Violation of the United States Constitution

The United States Constitution forbids any state to "pass any . . . Law impairing the Obligation of Contracts" n30 While the Statute increased Hartford's exposure to an award of litigation costs and expenses for conduct under a preexisting insurance contract, no provision of that contract immunized Hartford against such awards. Accordingly, the court did not find any impairment of contract. n31 Because Maryland law had always imposed a duty of good faith and fair dealing in every insurance contract, the court concluded that "[t]he substantive rights and obligations of the parties [under their contract] were not altered by the statute." n32

Moreover, even if there were some impairment of the contract, to find a constitutional violation, the court would also have needed to find that any impairment was substantial and was not, even so, a legitimate exercise of state power. n33 Given the extensive regulation of insurance already existing in Maryland, any impairment might not be substantial. n34 And, even if there were a substantial impairment, courts would defer to the legislature as to the need for the statute. n35

THE "FAIRLY DEBATABLE" RULE

In order to evaluate the court's holding that the Statute permits liability even when the insured's claim is "fairly debatable," it is necessary to understand why the contrary rule is a bedrock principle of bad faith law almost everywhere. This section examines the nature and basis of that rule.

The Bad Faith Tort Seeks to Protect Insureds with Valid Claims Against Abuse of the Insurer's Power to Force Them to Litigate

The purposes underlying the bad faith tort dictate the substantive standard of liability. That standard specifies what facts must be proven. The law of bad faith represents a balance between two competing interests: "the right of an insurer to reject an invalid claim and the duty of the carrier to investigate and pay compensable claims." n36 The tort is recognized to protect the insured's right to payment. But the insurer's right to challenge validity limits the circumstances in which liability may be imposed for non-payment, even if the claim ultimately proves meritorious. Both interests must be considered in defining the substantive legal standard.

An insurance contract is one where an insurer, in return for an agreed premium, assumes specified risks of financial loss which might otherwise befall the insured. n37 The insured usually has paid all premiums due before the insurer is ever asked to compensate a loss. Once a loss occurs, the insured can no longer seek to buy protection from competing insurers, which might have been willing to provide similar coverage. In this sense, "[a]n insurance company has exclusive control over the evaluation, processing and denial of claims." n38

Of course, an insured can overcome an ill-founded denial by litigating with the insurer. But risks which are insured are normally ones which an insured cannot afford to bear without insurance, so the occurrence of such a loss exerts pressure on an insured to obtain a prompt settlement, even if that may mean foregoing full compensation: for example, under a policy of disability insurance, "[t]he very risks insured against presuppose that if and when a claim is made, the insured will be disabled and in strait financial circumstances and, therefore, particularly vulnerable to oppressive tactics

on the part of an economically powerful entity" n39 So, it is little help to the insured that the usual right to prejudgment interest (even at a penalty rate n40) would cover the cost of the borrowing, because the insured is often unable to borrow.

The pressure created by an unaffordable loss is increased by the fact that many of the consequential losses that the insured might suffer while payment is delayed are ordinarily not recoverable in an action for breach of contract. n41 Not only does this limitation on recovery leave the insured uncompensated for some harms caused by an erroneous denial, but it also limits the incentive of the insurer to avoid such harms by prompt payment. n42 Moreover, litigation is expensive, although, in some states, that expense might be recoverable should the insured prevail in any suit. n43 And, because of the expense, effort and risk required to bring suit, even insureds whose claims are meritorious may not sue.

These concerns have led many courts to conclude that it is necessary to provide protection against the risk that "unscrupulous insurers [could] take advantage of their insureds' misfortunes in bargaining for settlement or resolution of claims." n44 Surely, as courts have repeatedly found, it would be abusive for an insurer to deny a claim and force an insured to settle or litigate when it knows that the claim is payable:

. It was bad faith to refuse any payment on a \$15,000 uninsured motorist claim when the insurer knew that the only real issue was a possible \$5,000 offset for prior medical payments benefits, and the insured offered to accept \$10,000 and litigate about the offset. n45

. It would be bad faith if, as alleged, the insurer deliberately sought to evade payment of a claim it knew was valid by making unfounded accusations of arson and then exploited the insured's unwillingness to submit to an examination under oath until the criminal charges were dismissed. n46

. It was bad faith for the insurer to withhold payment it knew was due, force an arbitration hearing despite that knowledge, and then demand a compromise settlement after an award in the insured's favor. n47

. It was intentional infliction of emotional distress where the insurer withheld payment on a disability insurance claim it knew was valid, trumped up charge of application misrepresentations for which it had no probable cause, and sought to exploit insured's need for funds to coerce surrender of policy in settlement of the nonexistent dispute. n48

And an insurer should not be permitted to avoid the obligation to pay by simply ignoring readily available information that would establish the insured's right to payment. n49 Starting from this core concept of unscrupulous and abusive conduct, bad faith law has somewhat eased the burden of proving abuse and regulated some less culpable misconduct which insurers have no legitimate reason to engage in.

So liability based on constructive knowledge is not limited to facts the insurer willfully avoided knowing. All courts recognizing any version of the bad faith tort extend this by holding the insurer responsible for considering all information supporting the insured's claim that it would have obtained by a reasonable investigation. n50 This creates an incentive to investigate properly and provides compensation for harms resulting from failure to do so.

And no jurisdiction recognizing the bad faith tort limits it to cases where the insurer actually knew the claim was payable. Most extend it to cases where the insurer recklessly disregarded its lack of any reasonable basis for withholding payment. n51 Some extend it to cases where the insurer was no more than negligent in failing to know that a reasonable basis was lacking. n52

Because Paying Unmeritorious Claims Would Inflate Insurance Costs, Insurers Are Given Wide Latitude to Challenge Claims Without Fear of Tort Liability

An insurer's right to contest questionable claims is more than an ordinary contractual right: it serves an important

public interest. Insurance rates are based on insurers' predictions of the claims they will be required to pay. If erroneous denial of a claim can result in expensive tort remedies, insurers may feel compelled to pay questionable claims rather than risk such liability. This is a particular concern with possibly fraudulent claims, where any impropriety of the claim will have been assiduously concealed and may only be detectable by expensive investigation and resort to circumstantial evidence. n53 Such payments, or the expectation of having to make them, would tend to inflate costs for those wishing only coverage for the risks specified in the contract.

In the leading bad faith case of *Anderson v. Continental Insurance Co.*, n54 the court recognized the undesirability of inflating insurance rates by "scaring insurers into paying questionable claims because of the threat of a bad faith suit and its excessive damages." n55 The *Anderson* court was confident it had prevented this by adopting a standard that protects any insurer which "makes an investigation of the facts and law and concludes on a reasonable basis that the claim is at least debatable." n56 Similarly, in *Travelers Insurance Co. v. Savio*, n57 the court emphasized the need to accord an insurer "wide latitude in its ability to investigate claims and to resist false or unfounded efforts to obtain funds not available under the contract of insurance." n58

Accordingly, in all but a few jurisdictions, an insurer is allowed to withhold payment of a claim as long as there is a genuine issue or (to use different words for the same concept) a bona fide dispute as to the insured's entitlement to payment. n59 As the *Anderson* court put the point, "when a claim is 'fairly debatable' the insurer is entitled to debate it, whether the debate concerns a matter of fact or law." n60 As the Texas Supreme Court has put the point, "[e]vidence that merely shows a bona fide dispute about the insurer's liability on the contract does not rise to the level of bad faith." n61 This rule recognizes that "the parties to an insurance contract will sometimes have a good faith disagreement about coverage. Under such circumstances, the parties may require a court to interpret the policy language for them, or a jury to resolve factual disputes." n62 Stated otherwise, a "reasonable basis" for denying a claim is one that warrants testing the claim in court. n63

Sometimes this point is expressed by saying that an insurer has a "right to be wrong" n64 or a "right to disagree" with the insured. The Indiana Supreme Court has used the latter phrase to summarize the balance of interests limiting the bad faith tort: "It is evident that the exercise of this right [to disagree] may directly result in the intentional infliction of temporal damage, including the damage of interference with an insured's business (which an insured will undoubtedly consider to be oppressive). The infliction of this damage has generally been regarded as privileged, and not compensable for the simple reason that it is worth more to society than it costs, *i.e.*, the insurer is permitted to dispute its liability in good faith because of the prohibitive social costs of a rule that would make claims nondisputable. Insurance companies burdened with such liability would either close their doors or increase premium rates to the point where only the rich could afford insurance." n65

THE MEANING OF THE MARYLAND STANDARD

The Statutory Language Supports the "Fairly Debatable" Rule

To repeat, the Statute provides that "[g]ood faith means an informed judgment based on honesty and diligence supported by evidence the insurer knew or should have known at the time the insurer made a decision on a claim." n66 One thing that this clearly means is that, as all jurisdictions recognizing extracontractual liability for bad faith hold, a first-party insurer must investigate possible grounds that might support an insured's claim. A requirement of an "informed judgment based on ... diligence supported by evidence the insurer knew or should have known at the time the insurer made a decision on a claim" makes such a duty crystal clear.

Once the necessary information has been gathered, the insurer is required to make a "judgment based on honesty." That language indicates that bad faith must involve something in the nature of dishonesty. True dishonesty would involve denial of a claim that the insurer knew was valid. But it is certainly arguable that an insurer might be liable

without actual subjective knowledge that the claim was valid, perhaps under the standard enunciated by the Wisconsin Supreme Court in *Anderson v. Continental Insurance Co.*,ⁿ⁶⁷ and which is now the majority standard for bad faith liability: "To show a claim for bad faith, a plaintiff must show the absence of a reasonable basis for denying benefits of the policy and the defendant's knowledge or reckless disregard of the lack of a reasonable basis for denying the claim."ⁿ⁶⁸

In administering the *Anderson* test, two rules assist the insured in carrying the burden of proof of the subjective element. First, "knowledge of the lack of a reasonable basis may be inferred and imputed to an insurance company where there is a reckless disregard of a lack of a reasonable basis for denial or a reckless indifference to facts or proofs submitted by the insured."ⁿ⁶⁹ Similarly, a knowing or reckless failure of the insurer to ascertain with diligence the facts pertinent to the coverage decision may be used to infer an improper state of mind. Relying on *Hilker v. Western Automobile Insurance Co.*,ⁿ⁷⁰ the *Anderson* court reasoned: "*Hilker* emphasizes that bad faith is the absence of honest, intelligent action or consideration based upon a knowledge of the facts and circumstances upon which a decision in respect to liability is predicated. While *Hilker* emphasizes the duty of ordinary care and reasonable diligence on the part of an insurer in handling claims, it is apparent from *Hilker* that the knowing failure to exercise an honest and informed judgment constitutes the tort of bad faith."ⁿ⁷¹

In light of its reliance on *Hilker*, *Anderson* appears to reflect the same concerns as the Maryland Statute. Reckless disregard of the lack of a reasonable basis for denying a claim could be seen as inconsistent with a "judgment based on honesty," so the statute could be interpreted to accord with the *Anderson* standard. But the statutory language could hardly permit an insurer to be held liable for a truly honest mistake, even one that was objectively unreasonable. Certainly it does not seem possible that a jury could be permitted to find dishonesty where there truly was a reasonable basis to challenge the insured's right to the benefits at issue. So, no matter where along this continuum the statutory line might be found, existence of such a reasonable basis should preclude a finding of bad faith. Stated otherwise (and contrary to the holding in *Cecilila Schwaber Trust Two*), the statutory language seems to compel acceptance of the "fairly debatable" rule followed in almost all jurisdictions recognizing extracontractual liability for bad faith.

That conclusion is further supported by the fact that failure to act in good faith subjects an insurer, not only to increased interest and an award of attorneys' fees, but to actual penalties in the administrative process. Penal statutes must be narrowly construed.ⁿ⁷² At a minimum, that precludes any construction that permits an insurer to be penalized for denying a claim whose merit was, after proper investigation, fairly debatable.

Prior Maryland Law Also Supports the "Fairly Debatable" Rule

According to the legislative history, as explained in the General Assembly's 90 Day Report, the lack of good faith standard created in Senate Bill 389 is the "same test for good faith established by the Court of Appeals for determining the duty owed, in another context, by insurance companies to their policyholders under *State Farm Mutual Automobile Insurance Company v. White*, 248 Md. 324 (1966)."ⁿ⁷³ *White* deals with an insurer's duty to settle claims against its insured in order to protect the insured against an unjustified risk of personal liability in excess of the policy limits.

White expressed the standard governing the duty to settle in the same words as the Statute: "for an insurer to measure up to the good faith test, its action in refusing to settle must consist of an informed judgment based on honesty and diligence. Furthermore, the insurer's negligence, if any there be, is relevant in determining whether or not it acted in good faith."ⁿ⁷⁴ The court discussed approvingly the standard predicted in *Gaskill v. Preferred Risk Mutual Insurance Co.*ⁿ⁷⁵: "It seems clear that the duty includes elements both of good faith and of reasonable care. This Court concludes that the proper test of liability in such a case as this (and the test which this Court believes the Maryland Court will probably apply when required to decide the question) is the good faith test, with the amplifications and limitations suggested by the quotations from the New Jersey Court [*Radio Taxi Service, Inc. v. Lincoln Mutual Insurance Co.*, 31 N.J. 299, 157 A.2d 319 (1960)], the Fourth Circuit [*American Casualty Company of Reading, Pa. v. Howard*, 187 F.2d 322 (4th Cir. 1951)] and Judge Watkins [*Lee v. Nationwide Mutual Insurance Co.*, 184 F. Supp. 634, 368 (D.Md.1960)], set out above."ⁿ⁷⁶

White rejected any suggestion that "dishonesty, misrepresentation or a species of fraud must be present" for the insurer to be liable. n77 It approvingly quoted the Appleman treatise: "The expression 'in good faith' has been held to refer to a lack of a good moral intent as the basis for refusing to pay a loss. *Conversely, 'bad faith' means any frivolous or unfounded refusal to pay*; it is not necessary that such refusal be fraudulent. And if probable cause is shown why payment should have been made, an inference of bad faith might thereby be raised. n78

Radio Taxi is quoted as saying that "[t]hose gifted with expertise in the field of judging issues of liability and extent of injury actually suffered by a plaintiff, would probably be the first to admit that an informed judgment arrived at in good faith after reasonably diligent investigation represents the limit that should be demanded of human capacity." n79 *American Casualty* is quoted as saying that "an insurer is obligated to exercise a reserved power to negotiate and settle with proper regard for the interest of the insured, and is liable for damage resulting from wrongful failure to settle within policy limits." n80

White also offered a familiar list of factors relevant in assessing the duty to settle (but of limited relevance to first-party claims): "In applying the 'good faith' theory the courts have found that the presence of one or more of the following acts or circumstances may affect the 'good faith' posture of the insurer: the severity of the plaintiff's injuries giving rise to the likelihood of a verdict greatly in excess of the policy limits; lack of proper and adequate investigation of the circumstances surrounding the accident; lack of skillful evaluation of plaintiff's disability; failure of the insurer to inform the insured of a compromise offer within or near the policy limits; pressure by the insurer on the insured to make a contribution towards a compromise settlement within the policy limits, as an inducement to settlement by the insurer; and actions which demonstrate a greater concern for the insurer's monetary interests than the financial risk attendant to the insured's predicament." n81

These factors address the special concern in duty to settle cases, whether the risks of judgment in the case against the insured justified a settlement in an amount demanded by the plaintiff (or, perhaps, in an amount that the insured contends should have been offered and would have prevented any excess judgment). First-party cases are very different, for there is no risk of excess liability: there is only a question whether the loss suffered by the insured is covered and, if so, what amount is necessary to compensate that loss.

But even putting that difference aside, one point that *White* makes perfectly clear is that an insurer need do no more than act reasonably to avoid liability. This is shown by the statement that "'bad faith' means any frivolous or unfounded refusal to pay" n82 A "frivolous or unfounded refusal to pay" is one that necessarily lacks a reasonable basis. Applying that standard to a first-party claim indicates, as did the analysis of the Statute's language, that a claim where the insured's right to payment is "fairly debatable" is one that an insurer can safely deny, without subjecting itself to liability under the Statute (including liability for penalties).

That is also consistent with the way in which later cases have applied *White* to the settlement of third-party claims. The Maryland Court of Appeals (the state's highest court) refused to extend *White* beyond the excess judgment situation. In particular, it has held that when an insurer refused a (supposedly) reasonable demand to settle (whose acceptance was recommended by defense counsel), but prevented any excess judgment by a later settlement, it has no liability to the insured, even for the fees of personal counsel hired after the refusal to settle. n83

Additionally, at least one Maryland Court of Special Appeals decision would require significant culpability to create liability for failure to settle. *Republic Ins. Co. v. Prince George's County* n84 was an action by a surety to recover from the contractor-principal obligor. It had an opportunity to settle with the obligee for less than the judgment it suffered and the court held that where it had no good faith basis to refuse to settle, it could not recover more than the

amount of the rejected settlement. (This could be viewed as a simple mitigation of damages issue, but that is not how the court treated it.) Relying on *White* and the duty to settle third-party claims within limits, it quoted approvingly from the Michigan case of *City of Wakefield v. Globe Indemnity Co.* n85 Undoubtedly the insurer does not act in bad faith if it refuses settlement in the honest belief that it has a fair chance of victory, or of keeping the verdict within the policy limit, or, upon reasonable grounds, that the compromise amount is excessive, or if it has legal defenses, as yet undetermined by a court of last resort, which fairly seem applicable... There may be other bona fide reasons for refusal to compromise. On the other hand, arbitrary refusal to settle for a reasonable amount, ... failure to fairly consider a compromise and facts presented and pass honest judgment thereon, or refusal upon grounds which depart from the contract and the purpose of the grant of power, would tend to show bad faith." n86

Thus any "bona fide reason" for refusing to settle should prevent bad faith liability.

The Florida Statute Is Not a Good Analogy

The *Cecilia Schwaber Trust Two* court erred in regarding the Florida statute as a proper guide to interpretation of the Maryland Statute. To begin with, the foregoing analysis shows that there was no need to look to an out-of-state statute (particularly one at odds with the overwhelming majority rule under bad faith law) for guidance. But even if that were proper, the two statutes are dissimilar. The Maryland Statute requires a "judgment based on honesty." But the court looked to a "Florida first-party bad faith statute providing that an insurer has not acted in bad faith if the insurer has "acted fairly and honestly toward its insured and with due regard for [the insured's] interest."" n87 A requirement that the insurer act "fairly and honestly" demands more than simply a "judgment based on honesty." Florida seems to conclude that "fairness" require the insurer to provide benefits even in circumstances where there is some genuine dispute as to the insured's right to those benefits. But a requirement only of a "judgment based on honesty" does not require the insurer to concede bona fide questions as to the insured's right to payment.

The Other Maryland Cases Cited by Cecilia Schwaber Trust Two Are Inapposite

The *Cecilia Schwaber Trust Two* court also reasoned that "the action here is for failure to act in 'good faith,' as opposed to an action for 'bad faith.' Maryland courts have indicated that the two are not the same." n88 But the cases it cites for that point lend no support to its construction of the Statute. In *Zdravkovich*, the Court of Appeals reversed sanctions imposed on a lawyer for failure to appear at a hearing, without providing the lawyer an opportunity to be heard in opposition to the sanctions; the court criticized the claim that, merely by failing to appear at the original hearing the lawyer "ha[d] not shown good faith." n89 In *Art Form Interiors, Inc.*, the court reversed a sanction imposed on an attorney based on a rule requiring litigation conduct "in bad faith or without substantial justification"; the appellate court found adequate justification for the sanctioned conduct and criticized the court below for basing the sanction in part on a "lack of good faith" in communications with opposing counsel. n90 *State v. Booze* involved a question of whether the State had impermissibly withheld material that should have been introduced in its case-in-chief for use as rebuttal evidence. None of those cases has anything to do with determining when an insurer has improperly refused to pay first-party benefits.

CONCLUSION

The Maryland Statute should be construed to adopt the "fairly debatable" rule. Other courts should not follow *Cecilia Schwaber Trust Two* on that question.

n2 *Ceclila Schwaber Trust Two v. Hartford Accident & Indem. Co.*, 2009 U.S. Dist. LEXIS 59788 (D. Md. July 14, 2009).

n3 Portions of this commentary are drawn from William T. Barker & Ronald D. Kent, *The New Appleman Insurance Bad Faith Litigation* (2009) (in press).

n4 Md. Code, Ann. Cts. & Jud. Proc. § 3-1701(d) (emphasis added). This statute increased the previously applicable prejudgment interest rate from 6% to 10%. Based on the Maryland constitution, the interest rate for pre-judgment interest is 6%, unless otherwise provided by the General Assembly. *See Harford County v. Saks Fifth Ave. Distrib. Co.*, 399 Md. 73, 96 (2007) ("pre-judgment interest shall be calculated at the legal rate of six percent per annum") *citing* Md. Const. art. III, § 57 ("[t]he Legal Rate of Interest shall be Six per cent. per annum; unless otherwise provided by the General Assembly"); *see also Crystal v. West & Callahan, Inc.*, 328 Md. 318 (1992) (absent statute, the legal rate of prejudgment interest is equal to the general legal rate of six percent) and *Dua v. Comcast Cable, Inc.*, 370 Md. 604, 612 (Md. 2002) (same). The Statute declares the applicable rate is that under § 11-107, the post-judgment statute, which is 10%. The legislature can authorize the higher interest rate found in § 11-107 for the Senate Bill 389, but may only do so prospectively. As *Dua* explains, if there is not a legislatively imposed interest rate in excess of six percent, the legislative imposition of a new higher interest rate will not have retroactive application because the imposition would deprive the defendant of a vested right. Even "a remedial or procedural statute may not be applied retroactively if it will interfere with vested or substantive rights." *Dua v. Comcast Cable, Inc.*, 370 Md. 604, 625 (2002). Even if the Statute may otherwise have retroactive effect, the imposition of the ten percent interest rate can only apply prospectively because it impacts a vested right prior to the effective date of the statute.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of the New Appleman on Insurance Law Library Edition and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Kirk R. Ruthenberg is a senior litigation partner who has practiced law at Sonnenschein for over 27 years, headed the firm's Litigation Practice in the Washington, D.C. office for nearly two decades, and now devotes full time to his litigation practice. Mr. Ruthenberg has extensive experience in complex commercial, intellectual property, and antitrust litigation in federal and state courts throughout the United States, as well as before the United States International Trade Commission (USITC). As head of the firm's D.C. Litigation practice, Mr. Ruthenberg has focused his practice in the litigation and resolution of complex technology, commercial, patent and other intellectual property disputes. Most recently, Mr. Ruthenberg represented Sun Microsystems in the prosecution of its antitrust claims against

Microsoft, which culminated in the largest settlement ever reported between two parties in private antitrust litigation. Mr. Ruthenberg served as lead trial counsel for Macronix Semiconductor in *The Matter of Certain EPROMs and EEPROMs* before the U.S. International Trade Commission, a patent infringement action instituted by Atmel Corporation alleging infringement of a patent covering silicon signature semiconductor technology. On behalf of Macronix, Mr. Ruthenberg obtained a ruling from the Administrative Law Judge invalidating the patent and a later ruling from the ITC holding that Macronix did not infringe the Silicon Signature patent and dismissing the investigation against Macronix. The ITC had previously found all three other respondents to have infringed and had entered exclusion orders preventing import of their products. Sonnenschein's client Macronix was the only victorious respondent in the investigation.

Kenneth J. Pfaehler is a partner in the Washington, D.C. office of Sonnenschein Nath & Rosenthal. Mr. Pfaehler's practice centers on complex litigation matters. He has extensive experience in litigating case involving insurance coverage, insurance bad faith, securities fraud, credit default, class actions, complex fraud and corporate governance matters. Mr. Pfaehler's experience also encompasses complex commercial, sales practices, surety bond and contract disputes. He litigates in federal and state courts around the country, as well as securities arbitration forums and administrative forums. Mr. Pfaehler also has extensive appellate experience in federal and state appellate courts. Mr. Pfaehler represented Royal Indemnity Company, now Arrowpoint Capital, in a series of litigations in Delaware, Kentucky and Texas over \$700 million of fraudulently-induced credit risk insurance policies. He has defended GE Life and Annuity Insurance Company and the Prudential Insurance Company of America in dozens of FINRA (formerly NASD) arbitrations against claims brought by policyowners and alleged whistleblowers. He obtained a complete defense verdict for AXA Equitable in a bad faith trial before the Maryland Office of Administrative Hearings. Mr. Pfaehler represented Prudential in hundreds of cases in more than a dozen states, against allegations of bad faith and improper practices in the sale of insurance policies and annuities, and also defended Prudential against these allegations in the federal multi-district class action litigation and before a multi-state task force of insurance regulators. Mr. Pfaehler has litigated insurance coverage disputes involving credit risk, errors and omissions, professional liability, general liability and property insurance. He has wide ranging appellate experience. Mr. Pfaehler's representation of insurance companies also encompasses contractual disputes with managing general agents, challenges to jurisdiction, and responding to regulatory inquiries and investigations.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients' interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Reed Smith on Contra Proferentem and the Not So "Hapless" Sophisticated Insured: An Analysis of Farmers Automobile Insurance Association v. St. Paul Mercury Insurance Company

By Mark Hersh and Roxanne Garibay

January 7, 2010

SUMMARY: In Farmers Automobile Ins. Assoc. v. St. Paul Mercury Ins. Co., the Seventh Circuit, in interpreting Illinois law, applied the rule of contra proferentem, but questioned the validity of the rule when applied to a sophisticated commercial entity. This commentary examines and discusses several reasons that contra proferentem should remain applicable to sophisticated commercial entities.

ARTICLE: Under the doctrine of contra proferentem, insurance policy ambiguities are construed against the insurer, in favor of coverage. In Farmers Automobile Insurance Association v. St. Paul Mercury Insurance Company n1, the Seventh Circuit, in interpreting Illinois law, applied the rule of contra proferentem, but questioned the validity of the rule when applied to a sophisticated commercial entity. This commentary examines Farmers, and discusses several reasons that contra proferentem should remain applicable to sophisticated commercial entities.

I. The Case

Farmers bought an insurance policy from St. Paul that covered employment wrongful acts, which was defined to include any breach of duty in connection with the unlawful treatment of an employee. The policy had an exclusion for "any [] violation of the Fair Labor Standards Act... [or] other similar provisions of any federal, state or local [] law..." n2 (emphasis added). Farmers alleged that coverage was triggered when its claims adjusters filed a class action seeking overtime pay pursuant to the Illinois Minimum Wage Law. n3 St. Paul refused coverage on the basis that the Illinois Minimum Wage Law was "similar" to the Fair Labor Standards Act, and thereby the class action did not trigger coverage under the policy's exclusion. n4

The district court agreed with St. Paul, and found that Illinois's minimum wage law was "similar" to the federal act. n5 Although Farmers used the word "similar" in its own policies, it appealed, and argued, that the word was vague, and should be construed against St. Paul as the insurer under contra proferentem. n6

The Seventh Circuit, in an opinion written by Judge Richard A. Posner, recognized that contra proferentem is based on judicial reluctance to require the "hapless insured to unravel [the] mysteries" of insurance policies. n7 The court observed, however, that the rationale for contra proferentem is "feeble," when it comes to a sophisticated commercial entity, and in the case of Farmers, a sophisticated insurer, even more so. n8 The court criticized the Illinois Supreme Court's opinion in *Outboard Marine Corporation v. Liberty Mutual Insurance Company*, which had declined to limit contra proferentem to commercially unsophisticated individuals on the basis that the insurer has "total control" of the terms and the drafting of the contract. n9 The Seventh Circuit opined that "'total control' is an exaggeration. n10 It nevertheless applied the rule of contra proferentem, because sitting in diversity, it was bound by the holding of the Illinois Supreme Court. Ultimately, Farmers disagreed that the word "similar" was vague, and affirmed the trial court's ruling. n11

II. Analysis

At first glance, the fact pattern in *Farmers* is a prime example of why contra proferentem fails when the insured is sophisticated. Farmers, a large sophisticated insurance company, was allowed to take advantage of a legal doctrine it had likely argued against, in order to claim as vague, a policy term that it had used in its own policies. Upon closer examination, however, contra proferentem is justified when applied to sophisticated insureds.

As Farmers acknowledged, the traditional justification for applying contra proferentem in insurance cases is that there is little opportunity for the insured to bargain over terms. n12 This consideration can apply with equal force to a sophisticated insured. n13 Because insurers are better able to forecast the risks associated with standard policy language n14, and raise premiums accordingly, they often do not allow even sophisticated commercial insureds to negotiate policy language. As a result, a sophisticated insured may have little bargaining power. n15

But even where this is not the case - for example, key terms in a directors and officers policy often are negotiated - contra proferentem is justified based on additional policy considerations. First, even if some insurance terms are tailored by the insured, the insurer still sells thousands of basically the same policies to customers. Construing ambiguities in favor of coverage makes it difficult for the insurer to exploit ambiguities in the policies. For example, a number of published cases concern the issue of what constitutes a "claim" in a claims-made policy. n16 An insurer typically will argue for a narrow definition of "claim" to avoid providing coverage. But an insurer may try to construe "claim" broadly when the insured has failed to report the matter in the time period prescribed by the policy, thus enabling the insurer to deny coverage based on late notice. Allowing insurers to take inconsistent positions from case to case is bad public policy, and at odds with insurers' obligations of good faith to their insureds.

Second, the insurance industry's profit model is based on being able to deny or delay paying out claims. To maximize profit, insurance companies must maximize the time between receiving premiums and making a payment. As a result, insurers benefit from ambiguities and have a huge financial incentive to draft ambiguous policy terms. Sophisticated insureds are not immune to such strategic ambiguity, and as a result, should not be immune from the benefits of contra proferentem.

Finally, and a related point, a bright line rule facilitates quicker resolution of the coverage dispute, and encourages a more uniform body of law. While Farmers may clearly be a sophisticated insured, in many cases the sophistication of an insured regarding insurance may be a disputed fact that requires an expenditure of judicial resources. n17 (The same may also be true of the question whether policy terms were negotiated.) Again, such delay nearly always benefits the insurer. In addition, courts and commentators have pointed out that upholding a strict contra proferentem rule in favor of coverage ensures that common insurance policy terms do not have meanings that fluctuate depending on the identity of the insured. n18 Accordingly, contra proferentem should be no less applicable to a sophisticated insured than it is to the "hapless insured."

Sophisticated policyholders should be aware that case law, such as *Farmers*, may make the application of contra proferentem increasingly more difficult. But there are a number of considerations supporting application of the doctrine

to sophisticated commercial entities. Sophisticated policyholders should be prepared to make these arguments for application of the doctrine when seeking insurance coverage.

ABOUT THE AUTHOR(S):

Mark Hersh is a partner at Reed Smith LLP and Deputy Head of Reed Smith's Insurance Recovery Group. He joined Reed Smith when the firm combined with Sachnoff & Weaver in 2007. Mark concentrates his practice on the representation of policyholders who have disputes or potential disputes with their insurance carriers, with an emphasis

on D&O, E&O, and other corporate and management liability insurance. He also represents clients in connection with fidelity bond coverage and counsels policyholders on insurance coverage outside the dispute context. Mark is an experienced trial and appellate lawyer. Prior to joining Sachnoff & Weaver in 2000, Mark spent nearly nine years as a federal prosecutor with the U.S. Attorney's Office in Chicago, receiving the Director's Award for Superior Performance as an Assistant U.S. Attorney. He is a former Law Clerk to the Honorable Joel M. Flaum, United States Court of Appeals for the Seventh Circuit, and received his law degree from Stanford University.

Roxanne Garibay is an associate at Reed Smith LLP. She recently joined the firm's Insurance Recovery Group. Previously, Roxanne was a member of the Commercial Litigation Group, with an emphasis on product liability. She received her law degree from UC Berkeley School of Law, Boalt Hall.

About the Firm. Reed Smith LLP is one of the 15 largest law firms in the world, with more than 1,700 lawyers in 24 offices throughout the United States, Europe,

Asia and the Middle East. Founded in 1877, the firm represents leading international businesses from Fortune 100 corporations to mid-market and emerging enterprises. Its lawyers provide litigation services in multi-jurisdictional matters and other high stake disputes, deliver regulatory counsel, and execute the full range of strategic domestic and cross-border transactions. Reed Smith is a preeminent advisor to industries including financial services, life sciences, healthcare, advertising and media, shipping, international trade and commodities, real estate, manufacturing, and education. McCarter & English LLP on Viking Pump, Inc. v. Century Indemnity Company

2010 Emerging Issues 4803

McCarter & English LLP on Viking Pump, Inc. v. Century Indemnity Company: Delaware Court Offers Significant Coverage Rulings Relating to Assignment of Insurance Rights & Allocation of Loss Under New York Law

By Sherilyn Pastor

January 7, 2010

SUMMARY: A Delaware decision supports application, under New York law, of an "all sums" allocation methodology to long-tail losses. It distinguishes prior New York "pro rata" allocation rulings favorable to insurers, and finds policies' "non-cumulation," and "prior insurance" provisions cannot "sensibly be applied within a pro-rata allocation scheme. The Court also upheld policyholders' rights to transfer coverage post-loss.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: In *Viking Pump, Inc. v. Century Indemnity Company*, a Delaware Court addressed post-loss assignment of insurance rights and allocation of loss under New York law. *See 2009 Del. Ch. LEXIS 180* (Del. Ch. Oct. 14, 2009). The Court ruled that plaintiff policyholders were entitled to insurance coverage for liabilities they accepted upon their acquisition of another company's assets. More importantly, the Court held that insurers were liable for losses based on an "all sums" allocation approach. *Id.* The Court's decision is significant in this regard because it relied on principles of insurance contract interpretation to distinguish prior New York "pro rata" allocation rulings.

Transfer of Post-Loss Insurance Rights

Plaintiffs acquired another company's manufacturing businesses and assets, and now face asbestos bodily injury liabilities arising from certain pre-acquisition asbestos exposures. When the plaintiffs sought coverage from their predecessor's insurers, the insurers claimed that the predecessor had not transferred its insurance rights to plaintiffs and, even if it had, their insurance policies' anti-assignment provisions voided such transfers. The Delaware Chancery Court resolved the issues under New York law and in plaintiff policyholders' favor. *Id.* at *8-9, 70-73.

The Court determined that the parties intended the successor companies to be liable for pre-acquisition asbestos exposures and to have insurance necessary to respond to such losses. *Id.* at *3-8. The Court disagreed that the insurance policies' anti-assignment provisions voided these transfers of insurance benefits, finding anti-assignment provisions are unenforceable under New York law for losses arising prior to the transfer of coverage. According to the Court, the policyholder is transferring only the right to collect under its policies following a compensable loss, not its policies

themselves. The insurer therefore is simply paying the amount due to a different party. *Id.* at *8-9, 70-73.

The Court rejected the insurers' arguments that the anti-assignment clauses should be enforced because the asbestos liabilities at the time of transfer were too speculative and not reduced to a fixed loss amount. It concluded that the insured risk was no greater post-assignment than pre-assignment. It also opined that enforcing anti-assignment provisions in these circumstances could negatively impact the market for the sale of corporate assets and lead to insufficient recoveries for tort plaintiffs. *Id.* at *70-73.

"All Sums" Allocation of Loss

Allocation refers to distributing responsibility for losses among multiple triggered policy periods, and between and among insurers. Three general approaches to allocation have developed: all sums; pro rata; and, pro rata by years and limits. Under an all sums approach, a policyholder can elect to collapse all costs into a single policy year. That policy year's insurers must then reimburse the entire loss up to their limits and subject to their contribution rights against other triggered years' insurers. *See, e.g., Keene Corp. v. Ins. Co. of N. Am.*, 667 F.2d 1034 (D.C. Cir. 1981), *cert. den.*, 455 U.S. 1007 (1982), *reh'g den.*, 456 U.S. 951 (1982); *Zurich Ins. Co. v. Raymark Indus., Inc.*, 118 Ill.2d 23, 514 N.E.2d 150 (1987); *Allstate Ins. Co. v. Dana Corp.*, 759 N.E.2d 1049 (Ind. 2001); *Rubenstein v. Royal Ins. Co.*, 694 N.E.2d 381 (Mass. App. Ct. 1998); *Carter-Wallace, Inc. v. Admiral Ins. Co.*, 154 N.J. 312, 712 A.2d 1121 (1998); *J.H. France Refractories Co. v. Allstate Ins. Co.*, 534 Pa. 29, 626 A.2d 502 (1993).

Under a pro rata approach, the loss is spread evenly over all triggered policy years. *See, e.g., Ins. Co. of N. Am. v. Forty-Eight Insulations, Inc.*, 657 F.2d 814 (6th Cir. 1981), *cert. den.*, 454 U.S. 1109 (1981); *Gulf Chem. & Metallurgical Corp. v. Assoc. Metals & Minerals Corp.*, 1 F.3d 365 (5th Cir. 1993); *Consol. Edison Co. v. Allstate Ins. Co.*, 98 N.Y.2d 208, 774 N.E.2d 687 (2002). Under a modified pro rata by years and limits approach, losses are spread horizontally among triggered insurance policies in proportion to the degree of risks transferred during the policy period. *E.g., Carter-Wallace*, 154 N.J. 312, 712 A.2d 1116; *Owens-Illinois, Inc. v. United Ins. Co.*, 138 N.J. 437, 650 A.2d 974 (1994).

The *Viking Pump* Court was faced with the "usual" allocation dispute, with insurers arguing for a pro-rata method and the policyholders arguing for an all-sums approach. *See 2009 Del. Ch. LEXIS 180*, at *83. After analyzing New York law, the Court concluded that rules of contract interpretation; the excess policies' plain language; and, the extrinsic evidence required application of an all sums allocation. The Court observed that all of the excess policies' terms could only be given effect under this approach. It also noted that principles of *contra proferentem* required resolving any uncertainty in the policies' language against the insurers' preferred pro-rata allocation method. *Id.* at *123.

The Court acknowledged the prior and seemingly inconsistent New York Court of Appeals' ruling in *Consolidated Edison Co. of New York v. Allstate Insurance Co.*, 774 N.E.2d 687 (N.Y. 2002), which applied a pro rata allocation approach. *Id.* at *116-23. The *Viking Pump* Court, however, found *Consolidated Edison's* facts distinguishable and concluded that the *Consolidated Edison* decision did not establish a bright-line rule in favor of a pro rata methodology. *Id.* Rather, the *Consolidated Edison* decision was limited to the interpretation of the policies there involved, and risks then before the court.

The *Viking Pump* Court emphasized that the *Consolidated Edison* allocation decision was not based on broad public policy considerations. *Id.* It therefore criticized those prior federal court decisions purporting to apply New York law, but ordering an allocation methodology based on evaluation of equitable and public policy concerns. These decisions offer "well-reasoned arguments on one side of [the] controverted legal policy" but "involve a free-wheeling consideration of what New York policy should be, in a manner that is rather surprising given the *Erie* doctrine." *Id.* at *111-12 (distinguishing *Olin Corp. v. Ins. Co. of N. Am.*, 221 F.3d 307 (2d Cir. 2000) (employing a pro rata allocation methodology for asbestos losses); *In re Prudential Lines*, 158 F.3d 65 (2d Cir. 1998) (employing an all sums methodology for asbestos losses)). Preferring to "stick to the method of contract interpretation that New York courts generally apply to insurance coverage disputes, and not to adopt a tie-breaking rule based on judge-made policy

determinations," the *Viking Pump* Court held that the policies' "non-cumulation," or "prior insurance" provisions were of "paramount importance" and could not "sensibly be applied within a pro-rata allocation scheme." *Id.* at *128, 133.

The Delaware Court's decision offers policyholders substantial and thoughtful support for an all sums allocation of long-tail losses -- such as asbestos and environmental liabilities -- under New York law. By adhering to established rules of contract interpretation, the Court's ruling holds insurers to their contractual bargains and accountable up to their policy limits for long-tail losses. How New York state and federal courts applying New York allocation law will respond (if at all) to the decision remains to be seen.

McCarter & English LLO on Martco Ltd. Partnership v. Wellons, Inc.

2010 Emerging Issues 4804

McCarter & English LLO on Martco Ltd. Partnership v. Wellons, Inc., The Fifth Circuit Applied Basic Rules Of Insurance Policy Construction To Find Coverage For Breach Of Contract Claims

By Joann M. Lytle, Nicholas M. Insua and Anne E. Matthews

January 7, 2010

SUMMARY: In *Martco Ltd. Partnership v. Wellons, Inc.*, the United States Court of Appeals for the Fifth Circuit recently rejected an insurance carrier's argument that a commercial general liability ("CGL") policy allegedly did not provide coverage for a breach of contract claim. The Fifth Circuit, however, applied basic rules of contract interpretation to find coverage for property damage resulting from the insured's malfunctioning product.

ARTICLE: A thorny topic for policyholders and insurance recovery practitioners is obtaining coverage for claims that are or can be characterized as arising from a breach of contract or breach of warranty. Some courts (indeed, an increasing number) take the view that such claims are not covered by general liability policies, usually not because of what the insurance policy actually says, but because of what insurance companies or their lawyers argue it says. But the recent decision of the United States Court of Appeals for the Fifth Circuit in *Martco Ltd. Partnership v. Wellons, Inc.*, n1 gives hope that Courts will follow basic rules of insurance policy construction when analyzing questions concerning the duties to defend and indemnify such claims. This article will focus on three aspects of the Court's lengthy and thoughtful ruling: whether (1) the claim involved "property damage" (2) caused by an "occurrence", and (3) whether the "impaired property exclusion" barred coverage.

Martco Ltd. ("Martco"), a manufacturing company, contracted with Wellons, Inc. ("Wellons"), to design, fabricate, and install certain improvements to an existing Wellons wood-fired thermal oil heating system located in one of Martco's plants. n2 Wellons timely completed the improvements to the system, but when it was put into service, several problems arose: "the new expansion tank imploded, a circulation pump isolation valve failed, fires developed in the dry bins, a valve stem leaked, more ash than anticipated was generated by the new system, the computerized control system did not function properly, and wires burnt off the thermocouples." n3 As a result of these problems, Martco was unable to operate the system at times, forcing periodic shutdowns of the plant and causing Martco to suffer lost production, profits, and business opportunities valued at approximately \$4.4 million. n4

Martco filed suit against Wellons, asserting six separate contractual claims. n5 Wellons, in turn, cross-claimed

against Admiral Insurance Company ("Admiral") for coverage under its commercial general liability policy ("Policy"). "The liability issues as between Martco and Wellons and the insurance issues as between Wellons and Admiral were bifurcated." n6 The liability issues were tried to a jury, which found in favor of Martco. n7

Once the liability phase of the trial concluded, Admiral filed a motion for summary judgment, in which it asserted that, under the Policy, it had no duty to indemnify Wellons for Martco's claims. n8 Wellons, together with Martco, filed a cross-motion, arguing the contrary. n9 The district court ruled in favor of Wellons and Martco, holding that the Policy did require Admiral to indemnify Wellons for Martco's claims for lost productivity, earnings, and profits. n10 Admiral appealed this decision. n11

A second round of summary judgment motions followed when Wellons and Martco filed a joint motion asserting that Admiral had a duty to defend Wellons under the Policy. n12 "Admiral responded by claiming that there was no duty to defend under the policy because there was no 'property damage' caused by an 'occurrence' evident in the original Martco complaint and because numerous exclusions applied." n13 The district court found that there was "property damage" n14 but that the Policy's "impaired property" exclusion n15 applied, such that Admiral did not have a duty to defend Wellons in the underlying suit. n16 Wellons appealed this decision. n17

The appeals were consolidated for review by the Fifth Circuit. n18 On appeal, the Fifth Circuit first considered the question whether Admiral had a duty to defend Wellons, and then analyzed separately the duty to indemnify. Rather than address the court's discussions of each of those duties separately, this article is organized around three of the coverage defenses addressed by both courts: (1) was there "property damage" (2) caused by an "occurrence" (3) that did not implicate the "impaired property" exclusion?

(1) "Property Damage"

Regarding "property damage," the court observed: "to satisfy its burden, Wellons must show that Martco's complaint alleges 'property damage' within the meaning of the Policy." n19 The Policy defined "property damage ... as '[p]hysical injury to tangible property, including all resulting loss of use of that property.'" n20 In analyzing the duty to defend, the Court, under Louisiana jurisprudence, construed liberally the allegations of underlying complaint against the definition of "property damage" (the "eight-corners rule"), and found that at least one of the paragraphs (Paragraph 12) in the underlying complaint potentially alleged "property damage" under the Policy: "WELLONS' efforts have produced negative results so far and the operation of the Wellons unit has caused physical degrading of the infrastructure through excessive ash carryover." n21 The court found that, in determining the duty to defend, the allegation of "physical degrading" in Paragraph 12, coupled with the complaint's "demand for damages for repairs" could "be construed as making a claim for an injury to tangible property caused by the insured," and thus found "Wellons met its burden with respect to this portion." n22

On the duty to indemnify, Admiral argued first, "as a matter of law, [that] a claim for breach of contract cannot constitute a claim for 'property damage.' Admiral reason[ed] that any recovery derived from such claims would involve purely economic damages and, as such, Martco failed to prove the necessary injury." n23 The Fifth Circuit upheld the district court's interpretation of Louisiana jurisprudence on this point, opining that "CGL policies would simply not make sense if the court held otherwise" because "CGL provisions and exclusions carefully address situations arising from contractual breaches producing property damage." n24 Thus, the underlying claims did involve covered "property damage" under the Policy. n25

Second, Admiral argued that Wellons had "not proven 'property damage' as defined under the Policy." n26 The Fifth Circuit also rejected this argument, concluding that the jury verdict "show[ed] Martco demonstrated 'loss of use' [and, a]s such, Wellons, by way of Martco, adequately demonstrated 'property damage' as that term is defined in the Policy." n27

(2) "Occurrence"

The Policy defined the term "occurrence" as "an accident, including continuous or repeated exposure to substantially the same general harmful conditions." n28 In rejecting Admiral's contention that there was no duty to defend because "Martco did not affirmatively plead sufficient facts to allow Wellons to assert coverage using Paragraph 12," n29 the Court held:

[Admiral's contention] would require an inversion of Louisiana's standard for assessing the duty to defend issue. Rather, we must ask whether the allegations do not unambiguously prevent a conclusion that coverage could exist.... Here, Paragraph 12 is ambiguous. It does not define "excessive ash carryover." It does not state how often "excessive ash carryover" occurred. All it states is that Wellons's efforts at repair (which the preceding and following paragraphs suggest lasted months) created additional harm and the resulting ash carryover led to degradation of some undefined infrastructure. Again, liberally construing the allegations, injury by "excessive ash carryover" can reasonably be understood to involve repeated exposure over the long period in which Wellons fruitlessly attempted to make repairs. While this may not be affirmatively clear on the pleadings, it is sufficient to conclude that the allegations do not unambiguously preclude a finding that there was an "occurrence." Consequently, we conclude that the allegations of the complaint state claims that may be covered by the insuring clause of the Policy. n30

The Court similarly concluded that the underlying action triggered Admiral's duty to indemnify. As with the definition of "property damage," Admiral argued that Louisiana jurisprudence "categorically exclude[d] construction defects as possible 'occurrences.'" n31 And as with Admiral's assertion that a claim for breach of contract could not give rise to "property damage," so too did the Court reject Admiral's argument that the underlying action did not arise from an "occurrence." n32

(3) "Impaired Property" Exclusion

Regarding the "impaired property" exclusion, in its discussion of the duty to defend, the Fifth Circuit first relied heavily on the Louisiana Court of Appeal decision in *Gaylord Chem. Corp. v. ProPump, Inc.*, 753 So. 2d 349 (La. Ct. App. 2000), in which the court reasoned that:

[T]he "impaired property" exclusion only excludes damage to property that has not been physically injured or for which the claimed damages are only for loss of use of that property. Therefore, any damages based on actual physical injury to Gaylord's plant, equipment, or other property would not be excluded under this provision. n33

The Fifth Circuit found that "interpretation of an identical 'impaired property' provision... convincing and, arguably, under *Gaylord*, the 'impaired property' exclusion should not apply" n34 to the claim of Wellons. The court also held that the definition of "impaired property" was not met because the damaged property could not unambiguously be fully restored "by repairing, replacing, adjusting, or removing the insured's 'work' or the insured's 'product.'" n35 Thus, the "impaired property" exclusion would not obviate Admirals' duty to defend. n36

On the duty to indemnify, the Court focused on an exception to the exclusion for "loss of use of other property arising out of sudden and accidental physical injury to 'your product' or 'your work' after it has been put to its intended use." n37 The Fifth Circuit found that the District Court had "ample evidence" to conclude that the "sudden and accidental" exception to the exclusion was met. n38 Accordingly, the Fifth Circuit determined that the impaired property exclusion did not relieve Admiral of its duty to indemnify Martco. n39

In sum, the Fifth Circuit in *Martco* dealt a significant blow to the insurance industry's burgeoning attempts to deny coverage under a general liability policy for property damage caused by an occurrence, simply because the property damage arose in the context of a contractual relationship. More courts should follow the Fifth Circuit's lead, by fairly reading the policy language and remembering that "the purpose of insurance is to insure." n40

McCarter & English LLP on Fasso v. Doerr

2010 Emerging Issues 4802

McCarter & English LLP on Fasso v. Doerr, Did The New York Court Of Appeals Clarify -- Or Confuse -- Equitable Subrogation Principles And Procedures?

By Charles Allen Yuen and Jessica S. Berk

January 7, 2010

SUMMARY: New York courts often disagree in subrogation cases. The 2009 decision of *Fasso v. Doerr* shows how sharply judicial minds may differ on the equities. *Fasso* clarified aspects of equitable subrogation, such as the "made whole" doctrine, in favor of health insurers; but dicta in the decision has clouded health insurers' right to intervene in underlying actions to enforce their subrogation rights.

ARTICLE: In New York, the right to assert a subrogation claim against a tortfeasor may arise by equity or by contract. n1 Common law equitable subrogation is based generally upon the "dual objective" that a tortfeasor should bear loss by reimbursing an injured party's insurer and the injured party should not recover twice for the same harm -- once from an insurer and again from a wrongdoer. n2 Although the general concepts underlying equitable subrogation and its limitations are simple, n3 New York courts often disagree in subrogation cases on how to reconcile the specific competing equitable rights and obligations. *Fasso v. Doerr* n4 is an example of the how sharply judicial minds may differ on the equities. In *Fasso*, the Appellate Division, Fourth Department, affirmed a trial court decision unanimously. Unanimously, the Court of Appeals then reversed the Appellate Division.

The courts in *Fasso* considered the potential effect of the "made whole" doctrine, a common law limitation on equitable subrogation, on the oft-litigated issue of whether the terms of a settlement agreement between an injured party and a tortfeasor may extinguish an insurer's subrogation right. In *Fasso*, a patient asserted a malpractice claim against a physician in New York Supreme Court, Erie County. The patient's health insurer had paid \$780,000 in medical expenses allegedly as a result of the physician's malpractice. n5 The insurer sought and was granted, absent any objection from the parties, intervenor party status to assert a subrogation claim against the physician. n6

The patient later moved to dismiss the insurer's subrogation claim. She argued that the insurer was not entitled to subrogation because the claimed monetary value of her injuries exceeded the \$2 million limit of the doctor's malpractice insurance. n7 She asserted that she therefore could not be "made whole," even absent a reimbursement to the insurer. n8 The trial court denied the motion. n9

On the second day of trial in Supreme Court, the patient and the physician settled. Under the settlement agreement, the patient and her co-plaintiff husband received \$900,000, the doctor admitted no wrongdoing, and the settling parties sought dismissal of the insurer's subrogation claim. n10 The settling parties agreed among themselves that the patient was not "made whole" by the settlement amount. n11

The insurer contested dismissal of its subrogation claim. It argued that the physician's malpractice insurance limit of \$2 million left a remaining \$1.1 million available, after subtracting the \$900,000 settlement payment, to fund the insurer's potential subrogation recovery of its prior payments to the patient. n12 The insurer also requested a mistrial in order to obtain witnesses and evidence to prove its subrogation claim in the absence of the settling patient. n13

Over the insurer's objections, the trial court dismissed the insurer's subrogation claim, *sua sponte*, and denied the insurer's request for a mistrial. The court reasoned, "it is abundantly clear that [the patient] is not made whole by this sum. As such, it does not give rise to any claim of equitable subrogation on the part of [the insurer]." n14

In affirming on a different ground, the unanimous Fourth Department panel reasoned that "[t]he rights of a health insurer in an equitable subrogation action are derived from the injured plaintiff," n15 and "a health insurer therefore has no right to control the settlement of the injured plaintiff's action." n16 The panel explained that "[t]he continuation of [the insurer's] action against [the physician] would have nullified that settlement." n17

Reversing, the Court of Appeals held that in construing equitable subrogation principles, both the Supreme Court and the Appellate Division had erred in their reasoning. n18 The Court of Appeals first agreed with the health insurer that its subrogation claim could be satisfied from the physician's remaining malpractice insurance limit, as well as the physician's other assets. n19 The Court of Appeals held that in light of the physician's available assets, including its malpractice insurance, the "made whole" doctrine would not limit the insurer's subrogation recovery. n20 The Court of Appeals specifically limited application of the "made whole" doctrine to situations where the recovery the injured party is entitled to receive is greater than the total of a tortfeasor's assets and insurance coverage, stating: "If the recovery the injured party receives, whether determined by settlement or verdict, is greater than the wrongdoer's assets and available insurance coverage, there is nothing left for the insurer to execute its subrogation rights against and the made whole rule prevents the insurer from sharing in the insured's judgment or recovery." n21

The Court of Appeals further held that the Fourth Department had erred in viewing the settling parties as having the right to limit the subrogation rights of the health insurer over its objection. n22 The settling parties did not have such a right even where, as in *Fasso*, the insurer was an intervening party in the action *and* the parties executed a general release in order to preclude such subrogation. n23 The Court of Appeals thus rejected application, to the specific settlement facts in *Fasso*, of the well-recognized general principle that because "[t]he rights of a health insurer in an equitable subrogation action are derived from the injured plaintiff . . . a health insurer . . . has no right to control the settlement of the injured plaintiff's action." n24 The Fourth Department, relying upon decisions which distinguished equitable and contractual subrogation, had reasoned that the rights of an insurer in an action for equitable subrogation were derived from an insured and therefore were limited by the insured's settlement. n25

The Court of Appeals decision in *Fasso*, in rejecting that view, did not provide the subrogating insurer with a right to impede settlements between an injured party and a tortfeasor. It simply limited the enforceability of certain settlement provisions which impede the insurer's subrogation rights. However, in so limiting enforceability of such settlement provisions, *Fasso* clearly reduces incentives for tortfeasors to settle. n26

Although it appears that *Fasso* "clarified" the equitable subrogation doctrine to the extent discussed above, the Court of Appeals further opined, to a certain extent, on whether an insurer may intervene in an injured party's action against a tortfeasor to enforce subrogation rights. n27 In *Fasso*, none of the parties had objected to the health insurer's intervention motion. Even though the intervention motion was thus not before it for adjudication, the Court of Appeals questioned the procedure. It stated that "New York courts have disagreed on the issue of whether it is permissible to grant intervention to health insurers of injured parties in tort cases. The predominant view is that the participation by

insurers in settlement negotiations creates conflicts of interests with plaintiffs" n28 The Court of Appeals further proclaimed that "allowing an insurer to intervene inevitably complicates settlement negotiations over the tortfeasor's insurance coverage," and called for the New York Legislature to clarify intervention rights in the light of "competing policy concerns." n29

The Court of Appeal's questioning *dicta* on intervention procedure casts doubt upon whether a health insurer has a right to intervene to enforce its subrogation rights. It has highlighted potential barriers on whether insurers may assert their claims by way of intervention. Injured parties and tortfeasors may now cite *Fasso* as authority for the proposition that health insurers should not be permitted to intervene in their cases. Health insurers may therefore find their intervention motions denied by courts identifying the conflicts of interest considerations mentioned in *Fasso* and relying on *Fasso*. As a consequence, they may find more of their potential subrogation claims barred by the running of statutes of limitations. n30

The Court of Appeals further commented briefly upon another issue which appears to have had no relevance at all to the claims at issue in *Fasso* -- the Legislature's limitation of the common law collateral source rule in tort actions. n31 The Court of Appeals opined that "nothing in the language or legislative history of [the Legislature's action] indicates that the Legislature intended to alter the established rules of equitable subrogation." n32 Although this comment was apparently intended only to influence the scope of future legislative action, a federal trial court has relied precisely upon it in ruling that despite limiting the common law collateral source rule, the Legislature did not affect an insurer's subrogation rights. n33

In sum, it is clear that the Court of Appeals in *Fasso* clarified aspects of equitable subrogation, such as the "made whole" doctrine, in favor of health insurers. On the other hand, *Fasso's dicta* has clearly clouded health insurers' right to intervene to enforce their subrogation rights.

n1 In contractual subrogation, an agreement between an insurer and its injured policyholder specifically allows the insurer to assert the policyholder's action against the tortfeasor. *See, e.g., Fed. Ins. Co. v. Arthur Andersen & Co.*, 552 N.E.2d 870, 872 (N.Y. 1990).

n2 *Winkelmann v. Excelsior Ins. Co.*, 650 N.E.2d 841, 843 (N.Y. 1990).

n3 Subrogation is not a recent concept but rather is a well-established doctrine based in equity. *Allstate Ins. Co. v. Stein*, 807 N.E.2d 268, 272 (N.Y. 2004). In fact, the Court of Appeals stated eight-five years ago that "[i]t is so well settled as not to require discussion that an insurer who pays claims against the insured for damages caused by the default or wrongdoing of a third party is entitled to be subrogated to the rights which the insured would have had against such third party for its default or wrongdoing." *Ocean Accident & Guar. Corp. v. Hooker Electrochem. Co.*, 147 N.E. 351, 353 (N.Y. 1925).

n22 *Id. at 1171.*

n23 *Id.*

n24 *See Fasso, 848 N.Y.S.2d at 800.*

n25 *Id.*

n26 *See Fasso, 903 N.E.2d at 1171. Fasso* has been cited by the Appellate Division in finding that an insurer's equitable subrogation claim cannot be barred by a general release executed between the insured and the tortfeasor. *N. Y. Cent. Mut. Fire Ins. Co. v. Barry, 884 N.Y.S.2d 61* (App. Div. 2d Dep't 2009).

n27 See *Fasso*, 903 N.E.2d at 1171-73.

n28 *Id.* at 1172.

n29 *Id.*

n30 In *Fasso*, for example, the Court of Appeals observed that when the health insurer sought intervention in the patient's action, the statute of limitations had already run on the health insurer's right to assert any direct subrogation claim against the physician. *Fasso*, 903 N.E.2d at 1172. The dangers are amply illustrated by *Allstate Insurance Co. v. Stein*, 807 N.E.2d 268, 272 (N.Y. 2004), where the Court of Appeals held that the statute of limitations applicable to a subrogation claim was the same one which governed the underlying claim of an injured party against a tortfeasor.

n31 N.Y. C.P.L.R. § 4545 (2009)(allowing consideration of evidence submitted to establish that a plaintiff will obtain indemnification for a loss from sources other than tortfeasor).

n32 *Fasso*, 903 N.E.2d at 1172.

n33 *In Re Sept. 11 Litig.*, No. 21 MC 101 (AKH), 2009 U.S. Dist. LEXIS 73223 at *58-*59 (S.D.N.Y. Aug. 13, 2009)("[t]his plain language [from *Fasso*] demonstrates that [N.Y. C.P.L.R.] § 4545 does not affect the equitable subrogation rights of plaintiff's insurers").

ARTICLE: *In re Professionals Direct Insurance Co.* n1 passed on the scope of Ohio's uniquely constricted attorney-client privilege for insurance companies in bad faith cases, as well as on the scope of federal work product protection, finding no clear error in the magistrate's order that the documents in question be produced. In doing so, it addressed the nature and extent of the review that a trial court must do to determine whether the privilege has been divested by the rule of *Boone v. Vanliner Insurance Co.* n2

This commentary examines the new decision against the background of the law elsewhere on attorney-client privilege in bad faith cases, examines the unique special rule adopted in *Vanliner*, and assesses the impact of the new decision in light of *Vanliner*. (Portions of this commentary are drawn from § 16.04 of the forthcoming William T. Barker & Ronald D. Kent, *The New Appleman Insurance Bad Faith Litigation*.)

I. The Case

Professionals Direct Insurance Co. ("PDIC") provided malpractice insurance to Wiles, Boyle, Burkholder, & Brindgardner. Illinois National Insurance Company retained Wiles to defend an employee of one of its insureds, in which the plaintiffs obtained a verdict that left Illinois National responsible for over \$8.5 million in damages. Wiles filed a post-judgment motion on January 15, 2003, which the trial court denied as untimely, a decision ultimately affirmed by both the Ohio Court of Appeals and the Ohio Supreme Court. In late 2003, while awaiting a decision from the supreme court, Wiles applied for renewal of its malpractice policy, stating that it was not aware of any circumstances, acts, or omissions in the prior 12 months that "could reasonably be expected to result in a claim to

Professionals Direct." After the supreme court affirmed the denial of the post-trial motion, Wiles notified PDIC on September 1, 2004 of a potential malpractice claim by Illinois National. n3

PDIC reserved the right to deny this claim, pending an investigation. It retained counsel to advise on potential coverage and on a possible action for a declaration that Wiles was not entitled to coverage. In October, 2004, Illinois National settled the underlying claim and initially offered to settle the malpractice claim for \$5 million, later raised to \$10 million; Illinois National filed suit on May 19, 2006. n4

On August, 19, 2005, PDIC wrote to Wiles asking for an explanation of the delay in reporting and the failure to identify the circumstances of the claim in the renewal application. In December, PDIC notified Wiles that it was planning to file a declaratory judgment action. On March 23, 2006, PDIC notified Wiles that it deemed the claim excluded. It sued six days later. Wiles counterclaimed for bad faith and demanded all documents relevant to that claim. When PDIC withheld documents based on attorney-client privilege and work product, Wiles moved to compel. n5

A magistrate judge conducted an in-camera review of the documents. He found that litigation could not reasonably have been expected before the August 19, 2005 request for an explanation of the delay in reporting. From that point on, the lawyers were both advising PDIC on coverage and preparing for litigation. As to documents prepared while the lawyers were performing a dual function, the magistrate judge made a document-by-document decision whether coverage advice or litigation preparation was the "driving force" for creation of the document, denying production of those where litigation was the reason for creating the document. n6 As to privilege, the magistrate judge determined that March 23, 2006 was the date of constructive denial of the claim and that no privilege would attach to any documents prepared before that date. n7 The district court adopted the magistrate judge's order, and PDIC sought mandamus.

The Sixth Circuit found that PDIC had shown that it lacked any other adequate means of relief and that the harm it would suffer from the order would be irreparable, but it found no clear error in the magistrate judge's rulings. n8 The magistrate judge had applied the correct test to determine what was protected work product, and PDIC showed no any clear error in the fact-intensive application of the standard. n9 Ohio has a testimonial privilege statute regarding attorney testimony, n10 but the court found this inapplicable to document production. n11 That left the common-law attorney-client privilege, which was the main issue in the case.

In *Boone v. Vanliner Insurance Co.*, the Ohio Supreme Court had declared that "'documents and other things showing the lack of a good faith effort to settle by a party or attorneys acting on his behalf are wholly unworthy of the protections of any claimed privilege.'" n12 PDIC argued that this required individual review of each document to determine whether the document showed lack of good faith.. The magistrate judge disagreed and the Sixth Circuit found no clear error. It relied on *Garg v. State Automobile Mutual Insurance Co.*, n13 which it described as the leading Ohio case on the issue. *Garg* read *Boone* to require disclosure of all pre-denial documents that "may cast light" on whether the insurer acted in bad faith. n14 While some Ohio courts have applied *Boone* more narrowly, the magistrate judge's reading was "a reasonable application of *Boone*" and could not be set aside on mandamus. n15

II. Analysis

A. Background: Attorney-Client Privilege in Bad Faith Cases

Lawyers are ubiquitous in the claim settlement process: defending insureds and providing coverage advice. The lawyers may be in-house or outside counsel, and both may be involved. And, as soon as a problem appears, lawyers get involved in that (possibly lawyers who were involved before, but not always).

Those with bad faith claims against insurers commonly view the insurer's communications with its lawyers and the lawyers' work product as especially valuable evidence for proving bad faith. Indeed, when trying to compel production, they commonly describe this information as essential to proof of their claims. Yet attorney-client communications and attorney work product are generally protected from discovery. While bad faith plaintiffs have made substantial efforts to

pierce these protections, sometimes successfully, insurers continue to resist discovery of privileged and work product materials, also with considerable success.

In most cases, the ability to force disclosure of an insurer's privileged materials in a bad faith case will depend on whether the court will hold that the insurer waived the privilege by placing privileged communications "at issue," n16 an issue where the legal standards vary among jurisdictions. A few courts have allowed discovery in bad faith cases of attorney-client communications under the crime-fraud exception to the attorney-client privilege. That exception provides that the privilege does not attach to communications where the client seeks advice to assist in committing or concealing illegal conduct. n17 But, under that exception to the privilege, mere allegations of crime or fraud do not divest the privilege, rather there must be *prima facie* evidence that the attorney has been consulted for the purpose of furthering such wrongdoing:

""It is obvious that it would be absurd to say that the privilege could be gotten rid of merely by making a charge of fraud" To drive the privilege away, there must be "something to give color to the charge;" there must be "prima facie evidence that it has some foundation in fact." When that evidence is supplied, the seal of secrecy is broken."" n18

In *United States v. Zolin*, n19 the United States Supreme Court adopted a widely followed procedure for determining when the crime-fraud exception applies. n20 The final decision on privilege may be based on an *in camera* review of the communications. But permitting routine use of *in camera* inspections to screen for possible applications of the crime-fraud exception "would place the policy of protecting open and legitimate disclosure between attorneys and clients at undue risk" n21 It would also burden courts called upon to review large records. n22 "There is no reason to permit opponents of the privilege to engage in groundless fishing expeditions." n23 Accordingly, "[b]efore engaging in *in camera* review to determine the applicability of the crime-fraud exception, 'the judge should require a showing of a factual basis adequate to support a good faith belief by a reasonable person' that *in camera* review of the materials may reveal evidence to establish the claim that the crime-fraud exception applies." n24

Nothing in the usual bad faith case involves anything remotely similar to a crime or fraud. So the exception cannot apply unless the exception is extended to some broader class of wrongdoing. The Restatement rejects such an extension and describes the current state of the law on this subject:

The evidence codes and judicial decisions are divided on the question of extending the exception to other wrongs such as intentional torts, which although not criminal or fraudulent, have hallmarks of clear illegality and the threat of serious harm. Legislatures and courts classify illegal acts as crimes and frauds for purposes and policies different from those defining the scope of the privilege. Thus, limiting the exception to crimes and frauds produces an exception narrower than principle and policy would otherwise indicate. *Nonetheless, the prevailing view limits the exception to crimes and frauds. The actual instances in which a broader exception might apply are probably few and isolated, and it would be difficult to formulate a broader exception that is not objectionably vague.* n25

Jurisdictions extending the exception beyond fraud are said to be a substantial minority. n26 Many of these jurisdictions have adopted "crime or tort" exceptions in codifying evidence law. n27 Even were courts inclined to extend the exception as a matter of common law, insurance bad faith does not appear the sort of wrongdoing that should be included. It usually does not require any wrongful intent and, in most jurisdictions, is more akin to negligence than to fraud. Even where wrongful intent is required, the required intent is far less culpable than fraud. Insurance bad faith has been held *not* the equivalent of fraud for privilege purposes. n28

Nonetheless, the Alaska Supreme Court held, in *United Services Automobile Ass'n v. Werley*, n29 held that "bad faith legal defense to a legitimate claim by one's insured" is a form of civil fraud for purposes of the privilege. n30 To establish a *prima facie* case enabling the privilege to be pierced, the insured must show that none of the grounds offered for nonpayment of the claim provided an objectively reasonable basis for refusal to pay. n31 Bad faith in Alaska apparently requires the same combination as in Arizona of objectively baseless refusal to pay *and* knowledge or reckless disregard of the absence of a reasonable basis. n32 Thus, showing the objective baselessness of the insurer's conduct

permits discovery of its attorney-client communications for the purpose of attempting to show the required subjective culpability. There is simply no need for such a procedure in bad faith actions where subjective culpability need not be shown. So there is no occasion for courts to follow *Werley* unless, at a minimum, subjective culpability is relevant. But even if it is required, the fact that the insurer's claim handling was objectively unreasonable would not, standing alone, support an inference that the insurer had an improper purpose in consulting counsel.

The Ohio Supreme Court held, in *Boone v. Vanliner Insurance Co.*,ⁿ³³ that "documents and other things showing the lack of a good faith effort to settle by a party or attorneys acting on his behalf are wholly unworthy of the protections of any claimed privilege." Thus, a mere allegation of bad faith required the trial court to conduct an *in camera* inspection and order production of any claim file material, even if other requirements for privilege were met, if it tended to show bad faith. This eliminates from the traditional crime-fraud exception both the requirement of an improper purpose in seeking the attorney's assistance and the safeguard of a preliminary showing before an *in camera* inspection can be held. As such, it is contrary to settled law throughout the country, and no case elsewhere has yet followed *Boone*.

Precisely because *Boone* departs so far from the law elsewhere, it would seem appropriate to read it narrowly, as the Sixth Circuit acknowledges that Ohio courts other than *Garg* have done. And perhaps that might have been done on an appeal, not subject to the requirement of clear error applicable on mandamus. In particular, with the mere allegation of fraud opening the way to an *in camera* inspection, it would seem that ordering disclosure should require that the court, after making such an inspection, should have to find at least a prima facie case of bad faith. That might make it tactically desirable for plaintiffs to defer the *in camera* inspection until they had developed any other evidence supporting the bad faith claim, so that this might be presented to the court along with its *in camera* review of the allegedly privileged materials.

A narrower reading may also be appropriate under the statutory amendment that was too recent to be applicable in *Professionals Direct*. As the Sixth Circuit described the amendment:

The amendment created § 2317.02(A)(2), which reads: "A person shall not testify in certain respects: . . . An attorney, concerning a communication made to the attorney by a client in that relationship or the attorney's advice to a client, except that if the client is an insurance company, the attorney may be compelled to testify, subject to an *in camera* inspection by a court, about communications made by the client to the attorney or by the attorney to the client that are related to the attorney's aiding or furthering an ongoing or future commission of bad faith by the client, if the party seeking disclosure of the communications has made a prima facie showing of bad faith, fraud, or criminal misconduct by the client." The explanatory note to this amendment states: "The common law established in *Boone v. Vanliner Ins. Co.* (2001), 91 Ohio St.3d 209, ... *Moskovitz v. Mt. Sinai Med. Ctr.* (1994), 69 Ohio St.3d 638, ... and *Peyko v. Frederick* (1986), 25 Ohio St.3d 164, .. is modified accordingly to provide for judicial review regarding the privilege."

Literally read, the amendment may only affect attorney testimony. But the legislative intent appears to have been broader. It is unclear how the Ohio courts will read the amendment.

In Ohio's courts, insurers have one protection that may not be available in the federal courts. *Garg* held that it is an abuse of discretion not to bifurcate the coverage claim from the bad faith claim and stay discovery on bad faith until the coverage question has been resolved.ⁿ³⁴ Federal district courts may, of course, bifurcate a case that way.ⁿ³⁵ But they are not obliged to do so.ⁿ³⁶

III. Conclusion

Where Ohio law does not govern, courts are unlikely to follow *Boone* (and should not do so). Ohio courts should read *Boone* narrowly.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of *The New Appleman on Insurance Law*, now in preparation, and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged with *Insurance Litigation Reporter*, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 *Duke L.J.* 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Ronald D. Kent heads the Litigation Department in Sonnenschein's Los Angeles office. He is also Co-Chair of the Firm's National Insurance Litigation and Coverage Practice and is a member of the firm-wide Policy & Planning (Management) Committee. Since 2005, he has been named each year as a leading trial lawyer nationally and in California, based on peer and client evaluations, by *Chambers USA: America's Leading Lawyers*, the highly respected independent attorney rating organization. Mr. Kent has extensive experience representing major insurance companies on a wide variety of matters, including fraud and bad faith actions, class action and multiple plaintiff litigation, defense of toxic tort and other environmental claims, insurance coverage actions and general business disputes. Mr. Kent has tried matters in state and federal courts throughout California, and in other states, and has successfully handled in excess of 70 arbitrations to final resolution. In addition, he has briefed and argued numerous appellate matters in the California Supreme Court, nearly all California district courts of appeal and the Ninth Circuit Court of Appeals.

About the Law Firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests. For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself: This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings. When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein).

Sonnenschein Nath & Rosenthal, L.L.P., on SwedishAmerican Hospital Association v. Sari Insurance Co.: Breach of Duty To Settle Frees Insured To Do So

By William T. Barker and Gauri Chopra

January 6, 2010

SUMMARY: SwedishAmerican Hosp. Ass'n v. Sari Ins. Co. held that an insurer's breach of duty to settle frees its insured to do so. There was no controlling Illinois law, and there is a division of authority elsewhere. The case also presented, but did not resolve, a novel question about the effect of a policy mechanism to resolve disputes about whether to settle. This commentary examines the case and the varying results reached elsewhere.

ARTICLE: *SwedishAmerican Hospital Ass'n v. Sari Insurance Co.* n1 held that an insurer that breaches its duty to settle frees its insured (and another insurer) to do so. The court found no prior controlling Illinois law on this point, and the issue is one on which there is a division of authority elsewhere. The case also presented a novel question about the effect of a policy provision creating a mechanism to resolve disputes about whether to settle, though the court determined that factual issues remained to be resolved on that issue. This commentary examines the case and the varying results reached elsewhere. It offers some thoughts on the issues presented. (Portions of this commentary are drawn from § 4.03 of the forthcoming William T. Barker & Ronald D. Kent, *The New Appleman Insurance Bad Faith Litigation*.)

I. The Case

Illinois State Medical Inter-Insurance Exchange ("ISMIE") provided \$1 million in malpractice insurance to Dr. Bruce Hecht, who treated Wanique Tripp at SwedishAmerican Hospital. Tripp, a child, suffered severe complications and her family sued both Hecht and the Hospital. As the case developed, any liability of the Hospital would be vicarious, based on the negligence of Hecht. The Hospital had a self-insured retention for itself and its employees (including Dr. Hecht) of \$1.5 million and Sari Insurance Co. provided \$25 million in coverage excess to that. n2

ISMIE defended Dr. Hecht, under reservation of rights. After extensive discovery the case settled for \$5 million, but ISMIE refused to participate, even though it admitted that (in a vicarious liability situation) it would be obliged to pay the first \$1 million. The Hospital and Sari agreed to fund the settlement and received an assignment of Dr. Hecht's

rights against ISMIE. They sued ISMIE seeking the \$1 million they contended it should have contributed to the settlement. n3

Both the Hospital and Dr. Hecht wished to settle, and there was considerable evidence indicating that there would be a verdict against Dr. Hecht and that the amount of any verdict would exceed \$1 million. ISMIE's adjuster's notes at the time showed that she felt that there would be a 95% chance of prevailing before a jury of doctors, but only a 50% chance with a lay jury and agreed that any verdict or settlement would exceed \$1 million. Based on Dr. Hecht's desires and the high exposure, she recommended that the case be settled. The physician review committee decided that the case should be tried. n4

In the suit by the Hospital and Sari, ISMIE contended that the settlement violated the no-action provision of its policy and was a voluntary payment that it was not obliged to reimburse. ISMIE also relied on a policy provision that disputes about settlement would be resolved by the physician review committee. The circuit court granted ISMIE summary judgment based on the no-action provision. n5 The Appellate Court found factual issues and remanded for further proceedings.

As to the no-action provision, the court reasoned that:

The purpose of a no-action provision is to protect the insurer from collusive or overly generous or unnecessary settlement by the insured at the expense of the insurance carrier. "It is, however, unfair to the insured to enforce the clause against him when the insurer has erroneously refused to perform the insurance contract." n6

While most cases applying that principle involve insurers that have refused to defend, the court concluded that

it follows that it would be unfair to enforce the no-action clause against the insured where the insurer has similarly breached the contract by breaching the duty to settle. In fact, the supreme court has stated that "[a]n insurer who undertakes the defense of a suit against the insured, where the damages sought are in excess of policy limits, cannot arbitrarily refuse a settlement within policy limits," and in such circumstances, the "insured may effect a reasonable settlement himself without breaching any conditions of the policy." *Krutsinger v. Illinois Casualty Co.*, 10 Ill. 2d 518, 527, 141 N.E.2d 16 (1957). n7

While there was no controlling authority on the point (the *Krutsinger* language being dictum in a case where the insurer had refused to defend), the court was persuaded by authority elsewhere supporting that conclusion. n8 Accordingly, Dr. Hecht's compliance with the no-action provision would have been excused if ISMIE had breached its duty to settle. While the payments by the Hospital and Sari had prevented any out-of-pocket costs to Dr. Hecht, the Hospital and Sari could complain of any breach, as Dr. Hecht's assignees. n9 But whether ISMIE breached a duty to settle was a question of fact, so summary judgment was inappropriate. n10

ISMIE also relied on the following provision in its policy:

"(d) The Exchange will not settle any claim or suit without having first obtained the written consent of the named insured. If the named insured and the Exchange are in disagreement as to whether or not a claim or suit should be settled or defended, either party may request that the matter be submitted to a committee of physician members of the Exchange whose decision regarding disposition of the claim or suit shall be binding." n11

While the physician review committee had recommended against settling, the court was not convinced that this contractual provision had been properly triggered. Dr. Hecht, his private counsel, the defense counsel appointed by ISMIE, and ISMIE's adjuster had all recommended that the case be settled. So, it appeared that there may have been no disagreement between ISMIE and Dr. Hecht requiring resolution by the physician review committee. But other documents, not in the record might also bear on that issue, so the issue could not be resolved on that record. But the court went on to say that "even if this provision was triggered, this provision does not relieve ISMIE of its good-faith duty to settle, as the good-faith duty is to be determined in a court of law, not by a panel of physicians." n12

II. Analysis

A. The No-Action Provision

The no-action provision and its companion, the voluntary payment provision, are standard provisions of liability insurance policies that restrict the freedom of the insured to settle without the insurer's consent while seeking to require the insurer to pay for the settlement. It is universally agreed that an insurer's breach of its duty to defend excuses the insured's compliance with these settlement restrictions. ⁿ¹³ But there is a division of authority on the effect of a failure to settle when the insurer is defending.

Many courts agree with *SwedishAmerican Hospital* that refusal to seize an advantageous opportunity to settle is a breach of contract, excusing the insured's compliance with the settlement restrictions. ⁿ¹⁴ On the other hand, the California Supreme Court has held that, ordinarily, "[a]s long as the insurer is providing a defense, the insurer is allowed to proceed through trial to judgment." ⁿ¹⁵ Under that rule, an insurer will be held responsible if refusal of a reasonable settlement results in a judgment in excess of limits, but the insured cannot simply cut off the insurer's right to try the case by agreeing to a noncash settlement that the insurer may then be forced to pay. California does permit an insured to make a cash settlement and then sue for reimbursement, ⁿ¹⁶ a rule that would support the result in *SwedishAmerican Hospital*. Other courts have held that a defending insurer's failure to settle does not free the insured to settle and have not indicated any exception for cash settlements by the insured. ⁿ¹⁷ This approach effectively treats the duty to settle as a duty to protect the insured from an excess judgment, if that is reasonably possible. Because such a duty is not breached unless and until an excess judgment occurs, a mere failure to settle does not free the insured from the settlement restrictions.

There is no indication in *SwedishAmerican Hospital* that this alternate line of authority was brought to the court's attention. Advocates for insurers should make use of that line of authority in appropriate cases.

B. The Physician Review Committee

Based on the (admittedly incomplete) facts recounted in the court's opinion, it is indeed unclear why the case was referred to the physician review committee. But if there truly was no dispute about the desirability of settling (and the stated facts make that possibility plausible), then it would seem doubtful that a committee recommendation to try the case would excuse the duty to settle. On the other hand, the agreement to submit disputes to the committee for a binding decision would appear to be an agreement to arbitrate, a point the court does not appear to have considered in its dictum rejecting binding effect. Even if not binding, a committee decision to litigate would seem potent evidence that a decision not to settle was reasonable.

2010 Emerging Issues 4797

Sonnenschein Nath & Rosenthal, L.L.P. on Griffin Dewatering Corp. v. Northern Insurance Co.: A Reservation of Rights Cannot Be Actionable Bad Faith

By William Barker

January 6, 2010

SUMMARY: Griffin Dewatering Corp. v. Northern Insurance Co. held that an insurer's reasonable refusal to defend did not become bad faith when a later supreme court decision established that the refusal was incorrect. But it also held that the insurer's reservation of a right to seek reimbursement of the amounts it paid could not be the basis for a bad faith claim. This commentary examines the latter holding and its implications.

ARTICLE: *Griffin Dewatering Corp. v. Northern Insurance Co.* n1 held that an insurer's reasonable refusal to defend did not become bad faith when a later supreme court decision established that the refusal was incorrect. But it also held that the insurer's reservation of a right to seek reimbursement of the amounts it paid could not be the basis for a bad faith claim. This commentary examines the latter holding and its implications.

I. Griffin Dewatering

Griffin Dewatering was a complex and confusing case. The court of appeal wrote that "[a]t first, we did not know what to make of this case." n2 It took the court two rounds of supplemental briefing, a second oral argument, and nearly 50 pages of opinion to sort it out. But, because the focus here is limited to the reservation of rights point, much of the complexity can be omitted. The bad faith case resulted in a judgment for \$1 million in compensatory damages (all attorneys fees for prosecution of the claim) and \$10 million in punitive damages, which judgment was reversed in its entirety.

The bad faith claim arose from a request by Griffin that Northern, its liability insurer, provide coverage for a claim asserted by Dr. & Mrs. Ron Waters relating to a sewage backup in their home that had caused extensive damage. The backup related to work Griffin was doing at the time for the South Coast Water District. Northern denied coverage on the basis of a Total Pollution Exclusion. The District paid Dr. & Mrs. Waters \$417,000 to settle their claim and then sued Griffin in September, 1999. n3

Northern initially denied a defense. But Griffin had excess insurance with AIG. AIG undertook to retain defense counsel and invoice Griffin for the cost, avoiding any immediate out-of-pocket cost to Griffin for defense expenses. In April, 2000, Griffin sued Northern for bad faith breach of its insurance contract. In September, 2000, Northern changed its mind, and agreed to defend the suit, reserving its right to seek reimbursement if there were no coverage. It then settled the District's suit for \$350,000, and paid the fees incurred by AIG before AIG had invoiced any of those fees to Griffin. As a result, Griffin never suffered any out-of-pocket cost for defense of the District lawsuit. n4

Griffin had incurred \$8,921.40 in fees for its suit against Northern. Northern offered to reimburse these as well (actually to pay a flat \$10,000, but that makes no difference here), but (at least as Griffin viewed the situation) reserved its right to seek reimbursement of its payments for defense and indemnity. n5

The coverage/bad faith litigation continued, with Griffin incurring over \$1 million in fees for that litigation. n6 In early 2002, there were two court of appeal decisions construing pollution exclusions in a way that favored Northern's position, but the supreme court granted review, depriving them of precedential effect. Northern had moved for summary judgment on coverage, which was denied after the supreme court granted review. On October 8, 2002, Northern unilaterally withdrew its reservation of the right to seek reimbursement. n7

The supreme court later decided, in *MacKinnon v. Truck Insurance Exchange*, n8 that a literal interpretation of absolute or total pollution exclusions would yield an absurd result and that, to prevent that, such exclusions would be limited to "conventional environmental pollution." n9 It thus became clear that Northern's denial of coverage (and of a defense) had been incorrect. Because the issue had been unsettled at the time of the denial, the trial court in *Griffin Dewatering* held that the denial was bad faith as a matter of law. n10 The court of appeal reversed on that point, holding that (given the state of the law at the time Northern refused to defend), Northern's refusal to defend had, as a matter of law, been reasonable and not bad faith. n11 While there is much interesting law in that portion of the opinion, it is beyond the scope of this commentary.

Griffin also contended that Northern's reservation of the right to seek reimbursement of its payments had deprived Griffin of the full benefit of the insurance, requiring Griffin to litigate coverage. On this basis, Griffin contended that its litigation costs were a form of damage for Northern's alleged bad faith. n12 The court of appeal disagreed, for two reasons. First, there was no bad faith: Northern's coverage position, though incorrect, was reasonable (for reasons already expounded at length). n13 But the reservation also could not deprive Griffin of any of the benefits of the contract, because Northern could not recover unless it could show that Griffin had never had any contractual right to the payments Northern had made. n14

II. A Reservation of Rights Is Merely a Notice, Does Not Require the Insured To Relinquish Anything, and Cannot Deprive an Insured of Anything the Insured Is Entitled To Under the Contract.

The right to seek reimbursement of noncovered defense costs and settlement payments is a noncontractual right rooted in the law of unjust enrichment. n15 As it applies to defense costs, "the right of recoupment ... is necessarily predicated on the proposition that the insurance company has expended funds on the policyholder's behalf that were never 'even potentially covered' under the insurance contract." n16 "That is, by definition and as a matter of law, an insurance company's only hope of reimbursement is if the policyholder *has received a benefit that the policyholder never paid for in the first place.*" n17

The *Griffin Dewatering* court relied on *Prichard v. Liberty Mutual Insurance Co.* n18 In *Prichard*, Prichard was sued on numerous claims that were clearly not covered and a defamation claim that was potentially covered. Liberty Mutual and two other insurers defended under reservation of rights. Undisputed testimony at trial indicated that the defamatory material was first published before the inception of the policy, and the policy excluded coverage for defamatory statements so published. Liberty Mutual informed Prichard's independent defense counsel of the apparent coverage defense. After judgment, Liberty Mutual contended that its duty to defend was now terminated by the undisputed evidence that the claim was excluded. It nonetheless offered to pay for appellate counsel, reserving the right

to seek reimbursement. The trial court ruled (and the court of appeal agreed) that Liberty Mutual's duty to defend had not terminated. The trial court further ruled that by "conditioning" an appellate defense on the reservation of rights, Liberty Mutual had breached its duty to defend, precluding it from asserting the first-publication defense to indemnification. The court of appeal found no breach of the duty to defend. n19

The *Prichard* court concluded that the finding of breach rested on the assumption that any right of reimbursement would have been contractual, requiring both agreement and new consideration. Because Liberty Mutual's offer to pay appellate counsel merely performed its duty to defend, the trial court had believed that it was attempting to extract a concession from the insured without offering anything in return. After explaining Prichard's argument to that effect, the court responded: "Wrong, wrong, wrong. The whole point of the *Buss* case is that an insurer's right to reimbursement for defense costs for never-even-potentially-covered-claims is predicated on a legal right 'implied in law as quasi-contractual,' not a matter of any agreement between the parties." n20 Because Liberty Mutual was not seeking any concession from the insured, its offer of a defense under reservation was not "conditioned" at all, let alone "unlawfully conditioned." n21 While Prichard tried to characterize Liberty Mutual's position as a "retroactive termination of its [defense] obligation," the court observed that this phrase "is simply an ominous phrase for 'reimbursement right.'" n22

Relying on *Prichard*, the court in *Griffin Dewatering* concluded that because the rights the insurer sought to reserve were "necessarily not a matter of [new] contract, the insurer's assertion of a reimbursement right could not deprive the insured of any 'benefits' under the [insurance] contract. It could only deprive the insured of benefits that the law gave [the insurer] independent of contract." n23 To be sure, the insurer's claimed right was not unrelated to the contract. The right of reimbursement would be based on the fact that the contract had never obliged the insurer to make the original payment. Stated differently, the insurance contract would have meant that the insurer had a right not to have made that payment. But the right to reimbursement (which is what Northern was trying to reserve) is not itself contractual.

That point is significant, because that means the rule applied in *Griffin Dewatering* is not limited to reservations of rights to seek reimbursement. It is equally applicable to the more common reservations of the right to deny indemnification. Such reservations seek no concession from the insured, but simply provide notice that the contract may not obligate the insurer to indemnify against any judgment and that it reserves the right not to go beyond what the contract requires.

Bottom line: a reservation of rights, even if unfounded, cannot constitute actionable bad faith without some further action or inaction that deprives an insured of contractual benefits.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial

Board of The New Appleman on Insurance Law, now in preparation, and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

About the Law Firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests. For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself: This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings. When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Reed Smith on United Guaranty Mortgage Ins. Co. v. Countrywide Financial Corp.

2010 Emerging Issues 4799

Reed Smith LLP on Mortgage Insurers Cannot Cry Insurance Fraud: An analysis of United Guaranty Mortgage Ins. Co., v. Countrywide Financial Corp., et al.

By Lilit Asadourian

January 6, 2010

SUMMARY: In United Guaranty Mortgage, the District Court for the Central District of California dismissed with prejudice United's tort and statutory claims against Countrywide, holding that United could not seek "poolwide" rescission of its mortgage insurance policies, and instead must show breach of contract on a loan-by-loan basis. This article analyzes the court's decision in United Guaranty, and the impact it will have on mortgage insurers.

ARTICLE: A recent decision by the Central District Court of California rejecting a mortgage insurer's attempts to rescind mortgage insurance policies on a poolwide basis is expected to have significant ramifications nationwide. In better economic times, United Guaranty Mortgage Ins. Co., sold thousands of mortgage insurance policies to Countrywide Financial Corp. and Countrywide Home Loans Inc. ("Countrywide") to insure mortgage loans that Countrywide originated and then securitized and sold on the secondary market to investors. When the underlying mortgages began to default, Countrywide called upon United Guaranty to pay on the policies. Instead of paying, however, United Guaranty filed a lawsuit against Countrywide in the Central District of California seeking poolwide rescission of coverage for thousands of loans insured under 11 master policies, altogether encompassing approximately \$13 billion in mortgage loans. n1 United Guaranty claimed that Countrywide had engaged in systemic fraud in the underwriting of the mortgage loans and the insurance intended to protect against the risk of default. On that basis, United Guaranty brought contract, tort and statutory claims against Countrywide including fraudulent inducement, negligence, negligent misrepresentation, rescission, and California Business and Professions Code section 17200 claims.

Following motions to dismiss by Countrywide, Judge Pfaelzer of the Central District Court dismissed all of United Guaranty's tort and statutory claims with prejudice, leaving only claims for breach of contract and breach of the implied covenant of good faith and fair dealing. The Court held that United Guaranty's claims could not sound in tort where sophisticated parties entered into sophisticated agreements and transactions that contemplated contractual remedies for the breaches United Guaranty alleged. In addition, the Court held that nothing in the policies contemplated that United Guaranty could rescind the policies on a "poolwide" basis. Instead, to avoid liability, United Guaranty will have to

demonstrate on a loan-by-loan basis for thousands of loans that there was some breach by Countrywide sufficient under the language of the policies to justify rescission of coverage as to a particular loan.

1. United Guaranty's allegations.

Even though United Guaranty had "extensive experience in mortgage insurance having sold it to a wide variety of clients since 1963," and "United Guaranty and Countrywide have done business for over forty years," United Guaranty maintained in its Amended Complaint n2 that it had little experience "in the subprime [mortgage] market" and relied upon Countrywide through a process known as "delegated underwriting" to underwrite coverage for the loans. n3 United Guaranty further claimed that it had relied on Countrywide's alleged representations that Countrywide had originated the loans in strict compliance with Countrywide's underwriting guidelines, and relied on "false information [provided by Countrywide] on the individual loans, including misrepresentations regarding characteristics of the loans and the creditworthiness of the borrowers." n4 Based on the foregoing, "United Guaranty priced and issued" the policies in what the parties refer to as "bulk" or "pool" transactions. n5 United Guaranty further asserted that Countrywide had, in reality, "abandoned any reasonable and prudent underwriting standard." After the loans at issue allegedly started showing a "high number of delinquencies," United Guaranty conducted an audit which supposedly "revealed that over 55% of the loans either failed to comply with the guidelines or contained some material defect." n6 On this basis, United Guaranty sought "poolwide" rescission of the policies.

2. Countrywide's Motion to Dismiss

Countrywide moved to dismiss United Guaranty's tort and statutory claims pursuant to *Federal Rules of Civil Procedure* 12b(6) and 9(b). Countrywide asserted that the economic loss rule which "generally bars tort claims for contract breaches, thereby limiting contracting parties to contract damages," barred United Guaranty's tort claims. n7 Countrywide also argued that United Guaranty could not seek global rescission as to all the insured mortgages, and United Guaranty had no basis for its Unfair Competition claim.

Judge Pfaelzer agreed. In a well-considered, 46-page opinion, Judge Pfaelzer found that the economic loss rule barred United Guaranty's tort claims and no exception to the rule applied. n8 Further, the Court found no discernable inducements that satisfied the Rule 9(b) heightened pleading standard for fraud, noting that even if United Guaranty could plead fraud with the particularity required, "nothing in the Amended Complaint makes reasonable reliance on the alleged inducements facially plausible." n9 In the Court's view, "[n]o reasonable insurer would rely upon generalized representations about "quality" underwriting-especially oral representations." n10

The Court further held that the "global rescission claim must be dismissed" because "nothing in the policy documents contemplates cancellation, rescission, or termination of coverage for an entire loan pool-not even for fraud." n11 Instead, the Court found that the parties bargained for rescission on a loan-by-loan basis and that allocating risks of fraud in this fashion makes sense when "insuring pools of mortgage that were originated by different loan officers, in different offices-and perhaps even by mortgage companies other than Countrywide." n12 Based on the severability factors articulated in *Coca-Cola Bottling Co. of San Diego v. Columbia Cas. Inc. Co.*, n13 Judge Pfaelzer held that coverage on each loan is severable from the other and "United Guaranty cannot articulate any limiting principle for when misrepresentations as to some loans would entitle it to global rescission for all loans." n14 In sum, the Court said:

Contract law allows parties to estimate costs and allocate risks in advance. Where sophisticated parties expressly agree about how to handle the risk of misrepresentations, they face a particularly difficult time asserting negligence and negligent misrepresentation. As for fraudulent inducement, reliance on some types of misrepresentations becomes less reasonable when the parties are more sophisticated. Likewise, the Insurance Code includes numerous provisions codifying default contract rules, procedures, and remedies. But in complex insurance transactions those provisions are likely to be displaced by the parties' bargain. Such is the present case, which remains a contract action. n15

Thus, United Guaranty is left only with its claims for breach of contract and breach of the implied covenant of

good faith and fair dealing and, to succeed, will have to demonstrate loan by loan that Countrywide breached the policy so as to rescind coverage on a particular loan.

3. Implications

The United Guaranty decision will likely have far reaching implications for mortgage insurers and policyholders across the country. In the wake of the tumbling housing market, mortgage insurers have similarly sought to rescind "poolwide" coverage in many jurisdictions, alleging fraud or misrepresentation by the mortgage originator in order to avoid billions of dollars in liability. The Central District Court's opinion in United Guaranty will guide other courts considering whether a mortgage insurer can recover in tort for breach of contractually obligated representations, or whether global rescission is appropriate for mortgage insurance policies that provide insurance on a loan-by-loan basis. Based on Judge Pfaelzer's opinion, the short answer is "no." Thus, following this ruling, mortgage insurers searching for a quick fix for their mortgage insurance liabilities should be more circumspect about bringing an action for fraud or global rescission.

n1 United Guaranty also filed another action in the North Carolina federal Court. Countrywide also filed a state court action against United Guaranty for breach of contract, breach of the covenant of good faith and fair dealing, and declaratory judgment which United Guaranty removed to the California Central District court.

n2 Judge Pfaelzer initially dismissed United Guaranty's tort and statutory claims with leave to amend.

Reed Smith LLP on The Fifth Circuit's Decision in Safety National

2010 Emerging Issues 4794

Reed Smith LLP on The Fifth Circuit's Decision in Safety National: Significant Implications for the Future Enforceability of Foreign Arbitration Provisions Conflicting with State Insurance Statutes

By Evan Knott

January 6, 2010

SUMMARY: In *Safety Nat'l Cas. Corp. v. Certain Underwriters At Lloyd's, London*, an en banc panel of the U.S. Court of Appeals for the Fifth Cir. held that a Louisiana anti-arbitration statute did not "reverse-preempt" the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the "New York Convention") under the McCarran-Ferguson Act.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

ARTICLE: An *en banc* panel of the United States Court of Appeals for the Fifth Circuit held that a Louisiana anti-arbitration statute did not "reverse-preempt" the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the "New York Convention") under the McCarran-Ferguson Act. *See Safety Nat'l Cas. Corp. v. Certain Underwriters At Lloyd's, London*, --- F.3d ----, 2009 U.S. App. LEXIS 24585 (5th Cir. Nov. 9, 2009)). The Fifth Circuit's *en banc* ruling presents an unexpected setback for policyholders invoking the protections of state statutes regulating insurance as a means to overcome provisions mandating arbitration of coverage disputes in foreign tribunals that increasingly appear in insurance policies issued by London and Bermuda market insurers. Moreover, the Fifth Circuit's ruling in *Safety National* creates a split with the Second Circuit's decision in *Stephens v. Nat'l Distillers & Chem. Corp.*, 66 F.3d 41 (2d Cir. 1995). The appellee in *Safety National* has applied to the United States Supreme Court for a Writ of Certiorari, the conflicting decisions between the Fifth and Second Circuits may now pave the way for review of this issue by the high court.

Procedural History and Factual Background of Safety National

The Louisiana Safety Association of Timbermen-Self Insurers Fund ("LSAT") procured excess worker's compensation reinsurance coverage from Lloyd's of London. LSAT attempted to assign the reinsurance agreement to an assignee, to which Lloyd's refused to consent. The assignee subsequently brought suit against Lloyd's in the Eastern District of Louisiana. The reinsurance agreement included an arbitration provision requiring arbitration of disputes arising under the agreement. The district court granted Lloyd's unopposed motion to stay and compel arbitration. Lloyd's sought to compel arbitration pursuant to the New York Convention, a federal treaty enacted in 1958. The New

York Convention treaty provides that each signatory nation "shall recognize an agreement in writing under which the parties undertake to submit to arbitration" any dispute "concerning a subject matter capable of settlement by arbitration." See Convention on the Recognition and Enforcement of Foreign Arbitral Awards, art. II(1), June 10, 1958, 21 U.S.T. 2517, 330 U.N.T.S. 3. The New York Convention contemplates enforcement in a signatory nation's courts, directing that courts "shall" compel arbitration when requested by a party to an international arbitration agreement, subject to certain exceptions that were not at issue in *Safety National*. *Id.*, art. II(3). The New York Convention treaty is the subject of an enabling Act included in the Federal Arbitration Act (the "Convention Act"). See 9 U.S.C. § 201 *et seq.* The Convention Act states that the New York Convention "shall be enforced in United States courts in accordance with this chapter." *Id.* at § 202. The Act additionally establishes federal court jurisdiction and venue. *Id.*, §§ 203-204.

After the district court granted Lloyd's unopposed motion to compel arbitration, the parties were unable to agree on the selection of an arbitrator, and Lloyd's moved to lift the district court's stay in order to join LSAT as a party and compel it to arbitrate. LSAT then intervened and moved to lift the stay and to quash arbitration, arguing that the arbitration provision was unenforceable under section 22:868 of the Louisiana Revised Statutes. The Louisiana statute in question provides:

No insurance contract delivered or issued for delivery in this state and covering subjects located, resident, or to be performed in this state . . . shall contain any condition, stipulation, or agreement: . . . (2) Depriving the courts of this state of the jurisdiction of action against the insurer. . . . C. Any such condition, stipulation, or agreement in violation of this Section shall be void, but such voiding shall not affect the validity of the other provisions of the contract.

See La. Rev. Stat. Ann. § 22:868.

The district court granted LSAT's motion to quash the arbitration proceedings. In so ruling, the district court held that pursuant to the McCarran-Ferguson Act, the New York Convention was reverse-preempted by the Louisiana statute because the statute plainly prohibited arbitration provisions in insurance contracts. The McCarran-Ferguson Act, which was enacted in 1945, provides that the "business of insurance" shall be regulated by the individual states. 15 U.S.C. § 1012(a). The McCarran-Ferguson Act further provides that, "No Act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any State for the purpose of regulating the business of insurance. . . ." *Id.* § 1012(b). Accordingly, the McCarran-Ferguson Act prevents federal preemption of a state statute, and effectuates "reverse preemption" by the state statute, when a three-part test is satisfied: (1) the federal law must not specifically relate to the business of insurance; (2) the federal law would invalidate, impair, or supersede the state statute if applied; and (3) the state statute was enacted for the purpose of regulating insurance. *Am. Bankers Ins. Co. of Florida v. Inman*, 436 F.3d 490, 493 (5th Cir. 2006); *Munich Am. Reins. Co. v. Crawford*, 141 F.3d 585, 590 (5th Cir. 1998).

After quashing the order compelling arbitration, the district court in *Safety National* certified its ruling for an immediate appeal to the Fifth Circuit. The Fifth Circuit reversed the trial court, holding that the McCarran-Ferguson Act did not reverse preempt the New York Convention. An *en banc* panel of the Fifth Circuit subsequently affirmed the prior appellate ruling by a vote of 15 to 3, and held that the New York Convention preempts and nullifies the Louisiana state statute from stopping the insurer from enforcing a policy provision depriving a Louisiana state court with jurisdiction over a coverage dispute.

The Fifth Circuit En Banc Holds that McCarran-Ferguson Does Not Reverse Preempt the New York Convention

In holding that the New York Convention was not reverse preempted by the Louisiana statute prohibiting insurers from requiring foreign arbitration of coverage disputes, the majority determined that Congress did not intend to include a federal treaty such as the New York Convention within the scope of an "Act of Congress" as set forth in the McCarran-Ferguson Act. The majority rejected LSAT's argument that because the New York Convention was not self-executing, but rather took effect through the Convention Act, an enabling Act that constituted an "Act of Congress" under the McCarran-Ferguson Act. Instead, the majority found that while it was "unclear" whether the New York

Convention was self-executing, the "fact that a treaty is implemented by Congress does not mean that it ceases to be a treaty and becomes an 'Act of Congress'" under the McCarran-Ferguson Act.

The majority additionally reasoned that the New York Convention treaty, rather than the provisions of the Convention Act implementing it, determined the parties' respective rights and obligations, and whether the state law at issue would be reversed preempted. Moreover, the majority noted, nothing in the Convention Act conflicted with or overrode the parties rights and obligations under the New York Convention treaty.

In so ruling, the majority's decision in *Safety National* is in apparent conflict with the Second Circuit's decision in *Stephens*, which held that the New York Convention was not a self-executing treaty and therefore relied on the Convention Act, an "Act of Congress," under the McCarran-Ferguson Act.

The three dissenting judges in *Safety National* emphasized that the New York Convention treaty has no legal effect in the United States in the absence of the enabling provisions of the Convention Act. The significance of this dynamic, according to the dissent, is that courts previously have preempted state laws based on treaties that were not self-executing because the federal statutes implementing the treaties, rather than the treaties themselves, have been found to have a preemptive effect under the Supremacy Clause of the Constitution. The dissent therefore concluded that the Louisiana statute could not be preempted without construing an "Act of Congress" in violation of the McCarran-Ferguson Act prohibitions against federal Acts from interfering with state statutes regulating the business of insurance.

Implications of the Safety National Decision for Policyholders and Foreign Insurers

The *Safety National* decision presents several significant implications for policyholders and foreign insurers, especially for those involved in imminent coverage disputes in courts within the Fifth Circuit. Unless and until the United States Supreme Court reverses the *en banc* ruling in *Safety National*, foreign insurers whose policies include London arbitration provisions may seek to compel foreign arbitration of coverage disputes with their policyholders falling within the Fifth Circuit's jurisdiction even where doing so would prevent the policyholder from invoking the protections of a state statute regulating the business of insurance.

If the United States Supreme Court grants *certiorari* and affirms the *Safety National* decision, policyholders stand to lose much more than their ability to litigate coverage disputes in U.S. state or federal courts and thus utilize the benefits of formalized fact and expert discovery, transparency of dispute resolution proceedings, and the appellate process typically absent from foreign arbitration proceedings. Policyholders also are at risk of losing crucial rights to litigate and recover for insurer bad faith, which is essentially non-existent under the insurance laws of the United Kingdom and other foreign jurisdictions. Indeed, policyholders in the absence of a ruling affirming *Safety National* may be able to invoke the forfeiture of their rights under state bad faith statutes as a means to "reverse preempt" enforcement of London arbitration provisions in their insurance policies.

The United States Supreme Court could affirm *Safety National* on the different and narrower grounds that the Louisiana statute (and others like it) prohibiting insurers from depriving courts from resolving insurance policy disputes does not regulate the business of insurance, and therefore does not fall under the McCarran-Ferguson Act's reverse preemption provisions. Such a result would likely leave a considerable amount of uncertainty for both policyholders and foreign insurers as to whether other types of state statutes (such as those creating a private right of action for insurer bad faith) could reverse preempt an insurer's attempt to enforce a foreign arbitration provision.

On the other hand, a reversal of *Safety National* by the Supreme Court may provide policyholders considerable latitude to invoke a wide array of state statutes regulating the business of insurance as a means for stopping foreign insurers from enforcing foreign arbitration clauses. Given the significance of these varying implications, the *Safety National* decision undoubtedly will be closely watched by counsel representing both policyholders and insurers in coverage disputes.

ARTICLE: INTRODUCTION

Internet-based social networking services and platforms, or "social media," are rapidly becoming the ultimate way to communicate instantly with friends and contacts around the world. As one expert has observed, "The field of marketing communications is rapidly moving to a new model in which online communication plays a dominant role, and social media are the latest development in that trend." n1 While Facebook, Twitter, LinkedIn and MySpace are some of the best-known social media, there are, in fact, hundreds of social media sites. Furthermore, the technology of social networking is rapidly evolving as users create their own innovations and conventions that modify how the social media sites are used. n2

Insurance companies have only recently begun using social media, and their adoption of this new form of communication has been relatively limited and experimental to date. However, there is little doubt that, as with other businesses, social media will become mainstream in the insurance industry. This will be driven by the simple fact that younger and older generations alike are using social media heavily, n3 and if insurers are not participating, their messages will not be heard, and they will not hear what their insureds and employees are saying about them.

Those insurers who have begun using social media are communicating with insureds to provide news and information about coverages, rates, ratings, jobs, etc. Much of what we are seeing still amounts to marketing. However, it is changing from the traditional one-way marketing of insurer to insured to the two-way and "multi-directional" interaction on social media among insurers and their followers. Social media are often referred to as powerful communication tools, but this power can be a two-way street. Just as social media greatly enhance the ability of insurers

to convey their messages, they also make it possible for consumers to rapidly convey their thoughts and opinions about insurers on a large scale and even launch grass roots protests. n4

Current laws do not specifically contemplate the technology of social networking, and it will take time for regulators, courts and legislators to address new issues that arise. However, the speed and expanded reach of social media communication greatly magnify the chances that insurers could violate existing laws that potentially apply to the use of social media. This commentary outlines some of those laws as well as initial steps insurers can take to protect themselves.

Some insurers have decided that they will not participate in using social media because they view the legal and communication risks as too great. Others have blocked their employees' access to Facebook and Twitter on company systems. However, in reality insurers will not be able to avoid social media. Their employees and agents are using these networking sites and can freely access them on their own mobile communication devices. Furthermore, they are setting up their own company-related Web sites to communicate with each other and even former employees. n5 Agents are setting up their own Web sites as well with advertising and company logos and trademarks on them. n6

KEY AREAS OF LAW THAT POTENTIALLY APPLY TO INSURERS USING SOCIAL MEDIA

Litigation and E-Discovery. As we have seen in recent years, e-mails have become prime sources of evidence as lawyers focus on them to make their cases. We can expect that the insurance industry's use of social media will be even more fruitful sources of litigation discovery by lawyers. Such impromptu and informal communications by insurers' employees with each other and with insureds will be subjected to the same level of scrutiny as e-mails have been, and they are likely to be even richer sources of information. As one commentator observed, "Lawyers ... love these sites, which can be evidentiary gold mines." n7 Domestic relations and family lawyers now actively scrutinize MySpace and Twitter for revealing and helpful information to make their clients' cases in divorce situations. n8 We can expect these same tactics to be used against insurers by plaintiffs' lawyers.

With social media, the potential damage is even greater than with e-mails because by nature social media communications are often real time. People typically express themselves "in-the-moment" n9 without any thought to how their comments can later be used against them and their companies. It is this immediate nature of the communications that can be very revealing and, therefore, extremely valuable or damaging, depending on one's position. As a result, social media postings can become self-inflicted wounds. Put another way, "It's permanent. It's indexed. It's searchable. If it's inappropriate or even illegal, you've shot yourself in the foot." n10

Further complicating matters is the challenge of complying with litigation hold orders. Where a company's business is conducted through the alternative channels of social media using company-provided or company-supported hand-held devices, these records may fall within the scope of a litigation hold order and the company may be required to prevent such records from being lost. Companies should, at the very least, consider their litigation hold order forms.

Market Conduct and Insurance Trade Practices; Advertising. Many provisions of state insurance trade practices and advertising laws arguably apply to social media communications such as "tweets" by company employees as well as the posting of photos and videos. Among the insurance trade practice laws most likely to be applied to social media communications are those proscribing misleading and false statements (e.g., misrepresentations of benefits, advantages, and terms of coverage or insurance products), defamation (e.g., making disparaging comments about competitors), and unfair claims practices.

Furthermore, a number of states have laws and rules governing marketing and advertising by insurers. For example, one state requires that advertising be truthful, complete, and clear. n11 If an insurance company sponsors a Facebook page, that is likely to be considered "marketing" or "advertising," and such a company has an obligation to monitor this and make sure it is accurate.

Record and Document Retention. State insurance codes usually require insurers to maintain their records and

documents for a specified period of time. This allows regulators to examine companies' operations for both their financial condition and their business conduct in the market. These laws very broadly define which records and documents must be retained, and insurers must assume that such laws apply to their communications via social media. It follows that regulators would therefore be entitled to access social media communications engaged in by insurers. However, there are questions of who owns or has custody and control of the information. n12

Privacy. Numerous state and federal laws governing privacy potentially apply when insurers use social media. Insurers should recognize that these laws are generally triggered when there is a transmission of unencrypted non-public personal information (NPI). So tweeting, even over a private channel of Twitter, could be subject to scrutiny under the law.

One of the principal laws in this area is the Gramm-Leach-Bliley Act (GLBA) n13 enacted by Congress in 1999. Insurers must beware of communicating individuals' names in combination with personal information related to those persons. For example, an individual's name and driver's license number n14 or Social Security number n15 generally would be considered sensitive information protected by statute.

Privacy laws can be triggered when insurers' employees and agents use social media to communicate with insureds in claims situations. For example, using unsecured Web sites or unencrypted e-mail to exchange personally identifiable data (such as name, address, driver's license number and account/policy number) could subject insurers to the privacy laws. n16

Some states have adopted the National Association of Insurance Commissioners (NAIC) Insurance Information and Privacy Protection Model Act of 1982. This Act regulates all "personal information" which is broadly defined and includes virtually all individually identifiable information about insureds. n17

Personal health information also is protected by the federal Health Insurance Portability and Accountability Act (HIPAA) of 1996. n18 Title II of this Act protects the privacy of patient information. n19 While it currently may seem unlikely that such information would be disclosed through social media, as insurers and employees expand their use of social media, the potential for inadvertent disclosure increases. Insurers should ensure that their current systems for accessing and using patient information are adequate to cover such communications. Insurers may, for example, opt to totally prohibit the communication of any patient information by employees over social media networks.

A number of states, such as Nevada and Massachusetts, also have security breach laws which require NPI transmissions to be encrypted.

The federal Fair Credit Reporting Act (FCRA) may also apply. For example, when an auto insurer obtains an insured's driving history or credit report for underwriting purposes, the FCRA restricts the subsequent use and distribution of such information. n20 The insurer cannot share that information with others, including the insured. A careless employee who inadvertently discloses information obtained from a credit report via a tweet could subject the company to liability under the FCRA.

Lastly, insurers must keep in mind that they are also held accountable to the standards and requirements that they themselves establish under company privacy policies. Thus, if employees violate privacy policies that their employer-insurers have posted on their Web sites and mailed out to customers, those insurers are at risk of being sanctioned by the Federal Trade Commission and/or state insurance departments which regulate trade practices generally. Further, a company that fails to comply with its own privacy policies posted on its Web sites might have liability to a consumer who claims he or she relied on that Web site's privacy policy.

Employment Law. Employers need to address concerns about employees' use of social media. For example, insurance company employees who make comments about their fellow employees or employers can potentially expose themselves and their employers to liability. This includes the exchange of comments between supervisors about the character and conduct of their subordinates. Problems can arise when employees use social media outside of work if

they mention the company in their postings.

Insurers should review their employment policies on electronic communications and revise them to cover the use of social media, just as they have adopted policies on the use of cell phones, e-mail and the Internet. They should consider including guidelines prohibiting comments that are defamatory, harassing, disparaging or discriminatory, or which disclose confidential company information. In addition, they should provide guidance about employees' use of social media at work.

Specifically, employers may also choose to address employees' use of social media for personal matters while on the job. Social media have the potential to be far more time-consuming than just e-mailing and occasionally surfing the Web. As employees compulsively check their iPhones and Blackberries for news of other people's lives, their use of social media can consume large amounts of time and adversely affect their productivity.

Privilege and Trade Secrets. The unintentional loss of privileged information and trade secrets can occur as a result of careless disclosures employees make when using social media to communicate with outsiders, including friends and even regulators. Companies need to make sure their employees are educated about this risk and instructed on how to avoid it. Insurers' employees must be aware of and assume that a communication containing sensitive information that is intended for one person could be subsequently redistributed to others, thereby resulting in a loss of protection and a waiver of privilege through public disclosure.

Company guidelines should specifically inform employees that information transmitted using company hardware and software is the property of the company.

Intellectual Property. There can be issues of ownership and rights to the use of material that is generated by employees and third parties and posted on social media sites such as Twitter, Facebook and MySpace. This includes copyrighted material, patented designs or material, trademarks, trade names, trade dress, trade secrets, and trade slogans and phrases. The use of third parties' trademarks, copyrighted material or other intellectual property in postings or other communications on social media sites could infringe third parties' intellectual property rights. Licensing issues may also arise. If employees engage in such actions while performing their jobs, whether in the context of a company-sponsored Web page or otherwise, their employers could be liable for any infringement caused by such actions.

The fact that many social media sites allow for the creation of customized Web pages on a variety of topics, coupled with the informal nature of much of the use of such social media sites, may result in employees or third parties creating pages about an insurer which utilize trademarks, copyrighted material and other intellectual property of the insurer that the insurer will want to control. Accordingly, insurers should take steps to ensure that Web pages on social media sites which appear to be authorized by the insurer are, in fact, authorized and controlled by the insurer.

When creating authorized "fan pages" or other media channels on social media sites, insurers will need to address issues similar to those arising in other media channels. For example, like any other Web page, if company trademarks, copyrighted material or other intellectual property are placed on a social media site, there is a risk that such material may be subsequently redistributed and used by third parties in ways that the company does not want and cannot control.

Antitrust. Insurers must be constantly vigilant about violating state and federal antitrust laws when it comes to the use of social media. Member insurers of trade associates who communicate with each other via social media about matters of mutual interest and concern could end up violating antitrust laws if they discuss rates and pricing.

Contracts. Statements by insurance agents/producers in social media communications with insureds regarding insurance products could be used as the basis for arguing that a modification of the insurance contract occurred as a result of representations about the scope and nature of coverage.

WHAT TO DO? INITIAL STEPS INSURERS CAN TAKE TO PROTECT THEMSELVES

With so many potential legal issues and risks, the task of protecting against violations and resulting liability can be daunting. Insurers may well ask, "How can we afford the time and cost of covering all of the bases?" However, doing nothing places a company at risk for larger costs down the road in the form of damages and legal fees.

The first and most important step an insurer can take is to adopt policies and guidelines, or review and revise existing ones, on the use of social media in communicating with insureds and the public. Insurers who adopt a clear social media plan that incorporates such guidelines will be in a much better position to successfully meet the operating and legal challenges of this new communications environment.

Second, insurers should implement those policies and guidelines. This includes educating and training employees about those policies and guidelines.

Third, insurers should monitor and enforce compliance with the policies and guidelines. While there are differences of opinion about this, with some arguing that monitoring adversely affects employee morale and productivity, a company that adopts guidelines and does nothing to implement and monitor their compliance leaves itself vulnerable to attack.

An insurer will never have a perfect compliance program. However, taking immediate steps to adopt company policies and guidelines on social media will provide strong protection (and a defense) in the future if the insurer is sued or charged with violating the law.

Douglas R. Richmond on Selecting Independent Counsel in Insurance

2009 Emerging Issues 4725

Douglas R. Richmond on Selecting Independent Counsel in Insurance

By Douglas R. Richmond

December 11, 2009

SUMMARY: A liability insurer required to defend an insured against a suit by a third party may face an alleged conflict of interest. Where the conflict does exist, the insured is entitled to independent counsel. Courts are split on whether the insurer retains the right to select independent counsel notwithstanding the alleged conflict of interest, or whether the insured is entitled to choose its own lawyer.

ARTICLE: INTRODUCTION

Occasionally, a liability insurer required to defend an insured against a suit by a third party faces an alleged conflict of interest that it deprives the insurer of its contractual right to control the insured's defense. This is most often the case where the insurer has reserved its right to deny coverage and the insured contends that the manner in which the third-party action is defended could defeat or limit coverage. In such a case, the argument goes, the insurer may be more interested in defeating or confining coverage than in defending the insured. Thus, from the insured's standpoint, leaving the insurer in control of the defense is unacceptable.

While one might debate the validity of this reasoning in many instances, it is true in any event that the insurer's loss of defense control in such a case does not eliminate its duty to defend the insured. Rather, the insurer must cure the conflict to fulfill its duty. n1 An insurer typically does so by allocating control of the defense to "independent counsel." n2 The lawyers selected as independent counsel make all tactical decisions concerning the insured's defense, share an attorney-client relationship solely with the insured, and are loyal only to the insured; the insurer simply pays independent counsel's fees. n3 Independent counsel in insurance are commonly referred to as "Cumis counsel" in recognition of the seminal California case on the subject, *San Diego Navy Federal Credit Union v. Cumis Insurance Society, Inc.* n4

The concept of independent counsel in insurance raises several important questions, but the principal and most

controversial one is simple: Who selects independent counsel? Does the insurer retain the right to select independent counsel notwithstanding the alleged conflict of interest, or is the insured entitled to choose its own lawyer? Courts are split on the answers to these questions.

SELECTING INDEPENDENT COUNSEL

The selection of the lawyers to serve as independent counsel is often a contentious issue. The clear implication is that the insured must have the exclusive right to select independent counsel because affording the insurance company a role in the process will necessarily impair or compromise the loyalty of any lawyer ultimately selected. Indeed, a number of courts hold that the insured alone is entitled to select independent counsel. n5 This approach has been described as the majority rule. n6 Courts adhering to this rule essentially reason that an insurer's instructions to a defense lawyer functioning as independent counsel that she is to represent the insured alone and to act exclusively for the insured's benefit cannot overcome the lawyer's "human nature" to treat the insurance company as a client. n7

CHI of Alaska, Inc. v. Employers Reinsurance Corp. n8 is a leading case recognizing insureds' right to select independent counsel. There, Employers Reinsurance Corp. ("ERC") offered to defend CHI in a serious personal injury action under a reservation of rights. CHI protested that the reservation of rights created a conflict of interest entitling it to independent counsel under Alaska law, and insisted that its personal attorney, Brett von Gemmingen, defend it. ERC expressed concern about von Gemmingen's experience in handling cases of this nature and suggested that CHI provide it with the names of more experienced lawyers that ERC might engage as independent counsel. CHI refused the offer. In response, ERC offered to allow von Gemmingen to represent CHI on the uncovered claim triggering the reservation, while ERC retained a firm of its choosing to act as co-counsel and to assume responsibility for the overall defense of the suit. CHI declined that offer, as well. CHI then filed a declaratory judgment action to vindicate its position on retaining independent counsel of its choice.

ERC and CHI both moved for summary judgment. CHI argued that ERC should have no role in selecting defense counsel because "any attorney selected by an insurance company '[would] attempt to help his real client, the insurance company, at the expense of the insured.'" n9 Retaining von Gemmingen to defend claims outside of coverage would not resolve the conflict, CHI reasoned, because the dual representation that ERC proposed would permit the law firm hired by ERC "to work against the interests of the insured and would cause confusion concerning who [was] to control various litigation decisions." n10 ERC argued that it had eliminated any potential conflicts of interest by allowing von Gemmingen to defend the uncovered claim at its expense. The trial court found for ERC and CHI appealed to the Alaska Supreme Court. The state supreme court was asked to answer two key questions. First, did the co-counsel scheme ERC proposed satisfy CHI's right to independent counsel? Second, did CHI have the unilateral right to select independent counsel?

The court concluded that ERC's proposed co-counsel arrangement did not satisfy its duty to provide independent counsel for CHI because it did not cure the conflict of interest. There were two reasons for this. First, the law firm selected by ERC would have access to information known to or held by CHI that could be used against CHI in subsequent coverage litigation. Second, the law firm selected by ERC would be able to direct the defense and, in doing so, might be able to influence the ultimate coverage determination.

With respect to CHI's right to select independent counsel, the court began its analysis by noting that "most cases" on the subject "express the view that the insured has the right to select independent counsel of its choice." n11 The court agreed that an insured has the unilateral right to select independent counsel of its choice, but tempered by its implied duty of good faith and fair dealing. In this context, the insured's duty of good faith and fair dealing requires it to select as independent counsel a lawyer "who is, by experience and training, reasonably thought to be competent" to conduct the defense. n12 As the court explained its reasoning:

Such a result . . . fairly balances the interest of the insured-being defended by competent counsel of undivided loyalty-with the interests of the insurer-having the defense of the insured conducted by competent counsel. The insurer is only required to pay the reasonable cost of the defense. . . . This provides a measure of protection for insurers against overbilling-and overlitigating-by independent counsel. n13

It was unclear whether von Gemmingham was qualified to defend CHI in the underlying case. There was at least some evidence that he might not be, since it was a serious case and he had been out of law school for only four years at the time the controversy arose. On remand, it would be necessary for the trial court to determine his qualifications. If von Gemmingham was qualified to handle the case, then the defense could go forward with him in charge; if he was not qualified, however, CHI would be required to select different independent counsel. n14

The *CHI of Alaska* decision was not unanimous; there was a reasoned dissent by Justice Daniel A. Moore, Jr. While agreeing that the insured should be entitled to select independent counsel, Justice Moore expressed concern that allowing the insured to do so unilaterally did not adequately respect the insurer's contractual right to defend the insured. He would have thus qualified insureds' right to select independent counsel by allowing insurers a "right of reasonable approval" over the insured's choice. n15 Under his proposed regime, an insurer would not be able to "unreasonably withhold" approval of an insured's proposed independent counsel. n16

Justice Moore was also bothered by the majority's requirement that an insured employ as independent counsel a lawyer "reasonably thought to be competent to conduct the defense" of the underlying litigation, because the majority failed to specify by whose standards competency should be measured. n17 Absent any objective criteria for determining independent counsel's competency, the measure of protection the majority thought it was affording to insurers was "both inadequate and unworkable." n18 In light of von Gemmingham's relative inexperience, ERC's reluctance to accept him as defense counsel was understandable.

Finally, Justice Moore reasoned that the majority's concern that allowing insurers a voice in the selection of independent counsel would somehow taint the defense were either speculative or exaggerated. n19 If an insurer-selected defense lawyer were to breach her duties to the insured as part of a scheme to further the insurer's interests, the lawyer would potentially expose herself to professional discipline and malpractice liability, and the insurer would face liability for bad faith. Those remedies adequately protect insureds and serve "as a strong disincentive to both insurers and defense counsel to compromise the insured's interest." n20

Justice Allen Compton also dissented. He observed that a lawyer hired by an insured was just as subject to ethical pressures as was a lawyer hired by an insurer, and that a lawyer selected by an insured might still be tempted to favor the insurer's interests if the lawyer thought that the insurer might ultimately offer a more rewarding financial relationship than that provided by the insured. n21 Justice Compton recognized that the insured should be allowed to select independent counsel, but he proposed that an insured's right to appoint independent counsel should be subject to the insured's contractual duty to cooperate.

Naturally, there is another side to the independent counsel selection coin. Proponents of this differing view contend that lawyers hired by insurers regularly defend insureds in cases in which the insured's and insurer's interests are not neatly aligned. The overwhelming majority of insurance defense lawyers vigorously defend the insureds they are hired to represent regardless of insurers' coverage positions. Defense lawyers who subordinate insureds' interests to insurers' interests risk professional discipline and malpractice liability. Insurers that tolerate such conduct risk bad faith liability. In light of these factors, it is reasonable to conclude that an insurer should be permitted to select independent counsel, provided that the defense lawyer understands that the insured is her sole client and the insurer acts honestly and responsibly in the process. Several courts have adopted this approach. n22

In *Federal Insurance Co. v. X-Rite, Inc.*, n23 for example, X-Rite and its CEO, Darrell Thompson, were sued on several theories in a case known as the "O'Connor litigation." n24 X-Rite engaged Varnum, Riddering, Schmidt & Howlett ("Varnum"), to defend the O'Connor litigation, and notified its insurer, Federal, of the suit and of Varnum's

retention two months later. Federal responded with a letter acknowledging its duty to defend the O'Connor litigation; declining to allow Varnum to continue as defense counsel; proposing to substitute the firm of Vandever, Garzia, Tonkin, Kerr & Heaphy ("Vandever") for Varnum; and reserving its rights to deny coverage with respect to three of the causes of action. Neither X-Rite nor Thompson responded to Federal, and the O'Connor litigation went on with Varnum handling the defense. Months later, when Federal insisted that Vandever be substituted as defense counsel for Varnum, X-Rite revealed that it had received a \$125,000 settlement offer through mediation that would soon expire. The next communication of any significance came when Varnum informed Federal that the O'Connor litigation had settled for \$125,000, requested that Federal indemnify X-Rite for the settlement, and sought reimbursement of roughly \$71,000 in attorneys' fees. Federal responded by filing a declaratory judgment action in a Michigan federal court.

The parties filed cross-motions for summary judgment. One of the issues for the court to decide was whether X-Rite was entitled to insist on counsel of its choice at Federal's expense. After surveying the law from various jurisdictions, the court concluded that it was not. n25 In a footnote, the court explained the meaning of "independent counsel":

"Independent counsel" is a term which has not been defined in the case law. The representation of Vandever . . . was tendered to X-Rite with a clear explanation of the firm's role, designed to assure X-Rite of its independence. Federal assured X-Rite that Vandever . . . would handle the defense of all claims asserted against X-Rite; that it would represent X-Rite only, not Federal, and would direct its efforts only to the best interests of X-Rite; and that it would not be involved directly or indirectly in coverage issues. These assurances are reasonable and, absent any contrary showing, effective to establish [Vandever's] independence. n26

The *X-Rite* court detailed the pertinent facts:

When Federal received notice of the action against X-Rite, it proceeded in accordance with black letter Michigan law by undertaking the defense with a reservation of rights. Further, Federal tendered the representation of "independent counsel," the Vandever . . . firm. . . . X-Rite objected not because it believed Vandever . . . was not "independent," but because it questioned the qualifications of . . . Vandever . . . to competently defend [two of the] claims [asserted against it], and because it believed the conflict created by Federal's reservation of rights gave it the absolute right to retain counsel of its choice at Federal's expense. n27

Furthermore, X-Rite's conduct evidenced "a cavalier disregard" for the language in the Federal policy granting Federal the right to defend its insureds and thus protect its own interests in any litigation implicating its duty to defend. n28 Unless Federal's contractual right to defend X-Rite was to be deemed mere surplusage, it had to be viewed as granting the insurance company some prerogative with respect to the O'Connor litigation beyond simply paying defense costs. The fact that Federal was not entitled to absolute control over X-Rite's and Thompson's defenses in the O'Connor litigation by virtue of its conflict of interest did not compel the conclusion that it lost its right to defend entirely. In the absence of some public policy to the contrary, Federal's contractual right to defend X-Rite and Thompson could hardly contemplate anything less than its participation in the selection of defense counsel. As for public policy, the court observed: "Public policy requires the insurer to act with utmost good faith. As long as this standard is observed, the [c]ourt may not interfere with the terms of the parties' agreement." n29

The *X-Rite* court was unwilling to conclude that an insurer defending under a reservation of rights automatically breaches its duty of good faith and fair dealing by selecting defense counsel. To do so would be to presume that defense counsel are unable to represent their client, i.e., the insured, without consciously or subconsciously compromising the insured's interests. n30 The court reasoned that the defense bar deserved greater confidence and respect than that presumption would accommodate. n31

In summary, the court determined that the conflict of interest attributable to Federal's reservation of rights did not automatically entitle X-Rite to counsel of its choice at Federal's expense. There being no evidence that Vandever was not independent or that by insisting on Vandever's representation Federal acted in bad faith, created an actual conflict

of interest, or otherwise prejudiced X-Rite's interests, X-Rite acted unreasonably in refusing a defense by Vandever in the O'Connor litigation. Federal was thus entitled to summary judgment on X-Rite's claimed right to independent counsel and reimbursement of Varnum's fees. SUMMARY AND SYNTHESIS

Regardless of whether one favors vesting the right to select independent counsel in the insured or leaving the task to the insurer, it is important to recognize that both approaches are default mechanisms. Insurers and insureds are free to select independent counsel cooperatively, or to formulate other approaches to choosing counsel. For example, an insurer might submit a list of lawyers to the insured, who could then select one. Alternatively, the insured might propose a list of lawyers to the insurer, which would then pick one. Either approach allows the party making the selection to satisfy itself as to the lawyer's suitability for the independent counsel role. Some insurance companies include selection of counsel clauses in their policies. Such clauses are desirable from insurers' perspective and should generally be enforceable.

Furthermore, there are logical limits on both the pro-insured and pro-insurer approaches to selecting independent counsel. Consider, for example, the settled principle that an insurer required to accept independent counsel chosen by the insured "is under a duty to provide only an impartial defense-not to sacrifice its own interests." n32 If independent counsel selected by the insured perhaps represent the insured in a coverage or bad faith dispute with the insurer, or might attempt to slant coverage in the insured's favor in the course of the defense, the insurer would have the right to reject those lawyers. n33 An insurer cannot reasonably be expected to tolerate antagonistic behavior by lawyers with whom it must interact in their capacity as defense counsel. n34 This is true even where the insurer's interactions with independent counsel are or will be limited. n35 On the other hand, an insurer cannot be permitted to select as independent counsel a lawyer whom it employs as staff counsel, or who practices in a captive law firm that the insurer controls. n36 As a practical matter, it is impossible to describe an insurance company employee as "independent" of the insurer, no matter how conscientious or honorable the employed lawyer may be.

Curiously, and despite the pervasiveness of state insurance regulation, few states regulate independent counsel in any fashion. California and Alaska have gone the farthest. In the wake of *Cumis*, California enacted *Civil Code* § 2860, which is a relatively comprehensive statute controlling independent counsel relationships. n37 The Alaska statute is also thorough. n38 Within its insurance claims administration statute, Florida more modestly addresses compensation for independent counsel. n39

In the end, the split in authority on the selection of independent counsel and the lack of state insurance regulations on the subject mean that there remains ample opportunity for disputes between insureds and insurers over this key issue. Both insurers and insureds have valid arguments for retaining the right to select independent counsel.

Sonnenschein Nath & Rosenthal on 21st Century Insurance Co. v. Superior Court: Insurance Subrogation, the Made-Whole Requirement, and Attorneys Fees

By William Barker

November 6, 2009

SUMMARY: Insurance subrogation or reimbursement rights are often qualified by requiring that the insured must be made whole before the insurer is entitled to recover. The California Supreme Court recently held that the insured need not be made whole for attorneys fees. Rather, the common-fund doctrine charges a share of the attorneys fees against the insurers portion of the recovery. This EIA analyzes the law elsewhere and the cases impact.

ARTICLE: Insurance policies commonly provide that, when benefits are paid for losses like damage to property or medical expenses, then the insurer is subrogated to the insured's rights to recover from any responsible tortfeasor and/or is entitled to be reimbursed out of any recovery the insured might obtain from any tortfeasor. Even without express provisions in the policy, the common law often would grant similar rights, but typically qualified by a requirement that the insured must be made whole before the insurer is entitled to any recovery. In *21st Century Insurance Co. v. Superior Court*, n1 the California Supreme Court (1) followed prior California precedent presumptively applying the "made-whole" rule to a contractual subrogation/reimbursement provision n2 and (2) held that, in deciding whether the insured has been made whole, one does not consider attorneys' fees the insured incurred to obtain any recovery. Rather, one utilizes the common-fund doctrine to charge a share of the attorneys' fees against the insurer's portion of the recovery.

There is a diversity of views among jurisdictions on the role of attorneys' fees in determining whether the insured has been made whole. This commentary analyzes the various rules and the impact of this case.

THE CASE

Silvia Quintana was insured by 21st Century, with coverage that included benefits for up to \$1000 in medical payments resulting from any auto accident. That coverage provided that "[i]f we make any payment under this Part and

the person insured .. recovers damages .., the person insured shall 1. hold in trust for us the proceeds of the recovery; and 2. reimburse us to the extent of our payment." n3

Quintana had an auto accident, was paid \$1000, and then settled her tort claim for \$6000, of which she was obliged to pay \$2106.50 in attorneys' fees and costs ("fees"). 21st Century then sought reimbursement. Quintana paid \$600, with the \$400 deduction representing an allocation of the fees she had incurred, an allocation accepted by 21st Century. She then filed a class action seeking to recover the payment, on the ground that no recovery could lawfully have been requested unless she had been made whole, which she said she had not been (because of the amounts she had paid for fees). n4 21st Century demurred to the complaint, the superior court overruled the demurrer, and court of appeal issued on writ of mandate directing the superior court to sustain the demurrer. The supreme court affirmed.

BACKGROUND: INSURANCE SUBROGATION AND THE MADE-WHOLE REQUIREMENT

The Made-Whole Requirement, the Principle of Indemnity, and the Collateral Source Rule. One of the doctrines of insurance law is the "principle of indemnity," "[t]he concept that insurance contracts shall confer a benefit no greater in value than the loss suffered by an insured." n5 As a leading treatise explains:

"[I]t is now a generally accepted fundamental tenet of insurance law that opportunities for net gain to an insured through the receipt of insurance proceeds exceeding a loss should be regarded as inimical to the public interest. In other words, insurance arrangements are structured to provide funds to offset a loss, either wholly or partly, and the payments made by an insurer generally are limited to an amount that does not exceed what is required to restore the insured to a condition relatively equivalent to that which existed before the loss occurred." n6

The principle of indemnity coexists with the collateral source rule, whereby a tortfeasor is liable for all damages suffered by the injured party, whether or not those damages have been compensated by insurance or some other collateral source. n7 Allowing subrogation or reimbursement reconciles those two rules, by compensating the injured party's loss, but allowing the collateral source to recover any payments made that would exceed the net loss after the tort recovery. n8 Thus, the primary burden of compensating tortious injuries is placed on the tortfeasor, with collateral sources playing a secondary role, only to the extent necessary.

The principle of indemnity serves two purposes of current significance. First, by eliminating any profit from suffering an insured loss, it avoids creating any incentive to cause such losses (as by arson) and it minimizes the incentives to take less care to avoid such losses. Second, by limiting the net amount the insurer must pay and allowing the insurer to set premiums appropriate for that net payment level, it avoids the need to charge higher premiums that would create double-recovery windfalls for some insureds at the expense of those who have no opportunity for such a double recovery. Such double recoveries are regarded as a form of unjust enrichment: while the insured has paid a premium for compensation of losses, premiums should take account of the principle of indemnity and should not include the costs of providing a net recovery in excess of the loss. n9 Paying higher premiums for a chance at a double recovery would have some elements of a lottery; rational insureds would not want to participate in such a lottery, because charges for the insurer's expenses and profits would make any expected recovery less than the cost. n10

The Seventh Circuit has summarized the case for allowing subrogation or reimbursement rights to insurers (whether or not subject to a requirement that the insured be made whole):

"In the usual case the insured incurs a medical expense for which he is promptly reimbursed by the insurance company (or equivalent), which then exercises its right of subrogation and goes off on what sometimes proves to be a wild goose chase after a possible tortfeasor to whom the expense can be shifted. The insured is out of the picture—well, not entirely, because he is entitled to any excess recovery by the insurance company. Subject to this qualification, of which more later, the risk of an uncertain recovery is shifted from the individual to a specialist in bearing risk and enforcing claims—the insurance company. The price of the insurance is thereby reduced (or, equivalently, the insured can

buy more insurance for the same price) because the insurance company acquires a contingent claim by virtue of the subrogation clause. Without subrogation, a part of the risk is shifted back to the insured. He pays more for the insurance because he retains, rather than (in effect) sells, a right to obtain through litigation a recovery that may actually exceed the actual loss that (after receiving the insurance proceeds) he suffered. This is because, by virtue of the collateral benefits rule, a tort plaintiff need not deduct from the judgment he receives in his tort suit compensation for the same loss which he may have obtained from another source, such as an insurance policy."

A legal right, for example a tort victim's right to sue his tortfeasor for damages, is like a lottery ticket. Its payoff is highly uncertain. Subrogation, consistent with the objective of insurance, transfers the lottery ticket from the individual policyholder to the collectivity of policyholders. The risk is spread, and by being spread eliminated or at least greatly reduced. Subrogation also eliminates the incentive to careless behavior created by the collateral benefits rule, which by enabling the insured victim of a tort to recover for the same loss from both the insurance company and the tortfeasor may (depending on the adequacy of tort damages) make the tort victim better off than he would have been had there been no accident. n11

A common-law rule providing insurers a right to subrogation or reimbursement, absent specific provision in the policy on that subject, both implements the public policy expressed in the principle of indemnity and fills a contractual gap by effectively implying contractual terms that probably correspond with what most buyers of insurance would want, if they were fully informed and asked to make a choice. n12 Such a rule is widely followed. n13

The Made-Whole Requirement in California Law. The law of subrogation derived from the law of suretyship n14 and, where the relevant contract was silent, California law effectively treated the subrogee as a surety for the debt owed by the tortfeasor to the insured/injured party: "'The general rule is that an insurer that pays a portion of the debt owed to the insured is not entitled to subrogation for that portion of the debt until the debt is fully discharged... Until the creditor has been made whole for its loss, the subrogee may not enforce its claim based on the rights of subrogation.'" n15 The court assumed "that the parties *could*, explicitly, provide in their contract that the insurer has a priority, regardless whether the insured is first made whole." n16 But that could not be done by contract language providing: "only in *general terms* that the rights to recover damages from another are 'transferred to us.' Although it substitutes plain language ('transferred') for legalistic jargon ('subrogated'), it is no more specific or explicit than language used in older policies stating that the insured 'shall be subrogated' to the insured's rights against another. The clause does not *specifically* address the [priority] issue in this case." n17

The court contrasted that general language with more specific language that had been held sufficient in another case: "" Health Plan .. shall be entitled to the payment, reimbursement, and subrogation as provided in section C(1) *regardless of whether the total amount of the recovery of the Member .. on account of the injury or illness is less than the actual loss suffered by the Member ...*"" n18

While language of that sort is generally enforceable, enforcement may be denied when the particular circumstances render enforcement unconscionable. n19

The Exception for "Personal Insurance." The principle of indemnity presupposes a clearly defined economic loss, which can serve both as a measure of compensation and as a limit on any insurance recovery. Such a sharply defined loss is frequently absent in what is sometimes called "personal" insurance, that is, insurance on the person of the insured. Prototype examples are life insurance, accidental dismemberment insurance, and some types of disability insurance which provide for payment of a specified sum on the happening of an insured event. n20 The principal of indemnity is not applied to policies of that sort. n21

While policies providing for indemnity against medical expenses do involve the sort of sharply defined loss that

typically invokes the principle of indemnity, they are commonly treated as policies of "personal" insurance. n22 As a result, it is commonly held that an insurer under such a policy has no right of subrogation unless provided in the policy. n23 That result is said to be supported by the following reasoning:

"Subrogation rights are common under policies of property or casualty insurance, wherein the insured sustains a fixed financial loss, and the purpose is to place that loss ultimately on the wrongdoer. To permit the insured in such instances to recover from both the insurer and the wrongdoer would permit him to profit unduly thereby.

"In personal insurance contracts, however, the exact loss is never capable of ascertainment. Life and death, health, physical well being, and such matters are incapable of exact financial estimation. There are, accordingly, not the same reasons militating against a double recovery. The general rule is, therefore, that the insurer is not subrogated to the insured's rights or to the beneficiary's rights under contracts of personal insurance, at least in the absence of a policy provision so providing. Nor would a settlement by the insured with the wrongdoer bar his cause of action against the insurer. However, if a subrogation provision were expressly contained in such contracts, it probably would be enforced quite uniformly. Such a provision cannot be read into a policy by calling it an indemnity contract, however." n24

Analytically, this appears to be incorrect, as applied to coverage for medical payments. If the insured obtains a full tort recovery, by adjudication or settlement, the law considers that full compensation (putting aside for the moment any attorneys' fees and other expenses incurred in obtaining that recovery). So the recovery necessarily includes compensation for any medical expenses, and that is necessarily duplicative of the compensation provided by medical payments insurance. Such a duplicative recovery creates the sort of unjust enrichment which the principle of indemnity seeks to bar and which a right of subrogation or reimbursement could prevent. n25 But the analytic error has few practical consequences, as policies providing coverage for medical expenses almost always include subrogation or reimbursement provisions.

Implications of Tort Law Rules. A right to subrogation normally operates as a partial assignment by operation of law, entitling the subrogee to step into the shoes of the subrogor and sue the tortfeasor based on the subrogor's rights. Of course, the tortfeasor is entitled not to have the claim split between two lawsuits, but that problem can be avoided by having the insured and the insurer join in a single suit, each seeking recovery of its own portion of the claim. n26 More fundamentally, tort claims for personal injury are commonly held not assignable, a limit that would also preclude true subrogation. n27 One may question the rule against assignment, as applied to claims for medical expenses, n28 but even assuming that assignment is impermissible, the insurer should at least have a common-law right (absent a contrary policy provision) to reimbursement out of any recovery the insured may obtain, subject to the requirement that the insured be made whole, and equivalent contractual rights should be enforceable. n29 Contractual rights to reimbursement are usually enforced. n30

FURTHER BACKGROUND: THE COMMON FUND RULE

The usual rule in the United States (sometimes called the "American Rule") is that, absent a contractual or statutory provision to the contrary, each litigant must pay that litigant's own attorneys' fees incurred in the litigation. n31 One exception to this rule is the "common fund" doctrine, which "provides that when a party through active litigation creates, preserves or increases a fund, others sharing in the fund must bear a portion of the litigation costs including reasonable attorney fees. The doctrine is employed to spread the cost of litigation among all beneficiaries so that the active beneficiary is not forced to bear the burden alone and the 'stranger' (i.e. passive) beneficiaries do not receive their benefits at no cost to themselves." n32

This rule was developed in class actions by bondholders and extended to class actions generally, as well as actions by shareholders, trust beneficiaries and others pursuing common rights against third parties. n33 It is now broadly recognized. n34 It was extended to insurance subrogation/reimbursement claims: an insurer must share in the insured's

attorneys' fees if the insurer has been benefited by the services of the insured's attorney in recovering a fund from which the subrogation/reimbursement claim could be paid. n35

HOW DO ATTORNEYS' FEES AFFECT THE ANALYSIS OF WHETHER THE INSURED HAS BEEN MADE WHOLE?

Prior Law. There is not an extensive body of law addressing the impact of attorneys' fees on determination whether an insured has been made whole, permitting an insurer to proceed with recovery by subrogation or reimbursement. Much of what there is involves unanalyzed pronouncements, sometimes as dictum in cases where the precise issue was not raised. Some such cases require that the insured be made whole for both damages and attorneys' fees. n36 Other cases impose no such requirement, but do apply the common fund rule to require the insurer to share in the insured's attorneys' fees and expenses incurred in recovering from the tortfeasor. n37 In each of these cases, the court exhibits no awareness that the other rule might be applicable, so the court cannot be said to have made a choice between them. In one case, the insured was required to bear the full burden of the fees for recovering from the tortfeasor, because the common fund rule was found not to apply and the made-whole requirement was not urged. n38

Wisconsin has rejected application of the made-whole requirement in favor of applying the common fund rule: "Under Wisconsin law, [the insured] is 'made whole' even if he must pay attorney's fees out of the funds he recovers from [the tortfeasor and its insurers]. Therefore, failing to require [the subrogated insurer] to make a contribution toward [the insured's] attorney's fees does not place [the subrogated insurer] in competition with [the insured] for funds which are insufficient to make [the insured] whole." n39

Before *21st Century*, the most extensive consideration of the issue was by Montana, which requires that the insured be made whole for both damages and attorneys' fees before the insurer can recover. One reason for this choice is the premise of the made-whole requirement itself: when either insurer or insured must suffer a loss, "the loss should be borne by the insurer for that is a risk the insured has paid it to assume." n40 In affirming that this rule effectively requires the insurer to reimburse the insured for the insured's own fees out of any recovery for the subrogated claim, the court reasoned that the insurer might control the costs by having its own counsel participate in the suit against the tortfeasor. n41 The court has also supported the made-whole requirement generally by reasoning that "the insured is the person most likely to suffer most if medical payments received must be repaid out of a third-party recovery; and .. the tortfeasor's carrier may consider that the injured person has already been paid medical expenses and can make a smaller offer which allows that such payment has already been made." n42 The latter reasons have no specific relevance to the attorneys' fees issue.

A California federal court has supported including attorneys' fees in the made-whole calculation on the basis that forcing the insured to fund the litigation while the insurer waits to see if there is a recovery allows the insurer to gamble with the insured's money. n43 But that reasoning would apply only if the insured were paying a noncontingent fee. If the lawyer is hired on a contingent fee, the lawyer willingly assumes the risk of nonrecovery. Moreover, if the insurer does not participate by its own counsel and if the common-fund rule is applied, the insured's lawyer will be compensated for both the insured's and the insurer's portion of the recovery. So the suggested inequity simply will not arise in ordinary cases. Moreover, California medical payment insurers have no choice but to sit out the tort case, and lawyers for insureds would not want them to participate. n44

The California Supreme Court's Decision in *21st Century*. Addressing the argument that the insurer is the party that has been paid to assume a risk, the California Supreme Court responded that "in the context of med-pay insurance the insured has not contracted for the insurer to assume any risk beyond the insured's medical payments. Quintana's lower premiums provide her only with medical payments in the event of an accident. If she decides to pursue a claim against the tortfeasor for her uninsured damages, she should be responsible for the attorney fees and costs necessary to recover those damages. In sum, Quintana has not paid *21st Century* to assume the risk of paying attorney fees for

uninsured losses on her behalf." n45

Other arguments were equally unavailing. While Quintana, the insured, argued that the collateral source rule effectively allowed collateral source payments to partially supply the compensation to the injured party consumed by attorneys' fees, the California Supreme Court responded that that rule "addresses the distribution of attorney fees between a plaintiff and a tortfeasor defendant, not between an insured and an insurance company." n46 Nor did the insurer's duty of good faith and fair dealing require it to limit its reimbursement claim, because the contract expressly authorized that claim. n47

The court summarized its reasons for concluding that the attorneys' fees were best dealt with by the common-fund rule, not the made-whole requirement. First, "were we to adopt Quintana's position we would effectively shift the burden of paying attorney fees in personal injury actions from insureds to first party insurers because insurers would have to forgo reimbursement in order to account for the insureds' attorney fees." n48 This would presumably result in higher premiums for medical payment insurance. Second, "pro rata allocation of attorney fees that is made under the common fund doctrine is equally applicable in the med-pay context because it adequately balances the interests of insureds and insurers. The insured receives the benefit of expedient medical payments at lower premiums, and he or she may retain the insurance payments if he or she does not recover directly from the third party tortfeasor." n49

Where, as in Quintana's case, the insured does recover full tort compensation, "a pro rata apportionment requires the insurer to account for its fair share of the attorney fees by reducing the amount of reimbursement to cover some portion of those fees. The responsibility for attorney fees is therefore properly allocated according to what the parties contracted for and the risks each party agreed to bear." n50

Justice Kennard concurred, relying both on the normal rule that each litigant must bear its own litigation costs and on the fact that the insured's proposed rule would "convert medical payment coverage into legal expense coverage, and it would result in higher premiums for California purchasers of automobile insurance coverage." n51 Because medical payments coverage is typically for much smaller amounts than the cost of tort litigation, the insured's proposed rule would essentially nullify the subrogation right. n52

The premise of the American Rule against fee shifting is that "full compensation for a wrongful injury ordinarily does not include reimbursement of litigation costs." n53 There was no greater reason to shift the burden of litigation costs to a medical payments insurer than to the tortfeasor. Rather, "[e]quitably apportioning attorney fees between insurer and insured, so that the insurer pays only the litigation expenses attributable to recovery of the benefits it was contractually obligated to provide, more appropriately complies with the dictate of the American rule that parties must bear their own litigation expenses." n54 This also corresponded to California's statutory rule regarding sharing by subrogated workers compensation insurers in the fees for tort recoveries. n55

Under the rule applied by the court, Quintana retained the full \$1000 in payment for the insured loss, and 21st Century paid the full litigation costs attributable to recovering that amount. Quintana had to absorb the litigation costs associated with the \$5000 of uninsured loss, but she was no worse off in that regard than if she had not had the medical payments insurance. n56

Justice Werdegar also concurred. n57 She reasoned that, if the insurer were permitted to participate in the tort action, as a subrogation right would ostensibly entitle it to do, it would also be entitled to share in any tort recovery. Subrogation and reimbursement should produce equivalent results, and the rule Quintana advocated would make them different. Like the majority and Justice Kennard, she concluded that Quintana's rule would improperly convert medical payment insurance into legal expense insurance. n58

CONCLUSION

The California Supreme Court is the first court to fully analyze the role of attorneys' fees in the made-whole requirement. It has correctly gone beyond observing that the insurer was paid to bear risk and considered *what risk* the

insurer was paid to bear. In that light, the common-fund rule, not the made-whole requirement is the proper way to equitably apportion attorneys' fees between insurer and insured. This persuasive opinion should and likely will be followed in many future cases.

n7 Restatement (Second) of Torts § 920A(2) ("Payments made to or benefits conferred on the injured party from other sources [than the tortfeasor or others acting on the tortfeasor's behalf] are not credited against the tortfeasor's liability, although they cover all or a part of the harm for which the tortfeasor is liable.").

n8 John G. Fleming, *The Collateral Source Rule and Contract Damages*, 71 Cal. L. Rev. 56, 82 (1983) (recognizing that availability of subrogation "is widely considered the optimal solution for the whole problem of collateral benefits on the ground that it prevents both the defendant from taking an undeserved advantage of the benefit and the plaintiff from being overcompensated"); see also *Lake Erie & W.R. Co. v. Falk*, 56 N.E. 1020 (Ohio 1900) (The plaintiff's assertion that he was entitled to recover for his full loss against the defendant railroad and also retain the proceeds that his insurance carrier sought by way of subrogation "could not be urged

successfully. . . . Good morals and important considerations of public policy forbid that conflagrations should be made profitable.").

n9 Courts resisting subrogation commonly assume that the insured has paid a premium to cover the entire loss insured, with no allowance for possible recovery by way of subrogation or reimbursement. That is an unwarranted assumption. But insurers litigating the permissibility of subrogation would be well advised to make a factual showing that potential subrogation/reimbursement recoveries have been properly accounted for in setting the premium.

In fact, past losses under similar policies are typically used to project future losses for which the premium must provide, and any subrogation/reimbursement recoveries for those past losses are treated as credits against those losses, so that the projections of future losses are automatically based on net losses after recoveries.

n10 See also A Michael Polinsky, *An Introduction to Law and Economics*, 53-55 (2d ed. 1989) (where one party to the transaction is risk averse (as most insureds are) and the other is risk-neutral (as insurers are), the risk is better allocated to the risk-neutral party).

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of the New Appleman on Insurance Law Library Edition and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, The Professional Responsibilities of Insurance Defense Lawyers, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients' interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Information referenced herein is provided for educational purposes only. For legal advice applicable to the facts of your particular situation, you should obtain the services of a qualified attorney licensed to practice law in your state.

Sonnenschein Nath & Rosenthal on Insurance Subrogation and the Made-Whole Rule

2009 Emerging Issues 4529

Sonnenschein Nath & Rosenthal on Insurance Subrogation and the Made-Whole Rule: When Does and Should It Apply Under State Law

By William Barker

October 30, 2009

SUMMARY: Common law often qualifies the right of an insurer to be subrogated to the insured's rights to recover from any responsible tortfeasor and/or be entitled to be reimbursed out of any recovery the insured might obtain from any tortfeasor by a requirement that the insured must be made whole before the insurer is entitled to any recovery. This Emerging Issues Analysis examines and evaluates these various rules applied under state insurance law.

ARTICLE: Insurance policies commonly provide that, when benefits are paid for losses like damage to property or medical expenses, then the insurer is subrogated to the insured's rights to recover from any responsible tortfeasor and/or is entitled to be reimbursed out of any recovery the insured might obtain from any tortfeasor. Even without express provisions in the policy, the common law often would grant similar rights, but typically qualified by a requirement that the insured must be made whole before the insurer is entitled to any recovery. In *21st Century Insurance Co. v. Superior Court*, n1 the California Supreme Court (1) confirmed prior California precedent presumptively applying the "made-whole" requirement to a contractual subrogation/reimbursement provision and (2) decided that, in considering whether the insured has been made whole, one does not consider attorneys' fees the insured incurred to obtain any recovery. Rather, one utilizes the common-fund doctrine to charge a share of the attorneys' fees against the insurer's portion of the recovery.

While the second point was the major focus of the decision, there is a diversity of views among jurisdictions, on the application of the "made-whole" rule to contractual subrogation/reimbursement. This commentary examines and evaluates the various rules applied. A separate commentary will examine this issue as it affects employee benefit plans governed by the Employee Retirement Income Security Act ("ERISA"), where there is a different division of views. The role of attorneys' fees in the made-whole calculation will be examined in yet another commentary.

I. THE CASE

Silvia Quintana was insured by 21st Century, with coverage that included benefits for up to \$1000 in medical

payments resulting from any auto accident. That coverage provided that "[i]f we make any payment under this Part and the person insured .. recovers damages .., the person insured shall [Paragraph] 1. hold in trust for us the proceeds of the recovery; and [Paragraph] 2. reimburse us to the extent of our payment." n2

Quintana had an auto accident, was paid \$1000, and then settled her tort claim for \$6000, of which she was obliged to pay \$2106.50 in attorneys' fees and costs ("fees"). 21st Century then sought reimbursement. Quintana paid \$600, with the \$400 deduction representing an allocation of the fees she had incurred, an allocation accepted by 21st Century. She then filed a class action seeking to recover the payment, on the ground that no recovery could lawfully have been requested unless she had been made whole, which she said she had not been (because of the amounts she had paid for fees). n3 21st Century demurred to the complaint, the superior court overruled the demurrer, and court of appeal issued on writ of mandate directing the superior court to sustain the demurrer. The supreme court affirmed.

II. BACKGROUND: INSURANCE SUBROGATION AND THE MADE-WHOLE REQUIREMENT

A. The Made-Whole Requirement, the Principle of Indemnity, and the Collateral Source Rule

One of the doctrines of insurance law is the "principle of indemnity," "[t]he concept that insurance contracts shall confer a benefit no greater in value than the loss suffered by an insured." n4 As a leading treatise explains:

[I]t is now a generally accepted fundamental tenet of insurance law that opportunities for net gain to an insured through the receipt of insurance proceeds exceeding a loss should be regarded as inimical to the public interest. In other words, insurance arrangements are structured to provide funds to offset a loss, either wholly or partly, and the payments made by an insurer generally are limited to an amount that does not exceed what is required to restore the insured to a condition relatively equivalent to that which existed before the loss occurred. n5

The principle of indemnity coexists with the collateral source rule, whereby a tortfeasor is liable for all damages suffered by the injured party, whether or not those damages have been compensated by insurance or some other collateral source. n6 Allowing subrogation or reimbursement reconciles those two rules, by compensating the injured party's loss, but allowing the collateral source to recover any payments made that would exceed the net loss after the tort recovery. n7 Thus, the primary burden of compensating tortious injuries is placed on the tortfeasor, with collateral sources playing a secondary role, only to the extent necessary.

The principle of indemnity serves two purposes of current significance. First, by eliminating any profit from suffering an insured loss, it avoids creating any incentive to cause such losses (as by arson) and it minimizes the incentives to take less care to avoid such losses. Second, by limiting the net amount the insurer must pay and allowing the insurer to set premiums appropriate for that net payment level, it avoids the need to charge higher premiums that would create double-recovery windfalls for some insureds at the expense of those who have no opportunity for such a double recovery. Such double recoveries are regarded as a form of unjust enrichment: while the insured has paid a premium for compensation of losses, premiums should take account of the principle of indemnity and should not include the costs of providing a net recovery in excess of the loss. n8 Paying higher premiums for a chance at a double recovery would have some elements of a lottery; rational insureds would not want to participate in such a lottery, because charges for the insurer's expenses and profits would make any expected recovery less than the cost. n9

The Seventh Circuit has summarized the case for allowing subrogation or reimbursement rights to insurers (whether or not subject to a requirement that the insured be made whole):

In the usual case the insured incurs a medical expense for which he is promptly reimbursed by the insurance company (or equivalent), which then exercises its right of subrogation and goes off on what sometimes proves to be a wild goose chase after a possible tortfeasor to whom the expense can be shifted. The insured is out of the picture—well, not entirely, because he is entitled to any excess recovery by the insurance company. Subject to this qualification, of which more later, the risk of an uncertain recovery is shifted from the individual to a specialist in bearing risk and enforcing claims—the insurance company. The price of the insurance is thereby reduced (or, equivalently, the insured can

buy more insurance for the same price) because the insurance company acquires a contingent claim by virtue of the subrogation clause. Without subrogation, a part of the risk is shifted back to the insured. He pays more for the insurance because he retains, rather than (in effect) sells, a right to obtain through litigation a recovery that may actually exceed the actual loss that (after receiving the insurance proceeds) he suffered. This is because, by virtue of the collateral benefits rule, a tort plaintiff need not deduct from the judgment he receives in his tort suit compensation for the same loss which he may have obtained from another source, such as an insurance policy.

A legal right, for example a tort victim's right to sue his tortfeasor for damages, is like a lottery ticket. Its payoff is highly uncertain. Subrogation, consistent with the objective of insurance, transfers the lottery ticket from the individual policyholder to the collectivity of policyholders. The risk is spread, and by being spread eliminated or at least greatly reduced. Subrogation also eliminates the incentive to careless behavior created by the collateral benefits rule, which by enabling the insured victim of a tort to recover for the same loss from both the insurance company and the tortfeasor may (depending on the adequacy of tort damages) make the tort victim better off than he would have been had there been no accident. n10

A common-law rule providing insurers a right to subrogation or reimbursement, absent specific provision in the policy on that subject, both implements the public policy expressed in the principle of indemnity and fills a contractual gap by effectively implying contractual terms that probably correspond with what most buyers of insurance would want, if they were fully informed and asked to make a choice. n11 Such a rule is widely followed. n12

B. The Made-Whole Requirement in California Law

The law of subrogation derived from the law of suretyship n13 and, where the relevant contract was silent, California law effectively treated the subrogee as a surety for the debt owed by the tortfeasor to the insured/injured party: "The general rule is that an insurer that pays a portion of the debt owed to the insured is not entitled to subrogation for that portion of the debt until the debt is fully discharged... Until the creditor has been made whole for its loss, the subrogee may not enforce its claim based on the rights of subrogation." n14 The court assumed "that the parties *could*, explicitly, provide in their contract that the insurer has a priority, regardless whether the insured is first made whole." n15 But that could not be done by contract language providing

only in *general terms* that the rights to recover damages from another are "transferred to us." Although it substitutes plain language ("transferred") for legalistic jargon ("subrogated"), it is no more specific or explicit than language used in older policies stating that the insured "shall be subrogated" to the insured's rights against another. The clause does not *specifically* address the [priority] issue in this case. n16

The court contrasted that general language with more specific language that had been held sufficient in another case:

"" Health Plan .. shall be entitled to the payment, reimbursement, and subrogation as provided in section C(1) *regardless of whether the total amount of the recovery of the Member .. on account of the injury or illness is less than the actual loss suffered by the Member ...*"" n17

While language of that sort is generally enforceable, enforcement may be denied when the particular circumstances render enforcement unconscionable. n18

C. The Exception for "Personal Insurance"

The principle of indemnity presupposes a clearly defined economic loss, which can serve both as a measure of compensation and as a limit on any insurance recovery. Such a sharply defined loss is frequently absent in what is sometimes called "personal" insurance, that is, insurance on the person of the insured. Prototype examples are life

insurance, accidental dismemberment insurance, and some types of disability insurance which provide for payment of a specified sum on the happening of an insured event. n19 The principal of indemnity is not applied to policies of that sort. n20

While policies providing for indemnity against medical expenses do involve the sort of sharply defined loss that typically invokes the principle of indemnity, they are commonly treated as policies of "personal" insurance. n21 As a result, it is commonly held that an insurer under such a policy has no right of subrogation unless provided in the policy. n22 That result is said to be supported by the following reasoning:

"Subrogation rights are common under policies of property or casualty insurance, wherein the insured sustains a fixed financial loss, and the purpose is to place that loss ultimately on the wrongdoer. To permit the insured in such instances to recover from both the insurer and the wrongdoer would permit him to profit unduly thereby.

"In personal insurance contracts, however, the exact loss is never capable of ascertainment. Life and death, health, physical well being, and such matters are incapable of exact financial estimation. There are, accordingly, not the same reasons militating against a double recovery. The general rule is, therefore, that the insurer is not subrogated to the insured's rights or to the beneficiary's rights under contracts of personal insurance, at least in the absence of a policy provision so providing. Nor would a settlement by the insured with the wrongdoer bar his cause of action against the insurer. However, if a subrogation provision were expressly contained in such contracts, it probably would be enforced quite uniformly. Such a provision cannot be read into a policy by calling it an indemnity contract, however." n23

Analytically, this appears to be incorrect, as applied to coverage for medical payments. If the insured obtains a full tort recovery, by adjudication or settlement, the law considers that full compensation (putting aside for the moment any attorneys' fees and other expenses incurred in obtaining that recovery). So the recovery necessarily includes compensation for any medical expenses, and that is necessarily duplicative of the compensation provided by medical payments insurance, creating the sort of double recovery which the principle of indemnity seeks to bar and which a right of subrogation or reimbursement could prevent. n24 But the analytic error has few practical consequences, as current policies or benefit plans providing coverage for medical expenses almost always include subrogation or reimbursement provisions.

D. Implications of Tort Law Rules

A right to subrogation normally operates as a partial assignment by operation of law, entitling the subrogee to step into the shoes of the subrogor and sue the tortfeasor based on the subrogor's rights. Of course, the tortfeasor is entitled not to have the claim split between two lawsuits, but that problem can be avoided by having the insured and the insurer join in a single suit, each seeking recovery of its own portion of the claim. n25 More fundamentally, tort claims for personal injury are commonly held not assignable, a limit that would also preclude true subrogation. n26 One may question the rule against assignment, as applied to claims for medical expenses, n27 but even assuming that assignment is impermissible, the insurer should at least have a common-law right (absent a contrary policy provision) to reimbursement out of any recovery the insured may obtain, subject to the requirement that the insured be made whole, and equivalent contractual rights should be enforceable. n28 Contractual rights to reimbursement are usually enforced. n29

III. UNDER INSURANCE LAW, WHEN DOES A CONTRACTUAL PROVISION OVERRIDE THE "MADE-WHOLE" REQUIREMENT?

A. Survey of Rules Adopted by Various Courts

Courts have taken a variety of approaches to the ability of contractual terms to override the made-whole rule. Many jurisdictions hold that the requirement that the insured be made whole before the insurer is entitled to recover

cannot be overridden by any contrary contractual provision. n30

Others hold that contractual language can override the made-whole rule, though they differ on the standard to be applied in applying that rule. A few say that even general subrogation language, if unambiguous, will override equitable principles. n31 Like California, most jurisdictions that allow a contract to override the made-whole rule impose a heightened requirement of clarity and explicitness for contractual language to have that effect. n32 Some have not taken a position on whether special requirements of clarity and explicitness apply. n33

Courts requiring clear and explicit contractual language typically do not consider sufficient provisions stating only that the insurer will be subrogated (without addressing priority), n34 that the insurer shall be entitled to reimbursement of "duplicate" payments (when any tort recovery is insufficient to fully compensate the insured and is not allocated to particular damages), n35 that the insurer shall be entitled to reimbursement "to the extent of [its] payment." n36 Language that has been held sufficient specifically addresses the issue of priority. n37

B. The "Made-Whole" Requirement Should Be Modifiable by Contract

As already noted, n38 many jurisdictions hold that the requirement that the insured be made whole before the insurer can recover any of its payments is imposed by law and cannot be modified by contract. But they have not justified this rule, and it appears ill-advised.

There are good reasons to think that most insureds would prefer to pay a slightly higher premium for the greater protection provided by insurance with subrogation/reimbursement rights limited by the requirement that the insured first be made whole. That is an adequate basis to apply that requirement as what is sometimes called a "default rule," applicable whenever the contract does not provide otherwise. n39 But even if that is what most insureds would prefer, not all insureds would agree. Insurance buyers could reasonably choose to pay a lower premium for the narrow coverage that results from giving the insurer priority in any third-party recovery. There is no apparent reason for courts to deny insurers the right to sell such policies to any purchasers who wish to buy them.

In analyzing whether the made-whole requirement should be applied to an ERISA benefit plan, the Seventh Circuit found the choice to present a "close question," resolved in that case by the fact that the plan gave the administrator discretion to interpret the plan, requiring deference to the administrator's interpretation precisely because the question was close. n40 The beneficiary in that case had received \$90,000 in medical benefits from the plan, had recovered \$126,000 from uninsured motorist coverage and \$500,000 on a product liability claim, and estimated her total damages at \$1 million (meaning that she had not been fully compensated). The court explained why it could be sensible to allow a reimbursement claim even where the beneficiary had not been made whole:

A "make whole" rule does not enable the insured to gamble on double recovery, as he would be doing without subrogation. The rule comes into play only if without it the operation of the subrogation clause would, by making the insured in effect pay back the policy benefits with money he has received for another loss caused by the injury that gave rise to the policy claim, leave him with an uncompensated injury. That would be the consequence of subrogating Jerome Foods to Mrs. Cutting's tort claim to the extent of the plan's medical benefits; the uncompensated nonmedical costs that she incurred as a result of the accident would be \$ 90,000 greater if subrogation is permitted. One can see why many state courts have thought that the inclusion of a boilerplate subrogation clause was not intended to have this effect—the effect, practically speaking, of curtailing coverage. To put this differently, rejection of "make whole" makes subrogation a lot like assignment. If insurance contracts required the insured to assign any tort claim he might have to the insurer, the price of the insurance would be lower but *effective* coverage would also be lower. The insured would recover only the policy limits, and not his full damages, even in a case in which a judgment had been secured against the tortfeasor, and collected, for those damages.

These arguments need not be thought decisive in favor of the make-whole rule. It is true that rejecting make whole would bring subrogation closer to assignment, but that would not necessarily be a bad thing. Assignment, by shifting the

insured's tort rights to the insurance company, reduces the price of insurance and thus enables the insured to obtain more coverage, in effect trading an uncertain bundle of tort rights for a larger certain right, which is just the sort of trade that people seek through insurance. (The counterargument is that the make-whole rule is most likely to apply in a case of catastrophic loss, such as the present, where full insurance is rare.) It can also be argued against the make-whole rule that it is administratively more complex, requiring the medical insurer to calculate the insured's total medical and nonmedical loss, and therefore that it makes insurance (or its equivalent in this case) more expensive to the insured-and makes it more expensive to him for the additional reason that he will have to pay for the additional coverage that the rule in effect provides. And no one's demand for insurance is unlimited. The counterargument on the administrative-complexity front is that subrogation (which the make-whole rule would eliminate in cases such as the present) involves an agency problem because of the insured's entitlement to any excess recovery that the insurer-subrogee obtains. The insurer, having no (or very little) interest in making money for the insured, may fail to press hard for an excess recovery. To which it can be replied that the make-whole rule simply shifts the disincentive to press hard from the insurer to the insured. n41

For present purposes, it can be assumed (as almost all courts do) that most insured would prefer that subrogation/reimbursement rights be limited by a requirement that the insured be made whole, even at the cost of a higher premium. But precisely because some insureds could reasonably prefer the cheaper premium, courts ought not to forbid contract provisions overriding the made-whole requirement.

Insurance policy language is subject to administrative regulation in all states. n42 In some the language must be approved by the regulator before it can be used, while others allow use of language unless the regulator objects. n43 Regardless of the mechanics, the regulator typically has fairly broad authority to prevent use of forms that are considered inappropriate. n44 So, insurance regulators are more appropriate authorities than courts to decide whether insurers and insureds are to be prohibited from overriding the requirement that the insured be made whole. n45

C. It Is Reasonable for State Insurance Law to Require Clear and Explicit Language to Override the "Made-Whole" Requirement

The requirement that the insured be made-whole before any subrogation/reimbursement rights arise has most impact on large claims, which are most likely to exceed a tortfeasor's insurance limits or available assets. Yet it is precisely the larger losses that most insurance buyers seek to insure against. And the additional premium cost resulting from a requirement that the insured be made whole seems likely to be relatively modest in most cases. Those facts support the widely held view that most insureds would prefer that subrogation/reimbursement rights be so limited. That, in turn, supports adoption of that requirement as a "default rule" when the contract does not provide otherwise. n46

There is a counterargument that risk-averse insureds should prefer a rule giving the insurer priority to recover on the tort claim and use the premium savings to purchase higher limits of coverage, while taking the risk of incomplete recovery for losses over the higher limit. n47 This ignores the fact that the problem may not be the monetary limit of coverage, but the scope of the coverage. The insurance policy may cover medical expenses or lost income, but (unless it is uninsured or underinsured motorist coverage) is unlikely to cover other types of damages incurred in a personal injury. In that circumstance, increasing the amount of medical expense coverage (which may already be ample) provides no protection against other types of uncompensated loss. And where medical expenses are large, nonmedical losses are also likely to be large and the tortfeasor's insurance and assets are more likely to be inadequate, so that an insurer priority on recovery could leave the nonmedical losses entirely uncompensated. If that risk could be avoided at the cost of a small additional premium for coverage with subrogation subject to a made-whole requirement, it seems likely that most insureds would prefer that to an insurer-priority rule.

Another counterargument is that the risk of incomplete recovery should be placed on the party who has the greatest role in pursuing complete recovery. n48 But in most cases, the cause of incomplete recovery will not be inadequate vigor in pursuit of the tortfeasor, but rather the inadequacy of the tortfeasor's insurance and assets to compensate a large loss. Improving litigation incentives would do little to ameliorate the fundamental problem.

If the made-whole requirement is to be the default rule, that leaves the question of whether to impose special requirements of clarity and explicitness, as do the great majority of courts that allow contractual language to override the made-whole requirement. One reason for doing so is that the contract language should be read in light of the legal background: where the language appears to do little more than confirm the common-law default rule, it can be seen as ambiguous, even if a literal reading might arguably alter the default rule. n49 On that basis, special clarity is required to avoid ambiguity. Perhaps a better rationale would be a weak version of the rule that policies should be construed to effectuate the reasonable expectations of insureds. n50 The premise would be that the default rule reflects the reasonable expectations of insureds and that any insureds who read their policies should be given fair notice by clear language that a different rule will be applied. In this way, public policy would be used to influence interpretation, without limiting the contractual freedom of the parties. n51

The fact that requirements of explicit language are so prevalent and that insurers do not seem to use such language in very many state-regulated policies n52 suggests that insurers may not regard the issue as very important. Alternatively, they may fear regulatory hostility to clear language overriding the made-whole requirement. n53 And courts may appropriately take precautions against language with that effect escaping regulatory scrutiny: if the language is clear and explicit, it is less likely to be overlooked by form reviewers.

In sum, there are good reasons for insurance law to insist on clear and explicit language to override the requirement that the insured be made whole. And doing so imposes little burden on insurers who wish to override the requirement.

n6 Restatement (Second) of Torts § 920A(2) ("Payments made to or benefits conferred on the injured party from other sources [than the tortfeasor or others acting on the tortfeasor's behalf] are not credited against the

tortfeasor's liability, although they cover all or a part of the harm for which the tortfeasor is liable.").

n7 John G. Fleming, *The Collateral Source Rule and Contract Damages*, 71 *Cal. L. Rev.* 56, 82 (1983) (recognizing that availability of subrogation "is widely considered the optimal solution for the whole problem of collateral benefits on the ground that it prevents both the defendant from taking an undeserved advantage of the benefit and the plaintiff from being overcompensated"); *see also Lake Erie & W.R. Co. v. Falk*, 56 *N.E.* 1020 (Ohio 1900) (The plaintiff's assertion that he was entitled to recover for his full loss against the defendant railroad and also retain the proceeds that his insurance carrier sought by way of subrogation "could not be urged successfully. . . . Good morals and important considerations of public policy forbid that conflagrations should be made profitable.").

n8 Courts resisting subrogation commonly assume that the insured has paid a premium to cover the entire loss insured, with no allowance for possible recovery by way of subrogation or reimbursement. That is an unwarranted assumption. But insurers litigating the permissibility of subrogation would be well advised to make a factual showing that potential subrogation/reimbursement recoveries have been properly accounted for in setting the premium.

In fact, past losses under similar policies are typically used to project future losses for which the premium must provide, and any subrogation/reimbursement recoveries for those past losses are treated as credits against those losses, so that the projections of future losses are automatically based on net losses after recoveries.

n9 *See also* A Michael Polinsky, *An Introduction to Law and Economics*, 53-55 (2d ed. 1989) (where one party to the transaction is risk averse (as most insureds are) and the other is risk-neutral (as insurers are), the risk is better allocated to the risk-neutral party).

n24 To be sure, determination of the amount of that an insurer should be able to recover can present complicated issues. But the point here is simply that some recovery ought to be authorized on appropriate facts, even if there is no subrogation provision in the policy.

n25 *See, e.g.*, *Cain v. State Farm Mut. Auto. Ins. Co.*, 121 Cal. Rptr. 200, 207 (Cal. Ct. App. 1975).

n26 *See, e.g.*, *State Farm Fire & Cas. Co. v. Knapp*, 484 P.2d 180, 185 (Ariz. 1971); *21st Century Ins. Co. v. Super. Ct.*, 98 Cal. Rptr. 3d 516, 518 (Cal. 2009); *Allstate Ins. Co. v. Reitler*, 628 P.2d 667, 670 (Mont. 1981). But see *Aetna Cas. & Sur. Co. v. Assocs. Transports, Inc.*, 512 P.2d 137, 142-43 (Okla. 1973) (even though personal injury claims are ordinarily nonassignable, where tortfeasor had knowledge of insurer's rights and settled with insured without providing for insurer's claim, insurer entitled to sue on claim for medical payments it had made).

n27 *See, e.g.*, *Peller v. Liberty Mut. Fire Ins. Co.*, 34 Cal. Rptr. 41, 42 (Cal. Ct. App. 1963) (noting such questions but disposing of them on the ground that the legislature had codified the prohibition on assignment).

n28 *E.g., Progressive West Ins. Co. v. Superior Ct.*, 37 Cal. Rptr. 3d 434, 442 (Cal. Ct. App. 2005).

n29 See cases collected in Annot., *Subrogation rights of insurer under medical payments provision of insurance policy*, 19 A.L.R.3d 1054, § 3 (1968, supplemented to Oct. 14, 2009).

n30 A state-by-state examination of the cases is found in Johnny C. Parker, note 12 above, 70 Mo. L. Rev. at 738-773. Prof. Parker concludes that the made-whole requirement cannot be modified by contract in Arkansas, Colorado, Connecticut, Georgia, Iowa, Louisiana, Michigan, Mississippi, Montana, Nebraska, New York, North Carolina, Oklahoma, Pennsylvania, Tennessee, and Wisconsin. *Id.* at 774.

n31 *E.g., Capitol Indem. Corp. v. Strike Zone*, 646 N.E.2d 310, 311-12 (Ill. App. Ct. 1995) (provision that insured's rights transferred "to the extent of our payment" granted insurer priority); *Stancil v. Erie Ins. Co.*, 740 A.2d 46, 49 (Md. Ct. Spec. App. 1999) (right to subrogation on paying amount due under contract governed, regardless whether the insured had been made whole); *Westfield Ins. Co. v. Rowe*, 2001 SD 87, 14-15 (provision that, upon making payment, insurer "subrogated" to insured's right to recover from another and that the insured would hold any recovery in trust and reimburse insurer "to the extent of our payment" entitled insurer to reimbursement regardless of whether insured had been made whole); *Fortis Benefits v. Cantu*, 234 S.W.2d 642, 647, 649 (Tex. 2007) ("insurer "subrogated to all rights of recovery" and has a right to reimbursement "equal to the amount we have paid").

n32 *E.g., Int'l Underwriters/Brokers, Inc. v. Liao*, 548 So. 2d 163, 165 (Ala. 1989) ("equitable principles apply to all instances of subrogation *except when the contract explicitly provides otherwise*" (emphasis added); dictum, contract at issue not analyzed because not in the record), *overruled by Powell v. Blue Cross & Blue Shield*, 581 So. 2d 772, 777 (Ala. 1990), *reinstated by Ex parte State Farm Fire & Cas. Co.*, 764 So. 2d 543, 546 (Ala. 2000); *Capps v. Klebs*, 382 N.E.2d 947, 950 (Ind. Ct. App. 1978) (to permit subrogation before the insured has been made whole, the contract must be clear, unequivocal and so certain as to admit of no doubt on the question"); *Providence Wash. Ins. Co. v. Hogges*, 171 A.2d 120, 124 (N.J. Super. Ct. App. Div. 1961) (equitable principles apply "except as modified by specific provisions in the contract"; provision that insurer subrogated to "all of insured's rights of recovery" not specific as to priority). *But see Wolfe v. Alfa Mut. Ins. Co.*, 880 So. 2d 1163, 1167-69 (Ala. Ct. Civ. App. 2003) (ordinary subrogation language sufficient to override made-whole requirement).

n33 *E.g., Valora v. Pa. Employees Benefit Trust Fund*, 939 A.2d 312, 320-322 (Pa. 2007) (equitable principles apply to contractual subrogation unless contract provides to contrary; not reaching standard for language doing so).

n34 *Wine v. Globe Amer. Cas. Co.*, 917 S.W.2d 558, 564 (Ky. 1996); *Kanawha Valley Radiologists, Inc. v. One Valley Bank, N.A.*, 557 S.E.2d 277, 281-82 (W. Va. 2001).

n35 *Blue Cross/Blue Shield v. Flam*, 509 N.W.2d 393, 398 (Minn. Ct. App. 1993) (applying federal law under ERISA plan). In 1993, the relevant law under ERISA was not well developed, so the court's view of that law likely mirrored the rule it would have applied under state law.

n36 *Capps v. Klebs*, 382 N.E.2d at 950; *Willard v. Automobile Underwriters, Inc.*, 407 N.E.2d 1192, 1193 (Ind. Ct. App. 1980); *Westendorf v. Stasson*, 330 N.W.2d 699, 701-04 (1983) (language calling for reimbursement of the reasonable value of care or services provided "to the extent of compensation benefits or damages recoverable" construed to "make[] no effort to supersede the general rules of equity"); *N. Buckeye Educ. Council Group Health Benefits Plan v. Lawson*, 2004 Ohio 4886, 21-24; *Equity Fire & Cas. Co. v. Youngblood*, 927 P.2d 572, 573, 575-76 (Okla. 1996) (applying federal law under ERISA plan; subrogation "to the extent of the plan benefit payments" and requirement of reimbursement "to the extent of plan benefits paid" did not override requirement that insured be made whole); *Amer. Med. Security v. Josephson*, 2000 OK CIV APP 127, 15-16 (under state law, provision for "automatic lien" on any recovery did not override requirement that insured be made whole). See also *Kanawha Valley Radiologists, Inc.*, 557 S.E.2d at 282 (as applied to facts, subrogation language was ambiguous as to priority).

n37 *E.g.*, *Wine*, 917 S.W.2d at 564 (insured agreed to hold recovery in trust and reimburse the insurer for its payments, retaining any amount received in excess of insurer's payments); *Lawson*, 2004 Ohio 4886, 6 (plan beneficiary agreed to reimburse plan from any recovery "irrespective of whether any such settlement or judgment may or may not provide reimbursement to me for all illnesses, injuries or other damages"; plan subrogated to the extent of any benefit payments or the amount of recovery "whichever is less").

n38 See note 30, above, and accompanying text.

n39 See, e.g., Frank H. Easterbrook & Daniel R. Fischel, *The Economic Structure of Corporate Law*, 89 *Colum. L. Rev.* 1416, 1433 (1989) (courts should choose default terms "that the parties would have selected with full information and costless contracting"). There are arguments that courts should sometimes select "penalty" default rules, not on the basis of what the parties actually want, but for the purpose of providing incentives for one party to reveal information that will allow tailoring of the transaction in a more optimal manner. See, e.g., Ian Ayres & Robert Gertner, *Filling Gaps in Incomplete Contracts: An Economic Theory of Default Rules*, 99 *Yale L.J.* 87 (1989). But the latter arguments concern contracts whose terms are bargained between the parties, and have little relevance to the sort of adhesion contracts involved in the usual insurance policy or employee benefit plan.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of The New Appleman on Insurance Law, now in preparation, and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, The Professional Responsibilities of Insurance Defense Lawyers, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in Chambers USA: Americas Leading Lawyers for Business. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and

insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Information referenced herein is provided for educational purposes only. For legal advice applicable to the facts of your particular situation, you should obtain the services of a qualified attorney licensed to practice law in your state.

McCarter and English LLP on Tax Aspects in Forming a Captive Insurance Company

2009 Emerging Issues 4397

McCarter and English LLP on Tax Considerations in Forming a Captive Insurance Company: The Deductibility of Premiums

By Gary Wilcox and Adam Budesheim

October 2, 2009

SUMMARY: The deductibility of premiums is a potential tax benefit in a corporation forming a captive insurer. The court has limited the deductibility of premiums to those situations in which the insurance issued by the captive is actual insurance, not just reinsurance. A key factor is whether the economic substance of the transaction resembles actual insurance. This Emerging Issues Analysis explores how this issue has been resolved in various instances.

ARTICLE: Although captive insurance companies are often touted as a tax benefit to the parent corporation, a number of court rulings relating to the deductibility of premiums paid to a captive have undermined dramatically the potential tax benefits of the captive for the parent. The rules governing deductibility of premiums paid to a captive defy broad categorization because the inquiry is fact-intensive. The Internal Revenue Service ("IRS") and courts focus on whether the parent has purchased "real" insurance from its captive; premiums for "real" insurance are deductible, but premiums that resemble setting reserves for self-insurance are not. This article does not attempt to evaluate the other many benefits of a captive insurer, whether tax-related or otherwise. It looks, instead, to the criteria that must be satisfied before a corporation can take tax deductions for premiums paid to a captive.

The Availability of Tax Deductions for Insurance and Self-Insurance. Assessing the tax benefits of purchasing insurance from a captive insurer requires determining where the transaction falls on the spectrum of insurance, by which a business shifts risk of loss from itself onto an insurer in exchange for payment of a premium, and self-insurance, by which the business retains its risk of loss. The federal tax code considers premiums for the purchase of insurance to be tax deductible as "ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business" 26 U.S.C. § 162(a); 26 C.F.R. § 1.162-1(a). Conversely, it is well-established that money put aside by a business for funding self-insurance is not tax deductible. *See Clougherty Packing Co. v. Comm'r*, 811 F.2d 1297, 1300 (9th Cir. 1987) ("[A]mounts placed into self-insurance reserves are not [tax deductible]. Instead, the self-insuring taxpayer must wait until losses actually occur, at which time the reserve funds actually paid out may be expensed and deducted from gross income."). For a business to deduct legitimately the premiums paid to its captive insurer, the transaction between the business and its captive must resemble the purchase of actual insurance rather than

self-insurance.

The Definition of Captive Insurer. Neither the federal tax code nor any federal statute defines "captive insurer." Some, but not all states, however, have codified "captive insurer" in their statutes. For example, both New Jersey and Connecticut define captive insurer as: "an insurance company owned by another organization whose exclusive purpose is to insure risks of the parent organization and affiliated companies or, in the case of groups and associations, insurance organizations owned by the insureds whose exclusive purpose is to insure risks to member organizations or group members and their affiliates." *See, e.g.*, N.J. Stat. Ann. § 17:22D-1; Conn. Gen. Stat. § 38a-91(2).

The precise definition of a captive and the scope of its functions and limitations vary from state to state. However, because the analysis of whether premiums paid to captives are tax deductible focuses on the nature of the transaction between the parent and its captive, the varying definitions of captive insurers will have little to no impact on whether premiums are tax deductible.

The Economic Substance of the Transaction. When determining whether premiums are tax deductible, courts focus on the "economic substance" of the insurance transaction between the parent and the captive. *See Mobil Oil Corp. v. United States*, 8 Cl. Ct. 555, 556 (1985). Courts employ a three-part analysis, derived from *Helvering v. LeGierse*, 312 U.S. 531 (1941), to determine whether the economic substance of the transaction resembles actual insurance or self insurance. The courts look for the presence of: (1) an "insurance risk"; (2) risk shifting and risk distributing; and (3) "commonly accepted notions of insurance." *See Ocean Drilling & Exploration Co. v. United States*, 988 F.2d 1135, 1148 (Fed. Cir. 1993).

The requirement of an "insurance risk" does not receive much discussion in the cases, likely because it is generally present in the transaction between the parent and captive. The tax court has described insurance risk as requiring that the insurer face some "hazard" and that "[i]f no risk exists, then insurance cannot be present." *AMERCO, Inc. v. Comm'r*, 96 T.C. 18, 38-39 (1991), *aff'd*, 979 F.2d 162 (9th Cir. 1992). Primarily, the "insurance risk" requirement is intended to distinguish between actual hazards and investment risks. Insurance risk, from the perspective of the insured, is that either there will be a loss or there will not be a loss. There can be no profit for the insured from that risk. An investment risk is a speculative risk that can result in either profit or loss, based on the outcome of investments, underwriting activities, etc. *See AMERCO*, 979 F.2d at 167.

Risk shifting and risk distributing have received the most attention by the courts. Risk shifting "entails the transfer of the impact of a potential loss from the insured to the insurer." If the insured has shifted its risk to the insurer, then a loss by or a claim against the insured does not affect it because the loss is offset by the proceeds of an insurance payment. *Clougherty Packing*, 811 F.2d at 1300. The risk shifting analysis focuses on the individual contract between the insured and the insurer. *Humana Inc. v. Comm'r*, 881 F.2d 247, 251 (6th Cir. 1989).

Risk distribution involves shifting the risk insured to a group of individuals. *Humana*, 881 F.2d at 251. In other words, the insurer assumes many independent risks in return for many premiums. *Clougherty Packing*, 811 F.2d at 1300. This allows the insurer "to reduce the possibility that a single costly claim will exceed the amount taken in as a premium and set aside for the payment of such claims. . . . By assuming numerous relatively small, independent risks that occur randomly over time, the insurer smoothes out losses to match more close its receipt of premiums." *Id.*

In contrast to risk shifting, the focus of risk distributing "is broader and looks more to the insurer as to whether the risk insured against can be distributed over a larger group rather than the relationship between the insurer and any single insured." *Humana*, 881 F.2d at 251.

The third factor, commonly accepted notions of insurance, has not received much discussion in the case law. Courts tend to review the overall transaction to determine whether it resembles what is commonly understood as insurance. The Federal Circuit has noted the many factors it examines in assessing whether the transaction follows commonly accepted notions of insurance: the presence of a hazard; the transaction was understood by the parties to be

insurance; contracts were written and premiums were paid; unrelated parties reinsured the policies; premiums were based on commercial rates; claims are handled appropriately; claims are paid from the insurer's own funds; the policies were valid and binding; and adequate capitalization of the insurer. *Ocean Drilling & Exploration Co. v. United States*, 988 F.2d 1135, 1151 (Fed. Cir. 1993). The last factor, adequate capitalization or the lack thereof, has been discussed by several courts, though not necessarily in the context of "commonly accepted notions of insurance," in finding that the transaction was not true insurance. See, e.g., *Gulf Oil Corp. v. Comm'r*, 914 F.2d 396, 410 (3d Cir. 1990); *Carnation Co. v. Comm'r*, 640 F.2d 1010, 1012 (9th Cir. 1981). Furthermore, courts regularly find that when the parent indemnifies the captive for any losses it might suffer, there is no actual insurance. See, e.g., *Gulf Oil*, 914 F.2d at 410; *Stearns-Roger Corp. v. United States*, 774 F.2d 414, 415 (10th Cir. 1985).

Captives as Sham Corporations. The first step in determining whether premiums paid to a captive are tax deductible is to determine whether the captive was created "for a legitimate business purpose or whether the captive was in fact a sham corporation." *Malone & Hyde, Inc. v. Comm'r*, 62 F.3d 835, 840 (6th Cir. 1995). The classic example of a captive as a sham corporation is one which is an undercapitalized foreign corporation that is "propped-up by guarantees of the parent corporation." *Id.* Some foreign jurisdictions have minimal capitalization requirements for insurance companies, which allows a parent to form a captive with insufficient capitalization to pay any significant volume of claims. *Id.* at 841. If the parent supports its undercapitalized captive through an agreement to provide further capital as necessary, see *Carnation*, 640 F.2d at 1012, the creation of the captive may be considered a sham transaction and premiums paid to that captive are not tax deductible. *Malone & Hyde*, 62 F.3d at 841.

An undercapitalized captive may be considered a sham corporation even if the parent agrees to indemnify the captive rather than provide further capitalization. In *Malone & Hyde*, the parent issued hold harmless agreements on behalf of its captive due to the inability of the captive to pay claims with its minimal capitalization. *Id.* The Sixth Circuit considered the hold harmless agreements "weaknesses" of the captive which indicated the captive was a sham corporation. *Id.*

The Pure Parent-Captive Insurer Relationship. A pure captive insures the risks of only its parent and its parent's subsidiaries or affiliates. Premiums paid by the parent to its pure captive are not tax deductible for the parent because there is no shifting of the risk from the parent. When viewed from the perspective of the insured (i.e., the parent), any risks shifted to the subsidiary are, in actuality, retained by the parent. The parent pays a premium to the captive, and that premium is intended to meet the casualty losses of the parent. As the captive pays losses claimed against the policy, the captive essentially pays the parent back the premium. See *Stearns-Roger*, 774 F.2d at 416-17. Any losses paid by the captive insurer reduce the net worth of the captive by that amount. Because the parent owns the captive, the parent's net worth likewise is reduced by the same amount. See *Ocean Drilling*, 988 F.2d at 1146 (citing *Clougherty Packing*, 811 F.2d at 1305); *Kidde Indus., Inc. v. United States*, 40 Fed. Cl. 42, 57-58 (1997). The parent, therefore, still bears the entire risk. See *Mobil Oil Corp. v. United States*, 8 Cl. Ct. 555, 567-68 (1985). Because there has been no shifting of risk, there has been no insurance transaction; the "premiums" paid by the parent are viewed more as a loss reserve and are not tax deductible. See *Clougherty Packing*, 811 F.2d at 1307; *Humana*, 881 F.2d at 251.

Captives with Multiple Owners. Some captives are owned by more than one corporation, which alters significantly the tax treatment of premiums paid to this captive. When a captive is not owned by a single corporate parent, the fortunes of the captive do not have a direct bearing on the balance sheet of a single corporate owner. Two separate Revenue Rulings by the IRS advise that when a captive is owned by multiple unrelated corporations, none of which has a controlling interest in the captive, premiums paid for insurance provided by that captive are tax deductible, even though the captive provides insurance only to its several owners. See *Rev. Rul. 78-338*, 1978-2 C.B. 107; *Rev. Rul. 2002-91*, 2002-2 C.B. 991. Because the taxpayer and the other insureds-shareholders are not related companies (even if they are involved in the same industry), the risk of loss is shifted from an individual company and distributed among the multiple shareholders that comprise the insured group. *Rev. Rul. 78-338* at 4. However, the IRS also looks to whether the captive is functioning as a legitimate insurance company, that is, it is adequately capitalized, charges premiums using recognized actuarial techniques, issues insurance contracts, investigates and pays claims, and is taxed as an insurance company. *Rev. Rule 2002-91* at 8.

The principles espoused by the above cited Revenue Rulings have been applied by a federal district court in a situation involving a far more complex ownership structure of the captive than that discussed in the Revenue Rulings. In *Crawford Fitting Co. v. United States*, 606 F. Supp. 136 (N.D. Ohio 1985), a captive was formed to provide insurance to the plaintiff and other companies. The captive was owned by four different corporations and four individuals, each of which contributed to the capitalization of the captive. The interrelationship of the corporations and the individuals and their relationships to the plaintiff corporation was quite complex. *Id.* at 138. The plaintiff corporation, Crawford, did not have an ownership interest in the captive, but the sole shareholder of Crawford, Mr. Lennon, owned at least 50% interest in each of the four corporate shareholders of the captive with the remaining ownership interest in each of the four corporate shareholders belonging to relatives of Mr. Lennon. *Id.* at 137-38. Of the four individual shareholders, three were officers or employees of Crawford and the fourth was an attorney whose firm had long been retained by Crawford. *Id.* at 138. The captive wrote a single insurance policy that provided coverage for Crawford and numerous related companies, Mr. Lennon and some of his relatives, companies owned by Mr. Lennon and his relatives, and companies that did business with Crawford but were otherwise unrelated. *Id.* Crawford paid about one-quarter of the total premium for this policy with the remainder paid by the various other insureds. *Id.* at 139.

The court ruled that the premium paid by Crawford to the captive was tax deductible because Crawford, the shareholders of the captive, and the other insureds of the captive were not so "economically related" that there was no shifting of the risk from Crawford to the captive. *Id.* at 145. The court found it significant that although Crawford was wholly owned by the same individual that had at least a 50% ownership in each of the four corporate shareholders of the captive, Crawford was *not* the parent of the captive or the parent of the corporate shareholders of the captive. *Id.* at 145-46. Therefore the risk covered by the captive's policy was shifted from Crawford to the shareholders of the captive, none of which was Crawford. The court further found it inconsequential that the individual shareholders of the captive had an employment relationship with Crawford because the individual shareholders' relationships with Crawford would not be directly impacted by the gains or losses of the captive. *Id.* at 146. The relationships of the four individual shareholders to Crawford did not in any way diminish the shifting of the risk.

Premiums Paid by a Sister Subsidiary. Several cases have addressed the situation in which a pure captive issues insurance policies to both the parent and the parent's other subsidiaries. The separate corporate existence of the subsidiaries and the parent are not ignored for tax purposes. *See Malone & Hyde*, 62 F.3d at 839 (citing *Moline Props. v. Comm'r*, 319 U.S. 436 (1943)). Therefore, the insurance transaction, with respect to the deductibility of premiums paid by the subsidiaries, is examined from the perspective of the subsidiaries as the insureds, not from the perspective of the parent.

The seminal case addressing the sister subsidiary situation is *Humana, Inc. v. Commissioner*, 881 F.2d 247 (6th Cir. 1989). *See also Kidde Indus.*, 40 Fed. Cl. at 56. In *Humana* the parent corporation and its subsidiaries operated hospitals. The parent established a captive insurer from which it purchased insurance for itself and its subsidiaries, charging the subsidiaries premiums based on their relative share of the insured risk. Although the court ruled that premiums paid by the parent to the captive for the parent's own insurance were not deductible, the court held that premiums paid by the other subsidiaries to the captive were tax deductible. *Humana*, 881 F.2d at 257. The court arrived at its decision by analyzing whether the insurance issued to the subsidiaries involved risk shifting and risk distribution.

The *Humana* court examined the relationship between the subsidiaries and the captive; the relationship of the captive and the parent were not relevant because, under *Moline Properties*, each distinct corporate entity is treated individually for tax purposes. Looking at the insurance transaction from the perspective of the insureds, the court noted that the subsidiaries owned no stock in the captive, contributed no capital to the captive, and did not make any guarantees relating to the performance of the captive. *Id.* at 253. Thus, unlike the parent-captive relationship in which each loss paid by the captive causes an identical decrease in the net worth of the parent, when the captive pays a loss, the net worth of the subsidiary is not affected by that payment; the risk is fully shifted to the captive. *Id.* (This analysis appears to hold true even if the parent company purchased insurance from the captive to cover all the subsidiaries and then charged each of the subsidiaries for its relative share of the total premiums paid by the parent. *See Humana*, 881 F.2d at 248.)

The *Humana* court also addressed whether the transactions involved risk distribution. The court's analysis focused on the captive and whether the captive had the ability to distribute the risk of any individual subsidiary over a larger group than just the captive and the subsidiary. *Id.* at 256. The court found there was risk distribution because the captive insured several separate corporations, even though the corporations were all within the same affiliated group. Losses of a single subsidiary could be spread among the several distinct corporate entities that were all the subsidiaries. *Id.* at 257.

Under the *Humana* decision, the premiums paid by subsidiaries represented an actual shift of the risk from the subsidiaries to the captive and the captive was able to distribute losses among the many subsidiaries purchasing insurance from the captive. Thus, premiums paid by subsidiaries to a captive of the parent are deductible under 16 U.S.C. § 162 as necessary and reasonable business expenses.

Although *Humana* provides a valuable tax deduction for corporations, attempts to broaden the holding in *Humana* have not met with success. In *Kidde Industries*, the parent purchased insurance from unaffiliated insurers which then reinsured a portion of that risk with the parent's captive. Other subsidiaries of the parent were given the option of participating in the insurance program underwritten by the unaffiliated insurer and reinsured by the captive. *Kidde Indus.*, 40 Fed. Cl. at 45. The parent sought to expand the ruling of *Humana* by arguing that not only were the premiums paid by the subsidiaries tax deductible, but the premiums paid by the parent to purchase insurance for the divisions within the parent's own corporate structure were also deductible. *Id.* at 56. The court's analysis considered the perspective of each separate corporate entity when determining whether the premiums were deductible. *Id.* at 58. Following *Humana*, the court ruled that the premiums paid by the subsidiaries were tax deductible, because from their perspective, the insurance purchased from the captive by an individual subsidiary shifted risk away from that subsidiary into a pool with the risks of other entities in which that subsidiary did not have an ownership interest. *Id.* at 56. The court rejected the parent's argument that premiums paid to purchase insurance for the parent's own divisions were tax deductible. From the perspective of the parent, the insurance purchased by the parent did not shift the risk away from the parent; the risk was shifted into a pool with the risks of other entities wholly owned by the parent. *Id.* at 57-58.

Reinsurance and Captive Insurers. Reinsurance and captive insurers intersect in two possible ways: either the captive reinsures policies issued to the parent by an insurer unaffiliated with the parent, or the captive purchases reinsurance for the policies to the parent from an unaffiliated reinsurer. The former has been addressed in a number of cases, all of which hold premiums paid to an unaffiliated insurer that substantially reinsures its policies with the parent's captive are not tax deductible. While the latter situation has never been addressed directly by the courts, dicta in one case, as well as the three-part test for determining whether a transaction is insurance or self-insurance, strongly suggest that premiums paid to a captive insurer that substantially reinsures the policy the captive issued to its parent are tax deductible.

Several cases involving captive insurers have addressed the same basic factual pattern -- the parent company creates a captive insurer; the parent company then purchases insurance from an unaffiliated insurer; the unaffiliated insurer then cedes most of that risk to the captive. See *Malone & Hyde*, 62 F.3d at 836; *Carnation*, 640 F.2d at 1012; *Clougherty*, 811 F.2d at 1299; *Gulf Oil*, 914 F.2d at 410. In each of these cases, the courts disallowed as deductions that portion of the premium paid to the unaffiliated insurer that was subsequently ceded to the captive. Although payment of premiums to the unaffiliated insurer was a true shifting of risk, the unaffiliated insurer then shifted some of that risk to the captive. In effect, the parent was paying premiums to the captive, but through the medium of the unaffiliated insurer. All the risk the unaffiliated insurer shifted onto the captive was, in essence, being shifted back to the parent.

Several of the above-cited reinsurance cases have an additional element to support the courts' determinations that there was no risk shift. In *Carnation*, the parent formed a minimally capitalized captive to which the parent's unaffiliated insurer ceded a portion of the parent's risk. *Carnation*, 640 F.2d at 1012. Because the undercapitalization of the captive jeopardized the captive's ability to cover losses, the parent agreed, at the unaffiliated insurer's behest, to provide additional capital to the captive if requested by the captive. *Id.* Similarly, in both *Malone & Hyde* and *Gulf Oil*, the parent corporations formed captives which reinsured some of the parents' risks underwritten by unaffiliated insurers.

Malone & Hyde, 62 F.3d at 836; *Gulf Oil*, 914 F.2d at 410. The parents then issued hold-harmless agreements and guarantees to the unaffiliated insurers that the parent's would indemnify the insurers for any losses the captives failed to pay. *Malone & Hyde*, 62 F.3d at 836; *Gulf Oil*, 914 F.2d at 410. In all three cases, the courts ruled that agreements to capitalize or indemnify indicated there was no risk transfer and premiums paid to the unaffiliated insurer could not be deducted. *Malone & Hyde*, 62 F.3d at 842-43; *Gulf Oil*, 914 F.2d at 412; *Carnation*, 640 F.2d at 1013.

The reinsurance-captive situation that has received little attention is when the parent purchases insurance from the captive, but then the captive cedes that risk to an unaffiliated reinsurer. While it does not appear that any court has ruled on the issue directly, one federal court suggests that the IRS does not challenge such deductions. In *Crawford Fitting Co.*, the parent purchased a \$1.5 million policy from its captive. The captive retained \$100,000 of the risk and reinsured the balance with an unaffiliated insurer. *Crawford*, 606 F. Supp. at 139. The parent then sought to deduct the entire amount of the premium paid to the captive. The IRS disallowed a portion of the deduction, but only the portion based upon the \$100,000 of risk retained by the captive. *Id.* The Court noted, "It is undisputed that to the extent [the captive] reinsured the remainder of the risk, in the amount of \$1,400,000.00, with . . . an unrelated insurance company, [the parent] is entitled to a deduction for the insurance premium for that amount of coverage. This reinsurance arrangement neutralized the risk borne by [the captive] to the extent of that amount." It is undisputed that to the extent [the captive] reinsured the remainder of the risk, in the amount of \$1,400,000.00, with . . . an unrelated insurance company, [the parent] is entitled to a deduction for the insurance premium for that amount of coverage. This reinsurance arrangement neutralized the risk borne by [the captive] to the extent of that amount." *Id.* at 141.

This result is fully in accord with the cases discussed above because there is both risk shifting and risk distributing. Risk shifting is clearly present. The case law makes clear that the purchase of insurance by the parent directly from its captive is not true insurance because the risk is ultimately retained by the parent. When the captive cedes that risk to an unaffiliated reinsurer, the risk which had previously been retained by the parent is then shifted to an unaffiliated party. Because the risk is no longer retained by the parent directly or through its captive, a true risk transfer has occurred (at least to the extent of the ceded risk). Furthermore, it seems beyond dispute that the risk distribution will also occur since the reinsurer will, presumably, have many other clients across which to spread the risk.

Captive Insurers with Unrelated Business. Several courts have allowed a parent to deduct premiums paid to a captive when the captive writes a substantial amount of insurance covering unrelated entities. The courts have determined that the substantial unrelated business of the captive creates a pooling of risk with entities unaffiliated with the parent, thereby shifting the risk of the parent onto the general pool. The Seventh Circuit cited with approval the testimony of an expert witness that "insurance does not shift risk so much as the pooling transforms and diminishes risk." *Sears, Roebuck & Co. v. Comm'r*, 972 F.2d 858, 863 (7th Cir. 1992). The Ninth Circuit explained more fully: "[W]hen the pool consists of a substantial amount of dollars, and risk, from those outside the parent and its affiliates, there is a true shift of the risk, even though the parent could suffer somewhat if the captive made a payment on account of an insured's loss. In a real sense, the parent's risk has been placed with the captive and thence spread among all of those in the pool." *AMERCO*, 979 F.2d at 167. Because the captive pools the parent's risk with the risks of other unaffiliated insureds, the risk of the parent is no longer borne by the parent. It is, instead, borne by the entire pool of insureds that have purchased insurance from the captive.

The size of the pool can have an impact on whether there is a true risk shift. In *Gulf Oil*, the court held that the 2% of net premiums the captive received from parties unrelated to the parent was *de minimis* and did not create a sufficiently large pool to truly transfer risk. *Gulf Oil*, 914 F.2d at 412. Although the courts have not defined a specific percentage of unaffiliated business necessary to shift risks, the Ninth Circuit has held that unaffiliated business that makes up as little as 29% of the captive's total insurance business is enough for a true risk shift. *See Harper Group v. Comm'r*, 979 F.2d 1341, 1342 (9th Cir. 1992) (noting that the captive's unrelated business accounted for 29% to 33% of its total insurance business); *see also Ocean Drilling*, 988 F.2d at 1150 (noting that the captive's unrelated business accounted for 44% to 66% of its total insurance business); *AMERCO*, 979 F.2d at 164 (noting that the captive's unrelated business accounted for 52% to 74% of its total insurance business).

The caveat to this discussion of captives with unrelated business is that under the definition of a captive insurer in some states, the captive cannot have any unrelated business -- captives are limited, by definition, to issuing insurance to their parents and other affiliated companies. See N.J. Stat. Ann. § 17:22D-1. The Seventh Circuit has suggested the possibility that insurers with unrelated business are not captives, noting that a subsidiary insurer, of which 99.75% of its insurance business was unaffiliated, "put[the parent's] risks in a larger pool, performing one of the standard insurance functions in a way that a captive insurer does not." *Sears, Roebuck*, 972 F.2d at 863. The other courts, however, have classified as captives insurers with a substantial amount of unrelated business.

Conclusion. While the possibility of deducting premiums paid to captives can provide substantial tax benefits to parent corporations, the instances in which those premiums are deductible are fairly limited. The premiums can only be deducted when the captive insurer is not a sham and the parent can establish that purchasing insurance from the captive is a true risk shift and risk distribution.

Sonnenschein Nath & Rosenthal On Emcasco Ins. Co. v. Nationwide Mut. Ins. Co.

2009 Emerging Issues 4376

Sonnenschein Nath & Rosenthal LLP On Illinois Emcasco Insurance Company v. Nationwide Mutual Insurance Company: Illinois Appellate Court Holds Insurer Communications With Its Coverage Counsel Privileged, Creates Appellate Split

By Daniel E. Feinberg

September 30, 2009

SUMMARY: Insurers and insureds in declaratory judgment actions pending in Illinois courts assume that attorney/client communications and work product are protected from discovery. In *Illinois Emcasco Ins. Co. v. Nationwide Mut. Ins. Co.*, 2009 Ill. App. LEXIS 760 (Ill. Ct. App. Aug. 6, 2009), the Appellate Court has rejected that communications between an insurer and its own separate coverage attorneys regarding insurance coverage issues is protected.

ARTICLE: In *Illinois Emcasco Ins. Co. v. Nationwide Mut. Ins. Co.*, 2009 Ill. App. LEXIS 760 (Ill. Ct. App. Aug. 6, 2009), the Appellate Court of Illinois considered whether communications between an insurer and its own separate coverage counsel in a declaratory judgment action were protected by the attorney/client privilege. Disagreeing with another division of the Court, it held that they indeed are protected.

The Case

Illinois Emcasco sued Nationwide for contribution with respect to the payment of a verdict against a common insured. Nationwide counterclaimed, alleging that Illinois Emcasco was obligated to exhaust its coverage before Nationwide's coverage might be implicated. Nationwide also alleged that Illinois Emcasco acted in bad faith allegedly by steering liability toward their common insured, so it would not have to bear responsibility for all of the liability (had the liability properly been attributed to another of Illinois Emcasco's insureds). During discovery, Nationwide sought production of communications between Illinois Emcasco and its coverage counsel, which Illinois Emcasco refused to produce on attorney/client privilege grounds.

Nationwide filed a motion to compel, and the trial court granted that motion relying primarily on *Western States Insurance Co. v. O'Hara*, 357 Ill. App. 3d 509, 828 N.E.2d 842 (Ill. Ct. App. 2005), wherein another division of the Appellate Court had ruled that the common interest doctrine applied to defeat privilege claims with respect to

communications between an insurer and its own separate coverage counsel regarding settlement of an underlying claim. Illinois Emcasco appealed, and the Appellate Court reversed.

Waste Management

Determination of the privilege issue turned on interpretation of the Illinois Supreme Court's decision in *Waste Management, Inc. v. International Surplus Lines Ins. Co.*, 144 Ill. 2d 178, 579 N.E.2d 322 (Ill. 1991). In *Waste Management*, the insurers and insureds filed competing declaratory judgment actions with respect to the parties' respective rights and obligations under certain environmental impairment liability policies. After the actions were consolidated, the insurers sought production of the insureds' underlying defense counsels' files. The insureds objected, asserting that the files were protected by the attorney/client privilege and work product doctrine. The trial court ordered the insureds to produce certain of the files, and the Appellate Court affirmed in part and reversed in part, ruling that certain of the files should be produced subject to in camera inspection by the court. The Supreme Court concluded that none of the files were protected, making them discoverable, subject to in camera inspection.

The *Waste Management* Court first found that underlying defense counsel's services were "at issue" in the coverage case and thus discoverable because "it is the very conduct of defense counsel in the underlying litigation which is the basis of insurers' declaratory judgment action and [their] defense to insureds' declaratory judgment action." *Waste Management*, 144 Ill. 2d at 190-91, 579 N.E.2d at 327. Next, the Supreme Court held that the insurance policies' cooperation clauses mandated the files' production even though the underlying litigation had concluded. *Id.* at 192, 579 N.E.2d at 328 ("In light of the plain language of the cooperation clause in particular, and language in the policy as a whole, it cannot seriously be contended that insureds would not be required to disclose contents of any communications they had with defense counsel representing them on a claim for which insurers had the ultimate duty to satisfy"). Finally, the Court ruled that the common interest doctrine precluded application of any privilege or protection that otherwise might have applied:

On these facts, a less flexible application of the [common interest] doctrine effectively defeats the purpose and intent of the parties' agreement. Insureds and insurers share a special relationship; they are in privity of contract. In a limited sense, counsel for insureds did represent both insureds and insurers in both of the underlying litigations since insurers were ultimately liable for payment if the plaintiffs in the underlying action received either a favorable verdict or settlement. To deny discovery in this instance would be to disregard considerations of public policy which require encouragement of full disclosure by an insured to his insurer. [*Id.* at 194-95, 579 N.E.2d at 329.]

The Supreme Court, however, specified that its holding does **not** apply to communications or product relating to the insurance coverage dispute between the insurers and insureds:

We hold, only, that the attorney-client privilege and work product doctrine are not applicable to bar disclosure of defense counsel's files in either the Miller or Nunn litigations. The protections are, nonetheless, available to bar disclosure of any communications or materials generated in preparation for the present declaratory judgment action. [*Waste Management*, 144 Ill. 2d at 200-01, 579 N.E.2d at 331-32.]

Western States

In *Western States*, the Appellate Court applied *Waste Management* to insurer communications with coverage counsel. In that case, the insured was involved in an automobile accident that injured several people. The insured's liability insurer, *Western States*, exhausted its policy limits by settling one of multiple bodily injury claims; thereafter, the insureds were sued in a lawsuit filed by a different (non-settling) claimant injured in the accident. After retaining defense counsel to defend the insureds in the lawsuits under a reservation of rights, *Western States* filed a declaratory judgment action seeking a declaration that it had no duty to defend or indemnify with respect to that lawsuit because its policy limits had been exhausted by the previous settlement. The insureds filed a counterclaim, alleging breach of contract and bad faith failure to settle the current non-settled claims. During discovery, the insureds sought production

of Western States' settlement-related communications with its separate coverage counsel, asserting that the insurer's settlement with one of the claimants was "at issue," and that they had a "common interest" in attorney/client communications with respect thereto. Western States claimed that these materials were protected both by the attorney/client privilege and the work product doctrine.

The Appellate Court affirmed the trial court's mandate to produce the documents due to what it perceived as a parallel to the factual situation in *Waste Management*:

We find the common-interest doctrine applies. Like the insured and insurers in *Waste Management*, Western States and the O'Haras shared a common interest in settling or defeating the Lovelace claim. The Tressler firm, though not representing the O'Haras, was sought to give advice on settling this claim -- a claim in which the O'Haras, as the insureds, had an interest. Under *Waste Management*, both the insured and the insurer do not have to be privy to or involved in the communications with counsel for counsel to be acting in the interests of both. [*Western States*, 357 Ill. App. 3d at 538-39, 828 N.E.2d at 848-49.]

Justice Cook dissented:

The present case does not involve combined representation, disclosure from an attorney whom the insurer retained to defend a lawsuit for the insured but disclosure from the insurer's separate attorney. In fact, the O'Haras, during oral argument, suggested that Western States' communications with in-house general counsel would be equally discoverable with the discovery of the Tressler firm ordered here. [*Western States*, 357 Ill. App. 3d at 522, 828 N.E.2d at 852 (dissenting op.).]

Illinois Emcasco

After analyzing the *Waste Management* and *Western States* decisions, the Illinois Emcasco Court ruled that the Western State Court's extension of the common interest doctrine to communications between an insurer and its own separate coverage counsel conflicted with the Supreme Court's decision in *Waste Management*:

[T]he Illinois Supreme Court consistently distinguished between non-privileged communications regarding the underlying litigation, and privileged communications regarding the coverage issues that could arise in a subsequent declaratory judgment action. The *Waste Management* court preserved the privilege for coverage issues, despite the fact that discovery was directed at counsel directly throughout the underlying litigation. [Illinois Emcasco, 2009 Ill. App. LEXIS at * 14.]

Accordingly, Illinois Emcasco concluded that the attorney/client privilege protected the communications between Illinois Emcasco and its own separate coverage attorneys regarding insurance coverage issues. Additionally, pursuant to *Waste Management*, the Illinois Emcasco Court ordered the trial court to conduct an in camera review to resolve any disputes over which communications are privileged:

We would be equally mistaken to assume that coverage counsel never makes communications in the common interest of the insurer and insured. The Illinois Supreme Court resolved the issue by providing that the circuit court would conduct an in camera inspection of the documents sought and exclude from disclosure those entitled to protection. [Illinois Emcasco, 2009 Ill. App. LEXIS at * 15 (emphasis in original); citing *Waste Management*, 144 Ill. 2d at 200-01, 579 N.E.2d at 331-32.]

Implications

Illinois Emcasco decision is noteworthy because it recognized the protections that the Supreme Court of Illinois provided to attorney/client communications or attorney work product generated with respect to a pending insurance coverage action. It pointed out the conflict between *Western States* and *Waste Management*, and that *Western States* "mistakenly assumes that coverage counsel always acts for the mutual benefit of the insurer and the insured." Illinois

Emcasco, 2009 Ill. App. LEXIS at * 15. The Western States Court failed to understand the limitation that the *Waste Management* Court placed on its ruling, and somehow found it appropriate to extend the common interest doctrine to communications that an insurer had with its own separate coverage attorneys regarding insurance coverage issues, where there ordinarily is no common interest. Until now, Illinois circuit courts have been bound by Western States' interpretation of *Waste Management*. See *People v. Carpentar*, 228 Ill. 2d 250, 260, 888 N.E.2d 105, 111-12 (Ill. 2008) ("In Illinois, the decisions of an appellate court are binding precedent on all circuit courts regardless of locale; therefore, until the Supreme Court says otherwise, an applicable appellate court decision must be followed by the circuit courts").

As a result, Western States provided insurance litigants with means to try and discover their adversary's communications with their separate coverage counsel under the guise that separate coverage counsel somehow acts for the mutual benefit of the insurer and insured if the communication or product somehow relates to an underlying claim. Circuit courts are now free to follow Illinois Emcasco, and given its support by *Waste Management*, should do so. The Illinois Emcasco Court thus provided insurance litigants (especially insurers) with an additional basis for resisting adversary attempts to discover communications with coverage counsel that was retained to represent only one of the parties with respect to insurance coverage issues.

Moreover, Illinois Emcasco Court created an acknowledged conflict within the Illinois Appellate Court as to the discoverability of communications with or product generated by attorneys retained to represent one party to an insurance coverage dispute. Thus, it is quite plausible that the Supreme Court of Illinois will accept review to resolve that conflict. Should that happen, policyholders could well ask the Supreme Court to re-examine the *Waste Management* decision as a whole, in light of its failure to find acceptance in other jurisdictions. At a minimum, it would clarify the law on privilege for coverage counsel.

ABOUT THE AUTHOR(S):

Daniel E. Feinberg is a member of Sonnenschein's Litigation Practice. Daniel E. Feinberg's practice concentrates on the representation and counseling of insurance companies in disputes and litigation regarding the extent or availability of insurance coverage. He has represented insurers in actions filed throughout the United States and in a variety of insurance coverage contexts, including coverage disputes relating to environmental contamination, asbestos exposure, mass tort liability, products liability, professional liability, premises liability, civil rights and claims under the Federal Employers Liability Act. In addition to his insurance coverage practice, Dan has extensive experience in representing insurers in direct action lawsuits.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has

strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

McCarter and English LLP on Notice and Reporting Requirements in Claims-Made and Claims-Made-and-Reported Policies: A Potential Trap for Both Courts and Policyholders

By Anthony Bartell and Craig W. Davis

August 28, 2009

SUMMARY: Both "pure" claims-made and claims-made-and-reported policies require that, for coverage, a claim must be made against the insured during the policy period. Claims-made-and-reported policies further require that the claim also be reported to the insurer during the policy period. Whereas the notice-prejudice rule arguably does not apply to claims-made-and-reported policies, the rule should always be applied to pure claims-made policies.

ARTICLE: INTRODUCTION. Many an unsuspecting liability policyholder has tendered to its insurer what, by all accounts, appears to be a legitimate coverage claim, only to have the insurer deny or reserve coverage because the policyholder allegedly gave notice of the claim too late. Indeed, a hair-trigger invocation of the "late notice" defense seems to constitute the standard operating procedure for insurers disclaiming or reserving rights in response to their insureds' coverage claims. Courts and legislatures throughout the country have responded to insurance companies' efforts to escape coverage on such formalistic grounds by establishing the "notice-prejudice" rule. Most states, by common-law rule or statute (or both), hold that an insurer can deny coverage based on late notice only by proving it suffered appreciable prejudice arising from the late notice. For most policyholders, therefore, an insurer's late notice defense constitutes little more than an empty threat.

Policyholders, however, must recognize a vitally important distinction when it comes to application of the notice-prejudice rule. Professional liability policies -- such as Directors and Officers ("D&O") policies, Errors and Omissions ("E&O") policies, and Employment Practices Liability Insurance ("EPLI") policies -- almost always apply on a claims-made basis or on a claims-made-and-reported basis. These "claims-made" policies differ, in several important respects, from typical "occurrence"-based policies. One difference concerns whether the notice-prejudice rule -- formulated with respect to occurrence-based policies -- applies equally to claims-made policies and to claims-made-and-reported policies.

The universe of claims-made policies encompasses two different types of coverage. Pure claims-made policies provide coverage for claims made against the insured during the policy term, as long as the insured gives notice to the

insurer as soon as practicable. The policy's notice provision, in short, mirrors that contained in an occurrence policy. The more restrictive claims-made-and-reported policy provides coverage for claims made against the insured during the policy period only if the insured provides notice of that claim to the insurer during the policy period.

The pure claims-made policy's notice requirements do not differ materially from those applicable to an occurrence policy. The notice-prejudice rule, therefore, always should apply to these policies. Claims-made-and-reported policies, however, provide coverage only for claims also reported to the insurer during the policy period. Arguable grounds exist, therefore, for exempting these policies from the notice-prejudice rule where the insured provides notice of the claim after the policy period. Many courts, unfortunately, fail to appreciate the distinction between the two categories of claims-made policies. This commentary will attempt to clarify this distinction for purposes of late notice and the notice-prejudice rule.

OCCURRENCE COVERAGE VS. CLAIMS-MADE COVERAGE. We first must distinguish between "occurrence"-based policies and policies that provide coverage on a "claims-made" basis. Simply put, coverage provided on an occurrence basis applies when a negligent act or omission (or some other covered event) gives rise to injury or damage during the policy period, regardless of when the policyholder receives a claim arising from such injury or damage. n1 Coverage, therefore, potentially exists for acts that occurred long (often years, sometimes decades) before the resulting claim against the insured. Insurers and insureds commonly refer to such coverage as "long-tail" because the insurer faces "a 'tail' that extends beyond the policy period itself." n2 The most well known "long-tail" claims involve property damage arising from environmental contamination and bodily injury arising from toxic substances such as asbestos. n3

Insurers compensate for the risk of long-tail claims by charging higher premiums for occurrence policies as compared to claims-made policies. n4 The insurer, however, still bears considerable risk because its premiums computed at underwriting might prove inadequate -- given, among other factors, inflationary pressures -- to cover claims asserted many years later. n5

A claims-made policy provides coverage for claims asserted against the insured during the policy period, "regardless of when the act or omission occurred." n6 A claims-made policy, therefore, involves no "long-tail" exposure because it establishes a definite cut-off date for coverage, *i.e.*, the last day of the policy period. n7 Claims-made policies provide coverage for claims asserted against the insured during the policy period, arising from injury and damage occurring before the policy period (normally limited by a retroactive date). n8

The lack of any "tail" exposure under claims-made, as opposed to occurrence, policies provides a distinct benefit to an insurer: "An underwriter who is secure in the fact that claims will not arise under the subject policy long after its termination or expiration can underwrite a risk and compute premiums with greater certainty. The insurer can establish his reserves without having to consider the possibilities of inflation beyond the policy period, upward-spiralling jury awards, or later changes in the definition and application of negligence." n9

"The core idea behind the move to claims made insurance policies was to *close the gap* between the time when the insurer *prices* the risk and the time when the insurer may incur an obligation to *pay on* that risk." n10

The class of claims-made policies contains an important division between pure claims-made policies and claims-made-and-reported policies. The case law, unfortunately, evidences much confusion relating to these different types of coverage because courts often fail to recognize the difference, sometimes with coverage-defeating results for the policyholder.

NOTICE IN GENERAL AND THE NOTICE-PREJUDICE RULE. The typical occurrence policy requires that the insured provide notice of an occurrence (or claim) to the insurer "as soon as practicable." "The giving of notice is only a condition of the policy, and in no manner is it an extension of coverage itself." n11 Courts and commentators agree the insurance industry drafted this notice requirement "to enable insurers to adequately investigate and respond to

claims." n12 The notice requirement ensures that an insurer's defense and investigation of a claim will not suffer because the "scent has grown cold," resulting in lost evidence and faded memories. n13 The notice requirement also allows insurers to estimate and set adequate reserves for a claim in a timely fashion. n14 "The object of all of these goals is to provide the insurer with an opportunity to protect its interests." n15

Given the insurer's interests protected by an occurrence policy's notice provision, late notice should not bar coverage if the untimely notice prejudices none of the protected interests. n16 Courts overwhelmingly have adopted this line of reasoning in imposing the notice-prejudice rule on insurers that invoke the late notice defense to escape otherwise covered claims. n17 These courts reason that "the requirement of notice in an occurrence policy is subsidiary to the event that invokes coverage, and the conditions related to giving notice should be liberally and practically construed." n18

Some jurisdictions require the policyholder to prove its late notice did not prejudice the insurer. n19 These courts generally maintain that because the insured bears responsibility for the late notice, it also should bear the burden of proof as a prerequisite to securing coverage. n20 Most jurisdictions, however, impose on the insurer the burden of proving it suffered appreciable prejudice from such notice. n21 These jurisdictions note the adhesive nature of insurance contracts and the principle that a merely technical and immaterial breach should not forfeit "the very thing paid for." n22 Forfeiture of coverage "would also disserve the public interest, for insurance is an instrument of a social policy that the victims of negligence be compensated." n23

A court observed, "This is not to belittle the need for notice of an [occurrence], but rather to put the subject in perspective. Thus viewed, it becomes unreasonable to read the [notice] provision unrealistically or to find that the carrier may forfeit the coverage, even though there is no likelihood that it was prejudiced by the breach. To do so would be unfair to insureds." n24

Some courts, however, have struggled with application of the notice-prejudice rule to claims-made policies and, particularly, to claims-made-and-reported policies.

APPLICATION OF THE NOTICE-PREJUDICE RULE TO CLAIMS-MADE POLICIES AND CLAIMS-MADE-AND-REPORTED POLICIES. Not all claims-made policies are created equal. The difference between pure claims-made coverage and claims-made-and-reported coverage bears particular significance with respect to notice requirements and the application of the notice-prejudice rule. A pure claims-made policy requires only that a claim against the insured be made during the policy period. n25 A claims-made-and-reported policy, by contrast, contains the added requirement that the policyholder report the claim to the insurance company during the policy period. n26

The key distinguishing feature of the claims-made-and-reported policy "gives the insurer administrative 'closure' " by allowing the insurer to close its books almost immediately after the policy period expires. n27 The reporting requirement also results in a lower premium for the policyholder. This lower premium, however, comes with a price; namely, the insured bears the risk of not timely reporting a claim to the insurer and, therefore, of losing coverage for a claim falling squarely within the policy. n28

Both claims-made and claims-made-and-reported policies normally contain a standard notice provision requiring notice to the insurer as soon as practicable. Where a claims-made-and-reported policy contains both a standard notice provision n29 and a reporting requirement, some courts have found the policy ambiguous as to its notice requirement. n30 Most courts, however, reconcile these provisions by finding the standard notice provision a policy condition independent of the insuring agreement, while finding the reporting requirement a part of the policy's coverage grant: "In the case of a notice provision, which is typically found in occurrence and claims-made policies and usually requires notice 'as soon as practicable,' the notification serves to facilitate the timely investigation of claims by bringing an event to the attention of the insurer and allows an inquiry 'before the scent of factual investigation grows cold.' In contrast, in the case of a reporting requirement, which is typically found only in a claims-made-and-reported policy, the prescribed

notification actually defines the scope of coverage provided by the policy, as the 'transmittal of notice of the claim to the insurance carrier' is the event that triggers coverage." n31

Another court has held that the "as soon as practicable" language of a claims-made-and-reported policy ".. is intended to preclude an insured, who has knowledge of a claim near the beginning of the policy period, from waiting many months until near the end of the policy period to notify the insurer of the existence of the claim, when such delay would cause prejudice to the insurer." n32

The reporting requirement of a claims-made-and-reported policy operates as a critical component of the policy's triggering mechanism. Courts, therefore, have proved reluctant, and often have declined, to apply the prejudice rule to a breach of the reporting requirement. Addressing a claims-made-and-reported policy (although referring to it simply as a "claims-made" policy), the New Jersey Supreme Court set forth the following basis for not applying the notice-prejudice rule to such policies: "[T]he event that invokes coverage under a [claims-made-and-reported] policy is transmittal of notice of the claim to the insurance carrier. In exchange for limiting coverage only to claims made during the policy period, the carrier provides the insured with retroactive coverage for errors and omissions that took place prior to the policy period. Thus, an extension of the notice period in a [claims-made-and-reported] policy constitutes an unbargained-for expansion of coverage, *gratis*, resulting in the insurance company's exposure to a risk substantially broader than that expressly insured against in the policy. Obviously, such an expansion in the coverage provided by [claims-made-and-reported] policies would significantly affect both the actuarial basis upon which premiums have been calculated and, consequently, the cost of [claims-made-and-reported] insurance. So material a modification in the terms of this form of insurance widely used to provide professional liability coverage both in this State and throughout the country would be inequitable and unjustified. The [notice-prejudice] doctrine .. [has] no application whatsoever to a [claims-made-and-reported] policy that fulfills the reasonable expectations of the insured with respect to the scope of coverage. n33

Several courts and commentators have questioned the emphasis some courts place on the location of the reporting requirement in a claims-made-and-reported insurance contract. n34 The *Root* court noted that "*just because* something is mentioned in an insuring clause does not *necessarily* mean that it goes to the scope of basic coverage provided by the insurance policy." n35 The court, instead, found the reporting requirement a condition precedent to coverage and, therefore, excusable under equitable doctrines. n36 The court found "the reporting condition in *Root's* policy here does *not* go to basic coverage but quacks, walks, looks and functions like a condition, not an element of the fundamental risk insured." n37 The court nevertheless rejected application of the notice-prejudice rule to a claims-made-and-reported policy because such application, in the court's opinion, would "convert the policy into a pure claims made policy, and therefore give the insured a better policy than he paid for." n38

Most courts reject application of the notice-prejudice rule to claims-made-and-reported policies because such application provides the insured with a better policy than that for which it bargained. This reasoning, however, cannot apply to a pure claims-made policy. A pure claims-made policy requires only that the policyholder receive a claim during the policy period, and that the insured provide notice of such claim "as soon as practicable." Application of the notice-prejudice rule does not expand coverage under a pure claims-made policy any more than it expands coverage under an occurrence policy.

The notice requirement in a pure claims-made policy serves exactly the same purposes as the notice requirement in an occurrence policy. The notice requirement, again, protects an insurer's interests in properly investigating a claim. Unless untimely notice prejudices the insurer's investigatory interests, it should not serve to forfeit coverage. While this reasoning appears straightforward enough, more than a few courts fail to grasp it.

COURT DECISIONS-THE GOOD, THE BAD, AND THE UGLY. Some courts sow confusion, and create bad law, by loosely employing the phrase "claims-made policy" and, more importantly, by failing to distinguish between a claims-made policy and a claims-made-and-reported policy. n39 At least one court found the notice-prejudice rule inapplicable to a pure claims-made policy under an analysis relevant only to a claims-made-and-reported policy. n40 In

Federal Insurance Co. v. CompUSA, Inc., n41 the court considered coverage under a pure claims-made policy sold by Federal Insurance Company. n42 The policy contained no reporting requirement, but only the standard notice provision requiring "written notice as soon as practicable." n43

The Federal policy inceptioned on December 16, 1998 and terminated on March 1, 2000. n44 In January 2000, the insured CompUSA received a complaint for breach of a joint venture agreement. n45 CompUSA answered the complaint in March 2000, but did not notify Federal of the claim, believing it frivolous. n46 In February 2001, a jury returned a verdict against CompUSA and its officer co-defendants for \$90 million, plus \$175 million in exemplary damages against one of the officers. n47 CompUSA, six days later, notified Federal of the claim. n48

Federal filed a declaratory judgment action against CompUSA and its officers, asserting no obligation to cover the insureds' losses because they failed to notify Federal of the claim "as soon as practicable" and because the untimely notice prejudiced Federal in investigating, defending and possibly settling the claim. n49 The court, however, never considered Federal's prejudice assertion, holding instead that "[b]ecause notice of a claim or potential claim defines coverage under a claims-made policy, we think the notice provisions of such a policy should be strictly construed." n50 The court's incorrect analysis led it to conclude Federal need prove no prejudice to escape coverage on late notice grounds. n51 The court, in effect, inserted a reporting requirement into a pure claims-made policy and converted the policy into a claims-made-and-reported policy. The court, in short, granted a decidedly unbargained for benefit to the insurer. n52

On the other end of the spectrum, some courts have applied the notice-prejudice rule to claims-made-and-reported policies. In *Village Escrow Co. v. National Union Fire Insurance Co.*, n53 the court applied the notice-prejudice rule to a policy that provided, as part of the insuring agreement, that the insurer would cover claims "first made against the insured and reported to the company during the policy period." n54 The underlying plaintiffs there filed an action against the insured (Village Escrow) during the policy period but failed to serve the insured until more than one year after the policy expired. n55 The insured then reported the claim to its insurer, who denied coverage based on late notice. n56

The court first noted it dealt with a particularly restrictive type of claims-made policy, which required that the claim against the insured, the reporting of the claim to the insurer, and the act or omission giving rise to the claim all occur during the one-year policy period. n57 The court then disregarded the commonly made distinction between a reporting requirement incorporated within a policy's insuring clause and a notice provision contained among a policy's conditions: "It would elevate form over substance to hold that a reporting requirement was subject to the 'notice-prejudice' rule if located in a separate clause of the insurance contract, but immune from that rule if placed in the same clause with other conditions defining the insurance company's liability under the policy." n58

The appeals court concluded that because placement of the notice requirement bears no relevance to its analysis, and because the late notice arose from no fault of the insured, the insurer could not escape coverage absent a showing of prejudice. n59 The court held "[t]he 'notice-prejudice' rule absolves insureds even when they are negligent or lazy. A fortiori, it absolves them when they are diligent but unaware of a secret claim." n60

Courts steering the middle course apply the notice-prejudice rule to pure claims-made policies but not to claims-made-and-reported policies. The policy in *Pension Trust Fund for Operating Engineers v. Federal Insurance Co.*, n61 provided coverage for "claims first made against the Insured during the Policy Period," and required that the insured, "as a condition precedent to [coverage], give the [insurer] notice as soon as practicable in writing of any claim made against it." n62 The court understood completely the difference between a pure claims-made policy and a claims-made-and-reported policy: n63 "The notice provision in a general claims made policy, as in an occurrence policy, often requires notice 'as soon as practicable.' This serves to 'facilitate the timely investigation of claims by bringing an event to the attention of the insurer and allows an inquiry 'before the scent of factual investigation grows cold.'" In contrast, in a claims-made-and-reported policy, notice is the event that actually triggers coverage. Because PTF's policy did not contain a reporting requirement, the notice prejudice rule applies." n64 The court remanded the

matter with instructions that the factfinder determine: (1) whether the insured provided untimely notice; and (2) if so, whether the insurer proved prejudice from the delay. n65

The Texas Supreme Court recently added another nuance to this issue in *Prodigy Communications Corp. v. Agricultural Excess & Surplus Insurance Co.* n66 The claims-made policy there required, "as a condition precedent" to coverage, that the insured "give notice of a claim to its insurer as soon as practicable . . . but in no event later than ninety (90) days after the expiration of the Policy Period or Discovery Period." n67 The insured gave notice of a claim more than one year after being served, and after expiration of the policy period, but within the defined reporting period. n68 The insurer argued, and the lower courts agreed, the insured could secure no coverage because it failed to provide notice "as soon as practicable." n69

The Texas Supreme Court reversed. Because of the definite notice period, the court treated the policy as a claims-made-and-reported policy. n70 The court then found the insured had reported the claim to the insurer within the policy's reporting period and, for that reason, concluded the insurer "was not denied the benefit of the claims-made[-and-reported] nature of its policy." n71 The court held that when the policyholder reports a claim to the insurer within the policy period or other defined reporting period, failure also to provide notice " 'as soon as practicable' will not defeat coverage in the absence of prejudice to the insurer." n72

Whereas other courts have treated pure claims-made policies as occurrence policies for purposes of the notice-prejudice rule, the *Prodigy* court has treated a claims-made-and-reported policy as an occurrence policy, for purposes of the notice-prejudice rule, when the insured satisfies the policy's reporting requirement. When an insured, under a claims-made-and-reported policy, reports a claim within the policy's time limits, the separate notice requirement will not result in a forfeiture of coverage unless the insurer proves appreciable prejudice resulting from the insured's failure to provide notice as soon as practicable. This common sense approach recognizes the distinction between the reporting requirement unique to claims-made-and-reported policies and the notice provision common to all claims-made and occurrence-based policies.

CONCLUSION. Courts have struggled with application of the notice-prejudice rule to the claims-made family of liability policies. The struggle ends when courts grasp the distinction between the general requirement that the insured provide notice of a claim "as soon as practicable" and the unique, coverage-restricting reporting requirement found only in claims-made-and-reported policies.

n15 *Id.*

n16 *Esmailzadeh*, 869 F.2d at 425 (stating that courts are "entirely justified in attaching no consequences to the insured's breach of the [notice provision in an occurrence policy], in circumstances where the breach caused no damage to the insurer").

n17 The most notable, and notorious, exception had been in New York, where the common-law rule remains that an insurer need not prove prejudice to prevail on a late notice defense. See *Argo Corp. v. Greater N.Y. Mut. Ins. Co.*, 827 N.E.2d 762, 765 (N.Y. 2005); *Unigard Sec. Ins. Co. v. N. River. Ins. Co.*, 594 N.E.2d 571, 573 (N.Y. 1992); *Sec. Mut. Ins. Co. v. Acker-Fitzsimmons Corp.*, 293 N.E.2d 76 (N.Y. 1972). However, New York's common-law rule has been abrogated by statute for policies incepting as of January 19, 2009. See N.Y. Ins. L. § 3420(a). Other jurisdictions adhering to some form of a no-prejudice rule include the District of Columbia (see *Greycoat Hanover F Street Ltd. P'ship v. Liberty Mut. Ins. Co.*, 657 A.2d 764 (D.C. Ct. App. 1995)), Idaho (see *Viani v. Aetna Ins. Co.*, 501 P.2d 706 (Idaho 1972), overruled in part on other grounds, *Sloviaczek v. Estate of Puckett*, 565 P.2d 564 (Idaho 1977)), Nevada (see *State Farm Mut. Auto. Ins. Co. v. Cassinelli*, 216 P.2d 606 (Nev. 1950)), and Virginia (see *State Farm Fire & Cas. Co. v. Walton*, 423 S.E.2d 188 (Va. 1992)). See generally 1 *Ostrager & Newman* § 4.04. Courts in these jurisdictions generally maintain that a policy's notice provision constitutes a condition precedent to coverage, and, as such, a breach thereof results in a forfeiture of the benefits of the agreement. See, e.g., *Greycoat Hanover F Street Ltd. P'ship*, 657 A.2d at 768; *Walton*, 423 S.E.2d at 192; *Acker-Fitzsimmons*, 293 N.E.2d at 78.

n19 See, e.g., *Grinnell Mut. Reinsurance Co. v. Jungling*, 654 N.W.2d 530, 541-42 (Iowa 2002); *Ferrando v. Auto-Owners Mut. Ins. Co.*, 781 N.E.2d 927 (Ohio 2002).

n20 See *Ferrando*, 781 N.E.2d at 936.

n21 See, e.g., *Nationwide Mut. Ins. Co. v. Starr*, 575 A.2d 1083 (Del. 1990); *Cooper v. Government Employees Ins. Co.*, 237 A.2d 870, 874 (N.J. 1968).

n22 See *Cooper*, 237 A.2d at 874; see also *Gazis v. Miller*, 892 A.2d 1277 (N.J. 2006) (applying *Cooper* principles to CGL occurrence-based policy).

n23 *Cooper*, 237 A.2d at 874.

n24 *Id.* (footnotes omitted).

n25 See *Pension Trust Fund for Operating Eng'rs v. Fed. Ins. Co.*, 307 F.3d 944, 955-56 (9th Cir. 2002); *Textron*, 639 A.2d at 1361 n.2. A typical claims-made policy provides that the insurer "shall pay on behalf of the Insured all sums . . . which the Insured shall become legally obligated to pay as damages as a result of Claims first made against the insured during the policy period." *United States v. A.C. Strip*, 868 F.2d 181, 188-89 (6th Cir. 1989) (typography altered).

n26 See *Pension Trust Fund for Operating Eng'rs*, 307 F.3d at 955-56; *Textron*, 639 A.2d at 1361 n.2; see also *Fed. Deposit Ins. Corp. v. St. Paul Fire & Marine Ins. Co.*, 993 F.2d 155, 158 (8th Cir. 1993) (discussing claims-made-and-reported policy, though referring to policy simply as "claims-made"). A typical claims-made-and-reported policy provides that the insurer "shall pay on behalf of the insured . . . all sums which the insured shall become legally obligated to pay as Damages as a result of Claims first made against the insured and reported to the Company during the Policy Period[.]" *A.C. Strip*, 868 F.2d at 185 (typography altered).

n27 *Root*, 130 Cal. App. 4th at 946.

n28 *Id.* This trade-off for a lower premium can become a huge problem when a policyholder receives a claim on the last day, or even during the last hours, of a policy period and, under such circumstances, finds it nearly impossible to timely report the claim to the insurer. Under such eleventh-hour circumstances, some courts apply equitable or contract principles to preserve coverage. See, e.g., *id.* at 948 (applying equitable principle that

condition of contract can be excused where it works a forfeiture when insured was not offered extended reporting period); *see also Cast Steel Prods., Inc. v. Admiral Ins. Co.*, 348 F.3d 1298 (11th Cir. 2003) (finding extended reporting period that applied when policy was cancelled or terminated ambiguous as applied to renewal of policy, and construing in favor of insured who reported claim within first hours of renewal policy, but hours after expiration of policy in effect when claim was first made against insured, and during which reporting of claim to insurer was required absent extended reporting period), *cert. denied*, 541 U.S. 1072 (2004). Other courts are less merciful. *See, e.g., Dolan, Fertig & Curtis*, 433 So. 2d at 516 (rejecting argument that public policy required contract be reformed to include extended reporting period when insured had opportunity to purchase such period but declined to do so). In *Catholic Medical Center v. Executive Risk Indemnity, Inc.*, 867 A.2d 453, 455 (N.H. 2005), the insured forwarded notice of several claims to its insurer by overnight delivery on the day the policy expired, but the insurer did not receive the notices until the day after policy expiration. The court, not faced with a situation in which the insured received notice of the claim at the last minute, and thus deferring that issue, construed the requirement that the insured "give notice" to mean that the insurer must actually receive notice within the policy period, and found no coverage. *Id.* at 458-59. Most claims-made carriers, for an added premium, will offer policyholders an extended reporting period to allow reports of such last minute claims. *See supra* note 7.

n29 A typical notice provision, found in the conditions section of the policy, reads: "As a condition precedent to the right of protection afforded by this insurance, the insured shall, as soon as practicable, give written notice of any Claim against the insured to the Company's agent or to the Company at [address]." *A.C. Strip*, 868 F.2d at 186 (emphasis omitted).

n30 The ambiguity argument has prevailed in cases involving "claims-made" policies that define a "claim" as being made on the date it is reported to the insurance company. *See St. Paul Fire & Marine Ins. Co. v. House*, 554 A.2d 404, 407-09 (Md. 1989); *accord Thoracic Cardiovascular Assocs., Ltd. v. St. Paul Fire & Marine Ins. Co.*, 891 P.2d 916, 924-26 (Ariz. Ct. App. 1994) (Contreras, J., dissenting). These policies differ in form from the typical claims-made-and-reported policies that include a reporting requirement as part of the coverage grant, *see House*, 554 A.2d at 408, but the two types of policies both provide coverage only for a claim made and reported during the policy period. *But cf. A.C. Strip*, 868 F.2d at 186 (holding notice and reporting provisions in same claims-made-and-reported policy did not render policy ambiguous).

Interestingly, New York regulations define a claims-made policy as a policy that "covers liability . . . [only when] the claim is first made during the policy period . . .," N.Y. Comp. Codes R. & Regs., tit.11, § 73.1(a), and further provide that "[a] claim will be deemed first made when the insurer receives written notice of [the] claim." *Id.* § 73.3(a). The New York regulations define a claim in terms of its *reporting* to the insurer; i.e., they subsume the reporting requirement into the definition of "claim" itself. No claim exists, therefore, until the insured reports it to the insurer. For that reason, New York prohibits authorized insurers in that State from issuing standard "claims-made-and-reported" policies, because such policies "impose[] additional reporting requirements not permitted under the statute." N.Y. Ins. Dep't, Office of General Counsel, *Opinion Re: Claims Made and Reported Policies* (July 31, 2003).

n31 *Textron*, 639 A.2d at 1364 (citations omitted).

n32 *A.C. Strip*, 868 F.2d at 186-87.

n33 *Zuckerman*, 495 A.2d at 406.

n34 *Root*, 130 Cal. App. 4th at 942 (quoting *Slater v. Lawyers' Mut. Ins. Co.*, 227 Cal. App. 3d 1415, 1429 (1991) (Johnson, J., dissenting)).

n35 *Id.* at 943.

n36 *Id.* at 943-48. Although the *Root* court found in favor of the insured, it did so by applying the equitable doctrine of excuse that causes a forfeiture, and not by imposing the notice-prejudice rule on a claims-made-and-reported policy.

n37 *Id.* at 943.

n38 *Id.* at 947.

n39 See, e.g., *Zuckerman*, 495 A.2d 395 (declining to apply prejudice rule to claims-made-and reported policy which the court consistently refers to as a "claims-made" policy); cf. *Gazis*, 892 A.2d at 1280 (clarifying that *Zuckerman* holding applies to claims-made-and-reported policy). See also *FDIC v. St. Paul*, 993 F.2d 155 (addressing and discussing claims-made-and reported policy but referring to policy throughout opinion as "claims-made" policy); *DiLuglio*, 959 F.2d 355 (referring to claims-made-and-reported policy as "claims-made" policy throughout opinion but holding that no prejudice was required based on reporting requirement); *Pizzini v. Am. Int'l Specialty Lines Ins. Co.*, 210 F. Supp. 2d 658 (E.D. Pa. 2002) (same); *City of Harrisburg v. Int'l Surplus Lines Ins. Co.*, 596 F. Supp. 954 (M.D. Pa. 1984) (same), *aff'd*, 770 F.2d 1067 (3d Cir. 1985); *Hasbrouck*, 511 N.W.2d 364 (same). Insurers often seize on such careless language, and the ambiguity it engenders, to expand a court's holding beyond the court's intent.

n40 *Federal Ins. Co. v. CompUSA, Inc.*, 239 F. Supp. 2d 612 (N.D. Tex. 2002).

n41 239 F. Supp. 2d 612 (N.D. Tex. 2002).

n42 See *id.* at 613, 615. The policy provided, in pertinent part, that the insurer "shall pay on behalf of each of the Insured Persons all Loss for which the Insured Person is not indemnified by the Insured Organization and which the Insured Person becomes legally obligated to pay on account of any Claim first made against him, individually or otherwise, during the Policy Period" *Id.* at 615.

n43 *Id.*

n44 *Id.* at 613.

n45 *Id.* at 614.

n46 *Id.*

n47 *Id.* Both CompUSA and its officers were insureds under the Federal policy. *Id.* at 613.

n48 *Id.* at 614.

n49 *Id.*

n50 *Id.* at 615.

n51 *Id.* at 617.

n52 The cases on which the *CompUSA* court relied amplify its confusion. None involve a pure claims-made policy. *FDIC v. Barnham*, 995 F.2d 600 (5th Cir. 1993), cited by *CompUSA*, 239 F. Supp. 2d at 616, involved a claims-made-and-reported policy (applying Louisiana law). The *CompUSA* court actually recognized that *Barnham* dealt with a different type of claims-made policy, but adopted *Barnham*'s reasoning nevertheless under purportedly "settled principles of Texas law." *Id.* The *CompUSA* court also relied on *Matador Petroleum Corp. v. St. Paul Surplus Lines Ins. Co.*, 174 F.3d 653 (5th Cir. 1999), which applied Texas law to a pollution endorsement in a commercial general liability policy that contained a 30-day reporting requirement. *Yancey v. Floyd West & Co.*, 755 S.W.2d 914 (Tex. Ct. App. 1988), cited by *CompUSA*, 239 F. Supp. at 617, involved a claims-made policy that defined covered "claims" as those reported to the insurer; in effect, a claims-made-and-reported policy. See *supra* note 30.

n53 248 Cal. Rptr. 687 (Cal. Ct. App. 1988), *op. withdrawn*, No. S006699, 1988 Cal. LEXIS 231 (Cal. Oct. 13, 1988) (previously published at 202 Cal. App. 3d 1309).

n54 *Id.* at 689 (italics removed).

n55 *Id.*

n56 *Id.*

n57 *Id.* at 690-91. The New Jersey Supreme Court has found such a restrictive policy unenforceable on public policy grounds. See *Sparks v. St. Paul Ins. Co.*, 495 A.2d 406, 414-16 (N.J. 1985), cited by *Village Escrow*, 248 Cal. Rptr. at 690-91.

n58 *Village Escrow*, 248 Cal. Rptr. at 692. This reasoning echoes that adopted by the California Court of Appeals in *Root*. The *Root* court, however, declined to apply the notice-prejudice rule, arguing it would convert a claims-made-and-reported policy into the less expensive pure claims-made policy. *Root*, 130 Cal. App. at 943-48. See *supra* note 38 and accompanying text. The *Root* court, instead, applied the equitable doctrine of excuse of a condition that works a forfeiture. *Id.*

n59 *Village Escrow*, 248 Cal. Rptr. at 694.

n60 *Id.* The court gave additional grounds for its holding. The cover page of the policy declared it to be a "claims made" policy, and not specifically a claims-made-and-reported policy, which made the very nature of the policy ambiguous. *Id.* at 694 n.4. See also *Lexington Ins. Co. v. Rugg & Knopp, Inc.*, 165 F.3d 1087 (7th Cir. 1999) (literally construing Wisconsin statute that applied notice-prejudice rule to "[e]very liability insurance policy" to apply to claims-made-and-reported policy); *Sherlock v. Perry*, 605 F. Supp. 1001 (E.D. Mich. 1985) (applying Michigan notice statute to claims-made-and-reported policy); *Stine v. Cont'l Cas. Co.*, 315 N.W.2d 887 (Mich. Ct. App. 1982) (same), *rev'd*, 349 N.W.2d 127 (Mich. 1984).

n61 307 F.3d 944 (9th Cir. 2002).

n62 *Id.* at 956.

n63 See *id.* at 955-57.

n64 *Id.* at 956-57 (citations omitted).

n65 *Id.* at 957. See also *Maynard v. Westport Ins. Co.*, 208 F. Supp. 2d 568, 574 (D. Md. 2002) (holding notice-prejudice statute did not apply to claims-made-and-reported policy at issue, and stating statute did apply to "true 'claims made' policies"), *aff'd*, 55 Fed. App'x 667 (4th Cir. 2003); *Hardwicke Recycling & Salvage, Inc. v. Acadia Ins. Co.*, 869 A.2d 82, 84, 96 (Vt. 2004) (holding notice-prejudice rule applied to commercial general liability policy that provided coverage for certain claims "*first made against any insured . . . during the policy period*").

McCarter & English LLP on Covering the Green Roof -- With Insurance

By J. Wylie Donald and Jocelyn Gabrynowicz Hill

August 21, 2009

SUMMARY: The City of Toronto just enacted North America's first ordinance mandating the installation of a green roof on new construction commercial and industrial buildings greater than a certain square footage. Green roofs are sprouting in numerous other jurisdictions. A key question that must be answered is: how will they be insured? The answer may not be identical to the coverage response for a traditional roof.

ARTICLE: INTRODUCTION. In the short story, *The Oranging of America*, Max Apple chronicles in a small way the presence of the Howard Johnson restaurants' trademark orange roofs. n1 Hard, impervious, anything-but-natural, these constructions have little in common beyond their fundamental purpose with the new color of roofs: green. "Green roofs" in turn are not classified by their color. Instead it is their attributes -- energy efficient, run-off reducing, pollutant absorbing, habitat creating, among others n2 -- that earn the green appellation.

Green roofs are becoming increasingly popular in light of the groundswell of interest in "green building" and sustainability. Many building owners, developers and investors are increasingly focused on participating in this trend (whether for principled or monetary reasons). Standards are developing such as those prepared by the American Society for Testing and Materials n3 and the U.S. Green Building Council ("USGBC"). One of the most significant is the USGBC's LEED Green Building Rating System. n4 Green roofs and other energy-efficient and low-resource-impact features can be part of the LEED system.

This commentary looks at green roofs from an insurance perspective. First, the commentary describes the nature of a green roof and catalogs potential problems that may occur with roofs generally and green roofs in particular. Next, the commentary considers the role of insurance in the context of traditional roof problems and extrapolates from those ideas to a discussion of how a claim concerning a green roof problem (including the effect of LEED standards) might be addressed.

WHAT IS A GREEN ROOF? Green roofs, also known as vegetative roofs, have evolved considerably from the sod and bluestem grass constructions common on the American prairie in the 19th century. n5 They have been

popularized recently in North America as part of the trend toward green building and sustainability. Indeed, Toronto just enacted the first municipal law mandating the construction of green roofs. n6

A green roof is more than a collection of planters located on a roof. Simply stated, a green roof is a construction of growing medium and plants added on top of a traditional, modified roofing system. n7 It includes:

- plants (limited in variety in some cases, in other cases diverse);
- a growing medium (not necessarily including soil);
- a fabric layer (to contain roots and the growing medium but permitting drainage of water);
- a drainage layer;
- a roofing membrane;
- insulation; and
- the roof structure (reinforced as necessary). n8

There are generally two types of green roofs: extensive and intensive. An extensive green roof is characterized by low weight and capital cost, minimal plant diversity, and reduced maintenance requirements and access. n9 The growing medium is generally less than six inches in depth. The roof micro-climate can be very dry and hot and the plant life, accordingly, must be low and hardy, such as species typically found in alpine, arid or semi-arid ecosystems. Maintenance visits are few for tasks such as inspections, application of fertilizer and limited weeding. n10

Intensive green roofs are the opposite. The depth of the growing medium is greater (up to two feet) and the roof costs substantially more. Because of the deeper soil depth, plant diversity can be greater, including trees and shrubs. n11 Maintenance is increased because the plants chosen require more tending (including watering and watering systems), but also because increased access (including visitors) puts more stress on the garden and the roof. n12

As may be obvious, a significant structural effect of green roofs derives from the soil depth and its accompanying weight when saturated with water. Extensive green roofs may have saturated media weight between 16 and 35 pounds per square foot; intensive roofs may be six times that. n13 Moreover, the additional loads from a green roof are located at the top of a building and may increase the design stresses that a building must support under earthquake and wind loads. These added stresses may require additional structural strength necessitating the use of steel or concrete or other strength components throughout the entire structure.

ROOF CLAIMS. That roofs can be problematic is not to be doubted. A case that catalogs many of the things that can go wrong arose in Delaware out of repairs to the roof of an anchor tenant at a shopping mall and subsequent leakage. In *Jardel Co., Inc. v. Lakewood Builders, Inc.*, n14 the Delaware Superior Court provided substantial detail on roof construction and the contracting, retention, supervision and technique that went into a repair, and the repair of the repair.

It should not be surprising that, as comprehensive and detailed as it is, the *Jardel* case does not catalog all the sources of problems that can arise with a roof and its repair. But it is a very good start. To distill it:

1. defective specifications;
2. unqualified contractors;
3. inadequate information regarding the design and condition of the roof;
4. negligent performance by the roofing contractor;
5. unavailability of materials;
6. resulting third-party damage;

7. defective conditions of the roof; and

8. weather delays. n15

All are in addition to the problems inherent in the passage of time with a properly constructed roof: leakage at joints, flashing, substrate, membrane, expansion joints, and penetrations.

When an extensive or intensive green roof is built there are several new systems that need to be combined on the roof, including structural support for the additional weight of plants, growing medium and water, watering systems, drainage systems, additional access and, of course, a living ecosystem of growing plants. Any of these can, for one reason or another, go wrong. But the potential problems go beyond that. Additional access provides more risks that something will be jarred loose, punctured, or deformed so that the watertight integrity of the roof is compromised. More significantly, the tons of dirt or other growing medium may obscure the condition of the roof potentially making punctured membranes, loose flashing or failed seals difficult to locate. This has the effect of allowing leakage to proceed longer before identification of the source and also increases the cost of repair. n16

COVERAGE FOR ROOFS. Regardless of the catalogue of potential new problems associated with green roofs, green roof coverage claims are likely to be analogous to traditional roof claims. In other words, we are likely to see an incremental shift in some regards, but not whole-scale change. Only time will tell whether this prediction is correct, as there have not yet been many claims associated with green buildings. Indeed, according to the insurance companies surveyed by Marsh in its 2008 report, there has only been one claim to date arising from a vegetative roof. The controversy involved a claim against a building's architect and structural engineer due to water infiltration into the building from the green roof. n17 That this is the first claim to have emerged is not surprising. Leaking is a common problem for all kinds of roofs, not to mention vegetative roofs, which incorporate water into the design.

The roof claim in the Marsh report likely involves claims of negligent design and construction under a commercial general liability ("CGL") policy or a professional liability/errors and omissions policy. Losses involving green roof problems may fall within the coverage provided by property policies as well. n18

Cause and Concurrent Causation. Disputes between policyholders and insurers over green roof problems will likely follow the current roof insurance claim patterns and policy analysis. For example, if an owner is seeking coverage for a leaking roof under a property policy, there are two main threshold questions: is there property damage, and, if so, was the property damage caused by a risk covered by the policy?

A typical property policy covers "direct physical loss of or damage to Covered Property caused by or resulting from any 'covered cause of loss.' " n19 The covered risks are either enumerated ("named peril" policies) or described as "all risk," by which the carrier covers all risks except those that are specifically excluded. n20

In a leaking roof case, it is pretty clear that there is "property damage" as the term is commonly understood and as it is defined in a typical policy. Thus, the inquiry tends to focus on whether there was a covered "cause" of loss. Oftentimes there may be more than one asserted cause leading to analysis of concurrent causation under the applicable policy.

The coverage grant in an insurance policy is always followed by various excluded causes of loss (often referred to as "excluded perils") and other specific exclusions. There are a number of standard exclusions which insurance companies are likely to raise which may be particularly pertinent to green roofs. In property policies, for example, there are typically exclusions for "wear and tear" and "deterioration," n21 as well as "defective design" or "defective construction." n22 Thus, an insurance company will argue that even though there is property damage, namely, the leaky roof and the damp, discolored or moldy building interior, there is no coverage because the leaky roof was caused by defective design, or faulty workmanship, or deterioration, which is excluded under the policy. Courts in such instances engage in a causation analysis.

To illustrate, despite an exclusion for "faulty workmanship" the court in *Driscoll v. Providence Mutual Fire Insurance Co.*, n23 found that the insureds' policy provided coverage where the damage to the roof in question was caused by a combination of both faulty workmanship, which was excluded, and by weight of ice and snow, which was not excluded. In that case, the policyholders discovered damage at one of their rental properties during an inspection in preparation for a new tenant, including outward-leaning outside walls, ceiling cracks, a two-inch drop in the roof, and other problems. The owners submitted a claim to their insurance company under their "all risk" policy. The insurance company denied the claim on the basis of its expert's opinion that the damage was caused by faulty roof design, a cause that was excluded from coverage under the terms of the insurance policy. The property owners hired their own engineer, who inspected the house and determined that faulty design had combined with the weight of snow from the prior winter to cause the property damage. n24

The owners had purchased an all risk policy, which broadly covered all risk of direct physical loss unless the loss was excluded. The weight of ice and snow was a covered cause of loss which was not excluded under the policy. n25 However, the policy also contained an exclusion for faulty work. Finally, the policy contained the following provision: "[w]e will not pay for loss or damage caused by or resulting from any of [the excluded causes of loss]. But if loss or damage by a 'covered cause of loss' results, we will pay for that resulting loss or damage." n26

The court found that both faulty design and the weight of snow and ice concurrently caused the damage. Because the damage was caused by both a covered and an excluded "cause of loss," the court found that the covered cause of loss trumped, and the faulty design exclusion did not bar coverage. n27

One can imagine similar concurrent causation issues arising around a green roof. For example, if the roof drains are inadequately sized and overwhelmed by torrential rains with resultant flooding of the green roof and structural damage to the roof because of the extra weight, can the property owner find coverage under his property policy, or must he seek recourse from his architect or builder under their malpractice policies? The answer undoubtedly will depend on the specific terms of the owner's policy and the specifics of the particular claim. What is not as idiosyncratic, however, is the need for the property owner to anticipate such problems and thoughtfully to address them so that the first time he is considering his insurance situation is not while the water is pouring in through the ceiling. Because many of the risks associated with green buildings and green roofs emanate from design-related services, we are likely to see concurrent causation as a repeated theme in the green build context.

"Green" Features May Go Beyond Aesthetics. Although in some instances green roof claims will follow the current roof insurance claim patterns and policy analysis, in light of the unique nature of the green roof, especially within the context of a LEED certified building, we may see some new twists on prior results. One old coverage battleground which may yield some new results is the question of what constitutes "property damage." Something a court considered as merely "aesthetic" -- and not property damage -- under the traditional rubric, may be transformed into something entirely different in the green building context.

For example, under the traditional rubric, if a builder installs the wrong colored shingles on a building, the carrier may assert there is no "property damage" -- the roof just does not look as it should. The result in *Down Under Masonry, Inc. v. Peerless Insurance Co.*, n28 illustrates this principle. In that case, a contractor building a new garage for a homeowner hired a subcontractor to install shingles on the roof of the garage. The subcontractor purchased and installed eastern grade B white cedar shingles instead of the western blue label red shingles that the contract required. The white shingles were different in color than the red shingles on the owners' nearby house, and were of inferior quality. n29 The owners sued the contractor, who in turn tendered the claim to its liability insurer. The contractor's insurance company denied coverage, refusing to defend or indemnify the contractor on the basis that there was no property damage. The court agreed with the insurance company, affirming the lower court's no-coverage ruling on the basis that no "physical injury" or "loss of use" occurred.

The policy in that case obligated the insurance company to pay those sums that the policyholder became legally obligated to pay as damages because of "property damage." The policy defined "property damage" as *physical injury to*

tangible property or the loss of use of tangible property that is not physically injured. n30

The subcontractor installed shingles that were of inferior quality and different in color from those specified in the original contract with the owners. "Nothing in the record, however, suggest[ed] that any physical defect existed in the shingle material used or in the manner in which the shingles were installed, or that the owners were unable to use their new garage as a result." n31 Accordingly, "[t]o find that the aesthetic impact on property value caused by the installation of inferior shingles equates to property damage would extend coverage beyond the contemplation of the parties." n32 The court thus declined to find coverage under the contractor's CGL policy for what the court viewed as aesthetic damage.

In the context of green buildings however, the color of a roofing material may be much more significant than mere aesthetics, and a court in the green-build context would likely reach a different result than the court in *Down Under Masonry*. According to LEED certification requirements, the color and grade of shingles has an impact on certification and the efficacy of the roof itself. For example, alternatives available under LEED to address the "heat island effect" permit a roof to be either a green roof, or covered with a material of Solar Reflective Index ("SRI") value of 29 or above for a steep-sloped roof, or 78 or above for a low-sloped roof. n33 The intent is to reduce the heat island effect by increasing the solar reflectivity of building materials. In general, lighter materials typically have a higher SRI than dark materials. Light materials reflect light, dark materials absorb light. Thus, the "wrong color shingles" would not be merely aesthetic, but would likely constitute property damage as the owner has lost the use of its roof to reflect sunlight. Two potential adverse consequences in this situation may be higher operational expenses due to higher heating loads on the building cooling system, as well as an impact on the building owner's ability to become LEED certified at a targeted level, due to the loss of LEED accreditation points from the use of nonconforming materials.

Improvements Required by Code. Attendant with the increasing public awareness of issues such as climate change, there has been a surge in demand for green buildings. The green building discourse has reached such a level that an increasing number of municipalities have enacted green building ordinances. As noted above, Toronto became the first city in North America to adopt an ordinance requiring green roofs on new construction buildings. But it is not alone in addressing the place of green buildings in the municipal skyline. A publication by the U.S. Green Building Council identifies 198 localities that have enacted LEED initiatives. n34 An interesting question arises where a covered peril damages a building without a green roof and missing other LEED features, but the local code requires rebuilding to include a green roof or otherwise incorporate green building attributes, including LEED certification. Would there be coverage for those improvements?

One of the often unanticipated consequences of any disaster is the cost of replacement of non-conforming structures with those that conform to code. Many policies contain exclusions for those costs. For example:

We will not pay for loss or damage caused directly or indirectly by any of the following: Such loss or damage is excluded regardless of any other cause or event that contributes concurrently or in any sequence to the loss. a. Ordinance or Law The enforcement of any ordinance or law: (1) Regulating the construction, use or repair of any property; .. n35

But by the same token, coverage extensions are available that put this coverage back in.

In the event of damage by a Covered Cause of Loss to a building that is Covered Property, we will pay the increased costs incurred to comply with enforcement of an ordinance or law in the course of repair, rebuilding or replacement of damage of that property, subject to the limitations stated ... n36

However, even in circumstances where an "ordinance or law" exclusion is not neutralized with an extension, policyholders may still prevail on coverage for increased code-required costs.

To predict how a court might deal with this replacement issue for a green roof, we can extrapolate from an analogous case, *Royal Cloud Nine, L.L.C. v. Lafayette Insurance Co.*, set in the Vieux Carre, the historic district of New Orleans. n37 During Hurricane Katrina, the historic Latrobe building was damaged by the storm. The building was on the National Register of Historic Places, and carried the Vieux Carre Commission's highest historical and architectural rating: "purple". The Vieux Carre Commission requires that the roofs of purple-rated structures be replaced with natural slate as opposed to materials of lesser quality. n38 The inspector hired by the insurance company prepared a roofing estimate for inferior slate valued at only a fraction of the price of the requisite natural slate. The policyholder filed suit against the insurance company seeking, among other things, the replacement cost of the roof using the natural slate.

Although it secured coverage at the trial level, on appeal the policyholder contended that the trial court erroneously failed to find the insurance company liable for the increased cost of replacing the roof with natural slate as required by the Vieux Carre Commission. The insurance company argued against the increased replacement cost on the basis that the ordinance or law exclusion in its policy precluded replacement cost coverage of the roof. n39

The insurance policy provided for the replacement costs in "the amount you actually spend that is necessary to repair or replace the lost or damaged property." n40 The court found that Hurricane Katrina caused the damage to the policyholder's roof, not the enforcement of the Vieux Carre Commission requirements and that replacement at the "purple" level was "necessary." Accordingly, the court awarded the policyholder an additional 62,400 to replace the roof with natural slate. n41

Green building ordinances often require that any new construction or renovation over a certain square footage must attain LEED certification or otherwise meet certain efficiency or sustainable attribute requirements. Toronto's new green roof ordinance, for example, requires that "[e]very building or building addition constructed after January 30, 2010 with a Gross Floor Area of 2,000 square metres or greater shall include a Green Roof." n42 If a Toronto building is destroyed by fire and the owner intends to rebuild, the owner is actually required by law to rebuild the structure to a more costly standard, much like the Latrobe building in *Royal Cloud Nine* was required to conform to specific, more expensive standards applicable to historic buildings. An insurance company is likely to assert arguments against code-required increased costs, similar to those asserted in *Royal Cloud Nine*. Even with a law and ordinance exclusion, however, the carrier may not prevail.

Weather, Seasons and the Period of Restoration. To this point, we have addressed only coverage issues with respect to "property." A significant feature of most property policies, however, is the provision of coverage for the interruption of the insured's business. While a green roof may be used by a business directly with its clients (e.g., a therapeutic garden at a hospital or the setting of a restaurant), a more substantial role is the place of the green roof in the overall characterization of the building as "green" or "sustainable" or "LEED certified." If the green roof is, for example, integral to the marketing of a building or the amount of rent that can be obtained or the approval of a certificate of occupancy, then the time for the restoration of the roof may be critical.

Analysis of the "period of restoration" was central to one of the decisions rendered in the World Trade Center insurance dispute over coverage for the September 11 terrorist attacks. In *SR International Business Insurance Co., Ltd. v. World Trade Center Properties LLC*, n43 the insured sought to recover lost rents for the *actual* period of time it took to rebuild the replacement structure for the World Trade Center, rather than a *theoretical* amount of time to rebuild. The insured's policy provided that its insurers would "pay for the actual loss of ... Rental Value sustained by the Insured due to the necessary 'suspension' of the Insured's 'operations' during the 'period of restoration.'" n44 In turn, however, the "period of restoration" was defined as beginning on "the date and time of direct physical loss or damage" and ending on "[t]he date when the property *should* be repaired, rebuilt or replaced with reasonable speed and similar quality." n45

The court concluded that the insured's "actual period to rebuild" argument would require the court to read "should be repaired" as "would be repaired." Unfortunately for the insured the court did not agree with the insured's parsing of the language:

That certain terms could apply to both an actual and a hypothetical period does not mean that they do when other text, and context, and authority, and logic, prove that they do not. n46

Accordingly, the court found that the period of restoration was the theoretical period, rather than the actual time it would take to restore the facility.

The central feature of a green roof is its vitality: by definition, it has a "living" biological component integral to its design. Accordingly, the time to restore a green roof may not be as simple as counting up the number of days required to lay down a membrane, install a drainage system, spread some soil and plant some cuttings or lay some sod. The weather and seasons may be entirely determinative of what can be done. And if the green roof's viability matters to the conducting of the insured's business, then ensuring coverage for the full required period of restoration is essential.

CONCLUSION. There are no doubt numerous other aspects of insurance coverage that will apply to green roofs; results will often turn on nuances in the applicable policy and will always depend on the particular facts in issue. Policyholders and their brokers and insurers need to approach the insurance of a green roof by recognizing that while many of the coverage questions and their answers will be similar to what has transpired with traditional roofs, only a thoughtful examination of coverage focused on the green roof will deliver the policy that provides the coverage required.

Aylward on Allocating Indemnity Obligations in Long-Tail Environmental Claims: Boston Gas and the "Unavailability" Debate

By Michael Aylward

August 7, 2009

SUMMARY: The Massachusetts high court has ruled that long-tail claims should be allocated on a pure time on the risk basis whether or not insurance was unavailable to the policyholder for part of the time during which loss occurred. This enables insurers to argue around the country that pro rata allocation is appropriate in cases involving interstitial orphan shares and when insurance could not be acquired due to pollution and asbestos exclusions.

ARTICLE: INTRODUCTION. Fifteen years after it opened the door to allocation disputes by rejecting a "manifestation-only" trigger in *Trustees of Tufts University v. Commercial Union Ins. Co.*,ⁿ¹ the Supreme Judicial Court ruled on July 24, 2009 in *Boston Gas Co. v. Century Indem. Co.*,ⁿ² that an insurer's indemnity obligation for long-tail claims must be determined in proportion to the insurer's policy period as a fraction of the overall duration of the claimed injury. Most importantly, the Supreme Judicial Court has rejected any exception to this general rule for periods of time for which insurance is claimed to be "unavailable."

While *Boston Gas* treads familiar ground in rejecting the insured's "all sums/joint and several liability" theory, it has forged an entirely new path in rejecting the policyholder's claim that years of "unavailable" insurance should be ignored in calculating allocation shares. Further, as will be discussed in this commentary, it appears from the breadth of the court's rejection of an "unavailability" exception that Massachusetts policyholders with long-tail environmental claims will henceforth be responsible not only for interstitial orphan shares (*i.e.* missing policies, exhausted years, insolvencies, etc.) but also for years since 1986, when most insurers added mandatory asbestos and absolute pollution exclusions to their policies.

THE BOSTON GAS DISPUTE. The *Boston Gas* case concerned a manufactured gas plant in Everett, Massachusetts that was operated between 1908 and 1969. Contamination was discovered in 1995 and has since resulted in extensive clean up activity and litigation among potentially responsible parties ("PRPs").

In 2001, Boston Gas brought suit against Century Indemnity Company, whose predecessor was alleged to have

issued a series of primary liability insurance policies to Boston Gas between 1951 and 1969. Each of the confirmed policies was written excess of a self-insured retention. In this case Boston Gas assigned its entire claim to a 1966-1969 policy, which unlike its predecessors, had an unusually large limit of coverage (\$17 million) subject to a self-insured retention ("SIR") of only \$100,000. Century Indemnity brought in as third-parties other insurers, all of whom settled with Boston Gas before trial.

Following a three-week jury trial in the U.S. District Court in Boston in 2005, Judge Rya Zobelⁿ³ awarded Boston Gas \$6.13 million, the total amount of damages found by the jury minus a single \$100,000 SIR, and declared that Century Indemnity would also be liable for any and all future clean up costs subject to its \$17 million limit.ⁿ⁴ Prior to trial, Judge Zobel had rejected Century Indemnity's request that the allocation issue be certified to the Massachusetts Supreme Judicial Court declaring, that the Appeals Court's opinions in *Rubenstein*ⁿ⁵ and *Chicago Bridge*ⁿ⁶ made clear to her that Massachusetts follows "the 'all sums,' joint-and-several allocation method."

On appeal, Century Indemnity's request for certification to the Supreme Judicial Court was not acted on by the First Circuit and the case proceeded to oral argument in early 2008. On June 10, 2008, the First Circuit issued a lengthy opinion,ⁿ⁷ reversing significant aspects of Judge Zobel's trial rulings but concluding (belatedly) that Massachusetts law was so uncertain on allocation issues that certification to the Supreme Judicial Court was, indeed, warranted.

The certified questions were accepted for review by the Supreme Judicial Court and heard on January 9, 2009. Despite the fact that the court ordinarily issues opinions within four months, its 130-day deadline came and went without an opinion, prompting questions with respect to whether a division had arisen within the court (a court where dissents are relatively rare) or whether the court could not come to terms with an issue with such enormous implications beyond the bare facts before it.

THE BOSTON GAS HOLDING. On the crucial threshold question of "joint and several versus pro rata," Justice Robert Cordy, writing for a unanimous court, concluded that "pro rata allocation of losses is consistent with, if not compelled by, the most reasonable construction of the policies at issue here." The court pointed to language in the definition of "occurrence" and the Territory clause as limiting coverage to property damage "during the policy period." The court declared that the use of "during the policy period" in the definition of "occurrence" was intended to limit the scope of the policy's "ultimate net loss" coverage, observing that:

This limitation makes sense: property damage during the policy period triggers the Century policies, which then respond by providing coverage for liability attributable to the amount of property damage occurring during the policy period.

Echoing a rhetorical question that Chief Justice Marshall had posed to counsel for Boston Gas during oral argument, Justice Cordy summed up the view of the court:

[W]e doubt that an objectively reasonable insured reading the relevant policy language would expect coverage for liability from property damage occurring outside the policy period. Read as a whole, neither Century policy expressly makes or implies a promise to pay one hundred per cent of Boston Gas's liability for multi-year pollution damage occurring decades before or after the policy period. No reasonable policyholder could have expected that a single one-year policy would cover all losses caused by toxic industrial wastes released into the environment over the course of several decades. Any reasonable insured purchasing a series of occurrence-based policies would have understood that each policy covered it only for property damage occurring during the policy year.

Having determined that pro rata should be the rule, the court turned to the second certified question, which asked it to determine exactly how pro allocation should work. As between an *Owens-Illinois*' "weighted shares" approach that takes policy limits into account and a pure "time on the risk" approach, that assigns an equal share to each share in which loss occurred, the court chose the latter. Further, in defining the period of "time on the risk," the court expressly declined to make an exception for years for which insurance was claimed to have been unavailable for such risks.

IS "UNAVAILABILITY" AN EXCEPTION TO PRO RATA ALLOCATION? With the addition of *Boston Gas*, eleven state supreme courts have now adopted "pro rata" allocationⁿ⁸ as contrasted with seven that have ruled for policyholders on the basis of either "all sums" or "joint and several" liability.ⁿ⁹ Even within these *pro rata* cases, however, a division has arisen with respect to whether and when policyholders should be responsible for orphan shares, particularly those relating to the years since 1985 when most insurers added mandatory asbestos and pollution exclusions to their commercial general liability ("CGL") policies.

Courts have, in fact, followed two very different paths in reaching the same *pro rata* result. The majority view, as exemplified by *Boston Gas*, does so by analyzing the terms of the subject insurance policies and, in particular, the significance of the policies' limitation of coverage to injuries "during the policy period." The other approach, pioneered by the New Jersey Supreme Court, concludes that the wording of the insurance contracts is, at best, inconclusive but nonetheless finds that *pro rata* allocation should be imposed for reasons of public policy, particularly the desirability of encouraging policyholders to buy insurance to transfer risk.

These two approaches differ most dramatically in the manner in which they address orphan shares. Under the insurance policy-based approach, an insurer pays for its "time on the risk" without regard to what other insurance the insured might or might not have purchased in other years. Under the public policy-based approach, loss is allocated in proportion to "risk." "Risk" is assigned in proportion to the total limits of coverage for each triggered year, including estimated limits for any year when the existence of actual policies cannot be confirmed. This approach omits consideration of any period of time when no insurance could have been purchased, as no public policy would be served by punishing an insured for failing to purchase insurance for risks that were uninsurable at the time.

The Owens-Illinois Holding. The "unavailability" doctrine finds its roots in *Owens-Illinois, Inc. v. United Ins. Co.*,ⁿ¹⁰ an asbestos case in which the New Jersey Supreme Court reversed an intermediate appellate ruling that the "all sums" language in the policies required each insurer to indemnify the insured in full, subject only to its policy limit. Although the New Jersey Supreme Court thus rejected the policyholder's claim that the "all sums" wording was dispositive of the allocation issue, it also rejected the insurers' argument that the policy language supported a "time on the risk" allocation. Having failed to find support in the wording of the policies for either side's position and refusing to accept the insured's position that the lack of clear policy wordings was itself a basis for maximizing coverage on the basis of ambiguity in the policies, the New Jersey Supreme Court struck out on a unique path of its own based purely on the public policy of devising an "efficient" means of allocating "resources":

The theory of insurance is that of transferring risk. Insurance companies accept risk from manufacturers and either retain the risk or spread the risk through reinsurance. Because insurance companies can spread cost through an industry and thus achieve cost efficiency, the law should, at a minimum, not abide disincentives to parties to acquire insurance when available to cover their risk. Spreading the risk is conventionally more efficient.ⁿ¹¹

Accordingly, the New Jersey Supreme Court found that insureds should be encouraged to transfer risk by purchasing insurance from third-party companies. Policyholders who chose not to "transfer risk" by purchasing insurance will be deemed to have "retained" that portion of the untransferred risk that they might otherwise have transferred to third parties.ⁿ¹² The court ruled that allocating loss in proportion to the risk transferred or contained "is more consistent with the economic realities of risk retention or risk transfer although later insurers might have to absorb a greater portion of the loss owing to the higher limits purchased in later years since the year-by-year increase in policy limits must have reflected an increasing awareness of the escalating nature of the risk sought to be transferred."ⁿ¹³ While declaring that it was reasonable to expect a policyholder to bear responsibility for shares in situations "where periods of no insurance reflect a decision by an actor to assume or retain a risk," the court distinguished "periods when coverage for a risk is not available."ⁿ¹⁴

The Stonewall Ins. Co. Holding. Whereas *Owens-Illinois* merely enunciated the possibility of an "unavailability" exception, this proposed exception was given concrete application a few months later in *Stonewall Ins. Co. v. Asbestos Claims Management Corp.*,ⁿ¹⁵ another asbestos case. The Second Circuit found that those courts that had endorsed

"pro-ratio to the insured" had only done so "to oblige a manufacturer to accept a proportionate share of a risk that it elected to assume, either by declining to purchase available insurance or purchasing what turned out to be an inefficient amount of insurance." n16 Based upon evidence that the adoption of an industry-wide endorsement excluding asbestos insurance made it impossible for asbestos manufacturers to transfer risk after 1985, the Second Circuit concluded that, in keeping with the economic "risk transfer" analysis that the New Jersey Supreme Court had enunciated in *Owens Illinois*, it would make little sense to punish a policyholder for failing to purchase insurance if it was impossible to acquire coverage for such risks at the time.

APPLICATION OF THE "UNAVAILABILITY" DOCTRINE. Although the "unavailability" exception has since gained little actual traction outside of New Jersey, it had the practical effect of deterring insurers from pursuing efforts to force policyholders to bear responsibility for post-1986 shares. As a result, most recent allocation case law has concerned the issue of whether the insured or its insurers will bear responsibility for "interstitial" orphan shares resulting from gaps during the period of time when most insureds have been able to confirm that they purchased CGL coverage.

While *Owens-Illinois* and *Stonewall* both concerned industry-wide absolute exclusions, policyholders have sought to rely on these cases to extend the "unavailability" doctrine to policies issued before 1986 on the theory that the adoption of the "sudden and accidental" exclusion had a similar effect on insurance markets. While these efforts have failed, to date, the resulting case law has clarified the applicable burdens of proof in "unavailability" cases.

The Olin Corp. Holding. One noteworthy ruling was issued by the Second Circuit in *Olin Corp. v. INA*, n17 which had the effect of constricting the scope of the "unavailability" exceptions to periods for which insurance was completely unavailable, as opposed to years where less comprehensive insurance was still available, albeit at a higher price. Olin had sought coverage for the cost of cleaning up a facility in North Carolina where it had manufactured fertilizer between 1950 and 1967, when the operation was sold to Kerr-McGee. Olin conceded that it was "self-insured" for a period in the 1950s but argued that it should not bear any responsibility for loss occurring after 1970, in light of the fact that New York law upholding the pollution exclusion made coverage unavailable to it under all policies issued after that date.

Following a preliminary ruling addressing these issues in July 1997, the parties presented evidence with respect to whether pollution insurance had been "available" to Olin after 1971 under a *Stonewall* standard. On December 30, 1997, Judge Griesa ruled that Olin must bear responsibility for the "orphan shares" resulting from INA's pollution exclusions. The court ruled that such exclusions were different from the situation in *Stonewall*, in which insurance for asbestos liability was wholly unavailable after a certain period of time, whereas Environmental Impairment Liability ("EIL") insurance coverage was available to Olin throughout the 1970s and 1980s.

On appeal, the Second Circuit found that nothing in its opinion in *Stonewall* suggested that "the relevant inquiry was limited to whether an insured was able to continue obtaining coverage for the particular risk in the same policy type, without an exclusion." n18 "If coverage under one type of policy becomes unavailable by exclusion, and the insurance customer can but does not buy the excluded coverage separately or in another policy type, it follows that the customer has opted to self-insure." n19 Whether or not Olin specifically elected not to purchase EIL insurance was irrelevant in the court's analysis. As with the district court, the Second Circuit concluded that it was sufficient to find that EIL coverage was available to companies like Olin in the marketplace and that it was not necessary to further prove that Olin subjectively elected to forego this coverage and to self-insure for such risks. The court therefore declared that the determination of "availability" would be undertaken on an objective basis. In calculating the amounts owed, the court declared that the denominator should be the overall period of injury whereas the numerator would be the insurer's years of coverage. INA was therefore declared to be liable for 13/28ths of the damages attributable to groundwater contamination and 2/35ths of the costs attributable to soil damage. The court ruled, however, that Olin could only recover the resulting sum insofar as it exceeded the \$100,000 deductible amount for each triggered year.

The Champion Dyeing & Finishing Co. Holding. Insurers fared less well in a recent New Jersey case construing

the application of the "unavailability" exception to periods of time when an insured had absolute pollution exclusions in its policies. In *Champion Dyeing & Finishing Co. v. Centennial Ins. Co.*,ⁿ²⁰ the Appellate Division ruled that although allocation would have been appropriate if insurers could prove that EIL coverage could have been purchased by a business of this sort in the year that its claims were received (1997), the evidence presented by the insurer had, in fact, not shown that coverage was available by then to small business with old leaking tanks. Even if "claims-made" EIL coverage was shown to have been available, the court ruled that it was error to use the insured's 1986-1997 CGL limits as a proxy measure of what the limits would have been under *Owens-Illinois* analysis since, under a "claims-made" policy, only one year's limits would apply.

The Wooddale Builders Holding. Whereas *Olin* restricted the scope of the "unavailability" exception, the exception gained unexpected traction in Minnesota in 2006 in a construction defect case, *Wooddale Builders, Inc. v. Maryland Cas. Co.*ⁿ²¹ *Wooddale* is curious because it represents the first time that "unavailability" has been recognized in a state where pro rata allocation had originally been approvedⁿ²² on a policy-based "time on the risk" basis approach. It is also the first case to apply "unavailability" in the context of construction defect claims.

Although the Minnesota Court of Appeals had ruled in a construction defect case that defense costs and indemnity should both be allocated based on "time on the risk" basis up until the date that the problems were remediated, the Minnesota Supreme Court declared on appeal that the end point for allocation should be the point in time when the insured received a notice of claim with respect to the property that was on the risk for that claim. Further, as the insured's later policies contained exclusions applying to water intrusion claims, the Minnesota Supreme Court also ruled the insured need not bear responsibility for any period of time for which insurance was unavailable for claims of this sort, so that the period of allocation ended as of the year in which the insured received a notice of claim or with the end of the last period of insurance coverage, whichever was earlier.

The Minnesota Supreme Court held that "strict application" of its *Northern States Power* "actual injury" rule was appropriate because any other result (1) would leave the policyholder uninsured with respect to damages allocated to the period between notice of the claim and the end of remediation and (2) would put a burden on insureds to prove not only that damage was the result of a single discrete occurrence, but during which particular policy period the occurrence took place, thus further increasing the costs of coverage litigation. The court rejected various insurers' argument that the allocation period should be co-extensive with the period of injury, thus extending up until the property damage from water intrusion in the homes had been fully remediated, despite the fact that *Wooddale* had apparently been unable to buy coverage for water intrusion exclusions after 2002. Also, in light of the "known loss" doctrine, the court ruled that coverage cannot be triggered under policies issued after the insured has received a claim, even if remediation is not yet complete. The court also ruled that if a policy is triggered, an entire policy year applies, even if the closing date or date of notice occurred midway through the policy.

WHAT IMPACT WILL BOSTON GAS HAVE ON THE "UNAVAILABILITY" DEBATE? Although *Boston Gas* is the eleventh state supreme court to rule for *pro rata* allocation,ⁿ²³ it is the first to do so while explicitly acknowledging the "unavailability" argument. Most prior cases did not address the issue of unavailability, either due to the reluctance of appellate courts to consider secondary allocation issues that might have uncertain implications for future disputes or because many of these cases have involved excess policies or policies written over large SIRs such that even a limited band of allocated years would moot any chance of the insurer's policies being triggered.ⁿ²⁴

Perhaps because *Boston Gas* was presented to the Massachusetts Supreme Judicial Court as a certified question, thus freeing the court to give a broad answer even with respect to subsidiary issues that were not actually implicated by the facts of the dispute between Boston Gas and Century Indemnity, or perhaps due to the court's desire to avoid having this issue rest on its doorstep for the next decade, Justice Cordy's analysis went far beyond the specific facts in the case and addressed a large number of the second and third tier issues that had been raised by the numerous *amici* in the case:

In its brief, *Boston Gas* did not take a position as to which method of pro rata allocation would be most appropriate, but it did suggest at oral argument that some limits should be placed on pro rata allocation, such as, that

there should be no allocation for uninsured years or where insurance could not be purchased. Some of the policyholder amici also suggest that it would be inappropriate to allocate to the policyholder for periods when coverage was unavailable. n25

Some courts have limited the policyholder's obligation to participate in the allocation to periods during which insurance was commercially "available." These courts have generally held that losses should not be allocated to a policyholder for periods during which the "policyholder was unable to obtain coverage in the market place for a particular risk and with respect to losses resulting from activities or products placed into commerce before such time as coverage became 'unavailable' due to pollution and asbestos exclusions." [Citation omitted.] We decline to adopt such an unavailability exception because to do so would contravene the limitation of coverage in the Century policies to liability attributable to property damage during the policy periods. As Century argues in its brief, the unavailability exception "effectively provides insurance where insurers made the calculated decision not to assume risk and not to accept premiums. In effect, because the policyholder could not buy insurance, it is treated as though it did by passing those uninsurable losses to insured periods." This would not be equitable to insurers if the insured purchased coverage for only a few years where there was protracted damage. n26

The force of the court's analysis in this regard is highlighted by Footnote 41, in which the court expressly distinguished *Owens-Illinois* and *Stonewall*, the leading cases in which courts have declined to extend allocation beyond 1986, and cited with approval rulings from Illinois and Wisconsin that have criticized the "unavailability" doctrine:

41 See, e.g., *Stonewall Ins. Co. v. Asbestos Claims Mgt. Corp.*, 73 F.3d 1178, 1203-1204 (2d Cir. 1995), modified, 85 F.3d 49, 51 (2d Cir. 1996) (adopting "proration-to-the-insured" for "years in which [the policyholder] elected not to purchase insurance or purchased insufficient insurance," but not for periods after 1985, when asbestos liability insurance became unavailable); *Owens-Illinois, Inc. v. United Ins. Co.*, 138 N.J. 437, 479, 650 A.2d 974 (1994) ("When periods of no insurance reflect a decision by an actor to assume or retain a risk, as opposed to periods when coverage for a risk is not available, to expect the risk-bearer to share in the allocation is reasonable"). But see, e.g., *Sybron Transition Corp. v. Security Ins.*, 258 F.3d 595, 599-600 (7th Cir. 2001) (rejecting *Stonewall's* distinction between periods when insurance was "available" or "unavailable" because "[t]he whole idea of a time-on-the-risk calculation is that any given insurer's share reflects the ratio of its coverage [and thus the premiums it collected] to the total risk"); *AAA Disposal Sys., Inc. v. Aetna Cas. & Sur. Co.*, 355 Ill. App. 3d 275, 287, 821 N.E.2d 1278, 290 Ill. Dec. 704 (2005) ("Because the policy periods contained in the . . . insurance policies do not include the years plaintiffs went uninsured, we fail to understand why [the insurer] should have to bear the costs from that period. . . . We understand that insurance coverage was not available for the period at issue, but intervenors cannot shift responsibility for the uninsured years to [the insurer]"). n27

Given the analytic basis on which these courts permitted allocation, it is far from surprising that the Massachusetts Supreme Judicial Court disagreed with their application of an "unavailability" exception. Thus, whereas the New Jersey Supreme Court concluded in *Owens-Illinois* that the wording of the policy did not help it in resolving the issue of allocation, the court's analysis in *Boston Gas* rests entirely on the wording of the policies and only relies on considerations of public policy to buttress its finding that pro rata allocation is required.

WHAT IS THE LONG-TERM SIGNIFICANCE OF *BOSTON GAS*? *Boston Gas* has significantly changed the shape of the playing field in Massachusetts and, in all likelihood, in the other states where these issues remain in dispute.

Up until now, most discussions concerning allocation in long-tail environmental claims stopped at 1986. While insurers might argue that insureds should bear responsibility for earlier gaps, few seriously sought to force insureds to accept coverage for the period after 1986 when most policies were amended to include "absolute" pollution exclusions or asbestos exclusions. This is no longer likely to be the case.

Not only does *Boston Gas* eliminate any distinction with respect to how different types of orphan shares should be treated, it expressly rejects any argument that insureds should not be responsible for that share of indemnity corresponding to years in which policies contain pollution or asbestos exclusions.

Boston Gas also eliminates the burden of proof obstacles that cases such as *Olin* and *Champion Dyeing* have erected that would require insurers to prove that during given periods of time the insured could have bought some kind of applicable insurance. As a result, issues of allocation can now be addressed on a much simpler factual record and resolved, where necessary, by summary judgment.

Despite being the eighteenth Supreme Court opinion on this issue, *Boston Gas* does not read like just any other allocation opinion. It is the author's opinion that the forthright and comprehensive manner in which Justice Cordy summed up the arguments that courts have considered up to this point will prove more than usually persuasive in future disputes.

Richmond on You Dont Say: Insurance Intermediaries Narrow Duty to Advise

By Douglas Richmond

August 4, 2009

SUMMARY: Clients regularly ask their insurance agents and brokers for advice on insurance issues, and that advice would seem to be part of an intermediary's role. In fact, insurance intermediaries generally have no duty to advise clients on insurance issues. Exceptions to that rule are quite narrow. This disconnect between desire and duty is a constant source of controversy.

ARTICLE: INTRODUCTION. Many insureds purchase their insurance through agents and brokers. This is true for both personal lines and commercial policies. Unfortunately, prospective insureds may be uncertain about their insurance needs. They may not know how much insurance they should purchase or what coverages they should have. They may never consider reasons for selecting one insurer over another beyond the price of a given policy. Insofar as commercial insurance is concerned, insureds may be unaware of endorsements that are available to tailor coverage to fit their specific business needs. It is understandable that in many instances insured or prospective insureds who are uncertain about their insurance needs will seek advice from the agents or brokers with whom they deal. What are intermediaries' duties in such circumstances, if any?

CROSS REFERENCE: For a full discussion of the duties of agents and brokers, see Jeffrey E. Thomas, New Appleman on Insurance Law Library Edition, Chapter 2.

GENERAL PRINCIPLES. If an insured asks an intermediary about the coverage she is purchasing, the intermediary must answer her questions honestly. n1 As a general rule, however, agents and brokers have no duty to advise insureds about the adequacy or appropriateness of the insurance coverage they purchase, or about optional coverage that might be available, n2 although a few courts have held otherwise. n3 Similarly, intermediaries have no duty to advise insureds about the terms of other policies they hold. n4 An insurance agent or broker is not necessarily an insurance adviser. As New York's highest court reasoned in *Murphy v. Kuhn*: n5

Insurance agents or brokers are not personal financial counselors and risk managers, approaching guarantor status . . . Insureds are in a better position to know their personal assets and abilities to protect themselves more so than

general insurance agents or brokers, unless the latter are informed asked to advise and act. . . . Furthermore, permitting insureds to add such parties to the liability chain might well open flood gates to even more complicated and undesirable litigation. n6

In addition, imposing on intermediaries a general duty to advise insureds about coverage issues would remove from insureds the burden of caring for their own financial needs, and would allow insureds to effectively insure after losses merely by claiming that they would have bought additional or different coverage had it been offered. n7 Courts are especially troubled by the idea that insureds should be able after a loss to manufacture insurance coverage for which they never paid simply by alleging that agents or brokers did not advise them of their insurance needs. As a Missouri court explained:

This turns the entire theory of insurance on its ear as individuals, in theory, take an intellectual gamble when purchasing insurance as they weigh the expense of insurance versus the amount of coverage that they purchase. Allowing insureds to seek coverage, post-occurrence, allows them to completely circumvent this risk. n8

Failure-to-advise claims should be disfavored because they are speculative. n9 Although insureds are quick to assert with the benefit of hindsight that they would have acted differently had they enjoyed the benefit of an intermediary's advice, such allegations are the embodiment of speculation and conjecture.

In short, an intermediary satisfies her duty to the insured by placing the coverage the insured requests. n10 A customer's general request for insurance does not trigger a duty on an intermediary's part to recommend coverage for every possible scenario. n11 Once the agent or broker procures the specific coverage requested, she owes the insured no further duties. n12 An intermediary generally owes no continuing duties to an insured with respect to advice, guidance or insurance counseling.

These principles are especially true where the intermediary whose conduct is at issue is an agent rather than a broker. An insurance agent's duty is to sell the products offered by the company that employs him, or with which he has a captive or exclusive relationship. n13 An insurance agent has no duty to advise insureds about competing insurers' products or policies. n14 Indeed, a captive or exclusive agent has no duty even to tell an insured about his exclusive relationship with the insurer whose products he is selling. n15 When it comes to dealing with agents, any duty to shop the market, compare policies, evaluate optional coverage, etc., rests solely with the insured. n16

EXCEPTIONS TO THE GENERAL RULE. Like all general rules, the no-duty-to-advise rule has exceptions. For example, an intermediary may specifically agree to advise an insured on coverage issues. n17 This sort of arrangement is much more common in commercial and professional contexts than it is where personal insurance is involved. In some jurisdictions, an intermediary may be held to have a duty to advise where she has a continuing relationship with the insured and the insured specifically requests advice, n18 or where there is a course of dealing over an extended period of time which would put an objectively reasonable insurance [intermediary] on notice that his advice is being sought and relied upon. n19

It is certainly possible for an intermediary to voluntarily assume a duty to an insured. n20 Indeed, many brokers voluntarily advise clients on coverage issues, policy terms, alternative coverages, insurance program structure, etc., on the basis that doing so is a business necessity. They reason that they cannot become a trusted advisor to their clients unless they do these things and, absent such a relationship, they will be seen as mere vendors who can easily be replaced. Naturally, if an intermediary assumes a duty to advise an insured with respect to insurance needs, summarize policy terms, or analyze a client's insurance program, for example, she must do so in a non-negligent manner. n21 Brokers who voluntarily assume duties to insureds simply consider the risk of negligent performance of their assumed duties slight, and the benefits to be gained from the assumption of those duties substantial. This is purely a business decision.

Most importantly, the general rule does not apply if the intermediary and the insured share a special relationship.

n22 The existence of a special relationship between an agent or broker and an insured may be treated either as a question of fact or as a question of law, depending on the jurisdiction. n23 Either way, special relationships are not lightly created. The fact that an agent or broker does business with an insured over a number of years does not itself give rise to a special relationship, nor does an intermediary's advertisement of insurance checkups, offer of policy comparisons, or the like. n24 The fact that an agent or broker holds himself out as having special insurance expertise or knowledge, standing alone, is insufficient to create a special relationship. n25 Intermediaries' knowledge that their clients are nave or unsophisticated does not create a special relationship. n26

To be held to share a special relationship with an insured in some jurisdictions, an intermediary must (1) exercise broad discretion in serving the insured's needs; (2) counsel the insured about specialized insurance coverage; (3) hold himself out as a highly-skilled insurance expert coupled with the insured's reliance on his expertise; and (4) receive compensation beyond any ordinary commission for the advice or guidance provided. n27 In other jurisdictions a special relationship may be created where (1) the intermediary holds himself out as an insurance specialist and receives additional compensation for consulting and advice, or (2) there is a long-standing relationship, some type of interaction on the question of coverage, and the insured relied on the [intermediary's] expertise to the insured's detriment. n28 In still other jurisdictions, a special relationship may arise if an intermediary knows (1) that the insured is unsophisticated in insurance matters; (2) that the insured is relying on him to procure appropriate coverage; and (3) that the insured needs the coverage at issue. n29 Finally, in South Carolina, the special relationship rule is phrased in terms of an implied duty, and exists where (1) the intermediary receives compensation beyond a mere commission or fee for procuring coverage; (2) the insured makes a clear request for advice; or (3) there is a course of dealing over an extended period of time which would put an objectively reasonable agent or broker on notice that her advice was being sought and relied upon. n30

Regardless of the specific factors considered or test applied, an insured or applicant arguing for a special relationship bears the burden of proof on the issue. n31 Furthermore, the applicant or insured must demonstrate something more than a standard intermediary-consumer relationship. n32

DeHayes Group v. Pretzels, Inc., n33 illustrates the analysis of some of the key factors listed above. In *DeHayes*, the insured, Pretzels, sued its broker, DeHayes, after a fire consumed Pretzels' manufacturing facilities. The facts developed in the trial court revealed that DeHayes' responsibility was to procure appropriate insurance coverage to protect Pretzels against business and casualty risks. To get the best rates for its coverage, Pretzels asked insurers to bid on its insurance business every two years. Thus, every two years DeHayes and other brokers solicited bids from various insurers and presented those bids to Pretzels for its consideration. n34 DeHayes was compensated solely by commissions paid by Commercial Union, the insurer repeatedly selected by Pretzels throughout the 1990s; Pretzels paid DeHayes nothing. n35

DeHayes appealed the trial court's denial of its summary judgment motion on the lack of a duty owed to Pretzels to the Indiana Court of Appeals. The *DeHayes* court noted that a broker may be bound to do more for an insured than merely procure coverage if they share an intimate long-term relationship or other special circumstances exist. n36 In this case, the relationship between DeHayes and Pretzels began in 1986, some 11 years before the loss at issue. Pretzels did not rely exclusively on DeHayes, however, when it came time to solicit bids for insurance; other brokers also solicited quotes for Pretzels. The choice of a particular insurer from among the competing bidders was always made by Pretzels. As a result, there was no showing that DeHayes exercised broad discretion with respect to serving Pretzels' insurance needs. n37

There was no evidence that DeHayes ever counseled Pretzels about specialized insurance coverage. The most that DeHayes had ever done was to advise Pretzels to increase its coverage limits when it built additional buildings at its manufacturing facility. Such advice was insufficient to create a special relationship. Additionally, the insurance coverage requested by Pretzels with respect to its expanded facilities was standard property and casualty coverage rather than some type of coverage customized to meet Pretzels' particular needs. n38 Pretzels never claimed that DeHayes held itself out as a highly-skilled insurance expert. Beyond that, Pretzels always decided which policy it would buy.

n39

Finally, DeHayes was compensated solely through commissions paid by Commercial Union. Pretzels never directly compensated DeHayes for expert insurance advice.

The *DeHayes* court thus concluded that Pretzels failed to show the existence of a special relationship that would support the imposition of heightened duties on its insurance broker. The court remanded the case to the trial court to enter summary judgment for DeHayes. n40

If an intermediary is held to have a duty to advise an insured about coverage and does so, the insured's failure to follow that advice does not expose the agent or broker to liability. Once informed of optional available coverages, the need for additional or different coverage, or the like, the insured must specifically request the intermediary to procure the suggested coverage if the intermediary is to be held liable for its absence or insufficiency. n41

To be sure, insureds may be disconnected from their insurance needs. Many insureds do not stay abreast of developments and trends that potentially indicate needs for different or greater coverage. It does not follow, however, that agents or brokers are responsible for identifying such customers in order to advise them accordingly. n42 Insureds must be free to determine their own insurance requirements; they ought not have unwanted coverage foisted upon them. Agents and brokers should not be required to speculate about insureds' needs or become coverage detectives out of fear of liability. The question ultimately is one of fit between intermediary and insured. As a Maryland court explained:

In a sense, it is a matter of business judgment on the part of the broker or agent, and personal preference on the part of the customer, that determines whether a customer or agent pursues a laissez-faire style rather than a proactive, aggressive one. To be sure, some customers prefer the don't call me, I'll call you approach with regard to their insurance agents and brokers, believing that they can determine for themselves what they need, and that insurance brokers and agents are just out to sell policies or excessive coverages that are unnecessary. Many of these customers undoubtedly believe that they are able to decide the extent of risk that they can or should tolerate, and they know best what they can afford to pay in premiums. On the other hand, there are customers who undoubtedly want an insurance broker or agent who looks out for the customer's interests before a problem develops, and alerts a client to the kinds of insurance available for maximum protection, or who makes suggestions relating to appropriate coverage and adequacy of coverage. For many of the same reasons, some agents or brokers may consider it prudent business practice to adopt a proactive style, and volunteer information to an insured regarding additional types of coverage, the need for increased coverage, or to help the insured assess his or her particular insurance needs. In contrast, others may believe that they should only respond to a customer's particular request, without aggressively attempting to suggest alternatives. n43

If an intermediary and an insured are not a good fit because the insured needs the protection attending a special relationship and the intermediary is unwilling to accept the duties that inhere in such a relationship, that means only that the insured should look elsewhere for assistance with its insurance needs. It does not mean that the intermediary can be held liable for failing to advise the insured in the way the insured in hindsight would have wished. n44

Insureds sometimes argue that agents and brokers have a duty to advise them on coverage issues because they have requested adequate protection, full coverage, sufficient coverage, as good a policy as [they] can get, the best coverage or best policy available, and so on. n45 Because every insured wants these things, however, vague statements of this kind do not give rise to a duty to advise on an intermediary's part. n46 The *Trotter v. State Farm Mutual Automobile Insurance Co.* n47 court expressed the clear majority rule when it stated:

A request for full coverage, the best policy, or similar expressions does not place an insurance agent under a duty to determine the insured's full insurance needs, to advise the insured about coverage, or to use his discretion and expertise to determine what coverage the insured should purchase. n48

If an intermediary is found to have a duty to advise an insured about coverage, that duty has limits, and an intermediary who breaches her duty is not automatically liable for the damages alleged to result. With respect to the first

point, the scope of the intermediary's duty is defined by the nature of the insured's request for advice. n49 With respect to the second observation, an intermediary does not face liability unless the insured provides her with the information necessary to render the advice sought. n50

THE CLOSELY RELATED DUTY TO EXPLAIN. Closely related to an intermediary's duty to advise an applicant or insured about its insurance needs is an agent's or broker's duty to explain the coverage afforded by a policy. As is the case with respect to an intermediary's alleged duty to advise an insured about the adequacy, appropriateness, or availability of particular coverages, agents and brokers generally have no duty to explain specific policy terms to insureds. n51 Some of the same reasons that defeat a duty to advise apply equally in the duty to explain context. For example, the concern that insureds should not be allowed to obtain coverage after a loss merely by claiming that they did not know the true nature of their coverage is just as valid when the intermediary's alleged duty is one of explanation instead of advice. Additionally, imposing on agents and brokers a duty to explain policy terms to insureds arguably flies in the face of insureds' duty to examine their policies. Nonetheless, courts occasionally hold that a duty to explain exists. This is most often the case where renewal policies are involved. Even courts that are generally unwilling to recognize a duty to advise or explain by intermediaries may be willing to recognize one where a renewal policy differs from the prior policy. n52

CONCLUSION. Insureds routinely purchase their coverage through agents and brokers. As a general rule, insurance intermediaries' duties are confined to the procurement of the policies or coverages that their clients specifically request. Insurance agents and brokers are generally not considered to be insurance advisors or counselors. That said, the general rule that agents and brokers have no duty to advise their clients on insurance issues has several exceptions. Intermediaries may assume a duty to advise their clients on a variety of insurance issues, for example, and brokers are sometimes held to have a duty to advise their clients by virtue of a special relationship. The many cases on intermediaries' alleged duties to advise customers on insurance matters and to explain policy terms suggest a critical need for intermediaries, insureds, and the lawyers who advise them to better understand the related issues. With luck, this commentary is a small step in that direction.

McCarter & English LLP on Wakefern Food Corp. v Liberty Mutual Fire

2009 Emerging Issues 3991

McCarter & English LLP on Wakefern Food Corp. v Liberty Mutual Fire

By Sherilyn Pastor and Alissa Pyrich

July 8, 2009

SUMMARY: The New Jersey Appellate Division recently held that Wakefern Food Corporation and its cooperative members have full coverage for food spoilage losses incurred as a result of the August 2003 Northeastern blackout. It rejects the insurers attempt to avoid coverage based on an exceedingly narrow and technical definition of "physical damage" favoring instead the plain meaning of the term.

ARTICLE: The New Jersey Superior Court, Appellate Division, recently ruled in favor of Wakefern Food Corporation and affiliated supermarkets ("Wakefern") in connection with a dispute over their right to collect insurance coverage for food spoilage losses and loss of business incurred during the August 2003 Northeastern blackout. The insurer, Liberty Mutual Fire Insurance Company ("Liberty Mutual") had initially denied coverage claiming that the losses were not the result of "physical damage." In *Wakefern Food Corp., et al. v. Liberty Mutual Fire Ins. Co., Slip. Op., Docket No. A-2010-07T3 (N.J. Super. Ct. App. Div. Apr. 22, 2009)*, the Appellate Division held that the term "physical damage," not defined in the policy, should be given its plain meaning based on Wakefern's understanding of the protection it was purchasing, not some hyper-technical meaning based on the intricacies of electrical power transmission systems. Applying this common sense meaning, the Appellate Division found that Wakefern was entitled to collect insurance coverage from Liberty Mutual for the food spoilage losses and loss of business sustained during the blackout.

On August 14, 2003, problems with the interconnected North American electrical power generation and transmission system (colloquially known as the "electrical grid") caused a blackout over much of the northeastern United States and eastern Canada. During this four-day blackout, affected areas were completely without electrical power. Wakefern and the other plaintiff supermarkets sustained significant losses as the result of food spoilage and loss of business.

Wakefern sought coverage for the blackout losses from its insurer, Liberty Mutual. Wakefern had purchased from Liberty Mutual both a first-party all risk insurance policy and an additional "Services Away From Covered Location Coverage Extension." The "Services Away Extension" specifically provides coverage for losses resulting from interruptions in electrical power to Wakefern's supermarkets where the interruption is caused by "physical damage" to

certain electrical equipment and property located off of supermarket property. Wakefern's Director of Insurance certified that, in purchasing coverage from Liberty Mutual, Wakefern specifically wanted to have coverage for food spoilage and other losses that might result from the loss of power from utilities. He understood that by purchasing all-risk coverage and the "Services Away Extension," Wakefern had obtained and paid for such coverage.

Although there was no dispute that the food spoilage and other losses sustained during the blackout were the kinds of losses covered under Liberty Mutual's policy and the "Services Away Extension," Liberty Mutual nevertheless declined coverage. According to Liberty Mutual, the four-day August 2003 blackout was not caused by "physical damage" to electrical equipment, and thus any losses resulting from the blackout were not covered by its policy. Faced with Liberty Mutual's denial, Wakefern -- represented by McCarter & English, LLP partner Sherilyn Pastor, sued to enforce its right to coverage.

Neither Liberty Mutual's policy nor the "Services Away Extension" contained a definition of the key term "physical damage." Liberty Mutual advocated a highly technical definition of the term, relying on an expert to argue that the root cause of the blackout was not something wrong with the various components of the electrical grid but instead the proper functioning of protection systems designed to prevent surges and physical damage to the components of the grid. In support of its argument, Liberty Mutual relied on the Final Report of the task force investigating the blackout, which Liberty Mutual asserted attributed the blackout to four major causes, none of which involved the actual destruction of the various technical components of the electrical grid.

The trial court agreed with Liberty Mutual, but the Appellate Division did not. It began its analysis by invoking the general principle that, where the language of an insurance policy supports two reasonable meanings, courts will favor the meaning that affords coverage. Slip Op. at 18. Further, the Appellate Division acknowledged that New Jersey law for the interpretation of insurance contracts seeks to give effect to the reasonable expectations of the insured. In particular, policyholders "should not be subjected to technical encumbrances or hidden pitfalls and their policies should be construed liberally in their favor to the end that coverage is afforded 'to the full extent that any fair interpretation will allow.'" Slip Op. at 19, quoting *Kievit v. Loyal Protective Life Ins. Co.*, 34 N.J. 475, 482 (1961). Guided by these principles, the Appellate Division concluded that "the undefined term 'physical damage' was ambiguous and that the trial court construed the term too narrowly, in a manner favoring the insurer and inconsistent with the reasonable expectations of the insured." Slip Op. at 20.

The Appellate Division also conclude that the electrical grid was physically damaged within the meaning of Liberty Mutual's insurance because, "due to a physical incident or series of incidents, the grid and its component generators and transmission lines were physically incapable of performing their essential function of providing electricity." Slip Op. at 21. The Appellate Division found it significant that because of the interconnected nature of the systems, power could not be turned back on in several areas until individual pieces of damaged equipment were replaced. *Id.* The inability to perform the intended function due to some sort of physical, tangible or concrete change or effect in the system or its parts was, for the Appellate Division, a component of "physical damage." In a footnote, the court pointed out that it would have reached a different conclusion if the blackout had been the result of something other than the physical inability of the electrical grid to function (such as, for example, an order that power be shut off to conserve electricity).

In reaching its conclusions, the Appellate Division noted that neither Wakefern nor Liberty Mutual were electric utilities, operators or providers with detailed knowledge about the workings of the electrical grid and its components. n1[1] Slip Op., at 21-22. Thus, it made no sense to assign a highly technical definition to "physical damage." *Id.* at 22. Rather, the term had to be defined from the point of view of Wakefern, as a customer of electrical power who had purchased insurance to protect against the risk of losses from the loss of electrical power used to refrigerate products. *Id.* The Appellate Division concluded that, "[t]he average policyholder in plaintiffs' position would not be expected to understand the arcane functioning of the power grid or the narrowly-parsed definition of 'physical damage' which the insurer urges us to adopt." *Id.*

Because the term "physical damage" was not defined in Liberty Mutual's policy and was capable of more than one reasonable meaning, the Appellate Division followed the well-established law and construed the term in a way that favored coverage for Wakefern's losses. Slip Op. at 22-23. The Appellate Division rejected Liberty Mutual's argument that "physical damage" could only be the permanent ruin or destruction of the electrical grid or its components. Instead, the Appellate Division concluded that a temporary loss of function, after which the electrical grid went back on line, was sufficient to satisfy the requirements of the policy. Slip Op. at 26-27. The inherent nature of power losses -- for which Wakefern had actively sought out insurance coverage -- is necessarily temporary (as electricity will always be eventually restored). Adopting Liberty Mutual's requirement of permanent ruin or damage would have rendered the "Services Away Extension" purchased by Wakefern illusory and effectively useless. Since such a result would be at odds with the reasonable expectations of the policyholder (and indeed, with Wakefern's specific expectations), the Appellate Division could not accept Liberty Mutual's definition of "physical damage."

All in all, the Appellate Division's ruling in *Wakefern* reinforces the generally pro-policyholder stance of the New Jersey courts. Faced with a choice between a highly technical definition of a term and a more generalized and reasonable definition that comported with the policyholder's understanding of the coverage protections it purchased, the Appellate Division opted for the coverage-affording alternate meaning. For insurers, the *Wakefern* ruling serves as a reminder that, if their intention really is to exclude certain types of coverage, they must make that intention clear and explicit. Insurers cannot hope to rely on technical encumbrances or hidden pitfalls as their policies will be construed liberally in favor of coverage to the full extent that any fair interpretation so allows.

[Return to Text](#)

n1 Following the same rationale, the Appellate Division noted the task force report's limited value in resolving the meaning of "physical damage" as used in Liberty Mutual's insurance policy. The report, while useful for its intended purpose of explaining on a technical level why the blackout occurred, was never intended for use in construing the meaning of insurance policies. Furthermore, as Wakefern noted, the report itself describes the physical damage that caused the blackout and extended its duration.

Sonnenschein Nath & Rosenthal, LLP on Boritz v. N.J. Manufacturers Ins. Co.

2009 Emerging Issues 3889

Sonnenschein Nath & Rosenthal, LLP on Boritz v. New Jersey Manufacturers Insurance Co.: New Jersey Extends Insurer Duty To Inform re Coverage Limitations

By William T. Barker and Donna J. Vobornik

June 26, 2009

SUMMARY: Along with some other states, New Jersey has held that, in some circumstances, the duty of good faith and fair dealing requires an insurer to affirmatively inform an insured of the insured's rights under the policy. In *Boritz v. New Jersey Mfrs. Ins. Co.*, the intermediate court extended this duty to require that a permissive user be notified of a step-down provision reducing the underinsured motorist (UIM) coverage otherwise available.

ARTICLE: Along with some other states, New Jersey has held that, in some circumstances, the duty of good faith and fair dealing requires an insurer to affirmatively inform an insured of the insured's rights under the policy. In *Boritz v. New Jersey Manufacturers Insurance Co.*,ⁿ¹ the intermediate court extended this duty to require that a permissive user be notified of a step-down provision *reducing* the underinsured motorist (UIM) coverage otherwise available. This commentary examines the significance of that decision in light of other cases on the duty to inform.

I. The Case

Boritz was injured in a traffic accident while a passenger in the Iacono car, which was rear-ended by Vinson's car. Vinson was insured by GEICO, which offered its \$15,000 limit in exchange for a release. New Jersey Manufacturers (NJM) insured the Iacono car, with a UIM limit of \$100,000 (but subject to a stepdown clause, reducing coverage for a nonnamed insured with his or her own UIM coverage to the limit provided by that coverage). Boritz herself had UIM coverage with a \$25,000 limit. ⁿ²

A UIM insurer typically has contractual subrogation rights against the tortfeasor responsible for injuries resulting in payment of UIM benefits. If the insured gives the tortfeasor a release, that would cut off the subrogation right. To protect the subrogation right, *Longworth v. Van Houten* ⁿ³ allows an insured to notify the UIM insurer of a proposed settlement with the tortfeasor, requesting consent to settle. If the UIM insurer wishes to prevent the settlement, it must pay the insured the amount offered in settlement. ⁿ⁴ Accordingly, Boritz notified NJM of the \$15,000 offer from GEICO, and it consented to the settlement. ⁿ⁵

NJM confirmed existence of UIM coverage for the Iacono car and the limit of \$100,000 per person, but it did not

mention the step-down provision, as it did not then know Boritz's own UIM limit. After reviewing documentation regarding the claim, NJM offered \$17,023 to settle the UIM claim. Boritz responded with a \$75,000 demand, which drew a \$32,023 counteroffer. NJM then received a copy of Boritz's declaration page, showing her UIM limit of \$25,000. It then invoked the step-down clause, which made the maximum recovery \$10,000 (Boritz's \$25,000 limit less the \$15,000 recovery from GEICO). Boritz then filed this declaratory judgment action, asserting that NJM was estopped from enforcing the step-down clause because it had confirmed the \$100,000 limit without disclosing the clause, and she had relied on that confirmation by accepting GEICO's offer. n6

The Law Division granted summary judgment to NJM, but the Appellate Division reversed, offering two rationales. First, a confirmation of coverage (or even a failure to timely disclaim) could be the basis for an estoppel if the insured detrimentally relied on that. Second, the duty of good faith is more than simply an obligation not to act in bad faith. According to the court, a request for consent under *Longworth* gives the insurer the opportunity to evaluate the settlement decision in light of all relevant factors, including its coverage limits. Because those limits are crucial to an insured's own settlement decision, the insurer ought to inform the insured if there are facts the insured needs to know. While NJM did not know Boritz's UIM limits when it gave consent to settle, it could have warned her of the step-down clause when it confirmed coverage. n7

II. Detrimental Reliance?

While this commentary focuses on the duty to inform, it is worth pointing out that *Boritz* seems to take the claim of detrimental reliance at face value, without describing any evidence supporting that claim. But whatever reliance an insured may have placed on an insurer's representations or omissions regarding UIM coverage would not be detrimental if there was no alternate course of action that at least might have yielded a greater total recovery by rejecting the tortfeasor's offer. Many tortfeasors are judgment proof. In fact, that is one reason why some people carry only the minimum limits necessary to satisfy the law. If the tortfeasor were (except for available insurance) unable to respond in damages, there could be no possible benefit in pursuing the claim once the tortfeasor's insurer offers its limits. And, even if the tortfeasor were not entirely judgment proof, that would make no difference if the available assets were too small to be worth the expense of litigating. In either event, accepting the settlement could not be detrimental, even if the insured was misled about the UIM limits. An insured asserting an estoppel should have the burden of proving that correct information on the UIM limit would have resulted in a different decision on settling for the tortfeasor's limits.

III. An Insurer's Duty To Inform

Some jurisdictions have held that an insurer's duty of good faith and fair dealing includes an affirmative duty, in some circumstances, to inform insureds about their rights under their insurance policies and what must be done to obtain benefits due. n8 New Jersey did this in *Bowler v. Fidelity & Casualty Co.*, n9 but *Boritz* (which did not even cite *Bowler*) represents an extension.

In *Bowler*, Fidelity issued a disability policy calling for payment of up to 200 weeks of specified disability payments so long as the insured was totally and continuously disabled. If the insured remained totally disabled at the end of that period, the policy called for payment of a lump sum equal to 600 weeks payments at the stated rate. Bowler, a buyer of ladies coats, suffered a severe fracture of the lower leg, requiring extended hospitalization. Osteomyelitis developed, causing chronic rotting away of the bone accompanied by continuing drainage of pus through an ulcer on the surface of the leg. Based upon reports from Bowler's doctor and periodic examination by its own doctor, Fidelity paid benefits for the first 199 weeks after the accident. n10

The 200 week period expired on December 2, 1957. In anticipation of this significant date, Fidelity sent Bowler additional claim forms in mid-November. Shortly afterward, he returned those forms asserting continuous and total disability to date. On November 25, 1957, Bowler's physician completed a report referring to his numerous prior reports, stating that Bowler was still under treatment and saying that the doctor could not predict how much longer Bowler would remain continuously and totally disabled. Bowler was reexamined by Fidelity's physician, Dr. Siegal, on

November 26, 1957. Dr. Siegal reported Bowler's lack of improvement since the accident and the continuing drainage and other problems with his leg. He then stated that Bowler was not totally disabled because he was capable of many kinds of work, but also noted that no one would hire him with his canes, his limp, and his foul-smelling leg. Without explanation, Fidelity failed to make either the 200th weekly payment or the lump sum payment of 600 weeks of indemnity. n11

More than six years later, Bowler sued for the unpaid benefits. The insurer raised the six-year statute of limitations as a defense, and the New Jersey Supreme Court held that it was estopped to claim the benefit of the statute. The court first reviewed the requirements of total and continuous disability, noting that courts found this requirement much less stringent than an untutored laymen (or doctor) might believe from a reading of the policy language. n12 Viewing the evidence available to the insurer in light of the proper standard, the court found that it was clear beyond all doubt that Bowler was entitled to the 200th weekly payment and that the company knew this. n13 Moreover, the court regarded the proof of Bowler's entitlement to the lump sum payment as practically conclusive." n14

The court regarded the insurer's conduct as shocking and unconscionable, precluding any right to rely on the statute of limitations. n15 It emphasized the insurer's duty of good faith and its special significance where the language expressing the extent of coverage may be deceptive to the ordinary layman." n16 It reasoned that:

When a loss occurs which because of its expertise the insurer knows or should know is within the coverage, and the dealings between the parties reasonably put the company on notice that the insured relies upon its integrity, fairness and honesty of purpose, and expects his right to payment to be considered, the obligation to deal with him takes on the highest burden of good faith. In situations where a layman might give the controlling language of the policy a more restrictive interpretation than the insurer knows the courts have given it and as a result the uninformed insured might be inclined to be quiescent about the disregard or non-payment of his claim and not to press it in timely fashion, the company cannot ignore its obligation. It cannot hide behind the insured's ignorance of the law; it cannot conceal its liability. In these circumstances it has the duty to speak and disclose, and to act in accordance with its contractual undertaking. The slightest evidence of deception or overreaching will bar reliance upon time limitations for prosecution of the claim. n17

Thus, the insurer was obliged to pay any amounts clearly due without waiting for any demand and, if it failed to do so, would be estopped from relying on the statute of limitations. The court went one step beyond requiring payment of benefits where the obligation to pay could not reasonably be disputed. It declared that:

if the insurer has factual information in its possession substantially supporting the policyholder's right to benefits, but it has a reasonable doubt as to whether the evidence is sufficient to require payment, the obligation to exercise good faith, upon which it knows or should know the insured is relying, cannot be satisfied by silence or inaction. It must notify the insured of its decision not to pay his claim. But mere naked rejection would not be sufficient. The giving of such notice should be accompanied by a full and fair statement of the reasons for its decision not to pay the benefits, and by a clear statement that if the insured wishes to enforce his claim it will be necessary for him to obtain the services of an attorney and institute a court action within the appropriate time. The appropriate time means the time remaining under the policy or the applicable statute of limitations within which the suit must be brought. Failure on the insurer's part to follow such a course, will bar reliance on the statute of limitations or a time restriction on court action expressed in the policy. n18

We have previously suggested that *Bowler* should not be read as broadly as this language might suggest:

Read broadly, the latter passage could suggest a duty to notify the claimant of many things, including the time period allowed for bringing suit, on every non-frivolous claim which an insurer declines to pay. But the New Jersey courts have not read it so. Indeed, there is hardly any caselaw citing *Bowler* for its statute of limitations holding and none relying on a failure of notice to preclude use of the statute of limitations. Thus, *Bowler* should be read to require notice only where the insurer has received evidence approximating a prima facie case of entitlement to benefits, and

perhaps, only where the insurer is on notice (because of policy language that a layman is likely to misunderstand or otherwise) that notice is necessary for the insured to exercise available rights, including the right to [contest denial of] the claim. n19

This language was quoted approvingly in *Azze v. Hanover Insurance Co.* n20 The issue there was tolling of the one-year suit limitation period in a property insurance policy. The New Jersey Supreme Court had held that such a limitation is tolled during the time between an insured's submission of a claim and the when the insurer gives formal notice that the claim has been denied. n21 *Azze* argued that a formal denial should have to include a warning about the limitation period, but the court disagreed, based in part on the quoted paragraph. n22 Because Hanover's denial of *Azze's* claim was not in bad faith, *Bowler* did not apply. n23 A federal district court has also concluded that *Bowler* does not apply unless the insurer is *clearly* required to pay or fails to notify the insured that the claim is being denied. n24

Because NJM was not denying Boritz's claim or withholding any benefits clearly due, *Bowler* would not apply, and *Boritz* represents an extension of a previously narrow duty. Unlike other cases in which bad faith has been found, NJM was not preferring its own interests to those of Boritz by failing to warn of the step-down clause. NJM had nothing to gain by leading Boritz to accept the settlement.

Moreover, *Boritz* rests, in part, on the dubious premise that a consent to settle is an acknowledgement of coverage. All a consent to settle actually says is that the insurer is waiving any subrogation right it might have. The most common reason is that the putative tortfeasor has too few noninsurance assets to make suit worthwhile, even if UIM benefits are paid. If UIM coverage is in doubt, that is another reason why any subrogation rights may have little value and can be relinquished. While there was an actual confirmation of coverage in *Boritz* itself, the court incorrectly treats a consent to settle as if it were such an acknowledgement.

IV. Conclusion

Courts in other states ought not to follow *Boritz*. If it is not reversed, New Jersey courts should read it narrowly, as they have consistently read *Bowler*.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial

Board of The New Appleman on Insurance Law, now in preparation, and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Donna J. Vobornik is vice chair of Sonnenschein's Insurance Practice Group. Ms. Vobornik is a general litigator with extensive experience in complex insurance coverage litigation. Ms. Vobornik has represented insurance clients in approximately 60 environmental coverage cases in state and federal courts in Illinois, Iowa, Wisconsin, Michigan, Ohio, Delaware, Pennsylvania and California. Ms. Vobornik also litigates other types of coverage claims, including asbestos, product liability, bad faith, personal injury (including advertising injury) and group health and disability claims. Ms. Vobornik has spoken on insurance-related topics at a number of seminars and is the co-author of "Fortuity: A Fundament of Coverage," in *Insurance Litigation Reporter*, October, 1989 and "The Scope of The Emerging Duty of First-Party Insurers to Inform Their Insureds of Rights Under the Policy," in *Tort and Insurance Law Journal*, Summer, 1990.

About the Law Firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests. For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself: This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings. When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein).

Reed Smith LLP on Thorpe Insulation: The Rising Use Of Course Of Performance Evidence To Interpret Insurance Policies In The Asbestos Context

By Douglas C. Rawles and Natasha Sung

June 26, 2009

SUMMARY: In California, course of performance evidence is one of several tools courts may use when resolving a dispute over the meaning of terms in contract disputes. But until last years decision in *Employers Reinsurance Company et al. v. Superior Court*, 161 Cal. App. 4th 906 (2008) (Thorpe Insulation), courts had not relied on course of performance evidence in disputes involving insurance contracts.

ARTICLE: In California, course of performance evidence is one of several tools courts may use when resolving the intended meaning of disputed terms in a contract. But until recently, California courts have not utilized this tool in disputes involving insurance contracts, even when the parties to the dispute have a long history of interaction due to numerous similar claims being handled over many years. Instead, courts for the most part ignored course of performance evidence, n1 and on those few occasions when it was considered, courts referenced such evidence in dicta as further support for its findings. n2

Last year, however, the court in *Employers Reinsurance Company et al. v. Superior Court*, 161 Cal. App. 4th 906, 911 (2008) ("*Thorpe Insulation*"), held that "course of performance" evidence is relevant in the interpretation of insurance contracts, and may be used for that purpose. The court also held that course of evidence is only admissible when it relates to the contract of insurance in issue; the parties' performance pursuant to a claims handling agreement, for example, will not be admissible to prove the meaning of the insurance contract itself. *Thorpe Insulation* may well be a harbinger of things to come, as policyholders and insurers continue to battle over coverage for long-tail claims involving thousands of claimants.

The Opinion

In *Thorpe Insulation*, the policyholder, a distributor and installer of asbestos insulation products, had been sued in hundreds of asbestos-related bodily injury claims and had tendered such claims to its insurers for defense and indemnity since 1978. n3 Most of Thorpe's policies provided coverage for products/completed operations claims and operations

claims; the former were subject to aggregate policy limits, while the latter were not. n4

In 1984, Thorpe and ten of its primary insurers entered into a claims handling and settlement agreement that allocated the costs of defense and indemnification among the insurers ("1984 Agreement"). n5 In part, the 1984 Agreement stated that it was a compromise settlement of disputed claims, and that it "is not intended to nor shall it be construed as the admission of the existence of a policy or as a policy interpretation, and shall not be used in any Court or Arbitration to create, prove or interpret the obligations under general liability or other liability policies." n6 In 1998, seven of Thorpe's excess insurers entered into an interim claims handling agreement that also allocated the costs of defense and indemnification among the insurers ("1998 Agreement"). n7 When Thorpe's insurers paid claims, they reduced the aggregate limits of the policies, treating all claims as products claims. n8

In 2005, after its primary and excess policies were all nearly exhausted, Thorpe brought suit against its primary insurers claiming that at least some of the current and future asbestos claims against it should be treated as "operations" claims not subject to aggregate limits. n9 Thorpe claimed that the term "completed operations" was "indecipherably ambiguous," and sought a declaration that its insurers had the burden of establishing that each asbestos claim was a "products/completed operations" claim to be charged against policy limits. n10

The insurers argued that the parties had treated asbestos claims as "products/completed operations" claims for thirty years, that Thorpe had obtained millions of dollars in payments from excess insurers based on this treatment, n11 and asserted affirmative defenses of laches, waiver, estoppel and ratification based on the claims handling history. n12

In the policy interpretation phase of the case, Thorpe filed a motion for summary judgment on these four affirmative defenses, and filed a motion *in limine* to exclude evidence relating to the parties' thirty-year course of handling asbestos claims as evidence of the meaning of the term "completed operations" in the insurance policies. n13 Thorpe argued that course of performance evidence was not relevant in the interpretation of standard form contracts and should not be used in the interpretation of insurance contracts at all. n14 Thorpe also argued that much of the course of performance evidence the insurers sought to offer was the product of the 1984 and 1998 Agreements, which provided in their terms that they were not to be used for policy interpretation. n15 The trial court granted the motion *in limine*, and the insurers sought writ review. n16

Upon review, the appellate court rejected Thorpe's first argument, holding that course of performance evidence is "generally admissible in the context of interpretation of insurance policies, even standard form policies." n17 As to the second point, the court held that because the bulk of the parties' performance and the insurance payments received by the company were made pursuant to the 1984 and 1998 Agreements, not the insurance policies themselves, the trial court did not err in excluding that evidence. n18 Based on the record, the court concluded that the claims handling conduct was the product of the 1984 Agreement that resolved differences regarding the claims and represented "an agreement under which primary insurers would pay their policy limits and no more." n19 The court noted that the 1984 Agreement "expressly states that it is *not* a policy interpretation and shall *not* be used in any court to interpret the policies. It therefore cannot be considered to be evidence of the parties' interpretation of the policies. As the agreement cannot be considered for policy interpretation, we similarly conclude that conduct *pursuant* to the agreement cannot be considered for the purpose of policy interpretation." n20

In closing, the court held that evidence of the parties' course of performance prior to 1984 was not excluded by Thorpe's motion *in limine*. n21 Thorpe argued that pre-1984 evidence would not be admissible because the insurers would be unable to prove that Thorpe "*understood* that it was accepting performance in a way that interpreted the policies to have no non-products coverage for asbestos suits," as required by California statute. n22 The court found that while the insurers might be unable to meet this requirement, this argument was not a basis of Thorpe's motion *in limine*.

CONCLUSION

In *Thorpe Insulation*, California clarified two important points in the context of contract interpretation. First, when appropriate, course of performance evidence can be used to interpret standard form insurance contracts. Second, for the evidence to be considered in contract interpretation, the conduct to be considered must be the product of the contract to be interpreted. What is a bit unusual is that the insurers sought to offer course of performance evidence not to interpret a disputed term of any of contract of insurance, but to support affirmative defenses of waiver, laches, estoppel and ratification in the policy interpretation phase of the case. n23 Regardless, course of performance evidence will likely play a big part in asbestos coverage disputes and policy interpretation in the near future, and litigation regarding the admissibility of such evidence should be expected.

n20 *Id.* (emphasis in original).

n21 *Id.* at 926.

n22 *Id.*, citing Cal. Com. Code § 1303 (course of performance evidence requires the party accepting the performance to do so "with knowledge of the nature of the performance").

n23 Last year, a court in New York found that a claims handling agreement and conduct supported a laches defense as applied to future asbestos bodily injury claims in "products/completed operations" or "operations" claim dispute. See *Continental Casualty Co. v. Employers Ins. Co. of Wausau*, 871 N.Y.S.2d 48, 51 (2008) ("Keasbey"). In *Keasbey*, insurers of a defunct asbestos insulation manufacturer and seller filed action seeking a declaration that they had no duty to indemnify the company for any pending asbestos claims against it because all such claims were "products/completed operations" claims subject to already-exhausted aggregate limits. *Id.* at 51-52. The court held the affirmative defense of laches barred the company and asbestos-injured claimants suing the company from arguing that such claims were not "products/completed operations" claims because, *inter alia*, the company, claimants, and insurers had all treated the claims "products/completed operations" claims in the past. *Id.* at 52. It is noteworthy that the insured accepted the excess insurers' contributing funds to a group of cases and "did not object to the cost-sharing agreement among excess carriers, which expressly treated the asbestos claims as products hazard claims subject to the aggregate limit." *Id.*

Although the evidence was not offered as "course of performance" evidence to interpret policy terms, the claims handling practices were admitted to support the laches defense directly. It will be interesting to see how course of performance evidence develops over the next several years in the wake of *Thorpe Insulation* and *Keasbey*.

Richmond on the Sharp Points of the Eternal Triangle of Insurance Defense

2009 Emerging Issues 3875

Richmond on the Sharp Points of the Eternal Triangle of Insurance Defense

By Douglas R. Richmond

June 22, 2009

SUMMARY: The Emerging Issues Analysis explores whether and to what extent conflicts of interest exist in various tripartite relationships involving the insurer, insured and insurance defense counsel and how they can be resolved. Recent pertinent court decisions are examined.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: INTRODUCTION

The term eternal triangle refers to the tripartite relationship created when a liability insurer hires counsel to defend its insured when the insured is sued by a third party. The insurer, the insured, and insurance defense counsel form the points of this eternal triangle. Although much has been written about the tripartite relationship that characterizes insurance defense practice, and about ethical dilemmas in insurance litigation generally, the relationship between insurer, insured and insurance defense counsel is a recurring source of disputes. These disputes typically are connected to the conflicts of interest inherent in insurance defense practice. For present purposes, a conflict of interest between insurer and insured occurs if there is a significant risk that their common lawyer's representation of one will be materially limited by the lawyer's representation of the other, the lawyer's responsibilities to a third person, or the lawyer's personal interests.

THE ATTORNEY-CLIENT RELATIONSHIP

The eternal triangle's inherent conflicts of interest are attributable to the concept of dual representation, best known as the dual client doctrine. The dual client doctrine recognizes that insurance defense counsel represent both the insurer and the insured. As the court in *National Union Fire Ins. Co. v. Stites Professional Law Corp.*, 1 Cal. Rptr. 2d 570 (Cal. Ct. App. 1991), explained: As long as the interests of the insurer and the insured coincide, they are both clients of the defense attorney and the defense attorney's fiduciary duty runs to both the insurer and the insured. *Id.* at 575; see also *Kroll & Tract v. Paris & Paris*, 86 Cal. Rptr. 2d 78, 81 (Cal. Ct. App. 1999) (quoting *Stites*). Defense counsel therefore serve two masters in any given case. The problems created by the dual client doctrine rest on the premise that defense counsel cannot loyally represent the insured in a case in which the insured's and insurer's interests do *not* coincide.

Forced to choose between a repeat client and the insured, the reasoning goes, defense counsel will necessarily side with the insurer.

The dual client doctrine appears to represent the majority rule. See, e.g., *Home Indem. Co. v. Lane Powell Moss & Miller*, 43 F.3d 1322, 1331 (9th Cir. 1995) (interpreting Alaska law); *Nat'l Union Ins. Co. v. Dowd & Dowd*, 2 F. Supp. 2d 1013, 1017 (N.D. Ill. 1998) (interpreting Illinois law); *Mitchum v. Hudgens*, 533 So. 2d 194, 198 (Ala. 1988); *Gulf Ins. Co. v. Berger, Kahn, Shafon, Moss, Figler, Simon & Gladstone*, 93 Cal. Rptr. 2d 534, 542-44 (Cal. Ct. App. 2000); *Unigard Ins. Group v. O'Flaherty & Belgum*, 45 Cal. Rptr. 2d 565, 569 (Cal. Ct. App. 1995); *Pa. Ins. Guar. Ass'n v. Sikes*, 590 So. 2d 1051, 1052 (Fla. Dist. Ct. App. 1991); *Coscia v. Cunningham*, 299 S.E.2d 880, 881 (Ga. 1983); *Preferred Am. Ins. Co. v. Dulceak*, 706 N.E.2d 529, 533 (Ill. App. Ct. 1999); *Mobil Oil Corp. v. Md. Cas. Co.*, 681 N.E.2d 552, 561 (Ill. App. Ct. 1997); *Cincinnati Ins. Co. v. Wills*, 717 N.E.2d 151, 161 (Ind. 1999); *McCourt Co. v. FPC Props., Inc.*, 434 N.E.2d 1234, 1235 (Mass. 1982); *Moeller v. Am. Guarantee & Liab. Ins. Co.*, 707 So. 2d 1062, 1070 (Miss. 1996); *Nev. Yellow Cab Corp. v. Eighth Judicial Dist. Court*, 152 P.3d 737, 742 (Nev. 2007); *Lieberman v. Employers Ins.*, 419 A.2d 417, 423-25 (N.J. 1980); *Nationwide Mut. Fire Ins. Co. v. Bourlon*, 617 S.E.2d 40, 45-46 (N.C. Ct. App. 2005); *United States Fid. & Guar. Co. v. Pietrykowski*, No. E99-38 (Ohio Ct. App. Feb. 11, 2000); *Spratley v. State Farm Mut. Auto. Ins. Co.*, 78 P.3d 603, 607 (Utah 2003); *In re Illuzzi*, 616 A.2d 233, 236 (Vt. 1992); *Barry v. USAA*, 989 P.2d 1172, 1175 (Wash. Ct. App. 1999); see also *In re Allstate Ins. Co.*, 722 S.W.2d 947, 952 (Mo. 1987) (permitting dual representation). This has been the case for some while.

The recognition of an attorney-client relationship between insurers and defense counsel is not universal. Indeed, the minority position is substantial, with many jurisdictions holding that the insured is the defense lawyer's sole client. See, e.g., *Cont'l Cas. Co. v. Pullman, Comley, Bradley & Reeves*, 929 F.2d 103, 108 (2d Cir. 1991); *In re A.H. Robins Co.*, 880 F.2d 694, 751 (4th Cir. 1989); *Gen. Sec. Ins. Co. v. Jordan, Coyne & Savits, LLP*, 357 F. Supp. 2d 951, 957 (E.D. Va. 2005) (discussing Virginia law); *Essex Ins. Co. v. Tyler*, 309 F. Supp. 2d 1270, 1272 (D. Colo. 2004) (discussing Colorado law); *Gibbs v. Lappies*, 828 F. Supp. 6, 7 (D.N.H. 1993); *First Am. Carriers, Inc. v. Kroger Co.*, 787 S.W.2d 669, 671 (Ark. 1990); *Higgins v. Karp*, 687 A.2d 539, 543 (Conn. 1997); *Finley v. Home Ins. Co.*, 975 P.2d 1145, 1153 (Haw. 1998); *Kirschner v. Process Design Assocs., Inc.*, 592 N.W.2d 707, 711 (Mich. 1999); *In re Rules of Prof'l Conduct & Insurer Imposed Billing Rules & Procedures*, 2 P.3d 806, 814 (Mont. 2000); *Feliberty v. Damon*, 527 N.E.2d 261, 265 (N.Y. 1988); *Givens v. Mullikin*, 75 S.W.3d 383, 396 (Tenn. 2002); *Barefield v. DPIC Cos.*, 600 S.E.2d 256, 270 (W. Va. 2004). At least one state holds that in a case defended under a reservation of rights, the insurer's reservation trumps otherwise acceptable dual representation and transforms the insured into the defense lawyer's sole client. See *Mut. of Enumclaw Ins. Co. v. Dan Paulson Constr., Inc.*, 169 P.3d 1, 8 n.10 (Wash. 2007); see also *Vigilant Ins. Co. v. Behrenhausen*, 889 F. Supp. 1130, 1135 (W.D. Mo. 1995) (indicating that defense lawyer represents only insured, but perhaps not widely authoritative because district court was applying Missouri law in unusual case defended under reservation; Missouri law generally holds that an insurer defending under a reservation of rights loses the ability to control the insured's defense).

In fact, both the dual client and sole client models assume too much. As a general rule, whether a defense lawyer represents the insurer in addition to the insured—who is always a client—is a matter of contract. *Unauthorized Practice of Law Comm. v. Am. Home Assurance Co.*, 261 S.W.3d 24, 42 (Tex. 2008). Beyond that, the existence of an attorney-client relationship is a question of fact. Unless a jurisdiction has adopted the sole client model as a matter of law, an insurer and the attorney it hires to defend its insured can share an attorney-client relationship in any given case depending on their conduct and understanding.

Courts have begun recognizing the importance of fact-specific inquiry into the existence of an attorney-client relationship between a liability insurer and the lawyer it employs to defend an insured. See, e.g., *Swiss Reinsurance Am. Corp. v. Roetzel & Andress*, 837 N.E.2d 1215, 1220-21 (Ohio Ct. App. 2005). In *Paradigm Ins. Co. v. Langerman Law Offices*, 24 P.3d 593 (Ariz. 2001), for example, the Arizona Supreme Court embraced the general rule that the existence of an attorney-client relationship turns on whether (a) the would-be client has manifested to the lawyer its intent that the lawyer provide legal services for it; and (b) the lawyer manifests his or her consent to do so. The Minnesota Supreme Court supplemented the general rules concerning the creation of attorney-client relationships in *Pine Island Farmers*

Coop v. Erstad & Riemer, P.A., 649 N.W.2d 444 (Minn. 2002), to provide a bright-line rule to determine whether defense counsel represents the insurer as well as the insured. *Pine Island*, 649 N.W.2d at 451.

Under the *Pine Island* approach:

[I]n the absence of a conflict of interest between the insured and the insurer, the insurer can become a co-client of defense counsel based on contract or tort theory if two conditions are satisfied. First, defense counsel or another attorney must consult with the insured, explaining the implications of dual representation and the advantages and risks involved. . . . Second, after consultation, the insured must give its express consent to the dual representation.

Pine Island, 649 N.W.2d at 452 (citations omitted). Without this consultation and the insured's express consent, the insured is the defense lawyer's sole client.

Two final points must be made. First, defense lawyers who do not want an attorney-client relationship with an insurance company are free to structure their engagements so that the insured is their sole client. This can be accomplished in an engagement letter. A lawyer who accepts only the insured as a client significantly diminishes the likelihood of a conflict of interest. On the other side of the coin, an insurer that desires an attorney-client relationship with defense counsel is free to resist the lawyer's attempt to limit the engagement.

Second, some courts that recognize the dual client doctrine further hold that a defense attorney owes his or her primary allegiance to the insured. See, e.g., *Paradigm Ins. Co. v. Langerman Law Offices, P.A.*, 24 P.3d 593, 598 (Ariz. 2001); *Spratley v. State Farm Mut. Auto. Ins. Co.*, 78 P.3d 603, 607 (Utah 2003). This simply cannot be. A lawyer generally cannot favor one co-client over another absent the clients' informed consent; to do so would be the very embodiment of a conflict of interest. Co-clients have a right to expect that their common lawyer is equally loyal. Furthermore, this approach is unnecessary in light of general conflict of interest rules, which protect insureds in cases where their interests and those of their insurers are not aligned. Finally, the primary allegiance approach is insidious. It is insidious from the insurer's perspective because an insurer relying on a defense lawyer to protect its interests along with the insured's may be vulnerable on several fronts without knowing it. It is also insidious from the insured's standpoint, because if the concern that a lawyer hired by an insurer is bound to be influenced by economic self-interest to favor the insurer--even if subconsciously--is true, then an insured in a case presenting a conflict of interest should be defended by independent counsel owing it undivided loyalty rather than by a lawyer supposedly owing it primary allegiance.

Long story short, the dual client and sole client models generally represent default rules. Judgments about attorney-client relationships are best made on a case-by-case basis.

COMMON CONFLICTS OF INTEREST

Conflict of interest analysis is important to defense counsel and insurers alike. For defense counsel, obviously, conflict of interest allegations may expose them to professional discipline and to liability for malpractice or breach of fiduciary duty. An insurer that fails to recognize a conflict of interest may be estopped from raising coverage defenses or exposed to bad faith liability. Reservations of RightsIn theory, an insurer who decides to provide a defense for the insured under a reservation of rights presents a potential conflict of interest because the insurer may be more concerned with developing facts showing non-coverage than facts defeating liability. *State ex rel. Rimco, Inc. v. Dowd*, 858 S.W.2d 307, 308 (Mo. Ct. App. 1993). Defense counsel may be able to steer a case toward a coverage result favorable to the insurer. For example, a defense attorney might elicit deposition testimony supporting a defense against providing coverage.

Assuming that an insurer's reservation of rights creates a conflict of interest, how might the conflict be resolved or ameliorated? The most common approach is to appoint independent counsel to represent the insured at the insurer's expense.

Not every reservation of rights creates a conflict of interest requiring the insurer to provide its insured with independent counsel. Rather, an insurer is obligated to provide its insured with independent counsel at the insurer's expense only when the outcome of a coverage issue can be affected by the defense of the underlying action. *Rx.com Inc. v. Hartford Fire Ins. Co.*, 426 F. Supp. 2d 546, 559 (S.D. Tex. 2006) (applying Texas law); *James 3 Corp. v. Truck Ins. Exch.*, 111 Cal. Rptr. 2d 181, 186 (Cal. Ct. App. 2001); *Nisson v. Am. Home Assurance Co.*, 917 P.2d 488, 490 (Okla. Ct. App. 1996). Conversely, an insurer has no obligation to provide independent counsel for the insured when the manner in which the underlying action is defended cannot affect coverage. *Cybernet Ventures, Inc. v. Hartford Ins. Co. of the Midwest*, 168 Fed. App'x 850, 2006 U.S. App. LEXIS 4677 (9th Cir. Feb. 23, 2006) (citing California statute); *Armstrong Cleaners, Inc. v. Erie Ins. Exch.*, 364 F. Supp. 2d 797, 807 (S.D. Ind. 2005) (discussing Indiana law); *Dynamic Concepts, Inc. v. Truck Ins. Exch.*, 71 Cal. Rptr. 2d 882, 887 (Cal. Ct. App. 1998); *Golden Eagle Ins. Co. v. Foremost Ins. Co.*, 25 Cal. Rptr. 2d 242, 257 (Cal. Ct. App. 1993); *Blanchard v. State Farm Fire & Cas. Co.*, 2 Cal. Rptr. 2d 884, 887 (Cal. Ct. App. 1991). The inquiry here focuses not whether defense lawyers *intend* their actions to affect coverage, but simply whether they *could* influence coverage through their activities. *Gafcon, Inc. v. Ponsor & Assocs.*, 120 Cal. Rptr. 3d 392, 418-19 (Cal. Ct. App. 2002).

In what circumstances might defense counsel be able to affect coverage? The best example is a case in which the insurer is defending under a reservation of rights because the insured's conduct may have been intentional. *State Farm Fire & Cas. Co. v. Mabry*, 497 S.E.2d 844, 847 (Va. 1998). While both the insured and the insurer are interested in defeating the plaintiff's claims outright, if liability is found, their interests diverge in establishing the basis for that liability. *Long v. Century Indemnity Co.*, 78 Cal. Rptr. 3d 483, 491 (Cal. Ct. App. 2008). After all, if the insured can be shown to have intentionally injured the plaintiff, there was no occurrence, and the policy's intentional acts exclusion will additionally bar coverage. Accordingly, in such circumstances the insured may be entitled to a defense by independent counsel. See, e.g., *Aquino v. State Farm Ins. Cos.*, 793 A.2d 824, 830 (N.J. Super. Ct. App. Div. 2002); *State Farm Mut. Auto. Ins. Co. v. Van Dyke*, 668 N.Y.S.2d 821, 822-28 (N.Y. App. Div. 1998); see also *Britt v. Cambridge Mut. Fire Ins. Co.*, 717 S.W.2d 476, 481 (Tex. App. 1986) (stating that insured was entitled to independent counsel in wrongful death case where he had previously been convicted of murder in a separate criminal action).

Defense counsel also may be able to affect coverage in a mixed action, i.e., a case in which multiple claims are made against the insured but only some are covered. The archetypal mixed action is one in which some causes of action allege negligence and others intentional wrongs. The worry here is that a defense attorney can through discovery steer the case away from coverage, or might successfully move for summary judgment on covered claims and thus leave the insured defenseless on uncovered causes of action. Alternatively, a defense lawyer might insist on special interrogatories or special verdicts so that damages can be allocated between covered and uncovered claims. See *St. Paul Fire & Marine Ins. Co. v. Engelmann*, 639 N.W.2d 192, 201 (S.D. 2002) (indicating that lawyer doing this would breach duty to insured). Some courts therefore hold that a mixed action creates a conflict of interest entitling the insured to independent counsel. See, e.g., *Herbert A. Sullivan, Inc. v. Utica Mut. Ins. Co.*, 788 N.E.2d 522, 539 (Mass. 2003); *Moeller v. Am. Guarantee & Liab. Ins. Co.*, 707 So. 2d 1062, 1070-71 (Miss. 1996); *Aquino v. State Farm Ins. Cos.*, 793 A.2d 824, 830 (N.J. Super. Ct. App. Div. 2002). South Dakota would also seem to fall into this camp, although that is not entirely clear. See *Englemann*, 639 N.W.2d at 199-201.

In *Tank v. State Farm Fire & Casualty Co.*, 715 P.2d 1133 (Wash. 1986), the Supreme Court of Washington attempted to resolve the conflict posed by a reservation of rights defense by imposing an enhanced duty of good faith on the reserving insurer. *Id.* at 1137. Other states have followed Washington's lead. See, e.g., *Twin City Fire Ins. Co. v. Colonial Life & Accident Ins. Co.*, 839 So. 2d 614, 616 (Ala. 2002); *Finley v. Home Ins. Co.*, 975 P.2d 1145, 1156-57 (Haw. 1998). Insurers can demonstrate enhanced good faith by (1) thoroughly investigating the plaintiff's claim; (2) retaining competent defense counsel who, like the insurer, must understand that the insured is counsel's sole client; (3) fully informing the insured of all coverage issues and the progress of the case; and (4) refraining from any action that demonstrates a greater concern for the insurer's financial interests than for the insured's potential exposure. *Tank*, 715 P.2d at 1137; see also *Mut. of Enumclaw Ins. Co. v. Dan Paulson Constr., Inc.*, 169 P.3d 1, 8 n.10 (Wash. 2007) (discussing *Tank* standards and pointing out that a defense lawyer in this situation has insured as sole client). The *Tank*

standard and criteria effectively safeguard insureds' interests without impugning defense counsel's loyalty or integrity. *L & S Roofing Supply Co. v. St. Paul Fire & Marine Ins. Co.*, 521 So. 2d 1298, 1304 (Ala. 1987).

In summary, no conflict of interest necessarily exists in a reservation of rights defense. *Twin City Fire Ins. Co. v. Ben Arnold-Sunbelt Beverage Co. of S.C., LP*, 433 F.3d 365, 366, 372 (4th Cir. 2005) (discussing South Carolina law and collecting cases); *Trinity Universal Ins. Co. v. Stevens Forestry Serv., Inc.*, 335 F.3d 353, 356 (5th Cir. 2003) (applying Louisiana law); *Rx.com Inc. v. Hartford Fire Ins. Co.*, 426 F. Supp. 2d 546, 559 (S.D. Tex. 2006) (applying Texas law); *Tyson v. Equity Title & Escrow Co. of Memphis, LLC*, 282 F. Supp. 2d 829, 831-32 (W.D. Tenn. 2003); *MetLife Capital Corp. v. Water Quality Ins. Synd.*, 100 F. Supp. 90, 94 (D.P.R. 2000); *Delmonte v. State Farm Fire & Cas. Co.*, 975 P.2d 1159, 1174 (Haw. 1999); *Mut. Serv. Cas. Ins. Co. v. Luetmer*, 474 N.W.2d 365, 368-69 (Minn. Ct. App. 1991); *Twp. of Readington v. Gen. Star Ins. Co.*, 2006 WL 551404, at *4 (N.J. Super. Ct. App. Div. Mar. 3, 2006); *Nisson v. American Home Assurance Co.*, 917 P.2d 488, 490 (Okla. Ct. App. 1996); *Unauthorized Practice of Law Comm. v. Am. Home Assurance Co.*, 261 S.W.3d 24, 40 (Tex. 2008); *Johnson v. Cont'l Cas. Co.*, 788 P.2d 598, 600 (Wash. Ct. App. 1990). *But see Hartford Underwriters Ins. Co. v. Found. Health Servs., Inc.*, 524 F.3d 588, 592-93 (5th Cir. 2008) (discussing Mississippi law); *Hartford Cas. Ins. Co. v. A & M Assocs., Ltd.*, 200 F. Supp. 2d 84, 89-90 (D.R.I. 2002) (holding that insurer's reservation of rights creates conflict of interest entitling insured to independent counsel); *Great Divide Ins. Co. v. Carpenter ex rel. Reed*, 79 P.3d 599, 604 (Alaska 2003) (same); *First Jeffersonian Assocs. v. Ins. Co. of N. Am.*, 691 N.Y.S.2d 506, 506-07 (N.Y. App. Div. 1999) (same); *see also Twin City Fire Ins. Co. v. Ben Arnold-Sunbelt Beverage Co. of S.C., LP*, 433 F.3d 365, 370-71 (4th Cir. 2005) (collecting cases holding that a mere reservation of rights creates conflict of interest entitling insured to independent counsel). The same principle holds true when a defense is provided under a non-waiver agreement. On a daily basis defense lawyers hired by insurers are called upon to handle cases in which the insured's interests and those of the insurer do not fully coincide. The defense bar generally has shown no inability to zealously defend insureds (their clients) under such circumstances. The overwhelming majority of defense attorneys vigorously defend the insureds they represent without regard for insurers' coverage positions. Nevertheless, if defense counsel can affect coverage through the litigation of the third-party action, the insured may be entitled to independent counsel at the insurer's expense. *Great W. Cas. Co. v. Dekeyser Express, Inc.*, 475 F. Supp. 2d 772, 778-80 (C.D. Ill. 2006); *Cunniff v. Westfield, Inc.*, 829 F. Supp. 55, 57 (E.D.N.Y. 1993); *Am. Family Mut. Ins. Co. v. W.H. McNaughton Builders, Inc.*, 843 N.E.2d 492, 498 (Ill. App. Ct. 2006); *Am. Family Mut. Ins. Co. v. Blackburn*, 566 N.E.2d 889, 892 (Ill. App. Ct. 1991); *Roussos v. Allstate Ins. Co.*, 655 A.2d 40, 44 (Md. Ct. Spec. App. 1995); *Nisson v. American Home Assurance Co.*, 917 P.2d 488, 490 (Okla. Ct. App. 1996). If an insurer determines that an insured is entitled to independent counsel, it must so inform the insured, even if the insured has not demanded independent counsel. *Elacqua v. Physicians' Reciprocal Insurers*, 800 N.Y.S.2d 469, 473 (N.Y. App. Div. 2005).

Representation of Multiple Parties

The representation of multiple parties by a single lawyer or law firm routinely raises conflict of interest concerns. Different defendants may have adverse interests. *See, e.g., Murphy v. Nutmeg Ins. Co.*, 773 N.Y.S.2d 413, 415 (N.Y. App. Div. 2004) (finding that insurer was required to provide separate counsel for multiple insureds with potential contribution claims against each other). In construction circumstances, for example, a landowner is typically an additional insured under a general contractor's commercial general liability (CGL) policy. An attorney hired by the general contractor's CGL insurer to defend a premises liability action may be asked to defend the landowner, as well. The doctrine of comparative fault necessarily makes the landowner and general contractor potential adversaries, notwithstanding their common interest in defeating the plaintiff's claim. If an injured automobile passenger sues both the owner and the driver, the owner and driver may be adverse. It may be in the driver's best interest to argue that she is the owner's agent, while the owner may benefit by arguing that the driver was impermissibly operating the vehicle. *See, e.g., Murphy v. Urso*, 430 N.E.2d 1079, 1083-84 (Ill. 1981). *But see Allied Am. Ins. Co. v. Ayala*, 616 N.E.2d 1349, 1358 (Ill. App. Ct. 1993) (finding no conflict where permissive use acknowledged). In other cases, a driver and a passenger may be adverse. *See, e.g., Gustafson v. City of Seattle*, 941 P.2d 701 (Wash. Ct. App. 1997). Representing both a trucking company and its driver may pose a conflict of interest when there is a potential dispute as to whether the

driver was acting in the course and scope of his employment. Indeed, representing an organizational insured and its employee is often potentially troublesome because of course and scope issues. Co-defendants may have indemnification agreements or common law indemnity rights, essentially requiring defense counsel to assert cross-claims. In such circumstances, an insurer may be required to provide independent counsel. See *Atl. Mut. Ins. Co. v. Struve*, 621 N.Y.S.2d 5, 6 (N.Y. App. Div. 1994) (stating that insurer's retention of separate counsel fulfills its initial obligation to mutually adverse insureds) (quoting *Goldberg v. Am. Home Assurance Co.*, 439 N.Y.S.2d 2, 4 (N.Y. App. Div. 1981)).

The problems that can flow from multiple representation are illustrated by a recent bad faith case in a Pennsylvania federal court, *Jurinko v. Medical Protective Co.*, No. 03-CV-4053, 2006 U.S. Dist. LEXIS 13601 (E.D. Pa. Mar. 27, 2006), *aff'd in part, rev'd in part*, 305 Fed. App'x 13, 2008 U.S. App. LEXIS 26263 (3d Cir. Dec. 24, 2008). The insurer, Med Pro, appointed a single lawyer, Kilcoyne, to represent two doctors in a medical malpractice action. The doctors' interests were incompatible, since either could escape liability by pointing the finger at the other with respect to the alleged failure to diagnose the plaintiff's skin cancer. The Med Pro claims handler testified at trial that he knew that Kilcoyne had a conflict of interest and that the dual representation was unethical, but that he insisted on it to save [Med Pro] money. Based on this and other misconduct, the jury returned a verdict against Med Pro of just over \$7.9 million, including \$6.25 million in punitive damages. On appeal, the Third Circuit let the bad faith verdict stand, but reduced the punitive damage award to just under \$2 million on the basis that the original award was unconstitutionally excessive.

The insurer in *Wolpaw v. General Accident Ins. Co.*, 639 A.2d 338 (N.J. Super. Ct. App. Div. 1994), issued a \$50,000 homeowners policy to Saranne Frew. The policy also covered other members of Frew's household, including her sister Karanne Wolpaw, and Karanne's son, Heath. Heath Wolpaw blinded a playmate, Michael Heim, when he shot him with a BB gun. Heim and his parents sued Heath, his mother, his father Ivan, and Frew. General Accident hired a single law firm to represent all of the defendants except Ivan. The Heims also sued the BB gun manufacturer and the store that sold it, both of which had different insurers and defense counsel.

General Accident immediately paid its \$50,000 policy limits into court as a settlement offer. The Heims rejected the offer. A jury awarded the Heims \$502,000 after finding Michael Heim 50% at fault, Heath Wolpaw 20% at fault, and Ivan Wolpaw 30% at fault. Post-judgment interest brought the total judgment to \$709,964.20. Karanne Wolpaw then sued General Accident, alleging that the insurer's failure to provide separate counsel constituted a breach of contract.

The *Wolpaw* court noted the general rule that an insurer of codefendants whose interests conflict must retain independent counsel for each insured, or permit each insured to do so at the company's expense. That was clearly the case at bar.

The three insureds had the common interests of minimizing the amount of the Heims's judgment and maximizing the percentage of fault attributable to the other defendants. However, their interests in maximizing the percentage of the other insureds' fault and minimizing their own was clearly in conflict. For instance, it was in [Karanne Wolpaw's] interest to argue that she adequately had secured the rifle from Heath's unattended use and had carefully instructed him in its safe use, which he negligently disregarded; on the other hand, it was in Heath's interest to argue that [his mother] negligently failed to secure the rifle, and that he was not negligent in view of his mother's negligence and his youth.

[S]eparate attorneys representing . . . Heath [and his mother] might well have asserted cross-claims for contribution against the other's client. That was not done It was also in plaintiff's interest to assert a cross-claim against her sister and that she remain a codefendant to share the liability burden. Yet the single firm of attorneys, discharging its duty to her sister, not only did not file a cross-claim for contribution on plaintiff's behalf, but successfully moved to have Frew dismissed from the case.

Wolpaw, 639 A.2d at 340. The court termed the conflict of interest obvious, and concluded that the insurer breached its policy by virtue of its failure to provide independent counsel for its various insureds. The court then remanded the case so that damages attributable to the conflict could be apportioned in a separate trial.

The *Wolpaw* court reached the correct result. Defense counsel generally cannot represent co-insureds in a comparative fault case. While both insureds' interests may appear to be aligned, there is a substantial possibility--if not a probability--that one will eventually have to point the finger at the other. A defense attorney that attempts to avoid this problem by maintaining a unified defense at all costs may end up hurting both clients. Although co-insureds may knowingly consent to joint representation, thus solving defense counsel's ethical dilemma, there are cases in which defendants probably should not so consent. This is certainly true where potential damages exceed coverage, and where one insured's coverage may be challenged.

Defense Counsel's Activities Generate Information Suggesting a Possible Coverage Defense

The dual client doctrine poses serious communication and disclosure problems for defense attorneys. An appointed attorney who learns of information suggesting a possible coverage defense during the course of an insured's representation faces an obvious dilemma. If the attorney shares the information with the insurer, the insured will be prejudiced. With a potential loss of coverage comes exposure to personal liability. On the other hand, withholding the information prejudices the insurer, which may have to pay a judgment for which there is no coverage. Of course, it is the insurer that pays defense counsel's bills, and it is the insurer with which the attorney desires a continuing relationship. Regardless of whether defense counsel discovers the information or whether the insured shares confidential information, defense counsel are generally barred from sharing the information with the insurer.

The insurer in *Parsons v. Continental National American Group*, 550 P.2d 94 (Ariz. 1976), CNA, hired counsel to defend its insureds, the Smitheys, in connection with their son Michael's alleged assault on three neighbors. The plaintiffs made a settlement demand within policy limits which CNA rejected. The defense attorney CNA hired later obtained Michael Smithey's confidential file from the juvenile facility where he was incarcerated, and determined that his attack was knowing and deliberate. It therefore followed, the attorney told CNA, that the assault was intentional. *Id.* at 96. CNA then issued a reservation of rights letter, informing the Smitheys that their son's assault may have been intentional and that their policy specifically excluded liability for bodily injury caused by intentional acts. The case proceeded to trial and the court directed a \$50,000 verdict for the plaintiffs, which exceeded the Smitheys' \$25,000 policy limits. Judgment was entered in the verdict amount.

The plaintiffs garnished CNA, which responded by offering its \$25,000 policy limits. The plaintiffs declined CNA's offer. CNA successfully defended the garnishment action by asserting its intentional acts exclusion. The same attorney that represented the Smitheys at trial defended CNA in the garnishment action.

The plaintiffs contended on appeal that CNA was estopped to deny coverage and waived its intentional acts exclusion because it exploited defense counsel's fiduciary relationship with Michael Smithey. The *Parsons* court agreed, reasoning that public policy mandated this result. CNA was ultimately responsible for the entire amount of the judgment.

More offensive conduct was exposed in *Employers Casualty Co. v. Tilley*, 496 S.W.2d 552 (Tex. 1973). The *Tilley* insurer, Employers, filed a declaratory judgment action seeking a determination that its insured's late notice relieved it of its duty to defend a personal injury action.

Before filing the declaratory judgment action, Employers obtained a non-waiver agreement from Tilley and hired counsel to defend the personal injury action. Defense counsel knew of Employers' late notice contention and of the insured's related explanation. For nearly eighteen months, the defense attorney secretly developed evidence for Employers on the coverage question. The attorney took witness statements from five of the insured's employees to establish their knowledge of the accident and related communications with Tilley (contrary to Tilley's stated position); briefed the late notice question for Employers without informing Tilley; interviewed two independent witnesses at the insurer's request to establish late notice; and wrote numerous letters and had multiple conversations with Employers about developing its coverage defense, suggesting additional investigation, and offering legal advice. This conduct became the basis for the declaratory judgment action filed by separate counsel.

The Texas Supreme Court concluded that it would be untenable to permit the insurer to disclaim its defense obligation based on late notice. The question was not the validity of Employers' late notice defense, but whether it was improperly developed. Because Employers' conduct violated the guiding principles and public policy governing insurer-insured relations, it was estopped from denying its contractual duties.

The Insured Shares Confidential Information

A lawyer's obligation to maintain client confidences is fundamental to the attorney-client relationship. Confidentiality is necessary because it encourages clients to be candid with their lawyers and to trust them. Almost all states have adopted the American Bar Association's Model Rules of Professional Conduct in some form. Model Rule 1.6(a) provides in pertinent part that [a] lawyer shall not reveal information relating to representation of a client unless the client gives informed consent, the disclosure is impliedly authorized to carry out the representation, or certain other conditions are met.

A lawyer with multiple clients owes each an equal and undivided duty of confidentiality. Independent duties to multiple clients may become a problem in the insurance defense context, where a defense attorney must keep both the insurer and the insured informed about the status of the case. Outside counsel guidelines typically require defense attorneys to periodically report to the insurer, to timely report significant case developments, and to report after specified events, such as depositions. If the insured shares confidential information with the defense attorney, can the attorney pass on that information to the insurer? What if the company's guidelines mandate the communication of such information?

A defense attorney certainly cannot develop confidential information in the course of the insured's representation with the intent to benefit the insurer by perfecting a coverage defense. Unfortunately, few confidentiality issues are that clear. Two situations come immediately to mind: First, an insured shares with a defense attorney confidential information that affects coverage. For example, the insured may confide in the attorney that she intentionally caused the subject harm. Second, the insured shares with the defense attorney confidential information that does not affect coverage, but that likely affects the insurer's defense strategy or settlement decisions. Perhaps the insured abused drugs at relevant times, has a criminal record, or holds inflammatory personal views. In both situations the cooperation clause in the insured's policy arguably requires the insured to communicate the information to the insurer. In both situations the insurer's outside counsel guidelines apparently require the defense attorney to share the information with the insurer. In the latter situation, standard practice does the same.

Assuming a dual client relationship, the defense lawyer must determine whether the confidential information at issue is the kind that the insured might be required to communicate to the insurer under the duty to cooperate. The lawyer also must determine whether the information is such that the insurer would expect to receive in the course of the representation.

If the confidential information falls into either category, the lawyer must explain to the insured the lawyer's relationship with the insurer. The attorney must explain to the insured the significance of the information to the insurer, either as it relates to coverage or as it affects the defense. The attorney must explain to the insured the duty to cooperate and the effect his or her failure to cooperate may have on coverage or on the insurer's defense obligation. If the information relates to coverage, the lawyer may have to advise the insured to retain separate coverage counsel. In addition to needing immediate coverage advice, the insured will need separate counsel to defend any subsequent coverage action by the insurer.

Having fully informed the insured about all possibilities and all consequences of secrecy, the defense attorney may ask the insured for permission to share the information with the insurer. If the insured consents, the defense attorney may divulge the insured's confidences to the insurer. If the insured refuses to consent, the defense attorney must maintain the insured's confidentiality; the attorney cannot share the information with the insurer.

If the insured instructs the defense attorney to maintain confidentiality, the resulting conflict of interest mandates the attorney's withdrawal from the representation. The lawyer cannot continue to represent the insured. The lawyer cannot thereafter represent the insurer in a coverage dispute with the insured, nor can the attorney represent the insurer in a suit against the insured for the insured's breach of its duty to cooperate. The defense attorney's involvement in the case is over.

It does not matter whether the confidential information is detrimental to the insured because it affects coverage, or whether it simply affects the insurer's case evaluation or defense strategy, except as it relates to the lawyer's efforts to persuade the insured to authorize disclosure. If the information affects the insurer's case evaluation or defense strategy, but does not affect coverage, it should be easier for the defense attorney to persuade the insured to authorize disclosure of the information to the insurer. The insured should see the wisdom of cooperating with the insurer to defeat or minimize the third-party claim, even if the information to be revealed may be embarrassing or derogatory. The insured is unlikely to see any value in disclosing information suggesting a potential coverage defense to the insurer for obvious reasons. The insured's instruction to maintain confidentiality seals the defense lawyer's lips without regard for whether the information affects coverage.

Understandably, a lawyer may reveal a client's confidential information where it is impliedly authorized to carry out the representation. If coverage is established, a defense attorney is impliedly authorized to communicate to the insurer any information obtained from the insured to carry out the dual representation. Accepting that as true, isn't a defense attorney impliedly authorized to share the insured's confidences with the insurer if that information may shape defense strategy or cause the insurer to settle the case? The answer is yes. If the insured instructs the lawyer to maintain confidentiality, however, implied authority is irrelevant. The insured's specific instruction to keep quiet trumps the attorney's implied authority.

Punitive Damages Are Claimed

Plaintiffs regularly plead their entitlement to punitive damages whether justified or not. Depending on the jurisdiction, a plaintiff's punitive damage claim may create a conflict of interest for insurance defense counsel. *See, e.g., Mobil Oil Corp. v. Md. Cas. Co.*, 681 N.E.2d 552, 561-62 (Ill. App. Ct. 1997).

States are divided on the insurability of punitive damages. In states prohibiting the insurability of punitive damages, or where a policy explicitly precludes coverage for punitive damages, an insurer may be thought to have no interest in defending such claims. Insureds, on the other hand, are vitally interested in avoiding punitive damages. Hence defense counsel's alleged conflict of interest.

A California court considered whether the existence of a punitive damage claim creates a conflict of interest in *Foremost Ins. Co. v. Wilks*, 253 Cal. Rptr. 596 (Cal. Ct. App. 1989). California prohibits coverage for punitive damages as a matter of public policy. The *Wilks* court concluded that the plaintiff's punitive damage claim did not create a conflict of interest, because it was in the insurer's best interest to vigorously defend the underlying suit to avoid liability for compensatory damages. *Wilks*, 253 Cal. Rptr. at 602. Although evidence might be developed that the insured acted recklessly or maliciously, thus exposing her to punitive damages, the insurer would not benefit from pursuing such a theory. Ergo, there was no conflict of interest.

Wilks is well-reasoned. Aggravating circumstances or conduct giving rise to punitive damages simultaneously increase compensatory damage exposure. An insurer must therefore vigorously defend aggravated litigation to reduce its potential indemnity obligation to its insured. Accordingly, the mere existence of a punitive damage claim does not create a conflict of interest. A punitive damage claim might create a conflict of interest only if coupled with an allegation that the insured acted intentionally. In that case, however, it is the alleged intentional act that creates any conflict; the punitive damage claim is incidental. *See, e.g., Illinois Municipal League Risk Management Ass'n v. Seibert*, 585 N.E.2d 1130 (Ill. App. Ct. 1992).

There may be cases in which a plaintiff's compensatory damages are minimal, but the insured's conduct is so outrageous or reckless that it may be exposed to punitive damages. *See, e.g., Nandorf v. CNA Ins. Cos.*, 479 N.E.2d 988 (Ill. App. Ct. 1985) (seeking \$700,000 in punitive damages and \$5,000 in compensatory damages for false imprisonment). For example, a plaintiff might suffer relatively minor injuries in an automobile accident in which the insured driver was drunk, or an African-American shopper briefly detained by a store's security force because of her race might sue the store for false imprisonment. Here the defendant's insurer need not worry about minimizing compensatory damage exposure because it is already small. The potential for a punitive damage award is of no concern to the insurer because it is not obligated to indemnify the insured for punitive damages. It might therefore be argued that the insurer has no interest in zealously defending the insured, and that because of this conflict of interest the insured is entitled to independent counsel. *See Nandorf*, 479 N.E.2d at 992-94.

This argument misses the mark. While it is true that the insurer's provision of a robust defense is no longer guaranteed by its interest in defeating or mitigating compensatory damages, that does not mean that it has no incentive to protect the insured against punitive damages. To the contrary, an insurer that does not zealously defend its insured in this situation will almost certainly be exposed to bad faith liability. The threat of bad faith provides the insurer with all the incentive it needs to protect the insured by way of an aggressive defense. Accordingly, a defense lawyer hired by an insurer in such a case should face no conflict of interest.

Potential Damages Exceed Coverage

Cases in which potential damages exceed available insurance coverage may spawn conflicts of interest. Conflicts allegedly arise when a plaintiff offers to settle within policy limits. *See Lehto v. Allstate Ins. Co.*, 36 Cal. Rptr. 2d 814, 820 (Cal. Ct. App. 1994). As soon as a policy limits offer is made, the insured's interests and those of the insurer diverge. The insured wants the insurer to accept the offer in order to avoid excess liability and potential financial ruin. Such a settlement is not necessarily in the insurer's best interests. By going to trial, the insurer may escape liability altogether, or obtain a judgment lower than the plaintiff's settlement offer. The insurer might therefore be tempted to gamble with its insured's money. Precisely to avoid this problem, courts imply a duty on insurer's part to settle claims for their insureds' benefit. Defense counsel are frequently caught in the middle.

The court in *Allstate Insurance Co. v. Campbell*, 639 A.2d 652 (Md. 1994), concluded that potential excess liability, standing alone, does not create a conflict of interest requiring the insurer to surrender control of the defense and pay for the insured's independent counsel. The *Campbell* court acknowledged the potential conflict, but observed that the insured's and insurer's interests are in no way adverse to the extent that exists where coverage is an issue. The court concluded that any conflict was mitigated by the insured's ability to later pursue a bad faith claim should the insurer unreasonably refuse to accept a policy limits offer. Absent a separate conflict of interest necessitating the retention of independent counsel for the insured, the insurer retains the right to control the defense of a potential excess verdict case.

Campbell is a sound decision. Insurers must vigorously defend potential excess verdict cases to minimize their potential indemnity obligation up to policy limits, and to avoid bad faith liability. The latter factor provides special incentive. The mere possibility of an excess verdict does not create a conflict of interest depriving an insurer of the right to control the defense. *See Littlefield v. McGuffey*, 979 F.2d 101, 108 (7th Cir. 1992) (deciding case under Illinois law).

The fact that the insurer retains control of the defense in a potential excess verdict case does not relieve defense attorneys of certain ethical obligations, however. Generally speaking, defense counsel must make the insured aware that a potential conflict of interest exists, and advise the insured of its right to consult independent counsel regarding any excess liability. Defense counsel must also inform the insurer of any potential excess liability. Both parties can then take the steps necessary to protect their respective interests. Under no circumstances can defense counsel play settlement games. Failure to settle a policy limits case in the pursuit of some personal agenda exposes defense counsel to personal liability.

Conflicts Regarding Insureds' Affirmative Claims

An insurer defending its insured generally has no obligation to prosecute counterclaims or third-party claims that the insured may have either as a matter of contract or by virtue of its duty of good faith and fair dealing. *Ramsey v. Lee Builders, Inc.*, 95 P.3d 1033, 1040 (Kan. Ct. App. 2004); *Towne Realty, Inc. v. Zurich Ins. Co.*, 548 N.W.2d 64, 68-69 (Wis. 1996); *Shoshone First Bank v. Pac. Employers Ins. Co.*, 2 P.3d 510, 516-17 (Wyo. 2000). It is still possible, however, for insureds' affirmative claims to spawn disputes, as *Northern County Mutual Insurance Co. v. Davalos*, 140 S.W.3d 685 (Tex. 2004), illustrates.

Davalos was injured in an automobile accident in Dallas County, Texas. He resided in Matagorda County, Texas. He sued the driver of the other car in Matagorda County. The other driver and his wife then sued Davalos and a third party in Dallas County. Davalos turned over the Dallas County litigation to his lawyers in the Matagorda County case, who answered the suit and moved to transfer it to Matagorda County. The attorneys then notified Davalos's insurer, Northern, of the Dallas County suit. Northern responded to Davalos, telling him that it would defend him, that did not wish to hire his lawyers, that it opposed the motion to transfer the Dallas County case to Matagorda County, that it had retained another attorney to defend him in the Dallas County action, and warning him that his coverage might be jeopardized if his personal counsel did not abandon their motion to transfer venue and withdraw. Northern also told him that he was free to retain his personal counsel at his own expense to consult on the Dallas County case, and that Northern's chosen lawyer would cooperate with that lawyer as long as it did not jeopardize the defense. Northern legitimately believed Dallas County to be the proper venue for both actions arising out of the accident.

Davalos rejected Northern's defense, asserting that the company's offer was qualified and thus breached the duty to defend, and that Northern could not select defense counsel because its dispute over venue created a conflict of interest. Despite Davalos's resistance and the fact that Northern was never allowed to assume the defense, the Matagorda County action was transferred to Dallas County on another party's motion. Northern settled the claims against Davalos that had been asserted in the original Dallas County case, obtaining his full release at the company's sole expense. Meanwhile, Davalos sued Northern in Matagorda County, claiming that the insurer had breached its duty to defend the Dallas County action, and that Northern was guilty of bad faith and had violated the Texas Insurance Code.

Davalos's suit against Northern proceeded, with both the trial court and a lower appellate court concluding that Northern had breached its duty to defend and violated the Texas Insurance Code. Northern then sought review by the Texas Supreme Court. The supreme court granted review and reversed.

The supreme court rejected Davalos's claim that Northern had improperly conditioned his defense. An insurer's right to conduct the [insured's] defense includes the authority to select the attorney who will defend the claim and make other decisions that would normally be vested in the insured as the named party in the case. *Davalos*, 140 S.W.3d at 688. Not every disagreement between an insurer and an insured about the conduct of a defense is a conflict of interest; were that the case, the insured, not the insurer, could control the defense merely by disagreeing with the insurer's actions or strategy. Instead, an insured may rightfully refuse an inadequate defense and may also refuse any defense conditioned on an unreasonable, extra-contractual demand that threatens the insured's independent legal rights. *Davalos*, 140 S.W.3d at 689. For example, Northern could not have conditioned Davalos's defense on his promise to dismiss his Matagorda County action. Here, however, the disagreement centered on the proper venue for the defense of the third-party action, not Davalos's right to pursue his own remedy.

Northern never deprived Davalos of a defense. Choosing venue is a strategic decision entrusted to defense counsel. The choice of venue should ordinarily have no impact on the insured's legitimate interests under the policy. *Davalos*, 140 S.W.3d at 690. While Davalos had the right to reject Northern's offer of a defense because he did not want the case against him defended in Dallas County, he was not entitled to recover the costs of that defense. Northern's offer to defend the Dallas County action satisfied its contractual obligations.

The court likewise found that Northern did not violate the Texas Insurance Code. The company's disagreement

with Davalos over venue did not render its offer to defend him equivocal.

CONCLUSION

Conflicts of interest are an inevitable hazard in the eternal triangle. Insurance defense attorneys can best avoid conflicts by embracing the principle that their sole client is the insured they are hired to defend in any given case. They should reflect this position in their engagement or acknowledgment letters sent to insureds when accepting new matters. Thereafter, defense counsel's only reliable means of avoiding conflicts is to take the approach that their primary duty is to further the insured's best interests. Defense counsel must keep the insured fully informed of all settlement offers, and must keep the insured informed of all general case developments. This is especially true if the defense is being provided under a reservation of rights, or under a non-waiver agreement. Finally, defense counsel must appreciate the confidential relationship they share with the insureds they defend.

Cirando on Insurance for the H1N1 Pandemic

By Lisa M. Cirando

June 16, 2009

SUMMARY: This Emerging Issues Analysis identifies some of the special challenges faced by governments and businesses grappling with pandemic-related losses as they respond to the worst global economic crisis in generations. It analyzes three basic types of insurance coverage that may be available to those entities, and offers some helpful hints for pursuing pandemic-related insurance coverage claims.

ARTICLE: INTRODUCTION

On Thursday June 11, 2009, the World Health Organization ("WHO") declared the first global influenza pandemic of the twenty-first century. The WHO's designation of a pandemic for a new strain of influenza A virus subtype H1N1 ("H1N1"), commonly referred to as swine flu, reflects the existence of ongoing community level outbreaks in over 70 countries worldwide. WHO's Director-General Dr. Margaret Chan has acknowledged that, "Further spread is considered inevitable." Past pandemics have reached at least a third of the global population.

Governments and businesses should carefully consider the potential for insurance coverage for their pandemic-related losses. This commentary presents a brief summary of the history and treatment of H1N1/swine flu and identifies some of the special challenges that will be faced by governments and businesses. This commentary also analyzes three broad types of insurance coverage that may be available to those entities grappling with the H1N1 pandemic: Property and Business Interruption (including Loss of Attraction); General Liability; and Directors and Officers Liability. Finally, some helpful hints for pursuing insurance coverage claims are offered.

HISTORY AND TREATMENT OF H1N1/SWINE FLU

The current pandemic is not the first time that humans have been infected with swine influenza. In 1976, a limited outbreak attributed to a different strain of the virus occurred among soldiers in Fort Dix, New Jersey. Until recently, the Centers for Disease Control and Prevention had received reports of approximately one human swine influenza virus infection every one to two years in the U.S., primarily among those persons with direct exposure to pigs. From December 2005 through February 2009, those numbers increased slightly, with approximately 12 reported cases of

human infection.

The numbers associated with the current pandemic have been steadily rising over the past few months, resisting early conclusions that the infection would not be widespread. Symptoms associated with H1N1 appear to be mild, with only roughly 150 deaths reported by the WHO since officials first discovered the virus in Mexico in March 2009. (In comparison, seasonal influenza kills about 500,000 a year worldwide). Reported cases of H1N1 now top out at nearly 30,000 worldwide, though experts believe that millions of people may have already been infected. Outbreaks have been most severe in Mexico and among Canada's indigenous populations, resulting in significant numbers being hospitalized.

When it comes to treatment, there are four different antiviral drugs licensed for use in the U.S., though the current H1N1 strain appears resistant to two of the four. A vaccine is expected to be ready for dissemination by October 2009, just in time for the start of the northern hemisphere's seasonal flu season.

GOVERNMENTS AND BUSINESSES GRAPPLE WITH THE PANDEMIC

A pandemic designation places increased pressure on all levels of government to take steps to contain the spread of H1N1, especially in the months before a vaccine is developed. In response to the initial outbreak, U.S. officials declared a public health emergency and the U.S. State Department warned citizens to avoid all nonessential travel to Mexico. In the U.S. and elsewhere, officials imposed quarantine measures such as school closures. Hong Kong instituted a quarantine at a hotel where Asia's first H1N1 case was traced, preventing 280 guests and employees from leaving the facility for a week.

Businesses have followed suit, taking extra precautions and assembling teams to develop and implement contingency plans in line with the Business Pandemic Influenza Planning Checklist posted by the U.S. Department of Health and Human Services at <http://www.pandemicflu.gov/plan/workplaceplanning/businesschecklist.html>. In fact, much of the actions taken by governments and businesses in the past few months had been developed in response to the avian flu and severe acute respiratory syndrome ("SARS") threats earlier this decade.

THE PANDEMIC PRESENTS SPECIAL CHALLENGES FOR GOVERNMENTS AND BUSINESSES DEALING WITH AN ECONOMY IN DISTRESS

The pandemic's likely effects-increased travel complications and declining productivity, coupled with escalating health care costs-present serious complicating factors for both governments and businesses as they respond to the worst global economic crisis in generations. In April 2009, the U.S. Congressional Budget Office estimated that a pandemic would reduce real (inflation-adjusted) gross domestic product by about one percent, or approximately US\$1.4 trillion. Experts have estimated that up to 30% of a company's employee base may be unable to work at some point in the pandemic, with potentially dire consequences for all businesses throughout the supply chain. In addition, governments and businesses may incur significant expenses, including the cost of sanitizing and decontaminating properties as well as the loss of income, either from property closures during decontamination or the resultant loss of customers due to the identification of the presence of H1N1.

Though international health authorities attempted to mitigate the effects on the economy by, for example, issuing recommendations against travel bans and other restrictions, some airlines canceled flights and waived change fees while cruise lines suspended port calls in Mexico. In addition, H1N1's link to pigs has led some countries to ban meat imports from Mexico and the U.S., even though it is not transmitted through the ingestion of pork, exacerbating a global slump in pork sales.

THREE TYPES OF INSURANCE FOR PANDEMIC-RELATED LOSSES

Governments and businesses may be able to recoup some of their pandemic-related losses under a variety of different insurance policies. The three most common types of insurance policies that may be implicated by the H1N1 pandemic include Property and Business Interruption (including Loss of Attraction); General Liability; and Directors

and Officers Liability.

Property Insurance Affords Coverage for Contaminated Properties

Property insurance protects against the risk of loss to the policyholder's buildings and building contents, such as equipment, furniture, computer hardware, etc. It may be written in one of two ways: All Risks or Listed Perils. All Risks policies provide coverage unless barred by a specific enumerated exclusion, whereas Listed Perils policies provide coverage for only certain defined risks (such as earthquakes, flooding, etc.).

Regarding All Risks coverage, certain property policies may contain disease or virus exclusions. To be enforceable, such exclusions must be narrowly tailored and written in clear and unmistakable language. In addition, exclusions are to be construed most strongly against an insurance company, with any ambiguities weighing in favor of coverage.

As to Listed Perils coverage, H1N1 is not likely to be a listed peril; however, some businesses may have purchased infectious disease coverage (which does not require physical damage to premises) in the wake of the SARS epidemic. Such additional coverages typically have significant limitations on the amounts available for loss, such as sublimits and high deductibles.

Loss or damage to property is a prerequisite to coverage under either All Risks or Listed Perils coverages. Significantly for businesses grappling with H1N1, contamination may constitute physical loss or damage. That is, the losses associated with the decontamination or destruction of insured property may be covered under first-party property insurance. Additionally, some first-party property policies include favorable language for policyholders that defines property damage to include the loss of use of insured property. In this way, a business may have property insurance to cover the loss of use of property made unavailable during times of quarantine or decontamination.

Business Interruption Insurance Compensates for Loss of Income

Property insurance policies also contain coverage for business interruption (or time element) losses that compensate policyholders for loss of business income in addition to the cost of repairs. Such coverage is typically triggered when a particular location becomes damaged and is not usable for an extended period of time. A typical insuring agreement states: "The Company will pay for actual loss sustained by the Insured resulting directly from the necessary interruption of the Insured's business caused by a peril covered hereunder." For example, the pandemic could lead to business interruption claims as a result of forced shut-downs or reduced access to a business' physical location, plant or warehouse.

The measure of the appropriate period of loss is often the subject of dispute. One definition is "the length of time that it should take to repair or replace damaged property." Policyholders may also have an extended period of indemnity that provides additional coverage beyond the initial period of loss. In addition, extra expense coverage for additional costs incurred because of the loss may be available. To gain these types of business insurance coverage, however, a policyholder must prove loss or damage to covered property.

Some businesses may have contingent business interruption coverage. Such coverage is triggered if an entity experiences pandemic-related losses as a result of a supplier's inability to deliver a product or service necessary to the policyholder's business. Other forms of business interruption insurance also recognize coverage where employees or customers are denied access because of a government decree, as in the case of Hong Kong's hotel quarantine.

Insurance companies may assert defenses to coverage, suggesting that the policyholder's loss is not due to H1N1 but instead a result of the economic crisis. Policyholders should consider retaining experts, such as forensic accountants, to assist with the determination of the extent of the loss.

Loss of Attraction: Special Coverage for Pandemic-Related Losses

In addition, some property insurance policies (especially those purchased by large hotel/hospitality-related businesses) may contain coverage for pandemic-related claims under loss of attraction provisions. Sample wording states: "This policy is extended to cover the actual loss sustained by the Insured resulting from cancellation of or inability to accept bookings for accommodation and/or a cessation or diminution of trade due to a loss of potential customers, as a direct result of: the occurrence at an insured location of murder, suicide, rape, attempted rape, armed robbery, and malicious activities, contagious and/or infectious disease, food or drink poisoning, vermin, pests or defective sanitation." To be covered, the policy typically requires that the loss exceed 24 hours. Some coverages specifically exclude loss "directly or indirectly arising out of, contributed to, or by resulting from SARS, Avian Flu, and/or atypical pneumonia, or fear of threat thereof."

General Liability Provides Defense and Indemnity Coverage Against Third-Party Claims

General liability (or comprehensive/commercial general liability) policies provide insurance for various types of claims brought by third parties alleging property damage, bodily injury, personal and advertising injury, as well as medical payments coverage. Some industries may be more susceptible to liability claims for pandemic-related losses than others. These include hospitality and food service industries, such as hotels, restaurants, cruise ships, resorts, tour companies, conference and event companies; common carriers such as airlines, trains, busses, taxi companies; and health care industries such as hospitals, elderly care homes, etc. Public institutions, such as prisons and detention centers, also may face pandemic-related claims.

Claimants asserting pandemic-related losses will look to hold entities accountable on the basis that they allegedly helped to spread H1N1 or failed to contain it. For example, employers experienced a wave of liability claims in 2003 for allegedly being unprepared for the SARS epidemic. There may be coverage for such claims, though causation may be a point of contention between insurance companies and policyholders. The determination of causation by the policyholder is fact-intensive, and it may be impossible for people who become ill to prove the precise moment and location of exposure; however, some cases may be easier to prove than others (*i.e.*, cruise ship v. supermarket).

The standard general liability insuring agreement provides both defense and indemnity coverages. Defense costs coverage is an important component and is available in addition to limits of liability. Where the allegations arguably fall within the coverage provided, the duty to defend terminates only when the limits are exhausted by payment of judgment or settlement. The definition of defense expenses may include expert and consultant expenses and site investigation costs, as well as attorneys' fees and costs.

Directors and Officers Liability Insurance Protects Against Loss for Wrongful Acts

Companies purchase directors and officers (D&O) liability insurance as the last line of defense for themselves and their directors and officers. In exchange for substantial premiums, D&O insurance companies promise to indemnify directors and officers for "Loss" that those individuals become legally obligated to pay due to "Wrongful Acts" committed in their capacity as directors and officers. "Wrongful Acts" may be defined to include negligent acts, errors or omissions, misstatements, or breach of duty committed by the directors or officers in the discharge of their duties and solely in their official capacity as such.

Though each policy is unique, D&O insurance policies typically provide three types of coverage:

- Side A or non-indemnifiable loss coverage, which protects directors and officers when the company is legally prohibited from indemnifying them or where the company is insolvent and cannot indemnify them;
- Side B or corporate reimbursement coverage, which pays the company back for amounts it expends to indemnify

directors and officers; and

- Entity coverage, which, when available, covers the company itself against securities fraud claims.

D&O insurance typically covers defense costs, settlements and judgments against directors and officers in securities fraud lawsuits and shareholder derivative actions. It also provides coverage for investigative and defense costs incurred by directors and officers and, sometimes, the corporation itself, with respect to Securities and Exchange Commission ("SEC"), regulatory and criminal investigations and proceedings.

Federal securities laws prohibit registered entities from making material misstatements or omissions of fact in their SEC filings, press releases and other public communications. With respect to the H1N1 pandemic, companies could violate the federal securities laws if they make false or misleading statements concerning-or if they fail to disclose entirely-the impact or lack of impact of a potential outbreak on their financial results. Securities class actions may be filed alleging nondisclosure or misstatement of risks. Shareholders of companies adversely affected by the H1N1 pandemic may claim that the conduct or decisions made by the company or its executives caused loss. Some allegations that may be made include not taking steps at the early stages of the outbreak to prevent exposure.

Public companies should consider the impact of the pandemic on their financial results. Certain industries, such as pharmaceuticals, may need to employ special accounting rules and SEC guidance for sales of their products. It is crucial that companies demonstrate corporate responsibility and accountability to their stakeholders through transparent actions and communications. Companies will need to assure their stakeholders that they can adequately respond to the pandemic from a humanitarian perspective and anticipate legal and public challenges.

CONCLUSION: HELPFUL HINTS FOR PURSUING INSURANCE CLAIMS

It is imperative that both governments and businesses acknowledge the potential that pandemic-related losses will trigger the protection afforded by several different types of insurance. Policyholders should gather and read all potentially relevant insurance policies and give timely notice of claims (or circumstances which may subsequently give rise to claims), as directed. Documents should be organized and well-maintained and experts, including legal counsel, should be retained early in the process, particularly for large claims. Relevant dates for filing proof of loss and lawsuits against the insurance company should be calculated as soon as possible. Time limits are strictly enforced under first-party property insurance; however, in most instances, time limits may be tolled by agreement.

Policyholders should be mindful of their duty to cooperate and keep insurance companies (including excess insurers) regularly updated and informed of decisions, especially any that involve large expenditures. Many policies require that policyholders seek insurance company consent to retain defense counsel or settle an action. Be assured that anything said to or shared with the insurance company may be used in its defense of the claim. If the claims-handling process should become adversarial, policyholders should remind the insurance companies that their duties of good faith and fair dealing continue even through coverage disputes and coverage litigation.

Reed Smith LLP on Direct Mortgage Corp. v. National Union Fire Insurance Co.: Fidelity Bond Coverage for Insureds Liability to Third Parties

By Mark S. Hersh and Yisroel I. Hiller

May 8, 2009

SUMMARY: Insured financial institutions often seek fidelity coverage, but fidelity insurers deny requests for coverage on grounds that this type of loss fails to satisfy the requirements of the standard fidelity agreement. This article analyzes *Direct Mortgage Corporation v. National Union Fire Insurance Co.*, and provides insureds with arguments to assist them in obtaining fidelity coverage for loss resulting from employee misconduct to third parties.

PDF LINK: [Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge](#)

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: I. Introduction

In the wake of the current financial crisis, insured financial institutions should be more aware than ever of potentially available sources of reimbursement for losses they suffer at the hands of their employees. Financial institutions commonly purchase fidelity coverage to protect themselves against losses resulting from employee dishonesty, and are often able to access such coverage for reimbursement of loss they suffer when employees defraud the company or misappropriate funds from the company's own accounts. But to what extent will a fidelity bond cover losses insureds incur arising from their liability for employee misconduct against third-parties?

In *Direct Mortgage Corporation v. National Union Fire Insurance Co.*, 2008 U.S. Dist. Lexis 60695 (August 8, 2008), the court analyzed this issue and noted a split of authority between courts limiting coverage to "direct" losses, and courts permitting coverage for any losses "proximately caused." The *Direct Mortgage* court sided with the decisions holding that a fidelity bond will cover only "direct" losses, concluding that it "is not intended to be a liability policy." It found that third party liability was covered only in limited circumstances, namely when the third party's property was being held by the insured in a bailment or trust situation.

This article analyzes the scope of fidelity coverage available to insureds for losses they incur in connection with liability to third parties, with particular emphasis on rejoinders to the two most common arguments carriers raise when denying fidelity coverage for such losses: (1) that these losses do not constitute "direct loss" under the bond (as the *Direct Mortgage* court found); and (2) that in causing losses to third parties, the defalcating employee lacked the

requisite intent to cause a loss to the insured institution (an issued raised but not reached in *Direct Mortgage*). n1

II. Analysis

A. The "Direct Loss" Requirement

When insureds seek coverage under fidelity bonds for loss incurred as a result of their liability to third parties ("third party loss"), carriers often assert that such liability is not "direct loss," citing to the language of the insuring agreement providing that only "Loss *resulting directly from*" employee dishonesty is covered. Some courts agree and reject coverage for third party loss on grounds that such loss results directly from third party claims, rather than from employee dishonesty. The *Direct Mortgage* case is one such decision.

However, as the *Direct Mortgage* court noted, there is case law to the contrary. Some courts have found third party liability to be covered under fidelity bonds as long as the loss (the payment to the third party) was caused by the employee's dishonesty:

The loss covered by an employee's fidelity bond is not necessarily limited to loss directly resulting from the employee's act, such as embezzlement. To the contrary, it may include liability on the part of the insured resulting from the application of the principles of vicarious liability. In other words, a bond insuring against loss sustained by reason of dishonesty, fraud, embezzlement, and so forth, covers losses imposed by the creation of liability to third persons. To illustrate, it has been held that a loss may be suffered by the insured through being required to make good on an obligation to a third person created by the fraud of its employee perpetrated on such third person.

Rafoth v. Nat'l Union Fire Ins. Co. (In re Baker & Getty Fin. Servs.), 93 B.R. 559, 564-65 (Bankr. N.D. Ohio 1988) (citations omitted). As noted in *Direct Mortgage*, some courts have applied a "proximate cause" standard in assessing whether liability to a third party is covered under the bond, i.e., there is coverage if the loss was proximately caused by the employee dishonesty. See *Auto Lenders Acceptance Corp. v. Gentilini Ford, Inc.*, 854 A.2d 378, 386 (N.J. 2004) (and cases cited therein) ("[T]he majority of federal courts that have addressed the question have concluded that the term 'direct loss' or its equivalent does, in fact, call for the application of a proximate cause standard").

Other courts hold that losses covered by fidelity bonds include losses directly resulting from liability of the insured under vicarious liability principles. See, e.g., *Rafoth v. Nat'l Union Fire Ins. Co. (In re Baker & Getty Fin. Servs.)*, 93 B.R. 559, 564-65 (Bankr. N.D. Ohio 1988) (citations omitted); *Ins. Co. of N. Am. v. Gibalco, Inc.*, 847 F.2d 530, 533 (9th Cir. 1988).

B. The "Intent" Requirement

The fidelity bond insuring agreement generally limits coverage to dishonest or fraudulent acts: "committed by the Employee with the intent: (a) to cause the Insured to sustain [a] loss; and (b) to obtain financial benefit for the Employee or another person or entity." Bond, INSURING AGREEMENTS, FIDELITY, (A). Carriers often rely on this language in denying coverage for third party loss, asserting that third party loss does not satisfy the "intent requirement" because when an employee engages in misconduct against third parties the employee intends to cause a loss to those third parties, rather than to the Insured. n2

While there is adequate case law to support this position, there appear to be a number of different approaches to the intent requirement in the case law. See generally *Resolution Trust Corp. v. Fid. & Dep. Co. of Md.*, 205 F.3d 615, 638-640 (3d Cir. 2000) (discussing the split in authority). Some courts have held that the intent requirement in a fidelity bond requires the specific intent or purpose to harm the insured. See, e.g., *Gen. Analytics Corp. v. CNA Ins. Cos.*, 86 F.3d 51 (4th Cir. 1996) (bond required specific intent to accomplish a purpose, akin to the intent required under criminal law). Under this approach, it is unlikely an insured would be able to establish that an employee's awareness that his misconduct toward third parties constitutes intent to cause loss to the insured. However, other courts have held that the intent requirement does not require that the dishonest employee must "actively wish for or desire" to cause

the loss to his or her employer. Rather, an intent to cause loss to the insured can be established if the employee acted with "substantial certainty" that its employer would suffer the loss. *See, e.g., Peoples Bank & Trust Co. of Madison County v. Aetna Cas. & Sur. Co.*, 113 F.3d 629, 635 (6th Cir. 1997). n3

Because "intent" is typically left undefined in the Bond, the insured should note that undefined terms in insurance policies are given their ordinary meanings, and where the meaning of words is uncertain or capable of several reasonable interpretations, resolve the doubts in favor of the policyholder. *See, e.g., Woods v. Nationwide Mut. Ins. Co.*, 246 S.E2d 773, 777 (N.C. 1978). n4 Accordingly, insureds should argue that the intent requirement has been satisfied when an employee causes losses to third parties for which the insured will face vicarious liability, because in doing so, the employee effectively intended (*i.e.*, acted with the knowledge that his conduct would) to cause the insured a loss. After all, a natural consequence of committing dishonest or fraudulent acts while consciously holding oneself out as an agent is potential vicarious liability of the principal to the victims. *See* Restatement (Second) of Agency § 261.

C. Other Relevant Policy Language

Two other common fidelity bond provisions also support the insured's argument that third party liability should be covered. Most Bonds require the insured to give notice to the carrier of any legal proceeding brought against the insured asserting claims for loss "which, if established, would constitute a collectible loss under this bond." Bond, GENERAL AGREEMENTS, NOTICE OF LEGAL PROCEEDINGS AGAINST INSURED -- ELECTION TO DEFEND, E. In connection with this notice requirement, most bonds provide that the insurer has discretion to assume the defense of the underlying proceeding, including third party claims asserted against the insured. The clear import of these provisions is that third party claims for loss caused to third parties may be covered under the Bond. However, some courts have rejected this argument. *See, e.g., Aetna Cas. & Sur. Co. v. Kidder, Peabody & Co., Inc.*, 676 N.Y.S.2d 559, 564 (App. Div. 1998).

Additionally, the Bond typically will exclude from coverage "damages of any type for which the Insured is legally liable, *except compensatory damages*, but not multiples thereof, arising directly from a loss covered under this bond." Bond, Exclusions § 2(u) (emphasis added). The carveback in this exclusion for "compensatory damages" clearly implies that the bond is intended to cover compensatory damages the insured pays to third parties in connection with its liability to those third parties. Some courts, however, have rejected this argument. *See Direct Mortgage*.

III. Conclusion

In sum, the *Direct Mortgage* decision is the latest in a line of cases severely limiting fidelity bond coverage for third party loss. However, as that decision acknowledged, there is a split of authority on this issue. Insured financial institutions seeking fidelity coverage for third party loss have reasonable arguments at their disposal to rebut the defenses to coverage for such loss commonly raised by fidelity carriers. These arguments can be an effective tool in negotiating a settlement of the coverage dispute or in persuading the carriers to contribute to a settlement of the underlying claim brought against the insured, and also serve as viable support for the insured's coverage position should a coverage dispute between the insured and its carrier escalate into litigation or other forms of dispute resolution.

[Return to Text](#)

n1 This article analyzes potential coverage for third party claims under the standardized fidelity insuring agreement language utilized by the 1986 edition of a Standard Form No. 24 Financial Institution Bond. *See* The Financial Institution Bond, Standard Form No. 24 (revised to April 1986), reprinted in STANDARD FORMS OF THE SURETY ASSOCIATION OF AMERICA (hereinafter, the "Bond").

n2 Many of the cases discuss the intent requirement in connection with policies requiring that the employee have "manifest intent" to cause loss to the insured. Bonds occasionally omit the term "manifest" from the intent requirement. Insureds may assert that the omission of the word "manifest" from the intent requirement lessens the burden on the insured to produce evidence demonstrating the employee had specific intent to cause a loss to the insured. *See Resolution Trust Corp. v. Fid. & Dep. Co. of Md.*, 205 F.3d 615, 642 (3d Cir. 2000) (holding "manifest" in the term "manifest intent" must be given meaning)).

n3 Some courts appear to merge the two approaches by requiring specific intent to harm the insured but permitting proof of recklessness to satisfy this standard. As the Third Circuit has stated, "proof of an employee's recklessness, or an employee's knowledge that a result was substantially certain to occur from the conduct, are objective indicia-manifestations-of the employee's specific purpose or intent." *Resolution Trust Corp.*, 205 F.3d at 641-42; *see also FDIC v. Nat'l Union Fire Ins. Co.*, 205 F.3d 66, 74 (2d Cir. 2000) (holding similarly).

n4 However, some courts have held that this usual rule of policy construction does not apply to financial institution bonds, on the grounds that they are negotiated by the banking industry. *See, e.g., Sharp v. FSLIC*, 858 F.2d 1042 (5th Cir. 1988).

Sonnenschein Nath & Rosenthal, LLP on Trout v. Nationwide Mutual Insurance Co.

2009 Emerging Issues 3589

Sonnenschein Nath & Rosenthal, LLP on Trout v. Nationwide Mutual Insurance Co.: An Inconclusive Decision on a New Bad Faith Set-Up

By William Barker and Gauri Chopra

May 4, 2009

SUMMARY: Trout v. Nationwide Mutual Insurance Co. is an unreported decision reporting on a new approach to setting up a liability insurer for bad faith, and leaves open the possibility that the approach might be allowed to work. This commentary examines the new approach, offers an argument that it should not work, and considers how insurers might handle claims where this approach is tried.

ARTICLE: *Trout v. Nationwide Mutual Insurance Co.* n1 is an unreported decision reversing a summary judgment because (as everyone agreed) the district court applied the wrong standard and (as the court held) the error was not harmless. But the case reports on a new approach to setting up a liability insurer for bad faith, and leaves open the possibility that the approach might be allowed to work. This commentary examines the new approach, offers an argument that it should not work, and considers how insurers might handle claims where this approach is tried.

I. The Case

Trout was a passenger in a car owned by Budnikov's father, Raysh, and driven by Kreyche, with Budnikov's permission. Both Kreyche and Budnikov had been drinking. The car hit a tree and Trout was severely injured in December, 2002. Kreyche was insured by Nationwide, with a per person limit of \$100,000 and the car was insured by American Express, with a per person limit of \$25,000. American Express assumed the defense.

In January, 2004, Trout's lawyer asked Kreyche's lawyer if Kreyche's insurer would offer its limits (also saying that he was not agreeing to accept the limits). He set a short deadline for response, but extended that once. Defense counsel responded by offering Nationwide's \$100,000 limit, with conditions, and reporting that American Express had also offered its limit, later adding that there was no other insurance available. Trout rejected Nationwide's conditional offer, made no counteroffer, went to trial, and was awarded \$640,000 plus costs. Kreyche was also criminally prosecuted and subjected to a \$170,138 restitution judgment in favor of Kaiser Permanente, which provided hospital and medical care to Trout for her injuries.

Kreyche assigned his right to Trout, who sued Nationwide for failure to settle, and Nationwide removed the case to federal court. Trout claimed that at least some of Nationwide's conditions were unreasonable, and had an expert witness who supported that claim. Among Nationwide's contentions was that it never had an opportunity to settle within limits, because Trout never made a demand within limits. The district court granted summary judgment to Nationwide.

Under Colorado law, as elsewhere, different standards apply to so-called third-party bad faith (failure to settle to prevent excess exposure) and first-party bad faith (improper failure to compensate the insured's own losses). As the Tenth Circuit explained:

"In the third-party context, an insured's claim is based on general principles of negligence and requires proof that the insurer acted 'unreasonably under the circumstances.'" By contrast, first-party claims require an additional element: "[i]n a first-party claim, . . . the insured must prove both that the insurer acted 'unreasonably under the circumstances' and that 'the insurer either knowingly or recklessly disregarded the validity of the insured's claim.'" n2

The district court mistakenly applied the first-party standard and found that Trout had shown neither unreasonable conduct nor reckless disregard. n3 Everyone agreed that this was error, and the issue was whether it was harmless. Stated differently, review of a decision on summary judgment is *de novo*, n4 so the appellate court can affirm the grant, if correct, even if the reasons given below were wrong. But the Tenth Circuit concluded (without explaining its analysis) that the expert evidence created an issue of material fact. n5

II. Analysis of the Bad Faith Claim

The Tenth Circuit's explanation of the difference between the third-party and first-party standards might indicate that the use of the first-party standard was harmless, because the district court found no unreasonable conduct. However, even though Colorado law seems confused on the point, reasonable conduct means two different things under the two standards. n6 In the first-party context, Colorado emphasizes the need to accord an insurer "wide latitude in its ability to investigate claims and to resist false or unfounded efforts to obtain funds not available under the contract of insurance." n7 Accordingly, establishing bad faith requires proof of "the absence of a reasonable basis for denying benefits of the policy and the defendant's knowledge or reckless disregard of the lack of a reasonable basis for denying the claim." n8 The insurer may challenge any claim that is "fairly debatable." n9 In contrast, the third-party context involves a quasi-fiduciary obligation to protect the insured from the third-party claim, and this obligation differs from a first-party insurer's obligation to pay benefits. n10 Many courts hold that this requires the insurer to consider a settlement demand as if it alone would be liable for any judgment. n11 Thus, even a reasonable hope of a defense verdict does not necessarily justify refusal to settle, if the potential damages are very large. So, one cannot assume that reasonable conduct under the first-party standard would also satisfy the third-party standard.

But the district court in *Trout* had relied on an independent ground that, if correct, should have sufficed to sustain the judgment. It reasoned that Nationwide could not be liable for failure to settle unless it had received an offer to do so, and Trout had never offered. n12 Some courts agree that an offer by the plaintiff is required, n13 some do not. n14 Colorado has not spoken to this issue, but the Tenth Circuit could have done so if the issue was adequately presented by the parties.

I have argued that an offer by the plaintiff (usually referred to as a "demand") should be required. n15 In summary, the argument is that the duty of good faith is imposed to provide the insurer with proper incentives in considering settlement opportunities. But the imposition of that duty has created incentives for manipulation by plaintiffs, who try to remove the policy limits without ever actually taking the risk of being limited to that amount.

A party that would prefer a breach of the duty to settle over performance of that duty would rather not make demands because the demand might be accepted and eliminate any possible recovery above limits. Such a party would prefer to wait for an offer, perhaps "signaling" supposed receptiveness. If the offer never comes, it can later be argued that a reasonable insurer would have made one and the injured party can then testify that it would have been accepted. If

an offer below limits is rejected, there is still an ability to claim that a higher offer, still within limits, would have been accepted. Yet the injured party (who may not have decided what would be acceptable), retains the ability to reject any offer that is made.

In order to avoid later disputes about whether a within-limits offer would have been accepted and to limit abuse by plaintiffs, I argue that the plaintiff should be required to make a demand that the insurer fails to accept before any bad faith claim can arise. If that were the law of Colorado, there would have been no need for a remand in *Trout*. Without checking the briefs, it is impossible to know whether this possibility was adequately presented and, in any event, the opinion is not precedential.

What makes the approach taken by Trout novel is that she essentially ignored Nationwide's effort to settle. Usually, bad faith actions not based on rejected demands have relied on the failure of the insurer to make an offer. Once an offer has been made, there has typically been either a demand for more money (if the offer were less than limits) or for removal of objectionable conditions, giving the insurer at least one opportunity to improve its offer. Trout simply rejected the offer and went to trial. Even if a court holds that an insurer has an obligation to explore settlement, it would be a considerable extension of that principle to say that the insurer must make the best possible offer as the opening of negotiations.

Such a rule would be particularly inappropriate on the facts in *Trout*. Nationwide's conditions were primarily, if not exclusively an effort to protect its insureds -- not itself. Those conditions were as follows:

- a release of Trout's claims against Kreyche, Budnikova and their respective parents;
- Trout's agreement to defend, hold harmless, and indemnify Kreyche, Budnikova and their respective parents in any action brought by a third party;
- Trout's warrant that she had not assigned any portion of her claim to anyone other than Kaiser Permanente and agreement to release and hold harmless Kreyche, his parents and Nationwide from any sums awarded for restitution in the State Action;
- dismissal of the State Action with prejudice;
- waiver of subrogation rights by Kaiser Permanente, Trout's medical insurance provider; and
- waiver of subrogation by any underinsured motorist insurance carrier.

Nationwide was attempting to buy peace for all of its insureds by offering its entire limits. It would have been remiss in not making some attempt to do so, unless it had the insureds' informed consent to leave them exposed to further suits-suits against which Nationwide would probably have had no obligation to defend once its limits were exhausted. Moreover, Nationwide may have had a legal obligation to demand some of those conditions. State law sometimes gives hospitals and other medical providers liens on their patients' tort claims, which must be satisfied before any payment can be safely made to the patient. When this occurs, the insurer is both obligated and entitled to resolve any lien claim as part of any settlement. n16 Colorado law may or may not provide for a lien, but it probably grants the medical provider at least a subrogation claim, a claim that apparently exceeded the policy limits.

In any event, looking at the matter from the perspective of Nationwide's insureds (including Kreyche, whose bad faith claim Trout is prosecuting) it is difficult to see how an effort to protect the insureds was a breach of duty to those same insureds.

III. Lessons for Insurers

The court does not tell us what the letter offering Nationwide's limits said about the conditions. But it might have helped if Nationwide made explicit what should have been obvious on the face of the conditions: that Nationwide was trying to perform its duty to protect its insureds against exposure in excess of limits by offering those limits in return for elimination of all exposure. The letter might have continued by saying that any proposed settlement that did not

eliminate all exposure would require consultation with the insureds, while offering to initiate such consultations if necessary. A letter of that sort might have made a bad faith claim less attractive and led to global settlement negotiations. And it would likely help with any bad faith jury.

IV. Conclusion

When plaintiffs' are faced with inadequate insurance, their lawyers are often creative in trying to find ways to reach beyond the limits. It remains to be seen how Trout's effort will ultimately fare, though the analysis above suggests that it should fail. In the interim, insurers should prepare for others who may try similar approaches.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of *The New Appleman on Insurance Law*, now in preparation, and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged

with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Gauri Chopra is an associate in the Litigation practice of Sonnenschein Nath & Rosenthal, LLP's Chicago office. Her practice focuses on insurance coverage litigation and counseling, with an emphasis on complex insurance litigation in both domestic and foreign arenas. Her experience covers many aspects of insurance coverage in both third-party liability and first-party property contexts, and includes the areas of general liability, excess liability, directors and officers liability, product liabilities, catastrophic loss, reinsurance matters and long-tail exposures such as environmental, asbestos and other toxic torts. Prior to joining Sonnenschein, Ms. Chopra was vice president and claims counsel at ACE Bermuda Insurance Ltd. in Hamilton, Bermuda, where she was involved with successfully handling many of the company's largest coverage disputes and regularly counseled internal clients on claims and underwriting issues. Prior to ACE Bermuda, Ms. Chopra was a litigation associate at a New Jersey law firm where she primarily represented insurance companies in coverage disputes in state and federal trial and appellate courts.

About the Law Firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests. For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself: This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings. When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

The Limits of Insurance Coverage to Compensate Victims of a Swine Flu Pandemic

2009 Emerging Issues 3572

Reed Smith LLP on the Limits of Insurance Coverage to Compensate Victims of a Swine Flu Pandemic

By James Davis, Richard Lewis and Noel Paul

April 30, 2009

SUMMARY: This commentary proposes a worst-case scenario for a Swine Flu pandemic, and discusses why insurance cannot be relied upon to meet the needs of many victims, or protect myriad parties from liability or loss.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

RELATED CONTENT: Click here for more Emerging Issues Analysis related to this Area of Law

ARTICLE: As the Swine Flu outbreak spreads across the United States and the world, political and business leaders are focused on prevention and bolstering public health. Most experts agree, however, that an increase in incidence of infection and death are inevitable. "We expect to see more cases, more hospitalizations, and, unfortunately, we are likely to see more deaths from the outbreak," said Health and Human Services Secretary Kathleen Sebelius. n1

One lesson of recent catastrophes in the US, however, is that leaders must also focus on planning for the aftermath of disaster, even as they work to lessen its impact. Many leaders already are considering the legal implications of their prevention efforts, and ways in which victims and their families will seek compensation. n2 Many will look to insurance for answers. This article proposes a worst-case scenario for a Swine Flu pandemic, and discusses why insurance cannot be relied upon to meet the needs of many victims, or protect myriad parties from liability or loss.

A SWINE-FLU PANDEMIC: WORST-CASE SCENARIO

The world is shrinking. International commerce and travel is widespread. People and products can move from one side of the world to the other in a single day. Thus, what likely would have remained an isolated outbreak in one part of the world a century ago could very likely impact the rest of the world today. Swine-flu infections already have been reported in Mexico, the United States, Canada, the United Kingdom, Austria, New Zealand, and other countries. n3 Indeed, France has asked the European Union to ban all flights to and from Mexico, and Cuba and Argentina already have done so. n4

As horrible as 9/11 and Katrina were, they directly impacted only a relatively small number of people on a regional basis. Within this context, our institutions have performed poorly, but have managed the disasters with some degree of order. A global catastrophe will test our institutions -- particularly the insurance industry -- to a dramatic degree.

Consider the cost of a global pandemic. The World Bank has estimated that each year of a pandemic could cost the US economy \$100-\$200 billion, and the global economy \$800 billion. n5 Many businesses and individuals will look to their insurance to provide a safety net amid these losses. Many will come up empty handed.

Consider this scenario: The spread of Swine Flu across the United States begins to accelerate, and authorities quickly estimate that, without immediate action, the nation could be subject to at least a "medium-level" flu pandemic causing to up to 200,000 deaths.

There is enough vaccination for only 2 percent of the population, and it has already been purchased by some major corporations and city and state governments. These groups begin inoculating as many as they can, but several corporations choose to immunize key employees who they believe are essential to managing the crisis.

As the number of those diagnosed increases, companies begin instructing employees in best practices to avoid contracting or spreading the flu. Some businesses send home non-essential employees with the promise that they will continue to be paid.

After a few days it becomes clear that the outbreak will surpass initial estimates, and that as many as 2 million people could be infected. Businesses close en masse. Others require key employees to continue to report to work, or attempt to establish telecommuting networks so they are able to work from home.

Thousands of businesses begin to inquire with their insurer regarding business interruption coverage. Most insurers deny coverage, however, citing the lack of "direct physical damage" in the office place. They also argue that Swine Flu qualifies as "environmental pollution" under the policy's absolute pollution exclusion. Insurers argue that they have been inundated with coverage requests under health and life policies, and request state and federal funds to subsidize their losses.

After several weeks, hundreds of thousands are hospitalized and even more are quarantined after contracting the virus. Many seek workers' compensation coverage, but are told that they lack sufficient evidence that their injury arose out of and in the course of their employment. One result: hundreds of thousands of lawsuits begin flooding the courts.

Plaintiffs seek possible negligent parties, and hordes of plaintiffs' attorneys help them in their cause. Victims sue their employers for negligently failing to prevent the virus's spread to the workplace, for providing inadequate medical advice, and for requiring that they continue to work.

"Non-essential" and blue-collar employees bring suit against their employers for failing to provide the same level of protection given key, white-collar employees. Even those who received vaccinations bring suit, arguing that the vaccination failed to work. Lacking anyone else to provide them compensation, families of deceased bring suit against the very medical care first-responders who sought to aid them from the start.

Thousands of suits move forward in state and federal court across hundreds of jurisdictions. While some jurisdictions allow consolidation of plaintiffs' claims, others will only hear individual complaints. An absence of common fact among plaintiffs scuttles efforts to form class actions. Lawyers on both sides, meanwhile, wrangle over procedural issues and substantive choice of law.

Although millions of victims are able to prove that they contracted the flu, many face a daunting task in establishing causation. They will have to retain perhaps dozens of scientific experts as witnesses. While some courts issue rulings advantageous to plaintiffs, other jurisdictions hold very differently, creating a patchwork of confusing precedent across the country. As the litigation moves forward, many plaintiffs lose touch with their cases, and the effort to secure justice largely becomes the matter of plaintiffs' attorneys and corporate defense firms. Administrative costs and legal fees begin to skyrocket.

COVERAGE ISSUES

Policyholders seeking coverage under various lines of insurance for damages and losses resulting from Swine Flu will necessarily contend with myriad practical considerations, and face a series of legal hurdles imposed by insurance companies.

Workers Compensation Coverage

Employees sent home under quarantine may not receive coverage if they are not actually infected. Even employees that are infected may struggle receiving coverage if they cannot show that their infection "arose out of" and was contracted "in the course of" their employment. Moreover, US workers compensation laws are a state-by-state patchwork. Whether a claim stemming from Swine Flu is covered would depend on whether the specific state restricts the range of occupational diseases that are covered. In California, for example, a disease that is not incident to a particular kind of occupation generally would not be covered under the state's workers compensation law. n6

Health & Life Insurance Coverage

A pandemic on the scale of the above scenario could threaten the financial solvency of the life insurance industry. According to the Insurance Information Institute, a moderate influenza pandemic could cost life insurers \$15 billion; a severe pandemic on the scale of the influenza outbreak of 1918, which affected 25-30 percent of the US population, could cost up to \$155 billion. n7 Given the poor financial health of many insurers resulting from the recession, claims for coverage for Swine Flu could tip health and life insurers over the breaking point. In this circumstance, these insurers are likely to deny many claims for coverage, or at least delay payment for many months or years. Indeed, the impact of a pandemic on the industry's own work force undoubtedly would significantly hinder the processing, evaluation, and payment of claims.

Professional Liability Coverage

As discussed above, employers face a host of liability issues relative to their management of their employees in the workplace, particularly with respect to compelling employees to either come to work or stay home, and providing a safe working environment. A claim rooted in an employer's discrimination against a certain type of employee, such as a non-essential employee, may be excluded from coverage. Insurance companies also likely would argue that an employer's decision with respect to its management of employees was "expected or intended", and that related damages are excluded from coverage.

General Liability Coverage

Institutions employing first responders, primarily paramedics and other medical personnel, likely would be vulnerable to suits for bodily injury. State and city public health departments, employers, and pharmaceutical companies also could face legal action if the main anti-viral drugs are unsuccessful or cause side effects. The two main anti-viral drugs, Tamiflu and Relenza, primarily have been tested in laboratories and may not be successful in each instance. n8 Insurers likely would argue that bodily injury resulting, for example, from ineffective anti-viral drugs was "expected or intended", because all of these parties knew that the drugs were not entirely effective or without adverse side-effects.

Claims brought against individuals for failing to take necessary precautions to prevent the spread of the flu, despite awareness of their own symptoms, might arise as well. A common provision in homeowners' coverage, however, excludes coverage for liability for transmission of a communicable disease by the insured. n9 Thus, individuals and families that are not judgment proof from the start may protection against a basic liability claim.

Institutions sued for exposing their workers, invitees, licensees, and other parties might be denied coverage based on the standard pollution exclusion in general liability policies. Even some specialized environmental pollution policies contain exclusions for liability resulting from "naturally occurring substances" or "microbial matter". n10

First-Party Property

Property Damage. Many businesses likely would try to recover under a first-party policy for costs to remediate a building infused with the Swine Flu virus. Whether a policyholder can bring a successful claim would depend upon whether the presence -- or suspected presence -- of Swine Flu virus in a building constitutes physical loss or damage to the building. Under existing law, it likely does: courts generally accept that property somehow rendered unfit for its intended use by some event or condition -- such as contamination -- has suffered "physical loss or damage."

Many businesses also might tender coverage for damage to property, and associated lost business, when labor unrest damages the policyholder's property. Lacking a specific exclusion for damages resulting from labor unrest, coverage should exist. If the strikers cause physical loss or damage to property, the value of that property, and the amount of lost income, can be recovered under most first-party forms. Note that many forms reference strikers, but only exclude an increase in Business Income loss due to strikers, and may not exclude loss caused by damage wrought by strikers.

Lost Income. Businesses likely would turn to their first-party property insurance to recover lost income. Policyholders should have coverage for lost Business Income -- expected profit, and continuing unavoidable expenses such as insurance premiums or payroll of crucial employees -- during the period needed to remediate their property. The critical issue for Business Income is establishing that there has been physical loss or damage. Note that the policyholder need not own the property affected by Swine Flu, as long as that property is used in its operations, nor must it make a claim for the remediation (e.g., if the remediation cost is within the deductible or the remediation is paid for by the landlord).

Questions may arise when costs are associated with a building mistakenly suspected to contain the Swine Flu virus. Policyholders should, however, be entitled to recover in this circumstance, on the ground that a building suspected as being contaminated is unfit for its intended use and thus has suffered physical loss or damage.

Policyholders also might be able to trigger coverage for lost income when orders of a civil authority restrict access to the policyholder's business in relation to an outbreak of Swine Flu. Civil or military authorities may impose restrictions on access to buildings or areas believed to harbor the Swine Flu virus, pending elimination of the contamination. Policyholders may have purchased coverage for this exact circumstance, under Civil or Military Authority clauses providing as follows:

We will pay for the actual loss of Business Income you sustain and necessary Extra Expense caused by action of civil authority that prohibits access to the described premises due to direct physical loss of, or damage to, property other than at the described premises, caused by or resulting from a Covered Cause of Loss.

In recent years, insurance companies, facing a spate of Civil Authority claims stemming from the attacks on the WTC and the 2005 Hurricanes, have reacted aggressively, atomizing the standard Civil Authority promise and requiring a policyholder to make a number of showings to secure coverage. In cases stemming from alleged Swine Flu contamination, carriers will require the policyholder not only to establish that the presence, or believed presence, of the virus in a building constitutes "physical loss or damage," but also that: (1) the sole motivation for the order was such existing property damage, not fear of additional property damage or bodily injury; and (2) the order made it impossible for anyone -- not simply more difficult for customers -- to access the property.

CONCLUSION

Authorities and leaders around the world currently are attempting to prevent the spread of the Swine Flu virus. The lesson of past catastrophes, however, is that these same leaders must simultaneously plan for the aftermath of a possible pandemic. Many political and business leaders -- and individuals -- will depend on the insurance industry to provide a backstop to what could be massive human losses and financial disruption. Many will return without assistance. Each type of insurance likely to be relied upon -- workers compensation, health and life, professional liability, general liability, and first-party property -- presents significant obstacles for policyholders. Thus, leaders and policymakers

should begin now to consider alternative means of compensating victims and providing a measure of legal protection to liable parties, many of whom likely will be at the front lines in attempting to prevent the spread of the virus.

Sonnenschein Nath & Rosenthal on R.C. Wegman Construction v. Admiral Insurance

2009 Emerging Issues 3539

Sonnenschein Nath & Rosenthal, LLP on R.C. Wegman Construction Co. v. Admiral Insurance Co.: When Must An Insured Be Warned About Excess Exposure and Who Must Do It?

By William Barker and Geoffrey Repo

April 20, 2009

SUMMARY: R.C. Wegman Construction Co. was named an additional insured under its contractor's policy with Admiral. Wegman's claim exceeded Admiral's \$1 million limit. Wegman was not notified until a few days before trial and immediately put its excess carrier on notice, but coverage was denied due to late notice. Wegman sued Admiral. An Illinois federal court dismissed Wegman's claim, finding that Admiral had breached no duty to notify.

ARTICLE: R.C. Wegman Construction Co. ("Wegman"), a construction manager, was sued for injuries suffered by Brian Budrick ("Budrick"), an employee of Standard-Hayes Boiler & Tank, LLC ("Standard"), one of the contractors working at the site. Standard's policy with Admiral Insurance Co. ("Admiral") named Wegman as an additional insured and Admiral defended. While Budrick's claim exceeded Admiral's \$1 million limit, Wegman claims not to have been told this until a few days before trial. It immediately put its excess carrier on notice, but coverage was denied because the notice came too late. Wegman sued Admiral for not informing it sooner. In *R.C. Wegman Construction Co v. Admiral Insurance Co.*, n1 an Illinois federal court dismissed Wegman's claim, finding that Admiral had breached no duty to notify. This commentary examines that decision and the exposures it may signal for insurance defense counsel.

I. The Case

Budrick sued in 2003, claiming a 2001 injury. According to Wegman, Admiral learned at Budrick's deposition in May 2005 that there was a realistic chance of an award exceeding its policy limits. In April 2007, Budrick demanded \$6 million to settle. Admiral never told Wegman either of these things, so Wegman never notified its excess carrier. The verdict was \$2,039,059.10. n2

Wegman urged that Admiral's duty of good faith required Admiral to inform it of the excess exposure. The court concluded that Illinois recognizes a duty of good faith in managing the defense and settlement negotiations, which can be breached by failure to settle within limits or by picking an unduly risky defense strategy. But Wegman did not allege any breaches of that sort. n3

Wegman argued that failure to notify the insured of possible excess exposure creates risks similar to refusing a within-limits settlement, so the duty of good faith should require such notice. But Wegman did not claim that Admiral could have done anything to prevent the excess judgment. Wegman claimed only that, with notice, it might have retained independent counsel and could have notified its excess insurer. That claim was "too attenuated to fit the [Illinois] courts' circumscribed application of the duty of good faith." n4

Moreover, the court found that "the duty of the insure[r] to consider the interest of the insured at least equal to its own is rooted in the possibility that a conflict of interest [regarding settlement] may arise where the insured is a defendant in a suit in which potential recovery may exceed policy limits." n5 But here, no conflict arose because there were no within-limits demands and the only demand was clearly excessive, so there was no reasonable prospect that Wegman might have wanted to accept that (and Wegman did not allege that it would have been interested in doing so). n6

The court further observed that Wegman had not cited any authority supporting a duty of the *insurer* to tell the insured what had occurred at a deposition or in anything other than settlement negotiations (which a single unreasonable demand did not constitute). *Defense counsel* might have such a duty, but defense counsel were not sued and an Illinois insurer is not vicariously liable for defense counsel's errors. n7 Moreover, the very fact that the insurer had provided counsel who presumably did have a duty to keep Wegman informed counseled against imposing any duty to inform on the insurer itself. n8

II. Implications

In light of Illinois practice, it is likely that Budrick's complaint did not state an *ad damnum*. But even if it had, that would not necessarily have been taken seriously, as such amounts are frequently exaggerated.

Unless Wegman told Admiral or defense counsel that it had excess insurance, they would not have known that Wegman needed to be advised of excess exposure, in the absence of settlement negotiations that might provide an opportunity to avoid or limit that exposure. But defense counsel might have been obligated to inquire about possible excess insurance, unless they had defined the scope of their representation to exclude that subject.

It has been held that whether defense counsel are obliged to provide advice on possible insurance coverage depends on whether that topic is part of the scope of representation, which is typically a question of fact. n9 Accordingly, defense counsel who wish to avoid obligations relating to insurance coverage should make that clear to the insured and confirm that limitation in writing.

But even if Wegman's defense counsel had limited their engagement that way, they would still have been obliged to "keep [Wegman] reasonably informed about the status of the matter." n10 The Model Rules indicate that "the lawyer should fulfill reasonable client expectations for information." n11 Ideally, the lawyer should consult with the insured to determine what sorts of information the insured desires. Without direction from the insured, it would be prudent to provide the information that would normally be provided to an uninsured client with a similar matter.

III. Conclusion

Defense counsel appointed by insurers can minimize their exposure to risks related to other insurance that the insured may have by appropriately limiting the scope of their engagement and assuring that the limitation is documented. But they also need to consult with the insured about what information the insured will want as the case progresses and to be sure they fulfill their duty to "keep the [insured] client reasonably informed about the status of the matter."

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of *The New Appleman on Insurance Law*, now in preparation, and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged with *Insurance Litigation Reporter*, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 *Duke L.J.* 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Geoffrey J. Repo is a member of Sonnenschein's Litigation Practice. His practice focuses on insurance-related litigation including, coverage disputes, bad faith cases, class actions and bankruptcies involving insurance coverage. Mr. Repo represents insurers and reinsurers in coverage disputes involving products liability claims, asbestos-related claims, sexual abuse claims, property damage claims, and a myriad of different general liability coverage disputes."

ABOUT THE LAW FIRM. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients' interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: America's Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its 'sophisticated and thorough' work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to 'work tirelessly and creatively to help manage disputes' and 'create briefings that are strong and impressive.' Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Reed Smith LLP on The Madoff Losses: How Will You Recover?

2009 Emerging Issues 3482

Reed Smith LLP on The Madoff Losses: How Will You Recover?

By Matthew Schlesinger and Jan Larson

March 24, 2009

SUMMARY: In the wake of the Bernard Madoff fallout, this commentary identifies and examines potential sources of recovery-including the full extent of insurance coverage available to cover defense costs, direct losses and possible settlements and judgments-as well as provides practical guidelines for investors and entities facing exposure.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Numerous entities, including financial institutions, hedge funds, accounting firms, investment advisors, charities, and individual investors, are caught in the fallout of Bernard Madoffs unprecedented investment fraud scheme. The estimated losses to investors from Madoffs self-described ponzi scheme are anywhere between \$24 billion and \$65 billion. Lawsuits pending against Madoff include both criminal and civil suits brought by the Securities and Exchange Commission (SEC), class actions brought by individual investors, and a civil suit brought by the Securities Investor Protection Corporation (SIPC), a securities-industry group formed by Congress to assist investors of failed brokerage firms in recovering their losses. These suits contain allegations of securities fraud, professional malpractice, breach of fiduciary duty, and gross negligence.

Litigation has also spread to other feeder fund entities such as financial institutions, hedge funds, accounting firms, and other investment advisors involved in the auditing and vetting of Madoff investments. Such funds facing suits include Tremont Group Holdings, Inc. and Fairfield Greenwich Group. The causes of action against feeder funds range from breach of contract to professional malpractice to fraud. Given the extent of the losses and with litigation swirling, it is critical that investors and entities understand all potential sources of recovery, including the full extent of insurance coverage available to cover defense costs, direct losses and possible settlements and judgments.

Securities Investor Protection Corporation ("SIPC")

For those who invested directly with Madoff, SIPC provides one potential avenue of recovery. Under the Securities Investor Protection Act (SIPA), SIPC is granted the power to either act as trustee or work with an independent court-appointed trustee to assist customers of a failed brokerage firm in recovering registered, non-negotiable securities such as stocks or bonds. On December 15, 2008, SIPC applied for liquidation of Bernard L. Madoff Investment Securities (BLMIS). The U.S. District Court for the Southern District of New York (the Court) granted the application for liquidation and appointed Irving Picard as the trustee to oversee the liquidation.

SIPC does not permit recovery for commodity futures contracts, investment contracts (such as limited partnerships), or fixed annuity contracts that are not registered with the SEC. An individual investors recovery through SIPC is capped at \$500,000, which includes a maximum of \$100,000 on claims for cash losses. As of December 2007, SIPC reportedly had around \$1.5 billion to cover potential claims.

In January 2008, over 8,000 claims forms were mailed to known-investors of BLMIS, and made available to unknown investors on the trustees website (<http://www.madofftrustee.com>). The original deadlines for investors to file claims against BLMIS with the trustee were March 4, 2009 for investors hoping to recover securities in kind, and July 2, 2009 for all others. On February 20, 2009, the trustee clarified that both filing deadlines will be considered timely, with no recovery advantage associated with either date.

It appears that the trustee plans to pursue recovery from several sources. As of the end of December 2008, the trustee reported that it had recovered at least \$29 million of Madoffs personal assets that could be used to reimburse investors. In addition, the trustee could potentially undertake clawbacks of funds that individual clients previously invested with Madoff but redeemed prior to the discovery of the securities fraud. It is estimated that such a clawback could reach back as far as six years before the December 2008 discovery. The exact time frame and extent, however, will be determined by the Court and the trustee, based on the federal Bankruptcy Code, the New York Debtor and Creditor Law, and other applicable case law.

Those individuals and entities that invested directly with Madoff particularly those who previously cashed-out must decide by July 2, 2009 whether to file a claim with the trustee under SIPC, and by doing so, subject themselves to the jurisdiction of the S.D.N.Y. in any clawback proceeding and, thus, the absence of the right to a trial by jury.

Insurance Coverage

Insurance coverage should provide another critical avenue of recovery for investors that experienced financial loss, as well as a source of protection for feeder fund entities at-risk in suits involving the investment of investors money in Madoff. Individual investors could potentially draw upon homeowners and possibly other first party property policies, while feeder funds facing claims or lawsuits may look to their errors and omissions (E&O) and directors and officers (D&O) liability policies, as well as possibly to fidelity bonds, for relief.

The insurance industry faces an estimated \$1 to \$6 billion in potential liability and losses connected to the Madoff investment fraud. It is predicted that the sheer scale of the Madoff losses could affect the dynamics of the insurance market going forward, both as to the availability and cost of insurance coverage. Regardless of whether they are individual investors or at-risk entities, policyholders will have to aggressively pursue their insurance claims, and even litigate, to ensure they receive the benefits of the coverage they purchased. The wording and terms of policies insurers issued can vary widely, so it is critical that investors and entities review their policies carefully in the context of the particular losses and/or suits they are litigating or facing.

First Party Property Policies and Homeowners Policies. Homeowners policies often provide coverage for the loss of theft of an individuals personal property and belongings. Specifically, many of these policies offer coverage for the loss of cash, stocks, bonds, and securities. One example of such policy language reads:

This policy covers you against all risks of direct physical loss or damage to your house, contents, or other permanent structures unless an exclusion applies.

The limit shown for each of the following categories is the maximum we will pay for a covered loss to that type of contents. money, bank notes negotiable papers, securities, accounts .

Often, though, the limits are fairly low and will vary according to the individual policy. On the other hand, the

individual policyholder should be the only claimant under the policy and will not have to compete with other investors for the same pot of money.

E&O Liability, D&O Liability, and Fidelity Bond Coverage. E&O (or professional services) coverage is insurance to cover the defense costs and any liability costs resulting from a third party suit against an entity in which it is alleged that the entity somehow failed in the performance of the professional services they provide (i.e. managing investment portfolios). A typical E&O coverage clause reads:

The Company shall pay loss on behalf of the Insureds resulting from any claim first made against such Insureds and reported to the Company in writing during the policy period, or any extended reporting period, for wrongful acts committed by the Insureds solely in the performance of, or failure to perform, insured services.

D&O coverage protects an entity's directors and officers and sometimes the entity itself against costs arising out of third party suits alleging breaches of fiduciary duty, misrepresentation, failure to disclose, or other wrongful acts in their capacity as directors and officers. A standard D&O coverage clause reads:

This policy shall pay the Loss of each and every Director, Officer or Employee of the Company arising from a Claim first made against such Insureds during the Policy Period or the Discovery Period (if applicable) and reported to the Insurer pursuant to the terms of this policy for any actual or alleged Wrongful Act in their respective capacities as Directors, Officers or Employees of the Company except when and to the extent that the Company has indemnified such Insureds. The Insurer shall, in accordance with and subject to Clause 8, advance Defense Costs of such Claim prior to its final disposition.

Fidelity bond coverage reimburses an entity for losses, among other things, due to intentional employee theft, fraud, or dishonesty, including breaches of due diligence requirements, where the employee acts for his own benefit and not for that of the company. A typical fidelity bond coverage clause reads:

[This bond] covers: (A) Loss resulting directly from dishonest or fraudulent acts committed by an Employee acting alone or in collusion with others. Such dishonest or fraudulent acts must be committed by the Employee with the manifest intent: (a) to cause the Insured to sustain such loss; and (b) to obtain financial benefit for the Employee or another person or entity.

Particular attention should be paid to the definition of key terms such as claim or professional services in these types of policies. Some policies define claim broadly to include any demand against the insured seeking monetary damages, while other policies define claim narrowly to exclude regulatory proceedings brought against the insured. As for the term, professional services, some policies define it generically as applying to any services related to the entity's business, while other policies specifically define only limited types of services that fall within coverage. Insurers may attempt to construe aggressively the scope of these and other terms to support a coverage denial.

These types of liability policies also contain multiple coverage exclusions insurers may attempt to utilize in support of coverage denials, including:

- . So-called conduct exclusions that preclude coverage for losses resulting from fraud, dishonesty, or the gaining of illegal profits. These exclusions should apply only if there has been a final adjudication or finding in fact that the alleged conduct was fraudulent or criminal;

- . Prior Acts exclusions that preclude coverage where the alleged wrongful acts occurred prior to a specified date;

- . Investment Banking exclusions that preclude coverage for losses arising out of services performed by the insured that relate to investment banking as defined by the policy (typically as a consultant, adviser or specialist providing economic or investment advice relating to the valuation of any assets or business entity, any aspect of mergers, acquisitions, leveraged buyouts, tender offers, securities offerings, restructurings, recapitalizations, divestitures, or other

forms of investment banking);

- . Late Trading/Market Timing/Selective Disclosure exclusions that preclude coverage following the actual or alleged late trading or market timing of shares of any investment company, or the actual or alleged selective disclosure of portfolio holdings of an investment company.

In addition, some insurers may seek to rescind policies altogether asserting some misrepresentation or fraudulent statement in the insurance application regarding the entity's management or knowledge of Madoff's scheme.

Recommended Action

The discovery of Madoff's investment fraud scheme has resulted in a swift tide of legal action and time is of the essence for those seeking either recovery or protection. Investors and entities with any potential losses or exposure should seek the expert advice of counsel in order to navigate these complex waters.

- . Understand the nature of the non-insurance recovery options available to you, including their advantages, disadvantages, risks, limits of recovery, and critical deadlines.

- . Review your insurance policies and understand the nature of the coverage you purchased. Did you purchase first party property, homeowners, E&O liability, D&O liability, or fidelity bond coverage? If so, what are the terms, limits, and exclusions? How are they likely to be applied?

- . Know when to provide notice of a claim to your insurance company. Many policies require notice be provided within a relatively short amount of time and, in any event, no later than a specified date (the end of the policy period or a certain number of days thereafter). In addition, even funds not yet the target of litigation may want to provide notice of circumstances to park claims under this year's policies before insurers add Madoff exclusions at the next renewal.

- . Understand how and what to communicate with your insurers in litigating a claim. Does the policy allow you to ask the insurer to assume the defense of a claim or must you retain your own counsel? If you must retain your own counsel, must you select counsel from a designated list and/or seek consent from the insurer? What information about the defense and costs must you provide to the insurer on an ongoing basis throughout the litigation?

- . Remember that claims submitted by policyholders to insurers are often met by reservation of rights letters or even coverage denials. If you understand your rights, you may not need to take no for an answer.

With the assistance of experienced counsel, the investors and entities facing potential exposure in the wake of the Madoff investment fraud will be in the best possible position, whether their goal is maximum recoveries or protection against future suits.

ABOUT THE AUTHOR(S):

Matthew J. Schlesinger is a partner with Reed Smith LLPs Insurance Recovery Group, where he represents policyholders in insurance recovery disputes involving such varied claims as fidelity, directors' and officers' liability, first-party property damage and business interruption, environmental and asbestos liability, HIV-infected blood, intellectual property, power interruption, construction, and professional disability. Matt lectures and writes frequently on insurance coverage issues, and has co-chaired numerous Mealey's insurance coverage conferences. He is also co-chair of the Membership Subcommittee of the Insurance Coverage Litigation Committee of the American Bar Association. McCarter English LLP on New York Insurance Department Opinion No. 08-10-07

2009 Emerging Issues 3462

McCarter English LLP on New York Insurance Department Opinion No. 08-10-07: An Insurers Duty to Defend Under A Directors And Officers Insurance Policy

By Steven Weisman and Cynthia Morrison

March 19, 2009

SUMMARY: The New York State Insurance Department recently rejected an insurance carriers proposed policy language for a directors and officers liability insurance policy (D&O Policy) that placed the duty to defend on the insured. Placing the duty to defend on the carrier may reduce disputes between carriers and their insureds concerning the timing of payments and reimbursement of defense costs.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The Office of General Counsel for the New York State Insurance Department (Department) issued Opinion No. 08-10-07 (the Opinion) rejecting an insurance carriers proposed policy language for a directors and officers liability insurance policy (D&O Policy) that placed the duty to defend on the insured. 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008). It, therefore, appears that carriers, admitted in New York, must issue D&O Policies to New York insureds that include a duty to defend their insureds.

This is a departure from D&O Policies that require only payments of all loss that the insured is legally obligated to pay, which typically includes defense costs. The timing of such payment usually is a critical issue for insureds and sometimes results in litigation between an insured and its carrier. Some courts hold that a carrier is obligated to pay defense costs as they are incurred, ⁿ¹ while other courts hold that, if a D&O Policy provides only a duty to indemnify, then a carrier is not obligated to pay defense costs until resolution of the underlying litigation. ⁿ² In both cases, the insurer may be released from paying any defense costs if it is finally determined that the loss incurred is not covered under the policy. Because, however, the duty to defend is broader than the duty to indemnify, carriers likely will have to pay defense costs as long as the claim may be covered by the D&O Policy.

The Opinion

A carrier sought Department approval of a D&O Policy that included the following provisions:

A. It shall be the duty of the Insureds and not the duty of the Insurer to defend Claims . The insurer shall have the right and shall be given the opportunity to effectively associate with the Insureds in the investigation, defense and settlement of any Claim that appears reasonably likely to be covered in whole or in part hereunder.

B. The Insureds shall not settle any Claim, select any defense counsel, incur any Costs, Charges and Expenses, admit or assume any liability, stipulate to any judgment or otherwise assume any contractual obligation without the Insurers prior written consent, which shall not be unreasonably withheld. The Insurer shall not be liable for any settlement, Costs, Charges and Expenses, assumed obligation, admission or stipulated judgment to which it has not consented or for which the Insureds are not legally obligated. The Insureds shall not knowingly take any action which increases the Insurers exposure for Loss under this Policy. Notwithstanding any of the foregoing, if all Insureds are able to fully and finally dispose of, with prejudice, all Claims that are subject to one Retention for an amount not exceeding any applicable Retention, including Costs, Charges and Expenses, then the Insurers consent shall not be required for such disposition.

See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at pp. 1-2.

The Department concluded that requiring the insured to defend to the carriers satisfaction or to obtain all of the required approvals from the carrier resulting in the carrier trying to disclaim coverage for an otherwise covered claim, would run contrary to Insurance Law § 3420, which establishes that the insurer be directly responsible for paying claims on behalf of the insured. 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at p. 3. The proposed Policy also runs contrary to New York Insurance Regulation 107, which requires the carrier to bear the duty to defend and provide a proper defense regardless of cost, because it limits the availability of coverage for defense costs. See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at p. 4 (citing 11 NYCCR §§ 71.1-71.2). Accordingly, by placing the duty on the insured, the proposed Policy inappropriately conditions defense cost coverage on the insured taking charge of the defense. See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at p. 5.

The Department also considered the carriers assertion that imposing the duty to defend on the carriers will negatively impact an insureds ability to control its defense of a covered underlying liability claim. The Department observed that a D&O Policy may be in keeping with Regulation 107 where the insured has an option to assume control over a defense provided that the carrier maintains the ultimate duty. n3 See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at p. 6. The proposed D&O Policy, moreover, significantly limits any real control an insured would have over the litigation because the insured is not permitted to handle any substantive aspect of the defense without the carriers consent. See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at p. 6.

The Insureds shall not settle any Claim, select any defense counsel, incur any Costs, Charges and Expenses, admit or assume any liability, stipulate to any judgment or otherwise assume any contractual obligation without the Insurers prior written consent, which shall not be unreasonably withheld. The Insurer shall not be liable for any settlement, Costs, Charges and Expenses, assumed obligation, admission or stipulated judgment to which it has not consented or for which the Insureds are not legally obligated. The Insureds shall not knowingly take any action which increases the Insurers exposure for Loss under this Policy.

See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at pp. 1-2. Accordingly, the Department concluded that the proposed D&O Policy would not give an insured any greater ability to control its defense than if the Department imposes the duty to defend on the carrier.

Potential Economic Implications

Requiring the carrier to defend the insured against claims that may implicate coverage under a D&O Policy may provide insureds with greater economic certainty without eroding an insureds control of its defense.

First, the duty to defend is broader than the duty to indemnify. See, e.g., *Ruder & Finn v. Seaboard Sur. Co.*, 439 N.Y.S.2d 858 (N.Y. 1981). The duty of an insurer to defend its insured arises whenever the allegations within the four corners of the underlying complaint potentially give rise to a covered claim, or where the insurer has actual knowledge

of facts establishing a reasonable possibility of coverage. *Frontier Insulation Contrs., Inc. v. Merchants Mut. Ins. Co.*, 91 N.Y.2d 169, 175, 690 N.E.2d 866, 667 N.Y.S.2d 982 (1997). D&O carriers, therefore, likely will be obligated to provide a defense, including payment of defense costs as they are incurred.

Second, the Department further determined that "the cost allocation provision of the proposed D&O Policy affords less defense costs coverage to the insured than a policy under which the insurer bears the duty to defend" and is inconsistent with Regulation 107, which "does not authorize allocation of defense costs." See 2008 NY Insurance GC Opinions LEXIS 230 (NY Insurance GC Opinions 2008) at p. 5. Accordingly, insureds likely will not have to incur underlying defense costs in cases that include allegations in the complaint that potentially give rise to a covered claim. The Department's decision also likely will reduce the volume of insurance coverage actions filed solely to resolve disputes over the timing of payment of defense costs and the reimbursement of advanced defense costs if the ultimate loss is not insured under the D&O Policy.

* * *

Conclusion

It remains to be seen whether any carrier will seek approval of an alternative policy form that does not require the carrier to provide a defense to its insureds. Presently, however, it appears that the Department requires carriers to include a duty to defend provision in its D&O Policies. It also remains to be seen whether courts, applying New York law to determine a carrier's defense obligation under a D&O Policy, will rely on the Department's interpretation of New York Insurance Law and New York Insurance Regulation 107.

Sonnenschein Nath & Rosenthal LLP on Addison Insurance Co. v. Fay: The Supreme Court of Illinois Adopts the "Time and Space" Test for Purposes of Determining the "Number of Occurrences"

By Daniel Feinberg

March 18, 2009

SUMMARY: The Addison Ins. Co. v. Fay decision is noteworthy because the Supreme Court of Illinois expanded on the "cause test" adopted in *Nicor, Inc. v. Assoc. Electric & Gas Ins. Services, Ltd.*, unanimously holding that the deaths of two boys constituted two separate occurrences because the insurer presented insufficient evidence from which it could be ascertained that the deaths "were so closely linked in time and space as to be considered one event."

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: In *Addison Ins. Co. v. Fay*, 2009 Ill. LEXIS 176 (Ill. Jan. 23, 2009), the Supreme Court of Illinois considered whether the deaths of two boys constituted a single occurrence or two separate occurrences under the terms of a liability insurance policy defining occurrence as an accident, including continuous or repeated exposure to substantially the same general harmful conditions. The two boys were killed by a quick condition in an excavation pit on the policyholders property, which (like quicksand) involves a cushion of water that prevents the soil from supporting a load of weight, which can result in that load sinking and becoming trapped. The boys bodies were found in close proximity to one another. Investigators concluded that one of the boys became trapped in the pit when trying to jump across it, and that the other boy became trapped trying to help free the first one. However, the investigators could not conclude how much time elapsed between the two entrapments, nor could they confirm that the boys were together when they first became trapped.

The boys families sued the policyholder, and Addison (the policyholders liability insurer) agreed to settle the suit for an amount equal to the policy limits. A dispute ensued as to whether the \$1,000,000 per occurrence limit or \$2,000,000 aggregate limit (for two separate occurrences) applied. Addison thus filed a declaratory judgment action to resolve that issue. The trial court ruled that the boys deaths resulted from two separate occurrences, finding that the evidence was sufficient to show that the causes of death were different and that the circumstances immediately prior to the deaths were different. Relying on the Supreme Courts decision in *Nicor, Inc. v. Assoc. Electric & Gas Ins. Services, Ltd.*, 223 Ill. 2d 407, 860 N.E.2d 280 (Ill. 2006), and a New Jersey appellate decision, n1 the Appellate Court reversed, ruling that the boys deaths were so closely linked in time and space as to be considered by a reasonable person as one occurrence. The boys families appealed to the Supreme Court of Illinois.

The Supreme Court began its analysis by discussing its prior decision in *Nicor* in which it adopted the cause test

for determining the number of occurrences. Under the cause test, the number of occurrences is determined by referring to the cause or causes of the damage. *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *13. In addition, where each asserted loss is the result of a separate and intervening human act, whether negligent or intentional, or each act increased the insureds exposure to liability, Illinois law will deem each such loss to have arisen from a separate occurrence. 2009 Ill LEXIS 176, at *14. However, the *Nicor* Court went on to state: By contrast, where the damages for which coverage is sought resulted from the manufacture and sale of defective products or a fraudulent sales scheme, the loss will be found to have emanated from a single cause and there will be but one occurrence for purposes of the applicable policies. *Nicor*, 860 N.E.2d at 294. Applying these principles in *Nicor*, the Supreme Court found that mercury spilled from gas meters resulted from intervening acts of negligence by the employees that replaced the individual gas meters and thus, that each mercury spill was a separate occurrence. *Nicor*, 860 N.E.2d at 295-96.

Addison argued that, under *Nicor*, the boys deaths were caused by one occurrence -- the policyholders sole negligent act of failing to properly secure and control his property. The Court distinguished *Nicor* (and other Illinois cases), n2 finding that those cases applied only in instances involving affirmative acts of negligence as opposed to an ongoing negligent omission:

[A]pplying *Nicor* in the way Addison suggests leads to an unreasonable interpretation of Parrishs insurance policy. Focusing on the sole negligent omission of failing to secure the property would allow two injuries, days or even weeks apart, to be considered one occurrence If several injuries suffered over the course of several weeks could be bundled into a single occurrence, the likelihood that damages would exceed a per-occurrence limit is significant, as demonstrated by the damages in the instant case. Purchasers of insurance such as Parrish would be left unprotected by their insurance policy, and liable for any amount above the per-occurrence limit. In accepting a per-occurrence limit, Parrish could not have intended to expose himself to greater liability by allowing multiple injuries, sustained over an open-ended time period, to be subject to a single, per-occurrence limit.

Addison Ins. Co., 2009 Ill LEXIS 176, at *16-17.

The Supreme Court held that some limiting principle must be applied in situations where a continuous negligent omission results in insurable injuries. *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *17. The Court thus adopted the time and space test as the means of limitation, following a New Jersey appellate court in *Doria v. Ins. Co. of North America*, 210 N.J. Super. 67, 509 A.2d 220 (N.J. Super. Ct. App. Div. 1986). n3 *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *21 (Where negligence is the result of an ongoing omission rather than separate affirmative acts, a time and space test effectively limits what would otherwise potentially be a limitless bundling of injuries into a single occurrence). Under that test, if cause and result are simultaneous or so closely linked in time and space as to be considered by the average person as one event, then the injuries will be deemed to be the result of one occurrence. *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *19-20; citing *Doria*, 509 A.2d at 224. Applying the time and space test, the Supreme Court held that Addison failed to sustain its burden of proving that the deaths were so closely linked in time such that they could be considered one event:

[A]lthough we conclude that the appellate court properly analyzed the facts under a time and space test, we cannot accept the courts opinion that the facts conclusively demonstrate that the injuries to Hodgins and Carr constitute only a single occurrence The record presented both to the trial court and the appellate court reflects the fact that what can be known about the events of April 30, 1997, is far outstripped by what cannot be known From the evidence presented at trial, we can infer that the boys did not become trapped simultaneously. We can also infer that Hodgins became trapped after Carr, in an attempt to free Carr from the sand. Beyond these basic facts and inferences, there is little evidence to support Addisons claim that the injuries suffered by these two boys were the result of a single occurrence. The police investigators could not determine how closely in time the boys became trapped. They suggested it could have been seconds or minutes apart, but acknowledged that there was no way to know. Nor could the medical experts give a time of death with certainty, or indicate how closely in time the two boys had died. Any opinions on these issues of timing would be inappropriately speculative. The substantial uncertainty on this issue persuades us that Addison cannot meet its burden of proving that the two boys injuries were so closely linked in time and space as to be considered one event. Because Addison cannot meet its burden, we hold that the injuries to Carr and Hodgins constitute

two occurrences.

Addison Ins. Co., 2009 Ill LEXIS 176, at *21-23. n4

The *Addison* decision is noteworthy because the Supreme Court expanded on the cause test previously adopted in *Nicor*, finding that some limiting principle must be applied in situations where a continuous negligent omission results in insurable injuries. The Court implemented the time and space test as that means of limitation. Under that test, courts will treat injuries or damage as the result of one occurrence if cause and result are simultaneous or so closely linked in time and space as to be considered by the average person as one event. Thus, some might argue that the *Addison* decision creates uncertainty as to the direction of Illinois law on the number of occurrences issue, particularly in the context of progressive injury claims. The time and space test focuses on the temporal and spatial connection between the injuries at issue; progressive injury cases, such as asbestos products injury claims, typically involve separate injuries to many different claimants over long periods of time from products or substances at numerous different sites. It is thus arguable that the injuries in such cases are not closely linked in time and space. However, in *Nicor*, the Supreme Court found that where the damages for which coverage is sought resulted from the manufacture and sale of defective products or a fraudulent sales scheme, the loss will be found to have emanated from a single cause and there will be but one occurrence for purposes of the applicable policies. *Addison* did not address this aspect of the *Nicor* decision, or the Appellate Courts similar ruling in *United States Gypsum Co. v. Admiral Ins. Co.*, 268 Ill. App. 3d 598, 643 N.E.2d 1226 (Ill. Ct. App. 1994) (ruling that the manufacture and sale of asbestos constitutes a single occurrence). Accordingly, *Addison* did not overrule *Nicor* or *U.S. Gypsum*, both which can be relied upon to support a single occurrence position in progressive injury cases.

In addition, the *Addison* Court limited the time and space test to situations where a continuous negligent omission results in insurable injuries. Many progressive injury cases do not involve negligent omissions, but instead, involve affirmative acts. See, e.g., *Outboard Marine Corp. v. Liberty Mut. Ins. Co.*, 283 Ill. App. 3d 630, 642, 670 N.E.2d 740, 748 (Ill. Ct. App. 1996) (ruling that contamination from the insureds manufacturing activities amounted to a single continuous occurrence); *U.S. Gypsum*, 643 N.E.2d at 1259. Hence, it also can be argued that the time and space test is inapplicable in progressive injury cases.

Another important implication of *Addison* is the Courts allocation of the burden of proving the number of occurrences on the insurer and not the policyholder. An argument can be made that it would have been reasonable for a trier of fact to infer that the boys were together at the time they were killed and, therefore, that their deaths were closely linked in time and space. Indeed, the New Jersey Supreme Court reached that result in *Doria*, which the *Addison* Court found to be a factually analogous case. Nonetheless, the *Addison* Court held that the timing of the boys deaths was too uncertain to establish a time and space connection and thus, a single occurrence. *Addison* thus appears to be the product of compelling facts, and the Supreme Courts analysis of the inferences arising from the evidence may well have been influenced by its desire to maximize insurance coverage for the decedents families.

In all events, while some might argue that *Addison* creates uncertainty in Illinois number of occurrence jurisprudence, the fact that the Supreme Court distinguished *Nicor* based on omissions versus affirmative acts indicates that the Court has not strayed from its cause test in progressive injury cases involving defective products or fraudulent schemes.

n1 *Doria v. Ins. Co. of North America*, 210 N.J. Super. 67, 509 A.2d 220 (N.J. Super. Ct. App. Div. 1986).

n2 [2] See *Mason v. Home Ins. Co. of Illinois*, 177 Ill. App. 3d 454, 532 N.E.2d 526 (3rd Dist. 1988) (each act of serving contaminated food to a customer over a three-day period was a separate occurrence); *Illinois National Ins. Co. v. Szczepkowitz*, 185 Ill. App. 3d 1091, 542 N.E.2d 90 (1st Dist. 1989) (two separate car accidents constituted two separate occurrences); *Village of Camp Point v. Continental Cas. Co.*, 219 Ill. App. 3d 86, 578 N.E.2d 1363 (4th Dist. 1991) (each individual instance of erroneous legal advice constituted a separate occurrence); *Illinois Central R.R. Co. v. Acc. & Cas. Co. of Winterthur*, 317 Ill. App. 3d 737, 739 N.E.2d 1049 (1st Dist. 2000) (separate occurrence resulted each time an executive exercised hiring authority in a discriminatory manner).

n3 In *Doria*, two brothers sustained injuries when accessing a negligently maintained swimming pool. See *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *19-20 (discussing the *Doria* case). The *Doria* court ruled that there was one occurrence, because the injuries resulted from a single cause -- the property owners negligent maintenance of the pool area. *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *20. The *Doria* court held further that the temporal and spatial connection between the injuries was sufficient to conclude that the average person would have considered it one event. *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *20.

n4 In light of the uncertainty regarding the sequence and timing of events, the Court refused to consider the policyholders argument that the second boys attempt to rescue the other constituted a separate and intervening act which increased the insureds liability and thus, a separate occurrence (under the *Nicor* standard). *Addison Ins. Co.*, 2009 Ill LEXIS 176, at *23.

ABOUT THE AUTHOR(S):

Daniel E. Feinberg is a member of Sonnenscheins Litigation Practice. Daniel E. Feinbergs practice concentrates on the representation and counseling of insurance companies in disputes and litigation regarding the extent or availability of insurance coverage. He has represented insurers in actions filed throughout the United States and in a variety of insurance coverage contexts, including coverage disputes relating to environmental contamination, asbestos exposure, mass tort liability, products liability, professional liability, premises liability, civil rights and claims under the Federal Employers Liability Act. In addition to his insurance coverage practice, Dan has extensive experience in representing insurers in direct action lawsuits.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has

strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Gkonos and Cawley on Current Developments in State and Federal Regulation of Swaps and Derivatives

By James S. Gkonos and Mark C. Cawley

February 28, 2009

SUMMARY: Recent pronouncements from the New York Insurance Department and the Missouri Insurance Department have concluded that some credit derivatives are "insurance" and are to be regulated as such. This commentary explores recent proposals to exert regulatory authority over the largely unregulated credit default swap market by the New York Insurance Department and the federal government.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Introduction

Credit derivatives have become synonymous with the recent credit crisis and the attendant collapse of prominent Wall Street institutions. Recent pronouncements from the New York Insurance Department and the Missouri Insurance Department have concluded that some of these products are insurance and are to be regulated as such. This commentary explores these and other recent proposals to exert regulatory authority over the largely unregulated credit default swap market by the New York Insurance Department and the federal government.

Credit Derivatives and the Roots of the Financial Crisis of 2008

The financial meltdown that began in August, 2008 and that has plunged the U.S. and the world into recession is directly traceable to the intersection of the U.S. housing market bubble and innovative financial products known generally as collateralized debt obligations (CDOs) and credit default swaps (CDSs). The housing bubble began in the late 1990s as housing prices began to spike upward deviating from historical rates of increase. The rapid increase in home prices was supported in part by mortgage lending to so-called subprime borrowers who either had less than perfect credit or who had good credit but borrowed more than their income and assets might otherwise allow. Subprime lending, in turn, was made increasingly possible by the use of innovative--and risky--mortgage products like adjustable rate mortgages and by the advent of the mortgage backed security (MBS), a form of CDO.

CDOs are constructed from a portfolio of fixed-income assets divided into different tranches of debt. The most senior tranches are rated AAA because they are paid first. The junior tranches contain progressively lower-rated debt and offer higher interest rates to compensate for the added default risk. Many investors used leverage to buy more CDOs than they could purchase with existing capital alone--thereby increasing their potential losses if the CDOs

defaulted.

MBSs consist of bundles of mortgages sold by the loan originator--a bank or mortgage company--to an investment bank that securitizes the loans. The investment bank issues shares of the MBS to investors who receive principal and interest payments from the cash flow generated by the underlying monthly mortgage payments. An MBS typically is divided into different tranches depending upon the risk associated with the underlying mortgages. Tranches comprised of mortgages with relatively little risk of default are rated AAA and investors in the AAA tranche receive less interest than investors in higher-risk AA or BBB tranches.

CDO (and MBS) buyers often purchased credit default swaps (CDSs) as a hedge or protection to guard against the risk of default. CDSs are private financial contracts under which a protection buyer pays a periodic fee (often expressed in basis points) to a protection seller in return for a contingent payment by the protection seller upon the happening of a credit event to a company, equity or transaction (a reference entity or security.) The definitions of credit event, the obligations of the counterparties, and the mechanism used to determine the payment upon the credit event are flexible and determined by negotiation between the counterparties and set forth in a standardized agreement called an ISDA Master Agreement, published by the International Swaps and Derivatives Association, Inc. Standardized terms are set forth in the ISDA Master Agreement with any alterations or amendments contained in additional documents referred to as schedules or confirmations. A credit event may include a number of adverse financial events such as a failure to make a payment, default, or bankruptcy. It may also include a credit downgrade of the underlying reference entity or its guarantor. Frequently, CDS contracts require the protection seller to post collateral if the value of the reference entity declines or if the creditworthiness of the protection seller declines. Collateral may be in the form of letters of credit or guarantees issued by insurance companies.

As home prices increased throughout the late 1990s through 2006, the cycle of subprime lending and subsequent securitization continued unabated. Interest rates, however, began to increase in 2007 and adjustable rate mortgage payments--as well as mortgage defaults--increased in tandem. Concomitantly, property values began to decline. Investors in MBSs and CDOs saw their stream of interest payments diminish significantly as increased mortgage payments exceeded the ability of mortgagees to pay and home values dropped below the principal mortgage amounts. As more and more mortgages went into default, CDS credit-event triggers required payment to CDO buyers by their CDS counterparties.

According to ISDA, the volume of CDSs have doubled every year since 2001, reaching \$55 trillion as of June 30, 2008. n1 Protection sellers viewed CDSs as highly profitable, low-risk protection in which the risk of having to pay on any one default was historically low and the risk of having to pay on multiple defaults at the same time was virtually nonexistent. The protections provided by CDSs were viewed by protection buyers in many ways like insurance, since it protected them substantially against losses stemming from, for example, the failure of cash flows from an MBS to pay the required principal and interest payments. There are, however, three important differences between CDSs and traditional insurance.

The first difference has to do with the nature of the risks being insured by CDSs. Premiums for automobile, homeowners, and life insurance policies are calculated to cover the cost of actuarially measurable risks. Moreover, the occurrence of one insurable event generally does not make the occurrence of another more likely. One house burning down does not increase the likelihood of another house burning down in another part of town. With CDSs, however, the underlying risks are not always understood or easily measured--particularly when the risk is mortgage debt several layers removed from the insured CDO tranche. Moreover, unlike traditional insurance, the risk of a credit event can increase the likelihood of the happening of another credit event. Mortgage defaults are a case in point. The rise in interest rates caused all adjustable rate mortgages to rise, which increased the likelihood that all affected homeowners would default.

Second, unlike insurance, speculators used CDSs to bet on the likelihood of credit events happening to particular reference entities, even when the speculators had no stake in the reference entities or transactions. A speculator might,

for example, enter into a CDS with a counterparty whereby the protection seller would pay the speculator if a reference entity suffered a credit downgrade. The speculator, however, would not own the bonds of the reference entity or have any other ownership interest in it. The swap would simply amount to a blatant gamble on the reference entity's credit rating. If the credit event occurred, a protection seller would have to pay even though the protection buyer has no insurable interest in the reference entity. In such cases, protection buyers--unlike purchasers of automobile or homeowners insurance--have no incentive to minimize their losses. To the contrary, speculative protection buyers have every incentive to maximize their losses.

The third difference between CDSs and insurance is that the CDS market is entirely unregulated. Protection sellers are not required to abide by regulatory controls applicable to insurance companies. Thus, they are not required to keep adequate--or, indeed, any--reserves for loss payments. The insurance industry, on the other hand, is a highly regulated industry.

Although banks and hedge funds treated CDSs as highly profitable insurance policies, they ultimately failed to appreciate the full extent of the risks associated with CDSs. As mortgage defaults increased, protection sellers were forced to post mounting losses as the CDO or MBS failed to generate sufficient cash flow to make the required periodic payments. Further, protection sellers were vulnerable to collateral calls as their losses mounted and their creditworthiness declined. Collateral calls required protection sellers to sell assets to generate cash. As the losses mounted and collateral calls increased, asset sales increased--driving down asset prices and leading to a death spiral for weaker protection sellers and placing even the strongest counterparties under financial stress. Consequently, entities like AIG and Lehman Brothers were required to post billions in collateral due to the amount of losses and their declining financial condition.

Credit Derivative Regulation Past and Present

Despite their central role in the current financial crisis, CDSs are crucial to the smooth functioning of the capital markets. When used for non-speculative purposes, they provide a legitimate means of hedging risks. ⁿ² They free up capital for further lending by enabling banks to reduce their exposure to particular industry segments and by allowing them to manage capital requirements imposed by federal or state regulations. By freeing up more capital for banks to lend, CDSs increase the amount of capital available to borrowers. Many analysts believed that the cost of protection of a given company was a much more accurate assessment of the creditworthiness of a company than its rating. Unlike credit ratings, which are based on snapshots of corporate financial data, an efficient CDS market arguably provides real-time monitoring of the creditworthiness of companies covered by that market.

Given their centrality to the smooth functioning of the capital markets and the grave risk for abuse, why have CDSs gone unregulated? The absence of federal and state regulation is, at first glance, surprising. After all, insurance is heavily regulated by the states and many aspects of securities and commodities trading are regulated by the Securities Exchange Commission (SEC) and the Commodity Futures Trading Commission (CFTC). Part of the answer lies in the fact that speculative CDSs--where the protection buyer is simply using the CDS to bet on a credit event happening--developed in a gap of both federal and state law.

At the federal level, this gap was initially fueled by uncertainty within the federal government as to what these products were and who was to regulate them. In 1998, a dispute erupted between the CFTC, the SEC, the Treasury Department, and the Federal Reserve. The CFTC sought to initiate regulation of swaps and derivatives. In response, the SEC, Treasury and Federal Reserve issued a joint statement citing grave concerns that the CFTC action would cast a shadow of regulatory uncertainty over an otherwise thriving market. ⁿ³ Also in response to the CFTC's proposed action, Treasury sponsored a bill, ultimately passed by Congress, that placed a six-month moratorium on CFTC action relating to the swaps and derivatives market. ⁿ⁴

Shortly thereafter, in 1999, the head of the CFTC quit. Thereafter, the Presidents Working Group, made up of the heads of the SEC, Treasury, Federal Reserve and the new CFTC chairman, issued a report recommending no CFTC

regulation on the grounds that such regulation would otherwise perpetuate legal uncertainty or impose unnecessary regulatory burdens and constraints upon the development of these markets in the United States. n5

In 2000, President Clinton signed the Commodities Futures Modernization Act of 2000 (CFMA), which pre-empted the regulation of swaps and derivatives from state and local laws and exempted such transactions from CFTC regulation. n6 The CFMA also provided for a self-regulated industry clearinghouse, but with federal oversight of risk management procedures. No industry action was taken with regard to this provision. As a result, no federal regulatory body had any jurisdiction over swaps and derivative transactions.

Nor did state regulatory agencies seek to regulate these types of transactions. State law had traditionally focused more on prohibiting fraud and gambling than in attempting to provide comprehensive regulation of these complex business instruments. In the regulation of insurance, concerns regarding speculation and fraud prompted legislatures and courts to require buyers of insurance to have an insurable interest in the underlying insured loss. n7 Otherwise, insureds were merely speculating and gambling on the happening of an insurable event.

State regulation of securities shared similar concerns. Early state statutes prohibited various types of speculation on securities, such as stock jobbing, which entailed speculation on price movements of securities not owned by the speculator. n8 State law also prohibited fake or fraudulent exchanges, called bucket shops. n9

While state laws did not try to regulate the underlying swap or CDS transactions, some states beginning in 1987, began to regulate insurance products that guaranteed the obligations of parties to purely financial transactions. New York was the first to comprehensively regulate such guarantees. The New York Financial Guaranty Law created a new class of insurance called financial guaranty insurance that could only be issued by specially created insurers, monolines, whose sole line of business was to issue financial guarantees. n10 Other states, such as California, Connecticut and Florida enacted similar legislation or promulgated similar regulations. n11 Nothing in these statutes prohibited insurers from guaranteeing swaps, CDOs and other derivatives.

In 2000, the same year that Congress passed the CFMA, the New York Insurance Department was asked whether credit default swaps in which the protection buyer had no interest in the underlying transaction was an insurance policy. The Insurance Department issued an opinion that concluded that such swaps were not insurance policies because the protection buyer had no interest (an insurable interest) in the underlying transaction. n12 The Department did not address whether credit default swaps in which the protection seller had an interest constituted insurance. As Eric Dinallo, Superintendent of the New York Insurance Department succinctly put it: In sum, in 2000 as a society we chose not to regulate credit default swaps. n13

Recent Regulatory Shifts

Following the collapse of Lehman Brothers, the near-collapse of AIG as a result of their exposure to CDSs, and the financial distress of the majority of monoline insurers, the New York Insurance Department decided to revisit the issue of the regulation of these financial products. In a September 22, 2008 Circular Letter, the New York Department of Insurance announced that, beginning in January, 2009, it would regulate covered CDSs, which it defined as CDSs where the protection buyer holds, or reasonably expects to hold, a material interest in the reference entity or obligation. n14 Consistent with its role as insurance regulator, New York intended to provide an appropriate way for those with an insurable interest to protect themselves and [the Department will] ensure that whoever sells them that protection is solvent. n15

The Department clearly viewed what it termed naked or speculative swaps, where the protection buyer has no interest in the underlying reference entity, as a form of gambling. n16 As Superintendent Dinallo stated before the House Agriculture Committee in October, 2008:

We engaged in the ultimate moral hazard no one owned the downside of their underwriting decisions, because the banks passed it to Wall Street, that securitized it; then investors bought it in the form of CDOs; and then they took out

CDSs. And nowhere in the chain did anyone say, you must own that risk. n17

Notwithstanding this abhorrence of the product, the Department concluded that these naked swaps were not insurance and could not be regulated by the State. n18 The Circular Letter, itself, did not provide any other details about the new regulations of covered swaps.

The Circular Letter also set forth Best Practices, which impose restrictions on financial guaranty insurance companies. n19 In addition to increased capital and surplus requirements, some of the more significant Best Practices include the following restrictions.

. *Concentrations of Risk.* The New York Insurance Law limits a financial guaranty company's exposure with respect to a single entity to ten percent of the financial guaranty company's aggregate surplus and contingency reserves. In determining risk concentrations when asset-backed securities are at issue, the Department had previously only evaluated such risks in reference to the issuer of the security, without consideration to the underlying transactions. The Department concluded that financial guaranty companies must evaluate the ten percent limitation not only as to the exposure associated with the issuer of the debt, but also as it relates to the initial lender and servicer of each category of the underlying obligation (such as consumer debt obligations or obligations secured by residential real estate).

. *Restrictions on Insurance for Collateralized Debt Obligations of Asset-Backed Securities.* Financial guaranty companies may no longer insure so-called CDO squares--pools of asset-backed securities that are comprised or include portions of other pools of such securities, except in very limited circumstances. The Department regards CDO squares as inherently riskier and unpredictable than an [asset-backed security] that is no more than one layer removed from the underlying debts or obligations.

. *Limits on Insurance of CDSs.* The Department also will prohibit financial guaranty companies from issuing policies on collateralized debt obligations or credit default swaps in which the policy guarantees an underlying swap agreement that triggers or accelerates liability based on changes in the credit quality or solvency of the financial guaranty company.

Circular Letter 19 prompted considerable attention not only because the vast majority of CDS activity occurs in New York and the majority of financial guaranty companies are domiciled there, but also because these new Best Practices caused a sea change in the way monoline insurers are regulated and may carry on their business in the future. The changes to the ten percent rule requiring the monolines to aggregate risk by issuer, lender and servicer, respectively, vastly change the prior practice of focusing solely on the issuer.

Further, the prohibition against guaranteeing transactions in which the monoline's credit rating can be a trigger for the posting of collateral may negate the entire purpose and utility behind the use of financial guarantee companies. Usually monolines are used to wrap a transaction that has a credit rating lower than that of the monoline, so that the transaction will get the benefit of the monoline's higher credit rating. The financial rating for the transaction affects pricing, and availability of protection buyers or sellers. In many instances, protection buyers seek to use the swap to obtain protection from a known risk, such as volatile foreign exchange or interest rates. An integral part of that protection comes from the credit rating of the protection seller, from which the protection buyer determines the likelihood that the protection it is purchasing will pay in the event of a loss or other credit event. The sole purpose of the monoline is to enhance the transaction's rating in order to improve the pricing and attractiveness to protection buyers. If the monoline's credit rating drives the transaction, but the monoline cannot participate if a drop in its credit rating creates a credit event, then protection buyers will be unlikely to buy swaps backed by monoline guarantees, because of the lack of any remedy if the monoline's credit rating (and also that of the transaction) drops. Taken to its logical conclusion, the end result is that monolines will be used very infrequently to guarantee swap and other derivative transactions because protection buyers will find little comfort in their participation.

The Department's Circular Letter raised--but failed to answer--many questions about the scope and effect of the

Departments intent to regulate covered CDSs as insurance. Before the Department could provide clarification, however, Superintendent Dinallo announced on November 20, 2008 in testimony before the U.S. House of Representatives Committee on Agriculture that the Department would indefinitely table its plan to regulate CDSs in light of federal efforts to develop a comprehensive CDS regulatory scheme. n20 That same day, the Department issued a Supplement to Circular 19 confirming that it would delay its plans to regulate CDSs but making clear that this delay did not affect implementation of Circular 19s Best Practices to financial guaranty companies. n21

In late January, the National Conference of (State) Insurance Legislators (NCOIL) received presentations by various representatives of interested parties relating to the regulation of swaps and derivatives and expressed the view that states should play a significant role in the regulation of these types of transactions. Concurrently, the Missouri Department of Insurance, Financial Institutions and Professional Regulation (the Missouri Department) also weighed in on the regulation of CDSs as insurance. On November 19, 2008, it issued Insurance Bulletin 08-12, which states that certain covered CDSs will be considered insurance for purposes of Missouri insurance law. n22 The Bulletin provides that, [a] CDS may be referred to as covered where the protection buyer has a present legal interest in the reference entity or reference obligation that is the subject of the credit event of the CDS. n23 Because the issuance of a covered CDS constitutes an insurance transaction, the issuer of a covered CDS must obtain a certificate of authority from the Missouri Department. n24

Significantly, however, the Missouri Department stated in the same Bulletin that covered CDSs represent only a small segment of the larger CDS market and that a segmented approach to CDS regulation was not desirable. n25 Accordingly, like the New York Insurance Department, the Missouri Department stated that it would exercise discretion in enforcement of the insurance laws in regard to covered credit default swaps, in order to allow an opportunity for the enactment of comprehensive federal regulation. n26 Further, the Missouri Department explained that, [i]f a comprehensive federal regulatory scheme regarding credit default swaps, including covered credit default swaps is adopted prior to January 1, 2009, or appears significantly likely to be adopted soon after that date, the director may defer or suspend any or all department enforcement actions. n27 As of this writing in late February 2009, the Missouri Department has not suspended enforcement of the Bulletin, and it remains in effect.

Federal Efforts to Regulate CDSs

Just as the effects on insurers and financial institutions caused the New York and Missouri Insurance Departments and state legislators to re-evaluate their stance on swaps and derivatives, these events also have spurred activity at the federal level. The New York Insurance Departments decision to table its regulation of CDSs was spurred at least in part by efforts of the Presidents Working Group (PWG) to cooperate in developing a comprehensive regulatory scheme for CDS regulation. The chairs of the CFTC, the Federal Reserve, and the SEC along with the Treasury Secretary comprise the PWG. On November 14, 2008, the PWG announced that its top near-term OTC [over-the-counter] derivatives priority is to oversee the successful implementation of central counterparty services for CDSs. n28 A central counterparty places itself between the existing counterparties to a CDS. Although it does not become a party to the CDS, it bears the credit risk of both counterparties by agreeing to make required payments due by a particular counterparty. To minimize risk, the central counterparty typically might require counterparties to meet its own criteria for capitalization and creditworthiness. It also would require participants in the clearinghouse to contribute funds over and above posted collateral to cover the central counterparty in the event of default. The PWGs announcement also included a Memorandum of Understanding pursuant to which the CFTC, the Federal Reserve, and the SEC agreed to cooperate in the regulation of centralized counterparties.

In its November, 2008 announcement, the PWG stated that it hoped to grant approval to at least one clearinghouse before year end. It met that deadline when the CFTC approved the Chicago Mercantile Exchange as a clearinghouse for certain CDSs. Under the Memorandum of Understanding, the CFTC consulted with the Federal Reserve and SEC in reviewing the Chicago Mercantile Exchanges application. NYSE Euronext Inc. also has received SEC approval to begin clearing CDSs.

In late January, the House Agriculture Committee circulated a discussion draft of a bill entitled the Derivatives Markets Transparency and Accountability Act of 2009 (DMTA). The discussion draft proposed, among others, detailed reporting of positions of market participants and disaggregation of market data to provide more transparency to commodities and other capital markets trading, including swaps and derivatives, consideration of trading limits on commodities and on over-the-counter (OTC) agreements that could disrupt market liquidity or cause severe market disturbance, and required all future OTC transactions to be settled and cleared through a CFTC-regulated designated clearing organization. Of particular note, Section 16 of the discussion draft would have amended the Commodity Futures Exchange Act by adding the following provision:

LIMITATION ON ELIGIBILITY TO PURCHASE A CREDIT DEFAULT SWAP.--It shall be unlawful for any person to enter into a credit default swap unless the person would experience financial loss if an event that is the subject of the credit default swap occurs.

The provision paralleled the view of the New York Insurance Department that such naked swaps were nothing more than gambles on a company's or transaction's success and proposed to make it unlawful to enter into a naked CDS. The bill also proposed to amend the Commodity Futures Exchange Act by adding the following definition of credit default swap:

The term credit default swap means a contract which insures a party to the contract against the risk that an entity may experience a loss of value as a result of an event specified in the contract, such as a default or credit downgrade.

The definition provision also exempted such transactions from regulation by the SEC. By defining a CDS as a contract that insures a party against a risk of loss, the bill proposed to vest regulation of transactions which insure against a risk of loss of value with the CFTC. The definition does not exclude financial guaranty insurance policies.

On February 3-4, 2009, the House Agriculture Committee held hearings on the proposed draft of the DMTA. Not surprisingly, these provisions provoked a strong reaction from various constituencies interested in swaps and derivatives. Robert Pickel, CEO of ISDA, argued that significant regulation of the swaps and derivative market was unnecessary and that the OTC markets had continued to operate smoothly when other markets had experienced significant dislocation. He argued that the limitation on eligibility to purchase provision would effectively eliminate the CDS business in the United States by making it impossible for sellers of protection to hedge their own risks. n29 Pickel also opined that the provision, by requiring parties to a CDS to show a loss, would essentially turn naked CDSs into insurance contracts that would be subject to state insurance regulations. n30 He added that these consequences would drive the CDS business overseas, limit access to credit derivatives in the U.S., and create disincentives to lending necessary to restart the economy. n31

John M. Damgard, President of the Futures Industry Association, also testified that Section 16 of the draft bills was anti-competitive and anti-innovation. n32 He stated that Section 16 appears to ban so-called naked credit default swaps in OTC dealer markets (where all CDS transactions now occur), while allowing them on exchange markets (where today none occurs). n33 Like Pickel, Damgard believed that prohibiting naked CDSs would remove important liquidity from our credit markets and could operate to make credit itself more expensive for those in struggling businesses that now thirst for credit. n34 Damgard urged the Committee to focus on improving the derivative clearing provisions of Section 13 of the bill, rather than banning liquidity providers from the CDS market n35

New York Assemblyman Joseph Morelle also weighed in on Section 16 of the draft bill on behalf of the NCOIL. n36 Although Morelle agreed that covered CDSs were insurance, he contended that the states were better suited to regulate covered CDSs as insurance than the federal government. n37 He further suggested that the definition of covered CDS should be broadened to include not only those CDSs where the protection buyer has an interest in the underlying asset, but also where the protection buyer is using the CDS for legitimate hedging purposes. n38 According to Morelle, although CDSs used for purely hedging purposes may not contain as direct an exposure to the underlying reference entity as purely covered CDSs, an insurable interest [nonetheless] exists which can be identified through

GAAP accounting which requires that CDS be listed as used for hedging or speculative purposes. n39 In Morelles own words, [t]he point of demarcation, then, is not so much one of clothed v. naked swaps, but rather speculative v. hedged. n40

Following the hearings on the discussion draft, a revised HR 977 was referred on February 11, 2009 to the Committee on Agriculture and to the House Committee on Financial Services. The referred bill was, in most respects, the same as the discussion draft except for two significant changes. First, the language prohibiting entering into naked CDSs was stricken from the revised bill. Rather than ban such transactions outright, the bill was amended to permit the CFTC to summarily suspend trading of CDSs if the public interest and the protection of investors so require. n41 Moreover, such action by the CFTC to suspend trading will not take effect until the CFTC notifies the President of its decision and the President does not disapprove. n42 The bill as passed also grants to the CFTC the right to bring criminal prosecutions under the Commodity Exchange Act if the Attorney General has declined to do so. n43 The definition of credit default swap did not change from that stated in the discussion draft.

The Future of CDS Regulation

Some regulation of CDSs is unquestionably needed. The recent credit crisis has demonstrated with frightening clarity the dangers inherent in CDSs, the geometric growth of risk and loss through their use, and the potential for a financial meltdown when financial institutions lack sufficient resources to meet their counterparty obligations. History has proven Warren Buffets 2002 prophetic characterization of swaps and derivatives as financial weapons of mass destruction. n44

What form and the extent of such regulation is a much more difficult question to answer and a subject of great debate now and in the future. Proponents of state regulation argue that state regulation of insurance companies has helped the vast majority of insurance companies weather the current financial crisis. Conversely, they argue that the exclusion of state regulation by the CFMA, and the failure of any federal agency to regulate the products was a failure of colossal magnitude, and has contributed to the substantial weakening of the banking system. Proponents of federal regulation point to the need to have comprehensive regulation of the capital markets, commodity traders and financial institutions, which, they argue, cannot be provided by the states. Finally, the companies and associations representative of the capital market participants argue that the issue behind the financial crisis is not attributable to swaps and derivatives, but instead lies with the over-investment in subprime loans and the greed of financial institutions and investment banks in packaging these loans for general investor consumption. This is clearly a debate that will continue for quite some time.

The DMTA is the opening salvo from Congress on this issue. It is short on both the what and the how components of CFTC regulation. Critical definitions are left to the rulemaking authority of the CFTC with little guidance. How reporting would be provided, when previously none had existed is yet to be determined. Moreover, crucial issues of what will be reported received no consideration whatsoever. Will reporting of trades be done based on the notional amounts involved or the actual value of the risk? If the risk is to be valued on a mark-to-market basis, how and when will that occur? Moreover, seeking presidential affirmation (or more precisely, lack of rejection) for an order limiting trading in credit default swaps seems practically and politically awkward.

Further, and perhaps more importantly, the inclusion of credit default swaps that insurance departments have declared as insurance products may bring into sharp focus the current debate on federal versus state regulation of insurance and the continuing efficacy of the McCarran-Ferguson Act. This debate has been a raging stalemate for years and is likely to engender stiff resistance from the states.

State regulation is no panacea either. The proposed regulations of certain kinds of CDSs as insurance by the New York Insurance Department were problematic on many levels. Its proposal to exert regulatory authority over covered

CDSs was based on whether the protection buyer had a material interest in the reference entity. That distinction appears to be rooted in Section 1101 of the New York Insurance Law, which defines an insurance contract as:

Any agreement or other transaction whereby one party . . . is obligated to confer a benefit of pecuniary value upon another party . . . dependent upon the happening of a fortuitous event in which the insured or beneficiary has, or is expected to have at the time of such happening, a material interest which will be adversely affected by the happening of such event.

Section 1101, however, does not define material interest, and little other guidance exists as New York courts have not grappled with the question in the context of capital markets transactions. Is 100% ownership of the reference obligation a material interest? What if the protection buyer holds only a minority stake in the reference obligation or in a small number of reference entities out of a larger portfolio of reference entities? What if the protection buyer itself holds no interest in the reference entity, but the buyer is a subsidiary of a holding company that does? Will the holding company's interest be attributed to the subsidiary?

All of these issues also raise a more fundamental question: how will a protection seller learn about the holdings and expectations of a protection buyer? After all, any regulatory penalties will almost certainly fall on protection sellers for selling credit default swaps without the necessary license from the Department. Will the burden be on the protection seller to find out the extent of its counterpart's interest in the reference entity, or will the protection buyer have a duty to disclose such interests? Moreover, the state regulation as currently proposed admittedly only reaches a part of the market. Even the NCOIL suggested inclusion of properly hedged risks as insurance has the same issues.

Splitting the CDS market into insured and uninsured segments also would likely reduce liquidity by dividing trading volume into separate pools. Reduced trading volume also could lead to higher costs for purchasing credit default protection, which would make CDS less attractive as hedging instruments. Also unknown is the effect of the differential tax treatment for insurance and derivatives. For all these reasons, the New York Insurance Department's proposed regulation of the covered CDS would lead to considerable confusion and uncertainty in the market. This could cause CDS market participants to shift the situs of transactions to other jurisdictions.

Finally, while the states have achieved substantial uniformity through the National Association of Insurance Commissioners, there are a number of issues for which there is a disparity in treatment by the states. One of those areas of disparity is the treatment of financial guaranty insurance. Many states have no statutory or regulatory framework for financial guarantees and it is considered part of surety. Under the laws of those states, multiline property and casualty companies could issue financial guarantees on an unfettered and unregulated basis. Other states, such as New York, California and Florida, have comprehensive statutory and regulatory frameworks that prevent or limit multiline insurers from issuing financial guarantees and that impose stringent capital and underwriting requirements on those monoline companies that are licensed to issue such guarantees. The question remains whether state regulation could achieve the required and necessary uniformity that regulation of swaps and derivatives would likely entail.

It is too early to tell how these various state and federal attempts at regulation will ultimately play out. There does appear to be a collective will to have some form of regulation, but a number of constituencies have vastly competing views as to the form and extent of such regulation. A truly comprehensive solution would entail seamless federal and state regulation, since these products appear to be both insurance and financial instruments. Such regulation would be attractive to insurance and capital markets participants, since it would likely yield less confusion and therefore greater confidence in the operation of the marketplace. Yet to date, the states and federal government have yet to cooperate in the insurance arena in any smooth and seamless fashion. One thing is certain there will be lots more debate, molding and crafting of these and any other regulatory structures before a final regulatory program is enacted and enforced.

ABOUT THE AUTHOR(S):

James S. Gkonos is Special Counsel in the Litigation Department and Vice-Chairman of the Insurance Practice Group in the Philadelphia office of Saul Ewing LLP. Mr. Gkonos practice includes advising clients regarding financial guarantees and the interaction between the insurance and insurance insolvency laws and capital markets transactions. Mr. Gkonos also regularly advises clients on reinsurance and the regulatory issues relating to reinsurance. Mr. Gkonos reinsurance experience includes handling the commutation of hundreds of reinsurance agreements as well as the negotiation of insurance disputes and drafting reinsurance treaties.

As a member of the Litigation Department of Saul Ewing, Mr. Gkonos also concentrates his practice on complex civil litigation, primarily involving insurance and reinsurance matters. Mr. Gkonos has litigated reinsurance arbitrations, complex insurance litigation in state and federal courts and represented clients in appellate proceedings involving insurance related matters.

Mr. Gkonos was formerly a Vice President and Chief Counsel for a major U.S. surety where he supervised the legal department which handled numerous complex domestic and international transactional and litigation matters. Mr. Gkonos has also successfully managed international litigation in the United Kingdom, Japan, China, Argentina, Brazil, Finland and the Virgin Islands relating to failed ship building contracts, hotel construction contracts, power station construction contracts, design-build operate contracts, water purification contracts and counter-guarantees. In addition, he has handled subpoenas from the Securities and Exchange Commission, various Senate and House committees, the Office of the New York Attorney General, the New York District Attorney and various insurance departments.

Mark C. Cawley, Special Counsel in Saul Ewings Litigation Department, represents insurance companies in litigation involving mergers and acquisitions, complex insurance coverage disputes, reinsurance disputes, and insurer bad faith. He has particular experience representing insurers and other companies in class action lawsuits. He also has represented individuals and companies in the insurance industry involved in government investigations, particularly with respect to the ongoing investigations into the use of finite reinsurance.

Information referenced herein is provided for educational purposes only. For legal advice applicable to the facts of your particular situation, you should obtain the services of a qualified attorney licensed to practice law in your state.

McCarter & English, LLP on Admiral Ins. Co. v. Debber: Ninth Circuit Affirms Rescission of EPLI Policy Based on Misrepresentations in Policy Application

By Brian Osias and Mark Villanueva

February 19, 2009

SUMMARY: Employment Practices Liability Insurance (EPLI) is a somewhat new form of liability insurance that covers employers for certain claims made by its employees. In an unpublished decision, the Ninth Circuit Court of Appeals recently affirmed a lower courts holding that an insurer was entitled to rescind consecutive EPLI policies where it was determined that the insured misrepresented its claims history in the policy application.

ARTICLE: Overview

Employment Practices Liability Insurance (EPLI) is a somewhat new form of liability insurance that covers employers for certain claims made by its employees. EPLI ostensibly provides protection against a host of different employee lawsuits, including discrimination, wrongful termination, sexual harassment, failure to employ or promote, and other employment-related allegations. EPLI coverage is sometimes packaged with Directors and Officers coverage and/or Errors and Omissions coverage, and often is written on similar forms.

According to insurers, the cost of EPLI policies depends on a variety of underwriting considerations, including the insureds business, the number of employees, and other risk factors, such as whether the insured has faced prior employment-related claims. EPLI carriers purportedly seek to become familiar with a potential policyholders business by requiring the completion of a very detailed policy application. If an EPLI policy is issued based on an application that fails to disclose material information, the insurer may attempt to rescind the policy, regardless of whether the omission in the application was intentional.

Background of Admiral Ins. Co. v. Debber

In an unpublished decision, the Ninth Circuit Court of Appeals recently affirmed a lower courts holding that an insurer was entitled to rescind consecutive EPLI policies where it was determined that the insured misrepresented its claims history in the policy application. *Admiral Ins. Co. v. Debber*, 2008 U.S. App. LEXIS 20898 (9th Cir. Cal. Sept. 26, 2008).

A. The 2002 Policy

In November 2002, Admiral Insurance Company (Admiral) priced an EPLI policy for Data Control Corporation (DCC). About three weeks later, DCC's broker asked Admirals underwriting agent, Monitor Liability Managers (Monitor), to bind EPLI coverage for DCC. Monitor issued a binder for an EPLI policy to DCC, which stated that Admirals review of a completed application was a condition precedent to coverage.

On February 11, 2003, Dale Debber (Debber), Chief Executive Officer of DCC, and Lorna Martin (Martin), DCC's Chief Technical Officer, completed and signed a policy application (the 2002 Application) for the December 13, 2002 to December 13, 2003 policy. The 2002 Application asked whether [i]n the last 5 years . . . any current or former Employee or third party made any Claim or otherwise alleged discrimination, harassment, wrongful discharge and/or Wrongful Employment Act(s) against [DCC] or its directors, officers, or Employees. Claim, as defined in the application, was not limited to the filing of a lawsuit or similar complaint with the EEOC or similar state or local agency, but also included a written demand or a threat by any current or former Employee seeking relief in connection with an employment related dispute or grievance. In response to the question, DCC answered no.

Another question in the 2002 Application asked: [d]uring the last 5 years, has [DCC] or any of its directors, officers or Employees thereof known of, or been involved in any lawsuit, charges, inquiries, investigations, grievances, or other administrative hearings or proceedings before a number of government agencies or any U.S. District or state court? Again, DCC responded no to this question.

Martin contended that DCC's broker instructed her to follow a prior renewal application for a different insurer to complete the Admiral application. The prior renewal application did not list any claims or lawsuits against DCC, as DCC previously disclosed to the other insurer the details of prior claims and lawsuits in the original application for coverage. Specifically, DCC disclosed to its other insurer that Debber had been sued in three prior actions, captioned *Jenise Whittle, et al. v. Dale Debber*, Case No. 58835, filed September 22, 1997; *John Atkinson, et al. v. Dale Debber, et al.*, Case No. 60533, filed August 6, 1998; and *Barbara Hunyada v. J. Dale Debber, et al.*, Case No. 60534, filed August 6, 1998. The *Hunyada* and *Atkinson* actions were pending within five years of DCC's completion of the 2002 Application.

After receiving the completed 2002 Application, on September 3, 2003, Admiral issued an EPLI Policy to DCC for policy period December 13, 2002 to December 13, 2003 (the 2002 Policy).

B. The 2003 Renewal

In December 2003, Monitor issued a binder for the renewal of the 2002 Policy, which stated that a condition precedent to coverage was Monitors [r]eceipt, review and underwriting acceptance of [a] properly completed, signed and currently dated EPLI renewal application (the Renewal Application). Debber and Martin completed the Renewal Application on behalf of DCC, and submitted the signed application on December 22, 2003.

As with the 2002 Application, the Renewal Application queried whether within the last five years, DCC had been involved in any lawsuit, charges, inquiries, investigations, grievances or other administrative hearings or proceedings before various agencies or any U.S. District or state court. Again, DCC representatives Debber and Martin responded no to the inquiry.

Martin contended that she relied on DCC's broker when filling out the Renewal Application. Specifically, Martin attested that because the prior claims against Debber were filed more than five years prior to the Renewal Application, the broker advised that they did not need to be disclosed.

On January 27, 2004, Admiral issued an EPLI policy to DCC for the policy period December 13, 2003 to December 13, 2004 (the 2003 Policy).

C. The Altman Action

On May 11, 2004, Vickie Altman and her husband (the Altmans) filed a complaint in the Nevada County Superior Court against DCC, Debber, and Martin. Among other things, the Altmans alleged claims of sexual harassment and retaliation in violation of California's Fair Employment and Housing Act and Title VII. In particular, the Altmans alleged that Debber and [DCC] have defended at least three sexual harassment and retaliation lawsuits in Nevada County since 1996 and that the complaints for these lawsuits contain strikingly similar allegations to those experienced and set forth by the Altmans.

D. Tender of Altman Complaint to Admiral

On May 24, 2004, DCC tendered the Altman complaint for defense and indemnity. Admiral agreed to defend the Altman action under the 2003 Policy, subject to a full reservation of rights. Admiral specifically reserved the right to file an action for a judicial determination that [Admiral] is entitled to rescind the Policy and that the Policy is void *ab initio* and provides no coverage whatsoever to any person or entity.

The Altman action was removed to the United States District Court for the Eastern District of California on June 2, 2004. On August 23, 2004, the Altman defendants motion to compel arbitration was granted and the federal action was dismissed. On August 11, 2005, counsel for the Altman defendants -- with Monitors consent -- served the Altmans with an offer of judgment. The Altmans accepted the offer and obtained an arbitration award in the amount of the offer. On September 26, 2005, Admiral issued a payment to the Altmans, subject to a reservation of rights to rescind the Admiral EPLI policies and to seek recovery of the payment from DCC, Debber and Martin.

E. The Rescission Action

On February 22, 2005, Admiral sought to rescind the 2002 and 2003 Policies in an action against Debber, Martin, and DCC. *Admiral Ins. Co. v. Debber*, 442 F. Supp. 2d 958 (E.D. Cal. 2006). Counsel for Admiral subsequently tendered a check to DCC, which represented a return of the premiums paid by DCC for the EPLI policies.

In opposition to Admirals summary judgment motion, DCC argued that the 2002 Application was irrelevant because the Altman claim was tendered against the 2003 Policy. DCC further argued that because the prior lawsuits were filed outside the five year window set forth in the 2003 Application, it had no obligation to disclose the earlier lawsuits. The Court rejected these arguments, and found that the 2002 Policy would not have been issued had the prior lawsuits been disclosed in the 2002 Application. The District Court held that [t]o allow an insured to conceal two sexual harassment and retaliation lawsuits clearly filed within five years of the original application and then claim upon renewal of the policy that those suits are outside the five year period is, understandably, unsupported in law. *Id.* at 968.

Further, the Court rejected DCC's argument that the questions in the policy applications contemplated only new lawsuits first made in the prior five years. The Court held that the application requested information relating to DCC's knowledge or involvement in lawsuits in the last five years, and was not limited to claims first made within that timeframe. The Court also held that DCC's reliance on advice from its insurance broker was not a defense to rescission. The Court noted that even an unintentional non-disclosure is sufficient to support rescission of an insurance contract, if the non-disclosed information was material to the contract. *Id.* at 967.

The District Court also held that Admirals issuance of a conditional binder prior to review of a completed policy application did not show lack of reliance on the application in issuing the policy. The Court noted the distinction between a binder and a policy, and found that the policy was not issued until after the 2002 Policy Application was completed. The District Court also rejected DCC's argument that rescission of the contract was improper because Admiral did not verify the truth of DCC's claims and loss history.

Finally, the Court denied DCC's cross motion for summary judgment on the basis of laches. DCC argued that Admiral unreasonably delayed seeking rescission of the EPLI policies, causing DCC substantial prejudice. The Court

held, however, that nine months was not an unreasonable amount of time for Admiral to investigate and act upon information supporting rescission.

F. The Ninth Circuits Decision

The Ninth Circuit Court of Appeals affirmed the District Courts ruling, and held that Admiral was entitled to rescind the EPLI Policies *ab initio*. The Appellate Court recognized that [u]nder California law, a material misrepresentation or concealment in an insurance application, whether intentional or unintentional, entitles the insurer to rescind the insurance policy *ab initio*. *Admiral Ins. Co. v. Debber*, 2008 U.S. App. LEXIS 20898 at *1 (9th Cir. Cal. Sept. 26, 2008) (quoting *West Coast Life Ins. Co. v. Ward*, 33 Cal. Rptr. 3d 319, 323 (Ct. App. 2005)). The Circuit Court found that the information omitted from the applications was material, and affirmed the District Courts ruling that the insurer was entitled to rescind both the 2002 and 2003 Policies.

Comment

EPLI carriers generally require potential policyholders to complete detailed applications that are supposedly intended to reveal the applicants knowledge of any prior or pending employment-related claims. An insureds misrepresentations about its claims history generally may provide a basis for rescission. As confirmed by the Ninth Circuit Court of Appeals, even an unintentional failure to disclose material information may justify rescission. Insureds may therefore wish to take an expansive and/or over-inclusive view in determining what information to disclose in connection with completing their EPLI applications to avoid rescission of their policies. Indeed, the *Debber* decision underscores the importance for the insured to be scrupulously accurate in the policy application to avoid potential post-claim rescission issues. Although materiality is a key consideration in determining whether a claim of rescission is justified, *Debber* instructs that insurers and at least some courts will take a broad view of what is material. The *Debber* Court appears to suggest that facts related to loss history in particular will often meet the threshold of materiality.

ABOUT THE AUTHOR(S):

Brian Osias is a partner in the Insurance Coverage Practice Group in the Newark, New Jersey office of McCarter & English.

Mark Villanueva is an associate in McCarter & English's Insurance Coverage Practice Group, and is based in the firm's Philadelphia, Pennsylvania office.

About the Firm Insurance Coverage is one of McCarter & English's largest practice groups, with 40 attorneys providing legal assistance to corporate policyholders. For over 20 years, the Group has litigated insurance matters throughout the country and provided insurance advice to clients assessing their potential risks, analyzing new insurance products and considering the adequacy of their insurance programs. It has secured billions of dollars in insurance assets for a broad range of Fortune 500 companies and other policyholder clients. McCarter & English has offices in Boston, Hartford, Stamford, New York City, Newark, Philadelphia and Wilmington.

Ernst & Young 2009 Insurance Outlook--US Property/Casualty

By Ernst & Young

February 8, 2009

SUMMARY: Ernst & Young presents its 2009 outlook for the U.S. property and casualty insurance industry.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Overview

The US property and casualty (P/C) industry is emerging from the turmoil in financial markets with significant isolated damages, but so far no serious general impairment. The outlook for 2009 includes greater risks from continuing volatility in investment and underwriting performance, what looks to be a more active merger and acquisition (M&A) market, and the prospects of market defining regulatory changes. Looking ahead, this may be the beginning of a transitional if not transformational environment for the industry. It is a time when challenges in the competitive landscape can become opportunities for the efficient and well-prepared. In this context, we have identified seven key actions:

1. Redirect focus on premium pricing
2. Monitor claims inflation risk
3. Prepare for changes in regulatory oversight
4. Prepare for changes in accounting requirements
5. Address effective expense control
6. Rethink risk modeling
7. Watch for new M&A activity

Redirect focus on premium pricing

Because of the recent financial crisis, compounded by a return to normal or above-average catastrophe loss levels, price reductions are likely over for the foreseeable future. After a four-year period where technical and market pricing diverged, 2009 appears to be reversing the trend. This does not necessarily mean a return to a hard market, but it does signal a change in the dynamics of competition in the marketplace. In most P&C business segments, pricing levels have been soft for the past four years. During that period, rate decreases were offset by an increase in insured exposures, resulting in virtually flat premiums. This changed with a softening of the economy in 2007. Still, profitability held up well, as loss levels declined in 2006 and 2007 in large part due to fewer catastrophe losses, loss reserve releases, and favorable casualty loss frequency experience. In spite of the ongoing rate competition, returns on capital reached record levels in 2007.

In 2008 catastrophes, pricing and the financial market crisis contributed to stress in the industry. Insured catastrophes totaled over \$50 billion and reduced loss reserve releases contributed to an overall deterioration of 7 points in the combined ratio. Although it is unlikely that this level of catastrophe losses alone will significantly change overall market pricing, the current crisis in financial markets is exerting upward pressure on pricing. As a result, US P&C policyholder surplus has fallen because of (i) financial guarantee insurance losses, (ii) other than temporary impairment (OTTI) of investment grade bonds and preferred stock, and (iii) substantial decreases in values of equity holdings. Surplus may drop by 10% or more by the end of 2008.

Early indications of pricing negotiations give strong support to at least a firming of the market in most lines. Insurer and reinsurer concerns over loss volatility and potential for mega-losses in highly developed catastrophe-prone locations should contribute to price stabilization. Additionally, losses in directors and officers (D&O) and errors and omissions (E&O) products will certainly result in significant price increases in those market segments. These factors will give rise to additional scrutiny by both rating agencies and regulators. Surplus preservation, particularly against catastrophic events, remains a critical cycle survival strategy.

Monitor claims inflation risk

The environment for P&C insurers through 2009 is likely to continue a volatile pattern that drives claims costs. In spite of the deepening recession and the rising concern of deflation, longer term, the industry must account for the massive deficit spending undertaken by the federal government. Insurers exposure to inflationary risk in many instances is fundamentally different from the factors that drive inflation in the broader economy: medical costs, construction costs and tort issues continue to account for the lions share of the industrys inflation trend. Although severity and frequency trends have benefited from the positive effects of broad tort reform in the last decade, these effects are starting to erode. The most significant factor in the broader economy will be the long-term impact of the federal bailout and economic stimulus packages that have already added to government deficits.

Through most of 2008, inflation spiked upward: since the financial crisis, the commodities futures for construction inputs have fallen and retail prices have followed. In an inflationary environment, P&C insurers as third-party payers or in adversarial claims settlement positions are in a poor negotiating position relative to larger purchasers of commodities or services. Medical cost is the broadest element in inflation, and it impacts product lines such as personal and commercial automobile, general liability, workers compensation, commercial multi-peril, and medical malpractice insurance. Over the past five years, medical care costs and hospital services have outpaced general inflation by 20%, making it difficult to predict the direction or magnitude of medical cost inflation.

Prepare for changes in regulatory oversight

Will 2009 be the year that federal regulation gets a firm foothold in the insurance industry? Recent market events, including the federal involvement in banking, have added a sense of urgency to these discussions. Momentum for change in the insurance regulatory structure is building, and the near-term uncertainty about the outcome presents challenges for the industry.

It is almost certain that the P&C industry will face increased regulation as an outcome of the current crisis in the financial services industry. Regulation is likely to be more intrusive, encompassing more continuous monitoring of activities and financial performance, perhaps with higher standards of solvency over the longer term (even though there may be some loosening of standards to help life insurers out of the current crisis).

The form of federal supervision favored in the Treasurys 2008 report, *Blueprint for a Modernized Financial Regulatory Structure*, is the optional federal charter (OFC) -- allowing insurance organizations the opportunity to choose the form of regulatory oversight that they find most appropriate. At this stage, it appears OFC is giving way to increased likelihood that federal regulation will be applied to all insurance and financial services sectors to some degree.

While the case for federal oversight is more apparent in the life industry, where geography matters little in product design or consumer preferences, the P&C industrys geographic variations present a formidable hurdle for centralization. Solvency protection and the workings of guaranty funds vary dramatically among the states. Differing levels of catastrophe exposure are a divisive factor that separates their interests. Consumer protection in automobile and housing repair, variations in litigation trends driven by the influences of state courts and legislation, and business sector concentrations all differ considerably by state. In 2007 and 2008, there are no clear indications that solvency or failure of regulation has been a systemic problem in the P&C arena, as it has in other insurance sectors and in financial services. Some form of compromise legislation may apply to P&C companies: maintaining rate and consumer protection regulation at the state level, but developing federal mechanisms to monitor solvency and provide an alternative to guaranty funds.

In the existing state-based insurance regulatory framework, the current guaranty fund structure is not designed to respond to events like the recent crisis. It handles specific failures of an individual entity, but not systemic failures that might broadly imperil the industry. States are hampered in addressing system-wide events because the process lacks the principle of a lead regulator and the dollar cost is too high. While state regulation is structured to act by seizing a company when a situation forces the equivalence of bankruptcy, it is limited in the capability and tools to head off systemic problems before they cause collapse. Furthermore, state ratings agencies currently act as shadow regulators, and while they may be able to influence behavior more proactively, they need to address a current lack of consistency and transparency.

Federal regulation could alter the competitive landscape of the P&C insurance industry. Opportunities to accelerate geographic expansion through both organic and acquisition channels will develop for those prepared to exploit the changes. Value will likely be created by those who can quickly adopt and defend strong regional and super-regional market presence.

Prepare for changes in accounting requirements

Accounting issues will be critical in 2009 and beyond as companies prepare to adopt a new financial reporting platform. With the Securities and Exchange Commissions 2008 pronouncements regarding the convergence of US generally accepted accounting principles (GAAP) with International Financial Reporting Standards (IFRS), companies are beginning to prepare for the anticipated change to a market-consistent framework. Implementing principles-based and market-consistent accounting challenges nearly every established system and operational facet of an insurance company. Under such a system, income statements and balance sheets become more volatile as assets and liabilities are increasingly subject to market valuations.

IFRS 4 Phase II and Solvency II have planned European Union implementation dates of 2012. Until then, US companies need to build the infrastructure to accommodate not only the existing IFRS framework but also the added challenges these changing rules and regulations present. This involves a huge operational undertaking, even in the best of times, but the financial crisis and recession have increased the pressures. As companies plan for the upcoming changes, the definition of the market-consistent framework may undergo changes as the impact of the financial crisis, and the role played by mark-to-market accounting of thinly-traded instruments, is better understood. The International Accounting Standards Board has allowed companies in certain circumstances to reclassify some financial instruments out of the trading category and into the loan category, which is carried on a cost basis, to help resolve the credit crisis, while reaffirming the need for transparency in asset valuations.

Thus, companies need to prepare for an uncertain roll-out of these requirements. This can increase the risks associated with some longer-term strategic decisions, where changing accounting or related tax regimes may alter the nominal value of the decision. Management must keep up with their peers in adopting systems and information capabilities to respond to these changes as they unfold.

Address effective expense control

For most of this decade, expense ratios have been rising steadily. For the P&C industry overall, underwriting, acquisition and general expense ratios as a percentage of premium are expected to reach 27.5% in 2008; this is higher than in any year since 1999. More significantly, underwriting, acquisition and general expense dollars were up 52% in those nine years. While premiums and claims grow in tandem, expenses should see benefits of size and economies of scale and so far, this has not happened. The pace of cost increase indicates that real inefficiencies are accumulating and are not simply a function of slowing premiums.

Long-term reversal of expense growth requires an emphasis on effective service outcomes in three critical operating areas: underwriting costs (including policy administration), acquisition expense (primarily, fees to brokers and agents), and claims-adjustment expense. Expense cutting cannot be haphazard or it may create more problems than it solves. Offshore and onshore outsourcing are expense-control options to reduce operating costs, especially those related to routine submissions and policy administration. However, outsourcing core functions carries risks associated with the long-term stability of the service providers. Regardless of the risks, successful outsourcing is a long-term solution that requires a broad view in terms of training, effectiveness of communication, and quality control.

Distribution is another area of expense control where efficiencies can be achieved through alternative marketing channels, including online quotation and policy delivery. While improvements have been made in personal lines, the complexity of policy applications continues to slow the process on the commercial side. Compounding this issue is the rather low confidence that corporate buyers and agents/brokers often feel in using new forms of electronic commerce. However, this should change as a new generation of users become more comfortable with electronic interchange and become more included in risk-management purchasing and decision-making positions.

Many of the largest P&C insurers undertook cost-reduction initiatives during the second half of 2008. However, a longer-term, sustainable approach to insurance spending must be applied to make a real difference.

Rethink risk modeling

In the year ahead, P&C insurers will need to incorporate risk-management lessons learned, particularly lessons learned in 2008, into their risk-management processes. Insurers will go beyond refreshing models, to focus on expanding information used for risk analysis and to better understand the realities of new and continually volatile financial-market conditions.

Risk models may provide insight into the proper application of information or into the additional information that is needed, but they should only play a part in the overall risk-management process. When it comes to modeling priorities, line managers and corporate functions will have increasing responsibility to ensure that lessons learned are incorporated into models. Adjustments may be needed in order to improve the modeling of changing economic and capital-markets conditions. On the asset side, modelers will pursue more complex credit-ratings transition matrices, correlations between asset classes and sectors, the importance of maintaining liquidity under stress scenarios, and methods of projecting both the deterioration and recovery of assets over time. Outputs from models and scenario tests will also need to be examined critically against real-world experience with an increased respect for extreme scenarios and worst-case hypotheticals.

Models may also continue to provide insight to managers, and are an opportunity to illustrate effects to third party audiences in characteristics such as unexpected correlations, rates of decay or deterioration, and aggregation risks. But the effort to improve models will fall flat without supervision by managers who are accountable and who are knowledgeable about real-world trends and influences.

Watch for new M&A activity

The financial crisis has created a unique confluence of events resulting in an unprecedented landscape for insurance mergers and acquisitions. The government bailout of one of the worlds largest financial institutions has placed its most prized assets on the auction block. Additionally, other insurers are looking to focus on core businesses and shed nonstrategic lines of business in order to free up capital and streamline operations. The total insurance properties currently available for sale exceeds the M&A activity of the last several years combined.

Concurrently, potential buyers are capital-constrained. Insurers are holding on to any excess capital to protect against further deterioration in investment markets, and private equity investors are challenged to find an appetite in the credit markets for large-scale acquisitions. Transactions will wait until acquisition-minded insurers are more assured of having adequate capital, and until private equity investors are once again able to access the debt market. Given current equity valuations, the use of stock is not generally available as currency to fund transactions. A few companies will emerge from the current situation with strong balance sheets and will use a portion of capital to fund an acquisition, but they are likely to wait until the depth of the current economic downturn, and its impact on operating performance, is better understood.

If current economic conditions persist, two additional factors will come into play that will drive down current sales prices for insurance properties. First, pressures from debt holders, regulators and rating agencies will force organizations to sell at prices below current valuations. Second, the performance of insurance units on the sales block will deteriorate over time as morale and employee performance suffer with the uncertainty of a sale. Depending on the speed and pace of economic recovery, 2009 may be one of the more significant years in the insurance M&A market.

Reed Smith LLP on Insurance Coverage for Violations of Statutory Privacy Rights

By Timothy Law and Toki Rehder

January 26, 2009

SUMMARY: In this commentary, Reed Smith LLPs Timothy Law and Toki Rehder advocate that given that insurance policies definitions of personal and advertising injury explicitly include the publication or making known of material that violates a persons right of privacy, insurers should cover damages imposed under privacy statutes.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Introduction: In 1890, Samuel Warren and Louis Brandeis wrote a seminal article for the Harvard Law Review on the Right to Privacy. n1 In advocating for expanded privacy rights, they explained that [p]olitical, social, and economic changes entail the recognition of new rights, and the common law, in its eternal youth, grows to meet the new demands of society. n2 Noting the technological advances of the day, such as instantaneous photographs and numerous mechanical devices [that] threaten to make good the prediction that what is whispered in the closet shall be proclaimed from the house-tops, those scholars presciently recognized that with new technology comes novel threats to the right to be let alone. n3

In todays world, the increased use of computers to process, store, and retrieve personal financial information, coupled with the aggressive use of technology for marketing purposes, are creating pervasive threats to privacy. Instead of the expansion of the common law advocated by Warren and Brandeis, the response has come from Congress, which has enacted numerous statutes to protect the privacy rights of consumers and businesses. Such laws include the Telephone Consumer Protection Act (TCPA), n4 the Fair Debt Collection Practices Act (FDCPA), n5 the Fair Credit Reporting Act (FCRA), n6 the Electronic Communications Privacy Act (ECPA), n7 the Right to Financial Privacy Act (RFPA), n8 the Cable Communications Privacy Act, n9 the Video Privacy Protection Act (VPPA), n10 the CAN-SPAM Act of 2003, n11 the Employee Polygraph Protection Act (EPPA), n12 the Drivers Privacy Protection Act, n13 the Gramm-Leach-Bliley Financial Modernization Act of 1999, n14 Health Insurance Portability and Accountability Act of 1996 (HIPAA), n15 and the Fair and Accurate Credit Transactions Act of 2003 (FACTA). n16 This commentary discusses common issues that arise when policyholders seek insurance coverage for lawsuits alleging violations of privacy laws.

Various Insurance Policies Protect Against Liability for Privacy Violations: Different types of insurance policies may provide coverage for violations of statutory privacy rights. The most ubiquitous commercial insurance coverage is the Commercial or Comprehensive General Liability (CGL) insurance policy. Typically written on a standard form,

most typically the one drafted the Insurance Services Office, CGL policies generally include Coverage A and Coverage B. Coverage A covers Bodily Injury and Property Damage Liability while Coverage B extends to Personal and Advertising Injury Liability. While violations of privacy statutes may result in bodily injury or property damage, alleged violations of privacy statutes are more often analyzed under Coverage B, which usually defines Personal and Advertising Injury to include: [o]ral or written publication, in any manner, of material that violates a persons right of privacy (the Publication Language). Other standard-form CGL policies define Personal and Advertising Injury to include making known to any person or organization covered material that violates a persons right to privacy (the Making Known Language).

Other types of insurance policies may provide coverage for privacy claims. Directors and officers (D&O) liability insurance may provide coverage not only for individual directors and officers, but also for the entity (although entity coverage is often limited to securities claims). Within the wide-ranging wrongful acts covered by D&O insurance may be employment practices such as employment-related libel, slander, humiliation, defamation, or invasion of privacy. Furthermore, if the claim of a violation of a privacy statute is made by an employee, Employment Practices Liability (EPL) coverage, or in rare instances the employers liability coverage in a workers compensation policy, can potentially provide coverage. n17 In addition to CGL, D&O and EPL insurance, many corporations purchase insurance policies covering professional errors and omissions (E&O) or technology-based risks. D&O, EPL, and E&O insurance policies are usually sold on a claims-made basis, requiring the claim to be made during the policy period and to be based on a wrongful act, which is often broadly defined. Coverage for TCPA Claims Heralds Coverage for Claims Under All Privacy Statutes: As it pertains to insurance coverage, the most litigated privacy statute has been the Telephone Consumer Protection Act, or TCPA, which protects peoples privacy from unwanted calls and faxes. n18 The TCPA makes it unlawful, subject to limited exceptions, to use any telephone facsimile machine, computer, or other device to send, to a telephone facsimile machine, an unsolicited advertisement. n19 The term unsolicited advertisement is defined as any material advertising the commercial availability or quality of any property, goods, or services which is transmitted to any person without that persons prior express invitation or permission, in writing or otherwise. n20 Courts can award damages equal to actual monetary losses, statutory damages of up to \$500 per fax, or triple damages of \$1,500 if the infringement is intentional. n21 The total damages sought in TCPA cases are often large because the faxes are typically sent to thousands of recipients.

In seeking coverage from their CGL insurance companies, some policyholders have argued that alleged violations of the TCPA are covered under Coverage A, in that the fax recipient suffers a loss of use of their fax machine and a small amount of ink, paper and toner whenever a fax is received. The loss of use of property, even if it is not physically damaged, normally falls within the insurance policys definition of property damage, so there is a strong basis for this argument. n22 It is more common, however, for coverage to be analyzed under Coverage B for alleged violations of the right of privacy. This logically follows from Congress express purpose in enacting the TCPA, which was to protect the privacy interests of residential telephone subscribers by placing restrictions on unsolicited, automated telephone calls to the home and to facilitate interstate commerce by restricting certain uses of facsimile ([f]ax) machines and automatic dialers. n23

The Right of Privacy Includes Seclusion and Secrecy: Illinois has been the central battleground for TCPA insurance coverage disputes. The main debate has been whether Coverage B covered violations of all types of invasion of privacy, or only those relating to violations of the right of secrecy. At least with regard to the Publication Language, this battle was won by policyholders, and lost by insurance companies, when the Illinois Supreme Court decided *Valley Forge Ins. Co. v. Swiderski Electronics, Inc.* n24

The court held that: [t]he receipt of an unsolicited fax advertisement implicates a persons right of privacy insofar as it violates a persons seclusion, and such a violation is one of the injuries that a TCPA fax-ad claim is intended to vindicate. n25 The Illinois Supreme Court found it unproblematic that the Complaint contained no mention of the right to privacy because a violation of privacy in the sense of a violation of seclusion is implicit in a TCPA fax-ad claim. n26 Referring to dictionary definitions, the court confirmed that right of privacy connotes both an interest in seclusion and

an interest in the secrecy of personal information. n27 Accordingly, the Illinois Supreme Court ruled that the policy language material that violates a persons right of privacy can reasonably be understood to refer to material that violates a persons seclusion, including unsolicited fax advertisements. n28 In the two years preceding the *Swiderski* opinion, many courts had reached the same opinion, finding coverage for TCPA claims under Coverage B. n29

The few cases that have found no coverage under the Publication Language followed *American States Ins. Co. v. Capital Associates of Jackson Co. Inc.*, n30 which ruled that the insurance policy was intended only to cover violations of the privacy right of secrecy, not seclusion. n31 In *Swiderski*, the Illinois Supreme Court specifically rejected *American States*, which had attempted to predict Illinois law. n32 Because the Seventh Circuit in *American States* incorrectly predicted the course of Illinois law, the *American States* decision and its progeny now lack precedential value. n33 Following *Swiderski*, a majority rule and a clear trend has been established favoring coverage for TCPA claims. n34

Generally, when courts have found no coverage for TCPA claims, they have relied not only on the now-discredited *American States* decision, but also on the Making Known Language, which some courts consider distinguishable from the Publication Language at issue in *Swiderski*. n35 The leading court to draw this distinction is the Court of Appeals for the Fourth Circuit in *Resource Bankshares*. n36 In that case, the Fourth Circuit focused on the term making known to rule that the policy was intended to provide coverage only for injury arising from the violation of the right of privacy by unwarranted disclosure, i.e., a violation of a right of secrecy, rather than from the violation of the right of privacy by unwanted intrusion, i.e., a violation of a right of seclusion.

Subsequent precedent involving Resource Bank calls into question the Fourth Circuits decision in *Resource Bankshares*. In addition to seeking coverage from St. Paul under its general liability insurance policy, which was the subject of the Fourth Circuits decision in *Resource Bankshares*, Resource Bank sued its directors and officers liability insurance company, Progressive Casualty Insurance Company, which had sold an Entity Errors and Omissions Endorsement. n37 The Progressive policy *excluded* coverage for loss in connection with any claim for invasion of privacy, presumably because it would be covered by CGL insurance. Attempting to use to its benefit the parsing of seclusion and secrecy that the Fourth Circuit had previously endorsed, Resource Bank urged that the exclusion addressed only the right of secrecy. The federal district court found that the plain meaning of invasion of privacy encompassed both the seclusional and secrecy variants of the right of privacy, so those claims were excluded.

Given that the right to privacy includes both the rights of seclusion and secrecy, the right of privacy should not be parsed, holding one to be covered and the other not. Indeed, the right of privacy protects many things, often not so easily labeled as a right of seclusion or secrecy. The term right of privacy appears in thousands of cases with factual scenarios so variable as to defy easy categorization. n38 The Harvard Law Review article by Warren and Brandeis makes no distinction between seclusion and secrecy, and instead indicates that they are intertwined in the right to be let alone. n39 Indeed, the authors stated that the right to privacy is like the right not to be assaulted, beaten, imprisoned, maliciously prosecuted or defamed. n40 Interestingly, the other offenses typically covered as a personal or advertising injury include (1) false arrest, detention or imprisonment; (2) malicious prosecution; (3) the wrongful eviction from, wrongful entry into, or the invasion of the right of private occupancy; (4) the publication of material that slanders or libels a person or organization or disparages its goods; and (5) use or infringement of anothers copyright, trade dress, or slogan in your advertisement.

Harassing calls by debtors that violate the FDCPA or other debt collection statutes are clear intrusions upon privacy, similar to the intrusion of unwanted faxes, and are covered. n41 Some privacy statutes are focused on the right of secrecy, such as those statutes that protect patient and credit card information, making the secrecy/seclusion debate moot. For example, the FCRA prevents the unwarranted disclosure of financial information; thus, the right of secrecy is plainly implicated. Indeed, the FCRA is an excellent example of how secrecy and seclusion are intertwined. In a typical FCRA case, n42 a consumer will complain that a company improperly accessed his or her credit information and then improperly used that information for marketing purposes, implicating both secrecy and seclusion interests.

Insurance policies draw no distinction between the right of secrecy and the right of seclusion or any other rights which are protected by the right of privacy, like the right to control one's own body, likeness, and image. ⁿ⁴³ In our modern times, legislators are responding to invasions of privacy by creating firm rules and liability for violating those rules. When businesses unintentionally violate those rules, thereby creating liability to third parties, those businesses should have access to the insurance they purchased to provide recompense to the victims.

The Privacy Violation Need Not Relate to the Content of the Material: Insurance companies also argue that the privacy violation must be caused by the *content* of the material published or made known, not simply by the manner of publication. Using this argument in TCPA cases, insurance companies sometimes argue that because an unwanted fax does not publish or make known private facts, there is no coverage. This distinction, however, is not supported by the language of the insurance policy. The word material or covered material means the thing itself (the fax), not just the content of the thing (the words or images on the fax). When the word material or covered material is defined in the insurance policy, this is made explicit.

Even when undefined by the insurance policy, this meaning is implicit in the use of the term covered material or material in another personal or advertising injury offense, the one relating to libel and slander, which usually reads, libel or slander in or with covered material. The libel or slander must be in material or covered material, such as a fax, a telephone call, a newspaper, or an email. When someone is alleged to have violated the privacy rights protected by the TCPA by sending, transmitting, publishing, or otherwise making known the facsimile advertisement (i.e., the material) in a prohibited manner, there should be coverage under a CGL policy. **Damages Imposed by Statute Are Covered:** While it would seem non-controversial that damages imposed by statute are damages within the meaning of an insurance policy, one federal court recently disagreed in the context of a FACTA claim. ⁿ⁴⁴ Congress provides statutory damages to compensate victims when their actual damages are nominal or difficult to prove. ⁿ⁴⁵ Indeed, many privacy statutes provide for statutory damages because the actual damages might be difficult to prove or quantify. For example, in a TCPA case, what are adequate damages for the annoyance of receiving an unwanted fax? In a FACTA case, what are adequate damages for exposing your credit card information in a manner that could lead to identity theft?

In enacting privacy statutes, Congress typically establishes liability for failing to protect private information or for overly aggressive advertising techniques that violates our right to be let alone, then imposes statutory damages (often called civil damages in the privacy statutes) to compensate the victim in a civil action. It would be a clear misinterpretation of the federal statutes to rule that Congress imposes statutory damages because the victim is not injured by a violation of the privacy protected by those statutes. ⁿ⁴⁶ Rather, the statutes are enacted and statutory damages provided because Congress recognizes that, in a whole host of ways, invasions of privacy cause harm.

Allegations of Intentional or Willful Violations of Privacy Statutes Will Not Preclude Coverage:

CGL policies contain exclusions that potentially may be implicated in privacy cases, including those exclusions addressing (1) knowing violations of the rights of another; (2) statements that are published with knowing falsity of their contents; and (3) intentional violations of penal statutes. Usually, those exclusions are *not* implicated because there are allegations of negligence, willfulness, recklessness, and carelessness in addition to any allegations of knowing or intentional statutory violations. ⁿ⁴⁷ Moreover, privacy statutes are not penal statutes. ⁿ⁴⁸

The FCRA provides a private right of action against businesses that misuse consumer credit reports. A negligent violation entitles a consumer to actual damages, ⁿ⁴⁹ while a willful violation entitles the consumer to actual, statutory, and even punitive damages. ⁿ⁵⁰ The United States Supreme Court recently held that the willful standard of the statute reaches both knowing and reckless violations of the FCRA, so a knowing or intentional violation is not established by a willful violation ruling. ⁿ⁵¹

Specific Exclusions May Eliminate Some Coverage for Certain Privacy-Based Statutes: The insurance industry has responded to the spate of TCPA and privacy claims and the resulting coverage disputes not by clarifying their insurance

policies to ensure unambiguous coverage, but instead by issuing new exclusions. ISO form exclusion CG00 67 03 05 and AAIS form exclusion GL 0225 10 05 are examples. Those exclusions are typically focused on the TCPA and the CAN SPAM Act of 2003, with many other privacy statutes remaining covered. If an exclusion identifies only specific statutes, then only liability under those particular statutes would be excluded.

When insurance companies do not utilize explicit language to exclude TCPA liabilities, especially when such language is available in the marketplace, there should be no question that the intent of the parties was to cover that liability. If the insurance company could have used more specific language, but chose not to do so, it should not benefit from any lack of clarity in its insurance policy.

Conclusion: The purpose of insurance is to insure. n52 Coverage provisions are therefore construed broadly, exclusions narrowly, with all ambiguities resolved in favor of coverage. CGL insurance is intended to cover damages for which the policyholder is legally obligated to pay (whether obligated in tort, through contract, or by statute) for bodily injury, property damage, and personal and advertising liability. Given that insurance policies definitions of personal and advertising injury explicitly include the publication or making known of material that violates a persons right of privacy, insurance companies should cover damages imposed under privacy statutes.

n1 Samuel D. Warren and Louis D. Brandeis, *The Right to Privacy*, 4 *Harv. L. Rev.* 193 (1890).

n2 *Id.* at 193.

n3 *Id.* at 195.

n4 47 *U.S.C.* § 227 (allowing a private right of action for unsolicited facsimile advertisements, certain automated telephone calls, and other unwanted telephone solicitations).

n5 15 *U.S.C.* § 1692, et seq. The FDCPA regulates the steps that a debt collector can take to learn the debtors location, communicate with the debtor, and communicate with third parties about the debt. The FDCPA also prohibits harassment or abuse, as well as false or misleading representations. The purpose of the statute is to eliminate abusive debt collection practices by debt collectors, which contributes to invasions of individual privacy. 15 *U.S.C.* § 1692.

n6 *See 15 U.S.C. § 1681*, et seq. The FCRA was enacted in 1970, in part, to insure that consumer reporting agencies exercise their grave responsibilities with fairness, impartiality, and a respect for the consumers right to privacy. *15 U.S.C. § 1681(a)(4)*. The FCRA, among other provisions, prohibits the release of consumer reports for purposes not authorized by the Act. *Pietras v. Sentry Ins. Co.*, No. 06 C 3576, 2007 U.S. Dist. LEXIS 16015, at *6 (N.D. Ill. March 6, 2007).

n7 *18 U.S.C. § 2510*, et seq. (authorizing civil damages for any person whose wire, oral or electronic communication is intercepted, disclosed, or intentionally used in violation of the ECPA).

n8 *12 U.S.C. § 3401*, et seq. (providing civil damages for unauthorized disclosure of financial records by a financial institution to federal government).

n9 *47 U.S.C. § 551* (allowing damages for collection, use, and disclosure of personally identifiable information by cable operators).

n10 *18 U.S.C. § 2710* (authorizing civil damages for the wrongful disclosure of video tape rental or sale records).

n11 *15 U.S.C. § 7701*, et seq. (establishing national standards for the sending of commercial email to be enforced by the Federal Trade Commission).

n12 *29 U.S.C. § 2001*, et seq. (allowing civil action for misuse of polygraphs in employment and for improper disclosure of information acquired from a polygraph test).

n13 *18 U.S.C. § 2721*, et seq. (allowing civil damages from anyone who knowingly and improperly obtains, discloses, or uses personal information from a motor vehicle record).

n14 *15 U.S.C. § 6801*, et seq. (providing obligations on financial institutions to respect the privacy of its customers).

n15 42 U.S.C. § 1320d et seq. While there is no private right of action under HIPAA, it is being considered by courts in assessing state privacy claims. See *Bagent v. Blessing Care Corp.*, 244 Ill. 2d 154 (2007) (privacy violations from phlebotomist allegedly revealing in a social setting that the patient was pregnant); *Acosta v. Byrum*, 638 S.E.2d 246 (N.C. Ct. App. 2006) (claims of invasion of privacy and infliction of emotional distress against a psychiatrist and office manager who allegedly improperly accessed and disseminated the patients health information). Administrative proceedings for damages for violations of HIPAA may be covered if not specifically excluded.

n16 On or about December 4, 2003, the FACTA was enacted as part of amendments to the FCRA, 15 U.S.C. § 1681, et seq. Among other things, FACTA required the truncation of credit card and debit card numbers to avoid printing more than the last 5 digits of the card number or the expiration date upon any receipt provided to the cardholder at the point of the sale or transaction. 15 U.S.C. § 1681c(g).

n17 Different types of insurance policies are written to be complementary and what is specifically included in one policy may be specifically excluded in another. Thus, the personal and advertising injury coverage provided in the CGL policy is often excluded from other policies.

n38 See, e.g., *National Archives & Records Admin. v. Favish*, 541 U.S. 157 (2003) (discussing the right of privacy in relation to a family's control over the body and death images of a deceased relative, including interference with the character or memory of the deceased); *Lawrence v. Texas*, 539 U.S. 558 (2003) (discussing the right of privacy in relation to governmental intrusion into private matters and places, particularly homosexual activity in the privacy of the home).

n39 Samuel D. Warren and Louis D. Brandeis, *The Right to Privacy*, 4 Harv. L. Rev. 193, 205 (1890) (But if privacy is once recognized as a right entitled to legal protection, the interposition of the courts cannot depend on the nature of the injuries resulting.)

n40 *Id.*

n41 See *St. Paul Fire & Marine Ins. Co. v. Green Tree Financial Corp.*, 249 F.3d 389 (5th Cir. 2001); *Collection Bureau of Orlando, Inc. v. Continental Cas. Co.*, 342 So. 2d 1019 (Fla. Dist. Ct. App. 1977). Debt collectors will often have specialized policies that specifically cover violations of the FDCPA and similar state statutes. See *Foster v. D.B.S. Collection Agency*, 2008 U.S. Dist. LEXIS 22264 (S.D. Ohio March 20, 2008).

n42 See *Zurich Amer. Ins. Co v. Fieldstone Mortgage Co.*, 2007 U.S. DIST LEXIS 81570 (D. Md. Oct. 26, 2007).

n43 The Restatement (Second) of Torts identifies four non-exclusive ways in which privacy can be invaded: (1) unreasonable intrusion upon the seclusion of another; (2) appropriation of the others name or likeness; (3) unreasonable publicity given to the others private life; and (4) publicity that unreasonably places the other in a false light before the public. Restatement (Second) of Torts, § 652A(2).

n44 *Whole Enchilada, Inc. v. Travelers Property Casualty Co. of Am.*, 2008 U.S. Dist. LEXIS 77186 (W.D. Pa. Sept. 28, 2008).

n45 See *Murray v. GMAC Mortgage Corp.*, 434 F.3d 948, 951, 952-953 (7th Cir. 2006) (noting that Congress enacts laws like the FCRA (of which FACTA is a part) and provides for modest statutory damages where the consumers loss is small and difficult to quantify); *Planned Parenthood of Columbia/Willamette Inc. v. American Coalition of Life Activists*, 422 F.3d 949, 963 n.7 (9th Cir. 2005), cert. denied, 547 U.S. 1111 (2006) (Statutory damages are meant to compensate victims when actual loss is hard to prove.); *Turner v. Beneficial Corp.*, 242 F.3d 1023, 1038 (11th Cir. 2001) (noting that Congress provided for statutory damages in TILA because, in many cases, actual damages are extremely difficult to prove).

n46 The District Court in *Whole Enchilada* so erred. The court distinguished statutory damages from damages generally, holding that [s]tatutory damages are generally awarded in place of actual damages, where no actual injury is alleged. *Whole Enchilada, Inc. v. Travelers Property Casualty Co. of Am.*, 2008 U.S. Dist. LEXIS 77186, at *67 (W.D. Pa. Sept. 28, 2008). [I]n order for coverage to be found, the underlying Complaint must allege that the damages sought are compensation for injury Here . . . the Complaint alleged only *potential* harm, therefore, no damage is alleged that would subject Travelers to coverage under the terms of its policies. *Id.* at *67-68. Further, [t]he purpose of statutory damages is to require a FACTA defendant to pay for willful violations . . . , not to compensate the claimants for any actual monetary or physical loss. Said damages are akin to punitive in nature. *Id.* at *69. The District Court misconstrued the purpose of statutory damages, as well as the

nature of the harm. Congress has definitively found that consumers are harmed when FACTA is violated because their private credit card information is published on a receipt. While a receipt may be handed only to the consumer, Congress has recognized that receipts easily find their way into the hands of those who would commit identify theft. It is not for the Courts to second-guess Congress's determination that the publishing of certain credit information on a receipt causes harm regardless of whether a particular receipt finds its way to a criminal.

n47 See *American Family Mut. Ins. Co. v. C.M.A. Mortgage, Inc.*, No. 06-10444, 2008 U.S. Dist. LEXIS 30233 (S.D. Ind. March 31, 2008).

n48 *Penzer*, 545 F.3d at 1310; *Hooters of Augusta, Inc. v. American Global Ins. Co.*, 272 F. Supp. 2d 1365, 1375-1376 (S.D. Ga. 2003), *affd*, 157 Fed. Appx. 201 (11th Cir. 2005); *Western Rim Inv. Advisors, Inc. v. Gulf Ins. Co.*, 269 F. Supp. 2d 836, 848-849 (N.D. Tex. 2003).

n49 15 U.S.C. § 1681o(a).

n50 15 U.S.C. § 1681n(a).

n51 See, e.g., *Safeco Ins. Co v. Burr*, 551 U.S. 47 (2007) (willfully fails as the Fair Credit Reporting Act includes careless or reckless behavior).

n52 13 John Alan Appleman & Jean Appleman, *Insurance Law and Practice* § 7403 (With respect to the rule of liberal construction, the courts have kept in mind that the primary purpose of insurance is to insure or to provide for indemnity, and have so construed insurance contracts as not to defeat the dominant purpose by technical rules of interpretation.)

ABOUT THE AUTHOR(S):

Tim Law is a partner at Reed Smith and has been representing policyholders exclusively in insurance recovery disputes for over 10 years, gaining wide-ranging experience in that field. He has advised and represented corporate policyholders facing potential liability for claims under privacy-related statutes, including the TCPA and FACTA. Recently, Tim has been actively pursuing recovery under mortgage-related insurance products for some of the nation's leading mortgage lenders. He is also one of the nation's leading attorneys representing policyholders in premium disputes and insurance company insolvencies.

Toki Rehder is an attorney at Reed Smith where she represents policyholders in disputes with their liability and property insurance companies. She has represented corporations from many different sectors of the economy, including

construction companies, non-profit organizations, and financial institutions. Toki has a broad background in litigation, including representing individuals and corporations in employment, labor, and civil rights cases.

About Reed Smith LLP: Over the past 30 years, Reed Smith has successfully resolved insurance coverage disputes and has recovered billions of dollars for policyholders, both nationally and internationally, in matters involving the entire range of commercial insurance products. As part of a top-15 international law firm, our Insurance Recovery and Counseling Group, with 60 policyholder coverage lawyers in offices around the world, can effortlessly draw on the experience of colleagues knowledgeable in nearly every area of business law and litigation.

Information referenced herein is provided for educational purposes only. For legal advice applicable to the facts of your particular situation, you should obtain the services of a qualified attorney licensed to practice law in your state.

Bullivant Houser Bailey P.C. on Pollution Exclusions: Alive and Well After MacKinnon

By Samuel Ruby

January 22, 2009

SUMMARY: In *MacKinnon v. Truck Ins. Exchange*, the California Supreme Court adopted a relatively narrow interpretation of what is "pollution" within the meaning of an insurance policy exclusion. In this commentary, Bullivant Houser Baileys Samuel H. Ruby revisits *MacKinnon*, examines its progeny in California, and reviews how it has been received in other jurisdictions.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Overview

In *MacKinnon v. Truck Ins. Exchange*,ⁿ¹ the California Supreme Court adopted a relatively narrow interpretation of what is pollution within the meaning of an insurance policy exclusion. At the time, some thought that *MacKinnon* had so narrowed the scope of the exclusion that it would apply only to claims for massive environmental disasters involving the most nefarious chemicals. Years later, however, *MacKinnon* has proven to have had no such impact. Despite *MacKinnon*, California courts have continued to apply the pollution exclusion to a range of circumstances, and outside of California, *MacKinnon* has had no discernable influence. *MacKinnon v. Truck*: Or, When Is a Pollutant Not a Pollutant? *MacKinnon*, an apartment building owner, hired a pest control company to eradicate yellow jackets at the building. The company treated the building with pesticides on several occasions. When one of the tenants died, her parents brought a wrongful death action in which they blamed the pesticides for her death. *MacKinnon* tendered his defense to *Truck*, his commercial general liability carrier.

Truck initially accepted the tender under a reservation of rights but later withdrew its defense after concluding that the policy's pollution exclusion applied. The exclusion provided that *Truck* would not cover bodily injury or property damage resulting from the actual, alleged, or threatened discharge, dispersal, release or escape of pollutants . . . at or from the insured location. The policy defined pollution and pollutants as mean[ing] any solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste materials.

After *Truck* withdrew its defense, *MacKinnon* hired new counsel and settled with the plaintiffs for \$10,000. *MacKinnon* then brought suit against *Truck*, alleging breach of the duty to defend, breach of the duty to indemnify, and breach of the implied covenant of good faith and fair dealing. A trial court found the pollution exclusion to be clear, unambiguous, and applicable to the wrongful death claim. Accordingly, the trial court granted summary judgment for

Truck.

MacKinnon appealed, but the California Court of Appeal affirmed. Like the trial court, the appellate court rejected MacKinnon's argument that the exclusion should not be read literally to apply to any dispersal of any irritant or contaminant. Undeterred, MacKinnon petitioned the California Supreme Court for review. The court granted review and reversed the trial court and the Court of Appeal.

Surveying the legal landscape, the Supreme Court found other jurisdictions that had considered the issue roughly divided into two camps. ⁿ² One camp, the Supreme Court observed, maintains that the exclusion applies only to traditional environmental pollution into the air, water, and soil, but generally not to all injuries involving the negligent use or handling of toxic substances that occur in the normal course of business. ⁿ³ The other camp, the Supreme Court commented, maintains that the clause applies equally to negligence involving toxic substances and traditional environmental pollution. ⁿ⁴

After identifying the split of authority in other jurisdictions, the Supreme Court discussed the historical background of the pollution exclusion. ⁿ⁵ Borrowing heavily from the analysis in *American States Ins. Co. v. Koloms*, ⁿ⁶ the Supreme Court traced the exclusion's origin to unsuccessful attempts to limit coverage through the definition of occurrence, amendments to the Clean Air Act that ushered in a new era of environmental litigation, and the environmental disasters of Times Beach, Love Canal and Torrey Canyon. ⁿ⁷ Reviewing the evolution of the exclusion from the original (and so-called qualified) version to the modern (so-called absolute) version, the Supreme Court embraced a view that the exclusion has been intended primarily to exclude traditional environmental pollution rather than all injuries from toxic substances. ⁿ⁸

After discussing the exclusion's history, the Supreme Court identified that history as one of the primary arguments for a narrow interpretation. ⁿ⁹ A second reason to reject a broad interpretation, the Supreme Court gleaned from cases in jurisdictions in the first camp, is that interpreting pollutant as literally any contaminant or irritant would bring virtually [any] substance or chemical in existence within the exclusion. ⁿ¹⁰ A third argument for restricting the exclusion, the Supreme Court observed, is that the phrase discharge, dispersal, release or escape may imply expulsion over a considerable area rather than a localized toxic accident occurring in the vicinity of intended use. ⁿ¹¹

The Supreme Court acknowledged that not all courts had found those arguments persuasive. Discussing the counter-arguments adopted by jurisdictions in the second camp, the court observed that some courts--finding the exclusion to be unambiguous--had not found it necessary or appropriate to divine its scope from its drafting history. Such courts, respecting the literal meaning of the broad definition of pollutant recited in the policy, had declined to employ popular connotations of the term pollution (or the phrase discharge, dispersal, release or escape) in order to constrain the policy definition.

Yet after briefly recognizing the second camp's viewpoints, the Supreme Court pitched its tent squarely in the first camp. The pollution exclusion, the court unanimously held, does not plainly and clearly exclude ordinary acts of negligence involving toxic chemicals such as pesticides. ⁿ¹² Rather, the court held, the scope of the exclusion is limited to injuries arising out of events commonly thought of as pollution, i.e., environmental pollution. ⁿ¹³ In short, the court superimposed what it perceived to be the common understanding of the term pollutant over the definition provided in the policy.

Applying its interpretation of the exclusion to the claim against MacKinnon, the court concluded that it was far from clear that the injuries arising from the normal, though negligent, residential application of pesticides would be commonly thought of as pollution. ⁿ¹⁴ While not ruling out that pesticides may be pollutants under some circumstances, the court found it unlikely that a reasonable policyholder would think of the act of spraying pesticides under these circumstances as an act of pollution. ⁿ¹⁵ Resolving the doubt in favor of coverage, the court reversed Trucks' summary judgment. ⁿ¹⁶

Children of *MacKinnon*: Subsequent California CasesThe *MacKinnon* court acknowledged that terms such as commonly thought of as pollution, or environmental pollution, are not paragons of precision, and further clarification may be required. n17 Some expected that in the wake of *MacKinnon*, the pollution exclusion would be applied only to cases involving massive environmental damage caused by release, over a wide geographic area, of the more infamous industrial products and byproducts. However, that expectation has not been vindicated. In all of the four pollution exclusion decisions published since *MacKinnon*, the lower California appellate courts have applied the exclusion under lesser circumstances.

The first case, *Garamendi v. Golden Eagle Ins. Co.*, n18 involved claims brought by two groups of sandblasting workers for silica-related injuries and damages. The sandblasters alleged that throughout their employment, they had been injured through the defendants sale of silica-containing products, the use of defective respiratory equipment, and the use of sandblasting equipment. One of the defendants tendered its defense to Golden Eagle. Citing a Total Pollution Exclusion Endorsement, among other reasons, Golden Eagle denied coverage.

The insured argued that silica should not be considered a pollutant because it was not one of the enumerated examples in the policy (smoke, vapor, soot, etc.). Rejecting that argument, the court noted that the examples were just that--examples--and that silica fell within the *definition* of pollutant as any solid . . . irritant or contaminant. Relying on *MacKinnon*, the insured then argued that silica still should not be considered a pollutant because it is commonplace in ordinary materials such as sand, glass, and concrete. Rejecting that argument as well, the court held:

Claimant is correct that under *MacKinnon* the mere fact that silica, like almost anything else, may be an irritant or contaminant under some circumstances is not dispositive. Butthe widespread dissemination of silica dust as an incidental by-product of industrial sandblasting operations most assuredly is what is commonly thought of as pollution and environmental pollution. n19

The court further rejected the insureds argument that under *MacKinnon*, the pollution exclusion should apply only to wholesale environmental degradation, such as occurred at, for example, Love Canal, or the Stringfellow Acid Pits. n20

The second case to construe *MacKinnon* was *Ortega Rock Quarry v. Golden Eagle Ins. Co.* n21 There, the Environmental Protection Agency had issued an order and brought a corresponding civil lawsuit concerning the insureds use of leftover dirt and rocks from its quarrying operations to shore up an access road. Allegedly, some of the fill had been discharged into an adjacent creek, in violation of the Clean Water Act. Citing pollution exclusions, the quarrys insurers declined to defend.

The quarry sued, but the insurers obtained summary judgments, which the Court of Appeal affirmed. Although dirt and rocks are found in nature and not ordinarily thought of as pollutants, the court held that they qualified as pollutants under the circumstances because they were dredged or fill material, and the Clean Water Act defines such material as a pollutant in relation to protected waters. Thus, for the second time, a court found the pollution exclusion applicable even under *MacKinnons* narrow interpretation, and even though the asserted pollutant was not a nefarious industrial byproduct nor had it been released over an extensive geographical area.

The third case to construe *MacKinnon* was *Cold Creek Compost, Inc. v. State Farm Fire & Cas. Co.* n22 There, a neighborhood association brought a nuisance claim against a facility that composted organic materials such as yard trimmings, manure, and grape pomace. The association alleged that the composting operations had generated odors so foul and noxious as to cause bodily injuries in the neighborhood. Because of other allegations, State Farm provided a defense, subject to a reservation of rights. Following a trial and a judgment for the plaintiffs, State Farm concluded that the judgment had been based on allegations of pollution, so it declined to pay the judgment or provide appellate counsel.

In the resulting coverage litigation, State Farm obtained summary judgment, and the Court of Appeal affirmed.

Both sides relied on *MacKinnon*, but the court found the case to favor State Farm:

The odors emanating from Cold Creeks facility were unquestionably an impurity, something objectionable and unwanted in the air . . . ; the odors polluted the air, as the term pollute is commonly understood. In the ordinary and popular sense of the words of the pollution exclusion, the odors were discharged and released by the composting and escaped from the facility. The odors spread a mile and a half to the plaintiffs homes--a substantial dissemination to the point of dissipation and dilution ordinarily understood as a dispersal of pollutants into the environment. n23

The court concluded that the widespread dissemination of offensive and injurious odors from a commercial compost facility is environmental pollution under *MacKinnon*, and thus excluded from coverage by the pollution exclusion in the policies. n24 The court declined to disqualify odors as pollutants merely because they do not pose a significant health threat or cause serious injuries. n25

The most recent case to construe *MacKinnon* was *American Cas. Co. of Reading, PA v. Miller*. n26 There, a furniture stripping business released methylene chloride into a public sewer system, resulting in serious injuries to a repairman who was working in the sewer nearby. The businesss insurer declined to defend, and in the ensuing coverage litigation, the insurer obtained a summary judgment.

Affirming the judgment, the Court of Appeal rejected the insureds argument that under *MacKinnon*, a one-time, negligent release of an injurious chemical cannot qualify as pollution. Similarly, the court rejected an argument that under *MacKinnon*, the pollution exclusion is limited to catastrophic events such as large scale environmental pollution. The court explained, The test in *MacKinnon* is not based upon the extent of injury, but upon the type of pollutant and how it is released into the environment. n27

MacKinnon on Tour: Its Legacy in Other StatesBecause many states had already fallen into one camp or the other before the California Supreme Courts decision in *MacKinnon*, the decision probably was never destined to set off a national shockwave. Some may have expected that at least in jurisdictions that had not yet decided where to camp, *MacKinnon* would prove influential. However, that expectation has not been vindicated. For example, in *Heringer v. American Family Mut. Ins. Co.*, n28 a case involving lead paint poisoning, the Missouri Court of Appeals discussed *MacKinnon* in some detail but found it distinguishable because the policy expressly defined pollutant to include lead.

In *Sulphuric Acid Trading Co., Inc., v. Greenwich Ins. Co.*, n29 a contractor was severely injured by a discharge of the insureds sulphuric acid during the handling of a rail tank car. The parties vigorously argued which interpretation of the pollution exclusion the Tennessee court should adopt. The court examined *MacKinnon* at length but declined to endorse it. The court held that the accident in question met *both* the narrow interpretation articulated in *MacKinnon* as well as the broader, literal interpretation adopted in other jurisdictions. On that basis, the court resolved the coverage issue in favor of the insurer, without deciding which interpretation was better.

In *Firemens Ins. Co. of Washington, D.C. v. Kline & Son Cement Repair, Inc.*, n30 a coverage dispute arose concerning a claimants respiratory problems allegedly resulting from inhalation of vapors from an epoxy sealant that had been applied at her workplace. The court noted the diametrically opposed interpretations of the pollution exclusion in various jurisdictions. The court cited *MacKinnon*, among other cases, as adopting a narrow interpretation limiting the exclusions application to traditional environmental pollution. However, the court predicted that the Virginia Supreme Court would enforce the literal, albeit broad, definition in the policy. Consequently, the court applied the exclusion to the claim in question, even though the claim did not involve traditional environmental pollution. ConclusionSo far, *MacKinnons* adoption of the narrower interpretation of the pollution exclusion has not tipped the scales in any other jurisdictions that have been faced with applying the exclusion. Even within California, the impact of the decision has been less than some predicted. Intermediate appellate courts have found the Supreme Courts narrow interpretation still to be broad enough to encompass a range of circumstances. Those courts have clarified:

. Lethal chemicals with complex and scary names are not the only substances that may qualify as pollutants under

MacKinnon. In certain circumstances, a commonplace natural material like silica (*Garamendi* n31), plain old dirt and rocks (*Ortega Rock Quarry* n32), and even foul odors (*Cold Creek Compost* n33) may qualify as pollutants.

. The relevant discharge or dispersal need not be intentional nor result in wholesale environmental degradation, but could involve construction activity in a defined area (*Garamendi* n34), a small stretch of road adjacent to a creek (*Ortega Rock Quarry* n35), or a one-time, negligent release of a chemical onto a nearby worker (*Miller* n36). Despite the change it was predicted to bring, *MacKinnon* is still--years later--the *last* time a California court has declined to apply a pollution exclusion to circumstances meeting the literal definition of pollution in a policy. Policyholders, insurers, and attorneys who thought *MacKinnon* would relegate the pollution exclusion to major environmental nightmares should reconsider the cases impact on claims involving lesser situations.

ABOUT THE AUTHOR(S):

Samuel H. Ruby is a shareholder in the San Francisco office of Bullivant Houser Bailey PC. Mr. Ruby specializes in insurance coverage law and is a member of the firms Insurance Industry Services Group. He handles a wide variety of first-party and third-party coverage and bad faith litigation, in addition to providing insurers with coverage opinions and assisting them with examinations under oath and appraisals. Mr. Ruby would like to thank Paris Scott for assisting with the researching of this article.

About Bullivant Houser Bailey P.C.

Bullivant Houser Bailey P.C. is a business and litigation law firm with approximately 155 attorneys and six offices on the West Coast. The firm is headquartered in Portland, Oregon and maintains offices in Sacramento and San Francisco, California; Seattle and Vancouver, Washington; and Las Vegas, Nevada. In 2008, Multicultural Law magazine named Bullivant a Top 100 law firm for workplace diversity. Please visit bullivant.com to learn more about Bullivant Houser Bailey and its Insurance Industry Services Group.

Information referenced herein is provided for educational purposes only. For legal advice applicable to the facts of your particular situation, you should obtain the services of a qualified attorney licensed to practice law in your state.

ARTICLE: SUMMARY

The central question in *Unauthorized Practice of Law Committee v. American Home Assurance Co.* n1 was whether insurer use of its own employee lawyers ("staff counsel") to defend insureds pursuant to liability insurance policies violated the prohibition on unauthorized corporate practice of law. The Texas Supreme Court joined the overwhelming majority of other states in concluding that there is no violation as long as the insurer's interests are aligned with those of the insured. In the process, it addressed a broader and more controversial question: does an insurance counsel represent the insurer, as well as the insured. It did not answer that question, but it approved an analytic approach that can be used to find the answer in other jurisdictions.

This commentary will describe what the court did, comment briefly on the unauthorized practice issue, and then address the how many clients issue at length. I conclude that the court got both issues right, but the reader should know that I was one of the counsel on the prevailing side.UNAUTHORIZED PRACTICE

As the Texas Supreme Court explained,

Liability insurance policies commonly provide that the insurer must indemnify the insured from liability for covered claims and give the insurer the duty, and also the right, to defend such claims. The right to defend in many policies gives the insurer complete, exclusive control of the defense. Insurance companies retain attorneys in private practice to represent insureds in defending claims against them, but for decades, in Texas and other states, insurers have

also used staff attorneys -- salaried company employees -- to save costs.

The issue in the case was whether the use of staff counsel to defend insureds constituted practice of law by the insurance company, which is not authorized to practice. The Unauthorized Practice of Law Committee is an arm of the Texas Supreme Court. It had initiated an investigation to determine whether American Home Assurance Co. and one of its staff counsel offices, the Law Offices of Katherine D. Woodruff, were engaged in unauthorized practice. Joined by Travelers Indemnity Co., they sued for a declaration the insurers' use of staff counsel did not violate the unauthorized practice statute. On cross-motions for summary judgment, the district court concluded that the statute had been violated, but stayed the judgment pending review. The court of appeals reversed and the Texas Supreme court largely affirmed the latter court, concluding that an insurer "may use staff attorneys to defend a claim against an insured if the insurer's interest and the insured's interest are congruent, but not otherwise. Their interests are congruent when they are aligned in defeating the claim and there is no conflict of interest between the insurer and the insured." n2

Texas statutes limit practice of law to members of the state bar and prohibit any business corporation from operating in Texas if any of its purposes involves engaging in activity requiring a license to practice law. n3 But the parties agreed that, in accordance with settled law in Texas and elsewhere, "a company does not engage in the practice of law by employing attorneys on its salaried staff to represent its own interests." n4 Because the insurance company will or may be called upon to pay any judgment or settlement on the claim against its insured, it is necessarily interested in the lawsuit against its insured. And the representation of the company may include the representation of others, such as the insured, whose interests are aligned with those of the insurer. n5

The leading Texas case on unauthorized corporate practice was *Hexter Title & Abstract Co. v. Grievance Committee*. n6 In *Hexter*, a "title company," engaging in the business of preparing abstracts of title, was charged with the unauthorized practice of law for preparing "deeds conveying land in which it owned no interest... notes, mortgages and deeds of trust in which it had no interest as borrower or lender and... other instruments affecting title to real estate and liens thereon in which it does not own and is not acquiring an interest." n7 The legal documents were prepared by licensed attorneys who were employed and paid a salary by the title company. The attorneys' work was "performed under the direction and control" of the executive officers and managers of the title company, which itself was acting as the agent of a title insurance company that issued title insurance policies on properties in Texas. n8 The documents were prepared to facilitate the sale and issuance of title insurance policies by the title insurance company on the transactions in question. The Texas Supreme Court held that this was unauthorized practice, because the title company had no preexisting interest in the transactions for which the documents were prepared:

These transactions involve conveyances, releases, and mortgages from grantors to grantees, and to which the insurance company is not a party. They are executed for the purpose of placing good title in the grantee, so that the insurance company may thereafter insure the title if it chooses. Such papers relate to the rights of third parties in which the corporation has *no present interest*, but only a prospective one. They affect the rights of individuals apart from their interest in the title insurance policy. The work of preparing these papers is distinct from the searching and insuring of the title--the legitimate business for which the corporation is incorporated. n9

While *Hexter* was permitted to employ lawyers to advise it on the state of title, it was not authorized to have its employees provide the same services to its customers. n10

For a corporation to be able to use staff counsel on behalf of a third party, (1) it must be serving its own interest, (2) it must have a direct, substantial financial interest in the matters for which it provides legal services, and (3) its interests must be aligned with those of the third party who receives those services. n11 The overwhelming weight of authority outside Texas takes a similar view. n12

Because a liability insurer has a direct interest in the outcome of its insured's defense, the first two requirements were not in doubt. The last point was where the controversy centered. As to that, the court observed that "in the vast majority of cases, a liability insurer and an insured have the same interest in defeating a liability claim, and their

interests differ only when there are coverage questions or when the consequences of the manner in which the defense is rendered affect them differently." n13

The UPLC argued that "the insured-insurer relationship is so fraught with the potential for conflict that an insurer that uses staff attorneys to defend insureds is essentially practicing law." n14 But the court noted that "neither the Committee nor *amici* has been able to cite any empirical evidence -- any actual instance -- of injury to a private or public interest caused by a staff attorney's representation of an insured." n15 So, while there was no question that conflicts sometimes arise in the tripartite relationship among insurer, insured, and defense counsel, "there is nothing to indicate that staff attorneys do not either resolve them as they would be resolved in any other representation or withdraw, just as private attorneys would. n16 In particular, an insurer's reservation of rights to deny coverage creates a potential for conflict of interest and may sometimes create a current conflict regarding the conduct of the defense: in such cases, any conflict can be avoided by staff counsel declining to handle the matter or withdrawing from doing so. n17 In this respect, as in all others examined by the court, staff counsel are governed by the same rules and have the same methods of complying with those rules as outside counsel retained by the insurer to defend insureds. n18 So, there is no per se prohibition on use of staff counsel: "there are a great many cases that can be defended by staff attorneys without conflict and to the benefit of mutual interests. The use of staff attorneys in those cases does not constitute the unauthorized practice of law." n19

Two justices dissented. They did not argue the conflict of interest point. Instead, they argued that the actions of staff counsel were necessarily the actions of the corporation. While the corporation was entitled to represent itself, they did not agree that it could also represent others whose interests were fully aligned. n20

While it was not the focus of the opinion, the dissent did express concern that staff counsel might be led to skimp on defense efforts to save expenses. n21 This ignored strong reasons why neither the company nor staff counsel would be more inclined to skimp on defense costs than when the insurer defends by outside counsel. The most important consideration is that the insurer usually has to pay whatever judgment or settlement results from the lawsuit. Skimping on defense would increase the expected liability payout by more than the savings on defense. Only if some or all of the liability were not covered or in excess of limits could it possibly be profitable to skimp on defense. Moreover, even though a Texas insurer is not vicariously liable for the errors of outside counsel, who are independent contractors, n22 it presumably would be vicariously liable for errors of employee counsel. Even if it would not be vicariously liable, it would surely be directly liable for its own conduct that caused skimping. And the determination whether skimping had occurred and why would be made by a jury, in hindsight, after a verdict awarding noncovered or excess damages against the insured. Such a jury would likely be unsympathetic to the insurer. In short, there is no realistic incentive to skimp on the defense and, should skimping occur, existing liability rules should provide insureds with ample redress. The availability of ample remedies for any mishandling of the defense means that, if this occurred with any frequency, there would be lawsuits to seek redress. The fact that there is no evidence of any problems with staff counsel tends to confirm the analysis suggesting that there should be no such problems.

In petitioning for rehearing, the UPLC asked the court for more definitive guidelines as to when the interests of insurer and insured diverge sufficiently to preclude use of staff counsel. In his commentary on *UPLC*, my friend Lee Shidlofsky raises the same question. n23 I think that is discernible from existing law and will sketch what I think is the answer; n24 I have addressed the point in depth elsewhere. n25 WHO IS A CLIENT Prior Texas Supreme Court Cases

Prior to *UPLC*, the leading Texas case on insurance defense relationships was *Employers Casualty Co. v. Tilley*. n26 While frequently cited as holding that the insurer is not a client, *Tilley* actually pointed the other way.

The case was a declaratory judgment action seeking a determination that late notice relieved Employers of the obligation to defend and indemnify Tilley in an action brought by Starky and others. Employers had undertaken the defense under a nonwaiver agreement. From the outset, Tilley claimed that he had no knowledge of the Starky accident until he was sued (22 months after the accident) and that this lack of knowledge excused his failure to give notice prior to suit. Defense counsel not only defended Tilley in the Starky action, but also worked to develop evidence that Tilley

had known of the accident sooner. The evidence so developed was the basis of the coverage action. The Texas Supreme Court held that Employers was estopped to deny coverage on that basis, even if Tilley had notice of the accident when it occurred.

In holding that defense counsel violated his duties to Tilley by developing coverage evidence adverse to him, the Court relied on the following principles applying to defense under liability insurance policies:

the insurance company's obligation to defend the insure[d] provides that the attorney to represent the insured is to be selected, employed, and paid by the insurance company. Nevertheless, such attorney becomes the attorney of record and the legal representative of the insured, and as such he owes the insured the same type of unqualified loyalty as if he had been originally retained by the insured. If a conflict arises between the interests of the insurer and the insured, the attorney owes a duty to the insured to immediately advise him of the conflict. n27

In itself, this passage simply affirms the lawyer's duty of loyalty to the insured and says nothing about whether the insurer is also a client as long as absence of a conflict permits joint representation. But *Tilley* relied on Canon 5 of the Code of Professional Responsibility dealing "with conduct of a lawyer representing *multiple clients* with conflicting or potentially conflicting interests. Representation of "an insurer and his insured" is mentioned among typically recurring situations involving potentially differing interests." n28 This basis for the holding clearly indicates that the court considered the insurer a co-client with the insured, so that counsel was governed by the usual rules for representation of multiple clients.

The court then quoted and approved "as conforming to the public policy of this State" certain "guiding principles" approved by the American Bar Association National Conference of Lawyers and Liability Insurers:

IV. CONFLICTS OF INTEREST GENERALLY--DUTIES OF ATTORNEY. In any claim or in any suit where the attorney selected by the company to defend the claim or action becomes aware of facts or information which indicate to him a question of coverage in the matter being defended or any other conflict of interest between the company and the insured with respect to the defense of the matter, the attorney should promptly inform *both the company and the insured*, preferably in writing, of the nature and extent of the conflicting interest.

V. CONTINUATION BY ATTORNEY EVEN THOUGH THERE IS A CONFLICT OF INTEREST. Where there is a question of coverage or other conflict of interest, the company and the attorney selected by the company to defend the claim or suit should not thereafter continue to defend the insured in the matter in question unless, after a full explanation of the coverage question, the insured acquiesces in the continuation of such defense. n29

These are essentially the procedures prescribed by the conflict rules for addressing conflicts between clients with differing interests. In particular, the requirement to warn the insurance company of conflicts clearly indicates that it was considered to be a client. Unless it were a client entitled to such a warning, preparatory to sorting out the conflict issue, alerting it to a coverage issue or other conflict would often violate the duty of loyalty to the insured.

The point here is not to treat the guiding principles as a statement of current law. In fact, the development of the law since *Tilley* suggests that these guiding principles are no longer sufficient to assure fulfillment of a lawyer's duties in a joint representation of insurer and insured. n30 But those principles were necessarily based on the premise that the insurer is a co-client. Prior to *UPLC*, that premise seemingly remained embedded in Texas law.

The most recent prior case in which the Texas Supreme Court had addressed the insurance defense relationship was *State Farm Mutual Automobile Insurance Co. v. Traver*. n31 Traver was the executor of Davidson, a State Farm insured who had suffered a judgment of about \$475,000 for an accident in which State Farm's liability limit was \$25,000. Traver alleged that State Farm breached its duty to settle within limits and that defense counsel, Bradshaw, committed malpractice. Traver also alleged that State Farm was vicariously liable for Bradshaw's alleged malpractice. The trial court granted summary judgment for State Farm on all claims. The court of appeals affirmed as to claims not related to malpractice but held that State Farm would be vicariously liable for any malpractice by Bradshaw and

remanded for further proceedings. The Texas Supreme Court held that an insurer is not vicariously liable for malpractice by defense counsel, but remanded to allow Traver an opportunity to plead and prove that State Farm was liable on some theory other than vicarious liability.

The court saw the vicarious liability issue as depending on "whether the principal has the right to control the agent with respect to the details of [the agent's] conduct." An insurer has a considerable right to control, but not enough to support vicarious liability:

We have recognized that a liability policy may grant the insurer the right to take "complete and exclusive control" of the insured's defense. Here, the standard form Texas Personal Auto Policy provides that the insurer "will settle or defend, as [it] consider[s] appropriate, any [covered] claim or suit ." The insurer's control of the defense under this policy includes the authority to accept or reject settlement offers and, where no conflict of interest exists, to make other decisions that would normally be vested in the client, here the insured. However, even assuming that the insurer possesses a level of control comparable to that of a client, this does not meet the requisite for vicarious liability.

A defense attorney is an independent contractor, has discretion regarding the day-to-day details of the defense, and is not subject to the client's control regarding those details. While the attorney may not act contrary to the client's wishes, the attorney "is in complete charge of the minutiae of court proceedings and can properly withdraw from the case, subject to control of the court, if not permitted to act as he thinks best." Moreover, because the lawyer owes unqualified loyalty to the insured, the lawyer must at all times protect the interests of the insured if those interests would be compromised by the insurer's instructions. Under these circumstances, the insurer cannot be vicariously responsible for the lawyer's conduct. n32

Nothing in this is inconsistent with the insurer being a co-client with the insured if there is no conflict of interest. The court explicitly assumed that the insurer has "a level of control comparable to that of a client" and said that this was not enough. Moreover, the lawyer's duties to the insured limit the ability of the insurer to direct, whether or not the insurer is a co-client. If the insurer is a co-client, the lawyer must still "protect the interests of the insured if those interests would be compromised by the insurer's instructions." The lawyer does this by finding that the instructions create a conflict, consulting with the clients, and withdrawing from the joint representation unless either the insured gives informed consent to those instructions or the insurer withdraws them. n33 In no event may the lawyer adversely affect the insured's interests without the insured's informed consent.

Moreover, three of the authorities relied upon to support the final sentence of the quoted passage were from California n34 and Florida n35--states that clearly hold that the insurer is a co-client unless there is a conflict of interest n36--and Pennsylvania n37--where the law seems to support that view. n38 The court also relied on a treatise that supports that view. n39 The other authorities cited were from New York and North Carolina, where the law on insurer clienthood (absent a conflict of interest) is not clearly settled. n40 So, if the authorities cited suggested anything, they pointed in the direction of treating the insurer as a co-client.

Finally, *Traver* itself was a case in which State Farm had a potential conflict of interest. The accident had involved two State Farm insureds, Davidson and Klause. Bradshaw defended Davidson and another law firm defended Klause, with Klause getting a defense verdict. According to Justice Gonzalez, "Traver's theory is that State Farm deliberately caused malpractice in the defense of [Davidson] to protect itself from excess liability of [Klause]." n41 In particular, he suggested that State Farm might be liable for tortious interference with Davidson's attorney-client relationship:

In most insurer-insured disputes, it would not be appropriate to attempt to prove that the insurer has willfully injured its insured, since this would be akin to the insurer putting a gun to its own head. Clearly, such a claim may not be asserted for mere incompetence on the part of the attorney or for a miserly defense. However, when there is a conflict between the interests of the insured and the insurer, as is alleged in this case, in which the insurer has a financial incentive to see to it that the insured fares poorly in the litigation, a claim for tortious interference may arise. n42

Even if State Farm acted entirely properly, the very possibility that it could have an incentive to protect itself or Klause at Davidson's expense created a conflict that would seem to entitle Davidson to independent counsel. n43 So *Traver* itself seems to be a case where Bradshaw ought not to have represented State Farm and State Farm ought not to have exercised control over Davidson's defense. Accordingly, *Traver* ought not to be read as addressing the relationship between the insurer and defense counsel in cases without conflicts unless the court clearly intended to address such cases. The *UPLC* Opinion

In the course of the *UPLC* opinion, the court devoted a paragraph to the issue of who qualifies as a client of insurance defense counsel:

The Committee argues that under Texas law insurance defense counsel represents only the insured, not the insurer, and that staff attorneys -- who necessarily represent the insurer -- cannot defend insureds without violating this rule. But we have never held that an insurance defense lawyer *cannot* represent both the insurer and the insured, only that the lawyer *must* represent the insured and protect his interests from compromise by the insurer. And we have noted that "an insurer's right of control generally includes the authority to make defense decisions *as if it were the client* 'where no conflict of interest exists.'" Rule 1.06 of the Texas Disciplinary Rules of Professional Conduct allows a lawyer to represent more than one client in a matter if not precluded by conflicts between them. Whether defense counsel also represents the insurer is a matter of contract between them. n44

The last sentence cited a law review article by Prof. Charles Silver, *Does Insurance Defense Counsel Represent the Company or the Insured?*. n45 That article applies the legal standard governing formation of attorney-client relationships in other contexts, an approach since approved by the Restatement (Third) of the Law Governing Lawyers. n46 We will now examine that approach and the answer it gives to the how many clients question. How Is Client Status Determined?

The most concise and authoritative statement of the relevant general principles is found in the Restatement. It says that it is a question of fact whether the lawyer appointed by the insurer to defend the insured in a given case also represents the insurer:

It is clear . . . that the lawyer designated to defend the insured has a client-lawyer relationship with the insured. The insurer is not, simply by the fact that it designates the lawyer, a client of the lawyer. Whether a client-lawyer relationship also exists between the lawyer and the insurer is determined under § 14. n47

Section 14, in turn, prescribes the following test:

A relationship of client and lawyer arises when:

(1) a person manifests to a lawyer the person's intent that the lawyer provide legal services for the person; and either

(a) the lawyer manifests to the person consent to do so; or

(b) the lawyer fails to manifest lack of consent to do so, and the lawyer knows or reasonably should know that the person reasonably relies on the lawyer to provide the services. n48 Intent in Insurance Representations

In the normal course of events, the attorney-client relationships are formed as a result of the insured tendering the defense to the insurer and the insurer retaining counsel pursuant to that tender. The insured's tender authorizes the insurer to retain counsel on behalf of the insured. n49 Of course, the insurer could ask the lawyer to provide legal services only for the insured, in which case it would not be a client. But the insurer's own interests are at stake in litigation of a claim where it may be called upon to indemnify, so it has reason to want the lawyer to perform legal services for itself as well. Insurers whose policies entitle them to control the defense generally wish to exercise that right, and that exercise is facilitated if the insurer is also a client. In particular, there would at least be a question

whether communications between insurer and attorney would be privileged if the insurer were not a client, while there would be no doubt if the insurer is a client.

When an insurer with these interests calls upon a lawyer to defend an insured, one would expect that the insurer desires legal services for itself as well as for the insured. Doubts as to the existence of an attorney-client relationship are generally construed against the attorney, who bears the burden of clarifying ambiguity (as illustrated by subdivision (1)(b) of § 14). So even if it is not explicit that the insurer intends to be a client, that should be the result unless either the insurer or the lawyer specifically indicates otherwise. Is There a Need for a Special Informed Consent?

The contrary argument is that the lawyer may not undertake a joint representation without first having the informed consent of both clients. Neither the insurance policy nor the tender of the defense assures that the insured has consented to a joint representation or that any such consent is informed. Moreover, it is suggested, once properly informed, the insured ought normally to refuse consent, thereby preventing the insurer from being a co-client. n50

I offer a two-step response. n51 First, I challenge the proposition that informed consent is required *before* commencement of the representation. Suppose an insured tenders defense of a claim to an insurer on the eve of a potential default. The insurer calls a lawyer seeking to have an appearance entered to prevent a default. The lawyer sees a potential for conflict which would arise upon filing an answer. But there is no conflict as to the filing of the appearance itself. I suggest that the lawyer could properly undertake a joint representation of insurer and insured (if that were requested), as long as the insurer were advised of the problem and of the potential need for substitution of other counsel if the conflict problem is not resolved prior to the time at which an answer must be filed. n52 After the appearance is filed, the problem could be explored and, if it proved genuine, both clients could be consulted about any necessary consent (if consent were otherwise appropriate). If consent were necessary and not available, the joint representation could be terminated and new counsel obtained.

Second, I challenge the proposition that the insured is free (once consultation about the risks of joint representation does occur) to refuse that consent, except at the cost of jeopardizing the right to indemnification. The insurer's promise of indemnification is based on the insured's cession of the right to control the defense and agreement to cooperate with that defense. Joint representation facilitates the insurer's exercise of these rights. At least unless joint representation endangers some interest of the insured which the insured has not agreed to forego, I would argue that refusal of consent breaches both the express terms of the contract and the insured's duty of good faith, not to gratuitously render the insurer's performance more difficult or expensive.

On the latter point, the Restatement takes no position. It properly points out that it addresses only the law governing a lawyer representing an insured person, not the law governing the relationship between insurer and insured. n53 Of equal importance, that is not an issue on which counsel representing the insured could take a position adverse to the insured's possible interest in withholding the consent, if one were required.

But the Restatement does say:

The lawyer's acceptance of direction from the insurer is considered in [other provisions]. With respect to client consent . . . in insurance representations, when there appears to be no substantial risk that a claim against a client-insured will not be fully covered by an insurance policy pursuant to which the lawyer is appointed and to be paid, consent in the form of acquiescence of the client-insured to an informative letter to the client-insured at the outset of the representation should be all that is required. The lawyer should either withdraw or consult with the client-insured when a substantial risk that the client-insured will not be fully covered becomes apparent. n54

The requirement for consent concerns the insurer's exercise (or potential exercise) of control. So it does not apply to the mere formation of the attorney-client relationship, which necessarily occurs before any such exercise. The reference to acquiescence in an informative letter was designed to codify one aspect of ABA Formal Opinion 96-403. Early drafts of the Restatement had problematic language stating that the insured's informed consent is a "precondition" to the

representation. With the removal of this language, I think the Restatement analysis is now fully consistent with my own on this point.

The Minnesota Supreme Court has imposed requirements that must be satisfied before defense counsel can treat the insurer as a co-client with the insured. n55 The court recognized that under the usual rules governing formation of attorney-client relationships, the insurer would almost always be a co-client, absent a conflict of interest precluding joint representation of insurer and insured. n56 It also recognized that a few courts have held that an insurer may never be a co-client with the insured. n57 The court declined to adopt so extreme a rule. n58 But it did conclude that the risks of conflicts of interest posed by dual representation were so great as to justify imposing special requirements of consultation and consent. n59 So, to permit dual representation, there must be both an absence of conflict and an express consent by the insured after consultation with counsel. n60

This requirement seems misguided. The basis of the court's concern is not any perception that conflicts are common, and conflicts are actually uncommon. The concern is that, were a conflict to arise, the temptation to favor the insurer would be strong. n61 But the temptation to favor one client is likely to be present in many conflicts. That is why the law requires a lawyer, absent informed consent to a conflict, to decline a conflicted dual representation and to withdraw from dual representation if an unexpected conflict arises. That requirement should prevent defense counsel from ever having any opportunity to favor one client at the expense of the other. The court offers no reason for thinking that insurance defense counsel are any more likely than other lawyers to disobey this rule. Yet, if they comply, there is no special risk to support the special requirement for an express consent.

Having said that, there is no reason to believe that getting an express consent would be difficult. In most cases where there is no conflict evident at the outset, there will be very little risk that an unexpected conflict will arise. Counsel can explain that to the insured. Counsel can also provide assurance that counsel will always be alert to any possible conflict that might arise and will promptly bring that to the insured's attention if it occurs. If any conflict cannot be satisfactorily resolved, then it will be eliminated by withdrawal of counsel from the dual representation. Most insureds, and especially those being represented by staff counsel, are unlikely to see much of a problem with dual representation and will likely give the consent if it is requested. Professor Hazard Interprets the Restatement

Prof. Geoffrey C. Hazard, Jr., Director of the American Law Institute when the Restatement was adopted and Reporter of the Model Rules of Professional Conduct, provided an expert opinion analyzing the effect of the Restatement:

The Restatement takes the position that the insurer may or may not be a client, depending on the facts surrounding the creation of the attorney-client relationship. Given the facts [of the typical insurance representation], in my opinion the Restatement standard would produce the same result as current Montana law [which treats the insurer as a client]. n62Limitation: Conflicts of Interest Precluding Joint RepresentationGeneral Conflict of Interest Analysis. Because the insured is a client (and regardless of whether the insurer is also a client), defense counsel owes the insured undivided loyalty. n63 In ordinary cases this presents no problem, for the insurer's interests will be fully consistent with those of the insured. As a California court has explained:

In the insured-insurer relationship, the attorney characteristically is engaged and paid by the carrier to defend the insured. The insured and the insurer have certain obligations each to the other, as previously noted, arising from the insurance contract. Both the insured and the carrier have a common interest in defeating or settling the third party's claim. If the matter reaches litigation, the attorney appears of record for the insured and at all times represents him in terms measured by the extent of his employment.

In such a situation, the attorney has two clients whose primary, overlapping and common interest is the speedy and successful resolution of the claim and litigation. Conceptually, each member of the trio, attorney, client-insured, and client-insurer has corresponding rights and obligations founded largely on contract, and as to the attorney, by the Rules of Professional Conduct as well. The three parties may be viewed as a loose partnership, coalition or alliance directed

toward a common goal, sharing a common purpose which lasts during the pendency of the claim or litigation against the insured. Communications are routinely exchanged between them relating to the joint and common purpose--the successful defense and resolution of the claim. Insured, carrier, and attorney, together form an entity--the defense team--arising from the obligations to defend and to cooperate, imposed by contract and professional duty. This entity may be conceived as comprising a unitary whole with intramural relationships and reciprocal obligations and duties each to the other quite separate and apart from the extramural relations with third parties or with the world at large. Together, the team occupies one side of the litigating arena. n64

But joint representation is not possible, without informed consent, if there is a conflict of interest between the insurer and insured regarding the way in which the tort case is to be defended. Insureds are thus protected against any unconsented conflict, in exactly the same way as other types of jointly represented clients are protected. n65 Under the Model Rules, the primary standard for determining whether there is a conflict is Rule 1.7(a):

Except [with informed consent of each affected client], a lawyer shall not represent a client if the representation involves a concurrent conflict of interest. A concurrent conflict of interest exists if:

- (1) the representation of one client will be directly adverse to another client; or
- (2) there is a significant risk that the representation of one or more clients may be materially limited by the lawyer's responsibilities to another client or to a third person, or by a personal interest of the lawyer. n66

A material limitation (as that term is used in paragraph (a)(2) of the rule) exists when a lawyer "cannot consider, recommend or carry out an appropriate course of action for the client because of the lawyer's other responsibilities or interests." n67 In applying this standard to insurance representations, courts have demanded special sensitivity to any situation where the choices made by defense counsel could benefit the insurer at the insured's expense.

The lawyer could have incentives to favor the insurer in such circumstances. It is the insurer who selected counsel and pays the fee, thereby earning a measure of gratitude not shared by the insured. More importantly, it is to the insurer, rather than the insured, that counsel looks for future referrals: "[t]he attorney's relationship with the insurer is usually ongoing, supported by strong financial interest . . . and, like other long-term relationships, sometimes strengthened by real friendships." n68 Thus, it is all too easy for defense counsel to wish to protect the insurer from fraud or lack of cooperation by the insured or even to aid it in coverage disputes with the insured, forgetting the loyalty owed to the insured. As a result, a number of cases have found it necessary to condemn such acts of disloyalty and to impose appropriate remedies against counsel or the insurer whose interests counsel sought to advance against the client insured. n69

Where the existence of divergent interests in the conduct of the defense is inherent in the case, the conflict of interest rules require that the representation be declined, unless all affected clients give informed consent. n70 The primary example in insurance representations occurs when some factual issue bearing on the insured's liability also bears on the existence of coverage. A fact of this sort has been described as a "pivotal fact," n71 whose existence is the most common source of conflicts requiring independent counsel (sometimes referred to as "*Cumis* counsel").

For example, if the insured is sued on alternative theories of negligence and battery, the former will typically be covered but the latter will not. Of course, the insurer and the insured share an interest in defeating the suit entirely and in minimizing any judgment. But if liability is found, the insured would prefer that it be based on (covered) negligence, while the insurer's interest would be served if it were based on (noncovered) battery. Because the way in which the case is defended has a real possibility of affecting the basis on which any liability would be found, this divergence of interest creates a conflict of interest for any defense counsel seeking to advance the interests of both insurer and insured. n72

If the case involves a "pivotal fact," and if the conflict on that issue cannot reliably be avoided by procedural means, then there will be an irreconcilable conflict. Counsel must advocate a position regarding the pivotal fact and any position will be contrary to the interests of one client or the other. By shaping the defense, counsel could thus shift

liabilities found by the court between covered and non-covered status. Where the coverage issues present such an opportunity, the insured is entitled to independent counsel unless the insured gives informed consent to the conflict. In the absence of such consent, counsel for the insured *cannot* also represent the insurer in such a case.

In Texas, this rule is reinforced by giving the insured a right to demand independent counsel of the insured's selection whenever the insurer reserves its right to deny coverage. n73 So the question of insurer clienthood only arises with respect to cases in which there is no conflict and, additionally, there is either no coverage question of any sort or the insured has not exercised the right to demand independent counsel. Such cases constitute the vast bulk of those where insurers retain defense counsel to represent insureds. Do Insurance Cases Require a Special Rule? The Montana Supreme Court has held, in *In re Rules of Professional Conduct*, n74 that a defense lawyer appointed by an insurer never represents the insurer. It based this holding on a misuse of the Rules of Professional Conduct and on an unsupported (and unsupportable) assertion that conflicts are so pervasive that the usual case-by-case methods of addressing such conflicts are inadequate.

Preexisting Montana law held that the insurer is a co-client, and one with an absolute right of control. n75 The court nevertheless dismissed the prior law for its failure to consider whether an insurer is a client "under the Rules of Professional Conduct." n76 Ironically, Montana previously had adopted the Model Rules, which expressly refrain from addressing that particular issue. Instead, the Scope statement to the Model Rules declares that "for purposes of determining a lawyer's authority and responsibility, principles of substantive law external to these Rules determine whether a lawyer-client relationship exists. Whether a client-lawyer relationship exists for any specific purpose can depend on circumstances and may be a question of fact." n77 Thus, the Rules of Professional Conduct could not provide any basis, in the absence of a conflict of interest, for rejecting insurer clienthood and right to control. Montana did not adopt the Scope Statement, but it did adopt the text of the Rules, which were drafted not to address when an attorney-client relationship exists.

The Montana court also necessarily rejected the normal rifle-shot, case-by-case handling of conflicts in favor of a blunderbuss prohibition on insurer direction *even when there was no conflict and only the insurer's money was at stake*. The Montana court sought to justify this by asserting that insurer/insured relationships are so "permeated with potential conflicts" that case-by-case solutions are inadequate. n78 The supposed pervasiveness of conflicts is a *factual* statement. This, however, was an original proceeding responding to a question unilaterally framed by the lawyers who sought the court's intervention. *There was no factual record and the court refused the respondent insurance companies the opportunity to present evidence* on issues including the infrequency of conflicts and the nonexistence of harm to insureds resulting from such conflicts. n79 Anyone familiar with insurance defense practice knows that conflicts are both far less common and far more easily managed than the Montana court assumed. Other courts ought not to follow the Montana opinion, and certainly not without allowing presentation of evidence on the factual assertion which is the necessary premise for that decision.

The Montana rule has been rejected by the only court to consider whether to follow that case on this issue. In *Paradigm Insurance Co. v. Langerman Law Offices*, n80 the Arizona Supreme Court followed the Restatement analysis and held that an insurer can be a co-client with the insured unless the risk of a conflict in the particular case is so great that joint representation is precluded:

the potential for conflict between insurer and insured exists in every case; but we note that the interests of insurer and insured frequently coincide. For instance, both insurer and insured often share a common interest in developing and presenting a strong defense to a claim that they both believe is unfounded as to liability, damages or both. Thus, by serving the insured's interests the lawyer can also serve the insurer's, and if no question arises regarding the existence and adequacy of coverage, the potential for conflict may never become substantial. *In such cases, we see no reason why the lawyer cannot represent both insurer and insured.* n81 CONCLUSION

Under the usual common-law standard for formation of an attorney-client relationship, Texas insurance defense counsel should ordinarily represent both insurer and insured, unless there is a conflict of interest precluding joint

representation. Because the same common law standard applies in almost all states, the same conclusion generally should be reached in states that have yet to pass on this question.

n30 In particular, defense counsel who learns of a coverage question not implicating the issues in the tort case and not creating a conflict of interest (e.g. was the car the insured was driving one insured by the policy) should not inform the insurer of this issue. If there is a conflict, continued representation requires an affirmative consent rather than simply acquiescence.

n31 *State Farm Mut. Auto. Ins. Co. v. Traver*, 980 S.W.2d 625 (Tex. 1998).

n32 *Id.* at 627-28. The court also dismissed as erroneous dictum a passage in *Ranger County Mutual Insurance Co. v. Guin*, 723 S.W.2d 656, 658 (Tex. 1987), asserting that the insurer would be vicariously responsible for defense counsel malpractice. 980 S.W.2d at 628.

n33 A recent explanation of the procedure the lawyer must follow is provided by American Bar Ass'n Standing Comm. on Ethics & Prof. Resp., Formal Op. 01-421 (Ethical Obligations of a Lawyer Working Under Insurance Company Guidelines and Other Restrictions). The ABA found that essentially the same procedure would apply regardless of whether the insurer is a co-client, so it took no position on that issue.

Rptr. 2d 20, 24 (1999) ("the attorney represents two clients, the insured and the insurer"; disqualifying attorney from unrelated representation adverse to insurer that retained attorney to defend insured); *In Re Rules Governing Attorneys*, 220 So. 2d 6, 7 (Fla. 1969) (rejecting rule precluding insurers from using employee lawyers to defend insureds because rule improperly "emphasize[s] the employer-employee relationship as the element which would distinguish the lawyer's responsibility to one of two clients whose interests might develop conflicts" when the problems are no different if defense counsel is an outside lawyer (emphasis added)).

n37 *Ingersoll-Rand Equip. Corp. v. Transportation Ins. Co.*, 963 F. Supp. 452, 454-55 (M.D. Pa. 1997) ("The attorney's ethical obligations to his or her client, the insured, prevent the insurer from exercising the degree of control necessary to justify the imposition of vicarious liability").

n38 *Sweldoff v. Philadelphia Transp. Co.*, 187 A.2d 152 (Pa. 1963) (referring to the insurance company and the insured as clients of the attorney); *Molitoris v. Woods*, 618 A.2d 985 (Pa. Super. Ct. 1992) (recognizing

attorney can represent both an insured and insurer's subrogation interest).

n39 *Traver*, 980 S.W.2d at 628, citing Allan D. Windt, Insurance Claims & Disputes, § 4.40 (3d ed. 1995) ("There is no theoretical justification for imputing a defense counsel's negligence to the insurer"). That treatise also states:

An attorney provided by an insurance company to represent an insured owes that person the same unswerving allegiance that would be owed if the attorney were retained and paid personally by the insured. The attorney also, however, owes an equal allegiance to the insurer. Consequently, counsel with reason to believe that the discharge of the duty to either the insured or the insurer would conflict with the discharge of the duty to the other cannot, absent the informed consent of both clients, continue to represent both.

n50 This argument is developed in Stephen L. Pepper, *Applying the Fundamentals of Lawyers' Ethics to Insurance Defense Practice*, 4 *Conn. Ins. L.J.* 27 (1997-98).

n51 This response is developed at length in William T. Barker, *Insurance Defense Ethics and the Liability Insurance Bargain*, 4 *Conn. Ins. L.J.* 75 (1997-98), prepared as a commentary on Prof. Pepper's article, see note 50 above.

n52 In the example given, joint representation is probably unnecessary in terms of either protecting the insured or minimizing claim costs. But if professional responsibility rules do not forbid such representation, it should not matter that it is not strictly necessary. Besides, the example is deliberately unrealistic, and more complicated examples could be constructed where (initial) joint representation would serve claim cost minimization purposes.

n53 Restatement, § 134, cmts. a, f. I regard this point as an important one. I have previously argued that many of the problems in dealing with the tripartite relationship stem from a misconceived effort to protect insureds against all forms of mishandling of the defense of claims against them through the law of professional responsibility, when many of those problems are better handled by insurance law. William T. Barker, *The*

Tripartite Relationship and Protection of the Insured: Beyond Professional Responsibility, 18 Ins. Litig. Rptr. 528 (1996). And, as explained in the preceding paragraph, insurance law may solve some of those problems by obliging the insured to give some of the consents required by the law of professional responsibility.

n54 Restatement, § 134, cmt. f. (cross-references omitted)

n55 *Pine Island Farmers Coop v. Erstand & Riemer*, 649 N.W.2d 444 (Minn. 2002).

n56 *Id.* at 451. See Charles Silver, *Does Insurance Defense Counsel Represent the Company or the Insured*, 72 Tex. L. Rev. 1583 (1994).

n57 649 N.W.2d at 449.

n58 *Id.*

n59 *Id.* at 450-51.

n60 *Id.* at 451.

n61 *Id.* at 450-51.

n62 Opinion of Geoffrey C. Hazard, Jr., 11-12, *In re Rules of Prof. Cond.*, 2 P.3d 806 (Mont. 2000) (footnote omitted). In the omitted footnote, Professor Hazard cites "Restatement (Third) of the Law Governing Lawyers § 215, cmt. f (Prop. Final Dr. No. 2 1998). Section 215 of the draft [was] amended before being approved [and renumbered as § 134], but the amendment did not affect this point." *Id.* n.6.

The (former) Montana law referenced by Prof. Hazard is *Palmer v. Farmers Ins. Exch.*, 261 Mont. 91, 108, 861 P.2d 895, 905 (1992) (insurer "employs the attorney to represent the interests of both the insured and the

insurer"); *State ex rel. United States Fid. & Guar. Co. v. Montana Second Jud. Dist. Ct.*, 240 Mont. 5, 10, 783 P.2d 911, 914 (1989) ("Absent a conflict of interest, the attorney hired by the insurance company to defend its insured, represents both"); *Safeco Ins. Co. v. Ellinghouse*, 223 Mont. 239, 252-53, 725 P.2d 217, 226 (1986) (same). Those principles are still the law in most jurisdictions, even though the Montana Supreme Court repudiated them in the case where Prof. Hazard gave his opinion.

n63 *E.g.*, Restatement, § 16 & cmt. e (describing duty); *Cinema 5, Ltd. v. Cinerama, Ltd.*, 528 F.2d 1384, 1386 (2d Cir. 1976) (attorney owes undivided loyalty to every client).

n64 *American Mutual Liab. Ins. Co. v. Superior Court*, 113 Cal. Rptr. 561, 571 (Cal. Ct. App. 1974).

n65 The Texas Association of Defense Counsel, as *amicus* on rehearing argued that "[t]he employee-lawyer[] has a duty to discuss even routine' conflicts with the client and obtain informed consent, regardless of congruence." Brief of Amicus Curiae Texas Association of Defense Counsel in Support of Petitioner's Motion for Rehearing, at 15. If the facts show a substantial risk that such a conflict will actually arise, that would be true, but there was no evidence that counsel faced with such risks do not either withdraw to allow defense to be handled by nonconflicted counsel or obtain the necessary informed consents. If, instead, there is no more than a speculative possibility of conflict, that issue need not be addressed until a concrete risk actually arises.

n66 Model Rules of Prof'l Conduct R.1.7(a) (2008). Rule 1.06 of the Texas Disciplinary Rules of Professional Conduct is similar, except that the Texas rule appears to permit adverse representations in unrelated matters that would be forbidden by the Model Rule. That possible difference has no relevance to the issue considered here.

n67 Model Rules of Prof'l Conduct R.1.7 cmt. [8] (2008).

n68 Ronald E. Mallen & Jeffrey M. Smith, *Legal Malpractice*, § 29.3, (5th ed. 2000).

n69 *See, e.g., Betts v. Allstate Ins. Co.*, 201 Cal. Rptr. 528 (Cal. Ct. App. 1984) (defense counsel encouraged insured to adopt "no-settlement" position which improperly exposed insured to serious risk of personal liability); *Parsons v. Continental Nat'l American Group*, 550 P.2d 94 (Ariz. 1976) (disclosure to insurer of confidential information indicating that insured's actions were intentional rather than negligent); *Employers*

Cas. Co. v. Tilley, 496 S.W.2d 552 (Tex. 1973) (exploitation of position as defense counsel to develop late notice defense on behalf of insurer); *Fidelity & Cas. Co. v. McConnaughy*, 179 A.2d 117, 121-24 (Md. 1962) (taking deposition to establish lack of cooperation); and cases cited therein.

n70 Even if both insurer and insured are properly clients at the outset of the representation, conflicts may arise during the representation from sources not foreseen at the outset. If the clients cannot resolve such a conflict (and do not consent to proceed despite the conflict), the lawyer will have to withdraw from joint representation. This is the usual rule for joint representations of any sort.

n71 The term is that of Ronald Mallen. Mallen, *A New Definition of Insurance Defense Counsel*, 53 Ins. Coun. J. 108, 114-15 (1986).

n72 E.g., *San Diego Federal Credit Union v. Cumis Ins. Soc'y Inc.*, 208 Cal. Rptr. 494 (Cal. Ct. App. 1984) (suit for both negligent and intentional injuries); *Brohawn v. Transamerica Ins. Co.*, 347 A.2d 842 (Md. 1975) (same); *Maryland Casualty Co. v. Peppers*, 355 N.E.2d 24 (Ill. 1976) (same).

n73 *Rhodes v. Chicago Ins. Co.*, 719 F.2d 116, 120 (5th Cir. 1983); *Steel Erection Co. v. Travelers Indem. Co.*, 392 S.W.2d 713, 716 (Tex. Civ. App. 1965 writ ref'd n.r.e.).

n74 2 P.3d 806 (Mont. 2000). The Montana Supreme Court provides vendor-neutral citations (in this case, 2000 MT 110) by numbering the paragraphs of its opinions. This brief will cite to the paragraph numbers ("Mont Op. ___") instead of the page numbers.

n75 See cases purportedly distinguished in Mont. Op. 24-33.

n76 *Id.* 23.

n77 American Bar Ass'n, *Annotated Model Rules of Professional Conduct*, xvii (3d ed. 1995). This language has been adopted in Texas, as paragraph 12 of the Preamble to the Texas Disciplinary Rules of Professional Conduct.

n78 *Id.* 37.

n79 Similar statements were made, also without the benefit of any factual record, in another advisory opinion. *American Ins. Ass'n v. Kentucky State Bar*, 917 S.W.2d 568 (Ky. 1996), another advisory opinion.

n80 24 P.3d 593 (Ariz. 2001).

n81 *Id.* at 598 (*emphasis added*). The court went on to say that "in the unique situation where the lawyer actually represents two clients, he must give primary allegiance to the one (the insured) to whom the other (the insurer) owes a duty of providing not only protection, but of doing so fairly and in good faith." *Id.* There is no reason here to inquire whether Texas or other states would or should follow this aspect of the Arizona rule, or whether there are any actual circumstances in which an insured would derive any protection from that rule not already provided by the lawyer's duty of undivided loyalty.

The Arizona court also appeared to perceive (or fear) conflicts in a wider range of circumstances than suggested here. *Id.* at 597 & n.1, 598. Again, there is no need to debate this here. If there is a sufficient risk of conflict, as that may be defined under local law, joint representation will be precluded under the analysis here. If there is not such a risk, this analysis and the Arizona Court agree that a joint representation would be proper.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of The New Appleman on Insurance Law, now in preparation, and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

ABOUT THE LAW FIRM. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Robert C. Clifford on Wilson v. 21st Century Ins. Co., 2007 Cal. LEXIS 13314

2008 Emerging Issues 1463

Robert C. Clifford on Wilson v. 21st Century Ins. Co., 2007 Cal. LEXIS 13314

By Robert C. Clifford

December 12, 2008

SUMMARY: Robert C. Clifford discusses the issues raised by the California Supreme Court's decision in *Wilson v. 21st Century Ins. Co., 2007 Cal. LEXIS 13314 (Cal. 2007)*. The California Supreme Court held that before an insurer denies a first party claim, the insurer must thoroughly investigate the facts and undertake a fair evaluation of its insured's claim.

RELATED CONTENT: Click here for more Emerging Issues Analysis related to this Area of Law

ARTICLE: *Introduction.* In *Wilson v. 21st Century Ins. Co., 2007 Cal. LEXIS 13314 (Cal. 2007)*, the California Supreme Court addressed two significant issues. First, the Court discussed an insurer's duty to fully investigate an insured's claim for first party policy benefits. Secondly, the court considered the application of the genuine dispute doctrine, as described in *Chateau Chamberay Homeowners Ass'n v. Associated Internat. Ins. Co., 90 Cal. App. 4th 335, 347 (Cal. Ct. App. 2001)*. In this particular instance, the Court held that summary judgment was improperly granted in favor of the insurer on the insured's bad faith action because triable facts existed which, if true, would support a jury's finding that the insured unreasonably failed to investigate the nature and extent of the insured's injuries before it denied the insured's claim for underinsured motorist (UIM) benefits.

I. Lack of Thorough Investigation and Fair Evaluation

Counsel involved in claims against insurers to recover first party policy benefits should be conversant with the holding of *Wilson v. 21st Century Insurance* and the insurer's duty to thoroughly investigate the facts that underlie the insured's claim. While the Court conceded that an insurer has no obligation under the implied covenant of good faith and fair dealing to pay every claim its insured submits, it stressed that the insurer cannot deny the claim "without fully investigating the grounds for its denial." *Wilson v. 21st Century Ins. Co., 2007 Cal. LEXIS 13314 (Cal. 2007)* citing *Frommoethelydo v. Fire Ins. Exch., 42 Cal. 3d 208, 215 (Cal. 1986)*. To protect its insured's contractual interest in security and peace of mind, "it is essential that an insurer fully inquire into possible bases that might support the insured's claim" before denying it. *Wilson v. 21st Century Ins. Co., 2007 Cal. LEXIS 13314 (Cal. 2007)* citing *Egan v. Mutual of Omaha Ins. Co., 24 Cal. 3d 809, 819 (Cal. 1979)*.

A trier of fact may find that an insurer acted unreasonably if the insurer ignores evidence available to it which supports the claim. The insurer may not focus only on those facts which justify denial of the claim. *Wilson v. 21st Century Ins. Co.*, 2007 Cal. LEXIS 13314 (Cal. 2007) citing *Mariscal v. Old Republic Life Ins. Co.*, 42 Cal. App. 4th 1617, 1623 (Cal. Ct. App. 1996); and *Shade Foods v. Innovative Prods. Sales & Mktg.*, 78 Cal. App. 4th 847, 880 (Cal. Ct. App. 2000).

Here, the insured -- a 21-year-old woman who was involved in an auto accident with an underinsured motorist -- submitted documentation from her treating orthopedist which stated that she had "degenerative disk changes as a result of occult disk injury at the levels in her neck from her high speed motor vehicle accident," and that these spinal changes were atypical for her age and "almost certainly" caused by the automobile accident. *Wilson v. 21st Century Ins. Co.*, 2007 Cal. LEXIS 13314 (Cal. 2007). The insurer's claims representative discounted the orthopedist's opinion and denied the insured's UIM policy limits demand on grounds that the insured's symptoms were caused by preexisting degenerative disc disease. Significantly, the claims representative reached his opinion without seeking an independent medical evaluation or record review from another physician. Instead, he based his denial on his own interpretation of the insured's medical records, including an MRI scan of the cervical spine, and the fact that the insured was vacationing in Australia when her attorney tendered the policy limits demand.

After the insurer denied the claim, the insured's counsel demanded arbitration. During discovery leading up to the arbitration hearing, the insurer's counsel deposed the insured's treating physicians and learned that spinal surgery had been recommended. The insurer then obtained an independent medical evaluation of the insured, and the examining physician subsequently reported findings that supported the insured's treating orthopedist's initial conclusion that the insured's injuries were caused by the subject motor vehicle accident. Faced with this new and independently obtained information, the insurer offered its policy limits, but this did not occur until two years after the insurer first denied the insured's claim, and the Court determined that the initial failure to investigate, coupled with the two year delay in payment, could sufficiently support a jury's finding that the insurer acted in bad faith.

An insurer is not obliged to accept the insured's expert witnesses' opinion without scrutiny or investigation. There are actions that an insurer can take if it questions the basis of the insured's claim. For example, to the extent it has good faith doubts, an insurer is within its rights to investigate the basis for the expert's claim by asking the expert to reexamine or further explain his or her findings, having another expert review all the submitted material and offer an opinion, or, if necessary, have its insured examined by other experts. What an insurer cannot do, consistent with the implied covenant of good faith and fair dealing, is to ignore the insured's expert's conclusions without any attempt at adequate investigation, and reach contrary conclusions lacking any discernable foundation. *Wilson v. 21st Century Ins. Co.*, 2007 Cal. LEXIS 13314 (Cal. 2007) citing *Egan v. Mutual of Omaha Ins. Co.*, 24 Cal. 3d 809, 819 (Cal. 1979); and *Mariscal v. Old Republic Life Ins. Co.*, 42 Cal. App. 4th 1617, 1623 (Cal. Ct. App. 1996).

II. The Genuine Dispute Rule

An insurer's denial of, or delay in, paying benefits gives rise to tort damages only if the insured shows the denial or delay was unreasonable. *Frommoethelydo v. Fire Ins. Exch.*, 42 Cal. 3d 208, 214 (Cal. 1986). As a close corollary of that principle, it has been said that "an insurer denying or delaying the payment of policy benefits due to the existence of a genuine dispute with its insured as to the existence of coverage liability or the amount of the insured's coverage claim is not liable in bad faith even though it might be liable for breach of contract." *Chateau Chamberay Homeowners Ass'n v. Associated Internat. Ins. Co.*, 90 Cal. App. 4th 335, 347 (Cal. Ct. App. 2001). This "genuine dispute" or "genuine issue" rule was originally invoked in cases involving disputes over policy interpretation, but in recent years courts have applied it to factual disputes as well. See *Chateau Chamberay Homeowners Ass'n v. Associated Internat. Ins. Co.*, 90 Cal. App. 4th 335, 348 (Cal. Ct. App. 2001); *Fraley v. Allstate Ins. Co.*, 81 Cal. App. 4th 1282, 1292 (Cal. Ct. App. 2000), *Guebara v. Allstate Ins. Co.*, 237 F.3d 987, 992 (9th Cir. 2001).

Here, the insurer contended that its denial of the insured's policy limit demand was not unreasonable and fell within the ambit of the genuine dispute rule. The Court quickly rejected this argument, reiterating that the insurer

ignored the insured's supporting medical documentation and simply made the unsupported contention that her injuries resulted from a pre-existing, degenerative condition. *Wilson v. 21st Century Ins. Co.*, 2007 Cal. LEXIS 13314 (Cal. 2007). Counsel should be aware that the genuine dispute rule does not relieve an insurer from its obligation to thoroughly and fairly investigate, process and evaluate the insured's claim. A genuine dispute exists only where the insurer's position is maintained in good faith and on reasonable grounds. *Wilson v. 21st Century Ins. Co.*, 2007 Cal. LEXIS 13314 (Cal. 2007) citing *Chateau Chamberay Homeowners Ass'n v. Associated Internat. Ins. Co.*, 90 Cal. App. 4th 335, 348 (Cal. Ct. App. 2001), and *Guebara v. Allstate Ins. Co.*, 237 F.3d 987, 996 (9th Cir. 2001).

An insurer is entitled to a summary judgment based on a genuine dispute over coverage or the value of the insured's claim only where the summary judgment record demonstrates the absence of triable issues. *Wilson v. 21st Century Ins. Co.*, 2007 Cal. LEXIS 13314 (Cal. 2007) citing Cal Code Civ Proc § 437c(c). In light of the court's holding, the practitioner must understand that a dispute based upon an unreasonable (i.e., unsupported) position is not genuine and summary judgment is therefore not proper.

Conclusion. One lesson to be learned is that although *Wilson v. 21st Century Insurance Co.* involved an insured's claim for underinsurance benefits, the implications of the holding go well beyond underinsurance coverage and must be considered in all first party coverage situations. The duty to fully investigate is particularly significant in such first party claims as disability and medical coverages, where the insurer's refusal to provide benefit payments can have a dire effect on the insured and subject the insurer to a claim of bad faith. The following practice tips can be distilled from this case:

Strategic Point -- Respondent: Counsel for the insurer should advise the insurer of the necessity of obtaining all information surrounding the insured's claim. In situations where the nature and extent of the insured's injuries come into question, counsel should promptly recommend that an independent medical examination and record review (or at the very least, a medical record review by a qualified physician) be conducted as soon as reasonably possible. Failure to fully consider the facts may have serious consequences in defending a subsequent bad faith claim against the insurer.

Strategic Point -- Claimant: Counsel representing first party claimants should be sure to provide the insurer with competent facts that support the claim at the earliest opportunity, and to retain copies of all supporting documentation that was provided to the insurer. If the insurer denies the claim, or makes what appears to be a substandard offer, counsel should consider the *Wilson v. 21st Century Insurance* decision and determine whether the insurer fully considered all facts surrounding the claim before responding to the insured's claim.

Ernst & Young on Reflections on Current Market Conditions for the Insurance Industry

By Peter Porrino and Robert Stein

December 2, 2008

SUMMARY: This Emerging Issues Analysis assesses the implications of the current financial and credit crisis for insurance companies and recommends actions they can take to help safeguard ratings and assets and mitigate exposure to potential losses.

PDF LINK: Click [here](#) for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: The events in financial markets over the last year, and in particular the past few months, are a stark reminder that insurance enterprises have exposures well beyond the risks assumed from their insurance policies. The credit crisis, which initially began with an increase in the incidence of defaults on US subprime mortgages, has quickly extended to every corner of the global financial market and resulted in a dramatic change in the competitive dynamics of the financial services sector.

We do not know when the crisis will come to an end or whether the actions of the Global Central Banks and regulators will stem the tide. The residential mortgage market continues to deteriorate, with delinquencies and defaults rising even in the prime mortgage market, as home prices fall and the economy weakens. Distress has now spread to auto loans, credit card receivables, commercial mortgage-backed securities and, increasingly, corporate debt. More broadly, new credit is virtually non-existent. Liquidity is hard to come by, and as the economy continues to slow, retail and business spending remains weak.

At this critical juncture, insurance company management needs to protect the organizations assets and capital base, maintain liquidity, and mitigate the exposures to losses that may be developing. These and other actions should be taken to protect ratings and to maintain the confidence of customers and distributors.

Business Implications

The business model for insurance enterprises is not likely to fundamentally change. However, a number of the implications of the current crisis are apparent.

The impact from equity and fixed income markets. In a persistent equity market downturn, life insurers will likely experience a sales decline in equity-based products. Depressed equity markets result in reduced fees, increased

guarantee values and diminished variable annuity/variable life earnings. Volatile equity markets have driven hedging costs higher, further reducing profitability. Products without guarantees may suffer a noticeable decline in cash inflows.

Additionally, products with guaranteed interest rates will need to be evaluated to determine how the current environment impacts the organizations obligations. Moreover, the regulatory pressures that emanated from the banking sector will renew insurance regulators focus on product suitability and disclosure issues related to customer offerings.

Clearly, all types of insurance organizations have significant exposure to the debt and equity markets in their investment portfolios. Unrealized losses will further weaken balance sheets and Other Than Temporary Impairment (OTTI) changes will depress year-over-year earnings. As the profitability of certain lines of business is evaluated, management will need to consider whether its deferred acquisition cost asset is impaired.

Securities lending programs. Securities lending programs have historically been an avenue for insurance and other organizations to earn additional income from their investment portfolios. In these transactions the insurance organization may have the right to use the collateral provided by the borrowing entity and invest the funds in other securities. However, insurance organizations should be mindful that the collateral is typically short term in nature. Investing collateral in illiquid or less liquid positions can result in a duration mismatch when the collateral is required to be returned.

Securitizations. Insurance securitizations might be viewed as the industrys version of packaged mortgage-backed securities. In the short term, the constriction of credit markets is eliminating the ability to execute these transactions. Heavy users of securitizations and off-balance sheet corporate vehicles to manage capital needs will come under greater scrutiny as investors evaluate these structures and the magnitude of such risk transfers. This is critically important for life insurance companies with significant XXX and AXXX exposures where bank letters of credit are becoming extremely scarce and expensive.

Global regulatory co-ordination. Insurance regulators worldwide are expressing concern about how multiple national regulators will manage the meltdown of a global institution. Without clear protocols for regulatory coordination, local regulators may reflexively strengthen their claims on local resources, dramatically reducing the benefits of geographic risk diversification and increasing consolidated capital requirements.

Capital requirements. Available capital will be adversely affected by investment portfolio devaluations and impairment charges, increased life and annuity product guarantee values and weaker business volume. As regulators and rating agencies reevaluate capital issues, it is likely that requirements will increase. Upward pressure will come from mounting credit risk provisions and requirements for structured products, mortgage-backed securities and equities. Additional capital will be needed to cover reinsurance risks and provide protection from exposure to credit and liquidity risks.

Next Steps

The implications of the credit crisis require insurance organizations to take steps both to protect the organization and, at the same time, to create potential opportunities. Continued volatility and uncertainty are likely to pervade the markets for the foreseeable future. Inactivity would clearly result in increased losses for organizations that do not understand their current exposures or establish processes to cope with the uncertainties. At a minimum, the following considerations should be evaluated by management in the context of the current crisis:

- **Pricing of investments and derivatives portfolios.** Management should evaluate its pricing and price validation

policies and procedures to determine whether the current processes adequately address escalating current issues. This overview should include: the increasing demand for improved governance, stronger price validation controls, more comprehensive independent model review and enhanced management reporting. If the market perceives a lack of strength in managements pricing process or if errors occur, a crisis in confidence could rapidly result in a dramatic destruction of shareholder value.

■ **Counterparty exposure analysis.** Management needs to quickly identify and aggregate exposures to companies in distress or at risk. Actively mitigating pre-and post-bankruptcy exposures through netting, and identifying, exercising and managing transactional trigger events will be critical to loss mitigation. No one knows if, when or which financial institution will be the next to suffer a loss of confidence and start a downward spiral. Organizations need to understand their exposures to all material counterparties and have sound mitigation strategies that provide rapid response in the event of a new crisis.

■ **Liquidity and cash flow analysis.** The quality of liquidity management, cash flow forecasting and working capital management should be challenged and revised to recognize the current market environment. Management typically relies on a presumed set of available sources of cash to meet working capital and liquidity needs. However, management should now consider whether those sources of cash will be available in times of crisis. Stress scenarios and cash alternatives need to be considered or organizations could find themselves in situations where funds are unavailable at the time they are needed most. Regulators may become more rigorous in requiring companies to demonstrate that they can enforce their financial support arrangements.

■ **Operational requirements.** Management should evaluate the impact of the recent financial crisis and its implications for the organizations operational needs. An immediate need will be to minimize the impact of counterparty bankruptcy or future insolvencies. This action requires identifying and exercising bankruptcy/insolvency trigger events, determining which contracts will automatically terminate upon bankruptcy, and utilizing master netting provisions and cash-settling contracts before they become entangled in bankruptcy courts. Managing the movement of cash and netting of exposures, putting in place new netting and novation agreements and actively managing exposures before bankruptcy are critical. These actions can have a material impact on realizing cash recoveries in a timely manner. Many organizations will discover that they are not able to address critical needs due to resource constraints. Timely loss mitigation is heavily dependent on flawless operational execution over the next few months.

■ **Transactions and restructuring.** Insurance organizations are in the process of evaluating sales of distressed, as well as prized operations to unlock liquidity and survive financial turmoil. Early planning, tight management of due diligence, ability to identify and understand the key issues rapidly and effective negotiation skills are critical in todays environment of short/compressed deal deadlines or restructuring events. Some significant assets may become available. Organizations that cannot take advantage of these opportunities will discover their more prepared and nimble competitors have achieved a strategic advantage.

■ **Tax basis analysis.** In connection with an evaluation of the sale of a business or legal entity, management must begin the cumbersome process of evaluating the tax basis of those entities. For those that were purchased or created many years ago, information can be scarce, and the ability to properly demonstrate tax basis in the sold entity will be difficult.

■ **Regulatory compliance.** Companies need to ensure that their reporting and compliance frameworks are capable of meeting demands that regulators are likely to place on any insurer whose financial stability is questionable. Additionally, insurance organizations can expect that insurance regulators are likely to review and increase the capital

requirements for all insurance enterprises, further pressuring the profitability of operations.

■ **Model validation.** A model's ability to accurately anticipate the impact of market conditions in times of stress has been severely tested in this credit crisis. However, models are growing in number, importance and complexity in the risk, investment, actuarial and tax areas. Accordingly, it is essential to gain an understanding of the assumptions, data quality and other technology controls related to these models. Identifying and understanding the limitations and assumptions as well as the risks not captured in each model will be critical to avoiding product mispricing. Failure to do so could have significant financial, regulatory and reputational impact. Furthermore, regular, independent and structured testing is necessary to provide assurance that the models are functioning as intended. In particular, validating the source and accuracy of the data is a key high-risk area for review.

■ **Tax analysis.** As the period of uncertainty unfolds, management will need to be keenly aware of tax issues that could arise. Any write-down in asset values may create a deferred tax asset (requiring evaluation and determination as to whether it may be recognized). In addition, the losses sustained by some companies will result in tax losses that may be carried back or forward. The losses may be limited in an acquisition context or may impact the recognition of other tax attributes such as the foreign tax credit. Understanding the tax implications both cash tax and financial statement impact of these changes is critical in viewing the broader picture.

While uncertainty lies ahead, the recent market events illustrate that insurers can take action to help safeguard ratings and assets, and to mitigate exposure to loss. Organizations that are well positioned, prepared and nimble may well be able to capitalize on the dislocation in the market.

ABOUT THE AUTHOR(S):

Peter R. Porrino is Ernst and Young's Global Director of Insurance Industry Services. Peter manages the firm's worldwide expansion of insurance industry services and supporting resources, and he oversees strategic planning and industry thought leadership and marketing initiatives. He is a member of the Executive Committee for Ernst & Young's Global Financial Services Group and serves as the chairperson of its Global Insurance Industry Network.

Robert W. Stein is Ernst and Young's Global Leader of Actuarial Services. Robert has served the insurance and financial services industries for over 35 years, advising on financial and strategic challenges. His emphasis has included implementing economic capital measurement methods and related risk management processes; developing capital allocation and risk-adjusted return measurement methods for multi-line insurers and financial institutions; assisting with the evaluation and implementation of emerging regulatory capital standards (e.g., Solvency II); and assisting foreign institutions adopt and report on IFRS and US GAAP accounting bases.

About Ernst & Young. Ernst & Young is a global leader in assurance, tax, transaction and advisory services. Worldwide, our 135,000 people are united by our shared values and an unwavering commitment to quality. We make a difference by helping our people, our clients and our wider communities achieve their potential.

About Ernst & Young's Global Insurance Center. Insurers must increasingly address more complex and converging regulatory issues that challenge their risk management approaches, operations and financial reporting practices. Ernst & Young's Global Insurance Center brings together a worldwide team of professionals to help you

achieve your potential -- a team with deep technical experience in providing assurance, tax, transaction and advisory services. The Center works to anticipate market trends, identify the implications and develop points of view on relevant industry issues. Ultimately it enables us to help you meet your goals and compete more effectively. Its how Ernst & Young makes a difference.

Reed Smith LLP on the Potential for Federal Regulation of Insurance

2008 Emerging Issues 3091

Reed Smith LLP on the Potential for Federal Regulation of Insurance in Light of AIG, Inc.'s Financial Collapse

By Paul Walker-Bright Esq.

November 19, 2008

SUMMARY: The recent financial difficulties of AIG, Inc., have reignited debate as to whether the federal government should take a greater role in the regulation of insurance. The modern structure of the financial services industry, including insurance, and the increasing national and international scope of insurance companies, call into question the efficacy of traditional state-based regulatory systems and highlight the need for a national approach.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: Introduction

The financial collapse of AIG, Inc., one of the world's largest groups of insurance companies, has had and will continue to have significant impacts on the financial services industry, including the regulation of that industry. Although AIG stresses that its insurance company subsidiaries are well capitalized and have a collective surplus of \$26.7 billion available to pay claims, ⁿ¹ it is reasonable to suppose that the enormous size of AIG's losses ⁿ² alone would have some impact on the insurer subsidiaries' ability to operate in the future. For example, A.M. Best has commented that its financial strength, issuer credit and debt ratings for AIG's insurance companies remain under review with negative indications due to the continuing financial problems of the parent company and uncertainty over whether the federal bailout will succeed. ⁿ³ Moreover, AIG's collapse highlights the extent to which insurance has become intertwined with other aspects of the financial services industry, including the markets for securities, futures, collateralized debt obligations, credit default swaps, and other complex financial instruments. The high stakes at risk due to AIG's financial collapse have reinvigorated the debate over whether the federal government should play a role in regulating the business of insurance. ⁿ⁴

The States' Historic Right to Regulate the Business of Insurance

In 1869, the United States Supreme Court ruled that issuing a policy of insurance is not a transaction of commerce for purposes of the Constitution's Commerce Clause. ⁿ⁵ This left the states free to regulate the business of insurance without much interference from the federal government. What evolved was a scheme in which each of the states developed its own agencies, laws and regulations to regulate insurance over the next 75 years, including the creation of the National Association of Insurance Commissioners (NAIC) in 1871. ⁿ⁶ However, in 1944 the Supreme Court reversed itself, holding that, whatever the accuracy of the Court's description of insurance in the nineteenth century, by

the middle of the twentieth century it was obvious that the business of insurance included interstate commerce and thus fell within the reach of federal laws and regulations, including antitrust laws. n7

The insurance industry and the states feared that the *South-Eastern Underwriters* decision heralded the onset of intensive federal regulation of insurance that would upset the existing scheme. Therefore, insurance companies and the states lobbied Congress for a law that would restore the status quo. In 1945 they were rewarded with the McCarran-Ferguson Act, 15 U.S.C. § 1011 *et seq.*, which provides that,

No Act of Congress shall be construed to invalidate, impair, or supersede any law enacted by any State for the purpose of regulating the business of insurance, or which imposes a fee or tax upon such business, unless such Act specifically relates to the business of insurance. . . . n8

The McCarran-Ferguson Act reverses the normal precedence of laws and provides that state laws regulating the business of insurance pre-empt federal laws that may impact insurance, except for federal laws that specifically concern insurance. This reverse pre-emption effectively returned to the states the right to regulate insurance. n9

The states (along with the District of Columbia and five territories) have continued to hold the field in regulating insurance from 1945 to the present day. The result is a patchwork of laws and regulations individually enacted and enforced by the states. Although the NAIC promulgates and promotes uniform standards for such laws and regulations, n10 it has no authority to enact or enforce them. Even a brief perusal of state laws and regulations reveals significant differences among the states on many insurance issues. n11

Previous federal involvement in the regulation of insurance has been limited. In the late 1980s and early 1990s the failure of several prominent insurance companies prompted a Congressional study into the causes of the failure and proposals for a federal regulatory system. n12 These proposals, however, did not lead to any significant federal regulations. In 1999, Congress passed the Gramm-Leach-Bliley Act, also known as the Financial Services Modernization Act (FSMA). n13 The FSMA allowed commercial banks, investment banks and insurance providers to consolidate, creating the modern financial services industry. n14 The FSMA reaffirmed the states right to regulate insurance and protects 13 specific areas of state insurance regulation from federal preemption. n15 The FSMA also required the states to enact uniform insurance agent licensing laws and reciprocity measures. n16

The Debate: Is the Current Regulatory Scheme Sufficient to Cope with the Demands of a Modern, International Insurance Industry?

In 2007 the United States Treasury Department conducted a comprehensive study of the regulatory structure in place for the financial services industry, including insurance. This study culminated in the Treasury Departments March 2008 report, *Blueprint for a Modernized Financial Regulatory Structure*. With respect to the insurance industry, the Treasury Department concluded that the state-based regulatory system was not the most efficient or effective way to regulate an industry that has become global in its scope. n17 The Treasury Department also recognized that insurance is only one aspect of the broader financial services industry, and that the lines dividing banking, securities, futures and insurance have become increasingly blurred. n18 Thus, the current functional division of regulatory responsibility among these industry sectors has the risk of creating conflicts among the responsible agencies and gaps in the regulatory schemes. n19

In order to address these deficiencies, the Treasury Department recommends establishing an optional federal charter (OFC) that would provide a system of federal chartering, licensing, regulation and supervision of insurers, reinsurers and insurance producers. n20 Insurers, reinsurers and insurance producers could opt for federal regulation or remain in the existing state system. n21 The Treasury Department also recommends creating an Office of National Insurance (ONI) and an Office of Insurance Oversight (OIO). n22 The ONI would create and oversee the necessary regulatory, supervisory, enforcement and rehabilitative powers of the OFC. n23 The OIO would promote international insurance regulatory policy for the United States and serve as an advisor to the Secretary of the Treasury on major

domestic and international insurance policy issues. n24 In short, the Treasury Department is in favor of a comprehensive scheme of federal regulation that would replace much, if not all, of the existing state-based regulatory regime. n25

Reaction to the Treasury Departments recommendations has been mixed. The NAIC, not surprisingly, is not in favor of the OFC approach. n26 Apart from the understandable aversion to having the powers of the state insurance commissioners significantly reduced, the NAIC points to the financial strength of AIGs insurance subsidiaries as proof that the state regulatory scheme works to ensure that insurance companies are insulated from adversity in their parent companies. n27 However, had the state insurance commissioners timely recognized that credit default swaps are a form of insurance subject to their regulations, arguably AIGs financial collapse could have been avoided or at least substantially mitigated. The NAICs belated admission that insurance regulations apply at least to some types of credit default swaps is a classic case of closing the stable door after the horses have bolted, and moreover still leaves approximately 90% of all credit default swaps unregulated. n28 Current discussions among federal and state regulators and legislators on how to regulate credit default swaps, and whether the Securities and Exchange Commission, the Commodity Futures Trading Commission, the state insurance departments, or some combination of federal and state regulators, should be responsible for regulating credit default swaps, highlight the need for a more systematic and broader level of regulation. n29

Other observers have expressed concern over the state regulators initial response to the AIG financial crisis, which was to agree to a plan where AIG would obtain \$20 billion of its insurance subsidiaries investment-grade securities in exchange for securities of questionable liquidity so that AIG could use the investment-grade securities as collateral. n30 One key motivation was the desire to protect, not the insurance companies or policyholders, but the jobs of thousands of AIG employees in the state of New York. n31 This demonstrates that state regulators are susceptible to local political and economic concerns that may interfere with the ability to make decisions that affect insurance companies and policyholders nationally and internationally.

The NAIC was created to address the need to coordinate regulation of multistate insurers, and one of its primary goals is the development of uniform policy when uniformity is appropriate. n32 To the extent that the NAIC claims success in coordinating the regulation of multistate insurers (which includes most insurance companies now) and developing uniform policies for the regulation of insurance that apply throughout the United States, this very success can be viewed as an argument in favor of a national regulatory system. The NAIC essentially is a trade organization that assists state insurance commissioners in regulating insurance. n33 It has no enforcement powers and no authority over the insurance commissioners or insurance companies. The cooperation of the individual insurance commissioners and their willingness to accept uniform insurance policies developed within the NAIC structure indicate the commissioners recognition of the need for such uniformity. A federal insurance regulator not only would develop the needed uniform policies but would be able to implement and enforce them as well. The OFC/ONI approach would create a truly national set of uniform laws and rules that coordinate the regulation of multistate and multinational insurance companies. The NAIC is seeking to achieve this same result, but without the ability to impose that regulation throughout the country. Thus, a federal insurance office would at least theoretically be better placed to accomplish the NAICs goals.

For example, in response to the AIG financial crisis the NAIC has created an AIG Special Task Force, comprised of all NAIC members, which is charged with overseeing the regulatory activities related to the AIG insurance subsidiaries and coordinating interaction among state regulators, federal government officials, company representatives, and international regulatory interests. n34 Had a federal Office of National Insurance existed at the time AIGs financial problems surfaced, it already would have been overseeing the regulatory activities related to the AIG insurance subsidiaries (assuming they had opted in to the federal charter) and coordinating the interaction among all affected entities. This interaction also would have been more efficient because the involvement of 50 different state insurance commissioners would have been greatly reduced.

Other insurance organizations support the Treasury Departments OFC approach. The American Insurance Association (AIA), the leading property and casualty insurance trade organization in the United States, n35 and the

Risk and Insurance Management Society, Inc. (RIMS), the professional association for corporate and government risk managers, n36 both are in favor of an OFC. n37 These entities believe that an OFC regulatory scheme would modernize the insurance industry, allow insurers to develop and deliver products more efficiently and effectively, and increase competition. n38

Currently there are several bills pending before Congress that would effect some federal regulation of insurance to a greater or lesser degree. The National Insurance Act of 2007 would put in place an OFC regulatory system substantially similar to the one subsequently recommended by the Treasury Department in its Blueprint. n39 The Insurance Information Act of 2008 proposes the creation of an Office of Insurance Information (OII) within the Treasury Department. n40 The OII would collect, analyze, and disseminate information and issue reports regarding insurance, establish federal policy on international insurance matters, and advise the Treasury Secretary on major domestic and international insurance policy issues. n41 The Insurance Information Act can be seen as an intermediate step on the way to establishing the full OFC regulatory scheme. The Nonadmitted and Reinsurance Reform Act of 2007 would streamline the regulation of nonadmitted insurance and reinsurance by applying single-state regulation and uniform standards to nonadmitted and surplus insurers and reinsurers. n42

Conclusion

The insurance industry has changed in many dramatic and fundamental ways since 1869. However, the current system of regulation in the United States, in which each state is individually responsible for regulating insurance, essentially has been unchanged for the past 139 years. The globalization of insurance markets and the increasing interrelationships of insurance and other financial products designed to hedge or mitigate risk are strong arguments in favor of modernizing the current system to some degree. Whether a comprehensive OFC/ONI approach will be enacted remains to be seen, but it seems likely that some form of federal insurance regulation eventually will be in place to address the real and perceived inefficiencies in the state-based regulatory system and the need for true national regulation of insurance in the modern financial world.

n18 *Id.* at 3-5.

n19 *Id.* A real world example of a regulatory gap is the credit default swap, the financial instrument at the root of AIGs collapse. A credit default swap basically is insurance for default on a debt like a municipal bond or a security backed by debt obligations, like mortgage-backed securities. *See* Wayne Pinsent, *Credit Default Swaps: An Introduction* (available at <http://investopedia.com/articles>); Gretchen Morgenson, *Arcane Market Is Next to Face Big Credit Test*, N.Y. Times, Feb. 17, 2008. In the Commodity Futures Modernization Act, Pub. L. No. 106-554, *114 Stat. 2763 (2000)*, Congress prohibited the federal government from regulating swaps, including credit default swaps. Pub. L. No. 106-554, § 407. Despite the fact that credit default swaps bear all the hallmarks of insurance, state insurance departments did not regulate them either. In other words, these arcane financial instruments, with a market worth **trillions** of dollars, were completely unregulated. *See* Nicholas Varchaver and Katie Benner, *The \$55 Trillion Question*, Fortune, Sept. 30, 2008 (available at http://money.cnn.com/2008/09/30/magazines/fortune/varchaver_derivatives_short.fortune/index.htm). The consequences of this lack of regulation are now obvious.

Bullivant Houser Bailey PC on Long v. Century Indemnity Co.: New Guidance On The Mechanics Of The Tripartite Relationship

By Maren Holmboe

November 18, 2008

SUMMARY: An insurance company defending under a reservation of rights must allow the insured to retain independent counsel if the reservation creates a conflict between the insured's interests and the insurer's interests. Although there is much law on the concept of independent counsel and when independent counsel is required, there has been less law on the mechanics of the independent counsel relationship after the relationship has been established.

RELATED CONTENT: [Click here for more Emerging Issues Analysis related to this Area of Law](#)

ARTICLE: Introduction

An insurance company defending under a reservation of rights must allow the insured to retain independent counsel if the reservation creates a conflict between the insured's interests and the insurer's interests. Although there is much law on the concept of independent counsel and when independent counsel is required, there has been less law on the mechanics of the independent counsel relationship--such as resolution of billing disputes--after the relationship has been established. Now, along comes *Long v. Century Indemnity Co.*, 163 Cal. App. 4th 1460 (2008), to provide some guidance.

I. The Tripartite Relationship

The term tripartite relationship describes the contractual relationship created when an insurance company owes a duty to defend its insured under a liability policy. The relationship between the insurance company, its insured, and the attorney hired by the insurance company to defend the insured, can create an ethical dilemma for defense counsel when the interests of the insurance company and the insured conflict. Such a conflict can--but does not always--arise when the insurance company owes a duty to defend under the policy while reserving the right to dispute coverage or seek reimbursement of defense costs. *James 3 Corp. v. Truck Ins. Exch.*, 91 Cal. App. 4th 1093, 1102 (2001).

When defense counsel represents both insurance company and insured, the relationship can raise difficult ethical problems. The insurance company pays the bills, but defense counsel owes a primary duty of loyalty to the insured. See

Model Rules of Professional Conduct R. 5.4(c) (A lawyer shall not permit a person who recommends, employs, or pays the lawyer to render legal services for another to direct or regulate the lawyer's professional judgment in rendering such legal services.)

California has addressed these potential conflicts inherent in the tripartite relationship through statute, requiring the insurance company to provide independent counsel to the insured where the policy imposes a duty to defend and there is a conflict of interest between the insured and the insurance company. California Civil Code § 2860(a) (codifying landmark California decision, *San Diego Federal Credit Union v. Cumis Ins. Society, Inc.*, 162 Cal. App. 3d 358 (1984)). While the statute grants the insured the right to select independent counsel, it also limits the rates that independent counsel may charge and mandates that, where the policy is silent regarding settlement of attorney fee disputes, attorney fee disputes shall be resolved by final and binding arbitration by a single neutral arbitrator selected by the parties to the dispute. Section § 2860 limits attorney fees for independent counsel to the rates which are actually paid by the insurer to attorneys retained by it in the ordinary course of business in the defense of similar actions in the community where the claim is being defended.

II. Long v. Century Indemnity Company n1

Liability insurer INA agreed to defend its insured, Harris, under a reservation of rights when Harris was sued by the California Department of Toxic Substances Control in a large hazardous waste cleanup action. INA asked attorney Long to defend its insured, as Long had previously represented Harris in another matter. Long and INA could not agree on an hourly rate for Long's services, as INA believed that Long was subject to the rate limits of California Civil Code § 2860(c). Long agreed to undertake the representation at the restricted hourly rate, but reserved the right to seek his normal hourly rate from INA later. Long only represented Harris in the underlying action and INA did not have an attorney representing its interests.

The case was settled as to Harris in July 2002. In July 2005, Long sought the additional fees from INA, demanding the difference between his standard hourly rate and the amount paid under the rate cap of section 2860, and demanding that INA submit to arbitration on the rate issue. INA refused both the payment and arbitration demands. Long filed a lawsuit against INA in February 2006. The trial court sustained INA's demurrer, deciding that it did not have jurisdiction to hear the case under section 2860(c), as Long's claim was essentially an attorney fee dispute.

Long argued that because INA was not represented in the underlying case there was no conflict or potential conflict that would trigger section 2860, and the fee limits should not apply. Long's argument was based on the language of section 2860(b), which states that a conflict of interest may arise when an insurer reserves its rights on a given issue and the outcome of that coverage can be controlled by counsel *first retained by the insurer for the defense of the claim*. (emphasis added). This language, Long argued, suggests that the duty to provide independent counsel to an insured will not arise unless the insurance company retains its own counsel.

The appellate court disagreed with Long and affirmed the trial court's decision, holding that the election of an insurance company not to retain counsel to protect its own interest does not obviate the need to provide *Cumis* counsel if a conflict or potential conflict exists. Under section 2860, It is not the presence of the insurer-selected attorney that creates the conflict, but rather, the existence of the conflict or potential conflict creates the need for independent' or *Cumis* counsel--an attorney who owes his allegiance solely to the insured. Rather, the Long court held, a potential conflict exists because the interests of the insurer and its insured diverge, thereby precluding the use of counsel (absent a waiver by the insured) who purports to jointly represent the interests of both the insurer and insured.

In so holding, the court recognized the ethical dilemmas that arise when a conflict of interest between insurer and insured arises in third-party litigation and counsel beholden to the insurer, if retained, might be faced with divided, but unequal loyalties. Consistent with the Model Rules of Professional Conduct, the *Long* court identified the animating principle of the [*Long*] decision . . . is protecting the insured.

III. Implications

Both insurance companies and defense counsel should be aware of the potential ethical issues of the tripartite relationship. Attorneys assuming defense of an insured should be aware that the fact that an insurance company's interests are not represented in the lawsuit does not negate a conflict of interest created by the adverse interests of the insurance company and the insured. The inquiry in this situation is whether the divergent interests of the insurer and its insured would preclude an attorney from representing the interests of both insurer and insured under section 2860. If such a conflict would exist, then courts will apply the attorney fee limits, arbitration requirement, and other requirements of section 2860.

ABOUT THE AUTHOR(S):

Maren Holmboe is an associate in the Portland office of Bullivant Houser Bailey. She focuses her practice on analysis and litigation of insurance coverage issues. She advises clients in first and third party insurance coverage disputes and represents clients in coverage litigation in state and federal court.

About Bullivant Houser Bailey PC.

Bullivant Houser Bailey PC is a business and litigation law firm with approximately 155 attorneys and six offices on the West Coast. The firm is headquartered in Portland, Oregon and maintains offices in Sacramento and San Francisco, California; Seattle and Vancouver, Washington; and Las Vegas, Nevada. In 2008, Multicultural Law magazine named Bullivant a Top 100 law firm for workplace diversity. Please visit bullivant.com to learn more about Bullivant Houser Bailey and its Insurance Industry Services Group.

Changes Under the Mental Health Parity and Addiction Equity Act of 2008

2008 Emerging Issues 3067

Ending Insurance Discrimination: The Mental Health Parity and Addiction Equity Act of 2008

By Publishers Editorial Staff 2008

November 4, 2008

SUMMARY: Congresss passage of the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 significantly amended the federal mental health parity requirements. This Emerging Issues Analysis discusses the changes under the Act and the possible preemption of portions of state mental health parity laws when the Act takes effect.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: Introduction

Health care plans once offered mental health benefits under the same terms as medical and surgical benefits, but due to the rising cost of health insurance in the 1970s and 1980s, many plans cut mental health benefits because the cost of coverage was high while the number of plan participants using such benefits was low. *See* Dana L. Kaplan, *Can Legislation Alone Solve America's Mental Health Dilemma? Current State Legislative Schemes Cannot Achieve Mental Health Parity*, 8 *Quinnipiac Health L.J.* 325, 328 (2005). By the 1990s, health care plans that provided mental health benefits offered coverage that was far more restrictive than coverage for other medical benefits. *Id.* at 329. Congress responded by enacting the Mental Health Parity Act of 1996 (1996 Act), 104 *P.L.* 204, § 702, which added parity provisions to the Employee Retirement Income Security Act (ERISA), 29 *USCS* § 1185a, and the Public Health Service Act, 42 *USCS* § 300gg-5, that prohibited health plans from capping annual or lifetime benefits for mental health coverage at lower amounts than annual or lifetime benefits for medical and surgical coverage.

However, the 1996 Act had little overall effect in achieving parity as health care plans continued to require higher out-of-pocket payments or placed additional treatment limits on mental health services over those provided for medical and surgical benefits. *See* Patrick J. Kennedy, *Why We Must End Insurance Discrimination Against Mental Health Care*, 41 *Harv. J. on Legis.* 363, 366 (Summer 2004). For several years, members of Congress worked to craft legislation that would close these loopholes. The Senate passed the Mental Health Parity Act of 2007, 2007 *S.* 558, and the House passed the Paul Wellstone Mental Health and Addiction Equity Act, 2008 *H.R.* 1424. Once the House and the Senate reached an agreement over the differing terms in each Act and reached an agreement on funding for the legislation, the Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 was enacted

as §§ 511 and 512 of the Emergency Economic Stabilization Act of 2008, *110 P.L. 343*, on October 3, 2008. News reports have suggested that the parity legislation was added to the Financial Bailout Bill because of its bipartisan support in an effort to get the Stabilization Act passed.

The legislation sets a new federal floor for mental health parity requirements of plans covering employers of 50 or more employees. This will have an impact on state parity legislation if a state has no parity laws or the requirements of their laws are less strict than the new statute. This article will discuss the new parity requirements and the areas in which state law may be preempted by the new legislation.

Discussion

I. Amendments to the Mental Health Parity Provisions of ERISA, the Public Health Service Act, and the Internal Revenue Code

A. Expansion of Definition

The Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (Act), *110 P.L. 343*, builds upon the 1996 Act and applies to group health plans that cover more than 50 employees. Sections 512(a), (b), and (c) of the Act amend the mental health parity provisions of § 712 of the Employee Retirement Income Security Act, 29 *USCS* § 1185a, § 2705 of the Public Health Service Act, 42 *USCS* § 300gg-5, and § 9812 of the Internal Revenue Code, 26 *USCS* § 9812. The most significant amendment to these sections is that parity is now extended to substance use disorder benefits. It is important to note, however, that a group health care plan is not required to provide mental health or substance use disorder benefit coverage. This Act only provides that if a plan offers such coverage, it must be in parity with the medical and surgical benefits the plan offers.

B. Financial Requirements and Treatment Limitations

Under the Act, parity has now been extended to financial requirements, such as deductibles, copays, coinsurance, and out-of-pocket expenses as well as treatment limitations, such as frequency of treatment, number of visits, and other limitations. What this means is that the rules for financial requirements and treatment limitations must be the same for mental health or substance use disorder benefits as they are for medical and surgical benefits. The Act also extends parity to out-of-network coverage, requiring a plan that offers out-of-network medical and surgical benefits to provide out-of-network mental health and substance use disorder benefits as well.

C. Disclosure

The Act amends the mental health parity provisions of ERISA, the Public Health Service Act, and the Internal Revenue Code to provide that a group health plan that offers mental health or substance use disorder benefits must disclose the medically necessary criteria for such coverage to plan participants and beneficiaries upon request. The Act also requires a plan to disclose the reasons for the denial of benefits to plan participants or beneficiaries upon request.

D. Cost Exemption

The Act provides an exemption from the mental health parity requirements if a group health plan can prove that it has experienced an increase in its total costs due to parity. For the first year of the Acts implementation, the increase must be more than two percent. For every year after, the increase in total costs is one percent. However, a plan must implement the federal parity requirements for at least six months before it seeks the cost exemption. The exemption will only be extended to a plan for one plan year. An employer has the option of continuing to provide mental health and substance use disorder benefits regardless of the cost increase.

In seeking the exemption, a qualified actuary must make a determination as to the increases in actual costs under the plan in a written report. The plan must promptly notify the Secretary of Labor (if is self-funded) or the Secretary of Health and Human Services (if it is fully insured), the appropriate state agencies, and plan participants and beneficiaries if the plan seeks an exemption. Further, notification to the Secretary of Labor or the Secretary of Health and Human Services must include a description of the number of covered lives under the plan as well as the actual costs of coverage for which the plan is seeking the exemption. The Secretary of Labor, the Secretary of Health and Human Services, or a state agency that has been notified of the exemption may audit the plans books and records, including actuarial reports, to determine that the plan was complying with the Act when it sought the exemption.

E. Enforcement

Pursuant to § 512(d) of the Act, the Secretary of Labor, the Secretary of Health and Human Services, and the Secretary of the Treasury must promulgate regulations to carry out § 512(a), (b), and (c) respectively within one year of the date of Acts enactment. Section 512(f) of the Act requires that the Secretaries coordinate their policies with respect to the enforcement of the mental health parity requirements to ensure that the requirements of the Act are given the same effect with respect to each Secretarys rulings, regulations, and interpretations, to avoid duplication of efforts, and to assign priorities in enforcement. The agencies that will likely issue the regulations and be tasked with the coordination effort are the Employee Benefits Security Administration of the Department of Labor, the Substance Abuse and Mental Health Services Administration of the Department of Health and Human Services, and the Internal Revenue Service of the Department of the Treasury. Because of the impact the regulations could have on the interpretation of the Act, it will be important for practitioners to be aware of when these regulations are adopted and take effect.

F. Effective Date

Section 512(e) strikes the sunset provisions of the mental health parity requirements of ERISA, the Public Health Service Act, and the Internal Revenue Code and makes the mental health parity requirements permanent as of January 1, 2009. The Act will apply to group health plans beginning in the first plan coverage year that is one year after the date of enactment of the Act. In other words, the effective date for compliance with the Act for most plans will be January 1, 2010. However, group health plans maintained under collective bargaining agreements that were ratified before the Act took effect are not subject to the terms of the Act until the collective bargaining agreement terminates.

G. Reports

Under § 512(a)(6), the Secretary of Labor is required to submit a report on compliance with the Act to Congress in 2012 and every two years after that. Subsection (a)(6) also requires the Secretary of Labor, in cooperation with the Secretaries of Health and Human Services and the Treasury, to provide information for group health plans, their participants and beneficiaries, state agencies and the National Association of Insurance Commissioner about the requirements of the Act. Pursuant to § 512(h), the General Accounting Office (GAO) is to provide Congress with a report on the impact that the Act has had on mental health and substance use disorder coverage within three years of the Acts passage. The GAOs report shall include which diagnoses are the most commonly covered and excluded, specific rates for coverage of mental health conditions and substance use disorders, and the impact of covering and/or excluding specific diagnoses on plan participants health, health care coverage, and the costs of treatment.

II. Preemption of State Parity Laws

The Act only applies to group health plans for employers of 50 or more people. Any state law governing health plans for employers with less than 50 employees will remain unchanged. Further, any state law that provides stricter parity mandates than those included in the Act will not be preempted. For example, Vermonts recent parity law, 2008 Vt. ALS 142, requires that a health plan provide mental health coverage and includes a provision that forbids a health

plan from excluding from its network or list of authorized providers any licensed mental health or substance use disorder treatment provider within its geographic coverage area if the provider meets the terms and conditions for participation in the plan.

Because of the Act's new requirements regarding substance use disorders, a state provision such as Tex. Ins. Code 1355.006, which provides that a group health benefit plan does not have to provide coverage for addiction to a controlled substance or mental illness that results from use of a controlled substance, will be preempted. While the Act does not require a group health plan to offer mental health benefits, if it does, it will now be required to offer substance use disorder benefits. Montana's law, Mont. Code Anno., § 33-22-703, which allows for caps on the number of treatment days for mental health benefits and the amount of annual and lifetime benefits for substance use disorders, will be preempted. Any state law that allows out-of-network coverage for medical and surgical treatment but restricts or prohibits out-of-network coverage for mental health or substance use disorder treatments will be preempted. Further, any state law that has different requirements for or provides a permanent cost exemption will be preempted by the Act. Because the provisions of the Act become effective on January 1, 2009, it will be important for practitioners to examine how their state parity laws vary from the Act and to be aware that provisions might be preempted.

Conclusion

Although the 1996 Act was a good beginning, Congress has recognized that it did not go far enough in ending insurance discrimination for those suffering from mental illness, and it has attempted to remedy inequity in the financial requirements and treatment limitations for mental health benefits. The new Act has also expanded parity requirements by including substance use disorders in its definitions. The Act attempts to tighten up the rules regarding a cost exemption for group health plans. Because the new Act imposes so many additional requirements on mental health parity rules, it is likely that portions of several states' parity laws will be preempted. It will be necessary for practitioners to understand the changes imposed by the Act and how it may change state parity provisions.

ARTICLE: ARTICLE: Introduction

Nanotechnology is being hailed as revolutionary and being called the next plastic because of its potential widespread use. Nanotechnology is the science of working with applications at a molecular level by designing, producing, and using structures and devices having one or more dimensions of less than 100 nanometers. A nanometer is one billionth of a meter and invisible to the naked eye. A common example used to offer perspective is that the width of a human hair is approximately 80,000 nanometers. Nanotechnology creates nanoparticles, which are particles with at least one dimension less than 100 nanometers. Nanoparticles are already being incorporated into a wide range of products to enhance their performance. Nanoparticles are currently used in electronic, biomedical, pharmaceutical, and cosmetic applications. A project set up by the Woodrow Wilson International Centre for Scholars on Emerging Nanotechnologies currently has 580 products in its database, which represents an increase of 175% since the database was released in March 2006. Lloyd's, *Nanotechnology Recent Developments, Risks, and Opportunities*, (Dec. 2007), p. 19, (available at http://www.lloyds.com/Lloyds_Market/Tools_and_reference/Emerging_risks.htm). The products can range from items such as paints, sunscreens, and moisturizers to tennis balls, burn and wound dressings, stain-resistant clothing, mattresses, and ink. <http://www.nano.gov/html/facts/appsprod.html>. The possible uses and applications for nanoparticles appear to be limitless and offer great promise. While the Environmental Protection Agency, the Food and Drug Administration, and the Occupational Health and Safety Administration can potentially control the use of nanoparticles under their existing statutory authority, there are currently no statutes aimed at specifically governing the use of nanoparticles.

However, scientists have started to voice concern about nanoparticles and their effect on the human body. Because of their size, nanoparticles can be ingested, inhaled, or absorbed through the skin. They can travel throughout the body and possibly cause injury. Because of their widespread dissemination, there is also concern that nanoparticles could potentially pollute air or water, ultimately contaminating groundwater and soil. Although nanoparticles have proven beneficial in removing toxic metals and other unwanted chemicals from the environment, using them in this manner

could be "solving one problem and replacing it with another, namely the unknown effect of placing large amounts of nanoparticles in the environment." Lloyd's, *Nanotechnology Recent Developments, Risks, and Opportunities*, (Dec. 2007), p. 17, (available at http://www.lloyds.com/Lloyds_Market/Tools_and_reference/Emerging_risks.htm). At this point in time, not much is known about the toxicity of nanoparticles. However, the insurance industry has the fallout from one of the former "wonder" products, asbestos, on its mind and is concerned about the possibility that nanoparticles might spawn the next mass toxic tort litigation. In an effort to avoid the asbestos debacle, it is important for insurers to follow the development of this technology and develop their own strategies that encourage the growth of this technology without risking the widespread and ongoing litigation that resulted from the use of asbestos.

Are Nanoparticles the Next Asbestos?

Comparison of Nanoparticles and Asbestos

Not so long ago, it was asbestos that was being hailed as the miracle material that was going to revolutionize industry. Asbestos was used in a wide range of products because of its fire resistant properties and its durability. However, it was later discovered that while asbestos was not toxic itself, the size and form of its fibers, when inhaled, caused grave damage to lung tissue. SwissRe, *Nanotechnology, Small Matter, Many Unknowns*, (2003) p. 41 (available at <http://www.swissre.com/>). Asbestos is a carcinogen that has a typical latency period of 20 to 40 years from exposure. Environmental Law Practice Guide § 36.02. It can cause several forms of lung cancer as well as asbestosis, a fibrosis of the lung and pleural tissues, which is a chronic and progressive disease. *Id.* One particular cancer risk is mesothelioma, which can result from a minimal exposure to asbestos and is fatal. Thus, it was not until asbestos was in widespread usage that its dangers became clear.

In an effort to avoid that scenario, scientists have been studying the toxicity of nanoparticles. Unlike asbestos, nanoparticle is a generic term that encompasses a myriad of different substances. Thus, research must be done on each type of nanoparticle because they are comprised of different chemicals and they interact in different ways. Further, initial research has shown that some nanoparticles are acutely toxic compared to larger particles that are composed of the same material, meaning that like asbestos, the material itself may not be toxic, but the size and composition of the material could cause a problem. Lloyd's, *Nanotechnology Recent Developments, Risks, and Opportunities*, (Dec. 2007), p. 13, (available at http://www.lloyds.com/Lloyds_Market/Tools_and_reference/Emerging_risks.htm). Scientists have currently identified three types of nanoparticles that they think might be harmful to the human body, one of which is the carbon nanotube. Karen Schmidt, *The Great Nanotech Gamble*, New Scientist, July 14, 2007, p. 38. The carbon nanotube is similar in form and size to asbestos fibers, and thus, there is concern that it will have a similar effect on the human lung if inhaled. Much like asbestos, the potential danger posed by nanoparticles is believed to be chronic, rather than acute. SwissRe, *Nanotechnology, Small Matter, Many Unknowns*, (2003) p. 43 (available at <http://www.swissre.com/>). If one or more nanoparticles prove hazardous if ingested, inhaled or absorbed through the skin, it could be some time before any harm is discovered. An additional concern is that nanoparticles have been shown to cross the blood-brain barrier, which protects the brain against toxic contamination. Guy Carpenter, *Nanotechnology--The Plastics of the 21st Century?*, pg. 8 (July 2006) (available at <http://www.guycarp.com/portal/>). While this can be an advantage for medicine, allowing the development of drugs designed to enter the brain for treatment, unwanted nanoparticles can also cross that barrier and accumulate in the brain, potentially causing harm. Lloyd's, *Nanotechnology Recent Developments, Risks, and Opportunities*, (Dec. 2007), p. 13, (available at http://www.lloyds.com/Lloyds_Market/Tools_and_reference/Emerging_risks.htm). Because nanoparticles are being increasingly used in products, the potential for a series of claims and losses like those that occurred with asbestos is a possibility insurers could be facing.

Asbestos Litigation

Since asbestos litigation began in the late 1960s, approximately 730,000 claims have been filed and an estimated 1

to 3 million more could be filed before the litigation ends. Environmental Law Practice Guide § 36.01. Companies have paid approximately \$70 billion in claims thus far. *Id.* The floodgates of asbestos litigation were opened with the decision of the United States Court of Appeals for the Fifth Circuit in *Borel v. Fibreboard Paper Products Corp.*, 493 F.2d 1076 (5th Cir. 1973), which held that manufacturers of products containing asbestos could be held strictly liable for failure to provide a warning to people who might be injured by their products. The manufacturers named as defendants were found jointly and severally liable for the plaintiff's injuries.

The litigation in the 1970s was confined to approximately 300 companies that processed asbestos or made heavy use of it. Environmental Law Practice Guide § 36.01. However, in the 1980s, filings increased dramatically. As a result, counsel as well as the courts began to develop systems in order to manage the huge volume of claims, and parties routinely entered into administrative settlements. In 1991, several plaintiffs and defendants attempted a class certification of a mass settlement, which the United States Supreme Court rejected in *Amchem Prods. v. Windsor*, 521 U.S. 591 (1997). The Court held that a shared interest in the settlement and exposure to asbestos were not sufficient to satisfy the predominance requirement of *Fed. R. Civ. P. 23(b)(3)*. *Amchem Prods. v. Windsor*, 521 U.S. 591, 623 (1997). Further, the Court held that the proposed class failed to satisfy the commonality requirement because of variations in exposure periods, variations in the degree and type of physical injuries, and variations in medical histories and other health factors. *Amchem Prods. v. Windsor*, 521 U.S. 591, 623-624 (1997). After the *Amchem* decision, another wave of asbestos claims hit. Initially, claims involving latent injuries from asbestos were filed by employees who worked for asbestos manufacturers and were exposed in the workplace, but by the 1990s, claimants included any individuals who had any exposure to asbestos. Individuals who had little or no physical impairment began to file claims, and over 8,400 companies across all types of industries that did anything remotely related to asbestos or asbestos-containing products were named as defendants. Environmental Law Practice Guide § 36.01. As one commentator has said, "In the five years following *Amchem*, the asbestos litigation system nearly collapsed." Patrick Hanlon & Anne Smetak, *Asbestos Changes*, New York University Annual Survey of American Law (2007), 62 *N.Y.U. Ann. Surv. Am. L.* 525, 547. However, more than 30 years after *Borel* opened the floodgates, reform through state legislatures and state courts appear to be slowing the filings and applying sensible rules to asbestos filings. See 20-23 Mealey's Litig. Rep. Asb. 19 (2006).

The insurance industry responded to the asbestos crisis by creating an asbestos exclusion in commercial general liability (CGL) policies. These exclusions started to appear in the CGL policies in the mid-1980s to the mid-1990s. 2-6 Mealey's Litig. Rep. Mold 35 (2002). However, most claimants were exposed to asbestos far earlier than the exclusions were written into the policies, and most of the policies in effect were "occurrence" policies that protected the policyholder from lawsuits for bodily injury or property damage as long as the policy was in effect when the injury occurred. Because of this and the latent nature of the injury, if a claim was filed in a jurisdiction that recognized the exposure rule, the injury-in-fact rule or the multiple trigger approach, an insurer was required to respond to the claim. The exposure rule was defined in *Insurance Co. of N. Am. v. Forty-Eight Insulations*, 633 F.2d 1212 (6th Cir. 1980), which held that an initial exposure to asbestos fibers in any given year triggered coverage. Each insurer was liable for its pro rata share of the injury. Under the injury-in-fact inquiry, the injury did not have to have manifested, but it did have to exist. *Abex Corp. v. Maryland Casualty Co.*, 790 F.2d 119, 124-125 (D.C. Cir. 1986). The trier of fact did not have to pinpoint the exact date of injury, but there had to be reasonably reliable evidence that the injury more likely than not occurred during the coverage period. *Abex Corp. v. Maryland Casualty Co.*, 790 F.2d 119, 128 (D.C. Cir. 1986). The multiple trigger approach was adopted by *Keene Corp. v. Insurance Co. of N. Am.*, 667 F.2d 1034 (D.C. Cir. 1981), which held that coverage under a CGL policy was triggered by either inhalation exposure to asbestos, exposure between the initial exposure and the manifestation of symptoms, or manifestation of the disease. Thus, the development of the exclusion was too little, too late to protect insurers from thousands of claims due to asbestos exposure.

What Can Insurers Do?

While the National Nanotechnology Initiative has been set up to coordinate the efforts of 26 federal government agencies in research and education concerning nanotechnology, there is currently a "regulatory vacuum" in the United States for governing the use of nanotechnology. See <http://www.nano.gov/>. Thus, a substantial burden has been placed on the private insurance market to underwrite the risk of nanotechnology. Insurers have an important role to play in

helping corporations manage the risks in this emerging technology. However, insurers need to be able to assess the probability and severity of potential losses in order to calculate a premium that justifies the risks being taken. Insurers need to develop a strategy of working with manufacturers, the government, scientists and regulatory agencies to be able to identify and quantify nanotechnology's risks. Insurers need to avoid learning the lessons of the risks of nanotechnology through long-term experience, such as what happened with asbestos. Because as with asbestos, there have been indications that certain nanoparticles may only be recognized as harmful after a considerable time, insurers must know "about the application areas and the dissemination of potentially suspect nanoproducts as well as about the precautionary and loss-prevention measures being taken." SwissRe, *Nanotechnology, Small Matter, Many Unknowns*, (2003) p. 44 (available at <http://www.swissre.com/>).

In the absence of regulation, private industry is working to develop best practices of their own. For example, DuPont and Environmental Defense, an advocacy group, teamed up to create a framework that "covers appropriate risk management in the process of developing a new nano product from initial conception through sales to eventual recycling and disposal." Lloyd's, *Nanotechnology Recent Developments, Risks, and Opportunities*, (Dec. 2007), p. 13, (available at http://www.lloyds.com/Lloyds_Market/Tools_and_reference/Emerging_risks.htm). The framework recommends that companies involved in the use of nanotechnology have experts on their teams that cover the fields of risk management, toxicology, industrial hygiene, and environmental issues. *Id.*

One thing the asbestos debacle has shown is that workers creating and working with nanoparticles are at the greatest risk if a nanoparticle turns out to be harmful to human health. However, if a decision is made like that in *Borel*, that a manufacturer is strictly liable for the injuries caused by a product using a toxic nanoparticle because it failed to warn of the dangers, multiple lines of insurance could be impacted, including General Liability, Product Liability, and Commercial Umbrella. GenRe, *Nanotechnology--Will Minute Items Have a Huge Impact on the P/C Industry?* *Hazardous Times*, p. 5, (Sept. 2004) (available at <http://www.genre.com/>). It is too soon to write exclusions for nanoparticles because the risks to the general public are unknown. But more importantly, the uses of nanoparticles encompass a wide range of applications "without a uniform description and with very different risk characteristics." Guy Carpenter, *Nanotechnology--The Plastics of the 21st Century?*, p. 11 (July 2006) (available at <http://www.guycarp.com/portal/>). Further, nanoparticles are often the initial building blocks, deep-seated in the manufacturing process and are used as binders or coatings within products, rather than stand-alone products themselves. David M. Brenner, *Thoughts in the Night: Nanoparticles=Asbestos? Greenhouse Gas=Superfund?* *Mealey's Global Insurance Forum*, Nov. 15, 2007, at p. 18. Thus, not only would creating an exclusion be incredibly difficult at this stage, but imposing such a restriction on corporate insurance clients as more and more manufacturers find uses for nanoparticles is an unattractive option without a clear and obvious necessity. *Id.* Such an exclusion would also have a serious impact on small, specialized nanotech firms and could impede the progress of this developing technology.

However, there are some steps insurers can currently take to minimize their risks. Most nanotechnology risks are currently written on occurrence policies. *Id.* Many reinsurers are suggesting that nanotechnology risks be switched over to claims-made coverage. Claims-made coverage protects against covered lawsuits only if the policy was in effect when the injury occurred and the policy is still in effect when the claim is made. Thus, it provides protection from latent injury cases, such as the thousands of asbestos claims that arose under occurrence coverage. Switching to claims-made coverage would also help minimize the risk because the "stacking of policy limits" over successive years could be avoided through loss definitions and exact descriptions under which a loss may be said to have occurred. SwissRe, *Nanotechnology, Small Matter, Many Unknowns*, (2003) p. 45 (available at <http://www.swissre.com/>). Further, coverage should be written in such a way as to avoid claims made by the "worried well." In other words, individuals who might have been exposed to a potentially harmful nanoparticle or who show indications of exposure but have no symptoms of disease.

There is currently some question as to whether the standard pollution exclusions in commercial liability policies would apply to nanotechnology. However, such a defense to something akin to the asbestos litigation claims seems to be unlikely to be successful. GenRe, *Nanotechnology--Will Minute Items Have a Huge Impact on the P/C Industry?* *Hazardous Times*, p. 5, (Sept. 2004) (available at <http://www.genre.com/>).

What the Future Could Hold

If insurers begin to believe that nanotechnology coverage carries more risk than they initially thought, they could begin to withdraw from the market. If that happens, small, specialized nanotech firms would likely feel the brunt. There is the possibility that the government could then step in to provide solutions to the lack of available insurance to the industry. Guy Carpenter, *Nanotechnology--The Plastics of the 21st Century?*, p. 12 (July 2006) (available at <http://www.guycarp.com/portal/>). State-run pools could be created to "assume the most volatile aspects of writing nanotechnology-related business by mutualizing and balancing the funding of exposures across all constituencies and thus enabling insurers to provide a lower-cost product to clients." *Id.* The report from Guy Carpenter proposes that if the risks remain unknown, "government may have to act as a backstop to limit the liability of those industries that design or use nanotechnology-driven products or processes." *Id.* The report also suggests that to deal with the unknown risks, insurers may establish a no-fault system which would fund the first layer of claims, and any claims over that amount would be covered by the federal government. *Id.* One commentator has even proposed a "Nanotechnology Insurance Fund" (NIF) that would provide compensation to workers or consumers who can prove injury from nanoparticles and would provide any required environmental cleanup costs. George J. Mannina, Jr., *Nanotechnology: Don't Delay Liability Risk Assessments and Solutions*, Legal Backgrounder, Dec. 8, 2006. The NIF would be funded through consumer surcharges, a fee assessed against manufacturers of goods using nanoparticles, and possibly, congressional appropriations. *Id.*

Conclusion

Given that the uses of nanotechnology could be limitless and incorporated into all manner of our daily lives along with the potential risk of latent injury from a nanoparticle, a wait-and-see approach on behalf of the insurance industry is not advisable. While it is too early to write specific coverages concerning nanotechnology, risks can be managed in the short-term by switching nanotechnology coverage over to claims-made coverage. In order to manage risks in the long-term, insurers should work together with manufacturers, government, the scientific community and regulatory agencies to create strategies for product safety and crisis management should the use of nanoparticles pose an asbestos-like threat. By staying on top of this rapidly advancing technology and ensuring that policyholders are engaging in best practices and working to reduce their risks as dangers become known, insurers can try to adapt coverage and manage risks. If the risks become too much for the industry to bear, insurers can work with the state and federal governments to create compensation plans that will allow the insurance industry to continue to provide affordable coverage to policyholders working with nanotechnology.

Legal Developments in the Life Insurance Settlement Industry

2008 Emerging Issues 2955

Legal Developments in the Life Insurance Settlement Industry

By Daniel W. Gerber and Jeffrey L. Kingsley

September 26, 2008

SUMMARY: Selling the proceeds of one's own life insurance policy to another may appear to be outside the scope of traditional insurance practices, but recently a growing number of policyholders have attempted to find additional sources of income as medical costs continue to rise. Courts, state regulators and even insurance companies themselves have started to reexamine traditional practices to address the growing demands of policyholders in this area.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: THE RAPID GROWTH OF THE LIFE INSURANCE SETTLEMENT INDUSTRY

Any analysis of the growth of life insurance settlement industry must begin with a brief understanding of the life settlement transaction itself. The transaction usually involves four separate parties: (1) the viator (the insured); (2) the life insurance company; (3) the life settlement company; and (4) the investors. The viator enters into an agreement with the life settlement company where the company purchases the life insurance policy from the viator for less than the expected death benefits. Often, the life settlement company is merely a broker who matches a viator with a group of investors who will purchase the policy. After the viator dies, the investors receive a portion of the death benefits under the policy.

In the 1980s, these types of transactions were attractive to young terminally ill individuals, many of whom had life insurance policies, but because of their illness were unable to work or afford their costly medical treatments [Appleman on Insurance 2d § 178.02[C]]. Given the growing cost of medical care in the United States, the life insurance settlement option has expanded beyond the terminally ill and is now being marketed to chronically ill individuals, namely senior citizens, who need the additional revenue stream to address the rising cost of medical care.

To address this shift in the industry, the National Association of Insurance Commissioners (NAIC) recently modified their definition of a life settlement contract. The NAIC now defines a life settlement contract as any agreement establishing the terms under which compensation or anything of value will be paid, which compensation or value is less than the expected death benefit of the insurance policy or certificate, in return for the viators assignment, transfer, sale, devise, or bequest of the death benefit or ownership of any portion of the insurance policy or certificate of insurance [National Association of Insurance Commissioners, Viatical Settlements Model Act § 2L (2005)].

As the life insurance settlement market continues to grow, however, traditional principles in both the insurance and securities industries are being reexamined.

THE INSURABLE INTEREST DILEMMA

One issue that regularly faces practitioners in this field is whether the investor has an insurable interest in the life insurance policy. A fundamental requirement for all types of insurance, especially life insurance, is that the person or entity who purchases a policy must have a insurable interest in the subject of the insurance at the time of purchase. Without an insurable interest, the policy is declared void thereby denying an investor any claim to the proceeds of the policy.

Typically, an insurable interest is established when a person or party has a close relationship to the insured. In the life insurance context, states have typically defined that relationship between the parties as an association by blood or law engendered by love and affection or a lawful and substantial economic interest in the life of the insured [*see, e.g., N.Y. Ins. Law § 3205(a)(1)*].

Unlike the traditional insurable interest relationship, however, the life insurance settlement industry attempts to establish an insurable interest based solely on an arms length transaction. In doing so, courts and regulators across the country are now struggling to redefine the term insurable interest to address this development.

Expanding the Insurable Interest Definition: Corporate-Owned Life Insurance Policies. One of the most common areas in which courts have examined the insurable interest issue is in the context of corporate-owned life insurance (COLI) policies. Under a COLI program, a company purchases life insurance policies on the lives of its employees, ranging from the executive management group to the rank-and-file employees. The issue courts face is whether companies, who typically name themselves as beneficiaries, have an insurable interest in the life insurance policies of their employees.

Although the courts are not entirely in agreement on this issue, the cases, taken as a whole, have established that employers in certain circumstances do have an economic interest in the insured employees to create an insurable interest. Factors considered in finding a corporate insurable interest in an employee are: (1) whether the employer actively informed the employee of the existence of the policy; (2) whether the employee was a key employee with special importance; (3) whether the state in which the policy was issued has defined the term insurable interest; and, (4) whether the human resources department can establish a policy that views money spent to attract and keep employees as a general cost of doing business [*Tillman v. Camelot Music, Inc., 408 F.3d 1300 (10th Cir. 2005)*; *Lewis v. Wal-Mart Stores, 2005 U.S. Dist. LEXIS 34461 (N.D. Okla. 2005)*; *Mayo v. Hartford Life Ins. Co., 354 F.3d 400 (5th Cir. 2004)*].

Rise of the Secondary Market of the Life Settlement Industry. Though courts seem inclined to entertain expanding the scope of insurable interest to include certain employer-employee relationships, a practitioner must be aware that this issue remains a constant concern in the life insurance settlement market where there is no recognizable relationship between the parties prior to the transaction. As such, courts are required to conduct a detailed analysis of the transaction in order to determine whether the investor has an insurable interest. One potential scenario which highlights the complexity of the transaction is when the investor purchases a life insurance policy with loaned funds from a financial institution with the intent to resell the policy. Recently, one states insurance department office declared that such a transaction violated its insurable interest provision by stating the transaction is merely a speculative investment for the ultimate benefit of a disinterested third party [2005 NY Insurance GC Opinions LEXIS 280]. Therefore, the issue of insurable interest remains a concern in the life insurance settlement industry.

Practice Insight: In order to protect and maintain an insurable interest through the life of an insurance policy, a practitioner representing various parties in the secondary market should consider the following:

- Analyze whether the investor or viatical settlement company has financing behind the transaction at issue;
- Seek disclosure of all parties to the transaction, including those who may have an interest at a later time;
- Analyze who is purchasing the policy and for what purpose (i.e., as an investment, for resale, etc.);
- If there is a lender involved in the transaction, analyze (a) whether the lender takes ownership of the policy at any point; and (b) whether the lender has any additional agreements in place transferring ownership of a policy to another party at a certain time;
- Analyze whether there is a requirement at the time of purchase that the investor must sell the policy to satisfy some financing requirements; and
- Analyze whether the life insurance settlement policy has been purchased before.

If the transaction is more complicated than it first appeared, a practitioner should carefully examine recent case law in the applicable jurisdiction to advise the client on how to proceed, if at all.

BREACH IN SECURITY: DOES A LIFE INSURANCE SETTLEMENT CONTRACT QUALIFY AS A SECURITY?

The life insurance settlement market is not guided exclusively by the insurance industry. Given the investment nature of the transaction, security regulations must also be considered. Courts have started to analyze whether a life insurance settlement can be defined as a security and thus be subject to the Securities Act of 1933 and the Securities Exchange Act of 1934. If such an arrangement is deemed a security, then the sellers of these policies are required to disclose certain information regarding the risks and performances of these so-called investments in order that potential buyers have the knowledge to make an informed decision prior to purchase [see Anna D. Halechko, *Viatical Settlements: The Need for Regulation to Preserve the Benefit While Protecting the Ill and Elderly From Fraud*, 42 Duq. L. Rev. 803 (2004)]. Unfortunately, there has been no definitive decision on this issue forcing practitioners to evaluate each transaction individually.

The Life Partners Decision: A Step Away from Regulation. The highest federal court to consider this issue is the United States Court of Appeals for the District of Columbia. In the case of *S.E.C. v. Life Partners, Inc.* [87 F.3d 536 (D.C. Cir. 1996)], the viatical settlement company, Life Partners, marketed the potential profits of purchasing life insurance policies to a variety of investors. Despite the obvious investment overtones in this type of transaction, the court found that this type of transaction did not qualify as a security because the viatical settlement company performed no essential entrepreneurial services after the purchase of the contract. This ruling had a profound effect on the life insurance settlement industry and has been widely criticized for allowing life insurance settlement transactions to go unregulated.

The States Respond: A Turn Back Towards Security. In the wake of the *Life Partners* decision, a variety of fraudulent practices arose in the life insurance settlement industry. Situations such as viators exaggerating their illnesses in an effort to receive additional benefits and viatical companies defrauding senior citizens concerning the terms of their life insurance policy, became common. [Miriam R. Albert, *The Future Death of Futures: Why Viatical Settlements Must Be Classified As Securities*, 19 Pace L. Rev. 345, 359 (1999)]. To respond to this growing problem, many states took it upon themselves to attempt to regulate the industry. In recent years, several states have determined that life insurance settlement contracts are considered securities under their blue sky laws and thus require additional disclosure [see *Accelerated Benefits Corp. v. Peaslee*, 818 N.E.2d 73 (Ind. Ct. App. 2004); *Poyser v. Flora*, 780 N.E.2d 1191 (Ind. Ct. App. 2003); *Joseph v. Viatica Mgmt. LLC*, 55 P.3d 264, 267 (Colo. Ct. App. 2002); *Siporin v. Carrington*, 200 Ariz. 97 (Ariz. Ct. App. 2001)]. As the United States Supreme Court has yet to consider this issue, the life insurance settlement market continues to be outside the parameters of federal security regulations.

Practice Insight: Given the uncertainty in the law on whether this type of transaction qualifies as a security, a practitioner might consider the following:

- The extent of managerial and entrepreneurial activities after the investment was purchased;
- Whether investors were asked to identify a desired maturity date; and

- Whether there was a promise of return on the investment [see

New Appleman Insurance Law Practice Guide § 34.09].

THE SECRET DANGER: TAX IMPLICATIONS REGARDING THE LIFE INSURANCE SETTLEMENT INDUSTRY

As with any other transaction, selling a life insurance policy has tax implications. Most senior citizens considering selling their life insurance policies rarely explore this issue before making such a decision.

Under a traditional life insurance policy, if the policyholder maintained ownership of the policy, all proceeds distributed by reason of the insured's death are excluded from the beneficiary's gross income. The same cannot be said if the life insurance policy is transferred to a third party. Up until 1997, the money received in the transfer was subject to federal income tax as well as state income tax consequences. That changed January 1, 1997, however, when Congress enacted legislation that allowed certain types of viatical settlements, life settlements and accelerated death benefits to be exempt from federal tax implications under certain circumstances [see Appleman on Insurance 2d § 178.02[D]].

To be eligible for the tax relief, a policyholder must be either terminally ill or chronically ill as defined by the statute. To be classified as terminally ill, there must be a reasonable degree of certainty that an individual will die within 24 months [see 26 U.S.C. § 101(g)(4)(A)]. For an individual to be considered chronically ill, the person must be unable to perform (without substantial assistance from another individual) at least two daily living activities for a period of at least 90 days due to a loss of functional capacity [see 26 U.S.C. § 101(g)(4)(B); Appleman on Insurance 2d § 178.02[D]]. As the law is currently written, senior citizens who fail to meet the strict requirements will be subject to adverse tax consequences and must plan accordingly.

The federal law also places requirements on the settlement itself. In order for a viatical settlement to qualify for favored tax treatment, it must demonstrate either: (1) that the life insurance contract was sold to a licensed company in the same state where the policyholder resides; or (2) that the total amount of the transaction has met the guidelines as outlined by the NAIC [see 26 U.S.C. § 101(g)(2); Appleman on Insurance 2d § 178.02[D]].

Practice Insight: A practitioner might want to examine the following:

- Whether the policyholder qualifies as a terminally ill or chronically ill individual under either federal or state law;
- Whether the third party is licensed in the state where the policyholder resides; and
- Whether you can create other arrangements for the policyholder, such as a trust, to shield the policyholder from the tax consequences imposed by the policy's sale.

INSURANCE COMPANIES RESPOND: THE BIRTH OF ACCELERATED DEATH BENEFITS

In order to capture a portion of the life insurance settlement market, insurance companies have begun to modify their life insurance policies to include an accelerated death benefits clause. The accelerated death benefits provision is similar to a viatical settlement in that it allows the policyholder the option of receiving between 25% to nearly 100% of their death benefits while alive [see Life Insurance Market Research International (LIMRA) & American Council of Life Insurance and Accelerated Death Benefits: 1998]. In its earlier forms, accelerated death benefits provisions were allowable to those policyholders who had a life expectancy of less than 12 months or required long-term care [see Life Insurance Market Research International (LIMRA) & American Council of Life Insurance and Accelerated Death Benefits: 1998]. This definition, however, is in the process of being modified to coincide with the markets shift towards the chronically ill policyholder. Some states such as New Jersey and New York are considering amendments to expand the accelerated death benefits definition to include the chronically ill [see 11 N.Y.C.R.R. § 41.2, proposed amendment (2005); N.J. Admin. Code § 11:4-30.3, proposed amendment (2002)].

While the expansion of the accelerated death benefits provision is viewed as a positive development for policyholders, it is a cause of concern for practitioners. A number of states have enacted laws in which they prohibit, in certain circumstances, a life insurance settlement provider from negotiating or entering into a life insurance settlement contract involving a policy that contains an accelerated death benefits provision [see Viatical and Life Settlements; Florida Department of Financial Services issued by the Office of Financial Regulation at www.fldfs.com]. In essence, the industry itself is attempting to minimize the influence of the life insurance settlement market. Despite the rise of accelerated death benefits provisions in life insurance policies, the life settlement market continues to expand and grow.

Practice Insight: A practitioner might want to consider the following if the life insurance policy contains an accelerated death benefit provision:

- Examine if the viatical settlement company can provide benefits that exceed the amount provided for in the accelerated death benefit provision;
- Disclose the viatical settlement companys offer to the life insurance company.

CONCLUSION

Given the unregulated nature of the life insurance settlement market, a policyholder exploring the possibility of selling his or her life insurance policy to a third party faces a multitude of issues. As demonstrated in this overview, there is no simple answer and often it varies on a case by case basis with certain factors such as location and the policyholders health playing major roles. From a practitioners perspective, one needs to be aware of both federal and state regulations together with the changes that occur in legal precedent to adequately inform your client of his or her options.

ABOUT THE AUTHOR(S):

Daniel W. Gerber is a partner of Goldberg Segalla LLP in New York. He maintains an international practice in commercial litigation with a focus on complex insurance coverage disputes and analysis, including reinsurance and excess insurance, as well as mediation and arbitration. He chairs his firms Life, Health, Disability and ERISA practice group and manages its Insurance Coverage practice group. He is an author of the *New Appleman Insurance Law Practice Guide*, as well as *Mealeys Emerging Insurance Disputes*. Mr. Gerber is admitted to the United States Supreme Court, as well as all federal and state courts in New York and Pennsylvania. He argues regularly before the New York Court of Appeals and the U.S. Second Circuit Court of Appeals arguing the seminal case in New York on late notice in insurance law. He has received the Chairperson of the Year Award for his work as Chair of the Insurance Coverage Committee for the New York State Bar Associations Torts, Insurance and Compensation Law Section, and will chair-elect of the almost 4,000 member Torts, Insurance and Compensation Law Section in 2008. In addition, Mr. Gerber is the immediate-past chair of the Membership and Annual Meeting Committees of the Defense Research Institute's (DRI) Life, Health and Disability Committee. Mr. Gerber frequently publishes and lectures nationally on insurance coverage, reinsurance and ERISA issues. He has authored several chapters on discovery in insurance litigation, as well as risk shifting issues. Mr. Gerber is also an active member of the Association of Life Insurance Counsel, the International Claims Association and the International Association of Defense Counsel, as well as the American Bar Associations Life, Health and Disability Committees. Mr. Gerber possesses an AV rating from Martindale Hubbell, a Super Lawyer designation from Law & Politics Magazine, and has been named consecutively by his peers to Business First's Who's Who in Law.

Jeffrey L. Kingsley is an associate with Goldberg Segalla LLP in New York and he maintains a national practice in the areas of insurance, reinsurance coverage and extra-contractual liability litigation, commercial litigation, and bankruptcy and restructuring. He has presented and authored numerous articles in New York ranging from alternatives to litigation as well as life insurance settlement issues.

ARTICLE: Hurricanes in California? No, but in *Northrop Grumman Corp. v. Factory Mutual Ins. Co.*, 2008 U.S. App. LEXIS 17270 (9th Cir.), the Ninth Circuit applies California law to an insurance coverage dispute arising out of Hurricane Katrina. The court finds that a flood exclusion encompasses water driven by wind even when it does not expressly say so. In reaching its decision, the Ninth Circuit also holds that primary and excess policies are to be construed as separate documents.

BACKGROUND

Hurricanes and Flood Exclusions

In the wake of Hurricane Katrina, a number of courts have had occasion to consider whether a storm surge is a flood within the meaning of an insurance policy exclusion. Not surprisingly, those decisions have principally arisen in the jurisdictions directly affected by Katrina. In the most prominent series of opinions to address this issue following Hurricane Katrina, Judge L.T. Senter, sitting in the Southern District of Mississippi, held that damage caused by a storm surge was clearly excluded under a flood exclusion. *See Buente v. Allstate Ins. Co.*, 2006 U.S. Dist. LEXIS 23742 (S.D. Miss.); *Tuepker v. State Farm Fire & Casualty Co.* 2006 U.S. Dist. LEXIS 34710 (S.D. Miss.), *affd* in part, reversed in part by *Tuepker v. State Farm Fire & Casualty Co.*, 2007 U.S. App. LEXIS 25786 (5th Cir.); *Leonard v. Nationwide Mutual Ins. Co.*, 2006 U.S. Dist. LEXIS 60079 (S.D. Miss.). Each of the homeowners policies involved included exclusions for water damage caused by water or flood, whether or not driven by wind.

Interpretation of Excess Policies

While recognizing that insurance policies must be construed in context, California courts have also held that the

interpretation of an excess policy should not depend on the language of the underlying primary policy. In *Smyth v. USAA Property & Casualty Ins. Co.*, 5 Cal.App.4th 1470, 1992 Cal. App. LEXIS 578, the California Court of Appeals rejected the insureds argument that an ambiguity existed in an excess policy because it defined a term differently than the underlying primary policy. However, in *Powerine Oil Company, Inc. v. Superior Court*, 37 Cal.4th 377, 2005 Cal. LEXIS 9547, the California Supreme Court, in finding that the language of an excess policy was clear and unambiguous, compared and contrasted the language at issue to language contained in the primary policy. Conceivably, this opinion could be read to mean that California courts interpreting excess policies could now look to the underlying primary policy for guidance in determining whether the language of the excess policy was ambiguous.

THE NORTHROP CASE

As a result of Hurricane Katrina, Northrop Grumman allegedly sustained approximately \$1.2 billion in losses at its shipyards in Mississippi and Louisiana. Factory Mutual was a 15% participant in Northrops first \$100 million layer of a primary all risk property insurance policy. The primary policy covered flood (albeit subject to a sublimit) and defined it as whether driven by wind or not. Factory Mutual also provided a layer of excess insurance, which excluded flood.

Under the primary policy, Factory Mutual paid its share of both the wind and flood damage. However, Factory Mutual denied that Northrop had excess coverage for flood. Northrop argued that the hurricanes storm surge was not a flood within the meaning of the excess policy because unlike the primary policy, the excess policy did not define flood with reference to wind-driven water.

Northrop filed suit in California, where it is headquartered. The U.S. District Court for the Central District of California agreed with Northrop that the excess policy was ambiguous. Construing the ambiguity in favor of coverage, the District Court granted summary judgment for Northrop. On appeal, the Ninth Circuit reversed.

The court held that storm surge falls squarely within the plain and ordinary meaning of the word flood, even when that term is not amplified by a clause such as whether driven by wind or not. The Ninth Circuit also held that no ambiguity existed simply because the excess policy defined a term differently than the primary policy. The Court was not convinced by Northrops argument that primary and excess policies should be construed as one contract, and held that California law did not support the application of such a rule.

IMPLICATIONS:

As the case demonstrates, while hurricane losses occur in the Gulf and Atlantic states, hurricane claims can be made anywhere. Because California courts have had limited opportunities to interpret the language of flood exclusions, the *Northrop* decision provides practitioners with some much-needed guidance on this issue. The opinion confirms that flood exclusions encompass damage caused by storm surges and other inundations of water arising out of hurricanes and other windstorms, a position that insurers were taking in many jurisdictions prior to this decision and which would be consistent with the recent line of high-profile decisions issued by the Southern District of Mississippi.

However, the decision introduces--without applying--a classic issue of California law. Although the Ninth Circuit found the flood exclusion to encompass storm surge, and although the court reversed the summary judgment in favor of Northrop on that basis, the court did not order summary judgment for Factory Mutual. Instead, the court remanded the case for a determination of whether Californias efficient proximate cause doctrine leads to coverage notwithstanding the flood exclusion. However, the Ninth Circuit did not explain how the trial court is supposed to address that issue.

In a broader context, the significance of the *Northrop* decision lies in the Ninth Circuits holding that primary and excess policies are to be construed separately. Although California law previously recognized that primary and excess policies do not necessarily constitute one contract, the California Supreme Courts decision in *Powerine* left the door open for insureds to argue that a difference between a primary and excess policy could create an ambiguity. Under *Northrop*, insurers issuing excess policies that provide narrower coverage than the underlying primary policy can now be more confident that California courts will not use the primary policy to find broader coverage under the excess

policy than the insurer intended to provide, so long as the language of the excess policy is clear and unambiguous on its face.

ABOUT THE AUTHOR(S):

Peter Roldan is an associate in the San Francisco office of Bullivant Houser Bailey PC. His practice is focused primarily on insurance coverage litigation arising out of commercial property and commercial general liability policies, including claims for bad faith.

About Bullivant Houser Bailey PC.

Bullivant Houser Bailey PC is a business and litigation law firm with approximately 155 attorneys and six offices on the West Coast. The firm is headquartered in Portland, Oregon and maintains offices in Sacramento and San Francisco, California; Seattle and Vancouver, Washington; and Las Vegas, Nevada. In 2008, Multicultural Law magazine named Bullivant a Top 100 law firm for workplace diversity. Bullivant Houser Bailey PC on City of Hollister v. Monterey Insurance Company

2008 Emerging Issues 2936

Bullivant Houser Bailey PC on City of Hollister v. Monterey Insurance Company

By Samuel H. Ruby

September 23, 2008

SUMMARY: Property insurance policies typically impose conditions precedent to recovery on a replacement cost basis. Often, those conditions must be satisfied within a certain time period. But what happens when the insurer allegedly frustrates the insureds ability to meet the deadlines? This commentary analyzes the background, holdings, and implications of *City of Hollister v. Monterey Insurance Company*.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Replacement Cost Coverage

Property insurance policies usually allow recovery on a replacement cost basis if the insured actually replaces the damaged property. Prior to actual replacement, insurers usually are obligated only to pay on an actual cash value basis. If the insured eventually replaces the damaged property (and in so doing spends more than the actual cash value payment), the insured usually may make a supplemental claim to recover the difference.

However, replacement cost policies typically impose *time limits* on when the insured may make a replacement cost claim. Often, the policy will require the insured to replace the property within a year, two years, or else a reasonable time after the loss. Replacement cost policies may also impose additional conditions, such as requiring the insured to give *notice of its intentions* within a certain amount of time after the loss.

Waiver and Estoppel

Courts in most jurisdictions have upheld conditions of replacement cost coverage, so long as they are clear and conspicuous. However, although the *validity* of such conditions is generally free from doubt, insureds have sometimes successfully invoked the principles of waiver or estoppel to preclude an insurer from *enforcing* time limits, based on how the insurer handled the claim. In *Waller v. Truck Ins. Exchange*, 11 Cal. 4th 1 (1995), the California Supreme Court took pains to define and distinguish the doctrines of waiver and estoppel, which have often been conflated and abused.

Waiver, the *Waller* court explained, is the intentional relinquishment of a known right after knowledge of the facts. *Id.* at 31. The waiver may be either express, based on the words of the waiving party, or implied, based on conduct

indicating an intent to relinquish the right. *Id.* Estoppel, in contrast, depends not on the intent behind a party's words or actions, but rather on their *effect*. Specifically, the Waller court explained, estoppel requires a showing of detrimental reliance by the injured party. *Id.* at 33.

In *Spray, Gould & Bowers v. Associated Internat. Ins. Co.*, 71 Cal. App. 4th 1260 (1999), an intermediate appellate court applied the principles of estoppel in finding that an insured's lawsuit was not barred by a suit limitation clause in the policy. Citing California claim handling regulations, the court held that an insurer has a duty to inform an insured about statutes of limitations, including contractual suit limitation clauses. The court determined that where the insurer fails to do so, where the insured does not independently learn of the limitation, and where an insured would have filed a timely action had it know of the limitation, the insurer may be estopped from asserting the limitation as a defense to the action.

The City of Hollisters Claim

A fire damaged a building at the Hollister Municipal Airport. Hollister had insured the building under its policy with Monterey Insurance Company. An endorsement provided that subject to certain terms and conditions, Monterey would pay the least of (1) the hypothetical cost to replace the damaged building on the same site, with a less costly building that is functionally equivalent to the damaged building, (2) the amount actually and necessarily spent to replace the building with less costly material if available, and (3) the policy limit. To recover on this functional building valuation basis, Hollister was obligated by the terms of the endorsement to contract for repair or replacement . . . within 180 days of the damage.

Within about six weeks of the fire, Monterey sent Hollister a letter, bringing to its attention the endorsement and in particular the contracting clause. According to Hollister, the contracting clause was also discussed in a meeting two weeks after the letter, and during that meeting, Monterey's representative indicated that Monterey would not grant an extension of the 180-day time limit. Later, Monterey did grant a 60-day extension but refused a further extension. When the extension expired, Hollister still had not contracted for the repair or replacement of the building, allegedly because Monterey was equivocating as to whether it would pay for a replacement building.

The Trial Court Proceedings

Hollister filed an action for declaratory relief. Specifically, Hollister requested a judicial determination that notwithstanding Monterey's refusal to extend the time limit on the contracting condition, Hollister could still complete the public bidding process and execute a construction contract to build a functional replacement. After hearing evidence for five days, the trial court found in favor of Hollister. The court entered a declaratory judgment that Monterey was estopped from enforcing or otherwise relying on the 180-day provision . . . provided that [Hollister] enters into a contract to replace Airport Building no. 25 within 180 days after notice of entry of the judgment. Monterey appealed, but the Court of Appeal affirmed.

The Court of Appeals Decision

Discussing the general principles of estoppel, the appellate court opined that the term refers less to a doctrine than to a conceptual pattern, first articulated in the courts of equity, which has come to pervade our law. When a party successfully invokes that conceptual pattern, the court in effect closes its ears to a point--a fact, argument, claim, or defense--on the ground that to permit its assertion would be intolerably unfair. Finding traditional formulations of the elements of estoppel to be somewhat misleading, the court offered a new formulation: (1) The party to be estopped has engaged in blameworthy or inequitable conduct; (2) that conduct caused or induced the other party to suffer some disadvantage; and (3) equitable considerations warrant the conclusion that the first party should not be permitted to exploit the disadvantage he has thus inflicted upon the second party.

Applying that formulation, the appellate court found that the trial court had properly held Monterey to be temporarily estopped from asserting the time limit in the contracting clause as a defense to liability for replacement

cost. Taking a cue from *Spray Gould*, the court reviewed California claim handling regulations and concluded that Monterey had engaged in blameworthy or inequitable conduct by, among other things, not promptly and unequivocally confirming that the building was a total loss and that the replacement cost coverage would apply if Hollister would timely enter into a construction contract. The appellate court found the evidence sufficient to support the trial courts finding that Monterey's conduct caused the delay, because but for that conduct, Hollister would have timely entered into a construction contract.

Implications

On its most basic level, *City of Hollister* merely confirms what most California practitioners have probably taken for granted since *Spray Gould*. Generally, the doctrine of estoppel is applicable in the insurance context; and specifically, it may be invoked (in appropriate circumstances) in response to a defense based on a time limit in a policy. *City of Hollister* extends *Spray Gould* by holding that estoppel may arise not only where the insured is *not informed* of a time limit, but also where the insured is informed but is *prevented* by the insurers conduct from *satisfying* the condition. Given the trend in other jurisdictions, one might have anticipated this holding--but now that a California court has finally spoken on the issue, practitioners finally have a California case to guide them.

The Court of Appeals decision is a victory for a policyholder, but practitioners should note the limited scope of relief that was sought in the case. Hollister did not seek immediate recovery of replacement cost benefits. Instead, Hollister merely sought--and was merely granted--declaratory relief that it would have additional time to enter into a construction contract and thereby satisfy a condition precedent to recovery on a replacement cost basis. To actually recover replacement cost benefits, Hollister still will have to enter into a construction contract and actually replace the building. Thus, *City of Hollister* does not stand for the proposition that when an insurers conduct frustrates an insured's ability to satisfy conditions precedent to replacement cost coverage, those conditions are suspended for all time and the insured may immediately recover on a replacement cost basis without ever satisfying the conditions.

Also, *City of Hollister* pointedly emphasizes that causation is essential to estoppel. Only after a lengthy review of the evidence did the appellate court conclude that Hollister could in fact have satisfied the contracting condition and would have done so but for the insurers conduct. Thus, where an insured should have been able to satisfy a condition despite the insurers conduct--or where the insured would have been unable to satisfy the condition for other reasons--an estoppel should not arise.

TX High Court Holds Coverage Cannot Be Expanded By Waiver & Estoppel

2008 Emerging Issues 2900

Wiley Rein LLP on Texas High Court Holds Coverage Cannot Be Expanded By Waiver and Estoppel: Ulico Casualty Co. v. Allied Pilots Association

By Paul Dame and Laura Henderson Scanlon

September 11, 2008

SUMMARY: In an important ruling this month, *Ulico Cas. Co. v. Allied Pilots Ass'n*, 2008 Tex. LEXIS 769 (Tex. Aug. 29, 2008), the Texas Supreme Court has made clear that the doctrines of waiver and estoppel cannot be used to re-write a contract of insurance and provide coverage for risks not insured.

ARTICLE: In an important ruling this month, the Texas Supreme Court has made clear that the doctrines of waiver and estoppel cannot be used to re-write a contract of insurance and provide coverage for risks not insured. *Ulico Cas. Co. v. Allied Pilots Ass'n*, 2008 Tex. LEXIS 769 (Tex. Aug. 29, 2008). The Texas high court held that the insurer was not obligated to reimburse a policyholder for defense costs arising from a claim noticed after the expiration of a claims-made-and-reported policy, although the insurer initially agreed to reimburse the policyholder for defense expenses, subject to a reservation of rights.

Ulico Casualty Co. (Ulico) issued to the Airline Pilots Association (the APA) a claims-made Union Liability Policy (the Policy). The policy period was extended twice, until October 25, 1999, whereupon the Policy expired without the APA having made any claims. On November 5, 1999, the APA submitted a claim arising out of the defense of a lawsuit (the *Allen* suit) that had been initiated before October 25, 1999. Ulico initially issued two letters in which it agreed to reimburse the policyholder for defense expenses, pursuant to a reservation of rights. Ulico then filed a declaratory judgment action asking the trial court to declare that it had no obligation to reimburse the APAs defense costs. The Policy at issue was a claims-made policy and did not provide a duty to defend. Rather, the insurer agreed to reimburse all loss which [the policyholder] shall become legally obligated to pay on account of any claim made . . . during the Policy Period. The Policy defined loss to include defense costs.

At trial, the parties stipulated to the following facts: (1) the APA selected the trial counsel of its choice, without input or assistance from Ulico; (2) Ulico did not direct or control the defense of the *Allen* Action; (3) Ulico did not make or assist the APA or its counsel in making any substantive or procedural decisions in defense of the *Allen* Action; (4) the APA would not have defended the *Allen* suit any differently had Ulico properly denied the APAs coverage claim; and (5) apart from the fact that the APA did not get its defense costs reimbursed, Ulicos initial position regarding reimbursement of defense costs did not prejudice the APAs defense of the *Allen* suit in any way.

The trial court instructed the jury that, to establish waiver or estoppel, the APA had to prove Ulico assumed the defense of the APA in the *Allen* suit and that the APA was prejudiced as a result. The jury answered both questions in the affirmative.

On appeal at the intermediate level, the Texas Court of Appeals recognized the basic principle that estoppel and waiver cannot be used to create insurance coverage when none exists under the policy. The Texas Court of Appeals ruled that a three part test determines whether an exception to the estoppel rule would apply: (1) an insurer must have assumed the defense of the underlying litigation; (2) without an effective reservation of rights, and (3) in so doing, prejudiced the insured. In upholding the jury verdict, the court held that there was legally sufficient evidence that Ulico had waived the defense, or was estopped from asserting, that there was no coverage under the Policy. In so holding, the Texas Court of Appeals relied on the exception enunciated in *Farmers Tex. County Mut. Ins. Co. v. Wilkinson*, 601 S.W.2d 520 (Tex. Civ. App. 1980). In *Wilkinson*, the Texas Court of Appeals stated that if an insurer assumes the insureds defense without obtaining a reservation of rights or a non-waiver agreement and with knowledge of the facts indicating noncoverage, all policy defenses, including those of noncoverage, are waived, or the insurer may be estopped from raising them. *Id.* at 521-22.

Despite the stipulations at trial recognizing that the APA was represented by counsel of its own choice, Ulico did not attempt to influence or control the APAs counsel, and Ulico never made a payment to the APA or its counsel, the Court of Appeals held that the agreement to pay defense costs, coupled with its asserted right to approve all such costs, created a *potential* for conflict that satisfies the first element of the test for estoppel.

The Court of Appeals also held that the APA was prejudiced in two ways, despite the fact that it prevailed on summary judgment in the *Allen* suit. First, the Court of Appeals held that, absent Ulico initially agreeing to reimburse the APA subject to a reservation of rights, the APA might have obtained an extended reporting period and thereby gained coverage for the *Allen* suit. Second, the Court of Appeals reasoned that Ulicos filing of a declaratory judgment action, instead of notifying the APA earlier by letter, forced the APA to incur further attorneys fees and expenses to defend itself in the coverage action.

In its key ruling earlier this month, the Texas Supreme Court reversed the intermediate appellate courts decision on the waiver and estoppel issue, holding that the doctrines of waiver and estoppel cannot be used to expand the contractual coverage of an insurance policy. In this regard, the Texas Supreme Court disagreed with *Wilkinson*s statement to the effect that noncoverage of a risk is the type of right an insurer can waive and thereby effect coverage for a risk not contractually assumed.

The Texas Supreme Court further held that the apparent conflict of interest that might arise when the insurer represents the insured in a lawsuit against the insured and simultaneously formulates its defense against the insured for noncoverage, though typically noted as justification for the *Wilkinson* rule, is insufficient justification for judicially rewriting the parties agreement. Although it acknowledged that [a]n insurers actions can result in it being estopped from refusing to make its insured whole for prejudice the insured suffers because the insurer assumed the insureds defense, the Texas high court made clear that estoppel does not work to create a new insurance contract that covers a risk not agreed to by the contracting parties.

The Texas Supreme Court also considered two jury findings that the trial court had set aside on a motion for judgment notwithstanding the verdict, in both instances rejecting the policyholders appeal. In one of the points set aside, the jury had found that the insurer impliedly granted an extended reporting period, and the policyholder argued that this finding was supported by an entry in the insurers computer system and by communications from the insurer agreeing to pay for defense expenses. The court determined that no evidence supported this jury finding, however, because the general conditions of the policy required all modifications to be made by a written endorsement signed by an authorized representative of the insurer. In the other finding set aside, the jury had found that the insurer agreed, separate from the policy, to reimburse the policyholder for its defense costs. The policyholder argued that the insurers communications agreeing to pay for defense costs was a promise separate from the policy, and that the policyholder accepted this

separate promise by cooperating with the insurer. The Texas Supreme Court determined that these actions were not evidence of consideration because the insurer received no benefit from the policyholders cooperation and the policyholder did not suffer any detriment, pointing to evidence that the policyholders defense counsel did not take or fail to take any action in defending the policyholder because of the insurers representations.

In this case, the Texas Supreme Court did note that an insurer bears the risk of being held liable for damages where the insurers handling of a policyholders claim or defense results in actual prejudice to the policyholder. Accordingly, insurers should continue to exercise care in evaluating coverage, securing a non-waiver agreement or proceeding under a reservation of rights as appropriate, ensuring that the defense of a policyholder is conducted by competent counsel. Most importantly, however, the Texas Supreme Court reiterated the importance of insurance policy language. It squarely rejected any attempt to rewrite insurance contracts through the application of the doctrines of waiver and estoppel.

Meckler Bulger Tilson Marick & Pearson on Am. Cas. v. Health Care Indemnity

2008 Emerging Issues 2903

Meckler Bulger Tilson Marick & Pearson LLP on American Casualty Company of Reading, Pa. v. Health Care Indemnity, Inc.:Oklahoma Law Mandates Pro Rata by Policy Limits Allocation of Both Defense Costs and Indemnity Payments among Concurrent Insurers

By J. Robert Hall

September 11, 2008

SUMMARY: American Casualty v. Health Care Indemnity addresses the priority of coverage and allocation of defense costs issues among two concurrent professional liability insurers. It involves the interplay between the "other insurance" clauses contained in the policies and addresses whether one co-primary insurer which pays more than its "pro rata by policy limits" share of defense costs has a right of contribution against another co-primary insurer.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: *American Casualty Company of Reading, Pennsylvania v. Health Care Indemnity, Inc.*, 520 F.3d 1131 (10th Cir. 2008) addresses the priority of coverage and allocation of defense costs issues among two concurrent professional liability insurers with respect to a nurse insured by both of them. It involves the interplay between the other insurance clauses contained in the policies and addresses whether one co-primary insurer which pays more than its pro rata by policy limits share of defense costs has a right of contribution against another co-primary insurer. Applying Oklahoma law, the Tenth Circuit held that both policies contained irreconcilable excess-type other insurance clauses, that defense costs and indemnity payments should be allocated on a pro rata by policy limits basis, and, contrary to a recent Oklahoma Appellate Court decision, that the insurer which paid more than its allocable share of defense costs was entitled to equitable contribution from the insurer which underpaid.

Background Facts

In May 2004, Mary Pat Rooks (Nurse Rooks), a registered nurse, was named as a defendant in a wrongful death action filed in Oklahoma state court, arising out of injuries sustained by a patient. *Id.* at 1132. At the time of the incident, Nurse Rooks was insured under a professional liability insurance policy she purchased from American Casualty Company of Reading, Pennsylvania (American Casualty). *Id.* She also qualified as an insured under a professional liability policy issued by Health Care Indemnity, Inc. (HCI) to the hospital where she was employed. *Id.* at 1133.

Because American Casualty and HCI disagreed about their respective defense and indemnity obligations to Nurse Rooks, American Casualty filed a declaratory judgment action in the United States District Court for the Western

District of Oklahoma. *Id. at 1133*. In its lawsuit, American Casualty asserted that both policies contained excess-type other insurance clauses (*i.e.*, clauses which state that coverage is provided only after other insurance is exhausted), and that the two clauses were irreconcilable or mutually repugnant. *Id.* American Casualty also contended that defense costs and indemnity payments should be allocated between the two insurers on a pro-rata by policy limits basis, under which allocation American Casualty would be responsible for only 1/11 of the defense costs and indemnity payments (since the HCI policy's limit of liability was \$10 million and the American Casualty policy's limit of liability was only \$1 million). *Id.* Finally, American Casualty sought contribution from HCI for the defense costs it paid in excess of its 1/11 share. *Id.*

HCI responded that it had no present defense or indemnity obligations, because its policy applied excess to the American Casualty policy, and it sought a declaration to that effect. *Id. at 1134*. HCI acknowledged that its own policy contained an excess-type other insurance clause, but contended that the American Casualty policy's other insurance clause could not be given effect because it was either a pro rata clause (*i.e.*, a clause which addresses allocation among co-primary insurers) or an escape clause (*i.e.*, a clause which disclaims all coverage under the policy if other insurance applies). *Id. at 1133, 1136*. HCI also took the position that even if both policies contained mutually repugnant excess clauses, under Oklahoma law American Casualty would not be entitled to contribution for defense costs because, unlike indemnity payments, an insurer cannot obtain equitable contribution for them. *Id. at 1133*.

On cross-motions for summary judgment, the district court concluded that both policies contained mutually repugnant excess clauses and that indemnity payments and defense costs must therefore be shared on a pro rata basis according to the ratio each respective policy limit bears to the cumulative limit of all concurrent policies. *Id.* The district court determined that American Casualty had spent \$134,578.43 toward Nurse Rooks defense, and HCI had contributed \$353,001.71. *Id.* Since American Casualty had paid more than its 1/11 share of defense costs, the district court entered a judgment for American Casualty in the amount of \$90,252.96, so that the net defense cost payments by the parties would be in the same ratio as their limits of liability. *Id.* HCI appealed.

Tenth Circuit Analysis

The Tenth Circuit began its analysis by discussing the relevant principles of Oklahoma law as to coordination-of-coverage disputes:

Primary coverage is provided when, under the terms of the policy, the insurer is liable without regard to any other insurance coverage available. *Excess coverage* or *secondary coverage* is provided when, under the terms of the policy, the insurer is liable for a loss only after any primary coverage--*other insurance*--has been exhausted. . . . An *escape clause*, also known as a *no liability clause*, disclaims any and all liability if other insurance is available.

Id. at 1131 (quoting Equity Mutual Ins. Co. v. Spring Valley Wholesale Nursery, 1987 OK 121, 747 P.2d 947, 954 (Okla. 1987) (emphasis in original)). The Court also noted that, under Oklahoma law, if two policies cover the same risk for the same insured, an excess clause controls over an escape clause and conflicting other insurance clauses cancel each other, in which case the allocation between the policies is determined according to the ratio each respective policy limit bears to the cumulative limit of all concurrent policies. *Id. at 1133*.

After noting there was no dispute that the HCI policy contained an excess other insurance clause, the Court turned to the proper interpretation of the American Casualty policy's other insurance clause, which read as follows:

Any loss resulting from any claim insured under any other insurance policy or risk transfer instrument, including but not limited to, self-insured retentions, deductibles, or other alternative arrangements, which applies to this loss, shall be paid first by those instruments, policies or other arrangements. This insurance will not serve as primary insurance where there is other applicable insurance. It is the intent of this policy to apply only to loss which is more than the total limit of all deductibles, limits of liability, self-insured amounts or other valid and collectible insurance or risk transfer arrangements, whether primary, contributory, excess, contingent, or otherwise. This insurance will not contribute with

any other applicable insurance. In no event will we pay more than our limit of liability.

Id.

The Tenth Circuit held that the American Casualty policy's other insurance clause, like the HCI policy's other insurance clause, was an excess clause. *Id.* It rejected HCIs argument that the clause was actually a pro rata clause because it contemplated providing primary coverage. *Id.* It was an excess clause because it stated that any loss shall be paid first by other policies and that the policy will not serve as primary insurance where there is other applicable insurance. *Id.* The Court also rejected HCIs argument that, in order to be an excess clause, an other insurance clause must utilize the specific word excess, reasoning that the Court must look to the substance of the policy language, not whether any particular magic word is used. *Id.* at 1133-34.

The Court also was not persuaded by HCIs alternative argument that its policy was excess to the American Casualty policy because the other insurance clause in the American Casualty policy was an escape clause. *Id.* at 1131, 1134. The Court determined that the American Casualty policy does not disclaim any and all liability if other insurance exists, the defining feature of an escape clause, nor does it accomplish that result indirectly. *Id.* at 1134. Rather, [l]ike the HCI policy, it provides coverage once the coverage of other policies has been exhausted. *Id.* The Court then contrasted the language of the American Casualty policy's other insurance clause with another clause which the Tenth Circuit had held to be an escape clause, which provided that insurance shall not apply to any liability or loss against which the insured . . . has other collectible insurance applicable thereto, in whole or in part. *State Farm Mut. Auto. Ins. Co. v. Mid-Continent Cas. Co.*, 518 F.2d 292, 297 (10th Cir. 1979). Unlike the other insurance clause at issue in *State Farm*, the American Casualty policy's other insurance clause did not disclaim all liability if other insurance applied, but rather only sought to provide coverage in excess of all other insurance. *American Casualty*, 520 F.3d at 1134. As such, it was not an escape clause but rather an excess clause, and American Casualty and HCI shared co-primary obligations based on their policies mutually repugnant excess clauses. *Id.*

The Tenth Circuit then turned to HCIs challenge to the district court's contribution award. *Id.* HCI argued that that American Casualty's defense cost contribution claim was foreclosed by *United Services Automobile Association v. State Farm Fire & Casualty Co.*, 110 P.3d 570 (Okla. Civ. App. 2004) (USAA), an Oklahoma Court of Appeals case which held that one insurer cannot obtain equitable contribution from another for defense costs (but rather only for indemnity payments). The Tenth Circuit disagreed and declined to follow USAA for two reasons. *Id.* First, the holding in USAA is contrary to an earlier Tenth Circuit decision applying Oklahoma law, *St. Paul Mercury Ins. Co. v. Underwriters at Lloyds of London, England*, 365 F.2d 659, 662 (10th Cir. 1966). *St. Paul* controlled over USAA because a decision by a state intermediate appellate court is not binding on us with respect to matters of state law, and a panel of this court cannot overturn one of our precedents on such authority. *Id.* at 1135. Second, the Tenth Circuit believed that USAA may have been wrongly decided, in that it failed to give weight to a recent Oklahoma Supreme Court case which suggested that equitable contribution among co-primary insurers might be allowed. *Id.*, citing *U.S. Fid. & Guar. Co. v. Fed. Rur. Elec. Ins. Corp.*, 37 P.3d 828, 832 (Okla. 2001). Accordingly, the Tenth Circuit upheld the district court's \$90,252.96 contribution award in favor of American Casualty. *Id.*

Potential Impact

Several aspects of the *American Casualty* decision may impact the respective rights and obligations of concurrent insurers. **First**, the Tenth Circuit clarified that, in interpreting an other insurance clause, it is the purpose and effect of the clause as a whole which matters, rather than the presence or absence of any magic words. *Id.* at 1133. Many other insurance clauses policies contain language which has not yet been interpreted in reported decisions. *American Casualty* suggests that other insurance clauses always should be interpreted as a whole, according to their plain meaning, and that no talismanic language is required.

Second, the *American Casualty* court applied the rule, adopted by a majority of courts, that defense costs and indemnity payments are allocated among co-primary insurers according to the pro rata by policy limits method, under

which each insurer contributes proportionately based on the ratio of the limits of liability of its policy to the total limits of liability provided by all applicable policies. *See, e.g., Great N. Ins. Co. v. Mount Vernon Fire Ins. Co.*, 708 N.E.2d 167 (N.Y. 1999). In a minority of jurisdictions, by contrast, defense costs are allocated among concurrent insurers on a pro rata by equal shares basis, under which each insurer pays an equal share of defense costs, regardless of the limits of liability of the policies or how any indemnity ultimately will be allocated. *Am. Cas. Co. of Reading, Pa. v. PHICO Ins. Co.*, 702 A.2d 1050, 1053-54 (Pa. 1997). Although in *American Casualty* the method of allocation was not specifically challenged on appeal, the case nonetheless suggests that the pro rata by policy limits method should be applied even where there is a significant disparity between the limits of liability of the policies at issue (in this case, the American Casualty policy's limit of liability was \$1 million, compared to \$10 million for the HCI policy).

Third, and most significantly, the *American Casualty* decision held that defense costs, like indemnity payments, are subject to allocation and that an insurer can equitably contribute for them from another co-primary insurer. In doing so, the court adopted the majority position in other jurisdictions. *See, e.g., U.S. Fid. & Guar. Ins. Co. v. Executive Ins. Co.*, 893 F.2d 517, 520 (2d Cir. 1990) (New York law); *Sharon Steel Corp. v. Aetna Cas. & Sur. Co.*, 931 P.2d 127, 140-42 (Utah 1997); *Employers Ins. Co. of Wausau v. Travelers Indem. Co.*, 141 Cal. App. 4th 398 (2006). *American Casualty* rejected the rationale of the Oklahoma Appellate Courts' *USAA* decisions and other similar decisions which hold that, because every concurrent insurer is jointly and severally required to provide a complete defense to the insured, defense costs therefore are not subject to equitable contribution. *See Jostens, Inc. v. Mission Ins. Co.*, 387 N.W.2d 161, 167 (Minn. 1986); *Sloan Constr. Co. v. Central Natl Ins. Co.*, 236 S.E.2d 818 (S.C. 1977).

Meckler Bulger Tilson Marick & Pearson on Zurich Am. Ins. v. OHara Reg. Center

2008 Emerging Issues 2904

Meckler Bulger Tilson Marick & Pearson LLP on Zurich American Ins. Co. v. OHara Regional Center for Rehabilitation: No Duty to Defend False Billing Claims under Professional Liability Policies

By Michael M. Marick and J. Robert Hall

September 11, 2008

SUMMARY: Zurich American v. OHara Regional Center addresses whether professional liability insurers have a duty to defend False Claims Act and common law false billing claims brought against an insured nursing home and its owners. Applying Colorado law, the Tenth Circuit held that the false billing claims did not give rise to a duty to defend because they did not arise from any act or omission of the insureds in providing professional services.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Background Facts

The insureds (collectively, OHara) owned and operated a long-term care facility in Denver. OHara had entered into provider agreements with the United States and the State of Colorado (collectively, the Government) under the Medicare and Medicaid programs. *Id.* at 918. Following an audit of OHaras billing practices, the Government determined that, over a period of several years, OHara had submitted inflated invoices for patient services. *Id.* at 918-19. In 2004, the Government filed a lawsuit against OHara (the False Claims Action), asserting claims under the False Claims Act and state common law, to recover the sums it had overpaid based on OHaras false Medicare and Medicaid bills, plus statutory penalties. *Id.* at 919.

During the years at issue, OHara was insured under a series of occurrence-based professional liability insurance policies issued by Zurich American Insurance Company (Zurich), Valley Forge Insurance Company (Valley Forge), and Certain Underwriters at Lloyds, London (Lloyds). *Id.* OHara tendered its defense in the False Claims Action to all three insurers. *Id.* Lloyds disclaimed coverage; Valley Forge and Zurich defended the insureds subject to a full reservation of rights, including the right to recoup defense expenses. *Id.* at 920.

As the False Claims Action proceeded, all three insurers filed separate declaratory judgment actions against OHara, which were consolidated in the United States District Court for the District of Colorado. *Id.* All three insurers sought declaratory judgments that they had no duty to defend the False Claims Action; Valley Forge and Zurich also sought to recoup defense costs from OHara. *Id.* On the parties cross motions for partial summary judgment, the district court held that none of the insurers had a duty to defend and that Valley Forge and Zurich were entitled to recoup their defense costs. *Id.* The district court certified the judgment pursuant to 28 U.S.C. § 1291. OHara appealed the duty to defend issue to

the Tenth Circuit. *Id.*

Tenth Circuit Analysis

On appeal to the Tenth Circuit, OHara made two principal arguments as to why the False Claims Action gave rise to a duty to defend under the insurers professional liability policies. *Id.* First, OHara asserted that the misconduct alleged in the False Claims Action arose from OHaras professional negligence in the design and implementation of health care practices, namely, the failure to provide professionally adequate nursing or medical services, because if a proper level of nursing care had been provided, the bills would not have been false. *Id.* Second, OHara asserted that its billing practices its preparation and submission of Medicare and Medicaid bills pursuant to its provider agreements with the Government also themselves constituted professional services within the meaning of the policies. The Tenth Circuit rejected both arguments.

The Court first considered and dismissed OHaras argument that the Governments alleged overpayments arose from OHaras failure to provide professionally adequate nursing services. Noting that all of the policies at issue essentially require that the insured cause injury by negligently providing nursing, medical, or professional services generally, Colorado law nonetheless requires more than a but for relation between the covered activity and the injury. *Id.* at 921. It mandates that the claimant must [also] show that the [covered activity] and the injury are directly related or inextricably linked so that no independent significant act or [omission] interrupted the but for causal chain between the covered [activity] and the injury. *Id.* at 921 n.7 (bracketed text in original) and 924. The insured must establish a direct causal connection, without any significant intervening independent act or omission, between the covered activity and the injury for which the underlying plaintiff seeks to hold the insured liable.

Thus, the Court reasoned that, in this case, the insureds had to establish a direct causal connection between the covered activity (*i.e.*, the insureds provision of nursing or medical services) and the injury for which the Government sought to hold them liable (*i.e.*, the governments payments due to the insureds inflated invoices). They failed to do so. The Court opined that [t]he Governments injury was not caused by OHaras failure to provide professional services, but instead resulted from OHaras submission of false and fraudulent claims for reimbursement. *Id.* at 921. Stated differently, the direct cause of the Governments injuries, its overpayments of Medicare bills, was OHaras intervening act of submitting inflated bills to the Government, not the earlier provision of inadequate professional services. From the Governments perspective, [t]he problem was not the actual level of services provided to OHaras patients, but rather that OHara billed for services it did not provide namely, enhanced services. *Id.* at 921-22. Dismissing OHaras arguments as an attempt to bootstrap liability for False Claims Act violations into the coverage provided by the professional liability policies, the Court held that no direct causal connection existed between OHaras failure to perform nursing services and the relief sought by the Government. As a result, none of the insurance policies even potentially provided coverage. *Id.* at 923.

The Tenth Circuit also rejected OHaras alternative argument that its preparation and submission of Medicare and Medicaid bills which tasks, it contended, were difficult and required advanced training constituted professional services. *Id.* at 924. Although some form of the phrase professional services was used in each of the three policies, the phrase was not defined in any of them. *Id.* Because Colorado courts had not clarified the meaning of professional services in a liability insurance policy, the Tenth Circuit applied a definition frequently relied on by courts:

A professional act or service is one arising out of a vocation, calling, occupation, or employment involving specialized knowledge, labor, or skill, and the labor or skill involved is predominately mental or intellectual, rather than physical or manual.

Id. (citing *Marx v. Hartford Acc. & Indem. Co.*, 157 N.W.2d 870, 871-72 (Neb. 1968)). Applying this standard, the Court reasoned that, although processing Medicare and Medicaid claims may be difficult and time consuming, it nonetheless does not require the level of particularized knowledge necessary to be characterized as a professional service; rather, it has been held to constitute nothing more than an ordinary activit[y] achievable by those lacking the

relevant professional training and expertise. *Id.* at 924-25. Significantly, the Court also rejected, as a matter of law, the insureds attempt to establish the difficulty and complexity of Medicare and Medicaid billing practices through an affidavit it submitted. *Id.* n.9. It noted that the insureds affidavit could not create any genuine issue of material fact because [p]reparing bills is an ordinary activity of business, and, while federal regulations may be complex, such an activity does not constitute a part of the professional services of a nursing home. *Id.* The Court emphasized the distinction between an insureds professional services, on the one hand, which could potentially be covered, and its activities incidental to those services, on the other hand, which could not. Because OHaras billing practices were incidental to its business as an operator of a nursing home facility, they were not professional services. *Id.*

Having rejected OHaras arguments, the Tenth Circuit concluded that none of the insurers had a duty to defend or indemnify OHara and affirmed the judgment in favor of the insurers. *Id.* The court remanded the case to the District Court for further proceedings on Valley Forge and Zurich's defense cost recoupment claims. *Id.* at 926.

Potential Impact

In our view, the potential impact of the *OHara* case is three-fold. **First**, the decision presents a significant hurdle for insureds seeking coverage under professional liability policies for suits involving the truth or accuracy of the bills they submit for professional services. In that regard, the case adds to a growing body of case law holding that insurers have no duty to defend or indemnify their insureds in connection with such claims. See *Horizon West, Inc. v. St. Paul Fire & Marine Ins. Co.*, 214 F. Supp. 2d 1074 (E.D. Cal. 2002), *aff'd mem.*, 45 F. App'x 752 (9th Cir. 2002); *Hampton Med. Group v. Princeton Ins. Co.*, 840 A.2d 915, 917-18 (N.J. Super. Ct. App. Div. 2004).

Second, the case provides guidance as to scope of the activities that may qualify as professional services, particularly under Colorado law, and the legal (as opposed to factual) nature of the inquiry. Specifically, the Tenth Circuit made a clear distinction between services an insured furnishes in a professional capacity (such as nursing services) and services it provides which are merely incidental to the profession (such as billing for those services). The Tenth Circuit endorsed the oft-cited definition of professional services set forth in *Marx v. Hartford Acc. & Indem. Co.*, 157 N.W.2d 870, 871-72 (Neb. 1968) and clarified that billing activities do not become professional services simply because they are difficult and time consuming. In addition, the case is noteworthy in that it rejected as a matter of law an insureds attempt to use an affidavit of a proffered expert to establish that Medicare and Medicaid billing is so complex it requires specialized knowledge, labor, or skill and is so predominantly mental or intellectual that it is within the definition of professional services set forth in *Marx*.

Third, the case may also have broader significance outside the context of a professional insureds billing activities, in that it addresses the causation requirement between the covered activity and the injury under a liability insurance policy. Specifically, the Court expanded on prior Colorado case law holding that a liability insurance policy requires a sufficiently direct causal connection between an activity covered under the policy and the injury at issue. In *OHara*, although it was alleged that a covered activity (*i.e.*, negligently inadequate staffing) was a but for cause of the governments injury (*i.e.*, overpayment for services not provided), OHaras deliberate submission of false bills was an intervening cause which broke the chain of direct causation. Accordingly, *OHara* and its causation requirement may well be significant in other cases in which an insureds potentially covered negligent conduct is a but for cause of an injury, while the insureds noncovered intentional conduct is an intervening cause of that injury.

ABOUT THE AUTHOR(S):

Michael M. Marick is a partner in the Chicago office of Meckler Bulger Tilson Marick & Pearson LLP, which also has offices in Dallas and Phoenix. For over twenty-five years, Mike has represented insurers across the country in disputes with their policyholders over insurance coverage -- at the claims stage, in trial courts, and on appeal. He has successfully represented insurers on a broad range of coverage issues arising under all types of primary and excess, general and professional liability policies, as well as treaty and facultative reinsurance contracts, including related claims handling and bad faith lawsuits. He has served as national coverage counsel to several major property and

casualty insurers in mass tort and environmental coverage cases. He has been lead counsel for insurers in particularly significant mass tort coverage litigation (asbestos, silica, breast implants, pharmaceutical products, medical devices), environmental coverage suits, disputes between excess and primary insurers, policy rescission actions and high stakes disputes over the insurers right to appoint defense counsel. Mike drafts policy language, has administered claims programs, and has been retained as a consultant and expert witness on insurance issues. He serves on the firms Executive and Management Committees.

J. Robert Hall also is a partner in the Chicago office of Meckler Bulger Tilson Marick & Pearson LLP. For over a decade, Bob has focused his practice on insurance coverage counseling and litigation at the national level. He has litigated insurance coverage disputes in dozens of states, representing clients at all stages of litigation and in alternative dispute resolution proceedings. He has counseled clients as to contractual and extracontractual issues arising in connection with primary, excess, and umbrella liability policies. Bob has written and presented on a variety of insurance coverage issues. He serves on the firms Diversity Committee.

Wiley Rein LLP on the March Towards New Health Care Privacy Legislation

2008 Emerging Issues 2893

Wiley Rein LLP on the March Towards New Health Care Privacy Legislation

By Kirk J. Nahra

September 11, 2008

SUMMARY: Electronic medical records, personal health records and additional use of information technology may dramatically improve our health care system. They also raise questions about whether existing privacy rules are appropriate in this evolving information environment. Today, as Congress begins to act, there is a real risk that privacy and security concerns ultimately may impede, reduce or eliminate many benefits of these new electronic records.

PDF LINK: Core Emerging Issues Commentary (\$)

ARTICLE: America needs to move much faster to adopt information technology in our health care system. . . . Electronic health information will provide a quantum leap in patient power, doctor power, and effective health care. We can't wait any longer.

Health information technology can improve quality of care and reduce medical errors, even as it lowers administrative costs. It has the potential to produce savings of 10 percent of our total annual spending on health care, even as it improves care for patients and provides new support for health care professionals.

(Then) U.S. Department of Health and Human Services (HHS) Secretary Tommy Thompson, announcing the initiative to promote health information technology (available at <http://www.hhs.gov/news/press/2004pres/20040721a.html>).

* * * * *

Electronic medical records will improve medical effectiveness. These records will cut administrative costs for the health care system. These records will reduce medical errors. Health information technology has the potential to transform the delivery of health care in America for the better -- and to do so without heavy-handed regulation or upheaval in the health care sector. n1 And personal health records, under individual control, will inspire individual patients to take more control of their health, in much the same way that consumer driven health plans have given patients an economic incentive for their treatment, saving health care costs for individuals, employers, health insurers and governments.

So why have we had such a hard time finding a way to implement health information technology, and to give health

care providers the appropriate incentives, encouragements and obligations to incorporate these records into the treatment of patients? It is clear that many in and out of the health care system view electronic medical records, personal health records and additional use of health information technology as a means of creating dramatic improvement in our health care system. At the same time, these records along with some of these benefits are creating a new debate as to whether the existing health care privacy and security rules are reasonable and effective in today's evolving health care information environment.

So, while clearly not the only relevant factor, privacy has become a stumbling block of sorts to development of health information technology. And, as Congress begins to move more quickly on the legislative front dealing with these records, privacy threatens to become an even bigger concern, with the real risk that privacy and security concerns ultimately may impede, reduce or eliminate many of the benefits of these new electronic records.

The overall debate over electronic health records has focused on two primary areas. First, from a pure policy perspective, what should the rules be for the collection, use and exchange of these electronic records? As we struggle to develop appropriate means of designing information exchange networks, and entities across the country, both public and private, face challenges in determining appropriate ground rules, will we be able to develop systems that will provide the benefits identified by government advocates while still protecting patient privacy through appropriate means?

Beyond this policy debate, the questions about these electronic health records are now moving to the legislative arena with Congress actively evaluating various health information technology bills that are designed to promote the use of health information technology while providing appropriate privacy and security protections.

This commentary looks at three components of this debate. First, it briefly defines the relevant terms and describes the marketplace for health information technology, to provide a common baseline for the discussion that follows. Second, it reviews the key policy issues that should be considered in implementing health information systems across the country. Third, it reviews the current legislative proposals and identifies the key areas of concern from these ongoing legislative efforts.

The Relevant Concepts

The debate over electronic healthcare records has spawned not only a wide range of new terminology and products, but also has created new categories of market participants who are using and disclosing vast amounts of health care information. It has been difficult to develop common terminology, and some of the difficulties in the current debate stem from disagreements (explicit or implicit) as to the scope of certain concepts. While the definitions used below are not necessarily uniform and unanimously accepted, they will be utilized here to discuss the relevant arguments.

Electronic Medical Records. The first idea is electronic medical records. Electronic medical records (EMRs) are medical records created and used by health care providers as part of providing care to patients. The idea of electronic medical records is simple take the records that doctors, hospitals and other healthcare providers have traditionally maintained, and move them from paper to electronic formats. When maintained electronically, these records may be more easily accessible to health care providers, can be combined and consulted, and may be subject to reduced costs and more standardization.

Personal Health Records. These records, by contrast, are essentially driven by marketplace initiatives, outside of an existing regulatory structure. The idea of a personal health record (PHR) is to give the health care consumer the patient an ability to compile and maintain information about that individual (or his/her parents or children), in an electronic format (although, of course, this collection of information could be on paper as well). The concept is pro-consumer, and is arguably consistent with the movement towards consumer-driven health plans give the consumer control over his or her health care information, and medical results will improve. Because these records typically (a) are

under the consumers control (at least nominally) and (b) require another entity to develop the vehicle for the record, these records often may be entirely outside the scope of protections provided by the Privacy Rule of the Health Insurance Portability and Accountability Act (HIPAA) [Pub. L. No. 104-191]. If an Internet company offers a consumer a product to gather and store health care information, that activity is outside the scope of HIPAA unless the offering entity happens to be a health care provider or a health insurer. Clearly, some providers and insurers are offering these products; at least as often, however, these products are being offered by companies with no effective control under HIPAA.

Health Information Exchange. The next key piece to the puzzle involves health information exchanges. While these exchanges can take many forms (and all of the relevant forms are still evolving), health information exchanges (HIEs) offer the opportunity for one entity often, but necessarily a health care provider to exchange electronically health care information with other entities. The prototype idea is the ability of a hospital to learn through a health information exchange that the patient who was brought into the emergency room was treated by one doctor for a particular condition, and received drugs from a pharmacy for another symptom. The goal of these exchanges is to improve medical outcomes and reduce medical errors for example, by identifying a potential drug interaction with the drug provided by the pharmacy. These exchanges clearly are a work in progress. Many of these entities typically called regional health information exchanges or RHIOs are being developed as quasi-governmental entities, focusing on a limited geographic region. These exchanges are developing on a very modest level, and are struggling not only to deal with a variety of difficult legal issues, but also to develop a sustainable economic model. These exchanges however, are raising many of the broadest privacy and security concerns. If the goal of these exchanges is to make available information that either was unavailable before, or realistically inaccessible, are there additional privacy and security protections that need to be put in place to control the flow of information? If an electronic health record simply involves a health care provider converting paper records to electronic formats, no one is too concerned. When these records start being exchanged with others at local, state, regional, or national levels then privacy and security become bigger concerns.

Personal Health Record Networks. Perhaps the most significant development of the past year has been the opening salvos in a much broader competition in the personal health record marketplace, with enormous companies proposing to develop what are essentially PHR-driven networks for the exchange of personal health information. In recent months, three leading entities Google, Microsoft and Dossia (an employer-driven coalition) have announced efforts to restructure the PHR marketplace, using the Internet and other electronic vehicles to provide consumers with a self-controlled personal health record while, at the same time, allowing information to flow between these records and health care providers around the country largely under the control of individual consumers. Many other companies Revolution Health, WebMD and others also are participating in this market. With each effort differing in some important details (and many of the details still being worked out), these activities present the possibility of making RHIOs obsolete before they move beyond their infancy. By operating under consumer control, these entities may be able to avoid or reduce some of the complexities that arise for RHIOs because of state law restrictions. Moreover, these deep pocketed entities can utilize significant resources to develop these programs and partner with entities around the country to participate in these programs, without the geographic restrictions of most RHIOs.

The Current Status and the Key Questions.

Today, there is lots of debate and discussion by lots of people about the very challenging issues presented by EMRs, PHRs and HIEs. While this debate proceeds with no clear end in sight the marketplace is moving forward without rules, both with healthcare providers building significant electronic medical records systems and through personal health record vendors developing increasingly broad product offerings. Moreover, regardless of how this debate proceeds, the rules are not likely to catch up with the marketplace any time soon. For health care providers, insurers, employers, aspiring PHR vendors, and others, it is critical to be aware of this uncertainty, and to understand the need to develop systems that can be effective today, but that also can be sufficiently flexible to adjust to future

regulatory requirements.

From a privacy and security perspective, I identify below (in my personal view) the top questions implicated in the development of electronic medical records, personal health records and health information exchanges.

Is there a need for new privacy rules that apply to the broad variety of participants in health information exchanges who are not covered by HIPAA today? The development of health information exchanges and personal health records has highlighted some of the gaps of the existing HIPAA privacy and security structure. There clearly are significant participants in these efforts who, today, have no regulatory obligations at all under HIPAA. Accordingly, one of the first questions to be addressed will involve whether there needs to be rules created for these entities. Most of the advisory groups that have opined on this topic have recommended that either the HIPAA rules be extended to these participants in health information exchanges and personal health records, or that new rules be created for these entities.ⁿ² Another alternative is for these entities to be required to develop appropriate privacy notices and policies (perhaps under some kind of government certification standard), with the Federal Trade Commission acting as the enforcement agency for violations of these notices. The question of what to do with these non-HIPAA entities is a critical one, and one that drives much of the concern about building trust in these electronic networks.

Are there sufficient differences in the HIE environment to justify different privacy rules than exist today? The current health care privacy structure is exceedingly complicated. The HIPAA structure is the primary set of rules. In addition, covered entities need to factor into their compliance efforts a wide variety of other federal laws and regulations (*e.g.*, the federal substance abuse rules) and an enormous, often inconsistent and exceedingly confusing array of state laws, that may or may not create more stringent obligations than HIPAA. With this extensive set of existing obligations, one of the key issues for the current debate is whether there is a specific reason to justify adding a new set of legal obligations. Many of the entities that have advocated for new rules simply do not like the existing rules; that is a fair position to take, but it does not address the question of whether there should be specific rules for this electronic health exchange environment. Instead, it is critical to evaluate whether there is something different about this environment to justify having new rules. It is hard to say as some have argued that the electronic nature of this information is different from the HIPAA environment, because electronic information clearly is encompassed within the HIPAA Privacy Rule, and is the clear and exclusive focus of the HIPAA Security Rule.

Nonetheless, there clearly are some differences. For example, the new kinds of participants in these efforts have led several groups to recommend extending the HIPAA rules to these new participants. If this step is taken, then, are there other substantive differences that justify new rules? Phrased differently, why should we create rules for this electronic health exchange environment that are different from the remainder of the health care universe?

What will be the implications of creating different rules specifically for information exchanged through HIEs? If a decision is made that there are reasonable bases to justify new rules for this environment, the follow-up question is what the impact will be from a situation where there will be two sets of rules for many entities, particularly healthcare providers one rule for HIPAA information, and a different set of rules for information that flows through the HIE. It is clear that the multiplicity of rules that exist today in the health care system on their own lead to confusion and concern, and create in some situations adverse consequences simply because of confusion. We can create significant new risks if we create a parallel set of rules, with confusion and complexity on how these rules should be applied. This concern about confusion should serve as a counterweight to the arguments that support new rules based on differences in the existing structure, particularly if these differences are not significant.

If there are going to be new rules created because of HIEs, should these rules extend to the overall health care privacy environment? As a related discussion, the question arises as to whether the need if there is one to create different rules for the electronic HIE environment justifies altering the rules throughout the health care system. Having two sets of rules creates a difficult set of complexities. Presumably, having one set of rules creates a cleaner

environment but then the question arises whether all of the health care rules should be changed because of the ongoing development of this health exchange environment. The current debate has served to highlight some of the HIPAA gaps, and has created a realistic view of the need for a true health information privacy regime. While a broader set of principles clearly would be beneficial -- in terms of the entities subject to these rules it is far less clear that the principles of HIPAA need to be fixed, altered or revised in any way. In fact, while there are some areas of concern, there is no widespread evidence that the HIPAA regime isn't working at least where it is applicable. So, before we embark on a new effort to revise how the health care industry handles patient privacy, we should make sure that there is a real need for new rules at all.

What kind of consumer consent should be required for HIE environments? One of the key issues in this debate involves the question of whether individuals should have additional consent rights than they do today under HIPAA. Patients and consumers have very limited consent rights in the HIPAA structure today. They essentially have no HIPAA consent rights for uses and disclosures of health care information for treatment, payment or health care operations purposes covering an enormous percentage of the typical uses and disclosures of information. They also have no consent rights for the public policy purposes established by the rule. The primary consent right is the requirement that individuals authorize disclosures outside of these core areas.

In the HIE environment, many advocates are promoting additional consumer choice and consent as a means of ensuring that consumers have trust in and participate in the system. That is certainly an appropriate topic for debate. Many of the same concerns were raised at the time of the HIPAA rule implementation. Once the HIPAA decision was made, and amid much concern about how patients would react, there is virtually no evidence supporting the idea that patients have been withholding information because of a lack of a consent model. Therefore, it is critical to evaluate this question of consumer consent fairly, with both an understanding of the current context (and the experience that stands behind this context) at the same time that we are evaluating the prospective nature of the health information exchange environment.

It also is critical to factor in the PHR component of this debate. Virtually all of the primary PHR models are promoted and marketed as consumer driven and consumer controlled. The premise of the PHR is that a consumer can choose (1) what information goes into the PHR and (2) who is given access to or provided information from the PHR. Obviously, there are significant challenges to making this general commitment a reality. There also are significant issues with how information that is disclosed even with consumer choice will be treated by the recipient. But, a marketplace that creates and develops PHRs faster and more broadly than the EMR environment and the development of health information exchanges may reduce the need to debate and decide on the appropriate role of consumer choice in an HIE environment. We also need to include in this discussion the question of whether consumer choice if provided is sufficient, given significant evidence that individuals do not fully understand the privacy choices they are given in the health care setting, particularly for situations that may or may not arise in the future.

If consumers are given additional consent rights, how will this affect the overall benefits of the health information exchange system? Continuing the idea, if there are additional consent rights granted to consumers which will affect the amount and nature of the information that will be exchanged through these exchange environments how will this affect the overall benefits of health information exchanges? This is probably the ultimate big picture question in this situation. Obviously, there are specific details that need to be addressed for example, would consent be opt-in or opt-out? Will the choice be all or nothing or more granular? If granular, and consumers are given the ability to withhold specific kinds of information, how will this affect the ability of health care providers and others to rely on this information? At the end of the day, the key question will be whether the consent model that is selected creates a situation where HIEs have so many gaps that the benefits of the exchanges in terms of medical errors, improved quality of care and reduction in administrative costs disappear because of privacy and security concerns.

Legislative Developments

As this policy debate has progressed, we now are seeing a parallel movement in Congress. On the one hand, Congress has been reviewing health information technology legislation for several years, designed to promote the use of health information technology and create an appropriate regulatory framework for this development. These bills have languished in Congress, both because of concerns about the goals of this legislation and, most recently, because of the perceived need to develop new privacy and security rules for this new environment. While this debate in Congress has been moving quickly, it is far from over. Moreover, as it now stands, the privacy and security proposals create the risk of both undercutting the incentives to use health information technology and imposing significant new burdens on health care entities in the name of patient privacy, without any concrete new privacy benefits or clear problems with the current privacy environment.

As we move into the fall of 2008, there is progress in both houses of Congress to move legislation to the Floor. In the Senate, the primary legislation at issue is the Wired for Health Care Quality Act, S. 1693, sponsored by Senator Kennedy. Focused on efforts to enhance the adoption of a nationwide interoperable health information technology system and to improve the quality and reduce the costs of health care in the United States, the legislation was passed by the Senate Health, Education, Labor and Pensions Committee more than a year ago, but had been held up from further action by concerns about the appropriateness of the privacy protections in the bill. Now, recent reports indicate that new privacy language has been agreed to by the key Senators involved in this debate, allowing this legislation to move forward in the Senate.

On the House side, the primary piece of legislation so far the PRO(TECH)T Act of 2008 (or the Protecting Records, Optimizing Treatment, and Easing Communication through Healthcare Technology Act of 2008.). This legislation was passed by the House Energy and Commerce Committee this summer. The House Ways and Means Committee also intends to introduce its own bill shortly, drafted by Congressman Stark, which threatens to delay any progress of this legislation in the House. In both houses of Congress, there is ongoing debate about both the technology portions of the bill, as well as the privacy and security proposals. While the likelihood of passage of legislation in 2008 is small, these principles clearly are gaining momentum, and will continue to be part of an ongoing debate in the new Congress in 2009.

The key driving force for this new legislation (which is still evolving in both Houses of Congress) is the need to promote health information technology. Accordingly, the bulk of the legislative language for these bills involves a series of goals relating to this technology, including:

- . Promotion of health information technology;
- . Establishment of appropriate government offices for regulation of health information technology;
- . Development of health information technology standards;
- . Incentives to health care providers for use of health information technology; and
- . Promoting interoperability among electronic health care records.

As these bills move forward, there clearly is a question as to whether Congress can agree on incentives to use new electronic technologies along with appropriate standards and infrastructure. If so, there is the related question of whether a bill that promotes use of health information technology necessarily requires the addition of new privacy and security provisions. Similarly, if Congress determines that new privacy provisions are required (as the bills today indicate), will these changes be limited to dealing with the effects of this new environment, or will they cross over into other areas not directly related to health information technology? Also, will these new changes be consistent with the idea of motivating use of these new technologies?

As of now, the privacy and security provisions seems inextricably linked to the health information technology legislation. There are a variety of key privacy provisions in this proposed legislation. First, there are a variety of

provisions that have nothing directly to do with the technology or systemic issues raised by the movement towards electronic records. For example, the House proposal would apply the HIPAA privacy and security rules directly to business associates vendors to health care companies. Currently, business associates must execute an appropriate contract with a HIPAA covered entity (such as a doctor, hospital or health insurer), but the business associate is subject only to a breach of contract action if it fails to meet its obligations. This provision would apply the rules directly to these vendors, exposing all HIPAA business associates to direct HIPAA enforcement. This is not necessarily a bad idea, but it clearly has nothing to do with electronic records.

Similarly, the House provisions would apply the HIPAA criminal enforcement provisions directly to employees of a covered entity. Today, following an interpretation by the Department of Justice, it is difficult to prosecute an employee for a HIPAA violation (although this difficulty has not stopped a series of prosecutions). The proposal would apply the criminal provisions to employees of covered entities, again without any tie to electronic records.

On a more significant note, the House bill includes a security breach notification provision that would extend far beyond the provisions of almost all state laws. All health care information would be covered including the wide range of information covered by HIPAA (such as name, address, phone number, etc), that is health information only by virtue of its inclusion within the scope of HIPAA. The current version contains no harm threshold (as do most relevant state laws), meaning that notice would be provided to individuals in the event of any breach of security involving any health care information. There is no description of the relevant harms that are intended to be covered again, unlike most state laws, which focus on identity theft risks.

Next, the House bill requires covered entities to withhold information from health insurers, if the patient objects to the disclosure to health insurers and the patient pays out of pocket for health care expenditures. While there clearly is a privacy interest at stake here, it also appears that the main impact of this provision would be to shield certain information from health insurers that their customers wish to hide. This clearly is a provision that should be challenged on public policy grounds. Regardless of ones view on this subject, however, this again is a provision that bears no relationship to the issues raised by electronic records.

There is one important provision in the legislation that is directly tied to electronic records, without raising significant disincentives for these records. Both bills would apply the HIPAA rules, to some extent, to various entities who today are not HIPAA covered entities, but in the new environment would be participating in health information exchanges or other uses or disclosures of health information through electronic records. This provision, while still evolving, mirrors the recommendations of various advisory groups, including the Confidentiality, Privacy and Security Work Group of the American Health Information Community, a group that I co-chair.

There are, however, a series of provisions that seem to create specific *disincentives* for the implementation of electronic records, by imposing specific new obligations on entities that use electronic records. For example, both the House and Senate proposals create a new patient right of access, providing broader access rights with quicker timetables, if an entity maintains information in electronic medical records. Similarly, this provision creates a greatly expanded HIPAA accounting right (a right that is virtually unused by individuals today), requiring covered entities that use electronic medical records to provide a complete audit trail of all internal and external access to an individuals medical information. This obligation creating enormous new costs and record retention obligations seems to be operating in direct opposition to the incentives portions of this legislation.

The single worst provision of the House legislation also creates substantial disincentives to use electronic records, one that could create significant operational problems for any health care entity. The House legislation contains a provision that requires patient consent for the disclosure of information for health care operations purposes, if a health care provider is using an electronic record. In this authors opinion, this is the single worst provision in either of these bills, with substantial risks of creating not only strong disincentives to use electronic health care records but also significant negative effects on the health care system, without any clearly defined privacy benefit.

The idea of this legislative language is that patients would provide consent for all health care operations uses and disclosures by providers, uses that involve the administrative operations of a health care business. This consent is presumed today in the HIPAA environment. There is no discussion in this legislation of how this consent would actually be obtained would patients be given a take it or leave it option, or would patients be provided with a list of dozens, or perhaps hundreds, of potential uses and disclosures for health care operations purposes, and instructed to pick and choose among them? Aside from the fundamental absurdity of this choice, it is very difficult to see how a health care provider could in fact operate its business, if it was forced to develop such an extensive system of new rules for how to run its business.

Moreover, the effects of these provision would extend far beyond health care providers. For example, health insurers would be precluded from using data they receive for their own health care operations purposes, unless the patient provided consent. This would (in the latest draft) even apply to information that the health insurer received for payment purposes, but would not be able to use for health care operations purposes. This step would threaten such important programs as pay for performance, health care quality reviews and a wide variety of cooperative quality related programs that currently are being promoted throughout the health care system. So, aside from enormous questions about how a provision like this would work and what harms it would create there is no definable privacy interest at stake, particularly one that is somehow greater through use of an electronic health record.

The Senate legislation, while generally narrower, also includes some confusing or problematic provisions. One publicized provision of the legislation involves a modest change to the marketing provisions of the HIPAA Privacy Rule. While marketing concerns drive a lot of commentary by privacy advocates under HIPAA, marketing has not been a topic that has generated a significant number of complaints to the HHS Office of Civil Rights. Nonetheless, without much explanation, the proposal would modify the definitions under the marketing provisions to require HIPAA authorizations in certain situations where they are not required today. Specifically, the language requires an authorization in connection with an arrangement whereby a covered entity, in exchange for direct or indirect remuneration, makes a communication to an individual to recommend or direct value-added health-related products or services or products or services not directly related to that individuals health.

While the language of the legislation is somewhat ambiguous, it is clear that the actual language is both unnecessary in some circumstances and confusing. For example, the HIPAA Privacy Rule today permits the use of patient information to send marketing communications about certain value-added and health related services, without the need for patient permission. If the communication is about a product or service that is not health-related, the Privacy Rule today requires an authorization. So, the legislative language about not directly related to that individuals health is unnecessary, unless the language is somehow drawing a distinction between health-related and directly related to an individuals health.

Next, in connection with a section entitled transparency, the legislation requires HIPAA covered entities, when contracting with a vendor who is not covered by the HIPAA Privacy Rule, whether off-shore or not, to:

- Take reasonable steps to select and retain third party service providers capable of maintaining appropriate safeguards for the security, privacy and integrity of protected health information; and
- Require by contract that such service providers implement and maintain appropriate measures designed to meet the requirements [imposed on covered entities.]

While there have been some legitimate questions raised about off-shore service providers, it is hard to read this language and believe that the drafters are aware at all of the existence of the HIPAA business associate provisions. *Arguably*, there is no due diligence obligation imposed by HIPAA. But how is it possible that new legislation would be needed to require by contract appropriate privacy protections for vendors, when the HIPAA Privacy Rule already imposes this exact obligation (with significantly more detail) on covered entities when vendors are hired today? Moreover, the legislation then requires the HHS Secretary to ensure that there is an effective means for enforcing the obligation . . . on any overseas services providers or other providers not covered by HIPAA, without giving the Secretary any tools whatsoever to do this. This language ignores that the HHS Secretary in fact has no enforcement

jurisdiction whatsoever over *any* business associate today, regardless of where the business associate is located, because of the limited jurisdictional reach of the HIPAA rules. Instead, the only option available to the Secretary is to impose enforcement risk on the covered entity if it fails to execute the appropriate contract.

Conclusion -- Where Do We Go From Here?

Clearly, there is a virtually unlimited set of issues arising from this debate. There also likely is no reasonable end in sight, so that there will be an ongoing policy-oriented debate, with many audiences being heard from, without any easy means of synthesizing or implementing these recommendations.

On the legislative front, there are significant risks that Congress will create more harm than good from its provisions. Congress appears determined to revisit carefully drawn HIPAA compromises without any credible need, thereby creating significant new costs and burdens for health care entities without any corresponding benefits. At a time when Congress is trying to motivate health care entities to implement electronic records programs, it also seems determined to impose new obligations on companies that do choose to implement these records, thereby creating incentives and disincentives in the same piece of legislation.

Congress should evaluate carefully whether there is a need at this time to develop new privacy and security rules. The technology portions of the legislation can proceed without any specific new privacy rules. These provisions while important mainly serve to motivate and guide a process of development of electronic health records over time. There are not new privacy risks created by this legislation even assuming there are in fact any new risks created at all by the movement towards electronic records. Rather than slow down these important technological issues, Congress should step back from new privacy and security rules, so that the push towards these rules does not create undue burdens without a corresponding benefit (particularly in a health care privacy system that generally is working well for covered entities and patients), while not impeding the important progress towards development of more comprehensive systems of electronic health records from health care providers across the country.

Wiley Rein LLP on Don's Bldg. Supply, Inc. v. OneBeacon Ins. Co.: Texas Adopts "Actual Injury" Trigger of Coverage for Property Damage Claims

By Benjamin Theisman and Gregory J. Langlois

September 10, 2008

SUMMARY: The U.S. Court of Appeals for the Fifth Circuit, the Supreme Court of Texas recently held, subject to variations in policy language, that general liability policies providing coverage for property damage that "occurs during the policy period" are triggered by "actual injury" or "injury-in-fact." The court did not follow the manifestation trigger theory representing a shift in Texas authority on property damage claims governed by Texas law.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Answering two certified questions from the U.S. Court of Appeals for the Fifth Circuit, the Supreme Court of Texas recently held, subject to variations in policy language, that general liability policies providing coverage for property damage that occurs during the policy period are triggered by actual injury or injury-in-fact. The policies at issue in this case therefore applied to underlying suits alleging damage to homes where the damage was alleged to have been present during the policy period but undetectable until after the policies expired. *Don's Bldg. Supply, Inc. v. OneBeacon Ins. Co.*, 2008 Tex. LEXIS 753 (Tex. 2008). In this ruling, the Texas high court did not follow earlier Texas cases endorsing the manifestation trigger, which had been the prevailing trigger theory according to both the United States Court of Appeals for the Fifth Circuit and Texas intermediate appellate courts. This shift in Texas authority will require a new perspective on property damage claims governed by Texas law as they are submitted to general liability insurers in the future. In addition, it may pose claim handling questions with respect to property damage claims for which coverage was denied or for which an insurer reserved its rights under Texas law based on the manifestation trigger.

A. The Ruling, Actual Injury or Injury-In-Fact

In this case, the policyholder, Dons Building, installed sold and distributed Exterior Insulation and Finish System (EIFS) siding, which was installed on numerous homes between December 1993 and December 1996. The policies in force during this time period provided coverage for property damage only if it is caused by an occurrence that takes place in the coverage territory and if the property damage occurs during the policy period. The policies defined property damage to include [p]hysical injury to tangible property, including all resulting loss of use of that property, noting that [a]ll such loss of use shall be deemed to occur at the time of the physical injury that caused it. Between 2003 and 2005, various homeowners filed lawsuits in state court against Dons Building, alleging that the product allowed moisture to

seep into cavities behind the siding, causing interior wood rot and other damages. The homeowners argued that the damages began to occur as of the first penetration of moisture allegedly six months to a year after the product was applied. Seeking to avoid statutes of limitation, however, the homeowners alleged that their damages were not discoverable or readily apparent until after the policies had expired because they were hidden behind the exterior siding, which had remained undamaged. The insurer filed a declaratory judgment action in federal court seeking a ruling that it owed no duty to defend or indemnify the policyholder. The district court held that the policies providing a duty to defend would not be triggered until damage became identifiable.

On appeal, the Fifth Circuit noted that a number of Texas courts of appeal in Dallas, San Antonio, and Austin had adopted the manifestation trigger theory, citing *Summit Custom Homes, Inc. v. Great Am. Lloyds Ins. Co.*, 202 S.W.3d 823, 827 (Tex. App.--Dallas 2006, pet. filed); *State Farm Fire & Cas. Co. v. Rodriguez*, 88 S.W.3d 313, 322 (Tex. App.--San Antonio 2002, pet. denied); *State Farm Mut. Auto Ins. Co. v. Kelly*, 945 S.W.2d 905, 910 (Tex. App.--Austin 1997, writ denied); *Cullen/Frost Bank of Dallas v. Commonwealth Lloyds Ins. Co.*, 852 S.W.2d 252, 258 (Tex. App.--Dallas 1993, writ denied); *Dorchester Dev. Corp. v. Safeco Ins. Co.*, 737 S.W.2d 380, 383 (Tex. App.--Dallas 1987, no writ). In contrast, the court noted that Houston courts have applied an exposure trigger in the context of EIFS damages, citing *Pilgrim Enterprises, Inc. v. Maryland Cas. Co.*, 24 S.W.3d 488, 490-91 (Tex. App.--Houston [1st Dist.] 2000, no pet.); *Pine Oak Builders, Inc. v. Great American Lloyds Ins. Co.*, 2006 WL 1892669, *7-8 (Tex. App.--Houston [14th Dist.] July 6, 2006, no pet.). The Fifth Circuit, accordingly, certified the following questions:

1. When not specified by the relevant policy, what is the proper rule under Texas law for determining the time at which property damage occurs for purposes of an occurrence-based commercial general liability insurance policy?

2. Under the rule identified in the answer to the first question, have the pleadings in lawsuits against an insured alleged that property damage occurred within the policy period of an occurrence-based commercial general liability insurance policy, such that the insurers duty to defend and indemnify the insured is triggered, when the pleadings allege that actual damage was continuing and progressing during the policy period, but remained undiscoverable and not readily apparent for purposes of the discovery rule until after the policy period ended because the internal damage was hidden from view by an undamaged exterior surface?

See *OneBeacon Ins. Co. v. Dons Bldg. Supply, Inc.*, 496 F.3d 361 (5th Cir. 2007).

The Texas Supreme Court accepted certification and addressed the certified questions in turn. The court noted that the first question asked for a determination of the proper rule under Texas law for determining the proper time at which property damage occurs under an occurrence-based general liability policy. The court, however, declined to fashion a universally applicable rule for determining when an insurers duty to defend a claim is triggered under an insurance policy, as such determinations should be driven by the contract language. Noting that the policies provided coverage only for property damage that occurs during the policy period and that property damage was defined as [p]hysical damage to tangible property, the court held that the property damage in this case arose when actual physical damage to the property occurred and thus when a home suffered wood rot or other physical damage. According to the court, it was irrelevant that the damage had not yet been discovered.

The court characterized its conclusion as an application of the actual injury or injury-in-fact rule triggering coverage at the time of an actual injury or injury-in-fact, regardless of the date of so-called exposure or manifestation. It noted that other courts have applied a manifestation rule, under which coverage is triggered only if the property damage becomes evident or was discoverable during the policy term, while still others have applied the exposure rule, under which coverage is triggered if the plaintiff is exposed to whatever agent ultimately results in personal injury or property damage during the policy period. Which approach is used often depends on differences in specific policy language under review, the court noted, as well as different factual circumstances.

The Texas high court determined that the widely-used policy language at issue here did not support application of either the manifestation rule or the exposure rule, stating that [t]his policy links coverage to damage, not damage

detection and that [o]ccurred means when *damage* occurred, not when *discovery* occurred. The court concluded that following the manifestation rule, as the insurer urged, would blur the distinction between this occurrence-based policy and a claims-made policy. The court also criticized application of an exposure rule, explaining that the policy provides coverage if the property damage occurs during the policy period rather than providing coverage if property is, during the policy period, exposed to a process, event, or substance that later resulted in bodily injury or physical injury to tangible property. Although noting that identifying the precise moment of injury is sometimes hard, the court stated that it was bound to apply contracting parties chosen language. In support of its conclusion, the Texas Supreme Court also cited a leading treatise stating that the injury-in-fact approach is likely more consistent with the policyholders and insurers actual intentions.

The second certified question asked whether the underlying complaints, which alleged that property damage took place during the policy period but was only detectable after the policies expired, triggered the insurers duty to defend. Based on its determination that the actual injury rule applied to the policies, the court held that the insurer owed a duty to defend, as a claim alleging that any amount of physical injury to tangible property occurred during the policy period and was caused by [the policyholders] allegedly defective product triggers [the insurers] duty to defend.

B. The Consequences

The Texas high courts ruling in this case marks a significant shift in Texas law. As noted by the Fifth Circuit and the Texas Supreme Court, intermediate appellate courts in Texas previously had largely been following a manifestation trigger theory. The rejection of that theory in favor an actual injury or injury-in-fact approach will require case-by-case analysis of the factual circumstances underlying a claim to determine if coverage is triggered. Such an analysis will likely raise further issues regarding whether multiple policy periods have been triggered and whether allocation is applicable. Accordingly, this ruling may signal the need for additional guidance from the Texas Supreme Court on related issues posed by long tail property claims under general liability policies.

Artigliere on Essex Insurance Company v. Mercedes Zota , et al.

2008 Emerging Issues 2891

Circuit Judge (Retired) Ralph Artigliere on the Florida Supreme Courts Latest Opinion on the Agency Relationship Between an Insured and an Independent Insurance Broker: Essex Insurance Company v. Mercedes Zota , et al., 2008 Fla. Lexis 1112 (Fla. 2008)

By Ralph Artigliere

September 10, 2008

SUMMARY: The Florida Supreme Court holds in *Essex Ins. Co. v. Zota* that the the common law presumption that an insurance representative, serving as an independent insurance broker, acts on behalf of the insured for purposes of receiving proof of insurance has not been altered by statutes requiring delivery of the policy to the insured.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: What the state and federal courts did in this case. A brief history of this dispute and its procedural path is essential to understanding the implications of the decision. The insured in this case, one of the defendants, Lighthouse Intracoastal, Inc., was in the business of building spec houses. Lighthouse secured various types of insurance to cover its activities as a homebuilder through an independent insurance broker, R.A. Brandon & Company. When one aspect of liability coverage was not available, Brandon procured surplus lines coverage for Lighthouse from the insurer, Essex, through Essex agent, McDuff Underwriters, Inc. The policy was delivered by Essex to Brandon as the securing broker, but Brandon never provided a copy of the policy to Lighthouse. When a person working on one of Lighthouses jobs named Mercedes Zota fell and was injured, Zota sued a number of parties in state court, including Lighthouse. Lighthouse did not receive a copy of the policy until the day after Zota was injured, and due to a faxing error the policy exclusions relied upon by Essex to deny coverage for the injuries were not included in the transmittal of the policy. 2008 Fla. Lexis 1112, FN 3. Lighthouse and the other parties challenged the ability of Essex to deny coverage based on the Florida statutory requirement to deliver a copy of the policy and its exclusions to the insured. *See* Fla. Stat. Fla. Stat. § 626.922 and § 627.421. Coverage issues raised by Essex were removed to federal district court in which a summary judgment was issued against Essex on the grounds that Essex was estopped from denying coverage because Essex had not delivered a copy of its policy to Lighthouse as required by Florida statute. *Essex Ins. Co. v. Zota, et al.*, 466 F. 3d 981, 2005 U.S. Dist. LEXIS 25255 (S.D. Fla. 2006). The case came to the Florida Supreme Court on five certified questions from the 11th Circuit based on unsettled Florida law. *Essex Ins. Co. v. Zota*, 466 F. 3d 981, 2006 U.S. App. LEXIS 25255 (11th Cir. 2006). However, in entering summary judgment, the federal district court simply estopped the surplus-lines insurer from relying on the language of the relevant policy exclusions and did not examine or develop many of the factual issues implicated by the Eleventh Circuit's certified questions. Accordingly, the Florida Supreme Court short circuited several issues by directing its efforts to the first certified question, the answer to which answered

the second and part of the fifth questions and created fact questions for the rest. Thus, the holding of the case addresses the first certified question, which is whether Fla. Stat. § 626.922 or § 627.421, or both, require delivery of evidence of insurance directly to the insured, so that delivery to the insureds agent is insufficient. The Court answered the first question no and held that sections 626.922 and 627.421, Florida Statutes (2003), have not abrogated the common-law agency analysis that it had previously applied in insurance-broker cases. Both aspects of the case, (1) the statutory analysis on the applicability of Chapter 627 to surplus lines carriers, and (2) the common law agency analysis, deliver important lessons for practitioners.

How the Florida Supreme Court reached its decision. On its face, the case appears uncomplicated because it does not change any law and it applies rather settled agency law to the operative facts: delivery to ones agent acting within the scope of the agents authority *presumably* constitutes delivery to the principal. However, in reaching that holding, the Court was required to first deal with a multifaceted statutory construction issue because Essex contended that, as a surplus lines carrier, it was excluded from the requirements of Chapter 627. A scrivener's error in the Florida insurance laws complicated the question of whether the relevant sections of the insurance law requiring delivery of an insurance policy to the insured apply to surplus lines insurance carriers. The Court dealt with the statutory construction issue by applying standard statutory construction and referring to its prior case that dealt with a species of the same issue, *Natl Corporacion Venezolana, S.A. v. M/V Manaure V*, 511 So. 2d 968 (Fla. 1987). This aspect of the case is important for surplus lines carriers because it holds that surplus lines carriers are not exempt from certain requirements of Chapter 627, including policy delivery, attorneys fees provisions, and more.

Once the Court found that the provisions of Chapter 627 requiring delivery of the policy to the insured was NOT exempted by statutory exclusions for surplus lines carriers, it was necessary for the Court to answer the first certified question: did the statutory requirement override common law of Florida in which delivery of the policy to the insureds agent (in this case the broker, Brandon) *presumably* comprises delivery to the insured? On the question of whether delivery of the policy to the agent was sufficient, the case turned in favor of the Essex. The Court strictly construed statutory impingement on the common law of agency and reiterated the vitality of its common law. Simply put, the insured was unable to overcome the presumption because there was no evidence of a special relationship between the surplus carrier and Brandon, the independent broker that procured the insurance for Lighthouse.

What the Florida case does. Despite limiting the scope of its decision on coverage due to lack of factual development in the district court case, the decision carries implications for carriers, brokers and insureds and lessons for in house counsel and private lawyers who represent them.

Exclusionary provisions and surplus lines carriers. Just how much protection is afforded to surplus lines carriers under the exclusionary provisions of section 627.021(2)? The Essex Court, relying on statutory construction analysis and the *Manaure* case held that the exclusionary provisions were intended to apply only to Part I of Chapter 627, the ratemaking portion of the statute. 2008 Fla. LEXIS 1112 at 18. Before *Essex*, surplus lines carriers relying on their exclusions from Chapter 627 may have expected broader exclusion from Chapter 627, as exemplified by the position of the insurer in the *Essex* case, which asserted that, as a surplus lines carrier, it was excluded from *all requirements* of Chapter 627. The Court rejected that notion outright. 2008 Fla. LEXIS 1112 at 18 (Therefore, Essex is incorrect in the assertion that none of the statutory provisions of chapter 627 apply to surplus-lines insurance.) The statutory construction holding clearly finds that surplus lines carriers in Florida are subject to not only the attorneys fees and policy delivery provisions at issue in the *Essex* case, they are subject to other requirements of that chapter. Since many surplus lines and foreign insurers may be unaware of the various technical requirements of Florida law, and may well have issued policies or engaged in practices that are not in compliance with those requirements, lawyers on both sides of cases involving surplus lines carriers and in-house counsel should review the policy and company practices for compliance with Florida law. Counsel should be cautioned that failure to comply with applicable statutory requirements could have serious implications for carriers providing coverage in Florida.

Requirement to deliver policy to the insured. When addressing the issue of whether delivery to the broker

constitutes delivery to the insured, the Courts analysis in the *Essex* opinion is instructive for carriers and insurance brokers. To say this case holds that carriers delivering policies to the insureds broker have met the Florida policy delivery requirements fails to address the full import of the case. The analysis of this issue is fact based; i.e., whose agent is the broker anyway? As stated by the *Essex* Court:

[A]n insurance broker acts as an agent of the insured, not the insurer, where the broker is employed by the insured to procure insurance. The presumption can be overcome by the existence of special circumstances [i.e., indicia of agency] indicating that the brokers arrangement with the insurer was not a standard relationship. (emphasis in original)

For surplus lines carriers, reliance on a presumption that delivery to the agent is effectively delivery to the insured is not a very safe harbor in which to weather a storm. The case-specific facts involving the relationships among the broker and the carrier and the insured will be considered. First, is the broker acting as an agent of the insured? If the broker is employed by the insured to procure insurance, there is a common law presumption that the broker is the agent of the insured. However, that presumption may be overcome by facts presented by the insured that there are special circumstances. *See 2008 Fla. LEXIS 1112 at 23-29*. Surplus lines carriers will need to assess whether to risk delivery of the policy to brokers is a safe practice in light of the potential forfeit of exclusions if the policy does not get to the insured.

Potential liability for brokers may arise when insureds that rely on brokers to procure insurance are not aware that the action or inaction of their agent in procuring information from the carrier is binding on them. Practitioners who represent independent agents should remind their clients to make the import of the agency relationship clear to the insured. Best practice dictates however that the agent/broker maintain a procedure for ensuring that all materials are forwarded to the insured, along with a method for documenting the delivery.

In light of the Courts holding in *Essex*, if the Florida legislature wants to require personal delivery of the policy and exclusions to the insured in all cases rather than to a broker or other intermediary, then that requirement will need to be clearly set out in an amendment to the statute.

What the Florida case does not do. Three of the certified questions were not addressed by the Florida Supreme Court because the factual issues were not developed in the federal case. As pointed out in the 11th Circuit *Essex* opinion, the Florida statutes and prior Florida cases are unsettled on the remedy for non-compliance with the statutory delivery requirement, whether Lighthouse met or did not meet the insurance definition of builder, contractor, developer, and whether the injured party Zota was an employee of Lighthouse under the policy. *Essex Ins. Co. v. Zota, et al.*, 466 F. 3d 981, 2006 U.S. App. LEXIS 25255 (11th Cir. 2006). In the absence of necessary facts, the Florida Supreme Court did not signal how it might answer the certified questions, so certain specific coverage issues remain unsettled under Florida statutory and case law. Perhaps the most important of these is the remedy available for non-compliance with the statute, which carries with it the question of whether exclusions can be lost and whether coverage that is not afforded by a policy can be created when statutory requirements are not followed. *See, 466 F. 3d at 986-988, 2006 U.S. App. LEXIS 25255 at 9-19.*

ABOUT THE AUTHOR(S):

Judge (ret.) Ralph Artigliere graduated with honors from the United States Military Academy at West Point in 1969 and high honors from the University of Florida School of Law in 1977. After a twenty-four year career as a civil trial lawyer with Holland & Knight (1977-81), Lane, Trohn, Clarke, Bertrand & Williams, P.A. (1981-91-Managing Partner), and Anderson & Artigliere, P.A. (1991-2001), Judge Artigliere was appointed to the Circuit Bench for the Tenth Judicial Circuit by Governor Jeb Bush in 2001. As a trial lawyer, Judge Artigliere represented insurance companies, insureds, and plaintiffs in personal injury and medical malpractice cases for 24 years. Judge Artigliere is a member of the faculties of the Florida Judicial Colleges and has been an instructor at the Florida Bars Advanced Trial Advocacy Course since 2001. Judge Artigliere sits on the Florida Civil Rules and Supreme Court Standard Civil Jury Instruction Committees. He co-authored with William Artigliere the Florida Bars FasTrain Manual: How to Write and

Use Jury Instructions in Civil and Criminal Cases distributed by LexisNexis. Judge Artigliere is Board Certified in Civil Trial by the Florida Bar and received the 2007 Harry Lee Anstead Award as Board Certified Lawyer of the Year. In 2006, Judge Artigliere was the recipient of the Florida Bars William M. Hoeverler Judicial Award for outstanding professionalism and contributions to the court system, and in 2005 he received the Willson American Inns of Court Professionalism Award for adherence to the highest standards of professional conduct as well as significant contributions to the cause of professionalism. Before retiring from the bench in 2008, Judge Artigliere served as judge of the felony criminal, circuit civil, and family divisions and as administrative judge of the civil and family divisions.

Mark Vespole on American Wrecking v. Burlington Ins.

2008 Emerging Issues 2892

Mark Vespole on American Wrecking v. Burlington Ins.:Has New Jerseys Handful of Pro-Insurer Decisions Morphed a Few One-Off Aberrations into a Trend?

By Mark R. Vespole

September 10, 2008

SUMMARY: In American Wrecking v. Burlington Ins., a case of first impression in New Jersey, the Appellate Division, presaging the NJ Supreme Court's June 5, 2008 decision in Villa v. Short, upheld a cross-suit exclusion in an additional insured context. Perhaps what may have been perceived previously as an isolated aberration or two in a precious few pro-insurer coverage decisions emanating from NJ Courts now has the preliminary trappings of a trend.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: American Wrecking was a high-risk demolition contractor which had two sister companies, Island and SECO. In 2003-2004, American Wrecking was performing demolition services under separate contracts with DSM and TCNJ at several locations. The respective contracts required that American Wrecking add the owners and general contractors for the two projects as additional insureds under their CGL policies. American Wrecking apparently subcontracted some of its demolition work for the projects to its two sister companies. Between November, 2003 and July, 2004, three employee's of the sister companies were injured at the worksites and filed separate negligence lawsuits against American Wrecking and the owners and general contractors of the two projects.

In 2001, American Wrecking obtained a comprehensive general liability insurance policy from Burlington Insurance Company ("Burlington"), a surplus lines insurer, through its agent, NIA Insurance Group ("NIA"). Because Burlington was a non-admitted surplus lines insurer., NIA obtained the coverage through Burlington's surplus lines agent, Partners Specialty. The first Burlington policy was in effect from November 14, 2001-November 14, 2002, and did not have a cross-suit exclusion.

On October 14, 2002, NIA submitted a renewal application on behalf of American Wrecking to the surplus lines agent, which issued a quote for a renewal policy. The renewal quote was for \$133,000 in premium, and added new exclusions and other policy language, including a cross-suit exclusion. On behalf of American Wrecking, NIA negotiated with the surplus lines agent for changes in the policy, including the deletion of the cross-suit exclusion and a reduction of the premium. Negotiations continued even after the policy was issued. As a result of the negotiations, the premium was eventually reduced by \$48,000 to \$85,000, and there were several changes to the policy. However, Burlington refused to delete the cross-suit exclusion.

As issued, the Burlington renewal policy contain the following relevant provisions applicable to a cross-liability exclusion endorsement, and separation of insured and additional insured issues:

EXCLUSION CROSS LIABILITY

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

This insurance does not apply to any actual bodily injury, property damage, personal injury, or advertising injury to:

3. A present, former, future or prospective partner, officer, director, stockholder or employee of any insured:

7. Separation of Insureds

Except with respect to the Limits of Insurance, and any rights or duties specifically assigned in this Coverage Part to the first Named Insured, this insurance applies:

- a. As if each Named Insured were the only Named Insured; and
- b. Separately to each insured against whom claim is made or suit is brought.

ADDITIONAL INSURED OWNERS, LESSEES OR CONTRACTORS

-- AUTOMATED STATUS WHEN REQUIRED IN CONSTRUCTION AGREEMENT WITH YOU

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

A. Who is An Insured (Section II) is amended to include as an insured any person or organization for whom you are performing operations when you and such person or organization have agreed in writing in a contract or agreement that such person or organization be added as an additional insured on your policy. Such person or organization is an additional insured only with respect to liability arising out of your ongoing operations performed for that insured. A persons or organizations status as an insured under this endorsement ends when your operations for that insured are completed.

Declaratory judgment actions arising out of the three lawsuits were consolidated and argued together before the trial court. The trial court granted summary judgment to the additional insureds seeking coverage under Burlington's policy, finding that although the cross-suit exclusion was not ambiguous, it was nonetheless inconsistent with the reasonable expectations of the insureds and with public policy. On appeal, the Court considered the issues of ambiguity, reasonable expectation of the insureds and violation of public policy.

Conclusion:

1. The Court first addressed the insureds' ambiguity argument, acknowledging the well- worn principles that while ambiguity will be interpreted against insurers to provide coverage, exclusions are presumptively valid, so long as they are clear, prominent, specific, and not contrary to any public policy. The court made two critical observations:

A. The Burlington policies cover commercial risks and were procured through a broker/agent and included parties on both sides of bargaining table who were sophisticated about insurance.

B. American Wrecking was engaged in a high-risk demolition business for which coverage can only be obtained through a surplus lines insurer.

The Court observed that the cross-liability or cross-suit exclusion states that the insurance policy does not apply to "bodily injuries" claimed by "an employee of any insured" (emphasis added). The Court's analysis of the quoted language is as follows:

standing by itself, the phrase "employee of any insured" is crystal clear. In short, "any" does not mean "the insured, it means "any" insured, which, of course, is its ordinary meaning.

Curiously, this interpretation preceded a remarkably similar interpretation of the same policy language in a different exclusion three weeks later by the New Jersey Supreme Court in *Villa v. Short*.

2. Again, curiously mimicking the subsequent decision in *Villa*, the Court considered the ambiguity argument in the context of the "separation of insured" or "severability" clause of the policy. As in *Villa*, the Court held that the severability or separation of insured clause did not render the policy ambiguous, because it was not located within a policy provision which grants coverage, and because its scope appears to be restricted to the issue of the limits of coverage as to each insured.

3. Addressing the reasonable expectations of doctrine, the Court distinguished between the applicability of the doctrine for commercial and homeowners policyholders. Relying upon *Nunn v. Franklin Mutual Insurance Co.*, 274 N. J. Super. 543 (App. Div. 1994), the Court held that in personal lines policies, the policy's plain meaning can be overridden if the insured's reasonable expectations of coverage are thwarted. On the other hand, however, when dealing with commercial policies, policyholder are typically more sophisticated and, therefore, an insured's reasonable expectations will not overcome the plain meaning of the policy. Given the significant negotiations between the policyholder's agent and the surplus lines agent in this case, the Court had no trouble concluding that the clarity of the cross-liability exclusion trumped the insured's reasonable expectations.

4. The Court concluded by finding that the cross-liability exclusion did not violate public policy, because public policy considerations, in and of themselves, do not result in a finding of coverage if the contested language of the policy is unambiguous in the first instance.

Finally, this case illustrates the importance of some of the distinctions a court will make when dealing with policy issued by a surplus lines insurer instead of an admitted insurer. Practitioners should clearly take note.

ABOUT THE AUTHOR(S):

Mark R. Vespole is a partner in the Newark, New Jersey office of Tressler, Soderstrom, Maloney & Priess, a national litigation and insurance services law firm. Having tried and litigated numerous commercial, insurance and securities matters in state and federal courts and before arbitration panels throughout the country, Mr. Vespole's practice includes insurance coverage and defense litigation arising out of first-party and third-party property and casualty, life and health, professional liability, employment practices and directors and officers liability policies, as well as corporate raiding, and securities arbitrations and compliance matters for broker-dealers and registered representatives.

Mr. Vespole has written and lectured extensively for a variety of insurance and securities trade publications and organizations covering a broad range of topics, including insurance coverage, bad faith, corporate raiding in the securities and life insurance industries, noncompete agreements, replacements of life insurance policies, contestability clauses, product liability and mold litigation.

Mr. Vespole is an Honors graduate of the University of Notre Dame and Seton Hall Law School. He is admitted to

practice in New Jersey, the United States Supreme Court, the United States Court of Appeals for the Second Circuit and Third Circuit, United States District Court of New Jersey and the United States District Court for the Southern, Eastern, Western and Northern Districts of New York. He has been certified by the New Jersey Supreme Court as a Civil Trial Attorney since 1988.

ARTICLE: Introduction

Childrens health insurance was one of the hottest political topics in the 110th Congress during 2007. What began as strong support for childrens health care eventually turned into an ideological battle over the future role of government in health care in the U.S.

After ten years, the State Childrens Health Insurance Program (SCHIP) has achieved success in expanding access to coverage for low-income children. The programs reauthorization in 2007 was an opportunity to build on and strengthen the aspects of SCHIP that made it a successful and popular program, as well as to address and fix the aspects of SCHIP that created obstacles and challenges to its success. However, despite bi-partisan support, Congress was unable to override President Bushs vetoes of two successive pieces of SCHIP reauthorization legislation.

The SCHIP policy disagreements represented a fundamental ideological disagreement over governments role in health care. The failure of a comprehensive reauthorization resulted in an extension that maintains current SCHIP programs as they are through March 2009. In the meantime, SCHIP remains a highly political issue. The outcome of the upcoming election will have a large impact on the future of SCHIP, but the ongoing uncertainty is problematic from an operational perspective. This commentary describes what introduces SCHIP provides, discusses the 2007 reauthorization debate that culminated in SCHIPs extension through March 2009, and comments on the implications for the future of the program.

Background: The State Childrens Health Insurance Program (SCHIP)

In 1997, following the failure of achieving comprehensive universal health reform, Congress found strong bi-partisan support to create the State Childrens Health Insurance Program (SCHIP).ⁿ¹ SCHIP is a federal-state partnership where the federal government matches state expenses for expanding childrens public health coverage. At the time of its creation, SCHIP was the largest federal health care reform initiative since the creation of Medicare and Medicaid in 1965. Politically, SCHIP is significant for the bipartisanship support with which it was created (SCHIP was passed by a Republican-controlled Congress and signed by a Democratic President) and for its success and popularity at the state level.

One of the hallmarks of the SCHIP partnership is state flexibility, whereby states have federal support to expand childrens coverage beyond its current level as best fits their needs and resources. Congress intentionally designed SCHIP to offer states flexibility, per federal approval, to design and operate their programs. States could use federal SCHIP funds to expand their existing Medicaid program, create a new separate SCHIP program, or do a combination of both. Federal law gives states flexibility to determine SCHIP income eligibility levels for children whose family incomes are too high to qualify for Medicaid under the rules the state had in place as of June 1997.

Another significant feature of the SCHIP partnership is the design of the federal financing arrangement. Congress appropriated \$40 billion for SCHIP over 10 years, with annual amounts distributed to the states and territories according to a formula set out in law. The distribution formula is primarily based on the estimates of the number of low-income children and low-income uninsured children in each state; and state costs are matched with federal funds at a higher rate than Medicaid. But more importantly, SCHIP is a block grant program that provides states with a set amount of funding that must be matched with state dollars.ⁿ² Unlike Medicaid, SCHIP is *not* an entitlement and a state *can* run out of federal SCHIP funds. This was a compromise lawmakers struck in order to make federal spending on SCHIP predictable (and limited). Given the limited nature of SCHIP funds, states are allowed three years in which to use each annual allotment; after that time unused funds must be returned to the federal government to be redistributed to states in need.

Success and Shortfalls: Ten Years of Experience With SCHIP

Within three years of the creation of SCHIP, every state had submitted plans to receive federal SCHIP funds for childrens coverage through a Medicaid expansion and/or separate SCHIP program. States have taken advantage of the programs flexibility, and each states program is designed to meet the states unique needs with respect to structure, eligibility requirements, delivery system, provider reimbursement, and administration.ⁿ³

SCHIP is responsible for a decade of improvements in childrens health, and has succeeded in providing uninsured children with coverage.ⁿ⁴ In 2007, more than 7.1 million children were covered through SCHIP-financed coverage at some point during the year (2 million in Medicaid expansions and 5.1 million in separate SCHIP programs).ⁿ⁵ Together, Medicaid and SCHIP decreased the rate of uninsured low-income children by one-third over the past decade.ⁿ⁶ From this success, SCHIP quickly became and has remained a popular program among the public, administrators, and policymakers alike.

In the 10 years of federal and state experience with SCHIP, the major challenge has been the financing structure. SCHIP funding was set in law in 1997, before there was any experience with the program. SCHIP allotments provided an influx of money early on for states to establish their programs. A handful of states, usually because they had significant pre-SCHIP Medicaid expansions for children, received federal approval to use SCHIP funds for adult coverage, usually parents.ⁿ⁷ It took some time, however, for the majority of states to ramp up their programs; in some cases enrollment exceeded expectations and soon some states were spending their entire allotment.

The federal SCHIP funding mismatch was significant and became more apparent as SCHIP matured. Some states had more than double the federal SCHIP funds they needed. As SCHIP spending has grown, the pool of funds available for redistribution has shrunk. n8 An increasing number of states, in part caused by their enrollment success, exhausted *all* of their available federal SCHIP funds leading some to make policy changes such as by capping enrollment, in order to avoid a funding shortfall. n9

Increasingly, Congress has taken action to redistribute funds among states, or even to appropriate new funds to fill the SCHIP shortfalls. n10 This contributed to the growing calls for a comprehensive reform of the program. For example, SCHIP directors called for SCHIP funding to be renewed and increased substantially to provide sufficient and predictable funds for states to effectively manage programs and reduce the number of uninsured [children]. n11

Disagreement: SCHIP Reauthorization Efforts

Throughout 2007, but particularly leading up to SCHIPs expiration on September 30, 2007, reauthorization was an active political topic. There was much debate and disagreement, largely along political and ideological lines, over the future of SCHIP.

Original Proposals. In February 2007, President Bush proposed reauthorizing SCHIP with a \$5 billion funding increase above the baseline over a five-year period. n12 Advocates and states widely viewed this as inadequate, and urged the Democratic-led Congress to consider a stronger reauthorization package with an increase large enough to meet the growth that had occurred in state programs, as well as provide room for further expansions that many states were planning. n13 Congress responded by passing a budget resolution in May 2007 that included \$50 billion for SCHIP over a five-year period, n14 double what President Bush had proposed.

First Presidential Veto. In August 2007, both the House and the Senate passed SCHIP reauthorization legislation. n15 In late July 2007, Representative Dingell (D-MI), Chairman of the Energy and Commerce Committee, introduced the Childrens Health and Medicare Protection Act (CHAMP, H.R. 3162). The package included almost \$50 billion for childrens health coverage under Medicaid and SCHIP, financed through a tobacco tax increase and reductions in payments to Medicare Advantage plans. The House quickly passed CHAMP days later on August 1, 2007 by a vote of 225 to 204.

The next day, on August 2, 2007, the Senate passed, by a vote of 68 to 31, the Childrens Health Insurance Program Reauthorization Act (CHIPRA, S. 1893). This \$35 billion reauthorization package, also financed through a tobacco tax, was based on the bi-partisan work of Finance Committee members, Senators Baucus (D-MT), Grassley (R-IA), Hatch (R-UT), and Rockefeller (D-WV). The bill also created performance payment incentives for states to enroll more low-income children, and expanded coverage to more than four million uninsured children. n16

After making some changes to the financing and benefit provisions in the Senate version, the House adopted CHIPRA (relabelled as H.R. 976 for technical reasons) on September 25, 2007 by a vote of 265 to 159. To ensure that the Senate and the House had adopted identical bills, the Senate approved the Houses version of CHIPRA (H.R. 976) by a vote of 67 to 29.

Arguing that CHIPRA went too far toward federalizing health care and would expand coverage for moderate-income uninsured children at the expense of poorer children, n17 President Bush vetoed CHIPRA on October 3, 2007. n18 In explanation, President Bush stated in a radio address, When it comes to SCHIP, we should be guided by a clear principle: Put poor children first. n19 On October 18, 2007, the House failed, by roughly a dozen votes of the two-thirds needed (273 to 156), to override the Presidents veto of CHIPRA.

Despite agreement with the general concept that children should have health coverage, some Republican policymakers, including President Bush, opposed several provisions and features of CHIPRA. Some concerns were rooted in programmatic and funding disagreements; for example, some Congressional members expressed concern about the appropriateness of financing childrens coverage through a tobacco tax. At other times, the intentions and provisions of CHIPRA were stated in vitriolic terms as SCHIP became an ideological and partisan issue. For example, Rep. King (R-IA) described SCHIP as Socialized Clinton-style Hillarycare for Illegals and their Parents on the House floor and Representative Feeney (R-FL) described it as Socialized, Cuba-style Health care. n20

As mentioned above, the SCHIP reauthorization debate was always ideological in nature, but hardened after the failure of CHIPRA. The disagreement over SCHIP reauthorization centered on the following main policy points:

. *Tobacco tax financing.* There was some concern among policymakers and the public over the appropriateness of raising federal tobacco taxes to fund childrens health care, and the implications for smokers, farmers, sellers, and state budgets. n21 In addition, there was disagreement over whether a tobacco tax would disproportionately affect low-income families and whether or not financing child health coverage through a tobacco tax is sustainable. n22 Congress, however, did not seriously discuss other financing options for the program.

. *Coverage of immigrant children.* Immigration was a key issue in the SCHIP reauthorization debate. Under current law, most legal immigrant children are not eligible for Medicaid or SCHIP during their first five years in the country and undocumented immigrant children are ineligible for Medicaid and SCHIP (however, immigrants may be eligible for emergency Medicaid services only). n23 Some conservatives alleged that the SCHIP reauthorization bills would make it easier for immigrants, specifically illegal immigrants, to obtain coverage, and thus increase fraud. n24 In reality, the bills would have tightened federal restrictions on Medicaid and SCHIP coverage of undocumented immigrants and created new citizenship verification documentation requirements for SCHIP applicants. n25

. *SCHIP-financed adult coverage.* As described above, a number of states that had extra SCHIP funds received federal waiver approval to expand coverage for adults. In most cases, coverage was expanded to the parents of children enrolled in Medicaid or SCHIP, but in some cases also to childless adults. n26 In 2007 approximately 587,000 adults were enrolled in SCHIP, 84 percent of which were parents or pregnant women. n27 There is empirical evidence that parental coverage improves childrens coverage and health. n28 Regardless, SCHIP spending on adult coverage became a highly political issue. The compromise CHIPRA bill would have phased-out SCHIP coverage for adults over two years. However, the issue actually represented a fundamental ideological difference about the governments role in health care, with some conservative policymakers calling for the immediate elimination of adult SCHIP coverage. n29

. *Coverage of moderate-income children (and the crowding-out of private coverage).* Perhaps most controversial was the issue of expanding SCHIP to uninsured children in moderate-income families. Some states had already expanded coverage to higher income levels, but opponents of an SCHIP expansion argued that coverage of middle-income children would be the first step toward a new entitlement program and socialized health care. n30 The President and other conservatives believed that Medicaid and SCHIP should be restricted to poor and low-income children. n31 However, in their opposition, they failed to acknowledge that CHIPRA actually gave states new incentives to enroll the lowest-income children and took steps to minimize the crowd out of existing private coverage.

Much of the policy debate revolved around how hard to make an SCHIP income eligibility cap, but the underlying main concern was that expanding eligibility for SCHIP would crowd out existing private coverage as families would drop or forgo private coverage and substitute it with subsidized SCHIP coverage. Indeed, there is evidence that some crowd out does exist (as it will in any health reform that expands coverage through public programs or subsidies). However, the magnitude of SCHIP crowd out estimates varies widely and there is some debate within the health policy community over the circumstances under which coverage substitution may be considered acceptable. n32

In fact, public coverage is considered by some to be an important stop-gap against the decline of employer-sponsored coverage due to economic factors. A well-respected economist and one of the leading researchers

on crowd out, Dr. Jonathan Gruber, has said, I want to emphasize a conclusion that has been consistent throughout my research: public insurance expansions are by far the most cost-effective means of expanding coverage in the U.S. today. n33 Furthermore, many SCHIP programs already include anti-crowd out policies that appear to be working, such as waiting periods before children become eligible. n34

The ideological divide over crowd out was further hardened in the middle of the Congressional debate when the Administration issued a directive to state SCHIP directors on August 17, 2007. n35 The new directive effectively shuts down state flexibility as it imposes new crowd out requirements for states expanding coverage to moderate-income children. n36

More specifically, the directive establishes eight new conditions that states must meet to use federal funds to provide SCHIP coverage to children in families with a gross income above 250 percent of the federal poverty level. As conveyed in the directive, the conditions require states to:

- Monitor health insurance status at the time of application.
- Verify family insurance status through insurance databases which must include information regarding coverage provided by a non-custodial parent.
- Prevent employers from changing dependent coverage policies that would favor a shift to public coverage.
- Ensure that, the cost sharing requirement under the State plan compared to competing private plans not be more favorable to the public plan by more than one percent of the family income, unless the public plans cost sharing is set at the 5 percent family cap.
- Establish a minimum of a one year waiting period of uninsurance for individuals prior to receiving coverage.
- Assure that the State has enrolled at least 95 percent of the children in the State below 200 percent of the FPL who are eligible for either SCHIP or Medicaid.
- Assure that the number of children in the target population insured through private employers has not decreased by more than two percentage points over the prior five year period.
- Assure, that the State is current with all reporting requirements in SCHIP and Medicaid and reports on a monthly basis data relating to the crowd out requirements.

In essence, the directive creates a two-tier SCHIP program, as some rules apply only to higher income children. This presents a barrier for states seeking to expand or streamline their programs. The Bush administration has asserted that the conditions in the August 17th directive are designed to ensure the SCHIP program would maintain its focus on the lowest-income children, as well as limit the potential crowd out of private coverage.

State officials, the advocacy and policy communities, and many lawmakers have expressed concern that the new requirements effectively limit program growth and could significantly change state operations. Concerns have also been raised that the Bush administration has not followed appropriate regulatory procedures in calling for the conditions to be implemented.

Second Presidential Veto. In order to address some of the objections and criticisms, CHIPRA was revised by: n37

- . Further restricting state flexibility to cover children in moderate-income families;
- . Strengthening incentives for states to enroll the *lowest* income children;
- . Eliminating SCHIP-financed coverage for adults within one year instead of two; and
- . Modifying the citizenship documentation requirements in Medicaid and SCHIP.

The slightly modified bill, CHIPRA 2 (H.R. 3963) was passed by the House on October 25, 2007 by a vote of 265 to 142 and passed by the Senate on November 1, 2007 by a vote of 64 to 30. Opponents of the original CHIPRA were

not swayed by the revisions in CHIPRA 2. n38 Asserting that CHIPRA 2 did not assure that poor children have coverage first and citing his continued concerns over the crowding-out of private coverage, n39 President Bush vetoed CHIPRA 2 on December 12, 2007. n40 The House subsequently failed to override the veto on January 23, 2008.

Despite SCHIPs popularity, the debate ultimately ended without a comprehensive reauthorization and various statements on who bore blame for the failure:

- . House Democrats accused the President and Republicans of shifting the reasons for their opposition of SCHIP reauthorization bills. n41 By one description, the Republican strategy was to, Thwart the new Democratic leadership at every turn, and then run next year against a do-nothing Congress. n42

- . Senator Kyl (R-AZ) stated that through SCHIP, Democrats, unfortunately, saw an opportunity to play politics. n43

- . After changing her support for CHIPRA temporarily, Senator Hutchinson (R-TX) urge[d] the Democrat leadership to abandon this political gamesmanship and work toward a bill the president will sign." n44

- . With the added tension of other issues, like the Iraq war, Democrats in the House and Senate started to blame each other. n45

By the time CHIPRA 2 was vetoed by President Bush, further attempts to negotiate a comprehensive SCHIP reauthorization were seen as fruitless by many. n46 Unable to comprehensively reauthorize SCHIP, Congress extended the program in the short-term as described below.

Short-term Solution: Seeking a Temporary Extension to SCHIP

SCHIP technically expired at the end of fiscal year (FY) 2007, on September 30, 2007. While the SCHIP program could continue to exist without being reauthorized, the federal government would be unable to make payments without legislation to provide new SCHIP funds. n47 In order to continue SCHIP while allowing Congress to continue debating a full reauthorization, Congress passed and the President signed two short-term extensions that funded SCHIP at FY 2007 levels. The Continuing Resolutions were signed by President Bush on September 29, 2007 and November 13, 2007 to extend SCHIP through November 16, 2007 and December 15, 2007, respectively.

On the heels of President Bush's veto of CHIPRA 2, the unlikely possibility of overriding that veto, and the expiration of the second short-term extension, a comprehensive reauthorization seemed dubious at best. Democratic leaders began working on a short-term solution to continue funding for SCHIP. Republican Congressman Barton (R-TX) also offered a similar extension proposal (H.R. 3584). Along with other unfinished health policy business, Congress extended SCHIP by passing the Medicare, Medicaid and SCHIP Extension Act (S. 2499) on December 19, 2007. It was signed into law (Pub. L. No. 110-173) by President Bush on December 29, 2007. n48

The Extension Act is designed to maintain state SCHIP programs at current funding levels through March 31, 2009, and does not provide new funds for expansions. n49 The bill continues the baseline allotment of \$5 billion per year, and only provides additional funds for budget shortfalls due to growth in health care costs and inflation. The additional funds total just \$1.6 billion in FY 2008 and \$275 million for the first two quarters of FY 2009. These additional funds are necessary to fill shortfalls that states are expected to face in trying to run their programs through FY 2008 at FY 2007 funding levels. Congress may be pressured to address those shortfalls at some point, as the new funds under the Extension Act are not sufficient to cover many additional SCHIP-eligible children or to support significant expansions in eligibility to higher income levels. n50 Although the Extension Act keeps SCHIP programs intact for now, the

longer-term future of SCHIP remains uncertain.

Next Stage: Implications for the Future of SCHIP

The 2007 SCHIP reauthorization debate ended with a hardening political divide, leaving childrens coverage increasingly on the line. ⁿ⁵¹ Ultimately, Congress and the President were able to agree upon extending the program and generally maintaining the status quo. This move prolongs SCHIP as an issue through the November election, and likely leaves the fate of the program in the hands of the next administration. Operationally, however, this move allows states to maintain their programs, despite the huge cloud of uncertainty over the future of federal SCHIP financing.

The SCHIP reauthorization debate more broadly represented an ideological divide (it has also been called a proxy war) over the governments role in health care. ⁿ⁵² While the legislation put before President Bush would have expanded coverage to about 4 million children, many Republican policymakers fundamentally disagreed with the concept that the government should address the uninsured by directly providing coverage. Many Democrats, however, sought to do just that. It is this fundamental divide that further contributes to the uncertain future of SCHIP.

Broad health care reform has been a key topic in the 2008 presidential election, and the election will have a direct impact on SCHIP. For example, under Senator McCains proposal, SCHIP would likely stay the same (or shrink if funding does not keep pace with costs); whereas the program could be significantly expanded under Senator Obamas proposal.

However, regardless of who is elected President, SCHIP reauthorization *must* be addressed by its next expiration date, March 2009. The Congressional Research Service has already estimated that 42 states will have exhausted all their federal SCHIP funds by April 1, 2009. ⁿ⁵³ This offers a relatively small amount of time for the new Congress and the new President taking office in January 2009 to agree upon a longer-term reauthorization plan, although Congress could take up SCHIP reauthorization again before then, and may in fact do so. ⁿ⁵⁴

States may have to prepare for the unlikely, but possible, case that SCHIP does expire and/or that no new federal SCHIP funds will be available. ⁿ⁵⁵ States may not be required to immediately disenroll children, but there will likely be no new outreach and little new enrollment. States would inevitably prepare to restructure their programs (e.g., expand Medicaid in place of a separate SCHIP program) or simply shut down their SCHIP programs altogether. If new SCHIP funds are eventually made available (through either reauthorization or an extension), there would have been much wasted effort as states must again readjust to account for the new funding and opportunities. Functioning on this uncertainty is not efficient as it diverts state efforts to operate their programs and enroll eligible children.

One important issue that was not addressed in the Extension Act is the August 17th SCHIP directive on crowd out. The directive would have been nullified by the SCHIP reauthorization bills had they become law, but the directives ideological basis made it difficult to address through the Extension Act.

On May 7, 2008, Centers for Medicare & Medicaid Services (CMS) released a second letter to state health officials offering clarification of several of the new policies outlined in the August 17th directive. The letter asserted that the conditions only apply to new enrollees, not current beneficiaries, and that states are not required to apply some of the cost sharing and waiting period conditions to applicants with family incomes below 250 percent of the federal poverty level.

The August 17th letter requires states already covering children with family incomes above 250 percent of the

federal poverty level to comply with the conditions by August 18, 2008. California has explored ways in which to address the directive, n56 and on August 12, 2008, California, which operated the nations largest SCHIP program, informed CMS that they would not be able to comply. n57 CMS responded by stating, We are determining whether the relevant states are in compliance with the existing requirements, as also clarified in the Aug. 17, 2007, letter. Moreover, we will continue to assist the states in developing policies that will ensure that the most vulnerable, low-income children are covered first, without moving them from private to public coverage. At this time, we are not taking compliance action." n58

It may be that no further policy response will be needed because Congress or the courts will halt implementation. State and federal policymakers, however, have already begun exploring options to challenge the directive. New York, New Jersey, Illinois, Maryland, and Washington have challenged the directive in federal court, with the support of a number of other states, child health advocates, and health policy experts.

Both the Government Accountability Office and the Congressional Research Service have issued opinions questioning CMS legal authority in issuing or enforcing the new requirements. While these agencies do not have the power to rescind the directive, their findings have been the subject of Congressional hearings and legislation that would nullify its proposed changes.

Congressional and agency efforts put into understanding and addressing the directive ultimately detracts focus and energy from a larger comprehensive reauthorization of SCHIP. Even if the directive is overturned, its central issue, addressing crowd out, will likely be one of the major issues in the next stage of SCHIP reauthorization.

In fact many of the issues that created the ideological divisions that resulted in the failure of the 2007 SCHIP reauthorization effort are likely to be the same issues that arise in the 2008-2009 SCHIP reauthorization effort. This is because there remains a fundamental ideological difference on governments role in health care, which will not and cannot be resolved through SCHIP. Prospects for, and the structure of, SCHIP reauthorization, as well as health reform more generally, are ultimately dependent on the results of the election, the overall political landscape, and the economic climate to provide clear leadership on this issue.

Maister & Schulz on In Vogue: A-Side DIC D&O Insurance Coverage

By Marc S. Maister and Harry J. Schulz III

September 4, 2008

SUMMARY: A majority of publicly traded companies have now added A-side DIC (Difference In Conditions) D&O insurance to their insurance programs. This commentary explains the fundamentals of such coverage, how it differs from traditional D&O coverage, and provides issues to think about when considering the purchase of an A-side DIC D&O policy. These policies essentially constitute the last line of defense for an individual D&Os personal assets.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Introduction

In the wake of Enron, WorldCom, Sarbanes-Oxley, derivative litigations spawned by options backdating cases, and a faltering economy, directors and officers are not surprisingly looking beyond their corporate indemnification rights, and traditional directors and officers (D&O) insurance, to protect their personal assets. Insurance brokers inform us that a majority of publicly traded companies now carry A-Side DIC D&O insurance, and that independent D&Os in particular have led the charge in pushing their companies to carry such coverage. This commentary is intended to explain what that coverage is, how it may differ from traditional D&O coverage, and provide some issues to think about when considering the purchase of an A-side DIC D&O insurance policy.

Traditional D&O Insurance

Traditional D&O insurance has evolved over the last few decades. Historically, D&O insurance was intended to afford protection solely to corporate directors and officers for liabilities arising in connection with their activities on behalf of the corporation. There was no protection for the corporation itself. The early D&O policies provided what are now known as A-side and B-side coverages. A-side coverage is usually a coverage of last resort solely for the D&Os. It protects them against loss arising out of their actual or alleged wrongful conduct in connection with the corporation, but only when they are not indemnified by the corporation. The key distinction from other coverages in the policy is that A-side coverage only applies after the corporation fails, refuses or is not permitted to provide the D&O with indemnification for the loss (depending on the policy language). Recognizing that such non-indemnified loss would otherwise have to be paid by the individual insureds themselves out of their own personal assets, A-side coverage generally does not have a self-insured retention or deductible that must be met prior to coverage being triggered. A-side coverages are most often triggered when the corporation is insolvent or when the individual insureds have to pay

settlement/judgment costs incurred in connection with a derivative securities claim. As to the latter, corporations may not be permitted to indemnify D&Os with respect to those types of losses.

B-side coverage is very similar to A-side coverage. It provides coverage for liability of the D&Os (not liability of the corporation), but differs from A-side coverage in that it reimburses the corporation for the corporations indemnification of the D&Os. In other words, the insurer essentially pays the corporations obligation to indemnify the D&Os. Often, this coverage is subject to a sizable self-insured retention. Most traditional D&O policies contain a clause specifying that the corporation will be presumed to be indemnifying its D&Os to the fullest extent permitted by law, thereby triggering the B-side coverage and the self-insured retention. Consequently, most claims for loss in connection with D&Os, including securities claims, fall under the policies B-side coverage.

Over time, however, disputes developed between corporations and insurers regarding allocation in connection with policies providing solely A-side and B-side coverages. In particular, securities claims were typically brought not only against individual D&Os, but also against the corporation. Where conflicts did not preclude joint representation, the D&Os and the corporation would often share defense counsel. Also, settlements of securities litigations would jointly resolve the claims against the D&Os and the corporation. Arguing that the corporations were reaping coverage benefits that had not been paid for, insurers began pushing for an allocation of costs which would only require them to pay for defense and indemnity incurred on behalf of the covered D&Os. Frequently, there were disputes between the insurers and the insureds as to the proper allocation the insurers would assert that a greater percentage of the loss was allocable to the corporation and thus not covered, and the insureds would argue that the loss was predominantly allocable to the D&Os and thus covered.

In the mid-1990s, there were a series of cases limiting an insurers ability to allocate loss to the non-covered corporation. *See, e.g., Nordstrom v. Chubb & Son*, 53 F. 3d 1424 (9th Cir. 1995); *Safeway Stores, Inc. v. National Union Fire Ins. Co. of Pittsburgh, PA*, 64 F.3d 1282, 1288 (9th Cir. 1995); *Raychem Corp. v. Federal Ins. Co.*, 853 F. Supp. 1170 (N.D. Cal. 1994); *Caterpillar, Inc. v. Great Am. Ins. Co.*, 864 F. Supp. 849, 852 (C.D. Ill. 1994). Around the time of these cases and thereafter, insurers decided to eliminate these costly coverage disputes and began to offer and charge a premium for what is now commonly referred to as C-side coverage. Such coverage is also known as entity coverage, and provides coverage to the corporation itself for a limited set of claims. Entity coverage is typically limited to coverage for securities claims (usually defined in the policy), and may be further limited to instances where the claim is first initiated and continuously maintained against a director or officer. Entity coverage often has a separate self-insured retention, and the policy limit applicable to such coverage is almost always shared with the policy limits applicable to A-side and B-side coverages. n1

Of course, while the addition of entity coverage to the traditional D&O policy did have the effect of diminishing disputes over allocation between insureds and D&O insurers, and often provided a benefit to the corporation in the form of coverage for securities claims, there were certain adverse consequences caused by the inclusion of entity coverage that soon became evident. First, the shared limits between the A-side, B-side and entity coverages meant that loss incurred by the corporation on a covered claim would dilute the limits available to pay loss incurred by the D&Os or on behalf of the D&Os by the corporation. Indeed, a single securities claim solely against the insured corporation could erode the entire policy. Second, the inclusion of entity coverage meant that the policy was an asset that was shared by both the D&Os and the corporation. Consequently, if the corporation became insolvent, the automatic stay of bankruptcy (pursuant to 11 U.S.C. § 362(a)(3)) could cause the entire policy to be tied up and rendered unable to respond to loss incurred by the D&Os. *See, e.g., In re Pintlar Corp.*, 124 F.3d 1310, 1313 (9th Cir. 1997); *In re Adelphia Communs. Corp.*, 298 B.R. 49 (S.D.N.Y. 2003). As such, a director or officer could face the nightmarish scenario of having a claim that he or she must continue to defend (absent an injunction under 11 U.S.C. §105(a), the automatic stay only protects the corporation, not the individual D&Os), all without indemnification from the corporation (due to insolvency) or coverage from the D&O insurance. Because events precipitating bankruptcy often give rise to claims against D&Os, the risk of simultaneously losing indemnity and insurance coverage was unacceptable to D&Os. Consequently, a number of newer D&O policies have provisions that seek to protect against D&Os from losing their coverage in the event of corporate insolvency, including priority of payments provisions. n2 However, such

provisions are largely untested and may be unenforceable in bankruptcy.

The Evolution of A-Side DIC Coverage

To protect against the risk of limits dilution created by the inclusion of entity coverage in the traditional insurance program, some companies began to purchase separate pure A-side excess policies solely for the benefit of the D&Os. Such policies typically provided A-side coverage on a following form basis (i.e., they provided coverage under the same or similar terms to those contained in the underlying insurance), and required the exhaustion of all of the underlying insurance before it applied (or at least that the insureds incur liabilities exceeding the amount of the underlying insurance). In other words, if the full underlying limits of traditional D&O insurance had been paid on a claim, the A-side excess policy would provide the individual D&Os with protection against any unresolved liability for which they could not be indemnified by the corporation. Because these A-side policies only provided coverage to the individual D&Os and not the entity, it was less likely that they would be subject to the automatic stay upon insolvency of the corporation.

The problem is that these pure A-side excess policies only applied in very limited circumstances and were often expensive. And, they did not address another concern plaguing D&Os making sure that there was coverage where the corporation and the underlying traditional insurance fails or refuses to provide indemnification/coverage (whether due to insolvency of the corporation or the insurer, the application of policy exclusions, or otherwise). For instance, if the underlying traditional D&O insurance became impaired by corporate insolvency, there was no assurance that the A-side excess policies would step in and provide any coverage to the D&Os, because the condition precedent to coverage *i.e.*, exhaustion of the underlying traditional D&O insurance had not occurred. Thus, while the pure A-side excess policies were not subject to being directly impaired by corporate insolvency, they could become indirectly impaired due to the failure (or inability) to exhaust the underlying policies. In that situation, the pure A-side coverage would effectively become stranded coverage, absent policy language to the contrary or unless someone filled the underlying gap.

In response, several entrepreneurial insurers began marketing A-side excess policies that also contained a Difference In Conditions (DIC) provision for the purpose of providing broader coverage (and competing with a similar product previously marketed by Corporate Officers & Directors Assurance Ltd., commonly known as CODA). Typically, DIC provisions specify that the policy drops down to respond as primary coverage if the corporation *and* the underlying insurers fail or refuse to indemnify the D&O (whether rightfully or wrongly) or cannot provide such indemnity to the D&O (whether due to legal prohibition, financial impairment or otherwise). As such, this new, broader coverage promises to drop down (to dollar one if necessary) to protect D&Os in the event that underlying traditional coverage becomes impaired by corporate insolvency or insurer insolvency.

While it is fair to say that A-side DIC coverage is largely still a doomsday coverage for D&Os, the reality is that these policies essentially constitute the last line of defense for an individual directors or officers personal assets, and many consider such coverage to be the second most important layer of D&O insurance (after the primary policy on the traditional tower). Indeed, A-side DIC coverage has increasingly been called upon to respond to claims, including for indemnification of judgment/settlement costs incurred in connection with derivative litigation (options back-dating cases, in particular); coverage after the corporations insolvency impairs the traditional D&O policies (bankruptcies are at a record high); and coverage of costs incurred in responding to interviews of former D&Os who have been denied indemnity by the new board (interviews typically do not constitute a Claim under traditional D&O policies). A-side DIC policies could also drop down to provide indemnification to D&Os for gaps created by below-limits settlements entered into between the insureds and the underlying insurers, at least where the corporation has also failed or refused to provide indemnity for such gap (*e.g.*, in the context of a derivative litigation settlement).³ A-side DIC policies may also provide drop-down protection where underlying traditional insurers seek rescission of their policies (*e.g.*, where a traditional insurer seeks rescission based on restated corporate financials), or where the underlying traditional insurance provides coverage on terms that are narrower than the A-side DIC policy. A-side DIC policies are typically non-cancellable and non-rescindable.

Practical Considerations Regarding A-Side DIC Insurance

Since their introduction, A-side DIC policies have continued to evolve into a highly-specialized insurance product in their own right. While the policy forms and coverages of many A-side DIC policies vary extensively, there are, nonetheless, certain common considerations that a prospective purchaser of such policies should examine before making a decision to bind coverage. Among these considerations in no particular order are the following:

- . Use a good insurance broker who is familiar with these specialized products.
- . Purchase the best coverage you can afford.
- . Purchase insurance from a financially stable insurer.
- . Purchase a policy that reflects fair pricing.
- . Consider the claims handling experience of the insurer.
- . Consider your relationship with the insurer, if any.
- . Consider establishing a D&O insurance committee to make purchasing decisions.
- . Purchase adequate limits to defend against a significant claim.
- . Coordinate the A-side DIC tower with your other coverage.
- . Consider the positives and negatives of insurers providing overlapping coverage.

Each of these considerations will now be discussed.

Use a Good Insurance Broker Familiar With A-side DIC Products

Purchasing D&O insurance is a bit like buying a car options can be added or removed (sometimes for a price), and many of the terms are negotiable. Of course, some policy provisions, and even certain types of policies, are more negotiable than others. For instance, while traditional D&O policies have long been viewed as mandatory coverage for a corporation, A-side DIC policies have been (until recently) viewed as optional coverage by many. With an increasing number of companies looking to purchase at least some amount of A-side DIC insurance, the market for these insurance products has become very competitive. A-side DIC insurers, anxious to capitalize on this developing market, have often been willing to provide broad coverage enhancements not available on traditional D&O policies.

A strong insurance broker with extensive experience in placing D&O insurance policies can help ensure that you obtain the best coverage possible on an A-side DIC policy. Generally speaking, good brokers are subject-matter experts familiar with numerous policy forms on the market, including the strengths and weaknesses of those forms. Many have experience in working with counsel to create specialized manuscript forms, if necessary. As such, a broker can help you navigate through the myriad of various forms to help you pick the one which best fits the particular risks that you are seeking to cover, and which also best fits within the context of your total D&O insurance program. Choose a broker that is on top of the current forms and who is already looking to enhance the current forms to provide you with broader coverage. Insurance brokers should also be able to provide you with credible benchmarking/analytical information on purchasing trends, pricing, market capacity, among other things. Moreover, strong insurance brokers can also provide invaluable assistance when a claim happens they might be able to use their relationship with the insurers to get claims paid.

Working in tandem with the broker, coverage counsel can be another useful tool in negotiating the purchase of an A-side DIC policy or in handling coverage questions when a claim happens. This is because coverage counsel typically

knows how the policies are responding to current claims and what arguments the insurers are making to deny coverage on claims. Coverage counsel may also identify problematic language and pitfalls that can be avoided through the use of endorsements and manuscript language. Accordingly, coverage counsel may be able to provide the broker with concrete examples which justify the policy changes being sought by a broker, and may be able to effectively anticipate and refute coverage arguments by insurers.

Purchase The Best Coverage You Can Afford

Since they first came into existence, A-side DIC policies have provided extensive protections to D&Os. Recently, many D&O insurers have introduced a second generation of A-side DIC insurance policies that expand upon these protections and incorporate many of the enhancements that have been most commonly sought by insureds and most commonly granted by insurers. Such enhancements include:

- . The elimination of a notice requirement within the policy period as a condition precedent to coverage;
- . Affirmative provisions providing that the policy is fully non-rescindable;
- . Fully severable exclusions and policy application precluding the imputation of knowledge or conduct of one insured to any other insured;
- . Limited or no insured versus insured exclusion (*i.e.*, no company versus individual insured exclusion);
- . Conduct exclusions not applicable to Defense Costs and that also require a final adjudication in the underlying claim;
- . Broadened definition of Claim to include coverage for formal and informal interviews, investigations and extradition coverage;
- . No pollution or cleanup cost exclusion;
- . No exclusion for bodily injury and property damage;
- . No exclusion for ERISA;
- . Affirmative provisions providing that the insurer will not dispute coverage for claims alleging violation of Section 11 or 12 of the Securities Act of 1933 (*i.e.*, the insurer will not assert no loss and seek to avoid coverage based on public policy concerns as to disgorgement); and
- . Broadened Difference-In-Conditions trigger of coverage (providing drop down coverage if the insured corporation and the underlying insurers fail or simply refuse to pay, for any reason whatsoever).

Other enhancements may be available and/or negotiated as a concession from the insurer. For instance, some insurers also offer coverages which recognize the potential competing interests between inside (*i.e.*, employee) and outside (*i.e.*, independent) D&Os. These policies (often called Independent Directors' Liability, or IDL policies) have separate limits applicable to those insured groups to preclude dilution of policy limits and reduce the risk of elevating one insured group's interests at the expense of another insured group. ⁿ⁴ Insureds should seek certain enhancements to their A-side DIC policies' subrogation provisions, particularly where there is an overlap between insurers in the traditional and A-side DIC insurance towers. Such enhancements should include provisions specifying that the insured has a right to pursue the non-paying D&O insurer if the A-side DIC insurer fails or refuses to do so, and also that any recoveries from the non-paying D&O insurer (less costs) will be applied to replenish the depleted A-side DIC policy limits.

In all events, however, insureds should seek to ensure that their A-side DIC policies provide coverage that is at

least as broad as or (preferably) broader than the coverage provided by their underlying traditional D&O policies, and that the A-side DIC policies do not contain any inconsistent language that may cause gaps in coverage between the traditional and A-side excess towers. Indeed, such inconsistencies/gaps should be expected due to the fact that most A-side DIC policies are stand-alone policies with their own internal terms and conditions (i.e., they do not follow form), and may be avoided by the inclusion of conforming endorsements.

Purchase Insurance From a Financially Stable Insurer

The potential for insurer insolvency is one of the many factors to consider when placing all D&O insurance policies, including A-side DIC policies. D&O claims typically take a long time to resolve (4 to 6 years is not unheard of), and are often referred to in the industry as long tail claims. Because of this, you want to first and foremost pick insurers that will be there to pay. You want to pick insurers that are financially stable and that are unlikely to withdraw from the market or become insolvent during times of economic uncertainty or in the face of extensive claims obligations.

The advent of A-side DIC policies provided insureds with some protection against insurer insolvency by including a drop down trigger of coverage following the insolvency of an underlying insurer. But this is only for A-side non-indemnifiable claims. Ratings of insurers are provided by A.M. Best Company, Standard and Poors and Moodys (among others). Do not presume that just because a broker has an insurer on its approved list that the insurer is financially stable. Check out the ratings yourself. Brokers have many relationships with insurers and are often loathe to take an insurer off of its approved list because it may effectively put the insurer out of business. That said, most brokers are mindful of the importance of A-side insurers and seek strong insurers that could function as de facto primary insurers.

Purchase a Policy That Reflects Fair Pricing

Getting the broadest coverage for the best price is easier said than done. Suffice it to say, it is not difficult to convince an insured that it should not overpay for the insurance coverage it is receiving. However, insureds often make a mistake when they seek to purchase the least expensive insurance policy available. The old adage you get what you pay for often applies to such a circumstance. Insurers are businesses, not charitable institutions, and they are in business to make a profit. Inexpensive insurance often reflects an insurance policy which provides narrower coverage and/or contains broader exclusions than those found in other more expensive policies. Also, insurers charging substantially lower premiums in connection with the underwriting of a policy may prove to be more reluctant to part with those premium dollars when a claim occurs. They may also be selling the coverage this year at a discount so they can steadily increase the premium over the next few years. In any event, the choice between broader coverage and lower premium costs is a balancing act which insureds should knowingly undertake when making their insurance purchasing decisions. That being said, the A-side D&O market has become increasingly competitive over the years, and premium costs have fallen as a result. If the insured company's financials are strong with a good balance sheet, insureds should expect competitive pricing on the A-side DIC program.

Consider the Claims Handling Experience of the Insurer

Hardly anyone interviews the claims personnel of an insurer. Yet, those individuals may be the most important people of all to an insured. When a claim occurs, insureds want an insurer who is not a mere passive observer to the claim, but one who instead is an active advocate on the insureds behalf. After all, an insured pays premiums for the sole purpose of having responsive coverage when a claim occurs. It is how you are treated when a claim occurs that counts. In that regard, it is a good idea for insureds to consider the claims handling experience of prospective insurers, and to seek an insurer with experience and resources that will help resolve the claim favorably. If the insured does not have any direct experience with the insurer, the insured can ask their broker questions like, Which insurers have a reputation for timely paying claims? and Which insurers have the most experience paying claims? Through talking with their clients and assisting in the processing of certain

claims, brokers often have insight into an insurers recent claims handling patterns and practices. An insurer that appears to invent roadblocks to coverage may deserve to be jettisoned from the D&O insurance program, even if it is providing coverage for a lower premium cost than other insurers. Coverage counsel and securities counsel may also be useful in identifying the insurers that are difficult to deal with and/or aggressively deny claims. D&O insurance differs from other lines of insurance based on the complexity of the claims as applied to the terms and conditions of the policy, and D&O insurers differ greatly in the philosophy, mindset and experience that they bring to the claims process.

Likewise, it is important to consider that new insurer entrants into the D&O market may or may not have the level of expertise or claims handling experience of the larger, more established insurers. Inexperience in this area may mean that such insurers will be less effective or efficient at handling and resolving your claims. Such inexperience may translate into a failure to timely pay defense costs, or even a failure to perceive a current settlement offer as a golden opportunity to avoid a much costlier litigation and settlement or judgment down the road. Inexperience may also lead to the hiring of less qualified counsel to defend the claim. Experienced insurers will usually recognize the folly of such penny-wise/pound-foolishness. And, keep in mind, if your insurer causes poor litigation results, you ultimately pay the adverse judgment or increased premiums going forward.

Consider Your Relationship With the Insurer, If Any

In the world of D&O insurance, relationships matter, and having a favorable underwriting and/or claims history with a particular insurer or insurers is a significant factor to consider when placing both traditional D&O insurance, as well as A-side DIC insurance. Indeed, such relationships (whether in connection with D&O insurance alone or arising out of other policy lines) often lead to insurers agreeing to provide the insureds with broader policy enhancements, higher limits and/or greater premium discounts as a reward for their loyalty. Policy renewals are easier if an insurer already knows your company, and insurers with whom you have long-term relationships have banked your premium and are more likely to stick with you in difficult times. Moreover, placing coverage with an established insurer that you have a relationship may help to avoid the headaches that might occur when coverage is placed with newer entrants. For instance, newer entrants to the D&O insurance market may be among the first to leave the market if it becomes unprofitable or otherwise hardens, leaving the insured scrambling to fill gaps in coverage at renewal. Established insurers are more likely to remain in the market during such difficult times.

On the other hand, it is always good to make new friends. A lack of claims or underwriting history with a particular insurer often arising in connection with one of the new insurer entrants to the D&O insurance market should not act as a sole reason to preclude an insured from placing such insurer on the program. There are many new insurers who are newly formed entities, but the personnel running them have been in the business for decades. However, a lack of history altogether is a factor to consider, depending on the people involved, and one which may weigh in favor of a smaller participation by such insurer in the program to start.

Many insureds will stick with insurers with whom they have a history because the insureds consider the insurers to be partners in a relationship, and may even pay more for their coverage to solidify that partnership for the inevitable day when a claim is received. Insurers can instill loyalty by providing a superior claims handling experience and open lines of communication with their insureds.

Consider Establishing an Insurance Committee to Make Purchasing Decisions

Purchasing D&O insurance is a complex task for many corporations, and one which is of increasing interest to the individual directors and officers. Often, there are competing interests which add to the complexity of the task, with each set of these divergent interests being concerned with preserving the limits available to them and avoiding the potential dilution of coverage that results from the inclusion of the other competing interests. Such competing interests not only include those of the company and the D&Os (which may lead to a conflict over how much traditional v. A-side DIC coverage to buy), but also among the directors themselves (*e.g.*, inside v. outside director interests). Outside directors

may push for higher limits on a specialized A-side DIC policy with dedicated limits (*e.g.*, an IDL policy), while inside directors may wish to allocate more premium dollars towards increasing the traditional or A-side DIC policies' limits. Further, outside directors may prefer conduct exclusions in D&O policies which become operative upon a plea or trial court conviction, while inside directors may desire such exclusions not to become operative until all appeals on the conviction are exhausted. Officers, on the other hand, may be more interested in the balance sheet protection afforded by the risk transfer component of the insurance and will push to have the corporation purchase additional traditional coverage, often at the expense of A-side only coverage.

As such, corporations should consider setting up a committee of board members and/or officers to work with the brokers in placing the D&O insurance coverage that best accommodates the divergent interests of the various D&Os and the corporation. A further advantage of establishing such a committee may come from the fact that many directors serve on multiple boards, and can probably provide some insight as to their experiences with D&O insurance in connection with those other directorships. In all events, delegating the completion of insurance policy applications and the negotiation of insurance placement or renewal to lower level employees of the company is unwise, because if mistakes are made in the application or in the placement, it is the D&Os who may personally pay for those mistakes.

Purchase Adequate Limits to Defend Against a Significant Claim

Often, we see insureds purchasing \$5 million of A-side DIC coverage for their D&O insurance program. While such limits may be adequate for the circumstances of those particular D&Os if other coverage responds, they may not be if the A-side DIC is the only insurance that responds to a claim. When considering what limits should be maintained on an A-side DIC tower, it is important to remember that A-side DIC coverage is triggered when neither the corporation nor the underlying traditional insurance are paying the loss incurred by the D&Os, and that defending securities claims can be very expensive. Consequently, D&Os should consider maintaining A-side DIC limits which are at least sufficient to fund defense costs for such a litigation, along with some amount of limits to provide for the payment of settlement or judgment costs. Further, it is also important to remember that with the divergent interests of D&Os, it is likely that conflicts between insured persons may require multiple sets of defense counsel, which will further accelerate the depletion of policy limits. Often, a broker will be able to provide market analysis to assist insureds in determining the appropriate level at which to set the A-side DIC limits.

Coordinate the A-Side DIC Tower With Your Other Coverage

As A-side policies have increased in prominence and popularity, many D&O insurance programs have been structured with multiple layers of pure A-side coverage excess of a traditional ABC D&O insurance tower. Often, brokers will place an A-side DIC policy as the lead layer of that A-side tower, with following-form pure A-side excess policies above the lead A-side DIC layer. However, where such stacking of multiple A-side policies occurs, it is advisable that each policy in the A-side tower also contain a DIC provision. This will help to ensure that each A-side DIC excess policy not only drops down if the traditional D&O insurance tower fails or refuses to pay, but also if an underlying A-side DIC insurer fails or refuses to pay. n5 Absent such a DIC provision, the pure excess A-side policy may provide little value to the insureds, as the policy will likely require the underlying insurers to admit liability for or actually pay the full underlying limits of insurance. Indeed, pure A-side excess policies lacking a DIC provision could conceivably become stranded coverage where the underlying policies fail to pay their full limits due to insolvency or a below limits settlement. Consideration should also be given towards whether a tiered A-side DIC tower makes sense (*e.g.*, one that provides A-side DIC coverage to all D&Os at lower levels, with A-side DIC insurance for independent directors only at higher levels).

Consider the Positives and Negatives of Insurers Providing Overlapping Coverage

Some brokers argue that you should never have insurers providing overlapping coverage (*i.e.*, one providing some coverage in the underlying traditional ABC D&O insurance tower and some coverage in the A-side DIC insurance tower). That may be good advice or it may not, depending on the structure of the program, the coverage available and

which insurers you are talking about. One has to balance the factors set forth in this article, among others, to reach a conclusion (broad coverage versus financial stability versus relationship versus price, etc.).

Brokers sometimes advise against such overlapping coverage because one wants the A-side DIC insurers to be solvent and drop down if the underlying traditional coverage refuses to pay or is insolvent. Obviously, having the same insolvent insurer at multiple layers is not a good thing. This risk is much greater in a small program, and the program can frequently be structured to try to avoid the risk. However, in a large program that has several A-side DIC layers, the risk may not be as significant because the layers above the insolvent A-side DIC insurer, if any, should drop down. Also, in large sophisticated programs insureds may reasonably make the determination that having the broadest coverage possible with many different insurers that are financially superior alleviates this risk. After all, having a solvent insurer is important, but it means nothing if the coverage purchased is not broad enough to respond to the claim. Having coverage placed with an insurer that has a poor claims payment history is equally unsatisfying. And, the fact that you have the coverage placed with two different insurers may not ensure solvency, especially if the lead A-side DIC insurer is a financially inferior insurer to another insurer already on the program that is willing to write some of the A-side DIC coverage. Frankly, insurers themselves are reluctant to take too much of a program and will generally regulate themselves on the issue. Last, from a pure solvency perspective, there may be no difference between purchasing \$5 million of underlying traditional coverage from a particular insurer and another \$5 million of A-side DIC coverage from that insurer as opposed to purchasing \$10 million of either traditional or A-side DIC insurance alone from the insurer (other than where the coverage attaches).

Brokers also correctly point out that there is the potential for game playing by an insurer with overlapping coverage, particularly if the insurers A-side DIC participation is required to drop down upon a refusal of that same insurers traditional coverage to pay a claim. Such insurer could theoretically refuse to pay its traditional coverage participation and force its own A-side DIC coverage participation to drop down and pay, effectively reducing the insurers exposure on the claim. In that instance, the concern is that the insurer will simply fail to pursue its traditional coverage participation in subrogation, thereby effectively reducing the insureds available limits. Such conduct would be bad faith, and there is no doubt that the insured should have the right to sue the insurer that is refusing to pursue the non-paying insurer (*i.e.*, itself) because the insured is economically harmed through the reduction of its available insurance limits. In any event, this risk can be eliminated by the addition of language making it clear that if the A-side DIC insurer does not diligently pursue its subrogation claims against itself (or any of its affiliates or any other insurer, for that matter) the insured may do so. We believe that the insured may have the right to do so anyway, but it is always a good idea to make such rights clear. All things being equal, it is good to consider structuring a D&O insurance program to avoid overlapping coverage, but pragmatically, it may not be possible (or even optimal) to do so in a sophisticated program. Difficult choices often have to be made, and various considerations have to be weighed and balanced.

Indeed, many of the leading insurers providing A-side DIC coverage also play an extensive role in the traditional D&O insurance market. Such insurers include AIG (through National Union and others), Chubb (through Federal Insurance Company and others), Ace (through Ace American, Westchester, CODA and others), XL Insurance and Arch, among others. Consequently, it is unlikely that an insured will be able to purchase a traditional D&O insurance tower and an A-side DIC insurance tower with limits in excess of \$50 million without at least some overlap of insurers between the traditional and A-side DIC towers. While diversification of risk is usually preferred (if possible), it is but one factor in making a decision regarding insurance placement. As stated above, the risks arising in connection with such overlap may be outweighed by the fact that such insurers may be able to provide coverages or limits on substantially more favorable terms than their competitors (especially if the insured has a favorable prior relationship with the insurer). Also, many of the above-referenced insurers tend to be the most financially stable insurers in the marketplace. While it seems counterintuitive, diversification of risk through the use of smaller, financially unstable insurers may actually prove to increase not decrease the risks of insolvency in the insurance program. In the end, if insurer overlap is inevitable, its risks can be ameliorated to some extent by placing the traditional D&O insurance and the A-side DIC insurance with different affiliated companies within the same insurance group.

Concluding Thoughts About Structuring and Placing A-Side DIC Insurance

Structuring an insurance program can be simple or complicated, and one size does not fit all. That is why you need a good broker when placing D&O insurance. Some D&O insurance programs have a total of three different insurers, while others might have 20 (or more) insurers, some with quota shares of the same layer. When structuring a D&O insurance program, there are many competing interests to consider each year:

- . Be proactive. Having your D&O insurance program reviewed before there is a claim can help to avoid future problems and ensure that there is time to correct any deficiencies.

- . Consider the structure that is best for the individual insureds at that time, balancing the insureds' various competing interests (*e.g.*, coverage versus cost versus stability versus claims experience). Having a good broker really matters with respect to this issue because most insureds have very little input on the exact structure of their program beyond the primary layers.

- . At a minimum, ensure that each policy in the A-side excess tower provides DIC drop-down coverage that is at least as broad as the coverages contained in the underlying traditional tower.

- . Have a backup insurer in the wings who wants to write the primary A-side DIC business this will help to keep the existing lead A-side DIC insurer competitive.

- . Chopping and changing insurers every year can save money, but it does little to develop a partnership with your insurer (it may also create coverage limitations if the insurers seek to apply retroactive dates). The primary reason to purchase D&O coverage is for your insurer to pay a claim if you get one. Loyalty may matter. Certainly, claims handling experience matters.

- . Is it better to have two or more insurers so that you have less risk with each insurer or one insurer that is financially superior? This can be a hard choice, especially on a smaller program. Having the risk spread among insurers is good, unless they go out of business or simply quit the volatile D&O insurance market. It may also be a problem if the insurers are small players who are not experienced with paying claims. So, it depends which insurers you are comparing. You have to weigh competing factors and decide which factors are the most important to you and best fit with your goals for the D&O insurance program. As discussed above, long-term relationships with insurers that are committed to staying in the D&O market and that have banked your premium over many years can be more important than diversity.

- . Never say never. Program structure should be reconsidered **every** year. It is easy to fall into a pattern of keeping the same structure from year to year. That is the least amount of work. But, the D&O market changes every year. New forms come out. Broader coverage terms become available. Multi-year policies become available. An insurer's financial health changes. Premium prices change. Claims happen. Coverage lawsuits happen. An insurer's willingness to pay certain claims can change. Relationships change. One or more of these market changes may render it advisable to make changes to the structure of the D&O insurance program.

- . Depending on the insureds and their loss history, they may not have a broad choice of insurers willing to provide coverage on their D&O insurance program. If the insureds are coming off of a big claim, it may be that the only insurer willing to underwrite the risk is the incumbent insurer (often for a larger premium). There are a limited number of insurers in the D&O market. If you want to place coverage with an insurer that is financially sound, gives you a fair deal and the broadest coverage, your choices may be limited.

- . Remember A-side DIC coverage is the backstop created to protect D&Os' personal assets when all other protections fail. As such, you should ensure adequate limits are maintained to take care of what can be an expensive doomsday scenario.

[Return to Text](#)

n1 [1] Some traditional D&O policies also provide a separate, limited entity coverage for the investigation costs incurred by the entity in connection with responding to shareholder derivative demands. This coverage typically has a sublimit of less than \$500,000. Additionally, many small to mid-sized companies may be able to obtain coverage for the corporation that is not limited to securities claims.

n2 [2] Such provisions are usually intended to ensure that the policy proceeds are freed from the automatic stay of bankruptcy by giving individual directors and officers priority over the corporation with respect to such proceeds. More sophisticated priority of payments provisions can be negotiated to provide further differentiation on payments, such that independent directors have priority over inside directors and officers.

n3 [3] A "below limits" settlement is where an insurer pays less than its full policy limits towards the settlement of a claim, typically in exchange for a release of any further right of coverage on the claim or related claims.

n4 [4] Other innovative products available in the marketplace include Personal Directors Liability ("PDL") coverage (which is designed to provide personal asset protection to a director who sits on one or more boards), and Retired Directors Assurance ("RDA") (which is designed to provide legacy protection to directors and officers when they leave the corporation (usually designed to hedge against organizational changes that may occur after the director or officer departs)).

n5 [5] Properly drafted DIC provisions should likewise reduce the risk created by insolvency of an underlying insurer providing coverage on a quota share basis (whether on a traditional D&O insurance participation or on an A-side excess participation) by dropping down to fill gaps created where the underlying insurance fails or refuses in whole or in part to indemnify the insureds. Quota share policies are commonly found in policies issued by Lloyds of London.

Haycock and Harbage on National Health Insurance Reform Proposals

2008 Emerging Issues 2794

Haycock and Harbage on National Health Insurance Reform Proposals: Comparison of John McCain's and Barack Obama's Plans

By Hilary Haycock and Peter Harbage

September 3, 2008

SUMMARY: Health care reform has been a hot topic in the presidential campaign. Both major parties nominees, John McCain and Barack Obama, have proposals to reform the current system. Although both plans address the same issues, from expanding access to coverage to containing costs to changing the insurance market, the candidates have very diverse approaches, as well as diverse expected outcomes. This commentary analyzes and compares the two plans.

PDF LINK: Core Emerging Issues Commentary (\$)

ARTICLE: Introduction

With 45.7 million Americans without health insurance or access to care, and with health care costs growing higher, health care reform has been a top topic throughout the presidential campaign. Both parties' nominees, Senator John McCain and Senator Barack Obama, have put forward proposals to reform the current system.

This commentary is an analysis of the major elements of their plans. Following an overview of the candidates' approach written from their perspectives, this commentary compares the candidates' plans on the critical elements of expanding access to coverage, cost containment and how each candidate proposes to finance these reforms.

Overview of Reform Goals and Plans

Although both the Democratic and Republican plans address the same areas of reform, from expanding access to coverage to containing costs to changing the insurance market, the candidates have very different approaches--as well as different expected outcomes. Sen. McCain's plan rests on laissez-faire ideology, while Sen. Obama has embraced the concept of "shared responsibility" that builds on the current system.

Republican Presidential Nominee, Senator John McCain. While Sen. McCain calls for "access to health care for every American," he does not outline a plan to achieve universal coverage. Instead, Sen. McCain's health reform plan has three stated goals:

- Making health insurance innovative, portable and affordable: McCains plan would try to improve competition in the health care marketplace to achieve this goal. McCain would replace the current system of providing tax exclusions for employer-sponsored coverage with a tax credit for every individual and family. Then, individuals and families are to shop around for the best product to meet their needs according to statements by the campaign. Sen. McCains plan also calls for expanding Health Savings Accounts, which allow individuals and families more control over choosing and paying for their own medical care while lowering monthly premium costs.
- Ensuring care for high risk patients: This is to be achieved by working with states to strengthen and promote high risk pools, which provide coverage for the medically uninsurable.
- Lowering health care costs: The McCain plan is to contain costs through a series of initiatives, including disease management and care coordination, expanding health information technology, provider payment reform and increased transparency.

Each major element of this plan as it relates to expanding coverage or reforming the insurance market is discussed in greater detail below.

Democratic Presidential Nominee, Sen. Barack Obama. Sen. Obama does call for universal coverage in his health reform plan, which also has three stated goals:

- Providing affordable, comprehensive and portable health coverage for every American: Every American would be guaranteed issue of coverage, meaning no applicant could be denied insurance on the basis of their medical condition or other factors. Creating a public health plan option and a National Health Insurance Exchange would all facilitate the purchase of coverage. Sen. Obama's plan would strengthen employer-based coverage by requiring employers to pay or play, meaning they must contribute to providing insurance to their employees or contribute a to-be-determined percentage of payroll to financing the national health plan. His plan would also expand coverage by mandating parents to ensure their children have coverage. Expanding Medicaid and the State Childrens Health Insurance Program (SCHIP, a federal-state partnership), and creating income-related subsidies and limits on rates would help make insurance affordable.
- Modernizing the U.S. health care system to contain spiraling health care costs and improve the quality of patient care: Initiatives for disease management, care coordination, cost and quality transparency, provider payment reform, and investment in health information technology as well as enhanced competition in insurance and drug markets are all ways the Obama plan would seek to contain costs. In addition, Obama would support comparative effectiveness research and tackle disparities in care.
- Promoting prevention and strengthening public health, to prevent disease and protect against natural and man-made disasters: Obama would encourage workplace and school wellness programs, expand our health care workforce, and support other programs to strengthen public health.

Each major element of this plan as it relates to expanding coverage or reforming the insurance market is discussed in greater detail below.

Cost Containment

Spiraling health care costs are placing increasing economic pressure on individuals, businesses and governments. Total health care spending reached \$2.1 trillion in 2006, n1 as insurance premiums have nearly doubled over the previous six years n2 and an ever increasing number of Americans now 45.7 million go uninsured. n3

Both Sen. McCain and Sen. Obama acknowledge that health care costs are a top problem which must be addressed by any health care reform plan. Many of their proposals for containing costs are based on similar concepts, including expanding health information technology, improving transparency and competition, and encouraging care coordination and management.

Chronic Disease and Prevention. Americans with chronic diseases account for more than 75 percent of total health care spending in the United States. n4 Many individuals with chronic diseases could benefit from better care management and preventive medicine. Both Sen. McCain and Sen. Obama state that improving care for chronic diseases is an important part of cost containment.

Sen. McCain has called for promoting prevention, early intervention, healthy habits, new treatment models, new public health infrastructure and the use of information technology. Also, Sen. McCain would support smoking cessation programs. However, his commitment to preventive care has been questioned given his support of expanding the individual market, where benefit packages are less likely to cover preventive care and more likely to require high deductibles. n5 High deductibles have been linked to lower preventive care utilization. n6

In contrast, Sen. Obama would require publicly funded plans (Medicare and Medicaid) to help individuals with high cost chronic diseases manage their conditions, with the stated goals of improving quality and lowering costs by doing so. He would also support employer and community efforts to improve health and wellness.

Coordinating Care. Our current health care system generally compensates providers on a per-service basis, which often discourages providers from spending time helping patients with the big picture of their medical needs. Both Sen. McCain and Sen. Obama have suggested that public programs should change their provider payment methods to pay providers per episode of care, which should compensate providers for their time in ensuring patients receive the correct and full spectrum of care for their medical condition. This can lower costs by ensuring patients get the right care when they need it, reducing unnecessary duplication in care and preventing expensive medical complications.

Both candidates also support a ban on public program payments to providers for medical errors. Sen. Obamas plan takes the next step of requiring public programs and the insurance Exchange to reward providers for delivering high quality care.

Transparency. An important first step to improving quality and reducing costs is improving our understanding of the quality and costs of the current system. Even just the reporting of cost and quality information has been shown to prompt providers to make improvements. n7 Sen. McCains plan calls for more information about the costs and quality of care in order to help consumers make smart choices. However, his plan does not call for any mandatory reporting requirements.

In contrast, Sen. Obama would require hospitals and providers to measure and report cost and quality information, and insurers will be required to report how premium dollars are spent on patient care versus administrative costs. In

addition, his plan would call on public programs to reward providers who reached high quality benchmarks.

Health Information Technology. Where other American industries have embraced the efficiencies and cost savings made possible by information technology, health care remains a largely paper-based industry. n8 Health information technology (HIT) is not only likely to help control costs, but it has also been shown to improve quality of care and save lives. n9 Many policymakers are looking for ways to reform our healthcare system to encourage the broader adoption and use of HIT.

Sen. McCain includes health information technology in his list of cost containment proposals, but the only specific purpose he defines for HIT is to enable doctors to treat patients across state lines.

Where Sen. McCain lacks specificity in his HIT commitment, Sen. Obama's plan calls for a \$10 billion federal investment in standards-based electronic health information systems, including electronic health records. Sen. Obama also acknowledges the need for any HIT program to address patient privacy concerns.

Pharmaceuticals. Prescription drug spending in the United States in 2005 (the most recent year for which there is data) was more than \$200 billion, a six percent increase from the year before. n10 Both Sen. McCain and Sen. Obama have proposed increasing the availability of both generic and re-imported prescription drugs as two ways to help reduce those costs for patients.

Unlike Sen. McCain, Sen. Obama would also allow Medicare to negotiate directly with pharmaceutical companies to buy drugs for lower prices. This could result in significant savings, as public spending on prescription drugs will have jumped from 27 percent in 2005 to 39 percent of total pharmaceutical spending in 2006, following implementation of the Medicare Part D prescription drug program. n11

Workforce. The United States is facing an increasing shortfall of needed healthcare professionals, particularly as our population continues to age. For example, by 2020, there will be 35 percent fewer nurses than the country needs, compared to a shortfall of less than 10 percent in 2005. n12 And the number of doctors per 100,000 residents is expected to fall more than 10 percent over the same time period. n13 This raises costs as providers have an increasing monopoly in the market and can demand higher reimbursement rates.

Sen. Obama's plan would increase funding to build the workforce, including supporting individuals seeking to enter the health care workforce with loan repayment, and supporting training programs through curricula grants. His plan also addresses retention issues by funding infrastructure support to improve working conditions and adequate reimbursement.

Sen. McCain's plan does not include a comprehensive workforce proposal.

Approach to Expanding Access to Coverage

As described above, Sen. McCain and Sen. Obama have very different approaches to the same goal of increasing access to health care for Americans. Sen. Obama focuses on expanding coverage, as health insurance is generally considered the primary mechanism by which Americans access care. Sen. McCain's plan seeks to give individuals greater power to make decisions on purchasing insurance and care.

This section discusses the major ways each candidate's plan would change the way Americans access health insurance, as well as how their plans would change health insurance regulation.

Coverage Requirements. One of the most significant differences between Sen. McCain and Sen. Obama's plans

are the Democrats inclusion of coverage mandates for children and employers.

Under Sen. Obama's plan, children would be required to have health insurance. In addition, employers will be required to offer their employees meaningful coverage, or they will have to contribute a percentage of payroll costs to help subsidize a national public plan. Sen. Obama's plan does not go so far as to include an individual mandate for every American to acquire coverage, as did the plans of several other Democratic presidential nominees. In contrast, Sen. McCain's plan not only does not include any coverage mandates, the candidate has announced his opposition to the concept. n14

As a result, experts estimate that Sen. McCain's plan would cover just 5 to 7 million additional Americans, n15 where Sen. Obama's inclusion of a mandate means that his plan would likely cover 30 million of the 45 million currently uninsured Americans. n16

Pooling Risk. Most Americans 61 percent of those under age 65 n17 currently receive health insurance through their employer, and thus on the group market. These individuals benefit from a number of advantages for group market policy holders, from fewer premium dollars spent on administrative costs to richer benefits packages to stronger consumer protections. Importantly, the group market pools risk, spreading the costs of care for the few who need it across a broader group.

It is often more difficult to obtain coverage on the individual market, which currently serves just five percent of all Americans. n18 On the individual market, insurers perform underwriting on applicants to determine their risk of incurring medical costs. Underwriting determines whether an applicant will be offered coverage, the rate of their premium and identifies coverage exclusions. Applicants with preexisting conditions may find they are denied coverage in the 45 states which do not require insurers to issue coverage to all. Alternatively, applicants may be offered coverage which is very expensive and which does not cover medical services for their condition.

Sen. McCain's plan calls for a greatly expanded individual market, particularly through his proposal to end the favorable tax treatment for employer-based coverage. His plan acknowledges that some Americans will not be able to obtain or afford coverage on the individual market due to a preexisting condition. For these individuals, his plan calls for the federal government to partner with states to operate what he calls a Guaranteed Access Plan, otherwise known as a high risk pool. Sen. McCain has called for \$10 billion in federal funding n19 for the Guaranteed Access Plan, or GAP, which would offer plans with reasonable limits on premiums, and some subsidies for low-income enrollees.

Sen. McCain's plan to expand the individual market, and supplement it through the GAP proposal, has been criticized by some, with warnings that the \$10 billion in funding promised by Sen. McCain may be insufficient to ensure access to care. n20

In addition, one report estimates that Sen. McCain's plan to expand the individual market would result in \$20 billion in new administrative costs as individuals move from employer coverage, with its relatively low administrative overhead of 12 percent of premium dollars, to the less efficient individual market, where administrative costs reach nearly 30 percent of premiums. n21

In contrast, Sen. Obama's plan includes several efforts to improve risk pooling and protections on the individual market. His plan would maintain the current tax treatment of employer-based health benefits. In addition, he would create a National Health Insurance Exchange where anyone could access health insurance. This Exchange would make the following changes to the individual market:

. *Fair and Reasonable Premiums:* Insurers must charge fair and stable premiums that will not depend upon health status.

. *Comprehensive Benefits:* Both public and private plans will be available on the Exchange, and all must offer similar benefits and meet standards for quality and efficiency.

. *Income-Based Subsidies*: Subsidies would be available for individuals and families who need them, on a sliding-scale basis.

The most efficient pool is one which includes every individual. Some have criticized Sen. Obama's plan for not including an individual coverage mandate, and thus for not including everyone in the risk pool.

Insurance Regulation on the Individual Market. Both Sen. McCain and Sen. Obama propose significant changes to how health insurers are regulated in the United States. The changes proposed by each candidate closely reflect their philosophy for health reform; Sen. McCain would pursue extensive deregulation where Sen. Obama has said that he wants stronger regulations to protect access and quality for consumers.

Today, insurers must adhere to the insurance regulations imposed by the state in which their policyholders reside. Some of those regulations include:

. *External Review*: In 44 states and the District of Columbia, consumers can apply for a required external review if their insurer denies a claim or benefit. n22

. *Guaranteed Issue*: Five states require insurers to sell products to any applicant, regardless of their health condition, or other factors. n23

. *Rating Limits*: Eighteen states impose some limit on the rates an insurer can charge, with ten imposing rate bands and eight requiring adjusted or pure community rating. n24

. *Preexisting Conditions*: States are all over the map on the requirements imposed on insurers regarding the definition of a preexisting condition, if and for how long insurers can exclude the condition from coverage, how far back into an applicant or policyholder's medical record underwriting research can go, and whether insurers are required to give applicants credit for prior coverage. n25

The major insurance regulation change proposed by Sen. McCain would be to allow insurers to sell their products across state lines. Sen. McCain asserts that this change will increase competition, helping to drive down costs and improve quality and choice for policyholders.

Others have suggested that this deregulation will lead to reduced consumer protections, as insurers will likely move to the state with the most lax regulations much as credit card companies did following similar deregulations in the late 1970s. n26

In contrast, Sen. Obama would extend many consumer protections to all Americans, including:

- *Guaranteed Issue*: Applicants could not be denied coverage for preexisting conditions.

. *Medical-Loss Ratios*: In 16 states one insurer dominates more than half the private insurance market and in 38 states one insurer dominates at least 30 percent of the private insurance market. n27 Sen. Obama's plan would force

insurers to pay out a reasonable share of their premiums for patient care instead of keeping exorbitant amounts for profits and administration in markets where the insurance business is not competitive.

- *Greater Transparency:* Insurance companies would have to report how much of premium dollars are spent on administrative costs versus medical care for patients.

Premium Subsidies and the Tax Code. Today, the federal government essentially subsidizes health coverage for Americans who receive it from their employer through a tax exclusion for the cost of employment health benefits. Sen. McCain's plan would end this benefit for payroll and income taxes, and replace it with a tax credit of \$2,500 for individuals and \$5,000 for families. n28 Sen. McCain has asserted that offering patients control means offering them tax credits to purchase insurance through work or on the individual market. And if patients purchase health insurance for less than the amount of the tax credit, the remaining funds can be transferred to a health savings account (HSA) to help pay for copayments and deductibles. As a top advisor to Sen. McCain has said, the tax credit will give all Americans equal ability to go in search of coverage: **"you get the same amount whether youre rich or poor, \$5,000 for every working family."** n29

Opponents have criticized this plan for several reasons.

- . Several estimates have suggested that the tax credit may not be enough to allow all families to purchase coverage, or would only cover the costs of catastrophic care policies that require high out-of-pocket cost sharing for routine care. n30 While the credit is worth \$5,000 to a family, the average family policy today costs \$12,000.

- . Unlike the current tax exclusion, which increases at the same pace as the actual cost of health insurance to individuals and employers, McCain's plan does not include a factor for medical inflation. Thus, over time the tax credit will decline in value and be worth less to individuals relative to the ever-increasing costs of insurance and medical care. n31

- . Sen. McCain's tax credit is the same flat amount for everyone; only individuals enrolled in high risk pools (which tend to have higher costs) could be eligible for income-related subsidies. The tax credits would not reflect the wide variation in insurance costs on the individual market due to policyholders' age, gender, medical condition and other factors.

In contrast, Sen. Obama would keep the current health benefit tax exclusion. Although the current exclusion tends to offer higher income families a higher benefit, Sen. Obama's plan includes income-based subsidies that low income families who are ineligible for a public program can use to purchase public, private or employer-based insurance.

Sen. Obama's plan also includes subsidies to help business shoulder the costs of health coverage. Small businesses which are increasingly less likely to offer coverage n32 would be exempt from the employer mandate. However, Sen. Obama's plan would encourage them to offer coverage by providing a tax credit to small business that is worth up to 50 percent of what they spend on employee premiums.

Sen. Obama's plan would also seek to bring down costs for all employers by subsidizing catastrophic health costs. Just 20 percent of Americans generate 80 percent of all health care spending. n33 Sen. Obama's plan calls for reimbursing employers for part of these high costs through a plan of reinsurance as long as the savings are passed on to workers through reduced premiums.

Public Programs: Medicaid & SCHIP. Public programs have played an increasingly important role in ensuring access to coverage for many Americans. Medicaid has long been the backbone of our health care safety net, providing coverage to nearly 59 million low-income and medically needy individuals in federal fiscal year (FY) 2005. n34

Another 4.4 million children were enrolled in State Children's Health Insurance Programs (SCHIP) in June 2007. n35

Sen. Obamas health care plan would expand eligibility for these programs, which would allow them to serve a larger population of low-income Americans, and increase overall funding for the health care safety net.

In contrast, Sen. McCain's plan does not advocate using Medicaid and SCHIP to expand coverage. In fact, Sen. McCain recently expressed his opposition to expanding public programs during the 2007 SCHIP reauthorization debate. Sen. McCain voted against a bill which would have reauthorized the program and expanded coverage to 10 million additional children, and then called the President's veto of the legislation the right call. n36

Sen. McCain has asserted that he would work to make public programs perform more efficiently by encouraging states to experiment with alternative forms of access, coordinated payments per episode covered under Medicaid, use of private insurance in Medicaid, alternative insurance policies and different licensing schemes for providers.

Reform Financing

Any major change in health care in the United States will come with a cost for implementation.

Sen. McCain's plan does not include many specifics on how he would fund any new initiatives. However, his plan would replace the current employer-sponsored insurance income tax exclusion with refundable tax credits for individuals and families. Congress estimates that the current tax exclusion will cost the federal government nearly \$120 billion in 2008, and more than \$140 billion annually by 2011. n37 This would be shifted to cover the costs of the tax credits. n38 Essentially, the McCain plan reduces federal funding for taxes by eliminating the tax exclusion--and as a result, increasing taxes. For his one major new government-sponsored initiative, the Guaranteed Access Plan, Sen. McCain has proposed federal funding of \$7 to \$10 billion dollars, saying he will work with Congress, the governors, and industry to make sure this approach is funded adequately.

On the other hand, Sen. Obama has explicitly spoken to how he plans to fund his health care reform proposal. His campaign estimates the cost of the plan, once fully phased in, to be between \$50 and \$65 billion annually. Sen. Obama proposes ending the Bush tax cuts for Americans earning more than \$250,000 a year, which would cover half the cost. n39 Some critics have questioned the time frame under which Sen. Obamas cost savings would materialize. n40 For example, Sen. Obamas plan uses estimates of HIT savings calculations from a study which suggests that \$77 billion in savings may not be achieved for many years. n41

Conclusion

Both Sen. Barack Obama and Sen. John McCain have offered health reform proposals with the potential to significantly change the health care system in the United States. While each candidate covers similar themes in their proposals, their approaches diverge broadly. Sen. Obama's plan builds on the existing system of both public and private coverage, and has pledged significant federal investments in subsidies and cost containment investments to make health care more affordable and efficient. His goal is cost-containment and universal coverage.

While Sen. McCain does not share the goal of universal coverage, his plan is no less far reaching. By reforming the tax code, Sen. McCain would shift coverage in America from the employer market where most Americans currently receive insurance to the individual market. In keeping with his philosophy of laissez-faire economics, the other elements of his plan largely rely on market forces and voluntary efforts by the industry to achieve cost savings and great efficiency.

ARTICLE: Although judicial resolutions of discovery disputes may often seem not to involve major issues of law, often, with their embedded standards of relevancy and their notions of burden, they provide insight on the boundaries and priorities of the law. Such is the case with a recent decision, *Hartford Accident & Indem. Co. v. Argonaut Ins. Co.*, 2008 U.S. Dist. LEXIS 47985 (D. Conn., June 23, 2008)). The opinion resolves a discovery dispute in a lawsuit between an insurer and its reinsurer in which the scope of the follow the fortunes doctrine is a key element. That doctrine, more expressively known as follow the settlements, and often though not invariably embodied by explicit clauses contained in a reinsurance agreement, generally restricts the ability of a reinsurer to question a settlement reached by the primary insurer. Instead, the doctrine obligates the reinsurer simply to pay its settling reinsured the amount owed according to the formula in the reinsurance agreement. Follow the fortunes clauses are a centerpiece of reinsurance agreements, particularly those whose coverage is concurrent with that of the primary insurance (follow-form policies), as they essentially delegate to the insurer substantial power over the meaning of the reinsurance (and insurance) agreements even when the insurer may be an interested party in a particular interpretation of those agreements in a particular dispute. The clause thus represents acceptance of a potentially biased adjudicator in the interests of finality and inexpensive dispute resolution. The relationship of utmost good faith that is supposed to exist between insurer and reinsurer, see *Unigard Sec. Ins. Co. v. North River Ins. Co.*, 4 F.3d 1049 (2d Cir. 1993), coupled with the ability of the modestly small world of reinsurers not to do business again with insurers that abuse the follow the fortunes doctrine, is thought to make the arrangement more palatable to reinsurers given the potential vulnerability it creates.

The *Hartford* case described above shows just how far this doctrine can go in at least some jurisdictions and highlights the increasing disarray of follow the fortunes law that has emerged over the past decades as reinsurance disputes have moved from arbitral forums to judicial ones. See Charles F. Corcoran III, *Reinsurance Litigation: A Primer*, 16 W. New Eng. L. Rev. 41 (1994). The facts of the case, discerned both from the original opinion available in the blogosphere at <http://www.reinsurancefocus.com/uploads/HartfordArgonautorigOrder.pdf> and from the opinion on a

motion for reconsideration available on LEXIS, are as follows. Argonaut facultatively reinsured Hartford's liability in 1974-75 to a manufacturer that used asbestos. Argonaut was apparently responsible for 50% of Hartford's liability from \$250,000 to \$1 million per occurrence for one year. There was no aggregate limit with respect to non-products claims. When the manufacturer incurred asbestos liability for acts apparently arising over a multi-year period, Hartford in 2004 engaged in an allocation of a \$54 million settlement in a fashion that was allegedly harmful to Argonaut, the reinsurer for a limited time period. Argonaut thus sought discovery of materials that would suggest whether Hartford's allocation was reasonable and consistent with Hartford's practices, including a related 2001 settlement. The court denied the discovery request. Although there was an issue of burden involved apparently Hartford maintained its files in a fashion that would require it to consume thousands of person-hours in complying with the discovery request the court rested its refusal to permit discovery on the alleged irrelevance of the material sought. Material that would show imperfections in the alignment of interests between the insurer and insured were not a proper subject of inquiry and neither were materials that would show inconsistencies between the 2004 settlement and its predecessors. Thus, if Argonaut were to prove the sort of bad faith or unreasonableness that would permit to avoid being bound to a settlement entered into by the ceding insurer, it would have to do so largely without the discovery that has long been a hallmark of most American civil litigation.

Perhaps the most surprising element of the decision in *Hartford* is that it can not be criticized as entirely inconsistent with precedent. In recent times, the law relating to the reinsurer's ability to question its liability under its contract has exhibited increasing disarray. The disarray lies roughly on two dimensions: (1) the implication issue: should a follow the fortunes clause be implied into reinsurance contracts that lack an explicit one and (2) the boundaries issue that appears to have been central in *Hartford*: how far should an insurer be permitted to go in binding the reinsurer to settlement decisions that fail to minimize the joint liability of the insurer and reinsurer but instead allocate unusually high losses to the reinsurer. n1

On the implication issue, American courts have essentially taken three positions: (1) implication as a matter of law, *See International Surplus Lines Ins. Co. v. Certain Underwriters at Lloyds London*, 868 F. Supp. 917, 920-21 (S.D. Ohio 1994); (2) implication as a matter of fact, *see National Am. Ins. Co. v. Certain Underwriters at Lloyd's London*, 93 F.3d 529 (9th Cir. Cal. 1996) (custom and usage evidence could imply follow the fortunes requirement where no explicit clause existed); *Aetna Cas. & Surety Co. v. The Home Ins. Co.*, 882 F. Supp. 1328 (S.D.N.Y. 1995) (implying follow fortunes requirement into facultative reinsurance after finding alleged industry custom in support); *See North River Ins. Co. v. Employers Reins. Corp.*, 197 F. Supp. 2d 972, 984-86 (S.D. Ohio 2002) (proof must be clear and explicit); and possibly (3) no implication. *See Michigan Township Participating Plan v. Federal Ins. Co.*, 233 Mich. App. 422, 431 (1999)

On the boundaries issue, American courts likewise have a spectrum of views. Some courts take the position that, absent fraud or collusion (a term whose meaning in this context is a bit unclear), the follow the fortunes doctrine binds the reinsurer. And this is apparently true even where, as in some cases, the insurer's economic interests directly conflict with those of the reinsurer (*see American Employers Ins. Co. v. Swiss Reinsurance America Corp.*, 413 F.3d 129, 136 (2d Cir. 2005)) and there is no reason to think that, had the reinsurer foreseen the particular situation, it would have agreed to place the interpretation of its contract into the hands of an extraordinarily biased decision maker. Thus, in *The North River Ins. Co. v. ACE American Reinsurance Co.*, 361 F.2d 134 (2d Cir. 2004), the court quite explicitly held that the absence of any alignment between the economic interests of the insurer and those of the reinsurer did not bar application of the follow the fortunes doctrine: if the insurer had time-allocated settlement costs so as to reduce its own liability and, as it happened, commensurately increased those of its reinsurer, the reinsurer was stuck n2 in mass asbestosis litigation, so long as the allocation was in good faith, reasonable, and within the applicable policies. n3 Similar rulings may be found in many cases, including *Travelers Casualty & Surety Co. v. Gerling Reinsurance Corp.*, 419 F.3d 181, 189 (2d Cir. 2005); *National Union Fire Ins. Co. v. American Re-Insurance*, 441 F. Supp. 2d 646 (S.D.N.Y. 2006) *But see Allstate Ins. Co. v. American Home Assurance Co.*, 837 N.Y.S.2d 138 (N.Y. App. 2007) (reinsurer is not bound by the follow-the-fortunes doctrine where the reinsured's settlement allocation, at odds with its allocation of the loss with its insured, designed to minimize its loss, reflects an effort to maximize unreasonably the

amount of collectible reinsurance). It is this line of cases that the court in *Hartford* appears to be embellishing: now evidence of economic motivations to act selfishly and to the prejudice of a reinsurer is not even discoverable.

Other courts resolve the boundaries issue by taking the position that the doctrine binds the reinsurer if the settlement is arguably within the scope of the insurance coverage. *Christiania General Insurance Corp. v. Great American Insurance Co.*, 979 F.2d 268, 280 (2d Cir. 1992). Thus, in the recent case of *City of Renton v. Lexington Insurance Company*, 2007 U.S. Dist. LEXIS 69959 (2007), the court declined to bind the reinsurer to a \$248,892 settlement of a construction dispute where the court found that an inherent vice exclusion in the primary policy clearly barred payment. Although the court does not specifically advert to the matter, the court may have been helped in its conclusion by recognizing that a primary insurer attempting to preserve good relations with a significant client (the City of Renton) might have motivation to pay too much to settle a dispute where it could foist all but \$25,000 of the bill on to its reinsurer. See also *Texas Farmers Ins. Co. v. Lexington Ins. Co.*, No. CV 06-08220 (C.D. Cal., Feb. 22, 2008) (court declines to apply the follow the fortunes doctrine in the face of a facultative reinsurance agreement under which, if settlement occurred the insurer owed essentially nothing and the reinsurer owed \$4 million whereas if settlement did not occur, the insurer risked owing \$5 million, although there were complicating special factors possibly affecting the courts decision).

Still others appear to take the view that the reinsurer is not liable under the follow the fortunes doctrine, at least where no explicit follow the fortunes clause exists, unless the reinsurance policy actually covers the loss. *North River Ins. Co. v. Employers Reinsurance Corp.*, 2002 U.S. Dist. LEXIS 11711 (S.D. Ohio 2002). Losses that are arguably covered but, on closer inspection, are not covered, do not obligate the reinsurer to pay. This district court opinion is not entirely a rogue holding. Most courts have refused, for example, to make the reinsurer pay for what amounts to excluded punitive damages where the insurer appears to have recharacterized those damages as compensatory damages as part of the settlement, see *American Ins. Co. v. North American Company for Property and Casualty Ins.*, 697 F.2d 79 (2d Cir. 1982); or where the reinsurer has been asked to pay amounts greater than its liability cap as a result of a settlement whose amount was apparently based in substantial part on expenses incurred by the insured to defend itself in litigation that the insurer should have paid for, *Bellefonte Reins. Co. v. Aetna Cas. & Sur. Co.*, 903 F.2d 910 (2d Cir. 1990).

Space does not permit an attempt fully to resolve here the current disarray in this vital area of reinsurance law. A few principles may be helpful, however. First, there should only be default rules and not mandatory rules in this arena: whatever rules the courts craft, the sophisticated parties to a reinsurance transaction should always be able to contract around it, particularly given that different circumstances and different relationships may call for different balancings of the desirability for certainty versus the desirability of an independent adjudicator.

Second, courts should attempt to develop clear and bright line default rules for standard follow the fortune clauses: the reduction in dispute resolution costs said to be created by a follow the fortunes doctrine is almost eliminated if there is dispute about the scope and nature of the rule itself or if the applicability of rule is defined by some hazy, multi-factor balancing test. Even if the default rule is not optimal, clarity gives the parties to a reinsurance transaction knowledge as to the scope and content of any effort at customization.

Third, states ought strongly to consider unifying their rules in this area perhaps through the auspices of organizations such as the National Association of Insurance Commissioners, the National Conference of Insurance Legislators or through the admittedly unusual practice of judicial deference to majority rules even where the court thinks a slightly better case could be made for some alternative or minority doctrine.

Fourth, most forcefully in a case where the doctrine is implied rather than explicitly stated in the reinsurance contract, courts ought to be extremely wary of applying the follow the fortunes doctrine in cases where the reinsurance policy is not concurrent with that of the primary policy and the insureds settlement of the case arguably implicates matters within the scope of the primary policy but excluded (via exclusion, definition or otherwise) from the reinsurance policy. As courts have noted, see *Travelers Cas. & Sur. Co. v. Certain Underwriters at Lloyds of London*, 96 N.Y.2d

583, 597 (2001), a rule to the contrary lets an implied rule swallow up potentially negotiated and significant provisions of the reinsurance policy.

Fifth, courts ought to engage in a little honest introspection about their enthusiasm for the follow the fortunes doctrine. It used to be the case that reinsurance disputes were almost universally arbitrated. Over the past few decades, that tradition has broken down and courts are now being asked to resolve cases in an area that few consider terribly sexy. On the one hand, an expansive follow the fortunes doctrine, coupled with a decline in arbitration, prevents sophisticated parties from developing incredibly complex contracts (such as many modern insurance and reinsurance policies) and then externalizing many of the resulting high dispute resolution costs onto the public through the judicial system. On the other hand, an expansive follow the fortunes doctrine permits disputes to be resolved by parties who are, at least potentially, in no way unbiased. And when that doctrine is coupled with unusual limitations on discovery, such as that imposed in the *Hartford* decision, it prevents exposure of the bias and self-interest the current system permits. Sooner or later, courts will need to confront the problems created by prevailing notions of the follow the fortunes doctrine or reinsurers will relieve them of that burden by (a) going back to a system of arbitration or (b) writing explicit clauses that limit the scope of the doctrine.

[Return to Text](#)

n1 The disarray is particularly troubling given the international nature of the reinsurance market and the fact that reinsurance law in the United States is, like many forms of insurance law, state-based, with resolution thus often depending on the interplay of hazy choice of forum and choice of law rules. Thus, many disputes that would ultimately be about the content of follow the fortunes law become compounded by difficult and often expensive antecedent disputes.

n2 Perhaps not coincidentally, the courts were thus spared an intensely factual and likely tedious coverage dispute.

n3 The court engages in an apparently approving citation, however, of *Hartford Accident & Indem. Co. v. Columbia Cas. Co.*, 98 F. Supp. 2d 251, 259 (D. Conn. 2000)

in which a district court declined automatic application of the follow the fortunes doctrine where the cedents allocation may have reflected an effort to maximize the amount of reinsurance collected. The citation of this opinion is mysterious because it appears that the sort of deliberate computation engaged in by the insurer in the *Columbia Casualty* case is exactly what was done by the insurer in the *North River* case. The court discusses, for example, North Rivers (laudatory) use of computer models and decision-tree software to quantify the effect of various settlement scenarios on the insurers responsibility. Although it is nowhere stated in the opinion, that modeling would be surprisingly deficient if it did not also examine the effect of various allocation formulae on the responsibilities of the various layers of insurance.

Morrison Mahoney LLP on Peraza v. Robles: Florida Courts Tightens the Rule on Time Limited Policy Limits Settlement Demands

By Michael F. Aylward

August 20, 2008

SUMMARY: A recent Florida opinion highlights the acute peril that time limited policy limits settlement demands present for insurers in the Sunshine State.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: A recent Florida opinion highlights the acute peril that time limited policy limits settlement demands present for insurers in the Sunshine State. For those who may be unfamiliar with such claims, time limited policy limits demands differ from conventional negligent failure to settle actions in that the goal of the third party claimant is not to extract the limits of coverage but rather to set aside what are typically relatively low limits of coverage to expose a deeper pocket of recovery to satisfy the plaintiffs injuries. To be blunt, a time limited policy limits demand is mainly a trap whereby a liability insurer can lose the protection of its policy limit if it insists on taking the time to undertake a reasonable investigation of the claims against its insured before agreeing to settle.

As liability insurers have discovered to their misfortune in the past, time limited policy limits demands in Florida create significant perils for an insurer that insists on interviewing witnesses, obtaining policy files, or otherwise undertaking the sort of reasonable investigation that most insurers would require before deciding whether to accept liability or pay a loss. Thus, in *Berges v. Infinity Ins. Co.* 896 So.2d 665 (Fla. 2004), upheld a finding of bad faith against an insurer, despite evidence that the insurer had made good faith efforts to pay its limits within the time granted but that its check had been sent to the wrong address. As a result, most insurers doing business in Florida have in recent years instituted safeguards and procedures to ensure that such demands are promptly and properly replied to. Unfortunately, as the recent opinion of the Florida District Court of Appeal in *Peraza v. Robles*, No. 3DO6-725 (Fla. DCA3 2008) illustrates, even a prompt response may not be enough.

Shortly after suffering injuries in an auto accident, Peraza engaged counsel who sent a demand letter to the other motorists insurer (MGA Insurance Company) demanding that it pay the \$10,000 policy limit within fifteen days. A day or two later, an MGA claims adjuster sent a check for \$10,000 to counsel. However, the letter made two crucial requests. First, MGA asked that it receive an authorization of settlement from the plaintiffs uninsured motorist carrier. Second, MGA asked for a waiver of any subrogation rights.

Plaintiffs counsel kept MGAs \$10,000 check but neither cashed it, nor agreed to MGAs terms. Instead, Peraza filed suit against Robles. Believing that the claims against its insured were resolved, MGA sought to have the case against dismissed and, indeed, the trial court granted the defendants motion to enforce the \$10,000 settlement agreement.

This finding was set aside by the Third District of the Florida Court of Appeals in a split decision. Two of the three justices declared that the insurers insistence on obtaining authorization from the uninsured motorist carrier and a waiver of subrogation rights changed the terms of the original settlement proposal such that MGAs response was in the nature of a counter-offer, not an acceptance of the original offer. As such, the court ruled that there was never a binding settlement agreement and that the plaintiff should be permitted to go forward with its bad faith action against MGA.

The third justice dissented, arguing that Florida precedents concerning time-limit agreements permitted the negotiation of the usual settlement documents even though they may not have been explicitly referenced in the original settlement offer. Justice Cope contended that the two additional proposals presented by MGA were in the nature of settlement documents that were customary and necessary to such cases and that its response was therefore an acceptance not a counter-offer.

To begin with, the dissent pointed out that when a plaintiff demands policy limits, the demand is necessarily subject to compliance with statutory and case law requirements. Judge Cope stated that it was his understanding that provisions for satisfaction of hospital liens and waiver of subrogation rights are customary in personal injury settlements and that it would have made little sense for a liability insurer to tender its policy limits if there remained a possibility that it could still be liable for further claims arising from the same incident. As such, the dissent found that MGAs requests were reasonable and customary and not an independent counter-offer.

In any event, the dissent argued that if there were questions with respect to the scope of the agreement, they should have been subject to a court hearing, not a judicial declaration that no binding agreement existed at all.

Judge Cope also took note of the fact that at oral argument plaintiffs counsel had candidly admitted that the entire controversy stemmed from a desire to set the stage for a bad faith suit against MGA. He commented (perhaps naively or wistfully) that but for this bad faith aspect, the matter would have been resolved long ago. We should adopt rules which encourage, and do not thwart settlements.

The District Court of Appeal had ruled in several cases that an insurers failure to meet an arbitrary deadline was not necessarily bad faith. *See DeLaune v. Liberty Mut. Ins. Co.*, 314 So.2d 601, 603 (Fla. DCA 4 1975)(Insurer did not act in bad faith where it missed by one business day an unreasonably short ten-day demand within which to tender its policy limits). Likewise, an insurer was held not to have acted in bad faith in *Clauss v. Fortune Ins. Co.*, 523 So.2d 1177, 1179 (Fla. DCA 5 1988), where it failed to accept a time-limit policy limits demand within the period prescribed because it was still investigating its insureds claimed liability but, once that investigation was concluded, tendered the limits only one day after the notice of bad faith was sent. However, the courts opinion in *Peraza*, coupled with the lingering after-effects of the state Supreme Courts opinion in *Berges* calls into question whether insurers still have any defenses to time limited policy limits demands in Florida.

Morrison Mahoney LLP on Aurelius v. State Farm Fire & Cas. Co.: Illinois Court Upholds Intentional Act Exclusion Against Claims of Innocent Spouse

By Michael F. Aylward

August 20, 2008

SUMMARY: Many cases involve an innocent spouse who seeks coverage for first or third-party losses due to the intentional acts of their wife or husband. Many of these cases come down to a parsing of the perceived nuances among exclusions referring to "an" or "any" or "the" insured. Such was the case in the recent opinion of the Illinois Appellate Court in *Aurelius v. State Farm Fire & Cas. Co.*, No. 2-07-0266 (Ill. App. August 5, 2008).

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Many cases involve an innocent spouse who seeks coverage for first or third-party losses due to the intentional acts of their wife or husband. A husband whose wife intentionally burns down the family home may present a first party claim for the lost value of the house, whereas parents who are sued for preventing assaults by other household members may seek a defense under the liability provisions of their policies.

As sympathetic as the claimants are in such cases, courts have often refused to find coverage, whether due to the fact that the underlying loss is not fortuitous or as the result of exclusions or limitations barring coverage for losses intentionally caused by any insured. Indeed, many of these cases come down to a parsing of the perceived nuances among exclusions referring to an or any or the insured.

Such was the case in the recent opinion of the Illinois Appellate Court in *Aurelius v. State Farm Fire & Cas. Co.*, No. 2-07-0266 (Ill. App. August 5, 2008). Karen Aurelius had made a claim under her homeowners policy for the intentional destruction of their home by her husband. Following the fire, Aurelius and her husband had provided a recorded statement to State Farm claiming that the loss was accidental. However, after her husband was indicted and then convicted for the crime of arson in connection with the loss, State Farm denied coverage citing the intentional act limitation to coverage in its policy as well as conditions precluding coverage for misrepresented facts.

The intentional acts condition stated that the policy was void, If you or any person insured under this policy causes or procures a loss to property covered under this policy for the purpose of obtaining insurance benefits The concealment or fraud condition stated that, This policy is void as to you and any other insured, if you or any other insured under this policy has intentionally concealed or misrepresented any material fact or circumstance relating to this insurance either before or after a loss.

After a state trial court sustained State Farms contentions, Karen Aurelius appealed to the Second District of the Illinois Appellate Court. The principal thrust of Aurelius appellate argument was that the language in question could not survive the so-called innocent spouse doctrine under Illinois law.

In earlier cases, some Illinois appellate courts have upheld first party claims by insureds whose spouses intentionally destroyed property. In *Wasik v. Allstate Ins. Co.*, 351 Ill. App.3d 260 (2004), the Appellate Court had held that a homeowner was entitled to recover for the intentional destruction of their home by their stepson notwithstanding language in the policy stating that the insurer did not cover any loss or circumstance in which *any insured person has concealed or misrepresented any material fact or circumstance* nor did the policy cover intentional or criminal acts of or at the direction of any insured person The Appellate Court ruled that under long-standing principles of Illinois law, an insured should be entitled to recover for losses, even where committed by a co-insured under the policy, unless the policy expressly made clear that the intentional acts or misrepresentations of any insured precluded a claim by all insureds. The *Wasik* court declared that, It was reasonable for the husband and wife to have assumed that their rights were not dependent upon those of their children. Although these provisions could be read as the insurer proposed, the court found that they do not clearly state that the policy will be void or coverage will be excluded as to all insureds in the event of some improper behavior by any insured.

The *Aurelius* court contrasted the State Farm language with the policy provisions that Illinois courts had found wanting in cases such as *Wasik*. The court emphasized the repeated references to you or any other insured as precluding any suggestion that an innocent spouse was entitled to coverage for intentional losses or intentional misrepresentations of facts concerning a loss.

Thus, unlike the policy provisions at issue in *Salemi*, *Miceli*, and *Wasik*, the intentional acts provision her states not only that the policy is void due to an intentional act of any insured but also that in such event the insurer will not pay you or any other insured for this loss. Similarly, the concealment of fraud provision states not only that the policy is void due to concealment or fraud but further adds that in such event the policy is void as to you and any other insured. The additional language in these provisions distinguishes this case from *Wasik* and renders the innocent insured doctrine inapplicable.

The Appellate Court also rejected Aurelius effort to introduce ambiguity based on a claimed conflict between these policy wordings and related exclusionary terms in the liability provisions of the policy. In particular, the court pointed to language in Coverage L (Personal Liability) which stated that the policy did not apply to bodily injury or property damage which is expected or intended by the insured or which is the result of willful and malicious acts of the insured. The court also noted the severability of insurance language which required that the insurance apply separately to each insured. Aurelius argued that this language, which focused on the interests of separate insureds, was in conflict with the quoted provisions of the first party coverages.

Without addressing this issue directly, the Illinois Appellate Court declared that language with respect to third-party claims was entirely distinguishable and irrelevant to the scope of coverage for first party losses under the policy.

Although not directly addressed by the Illinois Appellate Court, similar issues have become a hot area of controversy with respect to liability insurance, particularly in cases where one insured under the policy has sexually abused or assaulted the plaintiff. In such cases, arguments have been raised that the other insured is legally liable for failing to prevent the abuse or assaults. Some courts have avoided the result by focusing specifically on the definition of occurrence and the requirement of accident holding that all claims of liability arising out of intentionally-caused injuries are necessarily precluded from coverage without considering independent theories of negligence based upon negligent supervision and the like. In many cases, however, courts have held that the severability of interests language requires that the interests of each insured be considered separately. See *Safeco Ins. Co. of America v. Robert S*, 26 Cal.4th 758 (Cal. 2001) and *Brumley v. Lee*, 963 P.2d 224, 228 (Kan. 1998).

In the face of such holdings, homeowners carriers have increasingly adopted more narrowly crafted intentional act exclusions. Even so, courts continue to reach conflicting conclusions with respect to coverage is required for innocent spouses where intentional act exclusions only speak to the conduct of the insured as opposed to an insured or any insured. *Compare Chacon v. American Family Mut. Ins. Co.*, 788 P.2d 748, 752 (Colo. 1990); *Oaks v. Dupuy*, 653 So.2d 165, 168 (La. App. 1995); *American Family Mutual Ins. Co. v. Copeland-Williams*, 941 S.W.2d 625, 629 (Mo. App. 1997)(no coverage for innocent insureds under any insured exclusion) with *American National Fire Insurance Company v. State of Fournelle*, 472 N.W.2d 292, 295 (Minn. 1991) and *Worcester Mutual Ins. Co. v. Marnell*, 496 N.E.2d 158, 161 (Miss. 1986)(finding coverage).

Manning on Estate of Kathryn E. Spencer, et al. v. Daniel J. Gavin, Esq., et al.

2008 Emerging Issues 2735

Manning on Estate of Kathryn E. Spencer, et al. v. Daniel J. Gavin, Esq.,: Attorneys Legal Duty to Non-Clients in Legal Malpractice Cases

By Diana C. Manning

August 20, 2008

SUMMARY: Legal practitioners who practice individually, but work in close and interdependent business relationships with other lawyers, may have a legal duty to non-clients to report wrongdoing on the part of such other lawyers. The Appellate Division fashions a test for legal duty to non-clients in the legal malpractice context based on the actual knowledge of an attorney and his or her professional proximity to another lawyers business and clients.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The Appellate Division of the New Jersey Superior Court weighed in on the legal duty of attorneys to non-clients in legal malpractice cases in its recent opinion in *Estate of Kathryn E. Spencer, et al. v. Daniel J. Gavin, Esq., et al.*, 400 N.J. Super. 220, 946 A.2d 1051 (N.J. App. Div. 2008). The *Spencer* Court held that under certain circumstances an attorney may be liable to a non-client if he or she has actual knowledge of wrongdoing by another attorney that harms the non-client and fails to report it. Relying in part on New Jersey Rule of Professional Conduct (R.P.C.) 8.3, the Appellate Division reversed the trial courts order granting summary judgment to Dean Averna, Esq. and his firm Averna & Gardner, Esqs. and remanded the case for trial after determining that a reporting duty . . . is mandated by principles of legal ethics, tort law, and public policy, so long as the attorney is shown to have had actual knowledge of the other lawyers wrongdoing.

Dean Averna, Esq., his law firm, and several others were sued by the Estate of Kathryn E. Spencer and two other related estates after it was discovered that plaintiffs former executor, Daniel J. Gavin, Esq., misappropriated hundreds of thousands of dollars from the estates prior to his own death. Plaintiffs advanced two theories of liability against Averna and his firm: (1) that Averna had an attorney-client relationship with the plaintiffs as a matter of law because he performed per diem work at the request of the attorney-executor on estate matters, and (2) Averna had an independent duty to plaintiffs because of what plaintiffs described as his *de facto* partnership with the attorney-executor. The *Spencer* Court revisited some of the Appellate Divisions prior decisions by once again considering the factors that establish an attorney-client relationship in the estate law context, but broke new ground by deciding whether the Averna defendants owed a duty to plaintiffs that would subject them to civil liability if the duty was breached. While the former inquiry is fact-sensitive and often subject to a myriad of analytical approaches, the latter inquiry is a fairly simple legal analysis. As Judge Sabatino noted, the scope of a lawyers potential duty essentially has two facets: (1) the persons or entities to whom that duty is owed, and (2) the conduct required of the lawyer to fulfill that duty. It is this latter inquiry

in *Estate of Spencer* that is most instructive to practitioners in the legal malpractice context.

Attorneys Legal Duty to Non-Clients. Weighing the moral responsibility of an attorney to report wrongdoing by another attorney and the legal responsibility for said wrongdoing, the Appellate Division fashioned a holding in *Estate of Spencer* addressing the defendant attorneys knowledge of the malfeasance of a fellow attorney and his proximity to the wrongdoer. Citing the New Jersey Supreme Courts opinion in *Petrillo v. Bachenberg*, 139 N.J. 472, 655 A.2d 1354 (1995), the *Spencer* Court reiterated that an attorney may be liable to a non-client in certain situations where the attorney knows, or should know, that the non-client will rely upon the attorney. The Court found that plaintiffs implicitly relied upon Averna to be faithful to their best interests, and to not turn a blind eye if he learned that the executor was plundering estate funds. However, the Court stressed that the test for imposing a duty under these circumstances is actual knowledge of the wrongdoing.

The *Spencer* Court relied on two significant factors to determine that a reporting duty existed requiring Averna to report the attorney-executors malfeasance, one circumstantial and the other legal. First, the Court was persuaded by plaintiffs evidence of Avernas close and sustained nexus to Gavins law practice and found that imposing certain duties upon him as a consequence of that proximity was fair. Nevertheless, the Court rejected plaintiffs assertion that Averna and Gavin had entered into a *de facto* partnership finding that plaintiffs offered inadequate proof that Gavin and Averna exercised joint control over a common business. Second, while recognizing the Supreme Courts admonition in *Baxt v. Liloia*, 115 N.J. 190, 557 A.2d 1001 (1998), that violations of the R.P.C.s are not to be treated as *per se* grounds for an attorneys civil liability, the Court relied on R.P.C. 8.3(a), which states that [a] lawyer who knows that another lawyer has committed a violation of the Rules of Professional Conduct that raises a substantial question as to that lawyers honesty, trustworthiness or fitness as a lawyer in other respects, shall inform the appropriate professional authority. The Court emphasized that in accordance with R.P.C. 1.0(f), the term knowledge in R.P.C. 8.3(a) means actual knowledge, and therefore, Averna would have a professional obligation, owed not only to his clients but to the public at large, to bring Gavins thefts to light.

Recognizing the potential for this decision to be read too broadly or otherwise misapplied, the Appellate Division stressed that the *Estate of Spencer* decision does not stand for the proposition that a lawyer who receives a routine, arms-length referral from another lawyer automatically exposes himself or herself to civil liability if he or she fails to intercede after learning that the referring lawyer has somehow harmed a client. Rather, the decision stands for the proposition that an attorney . . . who has a close and interdependent business relationship with another lawyer, and who is performing legal work for a common client at that lawyers request, has a duty to report that lawyer if he or she develops actual knowledge that the lawyer has been stealing funds from their common client. It should be noted that the determination of whether a reporting duty exists under these circumstances did not turn on whether Averna performed legal services for the plaintiffs since the evidence established that he only performed legal services on behalf of one of the three plaintiffs. Rather, it was Avernas nexus to the wrongdoer that drove the *Spencer* Court to conclude that a jury should determine when, if ever, Averna developed actual knowledge that Gavin was stealing from the . . . estates.

While a true arms-length referral, one of the touchstones of private practice for attorneys, will not likely create the type of nexus necessary to establish a duty to a non-client as found in *Estate of Spencer*, as this decision makes clear, there is no brightline test for how close is too close. The *Estate of Spencer* decision serves as an important example of the judiciarys willingness to expand the legal duty between attorneys and non-clients, thereby establishing the prerequisite for a legal malpractice action. Legal practitioners sharing office space and/or clients should be mindful of the potential duty created by close, interdependent business relationships.

Meckler Bulger Tilson Marick & Pearson LLP on American International Specialty Lines Ins. Co. v. Res-Care, Inc.: The New Fifth Circuit Opinion Holding that it is Against Texas Public Policy to Insure Punitive Damages

By Robert Allen

August 19, 2008

SUMMARY: *American International Specialty Lines Ins. Co. v. Res-Care, Inc.*, 2008 U.S. App. LEXIS 11758 (5th Cir. June 2, 2008) involves whether the amount of a settlement allocated to punitive damages can be passed on to a Commercial Liability insurance carrier. Relying heavily on allegations contained in pleadings, the Fifth Circuit held that Texas public policy prohibited the insurability of punitive damages.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Background Facts

It took over three years after the oral argument for the Texas Supreme Court to issue its opinion in *Fairfield Ins. Co. v. Stephens Martin Paving*, 246 S.W.3d 653 (Tex 2008), (*Fairfield*) earlier this year. In a very limited holding, the Texas Supreme Court held that it was not against Texas public policy to insure punitive damages in the context of a workers compensation policy insuring an employer for gross negligence wrongful death cases. From that precedent, it took only four months for the Federal Fifth Circuit Court of Appeals to hold that it is against Texas public policy to insure punitive damages under a primary Commercial General Liability policy in *American International Specialty Lines Ins. Co. v. Res-Care, Inc.* 2008 U.S. App. LEXIS 11758 (5th Cir. June 2, 2008).

Underlying this coverage case was a particularly volatile wrongful death case brought by the family of Trenia Wright against Res-Care, its pertinent subsidiaries and several employees (*Wright v. Res-Care*). According to the pleadings, Trenia Wright was a 37 year old woman who suffered from cerebral palsy and other mental disabilities. She resided at a home, Applleridge, which was owned by Res-Care, that provided services to mentally disabled individuals. For the critical time period, Res-Care, its subsidiaries and employees were covered by primary and umbrella liability policies issued by American International Specialty Lines Insurance Co. (AISLIC).

The background facts of the events leading up to Ms. Wrights death are horrible and they are set out in detail in the Fifth Circuits opinion in *AISLIC v. Res-Care*. Suffice it to say, she died, in a most undignified way, from complications emanating from a fall four days earlier. The first employee who happened upon her after the fall was convicted of recklessly causing bodily injury to a disabled individual.

As the underlying *Wright v. Res-Care* case proceeded, Res-Care demanded AISLIC to settle the claims against it and AISLIC urged Res-Care to contribute to the settlement because it believed that the punitive damage exposure was not covered. Eventually, AISLIC and Res-Care executed a non-waiver agreement that allowed AISLIC to settle the *Wright v. Res-Care* litigation and then possess the right to proceed with a claim for recoupment from the Res-Care Defendants of all sums paid by [AISLIC] attributable to any claims not covered under the applicable Policies.

Eventually, AISLIC settled on behalf of Res-Care for \$9 million and then sued Res-Care for recoupment of the non-covered portion of the settlement.

In the instant recoupment litigation, AISLIC took the position that the actual damages in the *Wright v. Res-Care* settlement were between \$2 and \$3.5 million and that the remainder of the settlement was attributable to non-covered punitive damages. Res-Care posited that the entire \$9 million settlement was covered. The district court presided over a bench trial to apportion the non-covered and covered portions of the settlement pursuant to *Enserch Corporation v. Shand Morahan & Co.*, 952 F.2d 1485 (5th Cir. 1992).

The district court determined that the entire \$9 million settlement was attributable to the injuries emanating from the fall (even though other non-related incidents were also alleged in the suit). The district court apportioned the settlement as \$4 million for actual damages and \$5 million in punitive damages. The district court then rendered judgment that AISLIC recoup \$5 million from Res-Care.

Fifth Circuit Analysis

The Fifth Circuit's analysis of the legal issues arising from the underlying settlement involved waiver and estoppel, number of occurrences, trigger, burden of proof and whether Texas public policy precluded the insurability of the punitive damages aspect of the settlement. While all of these issues and the Fifth Circuit's treatment of them are noteworthy, this casenote will focus solely on the court's treatment of the insurability of punitive damages.

To begin with, it should be noted that the subject AISLIC umbrella policy specifically excluded coverage for punitive damages, so that policy was not in play for the punitive damages aspect of the settlement. The relevant AISLIC primary policy did not contain a punitive damages exclusion, so the Fifth Circuit analyzed whether it is against Texas public policy to insure the punitive damages aspect of the settlement under that policy in light of the specific facts of this case.

The Fifth Circuit followed the process for determining whether punitive damages are insurable as set out in the very recent Texas Supreme Court opinion in *Fairfield*. In *Fairfield*, the Texas Supreme Court held that a two-step process should be employed in determining whether punitive damages are recoverable. In this regard, the first step is whether the policy covers punitive damages. Since the only policy at issue was the primary policy that did not include a punitive damages exclusion, the Fifth Circuit held that as a threshold matter, punitive damages were covered.

The second step is whether Texas public policy precludes the insurability of punitive damages. To determine this, *Fairfield* requires the court to determine whether the Texas legislature has expressed an explicit public policy. If not, then, the court is free to consider general public policies.

With respect to the public policy issue, the Fifth Circuit quoted *Fairfield* for the proposition that the Texas legislature has been sensitive to the issue of insurance coverage for punitive damages and has made the policy decision to preclude such coverage in certain circumstances. *Fairfield*, 246 S.W.3d at 656. In this regard, the Fifth Circuit noted that the home in question, Appleridge, operated as an Intermediate Care Facility for the Mentally Retarded (ICF/MR) and that [t]he Texas legislature has not included ICF/MRs in the definition of health care providers found in the Texas Insurance Code. *American International Specialty Lines Ins. Co. v. Res-Care, Inc.*, 2008 U.S. App. LEXIS 11758 at 27-28 (5th Cir. June 2, 2008). This is important because health care providers have generally been prohibited from obtaining insurance coverage for punitive damages, *id.* at 26, although there are exceptions to this rule.

This allowed the Fifth Circuit to determine whether general public policy precludes the insurability of punitive damages in this instance. Under *Fairfield*, this requires a court to consider the interest of freedom of contract with whether enforcing the contract as written would frustrate important public policy. *Fairfield*, 246 S.W.3d at 663-64. All of this, bearing in mind, a strong public policy in favor of preserving freedom of contract. *Id.* at 664.

In determining whether general public policy precludes the insurability of punitive damages in this matter, the Fifth Circuit initially noted that the modern purpose of punitive damages is to punish the wrongdoer. *Fairfield* noted that in the corporate setting there may be some circumstances where it might be possible to insure punitive damages. In this regard, the *Fairfield* opinion states: [w]here other employees and management are not involved in or aware of an employees wrongful act, the purpose of exemplary damages may be achieved by permitting coverage so as not to penalize many for the wrongful act of one. *Id.* at 670.

Nonetheless, the Fifth Circuit rejected Res-Cares argument that as a corporation it should receive coverage for punitive damages. Interestingly, the Fifth Circuit relied heavily on the pleadings to note the allegations that all defendants, including Res-Care, were grossly negligent and that there were many allegations of gross negligence on the part of Res-Care. *Res-Care*, 2008 U.S. App. LEXIS 11758 at 31. Also, there were additional allegations, which supported the Fifth Circuits finding that the gross negligence allegations should not permit Res-Care to shift the responsibility for those actions on to AISLIC. For example, the pleadings alleged that a State of Texas report showed [that] Res-Care poorly operated other facilities, thereby establishing a course of conduct warranting exemplary damages . . . [and] [i]t therefore recommended that the Appleridge facility be closed. *Id.* at 33-34.

The Fifth Circuit then concluded that the circumstances:

were so extreme that the purposes of punishment and deterrence of conscious indifference outweigh the normally strong public policy of permitting the right to contract between insurer and insured. [citing *Fairfield*]. This case demonstrates the kind of avoidable conduct that causes injury where public policy is best served by requiring the insured to bear the costs of punitive damages. [citing *Fairfield*]. The district court did not err by failing to apportion any of the punitive damages to the primary policy.

Id. at 34.

Potential Impact

The *AISLIC v. Res-Care* opinion, then, will provide insurers with considerable leverage in negotiating settlements, not only with claimants, but their own corporate insureds. How this will actually materialize, however, is another story. This is because in light of *Texas Assn of Counties County Govt Risk Mgmt. Pool v. Matagorda County*, 52 S.W.3d 128, as more recently reaffirmed in *Excess Underwriters at Lloyds London v. Franks Casing Crew and Rental Tools, Inc.*, 246 S.W.3d 42 (Tex. 2008) an insurer can seek reimbursement from the insured only if it obtains the insureds clear and unequivocal consent to the settlement and the insurers right to seek reimbursement. *Matagorda County*, 52 S.W.3d at 135.

In the event that the insured does not provide such consent, an insurer could not settle a case with punitive damages exposure and then bring an action to recover from the insured for the amounts attributable to the punitive damages exposure. What effect an insureds refusal to either contribute to a settlement or agree to a subsequent reimbursement suit will bear on insurers in cases involving punitive damages exposure remains to be seen. For example, an insureds refusal to contribute to a settlement or agree to a reimbursement suit might motivate an insurer to reject a settlement offer and let the case go to trial. As a practical matter, if the case includes punitive damage exposure, a financially solvent insured might find it risky to be obstinate about contributing to a settlement or reject a request to consent to a reimbursement suit. This is because if such conduct prevents such a case to be settled, the insured might eventually be forced to pay for an uncovered punitive damage award that might far exceed its requested contribution to a settlement.

ABOUT THE AUTHOR(S):

Robert Allen is the Partner-in-Charge of the Dallas, Texas office of Meckler Bulger & Tilson LLP. Mr. Allen's practice is primarily focused in representing parties in the trial court and appellate proceedings in insurance and commercial litigation in Texas and all over the United States. Mr. Allen regularly represents parties in complex insurance coverage, bad faith, fraud, reinsurance and regulatory litigation matters. This includes disputes between excess carriers and primary carriers/self insureds, defending insurers and reinsurers in class action litigation and representing parties in litigation involving reinsurance, regulatory and insolvency related disputes. Mr. Allen also has served as a mediator, arbitrator, umpire, and expert witness in insurance and reinsurance disputes.

2008 Emerging Issues 2705

Bullivant Houser Bailey PC on Devonwood Condominium Owners Assn v. Farmers Ins. Exchange, What Happens After The Appraisal?

By Samuel H. Ruby

August 15, 2008

SUMMARY: On several occasions, California courts have told us what an appraisal panel may or may not do. But what is a court supposed to do after the panels work is done? When, if at all, may an appraisal award be adjusted under the terms and conditions of the policy? This commentary, discusses the import and practical considerations of *Devonwood Condominium Owners Assn v. Farmers Ins. Exchange*, 162 Cal. App. 4th 1498 (2008).

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: On several occasions, California courts have told us what an appraisal panel may or may not do. But what is a court supposed to do after the panels work is done? When, if at all, may an appraisal award be adjusted under the terms and conditions of the policy? These questions are answered in *Devonwood Condominium Owners Assn v. Farmers Ins. Exchange*, 162 Cal. App. 4th 1498 (2008).

I. Insurance Appraisals: The Substantive Case Law

Appraisal is process for resolving certain disputes under an insurance policy. California Insurance Code § 2071, which codifies the standard form of fire insurance policy for this state, requires that every fire insurance policy provide: In case the insured and this company shall fail to agree as to the actual cash value or the amount of loss, then, on the written request of either, each shall select a competent and disinterested appraiser. The appraisers must appraise the loss, stating separately the actual cash value and loss to each item. If the appraisers cannot agree, they must submit their differences to an umpire, and an award signed by the umpire and at least one appraiser shall determine the amount of actual cash value and loss.

On several occasions, California courts have held that the authority of an appraisal panel under *Insurance Code § 2071* is limited. For example, appraisers may not disregard the applicable formula for measuring actual cash value and substitute their own formula. *Jefferson Ins. Co. v. Superior Court*, 3 Cal. 3d 398 (1970). Also, in determining actual cash value of lost property, the appraisers must appraise the value of the property as the insured describes it and not make judgments as to whether the insureds claim is fraudulent. *Safeco Ins. Co. v. Sharma*, 160 Cal. App. 3d 1060 (1984). Furthermore, while appraisers are empowered to decide if a given article of property was damaged at all, they may not (absent a stipulation by the parties) make judgments about the

cause of the alleged damage. *Kacha v. Allstate Ins. Co.*, 140 Cal. App. 4th 1023 (2006).

II. Insurance Appraisals: The Procedural Case Law

The California Insurance Code provides no guidance on how the substantive right of appraisal is to be enforced. However, appraisal has been declared a species of arbitration. Code of Civil Procedure (CCP) § 1280(a). California's Arbitration Act provides a detailed set of procedural rules regarding the commencement, conduct, and enforcement of arbitrations. See CCP §§ 1280 et seq. By bringing appraisal under the umbrella of arbitration, California courts have applied those procedural rules to appraisals in several respects. See, e.g., *Louise Gardens of Encino Homeowners Assn. v. Truck Ins. Exchange, Inc.*, 82 Cal. App. 4th 648 (2000) (applying Arbitration Acts time limit to insureds challenge to appraisal award).

The Arbitration Act provides that a party may petition to a court for confirmation of an arbitration award. CCP § 1285. It further provides, If an award is confirmed, judgment shall be entered in conformity therewith. CCP § 1287.4. Until recently, few had thought to ask what application CCP § 1287.4 has to insurance appraisals. Given that the scope of insurance appraisal is limited, what sort of judgment--if any--should a court enter based on an appraisal award?

III. *Devonwood v. Farmers*--Substance and Procedure Collide

Devonwood, an association of condominium owners, made a claim to Farmers for property damage allegedly caused by a fire. When Devonwood and Farmers were unable to agree on what amount Farmers owed on the claim, they convened an appraisal. The appraisers were charged with determining the value of (1) the allegedly damaged floor, ceiling, and wall coverings; and separately, (2) the rest of the alleged damage (described as structure damage).

The coverings were segregated for a separate valuation because Farmers disputed coverage for them. However, consistent with *Sharma* and *Kacha*, the appraisers were not asked to decide whether the coverings were covered under the policy. The appraisers followed the rules and returned a unanimous award, which they said was without consideration of any deductible amount or any coverage or other provision of the policy which might affect the amount of the insurers liability thereunder. Devonwood petitioned a court to confirm the award, and Farmers apparently did not oppose confirmation.

However, relying on CCP § 1287.4, Devonwood further moved the court to enter a *monetary judgment* against Farmers--not only for the replacement cost of the structure damage, but also for the replacement cost of the coverings. Farmers objected that such a judgment would not be in conformity with the award, because the award did not constitute an adjudication of Farmers liability for the coverings. Nonetheless, the trial court entered the requested monetary judgment. Fortunately, that absurd result was reversed in a thoughtful opinion by the California Court of Appeal.

The appellate court agreed with Farmers that an insured is not entitled to a judgment under the California Arbitration Act that holds [an insurer] liable for the amount stated in an appraisal award, because the award itself does not determine this liability. The court noted that while arbitrators are frequently, by the terms of the agreement providing for arbitration . . . given broad powers . . . appraisers generally have more limited powers. The court reaffirmed that while a party to an appraisal has no jury trial right as regards the setting of the dollar amount of the loss, a party retains jury rights as to other issues.

Concluding that the trial courts judgment was not in conformity with the award as required by CCP § 1287.4, the appellate court reversed the judgment and remanded the case for entry of a new judgment.

IV. Implications

Although Devonwood stops short of dictating precisely what form a judgment based on an appraisal award should take, the implication is that a court should enter a *declaratory* judgment. The judgment should simply declare the property values and amounts of loss to be as stated in the confirmed award. The court should not declare whether the insurer is *liable* for the confirmed award. Indeed, the court should expressly *disavow* any implication that it is declaring the insurer liable.

When an award is confirmed and a judgment entered, the insurer has the right to adjust the award in accordance with policy provisions. The insurer is obligated only to pay the adjusted amount. If the insured does not accept the adjustments, then either party may then bring a lawsuit to resolve the dispute. *Practice Tip:* Where the parties anticipate factual issues beyond the value of the property or the amount of loss, they should consider stipulating to have those issues decided by the appraisal panel. Litigation is almost always slower and more expensive.

Bullivant Houser Bailey PC on Polygon Northwest Co. v. American Natl Ins. Co.

2008 Emerging Issues 2706

Bullivant Houser Bailey PC on Polygon Northwest Co. v. American Natl Ins. Co.: Attorney Fees Are Not Costs Taxed Under a Sophisticated Insureds Supplementary Payments Provision

By P. Jason Skuda

August 15, 2008

SUMMARY: Polygon Northwest provides a bright line delineating attorney fees from covered costs taxed under a common supplementary payments provision. But insurers should beware. The bright line could be blurred if challenged by a less sophisticated insured. This commentary discusses the import and practical considerations of a key holding in *Polygon Northwest Co. v. American Natl Ins. Co.*, 143 Wash. App. 753, 2008 Wash. App. LEXIS 773 (2008).

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: 1. Supplementary Payments: Jurisdictions are divided concerning coverage for attorney fees

Commercial liability policies typically include a supplementary payments provision. A common example provides:

SUPPLEMENTARY PAYMENTS COVERAGES A AND B

We will pay, with respect to any claim we investigate or settle, or any suit against the insured we defend:

...

e. All costs taxed against the insured in the suit.

A division exists among U.S. jurisdictions concerning what costs taxed encompasses. Some courts hold the word costs means expenses incurred in litigation, thus bringing attorney fees awarded against the insured within the coverage for supplementary payments. *See, e.g., Mutual of Enumclaw v. Harvey*, 772 P.2d 216 (Idaho 1989). Insureds benefit from this interpretation, as supplementary payments coverage is not subject to the policy's indemnity limits. Other courts hold attorney fees do not constitute costs taxed since the term is typically used in statutes and other legal authority to indicate expenses other than attorney fees. *See, e.g., CIM Ins. Corp. v. Masamitsu*, 74 F. Supp. 2d 975 (D. Haw. 1999). *Polygon Northwest* is Washington's first appellate-level decision concerning whether attorney fees are recoverable under supplementary payment provisions.² *Polygon Northwest*: Attorney fees are not costs taxed, at least for some insureds

Polygon Northwest Co. (Polygon), a condominium developer, obtained insurance coverage from a number of companies, including a primary policy from Assurance Company of America (Assurance). Polygon was later sued by a homeowners association for allegedly defective work on one of Polygon's projects. Polygon tendered its defense to

Assurance and other liability insurers.

Polygon and the association eventually settled of the associations claims, funded by certain insurers which were also parties to the litigation. The settlement provided the association would receive \$6,314,000 allocated to payment of claims and \$1,486,000 allocated to litigation costs, primarily constituting attorney fees. *Id.* at 764-65. Assurance paid its \$1 million per occurrence limit under Polygons policy. In addition Assurance paid half of the litigation cost sum, characterizing its portion as supplemental payments coverage, and, therefore, outside of the liability limit.

Assurance later attempted to recoup the litigation costs it paid from the associations excess insurers, arguing those cost fell within Assurances indemnity obligations, which should not have exceeded \$1 million. The trial court disagreed, holding that the litigation cost amount properly fell under Assurances supplementary payments provision. Assurance appealed this holding.

Assurance argued on appeal that the litigation costs should be characterized as part of Polygons overall losses . . . and collectible only under [Assurances] general liability coverage. *Id.* at 784. Since Assurances portion of litigation costs payment exceeded its general liability limit, Assurance posited the full amount of the litigation costs should have been paid by Polygons excess insurers. More specifically, Assurance argued the supplementary payments provision in its policy obligating it to pay [a]ll **costs taxed** against the insured in the suit, has a specific meaning that does not necessarily include all legal fees or costs incurred by the insured in a lawsuit. *Id.* at 784-85 (emphasis added). The court of appeals agreed.

The court of appeals held the term costs taxed had a technical meaning under Washington legal authority. Under this authority, costs taxed excludes attorney fees. *Id.* at 788-89 (citing, *e.g.*, RCW 4.84.010; *Nordstrom, Inc. v. Tampourlos*, 107 Wash. 2d 735, 743, 733 P.2d 208 (1987)). Although Washington courts generally apply ordinary, not technical, definitions to insurance policy terms, the court noted: A technical legal or technical meaning will be applied to a term in an insurance policy if it is clear that the parties to the contract intended that the language have a [legal or] technical meaning. *Id.* at 786 (quoting *Thompson v. Ezzell*, 61 Wash. 2d 685, 688, 379 P. 2d 983 (1963)).

The court determined Polygon and Assurance intended costs taxed to have a technical meaning since costs taxed refer[s] to taxable costs as that term is commonly used in Washington legal parlance. *Id.* at 786. The court based this intent on a finding that Assurance and Polygon were both sophisticated business entities whose understanding of the term would not be divorced from its standard and well-established legal usage. *Id.*

The court specifically rejected an excess insurers argument that dictionary meanings for the individual words costs and taxed should apply in lieu of a technical meaning for the complete term. *Id.* Based on this argument all costs associated with the legal process, including attorney fees, would have fallen within the definition of costs taxed. The court held the term could not be parsed in this manner, as it was clearly defined under Washington law and contained in a policy provision specifically referring to the legal process in one way or the other. *Id.*

The court further rejected arguments that no mutual intent existed, as only Assurance would intend for costs taxed to have such a technical meaning. The court held Polygon also intended for the technical meaning to apply, as the text of the supplementary payments provision in combination with the context of . . . its creation demonstrated a mutual intent for a technical meaning. *Id.* at 787. The court did not elaborate on the nature of this context beyond the parties sophistication. The *Polygon Northwest* opinion was not appealed to the Washington Supreme Court.³ Implications

In light of *Polygon Northwests* focus on the insureds sophistication, it remains to be seen how Washington courts will interpret the scope of costs taxed where an insured has less business or legal savvy. The case also provides a basis for insurers to argue that other legal or technical definitions should apply to sophisticated insureds.

Insurance Recovery Grows on Trees: Decision Tree Analysis

2008 Emerging Issues 2700

The CapAnalysis Group, LLC on Insurance Recovery Grows on Trees: Decision Tree Analysis Improves Attorney-Client Communication and Results

By John S. Wyckoff, Evy M. Wild and Robert N. Martin

August 15, 2008

SUMMARY: Using decision trees to support insurance recovery allows attorneys and clients a greater understanding of the underlying variables, the effect of uncertainty, and what drives the outcome. Attorneys and clients can conduct what-if analyses and establish resolution targets. Attorneys and clients can better manage expectations and achieve better results through the use of decision trees.

PDF LINK: Core Emerging Issues Commentary (\$)

ARTICLE: Introduction

Clients involved in insurance recovery often ask their counsel several questions regarding: how will their claim costs be reviewed (and possibly discounted) by the insurance carriers; what are the potential claim hurdles with respect to coverage (exclusions, self-insured retentions, occurrence wording, etc.); and how will the different allocation theories impact recovery? To effectively analyze the potential recovery and communicate the impact of these issues, attorneys can use decision trees to depict the relationships between different choices or scenarios and their associated outcomes. More broadly, decision trees also assist attorneys in communicating to their clients a particular cases strengths and weaknesses, the chances that the client will prevail, and the range of possible outcomes. In this regard, decision trees are very helpful in insurance recovery litigation because they can be used to visually display: (1) the claim process involving pre-claim analysis, claim valuation, and claim allocation; and (2) the impacts on a claim process involving multi-parties (primary and excess carriers) and (3) settlement versus litigation end points.

Decision tree analysis is a valuable tool because it can be used in all three phases of the claim process as well as in litigation and settlement. This commentary reviews the concepts of decision tree analysis and presents a hypothetical tree that explains potential insurance allocation outcomes. While this commentary presents the use of a decision tree for the purposes of allocation, it is hoped that the reader will see the power of decision trees and how they can be used in the other claim process phases and throughout the dispute resolution process. Moreover, it is hoped that the reader will appreciate how decision trees can be used in other litigation contexts such as contract disputes, intellectual property disputes, antitrust cases, and environmental litigation.

Decision Tree Diagram -- A Picture Is Worth a Thousand Words

Simply put, decision trees graphically depict the relationships between decisions

or events and the outcomes that result from them. The best feature of decision trees is their *intuitive and visual nature*, which allows attorneys and clients to understand the (1) hierarchy or order of decisions that need to be made or the chronology of events, (2) the assumptions regarding the probabilities of decisions or events, and (3) the impacts of the decisions or events on the outcome. Importantly, the decision trees graphical depiction of the hierarchy/order of decisions or events allows the user to properly and efficiently define different scenarios (a set of related events) and show which factors are pertinent to a scenario and which are not.

Decision trees can be used to organize and relate all factors and scenarios into a single simple to understand and interpret diagram. It is quite possible to have many different scenarios with relatively few choices or options. For instance, in insurance recovery of environmental claims there are usually two allocation options (Pro Rata and All Sums), two cost discount options (discounted to reflect a common insurer position that some costs are unreasonable or inapplicable and not discounted), and at least two coverage discounts (pollution exclusions, occurrence wording, etc). Even in this simplified analysis there are eight possible outcomes ($2 \times 2 \times 2$). Here a decision tree neatly organizes and relates all these factors and provides an analysis tool for determining the value of the potential recovery.

As the name implies, decision trees are comprised of branches and the intersection of branches are known as nodes. Each branch extends from a node. A fork is defined by a node with two or more branches. There are two types of forks: (1) an act fork and (2) an event fork. An act fork is defined by a node and branches reflecting various choice (decision) options controlled and selected by the decision maker. Conversely, an event fork is defined by a node and branches that depict the possible uncertain outcomes associated with the node.

The rules associated with forks are quite simple: (1) The branches that comprise the fork must include all the possibilities (events or decisions) and (2) they must include each possibility only once. In other words branches stemming from a fork must consist of events or decisions that are collectively exhaustive and mutually exclusive.

Regardless of the type of fork, the layout or arrangement of forks that comprise a decision tree is such that the hierarchy or sequence of decisions/choices or events proceeds from left to right with base of the tree (or present time) at the left and the outcomes or tips of the tree (or future events/decisions) depicted at the right.

Figure 1 below is a hypothetical allocation decision tree. It shows the hierarchy/order of decisions from left to right and the application of discounts to cost and coverage and the impacts of different allocation theories (Pro-Rata vs. All Sums) on the outcome. The hierarchy/order of reading decisions from left to right is the convention that events to the right of node and that are connected directly via a branch or via a series of branches affect the value of that node.

Cutting the Tree Down Branch by Branch from the Tips to the Trunk

The branches of the tree (branches stemming from event forks) are weighted by probabilities assigned by the user. The branch probabilities reflect the users assumptions about whether or not cost discounts will be applied, whether or not coverage discounts will be applied, and the users thoughts regarding which allocation theory, Pro Rata or All Sums will be applied. At each end node or outcome, represented by triangles at the rightmost branch tree tips, the probability and associated outcome -- the recovered cost -- is shown for each of the different branches. The end nodes with the higher outcome probability imply that their associated recoveries are more likely to occur than those recoveries associated with lower probabilities. For example, the end node that has the highest overall probability of 37% has an associated recovery of \$5 million (see box surrounded by dashes in the upper right corner of Figure 1) and this outcome

is considered most likely. Similarly the second most likely outcome is the \$25 million with 20% probability. These recoveries reflect the application of discounts (cost and coverage) and the effect of different allocations. The \$5 million or lower recovery amount reflects the application of Pro Rata allocation theory versus the \$25 million All Sums allocation. Almost twice the probability was assigned to the Pro Rata allocation (65%) compared to the All Sums allocation (35%). This assumption favors the carriers position. If, on the other hand, the user felt that the All Sums was the allocation theory that would more likely prevail based for examples by previous positions taken by the court, then the All Sums branch could be assigned a higher probability and the Pro Rata allocation branch assigned a lower probability. Regardless, the probabilities assigned to the branches extending from a single node must add to 100%.

[Click on Core Emerging Issues Commentary at the end of this commentary to see Figure 1]

In this case, the dollar amounts at the branch tip are based on: (1) assumptions regarding discounts and their impact on both past and future defense and indemnity costs; (2) discounts for coverage defenses based on late notice, occurrence wording, pollution exclusion, missing policies, and insolvencies; and (3) allocation analysis using discounted and non-discounted costs and coverage inputs.

Each branch is connected to a node (shown as round circles on the chart) and at each node there is a dollar value which represents the expected value (EV) at that node. The expected value is the probability-weighted value for the node, i.e. the sum of the value of each branch multiplied by its probability. For example, the expected value for the branch with the highest probability is \$12 million (see box surrounded by dashes at the top in Figure 1). This is the probability-weighted value based on the cost at each branch multiplied by its assigned probability and summed. (E.g., $EV = (65\% \times \$5 \text{ million}) + (35\% \times \$25 \text{ million}) = \$12 \text{ million}$.) Using this same process and tracing each branch back to the trunk (i.e., to the left end or beginning of the chart) will produce the expected value for the entire tree of \$14.6 million (see box surrounded by dashes on the left side of Figure 1). This represents the value based on all the outcomes and associated probabilities. This provides a benchmark value based on all the assumptions the user has put into the decision tree.

Decision Trees Provide a Powerful, Dynamic Tool for Litigation and Settlement Negotiations

Using a Microsoft Excel add-in computer program, such as Palisades Decision

Analysis Software, allows the user to construct a decision tree (Precision Tree). In addition, the tree may be linked to Excel spreadsheets containing: (1) cost information (past and future indemnity and defense costs); (2) cost discount information, i.e. reasonableness of costs; (3) coverage defense discount; and (4) allocation models. Changes in the underlying costs, discounts, or allocation models can cascade via the spreadsheet links to the inputs on the tree branches. Similarly, the probabilities on the decision tree branches can be changed to reflect different scenarios. The linking of the cost, discount, and model inputs to the decision trees provides the user with the ability to conduct what if scenarios on the fly and see the results immediately. Attorneys and clients appreciate this functionality and it provides them with a dynamic model to analyze the underlying legal and cost variables, the effect of uncertainty, and what drives the outcome.

Lastly, the ability to define the most likely outcome (cost with the highest

probability), the least likely outcome (cost with the lowest probability) and the expected value (cost-probability weighted value) provides attorneys and clients with the ability to establish negotiation targets. These targets may include an amount to initiate settlement negotiations versus an amount which is considered the lowest target settlement amount. It would also be helpful to understand what would be considered a successful high settlement result versus a successful low settlement result so as to manage attorney-client expectations. Using the what-if-scenarios and the

outcome values defined above, attorneys and clients can hone their strategies and optimize the outcome.
