John S. Wyckoff is a vice president of CapAnalysis Group LLC and is a certified professional geologist with over 18 years of experience in the environmental industry. Mr. Wyckoff specializes in valuing contingent environmental liabilities for the purposes of insurance cost recovery, site investigation and remediation, strategic environmental management, and environmental litigation support. He estimates the costs of environmental liabilities using advanced cost estimating models; financial, statistical and database applications; and project management software. Using these advanced tools, he assists clients to move beyond identifying liabilities to understanding their magnitude and how to manage them. He can be reached at Wyckoffj@Capanalysis.com.

Evy M. Wild is a director of CapAnalysis Group LLC and her background includes considerable experience in litigation support, intellectual asset management and forensic accounting. Ms. Wild has planned and performed financial analyses across a broad range of industries to determine losses and/or damages for lost profits, as well as provided measurements for unjust enrichment and intellectual property claims involving reasonable royalty rates and disgorgement of profits. Her experience also includes royalty audits, loss or damages for business interruption and asset tracking for dissolution of marriages. In addition, Ms. Wild has served as an advisor on several intellectual property (IP) matters, including registrations, infringements, licensing negotiations, dispute resolutions, valuations and competitive assessments. She has performed data mining techniques to identify underutilized intellectual assets for licensing, as well as assisted companies with IP management systems and corporate strategies. Ms. Wild is a member of the California State Bar and Licensing Executives Society. She can be reached at Wilde@Capanalysis.com.

Robert N. Martin is a senior consultant with CapAnalysis Group LLC. Mr. Martin specializes in litigation consulting in the areas of insurance recovery and economic damages. His insurance recovery expertise includes the analysis of allocation theories in cases involving complex environmental and toxic tort claims. Mr. Martin also assists in insurance recovery of legal defense costs and has experience in the recovery of fees and costs related to shareholder derivative and tort liability suits. His experience in the analysis of economic damages covers damages involving breach of contract, unjust enrichment, and patent infringement claims. He can be reached at Martinnr@Capanalysis.com.

When It Comes to Insurance Regulation, Is Uncle Sam the New Sheriff in Town?

2008 Emerging Issues 2696

Richmond on When It Comes to Insurance Regulation, Is Uncle Sam the New Sheriff in Town?

By Douglas R. Richmond

August 13, 2008

SUMMARY: The proposed federal Insurance Information Act of 2008 and Treasury Secretary Paulson's Blueprint for a Modernized Financial Regulatory Structure are the latest expressions of the need some perceive for federal insurance regulation. This commentary succinctly examines these potentially significant developments and expresses skepticism about the desirability of federal insurance regulation based on the rationales offered to date.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Introduction

Insurance regulation has historically been left to the states. For that matter, states have been entrusted with insurance regulation going as far back as the late 1700s and early 1800s. In the 1860s, however, many insurers considered state regulation to be burdensome and inefficient, and they accordingly urged Congress to adopt standards that would make insurers federal institutions analogous to banks. ⁿ¹ That effort failed, and state regulation flourished anew. State regulation of insurance was seemingly cemented by the passage of the McCarran-Ferguson Act in the 1940s. Since then, there has been occasional noise about replacing state regulation of insurance with a federal system.

Proponents of a federal regulatory scheme argue that the insurance business is truly interstate in character, and therefore requires a coordinated national regulatory framework. Second, the financial requirements imposed by states on insurers are perceived to be too low. Third, requiring insurers to deal with 50 separate regulatory agencies is grossly inefficient. Fourth, federal regulation would be better than state regulation because state insurance departments have long been regarded as under-funded and under-staffed. Fifth, state legislators, theoretically lacking the support staff, sophistication, or time necessary to evaluate the subtleties of insurance are vulnerable to unhelpful pressures exerted by special interest groups. Sixth, state insurance regulators are unlikely to intercede on consumers' behalf when the need arises because doing so will make them unemployable in the insurance industry when their term expires or desire for public service diminishes, and they are unlikely to find other employment matching their experience. Thus, they are better off being industry lapdogs than watchdogs. ⁿ²

On the other hand, proponents of state regulation argue that the current system is necessarily preferable to a non-existent federal regulatory framework of uncertain structure and efficiency. Second, state regulation encourages innovation because regulatory experiments typically take place where their effect will be confined to individual states.

Third, the notion that a federal system would be more efficient is unfounded given the SEC's often impotent regulation of the securities markets, the federal government's inability to prevent or repair the subprime mortgage mess, the federal government's gross mishandling of Iraq's post-war reconstruction, the weak federal response to Hurricane Katrina, and so on. Fourth, the notion that state legislators are more vulnerable to special interest pressures than U.S. representatives or senators is infirm, given the several recent cases of improper influence involving Washington politicians, their staffers, and government officials. Fifth, it is doubtful that insurance issues will attract the amount of congressional oversight and attention by federal officials that they deserve. Sixth, there has been no showing that state regulation has failed in any material fashion. n3

In any event, the noise concerning possible federal regulation of insurance is building to a crescendo as a result of three recent developments. The first was the introduction in the Senate in 2007 of the National Insurance Act of 2007 (S. 40) by Sen. John Sununu, R-N.H. and Sen. Tim Johnson, D-S.D. The second is the introduction in the House of Representatives of H.R. 5840, the Insurance Information Act of 2008. This bill was introduced in April 2008 by Rep. Paul Kanjorski, D-Pa. The third is the Department of the Treasury's recent publication of proposed sweeping reforms of the financial services industry in its *Blueprint for a Modernized Financial Regulatory Structure*. n4 This commentary will principally focus on the latter two developments, the National Insurance Act of 2007 having been the subject of an Emerging Issues Commentary in January 2008. n5

The Insurance Information Act of 2008

H.R. 5840 proposes to establish within the Treasury Department an Office of Insurance Information. The office would be headed by a Deputy Assistant Secretary of the Treasury and would be a career position within the Senior Executive Service. The Deputy Assistant Secretary would be authorized to (a) receive, analyze, collect and disseminate publicly available data and information and issue reports on all lines of insurance except health insurance; (b) establish federal policy on international insurance matters and ensure that state insurance laws are consistent with agreements relating to such [f]ederal policy entered into by the United States or on its behalf by a designated representative . . . with a foreign government or regulatory entity; and (c) advise the Secretary of the Treasury on major domestic and international insurance issues affecting both consumers and insurers.

As proposed, the Act would preempt any state law or regulation to the extent that it is inconsistent with federal policy on international insurance matters set forth in an agreement entered into by the United States or its representative with a foreign government or regulatory entity. Any determination of preemption would be made by the Deputy Assistant Secretary. Any aggrieved state would have the right to appeal such a determination to the Secretary of the Treasury. Nothing in the Act, however, should be construed to establish any general supervisory or regulatory authority of the [new office] or of the Treasury [Department] over any insurer.

H.R. 5840 has received mixed reviews. The National Association of Professional Insurance Agents (the PIA) has condemned it as misguided. The PIA contends that the Act's innocuous title is grossly misleading. The PIA raises a valid point. The Act as it is now drafted has much more to do with enabling federal regulation of insurance than it does with, say, the collection and dissemination of insurance information. The National Association of Insurance Commissioners (NAIC) has tepidly approved the bill, conditioned upon some amendments and definitional tightening. n6 The NAIC seems to be principally concerned with the Act's reference to agreements, which the organization urges should be more tightly defined to ensure that [s]tate consumer and solvency protections are preserved and to clarify which entities have authority to negotiate international agreements under the proposed legislation. n7 The amendments that the NAIC favors would make the Act subject to the federal Administrative Procedures Act and Freedom of Information Act, and would clarify that the Office of Insurance information created by the legislation would have no regulatory authority over the business of insurance, in addition to having no regulatory power over any insurer. n8

The Blueprint

Readers may recall that the National Insurance Act of 2007 proposed that insurers operating in multiple states be allowed to be regulated at the federal level under an Optional Federal Charter (OFC). The National Insurance Act would establish a parallel federal regulatory scheme to the state regulatory regimes for life and property and casualty insurers similar to the current dual banking system. Insurers would be free to elect between federal and state charters, licenses and regulation. Under the National Insurance Act, insurers opting for federal regulation would be regulated by a new Office of National Insurance (ONI) within the Treasury Department. The American Insurance Association (AIA) applauded the bill's introduction as an attempt to modernize insurance regulation. The National Association of Mutual Insurance Companies (NAMIC), on the other hand, came out in opposition. NAMIC expressed the view that the bill would harm consumers and small- to medium-sized insurers, which make up the bulk of the industry. The PIA also opposed the bill, explaining that state insurance departments are optimally knowledgeable about issues affecting their citizen's concerns, contending that state regulation is favorable from a consumer protection standpoint, and reasoning that the state regulatory scheme is more streamlined and efficient overall. Regardless of whether one supports or opposes the OFC concept, it received a significant boost from the *Blueprint*, which the Treasury Department published in March 2008.

The *Blueprint* grew out of the Treasury Department's study of the capital markets regulatory structure, including a March 2007 conference on capital markets competitiveness hosted by the Department. n9 The underlying premise of the study was that our current regulatory structure, while functioning well, is not optimal for promoting a competitive financial services sector leading the world and supporting continued economic innovation at home and abroad. n10 Insurance, of course, is a major component of the financial services sector. In the *Blueprint*, the Treasury Department offers a number of short-term and intermediate-term recommendations for reforming the current United States financial services regulatory structure.

The *Blueprint* proceeds from the assumption that the insurance industry has a national focus within the current state-centric regulatory structure. The inherent nature of state-based regulation is said to make developing national insurance products costly and cumbersome, directly impairing domestic insurers' competitiveness. n11 This is true despite the NAIC's laudable efforts at coordinating state regulation, whether by promulgating model laws or through other measures. As things now stand, insurers operating on a national basis are subject to multiple licensing requirements and regulatory examinations, and operate pursuant to multiple different state laws. n12 With respect to global insurance operations, a state-based insurance regulatory scheme is thought to produce increasing tensions in the global marketplace, both in the ability of U.S.-based firms to compete abroad and in allowing greater participation of foreign firms in U.S. markets. n13

To address these issues in the short-term, the *Blueprint* expresses the Treasury Department's recommendation of an OFC for insurers within the current structure. An OFC would provide for a system of federal chartering, licensing, regulation and supervision of insurers, reinsurers, and insurance intermediaries (i.e., agents and brokers). Industry participants who decline national regulation would continue to be regulated at the state level. States would not have jurisdiction over insurers opting for a federal charter, except that insurers would still be subject to some state laws, such as state tax laws, and mandatory workers' compensation and automobile insurance requirements. Federally chartered insurers would still be required to participate in state insurance guaranty funds and other residual risk mechanisms. n14

An OFC would be issued to specify the lines of insurance that each national insurer would be allowed to underwrite and sell. An OFC for life insurance would be broad enough to permit the insurer to distribute annuities, disability insurance, long-term care coverage, and so on. An OFC for property and casualty insurance would presumably encompass liability insurance, various personal lines coverages, surety bonds, and the like. No OFC would permit an insurer to hold a license as both a life insurer and as a property and casualty insurer. n15

As reflected in the *Blueprint*, the Treasury Department also recommends the creation of an ONI within its walls to regulate those who engage in the business of insurance pursuant to an OFC. The ONI would be headed by a Commissioner of National Insurance, who would have specified regulatory, supervisory, enforcement, and rehabilitative powers with respect to national insurers. n16

Finally, the Treasury Department recommends that Congress establish an Office of Insurance Oversight (OIO) within the Department. The OIO would be statutorily empowered to address international insurance regulatory issues, such as reinsurance capital. The OIO would be the nation's leading regulatory voice in promoting international insurance regulatory policy. It would have the authority to ensure that the NAIC and state insurance regulators uniformly implement what the United States considers to be international insurance policy goals. The OIO would also advise the Secretary of the Treasury on major domestic and international insurance issues. Ultimately, the OIO would be incorporated into the OFC framework. n17

Analysis

The current push for federal regulation is curious. As the *Blueprint* notes at the outset, the current insurance regulatory scheme is functioning well. n18 The only problem is the perception of some that the system is not optimal. Perhaps the most interesting thing about this observation is that the people making this judgment have no obvious basis for it. Few, if any, of the participants in the 2007 capital markets conference that spawned the *Blueprint* have readily discernable insurance experience. n19 There is nothing apparent in their backgrounds that suggests they have the ability to responsibly judge the strengths or weaknesses of the existing insurance regulatory framework. What is perceived to be optimal or less than optimal in the abstract by bankers, economists, securities industry insiders, and political scientists (i.e., the people driving Treasury's push for national regulation) with respect to financial regulation as a whole does not necessarily translate to insurance.

Second, how will federal involvement in insurance optimize its regulation or competitiveness? What about the history of federal regulation of financial markets suggests that the Treasury Department's stated goals are achievable? No one can seriously argue that the mere act of federalizing anything necessarily makes it better. There are countless examples of federal regulatory failures in various segments of the financial services industry that inspire little confidence in the Treasury Department's ability to regulate the insurance industry.

Perhaps the most disturbing recent trend in federal regulation generally is the disregard for the senior executive service commonly shown by political appointees. What will happen to federal insurance regulation if decisions that should be entrusted to capable career staffers are co-opted or undermined by political appointees? Does anyone think that the tremendous damage done to, say, the Department of Justice by partisans like Monica Goodling and Kyle Sampson cannot be replicated at the Treasury Department? It is no answer to say that the same sort of thing can happen within state insurance departments because the point here is not that the state regulatory scheme is flawless, but that federal regulation is not necessarily an enhancement or improvement.

Legislatively speaking, are the United States House of Representatives and Senate truly equipped to do a better job of governing the insurance industry than are state legislatures? If the answer is yes, based on what evidence?

Third, the United States is arguably the world's most competitive insurance market. n20 What evidence is there that foreign insurers are unable to compete or participate effectively in the United States market? That surely would come as news to European powerhouses such as Aegon, Allianz, Swiss Re and Zurich, all of which have robust U.S. operations and are competing quite effectively here in various lines of insurance and reinsurance. And let's not forget the many Lloyd's of London underwriters that profitably insure United States risks. Similarly, how is it that the current regulatory structure is impairing domestic insurers' abilities to compete overseas? Where is the evidence of that? What data support Treasury's claims of increasing tensions in the global insurance marketplace attributable to the current regulatory scheme?

Fourth, insurance intermediaries will not be able to take advantage of the proposed OFC as vaguely outlined in the *Blueprint*. For insurance brokers, absent something more, licensure in multiple states will remain the norm. Admittedly, that something more may be coming in the form of H.R. 5611, the National Association of Registered Agents and Brokers Reform Act of 2008, sponsored by Rep. David Scott, D-Ga. This proposed legislation would amend the Graham-Leach-Bliley Act and would establish the National Association of Registered Agents and Brokers (NARAB) as

a not-for-profit corporation fostering the multi-state licensing and continuing education of insurance intermediaries. In other words, NARAB would promote the reciprocal licensing of producers, and eliminate the cumbersome and expensive multi-state licensing process employed today. As drafted, H.R. 5611 reserves to the states the right to license and discipline intermediaries, and to prescribe and enforce laws and regulations oriented towards consumer protection and unfair trade practices.

Fifth, the suggestion that the current regulatory framework is undesirable because insurers are subjected to the potentially inconsistent laws of 50 states is lame. National insurers operating under an OFC will still do business in various states and will be subject to tort, contract and various other common law claims in all of them. The tort and contract law principles applicable to insurers, while occasionally inconsistent, and sometimes unhelpfully so, are not so wildly disparate as to be disabling. Nationalizing insurance regulation solves potential legal confusion only if with an OFC comes the development of a federal common law of insurance, much as has developed in connection with ERISA. Note that the federal common law of ERISA has been a disaster for consumers, because it strongly favors insurers and plan administrators in many contexts.

Sixth, the OFC scheme risks regulatory arbitrage and gaps in oversight. n21

Seventh, how and at what level will the ONI be funded? Who will staff it?

To be sure, the current system of state insurance regulation is imperfect. Insurers are justifiably concerned about some states' rate-setting practices and about others' unwillingness to bless innovative policy forms. The current state-centered regulatory scheme means that adjusters and intermediaries must be licensed in numerous states, and insurance companies and brokers must devote significant resources to compliance. A national regulatory scheme would presumably simplify matters for insurers and brokers administratively, and would accordingly lower related costs. Insurers and brokers could, in turn, pass such cost savings along to consumers.

That said, there is nothing about the current structure that is so obviously flawed as to justify calls for a redundant federal regulatory regime in the form of an OFC and ONI. And, if, as the *Blueprint* asserts, the state regulatory scheme is functioning well, but just not optimally, why is the solution not simply the improvement of the state scheme? Long story short, if the Treasury Department or interested groups possess data or concrete examples of gross systemic inefficiencies demonstrating a need for federal insurance regulation, they should hold them up for analysis and study. Anecdotes, intuition and speculative economic theory--which are what the Treasury Department and supportive legislators have principally offered so far--ought to be insufficient to justify the radical paradigm shift roughly set forth in the *Blueprint*.

In fact, there may be data or information suggesting the wisdom of the OFC. Experts on the insurance industry may be able to well articulate the wisdom of the OFC concept where the Treasury Department has failed. For example, a 2007 study for the American Council of Life Insurers by two Georgia State University professors suggests that an OFC would substantially reduce insurers' compliance costs and, at least in the life insurance industry, create some competitive advantages. n22 More research along these lines is necessary and should be encouraged.

Conclusion

Insurance regulation has historically been left to the states. For many years, there has been occasional noise about replacing state regulation of insurance with a federal system. That noise is building to a crescendo as a result of the introduction in the Senate of the National Insurance Act of 2007, the introduction in the House of Representatives of the Insurance Information Act of 2008, and the Department of the Treasury's recent publication of proposed sweeping reforms of the financial services industry in its *Blueprint for a Modernized Financial Regulatory Structure*. The current push for federal regulation, however, appears to be incompletely considered.

Any move toward federal insurance regulation is not going to happen immediately. H.R. 5840 may never make it out of the House Financial Services Committee. Depending on what happens in the November 2008 elections, the Treasury Department's regulatory focus may shift significantly. Regardless, there is as yet no compelling reason to modify the existing state insurance regulatory scheme to accommodate a redundant federal one.

Cope on City of Eastlake, et al., v. St. Paul Fire and Marine Ins. Co.

2008 Emerging Issues 2867

Cope on City of Eastlake, et al., v. St. Paul Fire and Marine Ins. Co., No. 07-1867, N.D. Ohio; 2008 U.S. Dist. LEXIS 4345: Insurers Intent Clear Despite Leaving Defense Obligation in Policy Exclusion

By Carrie Cope

August 4, 2008

SUMMARY: Insureds are very quick to accuse insurers of ambiguous policy wording in the face of a coverage denial especially when the denial is based on a coverage amendment. Eastlake is a decision in which the court unequivocally found the insurers policy amendments to be clear and unambiguous even though the insurer did not delete references to its defense obligation throughout the policy.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Modifying pivotal terms of an insurance policy by endorsement sometimes involves a delicate balancing act between making succinct changes that clearly convey the insurers intent and a wholesale rewriting of the policy's terms to address every provision the potential change impacts. Insureds, if unhappy about the limiting effect of a particular endorsement on coverage, will invariably argue that the change to the policy wording created ambiguity by the choice of specific words or the failure to change crucial provisions in the policy. Indeed, a fall down the sometimes slippery slope of policy amendments can result in an unanticipated avalanche of exposure for insurers. That was not the case, however, in *City of Eastlake, et al., v. St. Paul Fire and Marine Ins. Co.*, No. 07-1867, N.D. Ohio; 2008 U.S. Dist. LEXIS 4345, in which an Ohio court unequivocally found that the insurers intent to delete its defense obligation was unambiguous even though references to the defense obligation had not been consistently deleted throughout the policy.

The City of Eastlake and several of its current and former city officials sought coverage under a public entity management liability policy for a lawsuit brought against them by Richard Fatur, a taxpayer and resident of Eastlake. Mr. Fatur alleged that Eastlake and its officials over-collected on a tax levy, made improper budget requests during specified years and failed to keep the tax levy distributions in a separate trust fund as required by Ohio law. Mr. Fatur sought various forms of injunctive relief as well as a declaration that Eastlake conducted a criminal enterprise that engaged in a pattern of corrupt activity in violation of Ohio's RICO statute. The insureds sought a defense and indemnity under the policy issued by St. Paul. St. Paul denied coverage on the grounds that 1) it had no defense obligation under the policy and 2) the policy excluded coverage for loss resulting from a) improper administration or collection of taxes; b) any criminal, dishonest, fraudulent, or intentionally wrongful act or omission; and c) any claim seeking declaratory, injunctive or other non-monetary relief.

In the policy form itself, St. Paul had both the right and duty to defend any protected person against a claim for a

covered loss. However, that provision was changed via a Self-Insured Retention Endorsement which gave the insurer the right to investigate or defend any claim or suit for covered loss and specifically stated that the insurer had no duty to defend any claim or suit or perform other acts or services. The court examined the plain and ordinary meaning of the language in the Endorsement and noted: [A]s a matter of law, a contract is unambiguous if it can be given a definite legal meaning. In finding the elimination of the insurers defense obligation in the Endorsement to be unambiguous, the court discussed the difference between a deductible and a self-insured retention and noted the significance of the insureds obligation to defend itself until the self-insured retention is exhausted. In other words, the change to the defense obligation was communicated by the very nature of the Endorsement itself.

The plaintiffs argued that the Self-Insured Retention Endorsement did not modify the policy's exclusion for criminal, dishonest, fraudulent or intentionally wrongful acts, which contained language expressly stating that the exclusion would not be applied to the insurers duty of defense until it has been determined by legal processes that such act or omission was committed by [an insured]. Essentially, the insureds were arguing that the omission of a change to the defense wording in the exclusion created an ambiguity in the policy which must be resolved in their favor under Ohio law. The insureds relied on, *Edmondson v. Motorists Mut. Ins. Co.*, 48 Ohio St. 2d 52, 356 N.E. 2d 722 (1976), in which the insured prevailed because certain critical terms were defined in one section of an insurance policy but not in another part of the policy. However, the court in *Eastlake* declined to apply *Edmondson* and determined that since the Endorsement's change to the defense obligation, construed in the plain, ordinary, and popular sense of the language and words used, was unambiguous, it effectively nullified the insurers defense obligation in the intentional act exclusion. In reaching its decision, the court considered two fundamental concepts of Ohio law: Even if a conflict existed between the general policy wording and that of the Endorsement, the terms of the Endorsement control under Ohio law. Moreover, under Ohio law, exclusionary clauses generally cannot be used to create coverage where none existed in the first instance.

Policy wording issues are often construed against the insurer as the drafter of the policy. This can be the case regardless of how much input the insured had in negotiating the coverage change or how soft the market is for the type of coverage being purchased. In *Eastlake*, while the court found the language of the Self-Insured Retention Endorsement to be clear and unambiguous, the fact that the claim was ultimately not covered based on the tax and injunctive relief exclusions likely influenced the court's decision even though it purportedly reached its decision notwithstanding the application of those exclusions. While insurers sometimes face a difficult challenge in balancing the need to make changes consistently throughout the policy without overwhelming the insured with excess verbiage that potentially exposes the insurer to allegations of ambiguity, *Eastlake* is a strong decision supported by fundamental principles of policy wording construction.

ABOUT THE AUTHOR(S):

Carrie Cope is a partner in the Chicago office of Tressler, Soderstrom, Maloney & Priess, LLP where she specializes in insurance law and has two synchronized practice areas of insurance regulation and specialty lines claim handling. In her regulatory practice, she represents insurers, agents, brokers, reinsurers, reinsurance intermediaries, alternative risk insurance groups and third party administrators on a wide variety of regulatory and compliance issues. She also has over fifteen years of experience in providing specialty lines claim handling and coverage consulting services to the insurance industry. Her coverage practice is primarily concentrated in the areas of directors and officers liability, professional liability, miscellaneous errors and omissions insurance and employment practices liability. She is a member of the Professional Liability Underwriting Society and she recently authored a chapter published in *Applemans New Insurance Law Practice Guide*.

Bullivant Houser Bailey PC on Rising Catastrophic Flood Loss & Insurer Response

2008 Emerging Issues 2691

Bullivant Houser Bailey PC on Rising Catastrophic Flood Losses and Insurer Response

By J. Douglas Durham and Erin Nelson

August 1, 2008

SUMMARY: Floods cause significant and largely unpredictable property and business interruption losses each year. This commentary discusses the coverage and adjustment issues presented by flood claims. In addition to analyzing property damage issues, the commentary also explores business interruption loss issues triggered by floods. Seminal court decisions are surveyed and practice insights for insurance coverage attorneys are imparted.

PDF LINK: Core Emerging Issues Commentary (\$)

ARTICLE: Introduction

Floods cause significant and largely unpredictable property and business interruption losses each year. From 1972 to 2006, flood catastrophes have caused national losses of \$94 billion, an average of over \$176 million per flood. n1 Hurricane-related floods account for \$973 million of those losses. n2 These losses trigger insurance claims under policies that provide various types of insurance coverage. Many of these claims involve property damage, interruption in business, and often additional expenses incurred as a result of these catastrophes.

Due to the vast impact of Hurricane Katrina and, more recently, the Midwest storms causing this years (2008s) floods along the Mississippi River, insurers are confronted with dramatically increasing disaster losses. n3 As they respond to these claims, insurers are working to minimize claims expenses and evaluating or implementing various risk-limiting strategies. n4

Frank Russo, of Aons Rapid Response Property and Casualty Unit reports that, mitigation of damages and having a plan in place when a catastrophe strikes is key[.] n5 By rapidly fielding personnel who not only help process claims, but also assist insureds taking steps to limit their losses, insurers can help limit the extent of individual insured losses while providing assistance when it is most needed.

Among risk-limiting strategies, underwriters for certain insurers have elected not to issue homeowners insurance for homes along substantial stretches of the East and Gulf coasts. n6 As recently as June of 2008, Joe Lattanzio of Aon Corp.s Rapid Response Program commented that, [s]ome facilities are so exposed and prone to flooding that they cant get flood insurance at all. n7 Rod Fisher of Factory Mutual Ins. Co. explained, with reference to a 100-year flood, It doesnt mean the site is prone to flooding once every 100 years, it means that the chance of flooding is one out of 100. In

any given year you can have two, 100-year flooding events. n8 Given this years extensive flooding along the Mississippi River and major tributaries, some insurers may elect to limit their risks by reducing or eliminating their underwriting in such areas, just as they have in coastal areas prone to hurricane-related flooding, by reducing available coverage limits, by increasing premiums, or some combination of these approaches.

Standard Homeowners Insurance; Wind Damage, Flood Damage, and Coverage Disputes Over Causation Most homeowners insurance policies include standard provisions excluding coverage for losses caused by flood. n9 However, the typical homeowners policy covers damage caused by wind. Insurance policy interpretation involving the interplay between these provisions came to the forefront in the aftermath of Hurricane Katrina because a significant number of claims turned on the question of whether property damage was due to wind or storm surge. n10

The Mississippi Insurance Commissioner confirmed that homeowners policies typically specifically exclude damages from flooding. n11 However, U.S. Representative Gene Taylor (D. Miss) said that the tidal surge was not a water-actuated event, but rather, caused by wind and as such should be covered under policies covering wind damage. n12

In *Buente v. Allstate Property & Cas. Ins. Co.*, n13 the insureds sued their insurer for property damage sustained in Hurricane Katrina, alleging that the damage to their home was partly due to wind and wind-driven rain. n14 The policy in *Buente* contained a flood exclusion which provided in relevant part, [w]e do not cover loss to the [insured] property consisting of or caused by: 1. Flood, including, but not limited to surface water, waves, tidal water or overflow of any body of water, or spray from any of these, whether or not driven by wind 4. Water or any other substance on . . . the surface of the ground regardless of its source. n15

In evaluating whether the flood exclusion applied, the court in *Buente* determined that water driven by Hurricane Katrina was a flood as the term is ordinarily understood, and thus the insureds damage was excluded under the policy terms quoted above. n16

Likewise, in *Leonard v. Nationwide Mut. Ins. Co.*, n17 the insureds sued under their homeowners insurance policy to recover for damage to their home caused by Hurricane Katrina. n18 The policy in *Leonard* excluded coverage for damage caused by rising water and weather conditions, but did not preclude coverage for losses due to wind. n19 Following a bench trial, the court held that the insureds could not recover for damage that was a result of a storm surge, but to the extent that their losses were due to wind-driven debris, recovery was allowed. n20

This result is consistent with the general trend that rejects application of the efficient proximate cause doctrine when evaluating coverage for claims arising out of damage caused by Hurricane Katrina.

Where Covered and Uncovered Losses Collide; Actual Versus Proximate Causation A majority of states have adopted the efficient proximate cause doctrine when more than one causes result in damage to the insureds property. The doctrine, in a nutshell, holds that for insurance purposes the cause that sets the other causes in motion is deemed the efficient cause of the loss, even if the other causes follow and operate more immediately in producing the property damage. n21 Thus, if a covered peril such as wind creates a condition permitting natural forces such as water to cause damage which would not have resulted but for the condition created by the wind, coverage exists because the wind is deemed the efficient proximate cause. n22

The efficient proximate cause doctrine does not apply where separate causes, some covered and some not covered, cause divisible or different property damage. n23 Instead, the insurer is liable only to the extent of damage caused by the covered peril. n24

For example, in *Napoletano v. Standard Fire Ins. Co.*, n25 the insured sued to recover under a windstorm policy. n26 The court held that the question of whether the insureds loss was caused by the windstorm or flooding by the subsequent tidal wave was a question for the jury and that the insured could recover under the policy only to the extent that the damages were caused by the covered peril of wind as opposed to the non-covered peril, flooding due to tidal

wave. n27 Similarly, in *Hanover Fire Ins. Co. v. Ivey*, n28 the court affirmed judgment in favor of the insured holding that the insured had sufficiently established the extent of recoverable damages. n29

Where losses resulting from covered perils cannot be distinguished from those resulting from uncovered perils, recovery has not been allowed. n30 In one case, the insureds grain elevator was damaged in an explosion. The Missouri Supreme Court determined that the jury had to decide the question of whether the explosion resulted from built up pressure in grains soaked by flood waters, or by expansion of wet grains that caused dislocation of the hopper bottoms of the elevators. n31 The court reasoned that the insured could not recover the cost of repairing the elevators where the insured could not establish that the losses were due to explosion (a covered cause of loss) as opposed to flood (an excluded cause of loss). n32 Similarly, in *Niagara Fire Ins. Co. v. Muhle*, n33 the court remanded a case for a new trial based on an absence of evidence distinguishing losses caused by a tornado from those caused by water. n34

Thus, failure to distinguish covered losses from uncovered losses may have dire consequences for both the insurer and the insured. Since the insured bears the initial burden of establishing coverage, a practitioner may better serve a clients interests by focusing on the cause of each divisible item of damage rather than risking all coverage by failing to make this distinction.

Practice Insight: In evaluating an insureds losses focus on the cause or causes of each element of damages. Those that can be attributed solely to a covered cause of loss are least likely to result in a dispute with the insurer. If more than one cause combines to produce a particular element of damage, coverage is more likely to be disputed and the efficient proximate cause issue is likely to be a jury question.

Business Interruption Losses Present a Variety of Coverage Issues, Challenging Adjusters and Counsel for Insurers to Carefully Evaluate Their Recommendations

Of course, flooding losses are not limited to private homes. Flooding affects entire communities, and businesses sustain losses that may be covered under their business insurance. A business insurance policy that includes a flood exclusion should be reviewed to determine whether the exclusion applies to business interruption coverage provided under a separate insuring agreement.

Business losses triggered by floods frequently result in one or more of three major types of coverage disputes. First, business interruption coverage customarily includes provisions that control benefits due during the period of restoration. Generally, the covered period of restoration is a theoretical period, measured by the time reasonably necessary to accomplish the physical repair of the premises. n35

Nevertheless, the reasonableness of the period of restoration in light of the time necessary for repair or rebuilding may be disputed following a flood, for a variety of reasons. These may include the availability of materials, labor, or required infrastructure. Valuation issues regarding the cost to repair or rebuild can also be the subjects of dispute, and may also impact the restoration period. Following Hurricane Katrina, issues regarding proof of loss for estimates of cost of repair and replacement damage gave rise to litigation. n36 Best practices include early identification of these potential points of disagreement with an effort to reach agreement on how they will affect the restoration period before the impact becomes critical.

Second, business interruption coverage extends to income that the business would have received but for the catastrophe. The purpose of business interruption coverage is to do for the insured what, but for the interruption, the business itself would have done. n37 Business interruption coverage is intended to protect profit which the insured would have earned but for the interruption in its normal business activities due to a covered cause of loss. n38 Some policies provide coverage for net profit that would have been earned as well as continuing normal operating expenses. n39 Others provide coverage for the sum of net income that would have been earned minus the continuing normal operating expenses incurred during the interruption. n40 Business interruption coverage is not intended to place the

insured in a better position than it would have been in had there been no interruption of operations. n41

The formula a particular policy uses to determine the extent of business interruption coverage should be reviewed to determine what sort of information the insured must present to establish a valid claim. This is particularly true where some required information may not be available due to the effects of the catastrophe. For instance, electronic records may not be available until a hard drive or other storage system is recovered and accessed to provide data that establishes normal operating expenses, past revenues for seasonal businesses during the same time of year, and similar information. Again, because the disaster may introduce extraordinary problems in obtaining information required to process a claim, early identification of those problems can permit the insured and insurer to agree on how to address them, as well as whether an interim arrangement is required, thereby minimizing dispute and delay.

Finally, contingent business interruption coverage and extra expense coverage have been held to extend to ancillary expenses, including raw materials and increased transportation costs incurred as a result of a catastrophic event. n42 In preparing to present a claim for business interruption coverage, the best practice is to identify all forms of coverage purchased by the insured that potentially could be triggered by the insureds claim, including contingent business interruption and extra expense coverages. Even though these coverages may not be immediately triggered, claims may arise under them during the restoration period. Similarly, the effects of a natural disaster on an insured that has no direct property losses could result in a claim.

Practice Insight: Counsel should consider that contingent business interruption coverage may be triggered even where no damage to the subject property is caused by flood if a supplier is affected, resulting in decreased revenue.

The practitioner must be cautioned that a policyholders inability to prove that its market is still economically viable may affect its ability to recover business interruption losses. n43 Many policies contain an exclusion barring coverage where a policyholder loses its market. n44 This can pose a particular problem in geographic regions where the population has been forced to evacuate due to extensive flood damage and profitability is uncertain. n45

Catastrophic natural disasters typically disrupt normal daily activities of individuals and businesses over a wide geographic area. The effects can be long lasting depending on the area affected and the nature of the damage, as well as the availability of materials and resources to restore or repair damaged property. The type of disaster can determine the kinds of insurance coverage issues that arise. In an event such as a hurricane, a variety of perils may cause property damage, raising significant coverage issues. Some familiarity with the types of issues likely to exist, the facts likely to be determinative of those issues, and the law controlling them can help a practitioner effectively represent his or her client in coping with the aftermath of the disaster. n46

Gerber and Kingsley on Cal. Joint Powers Ins. v. Munich Reinsurance America

2008 Emerging Issues 2616

Daniel W. Gerber and Jeffrey L. Kingsley on California Joint Powers Insurance Authority v. Munich Reinsurance America, Inc. : Whether A Reinsurer Can Be Exposed To Tort Damages For Bad Faith

By Daniel W. Gerber and Jeffrey L. Kingsley

July 31, 2008

SUMMARY: In a case of first impression, a California District Court in California Joint Powers Insurance Authority v. Munich Reinsurance America, Inc. concluded that reinsureds cannot allege tort damages for a perceived breach of the reinsurers implied covenant of good faith and fair dealing. In rendering this decision, the California District Court took a first and important step in shaping the scope of liability in a reinsurance context.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The reinsurance industry and market is premised, in part, on risk allocation. That is, the reinsurer assists the reinsured, typically an insurance company, in their business by sharing in the indemnification risk. In turn, and unlike a reinsurance contract, a more traditional insurance contract is premised on one party undertaking the task of indemnifying another against a loss concerning an unknown event. Therefore, given that there are some fundamental differences between the reinsurance and insurance markets, there have been unresolved issues as to whether a reinsurer can be sued by a reinsured for tort actions. The California District Court in *California Joint Powers Insurance Authority v. Munich Reinsurance America, Inc.* 2008 U.S. Dist. LEXIS 56654 (C.D. Cal. Apr. 21, 2008) took an important step in separating the reinsurance and insurance markets. Are there more to follow?

Until recently, the reinsurance market was unsettled as to whether a reinsured could commence a claim against a reinsurer for tort damages, such as a breach of the implied covenant of good faith and fair dealing as there was little caselaw on the subject. The insurance market has allowed independent tort causes of action to be asserted against an insurer for failing to perform its contractual obligations. See e.g. *Panasia Estates v. Hudson Insurance Company* 10 N.Y.3d 200 (Court of Appeals in New York expanded the scope of an insureds ability to assert extra-contractual and tort-like damages arising when the insurers alleged breach arose out of its failure to properly investigate loss).

In *California Joint Powers Insurance Authority v. Munich Reinsurance America, Inc.*, the reinsured was a self-insured retention pool consisting of numerous public agencies. As such, the reinsured provided general liability and special liability coverage to its members for amounts in excess of \$1,000,000. *Id.* One of the reinsured members was the City of Rancho Palos Verdes.

In 1978, the City of Rancho Palos Verdes issued a moratorium on development in certain parts of its city because

of concerns regarding landslides. In 2002, certain developers in the City commenced a lawsuit against extending the moratorium claiming that it was unfair. The City, being part of the self-insured retention pool, informed the California Joint Powers Insurance Authority, who in turn notified its reinsurer, Munich Reinsurance America, Inc and sought a defense and indemnity. The lawsuit between the developers and the City of Rancho Palos Verdes ultimately settled for 4.25 million dollars.

Munich disclaimed coverage to California Joint Powers Insurance Authority claiming that the City of Rancho Palos Verdes claims were not covered by its reinsured and therefore, it would be entitled to any reinsured reimbursement. The California Joint Powers Insurance Authority filed a lawsuit against Munich for (1) breach of contract; (2) breach of implied covenant of good faith and fair dealing; (3) declaratory relief. In the complaint, the Authority stated that Munich tortuously breached the implied covenant of good faith and fair dealing and sought punitive damages.

In moving to dismiss the tortious breach of the implied covenant of good faith and fair dealing, Munich claimed that such claim does not exist in the reinsurance context. The District Court, in issuing its opinion, examined the scope of imposing tort damages in the insurance contract generally:

Because the covenant of good faith and fair dealing essentially is a contract term that aims to effectuate the contractual intentions of the parties, compensation for its breach has almost always been limited to contract rather than tort remedies. [citation omitted] The exception is when the actions that constitute the breach violate a social policy that merits the imposition of tort remedies. California courts have found that an insurers breach of the covenant of good faith and fair dealing violates social policy, justifying tort damages.

Tort remedies for breach of the implied covenant are permitted in the insurance policy setting for policy reasons pertaining to the distinctive nature of such contracts and the relationship between the contracting parties. They are considered appropriate because such contracts are characterized by elements of adhesion and unequal bargaining power, public interest and fiduciary relationship. [citation omitted]. The relationship between reinsurer and reinsured does not implicate the same policy concerns.

As such, given the Court found the reinsurance contract to be defined by statute as a contract for indemnity made for the benefit of the liability insurer, it has no relevance in the underlying tort action brought against an insured under a policy of liability insurance. *Id.* The Court concluded that due to the fact that a reinsurance contract was executed by two sophisticated business entities, there is no unequal bargaining power and that the agreements seek to allow a reinsured the ability to write more policies as opposed to give it peace of mind and security in the event of an accident. Finally, the Court also distinguished the fiduciary relationship in the reinsurance context from the traditional insurance context. The Court concluded that given the arms-length transaction, the reinsurer does not have a fiduciary relationship with its reinsured. Therefore, the District Court dismissed the Breach of Implied Covenant of Good Faith and Fair Dealing against Munich.

The District Court in this powerful decision outlined the stark differences between the reinsurance and traditional insurance contracts. As such, the Court found that because of these great differences, tort remedies arising out of the reinsured contract are not recoverable. Given that this is a case of first impression in California, it will be interesting to see if the other jurisdictions seem to adopt this stark contrast approach between the reinsurance and insurance markets or is this decision simply an aberration and that tort remedies will be allowed in certain contexts. Unfortunately, the impact of the Courts decision has not be fully realized until other courts in different jurisdictions weigh in on the scope of a reinsurers liability concerning traditional insurance causes of action.

ABOUT THE AUTHOR(S):

Daniel W. Gerber is a partner of Goldberg Segalla LLP in New York. He maintains an international practice in commercial litigation with a focus on complex insurance coverage disputes and analysis, including reinsurance and

excess insurance, as well as mediation and arbitration. He co-chairs his firms Insurance Coverage and Reinsurance practice groups. Mr. Gerber is an author for the renowned Insurance Treatise, New Appleman's Insurance Law Practice Guide, as well as Mealeys Emerging Insurance Disputes. He is admitted to the United States Supreme Court, as well as all federal and state courts in New York and Pennsylvania. Mr. Gerber argues regularly before the New York Court of Appeals and the U.S. Second Circuit Court of Appeals arguing the seminal case in New York on late notice in insurance law. He has received the Chairperson of the Year Award for his work as Chair of the Insurance Coverage Committee for the New York State Bar Associations Torts, Insurance and Compensation Law Section, and will be chair-elect of the almost 4,000 member Torts, Insurance and Compensation Law Section in 2008. In addition, Mr. Gerber is the immediate-past chair of the Membership and Annual Meeting Committees of the Defense Research Institute's (DRI) Life, Health and Disability Committee. Mr. Gerber frequently publishes and lectures nationally on insurance coverage, reinsurance and ERISA issues. He has authored several chapters on discovery in insurance litigation, as well as risk shifting issues. Mr. Gerber is also an active member of the Association of Life Insurance Counsel, the International Claims Association and the International Association of Defense Counsel, as well as the American Bar Associations Life, Health and Disability Committees. He possesses an AV rating from Martindale Hubbell, a Super Lawyer designation from Law & Politics Magazine, and has been named consecutively by his peers to Business First's Who's Who in Law.

Jeffrey L. Kingsley is an associate with Goldberg Segalla LLP in New York. He maintains a national practice in the areas of insurance, reinsurance coverage and extra-contractual liability litigation, commercial litigation, and bankruptcy and restructuring. Mr. Kingsley has presented and authored articles concerning alternatives to litigation as well as life insurance settlement issues.

Poolman on NCOIL viatical settlements model

2008 Emerging Issues 2633

Former North Dakota Insurance Commissioner Jim Poolman on Viatical Settlements: a discussion on the National Conference of Insurance Legislators Life Settlements Model Act, and NCOIL's attempts to attack the Stranger Originated Life Insurance" market

By Jim Poolman

July 30, 2008

SUMMARY: Former N.D. Insurance Commissioner Jim Poolman discusses the parameters of the National Conference of Insurance Legislators Life Settlements Model Act. Poolman compares the NCOIL model to the National Association of Insurance Commissioners model act, and pays particular attention to each organizations approach to waiting periods, free-look provisions, disclosure requirements and other consumer protections.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Poolman, Jim. Viatical Settlements: A Discussion on the National Conference of Insurance Legislators Life Settlements Model Act, and the Attempts to Attack the Stranger Originated Life Insurance Market. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Weighing in on a Controversial Issue. As the debate heats up regarding further regulation of the viatical settlement marketplace the NCOIL has weighed in with legislation of its own. NCOIL is an organization comprised of legislators with an interest in insurance issues, and some members serve on the insurance committees in their respective legislatures.

The NCOIL organization took an interest in addressing Stranger Owned or Stranger Originated Life Insurance--sometimes referred to as STOLI--after the National Association of Insurance Commissioners started their own debate on separate legislation. NCOIL had a viatical settlement model that was about to expire, and instead of having that model expire, NCOIL members decided to revise their model to address the changing issues in the viatical settlement marketplace. Viatical settlement (more commonly known as life settlement) companies and their brokers were unhappy with the direction state insurance regulators were heading with aggressive consumer protection changes made to their model, and they took their case to NCOIL members.

Stoli Served Shaken, Not Stirred. Regulators were concerned that Stranger Originated Life Insurance policies were becoming more pervasive and that consumers were being abused in the secondary life insurance market. STOLI policies are produced when an investor will have a consumer take out a life insurance policy on his or her life, typically financed with a non-recourse premium finance loan whereby the policy is secured as the collateral. The terms of the

loan are so outrageous that the policy is never intended to be held by the consumer because the loan will default, and the policy will have to be forfeited to the investors. In many cases the consumer will be induced into taking the policy with a cash payment, which will normally be a small percentage of the death benefit of the policy. After the two-year incontestability period has concluded, the ownership of that policy is immediately transferred to the investor. The investor will hold the policy and continue to pay the premium until the consumer dies, so the investor may collect the full death benefit.

The model put forth by NCOIL attacks STOLI very differently than the model put forth by the NAIC. The NAIC put forth a solution to stop the typical STOLI transaction by forcing the investor to wait for a longer period of time (five years) before taking the ownership of a policy. This five-year waiting period was narrowly crafted to only apply to policies that were completely financed, not unlike the transaction previously described. The new waiting period under the NAIC model also included several exceptions to the new waiting period, in case the consumer whose STOLI policy was taken out on his or her life could complete the settlement part of the transaction and give the ownership of the policy to the investor after the standard two-year incontestability period. Viatical settlement companies derided this proposal as anti-settlement, even though the waiting period only covered those policies where the consumer put none of their own resources to purchase the policy.

Seeing the settlement companies dissatisfaction with this approach, NCOIL tried to put STOLI back in the bottle a different way. Instead of regulating the transaction itself, legislators put together a STOLI definition whereby it would be a violation of law to participate in a transaction that met the STOLI definition.

The NCOIL model defines STOLI in Section 2, Subsection Y as follows:

Stranger-Originated Life Insurance or STOLI is a practice or plan to initiate a life insurance policy for the benefit of a third party investor who, at the time of policy origination, has no insurable interest in the insured. STOLI practices include but are not limited to cases in which life insurance is purchased with resources or guarantees from or through a person, or entity, who, at the time of policy inception, could not lawfully initiate the policy himself or itself, and where, at the time of inception, there is an arrangement or agreement, whether verbal or written, to directly or indirectly transfer the ownership of the policy and/or the policy benefits to a third party. Trusts, that are created to give the appearance of insurable interest, and are used to initiate policies for investors, violate insurable interest laws and the prohibition against wagering on life. STOLI arrangements do not include those practices set forth in Section 2L(2) of this Act.

This attempt at banning STOLI transactions is an important step forward in consumer protection. It is important to note that some life settlement interests have gone to state legislatures where this definition has been introduced to weaken this definition. Although this is a different approach to solve the problem of STOLI and arguably less restrictive than legislation put forth by regulators, this provision combined with other consumer protection pieces advances the ball. This approach, of course, is preferred by the life settlement companies because it is seen as friendlier and less aggressive in terms of regulating their business.

One specific piece important in this definition is the language about trusts. There are cases around the country, specifically the *Life Product Clearing LLC v. Linda Angel*, 2008 U.S. Dist. LEXIS 4233 case pending in New York court. In *Angel*, investors shrouded the insurable interest in the transfer of the policy to a trust mechanism, even after the policyholder had been paid up front for the policy. Investors still received the death benefit after the policyholders demise. This provision is not addressed in the regulators version of life settlement/STOLI legislation.

Consumer Protection: Hit and Miss. NCOIL members scored a goal for consumer protection when drafting their disclosure requirements. These requirements are very similar to what NAIC regulators put together in their draft. The NCOIL requirements force settlement brokers to fully disclose their compensation to the consumer. This stems from

lawsuits pending in New York court against Coventry First, one of the nations largest life settlement companies. *The People of the State of New York by Andrew M. Cuomo, Attorney General of the State of New York v. Coventry First, LLC*, 2008 NY Slip Op 5548; 2008 N.Y. App. Div. LEXIS 5460, alleges that those brokering life policies for consumers in some cases were making more on the transaction than the consumer who sold the policy.

Section 9C of the NCOIL Model lists disclosures that a broker must make to the owner of a policy as follows:

(3) A full, complete and accurate description of all the offers, counter-offers, acceptances and rejections relating to the proposed Life Settlement Contract;

(5) A complete reconciliation of the gross offer or bid by the Provider to the net amount of proceeds or value to be received by the Owner. For the purpose of this section, gross offer or bid shall mean the total amount or value offered by the Provider for the purchase of one or more life insurance policies, inclusive of commissions and fees;

The Life Insurance Settlement Association has traditionally opposed these types of disclosures. They are of the opinion that brokers should not have to tell the consumer what they are earning from the transaction, even though it absolutely affects the bottom line of what the consumer receives from their policy. They are at odds with the Institutional Life Markets Association, which believes this type of disclosure cleans up the business. Investors on Wall Street will be entirely more comfortable with putting money in this type of business if there is more transparency. This is a definite win for consumers and a smart move for legislators.

NCOIL legislators had an opportunity to march forward with consumer protection when giving consumers an opportunity to change their mind about a transaction, but failed to do so. Consumers under the NAIC Model have a longer time period to change their mind about selling their policy. For example, when a consumer purchases a long term care policy or a Medicare supplement policy they will typically have a 30 day free look period on that policy in which they can change their mind. Regulators thought that when consumers (typically seniors) are making the very important decision to sell their life insurance policy to a group of investors, they should have at least the amount of time they get when buying a long term care or Medicare supplement policy. NCOIL legislators in Section 11 of their bill included a 15-day period in which to rescind. Regulators included a provision in Section 10C that allows the consumer to rescind before the earlier of 60 days after the contract has been executed or 30 days after the proceeds from the settlement have been delivered to the consumer. This is an important distinction for consumers because consumers will want a longer period in which to change their mind about a very important transaction that sells their life insurance policy and in some cases for a significant amount of money.

Conclusion: Moving the Ball Forward for Consumers. The NCOIL model may not fill all the gaps in regulating an ever changing viatical settlement industry, but this legislation represents a large step forward with respect to protecting consumers around the country. Essential elements like full disclosure of compensation in settlement transactions and an attempt at going after STOLI transactions are important consumer protections. Those in the settlement industry prefer this legislation to the model regulators have put forward because they believe it is less aggressive and easier to work around by creating transactions that may not completely meet the definition of STOLI.

The NCOIL legislation does give the regulator power to conduct examinations of settlement companies, which is incredibly important to keep the industry in check. There are very legitimate players in the settlement industry who want to give maximum value to those that want to sell their policies in the secondary market. Regulation needs to be designed to protect consumers from the less legitimate companies that design their marketing practices, compensation schemes and transaction details for the purpose of using consumers to front policies where there is minimal benefit to the consumer and enormous benefit to the investor.

As legislators continue to debate these issues around the country, consumer protection should be the key. Legislators should not decide these issues based on who has drafted the bill, or what industry participants are involved.

There will be life insurance companies on one side and settlement companies on another. This is because there are billions of profits at stake for settlement companies, and life insurance companies believe their products are being abused. If decisions are made on what is best for the consumers, legislation and regulations based on those consumer-oriented decisions will promote the strongest consumer protections possible to give consumers the necessary selling power in this growing and changing marketplace. The NCOIL model may not be the strongest piece of legislation out there, but it is a step in the right direction.

ABOUT THE AUTHOR(S):

Jim Poolman. was elected North Dakota Insurance Commissioner in 2000, and overwhelmingly reelected in 2004. While Insurance Commissioner, he was an outspoken leader at the National Association of Insurance Commissioners, serving as their Vice-President, Chairman of the Midwestern Zone, Chairman of the Life Insurance and Annuities Committee, Executive Committee on Principles Based Reserving, Chairman of the Producer Licensing Working Group; amongst a host of other leadership posts. In North Dakota he was instrumental in preserving a competitive marketplace while passing very important consumer protections ranging in areas from privacy of consumers medical and financial information, suitability in annuity sales, restrictions on the use of claims information, insurance fraud and life settlements, amongst others. Mr. Poolman has been a sought after speaker on numerous insurance topics around the country. In August of 2007, Mr. Poolman resigned his post in North Dakota to start an independent regulatory consulting practice based in Bismarck, North Dakota. Mr. Poolman received his bachelors of Business Administration degree from the University of North Dakota in 1992. Mr. Poolman also served four terms in the North Dakota House of Representatives before being elected Insurance Commissioner.

Levine on Suitability in Annuity Transactions: a Comparison of the 2008 Amendments to the Suitability Laws in Florida and Connecticut

By A. Kenneth Levine

July 30, 2008

SUMMARY: Florida and Connecticut adopted NAICs narrowly drafted Suitability in Annuity Transactions Model in 2004. When NAIC returned to a wide-reaching standard in 2006, Florida declined to adopt the NAIC model. Connecticut amended its enabling legislation to adopt the new model. This commentary describes the bases for these changes, the trend these changes illustrate, and the manner in which producers, agents, and insurers may comply with this trend.

ARTICLE: Cite as: Levine, Ken. Annuity Transactions: A Comparison of the 2008 Amendments to the Suitability Laws in Florida and Connecticut. LexisNexis Expert Commentary, *(Insert date you accessed the document online)*.

During September 2003, the National Association of Insurance Commissioners adopted the Suitability in Annuity Transactions Model Regulation (Suitability Model) to establish uniform standards and procedures for ensuring that annuity purchases and exchanges were suitable to the insurance needs and financial objectives of senior citizens. Prior drafts of the Suitability Model addressed purchases and exchanges of annuities by persons of all ages. The final version of the Suitability Model recommended a narrow model that addressed the area of most concern to regulators--the sale of annuities to seniors . . . [b]ecause of the lack of support for a wide-reaching standard, and because none had existed before in most states. NAIC Model Laws, Regns & Guidelines 275-1, 2003 NAIC Proc. 3rd Qtr 28, Legis. History (2007). In 2004, the Florida Legislature enacted the Suitability Model as statutory text, while the Connecticut Assembly passed legislation authorizing the Connecticut Insurance Department (CID) to adopt the Suitability Model by rulemaking. With an effective date of August 4, 2005, the CID promulgated rules to enact the Suitability Model.

During June 2006, the NAIC returned to the wide-reaching standard draft of the Suitability Model and amended it to make it applicable to purchases and exchanges involving annuity consumers of all ages. During Floridas regular 2008 legislative session, Florida lawmakers reviewed Floridas version of the Suitability Model. Ultimately, they declined to adopt the NAICs amendments. Rather, the Florida Legislature significantly enhanced the existing standards by which an agent must determine the suitability of annuity transactions with seniors, converted a subjective measure to an objective standard for determining whether the agent properly applied these standards, required that the agents suitability analysis be documented, and invoked various other procedures. Meanwhile, Connecticut lawmakers amended that states

authorizing legislation to enable the CID to match the agency's suitability regulations with the NAIC's broadened version of the Suitability Model. Florida would travel by alternate legislative and administrative means to expand suitability analysis into product sales to other segments of Florida's population. Despite the differing issues addressed by the legislation in these states, producers, agents, and insurers are bestowed significant additional responsibility for ensuring compliance with a substantial increase in enforcement authority over the suitability of annuity transactions.

This commentary will describe the purported bases for these changes, the trend which these changes illustrate, and the manner in which producers, agents, and insurers may endeavor to comply with this trend.

Florida. In 2004, Florida codified the NAIC's Suitability Model to require that an insurance agent or, in direct sales, the insurer make reasonable efforts to obtain information concerning the senior consumer's financial status, tax status, and investment objectives and such other information used or considered to be reasonable by the [agent or insurer] in making the recommendation. Fla. Stat. § 627.4554(4)(b) (2007). Over the next four years, these criteria eluded a precise template for the Florida Department of Financial Services (FDFS) to determine the standard information which an agent was to glean from a senior consumer in conducting suitability analysis and making a recommendation. The FDFS suggested that a more accurate assessment of suitability required that the agent determine the consumer's investment goals and strategies, debt, assets and liabilities, health status, and any need for liquidity, and a host of other factors not specifically tied to age. The FDFS further advised that its role in reviewing an agent's suitability analysis often alluded to evidentiary support as the law lacked any verification requirement to demonstrate that a consumer, in fact, had been asked for the information to determine suitability and that the consumer actually provided or refused to provide the information. With annuity exchanges in particular, seniors complained to the FDFS that they were not fully informed of any possible disadvantages of the transactions, such as steep surrender charges.

To complicate the FDFS enforcement efforts further, the 2004 law prescribed, as the standard for determining the propriety of an agent's suitability recommendation, that the agent shall have reasonable grounds for believing that the recommendation is suitable for the senior consumer on the basis of the facts disclosed by the senior consumer as to his or her investments and other products and as to his or her financial situation and needs. Fla. Stat. § 627.4554(4)(a) (2004). Under Florida law, this reasonable grounds for believing standard required a subjective inquiry into whether the agent *believed* that a particular transaction was suitable regardless of whether the transaction was actually suitable on an objective basis. This subjective standard required that the FDFS prove the negative by clear and convincing evidence: that the agent did not believe that a particular transaction was suitable for a particular applicant. *See Ferris v. Turlington*, 510 So. 2d at 294-95 (Fla. 1987) (holding that agency may only discipline a license upon clear and convincing proof). To the FDFS, [t]his burden is largely unachievable, given that the suitability determination is solely within the discretion of the agent. Roxanne Rehm, *Florida Department of Financial Services 2008 White Paper on Annuities* 7 (Mar. 5, 2008) (*FDFS White Paper*). Meanwhile, during fiscal year 2006-07, the FDFS opened 351 investigations related to annuity transactions, a 41% increase over the prior fiscal year. The FDFS opened 260 annuity-related investigations during the first 8 months of fiscal year 2007-08, trending to a 58% increase over the prior fiscal year. Of these investigations, the FDFS trended a 20% increase per year in annuity cases involving seniors. *Id.* at 8.

The FDFS found that many of these cases involved agent misrepresentation or material omission designed to conceal the unsuitable nature of a sale. With an eye on possible systemic activity, the FDFS determined to review the adequacy of insurer efforts to supervise the agents which the insurer appointed. In practice, though, the FDFS found the 2004 law unclear as to whether ultimate responsibility for addressing suitability lay with the agent or with the insurer.

The Florida Legislature responded to these concerns with Senate Bill 2082, known as the John and Patricia Siebel Act, which passed both legislative chambers with unanimous approval. The bill was named for a Venice, Florida couple in their 80s who were sold \$600,000 worth of annuities that could not be touched for 15 years without large penalties. Jennifer Liberto, *State CFO Wants Tougher Rules on Annuities*, St. Petersburg Times, April 18, 2008.

Floridas new legislation amended the states 2004 suitability law, effective on January 1, 2009. The amended statute retained some standard information from the 2004 legislation and clarified or added new information which the agent, or insurer in direct sales, must obtain from the consumer to analyze suitability. For example, the agent must continue to determine the applicants tax status, investment objectives, and such other information used or to be considered *relevant* by the agent (with the term relevant replacing the term reasonable in this latter criterion). The bill clarified the financial status inquiry, by replacing that term with an examination of the applicants annual income; existing assets, including investment holdings; liquid net worth and liquidity needs; and, financial situation and needs. Further, SB 2082 added several new criteria, not found in the amended Suitability Model: personal information, including the age and sex of the parties to the annuity and the ages and number of any dependents; the source of the funds to purchase the annuity; the applicants intended use of the annuity; and, the applicants risk tolerance. 2008 Fla. Laws ch. 237, §§ 9 and 13. These new criteria appear to have been culled from the Financial Industry Regulatory Authoritys (FINRA) new suitability standards for variable annuities, adopted by way of FINRA Rule 2821(1)(B)(2), effective May 5, 2008, as to all registered representatives.

This information must now be transcribed onto an FDFS-adopted form, signed by the agent and the applicant; and, within 10 days of execution, forwarded on to the insurer or any third-party contracted by the insurer to supervise the agents suitability compliance. The consumers refusal to provide this information must also be documented on an FDFS-adopted form. Also on an FDFS-adopted form, before consummating an annuity exchange, the agent must indicate the differences between the consumers current and proposed annuity contracts.

The Florida Legislature also furnished the FDFS with an objective standard for determining the propriety of an agents suitability recommendation. The agent must now have an objectively reasonable basis for believing that the recommendation is suitable based on the facts disclosed by the consumer. This objective basis, coupled with the revised consumer information criteria for the agents analysis of suitability, arguably will enable the FDFS to apply an objective measure against the agents conduct.

Despite Floridas commitment to the 2004 version of the Suitability Model, focusing on the states senior population, Florida has endeavored by other means to address suitability in annuity transactions with other segments of the state. For example, by rule effective July 28, 2008, Florida seeks to ensure suitability in the sale of any annuity product by an [insurance producer or] insurer to an active duty service member of the United States Armed Forces. Fla. Admin. Code rr. 69B-240.001(2) (2008) (applicability as to producers) and 69O-142.200(2) (2008) (applicability as to insurers). For legislative authority to promulgate this rule, the FDFS drew from its broad grant of rulemaking authority under Floridas Unfair Insurance Trade Practices Act, Fla. Stat. §§ 626.9541(1) and 626.9611 (2007). Under this new rule, sale of an annuity to an enrollee of the Servicemembers Group Life Insurance (SGLI) program is deemed unsuitable unless, after a needs assessment, the producer and/or insurer demonstrate(s) that the applicants SGLI death benefit, together with any other military survivor benefits, savings and investments, survivor income, and other life insurance are insufficient to meet the applicants needs. Fla. Admin. Code rr. 69B-240.001(6)(v) and 69O-142.200(6)(v) (2008); *see also* Fla. Admin. Code rr. 69B-240.001(4)(f) and 69O-142.200(4)(h) (2008) (defining life insurance as including annuities, concerning regulation of producers and insurers, respectively).

A second example may be found in another statutory section amended by SB 2082. Section 626.99(4)(a), Fla. Stat., was amended to require that all annuity contracts, regardless of the purchasers age, provide an unconditional refund for a period of at least 14 days. 2008 Fla. Laws ch. 237, §8. A prior version of this bill limited this free look period to purchasers of annuities who were 75 years or older. This expanded free look period is intended to provide all annuity consumers adequate time after the transaction to review the suitability of their purchase. A third example may be found in a new requirement for agent continuing education. SB 2082 requires that, regardless of the age of any consumer to whom an agent intends to market an annuity, persons holding a life license in Florida must complete at least 3 hours of FDFS-approved continuing education coursework on the subject of suitability in annuity and life insurance transactions. *Id.* at § 3 (amending Fla. Stat. 626.2815(3)(k)).

These examples signal Floridas expanding application of suitability analysis beyond the confines of the states

senior constituency. While Floridas senior population is expected to grow by a staggering 176 percent by the year 2030, *FDFS White Paper* at p. 1, Florida lawmakers and regulators clearly do not intend to withhold suitability analysis from the balance of the population in the meantime.

Connecticut. Effective June 2, 2005, Connecticut enacted legislation authorizing the Insurance Commissioner to adopt regulations to establish standards for the sale or exchange of annuities to seniors, and procedures for making recommendations to seniors regarding the sale or exchange of annuities. Conn. Gen Stat. § 38a-432a (2007). Effective August 4, 2005, the CID adopted regulations addressing Senior Protection in Annuity Transactions. *See* Conn. Agencies Regs. § 38a-432a-1, *et seq.* The CID designed these regulations to set forth standards and procedures for recommendations to seniors in transactions involving annuities so that the insurance needs and financial objectives of senior consumers known at the time of the recommendation were appropriately addressed. Conn. Agencies Regs. § 38a-432a-1.

By 2008, in keeping with the NAICs revision of the Suitability Model, the CID determined to broaden the scope of these regulations to address the suitability of recommendations to any annuity consumer regardless of age. The statutory authority for the CIDs rules, though, specifically limited the scope of regulation to seniors. To address this qualification, the CID proposed legislation to remove the term seniors from Section 38a-432a of the Connecticut General Statutes. Such a simple statutory revision could not escape the political intervention inherent to the legislative process. One voice of intervention came in the form of Senate Bill 155, on February 14, 2008, which would altogether prohibit the sale of variable annuity contracts to seniors. By March 6, 2008, Senate Bill 155 died in committee for lack of sufficient favorable support.

Under separate cover, House Bill 5158 was reported favorably out of another committee, passed the General Assembly on May 7, 2008. This bill repealed Section 38a-432a and re-enacted the same language less any reference to seniors. On June 17, 2008, the CID formally published for adoption the agencys rules on Suitability in Annuity Transactions, indicating the agencys intent to remove all references to seniors. The 30-day comment period following publication passed without the CID receiving any comment. The CIDs suitability rule thus sets forth the standards and procedures for producer recommendations, commencing July 17, 2008, to all consumers that result in a transaction involving annuities.

The Connecticut rules retain the same suitability standards as the 2004 Florida law and the amended Suitability Model. In contrast to Florida, the Connecticut rules require that producers ensure the suitability of, *e.g.* fixed annuities with deferred payouts, when recommended to younger consumers who may need ready access to funds.

Insurer Culpability. Under the Florida, Connecticut, and Suitability Model amendments, insurers remain administratively culpable for suitability transgressions in annuity sales and exchanges which involve no producer or agent. The three regulatory schemes also require that the insurer ensure the establishment of a system to supervise recommendations that is reasonably designed to achieve compliance with each states suitability standards. Ensuring the establishment of such a system, versus adopting a straightforward requirement that the insurer establish a system to supervise, recognizes the different distribution methods by which an insurer may transact annuities. As indicated, the FDFS found it difficult to determine where ultimate responsibility lay for ensuring the suitability of a purchase or exchange of an annuity. SB 2082 included a couple of amendments which suggest that the insurer retains ultimate responsibility for the actions of parties which it appoints, but leaves this question somewhat unanswered with regard to parties transacting the insurers products either without proper authorization or in contravention of the supervisory system the establishment of which the insurer ensured.

First, SB 2082 now specifically authorizes the Florida Office of Insurance Regulation (FOIR) to order the insurer to rescind the contract and either fully refund all premium paid on the contract or the accumulation value, whichever is greater. The fact that this penalty is directed at the insurer, without reference to the agent, suggests the insurers administrative exposure for harm to a senior by violation of the Florida suitability law, whether caused by the insurer or the agent. Second, in an apparent effort to temper this administrative penalty, SB 2082 amends the law to indicate that

nothing in the amended statute shall subject an insurer to criminal or civil liability for the acts of independent individuals not affiliated with that insurer for selling its products, when such sales are made in a way not authorized by the insurer. Presumably, a way not authorized signals that the insurer can avoid evidence of a violation of Florida's suitability statute in a civil or criminal proceeding if the agent either lacked due authorization to represent the insurer by appointment, failed to adhere to the supervisory system enabled by the insurer, or otherwise exceeded the authority delegated to the agent by way of other agreement or authorization. Insurers, thus, should endeavor to assure that a specific and clear supervisory system is established and followed, that business may only be produced by duly-authorized agents, and that the parameters of an agent's authority are clearly delineated.

Conclusion. A vague legal standard often makes for a flexible allegation against an insurer or agent. On the other hand, violation of a standard which defies measurement is often difficult to prove. Insurers can sidestep their direct involvement in such time-consuming, costly, and public allegations by developing suitability standards which match or exceed the most rigorous and expansive of state requirements. Florida now appears to provide such a heightened level of scrutiny. Connecticut now reflects the breadth of annuity consumers intended for protection by the NAIC. Insurers can reduce litigation and reputation cost by routinely monitoring the application of these standards to ensure that authorized agents only sell annuities which can provide real value and security for each consumer's financial needs.

Zalma on Steele v. Life Insurance Company of North America: No Conviction Necessary to Enforce Felony Exclusion

By Barry Zalma

July 30, 2008

SUMMARY: Some courts ignore an insurers right to select risks and find coverage for widows where none exists. Other courts apply the wording of a policy as written--even if the result is harsh. Barry Zalma discusses Steele v. Life Ins. Co. of North America and applauds the 7th Circuit for upholding a felony exclusion where an insured died while committing his third DUI, even though the decision deprived a widow of a \$500,000 accidental death benefit.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Zalma, Barry. *Steele v. Life Insurance Company of North America: No Conviction Necessary to Enforce Felony Exclusion*. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Insurance is not a right. It is a contract purchased to spread the risk of loss between an insurer and the person seeking insurance. The contract, whether negotiated or a contract of adhesion, expresses in writing the intent of the parties. The insurer describes the risks it is willing to take and those it refuses to take. No insurance policy covers every risk faced by its insureds. Some do not fit within the insuring agreements and others are excluded from the grant of coverage.

[An insurance company] has the unquestioned right to select those whom it will insure and to rely upon him who would be insured for such information as it desires as a basis for its determination to the end that a wise discrimination may be exercised in selecting its risks. (*Robinson v. Occidental Life Ins. Co. (1955) 131 Cal.App.2d at 586.*) (Emphasis added)

Some courts are willing to ignore this general rule and find coverage for widows and orphans even if they are not entitled to coverage. Others, as they should, apply insurance policy wording as written if that wording is clear and unambiguous.

The decision handed down by the Seventh Circuit Court of Appeals in *Steele v. Life Insurance Company of North America*, 507 F.3d 593; 2007 U.S. App. LEXIS 25857; 43 Employee Benefits Cas. (BNA) 1078 (7th Cir. 2007) is a perfect example of a court willing to apply the clear and unambiguous language of an insurance policy to deprive a widow of a \$500,000 accidental death benefit because her husband was killed in the process of committing a felony.

William Steele died after crashing his car while under the influence of alcohol. His widow, Laura Steele, filed a claim for benefits with Life Insurance Company of North America, the underwriter of William's accidental death and dismemberment policy. LINA denied the claim because William's death resulted from his commission of a felony, a class of conduct the insurance policy excluded from coverage. Litigation ensued. The district court granted LINA's motion for summary judgment, and Mrs. Steele appealed unsuccessfully. n1

Before his death Steele worked for CSX Corporation as a railroad maintenance worker. William enrolled in the CSX Corporation Optional Personal Accident Insurance Plan policy and paid 100% of the premiums through payroll deductions. The policy provided a death benefit of \$500,000, which William's wife, Laura Steele, would receive in the event of his "accidental death."

William Steele's fatal drunk-driving accident was his third driving-under-the-influence offense. Illinois punishes third-offense DUI as a felony. Mrs. Steele argued that a third episode of drunk driving becomes a felony only upon conviction.

The policy at issue in *Steele* stated:

We agree to insure those Eligible Person [sic] who are within the covered classes listed in the Organization's application (each herein called the Insured) for whom the required premium is paid and an application made. We will insure the dependent(s) of an Insured provided the correct premium is paid and the eligibility requirements are met. We agree to pay benefits for loss from bodily injuries:

- (a) caused by an accident which happens while an insured is covered by this policy; and
- (b) which, directly and from no other causes, result in a covered loss. (See the Description of Coverage.)

We will not pay benefits if the loss was caused by:

- (a) sickness, disease, or bodily infirmity; or
- (b) any of the Exclusions listed on page 2.

One of the listed exclusions states: "No benefits will be paid for loss resulting from: . . . *commission of a felony by the Insured.*"

In November 2002 the Steeles attended a wedding reception in Georgetown, Illinois. William consumed too much alcohol and then got into his car to drive home. While he was en route, a Vermillion County Sheriff's Deputy pursued his vehicle for speeding. William sped up in an effort to evade the police and struck the rear of a pick-up truck. He was taken to the hospital and died shortly thereafter. Both the police and toxicology reports pertaining to the accident indicate William's blood-alcohol level was .255 (more than three times the legal limit), and Mrs. Steele does not dispute that her husband was legally intoxicated. He was convicted of two misdemeanor DUI offenses, one in Tennessee and one in Indiana, before the fatal collision.

In January 2003 Mrs. Steele filed a claim with LINA for benefits under William's accident policy. LINA denied her claim based on the policy's felony exclusion, stating that "Mr. Steele was committing a felony at the time of his death, namely driving while intoxicated, while on a suspended license with two prior DUI's. His driving while intoxicated, coupled with driving at a high rate of speed in order to avoid police intervention, resulted in the accident that caused his death." Under Illinois law, first and second DUI offenses are misdemeanors, but a third such offense is a felony.

The Seventh Circuit concluded that under Illinois law, "[t]he term 'felony' denotes an action that renders one liable to a certain amount of punishment. . . . Illinois does not define 'felony' with any reference to whether there has been a

'conviction.'" n2 Since William Steele's death occurred during his commission of an act that was punishable as a felony, that is all the policy exclusion requires to defeat Mrs. Steeles right to recover under the policy.

The law in Illinois is clear: if the insured's conduct is punishable as a felony, the insured's commission of that conduct is enough to come within the language of the policy's felony exclusion regardless of whether a felony conviction is actually sought or obtained.

Practice Pointers. The felony language is unusual in most insurance policies. Usually, exclusions deal with intentional acts, criminal acts and the like. Therefore, before taking a stand like that taken by the Life Insurance Company of North America, the insurer and its counsel must:

- . Determine the exact wording of the policy.
- . Determine if the exclusion is construed as clear and unambiguous in the jurisdiction where the loss occurred.
- . Determine the facts of the incident by a thorough and fair investigation.
- . Compare the facts determined to the policy wording as that wording has been interpreted by the courts in the jurisdiction where the loss occurred.
- . Look for other defenses, like:
 - o Other exclusions
 - o Misrepresentation or concealment at the time the policy was acquired
 - o Failure to comply with conditions
 - o Breach of warranty in the policy

Prudent insurers and their counsel cannot afford to be cavalier--they must be certain of the facts and how courts apply those facts to the law in a particular jurisdiction before denying a claim on grounds that the loss occurred while the insured was committing a felony.

Zalma on Vigilant Ins. Co. V. Bear Stearns: Insureds Settle at their own Peril

By Barry Zalma

July 30, 2008

SUMMARY: Insurance Coverage lawyer, consultant and expert witness, Barry Zalma, analyzes the matter of Vigilant Insurance Company v. Bear Stearns and discusses how a major investment bank made a \$70 million gift to its professional liability insurers by a garden variety breach of contract.

ARTICLE: Cite as: Zalma, Barry. *Vigilant Insurance Co. v. Bear Stearns Companies, Inc.*: Insureds Settle at Their Peril. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

In New York, when an insured acquires a policy of insurance that requires it to obtain the consent of its liability carriers before settling claims in excess of \$5 million, failure to comply breaches the insurance contract and prevents the insurer from obtaining indemnity in any amount. *Vigilant Insurance Co. v. Bear Stearns Companies, Inc.*, 2008 NY Slip Op 2080; 10 N.Y.3d 170; 884 N.E.2d 1044; 855 N.Y.S.2d 45; 2008 N.Y. LEXIS 542 (2008).

As if Bear Stearns Companies, Inc. did not have enough troubles with its finances it insured its primary professional liability, and then--by its own actions--destroyed its ability to obtain indemnity from a policy issued by Vigilant Insurance Company that provided coverage for losses resulting from claims made against the insured for its wrongful acts. The Vigilant policy afforded \$10 million in coverage after Bear exhausted a \$10 million self-insured retention. Plaintiffs Federal Insurance Company and Gulf Insurance Company further provided Bear an additional \$40 million in coverage under follow-form excess liability policies. Pursuant to the terms of these insurance contracts, Bear agreed not to settle any claim in excess of \$5 million without first obtaining the consent of its insurers. In addition, the policies excluded coverage for claims arising from investment banking work undertaken by Bear.

In early 2002, the U.S. Securities and Exchange Commission, National Association of Securities Dealers, and New York Stock Exchange, along with state Attorneys General, initiated a joint investigation into the practices of research analysts working at financial services firms and the potential conflicts that could arise from the relationship between research functions and investment banking objectives. The investigation focused on allegations that research analysts employed at ten major financial institutions, including Bear, were improperly influenced by investment banking concerns. Toward the end of 2002, the regulators met separately with each of the investigated firms to discuss a global settlement.

On December 20, 2002, Bear signed a settlement-in-principle document, acknowledging that each regulator would commence an action or administrative proceeding against it and that Bear would subsequently "consent to the action and the relief sought without admitting or denying the allegations." Bear further agreed to pay \$50 million in retrospective relief, plus \$25 million to fund independent research and \$5 million for investor education. The document indicated that the terms of the settlement were subject to approval by the SEC and other regulators. Also taking place on December 20, 2002, the regulators issued a press release announcing they had achieved an industry-wide settlement with the 10 financial institutions that would result in payments of more than \$1.4 billion in penalties, restitution and education funds. A few months later, Bear executed a consent agreement in which it acceded to the entry of a final judgment in the SEC's federal lawsuit against Bear in the United States District Court for the Southern District of New York.

Three days after executing the settlement agreement, Bear Stearns sent letters to its insurers requesting their consent to the settlement. The insurers disclaimed coverage and commenced this declaratory judgment action seeking a declaration that the \$45 million sought by Bear Stearns (after depletion of the \$10 million self-insured retention) was not covered by the policies.

In October 2003 the federal district court found the Bear settlement to be "fair, adequate, and in the public interest," and entered a final judgment ordering Bear to pay the agreed-upon sum of \$80 million. Shortly thereafter, the insurers moved for summary judgment in this declaratory judgment action.

The court stated: The insurers raise a number of objections to the Appellate Division order, but we find it necessary to address only one of them. The insurers contend that the Bear settlement is not recoverable because Bear breached the policy provision obligating it to obtain their consent prior to settling the regulator lawsuits. Specifically, the insurers claim that Bear resolved and finalized the settlement of the case when it executed the settlement-in-principle in December 2002 or, at the latest, when it signed the consent agreement in April 2003 without advising the insurers. Bear counters that the courts below properly found a triable issue of fact as to whether its execution of these two documents constituted a breach of the policy provision. *Id.* at 177.

The court highlighted as relevant the following provision of the primary insurance policy at issue in the case, which read:

"The Insured agrees not to settle any Claim, incur any Defense Costs or otherwise assume any contractual obligation or admit any liability with respect to any Claim in excess of a settlement authority threshold of \$5,000,000 without the Insurer's consent, which shall not be unreasonably withheld. . . The insurer shall not be liable for any settlement, Defense Costs, assumed obligation or admission to which it has not consented."

In addressing this policy provision the court specifically noted that "unambiguous provisions of an insurance contract must be given their plain and ordinary meaning, and the interpretation of such provisions is a question of law for the court." *White v Continental Cas. Co.*, 9 NY3d at 267 [2007] [citation omitted].

Bear expressly agreed that the insurers would "not be liable" for any settlement in excess of \$5 million entered into without their consent and was, as the court notes, aware of this contingency in the policies . . . Bear nevertheless elected to finalize all outstanding settlement issues and executed a consent agreement before informing its carriers of the terms of the settlement.

The court also pointed to the absence from the settlement agreement of any provision subjecting that settlement to the insurers' approval as required by the policy. Having signed the consent agreement, Bear was not free to walk away from it before entry of a final judgment. As a sophisticated business entity, Small wonder then that Bear Stearns--clearly marked by the court as a sophisticated business entity, could not recover the settlement proceeds from its insurers.

That Bear Stearns--with its armies of financial and legal consultants--actually made such a costly mistake may explain why the company failed recently and sold its assets for a mere peppercorn. Instead of giving its insurers, as it

had promised, notice of a proposed settlement for which it intended to make claim under the policy, Bear proceeded unilaterally, without obtaining its insurers consent to the settlement, and imposed an \$80 million loss on its stockholders, instead of the \$10 million it would have been required to pay if it had complied with the conditions its insurance contract.

This sophisticated bank stupidly, and with the advice of counsel, threw away at least \$70 million. Their lawyers, if they advised the settlement without first obtaining permission of the insurer, should consider reporting a potential claim to their errors and omissions carriers.

Practice Pointers. When asked to advise a defendant about a potential settlement counsel should always:

1. Obtain all insurance policies that may potentially provide coverage for some or all of the amounts claimed.
2. Read each policy of insurance carefully to enable counsel to advise the insured defendant of the coverages available and the defendants obligations under the terms and conditions of the policy.
- 2.
3. Consider retaining the services of an insurance coverage lawyer to read, review and provide advice concerning the terms, conditions and limitations of the policy and the duties that the insured defendant must fulfill to collect the benefits of the policy.
4. Immediately involve the insurer in the negotiations even if there is no condition requiring prior consent.
5. Ascertain that all of the insurance policy terms and conditions have been complied with by the insured before effecting settlement or make the settlement conditional upon receiving the approval of the insurer.
6. If the client/insured insists on settling without giving notice to the insurer with a condition like the one in the Bear Stearns policy, counsel must:
 - a. advise the client, in writing, of the conditions of the policy
 - b. advise the client of the dangers of settlement to the availability of coverage
 - c. refuse to effect the settlement without first obtaining a release and hold harmless agreement from the client, or withdraw from the representation of the client

Poolman on changes to the NAIC's Viatical Settlements Model Act

2008 Emerging Issues 2624

Poolman on the NAIC's Viatical Settlements Model Act: a discussion about the NAIC's newly crafted changes to the regulation of the viatical settlement business

By Jim Poolman

July 29, 2008

SUMMARY: Former North Dakota Insurance Commissioner Jim Poolman discusses the NAIC's recent changes to its Viatical Settlements Model Act. His commentary recaps events that caused the changes, addresses the pending New York case against Coventry First LLC, outlines the provisions enacted to put STOLI transactions on ice--such as the five-year incontestability period and the new disclosure rules--and describes other important consumer protections.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The business of viatical settlements or life settlements as those in the business now like to refer to it, has grown immensely over the past few years. With that growth, some of those in the business see new and changing opportunities, and some of those business practices have raised the eyebrows of regulators, legislators and others in charge of protecting the public. Between the morphing of this business and pending litigation against life settlement companies, the National Association of Insurance Commissioners started to examine the life settlement marketplace and passed comprehensive changes to their existing Viatical Settlements Model Act being debated around the country.

What Caused the Changes? Throughout 2005 and early 2006 insurance regulators around the country heard about a new phenomena within the viatical settlement industry. Some called it STOLI, which is an acronym for Stranger Originated or Stranger Owned Life Insurance. Others got even craftier and started using SPINLIFE, or Speculator Initiated Life Insurance. No matter what you call it, it wasn't the standard practice commonly known in the viatical settlement industry. Previous to this morphing of the business, a settlement company would purchase a life insurance policy on a terminally ill insured, so that the insured could cover final living expenses or treatments that were not covered under health insurance policies. We came to know about these transactions in the 1990s when the business of viatical settlements originally came onto the scene.

Viatical transactions were first geared to those who were afflicted with AIDS or terminal cancer. The policy owners were frequently forced to take experimental medications not covered under their health insurance plan, and the expensive treatments were paid for by the insured out of their own pockets. The practices then started to encompass policyholders who had owned their policies for a lengthy period of time, and decided that they didn't need those policies anymore. These policyholders instead found a way to realize an economic benefit out of those policies that could surpass the cash value that had built up inside the policy.

While the advances of medicine helped AIDS patients live longer and healthier lives, it also made that business far less attractive for settlement companies, as it became more and more difficult to analyze the mortality rate. With the impending difficulty of predicting death on these consumers, it certainly became more difficult to estimate a profit on those policies. In addition, there certainly is a finite pool of those consumers who want to give up their policies purchased to protect their families, plan estates, and transition businesses. So some settlement companies turned to the manufacturing of life settlements. These wet paper transactions, as they are commonly referred to, are ginned up policies with the sole intent to transfer the ownership of the policies to the investor at the time the policy is taken out. Typically the policies are sold as free insurance because the premiums are paid with a premium finance loan. These loans many times carry usurious interest rates, designed so that the insured would have to sign over the policy because they cannot pay back the loan to keep it.

These questionable transactions are different from legitimate premium financing mechanisms. Typically those who are planning estates, business succession or wealth transfer are offered competitive interest rates and those companies will not take an ownership interest in the policy.

In Addition to Stoli; Other Allegations of Bilking Seniors. In the midst of exploring STOLI transactions and how those transactions were affecting consumers, regulators discovery of potential unscrupulous activity in the settlement marketplace gave them momentum to promote new laws that govern other activity in settling a policy.

Former New York Attorney General Eliot Spitzer took aim at one of the largest life settlement carriers for potentially bilking seniors out of money on their policies. The alleged activity took place by Coventry First LLC Coventry, a Pennsylvania based life settlement company and brokerage firm. The complaint against Coventry (*State of New York v. Coventry First LLC*) laid out a bid-rigging scheme in which Coventry paid off other life settlement companies and brokers to not bid on policies so that Coventry could pay the policyholders less for their policies, and therefore, increase the profit to the company. The suit also alleges there were conflicts of interest with the company and other co-brokers where the company may not have been acting in the best interest of the consumer interested in settling a policy.

The lawsuit is still pending in New York state court, but pieces of the suit have been dismissed because the policyholders were not New York residents.

New Regulations to Protect Those Who Settle Their Policies. The National Association of Insurance Commissioners approach to providing new protections for those that enter into life settlement arrangements was comprehensive. Regulators wanted to first provide a defense against those settlement companies who were entering into STOLI or wet ink transactions where the policy is sold entirely for the benefit of investors. Secondly, but equally as important, are new regulations that protect those consumers who want to enter into a legitimate settlement arrangement to gain an economic value with a policy that they may see no need in keeping.

One of the key elements in life insurance transactions is the two-year waiting period, the expiration of which prevents a policy from being contested. Many wet ink transactions are specifically constructed to get around this two-year incontestability period, to include agreements to transfer the ownership of a policy immediately after the period concludes. In testimony at NAIC hearings, all groups participating--including life insurance carriers, agents, settlement companies, their brokers and consumer groups--agreed that the transactions were inappropriate. Settlement companies told regulators either that the transactions weren't happening, or that none of the witnesses were participating in those transactions. Yet, it seemed when options were discussed to stop those transactions, settlement companies were hesitant to come up with a real fix.

Putting Stoli on Ice! In their effort to combat these types of STOLI transactions, insurance regulators crafted a narrow five-year period in which those policies could be contested. A five-year period is crafted narrowly to only capture those policies paid by a premium finance loan. The provision is obviously tailored to capture the wet ink transactions. Even with the narrowly crafted five-year moratorium, there are a number of extenuating circumstances

when that fully premium financed policy can still be settled and the insured may enter into a settlement transaction. These exceptions as identified in *Section 11 A (2)* of the revised NAIC model are:

- (a) The viator or insured is terminally or chronically ill
- (b) The viators spouse dies
- (c) The viator divorces his or her spouse
- (d) The viator retires from full time employment
- (e) The viator becomes physically or mentally disabled and a physician determines that the disability prevents the aviator from maintaining full-time employment
- (f) A final order, judgment or decree is entered by a court of competent jurisdiction, on the application of a creditor of the aviator, adjudicating the aviator bankrupt or insolvent, or approving a petition seeking reorganization of the viator or appointing a receiver, trustee or liquidator to all or a substantial part of the aviators assets

These broad based exemptions allow for the consumer to continue the ability to sell their life insurance policy in a STOLI arrangement inside of this five-year window. Yet settlement companies rallied against this provision because they felt it reduced the property rights of the consumer, when really it diminished their economic interest in selling these inappropriate STOLI arrangements. Settlement companies were FAR less willing to have an arrangement where they would have to finance the premiums for five years before they could take the ownership of the policy, when currently they only have to wait for two years. If the policyholder died BEFORE the five-year period was completed, the *full death benefits would go to the policyholders beneficiary, NOT the investor*. This is an important benefit of the five-year waiting period for the consumer, to the detriment of the investor that is wagering on the life of the insured.

Disclosure is Good For Everyone! One of the allegations in the *New York State v. Coventry* case states that Coventry was taking exorbitant profits off of consumers who were settling their policies. In fact, according to the complaint, in some cases the settlement brokers were receiving more in compensation on the settled policy than the consumer selling the policy on their life. This is in addition to the complaint of bid rigging whereby Coventry was alleged to pay off other companies/brokers to make sure they could obtain the settled policy for lower compensation to the consumer.

Regulators are very concerned that consumers are being taken advantage of regularly in this marketplace. To combat this, the NAIC model requires two very important features:

Section 8. Disclosure to Viator

C. (2) A full, complete and accurate description of all offers, counteroffers, acceptances and rejections relating to the proposed viatical settlement contract

(4) The amount and method of calculating the brokers compensation, which term compensation includes anything of value paid or given to the viatical settlement broker for the placement of the policy.

It should come as no surprise that the Life Insurance Settlement Association vociferously opposed these two provisions, as there is certainly a motive to protect the secrecy of the compensation paid to the brokers in these transactions. Regulators felt very strongly that these important consumer protection provisions needed to remain.

Other Important Consumer Protection Provisions. There are a host of other consumer protections included in the NAIC Viatical Settlements Model Act. Some of these include a longer period during which a person who sells a life insurance policy has the ability to change their mind. Many states have free look periods on different types of insurance policies, especially when buying a Medicare supplement or long term care policy. Regulators felt that there should at

least be an equal free look period to allow someone to change their mind when selling a life insurance policy to a group of investors. Regulators increased the time to sixty (60) calendar days after the date upon which the viatical settlement contract is executed by all parties or thirty (30) calendar days after the viatical settlement proceeds have been paid to the viator.

The NAIC viatical settlement act also provides bonding requirements for viatical settlement brokers in case there are issues of fraud. This will allow the regulator to hold the settlement broker accountable and try to recoup any assets for the consumer if there are any instances of fraud.

Consumer Protection is Key. In a market that has changed immensely from the days of buying life insurance policies on the terminally ill, it is incumbent upon regulators and lawmakers to keep up with the pace of this change. Regulators who have drafted the NAIC model kept in mind the ultimate goal of protecting consumers as the bill was advanced. It is important to note, not all parties agreed to every piece of this Model. The Life Insurance Industry wanted stricter regulation, as they perceive STOLI and other life settlement transactions as a perversion of their products. The life settlement industry wanted very little or no regulation, even though their rhetoric is that they advocate for responsible regulation of their industry. It was up to regulators to balance all of these opinions and serve what they perceived as the best interests of consumers and the marketplace.

One thing is for sure, the NAIC action has spurred legislators, regulators and the public to have a discussion about investors owning a life insurance policy on someone they don't even know. It has created a debate about the proper consumer protections, the moral hazards of such a practice, and how this marketplace changes the face of the life insurance industry. I am confident this will not be the end of the debate as settlement companies will come up with new and creative ways to market their products, and consumers will need to continue to be protected from new schemes.

ABOUT THE AUTHOR(S):

Jim Poolman was elected North Dakota Insurance Commissioner in 2000, and overwhelmingly reelected in 2004. While Insurance Commissioner, he was an outspoken leader at the National Association of Insurance Commissioners, serving as their Vice-President, Chairman of the Midwestern Zone, Chairman of the Life Insurance and Annuities Committee, Executive Committee on Principles Based Reserving, Chairman of the Producer Licensing Working Group; amongst a host of other leadership posts. In North Dakota he was instrumental in preserving a competitive marketplace while passing very important consumer protections ranging in areas from privacy of consumers medical and financial information, suitability in annuity sales, restrictions on the use of claims information, insurance fraud and life settlements, amongst others. Mr. Poolman has been a sought after speaker on numerous insurance topics around the country. In August of 2007, Mr. Poolman resigned his post in North Dakota to start an independent regulatory consulting practice based in Bismarck, North Dakota. Mr. Poolman received his bachelors of Business Administration degree from the University of North Dakota in 1992. Mr. Poolman also served four terms in the North Dakota House of Representatives before being elected Insurance Commissioner.

Poolman on Principles-Based Reserves: FL regs on new split mortality tables

2008 Emerging Issues 2632

Poolman on Principles-Based Reserves: a discussion of the Florida regulatory provisions in FAC 69O-162.203 relating to the use of new split mortality tables in calculating reserves

By Jim Poolman

July 29, 2008

SUMMARY: Former N.D. Insurance Commissioner Jim Poolman discusses Principles-Based Reserves by examining FAC 69O-162.203, the recent Florida regulatory provisions relating to the use of new split mortality tables in calculating reserves. Considered an interim step in providing companies that sell term life insurance relief from redundant reserves, the new regulations are a sign of future reform toward a more principles-based approach.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Poolman, Jim. Principles-Based Reserves: A Discussion of FAC 69O-162.203, Which Sets Forth the New Florida Regulatory Provisions Relating to the Use of New Split Mortality Tables in Calculating Reserves. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Floridas Temporary Approach for Principles-Based Reserving. In an effort to modernize the state system of regulating the solvency of life insurance companies, Florida Insurance Commissioner Kevin McCarty proposed new rules that will eventually provide changes in how companies calculate the reserves they are required to hold to pay out future claims.

Part of a National Effort for Reform. Insurance regulators at the National Association of Insurance Commissioners have been discussing overhauling the system of how companies determine the amount of funds to hold in reserves for different life insurance products. The NAIC has been pushing changes that will create a more principles-based system of reserving rather than the current rules-based approach. In other words, companies would be given more freedom to use their own experiences in setting their reserves based on general reserving principles rather than using formulas that may not be applicable. Formulas have traditionally been one size fits all rather than taking into account different product variables and risks. Those variables can change based on a companys product design.

Generic formulas used in the current system of determining necessary reserve levels can sometimes lead to over conservative reserves for some products and lead to inadequate reserves for other products. Inadequate reserves, of course, can lead to solvency problems for both companies and the regulators in charge of protecting the consumers against a companys inability to pay future claims.

In the generic term life insurance business, insurers have demonstrated that the reserves they are forced to carry under a formulaic approach are far higher for many companies than the amount actually needed to pay future claims. Those redundant reserves can cause added expense to the consumer because of an inefficient use of capital by the company. For example, to meet the needed higher reserves, companies may need to charge extra premium to the consumer, purchase necessary reinsurance, secure letters of credit, or use other securitization measures to add the reserves to the balance sheet. All of these options add cost to the company, which in turn is reflected in the price of term life insurance. In many cases these extra reserves that are necessary under the formulas provided by regulation do not add any solvency protection for consumers, but will just necessitate extra cost to the company.

Redundant reserves became more of a problem when regulators at the NAIC passed regulation XXX or Triple X. Triple X affected how companies reserved for their products and drastically affected the term life insurance business, in many cases drastically raising the reserving levels required for the product. Studies by the industry showed that by moving to a more principles-based approach, some companies could be able to reduce their reserves by almost half, still have an appropriate reserve to pay claims, and not have any solvency risk to the company. This again allows companies to price their products more competitively, and better utilize the capital in their company.

Specific Change in Florida. The changes to *FAC 690-162.203*, which were proposed in May of 2007, are designed to address the problem found specifically in the term life insurance business. The new regulations will allow the use of revisions to the 2001 CSO mortality table that will reflect differences between a standard risk and a preferred risk of potential policyholders when rating and pricing their policy. The current mortality table only allows for one non-smoker table for males and females and one smoker table for male and females. The change will allow for a further segmentation of the policyholders to more adequately reflect the risk of the policyholders, thus allowing companies to adjust their reserves accordingly.

The changes to the Florida rules are based on one of the pieces of a package of regulations created and blessed by the NAIC in September of 2006. Regulators were specifically looking for an interim step to provide more accurate reserving measures for companies while moving toward a more principles-based approach for all life products. The life insurance industry and regulators identified the largest problem of disparate reserves that were potentially too conservative or not conservative enough with two specific products. The products identified were term life insurance and universal life policies that had secondary guaranties built in them. Regulators worked quickly to set out a plan to correct the reserve levels so companies would set reserves at a more appropriate level, and came up with the interim approach before wholesale change would take place. It is predicted that it will take much longer for the larger changes to be vetted at the NAIC--much less implemented in the states--and therefore the implementation of interim steps in large-market states like Florida is of key importance.

Conclusion: Win For Companies, Win For Consumers. The changes provided by Florida will be advantageous for insurers writing term life business in Florida. They will be able to more accurately measure the risks in their term life business by further segmenting the risks and charging the appropriate premium for those risks. By using the new split mortality tables provided in the changes to the reserving regulations, they will be able to better adjust the reserves needed to pay future claims. For those companies holding redundant reserves that are not necessary to pay future claims, they will be able to reduce them. This can result in lower cost to the company and potentially lower cost of insurance to consumers. In an era where insurance costs seem to only continue to rise, regulators and companies are responding in ways that will likely have positive effects across the board.

Zalma on Regulating Insurers to Avoid Fraud in Catastrophe Claims

2008 Emerging Issues 2634

Zalma on Regulating Insurers to Avoid Fraud in Catastrophe Claims

By Barry Zalma

July 29, 2008

SUMMARY: Barry Zalma discusses why it should be the duty of every insurance regulatory agency to implement catastrophe regulations that require insurers and their claims personnel, as well as independent and public insurance adjusters to be licensed, competent and well trained on insurance, insurance claims handling, fraud recognition techniques, and enough of the law of the state to correctly adjust claims and recognize attempted fraud.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Zalma, Barry. Regulating Insurers to Avoid Fraud in Catastrophe Claims. LexisNexis Expert Commentary, *(Insert date you accessed the document online)*.

After a catastrophe insurance regulators must be certain that insureds who suffer loss receive the indemnity to which they are entitled. Insurance regulators must control the insurers and their catastrophe teams while dealing with the fraud they know will be rampant after the catastrophe. For example, while the wild fires of October 2007 were still burning, California authorized insurers to bring in unlicensed adjusters from out of state to serve the thousands of victims and created a fraud task force to hold down fraud. After Katrina, Louisiana allowed unlicensed adjusters and public adjusters to enter the state to assist homeowners.

The California regulators, unlike those in Louisiana, recognized that after a catastrophe billions of dollars of insurance money floods into the location to indemnify insureds. Insurers send in teams of insurance adjusters to help those whose property has been damaged or destroyed. Even more rapidly fraud perpetrators send in teams of criminals to milk as much of the money as possible from the insurers and those they insure.

Insurance regulators are charged by their states to protect the public. This obligation is amplified when a catastrophe occurs. Regulators must be prepared to deal with the inability of insurers to adequately serve the public. During a catastrophe a high volume of claims for which the insurer is not staffed will flow to the insurer. Regulators must approve adjusters who are not licensed in the state, police inadequate or incompetent insurance claims adjusters and public insurance adjusters who attempt to take advantage of insureds. Simultaneously regulators must protect the insurers from insurance fraud which history teaches will consume between ten and 30% of the claims paid in a catastrophe.

When fires swept through Southern California in October 2007 the vast majority of those persons watching the horrors on television were thinking about the people, the homes, the tragedy. Those closer to the insurance industry were working to adequately staff their claims operation in Southern California and considering how to have the catastrophe teams think about arson, crime, and fraud while providing immediate relief to the honest victims of the fires.

The entire concept of insurance, the spreading of the risk of loss, is a mystery to the public. The public does not understand that potential loss probability, computed on astronomical amounts of data, means that insurers are seldom surprised on long term projections. Part of the great mystery is that insurance companies are essentially money managers, spreading the losses of a few over the ability of the many to pay.

Over the past few decades fraud has become an ever escalating problem. It is part of the cost of doing business equation and is passed on to the insurance buying public. When a catastrophe hits everyone suffers. Not only the victims of the catastrophe suffer but the insurers whose staff has not been adequately trained to discover fraud suffers the loss of millions of dollars not owed under the contracts of insurance.

Every person and every entity involved in a catastrophe will make a choice as it relates to the honesty of the overall process. The perception much of the public has is that insurance fraud is a victimless crime. Individuals do not have to pay. It is the trillion-dollar insurance pool that is designed to avoid payment that is tapped.

It is not just in a catastrophe that insurance fraud occurs. In fact, fraud by insureds is often pervasive throughout every layer of the insurance marketplace. It can involve, at a minimum:

1. Underwriting Fraud the insured lies when the policy is acquired.
2. Rating Fraud the insured lies about the location of the property to decrease the premium the insured will owe.
3. Premium Fraud the insured does not accurately report all employees to the workers compensation insurer.
4. Nondisclosure Fraud the insurance agent or broker sells a policy or annuity to someone who does not need it like life insurance to a 90-year-old.
5. Claims Fraud Paper accidents, inflated claims, owner give ups, kickback schemes, arson-for-profit, doctors/lawyers, conspiracies or staged accidents.
6. Identity Fraud.

If the insurance industry either desires, or is forced, to eliminate or reduce the extent of fraud the single answer is education. Every individual entrusted with the duty and/or privilege of working in or for the insurance industry must be educated in both the process and the products.

To be certain that the public receives the indemnity to which they are entitled and to be certain that fraud fails insurance regulatory agencies must, and many do, ascertain the abilities of the insurers who do business in their jurisdiction to properly indemnify their insureds and compel those who are not to train their personnel up to competence.

It should be the duty of every insurance regulatory agency to require insurers, their claims personnel, independent insurance adjusters and public insurance adjusters, to be licensed, competent and well trained on insurance, insurance claims handling, fraud recognition techniques, and enough of the law of the state to competently adjust claims and recognize fraud when it is attempted.

Insurance regulators should require that each person involved in the claims process from the clerk who takes in the first notice of loss to the executive who has the final say on the largest claim paid, be trained, and knowledgeable, about

the following:

1. Insurance, its history and modern application
2. The Fair Claims Settlement Practices laws and regulations imposed to enforce the law by the states where insurance claims may occur
3. How to read, understand and interpret insurance contracts
4. Investigation techniques including, but not limited to
 - a. Interviewing
 - b. Photography of loss scenes
 - c. Use of independent experts
 - d. Use of private investigators
 - e. Use of claims counsel
5. What is necessary to prove insurance fraud
6. Fraud recognition
7. The operation and use of the Special Investigative Unit (SIU) and reporting to the Fraud Bureau or Fraud Division
8. The SIU unit laws and the regulations enacted to enforce them
9. The law of contracts and torts needed by claims professionals to competently adjust claims

Compliance with the training requirements should involve more than mere attendance at training sessions. Training provisions should require that training session attendees actually understand what they are required to learn. The obligation to train need not be onerous or even take the claims person away from work for an extensive period of time. Modern computer-based training programs can be taken incrementally by the student while drinking his or her first cup of coffee in the morning. The computer-based training (CBT) can also test the student on what is learned without the student leaving his or her desk.

Insurers and their regulators can receive a record of the time spent by the insurance personnel on the training and the results of the tests electronically. Insurance personnel who use CBT training 3 minutes a day, 5 days a week, 50 weeks a year will receive 12.5 hours of training, while the claims person who spends 6 minutes a day will receive 25 hours of training.

Training is not a panacea. It will not staff catastrophe teams. It will not resolve all claims problems nor will it eliminate fraud. It is a beginning. Regulators must audit and enforce the requirement that claims personnel are adequately trained and are capable of applying that training to provide the indemnity promised by the policy of insurance.

If regulations are put in place across the country and insurers are forced to hire, train and maintain competent staff the public will be better served, the insurers will pay only what they owe, fraud will be reduced and insurance regulators will receive a lesser number of complaints.

Practice Pointers

When litigating on behalf of or against insurers it is essential that counsel determine:

The regulations imposed by the state to control claims handling

The regulations imposed by the state to control fraud investigations

Armed with this regulatory knowledge, counsel should concentrate investigation and discovery to prove or disprove compliance with those regulations.

Counsel for the state should work to put into effect sufficient training regulations to protect the public if not already in place.

ABOUT THE AUTHOR(S):

Barry Zalma, Esq., CFE, is an insurance coverage attorney. He is the founder of Barry Zalma, Inc., a California law firm whose practice emphasizes the representation of insurers and those in the business of insurance. He is also the founder and chief consultant with Zalma Insurance Consultants who consult with insurers, plaintiffs' counsel and defense concerning insurance bad faith, insurance coverage and insurance claims handling matters and, if needed, often serves as an expert witness at trial. Mr. Zalma is recognized as an expert on insurance claims handling, insurance bad faith, and insurance fraud. He is the author of several books relating to insurance, insurance coverage, insurance claims handling and insurance regulations including Chapters 12 and 13 of the New Appleman Insurance Law Practice Guide, November 2007, Matthew Bender & Company, Inc., a member of the LexisNexis Group. Details and his CV are available at [<http://www.zalma.com> & <http://www.zic.bz>]and Mr. Zalma can be reached at zalma@zalma.com.

Title I of the Genetic Information Nondiscrimination Act of 2008

2008 Emerging Issues 471

Chandler on Title I of the Genetic Information Nondiscrimination Act of 2008

By Prof. Seth Chandler

July 24, 2008

SUMMARY: Many have hailed the newly enacted Genetic Information Nondiscrimination Act of 2008 (GINA) as the first major piece of civil rights legislation of the 21st Century that will foster medical treatment based on genetics by prohibiting genetic discrimination on the part of insurers and employers. Professor Seth Chandler untangles the complex path by which the bill, through interaction with existing provisions of ERISA, the Public Health Service Act, the Internal Revenue Code and the Social Security Act, alters the law of insurance underwriting. He finds that, while GINA will, as touted, severely restrict use of genetic information as a basis for health insurance underwriting, the understandable failure of the bill to address life, disability and long-term care insurance, the existing state limitations on use of genetic tests in health insurance, and the fact that few health insurers were using genetic tests, means that GINA has changed the dilemma faced by the choice confronting most patients and medical practitioners in only a marginal way. Professor Chandler suggests the sort of litigation, regulatory and legislative controversies likely to be created by GINA. These include litigation over alleged use of family history information by insurers, actions against medical practitioners when patients rely to their insurance detriment on overstatements about the insulating effects of GINA, the backlash faced by regulators in obeying GINA's requirement that genetic information be given the same limited HIPAA privacy protections as other forms of medical information, and perhaps most importantly, legislative debate over in Congress and state legislatures as to whether the genetic exceptionalism premise behind GINA can withstand the statute's limitation of anti-discrimination provisions to just the health insurance industry.

ARTICLE: Chandler on GINAs Challenge: An Exposition of Title I of the Genetic Information Nondiscrimination Act of 2008 and the Issues Likely to Arise

By Seth J. Chandler Introduction

On May 21, 2008, President George W. Bush signed into law the Genetic Information Nondiscrimination Act of 2008 (GINA), Pub. L. No. 110-233, 122 Stat. 881 (2008), following favorable votes of 414-1 in the House of Representatives and 95-0 in the Senate. This act, hailed by some as the first major piece of civil rights legislation of the 21st Century, restricts in Title I the collection and use of genetic information for underwriting by health insurers starting in May 2009 and in Title II limits the ability of employers to use genetic information in hiring and other employment-related decisions starting in November 2009. This commentary examines Title I of GINA: what it does,

what it does not do, and the litigation and legislative challenges likely to follow in its wake.

The BackgroundLegal background. GINA cannot be well understood without an appreciation of the legal and factual background against which it was enacted. Legally, the federal government, which retained authority under the McCarran-Ferguson Act, 159 Stat. 33, ch. 20, 15 U.S.C. § 1011 et seq., to regulate the business of insurance provided it did so explicitly, had already restricted somewhat the use of genetic information in health insurance. Under Title I of the 1996 Health Insurance Portability and Accountability Act (HIPAA), Pub. L. No. 104-191, 110 Stat. 1936, 42 U.S.C. § 201 note, group health insurers serving the employment market pursuant to the Employee Retirement Income Security Act of 1974, Pub. L. No. 93-406, 88 Stat. 829, 29 U.S.C. § 1001 et seq., were prohibited from taking genetic information into account in determining eligibility for membership in the group (42 U.S.C. § 1182) and could not treat genetic information that had not yet manifested as a disease as a pre-existing condition whose coverage could potentially be limited for up to 12 months. No such restrictions existed, however, with respect to individuals seeking health insurance outside the employment context or, critically, with respect to other forms of insurance such as life insurance, disability insurance, Medicare supplemental policies (Medigap) and long-term care insurance where genetic information might well be relevant to the risk transferred to the insurer. The Americans with Disabilities Act, Pub. L. No. 101-336, 104 Stat. 327, 42 U.S.C. § 12101 et seq., although not entirely clear on the matter, was generally thought to provide little if any protection against discrimination by insurers based on genetic information.

Various states had provided additional protection against use of genetic information in health insurance underwriting. See Shannyn C. Riba, *The Use of Genetic Information in Health Insurance: Who will be Helped, Who Will be Harmed And Possible Long-Term Effects*, 16 S. Cal. Rev. L. & Soc. Just. 469 (2007). Most states prohibited health insurers from basing eligibility decisions on genetic information or for risk classification. Susan M. Wolf & Jeffrey P. Kahn, *Genetic Testing and the Future of Disability Insurance: Ethics, Law & Policy*, 35 J. L. Med. & Ethics 6 (2007). About half the states prohibited health insurers from requiring genetic tests. See Genetics and Health Insurance State Anti-Discrimination Laws, at <http://www.ncsl.org/programs/health/genetics/ndishlth.htm> (last visited July 14, 2008).

With respect to other forms of insurance, the picture was even more mixed. Only a handful of states prohibited use of genetic information in disability insurance (Susan M. Wolf & Jeffrey P. Kahn, *Genetic Testing and the Future of Disability Insurance: Ethics, Law & Policy*, 35 J. L. Med. & Ethics 6 (2007)) or long-term care insurance (Robyn Nicoll, *Long-Term Care Insurance and Genetic Discrimination Get It While You're Young and Ignorant: An Examination of Current Discriminatory Problems in Long Term Care Insurance Through the Use of Genetic Information*, 13 Alb. L.J. Sci. & Tech 751 (2003)), although several others created procedural restrictions on their use and on genetic testing. Genetics and Life, Disability and Long-term Care Insurance, at <http://www.ncsl.org/programs/health/genetics/ndislife.htm> (last visited July 14, 2008). As summarized by the National Conference of State Legislatures, Seven states prohibit genetic discrimination in life insurance without actuarial justification. Of these seven, Arizona, Maine, and New Jersey also prohibit genetic discrimination in disability insurance without actuarial justification, and Massachusetts, Montana and New Mexico extend their prohibitions to disability and long-term care insurance. Of the three lines of insurance, Idaho prohibits genetic discrimination in disability insurance only. Colorado, Massachusetts, Oregon and Vermont prohibit insurers from requiring applicants to undergo genetic testing for long-term care insurance but permit the use of test results. Some states mention life, disability or long-term care as exclusions to their genetic nondiscrimination legislation. Factual background. Whether because of the legal restrictions constrained in HIPAA, the various state law prohibitions, the current costs of genetic testing relative to the useful information likely to be obtained thereby, or fear of adverse public reaction, few if any health insurers were actually requiring genetic tests as part of the underwriting process or asking explicitly for the results of any genetic tests. Mark A. Hall & Stephen S. Rich, *Laws Restricting Health Insurers Use of Genetic Information: Impact on Genetic Discrimination*, 66 Am. J. Hum. Genet. 293 (2000). In the individual health insurance market, where HIPAA's restrictions did not apply, and in life, disability and long-term care insurance, genetic information could be and frequently was obtained indirectly through the relatively inexpensive process of requesting information on family history in the insurance application and the collection of medical records, privacy to which was

waived by the applicant as a condition of obtaining insurance. *See generally* Genetics and Life Insurance: Medical Underwriting and Social Policy (Mark Rothstein ed., 2004); Krupa Subramanian, et al., *Estimating Adverse Selection Costs From Genetic Testing for Breast and Ovarian Cancer: The Case of Life Insurance*, 66 J. Risk & Ins. 531 (1999) (discussing questionable use of family history as proxy for genetic information while barring use of more accurate genetic testing). The law of misrepresentation provided an incentive for applicants to be truthful in this process. Insurers were free to make a Bayesian inference, see E.S. Iverson, et al., *Validating Bayesian Prediction Models: a Case Study in Genetic Susceptibility to Breast Cancer*, in *Case Studies in Bayesian Statistics*, IV (C. Gatsonis et al. eds.) 321 (1998), that those whose near relatives suffered a heritable medical condition were at heightened risk of having that heritable proclivity manifest itself as expensive diseases while the insurer was on the risk. Summary. Until the passage of GINA, most insurers in most states who found such information relevant to their underwriting decisions could obtain genetic information either directly, through a medical test, or indirectly, through medical records or questions of the applicant. If, for example, an individual had already taken a genetic test that found the presence of a BRCA1 gene, or the individual knew that their mother had died of breast cancer, an insurer could obtain that information through the application process and then make underwriting decisions on life insurance, disability insurance, or long-term care insurance based on that information. To protect against difficult-to-detect mistakes (fraud) by the applicant, these insurers could purchase or otherwise collect genetic information from various repositories, including other insurers. Alternatively or in supplementation, most of these insurers could -- at least if they surmounted procedural requirements existing in some states -- theoretically request or require an applicant for insurance to take a genetic test, although instances of such requests were rare. The insurer could make underwriting decisions based on the results, or, if the individual refused to take the test, assume the worst. The exceptions to this regime were in group health insurance provided through employment, in which even HIPAA and some state laws made use of genetic information difficult and individual health insurance, where many but not all states tightly restricted use of genetic information. What the Bill Does

In General. GINA greatly restricts the ability of most health insurers, whether acting in the employment context or otherwise, to use any of several current routes to discover genetic information about the individual and base certain underwriting decisions thereon. It does so primarily by amending four federal statutes: (1) ERISA; (2) the Public Health Service Act (PHSA), the Internal Revenue Code (IRC), and (4) the Social Security Act (SSA). Prohibition on Use of Genetic Information by Insurers. Sections 101(a)(2) and 102(a) of GINA respectively amend section 702(b) of ERISA, 29 U.S.C. § 1182, and section 2702(b) of PHSA, 42 U.S.C. § 300gg-1(b), to prohibit group health plans or health insurance issuers offering group health insurance coverage in connection with a group health plan (ERISA insurers) from adjusting premiums or contribution amounts on the basis of genetic information. Section 102(b) of GINA adds section 2753 to PHSA to prohibit health insurance issuers offering health insurance coverage in the individual market (individual insurers) from several underwriting practices on the basis of genetic information: establishing rules for eligibility, adjusting premium or contribution amounts, and imposing a pre-existing condition limitation. Section 104 of GINA amends section 1882(s)(2) of SSA (42 U.S.C. § 1395ss(s)(2) to create similar requirements with respect to Medicare supplemental policies (Medigap insurance). These policies, purchased in a tightly regulated private market, permit Medicare beneficiaries to purchase insurance for expenses not covered by Medicare or whose coverage is significantly limited by Medicare.

Definitions are critical to an understanding of the scope of GINA's prohibitions. GINA amends section 733(d) of ERISA, 29 U.S.C. § 1191b(d), section 2791(d) of PHSA, 42 U.S.C. § 300gg-91(d), and section 1882 of SSA, 42 U.S.C. § 1395ss, to define genetic information about an individual to include three possibilities: (1) information about such individual's genetic tests; (2) information about the genetic tests of family members of such individual; and (3) information about the manifestation of a disease or disorder in family members of such individual.

The term genetic test on which the definition of genetic information largely depends, is in turn defined broadly to include not only analysis of human DNA to detect genotype, mutation or chromosomal changes but also analyses of RNA and chromosomes that permit similar detection. GINA §§ 101(d), 102(a)(3), 103(d), 104(b). Analysis of protein and metabolites is also considered a genetic test unless that test does not detect genotypes, mutations or chromosomal

changes or if it is directly related to a *manifested* disease. *Id.* Thus, if an insurer based premium decisions for a group on the existence of elevated white blood cell counts for many of the group members, that would not be treated as a genetic test by GINA because the presence of these proteins would not be probative as to the genetic makeup of the individuals. Similarly, if an insurer based premiums after learning the nature of an individual's CFTR protein, that would not likely be treated as a genetic test or genetic information by GINA because, even though information on the protein did provide information on the genetic makeup of the individual the location, amount and nature of the protein is highly correlated with the existence of cystic fibrosis the manifestation of the disease through symptoms such as thick mucus production rather than the protein test basically provided the genetic information.

The term family member on which the definition of genetic information likewise depends is also defined broadly. It includes any dependent of the individual (through marriage, birth, adoption or placement for adoption) as well as any first, second, third, or fourth degree relative of the individual or of their dependent. Thus, an insurer subject to GINA could not use genetic information about an individual's first cousin or their great uncle because those persons would be the individual's fourth degree relative under the frequently used civil law system of kinship or a yet closer relative under alternative kinship systems. Genetic information derived from a fetus is essentially treated as if it were genetic information from the woman inside whom it is present; genetic information derived from an embryo that results from assisted reproduction is essentially treated as if it were genetic information from the persons who legally hold the embryo. GINA § 101(c) (modifying ERISA § 733); GINA § 102(a)(3) (modifying PHSA § 2702); GINA § 103(c) (modifying IRC § 9802); GINA § 104(b) (modifying SSA § 1882). Limitations on Collection of Genetic Information. Some insurers might worry that insureds would forget or make a mistake with respect to genetic information in their possession and that the insurers would have difficulty proving fraud to the requisite standard. Alternatively, some insurers might want to attempt to collect genetic information on the likely members of a group to determine whether they wanted to offer insurance to the group or the terms on which such insurance would be offered. GINA prohibits insurers, however, from requesting, requiring, or purchasing genetic information for underwriting purposes. GINA § 101(b) (modifying ERISA § 702 codified at 29 U.S.C. § 1182); GINA § 102(a)(2) (modifying PHSA § 2702(b), codified at 42 U.S.C. § 300gg-1(b)); GINA § 103(b) (modifying IRC § 9802); GINA § 104(b) (modifying SSA § 1882, codified at 42 U.S.C. § 1395ss). Underwriting purposes is defined more broadly than mere eligibility but includes computation of premiums, application of pre-existing conditions, exclusions or other activities related to the creation, renewal or replacement of a contract of health insurance or health benefits. GINA § 101(d) (modifying ERISA § 733(d), codified at 29 U.S.C. § 1191b(d)); GINA § 102(a)(4) (modifying PHSA § 2702, codified at 42 U.S.C. § 300gg-1); GINA § 102(b) (referencing PHSA 2791(d), codified at 42 U.S.C. 300gg-91(d)); GINA § 103(d) (modifying IRC § 9832(d)); GINA § 104(b) (modifying SSA § 1882, codified at 42 U.S.C. § 1395ss). An exception is made, however, if the insurer acquires the information incidental to the collection of non-genetic information. As discussed below, this exception is likely to breed litigation. Limitations on Genetic Testing by Insurers. GINA also prohibits ERISA insurers, individual insurers and Medigap insurers from requesting or requiring an individual or family member to undergo a genetic test for the purposes of underwriting. (GINA §§ 101(b), 102(a)(2), 102(b)(1), 104(b)). These insurers may order genetic tests, however, for the purposes of making coverage and payment determinations and may request that individuals volunteer for genetic tests in connection with federally authorized research. Extension of HIPAA Privacy Rules. Section 105 of GINA requires the Secretary of Health and Human Services to enact (without prior public comment) regulations that accord genetic information largely the same privacy status as conventional medical information under current HIPAA privacy regulations. Violations of the regulations enacted as a result are to be punished in the same way as are HIPAA privacy violations with respect to more traditional medical information. Preemption of State Law. Unlike Title II of GINA which contains a new and specific provision addressing preemption of state law, Title I of GINA appears to be silent on the preemption issue. The silence is somewhat misleading, however, since GINA would appear simply to piggyback on existing preemption provisions contained in ERISA and part B of Title XXVII of the PHSA, which it amends.

With respect to ERISA insurers, the most reasonable assumption in the face of Congressional silence is that Congress wanted to leave the murky and contentious state of ERISA preemption untouched for now. And, although that very murk makes prediction in this field difficult, one would therefore assume that ERISA will in fact preempt any

private right of action against ERISA plans or ERISA insurers that might exist under state law for genetic discrimination in health insurance akin to that addressed by Title I of GINA. *See Alessi v. Raybestos-Manhattan Inc.*, 451 U.S. 504 (1981); *Pilot Life Ins. Co. v. Dedeaux*, 481 U.S. 41 (1987). Claims for such violations should in general be properly removable to federal court. *Aetna Health Inc. v. Davila*, 542 U.S. 200, 209 (2004). Permitting such causes of action would, it will be said, disrupt the uniformity created by GINA with respect to genetic nondiscrimination in health insurance and would undercut the remedial scheme such as it is created by ERISA § 502. *Id.*

With respect to individual insurers, GINA leaves considerable scope for state law. This freedom exists because the relevant part of GINA amends Part B of Title XXVII of PHSA. Under section 2762 of PHSA, nothing in Part B shall be construed to prevent a state from establishing, implementing, or continuing in effect standards and requirements unless such standards and requirements prevent the application of a requirement of [Part B]. Thus, while a state could not permit an individual insurer to take an action prohibited by GINA, it would appear free to enact laws that were more stringent than GINA relating to genetic discrimination or even laws that were less stringent but that provided different remedies. Thus, the current peculiarity of protection against insurer malfeasance in the individual insurance market being greater than that against insurer malfeasance in the employer group market is likely to be perpetuated by GINA. The extent to which GINA will succeed in creating the desired uniformity will depend in part on whether the standard it sets with respect to the rights of individuals as to their genetic information ends up being sufficiently high in practice that the costs of enacting yet stricter state laws, including the costs of disuniformity and the possible perils of adverse selection, outweigh the perceived benefits of broader rights.

Enforcement. In examining a piece of legislation, it is always critical to examine how it is enforced. There are four basic modes of enforcement under GINA: (1) imposition of a civil penalty by the Secretary of Labor, (2) imposition of an excise tax under the Internal Revenue Code, (3) under some circumstances a private right of action, and (4) potential criminal liability for knowing release of individually identifiable genetic information.

Section 101(e) of GINA amends ERISA § 502 (codified at 29 U.S.C. 1132) and section 102(a)(5) of GINA amends PHSA § 2722(b) (codified at 42 U.S.C. 300gg-22(b)) to permit the Secretary of Labor to impose a \$100 per day per participant/beneficiary penalty for violations of GINA's prohibitions on insurer use of genetic information, subject to a minimum penalty of \$2,500 if de minimis violations are not corrected after receiving notice from the Secretary or a minimum penalty of \$15,000 if more than de minimis violations are not corrected after receiving notice from the Secretary. Two caps exist on potential penalties. First, there is an aggregate cap of the lesser of \$500,000 or 10% of the amount paid by the plan sponsor during the preceding taxable year. Second, the penalty is reduced to zero if the GINA violations were due to reasonable cause and not to willful neglect and were corrected within 30 days of the time that the person otherwise liable knew or should have known of the violation. Moreover, the Secretary has discretion to reduce the penalty if it would be excessive relative to the failure involved. There are similar provisions with respect to enforcement of GINA's substantive provisions that relate to the individual insurance market.

Under section 103(e) of GINA, employers that violate GINA can also face an excise tax of up to \$100 per day per participant in much the same way that they previously could for violation of HIPAA or for violations of COBRA. The minimum excise tax and the limitations on the tax are virtually identical to those placed on the civil penalties that the Secretary of Labor can impose.

It is not entirely clear from a reading of GINA whether the Secretary of Labor can impose civil penalties and the Internal Revenue Service can impose an excise tax for the same violations. Section 106 of GINA states, however, the Secretary of Health and Human Services, the Secretary of Labor and the Secretary of the Treasury shall insure through the execution of an interagency memorandum that their regulations regarding the statute are administered so as to have the same effect that to coordinate enforcement in order to avoid duplication of enforcement efforts and assign priorities in enforcement. Also, with respect to individual insurers, states have primary responsibility for seeing that GINA's requirements are met. GINA § 102(b)(2) (modifying PHSA § 2753).

There is also the possibility of private enforcement through injunctive action of at least parts of Title I of GINA.

Private enforcement with respect to ERISA insurers will be done through ERISA. Section 502(a)(3) of ERISA, 29 U.S.C. § 1132(a)(3), gives an ERISA participant or beneficiary the right to enjoin any act or practice which violates any provision of this subchapter [Subchapter I of ERISA]. Subchapter I spans ERISA § 2 through ERISA § 734 (29 U.S.C. § 1001 through 29 U.S.C. § 1191c) and includes ERISA § 702 (29 U.S.C. § 1182) and ERISA § 733 (29 U.S.C. § 1191b), which are the main provisions GINA modifies. It would thus appear that injunctive relief would be appropriate in the event that an ERISA plan refused eligibility to a dependent of a participant based on the fact that a family member had a genetic medical condition or if the ERISA plan was collecting genetic information for improper underwriting purposes. Federal courts will have exclusive subject matter jurisdiction over these actions for injunctive relief. *See* ERISA § 502(e)(1), 29 U.S.C. § 1132(e)(1).

Obtaining a private *damage* remedy against ERISA insurers will be more difficult because section 502(a)(1) of ERISA, which is the main provision that provides a damage remedy, applies only to recover under an ERISA plan or to enforce an ERISA plan. It does not expressly include a right to recover for violations of the statute itself. The participant or beneficiary allegedly damaged by a violation of GINA will thus have to pursue the ambitious argument that GINA's requirements are implicitly incorporated into an ERISA plan and that the participant or beneficiary therefore has a right *under the plan* that has been violated.

With respect to individual insurers, private enforcement would appear to be available under state law. These remedies exist because, as set forth above, section 2762 of GINA permits state law regulating genetic discrimination to continue as long as it does not directly conflict with GINA. Thus, if a state has a law barring genetic discrimination and provides a private right of action to enforce it against individual insurers, nothing in GINA would appear to preclude the continued use of that private right of action. And this would be true whether the law was less stringent, as stringent, or more stringent than GINA.

There would appear to be no federal private right of action, however, even for injunctive relief, for victims of the same sort of Title I GINA violations in the individual health insurance market. GINA creates no explicit private right of action and courts have ruled that no federal private right of action should be implied for violations of the closest related statute, part B of Title I of HIPAA. *See O'Donnell v. Blue Cross Blue Shield of Wyo.*, 173 F. Supp. 2d 1176 (D. Wyo. 2001). Victims and prospective victims of these types of GINA violations will have to hope that private enforcement via state law, public enforcement or the threat of public enforcement by the Secretary of Labor or the IRS proves an adequate deterrent.

There is also criminal liability for violation of portions of GINA. Section 105(a) of GINA makes clear that a knowing and intentional release of individually identifiable genetic information by certain health insurers will be treated the same as a knowing and intentional release of individually identifiable conventional health information. As such, under SSA § 1177, which is expressly referenced by GINA, violators can face penalties in the worst cases of a \$250,000 fine and 10 years in prison.

What the Bill Does Not Do

As to Other Forms of Insurance. GINA leaves untouched the use of genetic information by insurers other than health insurers. It does not violate GINA, for example, for a life insurer to use genetic information to set premiums or determine coverage. If an individual has a gene statistically correlated with breast cancer, for instance, GINA does not bar the insurer from refusing to write the policy or charging a higher premium. Similarly, it does not violate GINA for a long-term care insurer to use genetic information to set premiums. A family history of Alzheimers, for example, may reveal the existence of genes in an individual that make it more susceptible to that illness. While, in light of GINA, neither an individual nor a group insurer could take that family history into account in underwriting a health insurance policy on, say, a 58-year-old applicant, nothing in GINA would preclude a long-term care insurer from taking that same information and basing underwriting decisions on it. The same inconsistency applies with respect to disability insurance as well. The same proclivity to cancer that raises the expected costs of insuring an individual against health expenses raises the expected costs of insuring that individual against the loss of income resulting from inability to work. While

GINA precludes the health insurer from raising premiums or making other underwriting decisions as a result of the genetic information, nothing in GINA precludes the disability insurer from doing so.

The failure of GINA to prohibit underwriting decisions by life insurers, disability insurers and long-term care insurers is a crucial decision by Congress. Thus, contrary perhaps to the exhortations of those in the medical and research communities who, for various altruistic and economic motivations would like to see heightened use of genetic tests, a medical practitioner can still not truthfully tell patients that the results of a genetic test will have no impact on their future insurability. Indeed, attorneys for such practitioners would do well to counsel their clients not to incur potential liability by accepting overstatements of GINAs scope and thus advising their patients that the discovery of genetic information was without potential insurance implications.

As to Certain Forms of Health Insurance. Also untouched by GINA are certain types of health insurance that are termed excepted benefits. The most notable of these are specific disease insurance policies that provide independent coverage, for example, only against cancer. This exception exists with respect to ERISA insurers because ERISA § 733(c)(3)(A) (29 U.S.C. § 1191b(c)(3)(A)) includes "[c]overage only for a specified disease or illness" as an "excepted benefit" and ERISA § 732(c)(2) (29 U.S.C. § 1191a(c)(2)) states that the requirements of Part 7 of Subtitle B of ERISA, which is a part modified by GINA, generally do not apply to excepted benefits. This exception exists with respect to individual insurers because GINA modified part B of Title XXVII of the PHSA and PHSA § 2763 (codified at 42 U.S.C. § 300gg-63) states that the requirements of Part B, including the new prohibitions against various forms of genetic discrimination, do not apply to excepted benefits defined in PHSA § 2791(c)(3) (codified at 42 U.S.C. § 300gg-91(c)(3) and because that provision describes coverage only for a specified disease or illness.

As to All Forms of Genetic Information. GINA also does not protect all forms of genetic information even with respect to health insurance. Gender, for example, which correlates (in different directions) with various forms of health expense risks, is generally determined by the presence of a Y chromosome in the individual. Sections 101(d), 102(a)(4), 103(d) and 104(b) of GINA make clear, however, that an insurer may use information about sex in setting underwriting. And, while sex is conventionally determined readily without the need for genetic information, nothing in GINA would appear to prohibit a health insurer from resolving sex in ambiguous cases through genetic testing. An insurer who wanted to test for gender in the case of someone representing themselves as a woman but who had symptoms, for example, of complete androgen insensitivity syndrome (infertility, delayed menstruation) would likely not be hindered by GINA in taking the existence of a Y chromosome into account in an underwriting decision. The lack of perfect clarity of GINA, however, with respect to inter-sexed individuals may become an area of potential litigation.

As to Manifest Diseases. Genetic information can be revealed in a number of ways. For much of the 20th Century and continuing into the present, family history, coupled with a knowledge of genetics and deduction, provided useful information on the genetic makeup of the individual. More recently, genetic information can often be obtained directly through direct tests for the presence of a given gene or allele. As noted above, GINA would appear to prohibit use of these methodologies in obtaining information about the genetic makeup of an individual, predicting the individuals statistical health trajectory, and making underwriting decisions. This is so because GINA prohibits various underwriting decisions based on genetic information (section 101(a)(2), 102(a)(1)(B), 103(a)(2)), which, as noted above, is in turn defined by reference to genetic tests.

There are, however, other methods of obtaining genetic information about an individual. One is the presence of various diseases. In some cases, such as the manifestation of sickle cell anemia or Huntingtons disease, it is believed that the presence of the disease determines with virtual certainty the existence of a certain allele in the individual. In other instances, such as breast cancer or diabetes, the presence of the disease makes the presence of an allele or set of alleles more likely but not certain. The manifestation of disease is more frequently based on poly-genetic or epigenetic characteristics coupled with the environment encountered by the individual over their lifetime. GINA does not prohibit the use of genetic information discovered in this fashion. The exception likely exists because, while genetic information will be uncovered, clinical manifestations have basically mooted out their importance in making underwriting decisions. Information about which baseball team has a higher batting average has zero marginal predictive value with respect to

the outcome of the World Series if you already know the outcome of the World Series. Likely Litigation Issues

Family History Litigation. One fertile source for litigation is likely to arise from the realms of genetic information contained in current medical records as a result of medical practitioners routine use and recording of family history information. Individual insurers, who routinely request medical record information for underwriting purposes, will thus routinely gain knowledge of individuals genetic information. When these individuals are turned down for insurance or face higher-than-expected premiums, which will occur frequently, some may be willing to sue on a theory that there must be a causal relationship between the genetic information and the underwriting decision. Insurers will no doubt defend on grounds that (a) other factors caused the underwriting decision and (b) that the genetic information collected was incidental, as permitted by GINA.

Although insurers may end up winning many of these lawsuits, at least until clear precedents are established, the result is likely to be a significant amount of litigation that will be difficult to resolve without significant and expensive discovery. The very possibility of these lawsuits may, in fact, end up being an argument to give GINA broad preemptive scope.

Practitioner Liability. One form of litigation created by GINA is likely not actions to enforce the statute itself but to create liability on the part of medical practitioners for misrepresenting the scope of the statute in an effort to persuade individuals to undergo genetic testing. At present, the research community appears to be celebrating the passage of GINA as removing the barriers to genetic testing and research. What happens, however, when the patient who does not recall hearing the physicians caveats about the statutes restriction to health insurance ends up being turned down for life insurance or long-term care insurance following an adverse result on the test?

Definition Issues. There are also likely to be issues arising directly under GINA, particularly with regard to definitions. One issue is the scope of the excepted benefits exclusion from the definition of health insurance coverage. If genetic testing becomes cheaper and more accurate or GINA starts creating significant adverse selection issues in the individual health insurance market, one could expect to see more health insurers recasting themselves as specific disease insurers, providing a long list of diseases or a package of policies against a list of diseases. The extent to which courts will permit such packages to qualify as an excepted benefit may depend in part on the success of an economic argument. Insurers of this sort should be able to argue credibly that, as a matter of economics, disease specific insurance, such as insurance against cancer, should not be subject to the new law. GINA, they will say, showed sensitivity to the countervailing concern of adverse selection by declining to include life insurance, disability insurance and other forms of health related insurance within its prohibitions. Legislators did so, in part, because these forms of insurance are more subject to adverse selection effects: people can stoke up on life insurance, for example, in a way that is not possible with health insurance. Adverse selection risk, these insurers may well be able to show, is considerably higher with respect to discretionary specific disease insurance than for broader, traditional health insurance.

Issues might also arise about the meaning of family member because GINA fails to specify which of the several kinship degree systems are to be used in determining the degree of relationship between an individual and another. By way of example, if the collateral degree system is used, a twice removed second cousin is a third degree relative and thus a prohibited subject of genetic testing. If, however, the civil degree system is used, a twice removed second cousin is an eighth degree relative and thus a permissible scope of genetic testing. (An excellent discussion of kinship degrees may be found at <http://www.umanitoba.ca/faculties/arts/anthropology/tutor/descent/cognatic/degree.html>). The courts may be saved from excessive litigation on this point, however, by the improbability that an insurer would be able to glean much useful genetic information from testing on relatives that were distant under any computation of kinship degree.

Issues Created by Scientific Developments. In certain instances, the text of GINA appears wedded (perhaps too closely) to the specifics of current genetic science. Issues under GINA could arise in the future, for example, if genetic content can be determined or at least narrowed through means other than direct analysis, protein/metabolite analysis, or family history. Already, for example, there are theories that finger-length ratio correlates with homosexuality. See

Terrance J. Williams, *Finger-length ratios and sexual orientation*, 404 *Nature* 455 (2000). Thus, to the extent that homosexuality has a genetic component and creates different health risks than heterosexuality, one can imagine the aggressive insurer of the future engaged in GINA litigation when they attempt to deduce the presence of genes for homosexuality by using rulers on the digits of an applicants hand. The current definition of genetic test would not appear to encompass alternative methods such as analysis of human morphology or behavior.

Moreover, the statutes definition of genetic information with its focus on DNA, RNA and chromosomes is wedded to an approximation of current sciences best understanding of genetics. It may well turn out, however, that other molecules found inside the body play a role in human development and in epigenetics, the process whereby identical genes express themselves differently depending on environmental or chemical factors, including those affected by the expression of other genes. It is thus not entirely clear whether GINA would prohibit insurers from testing for the presence of various chemicals such as DES or other epigenetic carcinogens that are not themselves any of the prohibited test subjects described in GINA yet work by modifying the expression of at least some genetic material.

Finally, if science permits more complex forms of reproduction in which at least some individuals may have more (or less) than two genetic parents, the computation of kinship degree required by GINA may become more complex. Even now, a child produced through certain forms of surrogacy may have the nuclear DNA of the genetic father, the nuclear DNA of the mother, but the mitochondrial DNA of the surrogate. Who exactly counts as the resulting child's fourth degree relative?

Likely Regulatory Issues

Although the fleshing out of Title II of GINA is likely to require far more regulatory work, the agencies charged with administration of GINA are still likely to have some work in the coming year to implement Title I. The Secretary of Health and Human Services will have to determine how to conform HIPAA privacy provisions to accommodate genetic information and to obey GINA's section 105 command that genetic information must be treated as health information. Because existing regulations permit substantial sharing of medical information for treatment, payment and operations, regulators are likely to face controversy from those who regard genetic information as being more sensitive perhaps akin to psychotherapy notes than information about an ear infection and who will thus wish regulations to provide genetic information with still heightened privacy protections. *See Congress Inadvertently Legalizes Sharing of Genetic Information Without Patient Consent*, Reuters, May 6, 2008. Whether an immediate official forum for the expression of such controversy will exist is hardly clear: section 105(c) of GINA states that revisions to the HIPAA privacy rules will take effect 60 days after publication in the Federal Register without opportunity for any prior public comment. Public comment will be permitted to suggest revisions of the regulations after they are first promulgated.

A second focus of regulatory effort will involve the research exception to the prohibition otherwise existing in GINA against insurers (group, individual or Medigap) from requesting genetic tests of applicants or potential applicants (such as existing insureds eligible for renewal). Various sections of GINA permit insurers to request (but not require) such genetic tests provided a host of procedural protections are followed, including requirements that the research conform to the usual human subjects research requirements, that it be clear that compliance with the request is voluntary, and that the results of the research not be used in any way for group or individual underwriting. In addition, however, the statute authorizes the relevant regulatory authorities to promulgate additional regulations that restrict health insurers in genetic testing for research purposes.

A third regulatory effort will involve the development of memoranda of understanding among the various agencies charged with GINA enforcement as to regulatory priorities. *See* GINA § 106.

Likely Legislative Follow Up

GINA is likely to provoke considerable legislative debate and reconsideration. This is so because it rests on the

dubious intellectual idea of genetic exceptionalism. As critics from the (moderate) left such as Professor Mark Rothstein (see *Is GINA Worth the Wait?*, 36 *J.L. Med. & Ethics* 174 (2008)), and critics on the right such as Professor Eric Posner (see

<http://www.slate.com/blogs/blogs/convictions/archive/2008/05/04/the-puzzling-consensus-in-favor-of-the-genetic-information-nondiscrimi>

have noted, there is something very peculiar about saying that a persons risk for a future condition cannot be used in insurance underwriting while a persons manifestation of a condition can be. In property insurance, for example, would one be willing to say that an insurer should not be able to take the proximity of a property to a seismic fault line into account in underwriting simply because the possible earthquake might never occur but permit an insurer to decline to insure a house that has already suffered earthquake damage because the damage suggests proximity to a fault line? And, if it be objected that property insurance is different than medical insurance, consider why an insurer may decline to insure someone who has suffered cancer but is in remission yet may not decline to insure someone who has a genetic predisposition to cancer? And if it be objected that an individuals genetic make up is not their fault and this differentiates the genetic situation from that of the homeowner who chooses to purchase property near a seismic fault line, consider the individual who has future health risks as a result of an accident that was not her fault. Why should the insurer be able to make underwriting decisions based on an individuals risk of future medical expense following, say, a shooting in which he was the faultless victim, but not be able to make underwriting decisions based on an individuals risk of future medical expenses following, say, a genetic mutation in which he was the faultless victim?

To critics on the left, the difficulty in satisfactorily answering these questions shows the need for greater restrictions on private insurance underwriting or greater dependence on public insurance schemes. To critics on the right, the difficulty satisfactorily answering these questions shows why GINA is a bad idea to begin with and should be limited or repealed. GINA thus thrives only in an intellectual environment where the idea that genetic information is special so-called genetic exceptionalism can be taken seriously. See Deborah Hellman, *What Makes Genetic Discrimination Exceptional?*, 29 *Am. J. L. and Med.* 77 (2003).

The debate is most likely to crop up as advocates of genetic exceptionalism press a case either at the state or federal level to expand GINA to different forms of insurance. Preemption is unlikely to be a barrier given GINAs confinement to health insurance and the room for state insurance regulation created by the McCarran-Ferguson Act. If, after all, use of private genetic information is immoral or unfair, how can it be tolerated to permit life insurers, disability insurers and other insurers from using that same information? Or if the privacy of genetic information is essential to the success of personalized medicine, pharmacogenomics, and medical research, how can it be permitted to let concerns about life insurance, disability insurance and other forms of insurance where genetic information is relevant to the risk, sabotage vital medical treatment or research? If the fact that our genes are not our fault, but just the result of random or pseudo-random forces, suggests that genetic information should not be used by insurers, how can we permit any insurer to use the information?

The answer to these questions, or at least the partial answer to these questions, is that GINA is a balancing act and that all the right does not lie on the side of restricting insurer access to genetic information. Health insurance is almost certainly more vital to most individuals than life insurance; underwriting of health insurance should thus be subject to tougher regulation. Adverse selection that results from asymmetric information coupled with optional insurance purchasing is almost certain to be far stronger in the case of life insurance than in the case of broad health insurance and likely to be stronger in the cases of disability insurance and long-term care insurance than in the case of health insurance. The health insurance market can likely tolerate asymmetric information about genetic risk to a greater extent than the life insurance market or other insurance markets. See Seth J. Chandler, *Visualizing Adverse Selection*, 8 *Conn. Ins. L.J.* 435 (2002). But, if GINA fosters the norm shared by many now that genetic information is special, and that it is just bad for insurers to use it, particularly if doing so invades the privacy of the individual, one may see serious pressure, particularly at the state level for an expanded scope of protection against insurer use of genetic information.

The Marginal Choice Made by a Potential User of Genetic Tests

Prior to GINA, individuals seeking genetic information sometimes had a difficult choice. On the one hand, genetic

information might enable them to plan better for the future even if the condition it revealed was not presently amenable to treatment. Probable lifespan and probable health trajectories might make rational individuals make different choices about, for example, the deferral of pleasure. The person who knew he had the gene for Huntingtons disease might, for example, resist forms of lengthy education whose benefits were more economic than philosophical. Moreover, in some instances, genetic information could be used to make better medical decisions. A woman who discovered she (or even a close relative) contained a BRCA1 or BRCA2 gene heightening the risk of breast or ovarian cancer, might decide to conceive children earlier in life or undergo prophylactic surgeries to remove the presently benign homes of future cancers. But, in a market system in which insurance involving medical risk is often written on a short-term basis or often not obtained until later in life, such an individual could rationally fear that the discovery of such genetic information could be used by those to whom he would ordinarily transfer medical risk, such as his health insurer, life insurer, disability income insurer or long-term care insurer. Indeed, there could be a rational fear that the very discovery of information making treatment prudent would eliminate their economic ability to treat the discovered condition. And, while the failure of the insurance industry to engage in aggressive genetic testing might have rendered such fears somewhat exaggerated in many instances, it was still a risk faced by many and that could not be entirely discounted.

GINA does not eliminate the difficult choice faced by those wanting genetic information about themselves, but it does make the choice easier in many instances. If the chief fear of individuals was that they would not be able to pay for medical treatment after a health insurer declined coverage (one way or another) following an adverse genetic test result, GINA should make the decision to undergo testing much easier. There is now a federal guarantee that genetic information will generally not be used in health insurance. Thus, individuals need not rely on the laws of the state in which they currently reside to protect them from this possibility. If, however, individuals also have substantial fears about an inability to protect their family from the risk of premature death through life insurance, through the depletion of their financial resources through longterm care or from the familys loss of wealth through disability, GINA may not be enough to persuade them to abandon the state of deliberate ignorance in which they now exist.

The Big Picture

GINA is a piece of wedge legislation important perhaps more for the incoherence it introduces in our previous assumptions about insurance regulation than for its practical importance. As noted above, many states already prohibited most of the practices barred by GINA and, whether because of the law, social norms, the economics of testing or even altruism, virtually no health insurers were engaged in the practices GINA now clearly prohibits. Thus, as a practical matter, except perhaps for creating additional administrative costs related to HIPAA privacy compliance, creating litigation over incidental use of genetic information by insurers in the individual market, or for making it clearer to potential consumers of genetic tests the limited consequences of an adverse result, GINA is likely to have little impact in the short term. In the long run, however, GINA is important for at least three reasons.

First, while genetic testing is now sufficiently expensive and sufficiently unlikely to yield determinative information about the health trajectory of most individuals for the duration of most private insurance policies that few health insurers would routinely engage in it even if permitted, the time may come when science changes this calculus and GINA has a practical bite. By this time, however, the letter and spirit of GINA will have existed for sufficiently long that a norm of non-discrimination will have evolved. Indeed, this fostering of a norm before the problem arises may be the chief contribution of GINA. Thus, even though Title I of GINA may have only modest practical importance at present, it may prove a powerful force when the problem of adverse selection potentially created by private and widespread genetic testing arises.

Second, the intellectual frailty of genetic exceptionalism will ultimately force legislators to consider whether insurers should be able to take other causes of risk into account in making underwriting decisions. Both Mark Rothstein from the left and Eric Posner from the right and still others from across the political spectrum are correct in noting the incoherence of prohibiting insurers from taking the existence of genetic information into account in making

underwriting decisions yet permitting them to do so in the case of information (the presence of manifest disease, for example, or the presence of epigenetic co-factors) that are equally probative of unmanifested future risk. Indeed, though successful search is easy in political discourse, it is hard to find, at least in the academic community, persons who have studied the matter and who vigilantly support traditional justifications for genetic exceptionalism. See, e.g., Deborah Heller, *What Makes Genetic Discrimination Exceptional?*, 29 *Am.J.L. and Med.* 77 (2003) (debunking traditional arguments for genetic exceptionalism though developing new arguments in support).

Third, GINA disrupts yet again whatever notions remain that the spirit of the McCarran Ferguson Act should cause Congress to leave regulation of health insurance to the states. To an increasing extent, health insurance is being treated by the federal government as just another form of interstate commerce as to which the benefits of uniformity and the supposed deficiencies of state regulation call for greater federal intervention. It will be interesting to see over the coming decade if believers in either federalism or a less regulated insurance market are able to hold the line at GINA.

ABOUT THE AUTHOR(S):

About the Author. **Seth J. Chandler** is Foundation Professor of Law at the University of Houston Law Center, where he also serves as Co-director of the Health Law & Policy Institute. Past president of the American Association of Law School's section on Insurance Law, Professor Chandler has taught and written in the field of insurance law and regulation for 18 years with an emphasis on application of mathematical models and computer simulations to issues arising from the law and economics of insurance. He has also pioneered the use of the Mathematical computer language in legal analysis and has created various interactive demonstrations of insurance concepts. Professor Chandler holds an A.B. summa cum laude from Princeton University and a J.D. magna cum laude from Harvard Law School where he served as managing editor of the Harvard Law Review. A clerk for the late Judge Edward R. Becker, Professor Chandler practiced at Williams & Connolly and Munger, Tolles & Olson before becoming a full time academic in 1990. He served as Associate Dean for Academic Affairs and then Vice Dean of the University of Houston Law Center from 2002 through 2005.

The Evolving Role of Custom and Usage in Reinsurance Contracts

2008 Emerging Issues 470

Foley & Lardner LLP on the Evolving Role of Custom and Usage in Reinsurance Contracts

By Glen Kanwit, Andrew Oberdick and Yana Bondar

July 24, 2008

SUMMARY: Traditionally, reinsurance contracts have been treated as creatures of custom and usage in the industry. In the last decade, however, courts have increasingly relegated custom and usage to the same shelf as other contracts, to be taken out only where appropriate. The implications for reinsurance law are significant. Both litigants and drafters of reinsurance contracts need to understand and apply this convergence between normal commercial law and reinsurance law. As this commentary points out, [L]itigants cannot assume that reinsurance contracts will be treated as special and unique, with a favored place for trade usage. Drafters of reinsurance contracts should not assume that brevity of expression will be cured either by mutual good will of the contracting parties or by the wisdom of a court delving into trade usage in the reinsurance industry.

ARTICLE: The Evolving Role of Custom and Usage in Reinsurance Contracts

By Glen H. Kanwit, Andrew Oberdeck and Yana Bondar

Introduction

Economic forces within the reinsurance industry have pushed parties away from informal expressions of their agreements, and toward more complete writings associated with normal commercial practice. As courts give recognition to this convergence, parties who rely on outmoded notions of custom or usage for terms to be included in their contracts are likely to be disappointed. This article explores the role of custom and usage in normal commercial contracts, the place custom and usage has had in reinsurance contracts, and finally, developments in the last decade which confirm the growing convergence of reinsurance law and commercial law with respect to custom and usage.

Custom and Usage in Commercial Contracts

Commercial contracts are often peppered with specialized vocabulary, referencing or incorporating particular customs of conducting business. These customs, termed usage or usage of trade, are defined in the Uniform Commercial Code as practice or method of dealing having such regularity of observance in place, vocation or trade as to justify the expectation that it will be observed with respect to the transaction in question. Uniform Commercial Code § 1-205(2) (1977).

There are two major areas in which trade usage has been employed in commercial contracts: as an aid to interpret terms of a contract, and to supply a term when a contract is silent on a particular issue. Restatement (Second) of Contracts § 221 (1981); Uniform Commercial Code § 1-205(3).

Provide Meaning to an Existing Term. When a contract term is ambiguous, or capable of more than one reasonable meaning, courts turn to usage to determine its meaning in the context in which the term is used. *Bonnie & Co. Fashions, Inc. v. Bankers Trust Co.*, 945 F. Supp. 693 (S.D.N.Y. 1996).

Often terms that seemingly have a clear meaning in a contract have a different meaning in the context of specific industry practices. In these instances, courts may enforce the specific industry definition in order to honor the true understanding of the parties as determined by actual usage and custom. Restatement (Second), § 212, cmt. b.

Even such an apparently clear expression as one thousand may be shown by trade usage to have a different meaning in a specific industry. In the bricklaying trade, a contract which fixed the bricklayers compensation at \$5.25 a thousand did not obligate him actually to lay 1,000 bricks to earn \$5.25, but instead, required that he build a wall of a certain size. While the number one thousand was not ambiguous in itself, the court allowed evidence of its meaning in the industry-specific context to show that a thousand is estimated according to the cubic feet of masonry of laid brick, rather than by the actual number of bricks laid. *Brunold v. Glasser*, 25 Misc. 285, 53 N.Y.S. 1021, 1022 (N.Y. County Ct. 1898).

Contracting parties are presumed to have intended to use terms as they are used and understood in the industry, even if those terms vary from their commonly understood meaning in other contexts. *Hardware Specialties, Inc. v. Mishara Constr. Co.*, 2 Mass. App. Ct. 277, 280 (1974) (stating that [v]alid usages known to contracting parties, respecting the subject matter of an agreement, are by implication incorporated therein, unless expressly or impliedly excluded by its terms, and are admissible to aid in its interpretation, not as tending in any respect to contradict or vary a contract, but upon the theory that the usage forms a part of the contract.); *SI Communications, Inc. v. Nielsen Media Research*, 181 F. Supp. 2d 404, 409 (S.D.N.Y. 2002) (finding that under Illinois law, customs and usages of trade are presumed to form part of contract where the contract contains no provision to the contrary); *Trent Partners and Associates, Inc. v. Digital Equipment Corp.*, 120 F. Supp. 2d 84 (D. Mass. 1999) (stating that under Massachusetts law, evidence of industry custom and usage is relevant to contract interpretation, even in the absence of ambiguity); *see also* Restatement (Second) of Contracts § 223 cmt. b (There is no requirement that an agreement be ambiguous before evidence of a course of dealing can be shown); 3 Arthur Corbin on Contracts 555 (1960) (It is not necessary that words should be unusual words or words that are ambiguous on their face in order to admit evidence of special usage).

The circumstances under which trade usage is admissible as an aid to contract interpretation may depend upon which law governs. A minority of courts, including those in New York, will not allow trade usage evidence to interpret contractual terms that contain no ambiguity. *Milonas v. Public Employment Relations Bd.*, 225 A.D.2d 57, 648 N.Y.S.2d 779 (1996) (stating that custom or usage may be admissible only if the agreement is found to be ambiguous). The courts determine whether ambiguity exists by looking within the four corners of the document, not to outside sources. *Kaas v. Kaas*, 91 N.Y.2d 554, 556 (1998) (noting that in deciding whether an agreement is ambiguous, courts should examine the entire contract and consider the relation of the parties and the circumstances under which it was executed. Particular words should be considered, not as if isolated from the context, but in the light of the obligation as a whole and the intention of the parties as manifested thereby).

Add Omitted Terms to a Contract. Evidence of usage may be also introduced to add terms to the agreement where the contract is silent as to a particular issue, particularly where the term is essential to the agreement. *4-County Elec. Power Assn v. Tennessee Valley Authority*, 930 F. Supp. 1132 (S.D. Miss. 1996).

For example, trade usage was used to supplement a distributorship agreement where the agreement was silent as to its duration. *VistaTech Enterprises, Ltd. v. Brother Intl Corp.*, 677 F. Supp. 178 (S.D.N.Y. 1988). In this case, the agreement between a supplier of consumer electronics and its distributor did not have any time limitation or a termination clause. The court considered a common practice among distributors in New York to quote prices to the trade for a two-month period. Based on the quotation custom, the court construed the agreement between distributor and supplier to have a two-month term.

In *Point Adams Packing Co. v. Daubenspeck*, trade usage in the fishing industry was admitted to supplement an agreement between an owner of a fishing vessel and a processor of seafood. The agreement was silent on which party was responsible for paying the fishing resource raw material tax. The court admitted the evidence of a well-established trade custom in Alaska, according to which the processor was responsible for the payment of the tax, but in turn had to be reimbursed by the owner of the processed fish. *Point Adams Packing Co. v. Daubenspeck*, 584 P.2d 479 (Wash. Ct. App. 1978).

In *Cooper v. Kane*, where a contract for the excavation of lots was silent as to the ownership of sand and other materials that were excavated, the court admitted trade usage evidence that such material belonged to the excavator instead of the owner. *Cooper v. Kane*, 19 Wend. 386 (N.Y. Sup. Ct. 1838).

The Role of Custom and Usage in Reinsurance Contracts

Given the informal nature of insurance and reinsurance contracts for much of the late eighteenth and nineteenth centuries, courts generally held that such contracts must be interpreted in light of the parties course of performance and usage when determining the meaning of an agreement. See, e.g., *Yeaton v. Fry*, 9 U.S. 335 (1809); *Maryland Ins. Co. v. Woods*, 3 L.Ed. 143 (1810); *Palmer v. Warren Ins. Co.*, 1 Story 360 (C.C. Mass. 1840); *Dutcher v. Brooklyn Life Ins. Co.*, 8 F. Cas. 147, 3 Dill. 87 (C.C. Mo. 1874); *Wilkins v. Tobacco Ins. Co.*, 30 Ohio St. 317, 335 (1876); *Blummer v. Phoenix Ins. Co.*, 45 Wis. 622 (1878).

The prominent role of custom and practice in the insurance industry was explained in a derogatory characterization of a marine insurance policy in an eighteenth century English case, *Brough v. Whitmore*. Graydon Staring, *The Law of Reinsurance* § 12:8 (2008) (citing *Brough v. Whitmore*, 4 Term Rep. 206, 210, 100 Eng. Rep. 976, 978 (K.B. 1791)). In that case, Mr. Justice Buller wrote that a marine insurance policy, has at all times been considered in Courts of law as an absurd, incoherent instrument: but it is founded on usage, and must be governed by usage. *Id.*

Nearly two decades later, Chief Justice Marshall of the United States Supreme Court took a similar approach in *Yeaton v. Fry*, writing: Policies of insurance are generally the most informal instruments which are brought into courts of justice; and there are no instruments which are more liberally construed, in order to effect the real intention of the parties, if that intention can be clearly ascertained. *Id.* (citing *Yeaton*, 9 U.S. 335 (1809)).

The courts liberal use of evidence of trade usage during this era was often made necessary by the contracting parties frequent use of blanks instead of negotiated reinsurance contracts. Courts recognized that such blanks did not, and were never intended to, embody the intentions of the contracting parties. See, e.g., *Philadelphia Life Ins. Co. v. American Life & Health Ins. Co.*, 23 Pa. 65 (1854) (using evidence of reinsurance trade practice where the parties use of a printed blank supplied no relevant contract terms); *Manufacturers' F. & M. Ins. Co. v. Western Assurance Co.*, 145 Mass. 419, 424, 14 N.E. 632, 633-34 (Mass. 1888) (noting that [w]henver words are found in a contract which can have no proper application to the subject to which it relates, they cannot be regarded; and not infrequently the careless use of printed blanks compels recognition of this rule).

As reinsurance agreements became more complex and embodied the intentions of the contracting parties, courts began to limit evidence of trade usage. As early as 1903, in the case of *Ocean S.S. Co. v. Aetna Ins. Co.*, 121 F. 882, 886 (S.D. Ga. 1903), the court noted that more complete and complex agreements should be interpreted by reference to their clearly stated terms rather than by reference to trade custom and usage applied in informal settings. Applying this standard to the disputed reinsurance contract, the court rejected the reinsurers argument that custom and usage called for its liability to be shared pro rata with the ceding insurer, citing the clear language in the policy stating that the reinsurer agree[s] to pay the assured in full all claims for such losses arising from perils enumerated in the [underlying] policy as the assured may, in their judgment, settle for with the owners or other parties interested in the merchandise as aforesaid . *Id.* at 866.

Similarly, in *American Guaranty Co. v. American Fidelity Co.*, the court rejected a reinsurers argument that custom and usage imported a retention requirement into reinsurance contracts. 260 F. 897, 900 (6th Cir. 1919), *cert. denied*, 251 U.S. 559 (1920). The reinsurance contract at issue did not contain a retention clause, and the reinsurer claimed that the lack of any retention clause rendered the contract unintelligible such that extrinsic evidence of custom and usage could be presented to explain the contract. *Id.* Accordingly, the reinsurer sought to apply evidence of custom and usage to imply a retention requirement in the following clause:

Any loss hereunder shall be payable by the reinsurer pro rata with the reinsured; that is to say, in the proportion which the amount of this reinsurance bears to the amount of the reinsureds total liability, and under the same conditions by the reinsurer as the reinsured shall pay

Id. The court found this pro rata clause to be unambiguous and held that, even if the reinsurer could prove a contrary custom or usage, it could not change or avoid the terms of a clear, definite and unambiguous contract. *Id.*

At the same time, courts began to limit the circumstances under which usage was admissible with respect to reinsurance contracts to circumstances applicable to normal commercial contracts. *French Mut. General Society of Mutual Ins. Against Theft v. United States Fidelity & Guar. Co of Baltimore City*, 203 F. 558 (D. Md. 1914), *rev'd on other grounds*, 212 F. 620 (4th Cir. 1914) (holding that where contracting parties have not expressed their intentions plainly, general terms and phrases must be construed in light of the circumstances surrounding the parties); *Union Ins. Co. of City of San Francisco v. American Fire Ins. Co. of City of New York*, 107 Cal. 327, 333 (1895) (holding that in reinsurance contracts, as in other contracts, where there is a known usage of trade, persons carrying on that trade are held to have contracted in reference to the usage, *unless the contrary appears*, and the usage forms a part of the contract).

In *Christiana Gen. Ins. Corp. of N.Y. v. Great American Ins. Co.*, 979 F.2d 268, 274 (2d Cir. 1992), the court allowed extrinsic evidence of industry custom and practice to be considered only after finding that the term prompt notice in a reinsurance contract was ambiguous. The court ultimately determined that an issue of material fact existed as to whether applicable industry custom and practice dictated that a reasonable insurer in the ceding insurers position would have given its reinsurer prompt notice of the occurrence at issue. *Id.* at 278. *See also United Fire & Cas. Co. v. Arkwright Mut. Ins. Co.*, 53 F. Supp. 2d 632, 640 (S.D.N.Y. 1999) (holding that when a contract is in any respect uncertain or equivocal in meaning, all the circumstances leading to its execution may be shown for the purpose of clarifying, but not contradicting or changing its terms but that the parties course of performance of a contract is relevant to understanding the contract even if the contract is unambiguous); *Unigard Sec. Ins. Co. v. North River Ins. Co.*, 4 F.3d 1049, 1071 (2d Cir. 1993) (refusing to allow evidence of the parties course of dealing to override a standard limit of liability provision in the reinsurance contract, holding that the efficiency of the reinsurance industry would not be enhanced by giving different meanings to identical standard contract provisions depending upon idiosyncratic factors in particular lawsuits).

The special place of custom and usage in the reinsurance business has tended to linger, however, in spite of cases that have announced that reinsurance contracts are like all other contracts. A treatise authored in 1996 stated that The special and unique nature of the reinsurance arrangements makes it imperative that a court consider industry custom and

practice in interpreting reinsurance contracts. The typical reinsurance agreement is relatively short and concise, using terms of art rather than lengthy, legalistic explications to define the obligations of the parties. Barry R. Ostrager and Mary Kay Vyskocil, *Modern Reinsurance Law and Practice* § 5.03 (1996).

In isolated instances, some courts have continued to imply terms in reinsurance contracts on the ground that, by usage, such terms are deemed to part of every reinsurance agreement. Perhaps the most prominent of these instances is the follow the fortunes doctrine, under which a reinsurer is precluded from questioning a cedents good faith claim decision.

The leading case in support of the view that a follow the fortunes clause is implied in every reinsurance contract is *International Surplus Lines Ins. Co. v. Certain Underwriters & Underwriting Syndicates at Lloyds of London*, 868 F. Supp. 917 (S.D. Ohio 1994). [See also *Mentor Ins. Co. Ltd. v. Norges Brannkasse*, 996 F.2d 506 (2d Cir. 1993); *National American Ins. Co. of California v. Certain Underwriters at Lloyds London*, No. CV 91-4021-MRP (C.D. Cal. Aug. 26, 1993), *revd*, 93 F.3d 529 (9th Cir. 1996).] In that case, the court held that even in the absence of any contractual language to support the implied follow the fortunes clause, such a clause was implied because the doctrine applies to all reinsurance contracts. 868 F. Supp. at 920; see also William Hoffman, *On the Use and Abuse of Custom and Usage in Reinsurance Contracts*, Tort & Ins. L.J., Vol. 33, No. 1, at 60, 72 (1997) (providing a thorough analysis of the courts approaches in *International Surplus Lines Ins. Co.* to evidence of reinsurance custom and usage concerning follow the fortunes clauses, and questioning the precedent and evidence relied upon which the court based its decision).

Other courts have been more skeptical, holding instead that whether reinsurance custom and practice dictates that a follow the fortunes is an implied term in every reinsurance contract is an issue of material fact, which must be established by appropriate evidence. See *Michigan Township Participating Plan v. Federal Ins. Co.*, 233 Mich.App. 422, 430, 592 N.W.2d 760, 765 (1999); *Natl Am. Ins. Co. of Cal. v. Certain Underwriters at Lloyds London*, 93 F.3d 529, 537 (9th Cir. 1996). Instances such as this have left parties to reinsurance contracts unclear whether they are like all other commercial contracts, or whether trade custom and usage still occupy a special place in interpreting reinsurance contracts.

Recent Cases Confirm the Trend Towards Treating Reinsurance Contracts Like Other Commercial Contracts

In the last decade, courts have consistently said that they treat reinsurance contracts like any other commercial contract. As these pronouncements accumulate, they create a body of law that has its own momentum and a weight that makes it increasingly difficult for a litigant to argue that reinsurance contracts should have their own specialized interpretation rules.

For example, in *Employers Reinsurance Corp. v. Mid-Continent Cas. Co.*, 358 F.3d 757, 764-768 (10 Cir. 2004), the court faced the issue of whether attorneys fees and expenses that the insurer was required to pay to its insured as a result of declaratory judgment actions on coverage issues were required to be reimbursed by the reinsurer as compensatory damages under the reinsurance agreement. Applying Oklahoma law, the court noted that the court interprets an insurance contract in accordance with principles applicable to all contracts. *Id.* at 764. The court examined the plain language of the reinsurance agreement, and after it found that the language was susceptible of two possible meanings, held that extrinsic evidence of circumstances surrounding the contract formation and execution as well as evidence of trade usage should be considered. *Id.* at 768.

In *Commercial Union Ins. Co. v. Seven Provinces Ins. Co.*, 217 F.3d 33, 38-39 (1st Cir. 2000), the reinsurer argued that the cedent had violated the net retention provision of the contract by ceding part of its share of the potential exposure to another reinsurer under a quota share treaty. The court found that the contract was ambiguous on this point, and that extrinsic evidence was appropriate. Because the contract was several decades old, extrinsic evidence of the intent of the parties was unavailable. General evidence of usage in the industry at the time of execution of the contract was supplied by conflicting expert affidavits. The court resolved the issue by determining the relative credibility of the

experts opinions. The *Commercial Union* case provides a graphic illustration of how seemingly straightforward contract interpretation principles become difficult to apply when evidence of the parties intent is lost by the passage of time.

In the past decade, it has become increasingly difficult for parties to reinsurance contracts to import understandings that they claim they had into their written agreements. In *ReliaStar Life Ins. Co. v. IOA Re, Inc.*, 303 F.3d 874, 879-881 (8th Cir. 2002), the reinsurer sued its retrocessionaires for failure to pay certain losses. The retrocessionaires claimed, among other things, that their obligations were limited by an underlying reinsurance contract which required strict proof of coverage and would thus defeat application of the follow the fortunes doctrine. Supporting affidavits averred that the understanding of the retrocessionaires was that the underlying contract was part of the retrocessional agreement. *Id.* at 880.

The court rejected this argument, holding that under commercial contract principles, the understanding expressed in the affidavits was insufficient to create an ambiguity in the contract, and without such an ambiguity, the understanding could not become part of the written contract. *Id.* at 880-881. If the retrocessionaires had thought that it was unnecessary to include the underlying agreement as an express part of their retrocessional agreement, relying on informal custom and practice in the reinsurance industry, they were quite mistaken. If a party to any reinsurance contract believes that it need not completely set forth the agreement between the parties, it runs exactly the same risk.

While courts in the past decade have consistently applied commercial contract interpretation rules to reinsurance contracts, the prominent role played by usage in the reinsurance industry continues to be a focus of controversy. In *British Intl Ins. Co. Ltd. v. Seguros LA Republica, S.A.*, 342 F.3d 78, 82 (2d Cir. 2003), the cedent argued that its reinsurer had an obligation of pro rata reimbursement under facultative reinsurance certificates for declaratory judgment expenses incurred in coverage disputes with its insureds. Following New York law, the court held that the intent of the parties was to be gleaned from within the four corners of the contract, and not from extrinsic evidence. Only if an ambiguity was apparent within the terms of the document would extrinsic evidence be permitted to resolve the ambiguity. The court did not find any such ambiguity in the contract.

As a fallback position, the cedent argued that--even if there was no ambiguity in the contracts--reinsurance industry custom and practice could be used to supplement the terms of the contract, to include such an obligation in the agreement between the parties. 342 F.2d at 83-84. In rejecting this contention, the court turned to normal commercial contract rules applicable where a party seeks to import a term into a contract on the basis of trade usage. The burden is on the party seeking to establish such a custom and practice; that party must prove that the party to be bound was either aware of the custom or that it was so notorious that the party to be bound should have been aware of it. *Id.* While the court held that this burden had not been met, it should be noted that the cedent was able to obtain affidavits from members of the reinsurance industry that such a trade usage existed in the 1970s and early 1980s. Thus, even in the absence of any contractual term obligating the reinsurer to share in declaratory judgment expenses, the persistence of the view that trade usage in the reinsurance industry could supply terms to supplement reinsurance agreements has continued.

The battle also continues over whether the follow the fortunes doctrine is inherent in every reinsurance contract. In *North River Ins. Co. v. Employers Reinsurance Corp.*, 197 F. Supp. 2d 972 (S.D. Ohio 2002), the court held that this issue could not be decided as a matter of law, because it could not be said that the practice of implying such a clause is so widespread and accepted in the industry as to be beyond all factual and legal dispute. *Id.* at 986. The court then turned to evidence in the form of competing expert affidavits as to whether there was a custom or usage in New Jersey, the jurisdiction whose law governed, at the time that the contract was made. In a subsequent opinion, *North River Ins. Co. v. Employers Reinsurance Corp.*, 2002 U.S. Dist. LEXIS 11711 at *8-24 (S.D. Ohio 2002), the court held that the expert affidavits were of little weight because they lacked factual support. *Id.* at *18. The case was decided on the plain language of the contract, once the court concluded that the cedent had not proved a custom and practice for reinsurers to honor a reinsureds good faith settlement of claims involving disputed coverage.

Parties who invoke the follow the fortunes doctrine can no longer count on the support of courts absent proof that

the doctrine is an accepted usage in the governing jurisdiction. In *American Employers Ins. Co. v. Swiss Reinsurance America Corp.*, 275 F. Supp. 2d 29, 36-37 (D. Mass. 2003), *revd on other grounds*, 413 F.3d 129, the U.S. District Court in Massachusetts noted that the favored view is that follow the fortunes and follow the settlements are an industry custom, and apply even in the absence of express language to that effect. The Second Circuit is firmly of the same view, as discussed in *Travelers Casualty & Surety Company v. Gerling Global Reinsurance Corp. of America*, 419 F.3d 181, 189-90 (2d Cir. 2005). But in *American Motorists Ins. Co. v. American Reinsurance Co.*, No. C 05-5202 CW (N.D. Cal. May 29, 2007), the U.S. District Court for the Northern District of California held that follow the settlement doctrine is not inherent in every reinsurance contract. Since the insurer had failed to provide evidence of trade usage, the court declined to imply a follow-the settlement provision in a reinsurance agreement that did not expressly include such a provision. And in *Affiliated F.M. Insurance Co. v. Employers Reinsurance Co.*, 369 F. Supp. 2d 217, 227 (D.R.I. 2005), the court expressed a high degree of skepticism about whether it would be appropriate to read follow the fortunes into a contract given the divergence of precedent on the issue.

Conclusion

In summary, there has been a clean convergence between normal commercial practice and reinsurance law with respect to trade usage that has accelerated in the last decade. The trend has several implications. First, litigants need to understand the rules that are applied in normal commercial settings when trade usage is at issue in a reinsurance contract case. Second, litigants cannot assume that reinsurance contracts will be treated as special and unique, with a favored place for trade usage. And finally, drafters of reinsurance contracts should not assume that brevity of expression will be cured either by mutual good will of the contracting parties or by the wisdom of a court delving into trade usage in the reinsurance industry. As in normal commercial practice, there is no substitute for careful and comprehensive draftsmanship.

HRDLICK AND RICHTER ON MIDWEST FLOODING

2008 Emerging Issues 2548

HRDLICK AND RICHTER ON RESPONSE TO RECENT MIDWEST FLOODING BY STATE INSURANCE DEPARTMENTS

By Thomas R. Hrdlick and A. John Richter

July 19, 2008

SUMMARY: Following the devastation wrought on several Midwestern states by recent floods, the insurance departments of Illinois, Indiana, Iowa and Wisconsin issued bulletins requesting, imposing, or reminding insurers of certain protections for insureds in their states. These bulletins are summarized below. Several important questions about the applicability of the bulletins remain.

ARTICLE: Cite as: Hrdlick, Thomas R., and Richter, A. John. Response to Recent Midwest Flooding by State Insurance Departments. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

The torrential rains of June 2008, and the flooding that ensued, will not soon be forgotten. For days, surging floodwaters threatened the lives and property of many Midwestern families and businesses. As the immediate threat began to recede with the floodwaters, worries set in of a different kind. Worries about starting over, rebuilding homes, minimizing damage from polluted water. Insurance factored heavily into all of these concerns, and that spurred action from the insurance departments of Illinois, Indiana, Iowa and Wisconsin. The insurance departments of these four states issued bulletins requesting, imposing, or reminding insurers of certain protections for insureds relative to the payment of premiums and the cancellation or non-renewal of policies. While certainly well-intentioned, these bulletins do raise some questions about their intended applicability and scope. In the paragraphs below, we provide analysis of the bulletins and some of the legal issues they present.

Regulatory Action in Affected States

Illinois

For Illinois policyholders affected by the flooding, the Illinois Division of Insurance has issued a bulletin to all insurers licensed or authorized to transact business in Illinois. With respect to the bulletins provisions, affected policyholders include, but are not limited to, those residing in state or presidential declared disaster areas. The bulletin

includes (among other things) the directives described below and also requires insurers to post all actions taken to implement these directives on their websites.

The principal directive Illinois imposed is a 60-day moratorium, beginning on June 18, 2008 and retroactive to June 10, 2008, on policy cancellations and non-renewals. Thus, any cancellation or non-renewal issued on or after June 10, 2008 must be withdrawn and the policy reinstated with no lapse in coverage. In addition, no new cancellations or non-renewals will be allowed for affected policyholders until August 18, 2008, or a later time, if reasonable, given an individual's circumstance.

The bulletin also imposes other insurance-related time extensions. Insurers must extend any deadlines for action by an insured (e.g. submission of claim of loss or bills, reporting of information, or payment of funds) at least 60 days beyond the last date allowed in the contract. Finally, insurers must not cancel or refuse to renew policies respecting affected property due to an increase in the risk originally accepted or the geographical location of the risk.

The complete Illinois bulletin is available at <http://www.idfpr.com/DOI/General/CB200804ExceptionsforConsumersinDisasterareasDOI.pdf>.

Indiana

To protect Indiana policyholders in the impacted areas, the Indiana Department of Insurance has issued a bulletin to all insurance companies. The Indiana impacted areas are limited to those designated as disaster areas by state executive order or presidential declaration.

The Indiana directives include (among other things) a 60-day moratorium for cancellation of any insurance policy in effect for any policyholder residing within the impacted areas. The 60-day period begins on June 17, 2008, but the moratorium is retroactive to May 30, 2008. The moratorium applies only to cancellations/non-renewals for failure to pay premiums during the 60-day period. Cancellations/non-renewals for other reasons may still be made pursuant to statutory notice requirements; however, the Department of Insurance requests that insurers take into consideration that persons in impacted areas may not be able to receive notice of a cancellation/non-renewal due to evacuation or delayed postal service.

Also, penalties attaching to late payment of premiums within the moratorium period are suspended. Indiana stresses that the moratorium is not a waiver, it is only an extension of the grace period in which to pay the premium. Thus, after 60 days, Indiana has requested that insurers work with policyholders to develop a repayment plan for premiums that would have become due during the moratorium period.

The complete Indiana bulletin is available at http://www.state.in.us/idoi/files/Bulletin_163.pdf.

Iowa

The Iowa Insurance Division has *requested* that all insurance companies authorized to transact business in Iowa, regardless of the line of insurance, implement the extensions described below with regard to their insureds who have been affected by the recent flooding. This request is applicable to insureds residing in or property insured in Iowa counties declared state or presidential disaster areas.

Iowa requests that insurers provide each insured an optional 60-day interest-free deferral for all premium payments due in the month of June. In addition, insurers are asked to provide a 60-day extension on contractually defined time

limits with respect to various required actions of the insured (such as submitting follow-up documentation on an existing claim). The start date for relief consideration is May 25, 2008, and, as of this time, deferrals and extensions are not required for July due dates. In a Frequently Asked Questions notice issued in response to the bulletin, Iowa clarified that the insurer should grant relief if the insurer knows that an insured is impacted either by a known, community-wide disaster or by a consumer's self-reported impact. Also, in the Frequently Asked Questions notice, Iowa urges insurance companies not to deduct deferred June premiums from claim payments being made in July.

While Iowa has only requested insurance company cooperation, any insurer who was unable or unwilling to comply with the request needed to notify the Iowa Insurance Division within five working days from the receipt of the bulletin (issued on June 16, 2008).

The complete Iowa bulletin is available at <http://www.iid.state.ia.us/docs/bull0809.pdf>.

A list of Frequently Asked Questions in response to the bulletin is available at <http://www.iid.state.ia.us/docs/Q&Aforbulletin0809.pdf>.

The list of Iowa counties declared state or presidential disaster areas is available at <http://flood2008.iowa.gov/index.php?topic=disaster>.

Wisconsin

While Wisconsin has yet to issue any type of moratorium on cancellation or non-renewal of insurance policies, the Wisconsin Commissioner of Insurance has issued a stern and detailed reminder of the statutory notice requirements for non-renewal or renewal with altered terms. This perhaps signals that the Commissioner of Insurance will closely scrutinize post-flood renewals and strictly enforce the statutory notice requirements.

The complete Wisconsin bulletin is available at <http://oci.wi.gov/bulletin/0608renew.htm>.

General Points

Viewed collectively, the actions taken by the Illinois, Indiana, Iowa and Wisconsin insurance authorities reveal a shared concern that insureds may be unable to make their required premium payments (whether due to logistical or financial reasons) and/or that insurers may take action to cancel or non-renew coverage because of new concerns over the nature and location of the risk. The following are some general points to consider when evaluating the impact of the bulletins on an insurer's operations.

1. P&C vs Life/Health Insurers. Nothing in the directives or bulletins draws a distinction between property/casualty and life/health insurers. Indeed, concern about the logistic or financial ability to make premium payments would be equally applicable in all contexts, and the bulletins should be noted and/or adhered to by all insurers regardless of lines of business.

2. Licensed vs Unlicensed Insurers. There is perhaps some ambiguity as to whether the bulletins and directives apply to only licensed insurers transacting business in these states. Illinois asserts that its directive applies to entities licensed or authorized to transact insurance business in the state. Such language suggests that Illinois intends to draw a distinction between licensed insurers and authorized insurers for purposes of the bulletin, and thus the bulletin may arguably apply to surplus lines insurers and perhaps even reinsurers. Indiana states that its directive applies to all insurance companies, drawing no distinction between licensed and unlicensed entities doing business in Indiana. Iowa states that its bulletin pertains to all insurance companies authorized to transact business in the state. This typically

would be interpreted to mean all licensed companies, but query whether this is the Iowa departments intention. The issue is not addressed by Iowas FAQ noted above.

3. Commercial vs Personal Lines. It appears from the language of these bulletins that they are intended to apply to both commercial and personal lines insurers. While this is clear in the bulletins issued by Indiana, Iowa, and Wisconsin, it is perhaps less clear in Illinois, where the bulletins protections are said to benefit insurance consumers. Some may read this as Illinois intent to target individual, personal lines consumers as opposed to commercial lines consumers. However, the principal concerns of these departments (i.e., the insureds inability to pay premiums and/or policy cancellation due to the nature and location of the risk) are equally applicable in both the personal lines and the commercial lines setting, and thus it one presumes Illinois intends for its bulletin to apply to both absent a clear and express direction to the contrary.

4. Constitutional Validity. Finally, some may argue that a state government acting to alter or interfere with the contractual terms of existing insurance policies raises legal issues under the Contract Clause of the United States Constitution, which provides that [n]o State shall pass any ex post fact Law, or Law impairing the Obligation of Contracts. The principal question would be whether the bulletins result in an unconstitutional impairment of private contractual rights. U.S. Const. art. I, § 10, cl. 1. Research reveals that the Contract Clause does not impede a states power to protect the general welfare of its citizens under its police power. In fact, the United States Supreme Court has recognized the importance of a states power to alter private contracts in an emergency, stating that the Contract Clause does not prevent limited and temporary interpositions with respect to the enforcement of contracts if made necessary by a great public calamity such as fire, flood, or earthquake. *Home Building & Loan Assn v. Blaisdell*, 290 U.S. 398, 439-40 (1934). In *Blaisdell*, the Court upheld a Minnesota law granting a moratorium on mortgage foreclosures during the Great Depression because of the emergency situation and the temporary nature of the modification. The recent floods arguably present a similar emergency situation and the bulletins issued in response represent a temporary modification. Thus, it is unlikely that a constitutional challenge of the state bulletins at issue under the federal Contract Clause would succeed.

ABOUT THE AUTHOR(S):

Thomas R. (Tom) Hrdlick is a partner with Foley & Lardner LLP and a member of the firm's Insurance Industry Practice and Health Care Industry Team. Mr. Hrdlick's practice is concentrated in the fields of corporate and regulatory insurance law, with a particular emphasis on transactional work within the insurance industry. He has represented insurance companies and other insurance-related entities in a variety of transactions and corporate restructurings, including reinsurance affiliations, mergers, stock acquisitions, initial and secondary public offerings, demutualizations and mutual holding company conversions. Mr. Hrdlick has also counseled such entities with respect to their regulatory affairs, including their dealings with state insurance departments and matters involving federal agencies such as the SEC, FTC, Treasury, and OFAC. Mr. Hrdlick is a 1988 graduate of Georgetown University Law Center and a 1985 graduate of Marquette University with a B.A. in political science. He is admitted to practice in Wisconsin and in the United States District Court, Eastern and Western Districts of Wisconsin, and is a former senior law clerk to the Hon. Rudolph T. Randa, United States District Court Judge for the Eastern District of Wisconsin.

A member of the American Bar Association (Business Law Section and Tort & Insurance Practice Section), the Seventh Circuit Bar Association, the State Bar of Wisconsin, and the Milwaukee Bar Association, Mr. Hrdlick also is a past president and former member of the Board of Governors for the St. Thomas More Lawyers Society in Wisconsin. His presentations and publications include: "UETA, E-SIGN and Electronic Transactions in the P&C Industry -- Are There Legal Obstacles to Going Paperless?" presentation to Property Casualty Insurers Association of America (February 19, 2008); "Protecting Privacy Under Gramm-Leach-Bliley (Act II): The NAIC's Model Safeguarding Regulation," published in the American Bar Association's Tort & Insurance Law Journal, Volume 37, No. 4 (Summer 2002); "Appellate Review of Remand Orders in Removed Cases: Are They Losing A Certain Appeal?" published in 82 Marquette Law Review 535 (Spring 1999); He also co-authored: "Insurers Operating Under Assumed or Fictitious

Names: When, How and ... What?!" published in the Federation of Regulatory Counsel's Quarterly Journal of Insurance Law and Regulation, Vol. XII, Ed. II (June 10, 2000).

New Developments Regarding Limitations on Discovery of Reinsurance Information

2008 Emerging Issues 452

Wiley Rein LLP on New Developments Regarding Limitations on Discovery of Reinsurance Information

By Sandra Stevens

July 18, 2008

SUMMARY: In her analysis of New Developments Regarding Limitations on Discovery of Reinsurance Information, Wiley Rein, LLP litigation partner, Sandra Tvarian Stevens, Esq., discusses appropriate limitations on the production of reinsurance information and provides practical advice for insurers and reinsurers on topics such as: -- The Nature of the Reinsurance Relationship;- The Role of Utmost Good Faith;- The Purpose of Access to Records and Cooperation Clauses; -- Policyholder and Underlying Claimants Demands for Discovery of Reinsurance Information; and -- Privilege and Work Product Considerations. The commentary explores why insurers and their policyholders continue to grapple with the question of whether reinsurance information has any relevance to the issues raised in coverage disputes. The commentary features an analysis of current and past decisions addressing demands for production of reinsurance information and examines why courts have refused to order production in some cases, while allowing it in others.

ARTICLE: Wiley Rein LLP on New Developments Regarding

Limitations on Discovery of Reinsurance Information

By Sandra Tvarian Stevens

Introduction

Over the years, insurers and their policyholders have grappled with the question of whether reinsurance information has any relevance to the issues raised in a coverage dispute to which the reinsurer is not a party. A number of recent decisions concerning the scope of discovery of reinsurance information demonstrate that this topic continues to have significance for insurers and policyholders alike. As discussed below, these decisions also provide practical guidance

for insurers and reinsurers with respect to responding to demands for discovery of reinsurance information from policyholders, as well as from other third parties.

The Nature of the Reinsurance Relationship

In order to understand the arguments propounded both, in favor of, and against the use of reinsurance information in a coverage dispute, it is helpful to review the nature of the reinsurance relationship. In its most basic form, reinsurance has been described as insurance of an insurer. *See, e.g., Reinsurance Claims* 41 (Hammesfahr 2004). The reinsurance relationship allows the insurer (also referred to as the ceding company or cedent) to transfer or cede some or all of its risk to a reinsurer, in exchange for payment of a premium. *Id.* at 39 (internal citations omitted). *See also Catholic Mutual Relief Society et al., v. Superior Court of Los Angeles County*, 42 Cal. 4th 358, 368, 165 P.3d 154, 160, 64 Cal. Rptr. 3d 434, 440 (2007) (Reinsurance is 'a special form of insurance obtained by insurance companies to help spread the burden of indemnification.'). The reinsurer does not underwrite the policyholders risk. Nor does it investigate or adjust any of the policyholders claims under the direct insurance contract. Rather, the responsibilities for administering and paying the policyholders claims are left to the insurer, and the reinsurers role is limited to indemnifying the ceding insurer.

Because a policyholder is not a party to the reinsurance contract, it does not enjoy privity of contract with the reinsurer, and may not enforce any rights under the reinsurance contract. *See, e.g., In re Bennet Funding Group, Inc. Sec. Litig.*, 270 B.R. 126 (S.D.N.Y. 2001), *aff'd*, 60 Fed. Appx. 863 (2d Cir. 2003) (rejecting direct action suit brought by policyholder against reinsurer). *Cf. World Omni Fin. Corp. v. Ace Capital Re, Inc.*, No. 02 Civ. 0476 (RO), 2002 U.S. Dist. LEXIS 16870, at *6 (S.D.N.Y. Sept. 6, 2002) ([W]here the insured consistently deals directly with its insurer's reinsurer . . . the reinsurer may become directly liable to the insured"). As one court succinctly explained, [a] reinsurance contract operates solely between the reinsurer and the ceding company. It confers no rights on the insured. *See, e.g., Unigard Sec. Ins. Co. v. North River Ins. Co.*, 594 N.E.2d 571, 574 (N.Y. 1992).

The Role of Utmost Good Faith

All aspects of the reinsurance relationship between cedent and reinsurer are governed by the age-old concept of *uberrimae fidei*, or utmost good faith. As the Supreme Court first explained more than a century ago, the duty of utmost good faith requires communication and disclosure of all material facts by the ceding company. *Sun Mut. Ins. Co. v. Ocean Ins. Co.*, 107 U.S. 485, 510 (1883) (finding that the need for information may be greater in a case of reinsurance than as between the parties to an original insurance.). *See also AXA Corp. Solutions v. Underwriters Reinsurance Co.*, No. 02 C 3016, 2004 U.S. Dist. LEXIS 22609, at *50 (N.D. Ill. Nov. 9, 2004) (This tradition of utmost good faith in the reinsurance context was the result, in part, of the understanding between the reinsurer and the ceding insurer that they would conduct themselves in a manner of trust and full disclosure that led to long term relationships and repeat transactions.).

Some contemporary decisions have suggested that the duty of utmost good faith applies principally in the context of underwriting and require[s] the reinsured to disclose to the reinsurer all facts that materially affect the risk of which it is aware and of which the reinsurer itself has no reason to be aware. *Christiania Gen. Ins. Co. v. Great Am. Ins. Co.*, 979 F.2d 268, 278 (2d Cir. 1992) (citation omitted). Other courts, however, have acknowledged that the duty of utmost good faith extends to the reinsurance claims relationship as well because a reinsurance companys ability to respond to a reinsurance claim relies to a large extent on the information that the ceding company provides to the reinsurer. *See, e.g., United Fire & Cas. Co. v. Arkwright Mut. Ins. Co.*, 53 F. Supp. 2d 632, 633 (S.D.N.Y. 1999) (the duty of utmost good faith falls principally upon the ceding insurer, because it is the ceding company, not the reinsurer who controls the settlement of claims and access to the facts regarding those claims); *Allendale Mut. Ins. Co. v. Excess Ins. Co.*, 992 F. Supp. 278, 282 (S.D.N.Y. 1998) (accord). Courts have also found that the ceding companys duty of utmost good faith is broader for treaty reinsurance -- which reinsures an entire book of business that may cover different claims and losses --

than for facultative reinsurance -- which applies to specific risks and policies -- because more information may be required for treaty reinsurance. *See, e.g., In re Matter of the Liquidation of Union Indem. Ins. Co.*, 674 N.E.2d 313 (N.Y. 1996).

A handful of decisions have also implied that the strict standard of utmost good faith has eroded, and that the parties to reinsurance contracts should be subject only to the general standard of good faith which, under the law of many states, applies to all contractual relationships. *See, e.g., Unigard Sec. Ins. Co. v. North River Ins. Co.*, 4 F.3d 1049, 1066 (2d Cir. 1993) ([U]tmost good faith does not accurately describe the modern relationship of sophisticated insurers bargaining at arms length.) (Citation omitted.). *See also AXA Corp. Solutions*, 2004 U.S. Dist. LEXIS 22609. As the AXA Court explained:

Times have changed, however, and [t]he reinsurance market today does not have the same profitable long term relationships that outweigh any single loss, repeat transactions, or dependent on reputation. Instead, whereas utmost good faith once promoted an efficient reinsurance market by allowing the reinsurer to rely on the ceding insurers disclosure without monitoring, these sophisticated parties must now bargain for adequate protection.

2004 U.S. Dist. LEXIS 22609, at *50 (citation omitted). *But see Nichols v. Am. Risk Mgmt.*, No. 89 Civ. 2999 (JSM), 2002 U.S. Dist. LEXIS 22221, at *4 (Sept. 14, 2002) (duty of utmost good faith encompasses basic obligation of a reinsured to disclose to potential reinsurers all material facts regarding the original risk of loss and finding that reinsurer was entitled to rescind reinsurance contracts where insurer knew of and was required to advise others of its insolvency well before the date of the reinsurance agreements at issue, but failed to do so). Thus, there continues to be some expectation that the reinsurer and insurer should conduct their business in good faith.

The Purpose of Access to Records and Cooperation Clauses

Consistent with the duty of utmost good faith and the need for information sharing between insurer and reinsurer, many reinsurance contracts contain access to records or cooperation clauses. Both access to records and cooperation clauses are intended to facilitate the exchange of information between cedent and reinsurer in the ordinary course of their business dealings with one another.

Access to records clauses generally provide that the reinsurer may examine all books and documents relating to the business transacted under the reinsurance treaty and permit the reinsurer to request copies of insurance policies, claim documents, and the like from the ceding insurer. A typical access to records clause may state as follows:

The reinsurer or its duly accredited representatives shall have the right to inspect the books and records of the reinsured at all reasonable times for the purpose of obtaining information concerning this agreement or the subject matter thereof.

See Hammesfahr at 255.

Cooperation clauses, as the name implies, require the reinsured to cooperate with the reinsurer. *See, e.g. id.* at 258-260. A cooperation clause may require the cedent to report claim developments to the reinsurer automatically:

The Reinsured shall keep the Reinsurer informed of all developments likely to affect the cost of any claims hereunder and undertakes in so far as is reasonably possible to cooperate with the Reinsurer or its representative in the conduct and settlement of such claim or claims and in the estimating of claims reserves.

Id. at 258. Certain other cooperation clauses require the reinsurer to affirmatively invoke the cooperation clause before a cedents reporting obligation is triggered:

When so requested in writing, the Company shall afford the Reinsurer or its representatives an opportunity to be associated with the Company, at the expense of the Reinsurer, in the defense of any claim, suit or proceeding involving this reinsurance, and the Company and the Reinsurer shall cooperate in every respect in the defense of such claim, suit or proceeding.

Id. Thus, both access to records and cooperation clauses recognize that a reinsurer is dependent on information provided to it by the ceding insurer.

Policyholders Demands for Reinsurance Information

The circumstances under which an insurer shares information with its reinsurer during the course of a typical reinsurance relationship are very different from situations in which a policyholder demands that reinsurance information be produced during discovery in a coverage dispute involving the policyholder and insurer. Policyholders demands that the insurer produce reinsurance contracts and communications with its reinsurers, or even policyholder subpoenas to reinsurers are not new. Policyholders routinely argue that an insurers presentation of the facts of a claim to its reinsurer may have bearing on the insurers analysis of coverage for the policyholders claim, and that therefore, the policyholder is entitled to such reinsurance communications.

Most courts that have addressed this issue have concluded that discovery of reinsurance information is not relevant to the issues in a coverage dispute. *See, e.g., Rhone-Poulenc Rorer Inc. v. Home Indem. Co.*, 139 F.R.D. 609, 613 (E.D. Pa. 1991) (denying request for reinsurance information where vague and limited monetary demands are insufficient to bring the reinsurance agreements within the scope of discovery); *Green Constr. Co. v. Kansas Power & Light Co.*, 732 F. Supp. 1550, 1554 (D. Kan. 1990) (finding request for the production of reinsurance file was not relevant to the present litigation and finding that reinsurance materials did not need to be produced); *Leksi, Inc. v. Fed. Ins. Co.*, 129 F.R.D. 99, 106 (D.N.J. 1989) (denying motion to compel reinsurance information because its relevance is very tenuous and is not related to questions of policy interpretation). The decisions finding that reinsurance information is not relevant to issues raised in a coverage dispute involving a policyholder and insurer recognize the fact that a policyholder is not a party to a reinsurance contract and does not have any rights under that reinsurance contract.

Even those courts that have permitted discovery of reinsurance information have typically ruled that the information is only discoverable under limited conditions, such as when the coverage dispute involves a rescission claim, a late notice defense, or lost policy issues. *See, e.g., Medmarc Cas. Ins. Co. v. Arrow Int'l, Inc.*, No. 01-cv-2394, 2002 U.S. Dist. LEXIS 15082, at *10 (E.D. Pa. July 29, 2002) ([C]ourts appear reluctant to permit discovery of communications between cedents and their reinsurers for the purpose of establishing the proper interpretation of an unambiguous insurance policy, but are more willing to permit discovery for other purposes, such as defending against an insurer's effort to rescind a policy; to deny claims for late notice; to reconstruct a lost policy; or as extrinsic evidence of an ambiguous policy provision.); *Turnell Corp. v. U.S. Fid. & Guar. Co.*, No. 4:07-cv-1169, slip op. at 1-2 (E.D. Mo. Oct. 19, 2007) (denying policyholders demand for reinsurance agreement where insurer had not notified the reinsurer of the claim at issue); *United States Fire Ins. Co. v. Bunge North Am.*, No. 05-2192-JWL-DJW, 2007 U.S. Dist. LEXIS 38754, at *27 (D. Kan. May 25, 2007) (finding reinsurance was relevant for purposes of rebutting the Insurers defense of late notice, for purposes of establishing [the policyholders] claims of bad faith and improper handling, and for purposes of reconstructing the terms of any lost policies).

One of the most recent decisions addressing whether or not reinsurance information is discoverable, *Heights at Issaquah Ridge Owners Ass'n v. Steadfast Ins. Co.*, No. C07-1045 RSM, 2007 U.S. Dist. LEXIS 95213 (W.D. Wash. Dec. 13, 2007), drew a distinction between production of the reinsurance contracts themselves which the court found were discoverable and reinsurance communications which the court found to be irrelevant. In *Issaquah*, the policyholder

argued that the reinsurance agreements and communications between insurer and reinsurer were relevant to its bad faith claim. The court explained this distinction as follows:

With respect to reinsurance, the policies themselves are discoverable under rule 26(a)(1)(D). . . . The rule does not, however, extend to communications between insured and reinsurer regarding the reinsurance policies . . . To obtain discovery of those communications, plaintiff must demonstrate their relevance to the bad faith claim.

The court then found that reinsurance matters are rarely relevant to a claim of bad faith and denied the request for production of reinsurance communications. *Id.* See also *Fireman's Fund Ins. Co. v. Superior Court*, 233 Cal. App. 3d 1138, 1141, 286 Cal. Rptr. 50 (1991) (refusing to allow discovery of reinsurance information even though reinsurer was direct party to bad faith action).

As the *Issaquah* decision demonstrates, policyholders demands for production of reinsurance information can be quite broad, and often encompass requests for reinsurance communications between the insurer and its reinsurer in addition to requests for copies of the reinsurance agreements themselves. However, there are a number of steps insurers and reinsurers can take to seek to impose reasonable limits on the production of reinsurance information. For example, if the insurer is faced with a demand for discovery for reinsurance information from the policyholder, it can assert relevancy objections and/or oppose the production of reinsurance information by motion. The reinsurer can make similar arguments, where appropriate, in order to respond to, or quash, a subpoena seeking production of reinsurance information, if the reinsurer is a non-party to the litigation.

As the California Supreme Court recently made clear, [a]n essential feature of reinsurance is that it does *not* alter the terms, conditions or provisions of the contract of liability insurance between the direct liability insurer and its insured (the tort defendant). See *Catholic Mutual Relief Society*, 42 Cal. 4th at 369, 165 P.3d at 160, 64 Cal. Rptr. at 440. Thus, insurers (and reinsurers) may argue that discovery concerning reinsurance agreements or reinsurance communications to which policyholders are not parties will not assist the court in determining the scope of coverage under separate insurance contracts between the insurer and its policyholder that may have different terms and conditions. Moreover, even in those jurisdictions where courts have required production of reinsurance information, insurers should emphasize that many of those decisions do not allow for the whole-sale production of reinsurance information, but rather impose limitations on the scope of reinsurance information produced. Finally, insurers and reinsurers should assert objections based upon the attorney-client privilege and protected work product where appropriate.

Underlying Claimants Demands for Discovery of Reinsurance Information

Policyholders, however, are not the only third parties that may demand production of reinsurance information. Two recent decisions *Kadlec Medical Center v. Lakeview Anesthesia Assocs.*, 527 F.3d 412 (5th Cir. 2008) and *Catholic Mutual Relief Society et al., v. Superior Court of Los Angeles County*,

42 Cal. 4th 358, 165 P.3d 154, 64 Cal. Rptr. 3d 434 (2007) appear to be representative of a growing number of cases in which the issue to be decided is not whether reinsurance information is relevant to the coverage dispute between an insurer and its policyholder, but rather, whether it is relevant in an underlying tort action involving the policyholder.

In *Kadlec Medical Center*, an anesthesiologist under the influence of narcotics improperly anesthetized a patient, causing her to enter into a permanent vegetative state. 527 F.3d at 417. The medical center and its insurer settled a claim brought by the patients family and then brought suit against the anesthesiologists prior employer, Lakeview, alleging that Lakeview had failed to disclose the anesthesiologists drug use in a referral letter it had sent on his behalf. *Id.* at 417-18. At trial, Lakeview sought unsuccessfully to introduce evidence of the fact that the reinsurer had paid a portion of the settled claim. *Id.* at 425. The court on appeal agreed that evidence of the reinsurance payment had been excluded properly under Louisianas collateral source rule, finding that allowing the reinsurance information to be

introduced would effectively penalize [the insurer] for having the foresight to obtain reinsurance. *Id.* at 426. The court further explained that the policy driving the [collateral source] rule is the belief that a tortfeasor should not benefit because a plaintiff had the foresight to obtain insurance. *Id.* at 425. Thus, *Kadlec* presents the not so typical situation in which insurer and policyholder can both agree that reinsurance information is not relevant.

Unlike *Kadlec*, which appears to have been decided primarily on public policy grounds, *Catholic Mutual Relief Society* involved a question of statutory construction. 42 Cal. 4th at 363. In *Catholic Mutual*, victims of alleged abuse sought discovery of financial information from the Church's insurer. *Id.* at 363-64. The insurer, who was not a party to the litigation against the Church, moved to quash the subpoenas. *Id.* at 365. The lower court denied the motion. *Id.* The Court of Appeal concluded that the reinsurance documents and information sought were not discoverable under a California statutory provision authorizing limited discovery of insurance information as a matter of right. *Id.* The California Supreme Court granted review and held that the statute did not authorize pretrial discovery of a nonparty liability insurer's reinsurance agreements for purposes of facilitating a pretrial settlement of underlying tort claims. *Id.* at 374. In so doing, the Court emphasized that reinsurance contracts are irrelevant to underlying tort actions:

Because a contract of reinsurance is defined by statute as a contract of indemnity made for the benefit of the liability insurer, as a general matter it has no relevance in an underlying tort action brought against an insured under the policy of liability insurance. Indeed, the insurance code expressly provides that "[t]he original insured has no interest in a contract of reinsurance." (*Ins. Code*, § 623, italics added.)

Id. at 368. Thus, both *Kadlec* and *Catholic Mutual* demonstrate that insurers and reinsurers have sound arguments available to them in objecting to the relevance of reinsurance information in underlying tort actions, including arguments based upon public policy and/or statute.

Privilege and Work Product Considerations

Given that demands for production of reinsurance information from third parties have become fairly common, insurers and reinsurers also need to be sensitive to privilege and work product issues. In that regard, a recurring issue has been whether disclosure of information in the ordinary course of the reinsurance relationship will be found to operate as a waiver of privilege or work product protection as to third parties if a portion of the information disclosed consists of privileged communications or attorney work product.

The purpose of the attorney-client privilege is to encourage full and frank communication between attorneys and their clients. *Upjohn Co. v. United States*, 449 U.S. 383, 389 (1983). Waiver of attorney-client privilege occurs whenever disclosure of privileged communications to a third party is inconsistent with maintaining confidentiality *per se*. *Bank of America v. Terra Nova Ins. Co.*, 211 F. Supp. 2d 493, 496 (S.D.N.Y. 2002). In turn, the work product privilege protects materials prepared in anticipation of litigation, and affords special consideration to materials that would reveal mental impressions, conclusions, opinions or theories concerning the litigation. *United States v. Adlman*, 134 F.3d 1194, 1195 (2d Cir. 1998) (materials are prepared in anticipation of litigation if they would not have been prepared but for the prospect of litigation).

A number of courts have held that the disclosure of privileged communications to reinsurers, such as pursuant to an access to records clause contained in a reinsurance contract, does not waive privilege or work product protection *per se*. See, e.g., *Gulf Ins. Co. v. Transatlantic Reinsurance Co.*, 788 N.Y.S.2d 44, 45-46 (N.Y. App. Div. 2004) (Access to records provisions in standard reinsurance agreements, no matter how broadly phrased, are not intended to act as a *per se* waiver of the attorney-client or attorney work product privileges); *North River Ins. Co. v. Philadelphia Reinsurance Corp.*, 797 F. Supp. 363, 369 (D.N.J. 1992) (Although a reinsured may contractually be bound to provide its reinsurer with all documents or information in its possession that may be relevant to the underlying claim . . . it does not through a cooperation clause give up wholesale its right to preserve the confidentiality of any consultation it may have with its attorney concerning the underlying claim and its coverage determination.).

Similarly, courts have generally held that a cedent does not waive work-product privilege protection by providing documents to its reinsurers. *See, e.g., Trustmark Ins. Co. v. Gen. & Cologne Life Re of Am.*, No. 00 C 1926, 2000 U.S. Dist. LEXIS 18917, at *12-13 (N.D. Ill. Dec. 19, 2000) (work product protection is waived when disclosure is inconsistent with protecting information from adversaries); *Minn. Sch. Boards Assoc. Ins. Trust v. Employers Ins. Co.* 183 F.R.D. 627, 631-32 (N.D. Ill. 1999) (insurer did not waive work product protection by sharing documents with its reinsurer because waiver of work product occurs only when disclosure . . . to a third party is inconsistent with the maintenance of secrecy from the disclosing party's adversary and insurer always intended and expected that [its communications with its reinsurer] would remain confidential); *United States Fire Ins. Co. v. General Reinsurance Corp.*, No. 88 Civ. 6457 (JFK), 1989 U.S. Dist. LEXIS 8280, at *7 (S.D.N.Y. July 19, 1989) (finding no waiver of work product protection where insurer and its reinsurers remain[ed] in a community of interest regarding this lawsuit).

Courts have tended to be less consistent, however, when a waiver of attorney client privilege is alleged, and their analysis has turned in large part on whether or not a common interest exists between cedent and reinsurer. The common interest doctrine is a limited exception to the rule that privilege is waived when a protected communication is disclosed to a third party. *SR Intl Bus. Ins. Co. v. World Trade Ctr. Props.LLC*, No. 01 Civ. 9291, 2003 U.S. Dist. LEXIS 1106 at *2 (S.D.N.Y. Jan. 29, 2003); *see also Allendale Mut. Ins. Co. v. Bull Data Sys., Inc.*, 152 F.R.D. 132, 139-40 (N.D. Ill. 1993). The common interest doctrine provides that a party does not waive privilege when it shares privileged communications with another party having a mutual legal interest against a common adversary. *SR Intl*, 2003 U.S. Dist. LEXIS 1106 at *2; *Allendale*, 152 F.R.D. at 140.

Generally speaking, the mere fact that a reinsurance relationship exists between the cedent and its reinsurer, standing alone, is not enough for a common interest to exist. *See, e.g., Reliance Ins. Co. vs. Am. Lintex Corp.*, No. 00 Civ. 5568 WHP KNF, 2001 U.S. Dist. LEXIS 7140 (S.D.N.Y. May 31, 2001). *See also Aetna Cas. & Sur. Co. v. Certain Underwriters at Lloyds London*, 676 N.Y.S.2d 727 (Sup. Ct. N.Y. 1998). As the *Aetna* Court explained:

any common interest privilege must be limited to communication between counsel and parties with respect to legal advice in pending or reasonably anticipated litigation in which the joint consulting parties have a common legal interest. . . . [It] may not be used to protect communications that are business oriented or are of a personal nature.

Applying this analysis, a number of courts have held that insurers and reinsurers do share common interests sufficient to protect the attorney-client privilege. *See, e.g., Great Am. Surplus Lines Ins. Co. v. Ace Oil Co.*, 120 F.R.D. 533 (E.D. Cal. 1988) (rejecting policyholders argument that privilege had been waived when the insurer transmitted certain privileged documents to its reinsurer and finding that under California law, reinsurers business interest in the claim was sufficient to prevent waiver); *Hartford Steam Boiler Inspection & Ins. Co. v. Stauffer Chem. Co.*, No. 701223, 1991 Conn. Super. LEXIS 2527, at *4-5 (Conn. Super. Ct. Nov. 4, 1991). As the *Stauffer* Court explained in denying a motion to compel privileged reinsurance communications:

The Insureds contend that [the insurer] has waived the attorney-client privilege because it disclosed the communications to a third party. The Court disagrees. The legal and economic interest of [the insurer] and [the reinsurer] in the EIL insurance claims and lawsuits are inextricably linked by the reinsurance treaty. The fact that [the reinsurer] is not a party defendant in those lawsuits is of little significance because [the reinsurer] will automatically share in any liability suffered by [the insurer] . . . The Court holds, under all of these circumstances, that the privilege is not waived but rather continues to protect the confidentiality of the communications.

Id., at *4. *But see North River Ins. Co. v. Columbia Cas. Co.*, No. 90 Civ 2518, 1995 U.S. Dist. LEXIS 53, at *8 (S.D.N.Y. Jan. 5, 1995) (addressing dispute between cedent and reinsurer).

North River involved a dispute between a cedent and its reinsurer in which North River sued to recover defense costs it alleged were due to it under a reinsurance contract. *Id.*, at *1. When Columbia Casualty, the reinsurer, requested that North River produce certain alternative dispute resolution (ADR) documents and other memoranda, North River moved for a protective order, arguing that the various documents were immune from disclosure under the

attorney-client privilege and work product doctrine. *Id.*, at *3. The reinsurer argued that the ADR documents should be produced because it and North River shared a common interest. *Id.* In rejecting that argument, the court explained that the interests of the ceding insurer and the reinsurer may be antagonistic in some respects and compatible in others, and that therefore, a common interest cannot be assumed merely on the basis of the status of the parties. *Id.*, at *12. In reaching this decision regarding the ADR documents, the court found the following facts persuasive:

[the parties] were not represented by the same counsel, and Columbia Casualty did not contribute to North River's legal expenses nor exercise any control over its conduct of the proceedings. Nor is there any evidence that the two coordinated litigation strategy in any way. While their commercial interests coincided to some extent, their legal interests sometimes diverged, as demonstrated by the instant litigation. In short, Columbia Casualty's only argument for finding a common interest is that the two parties stand in the relation of reinsurer to ceding insurer, and that is insufficient.

Id. at *15. However, the court found that North River had waived the privilege with respect to the other memoranda since it had provided them to another third party. The court explained, [h]aving waived the privilege as to one third-party, North River cannot now resurrect it as a barrier to discovery by Columbia Casualty. *Id.* at *23.

These various decisions implicitly recognize that there is an inherent tension between the insurers obligation to provide information to its reinsurer under the terms of the reinsurance agreement on the one hand, and on the other, its need to protect privileged communications from disclosure to third parties. While the extent to which an insurer will share information with its reinsurer depends on the terms of the applicable reinsurance contract and on the facts of a particular case, there are some general considerations that insurers should keep in mind with respect to privilege issues.

First, because courts have reached different conclusions as to whether an insurers sharing of privileged communications with its reinsurer will waive the privilege, it is important to assess the potentially applicable case law regarding waiver of privilege. In that regard, it may be advisable for the insurer to discuss waiver concerns with in-house or outside counsel.

Second, insurers should weigh the pros and cons of entering into a confidentiality agreement with their reinsurer(s). The typical confidentiality agreement may require all information exchanged between the parties to the agreement, including attorney client communications and work product, to be kept confidential, subject to specific exceptions-such as disclosures to courts, auditors, and federal and state regulators-or where the information is already publicly available. While it has become common practice for insurers and reinsurers to enter into confidentiality agreements in an effort to protect their communications from disclosure to third parties, such agreements generally are only binding on the parties to that agreement, and not on third parties. In fact, at least one court has expressed a reluctance to limit discovery of reinsurance information on the grounds that reinsurance information is confidential. *See, e.g., U.S. Fire Ins. Co. v. Bunge North America, Inc.*, 244 F.R.D. 638 (D. Kan. 2007) (affirming order requiring production of reinsurance materials and finding *inter alia* that [t]he Insurers have not shown how an agreement's confidentiality may overcome Rule 26(a)(1)(D)). Thus, it may be useful for the insurer to consult with counsel prior to entering into a confidentiality agreement.

Conclusion

It is highly likely that courts will continue to address demands for production of reinsurance information from policyholders and other third party strangers to the reinsurance contract. In responding to these demands, insurers and reinsurers should remember that they have available a number of arguments to seek to impose appropriate limitations on any such discovery.

Godes on Princeton University v. National Union Fire Insurance Co.

2008 Emerging Issues 2564

Scott N. Godes on Trustees of Princeton University v. National Union Fire Insurance Co. of Pittsburgh, Pa.

By Scott N. Godes

July 17, 2008

SUMMARY: In *Trustees of Princeton University v. National Union Fire Insurance Co. of Pittsburgh, Pa.*, the New York Supreme Court and the Appellate Division, First Department, rejected National Union and AIGs arguments that under a D&O policy, the insured versus insured exclusion bars coverage for all derivative-type claims and that a sublimit applies to all costs relating to an occurrence that involved mixed (covered and non-covered claims).

In *Trustees of Princeton University v. National Union Fire Insurance Co. of Pittsburgh, Pa.*, 15 Misc. 3d 1118A; 839 N.Y.S.2d 437; 2007 N.Y. Misc. LEXIS 2350; 237 N.Y.L.J. 90 (N.Y. Sup. Ct. Apr. 10, 2007), *affd*, 2008 N.Y. App. Div. LEXIS 4849 (App. Dept 1st Div. June 5, 2008) (*Trustees of Princeton*), an insurance coverage dispute, AIG, through its insurer National Union, tried to escape from providing directors and officers insurance coverage for direct and derivative claims under its D&O policy.

National Union and AIG relied on two primary arguments in its efforts to refuse to pay. First, they argued that the insured versus insured exclusion bars coverage for all derivative-type claims. *See* 2007 N.Y. Misc. LEXIS 2350, at *4. Second, they argued that a sublimit of coverage, which offered 1/3 the aggregate limit of the full policy limit, applies to all costs relating to an occurrence that involved mixed (covered and non-covered) claims. *See id.* at *4-5. The court, in a decision that was affirmed by the Appellate Division, First Department, rejected National Unions arguments. n1 This commentary, written by Scott N. Godes, counsel at Dickstein Shapiro LLP, who represents policyholders in insurance coverage disputes, discusses the implications of the *Trustees of Princeton* decision for policyholders facing coverage disputes under directors and officers insurance policies. The views and opinions expressed in this article are solely those of the author and not necessarily those of his current or former law firms and/or clients.

The Court Decided Properly That the Insured Versus Insured Exclusion Did Not Preclude Coverage. The underlying dispute involved direct and derivative claims. *Id.* at *3. National Union and AIG argued that the policy

provided no coverage for the derivative claims, which were brought against the officers (who were individual insureds under the policy) on behalf of the organization (which was the named insured), due to the insured versus insured exclusion. See *id.* at *3-4.

The so-called insured versus insured exclusion in the relevant policy stated:

The Insurer shall not be liable to make any payment for Loss in connection with a Claim made against an Insured...

(f) which is brought by or on behalf of the Organization against any Individual Insured; provided however, this exclusion shall not apply to any derivative Claim made on behalf of the Organization by a member or any other such representative party if such action is brought and maintained independently of and without the solicitation of or assistance of, or active participation of or intervention of any Individual Insured or the Organization or any Affiliate thereof.

Id. at *4.

The trial court denied National Union and AIGs argument. Had the court adopted the insurers position, it could have gutted D&O coverage for derivative claims in general, potentially wiping out unfathomable amounts of insurance protection. In support of its ruling, the trial court noted that [t]he purpose of the insured versus insured exclusion is to prevent collusive lawsuits that corporations bring against their officers and directors to recoup consequences of business mistakes, effectively transforming liability insurance into business loss insurance. *Id.* at *5 (citing *Bodewes v. Ulico Cas. Co.*, 336 F. Supp. 2d 263, 272-277 (W.D.N.Y. 2004)). The trial court refused to extend the exclusion as broadly as National Union and AIG requested that is, to exclude coverage for all claims that it deemed to be derivative in nature. *Id.* at *6.

The trial courts decision was eminently correct in light of the second argument that National Union and AIG advanced: that *all* costs arising from an occurrence some of which were subject to policy limitations and some not are subject to the policy limitations. Had the trial court accepted National Union and AIGs arguments in full, they likely would have asserted in other cases that coverage is excluded for *all* claims that involve *any* underlying derivative-based causes of action.

The Appellate Division affirmed the trial court on this point, reject[ing] the contention that the policy's insured versus insured exclusion applies to claims brought against the insured entities by individual insureds acting in their individual capacities. 2008 N.Y. App. Div. LEXIS 4849, at *2.

The trial court also explained that its ruling was supported by the rule that unless National Union and AIG could determine which costs were due specifically to non-covered claims, they had to pay defense costs in full, and could not apportion claims at the expense of the insureds defense of the underlying action. 2007 N.Y. Misc. LEXIS 2350 at *6. This is in line with New York law that, to defeat its duty to defend, an insurer has a heavy burden of showing that no claim is possibly covered. See, e.g., *Frontier Insulation Contractors, Inc. v. Merchants Mut. Ins. Co.*, 91 N.Y.2d 169, 175 (1997); *Tortso v. MetLife Auto & Home Ins. Co.*, 21 A.D.3d 27, 278, 799 N.Y.S.2d 506, 508 (App. Div. 1st Dept 2005).

The Court Decided Properly That the \$5 Million Sublimit Did Not Apply to All Claims. National Union n2 also sought to limit its obligations by arguing that a sublimit of coverage applied. The policy had a \$15 million aggregate limit; a separate sublimit, however, provided that for Claims that involve multiple allegations, the \$ 5,000,000 sublimit will only apply to the portion of the Claim which is related to the equitable or injunctive relief allegations. *Trustees of Princeton*, 2007 N.Y. Misc. LEXIS 2350, at *7.

National Union argued that the limitation was so expansive that it applied to all defense costs, without an allocation, because the claims in the underlying action are equitable in nature. *Id.* at *6. National Unions position would have subjected all costs to the sublimit, rather than allocating certain costs that fell within the \$5 million sublimit, and

paying the rest of the costs out of the full \$15 million overall limit.

Again, the trial court rejected National Union and AIGs position. The court struck a middle ground, holding that AIG could allocate between claims seeking equitable relief and claims seeking monetary relief if apportionment is feasible. *Id.* at *7. On appeal, the Appellate Division, First Department, rejected National Unions similar arguments: that the \$5 million sublimit for claims that seek equitable relief applies also to claims arising from the same underlying occurrence that seek legal relief based on tort and contract law principles. 2008 N.Y. App. Div. LEXIS 4849, at *2. The appellate court explained that National Unions argument relie[d] on a strained construction of the terms of the policy. *Id.*

National Union and AIGs arguments were wrong. At a minimum, if there is a duty to defend any part of a claim, an insurer generally is obligated to defend the entire claim. *See, e.g., Frontier Insulation Contractors, Inc.*, 91 N.Y. at 177-78. Moreover, because National Union and AIG attempted to apply a sublimit a limitation on coverage National Union and AIG bore the burden of proving that the sublimit applied. *See, e.g., Gaetan v. Firemans Ins. Co.*, 264 A.D.2d 806, 807, 695 N.Y.S.2d 608, 609 (2d Dept 1999) (insurer bore the burden of proving that lower coverage limit for a certain type of claim applied); *accord, e.g., Am. Employers Ins. Co. v. Eagle, Inc.*, No. Civ. A. 03-0048, slip op. at 2-3, available at 18-22 Mealey's Litig. Rep. Asb. 19 (2003) (E.D. La. Nov. 12, 2003) (Plaintiffs [insurers] must prove that the products/completed operations aggregate limits have been exhausted by their proper allocation of each and every claim.), *affd on other grounds*, 122 F. Appx 700, 2004 U.S. App. LEXIS 25014 (5th Cir. Dec. 6, 2004).

The Insurer Had to Advance Defense Costs, Without an Allocation, Until the Underlying Litigation Was Completed. A final significant point in the Appellate Divisions decision is that National Union had to advance defense costs, in full, until the underlying litigation was resolved. *See Trustees of Princeton*, 2008 N.Y. App. Div. LEXIS 4849, at *2. That decision is critical, as it allows the insured to recover its defense costs, without being forced to allocate between covered costs and those that the insurer believes are not covered. Indeed, it is not appropriate for a court to address the question of allocation of defense expenses while the underlying claims are pending. *See id.*

Conclusion. The *Trustees of Princeton* decisions correctly rejected National Union and AIGs attempts to have limited exclusions and limitations apply to coverage and defense costs for all claims, without, at a minimum, an allocation to determine whether the claims were covered or not. Moreover, the appellate court explained that the insured may recover its defense costs, in full, without an allocation between covered and uncovered claims, while the underlying actions are pending. As AIG is one of the largest insurers issuing directors and officers insurance (often through its insurer, National Union), it is not unlikely that National Union and AIG will raise similar arguments in other cases, and these decisions are instructive as to why such arguments should be rejected.

Return to Text

n1 . Unlike the trial court, the Appellate Division, First Department, attributed arguments to National Union only.

n2

[2]. The trial court attributed this argument to National Union only.

ABOUT THE AUTHOR(S):

Scott N. Godes is an attorney in the Washington, DC office of Dickstein Shapiro LLP. Mr. Godes represents corporate policyholders in insurance coverage disputes. He is an experienced trial lawyer who has litigated complex insurance coverage disputes, including class actions, in state, federal, bankruptcy, and appellate courts, as well as in commercial arbitrations. Mr. Godes has a wide-ranging coverage practice, pursuing insurance in disputes relating to directors and officers claims for alleged securities violations; allegations of damaged computer data, hardware, and software; mass tort liabilities, including asbestos; environmental property damage; flood claims; allegations of improper alcohol advertising; and class actions. Recently, Mr. Godes was lead counsel in *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, a landmark case decided by the New York Supreme Court that ruled there are millions of dollars of coverage for thousands of asbestos claims, even after the insurers claimed to have paid their full aggregate limits of coverage. Mr. Godes received his B.A., cum laude, from Middlebury College, and his J.D., with honors, from the George Washington University Law School.

Bullivant Houser Bailey PC on Goddard v. Farmers Ins. Co. of Oregon: Oregon Supreme Courts Most Recent Interpretation of the Constitutional Limits on Punitive Damages Awards

By Nicholas L. Dazer

July 17, 2008

SUMMARY: In cases that do not involve personal injuries and involve only economic damages, the Oregon Supreme Court in *Goddard* holds that a punitive damages award is unconstitutionally excessive if it exceeds four times the amount of compensatory damages.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Dazer, Nicholas L. *Goddard v. Farmers Ins. Co. of Oregon*: Oregon Supreme Courts Most Recent Interpretation of the Constitutional Limits on Punitive Damages Awards. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

On March 6, 2008, the Oregon Supreme Court released another case examining the constitutionality of a large punitive damages award. In *Goddard v. Farmers Ins. Co. of Oregon*, 344 Or. 232, 179 P.3d 645 (2008), the court holds that the jury's approximately \$20 million award was unconstitutionally excessive. In the portion of the opinion that makes new law in Oregon, the court holds that the maximum constitutional award in the case would be an amount four times the amount of the compensatory damages award. That analysis is interesting because it marks the first time the court has specifically articulated how much is constitutional in a case where the amount awarded by the jury was deemed unconstitutional. The court's decision is the most recent opinion in a long-running appeal arising from an auto accident 20 years ago.

In the underlying case, Farmers insured, John Munson, was sued for causing an automobile accident that killed Marc Goddard, while Munson was under the influence of alcohol. Farmers undertook Munson's defense but failed to settle within policy limits. A jury returned a verdict of \$863,274 against Munson, who then assigned his bad faith claim against Farmers for unreasonably failing to settle within policy limits to the plaintiff. That action resulted in a verdict against Farmers for approximately \$1.2 million in compensatory damages and approximately \$20 million in punitive damages.

The Court of Appeals reduced the punitive damages award, and then the Oregon Supreme Court took review to analyze the constitutionality of the punitive damages.

In a unanimous opinion, the court holds that a punitive damages award of four times the amount of compensatory damages is the maximum award permitted by the constitution under the circumstances of this case. Most of the decision is a revisitation of the familiar rules and principles from *BMW of North America, Inc. v. Gore*, 517 US 559 (1996), and *State Farm Mut. Ins. Co. v. Campbell*, 538 US 408 (2003). Applying the "guideposts" from those cases, the court concluded that the \$20 million award was unconstitutional. Then the court turns to the next question: If \$20 million is too much, what is a permissible number?

The court holds that the ratio guidepost is the most helpful in making that determination, and notes that the US Supreme Court has occasionally opined that a four-to-one ratio between compensatory damages and punitive damages is at the outer boundary of constitutionality. The court also notes that the US Supreme Court has indicated that cases involving only economic loss do not warrant punitive damages as substantial as cases involving physical harm. Applying these and other considerations, the court holds that the maximum permissible punitive damages award is four times the compensatory award.

The Supreme Court affirms as modified the Court of Appeals, vacates the judgment of the trial court, and grants defendants motion for new trial on punitive damages, unless plaintiff agrees to remittitur of punitive damages to four times the compensatory award.

Practice Tip. The practitioner should be aware that, under Oregon law, the prevailing party receives 40% of any award for punitive damages, and 60% is paid to the Criminal Injuries Compensation Account of the Department of Justice Crime Victims Assistance Section, pursuant to ORS 31.735.

Practice Tip. While the Oregon Supreme Court has not yet established a firm limit on punitive damages in cases involving physical harm, the Oregon Court of Appeals has found a seven to one compensatory to punitive damages ratio constitutionally permissible in a case brought by an injured patient against a physician who prescribed theophylline-based medication and the drugs manufacturer in *Bocci v. Key Pharmaceuticals, Inc.*, 190 Or. App. 407, 79 P.3d 908 (2003).

For information on the due process limitations imposed by the Fourteenth Amendment, see Constitutional Law §778 (LexisNexis Matthew Bender).

ABOUT THE AUTHOR(S):

Nicholas L. Dazer is a shareholder in the Portland, Oregon office of Bullivant Houser Bailey PC. He is a trial attorney who focuses much of his practice on multi-state insurance coverage disputes, and representing both plaintiffs and defendants in complex commercial matters. His significant litigation experience includes a wide range of cases involving bad faith, first party coverage, reinsurance, construction defect, arson, business interruption, fraudulent claims, Fair Credit Reporting Act, and complex business litigation. Mr. Dazer has tried a number of jury trials to verdict and has successfully argued in the Oregon Supreme Court. Mr. Dazer's most recent victory was a defense verdict for a national trucking company in a multi-million dollar catastrophic personal injury case. Mr. Dazer serves on the firm's hiring committee, the firm's e-discovery task force, and is past editor of Bullivant Insurance Coverage News.

Mark Vespole on Villa v. Short

2008 Emerging Issues 2571

Mark Vespole on Villa v. Short: Has the New Jersey Supreme Court Swung to a More Insurer-Friendly Judicial Philosophy?

By Mark R. Vespole

July 17, 2008

SUMMARY: By virtue of its decision and opinion in *Villa v. Short*, decided on June 5, 2008, the New Jersey Supreme Court has given insurers reason to believe that the pendulum may be swinging in their favor. In upholding a disclaimer of coverage based upon its rather conservative analysis of the frequently-litigated intentional act exclusion, the Court may have presaged a change in judicial philosophy regarding the interpretation of insurance policies.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Vespole, Mark. *Villa v. Short: Has the New Jersey Supreme Court Swung to a More Insurer-Friendly Judicial Philosophy?* LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

In *Villa v. Short*, 195 N.J. 15 (N.J. 2008), the Court considered whether a homeowner's insurance policy excludes coverage for all insureds if any insured under the policy commits an intentional or criminal act. The insureds, Joseph and Elsie Short, had homeowners' insurance with Allstate. The couple had two children, an older, married daughter and a son, John, who was diagnosed as mildly mentally retarded when he was six years old. John received special education and vocational training which enabled him to obtain employment at a nursing home. John lived with his parents as a young adult and relied upon them to help manage the money he earned.

On various occasions starting in 1983 when John was 21, he began sexually molesting his five-year-old niece. This occurred on family vacations and at the Shorts' home during a span of approximately five years. In 1990, the victim advised her mother of the abuse, which was acknowledged by John. John's parents knew that their son was familiar with sex, because they were with him when he purchased sexually explicit magazines. John's niece alleged that he showed her those magazines.

Just before her 20th birthday, the abused niece filed a complaint against her uncle for sexual molestation and her grandparents for negligent supervision of their son in failing to prevent the sexual assaults. Allstate disclaimed coverage under its homeowners' policies based upon exclusions for intentional or criminal acts. A declaratory judgment lawsuit by the policyholders seeking coverage ensued.

Because the sexual molestation occurred over several years, there were two different policy forms used by Allstate.

The two policy provisions at issue were the intentional act exclusion, which was the same in both policies, and a severability clause, which was different. The intentional act exclusion of the policies provided:

We do not cover any bodily injury or property damage which may reasonably be expected to result from the intentional or criminal acts of an insured person or which is in fact intended by an insured person.

The severability or "Our Limits of Liability" clause of the earlier policies began with the sentence:

This insurance applies separately to each insured person.

The later version of Allstate's policies removed this first sentence from the severability clause and added "joint obligation" language, whereby the acts or omissions of one insured person under the policy are deemed to be binding upon another insured person.

The Appellate Division held there was no coverage because the molester was "an insured person" under the policy, and losses arose from his intentional or criminal acts. The grandparents argued that the policy was ambiguous because the term "an insured" could be interpreted to mean "each" insured, so that coverage should only be denied for the insured committing the intentional act.

Against this backdrop, the Court addressed three principal issues:

1. Whether or not the molester could be charged with intentional conduct in light of his mental disability.
2. Whether or not the intentional acts exclusion clearly excludes coverage for all insureds based upon the intentional acts of one insured.
3. Whether based upon the changes in the severability clauses of the policies, the conduct of each insured [the victims uncle and grandparents] is assessed separately for the purpose of the intentional act exclusion.

Conclusion

1. In cases involving undisputed criminal acts which require proof of intent, intent is usually inferred unless the wrongdoer is incapable of distinguishing between right and wrong because of mental illness or incapacity. *Ruvolo v. American Casualty Co.*, 39 N. J. at 497 (1963). However, in *Villa*, the Appellate Division found and the Supreme Court apparently agreed that, based upon the limited record regarding John's mild mental retardation, it was impossible to determine whether or not his level of reduced mental capacity "would render the [intentional acts] exclusion ineffective." It is entirely possible that the policyholder's counsel knew more about John's mental condition than was found in the record, which may have weighed against the argument that his diminished mental capacity made him incapable of forming the requisite intent, thereby vitiating the exclusion. However, policyholders with a diminished mental capacity seeking coverage for an intentional act which would otherwise be excluded under the terms of the policy would probably be well served by retaining a medical expert to provide an opinion as to whether their mental incapacity impacts the ability to act intentionally. If a policyholder is incapable of acting intentionally, the exclusion will not apply, and there will be coverage.

2. In upholding Allstate's disclaimer of coverage, the Court held that the term "an insured" in the intentional acts exclusion was not ambiguous. In doing so, the Court relied upon a similar interpretation in two Appellate Division cases, *Argent v. Brady*, 386 N. J. Super. at 349-50 (App. Div. 2006) and *J.C. v. N. B.*, 335 N. J. Super. at 506-509 (App. Div. 2000) cert. denied, 168 N. J. 294 (2001). The Court found that while the use of the term "the insured" is inherently ambiguous because "the" is a definite article, the use of the indefinite article "an" clearly equates "an insured" with "any insured. Consequently, if an insured or any insured commits an intentional or criminal act that falls within the exclusion, the exclusion will apply to all insureds under the policy.

Given that the Supreme Court was merely following two well reasoned Appellate Division decisions, which represent the majority position nationwide, perhaps the Court's opinion is not particularly startling to some. However, the Court's opinion was by a 4-2 margin, with Justice Albin, who unequivocally would have sided with the dissent, not participating. Therefore, it is clear that the Court was fairly closely divided on this insurance coverage issue, a conclusion aptly illustrated by Justice Long's cogent dissent.

Justice Long cited to the Court's own opinions in *Auto Lenders Acceptance Corp. v. Gentillini Ford, Inc.*, 181 N. J. at 270 (2004) and *Zacarias v. Allstate In. Co.* 168 N. J. at 595 (2001) for the proposition that if language in an insurance policy is open to more than one interpretation or could have been stated more precisely, the Court should choose the interpretation that comports with the reasonable expectations of the insured. Justice Long points out that both the United States Court of Appeals for the Fifth Circuit and the Kansas Supreme Court have held that the phrase "an insured" in a liability insurance policy is inherently ambiguous. Because the term "an insured" is capable of more than one reasonable interpretation, Justice Long concluded that the plaintiffs insured grandparents plainly had a reasonable expectation that they would be covered for their negligent supervision of their son.

The phrase "an insured" is used in numerous provisions of a typical commercial general liability insurance policy. Based upon the majority opinion of Court that "an insured" essentially means "any insured", that interpretation could be controlling whenever the policy refers to "an insured".

3. The policyholders argued that notwithstanding the interpretation of "an insured", that phrase nonetheless became ambiguous when read in conjunction with the first sentence of the severability clause of the earlier policy form. The Court's analysis of the severability clause begins by pointing out that it is situated in a different part of the policy than the coverages and exclusions. Even though the severability clause starts with the premise that the insurance applies separately to each insured, the Court held that the first sentence must be interpreted in the context of the entire clause. Because the remainder of the severability clause deals with limits of liability, the Court interpreted the first sentence to mean simply that each insured is entitled to coverage up to the limits of the policy. The Court further held that the severability clause did not in any way impact the "unambiguous exclusion for intentional or criminal acts of an insured."

In her dissent, Justice Long interpreted the severability clause to mean that each insured under the policy is entitled to his own separate coverage determination. Justice Long viewed Allstate's removal of the "separation" language and addition of the joint obligations language in its later policies as a tacit acknowledgment that earlier policy was ambiguous.

It will probably take a few more insurance coverage opinions from the New Jersey Supreme Court to determine whether this subtle shift in judicial philosophy is simply a one or two case aberration or the beginning of a trend. Stay tuned.

ABOUT THE AUTHOR(S):

Mark R. Vespole is a partner in the Newark, New Jersey office of Tressler, Soderstrom, Maloney & Priess, a national litigation and insurance services law firm. Having tried and litigated numerous commercial, insurance and securities matters in state and federal courts and before arbitration panels throughout the country, Mr. Vespole's practice includes insurance coverage and defense litigation arising out of first-party and third-party property and casualty, life and health, professional liability, employment practices and directors and officers liability policies, as well as corporate raiding, and securities arbitrations and compliance matters for broker-dealers and registered representatives.

Mr. Vespole has written and lectured extensively for a variety of insurance and securities trade publications and organizations covering a broad range of topics, including insurance coverage, bad faith, corporate raiding in the securities and life insurance industries, noncompete agreements, replacements of life insurance policies, contestability clauses, product liability and mold litigation.

Mr. Vespole is an Honors graduate of the University of Notre Dame and Seton Hall Law School. He is admitted to practice in New Jersey, the United States Supreme Court, the United States Court of Appeals for the Second Circuit and Third Circuit, United States District Court of New Jersey and the United States District Court for the Southern, Eastern, Western and Northern Districts of New York. He has been certified by the New Jersey Supreme Court as a Civil Trial Attorney since 1988.

Wiley Rein LLP on New York Insurance Late Notice Legislation

2008 Emerging Issues 2533

Wiley Rein LLP on New Yorks Longstanding Late Notice Insurance Law Facing Imminent Change

By Laura A. Foggan and Benjamin Theisman

July 16, 2008

SUMMARY: New York's longstanding "no prejudice" rule, strictly enforcing the notice conditions of liability policies, faces a major change. The New York legislature has sent a bill to the Governor that would modify New York's late notice law.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: On Wednesday, July 23, 2008, New York Governor David A. Paterson signed legislation changing New Yorks longstanding no prejudice rule, which for decades has strictly enforced the notice conditions of liability policies. The law takes effect in 180 days and will govern policies issued or delivered in New York, and any action maintained under such a policy, after its effective date. By amending NY CLS Ins § 3420, the new law will prohibit a liability insurer from denying coverage based on the policyholders failure to provide timely notice unless the insurer has been prejudiced by the late notice. Additionally, under certain conditions, the law will permit claimants in suits arising out of death or personal injury to maintain an action directly against an insurer in which the sole question is the insurers disclaimer or denial based on the failure to provide timely notice.

New Yorks consistent adherence to the no prejudice rule has been targeted by policyholders and claimants alike, in an effort to expand the available coverage and circumvent one of the strongest coverage defenses available to insurers in New York. This is the second time in the last two years that the New York legislature has sought to change New Yorks late notice jurisprudence and permit certain direct actions by claimants against insurers. Moreover, for many years, policyholder advocates have fought strenuously (although unsuccessfully) to overturn the no prejudice rule in the courts.

Recognizing that insurance policies are contracts that must be applied according to their plain language, New York courts historically applied liability policies plain and unambiguous notice provisions. Indeed, New York courts found that notice provisions are matters of vital concern and allow an insurer to protect the interests of the policyholder and the public, as well as itself. *Unigard Sec. Ins. Co., Inc. v. North River Ins. Co.*, 79 N.Y.2d at 583 (1992). Longstanding New York law has, with minor exceptions, applied notice requirements in liability policies without reference to a prejudice doctrine. This result was confirmed by the New York Court of Appeals as recently as 2005:

A liability insurer, which has a duty to indemnify and often also to defend, requires timely notice of lawsuit in order

to be able to take an active, early role in the litigation process and in any settlement discussions and to set adequate reserves. Late notice of lawsuit in the liability insurance context is so likely to be prejudicial to these concerns as to justify the application of the no prejudice rule.

Argo Corp. v. Greater New York Mutual Insurance Co., 4 N.Y.3d at 340 (2005).

Similarly, for decades New York courts have refused to allow a claimant to pursue an insurer prior to obtaining a judgment against the policyholder. See *Coster v. Coster*, 289 N.Y. at 443 (1943) (Under our law, the mere fact that the defendant was to be indemnified for damages awarded against him for accidental injury to a person establishes no right of action in favor of the latter.); *McKenzie v. N.J. Transit Rail Operations, Inc.*, 772 F. Supp. at 149 (S.D.N.Y. 1991) (New York law bars suit by a stranger to an insurance contract who has not secured a judgment against the insured).

This settled precedent is altered under the new law, which passed the legislature quickly at the end of the legislative session, being introduced on June 18, 2008 and passed on June 23, 2008. The law does contain some limitations. It will have prospective effect only, providing explicitly that it shall take effect on the one hundred eightieth day after it shall have become a law, and shall apply to policies issued or delivered in this state on or after such date and to any action maintained under such a policy. Additionally, the law only applies to insurance policies providing coverage against liability for injury to person . . . or against liability for injury to, or destruction of, property. . . . Further, the law does not change New York law with respect to notice under claims-made policies, specifying that these policies can require that a claim be made during the policy period or any extended reporting period.

Where it is applicable, the law signals a sea change in the approach to late notice under New York law. Under the provisions of the law, under newly-issued policies, a liability insurer cannot deny coverage for late notice unless the failure to provide timely notice has prejudiced the insurer. . . . The law further states that the insurers rights shall not be deemed prejudiced unless the late notice materially impairs the ability of the insurer to investigate or defend the claim. Moreover, if notice is less than two years late, the insurer will bear the burden of establishing prejudice. Only if notice is more than two years late will the policyholder bear the burden of showing the absence of prejudice, such prejudice being presumed. However, an irrebuttable presumption of prejudice applies if, prior to notice, the insureds liability has been determined by a court ruling or arbitration or if the insured resolved the claim by settlement or compromise.

As to the direct action right, the law specifies that with respect to a claim arising out of death or bodily injury . . . if the insurer disclaims liability or denies coverage based upon the failure to provide timely notice, then the injured person or other claimant may maintain an action directly against such insurer, in which the sole question is the insurers disclaimer or denial based on the failure to provide timely notice. . . . The law does provide that no such cause of action is permitted if the insurer or policyholder initiates a declaratory judgment action naming the injured person or claimant as a party within 60 days following a disclaimer based on late notice. The purpose of the new direct action provision is to allow a claimant to determine whether coverage may be available for a personal injury or wrongful death suit before pursuing what may be protracted litigation against the insured to establish liability and damages. As noted, prior New York law allowed a direct action against the insurer only if a claimant obtained a judgment against the policyholder which remained unsatisfied after 30 days.

A further provision in the law creates a process under which, upon written request with sufficient identifying information from a claimant, an insurer must within 60 days confirm whether the policyholder had a liability policy in effect on the date of the alleged occurrence and specify the limits of liability under any such policy. This provision appears to be geared toward enabling a claimant to determine whether there is a basis for a coverage claim and direct action against the insurer.

Proponents of the new law argued that New York has been in the minority of the states in requiring no showing of prejudice for an insurer to deny coverage based on late notice and that this permitted insurers to deny coverage based on what they deemed an inconsequential technicality while collecting billions of dollars annually in premiums. However, insurance policy provisions that require policyholders to provide timely notice both of any lawsuit and initial notice of

the occurrence or accident upon which the suit is based are fundamental to the efficient and predictable administration of insurance contracts. Prompt notice provides the insurer with an opportunity to investigate both coverage and the accident to prepare for potential claims, set up a defense where appropriate, engage in early settlement negotiations, to set appropriate premiums and establish adequate reserves, which benefits accrue to the policyholder and the insurer alike.

Both the insurer and the insured have an interest in an early investigation before memories fade and conditions change, and/or evidence is lost. It is imperative that an insurer is provided with notice while evidence is still available in order for the insurer to investigate both coverage and the accident to prepare for potential claims, set up a defense where appropriate, and detect and prevent potential fraud. Prompt notice of a claim also facilitates the opportunity to settle a claim early, which may limit the insurer's exposure and may protect the insured from a judgment in excess of the policy coverage.

In addition to prompt notice of the "occurrence" or claim, notice of suit is critical because it informs the insurance carrier of the existence of an actual court proceeding. The existence of a suit increases the probability of exposure for the insurer and may prompt further scrutiny and investigation. Until a complaint is actually filed, an insurer will not be able to know the identity of all of the plaintiffs or whether there will be any other defendants, nor to know the causes of action being pursued or the amount of alleged damages. All of this information is critical for assessing the strength of the case against the policyholder, the potential exposure for the insurer and even whether or not coverage is available under the policy. Moreover, under New York and many other states law, an insurer's duty to defend generally arises when the allegations in a complaint state a cause of action that gives rise to the reasonable possibility of recovery under the policy. An insurer can only make an informed decision regarding whether the four corners of the complaint potentially give rise to a covered claim if it is able to review the complaint. In order to do so, the insurer must receive timely notice of the complaint from its insured.

The New York law will remove incentives for policyholders to provide prompt notice, thereby undermining the important goals served by strict enforcement of notice requirements. Further, there is the inherent difficulty in proving prejudice from late notice. It is hard to show what the outcome would have been had timely notice been given or the extent to which proper notice would have had an impact on the insurer from whom coverage is sought. It is, for instance, difficult or impossible to prove the prejudice from not locating a witness who could have been found if timely notice were given. Similarly, it is difficult to prove how much lower a settlement might have been if the insurer had been able to negotiate a settlement immediately after the case was filed. Although this uncertainty is the result of the failure of the insured to meet notice requirements, the New York law places the burden of proving prejudice on the insurer if notice is given within two years of the time required under the policy. This allocation of the burden of proof undercuts important policy considerations underlying notice requirements in liability insurance policies.

Although New York has now altered its late notice law, a number of jurisdictions throughout the United States continue to adhere to the well-established "no prejudice" rule and enforce notice provisions without requiring prejudice to be shown. E.g., *State Farm Fire & Casualty Co. v. Walton*, 244 Va. 498, 423 S.E.2d 188, 191 (1992); *Greycoat Hanover F St. Ltd. P'ship v. Liberty Mut. Ins. Co.*, 657 A.2d 764 (D.C. 1995); *Haston v. Transamerica Ins. Servs.*, 662 So. 2d 1138 (Ala. 1995); *Granite State Ins. Co. v. Nord Bitumi U.S., Inc.*, 262 Ga. 502, 422 S.E.2d 191 (1992); *Las Vegas Star Taxi, Inc. v. St. Paul Fire & Marine Ins. Co.*, 102 Nev. 11, 714 P.2d 562 (1986). It will be interesting to monitor the effect of the proposed changes in New York law, as well as the case law giving further definition to the meaning of prejudice affecting the ability of the insurer to investigate or defend the claim. This law signals a significant shift in how notice requirements will be applied to future liability policies issued or delivered in New York.

ABOUT THE AUTHOR(S):

Laura A. Foggan is co-chair of Wiley Rein LLP's Appellate Practice and a member of the Insurance Practice. Consistently named as a leading lawyer for insurers in commercial insurance work, Ms. Foggan is recognized for her

contributions to the development of key insurance law precedents and the effective presentation of insurer views through industry amicus submissions in the courts. She has twenty-five years of trial and appellate experience in insurance-related litigation. She directs major complex commercial litigation in courts nationwide, and has served as lead counsel in matters involving insurance for terrorism, technology, environmental, employment, product liability, mass tort and pharmaceutical claims.

In addition to her litigation work, Ms. Foggan also provides crucial legal and strategic advice to insurers in other areas, including technical analysis of insurance issues and testimony before state legislatures regarding legislative proposals. She also represents insurers in arbitration and mediation settings, and has been certified as an arbitrator by ARIAS and named as a member of the Center for Public Resources (CPR) Distinguished Panel of Neutrals for the Inter-Insurer Program. She serves as co-chair of the Insurance Coverage Litigation Committee of the ABA Litigation Section, as well as the Insurance Law Forum of the DC Women's Bar Association.

Ms. Foggan has been named one of "The Best Lawyers in America" in the Insurance Law category (2008), one of "America's Leading Business Lawyers" by Chambers USA (2002-2008), one of "Lawdragon's 3000 Leading Lawyers in America" (2006, 2007), and one of Business Insurance magazine's "100 Leading Women" in insurance (2000). She serves as co-chair of the Insurance Coverage Litigation Committee of the ABA Litigation Section.

Benjamin Theisman is an associate at Wiley Rein specializing in insurance coverage litigation. He represents clients in trial and appellate litigation matters.

Leventhal on National Council on Compensation Insurance, Inc. v. American International Group, Inc.: The Discovery Obligations of Reinsurance Pool Participants When Is A Non-Party Treated Like A Party

By Robert C. Levanthal

July 14, 2008

SUMMARY: A recent federal trial court decision required a reinsurance pool and its attorney in fact to produce documents that were in the possession of approximately 500 pool members in response to a FRCP Rule 34(a) request for production of documents. If other courts adopt this rationale, it would place an immense obligation on reinsurance pools and their attorneys to insure the preservation and production of documents that are not in their possession.

ARTICLE: Cite as: Leventhal, Robert C. *Compensation Insurance, Inc. v. American International Group, Inc.*: The Discovery Obligations of Reinsurance Pool Participants When Is A Non-Party Treated Like A Party. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

In *National Council On Compensation Insurance, Inc. v. American International Group, Inc.*, 2007 U.S. Dist. LEXIS 91518 (N.D. Ill. Dec. 11, 2007), the National Council on Compensation Insurance Inc., (NCCI) acting solely as the attorney in fact for the National Workers Compensation Insurance Pool (NWCIP), sued pool member American International Group (AIG) alleging that AIG engaged in a fraudulent scheme to avoid its proportional share of pool obligations. AIG served a Rule 34(a) request for production of documents on NCCI seeking documents in the possession of NCCI, NWCIP, and each of the approximately 500 pool members. NCCI claimed that it should only have to produce documents in its own possession because it was the only named plaintiff. The court rejected this argument and held that NWCIP was the real party in the case because NCCI was suing solely as its attorney in fact.

The court acknowledged that the individual pool members were not parties to the case and could not be required to respond to discovery procedures that were only applicable to parties. n1 However, the court went on to hold that NCCI and NWCIP had control over documents in the possession of each of the pool members and were required to preserve and produce relevant documents that were in each pool members possession (including electronic files). Thus, the court concluded that while AIG could not serve Rule 34(a) document requests on individual pool members, it could obtain documents in the possession of pool members merely by serving the Rule 34(a) requests on NCCI and NWCIP. Further, the court held that NCCI and NWCIP were required to include information in the possession of each pool member when responding to interrogatories and requests for production of documents. (*Id.* at 24 -25.)

The court based its decision primarily on a provision of the pools Articles of Agreement which provided in relevant part that [u]pon direction of the Board of Governors, the Administrator is empowered to act as attorney in fact for each participating company to prosecute, to defend, to submit to arbitration, to settle, and to propose or accept a compromise with respect to any claim existing in favor of, or against, such participating company based on or involving any matter relating to this Agreement or to intervene in any action or proceeding related thereto. (Id. at 11 12.) The court reasoned that [b]y authorizing this litigation on behalf of the participating members of the pool, the Board of Governors has exhibited that it has practical and managerial control over the pool [and that] the control necessarily extends to obtaining from the participating members documents relevant to the litigation. (Id. at 12.)

In reaching its decision, the court also relied on its determination that the pool appears to be in substance an unincorporated association. Although there are not many cases addressing the discovery obligations of members of unincorporated associations, there is at least one case that can be interpreted as holding that an association is not obligated to produce documents and information in the possession of each of its members and which therefore could support an argument that *NCCI* was wrongly decided.

In *University of Texas v. Vratil*, 96 F.3d 1337, 1996 U.S. App. LEXIS 24451, 1996-2 Trade Cas. (CCH) P71,573, 35 Fed. R. Serv. 3d (Callaghan) 1527, the Tenth Circuit issued a writ overturning a district court opinion that held that members of an unincorporated association are real parties in interest and are required to respond to the opposing parties interrogatories and sanctioned them for failing to respond. The Tenth Circuit rejected this holding and stated where [a] party is an association, Rule 33(a) allows it to select an officer or agent to respond on its behalf. 96 F. 3d at 1340. The court made no mention of any obligation that the association had to provide all responsive information that was in the possession of its members and the decision therefore appears to imply that no such obligation exists. See also Moores Federal Practice Civil 33.20 at n. 48; Manual for Complex Litigation (Fourth) at § 33.20, n. 48.

In any event, given the paucity of cases addressing the discovery obligations of reinsurance pool members (and the fact that many disputes involving reinsurance pools are addressed in confidential arbitrations) it is difficult to determine whether the reasoning of *NCCI* is likely to be adopted by other courts (or arbitration panels). However, the *NCCI* decision is important because it creates serious potential pitfalls for lawyers representing reinsurance pools. n2

For example, the *NCCI* court held that the Pool is responsible for ensuring that relevant information held by the participating companies is preserved and produced as required. (Id. at 24 25, n. 3, emphasis added.) Failure to preserve discoverable information within the possession of a pool member could give rise to serious discovery sanctions against the pool. In order to meet this obligation, counsel would have to make sure that each of the approximately 500 pool members took appropriate steps to preserve potentially discoverable information (including electronically stored information) and to search for, and produce, requested documents. (For a discussion of electronic document preservation requirements see, Moores Federal Practice, Civil §§ 37A.10.)

Further, Pool members would likely have to be consulted when framing answers to interrogatories and requests for admission, because information that is within their possession would be considered to be within the control of the Pool. Given the potential scope of these obligations, counsel for a pool should communicate with Pool members prior to filing suit and should inform them of their potential discovery obligations and put in place necessary procedures to ensure that potentially discoverable information is preserved.

There are also steps that counsel can take to minimize the scope of potential discovery of pool members. A complaint that raises issues about the knowledge of pool members is more likely to lead to broad discovery against pool members than a complaint that raises no such issues. Allegations that each pool member was defrauded may put the mental state of each pool member directly at issue, thereby increasing the potential scope of discovery. Narrower allegations could result in more limited discovery of pool members.

There are also steps that can be taken when drafting pool agreements that can assist in dealing with potential discovery issues. For example, pool agreements often include arbitration clauses requiring disputes between the pool and its members to be resolved by way of binding arbitration. Arbitration panels are likely to limit discovery more than a court would, and provide greater protection of confidential information. The arbitration clause can expressly limit the scope of discovery available, provided that it does so in a way that is compatible with due process requirements. n3 See, *Schacht v. Hartford Fire Ins. Co.*, 1991 US Dist. Lexis 16430 [*12].

Finally, a pool agreement could be drafted to specifically address each pool members obligation to cooperate with the pools counsel in the event of litigation and could require pool members to preserve information for use in litigation. The problem with such language is that it almost certainly would be used against the pool in determining the scope of information that the pool is required to produce in discovery. A party seeking discovery would undoubtedly argue that such contractual provisions demonstrate that the pool has control over all information in each pool members possession and would make it difficult for the pool to convince a court that it should define the scope of discovery against the pool more narrowly.

[Return to Text](#)

n1 . The court held that pool members who served on NWCIPs Board of Governors were NWCIPs managing agent and could be served with notices of deposition under Rule 30, without the need for a Rule 45 subpoena.

n2 . It is good practice to attempt to raise and resolve the scope of discovery that may be had against the pool at the early stages on any litigation or arbitration to which a pool is a party.

n3 . It is a common practice to include arbitration clauses in reinsurance agreements between pools and their reinsureds.

California Healthcare Reform Continues: Legislation in 2008

2008 Emerging Issues 434

Harbage, Haycock and Odeh on California Healthcare Reform: Legislation in 2008

By Peter Harbage, Hilary Haycock and Michael Odeh

July 12, 2008

SUMMARY: With comprehensive healthcare reform failing a key legislative vote in January 2008 [see *2008 Emerging Issues 199*], California policymakers are now energized to achieve specific healthcare reform goals in 2008, despite also struggling with a significant state budget deficit. In this commentary, Peter Harbage and colleagues identify and discuss the major healthcare reform bills currently moving through the California Legislature as of this writing in July 2008, including what they provide, the support and opposition they have garnered, and their projected fiscal impact.

ARTICLE: Harbage, Haycock and Odeh on California Healthcare Reform Continues: Legislation in 2008

INTRODUCTION

California policymakers spent much of 2007 debating comprehensive healthcare reform, engaging and energizing a variety of stakeholders across the state [see *2008 Emerging Issues 199*]. Despite strong support for reform from Republican Governor Arnold Schwarzenegger, many Democratic legislators, and key stakeholders, comprehensive healthcare reform ultimately did not pass the legislature.

However, healthcare reform has remained a priority for legislators and the governor alike. Several reform concepts have been resurrected from the ashes of last years debate and introduced as bills in the current session by a number of state legislators in hopes of achieving specific reform goals.

Many of the bills are aimed at strengthening regulation of the individual health insurance market, where insurer actions have been so egregious that both sides of the aisle are getting fed up with them, according to California State Senator Sheila Kuehl. n1 In fact, many pieces of legislation are receiving support from Republicans despite the opposition of their otherwise long-time allies in the insurance industry.

However, with a \$15 billion state budget shortfall, these efforts have been complicated by significant efforts to

reduce state spending, especially spending on healthcare. Even with bipartisan support, legislation with *any* associated state fiscal costs faces this added challenge of an extremely tight state budget. Thus, much of the reform legislation that is achieving success shifts costs not onto government, but onto insurance companies, healthcare providers and, most likely, consumers.

The Governors Office has begun public discussions around a two-year approach for achieving healthcare reform, building on the policy compromises achieved in 2007. The first year focuses on budget-neutral reforms to lay the groundwork for comprehensive reform. Reforms to expand coverage and which require financing must wait until 2009, when the state hopes to have a stronger budget outlook.

The Legislature is already considering a number of piecemeal reform proposals, including many which address the governors year one goals. This commentary consists of an analysis of the legislation currently under debate that fall into the three broad categories the governor has laid out as a priority this year:

- . Consumer Protections;
- . Cost Containment; and
- . Prevention.

ANALYSIS

California legislators have introduced a broad range of healthcare reform legislation in the 2008 session. Our analysis is limited to those bills which generally align with the priorities being discussed by Governor Schwarzeneggers office, such as being budget neutral to the state. Thus, legislation such as the reintroduced SB 840, Senator Kuehls single-payer universal coverage bill, and other efforts to expand coverage that require significant new state funding are not included.

Thus far in the 2008 Session, Democratic lawmakers have provided most leadership in authoring bills, but in many cases have been able to build bipartisan support even in the face of business and industry opposition. Many of these bills are likely to undergo amendment in the coming months as the Governors office releases specific legislative proposals and reaches out to legislators to build compromises.

Descriptions below are based on the most recent bill information and relevant analyses from Legislative Committees unless otherwise noted. n2

Consumer Protection Reforms. Much of the health reform legislation has been focused on protecting consumers in purchasing and using health insurance. These protections fall into three categories:

- Protecting consumers in the purchase of coverage;
- Protecting consumers against rescission; and
- Protecting consumers through benefits packages.

While many of these bills track the governors first-year vision for reform, a number of them go further to regulate the insurance market than the governor has indicated that he might be comfortable allowing. See Appendix A below for a list of these bills, their status as of this writing in July 2008 and their fiscal impact.

Protecting consumers in the purchase of coverage. Legislation that addresses the consumer purchase of health insurance coverage has done so through regulation of and standards for insurance companies. As such, these bills are generally supported by consumer groups but opposed by insurers.

- **SB 1522** (Steinberg, D) would help consumers better understand and shop for insurance on the individual market by

requiring the Department of Managed Health Care and the Department of Insurance to develop a system that places individual insurance plans into five categories based on costs and benefits. Health insurers offering a plan in one category would be required to offer plans in all categories. In addition, this bill would impose a limit on maximum out-of-pocket costs for consumers and create a standard benefit package for individual plans.

This bill is supported by many consumer, advocacy, medical and labor groups, but is opposed by most insurers who argue that this approach will eliminate affordable coverage options on the individual market by destroying their flexibility in benefit design. All Republican senators voted against this bill and it only passed the Senate based on the Democratic majority. This approach is similar to a proposal from Governor Schwarzenegger to create five tiers of health insurance options, but goes further than the governors proposal by limiting costs for consumers. n3

- **AB 1554** (Jones, D) would allow the state to regulate the rates insurers can charge. Under this bill, insurance plans are required to justify rate increases and obtain approval from the appropriate state regulatory agency. The bill is supported by many labor and consumer groups for attempting to address the growing cost of coverage, however the bill is strongly opposed by most health insurers as well as the California Medical and Hospital Associations based on their stated concerns about creating a new bureaucratic and regulatory structure that may inhibit innovation in the marketplace.

Protecting consumers against rescission. State-led investigations, and related media coverage, have drawn attention to insurer practices of unfairly dropping policyholders coverage, including via rescissions. n4 A rescission occurs when a policyholder is retroactively denied coverage, usually after a policyholder has submitted a claim for care. Rescissions are often based on research the insurance company conducts on policyholders medical records to find preexisting conditions or technical errors on insurance applications. The following legislative proposals reflect how high a priority this issue is for both Democrats and Republicans.

- **AB 1945** (De La Torre, D) would require state approval for health plan rescissions of an insured individual, and establish a third-party review panel. It would also create a standardized insurance application for consumers in the individual market. This bill is supported by a diverse set of medical, consumer, and labor groups. However, concerns have been raised primarily by attorney groups that this bill will limit the legal recourse patients have against health plans by relying on the review panel. Twelve of the 32 Republican members of the Assembly joined Democrats to pass the bill. Governor Schwarzenegger has expressed a desire to protect consumers who did not intentionally mislead their insurer on their application from rescissions. n5

- **AB 1150** (Lieu, D) would prohibit insurance companies from offering employees financial incentives, including bonuses, for rescinding policies or denying claims. Consumer, labor, and healthcare provider organizations including the California Medical Association have all come out in support. The California Association of Health Plans has the bill on their list of legislation to watch. n6 This bill passed out of the Assembly with overwhelming bipartisan support, and has received unanimous approval from the Senate Health Committee. Governor Schwarzenegger has also endorsed this concept.

- **SB 1168** (Runner, R), one of the only health bills to be introduced by a Republican, would prohibit insurers that cover dependent children who are full-time secondary or post-secondary students from dropping coverage if the dependent takes a medical leave of absence from school. This bill would have negligible state costs and passed the Senate without opposition. In fact, this bill has received support from insurers and underwriters (including Americas Health Insurance Plans), medical associations, consumer advocacy groups, and professional associations, and has faced

no opponents.

■ **SB 1525** (Kuehl, D) would require insurers to report their process for determining medical necessity, report the number of claim denials based on medical necessity, and report the medical qualifications of the individuals who make those decisions. This was passed out of the Senate with bipartisan support despite opposition by the insurance industry. The legislation had the support of provider organizations, including the California Medical Association and California Nurses Association, as well as consumer groups. Opponents argued the bill duplicated regulations and would unnecessarily raise administrative costs for insurers.

Protecting consumers through benefits packages. The governor has indicated he would consider legislation that would require insurers to either cover or offer coverage of certain services for policyholders. However, many of these benefit mandates are likely to increase policy costs for individuals and families, as well as significantly increase state costs for Medi-Cal (Californias Medicaid program) and CalPERS (the California Public Employees Retirement System), which may trigger opposition from the governor. Higher program costs and general opposition to market mandates could lead to opposition from Republican legislators. Reforms which require insurers to offer additional coverage for specific services for an additional charge, including SB 1198 below, have been more successful in building bipartisan support.

■ **AB 1887** (Beall, D) would require insurance plans to cover any disorder identified in the *Diagnostic and Statistical Manual of Mental Disorders IV*, however Medi-Cal and CalPERS plans are exempt. There would be some state costs associated with this bill, which is supported by medical, advocacy, and labor groups, but strongly opposed by insurance and some business groups.

■ **AB 1962** (De La Torre, D) would require most private insurance plans to cover specified maternity benefits. This bill has a wide variety of supporters and no state cost, but the California Association of Health Underwriters, Anthem Blue Cross, and the Association of California Life and Health Insurance Companies have opposed the bill claiming adverse effects on competition and decreased consumer choice.

■ **SB 1198** (Kuehl, D) would require private group insurance plans to offer policyholders the option to purchase additional coverage for durable medical equipment with annual and lifetime benefit maximums, and maximum out-of-pocket costs. This bill passed out of the Senate with support from both Democrats and Republicans despite opposition from insurers and health plans.

■ **SB 1634** (Steinberg, D) would require insurance plans to cover services that are medically necessary for the treatment of cleft palate. This bill is supported by dental and plastic surgeon groups but opposed by insurance and business groups. Despite industry opposition, this measure passed the Senate with significant Republican support, including a Republican co-author, and with 12 out of the 15 Republican Senators voting for it.

■ **AB 1894** (Krekorian, D) would require insurance plans to cover HIV antibodies and AIDS tests, regardless of whether the testing is related to a primary diagnosis. This bill is opposed by insurers and business groups, but supported by the Center for AIDS Research, Education and Services, as well as the California Medical Association.

■ **AB 1774** (Lieber, D) would require insurance plans to cover screening procedures for gynecological cancers when ordered by physicians and consistent with national guidelines; and **AB 2234** (Portantino, D) would require insurance

plans to cover screening and testing procedures to diagnose breast cancer, consistent with national guidelines. Both bills are estimated to have significant state costs for compliance in Medi-Cal and CalPERS plans.

Cost Containment Reforms. The governors recent reform outline calls for an expanded approach to cost containment, including increasing the use of health information technology, increasing the use of low-cost healthcare providers such as retail clinics, and improving the Workers Compensations system. The cost containment reforms proposed thus far in the 2008 session can be grouped into three categories: insurance regulation, increasing transparency, and provider oversight. See Appendix B below for a list of these bills, their status as of July 2008 and their fiscal impact.

Cost containment through insurance regulation. It has been estimated by some that 30 percent of premium dollars on the individual market go to administrative costs and profits for insurance companies. n7 A key part of 2008 reform efforts has been an effort to revive legislation which would limit this profit margin for insurers.

- **SB 1440** (Kuehl, D) would require healthcare plans and health insurers to spend at least 85 percent of premiums on healthcare benefits, or, in other words, cap insurance company profits at 15 percent. Medical, advocacy, and labor groups argue this bill is necessary to refocus healthcare spending and control spiraling healthcare costs. Healthcare plans disagree with the measures identified in the legislation and argue that administrative costs are a misleading indicator.

Cost containment through transparency. Improving transparency in cost and quality has been shown to both prompt underperforming providers to improve, and allow healthcare payers to reward or encourage high performance. n8 Provider groups have opposed such legislation, arguing that the new data collection and reporting requirements will be burdensome for them and may undercut competition.

- **AB 2967** (Lieber, D) would establish the development of a statewide healthcare cost and quality transparency plan designed to provide public reporting of healthcare safety, quality, and cost information. While this bill would not immediately change current provider reporting requirements, this bill has received fierce opposition from provider groups but strong support from consumer and labor groups. Governor Schwarzenegger has indicated his support for this legislation. n9

- **SB 1300** (Corbett, D) would prohibit confidentiality clauses between healthcare plans and providers that restrict the ability of healthcare plans to supply information on the cost of procedures to plan enrollees. This bill is opposed by insurers and providers but supported by consumer groups.

Cost containment through provider oversight. Legislators have also attempted to contain costs through greater oversight of provider practices that create inefficiencies in the healthcare system.

- **AB 2146** (Feuer, D) would restrict providers from billing patients or public health coverage programs, Medi-Cal and Healthy Families (Californias State Childrens Health Insurance Program), for never events medical errors that should never occur, such as hospital-acquired conditions. This will both save the state money, and encourage overall system savings by preventing medical errors. The legislation passed out of the Assembly mostly along party lines. The bill was opposed by provider organizations, including the California Medical Association and other specialty groups. It is supported by consumer organizations such as Health Access, Insure the Uninsured Project, and AARP, as well as SEIU. Governor Schwarzenegger has called for stricter reimbursement policies for never events, although his exact position on this bill has not been announced. n10

■ **AB 2942** (Ma, D) would standardize the community benefit requirements that non-profit hospitals must meet to maintain their tax-free status. This could lower costs by encouraging hospitals to promote public health and disease prevention, as well as by strengthening the safety net. The bill has the support of labor unions and consumer groups, and is opposed by the California Hospital Association and individual hospitals and hospital systems. The bill was passed out of the Assembly, largely along party lines.

Prevention Reforms. Prevention has long been a central focus of the governors healthcare reform plan, and the issue gained traction over the course of the debate in 2007. Given the long-term nature of a prevention strategy, it is not central to the current reform debate in the Legislature, but activity will likely increase as the governor renews focus.

CONCLUSION

Throughout 2008, California lawmakers have been finding bipartisan support for slices of the failed comprehensive reform plan. Given the significant state budget shortfall, however, policymakers have been unable to focus key reform concepts, such as expanding coverage. Instead, policymakers have introduced legislation to protect consumers and to contain costs. Many of these efforts would result in increased regulation, transparency, and oversight of the insurance market. Despite strong political support for many of these bills, however, those reforms with significant state costs face the additional challenge of securing financing during tight fiscal times.

Adding to the activity in the Legislature and restating its commitment to healthcare reform, the Schwarzenegger Administration is gearing up to release a detailed two-year plan. The governors plan aims to achieve healthcare reform by first building on the legislative efforts to create a solid foundation for comprehensive reform before embarking on a major coverage expansion and financing overhaul. Given this strong leadership from Governor Schwarzenegger, California continues to have the opportunity to achieve healthcare reform through the bills described in this commentary, which could help build momentum for additional efforts.

Appendix A: Consumer Protection Legislation

Protecting Consumers in the Purchase of Coverage

Bill Number

Short Description

Introduced

Status

Fiscal Impact

SB 1522

Changes rules governing individual insurance market by creating categories and minimum standards

Steinberg (D) on 2/22/2008

Passed Senate (22 to 16) on 5/27/08; re-referred to Assembly Committee on Appropriations on 6/18/08

\$500,000 in 2008-09 in administrative costs

AB 1554

Requires insurers to obtain approval from state for rate increases

Jones (D) on 2/23/07

Passed Assembly (42 to 33) on 6/7/07; re-referred to Senate Committee on Health on 6/18/08

Annual special fund costs of more than \$10 million

Protecting Consumers Against the Loss of Coverage

Bill Number

Short Description

Introduced

Status

Fiscal Impact

AB 1945

Requires review and approval of insurance rescissions

De La Torre (D) on 2/13/08

Passed Assembly (59 to 16) on 5/27/08; re-referred to Senate Committee on the Appropriations on 7/2/08

One-time fee-supported special fund cost of \$150,000 and annual fee-supported special fund costs of \$400,000

AB 1150

Prohibits insurers from setting goals, quotas, or compensation based on rescissions or cancellations

Lieu (D) on 2/23/07

Passed Assembly (76 to 0) on 1/29/08 and Senate (36 to 0) on 7/3/08

Negligible state costs

SB 1168

Prohibits insurers from dropping dependent coverage if student takes medical leave of absence from school

Runner (R) on 2/7/08

Passed Senate (38 to 0) on 4/23/08; sent to Assembly Consent Calendar on 6/23/08

Negligible state costs

SB 1525

Requires insurers to report their process for determining medical necessity

Kuehl (D) on 2/22/08

Passed Senate (26 to 9) on 5/12/08; re-referred to Assembly Committee on Appropriations on 6/18/08

Approximately \$60,000 in 2008-09

Protecting Consumers in Benefits Packages

Bill Number

Short Description

Introduced

Status

Fiscal Impact

AB 1887

Requires insurers to provide parity for coverage of mental health benefits

Beall (D) on 2/7/08

Passed Assembly (46 to 30) on 5/27/08; re-referred to Senate Committee on Appropriations on 6/25/08

Annual costs to Healthy Families and Medi-Cal of \$160,000, 33% to 50% from the General Fund

AB 1962

Requires private health insurance plans to cover specified maternity benefits

De La Torre (D) on 2/13/08

Passed Assembly (44 to 31) on 5/27/08; re-referred to Senate Committee on Appropriations on 6/19/08

No direct state impact

SB 1198

Requires private group plans to offer parity for coverage of durable medical equipment

Kuehl (D) on 2/13/08

Passed Senate (27 to 8) on 5/12/08; re-referred to Assembly Committee on Appropriations on 6/25/08

Unknown

SB 1634

Requires insurance plans to cover medically necessary services for treatment of cleft palate

Steinberg (D) on 2/22/08

Passed Senate (37 to 2) on 5/22/08; referred to Assembly Committee on Appropriations on 6/25/08

Approximately \$41,000 in state expenditures for CalPERS members who are state employees

AB 1894

Requires insurance plans to cover HIV and AIDS testing

Krekorian (D) on 2/7/08

Passed Assembly (47 to 28) on 5/27/08; re-referred to Senate Committee on Appropriations on 6/24/08

Negligible costs to CalPERS for compliance

AB 1774

Requires insurance plans to cover screening of gynecological cancers

Lieber (D) on 1/14/08

Held under submission in Assembly Committee on Appropriations on 5/22/08

Annual increased costs of \$39 million (50% from General Fund) to the Medi-Cal program and \$27 million from General Fund to CalPERS

AB 2234

Requires insurance plans to cover screening procedures to diagnose breast cancer

Portantino (D) on 2/20/08

Held under submission in Assembly Committee on Appropriations on 5/22/08

Annual increased costs of \$22 million (50% from General Fund) to the Medi-Cal program and \$3.8 million from General Fund to CalPERS

Appendix B: Cost Containment Legislation

Cost Containment Through Insurance Regulation

Bill Number

Short Description

Introduced

Status

Fiscal Impact

SB 1440

Require insurers to spend at least 85% of premiums on benefits, not administrative costs

Kuehl (D) on 2/21/08

Passed Senate (22 to 16) on 5/27/08; re-referred to Assembly Committee on Appropriations on 7/1/08

\$233,000 in 2008-09

Cost Containment Through Transparency

Bill Number

Short Description

Introduced

Status

Fiscal Impact

AB 2967

Establishes a transparency plan to provide public reporting of

health care safety, quality, and cost information

Lieber (D) on 2/22/08

Passed Assembly (41 to 32) on 5/27/08; re-referred to Senate Committee on Appropriations on 6/25/08

One-time, fee-supported special fund costs of \$300,000 and annual fee-supported special fund costs of \$500,000 to \$1 million

SB 1300

Prohibits cost confidentiality clauses between health plans and providers

Corbett (D) on 2/20/08

Passed Senate (22 to 12) on 5/15/08; re-referred to Assembly Committee on Appropriations on 6/26/08

Negligible state costs

Cost Containment Through Provider Oversight

Bill Number

Short Description

Introduced

Status

Fiscal Impact

AB 2146

Restrict providers from billing patients or public insurers for never events.

Feuer (D) on 2/20/08

Passed Assembly (48 to 29) on 5/28/08; re-referred to Senate Committee on Appropriations on 7/2/08

One-time General Fund cost of \$900,000

AB 2942

Revises hospital requirements for community needs assessments and community benefit plans

Ma (D) on 2/22/08

Passed Assembly (43 to 35) on 5/28/08; re-referred to Senate Committee on Appropriations on 6/26/08

Annual start-up costs of \$2 million for public hospitals and annual fee-supported special fund costs of \$900,000 through 2010-11

Derivative Litigation: Raising Concerns About Collusion, Court Rejects Proposed Backdating Settlement and Suggests that Shareholders Would Be Better Off Going to Trial.* LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

When allegations first came to light that directors and officers in hundreds of companies had backdated options garnering, in many cases, huge financial gains, without following the requisite accounting rules or disclosure requirements, one may have expected decades of litigation resulting in multimillion settlements. Although the backdating scandal only rose to the forefront of public attention in 2005, many such cases have been resolved fairly quickly without substantial contributions by the individual defendants. However, a decision issued by a California court in April of this year raises significant questions about the expeditious path the settlements of many such cases have followed and the parties intent in settling them on terms that did not unduly burden the defendants. *In re Zoran Corp. Derivative Litig.*, 2008 U.S. Dist. LEXIS 48246 (N.D. Cal. Apr. 7, 2008), the United States District Court for the Northern District of California refused to approve what it evaluated as a low-end settlement proposal for a shareholder derivative suit after ferreting out several components of the settlement which it felt were not in the corporations best interest and were not appropriately disclosed by the parties attorneys in their presentation to the court.

The suit was filed against several of Zorans current and former officers and directors and alleged violations of securities laws, breaches of fiduciary duty, unjust enrichment, constructive fraud, abuse of control, corporate waste, gross mismanagement, and rescission. In particular, the plaintiffs alleged that the defendant board members knowingly ratified or participated in granting backdated stock options to each other as well as rank-and-file employees. All of the defendants were alleged to have contributed to the dissemination of false statements in financial statements, proxy statements, and other SEC filings.

On February 26, 2008, the parties executed a stipulated settlement, which provided that the plaintiffs attorneys would receive \$1.2 million in fees and costs and certain options owned by some of the defendants would be cancelled, while other options were repriced. The cancellation and repricing concessions were represented to the court to have a value of \$1.65 million. The settlement also provided for certain corporate governance reforms and a broad release of all claims. Absent from the stipulated settlement was any cash recovery for the corporation.

In determining whether to approve the settlement, the court addressed the key features of the proposal, beginning with the cancelled options. First, the court noted that it was highly improbable that the cancelled options would ever be exercised. The cancelled options had exercise prices ranging from \$24.78 to \$38.74, but the closing market price of the stock on March 3, 2008, the date of the hearing for preliminary approval of the settlement, was \$13.99. While the court acknowledged there was a chance the stock price would rebound, it disagreed with the parties valuation of the options. Each party used the Black-Scholes method, a mathematical algorithm, to determine the value of the cancelled options. This method uses five input variables for evaluation: (1) the exercise price of the option; (2) the current stock price; (3) the time to expiration of the option; (4) the volatility of the stock price; and (5) the risk-free interest rate. When presenting the proposed settlement to the court, both parties chose December 3, 2007 as the date of valuation of the stock, to arrive at a stock price of \$21.99. Using that price, the plaintiffs calculated the cancelled options value at \$1.57 million while the defendants calculated the value to be \$1.05 million. The court took issue with the valuation date of the stock price because it ignored the sharp decline in the price following December. By the time the stipulation of settlement was filed on February 26, 2008, the stock price had already dropped to \$14.30, and by March 3, the price was \$13.99. Using the defendants conservative valuation method, but substituting the stock valuation date of March 3, the Court determined the value of the cancelled options to be \$216,955.

The court commented that the discrepancy between the valuations was due to different input variables being used for the time to expiration, the risk-free interest rate and volatility. The court noted that the only consistent numbers that were used by both sides were the exercise price of the options and the stock price on the valuation date, both of which were predefined. The court explained that while the date of valuation chosen by the parties, December 3, 2007, was fundamentally important, the reason for counsels choice of the date was unclear. At the hearing, the attorneys gave the court the impression that the date was chosen because it marked the date the parties signed the memorandum of understanding on that date. However, that did not appear to be correct, after further investigation, the court concluded that counsel simply went back and selected a favorable date in order to make the proposal look better than it really is and then were not entirely forthcoming in disclosing the full timeline.

The court also addressed the value of the repriced options and held they could not be counted as consideration for the settlement. The parties had led the court to believe that the repricing occurred as part of the negotiations leading to the proposal, but the court later discovered that the options were repriced in December 2006, over a year before the settlement was proposed to the court, and even before the plaintiff filed its consolidated complaint. The court admonished the parties for failing to disclose that the defendants were attempting to settle based on old concessions instead of new consideration. Additionally, the court found that if a meaningful valuation date was used, the value of the repriced options was zero.

Moreover, the court characterized many of the corporate governance reforms as purely cosmetic, and was further troubled that five of the reforms listed in the settlement had been adopted by Zorans board before the parties entered settlement negotiations. Pointing out that the reforms did not compensate the company for the damage it suffered as a result of the backdated options, the court found the reforms to be a poor substitute in lieu of some substantial portion of the \$16 million in damages asserted by plaintiffs expert.

Not limiting its review to the settlements value, the court also determined that the scope the release was overbroad as it should only include claims made in the complaint and those closely related thereto. However, the release included claims that had not been asserted in the complaint, and it included all claims relating to all stock options granted and issued regardless of whether they [were] alleged to be backdated when there could be many alternative causes of action relating to Zorans stock options.

In sum, the court found the proposed settlement to be far too modest, noting [t]he corporation would recover no cash, all the cash going to counsel. The court acknowledged that while a district judge should give considerable deference to the plaintiff counsel's view of whether the proposed settlement is satisfactory in light of the risks of continued litigation, the plaintiff's counsel had not justified why such a low-end settlement should be approved given the strong allegations of wrongdoing in the complaint; nor had she addressed difficult proof problems with regard to liability. The court noted that to justify the proposed settlement, the record would have had to show that the plaintiff had no chance of success at trial. However, that had not been shown and the shareholders would be far better off to take their chances at trial—even at the risk of total loss—than to accept the proposal.

The court ended its opinion with a lesson on the duty of candor, stating that because of the risk of collusive settlements at the expense of the absent shareholders . . . counsel have an enhanced duty of candor to lay out the weaknesses as well as the strengths. It is unfair to try to slip a weak or collusive settlement past the judge, hoping he or she will simply sign off or will not stumble upon the right questions.

The impact of this decision on pending and future backdating settlements remains to be seen. However, at a minimum, the court's concerns about the reasonableness of the proposed settlement could encourage closer scrutiny of the parties' rationale for valuation of backdating settlements. The case also provides additional leverage for asking individuals who are defendants in backdating cases to contribute out of their own pockets under certain factual scenarios. While some legal commentators have suggested that insurers may have to put in more money to settle such cases, this decision should not be used successfully as leverage by defendants to obtain additional funds from their insurers to the extent such settlements comprise amounts that are not covered by insurance, as they often do. However, the serious concerns raised by the Court in *Zoran* could impact an insurer in other ways given that, while insurers typically independently evaluate potential damages when faced with a settlement proposal, such decisions are made, to a large extent, in reliance on the information presented by the parties' counsel as well as defense counsel's settlement recommendation.

ABOUT THE AUTHOR(S):

Carrie Cope is a partner in the Chicago office of Tressler, Soderstrom, Maloney & Priess, LLP where she specializes in insurance law and has two synchronized practice areas of insurance regulation and specialty lines claim handling. In her regulatory practice, she represents insurers, agents, brokers, reinsurers, reinsurance intermediaries, alternative risk insurance groups and third party administrators on a wide variety of regulatory and compliance issues. She also has over fifteen years of experience in providing specialty lines claim handling and coverage consulting services to the insurance industry. Her coverage practice is primarily concentrated in the areas of directors and officers liability, professional liability, miscellaneous errors and omissions insurance and employment practices liability. She is a member of the Professional Liability Underwriting Society and she recently authored a chapter which will be published in Applemans New Insurance Law Practice Guide.

Wiley Rein LLP on Exxon Shipping and State Punitive Damages

2008 Emerging Issues 2469

Wiley Rein LLP on Exxon Shipping and State Punitive Damages

By Thomas W. Kirby

July 3, 2008

SUMMARY: The U.S. Supreme Courts ongoing effort to limit excessive punitive damages takes a different twist in *Exxon Shipping Co. v. Baker*. Rather than relying on due process, the Court uses its common law power over federal maritime law to hold that punitive damages in maritime cases must not exceed compensatory damages, adopting a 1:1 ratio as the cap.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Kirby, Thomas W. *Exxon Shipping and State Punitive Damages*. LexisNexis Expert Commentary, (Insert date you accessed the document online).

The Supreme Courts latest punitive damages case, *Exxon Shipping Co. v. Baker*, 2008 U.S. LEXIS 5263 (U.S. June 25, 2008), teaches us a great deal about challenging high punitive damages in state law cases, but we must take care not to learn too much. In contrast to the recent line of Supreme Court punitive damages cases exemplified by *BMW of North America, Inc. v. Gore*, 517 U.S. at 582 (1996), *Exxon Shipping* explicitly disavows any reliance on constitutional due process. Instead, the Court exercises its federal maritime common law authority to craft its view of an ideal punitive damages standard.

The upper limit set by the Court a ratio of 1:1 between punitive and compensatory damages is one many defendants would welcome. However, the lack of a constitutional foundation means that no state law or court is compelled to adopt that ratio. Instead, the opinion provides a thoughtful and potentially persuasive model for how state courts could exercise their common law authority to set similar caps under their own laws. Also, the general thrust of the decision strongly reinforces the due process cases, and it identifies themes and reasoning that may prove effective in shaping future due process decisions that restrict the size of punitive damage awards.

Background. The ink already spilled telling the story of the *Exxon Valdez* seems to approach the volume of oil the ship spilled off the Alaskan coast. Suffice it to say, the jury found that the captains intoxication while his ship transited treacherous waters caused a massive oil spill deemed to warrant a compensatory award of \$507.5 million for injuries to tens of thousands of Alaskans. For good measure, the jury also awarded \$5 billion in punitive damages against the ships owner, Exxon Shipping, which allegedly knew the captain had relapsed into heavy drinking and took no protective measures. After a long struggle, the Ninth Circuit cut the punitive award to \$2.5 billion on due process grounds. The

Supreme Court then granted certiorari to consider whether the punitive award was excessive *as a matter of federal maritime law* (not due process).

The Courts Common Law Approach. The Court stresses that federal maritime law is one of a few areas in which it is free to decide in the manner of a common law court. It takes a very broad view of the law-making powers of a common law court, saying such courts have established many generally applicable numerical standards such as the 21-year period in the rule against perpetuities [which] was a judicial innovation, as were various exact limitations periods for civil actions and age cut-offs. It recognizes that such rules are subject to the authority of Congress to legislate otherwise if it disagrees, but it declines to regard Congressional inaction as a barrier to fulfilling its traditional judicial role.

Of course, most state Supreme Courts claim broad common law powers with respect to many cases that come before them, particularly in crafting remedies. Thus, *Exxon Shipping* may be urged as a model that state courts can follow in setting punitive damage standards for a wide range of state causes of action. On the other hand, because state courts so commonly exercise common law powers, they may face considerable relevant precedent, while the U.S. Supreme Court addressed the issue as one of first impression, giving it maximum freedom to craft the rule it thinks best. The extent to which state courts can and should re-think previously decided cases will be a major battleground when *Exxon Shipping* is relied upon in state litigation. In such cases counsel must use the decision to *persuade*; it simply does not coerce state compliance.

The Limited Purposes Of Punitive Damages. The *Exxon Shipping* opinion begins its excessiveness analysis by reviewing the history of punitive damages, from common law origins in England through developments in America. The Court identifies three commonly asserted justifications for such damages: punishment, deterrence, and compensation for ephemeral or hard-to-quantify losses. It concludes, however, that modern punitive damages have no compensatory purpose, but serve only to punish and deter in cases of enormity where a defendants conduct is outrageous owing to gross negligence, willful, wanton, and reckless indifference for the rights of others, or behavior even more deplorable.

The Court holds that, in fairness, such essentially punitive awards should be reasonably uniform and predictable in severity, noting the trend in criminal law has been to reduce broad sentencing discretion. The Court opines that even a bad man should have some ability to know what the stakes are, and when the bad mans counterparts turn up, they should face a fair probability of suffering in like degree.

The Selection of a 1:1 Ratio Of Punitive to Compensatory Damages. Reviewing a wide range of data concerning punitive damages in American courts, *Exxon Shipping* does not detect mass-produced runaway awards. To the contrary, the Court perceives overall restraint in punitive awards. However, it also perceives a real problem [in] the stark unpredictability of punitive awards. It concludes that, although the frequency and median amount of punitive awards is not shocking, the wide spread in amount and occasional massive outlier award are troubling. Accordingly, the Court decides to craft a limit that will allow adequate room for substantial punishment while constraining outliers.

The Court identifies three possible means to that end. First, it considers a verbal solution, drafting more specific and concrete criteria to be used either in jury instructions or in a more rigorous judicial review than the traditional shock the conscience test. However, based on its view of the results of such an approach in several states, the Court concludes such a verbal approach was unlikely to succeed.

Second, the Court considers imposing a hard dollar cap on punitive damages. It decides, however, that there is no standard tort or contract injury that would permit setting a dollar cap. Also, a court is not well positioned to monitor such a cap, adjust it for inflation, and revise it as information develops. Thus, the Court finds that such a cap requires active involvement of a legislature.

The third option, and the one selected by the Court, is pegging punitive to compensatory damages using a ratio or

maximum multiple. It says this approach will tend to automatically adjust for inflation and other relevant factors, e.g. severity.

In seeking guidance as to a proper multiple, the Court considers state and federal statutes providing for enhanced awards, but finds they vary too much to be useful. Instead, it settles on guidance drawn from statistics about American punitive awards. Making various assumptions, the Court identifies a median ratio of punitive to compensatory damages of about 0.65:1. Recognizing some cases call for higher awards than others, it decides a 1:1 ratio, which is above the median award, is a fair upper limit in maritime cases. Since the compensatory damages awarded against Exxon Shipping were \$507.5 million, it orders that the punitive award be remitted to an equal amount. Exxon Shippings counsel thus find themselves in an elite circle of advocates who can claim that losing their client only a billion dollars was a great victory.

Applying *Exxon Shipping* to State Common Law Cases. Most of the Courts reasoning readily can be adapted to arguing that state supreme courts should establish similar punitive damages caps. As noted above, most state supreme courts claim broad law making powers, particularly with respect to remedy. And the data relied upon by *Exxon Shipping* came mainly from state law cases. Still, the case must be employed with some sensitivity to differing facts, however. For example:

- . For historic reasons having to do with the inability of shipowners to control their captains, maritime law arguably has been less hospitable to punitive damages than other areas. Thus, it might be argued that a higher ratio should be adopted in other areas. However, it does not appear that *Exxon Shipping* gave this factor any weight in selection its 1:1 maximum ratio.

- . In a similar vein, it might be thought that maritime claims have sufficient uniformity, e.g. a ship collides with something, to permit a fairly narrow range of possible awards. If a state court is considering a maximum ratio for a wide range of torts, plaintiffs may argue that something higher than 1:1 is necessary to accommodate potential variability. On the other hand, the *Exxon Shipping* opinion makes no claim that maritime claims are uniform.

- . *Exxon Shipping* notes that heavier punitive awards traditionally have been thought appropriate for wrongs that are difficult to detect, or where the actual injury to a given plaintiff is low. In a field of law where such cases may arise, the question of exceptions may have to be addressed.

- . The Court also notes that some regulatory schemes provide by statute for multiple recovery in order to induce private litigation to supplement official enforcement. These and similar considerations may affect the application of *Exxon Shipping* to liability arising under some statutes, as well as to some tort theories that may have been adopted to advance statutory policies.

A Practice Pointer: Preserving Issues in the Trial Court. Finally, *Exxon Shipping* has a procedural twist that has no particular relevance to punitive damage limits, but that may be of interest to litigators. One argument had not been presented in a timely way to the district court, but the Ninth Circuit had exercised its discretion to consider it. Although the Court declined to find that the Ninth Circuit had abused its discretion, it made clear that the failure to raise issues properly in the trial court is a serious matter that usually should result in waiver. Quoting an opinion by Judge Boudin of the First Circuit, the Court said:

The reason for the rules is not that litigation is a game, like golf, with arbitrary rules to test the skill of the players. Rather, litigation is a winnowing process, and the procedures for preserving or waiving issues are part of the machinery by which courts narrow what remains to be decided.

The point that issues should be carefully preserved is a commonplace, but *Exxon Shipping* provides a particularly powerful statement of the reasons for waiver. Counsel who rely on *Exxon Shipping* unavoidably will alert their opponents to that statement. Accordingly, it will be particularly important for counsel who anticipate using *Exxon Shipping* to take care to present and preserve the issue and any essential predicates. This process should start in the

Answer, which should plead that any punitive damages must be limited both by due process and by the limits of substantive law. Care should be taken that jury instructions do not state principles inconsistent with proper limits, or that a proper objection and request for a correct instruction are timely made. The courts procedures for end-of-trial motions should be scrupulously followed.

Another Supreme Court Punitive Damages Case On the Horizon. Meanwhile, there will be another punitive damages case next term. The Supreme Court has agreed to decide whether the Oregon courts wrongfully sustained a massive award against a tobacco company based on injury to other persons. *Philip Morris USA v. Williams*, No. 67-1216.

ABOUT THE AUTHOR(S):

Thomas W. Kirby is a senior litigation partner at Wiley Rein LLP handling complex, policy-oriented trial and appellate matters nationwide. Counsel in more than 70 published cases, he focuses on copyright and trademark, First Amendment, Commerce Clause and election law, as well as class actions and commercial disputes. The notable verdicts he has secured for his clients include one of the largest copyright verdicts in U.S. history, an award recognized in the NLJ 100. In a successful First Amendment/Commerce Clause challenge to an Internet statute, a federal judge said of Mr. Kirby, There have been few attorneys before the court as accomplished, trained, experienced, intelligent and skilled. He is quite unique in his ability to combine the theoretical and the clinical. *PSINet v. Chapman* (W.D.Va.)

Morrison Mahoney LLP on Boston Gas Co. v. Century Indemnity Co.: New Developments in Massachusetts Allocation Disputes

By Michael F. Aylward

July 2, 2008

SUMMARY: After years of controversy and confusion, the Supreme Judicial Court of Massachusetts is finally destined to answer whether long-tail claims may be assigned to a single policy year or must be allocated on some other basis. This article explores the First Circuits June 10, 2008 opinion in *Boston Gas v. Century Indemnity* and its implications for pending and future pollution, asbestos and other long-tail claims in the Bay State.

ARTICLE: Cite as: Aylward, Michael F. *Boston Gas Co. v. Century Indemnity Co.*: New Developments in Massachusetts Allocation Disputes. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Be careful what you ask for. After a decade of conflicting and increasingly problematic lower court rulings, parties who have long complained about the lack of clear law on allocation issues in Massachusetts now face the prospect of a decisive ruling from the Supreme Judicial Court in Massachusetts.

Allocation issues have pervaded long tail disputes in Massachusetts since the SJC emphatically rejected a manifestation trigger fifteen years ago in *Trustees of Tufts University v. Commercial Union Ins Co.*, 415 Mass. 844, 616 N.E.2d 68 (1993). Once the door was open to spreading losses among multiple years, issues began to arise with respect to who bore responsibility for orphan shares attributable to years for which insurance was unavailable due to insolvencies, exclusions or missing policies. With larger insureds, issues were also presented by the pervasive use of self-insured retentions. Insureds evaded these problems by persuading courts to allow them to spike their claims under an all sums or joint and several liability theory that allowed them to assign their entire loss to any single policy that was triggered by part of the loss, a position that was endorsed by the Appeals Court in *Rubenstein v. Royal Ins. Co.*, 429 Mass. 355, 708 N.E.2d 639 (1999).

Although the Supreme Judicial Court agreed to hear Royals appeal in *Rubenstein* it declined to consider the allocation aspects of the Appeals Courts opinion. In the intervening decade, other efforts to get the issue of allocation before the SJC were declined by the SJC or lower courts that were asked to certify the issue to the Court. As recently as *A.W. Chesterton Co. v. Massachusetts Insurers Insolvency Fund*, 445 Mass. 802, 838 N.E.2d 1237 (2004), the SJC refused to consider an *amicus* brief submitted by Lloyds that asked them to address the issue in the context of asbestos.

Now the issue has been squarely framed for the SJC by the U.S. Court of Appeals for the First Circuit in a large pollution claim. In *Boston Gas Co. v. Century Indemnity Co.*, No. 07-1452 (1st Cir. June 10, 2008), a gas utility had sued various insurers, seeking coverage for the cost of cleaning up a former production facility in Everett, Massachusetts. Boston Gas proceeded to trial against Century Indemnity, whose predecessor had insured it between 1951 and 1969 under primary policies that each contained a self-insured retention of \$100,000 or more. At trial, the jury awarded Boston Gas \$6.1 million. Additionally, Judge Zobel issued a declaration that Century was liable for all future cleanup costs.

The First Circuit began its review by considering Century Indemnity's contention that the U.S. District Court had erred in refusing to allocate Boston Gas's liability among the various insurers that had provided coverage to it during the historical period of the site's operation (1908-1969). Century Indemnity contended that its liability should be no more than its proportionate share and that the district court had erred in applying an all sums approach. Century Indemnity also argued that Boston Gas should be liable for a separate \$100,000 self-insured retention for each of the policies that it had issued that were thereby triggered.

Despite the insureds urging that it follow the Appeals Court's ruling in *Rubenstein*, the First Circuit found that this was an issue that required resolution by the Supreme Judicial Court noting that the Appeals Court's analysis of this issue in *Rubenstein* was cursory. Nor was there a clear consensus among other states as to whether *pro rata* or all sums is the preferable approach. The First Circuit observed that, at first blush, it might seem illogical to hold a single insurer fully liable for environmental damage that occurred over the course of a century. The court pointed out, however, that the insurer could seek contribution from other carriers on the risk during the period of injury and that the alternative would be to require a policyholder to sue insurers in a single suit to avoid inconsistencies.

The First Circuit observed that joint and several and *pro rata* both employ legal fictions that do not accurately reflect the means by which environmental contamination occurs over the years at a given site. The court also observed that the two approaches had very different implications for the involvement of excess carriers and the insureds' obligation to pay SIRs.

Given these conflicting implications and the absence of any clear guidance from the Supreme Judicial Court and particularly in light of the large sum of money involved, the court ruled that certification was appropriate. The court also took note of the fact that the absence of law in Massachusetts could be contrasted with holdings in New York, New Hampshire and Connecticut that had adopted the *pro rata* approach. The court also observed that *Rubenstein* did not address other secondary implications of allocation such as whether the insured could stack multiple policies under an all sums approach or whether allocation should be done purely by the years of coverage or based on years and limits. Accordingly, the First Circuit certified the following questions to the Supreme Judicial Court:

1. Where an insured protected by standard CGL policy language incurs covered costs as a result of ongoing contamination occurring over more than one year and the insurer provided coverage for less than the full period of years in which contamination occurred, should the direct liability of the sued insurer be *pro rated* in some manner among all insurers on the risk limiting the direct liability of the sued insurer to its share but leaving the insured free to seek the balance from other such insurers?
2. If some sort of *pro rata* liability is called for in such circumstances, what allocation method or formula should be sued?
3. If a single insurer in such circumstances is subject to liability under more than one policy and each policy has a separate deductible or self-insured retention, should the insured be able to collect covered losses from a single policy subject only to that policy's deductible or self-insured retention or should liability be reduced by the sum of the applicable self-insured retention, effectively allocating total liability across the policies of that insurer in effect during the contamination period?

In addition to these certified questions, the First Circuit answered important issues concerning the effect of the owned property exclusion in such cases and the ability of an insured to obtain a declaration of coverage for future losses.

Like most states, Massachusetts follows the rule that the owned property exclusion does not preclude coverage for the cost of preventing the migration of pollution onto the property of others. In *Hakim v. Abington Mut. Fire Ins. Co.*, 424 Mass. 275, 675 A.2d 1161 (1997), the court left open the issue of whether or how clean up costs might be allocated where some portions of a clean up are solely related to damage to the insureds own property.

In the *Boston Gas* case, the District Court gave the jury an instruction on the owned property exclusion that suggested an all or nothing approach whereas Century Indemnity argued that the exclusion might apply to preclude coverage for certain costs even if some portions of the cleanup eliminate or avoid contamination of groundwater, property or adjacent property. The court observed that several million dollars in cleanup costs had been incurred to remove soils on the property that might have been found to be subject to the exclusion including the cost of removing contaminated soils and liquids from underground storage tanks. Century noted that much of this work had been done to give the successor owner a firm foundation for its own facilities and did not involve remediation or prevention of further off-site damage.

While noting the narrowness of the issue, the First Circuit observed that the amounts in dispute were not trivial and therefore remanded the case for a further trial on the issue of determining whether all the costs were necessary to prevent off-site contamination or whether some were merely for the purpose of mitigating on-site contamination. On the other hand, the court declined to enter judgment as a matter of law for Century Indemnity with respect to the \$1.6 million spent to remove contaminated soils from the property. The court also rejected Century Indemnitys contention that it should not owe coverage for removal costs that were incurred after its coverage ended given the fact that the ongoing occurrence had begun prior to its policy.

The other major issue addressed by the First Circuit was the ability of an insured to obtain a declaration of coverage for costs to be incurred in the future. Century Indemnity complained that Boston Gas might use the judgment to compel it to pay for cleaning up the Mystic River even though no issue related to the cleanup of the River had been presented at trial. The First Circuit observed that the entry of judgment for Boston Gas did not preclude its insurer from contesting the amount of the requested costs or whether the work undertaken was consistent with compensable remediation efforts. As a result, the court concluded that Century was free to dispute future claims as to issues that not already been decided but that it could not re-argue matters that had been decided. Nor could Boston Gas seek to recover for future costs spent purely to remediate its own property where no threat exists of contamination outside the site.

The court also reversed Judge Zobel's ruling that Boston Gas was entitled to pre-judgment interest from the date that the individual costs were incurred. Applying federal law, the court held that statutory interest runs from the date of breach or demand. In this case, Century Indemnity had been put on notice of these claims in 1995 but Boston Gas had never submitted actual bills to it, nor was there any date when there was a breach or demand prior to the filing of the lawsuit in 2002. Since there was never a refusal to pay any invoice, either specifically or categorically, prior to the filing of the coverage litigation in 2002, the court ruled that Boston Gas was only entitled to pre-judgment interest from that date forward. The court emphasized the fact that the insureds 1995 notice letter had only referenced potential claims and that Century Indemnity had never denied coverage up until the date it was sued, nor was it bound to make payments in the absence of a specific request to do so by its policyholder.

If, as seems extremely likely, the Supreme Judicial Court accepts review of *Boston Gas*, litigants in long-tail disputes can look forward by 2009 to finally having clear appellate authority in Massachusetts on the basic issue of whether an insured can assign its entire loss to a single policy or not. Even if the court rejects this proposition and requires some sort of allocation, however, numerous secondary and tertiary issues will remain to be worked out.

Of particular significance will be how the issue is framed to the SJC. Will the question be whether a long-tail loss

should be allocated among the years of available insurance or should it be allocated on a pure time on the risk basis so that an insurer would only bear responsibility for that fraction of a loss that corresponds to the years (or months) that its policies were in effect as a percentage of the overall period of injury or damage. In this case, as in *Consolidated Edison Co. of New York v. Allstate Ins. Co.*, 98 N.Y.2d 208, 774 N.E.2d 687, 746 N.Y.S.2d (2002), the period of available insurance and the size of the SIRs so large that the insured might lose either way.

An issue that may or may not be considered by the court is how allocation should be undertaken if it is to be done. Should it be calculated on a pure time on the risk basis or is a *Carter-Wallace* approach preferable that takes into account the limits of coverage?

Also, will the court adopt an availability limitation to allocation that eliminates from consideration periods of time for which the policyholder could not have purchased insurance, especially years after the mid-1980s when absolute pollution exclusions and exclusions for asbestos losses became a common feature of CGL policies?

These are issues of acute importance in dozens of cases now pending and that remain to be brought in the future. Much now hangs in the balance.

ABOUT THE AUTHOR(S):

Michael F. Aylward is a senior partner in the Boston office of Morrison Mahoney LLP where he chairs the firms complex insurance claims resolution group. For nearly 25 years, Mr. Aylward has represented insurers and reinsurers in coverage disputes around the country concerning the application of liability insurance policies to commercial claims involving intellectual property disputes, environmental and mass tort claims and construction defect litigation. He is a frequent lecturer on insurance issues and has authored portions of various insurance treatises and is a frequent contributor to scholarly publications on legal issues. Mr. Aylward has taken a leadership role in legal organizations including the Defense Research Institute (Board of Directors (2000-2003); past Chair, Insurance Law Committee and Law Institute (2004-2006); and the International Association of Defense Counsel (Chair, Reinsurance, Excess and Surplus Lines Committee, Board of Editors, Defense Counsel Journal). He presently serves as the chair of the Reinsurance, Excess and Surplus Lines Committee of the Federation of Defense and Corporate Counsel.

Sonnenschein Nath & Rosenthal, LLP on *Buhmeyer v. Case New Holland, Inc.* and *Niver v. Travelers Indemnity Co.*: Punitive Damages for Insurance Bad Faith in Iowa

By William T. Barker and Robert C. Johnson

June 30, 2008

SUMMARY: Two Iowa federal district courts have expressed differing views on the level of culpability that must be demonstrated to submit a punitive damages claim to a jury in an insurance bad faith case. No Iowa case clearly resolves this dispute. This commentary argues that *Niver* is right and suggests how the standard should be more precisely defined.

ARTICLE: Cite as: Barker, William T., and Johnson, Robert C. *Buhmeyer v. Case New Holland, Inc.* and *Niver v. Travelers Indemnity Co.*: Punitive Damages for Insurance Bad Faith in Iowa. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Two Iowa federal district courts have expressed differing views on the level of culpability that must be demonstrated to submit a punitive damages claim to a jury in an insurance bad faith case. *Buhmeyer v. Case New Holland, Inc.* n1 said that any case where bad faith can be found necessarily also satisfies the requirements for punitive damages. *Niver v. Travelers Indemnity Co.*, n2 disagreed, and set aside a punitive damage verdict, but without clarifying exactly what is required. No Iowa case clearly resolves this dispute.

Under Iowa law, to establish an insurer's bad faith, the plaintiff must prove (1) that the insurer had no reasonable basis for denying the plaintiff's claim or for refusing to consent to settlement, and (2) that the insurer knew or had reason to know that its denial or refusal was without reasonable basis. n3 The first element is an objective one; the second element is subjective. n4 We submit that, contrary to *Buhmeyer*, punitive damages may not be awarded unless the evidence permits a jury to find that the insurer either knew that it lacked a reasonable basis for delay or denial of the claim or it recklessly disregarded that lack. n5

An Iowa statute requires that, to recover punitive damages on any cause of action, a plaintiff must establish, by a preponderance of clear, convincing, and satisfactory evidence, [that] the conduct of the defendant from which the claim arose constituted willful and wanton disregard of the rights or safety of another. n6 Case law establishes that where there is no showing of personal spite, hatred, or ill will, the statute requires a showing of legal malice. n7 Legal malice is shown by wrongful conduct committed or continued with a willful or reckless disregard for another's rights.

Necessarily, then, a claim for punitive damages must be supported by something more than merely negligent conduct.
n8

Another formulation of the legal malice standard is that the actor has intentionally done an act of unreasonable character in disregard of a known or obvious risk that was so great as to make it highly probable that harm would follow, and which thus is usually accompanied by a conscious indifference to the consequences. n9

Buhmeyer said that the latter formulation embraces any case meeting the requirements for bad faith liability. n10 We disagree.

It is true that denying a claim is an intentional act. If the denial was in bad faith, then there can have been no reasonable basis, meaning that the act was (in a sense) of an unreasonable character. But that is true of any intentional conduct that negligently disregards risks. To permit punitive damages requires a greater culpability than mere negligence. But bad faith does not require greater culpability: it requires only that the defendant *should have known* that there was no reasonable basis to deny the claim.

The second formulation of the punitive damages standard was developed in cases where the conduct endangered the safety of persons or property. That is significant, because everyone has a right to be free from unreasonable risks to safety; disregard of a known or obvious great risk is more culpable than mere negligence. n11 And there is no problem applying that formulation to cases where the elements of the relevant tort or the facts of the case show elevated culpability. n12 In contrast, an insurers duty of good faith does not depend on the consequences of denying the claim. A fairly debatable claim may be denied, and thereby debated, no matter how severe the consequences to the claimant. So, mere knowledge of consequences does not elevate the culpability of the denial. The focus of any culpability analysis depends on whether the lack of reasonable basis was known or obvious. Only then could one could fairly say that the denial was wrongful conduct committed or continued with a willful or reckless disregard for anothers rights. n13

The Eighth Circuit recognizes that, under Iowa law, submission of punitive damages to a jury requires proof of egregious conduct. n14 It has held that evidence sufficient to prove retaliatory discharge for pursuing a workers compensation claim was not enough to submit punitive damages to the jury. n15 We submit that it cannot be true that Iowa law permits punitive damages whenever insurance bad faith is proven. Only clear and convincing evidence that the insurer knew it lacked a reasonable basis or recklessly disregarded that lack can support punitive damages.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial

Board of The New Appleman on Insurance Law, now in preparation, and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Robert C. Johnson is a partner in the Chicago office of Sonnenschein Nath & Rosenthal LLP and a past Chair of its national Litigation practice group. He currently heads the Litigation practice in the Chicago office. Mr. Johnson represents insurers in various complex litigation matters, including bad faith actions and asbestos, environmental, product liability, construction defect, mold and personal injury (including advertising injury) coverage claims. He has handled appeals in the Second, Third, Fourth, Fifth, Seventh, Eighth, Ninth and Eleventh U.S. Circuit Courts of Appeal, and all five districts of the Illinois Appellate Court. He has been recognized as a leading lawyer in Illinois in insurance coverage litigation by Chambers USA, Americas Leading Lawyer for Business 2007.

Sonnenschein Nath & Rosenthal, LLP regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in Chambers USA: Americas Leading Lawyers for Business. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Stempel on Federal Insurance Co. v. American Hardware Mutual Ins. Co., The Nevada Supreme Court Gives Broad Construction to Commonly Used Additional Insured Endorsements

By Jeffrey W. Stempel

June 30, 2008

SUMMARY: In *Federal Insurance Co. v. American Hardware Mutual Ins. Co.*, 2008 Nev. LEXIS 38 (May 29, 2008), the Nevada Supreme Court unanimously aligned itself with the apparent emerging majority approach and held that the additional insured endorsement in question covered active negligence by the additional insured and provided coverage even if the additional insured was the only insured accused of fault.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Stempel, Jeffrey W. *Federal Insurance Co. v. American Hardware Mutual Ins. Co.*, The Nevada Supreme Court Gives Broad Construction to Commonly Used Additional Insured Endorsements. LexisNexis Expert Commentary, (Insert date you accessed the document online).

The Problem and Its Background. Insurers and additional insureds have been locked in contests for some time over the scope of additional insured coverage, with insurers often contending that additional insureds (insureds added on to a policy purchased from the insurer at the request of the named policyholder who bought the policy) are covered only if sued for vicarious liability flowing from the conduct of the named policyholder. Insurers argue that an additional insured does not enjoy coverage under the named insureds policy in cases where the additional insured is sued because of its own active negligence or where the additional insured is the only allegedly negligent tortfeasor. Conversely, additional insureds argue that an-insured-is-an-insured-is-an-insured and that they enjoy the full range of coverage available to the named policyholder and are thus covered even where their conduct contributes to the injury, alone or in combination with that of the named policyholder.

In general, additional insureds appear to be winning these coverage battles. See Jeffrey W. Stempel, Stempel on Insurance Contracts § 25.06 at p. 25-87 (3d ed. 2006 & Supp. 2008)([M]ost courts have tended to give the arising under language of the various traditionally used additional insured endorsements a broad construction and have refused to limit additional insured coverage to only cases of vicarious liability.); Douglas R. Richmond, *The Additional Problems of Additional Insureds*, 33 *Tort & Ins. L.J.* 945, 958 (1998)(noting that liberal interpretation of the additional insured endorsement is fast becoming the majority rule). See, e.g., *National Union Fire Ins. Co. v. Lumbermens Mut. Cas. Co.*, 385 F.3d 47 (1st Cir. 2004)(applying Massachusetts law); *Marathon Ashland Pipe Line v. Maryland Cas. Co.*, 243 F.3d 1232, 1240 n. 5 (10th Cir. 2001)(applying Wyoming law); *Mid-Continent Cas. Co. v. Swift Energy Co.*, 206 F.2d 487,

498 (5th Cir. 2000)(applying Texas law); *McIntosh v. Scottsdale Ins. Co.*, 992 F.2d 251, 254-55 (10th Cir. 1993)(applying Kansas law); *Acceptance Ins. Co. v. Syufy*, 69 Cal. App. 4th 321, 81 Cal. Rptr. 2d 557, 562-63 (1999). But see also *BP Chemicals, Inc. v. First State Ins. Co.*, 226 F.3d 420, 425-26 (6th Cir. 2000)(applying Texas law)(restricting coverage to cases not involving additional insureds own negligence because the particular endorsement at issue explicitly barred coverage for any negligent acts committed by the additional insured.); *National Union Fire Ins. Co. v. Nationwide Ins.*, 69 Cal. App. 4th 709, 82 Cal. Rptr. 2d 16, 21-22 (1999)(same result in case involving similarly explicit limitation in additional insured endorsement).

The Federal v. American Hardware Case. In *Federal Insurance Co. v. American Hardware Mutual Ins. Co.*, 2008 Nev. LEXIS 38 (May 29, 2008), the case began in state court but was removed to federal court, only to have the federal trial court certify the following legal question to the Nevada Supreme Court: [w]hether, under Nevada law, an additional insured endorsement provides coverage for an injury caused by the sole independent negligence of an additional insured? The Court [a]nswer[ed] the question in the affirmative and conclude[d] that, unless the contrary intent is demonstrated by specific language excluding or limiting coverage for injuries caused by the additional insureds independent negligent acts, there is coverage. See 2008 Nev. LEXIS 38 at *1-*2.

The liability insurance policy in question was issued by American Hardware Mutual to Clark Lift West, Inc. Clark Lift provided maintenance and repair services at a facility for Southern Wine and Spirits of America, Inc. American Hardware willingly issued an endorsement naming Southern Wine as an additional insured under the Clark Lift policy. The endorsement stated that Southern Wine was an additional insured covered for liability but only with respect to liability arising out of [the named policyholders] ongoing operations performed for that [additional insured]. See *id.* At *2. Soon after, a Clark Lift employee was injured while providing services at Southern Wines facility. He sued Southern Wine seeking damages for Southern's alleged negligence. While repairing a conveyor belt drive, the belt unexpectedly began moving and that he slipped on loose cardboard that was negligently left on the floor, resulting in his hand being mangled in the conveyor belt mechanism. Upon receiving notice of the suit from the company, Southern Wine informed its CGL insurer, Federal Insurance. The two tendered the defense of the tort action to American Hardware, which refused the tender, arguing that the additional insured coverage accorded to Southern Wine under the Clark Lift policy applied only when the alleged negligence could be imputed to the additional insured thorough the named insureds operations, i.e., when the additional insured can be vicariously liable for the named insureds negligence. See *id.* At *3.

The Court had two primary bases for deciding in favor of coverage. First, it found the additional insured endorsement in the American Hardware policy to be ambiguous and hence construed it against American Hardware as the drafter. Second, the Court applied what it viewed as the majority rule and the Nevada rule that grants of coverage in an insurance policy should be interpreted broadly and restrictions on coverage need to be clear and explicit. See *id.* At *6-*13. Under Nevada law, an insurer wishing to restrict a policy's coverage should use language that clearly and distinctly communicates to the insured the nature of the limitation. See *id.* At *6, citing *National Union Fire Ins. V. Renos Exec. Air*, 100 Nev. 360, 364, 682 P.2d 1380, 1382 (Nev. 1984).

Here, American Hardware's endorsement contains no such distinctly limiting language. Indeed, this court as well as other jurisdictions has recognized that the scope of coverage provided by virtue of the phrase arising out of the [named insureds] operations is ambiguous, since it is unclear whose acts are covered. Specifically, under one reasonable interpretation, the endorsement limits coverage to circumstances in which the named insureds negligent acts or operations directly caused the plaintiffs injury, that is, circumstances in which the additional insured is held vicariously liable for the named insureds negligence. Under another reasonable interpretation, however, the endorsement covers the additional insureds direct negligence, so long as the plaintiffs injury has some connection to the work or operations that the named insured performed for the additional insured. Thus, in accordance with our precedent and consistent with persuasive authority from other jurisdictions, we conclude that the endorsement here, which covers the additional insured only with respect to liability arising out of the [the named insureds] ongoing operations performed for [the additional insured], is ambiguous, since it is reasonable to interpret that language both in favor of and against coverage for the additional insureds independent negligence.

See 2008 Nev. LEXIS 38 at *6-*8 (citations omitted, bracketed terms in original).

The Significance of *Federal v. American Hardware*. The *Federal v. American Hardware* case is significant for a number of reasons. First, it puts another state supreme court unanimously in the camp of giving broad construction to the scope of additional insured coverage and requiring insurers to do more than just argue the purported public policy benefits of restricting coverage to only derivative liability or merely asserting a generalized industry intent that additional insured coverage be narrower than coverage for the named insured.

Second, in a move that perhaps will give both policyholder and insurer counsel concerns in future Nevada cases, the Court stated that the construction of restrictive language in insurance policies will be assessed not only according to whether it is facially ambiguous and with reference to the general rule that restrictions on coverage must be clearly expressed but also with reference to the reasonable expectations of the insured and extrinsic information as to the parties specific intent or the custom and practice regarding the understanding of the scope of coverage afforded by a common policy term. See *id.* at *11-*15 (footnotes omitted). See also *Anuvi, LLC v. G.L. Dragon, LLC*, 163 P.3d 405, 407 (Nev. 2006) (indicating that party intent can be ascertained from the text of the contract document and from the surrounding circumstances even where specific extrinsic evidence of intent is not introduced or received).

Third, and perhaps most important, the Nevada Supreme Courts decision in *Federal v. American Hardware Mutual* not only adds another case to the list of additional insured victories but also expressly embraces the view that a broad construction of the typical additional insured endorsement is the dominant majority view of the courts. The articulated norm is that the additional insured is covered under the named insureds policy so long as the additional insured is being sued for something reasonably related to its operations involving the named insured. See 2008 Nev. LEXIS 38 at *18-*20 (citing cases). In other words, *Federal v. American Hardware* stands for the proposition that insurers using the traditional arising out of the named insureds operations additional insured endorsements must provide broad coverage to the additional insured and that there is little judicial debate on the point.

An Available Escape Hatch for Insurers But Reluctance to Use It. However, the decision also gives insurers a chance to avoid providing such broad coverage. [A]n insurer may limit the coverage provided to an additional insured [but] in order to do so, it must include in the endorsement explicit language that would exclude particular causes of losses suffered. Absent an express exclusion, we are bound to construe the insurance term broadly, in favor of coverage. See *id.* at *20-*21. This means that insurers are perfectly free to write more restrictive additional insured endorsements or to introduce evidence of party intent, expectation, or industry custom and practice in arguing for a narrower construction of an additional insured endorsement. Although *Federal v. American Hardware* and other cases in the majority trend create a default rule or presumption in favor of broad additional insured coverage, it is a default rule that can be avoided by contract and a presumption that can be rebutted by specific policy language or other indicia of contract meaning.

Ironically, however, most insurers appear to continue to be using the arising out of the named insureds operations endorsement or only slight variations even though the Insurance Services Office has made available to insurers a more favorable endorsement. In 2004, ISO issued form CG 20 10 07 04 which attempts to achieve a fault based coverage grant by eliminating the phrase arising out of your [named insureds] ongoing operations performed for that [additional] insured and instead linking potential coverage for the additional insured directly to the acts or omissions of the named insured. More specifically, ISO seeks to limit coverage for an additional insured to its vicarious or contributory negligence and negate any coverage for the additional insureds sole negligence. . . . See Randy J. Maniloff, *Additional Insured Endorsements*, FC& S Casualty & Surety Bulletin M. 23-1 (May 2004) at 23-3; Randy J. Maniloff, 19-22 *Additional Insured Endorsements: (ISOs Revisions): Adopting a Fault-Based Additional Insured Standard*, 18-26 *Mealeys Litig. Rep. Ins.* at 11-12.

I am considerably less impressed with the clarity of the language in the new ISO form. In particular, the forms text stating that there is coverage for the acts or omissions of those acting on behalf of the named policyholder in the course of performing operations for the additional insured can very reasonably be read to mean that if an additional insured

(such as a general contractor) is working on the job site in at least some connection to the work of the named policyholder (such as a subcontractor), that there is coverage for the additional insured regardless of whether the additional insured is sued on a theory of vicarious liability or active negligence. The new language, albeit narrower than the old language, still could be seen by many (or perhaps even most) courts as ambiguous. This is particularly ironic in that ISO had, prior to issuance of the new form, considered using language stating that there was no coverage under the endorsement for claims involving the sole negligence of the additional insured or by those acting on behalf of the additional insured. Now there's language that is unambiguous.

Because ISO was aware of how to write such straight-forward endorsements but declined to put such clear language in the resulting 2004 form, insurers will have some explaining to do in contending that the much more vague 2004 form clearly accomplishes the same result. However, to the extent that courts permit insurers using the 2004 form to introduce extrinsic information such as drafting history, ISOs accompanying materials make it quite clear that under the new form, the intent of the insurance industry is to provide additional insured coverage only when the named policyholders acts or omissions result in suit against the additional insured. In the meantime, insurers appear to continue to use the pre-2004 endorsement language and continue usually to lose when arguing for a restrictive construction of their endorsements in actual use.

Conclusion. For the moment, the key lessons of *Federal Insurance v. American Hardware Mutual* are these: First, insurers who continue to use the traditional pre-2004 arising out of named insured operations language for additional insured endorsements increasingly do so at their peril. Second, insurers who want to expressly write a narrower scope of additional insured coverage into their policies will probably be successful if their drafting is reasonably clear. Third, even where insurers have failed to do this, they may be able to win these coverage disputes in cases where they are able to produce sufficiently probative evidence that narrower scope was intended or that the additional insured had such an understanding or expectation.

Wiley Rein LLP on the Showdown Looming Over NAIC's Authority

By Lawrence Mirel

June 23, 2008

SUMMARY: For much of its 137-year history, the National Association of Insurance Commissioners was a forum for state insurance commissioners to meet and share experiences and common problems. That started to change when the NAIC began to serve as a standard-setting and information-sharing public voice for the regulatory community. The Emerging Issues Analysis analyzes the extent of this many-faceted problem from the perspective of the insurance industry.

ARTICLE: Wiley Rein LLP on the Showdown Looming Over NAIC's Authority

By Lawrence H. Mirel

Since the National Association of Insurance Commissioners was founded in 1871 there have been questions about what, exactly, it is. It is often described as the oldest association of state officials in the United States, a private organization made up of public officials. It is not itself an "official" organization; that is, it has no governmental authority of its own.

Or does it?

For much of its long history the NAIC was a place for state insurance commissioners to meet, discuss common problems, swap stories about the large and diverse industry they collectively regulate, and have a good time. In short, it was much like any other private trade organization, despite the fact that its members were all elected or appointed state officials.

That began to change about 25 years ago, when the NAIC started playing a more central role in the state insurance regulatory system. As the insurance industry grew in both national and international importance the insurance commissioners saw a need for a more robust NAIC, to serve as a standard-setting and information-sharing public voice for the regulatory community. At first the insurance industry, desperate for a measure of uniformity in state regulatory

rules and some protection against redundant and sometimes conflicting examinations, supported this effort. Since the early 1990s, however, when the NAIC began to accredit state insurance departments, the growth of the NAIC has been phenomenal, and it continues to increase dramatically each year. Its size and capability have become a source of concern to the insurance industry, which has started to oppose the NAIC's efforts to function as a kind of national regulatory body.

In the early 1970s the annual budget of the NAIC was less than a million dollars. By 2008 that budget had grown to more than \$68 million, up from \$55 million just five years earlier, dwarfing the funding of all but a handful of the largest state insurance departments. Its paid staff now exceeds 425 persons, and it has an operating *reserve* of more than \$50 million. Its chief executive officer earns \$370,000 a year, many times the annual salaries of the regulators who form the membership of the organization, and other top officials of the organization are likewise well compensated. n1

Prior to 1980 close to two-thirds of the budget of the NAIC came from dues paid by member states. Today only about 3% of the budget comes from dues, and the states get more than that amount back in the form of grants and travel expenses handed out by the NAIC. The rest comes primarily from fees paid by the insurance industry, most of which are mandatory.

It is not hard to figure out what is going on here. Leaving aside the natural tendency of all organizations to grow and to seek power and authority, two main factors are driving this surge in the influence of the NAIC.

First, the very concept of state insurance regulation is under attack. The tradition in the United States of state insurance regulation goes back to an 1869 Supreme Court decision holding that insurance was not interstate commerce. n2 After the Supreme Court reversed itself in 1944 n3 Congress immediately enacted legislation -- the McCarran-Ferguson Act n4 -that ceded federal authority to regulate insurance to the states. The insurance industry supported, and still supports, much of the McCarran-Ferguson law.

But the industry, weary of the cost and difficulty of dealing with more than 50 state regulators (the 50 states plus the District of Columbia, Puerto Rico and the territories), coping with inconsistent rules and regulations, and responding to incessant and overlapping examinations, has been pushing for a single national regulator, at least on an optional basis. An Optional Federal Charter bill is currently pending in both Houses of Congress that would give insurers the same choice that banks have -- to be regulated by the states or to be regulated by the Federal Government. Even though there is no immediate prospect of the Optional Federal Charter bill becoming law, the NAIC feels compelled to fend off the challenge posed by those who seek to weaken or abolish state insurance regulation.

To respond effectively, the NAIC must be able to demonstrate that the state system can achieve a high level of uniformity, can speak with one voice, can maintain a central data bank of information about the industry, and can enforce the rules that it sets. It must, in other words, try to make the prospect of a federal regulator appear unnecessary, thereby enabling it to tap into a deep-seated public aversion to the growth of federal power and bureaucracy.

Second, technological innovation has enabled the NAIC to wield unprecedented power. What was only a few years ago an impossible dream -- to be able to gather vast quantities of data from multiple sources and collate those materials into easily accessible national information -- is now an everyday occurrence. The NAIC has the money, the machinery, and -- most importantly -- the highly trained people who can do far more with insurance industry data than any single state can. Moreover, by collecting such information, aggregating it, and selling it back to the industry that provided it in the first place, the NAIC has found an endless source of revenue. Using its unique position as the central repository of insurance information gathered from the states, the NAIC can maintain a virtual monopoly on highly valuable and much sought after data on the detailed operation of private insurance companies.

The problem with this picture is that the NAIC is not a government agency. It is neither empowered by law to play the role it seeks, nor is it limited by the rules that apply to governmental bodies. It is not subject to any Administrative Procedure Act, for example, which provides fairness and due process to persons who disagree with the activities of a

state or federal agency. No Freedom of Information Act is applicable to the NAIC, neither the provisions requiring public disclosure of information in the hands of the government nor more significantly for the industry-the provisions spelling out what information is private or confidential and therefore exempt from public disclosure. Most states and the federal government have laws protecting "trade secrets" and providing remedies for breaches of those laws, up to and including criminal penalties for officials who disclose such information. The NAIC is subject no such legal limitations.

The NAIC is, as described by its president in 2007, Commissioner Walter Bell of Alabama, "a 501(c)(3) non-profit corporation with voluntary membership and .. not a state government entity. .. When individual insurance commissioners gather as members of the NAIC, they are not considered a governmental entity or public body .. but rather are a private group. As an organization, the NAIC does not have any regulatory authority." n5

How, then, does it get the power to require that insurance companies submit data to it, and to pay fees for doing so? How is it that "[t]he NAIC maintains a vast compendium of financial and subject matter information on all facets of insurance...The NAIC's comprehensive collection of insurance information is the largest in the field. We have also invested heavily in software tools to analyze and enhance the data"? n6

The answer in part lies in statutes that the NAIC has convinced states to enact in recent years specifically mentioning the organization and requiring or, more usually, permitting state insurance regulators to share with it information obtained in the course of examining an insurance company. Typically these statutes provide that:

"All working papers, recorded information, documents, and copies thereof produced by, obtained by, or disclosed to the [regulator] or any other person in the course of any examination must be given confidential treatment, are not subject to subpoena, and may not be made public by the [regulator] or any other persons, except [in certain listed enforcement situations]. Access may also be granted to the National Association of Insurance Commissioners. Those parties must agree in writing before receiving the information to provide to it the same confidential treatment as required by this Section, unless the prior written consent of the company to which it pertains has been obtained."

The language quoted is from an Illinois market conduct examination statute, n7 but 43 states have similar laws. n8 Despite minor variations these statutes are much the same because they are based on model laws developed by the NAIC or by the National Conference of State Insurance Legislators ("NCOIL"). n9

Note that the statutory language says that the NAIC must give the same confidential treatment to the information it receives as is required under the law of the state that shared the information. The NAIC claims that it has signed confidentiality agreements with each of the states that would allow it to receive the information and protect it according to state law. Does that mean that the NAIC provides the same degree of confidentiality as that required under state law? That is not an easy question to answer because state laws vary. If the NAIC gathers information from most or all states, which state laws govern the confidentiality of that information-the most restrictive (i.e., those that provide the greatest confidentiality protection) or the least restrictive (i.e., those that require all information to be public)? n10

Moreover, *can* the NAIC provide the same degree of confidentiality as is required under state law, even if it wanted to? The Illinois statute quoted above provides that the market conduct examination data "are not subject to subpoena." If the information was under the control of the NAIC could the NAIC win a motion to quash a subpoena seeking the information in its possession, citing Illinois law? A state government may attempt to resist a subpoena by asserting sovereign immunity; the NAIC cannot.

More to the point, however, the NAIC shows no genuine interest in or commitment to protecting the confidentiality of company information that is provided to state regulators. To the contrary, the NAIC in recent months has taken several actions which suggest a desire to make all, or most, insurance company data in its possession public, causing shudders of anxiety throughout the industry.

In one of these efforts the Market Conduct and Consumer Affairs (D) Committee of the NAIC has proposed to the NAIC's Executive Committee that all market conduct information on insurance companies currently gathered by the

individual states be submitted to the NAIC yearly as a supplement to the Annual Statement Blank. The Annual Statement Blank, which is used for reporting financial solvency information, is considered a public document. Does that mean that reporting market conduct data on those forms removes them from the protection of state confidentiality laws? The general counsel of the NAIC says yes, that the confidentiality protection afforded market conduct data under state laws applies only to data reported on market conduct forms, not if the same information is reported on the Annual Statement Blank. n11

In another effort the NAIC has recently proposed changing the bylaws of the System for Electronic Rate and Form Filing ("SERFF") to make the board of directors of that joint regulator-industry organization into an advisory committee. SERFF is a cooperative industry-regulator effort that developed a software system allowing insurance companies to file their rates and forms (i.e., their policy language) electronically and uniformly with all states at once -- instead of making separate hard copy submissions to each jurisdiction, on separate, often state-specific, forms. The bylaws of SERFF, which was funded initially by industry and the NAIC, call for a governing board of 13 members, 7 regulators and 6 industry representatives, to make all policy decisions of the organization, subject to approval by the Executive Committee of the NAIC. SERFF was to be self-funded, with all income being used to cover the costs of the system, and for no other purpose. Initially the SERFF concept met with substantial resistance, as states did not want to accept electronic filings and companies were unwilling to file in a format that was not acceptable to the regulators. Over a 15-year period, however, hard effort on the part of the regulators and industry representatives on the SERFF board finally overcame the resistance and in the past year the program has achieved great success. All states now accept SERFF filings for at least some purposes and companies now generally use the system. n12

The industry sees the effort of the NAIC to change authority over the SERFF system by removing the industry representatives as an attempt to hijack a successful system and use it for other purposes, not all of which are acceptable to the industry. The industry worries that the revenues from the system, which are now substantial, will be used for other NAIC purposes not contemplated in the SERFF bylaws, and that the SERFF platform itself will be used to gather and make public individual company data that is now considered confidential. To date the outcome of this effort is not settled. n13

In another recent example, the Interstate Insurance Product Regulation Commission ("IIPRC") has voted to make public product proposals filed by companies that have been withdrawn or have been disapproved by the IIPRC. The IIPRC was formed at the initiative of the NAIC to provide a way for new products to be reviewed once, rather than having to be approved by each state regulator. Created by an interstate compact -- and thereby endowed with actual governmental authority that the NAIC itself lacks -- the IIPRC receives and reviews new product proposals (currently limited to life, annuity and long-term care products) by the use of panels made up of regulators from several jurisdictions. States that have joined the compact (currently 31) agree that they will accept the decision of the IIPRC panel that has reviewed the product and will allow it to be sold in their jurisdictions if the IIPRC has approved it. Submitting new products to the IIPRC is obviously highly advantageous to companies, saving much time and money, but the new proposal of the IIPRC has again raised questions about the operation of a quasi-governmental program.

Once approved, products reviewed by the IIPRC are of course made public. But companies for a variety of reasons do not want to have information about disapproved or withdrawn products publicly available. Moreover, a provision of the compact requires the IIPRC to protect "insurers' trade secrets," and a Drafting Note to that section refers to "product filing information .. as proprietary information of insurers." n14 Despite this clear language, however, the IIPRC, under pressure from the NAIC, is moving to make product filings public from the moment they are received by the IIPRC, regardless of whether they are later approved, disapproved, or withdrawn. n15

What does the industry fear from the new aggressiveness of the NAIC? After all, wouldn't it be better for the industry, as well as for the regulators, if all data was collected centrally so that one filing, and not 50-plus filings, would be possible? If a single federal regulator would make life easier and more efficient for the insurance industry, why not a single state-based regulator, namely the NAIC?

The difference is that a federal regulator would be empowered and limited by law. The NAIC, being a private organization, is not subject to the confidentiality laws that apply to government agencies. Issues of what information should properly be in the public domain and what information should remain confidential, either to protect the privacy of individual insurance company customers or to protect the trade secrets of those companies from competitors, would not be decided by a public regulatory agency, after full debate of the issues, but rather by a trade association with a large staff and a lot of money. Although the members of the NAIC are all state officials, and responsible under the laws of their states for their actions as regulators, they do not have such responsibilities or limitations when they act as members of their trade association. As Commissioner Bell noted, in the letter quoted at the beginning of this article, individual commissioners who participate in the NAIC do so not as government officials but as member of a private group.

Yet what the NAIC seems to be doing, as shown by recent actions described above, is to seek to override specific state confidentiality statutes in order to show that it can become the de facto national regulator of insurance. That is a highly dangerous and unprecedented role for an unaccountable, private trade association to play.

The primary motivation for these actions appears to be to hold off federal insurance regulation. But the effect would be to provide vast amounts of raw data to consumer groups and plaintiffs lawyers about the internal operations of insurance companies, information that the industry is certain will be used against them. Commissioner John Morrison of Montana, himself a plaintiffs' lawyer by profession, heads the D Committee that proposed making market conduct information public. He has claimed several times recently in public that the market conduct information held by the states is already in the public domain, despite the fact that the laws of Montana are clear that market conduct information is confidential in that state. n16 Morrison's view is shared by the representatives of various consumer groups. n17

It can certainly be debated whether and what kinds of insurance company data should be made public, and whether such public disclosure would actually help consumers or would truly harm industry. What should not be on the table, however, are proposals for a private trade association to ignore valid and enforceable state laws in its rush to prove itself capable of becoming a national insurance regulatory agency. We are still a country of laws, and it is through the legislative process that these kinds of issues need to be resolved.

n9 NAIC Model Law 693; NCOIL Market Conduct Surveillance Model Law (11/2006).

n10 The Illinois statute, and similar laws in other states, provides for another exception to the confidential protection of the information, namely "the prior written consent of the company to which it pertains." As far as can be determined, the NAIC has never sought and has never obtained written consent from any company to release information in its possession from the confidentiality protection afforded by applicable state laws.

n11 Colloquy between Andrew Beal, Associate Executive Director and Chief Legal Counsel of the NAIC, and lawyers for the American Council of Life Insurers, June 9, 2008.

n12 Although intended to be entirely voluntary on the part of both regulators and insurance companies, in the past year states have begun to require companies to file their rates and forms directly with the NAIC, using the SERFF platform. See, e.g., Alabama (Dept. of Ins. Bulletin April 1, 2007); Colorado (Div. of Ins. Bulletin

B-1.19, effective Sept. 11, 2007); Kansas (Ins. Dept. Bulletin 2007-6 dated July 23, 2007); Massachusetts (Div. of Ins. Bulletin 2008-08 dated May 20, 2008); Minnesota (Dept. of Commerce Bulletin 2007-3, dated July 9, 2007); and Rhode Island (Ins. Bulletin No. 2007-03 dated June 15, 2007). Do such laws transform NAIC from a private organization into a quasi-governmental body?

n13 At a meeting of the SERFF board in San Francisco on May 31, 2008, the chief legal officer of the NAIC argued that the SERFF board was never a properly constituted legal body and that the NAIC had every right to take it over. The following day, however, the Chairman of the SERFF board, Commissioner Roger Sevigny of New Hampshire, said that the NAIC would respect the authority of the SERFF board and would seek changes within the requirements of the SERFF bylaws.

n14 Interstate Ins. Product Regulation Compact, Art. VIII, 1, drafting note (NAIC Model Regulation 692, July 2003).

n15 Although the IIPRC has already voted to make this information public, it has also established a 60-day period for comments from industry and regulators before the new rule goes into effect. That period of review expires in the middle of August. It is conceivable, of course, that based on the comments received, the IIPRC will change its mind.

n16 See Mont. Code Ann. § 33-1-409(6) (stating that "[a]ll working papers, confidential criminal justice information, as defined in 44-5-103, personal information protected by an individual privacy interest, and trade secrets, as defined in 30-14-402, specifically identified and for which there are reasonable grounds of privilege asserted by the party claiming the privilege obtained by or disclosed to the commissioner or any other person in the course of an examination made under this part must be given confidential treatment, are not subject to subpoena, and may not be made public by the commissioner or any other person, except to the extent provided in subsection (5). . . .").

n17 For example, in a letter dated March 28, 2008, addressed to Commissioner Morrison and commending the work of the D Committee, Constance Chamberlin, President and CEO of Housing Opportunities Made Equal in Virginia, Inc, a NAIC Funded Consumer Representative, wrote: "Rather than collecting summaries, as set out in the current proposed data elements, regulators need data on the individual policy level. Data collected should include the race, gender and income of the applicant, credit score if applicable, disposition of application, location of the policy, premium, type of policy, number of claims, etc."

Richmond on Certificates of Insurance: Understanding Their Role in Liability Insurance Coverage

By Douglas Richmond

June 19, 2008

SUMMARY: This Emerging Issues Analysis explores court decisions across the nation revealing those dangers and offers practical advice to parties who would issue or rely upon certificates of insurance.

ARTICLE: Richmond on Certificates of Insurance: Understanding Their Role in Liability Insurance Coverage By Douglas R. Richmond Introduction

When a commercial landowner contracts for construction on its property, it typically requires the general contractor to name it as an additional insured on the contractors commercial general liability (CGL) insurance policy. n1 Similarly, commercial landowners or property managers may require lessees to name them as additional insureds on the lessees CGL policies. Alternatively, a large retailer may require vendors who supply it with potentially hazardous products to name it as an additional insured on the vendors CGL policies. The entity to be named as an additional insured may specify coverages to be procured, or mandate minimum liability limits to be provided. Because the parties in these situations usually have contractual indemnity obligations apart from applicable insurance policies, the party procuring coverage generally may be described as the indemnitor, and the party to be named as an additional insured as the indemnitee. n2

Regardless of the context or specific coverage requirements, a company that is required to procure particular coverage for itself or add another entity or person to its liability policy typically evidences the fulfillment of its obligation by providing the indemnitee with a certificate of insurance. Most certificates of insurance are issued on a standard form prepared by ACORD Corporation for the insurance industry. Much as standardized insurance policies are identified by form number, the current standard certificate of liability insurance is ACORD 25 (2001/08). The forms change slightly over time, although the current form is very similar to its immediate predecessors. A standard certificate identifies the producer (an agent or broker), the insured, and the insurers affording coverage. The certificate also gives basic information about the policies to which it refers, including the names of the insurance companies affording coverage, the type of insurance, the policy numbers, the effective dates and expiration dates of the policies, and the liability limits of the policies. There is space to describe operations, exclusions, etc., added by endorsement to the policies listed, or to identify special policy provisions. The indemnitee is identified on the certificate as the Certificate Holder.

The use of certificates in this context has some advantages. The principal advantage is convenience. Certificates can be prepared and issued expediently, while an insured might not receive its policy for several months after inception. Most certificates are a single page or two, while commercial insurance policies may be lengthy. Certificates are easy to read. Certificates typically are issued by the indemnitors insurance broker, which eliminates the delay expected to accompany the insurers direct involvement in the process.

Additionally, insureds may be reluctant to share all the details of their insurance policies and can avoid doing so by substituting certificates for copies of actual policies. For example, a contract may require the indemnitor to procure a CGL policy with liability limits of \$1 million per occurrence. In fact, the indemnitor has a CGL policy with \$5 million liability limits, but it does not want to reveal its higher limits by furnishing a copy of its policy to the indemnitee because it thinks that information will make it a more appealing target should litigation ever erupt. By requesting that its broker issue a certificate of insurance stating that it has a policy with \$1 million liability limits in place, the indemnitor can satisfy its contractual obligations without revealing what it considers to be sensitive information. n3 Alternatively, the indemnitor may not want its indemnitee or others to know what it pays for coverage. Of course, the declarations page on its policy will reveal the premium amount. By providing a certificate in lieu of its policy, the indemnitor avoids this perceived intrusion into its business affairs as it goes about satisfying its contractual obligations.

While these advantages have made certificates the preferred means of documenting commercial indemnitors maintenance or provision of suitable liability insurance coverage, many business people and lawyers do not understand the limited role of certificates of insurance in liability coverage. They often do not appreciate how little information a certificate conveys about the coverage it identifies, or that as a rule, a certificate does not establish coverage for a loss. It is also unfortunately true that brokers sometimes issue certificates that are incorrect, as where they issue a certificate showing an indemnitee as an additional insured when, in fact, the indemnitee has not been added to the subject policy. n4 In any event, there are ample opportunities for controversy when a claim is made. Certificates of insurance commonly play a role in commercial coverage and indemnification disputes. Basic Principles Regarding Certificates of Insurance

It is perhaps simplest to begin our discussion of basic principles regarding certificates of insurance by identifying what a standard certificate is not, or what it does not do. A standard certificate of insurance does not alter the terms of the parties indemnity agreement or underlying contract. n5 A standard certificate of insurance is not an insurance policy. n6 A certificate does not alone evidence an oral contract of insurance. n7 A certificate is not a binder, i.e., a temporary policy of insurance that is effective until the insurer issues a formal policy. n8 A certificate of insurance alone does not constitute a contract to procure liability insurance with the issuing broker or impose a duty upon the issuer to obtain coverage. n9 For that matter, a standard certificate of insurance is not a contract of any sort. n10 A standard certificate does not even evidence an indemnitors agreement to procure insurance covering an indemnitee as an additional insured. n11

So what is the function of a certificate of insurance in the context of liability coverage? What role does a certificate play in liability insurance? In short, a standard certificate of insurance is solely an informational document. n12 A standard certificate of insurance serves to evidence the existence of the policies to which it generally refers. n13 It is the policies that control coverage, n14 as *Granite Construction Co. v. Bituminous Insurance Cos.* n15 illustrates.

Granite, a general contractor, sought a declaratory judgment that Bituminous, which insured a subcontractor, Brown, had a duty to defend Granite in a personal injury action by a Brown driver. Granite was an additional insured on Browns policy with Bituminous and had received a certificate to that effect. Bituminous denied coverage based on the persons insured provision in its policy. That provision had been amended by endorsement to make Granite an additional insured, but only with respect to liability arising out of operations performed for [Granite] by or on behalf of [Brown]. n16 The sole allegation in the underlying suit was that Granites employee negligently loaded Browns truck, causing it to overturn.

The trial court granted summary judgment for Bituminous, and Granite appealed to the Texas Court of Appeals.

Granite argued that regardless of the persons insured language in the policy, the following provision in the certificate triggered coverage: CERTIFICATE HOLDER IS ADDED AS AN ADDITIONAL NAMED INSURED FOR ALL GRANITE CONSTRUCTION COMPANYS WORK IN THE STATE OF TEXAS. n17 The court rejected this argument, explaining that the certificate itself did not manifest the insurance coverage afforded Granite as an insured. n18 Rather, the certificate merely evidenced Granites status as an insured and, by its very language, specified that any coverage was subject to the specific terms, conditions, and exclusions in the Bituminous policy. n19

Bituminous argued that it had no duty to defend Granite because the persons insured endorsement to its policy restricted coverage to liability for acts performed by Brown, but not for Granites own operations. n20 The court agreed that the underlying claim did not arise out of operations performed for Granite by or on Browns behalf, because it was Granites own employees negligence that gave rise to the suit. n21 Accordingly, the court in *Granite* affirmed the trial court judgment for Bituminous.

The fact that standard certificates of insurance are informational documents only and do not confer coverage should be apparent from their face. Standard certificates bear significant disclaimers. For example, a standard certificate states at the top: THIS CERTIFICATE IS ISSUED AS A MATTER OF INFORMATION ONLY AND CONFERS NO RIGHTS UPON THE CERTIFICATE HOLDER. THIS CERTIFICATE DOES NOT AMEND, EXTEND OR ALTER THE COVERAGE AFFORDED BY THE POLICIES BELOW. The decision in *Handley v. Providence Mutual Fire Insurance Co.* n22 illustrates the importance of this broad cautionary language.

Handley, a home builder and remodeler, required a subcontractor, Miles, to provide him with a certificate of insurance demonstrating that Miles had liability coverage. Miles insurance broker, Olivier, sent Handley a certificate supposedly evidencing Miles coverage through Providence (Olivier was an authorized representative of the company). The certificate did not bear the foregoing disclaimer. n23 In fact, Olivier knew that Miles had no coverage because his premium check bounced. When Handley later sought coverage under Miles policy, Olivier revealed that Miles had no policy with Providence. Handley then sued Providence for negligent misrepresentation. n24 The trial court held that the certificate of insurance issued by Olivier created no contractual relationship or duty on the part of Providence to inform Mr. Handley of any inaccuracies contained in the certificate . . . including whether coverage actually existed. n25 On this basis, the trial court granted Providence summary judgment. Handley appealed.

The Supreme Court of New Hampshire reasoned that the absence of disclaimers on the certificate clearly stating that the document was issued for informational purposes only or that it conferred no rights upon the certificate holder, coupled with false statements in the certificate, made Providences potential liability an issue of fact. n26 The court accordingly reversed the trial court and remanded the case for further proceedings.

Other courts react similarly. Under Illinois law, for example, the lack of such a disclaimer on a certificate may result in the certificate governing the extent and terms of coverage. n27 On the other hand, where the certificate refers to the policy and expressly disclaims any coverage other than that contained in the policy itself, the policy governs the extent and terms of coverage. n28

A standard certificate further provides at the start of the Coverages section: THE POLICIES OF INSURANCE LISTED BELOW HAVE BEEN ISSUED TO THE INSURED NAMED ABOVE FOR THE POLICY PERIOD INDICATED. NOTWITHSTANDING ANY REQUIREMENT, TERM OR CONDITION OF ANY CONTRACT OR OTHER DOCUMENT WITH RESPECT TO WHICH THIS CERTIFICATE MAY BE ISSUED OR MAY PERTAIN, THE INSURANCE AFFORDED BY THE POLICIES DESCRIBED HEREIN IS SUBJECT TO ALL THE TERMS, EXCLUSIONS AND CONDITIONS OF SUCH POLICIES. AGGREGATE LIMITS SHOWN MAY HAVE BEEN REDUCED BY PAID CLAIMS.

A standard certificate also relieves an insurer of liability for failing to notify the certificate holder that the related policy has been cancelled. This is accomplished by way of the following language: SHOULD ANY OF THE ABOVE DESCRIBED POLICIES BE CANCELLED BEFORE THE EXPIRATION DATE THEREOF, THE ISSUING

INSURER WILL ENDEAVOR TO MAIL 30 DAYS WRITTEN NOTICE TO THE CERTIFICATE HOLDER NAMED . . . , BUT FAILURE TO DO SO SHALL IMPOSE NO OBLIGATION OR LIABILITY OF ANY KIND UPON THE INSURER, ITS AGENTS OR REPRESENTATIVES.

Because a standard certificate of insurance is not an insurance policy and because it bears clear disclaimers, prudent indemnitees obtain copies of the policies to which certificates refer so that they can analyze them. n29 Only then will they know if the policies to which a certificate refers were in fact issued, or truly afford the contemplated coverage. Indeed, an additional insured is arguably obligated to examine the policy to determine applicable coverages. n30 In any event, the mere issuance of a certificate of insurance does not confer additional insured status or impose any duties on an insurer vis--vis the certificate holder. n31 As a rule, a certificate cannot create coverage where none exists under the policy to which the certificate refers. n32

Finally, an insurer generally has no duty to inform an additional insured of inaccuracies in, or subsequent changes to, the information contained in a certificate of insurance. n33 The same is true for a broker who issues a certificate. n34 An insurer generally has no duty to inform the additional insured that the policy to which the certificate refers has been cancelled or was not renewed, as the disclaimer on a standard certificate should make clear. n35 The fact that the policy to which a certificate refers was cancelled or non-renewed before a broker issued the certificate still does not give the indemnitee any rights against the insurer. n36

For all of the foregoing reasons, indemnitees and courts are sometimes skeptical of certificates value. As the New Hampshire Supreme Court once observed, a certificate of insurance bearing the standard disclaimers is a worthless document which does no more than certify that insurance existed on the day the certificate was issued. n37 CASES AND CONTROVERSIES

Certificates may play a role in a variety of controversies. In some states, for example, policy exclusions are invalid unless clearly communicated to the insured in writing. n38 Thus, even where the certificate provides that the policy will control, exclusions that do not appear on the certificate are effective only if the policy itself is provided to the additional insured. n39 If not, the insurance company must provide broader coverage to the additional insured than that afforded the named insured. Similarly, in *Midland Enterprises, Inc. v. St. Paul Fire & Marine Insurance Co.*, n40 an Ohio court concluded that a marine towing company named as an additional insured was entitled to coverage even though the vessel involved in the loss was not scheduled on St. Pauls binder. In determining whether St. Paul had agreed to provide coverage, the court read the binder and a related certificate together. Because the certificate [did] not state that there were any limitations for that coverage, it was proper evidence of the coverage that the towing company thought it had been provided. n41

Midland Enterprises turned on its unusual facts and, accordingly, the case is of limited precedential value. First, the loss occurred before St. Paul issued a policy. Accordingly, the court could never examine the policy to determine coverage. This fact significantly influenced the courts decision. n42 Second, the certificate bore comments specific to coverage for the vessel lost. n43 These comments supported the policyholders claim to coverage. Third, there is nothing in the opinion to indicate that the certificate bore any of the standard disclaimers. Certificates of Insurance and Coverage by Estoppel. Most disputes involving certificates of insurance involve estoppel allegations. In *Marlin v. Wetzel County Board of Education*, n44 for example, the Wetzel County Board of Education contracted with Bill Rich Construction to renovate a school. The contract required Bill Rich to indemnify the Board against claims arising from the companys renovation work; to maintain liability insurance coverage, including contractual liability coverage for its indemnity obligations; and to name the Board as an additional insured on its liability policy. n45 Bill Rich purchased CGL and umbrella coverage from Commercial Union through the B & W Insurance Agency. Bill Rich arranged for B & W to issue a certificate of insurance describing the Board as additionally insured on its Commercial Union policies and identifying the Board as a certificate holder. n46

Workers employed by subcontractors involved in renovating the school alleged that they were exposed to asbestos dust and sued both the Board and Bill Rich. Based on its contract with Bill Rich and the certificate of insurance, the

Board demanded that Commercial Union defend and indemnify it against the workers claims. The insurer refused, asserting that while B & W was its agent for purposes of issuing the certificate, B & W never notified it that the Board was to be afforded additional insured status under Bill Richs policies. n47 Commercial Union never received the certificate or any other document indicating that it needed to amend its policies. Furthermore, Commercial Union argued, the certificate on which the Board relied plainly was issued for informational purposes only and could not alter or amend the related policies. n48

The Board filed a declaratory judgment action against Commercial Union. Both sides moved for summary judgment. The trial court sided with Commercial Union, concluding that the disclaimers on the certificate defeated the Boards expectation of coverage. The court further found that the policies did not cover the Board merely because of the indemnity provisions in the Bill Rich contract. The Board appealed to the Supreme Court of Appeals of West Virginia.

On appeal, the Board argued that because a Commercial Union agent issued a certificate identifying it as an additional insured, it reasonably relied on that representation and to its detriment allowed Bill Rich to perform work for which it was inadequately insured. Thus, the Board claimed, Commercial Union was estopped to deny it coverage as an additional insured. n49 Commercial Union, on the other hand, argued that it never knew of the certificate issued by its agent. It thus did not amend Bill Richs policies to additionally insure the Board. Neither the Board nor Bill Rich paid additional premiums for additional coverage. The disclaimers on the certificate should have signaled the Board that the certificate afforded it no coverage. In sum, because no firm representation of coverage was ever made and the Board could not have reasonably relied on the certificate as evidence of coverage, there could be no estoppel. n50

The Supreme Court of Appeals of West Virginia noted that estoppel may not be used to create coverage where none otherwise exists, or to increase coverage beyond that provided by the policy. n51 This is, of course, the clear majority rule. n52 Yet the court noted that an exception to the general rule may lie where an insurer or its agent makes a misrepresentation at a policys inception that deprives the insured of the opportunity to obtain the coverage it desires. n53 The court thus focused on whether B & Ws issuance of the certificate identifying the Board as an additional insured on Bill Richs policies constituted a misrepresentation entitling the Board to coverage. The court concluded that it did, explaining:

We therefore hold that a certificate of insurance is evidence of insurance coverage, and is not a separate and distinct contract of insurance. However, because a certificate of insurance is an insurance companys written representation that a policyholder has certain insurance coverage in effect at the time the certificate is issued, the insurance company may be estopped from later denying the existence of that coverage when the policyholder or the recipient of a certificate has reasonably relied to their detriment upon a misrepresentation in the certificate.

Examining the record, we believe that the elements of estoppel . . . have been established by the Board. At the inception of coverage for the Board . . . an agent for Commercial Union prepared a certificate of insurance naming the Board as an additional insured. The insurance companys bare, conclusory averment that the certificate naming . . . [the Board] as an additional insured was the result of clerical error was insufficient to overcome the estoppel effect of its misrepresentation, since even an innocent misleading of another party may bar one from claiming the benefits of his deception. n54

The *Marlin* court determined that the trial court erred in ruling for Commercial Union and remanded the case to the trial court for further proceedings. Because the Supreme Court of Appeals had already found that the Boards contract with Bill Rich was an insured contract within the meaning of the contractual liability coverage in the Commercial Union policies, n55 the decision was a clear win for the Board.

Interestingly, the Supreme Court of Appeals of West Virginia never addressed Commercial Unions argument that the disclaimers on the certificate defeated the Boards claim of reasonable reliance, which is an essential element of estoppel. The court seemingly skirted the issue on the basis that denying coverage to the Board in this instance would be unjust, and estoppel is designed to prevent a partys disavowal of previous conduct if such repudiation would not be

responsive to the demands of justice and good conscience. n56 It is difficult, however, to perceive any injustice in these circumstances. The Board presumably was advised by counsel with respect to the Bill Rich contract and it surely had its own liability insurance coverage for the workers claims. Additionally, the disclaimers on the certificate screamed to the Board of the need to verify its coverage as an additional insured. It arguably was unreasonable for the Board to rely on the certificate for coverage given the documents plain disclaimers. n57 The fact that Commercial Union probably suffered no material harm by virtue of its right to indemnity from B & W changes nothing. n58 The *Marlin* court should have addressed the reasonable reliance issue head-on and its failure to do so lessens the opinions persuasive value. n59

Although other courts have also invoked estoppel to find coverage based on certificates of insurance, n60 this approach does not reflect a majority rule. Indeed, there is ample contrary authority.

In *TIG Insurance Co. v. Sedgwick James of Washington*, n61 for example, a company called Via Net was insured under a general liability policy issued by Lumbermens. In March 1996, one of Via Nets customers, Safety Lights, required Via Net to provide a certificate of insurance reflecting Safety Lights status as an additional insured on Via Nets general liability policy. Via Nets insurance broker, Sedgwick, issued a standard certificate bearing all of the customary disclaimers that identified Safety Lights as an additional insured under Via Nets general liability policy with Lumbermens. In 1997, Guy Wright, a deliveryman for Via Net or an affiliated company, was injured making a delivery to Safety Lights. He sued Safety Lights, which notified Sedgwick of the suit and requested a defense and indemnity from Lumbermens by virtue of its additional insured status reflected on the certificate of insurance. Lumbermens declined, asserting that Safety Lights was not an additional insured on the Via Net policy. n62

Safety Lights liability insurer, TIG, defended the Wright lawsuit. After the case settled, TIG and Safety Lights sued Sedgwick and Lumbermens to recover their defense and indemnity costs. Both sides moved for summary judgment, and one of the principal issues was the effect of the certificate that identified Safety Lights as an additional insured on Via Nets general liability policy. The plaintiffs alleged that the certificate created coverage. The district court disagreed, concluding that Safety Lights was not entitled to coverage by virtue of the certificate, and ultimately granted Lumbermens summary judgment on all of the plaintiffs claims. n63

Under Texas law, when a certificate of insurance states that it does not alter, amend or extend the terms of the policy to which it relates, the terms of the certificate are subordinate to the terms of the insurance policy. n64 A certificate will not create coverage where none otherwise exists. n65 In this case, the certificate clearly provided that it did not alter, amend or extend the terms of any policies listed on the document. Lumbermens policy made no provision for additional insured coverage. The certificate was not itself a contract of insurance. n66

Safety Lights contended that it never received a copy of the Lumbermens policy and that it relied on Lumbermens representation of coverage on the certificate. The fact that Safety Lights never received the policy, however, did not change the result. The plaintiffs had no basis to claim that it was reasonable to rely on a certificate of insurance in lieu of actual policy language. Indeed, settled Texas authority supported the practical result that the holder of a certificate of insurance should obtain the insurance policy to ascertain his coverage. n67

TIG and Safety Lights appealed the district courts grant of summary judgment to the Fifth Circuit. They argued on appeal that Lumbermens was bound to provide coverage under the certificate of insurance because, in issuing the certificate, Sedgwick acted as Lumbermens agent. n68 This argument failed, however, because while Sedgwicks agency agreement with Lumbermens authorized Sedgwick to issue certificates on the insurers behalf, it did not authorize Sedgwick to modify policies. n69 The certificate plainly stated that it did not alter or amend the terms of the Lumbermens policy. Sedgwicks issuance of the certificate could not create coverage on either an actual or an apparent authority theory. Sedgwick simply did not have the power to bind Lumbermens contractually. n70

Retreating, TIG and Safety Lights contended that Lumbermens was estopped to deny coverage based on the certificates identification of Safety Lights as an additional insured. This argument was doomed to fail under Texas law,

which holds that (1) estoppel cannot be used to create coverage where none otherwise exists; and (2) when a certificate expressly incorporates the terms of a policy, as did the certificate here, the policy trumps the certificates terms. n71

The plaintiffs made two additional arguments for coverage, both of which the court rejected. The Fifth Circuit therefore affirmed the district court judgment for Lumbermens.

In *Redmond v. State Farm Insurance Co.*, n72 John Redmond purchased an apartment building and sought full coverage on the property from State Farm agent James Reid to satisfy a condition of his mortgage loan. Redmond never received or read the policy he discussed with Reid. The only documents he saw were a certificate of insurance, a price quote, and a brochure on apartment building insurance. Redmond assumed that his new State Farm policy covered everything. n73 The brochure stated that it contained only a general description of coverage and that all coverages were subject to the conditions and exclusions in the policy. n74 The certificate described the policy to which it referred as special form all risk. n75

The State Farm policy contained a lead paint exclusion. When some tenants made lead paint claims, Redmond sued State Farm to determine whether the company was obligated to defend and indemnify him. A jury returned a verdict for State Farm.

Redmond appealed, arguing that State Farm was estopped to deny coverage and that the policy should be reformed to provide coverage. He argued that he had a reasonable expectation of coverage based in part on the certificate of insurance stating that he had all risk coverage. n76 The appellate court disagreed, discussing the certificate of insurance in the process. The court found that the words special form all risk on the certificate did not by themselves manifest an intent to cover lead paint claims. n77 Moreover, the brochure describing the policy expressly stated that all coverages were subject to the conditions and exclusions in the policy. n78 The *Redmond* court thus held that the doctrines of equitable estoppel and reformation did not apply, and affirmed the trial courts determination that there was no contract to provide lead paint coverage as a matter of law. n79

In *Pekin Insurance Co. v. American Country Insurance Co.*, n80 the certificate issued to the additional insured, Ulbrich, bore all the standard disclaimers. A loss involving Ulbrich was excluded by the American Country policy to which the certificate referred. Ulbrich and its liability insurer, Pekin, filed a declaratory judgment action to determine American Countrys duty to defend Ulbrich. They asserted that because the certificate named Ulbrich as an additional insured on a policy which provided commercial general liability insurance . . . but the policy excluded coverage, there is a conflict between the two documents. n81 They reasoned that the language of the certificate should prevail. n82 The *Pekin* court rejected this argument, stating:

[T]here was a clear showing, . . . that the certificate was not part of the policy, and it conveyed no rights to the certificate holder. These statements also informed Ulbrich as a certificate holder that it had to look to the policy to determine the extent of coverage as well as any existing exclusions. n83

The certificate of insurance did nothing more than inform Ulbrich that it had the same coverage afforded the named insured for the project at issue, subject to all of the policys terms and exclusions. There was no conflict between the certificate and the policy. n84

It was Ulbrichs responsibility, not American Countrys, to determine whether the coverage afforded by the American Country policy was adequate for its intended purposes. The *Pekin* court reasoned that to hold otherwise would place an impossible burden on insurers to review all agreements between their named insureds and prospective additional insureds to determine particular insurance needs before issuing certificates. n85 Misrepresentation Cases. In addition to arguing for coverage based on estoppel, indemnitees frustrated by a lack of coverage seemingly provided by a certificate of insurance also assert claims for negligent or fraudulent misrepresentation against indemnitors, insurers and intermediaries. To prevail on a misrepresentation theory, a plaintiff must establish that it reasonably relied on the allegedly false statement. This is a high hurdle where the statement supposedly inducing the plaintiffs reliance appears

in a standard certificate of insurance. The disclaimers on standard certificates tend to make reliance on the document unreasonable. n86 Rather than relying on a certificate of insurance, an indemnitee should obtain a copy of the policy to which the certificate refers and review it to determine the existence or scope of coverage actually afforded. n87 This is, of course, consistent with the general rule that insureds have a duty to read their insurance policies and are charged with knowledge of their provisions. n88

In *Alabama Electric Cooperative, Inc. v. Bailey Construction Co.*, n89 for example, AEC and Bailey entered into a contract in March 2000 for Bailey to remove ash and sludge from one of AECs holding ponds. The contract required Bailey to furnish evidence to AEC that Bailey had procured liability insurance to cover its removal work. Bailey supposedly agreed to have AEC named as an additional insured on its liability insurance policy, although the contract did not include a provision to that effect. Bailey had previously worked for AEC and on those occasions had AEC named as an additional insured on its policies. With respect to those jobs, Bailey had directed its broker, International Assurance, Inc., to issue certificates of insurance to AEC identifying the cooperative as an additional insured on Baileys liability policies.

In October 2000, Willene McLoed, an independent contractor working for Bailey on the holding pond project, was killed on AECs property. The executor of McLoeds estate sued AEC for wrongful death. AEC asked International to furnish it with a certificate of insurance reflecting its status as an additional insured on Baileys liability policy with QBE Insurance Co. It was then determined that AEC was not an additional insured on the QBE policy. Nevertheless, International issued a certificate identifying AEC as an additional insured on the QBE policy without authorization from either Bailey or QBE and sent that certificate to AEC. n90

AEC demanded that Bailey and QBE defend and indemnify it with respect to the McLoed wrongful death action. QBE initially agreed to do so based on the certificate identifying AEC as an additional insured. QBE changed its mind, however, when it discovered that AEC was never actually added to its policy as an additional insured by an endorsement to that effect. n91 AEC and its insurers settled the McLoed action without Baileys or QBEs participation. They then sued Bailey, QBE and International. That case reached the Alabama Supreme Court, where AEC and its insurers contended that Bailey had misrepresented AECs status as an additional insured and that those misrepresentations had induced AEC to enter into the holding pond contract. AEC and its insurers argued that the misrepresentations were contained in the certificates of insurance sent to AEC by International Assurance, [which] indicat[ed] that AEC was an additional insured on Baileys then existing insurance policies. n92 The certificates were issued in connection with projects performed by Bailey before entering into the holding pond contract. n93

Bailey countered that even if it could be held vicariously liable for Internationals alleged misrepresentations in prior certificates of insurance, AEC could not have reasonably relied on those misrepresentations in awarding the holding pond contract. n94 The prior certificates clearly stated that they were issued for informational purposes only and did not alter, amend, extend or modify the coverage provided by the subject policies. n95 Moreover, the reverse side of one of the certificates provided that if the holder was to be an additional insured, the policy itself had to be endorsed to that effect, and that a statement on the certificate did not confer rights to the certificate holder in lieu of such endorsement(s). n96

The Alabama Supreme Court agreed with Bailey, principally relying on the district court decision in *TIG Insurance Co. v. Sedgwick James of Washington*. n97 The *TIG Insurance* court had rejected the plaintiffs misrepresentation claims based on the clear disclaimers on the certificate at issue and the would-be indemnitees failure to read the actual policy to which the certificate referred. n98 AEC and its insurers attempted to distinguish the *TIG Insurance* decision on the basis that the insured there could have reviewed the subject policy had it elected to do so. n99 Here, they contended, AEC was unable to review the policies to which the certificates referred. They based their argument on deposition testimony by an International broker, Andrea Miller, who testified that she would not have given AEC copies of Baileys insurance policies without Baileys permission. n100 In her view, Baileys insurance policies were akin to trade secrets, given that Bailey might not have wanted AEC to know what it was paying for coverage. n101

There were several flaws in the plaintiffs argument. First, there was no evidence that AEC ever attempted to obtain copies of the policies or endorsements that would have existed if it were, in fact, an additional insured. Second, there was no evidence that Baileys insurers would have refused to give AEC copies of their policies or additional insured endorsements had they been asked. Third, there was no evidence that Bailey would have refused to consent to AEC reviewing its insurance policies. Based on these facts, the court held that AEC and its insurers could not establish that AEC reasonably relied on the certificates of insurance in awarding Bailey the holding pond contract. n102 Bailey thus prevailed on the plaintiffs misrepresentation claim.

In *Nazami v. Patrons Mutual Insurance Co.*, n103 a local home improvement contractor, Gifford, was negotiating with Nazami to renovate her home. In June 2001, Giffords insurance broker, Fallon, issued a certificate of insurance identifying Nazami as the holder. The certificate stated that the Patrons policy to which it referred would expire in May 2002. The certificate bore all of the standard disclaimers described above in this commentary. Importantly, it provided that while Patrons would endeavor to mail Nazami written notice should the policy be cancelled before its expiration date, it would bear no liability in the event notice was not mailed. n104

Gifford began work on Nazamis home in November 2001 and, naturally, he blundered enormously. When Nazami made a claim for her damages under Giffords policy with Patrons, she learned that it had been cancelled for non-payment of premiums. She then sued Gifford, Fallon and Patrons. Nazami alleged that she relied on the certificate of insurance in contracting with Gifford and that Fallon knew or should have known that the certificate might lead her to believe that Giffords coverage with Patrons was guaranteed until the policys expiration date. She accordingly asserted claims for common law fraud, negligent misrepresentation, violation of the Connecticut Unfair Insurance Practices Act (CUIPA), and violation of the Connecticut Unfair Trade Practices Act (CUPTA). n105 The trial court granted summary judgment for Fallon and Patrons, and Nazami appealed. The Connecticut Supreme Court accepted transfer from a lower appellate court. n106

The Connecticut Supreme Court rejected Nazamis CUIPA and CUPTA claims on the basis that her misrepresentation allegations were in direct conflict with the language of the certificate. n107 As the court explained:

For example, it is clear that the policy expiration date and the possibility of cancellation are two distinct events contemplated by the language of the certificate. Although the certificate provided that the policy took effect on May 15, 2001, and would expire on May 15, 2002, it also explicitly disclaimed any liability in the event that the policy was cancelled. Indeed, the certificate specifically noted that the stated coverage was subject to all the terms, exclusions and conditions of the policy.

Furthermore, the certificate contemplated cancellation in providing that, [s]hould any of the above described policies be cancelled before the expiration date thereof, the issuing insurer will endeavor to mail [ten] days written notice to the certificate holder. . . . (Emphasis added.) In short, the certificate specifically and repeatedly distinguished between expiration and cancellation of the [Patrons] policy. n108

The certificate simply did not contain any misrepresentations as required to constitute violations of the statutes. n109

The court was equally unimpressed with Nazamis common law fraud and negligent misrepresentation claims. Again, the certificate bore significant disclaimers with respect to cancellation and the restriction of coverage to the terms of the Patrons policy. n110 The certificate did not provide that the Patrons policy was paid in full for its entire term, or that it was in any way guaranteed. n111 After tackling Nazamis other claims, the Connecticut Supreme Court affirmed the trial courts grant of summary judgment for the defendants. PRACTICAL ADVICE

Notwithstanding the scattered cases suggesting that indemnitees may successfully argue for coverage by estoppel based on representations contained in a certificate of insurance, prudent indemnitees should exercise caution when requiring that indemnitors procure liability insurance applicable to their common enterprise. Caution is required

regardless of whether a contractor is only required to procure satisfactory coverage for itself, or whether it is required to name the indemnitee as an additional insured on its policies.

As noted previously, indemnitees are well-advised to obtain copies of the actual policies intended to provide coverage. Only then will they know if the policies to which a certificate of insurance refers were in fact issued, or truly afford the contemplated coverage. In the alternative, an indemnitee might require that the indemnitors insurer, rather than the indemnitors broker, issue a certificate. This approach increases the likelihood that the insurer has, in fact, added the indemnitee as an additional insured to the indemnitors policy where required to do so, but it is not foolproof. Indeed, the indemnitee is still left to speculate about policy terms.

Insofar as additional insureds are concerned, obtaining a copy of the policy to which they have been added is no mere formality. Not all policies are standardized form documents. Surplus lines policies often are manuscript or bear manuscript endorsements. Excess and umbrella policies are commonly manuscript documents. Lloyds of London policies differ from policies issued by most domestic insurers. Even standard liability policies may have unexpected endorsements. There are several standard additional insured endorsements in use, and the selection of the proper endorsement is critical to coverage. n112

Furthermore, it is unfortunately true that insurance brokers sometimes err in procuring additional insured coverage or in issuing certificates of insurance, and that those errors may materially prejudice the indemnitee. An indemnitees ability to detect potential errors is significantly enhanced if it obtains copies of the actual policies under which it desires coverage.

Is this advice impractical? Some construction and insurance industry veterans will argue that it is. Insiders will say that the pace of business demands the convenience that certificates of insurance provide. Reliance on certificates of insurance seldom causes problems and those rare problems can be addressed when (or if) they surface. Furthermore, the use of certificates of insurance is so accepted and widespread that reliance on them is reasonable. These sentiments are understandable. Certainly, the overwhelming majority of transactions in which certificates of insurance are used come off without a hitch. There are deals in which the caution urged here is theoretically unnecessary because the parties have a long business relationship and clearly understand their respective insurance obligations. An indemnitors insurance broker may have intimate knowledge of the indemnitors business and business practices, and provide excellent service with respect to procuring additional insured coverage and issuing certificates. On the other hand, the parties in Alabama Electric enjoyed an established business relationship and had successfully completed projects in which certificates of insurance were used to document key insurance aspects, and their familiarity led to relative disaster.

Looking at matters from the indemnitors perspective, they must clearly understand the insurance obligations they are being asked to undertake. For example, does a contract require only that they procure specified insurance coverage for themselves, or must they also procure coverage for the indemnitee as an additional insured? The failure to procure specified coverage may leave them to satisfy any indemnity obligations out of their own pockets. Additionally, the failure to procure suitable coverage may expose them to liability for breach of contract even where there is other insurance available to the indemnitee.

To the extent indemnitors are presented with repeated demands for additional insured status, they should negotiate blanket additional insured endorsements to their policies. The language of blanket endorsements varies, but such endorsements generally extend coverage to any party that the indemnitor agrees to name as an additional insured to its policy. n113

Intermediaries must appreciate the potential problems posed by their clients use of certificates of insurance. They should not issue certificates of insurance identifying the certificate holder as an additional insured, for example, without knowing whether that can be or has been done. They should be careful to use only standard certificates that bear broad disclaimers. Although agents or brokers have no duty to advise customers on insurance matters, n114 understanding the nature of an insureds business or project needs is an integral part of their own risk management. Intermediaries are

common litigation targets in cases that pivot on allegedly inaccurate or misleading certificates of service.

CONCLUSION

Certificates of insurance are central documents in many coverage disputes involving indemnitors, indemnitees, and multiple insureds. Contracting parties must appreciate that standard certificates of insurance are informational documents only. They are not contracts and they certainly are not insurance policies. Where additional insured status is at issue, both insurers and additional insureds should want the named insured to give the additional insured a copy of the policy at issue, rather than a certificate alone. Only then can the carrier be assured that its policy terms will control and, most particularly, that exclusions in its policy will apply. Conversely, the additional insured needs a copy of the policy so that it can determine whether it has sufficient coverage. This is a question that a certificate of insurance alone cannot answer.

As a general rule, an insurer should not be estopped to assert exclusions or other coverage limitations contained in its policy that are not revealed in a related certificate. Nor should courts generally reform policies to provide coverage because they contain exclusions or other terms that are not revealed in a certificate. The disclaimers prominently displayed on standard certificates of insurance should make clear to indemnitees that they must read the policies to which certificates refer. In most cases, an indemnitee's reliance on a standard certificate of insurance for liability protection is unreasonable.

There are bound to be cases in which an indemnitor does not procure the coverage it promised to provide. That does not mean, however, that the indemnitee should be able to obtain that coverage from the insurer named on a certificate of insurance. Rather, the indemnitee's remedy is to sue the indemnitor for failing to provide the desired coverage. An indemnitee can also hold its indemnitor to any contractual indemnity obligations that exist apart from any agreement to provide insurance. Either way, the insurer's obligations should remain limited to the promises made in the language of its policy.

n1 For more on additional insureds, see Stacy A. Broman & Jenny L. Sautter, *Additional Insured Endorsements: Recent Efforts to Limit Coverage to the Additional Insured*, 57 Fedn Def. & Corp. Couns. Q. 77 (2006); Douglas R. Richmond, *The Additional Problems of Additional Insureds*, 33 Tort & Ins. L.J. 945 (1998).

n2 A promise to indemnify and a promise to procure insurance are different obligations. *FabArc Steel Supply, Inc. v. Composite Constr. Sys., Inc.*, 914 So. 2d 344, 362 (Ala. 2005) (quoting *Goodyear Tire & Rubber Co. v. J.M. Tull Metals Co.*, 629 So. 2d 633 (Ala. 1993)); *Bramalea Cal., Inc. v. Reliable Interiors, Inc.*, 14 Cal. Rptr. 3d 302, 307 (Cal. Ct. App. 2004); *Estate of Willis v. Kiferbaum Constr. Corp.*, 830 N.E.2d 636, 644 (Ill. App. Ct. 2005). Where there is a promise to obtain insurance, the promisor agrees to procure insurance but does not agree to bear responsibility in the event of injury or loss. . . . A promise to name a third party as an additional insured is not inextricably tied to that party's promise to indemnify the party [with which it contracts]. *Estate of Willis*, 830 N.E.2d at 644. Moreover, an indemnitor's promise to procure insurance is simply that; it is not necessarily an agreement to have its indemnitee named as an additional insured on its policies. *Empire Ins. Co. v. Ins. Corp. of N.Y.*, 40 A.D. 3d 686, 836 N.Y.S.2d 228, 230 (2007) (quoting *Trapani v. 10 Arial Way Assocs.*, 301 A.D.2d 644, 647, 755 N.Y.S.2d 396, 398 (2003)).

n3 There is nothing underhanded about this practice. In this example, the parties contract requires the indemnitor to procure a policy with liability limits of \$1 million per occurrence. The indemnitors policy affords that amount of coverage. The fact that it affords more is irrelevant to the indemnitee at the time of contracting. Of course, the full policy amount probably will be revealed in discovery should there ever be litigation and, for that reason, the indemnitor may opt to reveal it at the outset.

n4 See *Marlin v. Wetzel County Bd. of Educ.*, 569 S.E.2d 462, 470-71 & n.10 (W. Va. 2002) (discussing this problem and collecting related cases in footnote).

ABOUT THE AUTHOR(S):

Douglas R. Richmond is Senior Vice President in the Professional Services Group of Aon Risk Services, the world's largest broker of insurance for professional services firms. Before joining Aon in Chicago, Mr. Richmond was a partner with Armstrong Teasdale LLP in Kansas City, Missouri (1989-2004), where he had a national trial and appellate practice. In 1998, he was named the nation's top defense lawyer in an insurance industry poll as reported in the publications *Inside Litigation* and *Of Counsel*. He is a member of the American Law Institute (ALI), the American Board of Trial Advocates (ABOTA), the International Association of Defense Counsel (IADC), and the Federation of

Defense and Corporate Counsel (FDCC). Mr. Richmond has also been selected to The Best Lawyers in America in the areas of legal malpractice, personal injury litigation, and railroad law. In 2003, the Euromoney Legal Media Group named him one of the nation's top insurance and reinsurance lawyers. He is the co-author of a leading treatise, *Understanding Insurance Law* (4th ed. 2007), published by LexisNexis. Additionally, Mr. Richmond has published roughly 50 articles in university law reviews, and many more articles in other scholarly and professional journals. He teaches Legal Ethics at the Northwestern University School of Law and he is a regular National Institute of Trial Advocacy (NITA) faculty member. He previously taught Trial Advocacy and Insurance Law at the University of Kansas School of Law, and Insurance Law and a seminar on Damages at the University of Missouri School of Law.

2008 Emerging Issues 2374

Kraus on Insurance Implications of Climate Change: Tornadoes are not Just in Kansas Anymore--a Discussion on Whether Severe Storms are a Harbinger of Climate Change and How the Insurance Industry can Respond

By Sallie Kraus

June 16, 2008

SUMMARY: Catastrophe models have their weaknesses and are not without controversy. Some argue that carriers are too reliant on models. Others say that carriers are able to critique weaknesses in models and use them with caution. In this article, Sallie Kraus explores some of the alternate financial and insurance products as well as some legislative initiatives that are being considered to address the challenges presented by climate change.

We may think of tornadoes as a phenomenon limited to the Midwestern Plains as in the Wizard of Oz, but this year they have cut a swath from Texas to Virginia. The spate of severe spring tornadoes in the US, coupled with forecasts of an active hurricane North Atlantic season this year have made weather an even more popular topic of conversation than usual in the U.S. Add to the mix, the escalating climate change debate, Cyclone Nargis in Myanmar and the severe earthquake in China and natural disasters have caused concern among domestic and multinational carriers. This commentary will discuss the most winter storms and spring tornadoes that have occurred throughout the world, project what may lay ahead for the 2008 storm season, review the positions that the scientific community is taking in the ongoing debate over whether global warming is causing more intense weather, and outline the government and insurance industry response to these global occurrences.

Act I: Winter Storms and Spring Tornadoes. Nine catastrophes occurred during the first quarter, the highest number in at least 10 years.

Insurers earnings already hit by \$3.5b weather-related losses in the first quarter may suffer a losing underwriting year in 2008 if forecasts of a severe hurricane season are accurate. ISO defines a catastrophe as an event that causes \$25

million or more in insured property losses. There were nine catastrophes that contributed to the \$3.5b total, but one cat event-- a series of tornadoes and strong storms in February-- caused \$995M of insured losses. A single tornado on March 14 rumbled through downtown Atlanta causing damage first estimated by ISO at \$340M, but the figure could exceed \$1B as claims are settled. n1

Looking on the bright side, the first-quarter losses could provide an impetus to raise commercial property insurance rates that have been falling over the past two years. However, the severe weather has already taken its toll on 2008 earnings for the largest insurance carriers. Allstate, the largest publicly traded homeowners insurer, blamed the unusually high number of tornadoes for \$568 million of catastrophe losses in the first quarter. As a result, the company's first-quarter operating income fell below analyst expectations. Travelers, one of the largest publicly traded commercial carriers, reported \$62 million in catastrophe losses in the first quarter, mostly in commercial lines, more than double the \$29 million total for all of last year. n2

While some insurers may begin increasing their rates following these tornadoes, this action is not likely to be sufficient to make up for the dramatic drop in commercial insurance prices that followed the unusually benign U.S. hurricane seasons in 2006 and 2007

Tornado season usually peaks in the second quarter. While tornadoes tend to be a mile or smaller in diameter and last for only a few minutes their extreme winds can cause extensive damage. These spring tornadoes have brought devastation from Oklahoma to Georgia. Two tornadoes in the US caused at least 22 deaths each on February 5 and May 11.

Neither has bad weather been confined to the US. Windstorm Emma, this winters worst storm, swept through Europe on March 1. It caused up to EUR 1b in damages, gathering strength as it moved east from the UK to Eastern Europe. n3 These storms were not nearly as severe as Kyrill in 2007 or Lothar and Martin, storms in the late 1990s that caused damages of \$7b and \$3b respectively. Note that the top natural catastrophes of calendar year 2007 were all weather-related and were dispersed around the world. n4

Act II: The 2008 Hurricane Season--what lies ahead? While tornadoes have wreaked havoc this year, they may just be the opening act for the hurricane season, which has historically produced the largest insured losses. The largest hurricane loss in history was Hurricane Katrina, a \$41.1 billion in insured event in 2005. It was far bigger and with more widespread impacts than the second largest loss, the World Trade Center attacks of 2001, a \$32.5 billion insurance loss.

The Colorado State University Hurricane Center has predicted that this year's hurricane season that officially begins June 1, will be well above average with a total of 15 storms. Even if the 2008 hurricane season produces only a normal number of average intensity storms, many industry observers think this will be a tough year for many insurers.

Hurricanes have been rising in frequency and intensity in recent years, with seven of the 10 most costly in recorded history occurring since 2004. However, after Katrinas devastation of 2005, no hurricanes hit the U.S. in 2006 and only a few smaller storms came ashore last year.

Just as the local weatherman may be wrong about the forecast for a particular day, seasonal hurricane forecasts are subject to change. Thus, some climatologists find a comparison of seasonal forecasts to actual five year storm data to be more instructive. n5 They explain that the disparity between forecasts and actual hurricane activity may be due to unanticipated levels of dust and dry air that settled across the area of the Atlantic Ocean where tropical systems and hurricanes tend to develop.

Thus, it is somewhat problematic that cat bonds and alternative financing arrangements have ramped up the importance of short term annual weather modeling. To address climate change, cat modelers and insurance

professionals will have to blend traditional and well developed short term weather modeling techniques much less developed long term climate modeling. Models have their weaknesses and are not without controversy. Some experts and regulators take the position that carriers are too reliant on models, especially since Katrina. However, other industry observers say that carriers are able to critique weaknesses in the models and use them with caution. n6

Swiss Re, Berkshire Hathaway and other reinsurers provide conventional coverage for natural catastrophe reinsurance. However, the reinsurers are also expanding insurance-related securities such as cat bonds that have been available since 1997. There are other new vehicles for addressing catastrophes risks, such as the OTC weather risk market. In this way, new capital-based vehicles are available to underwrite climate-related risk. n7

There are many financial developments taking place in the emerging emissions markets that are adjunct to the insurance industry. The Kyoto Protocol's cap and trade system, as implemented by the European Union's emissions trading scheme, is the opening act for the era of global emissions trading. Most countries outside the U.S. have already implemented or are developing regulations that will require private industry to reduce greenhouse gas emissions and comply with the Kyoto Protocol.

Recent U.S. legislative initiatives, including California's Global Warming Solutions Act of 2006 (AB 32), the Northeastern and mid-Atlantic states' Regional Greenhouse Gas Initiative, state Climate Action Registries that facilitate banking of emission credits, the Chicago Climate Exchange are just the first steps in a U.S. market approach to emissions trading.

Further, initiatives from organizations such as the International Trading Association and the International Finance Corporation will have an impact on industries that produce greenhouse gases around the globe. The first insurance product has been offered in the carbon market and of course, emissions and offsets for all six greenhouse gases are traded on the Chicago Climate Exchange. n8

Act III: A Change in the Weather or Climate change? While sophisticated models and financial instruments are being developed as described above, there is still considerable debate in the scientific community as to whether global warming is contributing to an increase in the number and intensity of cyclones. n9 Further, there is not unanimous opinion which factor is most important. Increasing sea surface temperatures is the factor cited most frequently, but there are other scientific reasons as well. n10

Others say recent storms are having a greater impact because of anthropogenic factors that contribute to climate change and patterns of development. In one study, a team of meteorologists, cat modelers and actuaries converted U.S. hurricane damage figures from 1900 to 2005 storms to 2005 values. n11 They estimated the damage that would occur if storms from the past took place under the social, demographic and economic conditions of 2005. In other words, what if hurricanes that battered Florida in the 1930s had taken place in 2005 with all of the expensive homes and increased population already in place? Not surprisingly, the authors found that the amount of damage would have increased exponentially.

Cyclone Nargis killed an estimated 100,000 people in Myanmar on May 2 this month when its 12-foot storm surge reaching 25 miles inland. One meteorologist called it a once-in 500 year event n12 This is because the small but powerful storm that was 90 miles wide, took an unusual track aimed at the lowest point in the country hit at high tide and moved very slowly The delta was made even more vulnerable because 80% of the mangrove forests along the coast had been cut down in the past decade in favor of shrimp farms and rice paddies. n13 Although the trees provide less protection against a slow moving cyclone producing high storm surges, without much natural barrier between the ocean and their flimsy homes, Myanmar's residents were at the mercy of the storms full wrath.

Although there is not enough data to know whether this one event, the 10th worst cyclone on record, was due to climate change, some scientists say that increasing sea temperatures will lead to more severe storms. They theorize that

increasing sea surface temperatures (SSTs) and in turn, that rising SSTs are due to the presence of higher levels of greenhouse gases in the atmosphere. There are additional factors--windshear, stability and humidity--as well as the air circulation changes caused by EL Nino--just to name a few n14 There is an opposing view that global warming should reduce that global frequency of hurricanes, while some may be locally more intense n15

The more intense storms have been hitting less developed countries of late are of particular concern. For example, monsoon season in India has been much more intense in recent years. As the countrys economy and its prosperity has been increasing tremendously, so have property values especially in regions like Mumbai. Recent intense monsoon seasons and the steep increase insured property has driven up insured losses in recent years. Between 1980 and 2004 annual losses averaged no more than \$5M, but by 2006 the annual figure exceeded \$400M. n16

ACT IV: Insurance Carriers and Governments Respond. Changing weather patterns and climate change poses coverage issues and business challenges to the insurance industry. There is already much activity in the insurance industry--on the regulatory, product development and risk management fronts.

So far, there are relatively few cases in which climate change is the alleged culprit. The earliest case did not have much impact on the legal landscape. In *Comer v. Murphy Oil USA Inc.*, S.D. Miss., No. 05-CV-436, 8/30/07) class action plaintiffs alleged that the defendant coal and energy companies emitted significant amounts of greenhouse gases that were linked to more frequent and severe hurricanes like Hurricane Katrina. The plaintiffs were unsuccessful in their efforts to seek damages for personal injuries as well as the loss of properties and businesses from the hurricane. The judge agreed with the defendants that the plaintiffs did not have standing to assert their claims and thus dismissed all the plaintiffs' claims sua sponte and all the other remaining motions as moot.

However, in *Massachusetts, et al. v. Environmental Protection Agency*, 549 U.S. ___, 127 S. Ct. 1438 (2007), the plaintiff was successful in achieving standing to sue and obtaining a ruling that EPA has statutory authority to regulate greenhouse gases. This case has given much hope to the environmental community that more will be done to regulate and reduce greenhouse cases.

It may also be relied upon in coverage cases since the court found that carbon dioxide was a pollutant.

Although there are so few cases, there is already a fairly significant body of literature on which lines of business are likely to be affected by climate change and the types of coverage issues that are likely to be raised. n17 Those theories have been explained in detail in these papers and at various legal seminars. n18 Property is the most obvious and we have already seen much litigation in the flood versus wind suits against carriers that were filed in the wake of Hurricane Katrina. Certainly, suits will be styled to reach the deep pockets of liability carriers. It is also likely that corporations that emit greenhouse will become the target of shareholder suits, which could have an impact on directors and officers coverage.

However, there are impacts that may be more subtle. For example, there could be an impact on life insurers that has not been widely discussed. Obviously, more severe storms increase the possibility that more insured lives will be lost. Just an increase of temperatures on the planet may cause higher mortality rates. The Intergovernmental Panel on Climate Change forecasts that temperatures on the planet will increase between 1.7 and 5 degrees Celsius and there will be more extremely hot days and fewer extremely cold days. Researchers think there could be an impact on the number of weather-related deaths.

Based on these statistical climate changes, a study by researchers from the Harvard School of Public Health concluded that mortality will increase across the U.S. because of climate change, but its impact will be uneven. n19 Cities that commonly have hot summers also usually have more air conditioners. This explains why Houston and Miami would be less affected by a heat wave than Chicago, Detroit and Philadelphia--the cities with the highest increases in mortality during heat waves. These cities also have a large number of poorer residents who are less likely to have air

conditioning. Thus, it is not hard to see that climate change could hit poor people hardest. n20

Clearly, there is both risk and opportunity in addressing climate change. Risk, comes in the form of more losses and erosion of profits. Opportunity, however, comes in a myriad of ways. Carriers are taking advantage of their influence to mitigate risks by encouraging mitigation and better construction. They have also gone green by developing not just new products, but new approaches to doing business. This ranges from encouraging green construction to charging for car insurance according to the number of miles driven. n21

There has also been a great deal of activity at the federal and state level to address the insurance implications of climate change and more severe weather. Much of the activity is in response to the tremendous losses associated with Hurricane Katrina.

For example, the Louisiana state senate voted in late April to allow different, "named storm" deductibles on homeowner policies depending on how far a property is from the hurricane-prone Gulf of Mexico. n22 Louisiana is the only state that currently requires insurers to set a statewide deductible -- so that policies for properties near the Arkansas state line have the same deductible for those along the Gulf, where catastrophic damage from hurricanes is far more likely.

The bill, now pending in the House, would also place a 4 percent cap on named storm deductibles, the states Department of Insurance would be charged with drawing up a map of Louisiana with zones outlining the deductibles for each area of the state. Insurers would then be able to set different deductibles on properties in different zones.

An amendment to the bill was approved that that would force a company that uses that mechanism to then offer those homeowners a lower premium. The amount of the premium reduction would be approved by the insurance department.

There is another proposal in Louisiana to develop all risk policies. Rather than requiring homeowners to purchase separate flood insurance, they could purchase one policy for the typical risks of fire, theft, liability and wind. Under this proposal, the federal government would, in effect, become the reinsurer of the flood line of the policy. n23 These are but two of the legislative responses to the increased risks posed by climate change.

At the federal level, the U.S. Senate just approved a significant overhaul of the federal flood insurance program has been approved. The bill puts the program on better financial footing by paying off the \$17.5b of debt left from Katrina and increasing premiums. It also tightens up coverage, eliminates coverage for some second homes, commercial properties and properties with poor loss experience. It also requires the government to give consumers better information about coverage options and clearly delineates floodplains where flood insurance is required.

Federal climate change legislation is also pending in Congress that address reductions in carbon emissions and the implementation of a cap and trade system. Some commentators have proposed that additional legislation is needed regarding energy efficiency and conservation, forestry and land use practices, transportation and tax incentives. n24

These improvements are so far incremental, but represent a real effort to address the various challenges posed by weather and climate change.

Zalma on Premium Increases and Climate Change

2008 Emerging Issues 2375

Barry Zalma on Premium Increases and Climate Change

By Barry Zalma

June 12, 2008

SUMMARY: Insurance Coverage lawyer, consultant and expert witness, Barry Zalma, discusses a report suggesting that multiple weather catastrophes that some claim are caused by man-made global warming have increased the cost of insurance. Zalma also explains that insurance premiums are not based on only one set of data--such as weather conditions--and that the prudent insurer does not base its insurance underwriting decisions on global warming alone.

PDF LINK: Click Here for Enhanced PDF of Commentary

ARTICLE: Insurance premiums are based upon a calculation of the amount of risk the insurer is asked to take. It has been reported that premiums are on the rise as a result of multiple weather catastrophes that some claim are caused by man-made global warming. A report from the Environmental Defense Fund at <http://www.edf.org/page.cfm?tagID=14044> found:

Alabama: Premiums 10 times higher

Between 2001 and 2006, some premiums for homes along the east coast of the United States rose more than 10-fold.

Florida: Premiums up 77%

From 2001 to 2006, average homeowner policies increased by 77%, more than in any other state.

Louisiana: Premiums up 65%

Between 2001 and 2006, home insurance premiums rose 65.2%, ranking the state fifth in the nation for rising homeowner costs.

Mississippi: Premiums up 63%

Between 2001 and 2006, average homeowner premiums climbed 63.3%, ranking the state 6th in the nation for increases.

South Carolina: Premiums up 56%

Between 2001 and 2006, homeowner premiums climbed an average of 56.4%.

Virginia: Premiums up 67%

Since 2001, premiums have climbed an average of 67.2%, ranking the state among the top five for biggest premium increases.

Texas: Premiums up 50%

Between 2001 and 2006, average premiums increased more than 50%, from, for example, \$806 to \$1,214.

As serious as the premium increases seem, there is no indication or evidence that global warming is the cause for the increase in premium. Indeed, statements to the contrary suggest a total ignorance of what insurance is and how insurance premiums are calculated.

If there is global warming, its effects--other than making the northern half of North America more temperate and comfortable and relieving the pressures of the Little Ice Age that covered North America during the 18th Century--will be calculated into the premium charged by those insurers who insure against the risk of loss of real property in North America.

Understanding the Nature of Underwriting. In its original usage the operation of the insurance business was known as underwriting. In modern usage underwriting has a more restricted meaning. Underwriting is considered a systematic technique for evaluating risks that are offered to an insurer by prospective insureds. The function of the insurance underwriter involves evaluating, selecting, classifying, and rating each risk. Underwriters establish the amount of protection offered to each risk the underwriter finds acceptable. Underwriters are the risk takers. The underwriter must always be alert for facts that lead him or her to believe that a moral hazard or a physical hazard exists.

Information comes to the underwriter by various means, usually starting with the application for insurance. Information also comes to the insurer from public information sources, newspapers, LexisNexis, Google, Yahoo, or MSN. Insurers also retain the services of professional engineers to inspect the property and provide the underwriter with information that could effect the decision to insure or not insure against the risk of loss of the property. For example, if the building is in a flood or hurricane prone area and built below sea level (like much of the city of New Orleans) that structure would present a different risk of loss than a similar structure built in California where the risk of earthquake damage is greater than in Louisiana. The risk of loss of a condominium structure in over-built Miami, Florida where the value of the property has fallen over the last few years presents a greater risk of a loss than a property in a highly desirable area of Manhattan.

The Underwriter will probably be more interested in the character of the person seeking to be insured. The underwriter will be concerned with the prospective insureds police record, a history of gambling, questionable associates, employment instability, personal habits, frequent changes of residence, poor record of paying bills, claims consciousness (for example, a person who wants to know claims handling procedures, the name of the local claims manager, the names and experience level of the local adjusters, etc.), frequency of claims and claims presented for minor maintenance.

The underwriter will finally look to establish the existence of hazards that increase uncertainty brought about by the indifference of a prospective insured, an increase in uncertainty brought about by the moral character of the prospective insured and an increase in uncertainty brought about by the condition of the property or its location. If the underwriter finds there is an increase in the probability of loss or an increase in the severity of the potential loss the judgment of the underwriter will be effected and he or she may refuse the insurance or will try to control the increased risk by raising the amount of deductible or self-insured-retention, add conditions or limitations to the coverage or exclude certain usually

insured risks of loss.

Insurers have dealt with weather changes over the last three centuries. They have paid millions of claims worth billions of dollars. Over the centuries of paying claims insurers gathered information that allow a statistical study to predict, with some certainty, the number and cost of losses in the future. The people who analyze all of the information available to the insurer and calculate the premium necessary to profitably take certain risks of loss are called actuaries. Actuaries are people versed in the collection and interpretation of numerical data, especially someone who uses statistics to calculate insurance premiums. In the insurance industry an actuary reviews the data of claims filed by policyholders, claims filed with other insurers, data on weather trends, data on earthquake potentiality, data on loss propensities in particular locations, and other data kept secret by the actuaries to determine how risk should be priced. The actuary recommends to the underwriter the amount of premiums that should be charged, the amount of reserves that should be kept, and the amount of dividends paid.

Weather conditions are one of many sets of data considered by underwriters and actuaries. Weather conditions cannot, and could never be, the only reason for an underwriting decision. If an underwriter, working with an actuary, finds that the premiums allowed by the state are inadequate to allow the insurer to deal with the risk and make a profit, the prudent underwriter will not accept the risk. If actuarial studies reflect that there is an increase in hazard as a result of weather then premiums must reflect that risk.

When insurers were faced with the hazards of frozen pipes and the weight of snow and ice in the 18th Century they dealt with the increased hazard caused the Little Ice Age by excluding the risks they were not willing to take or increased premium to cover the risk. Similarly, as weather patterns change in the 20th and 21st Centuries premiums and coverage terms change to meet the increase or decrease in risk that result from the changes.

Because few insurers were willing to take the risk of flood in flood plains, earthquakes in earthquake zones, terrorist acts in high risk areas, brush fires in brush fire areas, and windstorm in hurricane prone areas, government backed insurance became available with the taxpayers funding the losses in excess of the premiums collected. These government backed insurance policies are more a welfare benefit for property owners than insurance because the government, instead of a private business is taking the risk.

Insurance is not so simple a contract that a single event can totally change its availability and affordability. Weather changes are, and have always been, part of the data that an underwriter considers when deciding to accept or reject a risk. Weather changes can be important. Weather changes can be unimportant. But weather changes are only a part of the underwriters decision making process.

Although premiums have increased in certain areas at a precipitous rate that increase cannot when insurance, underwriting and actuarial science are understood be blamed for the increase. It is dangerous in most legal analyses to limit the conclusion to one factual issue. Underwriting insurance requires the analysis of multiple factual issues that can increase or decrease the potential for loss. The underwriter and the actuary want to cover those risks where the insurer can collect sufficient premiums to pay all losses that can be anticipated and to still have enough to make a profit for its stockholders. Insurers cannot allow hysteria over global warming to effect their decisions with regard to a particular risk. They must review all of the potential factors that can effect the risk so that a well run, well built structure on land above sea level in New Orleans would be a risk an insurer is willing to take for a reasonable premium while a home in Beverly Hills, well built home located on stable ground in Beverly Hills owned by a person who has suffered five fire losses in the last ten years and three theft losses in the last five years, would be unacceptable to a prudent underwriter.

ABOUT THE AUTHOR(S):

Barry Zalma, Esq., CFE, is an insurance coverage attorney. He is the founder of Barry Zalma, Inc., a California law firm whose practice emphasizes the representation of insurers and those in the business of insurance. He is also the

founder and chief consultant with Zalma Insurance Consultants who consult with insurers, plaintiffs' counsel and defense concerning insurance bad faith, insurance coverage and insurance claims handling matters and, if needed, often serves as an expert witness at trial. Mr. Zalma is recognized as an expert on insurance claims handling, insurance bad faith, and insurance fraud. He is the author of several books relating to insurance, insurance coverage, insurance claims handling and insurance regulations including Chapters 12 and 13 of the New Appleman Insurance Law Practice Guide, November 2007, Matthew Bender & Company, Inc., a member of the LexisNexis Group. Details and his CV are available at [<http://www.zalma.com/> & <http://www.zic.bz>] and Mr. Zalma can be reached at zalma@zalma.com.

Sonnenschein Nath & Rosenthal, LLP on Bad Faith & Summary Judgment in Iowa

By William Barker and Robert Johnson

June 5, 2008

SUMMARY: Under the bad faith law in most jurisdictions, it is often possible to show that a bad faith claim fails as a matter of law. A recent decision of the Iowa Supreme Court in *Bellville v. Farm Bureau Mutual Insurance Co*, 702 N.W.2d 468 (Iowa 2005), has clarified that subject. This Emerging Issues Analysis argues that Bellville and other Iowa cases support much readier availability of summary judgment than Zimmer recognizes.

ARTICLE: Under the bad faith law in most jurisdictions, it is often possible to show that a bad faith claim fails as a matter of law. Even though some facts may be in dispute, the disputed facts are often immaterial to whether the insurer's conduct met the requirements of the law or, if that conduct was arguably deficient in some way, whether the deficiencies had any causal relationship to the harm suffered by the insured. As a result, summary judgment and its procedural cousins (judgment as a matter of law at or after trial and appellate review of evidentiary sufficiency) are important tools in the arsenal of lawyers defending bad faith cases. Moreover, an important factor in evaluating a bad faith case is considering whether there likely will be a good motion for summary judgment. Finally, determining the standards for summary judgment implicates fundamental questions as to the nature of the bad faith tort.

Because of the importance of this subject, one of us has examined it at length in two prior articles. n1 There has been particular dispute as to the availability of summary judgment in Iowa. A recent decision of the Iowa Supreme Court in *Bellville v. Farm Bureau Mutual Insurance Co*. n2 has clarified that subject. But the meaning of *Bellville* is itself contested, as shown by the recent federal decision in *Zimmer v. Travelers Insurance Co*. n3 This commentary will show that *Bellville* and other Iowa cases support much readier availability of summary judgment than *Zimmer* recognizes.

The Logic of Summary Judgment in Bad Faith Cases

The duty of good faith protects the right of an insured to receive the benefits of the insurance contract. An insured can overcome an ill-founded denial by litigating with the insurer. But risks which are insured are normally ones which an insured cannot afford to bear without insurance, so the occurrence of such a loss exerts pressure on an insured to obtain a prompt settlement, even if that may mean foregoing full compensation. n4 If the insured could borrow to finance the loss while suing, the usual right to prejudgment interest should cover the cost of the borrowing. n5 But the

loss itself may render the insured unable to borrow or the insured may have purchased the insurance precisely because the insured lacks that ability, even without a loss.

The pressure created by an unaffordable loss is increased by the fact that any consequential losses that the insured might suffer while payment is delayed are ordinarily not recoverable in an action for breach of contract. n6 Not only does this limitation on recovery leave the insured uncompensated for some harms caused by an erroneous denial, but it also limits the incentive of the insurer to avoid such harms by prompt payment. n7 Moreover, litigation is expensive, although that expense may sometimes be recoverable should the insured prevail in any suit. n8 And, because of the expense and effort required to bring suit, even insureds whose claims are meritorious may not sue. n9

An insured has contracted to be protected against covered losses. Thus, the insurer is required to pay claims where there is no reasonable basis to withhold payment. But an insurer is not liable in tort for mere erroneous denial of a claim. The law of bad faith represents a balance between two competing interests: the right of an insurer to reject an invalid claim and the duty of the carrier to investigate and pay compensable claims. n10 The tort is recognized to protect the insured's right to payment. But the insurer's right to challenge validity limits the circumstances in which liability may be imposed for non-payment, even if the claim ultimately proves meritorious.

There is a powerful reason why insurers cannot properly be held liable for mere erroneous denial of a claim. The *obligation* to pay meritorious claims is accompanied by the *right* to deny those without merit.

This right is more than an ordinary contractual right: it serves an important public interest. Insurance rates are based on insurers' predictions of the claims they will be required to pay. If erroneous denial of a claim can result in expensive tort remedies, insurers may feel compelled to pay questionable claims rather than risk such liability. This is a particular concern with possibly fraudulent claims, where any impropriety of the claim will have been assiduously concealed and may only be detectable by expensive investigation and resort to circumstantial evidence. n11 Such payments, or the expectation of having to make them, would tend to inflate costs for those wishing only coverage for the risks specified in the contract.

In the leading bad faith case of *Anderson v. Continental Insurance Co.*, n12 the court recognized the undesirability of inflating insurance rates by scaring insurers into paying questionable claims because of the threat of a bad faith suit and its excessive damages. n13 The *Anderson* court was confident it had prevented this by adopting a standard that protects any insurer which makes an investigation of the facts and law and concludes on a reasonable basis that the claim is at least debatable. n14 Similarly, in *Travelers Insurance Co. v. Savio*, n15 the court emphasized the need to accord an insurer wide latitude in its ability to investigate claims and to resist false or unfounded efforts to obtain funds not available under the contract of insurance. n16

Accordingly, an insurer is allowed to withhold payment of a claim as long as there is a genuine issue or (to use different words for the same concept) a bona fide dispute as to the insured's entitlement to payment. n17 As the *Anderson* court put the point, when a claim is fairly debatable' the insurer is entitled to debate it, whether the debate concerns a matter of fact or law. n18 As the Texas Supreme Court has put the point, [e]vidence that merely shows a bona fide dispute about the insurer's liability on the contract does not rise to the level of bad faith. n19 This rule recognizes that the parties to an insurance contract will sometimes have a good faith disagreement about coverage. Under such circumstances, the parties may require a court to interpret the policy language for them, or a jury to resolve factual disputes." n20 Stated otherwise, a reasonable basis for denying a claim is one that warrants testing the claim in court. n21

Sometimes this point is expressed by saying that an insurer has a right to be wrong n22 or a right to disagree with the insured. The Indiana Supreme Court has used the latter phrase to summarize the balance of interests limiting the bad faith tort:

It is evident that the exercise of this right [to disagree] may directly result in the intentional infliction of temporal

damage, including the damage of interference with an insured's business (which an insured will undoubtedly consider to be oppressive). The infliction of this damage has generally been regarded as privileged, and not compensable for the simple reason that it is worth more to society than it costs, *i.e.*, the insurer is permitted to dispute its liability in good faith because of the prohibitive social costs of a rule that would make claims nondisputable. Insurance companies burdened with such liability would either close their doors or increase premium rates to the point where only the rich could afford insurance. n23

For summary judgment purposes, the significant point is that an insurer's failure to pay benefits cannot give rise to a bad faith action, under the standards applicable to the first-party bad faith tort, if the insured's right to payment was fairly debatable or subject to a bona fide dispute (two formulations with the same meaning). Existence of grounds for a bona fide dispute is a reasonable basis or a proper cause (two more equivalent formulations) for delay or denial of benefits. So, showing existence of grounds for a bona fide dispute is ordinarily sufficient to preclude bad faith liability. n24

The law of bad faith will charge an insurer with knowledge of all facts favorable to the insured that a reasonable investigation would have revealed, even if the insurer did not actually learn those facts. n25 Nonetheless, if the insurer can show that, at the time benefits were denied, there existed evidence sufficient to create a bona fide dispute as to the insured's entitlement to payment or if it can show existence, at that time, of a fair legal argument challenging the insured's entitlement to payment, then it should be able to defeat bad faith as a matter of law, entitling it to summary judgment or its equivalent at some later stage of the proceedings. Iowa Bad Faith Law Existence of a Reasonable Basis for Denying Benefits Precludes Bad Faith. The *Zimmer* court's summary of the governing standards of Iowa bad faith law is a good starting point to explain why that court failed to understand the proper relationship between those principles and summary judgment. That summary was as follows:

In order to prevail in a claim for bad faith, the insured party must prove by substantial evidence: (1) that the insurer had no reasonable basis for denying benefits under the policy and, (2) the insurer knew, or had reason to know, that its denial was without basis. The first element is objective, and the second element is subjective.

In considering bad faith tort cases against insurers, the Iowa Supreme Court has held that [a] reasonable basis to deny a claim exists when the claim is fairly debatable. Whether a claim is fairly debatable is generally a question of law. The fact that the insurer's position is ultimately found to lack merit is not sufficient by itself to establish the first element of a bad faith claim. The focus is on the existence of a debatable issue, not on which party was correct. n26 A Directed Verdict Rule Is Rejected. In *National Savings Life Insurance Co. v. Dutton*, n27 the Alabama Supreme Court adopted a rule very supportive of summary judgment on bad faith: if the insured is not entitled to a directed verdict on entitlement to benefits, then the insurer is entitled to summary judgment on bad faith. While this rule is now generally recognized as overbroad, it forms part of the background of current Iowa law. So, it is worth brief examination.

Dutton was a medical insurance case turning on whether the insured, Mrs. Dutton, had made material misstatements on her application. In applying for coverage, Mrs. Dutton denied ever having had "high or low blood pressure, pain in chest, varicose veins, disease of heart or circulatory system." Roughly a year later, she visited a physician, complaining of chest pain. The initial history taken by the doctor indicated that she had suffered such pain intermittently for two to three years, but that it recently had become worse. The doctor ordered hospitalization for testing. The hospital record repeated the history of prior chest pain and indicated that Mrs. Dutton took blood pressure medication. The ultimate diagnosis was probable ulcer or gall bladder disease.

The insurer rescinded the policy based on misstatements about chest pains and blood pressure problems, noting that it based its decision on the medical records and inviting corrections. Mrs. Dutton's physician responded with a letter stating that she had no history of hypertension or of medication for that condition. Subsequently, Mrs. Dutton again was hospitalized for chest pain. When her insurer declined to reinstate the policy or pay her claims, she sued for benefits and

bad faith. The trial court granted the insurer summary judgment on the allegation of bad faith, but submitted the misrepresentation claim to the jury. n28

On appeal, the Alabama Supreme Court affirmed the summary judgment on bad faith. The court found that the insurer had a "reasonably legitimate or arguable reason" for seeking rescission, even if it did not ultimately succeed on that point:

Whether an insurance company is justified in denying a claim under a policy must be judged by what was before it at the time the decision is made. Here, the company had before it a hospital record which purported to quote Mrs. Dutton as saying, upon her admission, that she was suffering chest pain and had experienced chest pain for two or three years. This was in direct contrast to the answer which she gave to a direct question on the application. When the company informed her that it was denying the claim and cancelling the policy because her answers to the questions on the application conflicted with the medical records, she did not come forward with any additional information with regard to a history of chest pain. She did not tell the company that the hospital admission record was false; in fact, she did not attempt to refute it in any way except to have her physician write a letter in which he did not dispute the record. He simply said that, insofar as he knew, she had no history of hypertension before he first saw her and hospitalized her. n29

Dutton then formulated its far-reaching summary-judgment rule:

In the normal case in order for plaintiff to make out a prima facie case of bad faith refusal to pay an insurance claim, the proof offered must show that the plaintiff is entitled to a directed verdict on the contract claim and, thus, entitled to recover on the contract claim as a matter of law. Ordinarily, if the evidence produced by either side creates a fact issue with regard to the validity of the claim and, thus, the legitimacy of the denial thereof, the tort claim must fail and should not be submitted to the jury.

The Iowa Supreme Court rejected the *Dutton* rule in *Reuter v. State Farm Mutual Automobile Insurance Co.* n30 Reuter was injured in an accident on September 27, 1984 and received medical and uninsured motorist benefits, including benefits for chiropractic services through December 26, 1985. On May 28, 1986, Reuter began receiving further chiropractic treatments and sought further medical benefits. State Farm's consultant was not able to verify the medical necessity of resuming treatment for the 1984 injury, so State Farm denied benefits for some further treatments, paying \$594 but leaving \$556 unpaid. In response to a request by the chiropractor, a state utilization review committee found the services provided reasonable and necessary, and Reuter sued State Farm for bad faith denial. At trial, Reuter sought a directed verdict on the contract, which was denied. Invoking the *Dutton* rule, State Farm sought directed verdict on bad faith, which was granted. The jury returned a verdict of \$556 on the contract claim and Reuter appealed the directed verdict on bad faith.

While recognizing that where a claim is fairly debatable,' the insurer is entitled to debate it, the Iowa Supreme Court did not agree that the mere denial of a plaintiff's motion for directed verdict establishes that the issue is fairly debatable.' The trial court should carefully review the facts and the particular circumstances in making its determination as to what is the precise issue or issues that are debatable. n31 Nonetheless, on the facts here, the directed verdict was correct, as the consultant's opinion provided a reasonable basis to challenge the claim. n32

In *Bellville*, the Iowa Supreme Court Clarified the Availability of Summary Judgment in Bad Faith Cases. While determining the propriety of summary judgment or directed verdict in various individual bad faith cases, the Iowa Supreme Court said little more on the general standard for some time. But it addressed that subject at length in *Bellville v. Farm Bureau Mutual Insurance Co.* n33 Bellville was injured by an underinsured motorist, with a \$50,000 policy; Farm Bureau's policy provided \$300,000 in underinsured motorist coverage. Bellville demanded (1) consent to accept the tortfeasor's policy limits and (2) payment of \$300,000, later reduced to \$270,000, both of which Farm Bureau denied. Asserting that both denials were in bad faith, Bellville sued Farm Bureau. A jury awarded both compensatory and punitive damages; the Iowa Supreme Court reversed and directed judgment for Farm Bureau.

On the objective element, it reaffirmed the rule that any fairly debatable claim could be denied without incurring bad faith liability:

A reasonable basis exists for denial of policy benefits if the insured's claim is fairly debatable either on a matter of fact or law. A claim is fairly debatable when it is open to dispute on any logical basis. Stated another way, if reasonable minds can differ on the coverage-determining facts or law, then the claim is fairly debatable. n34

For the last point it relied on one of Barker's prior articles. n35

It further recognized that [w]hether a claim is fairly debatable can generally be decided as a matter of law by the court. As one court has explained, [c]ourts and juries do not weigh the conflicting evidence that was before the insurer; they decide whether evidence existed to justify denial of the claim.' n36 It approvingly quoted Steven Ashley's bad faith treatise on the standard:

[A]n insurer is innocent of bad faith as a matter of law if the insurer took a position in regard to the claim that reasonable minds could hold. Unless the trial court is prepared to grant a directed verdict to the insured on his claim under the policy and to hold that reasonable minds could not disagree as to the insured's entitlement to proceeds under the policy, it follows that reasonable minds could disagree about the insured's entitlement to policy proceeds. Therefore, the insurer should be entitled to a directed verdict in its favor on the insured's bad faith claim unless the insured is entitled to a directed verdict in his favor on the policy claim. n37

Looking at Farm Bureau's valuation of the claim, the court noted that the issue was not, as Bellville urged, whether that Farm Bureau's offer was unreasonably low,' [but rather] whether there was no reasonable basis for Farm Bureau's denial of the plaintiff's demand for a \$270,000 payment. n38 As a matter of law, there was such a reasonable basis, because Farm Bureau had valued the claim at \$300,000, attributed 30% of the fault to Bellville, and deducted his \$50,000 recovery from the tortfeasor. n39 It was not enough that Bellville's experts thought Farm Bureau's valuation unreasonable; there must be evidence that the basis for [that] valuation was unreasonable. n40

Here, the investigating officer had found it a contributing circumstance that Bellville had run a traffic light. n41 While this was not admissible evidence at trial, a reasonable person could have relied on it to attribute fault to Bellville. n42 Farm Bureau was not obliged to accept the conflicting views of Bellville's experts. n43 Nor did Bellville prove that he had brought to Farm Bureau's attention any evidence demonstrating that the officer's report was patently wrong. n44 Thus, as a matter of law, Bellville fault was fairly debatable. n45

On Bellville's contract claim against Farm Bureau, the jury had valued his personal injury claim at \$756,714.95 (and found him 5% at fault). n46 But, because Farm Bureau had a reasonable basis to attribute 30% fault to Bellville, its rejection of a \$270,000 demand was not bad faith as long as Farm Bureau had a basis to value the claim at less than \$415,000. n47 An insurer is not obliged to pay based on analysis of jury verdicts in other cases unless their facts are shown to be similar to those in the claim. n48 Nor was it sufficient to offer expert opinions that a reasonable insurer would have paid Bellville's demand, because bad faith is not shown by mere proof of negligence; the plaintiff must negate the existence of a reasonable basis for the insurer's actions. n49 And, in *Bellville*, there were conflicting expert opinions as to the value of the case, which simply demonstrates the obvious: it is difficult, if not impossible to determine with any precision how the jury will value such a claim, particularly its noneconomic components. n50

As a matter of law, it could not be said that Farm Bureau lacked a reasonable basis for rejecting the \$270,000 demand, because that value was subject to debate:

Certainly there may be cases in which the UIM limits are so low or the undisputed damage items so high that there would be no reasonable basis to refuse payment notwithstanding the impossibility of accurately predicting the value of the insured's damages. But this case is not one of those. n51

Turning to Farm Bureau's refusal to consent to settlement with the tortfeasor, the court noted that consent to settle

provisions had previously been upheld, though breach of such a provision would not preclude a claim unless the insurer could show that (absent the settlement) it would have been able to recover from the tortfeasor. The court agreed with *Bellville* that an insurer in Farm Bureau's position should have a good faith duty to consent to settlement if it lacks a reasonable basis to believe that its subrogation claim has value. n52 But the existence of such a duty had been fairly debatable, because the issue had never been decided in Iowa. n53 Moreover, that question was one on which reasonable minds could differ, as illustrated by the fact that the court of appeals had reached a different conclusion. n54

Because each of Farm Bureau's challenged actions had a reasonable basis, Farm Bureau was entitled to judgment as a matter of law. n55

Iowa Has Adopted a Modified Directed Verdict Rule *Bellville* Supports a Modified Directed Verdict Rule. A starting point in this analysis is the Iowa Supreme Court's approving quotation from the Ashley treatise. n56 While that quotation reads like the strict directed verdict rule rejected in *Reuter*, *Bellville* did not overrule *Reuter*, holding only that [w]hether a claim is fairly debatable can *generally* be decided as a matter of law by the court. n57 In fact, both the Ashley treatise and the Barker and Glad article recognized exceptions to any such rule, exceptions that reconcile their rule with *Reuter* and indicate how one can determine when the directed verdict rule will not apply, producing a modified directed verdict rule, which is fully consistent with *Reuter's* rejection of a strict directed-verdict rule.

The Ashley treatise identifies exceptions, such as the insurer's knowing use of false testimony to create a fact issue and reliance on an expert known to be unreliable. n58 The Barker & Glad article similarly identifies exceptions for coverage testimony by lying insurer employees, dishonestly selected experts, and unreasonable insurer-employee experts. n59 As pointed out in *Cabell Electric Co. v. Pacific Insurance Co.*, n60 the justification for an exception to the directed-verdict rule is the bad faith jury's ability to determine, *from additional evidence*, that some of the evidence supposedly creating a factual issue on coverage was known by the insurer to be unworthy of consideration. An insurer cannot, in good faith, rely on evidence it knows or should know to be false or unreliable.

But if there is any evidence that the insurer could, in good faith, rely upon and which would permit a reasonable factfinder to rule against the insured, then the issue is fairly debatable and there can be no bad faith. So, for example, *Bellville* was entitled to rely on the police officer's report in attributing fault to *Bellville*, unless presented with proof that the officer's report was *patently* wrong. n61 As the Iowa Supreme Court succinctly put the point: if reasonable minds can differ on the coverage-determining facts or law, then the claim is fairly debatable. n62

Bellville also approvingly quoted a Texas case saying [c]ourts and juries do not weigh the conflicting evidence that was before the insurer; they decide *whether evidence existed* to justify denial of the claim.' n63 *Bellville* quoted the same case for the proposition that [t]he issue in the bad faith case is not whether the factfinder believes the evidence that [the insurer] believed when it denied the claim; the issue is whether such evidence existed.' n64

All of these statements indicate that juries have an extremely limited role in evaluating the objective element of bad faith: determining whether the evidence creating the fairly debatable coverage issue existed. (As will be discussed, juries may also consider whether the insurer knew (or, perhaps, should have known) that some of the evidence was unworthy of reliance. n65

Gilbert v. USF Holland, Inc. Supports a Modified Directed Verdict Rule. This aspect of the law of bad faith is reinforced by *Gilbert v. USF Holland, Inc.* n66 *Gilbert* reversed an award of workers compensation penalty benefits. The workers compensation statute provides for penalty benefits [i]f a delay in commencement or termination of benefits occurs without reasonable or probable cause or excuse. n67 A reasonable excuse exists if the claim for benefits is fairly debatable. n68 Section 86.13 codifies, in the workers' compensation context, the common law rule that an insurer with a good faith dispute over the legal or factual validity of a claim can challenge the claim, if its basis for doing so presents a fairly debatable issue. n69 Because the substantive standards are identical, denial of penalty benefits precludes any bad faith claim. n70 So, reversal of penalty benefits in *Gilbert* meant there could be no bad faith liability on those facts. In *Gilbert*, as in *Bellville*, the Iowa Supreme Court held that [w]hether the issue was fairly debatable

turns on whether there was a disputed factual issue that, if resolved in favor of the employer, would have supported the employer's denial of compensability. n71

Gilbert was a truck driver for USF Holland. He bent over to pull up a dock plate, a heavy metal ramp balanced in a way that is usually easy to move. This time, it stuck and jerked Gilbert down. He felt some pain but thought nothing of it. A second attempt disengaged the dock plate. He went to a nearby desk and signed a weigh bill. When he straightened up, he felt great pain, which he reported. n72

The next day, Gilbert wrote a report, saying that his neck popped as he was getting up. He had no idea why. He said nothing about the stuck dock plate. Nor did he mention it to his physician, Dr. White. n73

His compensation claim was denied because his injury did not arise out of any peculiar work stress. Gilbert then clarified his report by telling the adjuster about the dock plate. The insurer reaffirmed the denial. n74

About a month later, Gilbert developed severe neck pain and consulted Dr. Carlstrom, whom he told about the entire incident, including the stuck dock plate. Dr. Carlstrom attributed Gilbert's current symptoms to that incident. Eventually, Gilbert returned to work with no restrictions. n75

USF Holland still denied compensability. Gilbert submitted (1) a causation opinion from Dr. Carlstrom, (2) a letter from Dr. Minervi stating that his progress notes never denied work-relatedness, and (3) testimony to the dock plate incident. But compensation was still denied. Gilbert was awarded both benefits and penalty benefits. n76 The award said, 'continued denial of the claim after such matters were addressed by Drs. Carlstrom and Minervi was not fairly debatable and was not reasonable.' n77 But the Iowa Supreme Court struck the penalty benefits.

The compensability issue was whether the injury arose out of Gilbert's employment. Whether the issue was fairly debatable turns on whether there was a disputed factual issue that, if resolved in favor of the employer, would have supported the employer's denial of compensability. n78

Based on Gilbert's initial explanation, USF Holland maintained that the injury had been caused simply by straightening up, not any hazard connected with the employment. n79 The Iowa Supreme Court said the issue remained fairly debatable, even after the doctors supported work-relatedness and the co-worker corroborated Gilbert's account:

Although the physicians concluded that Gilbert's injury was caused by his employment, these opinions were based on Gilbert's revised history of his injury. The employer has never asserted that the act of tugging and lifting on a stuck dock plate could not have caused the injuries suffered by Gilbert. What the employer disputed is whether the employee's revised or amplified version of the events of June 4 -- that he first felt pain when he pulled on a stuck dock plate -- was true. Thus, the industrial commissioner should have focused on whether there was a fair debate over how the injury occurred. We think there indisputably was. n80

If, as Gilbert had first reported, the injury occurred as he straightened up, the occurrence might have been unrelated to his work. The Iowa Supreme Court held that the employer was entitled to rely on Gilbert's original version of his injury even though he subsequently changed his story of how the injury occurred. n81

Gilbert argued that he never changed his story, but simply amplified it when he learned additional facts were relevant. The Iowa Supreme Court held that the difference in accounts created an issue of credibility:

Regardless of how Gilbert's reporting of his injury is characterized, it cannot be disputed that he never mentioned that he first felt pain after pulling up on the dock plate, as opposed to when he straightened up, until *after* his claim had been denied. The employer was certainly entitled to argue that this previously undisclosed fact was a fabrication. Given the fact that not even the eyewitness corroborated this aspect of Gilbert's history, that pulling on the dock plate triggered the onset of pain, resolution of the matter rested on Gilbert's credibility, which the employer was free to challenge. As the deputy noted, there was a credibility issue in this case for the commissioner to resolve. The fact that the

commissioner resolved the credibility issue in favor of the employee did not mean that there was not a reasonable dispute with respect to how the accident occurred. n82

Gilbert also argued that the medical evidence pointed to work causation, and USF Holland never obtained any contrary medical opinions. But the Iowa Supreme Court held that the relevant issue was not medical:

the debatable issue in this case was *factually* how the injury occurred. Medical testimony on causation is simply not relevant to resolution of this contested *factual* issue. In other words, the fact that the physicians relied on the revised history rather than the original history did not resolve the factual dispute as to how the injury occurred. Thus, the commissioner's reliance on the medical testimony as support for her finding that there was not a reasonable basis to contest compensability was erroneous. n83

Finally, Gilbert argued that there had been an inadequate investigation, because the witness to the incident was not interviewed. But, even if that should have been done, there was no evidence that the witness would have added any new information. So, failure to interview the witness did not support the finding that there was no reasonable basis to dispute compensability. n84

Both *Bellville* and *Gilbert* demonstrate that an insurer may view the facts relating to the claim in an adversarial manner, looking solely to whether there is a genuine issue warranting submission of the issue to a trier of fact. Indeed, *Bellville* approvingly cites authorities which make that point. n85 Neither of those cases recognizes any qualification to that rule, except a bar against relying on evidence that the insurer knows is unworthy of reliance.

All Other Iowa Bad Faith Cases Are Consistent with a Modified Directed Verdict Rule. This reading of Iowa law is consistent with other Iowa precedent. Many cases hold bad faith claims precluded because the insured's coverage claim was fairly debatable. n86 One case found the coverage claim not fairly debatable precisely because the insured *had* been entitled to summary judgment on coverage. n87 Another case would fit within an exception just described. n88 In yet another case the injured worker had recovered penalty benefits and, as so far as the opinion indicates, the denial had been based solely on unsupported suspicions. n89 Only two cases suggest that the question of fair debatability may have been for the jury, and in both the insured appears to have been entitled to a directed verdict on coverage.

Nassen v. National States Insurance Co. n90 affirmed judgment on a verdict finding bad faith and fraud. The insurer had claimed application misrepresentations based on supposed hospital diagnoses of pre-existing health conditions, but existence of those conditions was negated by the discharge summary for that hospitalization and other information in the insurer's claim file. n91 Under the circumstances, the question of bad faith was for the jury to decide. n92 In *Nassen's* procedural context, this did not mean that the jury could decide whether the insurance claim was fairly debatable: there clearly was nothing to debate. The subjective element of bad faith might have required jury factfinding. Or the court might have meant only that there was no legal obstacle to the bad faith verdict, perhaps because *Nassen* would have been entitled to summary judgment. Either meaning would support the affirmance.

In *McIlravy v. North River Insurance Co.* n93 the insurer had obtained summary judgment on the issue of bad faith, and the Iowa Supreme Court remanded for trial. It concluded that McIlravy's initial interview provided a reasonable basis for the initial denial, because the injury appeared not to result from any work-related stress. n94 McIlravy's doctor, Dr. Gehrke, said in a letter that the injury was work-related, but provided no factual basis; accordingly, North River had no additional facts or information to reevaluate its earlier response that the injury was not work-related. n95 But North River then deposed Dr. Gehrke, who now explained that McIlravy's job placed him at greater risk of the sort of injury he suffered. n96 Despite this new evidence, North River continued to deny the claim and (so far as the summary judgment record revealed) conducted no further investigation of a claim now *prima facie* established. n97

The Iowa Supreme Court observed that the new information provided in the deposition did not necessarily render

the compensability issue undebatable . n98 In theory, other evidence (not in the summary judgment record) might have kept the issue of compensability in dispute, but that would have at least required North River to have investigated to see whether such evidence could be found.

The court said that Dr. Gehrke's deposition testimony did transform the reasonableness of the continued denial by North River into a jury question. n99 As the court explained:

Bad faith may be inferred from a flawed investigation, and the facts of this case place the adequacy of the investigation conducted by North River after the deposition of Dr. Gehrke into question. We recognize an incomplete investigation will not alone support recovery for bad faith if the insurer nevertheless had a reasonable basis for denial. Yet, the failure of North River to investigate in this case went to the very foundation of the basis for its denial. North River previously denied the claim based on the lack of facts to show the injury was work-related, and the deposition of Dr. Gehrke supplied the missing facts. A reasonable inference to be drawn from North River's failure to investigate further is that it knew it had no reasonable basis for denying McIlravy's claim. n100

McIlravy did not say the dispute requiring jury trial was whether the claim remained fairly debatable. Indeed, unless North River at least sought evidence to dispute work-relatedness, (1) there was no further basis to dispute coverage, and (2) *McIlravy* could have obtained summary judgment in the workers' compensation proceeding. The issue requiring trial apparently was the subjective element of bad faith.

In sum, all Iowa bad faith precedents are consistent with the modified directed-verdict rule that can be extracted from *Bellville* and *Gilbert*.

The *Zimmer* Court Takes a Different View

This issue was recently presented on post-trial motions in *Zimmer v. Travelers Insurance. Co.*, n101 where the federal district court disagreed with the analysis here. Because the case was settled on appeal, that decision will never be reviewed.

Kris Zimmer recovered workers' compensation (WC) benefits for a back injury on June 1, 1999 that aggravated preexisting psychological problems; he then sued for bad faith benefit denial. n102 The jury found bad faith, awarding Zimmer \$10,087,453 in compensatory damages and \$3,000,000 in punitive damages. n103 The district court struck \$571,529 in compensatory damages and \$2,000,000 in punitive damages, for reasons not relevant here. n104 It declined to grant Travelers judgment as a matter of law.

The Zimmer claim was a complicated one, but the argument for judgment as a matter of law focused on a single issue: had it been fairly debatable whether Zimmer had actually suffered the work injury he claimed. The evidence on that point can be summarized as follows.

On June 1, 1999, Zimmer worked at a unit of Wells Fargo. He reported to his superior, Dennis Woolums, that he had suffered a work-related back injury; Woolums sent him home. The next day, Zimmer went to the emergency room (ER) of Des Moines General Hospital, where he was met by Dr. Carol Horner, his regular doctor. Dr. Horner gave him a note: [p]lease excuse Mr. Zimmer from work from 6/1/99 until released due to medical illness. Zimmer has not worked since. n105

Wells Fargo said Zimmer's claim was questionable. The adjuster, Beerbower, interviewed Zimmer:

I called and talked to the IW [injured worker]. He kept telling me that he has had previous back problems and when he bent over to pick up some confidential papers off the ground he felt a rip in his left side of his lower back. He states that he informed Tim Enos [a co-worker] that he had hurt his back when picking up the papers off the ground.

. He kept saying over and over that this was the final straw that broke the camel's back. n106

Pre-June 1 medical records showed that Zimmer had a history of worsening back and emotional problems starting in early 1999. n107 Wells Fargo reported that Zimmer's boss said Zimmer walks like he does every other time he has a bad back. n108 Enos denied having been told of the injury, though saying that Zimmer bent over to pick up the papers. n109

On June 2, Zimmer visited the ER. The hospital records do not mention any June 1 injury. The triage nurse's notes state: Severe back pain. Chronic They describe bruising and discoloration of his fingers. Dr. Abbassi's notes describe Zimmer's [c]hief complaint as [t]ingling sensations on the three fingers of his left hand with discoloration of those fingers. Under review of systems, Dr. Abbassi noted, [t]he patient denied any falls or injury. He does complain of back pain, which is chronic in nature. Dr. Horner ordered tests with a diagnosis of severe back pain, but did not indicate any injury. n110

In the ER, Dr. Horner referred Zimmer to Dr. Rettenmeier. Dr. Rettenmeier wrote a June 3 letter describing the visit, which does not mention any June 1 injury. He said Zimmer presents for evaluation basically of a variety of pain issues, primarily left sided leg greater than arm, as well as some vague discoloration changes in his hands. He dates the onset of his problems to 1988. n111 After discussing the events of 1988 and their consequences, Zimmer said that [a]bout 2 years ago, he started developing other pain issues. He apparently started having some pains that started in the left side of his lower back and chest and moved up into his arm. He talked about pains that radiate up his arm into the left side of his face and neck. Dr. Rettenmeier understood that Zimmer had gained control of that problem. Zimmer then talked about more current problems:

since January of this year, he has had progressive worsening... He talks about low back pain that has been unmanageable. In the past, it has always been manage[able], but has subsequently been unmanageable... Tuesday around 2 p.m., he apparently missed his Xanax, an hour late. He developed the sudden onset of discoloration in his left hand... He also has been having a lot of anxiety issues. This apparently has been a significant problem for several years. About 2 1/2 years ago, he apparently had stress at work and dropped 35 pounds in a quick period of time... He admits to a lot of work stress. He readily admits to anxiety issues... He really does not describe work depressive symptoms... n112

Dr. McGuire had seen Zimmer for his back problems in March 1999; Beerbower had Zimmer see him again, hoping Dr. McGuire could distinguish what was pre-existing from anything caused by the reported June 1 injury. n113 Unfortunately, Dr. McGuire did not address that point. After noting Zimmer's report of the June 1 injury, he said that Zimmer's problems were outside his expertise:

His back is the somatization of all his other problems. There is absolutely nothing for me to do. [] He needs to resolve stress and psychological problems before we can do anything. [] . From my standpoint, as far as his spine is concerned, he can be working full time. As far as his psychological problems and his dealings with superiors and other people, that needs to be resolved and that is in someone else's area of expertise. [] . As far as the back is concerned he could be working. The psychological problems and the job conflict situation would probably prevent him from working. n114

Dr. Horner's records begin on July 8, 1997, discussing back and abdominal pain. They show increasing back problems in early 1999 through late May, including referrals to Dr. Koithan (a psychiatrist), and Drs. Stein, Igram, and McGuire. They include a copy of part of the ER record. They say nothing about what Zimmer said in the ER. Zimmer saw Dr. Horner on June 30, 1999; July 14, 1999; July 23, 1999; July 26, 1999; and July 27, 1999. *The first mention of the reported June 1 injury in Dr. Horner's records was on July 27.*

The July 27 note describes Zimmer's then-current complaints of back, abdominal, and leg pain and his consultation with Dr. Leth. The note then discusses the reported June 1 injury:

The patient's presenting symptoms were reviewed with him at length. The patient reports that he bent over to chase

some papers on June 1, 1999 about 9:10 in the morning on 8th Street outside his home office. He was trying to pick up some of the company's confidential memos. apparently [sic] some QA type forms. . . . The patient was plugging a parking meter with quarters when he looked up and saw the papers flying up the street. Previously, they were in the back seat in a binder. Another employee or co-worker was apparently getting these papers out of the car. Paper hit his leg. The patient picked this up, saw it was confidential, and went in pursuit of the other papers. When bending over to pick these up he noticed the feeling of something ripping or tearing in his left lower back. He had to leave work later that morning, about 10 o'clock, due to the pain in his back. The next day he went to the Des Moines General emergency room where I saw and evaluated him.

The patient reports that he is presently unable to work as he cannot sit for long, cannot bend over or flex, cannot pick things up, cannot walk upstairs. He states that his wife must help him get out of bed or he must use a cane to help him get himself up due to his pain. n115

In July, Zimmer saw Dr. Leth (a pain specialist) and Dr. Koithan (a psychiatrist). He gave both a history that included the June 1 injury. n116 Over the years following, Zimmer saw many other doctors, giving them similar histories. Eventually, Dr. Horner (and Dr. Giordano, who treated Zimmer, starting in 2000) provided an opinion that Zimmer's disability was caused by the June 1 injury. n117

Travelers argued that it was fairly debatable whether Zimmer suffered any work injury on June 1, 1999. The following undisputed evidence existed: (1) Enos's failure to corroborate Zimmer's account; (2) ER records reporting Zimmer's denial of any fall or injury; (3) absence from the ER records and Dr. Rettenmeier's records of any mention of any June 1, 1999 injury; and (4) absence from Dr. Horner's records of any contemporaneous reference to any such injury and, despite two supplements requested by Zimmer, of any indication that Zimmer reported that injury in the ER. This created a factual issue whether the reported work injury had occurred, because an injured worker seeking medical treatment for back problems would be expected to tell doctors about any recent back injury.

These facts closely parallel those in *Gilbert*. Indeed, *Zimmer* is an even clearer case than *Gilbert* for presence of a fairly debatable factual issue. In the emergency room, Zimmer actually denied any fall or injury, something Gilbert never did. Both Zimmer and Gilbert omitted mention of the work injury at crucial points immediately after it allegedly occurred. (To be sure, Zimmer promptly reported the alleged work injury to his supervisor, while Gilbert did not; that makes little difference and is offset by Zimmer's emergency room denial of any recent injury.) In neither case did the witness corroborate the *injury*, though both corroborated the relevant incident. In neither case could the doctors shed any light on the factual question of how the injury occurred, i.e., whether the worker first felt pain at the time claimed. In neither case is there any evidence that further investigation would have produced additional evidence supporting the claim.

The *Zimmer* court offered several distinctions of *Gilbert*, mostly in an unreported memorandum denying a motion to reconsider the motion for judgment as a matter of law. First, *Gilbert* involved review of an administrative decision for substantial evidence, a review that is more searching than review of a jury verdict. n118 But that assumes that there was some relevant fact that the jury could have determined. Bad faith requires that a plaintiff establish two elements, one subjective and one purely objective. Given the close similarity of the facts in *Zimmer* and *Gilbert* and the identity of the legal standards, the standard in *Zimmer* was the same as in *Gilbert*: Whether the issue was fairly debatable turns on whether there was a disputed factual issue that, if resolved in favor of the employer, would have supported the employer's denial of compensability. n119 That depends solely on an objective evaluation of the evidence available to the insurer (about whether the worker felt pain when claimed); the only facts to be found are what that evidence was. Both in *Zimmer* and in *Gilbert*, there was no dispute as to that evidence. The question whether that evidence created a disputed issue was a question of law, not one of fact.

The *Zimmer* court also suggested that the ER notes might be interpreted in a more favorable light to Zimmer, relating the denial of any falls or injury only to the discoloration of his fingers. n120 Moreover, the failure to report the injury to his doctors might be seen as outweighed by his prompt report to his supervisor and to Beerbower, especially as

these reports (unlike Gilbert's) were made before his claim was denied.

The *Zimmer* court held that the existence of competing inferences from the evidence permitted the jury to find that there was no objectively reasonable basis to deny the claim. n121 That misconceives the inquiry. Availability of competing inferences allowed the workers' compensation arbitrator to make *factual findings* favoring Zimmer. But the question on bad faith liability is whether there was an objectively reasonable basis for the insurer to insist upon adjudication of the facts. *Gilbert* held such a basis exists when there is a genuine factual issue, e.g., on when the worker felt pain. n122 *If the available evidence presents a fairly debatable question, then an insurer is entitled to debate that question by denying the claim and requiring that the facts be adjudicated.*

The *Zimmer* court also relied n123 on *Etten v. U.S. Food Service, Inc.* n124 Etten had delayed reporting a slip and fall to his employer because the onset of symptoms had been delayed. n125 Given the delayed onset, the delay in reporting gave no reason to question the injury. Thus, as the *Etten* court said, the questions raised were based purely on speculative inferences from a highly selective reading of [Etten's] medical records.' n126 In contrast, Zimmer reported immediately to his supervisor but, strangely, not to his doctors. Zimmer's failure to tell his doctors, when he would be expected to do so if the injury had occurred, created a question not present in *Etten*. n127 The inference drawn from Zimmer's failure to tell his doctors was not speculative.

The *Zimmer* court pointed to the various medical records, starting with Dr. Horner's July 27 note, that showed Zimmer reporting the injury and even connected it causally with his disability. n128 But there were similar medical records and causation opinions in *Gilbert*, so those cannot be a distinguishing factor. The suspicious fact in *Zimmer* is Zimmer's failure to report his injury to his doctors, *when first seeking treatment*, despite having reported it to his supervisor. Neither later reports nor medical opinions based on those reports can eliminate the resulting question.

Precisely because Dr. Horner's medical records, even as supplemented, say only that Zimmer reported the injury on July 27 -- not June 2 -- the *Zimmer* court erred in thinking it significant that Beerbower denied the claim before getting those records. As *Gilbert* held, inadequate investigation cannot support bad faith unless that investigation would have revealed significant information. On the *factual* issue of whether Zimmer felt acute pain on June 1, Dr. Horner's records contained no significant information. So, while Beerbower's action must be judged *as if* she had waited for those records to arrive, her failure to wait did not make Zimmer's claim undebatable.

Conclusion

If there is any evidence that the insurer could, in good faith, rely upon and which would permit a reasonable factfinder to rule against the insured, then the issue is fairly debatable and there can be no bad faith. As the Iowa Supreme Court succinctly put the point: if reasonable minds can differ on the coverage-determining facts or law, then the claim is fairly debatable. n129

n3 *Zimmer v. Travelers Ins. Co.*, 521 F. Supp. 2d 910 (S.D. Iowa 2007). The authors developed some of the analysis here for use in post-trial motions and appeal in *Zimmer*. The case was settled on appeal, for a confidential amount.

n4 See, e.g., *Fletcher v. Western Nat'l Life Ins. Co.*, 10 Cal. App. 3d 376, 403, 89 Cal. Rptr. 78, 95 (1970) (under disability insurance policy, [t]he very risks insured against presuppose that if and when a claim is made, the insured will be disabled and in strait financial circumstances and, therefore, particularly vulnerable to oppressive tactics on the part of an economically powerful entity).

n5 See, e.g., Tex. Ins. Code Ann. art. 21.55 (allowing a recovery of 18% per annum for wrongful and untimely denials of claims). Even apart from statutes of this sort, state law commonly allows for prejudgment interest on claims for liquidated amounts. See, e.g., *authorities collected in* 47 C.J.S., *Interest & Usury*, § 20, at 55-59 & nn. 90-97 (1982); *id.* at 2 (Supp. 2002).

n6 See *Paulson v. State Farm Mut. Auto. Ins. Co.*, 867 F. Supp. 911, 917-18 (C.D. Cal. 1994) (emotional distress not compensable on contract claim).

n7 See *Arnold v. National County Mut. Fire Ins. Co.*, 725 S.W.2d 165, 167 (Tex. 1987) (in the absence of a tort cause of action, insurers can arbitrarily deny coverage and delay payment of a claim with no more penalty than interest on the amount owed). This is an overstatement, because the insurer must pay the costs of its own defense no matter how the suit turns out, and, depending on state law, may have to pay the insured's attorneys fees and a penalty interest rate if the insured prevails. *But see Union Bankers Ins. Co. v. Shelton*, 889 S.W.2d 278, 286-87 (Tex. 1994) (Cornyn, J., dissenting) (an insurer has more incentive to pay if it will be liable for any consequential damages in addition to interest and attorneys fees).

n8 See Tex. Ins. Code Ann. arts. 21.21, 21.55; Tex. Civ. Prac. & Rem. Code Ann. § 38.006(5). Not all jurisdictions permit recovery of fees as a matter of course on wrongfully denied insurance claims.

n9 Plaintiff-oriented commentators place great emphasis on this point. E.g., Marc S. Mayerson, *First-Party Insurance Bad Faith Claims: Mooring Procedure to Substance*, 38 Tort Trial & Ins. Prac. L.J. 861, 868 (2003) (courts are loath to permit a policy holder's transaction costs in accessing judicial process to create an economic space within which an insurance company can get away with rendering less than what it promised).

n10 *Aranda v. Insurance Co. of N. Am.*, 748 S.W.2d 210, 213 (Tex. 1988).

n11 Detection and prevention of fraud is an interest strongly shared by all honest purchasers of insurance, who would object to paying higher premiums merely to enrich the perpetrators of fraud. *See* Alan O. Sykes, *Bad Faith Breach of Contract by First-Party Insurers*, 25 *J. Legal Stud.* 405, 425-29 (1996). Anything which inhibits insurers from challenging potentially fraudulent claims will not only permit the success of frauds which go undetected as a result, but will also tend to encourage additional fraudulent claims.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of The New Appleman on Insurance Law, now in preparation, and a Consulting Author of the New Appleman Insurance Law Practice Guide. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of Bad Faith Law Report until that publication merged with Insurance Litigation Reporter, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Robert C. Johnson is a partner in the Chicago office of Sonnenschein Nath & Rosenthal LLP and a past Chair of its national Litigation practice group. Mr. Johnson represents insurers in various complex litigation matters, including bad faith actions and asbestos, environmental, product liability, construction defect, mold and personal injury (including adversting injury) coverage claims. He has handled appeals in the Second, Third, Fourth, Fifth, Seventh, Eighth, Ninth and Eleventh U.S. Circuit Courts of Appeal, and all five districts of the Illinois Appeallate Court. He has been recognized as a leading lawyer in Illinois in insurance coverage litigation by *Chambers USA, Americas Leading Lawyer for Business 2007*.

Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases.

Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Godes on Sun-Times Media Group, Inc. v. Royal & SunAlliance Insurance Co.: Superior Court of Delaware's Decision Requiring the Advancement of Defense Costs Under Directors and Officers Insurance Policies

By Scott N. Godes

June 2, 2008

SUMMARY: In *Sun-Times Media Group, Inc.*, the Delaware Superior Court considered insurers' usual arguments as to why they should be able to refuse to advance defense costs, as they promised to do in their policies. The *Sun-Times* decision considered, and rejected, arguments that the insurers did not have to advance defense costs because of personal conduct exclusions, consent to settle and cooperation clauses, and the priority-of-payments clauses.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: In *Sun-Times Media Group, Inc. v. Royal & SunAlliance Ins. Co. of Canada*, No. 06C-11-108 RRC, 2007 Del. Super. LEXIS 402 (Del. Super. Ct. June 20, 2007) (*Sun-Times*), an insurance coverage dispute, the insurers tried to escape from providing directors and officers insurance coverage for numerous claims, including securities class actions and derivatives actions.

The insurers relied on several arguments in their efforts to refuse to cover. They asserted that they had no obligation to advance defense costs because of (1) personal conduct exclusions [4(a) and 4(c), the fraud and personal profit exclusions]; (2) the consent-to-settle or cooperation clauses; and, (3) the priority-of-payments clause. *2007 Del. Super. LEXIS 402*, at *1-2. Notably, the court rejected the insurers' arguments under general insurance contract principles, because the insurers failed to carry their burden of proof on the appropriate choice of law. *Id.* at *29.

The court decided properly that the fraud and personal profit exclusions did not prevent the advancement of defense costs. The court was correct in refusing to allow the insurers to escape their duty to pay defense costs based on the fraud and personal profit exclusions. The court explained that, notwithstanding the presidents pleading guilty to fraud, other directors of the company could not be precluded from recovering defense costs, as exclusions 4(a) and 4(c) applied only to the organization, not the individual directors. See *id.* at *35. The court also allowed the company to recover defense costs that it paid to defend the directors. The court based its decision, part, on the fact that the policy required the insurers to advance defense costs prior to final disposition of the claim. That is of critical importance, because it required the insurers to advance defense costs contemporaneously, notwithstanding the exclusions. The fraud and personal profit exclusions did not serve to exclude defense costs from innocent directors and officers or from the company, and the insurers could not impute the fraud onto the innocent parties.

The court decided properly that the consent-to-settle or cooperation clauses did not prevent the advancement of defense costs. The insurers also sought to avoid coverage by claiming that the insureds violated the policies consent and cooperation clauses. The insurers argued that they were entitled to rely upon these clauses because they had not denied coverage, but only reserved the rights to do so. The court found that a distinction without a difference, holding:

Because the Defendants reserved their rights with respect to coverage and later denied coverage, they should not have veto power over the settlement process. When the Defendants reserved their rights to accept coverage, Plaintiffs were allowed to take reasonable measures to defend themselves, including settlement.

Id. at *40. In short, the court held that the insurers reservation of rights to deny coverage waived their right to rely on the provisions. *Accord, e.g., Gribaldo, Jacobs, Jones & Assoc. v. Agrippina Versicherungen A.G.*, 3 Cal. 3d 434, 449, 91 Cal. Rptr. 6 (1970) (applying to E&O policy principle that when the insured has requested and been denied a defense, it may ignore the policy provisions forbidding the incurring of defense costs without the insurers prior consent).

Again, the critical point is that the rule that insurers cannot rely on consent provisions after denying coverage applies the same to D&O policies as it does to duty to defend policies (like general liability policies).

The court decided properly that the priority-of-payments clause did not prevent the advancement of defense costs. Finally, the court rejected the insurers efforts to rely on the priority-of-payments clause (also known as the order of payments clause) to deny coverage. The insurers argued that before they paid defense costs to the corporation, there had to be a finding of coverage for the directors and officers and payment to them. The court gave short shrift to that argument, explaining that because it had ruled that the directors and officers were due advancement of defense costs compensation under the policy the priority of payments clause did not preclude coverage. Stated simply, the priority-of-payments clause cannot be used to deny coverage to all parties.

Conclusion. The *Sun-Times* decision correctly rejected the insurers numerous roadblocks to advancing defense costs, as they had promised to do in their policies. Insurers raise the same or similar arguments in directors and officers coverage disputes across the country, and this decision should be considered persuasive authority against the insurers wrongful attempts to deny coverage.

ABOUT THE AUTHOR(S):

Scott N. Godes is an attorney in the Washington, DC office of Dickstein Shapiro LLP. Mr. Godes represents corporate policyholders in insurance coverage disputes. He is an experienced trial lawyer who has litigated complex insurance coverage disputes, including class actions, in state, federal, bankruptcy, and appellate courts, as well as in commercial arbitrations. Mr. Godes has a wide-ranging coverage practice, pursuing insurance in disputes relating to directors and officers claims for alleged securities violations; allegations of damaged computer data, hardware, and software; mass tort liabilities, including asbestos; environmental property damage; flood claims; allegations of improper alcohol advertising; and class actions. Recently, Mr. Godes was lead counsel in *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, a landmark case decided by the New York Supreme Court that ruled there are millions of

dollars of coverage for thousands of asbestos claims, even after the insurers claimed to have paid their full aggregate limits of coverage. Mr. Godes received his B.A., cum laude, from Middlebury College, and his J.D., with honors, from the George Washington University Law School.

Gerber and Kingsley on Allstate Insurance v. American Home

2008 Emerging Issues 2337

Gerber and Kingsley on Allstate Insurance v. American Home: When and Under What Circumstances can a Reinsurer Decline to Follow the Follow-The-Fortunes Doctrine

By Daniel W. Gerber and Jeffrey L. Kingsley

May 29, 2008

SUMMARY: Typically, a reinsurer in the complex relationship with its reinsured, must adhere to the follow-the-fortunes doctrine. A recent case, *Allstate Insurance v. American Home* appears to have carved out a niche in which a reinsurer does not have to abide by the follow-the-fortunes doctrine if the settlement fails to comply with a courts ruling and is contrary to the reinsureds position during litigation.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Introduction. Under the follow-the-fortunes doctrine, a reinsurer is typically obliged to indemnify its reinsured for a settlement reached by the reinsured so long as the reinsureds allocation of that settlement is in good faith and within the terms of the reinsurance policy. A recent case in New York, *Allstate Insurance v. American Home*, 43 A.D.3d 113, 837 N.Y.S.2d 138 (1st Dept 2007) however, rejected the premise that a reinsurer cannot inquire into the underlying lawsuit to ensure that the reinsurers position is consistent. With the *Allstate* decision expanding the scope of reinsurers to examine a reinsureds settlement terms, the question then becomes: how far can they go?

Analysis. In *Allstate Insurance v. American Home*, 43 A.D.3d 113, 837 N.Y.S.2d 138 (1st Dept 2007), Allstate Insurance Co., (Allstate) filed a declaratory judgment action to determine its rights and obligations under its reinsurers, American Home Assurance Company (AMA) environmental coverage settlement with its insured.

AMA issued commercial property insurance policies to United Technologies Corporation (UTC) for coverage of loss or damage to the property during the periods of 1975-1978 and 1978-1981. The first policy covering the period of 1975-1978 had a 6 million dollar liability limit for one loss, disaster, or casualty. The second policy covering the 1978-1981 period had a 10 million dollar limit of liability for the same one loss, disaster or casualty. UTC had retained a \$200,000 self-insured deductible for any one occurrence under each policy.

AMA secured reinsurance from Allstate with respect to the UTC policies. The reinsurance policy was structured in three layers. The first layer included a one million dollar reinsurance coverage. The second layer had a five million dollar excess of the one million dollar coverage. The third layer had a four million dollar excess over the first two layers that totaled ten million dollars.

In 1992, UTC commenced a declaration action against AMA in the District Court of Connecticut for indemnification under its policies for physical loss and damage allegedly sustained due to environmental pollution at various sites, including plants in West Palm Beach, Florida, Stratford, Connecticut and Windsor Locks, California.

During that litigation UTC argued to the Court that the losses alleged in the complaint involved multiple occurrences at each of the plants. The main disagreement between UTC and AMA centered on the number of occurrences at each site because determining the number of occurrences would severely impact the \$200,000 per occurrence deductible under the policies. The rationale for UTC was simple -- the fewer deductibles, the more liability AMA had under the UTC policies. Conversely, AMA argued that there were more occurrences in part to increase the number of deductibles.

After a jury trial ruled in favor of UTC in one portion of the trial, both UTC and AMA took the Court regarding the method for determining the number of occurrences per site at the Windsor Locks site. The District Court found that for purposes of calculating deductible amounts seven occurrences took place at the Windsor Locks site. The court then applied, pursuant to the language of the UTC insurance policies, one deductible per occurrence and added an additional deductible for each policy period during which the jury found that UTC suffered a loss.

After that determination, UTC and AMA were scheduled for trial for the remaining portions of the case. A few months prior to the trial, the parties settled the remaining issues for a one time lump sum payment of one hundred and eleven million dollars. During the settlement process, AMA changed its position and applied a one-occurrence-per-site approach, despite the Court's ruling that the Windsor Locks site had seven occurrences. By treating each site as one occurrence, reinsurance was triggered under both policies. As a result, AMA demanded payment from Allstate in the amount of \$2,578,638.21 from the reinsurer under the follow-the-fortunes doctrine.

Allstate moved for partial summary judgment seeking a declaration that it was not obligated to pay AMA under the follow-the-fortunes doctrine on the basis that loss allocation, specifically treating each site as one occurrence, was unreasonable and contrary to the court's ruling. AMA opposed the motion and cross-moved for summary judgment on the same issue arguing that its allocation was reasonable and Allstate was obligated under the follow-the-fortunes doctrine and abide by the settlement terms absent a showing of bad faith or fraud.

The lower court ruled in favor of AMA stating that Allstate's position would force the Court to engage in an intrusive factual inquiry into the reinsured settlement process. Moreover, the lower court found that AMA's one-occurrence-per-site rule, while possibly inconsistent was reasonable because it was applying a bright-line test as opposed to any own subjective belief it had during the lawsuit. Allstate appealed the decision.

In reviewing the issues in this case, the Appellate Division of the First Department in New York outlined the follow-the-fortunes doctrine. According to the court, the follow-the-fortunes doctrines require a reinsurer to indemnify for payments reasonably within the terms of the original policy, even if technically not covered by it. [Citations omitted] Therefore, according to the doctrine, a reinsurer is bound to accept the cedent's good faith decisions on all things concerning the underlying insurance terms and claims against the underlying insured.

The purpose, the court determined, of the follow-the-fortunes doctrine is to promote good faith settlements of the insured's claims. As a result according to the court, the doctrine insulates a reinsured from a reinsurer's challenge unless the settlement was in some way fraudulent, in bad faith, or the payments were beyond the scope of the original policies.

Despite accepting the essential terms of the doctrine, the court stated that the doctrine does not require a reinsurer to blindly accept the reinsured's allocation when the allocation is contrary to the reinsured's prior position in the lawsuit. The court stated that the follow-the-fortunes doctrine applies to allocations as long as the allocation meets the typical follow-the-settlement requirements [that is] good faith, reasonable, and within the applicable policies limits.

As such, the court found that the AMA's allocation position was unreasonable because the one occurrence-per-site allocation of the Windsor Locks site directly contradicts the District Court's ruling as to the number of occurrences at the

site. As such, the court determined that Allstate is not obligated to compensate AMA with respect to the settlement pursuant to reinsurance policies.

Practice Tip. The *Allstate* decision was one of the first decisions that allowed a reinsurer to decline to follow the follow-the-fortunes doctrine when it did not demonstrate bad faith or fraudulent conduct. Rather, the *Allstate* decision provided reinsurers the basis to investigate positions a reinsured makes during the underlying litigation to ensure that its position is consistent.

While *Allstates* impact on the scope of the follow-the-fortunes doctrine is still unknown, the mere fact that the follow-the-fortunes doctrine was not adhered to due to a position the reinsured took during litigation is significant. It is therefore important for attorneys representing reinsurers and reinsured alike to understand that a reinsureds position during the underlying litigation has the possibility of playing a major role in determining whether the reinsured can seek indemnification from its reinsurer.

While the Appellate Division in the *Allstate* decision proclaimed that the factual circumstances in the case were unique, the impact from the decision may be much broader than it even realized. As such, practitioners need to recognize that any position taken by a party during litigation is significant and could have a tremendous impact on reinsurance coverage at a later time.

ABOUT THE AUTHOR(S):

Daniel W. Gerber is a partner of Goldberg Segalla LLP in New York. He maintains an international practice in commercial litigation with a focus on complex insurance coverage disputes and analysis, including reinsurance and excess insurance, as well as mediation and arbitration. He chairs his firms Life, Health, Disability and ERISA practice group and manages its Insurance Coverage practice group. He is an author for the renowned Insurance Treatise, New Appleman's Insurance Law Practice Guide, as well as Mealeys Emerging Insurance Disputes. Mr. Gerber is admitted to the United States Supreme Court, as well as all federal and state courts in New York and Pennsylvania. He argues regularly before the New York Court of Appeals and the U.S. Second Circuit Court of Appeals arguing the seminal case in New York on late notice in insurance law. He has received the Chairperson of the Year Award for his work as Chair of the Insurance Coverage Committee for the New York State Bar Associations Torts, Insurance and Compensation Law Section, and will chair the almost 3,500 member Torts, Insurance and Compensation Law Section in 2008. Mr. Gerber is also an active member of the Association of Life Insurance Counsel, the International Claims Association and the International Association of Defense Counsel, as well as the American Bar Associations Life, Health and Disability Committees. Mr. Gerber possesses an AV rating from Martindale Hubbell, a Super Lawyer designation from Law & Politics Magazine, and has been named consecutively by his peers to Business First's Who's Who in Law.

Jeffrey L. Kingsley is an associate with Goldberg Segalla LLP in New York and he maintains a national practice in the areas of insurance, reinsurance coverage and extra-contractual liability litigation, commercial litigation, and bankruptcy and restructuring. He has presented and authored numerous articles in New York ranging from alternatives to litigation as well as life insurance settlement issues.

Wiley Rein LLP on Liability Coverage for "Global Warming Claims"

2008 Emerging Issues 297

Wiley Rein LLP on General and Professional Liability Coverage for "Global Warming Claims"

By Theodore Howard, Kenneth Ryan and Justin Heminger

May 27, 2008

SUMMARY: Responding to recent commentaries by policyholder advocates, insurance coverage experts Theodore A. Howard, Esq., Kenneth E. Ryan, Esq. and Justin D. Heminger, Esq. of Wiley Rein LLP consider the extent to which global warming claims against corporate policyholders are likely to impact general and professional liability insurers. The authors briefly explain the scientific principles and public perceptions driving global warming claims and then examine the claims that already have been litigated. After providing this background, the authors analyze the coverage issues that insurers may face as corporate policyholders seek coverage under general and professional liability policies. From this analysis, the authors explain why global warming claims are more likely to be similar to the overhyped Y2K problem than the next asbestos confronting the insurance industry.

ARTICLE: Several recent commentaries authored by policyholder advocates suggest that a veritable explosion of insurance coverage litigation arising in connection with liability claims against corporations relating to global warming looms on the horizon, and that general and/or professional liability insurers had best be prepared. n1 In this responsive commentary, following a brief description of the concept of global warming and an overview of how litigation implicating this phenomenon is evolving, we explain why we believe that, from a liability insurers perspective, global warming claims are, ultimately, more likely to resemble the vastly overhyped Y2K problem, in terms of real-world coverage exposure, than the next asbestos confronting the insurance industry.

Global Warming -- What Is It?

Although the underlying scientific principles affecting global warming are numerous and complex, the phenomenon can be described in relatively straightforward terms:

Energy from the sun drives the earth's weather and climate, and heats the earth's surface; in turn, the earth radiates energy back into space. Atmospheric greenhouse gases (water vapor, carbon dioxide and other gases) trap some of the outgoing energy, retaining heat somewhat like the glass panels of a greenhouse. Without this natural greenhouse effect, temperatures would be much lower than they are now, and life as known today would not be possible. Instead, thanks to greenhouse gases, the earth's average temperature is a more hospitable 60F. However, problems may arise when the atmospheric concentration of greenhouse gases increases.

* * *

What has changed in the last few hundred years is the additional release of carbon dioxide by human activities. Fossil fuels burned to run cars and trucks, heat homes and businesses, and power factories are responsible for about 98% of U.S. carbon dioxide emissions, 24% of methane emissions, and 18% of nitrous oxide emissions. Increased agriculture, deforestation, landfills, industrial production, and mining also contribute a significant share of emissions. In 1997, the United States emitted about one-fifth of total global greenhouse gases.

Estimating future emissions is difficult, because it depends on demographic, economic, technological, policy, and institutional developments. Several emissions scenarios have been developed based on differing projections of those underlying factors. For example, by 2100, in the absence of emissions control policies, carbon dioxide concentrations are projected to be 30-150% higher than today's levels. ⁿ²

This aggravation of the so-called greenhouse effect due to the accumulation of excessive concentrations of greenhouse gases in the earth's atmosphere poses potentially stark consequences. Since the industrial revolution, the Earth's average temperatures have increased substantially and rapidly from a historical perspective, and all ten of the hottest years on record have occurred since 1990. 2005 was the hottest year in over a century. ⁿ³ Moreover, scientists expect that the average global surface temperature could rise 1-4.5F (0.6-2.5C) in the next 50 years, and 2.2-10F (1.4-5.8C) within the next century, with significant regional variation. Evaporation will increase as the climate warms, which will increase average global precipitation. Soil moisture is likely to decline in many regions, and intense rainstorms are likely to become more frequent. Sea level is likely to rise two feet along most of the U.S. coast. ⁿ⁴

A watershed development in the protracted scientific debate over whether global warming was actually occurring came in 2001, with the issuance of a report by the Intergovernmental Panel on Climate Change (IPCC), an advisory body to the United Nations Framework Convention on Climate Change. The IPCC concluded that [i]n light of new evidence and taking into account the remaining uncertainties, most of the observed warming over the last 50 years is likely to have been due to the increase in greenhouse gas concentrations, ⁿ⁵ with likely denoting a confidence level by the authors in the range of 66-90 percent. ⁿ⁶

The 2001 IPCC Report catalogued numerous possible weather-related manifestations of the effects of global warming and assessed their probability over the decades of the 21st century. It characterized as very likely to occur -- i.e., at a confidence level of 90-99% ⁿ⁷ -- such problems as more hot days over nearly all land areas, fewer cold days and frost days over nearly all land areas, increases in the heat index, a greater frequency of intense precipitation events, and the like. ⁿ⁸ Predicted as likely (i.e., 66-90% confidence level) were increased summer continental drying and associated risk of drought and increased tropical cyclone wind peak and precipitation intensities. ⁿ⁹ While the need for caution in relying upon such projections has been duly noted within the scientific community, ⁿ¹⁰ at least some of the phenomena the IPCC predicted in 2001 appear to be already occurring, as reflected by media coverage of more recent scientific findings. ⁿ¹¹ Moreover, in a revised analysis more recently released, the IPCC itself has concluded, based on additional data and improved techniques for interpreting prior data, that the confidence levels attending its 2001 predictions as to the anticipated manifestations of climate change have increased. ⁿ¹² In any event, however, perception is reality. From a *perception* standpoint, the causal connection between global warming and a future of climatic problems of increasing variety, frequency and severity appears to be cemented in the minds of the news media and much of the general public.

Insurers share the perception. A 2006 Lloyds of London report, entitled *Climate Change: Adapt or Bust*, surveyed the then-current scientific literature, and summarized the risk implications for international insurers. It anticipated the consequences of global warming in respect to such phenomena as more frequent and more severe hurricanes due to

elevated ocean temperatures, increased sea levels attributable to the melting of glaciers and polar ice caps with attendant inundation of coastal areas (including major metropolitan areas), impacts of increasing land and air temperatures, as manifested by greater drought and wildfire conditions in some areas and more severe precipitation events and resulting flood conditions in others, and the like. n13 More recently, similar reports have been issued by or on behalf of other major insurers, indicating their increasing awareness of global warming and its potential impact on the worldwide insurance industry. n14

Global Warming Claims

Media coverage of the potential impact of global warming on the insurance industry has largely been *forward-looking*. The focus has been: (i) the future exposure implications for insurers due to projected natural catastrophes linked to adverse climate change; and (ii) how insurers have begun, or should begin, to alter their business practices over the long haul -- in respect to underwriting as well as investment philosophy -- in response to risks posed by climate change. n15

Although this emphasis on future first-party exposures and possible avenues of avoidance is certainly appropriate, the insurance industry also should be aware of the prospects for substantial liability coverage claims against corporate policyholders based on these insureds alleged responsibilities for *already-existing manifestations* of global warming. While a critical mass of liability claims against corporations giving rise to such coverage demands has not yet emerged, signs suggest the possibility that it could come soon.

Early Global Warming Litigation. Litigation linking existing and prior corporate business practices to the deleterious present and future impacts of global warming had, until very recently, taken two alternative forms -- neither directly implicating general or professional liability coverage concerns. The first of these two archetypes involves challenges to regulatory inaction -- *i.e.*, cases brought against governmental regulatory authorities, seeking to compel their adoption and imposition of environmental regulations that would require corporate entities to reduce their emissions of greenhouse gases. Highest in profile and most closely-watched within this class of cases was the action resulting in a decision by the Supreme Court of the United States in *Commonwealth of Massachusetts v. U.S. Environmental Protection Agency*. n16

The case began as a notice-and-comment rulemaking proceeding initiated by environmental groups in October 1999, seeking to require the EPA to regulate CO₂ and other greenhouse gas emissions from new automobiles under Section 202(a)(1) of the Clean Air Act. n17 After nearly four years, EPA concluded in August 2003 that it lacked statutory authority to regulate greenhouse gas emissions from motor vehicles and that, even if it had such authority, it would decline to exercise it for a host of policy reasons. n18

Following EPA's denial of the petition, 12 states, three municipalities, two U.S. territories and a host of public interest environmental groups collectively challenged the agency determination in the U.S. Court of Appeals for the D.C. Circuit, n19 contending that the Clean Air Act empowers the EPA to promulgate standards applicable to the emission of any air pollutant from . . . new motor vehicles . . . which . . . cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare, and that EPA's refusal to regulate greenhouse gas emissions from automobiles under this standard was arbitrary, capricious, and contrary to law. On July 15, 2005, a divided panel of the D.C. Circuit -- assuming, without squarely deciding, that the petitioners had standing to sue -- denied their appeal, concluding that the EPA Administrator acted within the scope of her statutory discretion in refusing to promulgate regulations to limit greenhouse gas emissions from new vehicles. n20

The U.S. Supreme Court granted a petition for *certiorari* in June 2006, to review the D.C. Circuit ruling. Following full briefing, argument and four months deliberations, the Supreme Court rendered its decision on April 2, 2007, reversing the D.C. Circuit's decision by a 5-4 majority. Justice Stevens (joined by Justices Kennedy, Souter, Ginsberg and Breyer), concluding that automobile-emitted greenhouse gases are unquestionably within the broad parameters of the statutory definition of air pollutants as set forth in the Clean Air Act, held that the petitioners had the requisite

constitutional standing to sue and that EPA clearly had statutory authority under the Clean Air Act to regulate such greenhouse gas emissions and could not simply decline to exercise that authority on the basis of broad policy rationales having no foundation in the statutory language. n21 Despite the apparent resolution of this eight-year-old dispute, on April 2, 2008, the one-year anniversary of the Supreme Courts decision, the plaintiffs filed a petition in the D.C. Circuit, requesting that the Court order the EPA Administrator to comply with the Supreme Courts ruling (and the D.C. Circuits subsequent opinion after remand from the Supreme Court) by issuing, within 60 days, its determination that greenhouse gases do endanger public health or welfare, as defined in the Clean Air Act. n22 The D.C. Circuit has yet to rule on the petition.

While much was riding on *Massachusetts v. EPA* from a federal environmental regulatory standpoint, including the critical threshold question as to whether CO₂ and the other greenhouse gases emitted from the exhaust pipes of automobiles constitute air pollutants within the contemplation of Section 202(a)(1) of the Clean Air Act, the case, and others like it, n23 did not directly implicate general or professional liability insurers coverage under current or previously-issued policies. n24 This is because the regulatory actions -- even if successful -- were focused on requiring governmental entities to impose regulations that would mandate prospective behavior modification on the part of corporate policyholders *vis--vis* the emission of greenhouse gases. These lawsuits did not name the corporations as defendants, much less allege any sort of corporate culpability for *previous or existing injury or damage* of the type cognizable under general liability policies or likely to give rise to disgruntled shareholder claims that could implicate professional liability policies.

The second form of global warming litigation previously initiated, as distinct from the regulatory actions just discussed, targeted corporations as defendants. In these lawsuits, various plaintiffs, including environmental groups and state and local governments, sought declaratory and injunctive relief against emitters of greenhouse gases, premising their claims upon common-law public nuisance theories. The most prominent of these cases, *Connecticut v. American Electric Power Co.*, was filed by the States of Connecticut, New York, California, Iowa, New Jersey, Rhode Island, Vermont and Wisconsin, along with the City of New York, against American Electric Power Company, The Southern Company, the Tennessee Valley Authority, XCel Energy, Inc. and Cinergy Corporation in federal district court in New York City in July 2004. n25 As set forth in the plaintiffs initial pleading: Defendants power plants emit large quantities of carbon dioxide and are contributing to an elevated level of carbon dioxide in the atmosphere. . . . This Complaint seeks an order requiring defendants to reduce their emissions of carbon dioxide, thereby abating their contribution to global warming, a public nuisance. n26 In requesting relief under either federal or state common law of public nuisance, plaintiffs sought an order (i) holding each of the defendants jointly and severally liable for contributing to an ongoing public nuisance, global warming, and (ii) enjoining each of the defendants to abate its contribution to the nuisance by capping its emissions of carbon dioxide and then reducing those emissions by a specified percentage each year for at least a decade. n27

The public nuisance-based injunction actions against private corporate defendants have not, thus far, proven viable. n28 Moreover, these cases drew little attention from general and professional liability insurers because, although the cases were premised upon allegations that could, in theory, be read to implicate claims of existing or imminent bodily injury or property damage, the plaintiffs *did not seek monetary relief of any kind, but rather only prospective injunctive relief*, and therefore did not even arguably implicate the as damages inquiry that animated a previous generation of environmental insurance coverage disputes in the general liability context. n29 In many instances, the absence of a demand for monetary relief and the request for solely prospective injunctive relief also would be fatal to an attempt to seek coverage in the professional liability context. n30

Emerging Global Warming Liability Claims. While the global warming-related cases discussed above show that the litigation as a whole targets *prospective* business practices that are perceived to contribute to adverse climate

change, a significant change in this pattern is possible in light of recent developments. Specifically, lawsuits asserting claims against corporate defendants *seeking the recovery of damages for existing injury or damage* allegedly attributable to the effects of global warming caused, at least in part, by these corporations *past conduct*, have commenced. Many more claims realistically can be anticipated. The coverage exposure implications for general and professional liability insurers of targeted companies are apparent, and conceivably serious.

The initial lawsuit presenting tort claims for damages against corporate defendants based upon their alleged responsibility for global warming was a Hurricane Katrina-related class action -- *Comer v. Nationwide Mutual Insurance Co.* -- filed in federal district court in Mississippi in September 2005. The case initially targeted only property insurers, and originally focused solely on the insurers alleged wrongful conduct in limiting or denying coverage for hurricane-related property damage under homeowners policies on the basis of the policies flood exclusions. However, almost immediately, the plaintiffs in *Comer* amended their pleadings in order to add named and John Doe petrochemical companies as additional defendants, against which separate claims for compensatory and punitive damages were asserted. The *Comer* plaintiffs alleged that Hurricane Katrina was the result of environmental conditions caused by global warming and that the Oil Company Defendant Class had ignored warnings about the deleterious effect their actions would have on global warming and continued to engage in oil production and refining . . . activities that have produced the greatest single source of by-products leading to the development and increase of global warming. n31 The plaintiffs fleshed out these allegations by asserting that as a direct and proximate result of the Oil Company Defendant Class activities, global warming had increased until it had produced the conditions whereby a storm of the strength and size of Hurricane Katrina would inevitably form and strike the Mississippi Gulf Coast consequently causing extensive death and destruction. The damages sought by plaintiffs included Loss of Property; Loss of use of their property; Loss of their business and/or income; . . . Loss of loved ones; . . . Mental anguish and emotional distress n32

The court (Senior Judge L.T. Senter, Jr.) quickly recognized that the action framed by the plaintiffs Amended Complaint, which purported to combine -- in one case -- three separate proposed class actions against three disparate sets of defendants, based on three distinct sets of legal theories and claims, was completely unmanageable. The court dismissed the plaintiffs causes of action against non-global warming defendants by order dated February 23, 2006. n33 Shortly thereafter, the plaintiffs filed a third amended pleading, expanding the scope of their global warming allegations and claims to encompass additional defendants including public utilities, power companies and coal mining and chemical manufacturing companies. n34 After protracted motions practice, defendants motions to dismiss were finally granted at a hearing on August 30, 2007, based on the conclusion of District Judge Louis Guirola, Jr. (to whom the case was reassigned) that the plaintiffs lacked standing and that their claims were non-justiciable pursuant to the political question doctrine. n35 An appeal of the dismissal order is pending.

Meanwhile, a second major lawsuit asserting damages claims against private corporate defendants premised expressly upon allegations that they contributed to global warming was commenced in federal district court in San Francisco by the California Attorney General on September 20, 2006. n36 Named as defendants in the action were the Big Six domestic and Japanese automobile manufacturers -- GM, Toyota, Ford, Honda, Chrysler and Nissan -- which, according to the pleading, by their annual emissions in the United States of approximately 289 million metric tons of carbon dioxide and other greenhouse gases, are substantial contributors -- among the worlds largest contributors -- to global warming, and to adverse impacts on California. n37 The Complaint went on to allege generally that global warming had injured Californias environment, economy, and the health and well-being of its citizens, that California had incurred substantial costs in responding to the impacts of global warming, and that, despite the defendants awareness of the ongoing damages caused by global warming, they had chosen to continue producing vehicles that generated carbon dioxide, to the detriment of California. n38

The Complaint emphatically declared, The People seek compensation for the large-scale damage caused by these defendants. n39 Thus, the State sought to hold each defendant jointly and severally liable for contributing to a public nuisance -- global warming and the impacts resulting from global warming in California -- and awarding monetary damages to the State. n40 The State also sought a declaratory judgment that each defendant is jointly and severally liable to pay for such additional damages incurred by California in the future for contributing to the ongoing nuisance of

global warming. Following detailed allegations concerning the science of global warming and its purported impacts on the States property and citizens, the Complaint set forth alternative causes of action, seeking millions (if not billions) of dollars in incurred and prospective money damages under public nuisance theories of recovery pled under federal common law and state law. n41

After extensive briefing and argument of the defendants motions to dismiss, the federal district court ruled in September 2007, holding that the States damages claims implicated non-justiciable political questions which were required to be dismissed, based on reasoning consistent with that articulated by the district court in *Connecticut v. American Electric Power Co.*, *supra*. n42

Notwithstanding the unimpressive results of these early efforts, many commentators believe that *Comer* and *State of California* may represent but the tip of the proverbial (melting) iceberg -- bad pun intended -- in regard to tort actions for damages against corporate defendants, seeking to hold them accountable for their alleged contributions to adverse climate change and its current and future effects. Steven Susman, founding partner of the prominent Houston, Texas trial litigation boutique Susman Godfrey LLP, predicted that a consortium of plaintiffs mass-tort lawyers will devise and pursue a major global warming lawsuit against corporations. n43 Susman compared this predicted collaboration to the so-called *Castano Group* of plaintiffs lawyers that joined forces to craft the theory of tobacco company responsibility for governmental healthcare costs expended to treat citizens tobacco-related illnesses that ultimately resulted in those companies landmark \$206 billion settlement with state attorneys general. n44

The first salvo in this threatened attack by the plaintiffs bar has materialized in a lawsuit that Susman and other lawyers recently filed on behalf of the Native Village of Kivalina and the City of Kivalina against two dozen energy companies. n45 Kivalina, a small Alaskan village of approximately 400 residents situated on a six-mile-long barrier reef in the Chukchi Sea, brought suit on behalf of its citizens in a *parens patriae* capacity alleging that global warming is destroying the village to the point that the entire village must relocate at an estimated cost of between \$95 and \$400 million. The Complaint alleges that defendants are responsible for a substantial portion of the greenhouse gases in the atmosphere that have caused global warming and Kivalinas special injuries and that they knew or should have known of the impacts of their emissions on global warming and on particularly vulnerable communities such as coastal Alaskan villages, yet, [d]espite this knowledge, defendants continued their substantial contributions to global warming. n46 Allegedly as a result of global warming, sea ice that once provided a buffer between the reef on which Kivalina is located and the Chukchi Sea has disappeared, leaving Kivalina exposed to coastal storm waves that are eroding the barrier reef and threatening the communitys property, health and well-being. n47

As with the *State of California* action, the *Kivalina* Complaint includes federal and state public nuisance claims. However, as anticipated by Susman, the Complaint also purports to identify a civil conspiracy among some of the defendants by which they conspired to create a false scientific debate about global warming in order to deceive the public. n48 In support of this assertion, the Complaint recites extensive allegations concerning the defendants financial contributions to and participation in what are dubbed front groups, fake citizens organizations, and bogus scientific bodies, while drawing comparisons to Big Tobaccos disinformation campaign. n49 These allegations culminate in a conspiracy claim based on the defendants purported scheme to mislead the public with respect to the science of global warming and to delay public awareness of the issue so that they could continue contributing to, maintaining and/or creating the nuisance without demands from the public that they change their behavior as a condition of further buying their products. n50

At least some insurers have concluded that the potential implications of global warming litigation for the insurance industry must be taken seriously. Thus, in its *Adapt or Bust* report, n51 Lloyds of London stated:

We foresee an increasing possibility of attributing weather-related losses to man-made climate change factors. This opens the possibility of courts assigning liability and compensation for claims of damage. Legal liability is now being

actively pursued by several groups of lawyers and scientists who wish to use the same lines of argument as used against tobacco companies. If the courts conclude that damage was reasonably foreseeable then liability could follow, as would the search for deep pockets to meet the costs, with insurers a likely port of call. n52

The *Comer* case, brought on behalf of a putative class of private citizens alleging loss of life or property due to Hurricane Katrina, the *State of California* action, brought by the State Attorney General in a *parens patriae* capacity on behalf of the citizens, property and natural resources of the State, and the *Kivalina* suit, brought in a *parens patriae* capacity by a village attempting to relocate its residents, certainly do not define the universe of such actions. It takes no great stretch of imagination to contemplate inter-corporate litigation in this context such as, for example, a timber company owning vast stands of commercial lodgepole pine in British Columbia recently destroyed by the mountain pine beetle, as plaintiff, against corporate defendants it believes contributed to the climate change eliminating beetle-controlling killing frosts that formerly protected the forests, as detailed in one commentary. n53

General Liability Coverage Considerations

Corporate demands for insurance coverage under general liability policies for global warming-related damages cases are likely to bear at least some superficial resemblance to the types of long-tail coverage claims with which general liability insurers have had substantial experience since the 1970s. According to the relevant science, global warming is not an instantaneous phenomenon, but rather has developed gradually over time due, at least in part, to corporations alleged acts or omissions in emitting, or in manufacturing products that emitted, greenhouse gases over many decades. The analogy to delayed manifestation problems such as asbestos-related disease and gradual hazardous waste-caused pollution which have been the principal subjects of long-tail insurance coverage claims and litigation seems apparent. The three actions reviewed above, as illustrative of the types of tort claims for damages based upon global warming that could become commonplace, also reflect the potentially broad temporal scope that is likely to characterize these claims. Insurers thus can reasonably expect to be confronted with a panoply of complex coverage issues analogous to those to which they have become accustomed in the context of long tail claims. Furthermore, in the event that disputes arise between policyholders and general liability insurers over the availability of coverage for global warming claims, the extensive case law developed in resolving other long tail claims provides a sound basis for assessing whether any particular general liability policy is implicated.

Trigger of Coverage. As regards the trigger of coverage -- a critically-important threshold issue in any general liability coverage inquiry -- apparent similarities between putative global warming claims and familiar types of long-tail coverage claims exist, but should not be overstated. For example, while the plaintiffs in *Comer* attempted to establish, by their allegations, a causal chain from: (i) the defendants continuing greenhouse gas emissions; to (ii) the progressive worsening of global warming; to (iii) creation of the climatic conditions allowing a storm such as Hurricane Katrina to develop; to (iv) their injuries and damage resulting from the storm itself, it is far from clear that for purposes of trigger-of-coverage analysis, anything but the injury- or damage-causing storm itself is relevant. Certainly a strong argument could be made, on the facts as alleged, that to the extent coverage were available at all, only policies in effect during the approximately two-week period from Katrinas initial formation as a tropical depression in the Atlantic Ocean through the date of its Gulf Coast landfall as a Category IV hurricane would be triggered. There was simply no contention in *Comer* that global warming *in and of itself* caused the loss of life or other bodily injuries, or the damage to property, for which the plaintiffs sought damages; instead, plaintiffs theory was that global warming at most established *the conditions* under which a storm the size and strength of Katrina could be formed. Thus, triggering any coverage on the basis of the time period in which the defendants alleged acts or omissions merely contributed to global warming would appear to lack factual or legal foundation.

An arguably different analysis, and a potentially different trigger outcome, might apply to the *State of California* and *Kivalina* actions, in which global warming is more directly targeted by allegations as to the specific cause of the harms to the plaintiffs and their property and resources for which damages are sought, and where the alleged harms themselves are of a gradual and progressive, rather than instantaneous, nature. However, the timing and character of each category of alleged injury or damage would require careful examination in this regard.

Other General Liability Coverage Issues. Beyond the complexities presented by the threshold trigger issue, insurers can reasonably expect to be confronted with a panoply of additional complex coverage issues analogous to those they previously have addressed in the context of other long tail claims, such as:

- . Can the policyholder prove the existence and/or terms and conditions of lost policies? Questions over lost policies should be anticipated in light of global warming claims against corporate policyholders that implicate those companies activities dating back as far as the 1950s.

- . What law should apply to a coverage dispute? Complex choice-of-law analyses will almost certainly be required, given the multi-jurisdictional nature of both the insureds alleged acts or omissions and the geographic scope of the resulting global harms.

- . Do the policyholders greenhouse gas-emitting activities, or manufacture of emission-generating products, constitute an occurrence (where the activities and/or the allegedly resulting injury or damage were accidental), or were the injuries or damages expected or intended from the policyholders standpoint and therefore not covered? The plaintiffs pleadings in *Comer* and *State of California* are replete with assertions that the corporate defendants in each case, despite their awareness of warnings concerning the increasingly clear linkage between greenhouse gas emissions and worsening climate change, *knowingly and intentionally* continued to engage in activities that caused such emissions and/or continued to manufacture emissions-generating products. n54 The *Kivalina* complaint goes a step further by alleging that corporate defendants knowingly conspired to cover up the truth about global warming so that their businesses could continue emitting greenhouse gases while avoiding economic pressure to modify their behavior. n55 Allegations of this character will almost certainly provoke the assertion by insurers of expected or intended defenses under the occurrence provisions in their policies or expected/intended exclusions and, depending on the timing of the policies, common-law known loss or loss-in-progress defenses as well.

- . Do the harms upon which the global warming claims for damages against the policyholder are based constitute bodily injury or property damage, as contemplated by the provisions of the policy? While the prospect of actions premised upon actual bodily injury or property damage allegedly attributable to the impacts of global warming is certainly plausible -- the timber company lawsuit for destruction of its lodgepole pine trees hypothesized above is an example -- some lawsuits of this nature may instead be premised upon harm that constitutes pure economic loss for which, under the settled law of most jurisdictions, general liability policies do not provide coverage. n56

- . Alternatively, are the global warming claims for damages against the policyholder for which coverage is sought based upon personal injury, as contemplated by the provisions of the policy? Mirroring insurers past experience in addressing policyholder demands for coverage of environmental contamination claims, some insureds will likely contend that global warming claims for damages asserted against them, particularly those of individual claimants premised upon a private nuisance theory, implicate the enumerated offense of wrongful entry or eviction or other invasion of the right of private occupancy under the Personal Injury provisions of some general liability policies. n57

- . Were there facts and circumstances relating to the alleged causal connection between the policyholders acts or omissions and the emergence and/or exacerbation of global warming brought to the policyholders attention before the time when the third-party claim for damages was asserted, such that the policyholders notice of occurrence obligation under the policy might have accrued long before notice was actually provided to the insurers?

- . Do any policy exclusions preclude a coverage obligation for global warming claims, either in whole or in part? To the extent any exclusion is in play, is its applicability sufficiently clear that coverage can be disclaimed outright, or does uncertainty dictate the insurers assumption of the duty to defend, subject to a reservation of rights? Given that the fundamental premise of damages claims based on global warming is that the corporate defendants have intentionally

engaged in activities causing, directly or indirectly, the emission of greenhouse gases into the atmosphere over extended periods of time, coverage may well be foreclosed by operation of the qualified (*i.e.*, sudden and accidental) pollution exclusions incorporated in general liability policies beginning in 1972 -- especially in those jurisdictions in which the law establishes that sudden has a temporal connotation -- as well as by the absolute (or total) pollution exclusions employed by the insurance industry in policies issued beginning in 1985. The Supreme Courts holding in *Massachusetts v. EPA* that CO₂ and other automobile-emitted greenhouse gases are, as a matter of law, air pollutants under the Clean Air Act would seem to clearly enhance insurers leverage in arguing that their pollution exclusions should categorically bar liability coverage for global warming claims. n58

. Finally, assuming no categorical impediments to coverage, what is its scope -- *i.e.*, is there an applicable aggregate limit of liability and, if not, do the underlying allegations against the policyholder comprising the global warming claim implicate one or multiple per occurrence limits of liability? Moreover, what principles -- if any -- govern the allocation of insurance coverage if policies issued by multiple insurers are triggered?

Professional Liability Coverage Considerations

Although the most likely focus of insurance coverage issues arising out of global warming litigation will be on general liability policies, insurers also may encounter global warming-related claims in the professional liability context. For example, corporate policyholders with significant exposures or litigation costs for global warming liabilities may be faced with securities and derivative suits from shareholders. Directors and officers who allegedly ignored or misstated potential adverse impacts of greenhouse gas emissions or other aspects of their companies operations could face a barrage of lawsuits, and one could anticipate policyholders tendering such claims under Directors and Officers (D&O) and Errors and Omissions (E&O) policies.

In such circumstances, coverage issues likely to arise in addition to some general liability coverage issues addressed above that are equally relevant in the professional liability context may include the following:

. Does the long tail nature of the allegations present an obstacle to coverage? Claims-made policies are intended to afford specified coverage only for claims brought during a specific policy period, allowing insurers to more accurately underwrite exposures and thereby charge lower premiums. The claims-made nature of professional liability policies presents a crucial threshold question when confronting global warming liabilities which, as with other familiar long tail exposures, may be based on decades of corporate acts. Professional liability policies thus often contain exclusions for prior acts -- acts occurring prior to a specified date. Where the prior acts exclusion is worded broadly to disallow coverage for any acts committed in whole or in part prior to the specified date, coverage for global warming claims that include allegations stretching back for years or even decades may be precluded.

. Does the policyholder have a history of global warming-related proceedings that trigger a prior or pending litigation exclusion? As with the prior acts exclusion, claims-made policies often include a provision limiting exposure for claims made during a particular policy period that are related to a claim made during a prior policy period. Thus, to the extent that a global warming claim relates back to a claim made before policy inception, for example an SEC investigation or EPA regulatory action, coverage may be barred.

. Is coverage barred by the pollution exclusion? Although the provision is found in most standard policy forms, its wording can vary greatly. For example, the provision may exclude coverage broadly for any claim arising out of a discharge or release of a defined set of pollutants. In that case, a securities or derivative suit brought against a corporate policyholder and its directors and officers based on a failure to address or disclose global warming liabilities would likely be excluded from coverage. n59 On the other hand, a different provision that only excludes coverage for a claim for the actual discharge or release of pollutants might not bar coverage for a tangentially related securities suit.

. Is coverage barred by the property damage/bodily injury exclusion? As with the pollution exclusion, the precise

wording of the provision can be critical. To the extent that plaintiffs seek to recover amounts for property damage or bodily injury, most professional liability policies would exclude those risks because they are typically addressed by the terms of general liability policies. More often than not, however, the exclusion is worded to bar coverage only for claims for property damage or bodily injury, meaning that it may not necessarily preclude coverage for a securities action alleging that the corporate policyholders directors and officers mismanaged its operations, which contributed greenhouse gases to the environment and led to further liabilities to state or private entities.

. Do the allegations trigger a standard policy exclusion for dishonesty, fraud or willful violation of laws, statutes or regulations? Some policies exclude coverage only as to the specific person(s) who committed the alleged dishonest act, while other policies impute the adverse coverage impact to other insureds.

. Did the policyholder make inaccurate statements in applying for and purchasing a professional liability policy? To the extent that a policyholder or its directors and officers are alleged to have misrepresented their knowledge of global warming risks and/or liabilities in applying for and purchasing the policy, those misrepresentations may form the basis for policy rescission. n60 When plaintiffs allege, as in the *State of California* case, that the corporate defendants knew or should have known . . . that their emissions of carbon dioxide and other greenhouse gases contribute to global warming and to the resulting injuries and threatened injuries, n61 such corporate knowledge, if proven, would likely reside with the directors and officers of the company who originally applied for the policy. Scrutiny of the actions of directors and officers may be even more keen when plaintiffs attempt to prove active misrepresentation and concealment, such as the conspiracy claim alleges in the *Kivalina* suit. n62

What the Future Holds

The range of complex and potentially serious coverage issues that general and professional liability insurers may be required to address, to the extent lawsuits analogous to the *Comer*, *State of California*, and *Kivalina* actions proliferate, does not necessarily suggest that catastrophic indemnity exposure for insurers is looming on the horizon. Based on what is currently known, the opposite inference may well be more likely justified. At present, it appears that plaintiffs in global warming-related actions (existing or putative) against corporations for damages face a truly daunting task in establishing any entitlement to obtain relief. It seems likely that many courts will simply refuse to recognize and wrestle with these claims at all, finding, as did the federal district courts in *State of Connecticut*, *Comer* and *State of California*, that these claims are so inextricably intertwined with matters of domestic and international environmental policy that they present non-justiciable political questions, and thus dismiss the cases accordingly, often at the pleadings stage. n63

Even assuming that the cases survive threshold challenges premised upon lack of standing, non-justiciability and the like, the hurdles posed by the burden of proof upon the plaintiffs with respect to *causation* may well be insurmountable. At a minimum, the claimants inability to establish a proximate cause relationship between a particular corporate policyholders acts or omissions allegedly contributing to global warming and the specific global warming-related injury or damage for which the claimant seeks to be compensated will signal the death knell for many -- if not most or all -- of these cases at the summary judgment stage of the proceedings. In this regard, even though Senior Judge Senter of the Mississippi federal district court permitted the plaintiffs to amend their pleadings for a third time in the *Comer* litigation, prior to the subsequent dismissal of the case, he was constrained to comment on the steeply uphill nature of the plaintiffs ultimate battle:

Without in any way expressing an opinion on the merits of the plaintiffs claims against these defendants, I will observe that there exists a sharp difference of opinion in the scientific community concerning the causes of global warming, and I foresee daunting evidentiary problems for anyone who undertakes to prove, by a preponderance of the evidence, the degree to which global warming is caused by the emission of greenhouse gases; the degree to which the actions of any individual oil company, any individual chemical company, or the collective action of these corporations contribute, through the emission of greenhouse gases, to global warming; and the extent to which the emission of greenhouse gases by these defendants through the phenomenon of global warming, intensified or otherwise affected the weather system that produced Hurricane Katrina. n64

The causation burden for the plaintiff in the *State of California* action may have been even weightier than that confronting the Mississippi homeowner plaintiffs in *Comer*. The State, if the case had been permitted to go forward, would have had to establish that the automaker defendants -- which are not direct emitters of greenhouse gases themselves, but rather are the manufacturers of socially useful but emissions-generating products which are placed into the stream of commerce and purchased by or leased to intervening parties, *i.e.*, *drivers*, who effectively control the nature and extent of the use of the products and thus the volume of their emissions -- were nevertheless not only responsible for causing or exacerbating global warming, but legally responsible for global warming's causation of the injuries and damage to the States people, property and natural resources for which money damages were sought. Even if the causal nexus between automobile emissions and harmful global warming is *presumed* for these purposes, attributing liability to any individual automaker or to the automakers collectively under these circumstances would be no easy task -- indeed, we strongly suspect this objective would prove unattainable under current notions of tort liability. n65

For all of these reasons (and likely a host of others not even touched upon here), it is not the ultimate financial impact of the duty to indemnify under general and professional liability policies that ought to most concern insurers with respect to the specter of global-warming-related coverage claims. That said, a note of caution is in order. There was almost certainly a time, in the nascent stages of the earlier generations of tort litigation premised upon allegations of mass injury or damage caused by substances such as asbestos, hazardous wastes, tobacco, and the like, when prognosticators confidently opined that such claims were contrived, implausible, and doomed to fail in relatively short order. Yet, history has a way of repeating itself, and determined, creative plaintiffs lawyers have time and again demonstrated their capacity to refine and retool their causation theories and liability themes to a point where the claims seem progressively less outlandish and more within the realm of acceptability to a once-skeptical public and judiciary. Corporate defendants and their insurers have been down this road too many times to dismiss global warming-related tort claims as unlikely to ever gain traction in the U.S. courts.

Nevertheless, for the reasons stated, if any immediate problem is presented by global warming claims from the perspective of general and professional liability insurers, it is not the duty to indemnify but *the duty to defend*. Recent history is replete with examples of categories of underlying third-party liability claims that were never any real threat to insurers policy limits of liability from an indemnification standpoint, but which threatened massive defense obligations. That is precisely the concern that may be presented by putative global warming claims which, based on current science, can almost certainly be pled in such a way as to evade characterization as frivolous or dismissal on threshold motions for failure to state a claim. Moreover, these claims can be accompanied by demands for damages of sufficient magnitude that they must be vigorously defended by corporate policyholders and their high-priced defense attorneys, even if the prospect of ultimate liability appears remote.

It is with these concerns in mind that we suggest that general and professional liability insurers watch the emerging trend of claims for damages against corporations for their alleged contributions to the phenomenon of global warming closely, that they begin thinking now about strategies for responding to and/or defending against those corporate policyholders demands for coverage, and that they prepare for the eventuality that substantial defense costs may have to be incurred, even though the potential for substantial indemnification obligations under their respective policies appears unlikely.

Conclusion

While all three principles -- the existence of global warming, the extent to which the phenomenon is a product of human activities, and the extent to which extreme natural catastrophes are attributable to the phenomenon -- may remain subject to serious analysis and debate in some circles, they are no longer open questions insofar as general public perception is concerned. The quest to fix blame and impose liability for the consequences of global warming,

principally upon corporate actors who are perceived, rightly or wrongly, as the main villains in regard to their degree of responsibility for greenhouse gas emissions, has begun and appears likely to intensify in the immediate future. Corporations and their general and professional liability insurers must heed the warning signs and prepare accordingly.

[23]. See also *Korsinsky v. U.S. Environmental Protection Agency*, No. 05 Civ. 859 (NRB), 2005 U.S. Dist. LEXIS 21778 (S.D.N.Y. Sept. 28, 2005) (action against EPA and New York State environmental regulatory agencies for contributing to and failing to abate the public nuisance of global warming; case dismissed for lack of Article III standing on the part of the plaintiff), *aff'd*, 192 F. App'x 71 (2d Cir. 2006); *Our Children's Earth Foundation v. U.S. Environmental Protection Agency*, No. CV-03-0770, Complaint (N.D. Cal. Feb. 21, 2003)

(mandamus action seeking to require EPA Administrator to promulgate regulations limiting greenhouse gas emissions from fossil fuel-fired electrical utility plants pursuant to provisions of Clean Air Act; case dismissed by stipulation after issuance by EPA of decision declaring its lack of statutory authority to regulate greenhouse gas emissions in August 2003, as addressed in *Massachusetts v. EPA*, *supra*). A closely-analogous variation on essentially the same theme is presented by *Friends of the Earth, Inc. v. Watson*, No. C 02-4106, 2005 U.S. Dist. LEXIS 42335 (N.D. Cal. Aug. 23, 2005). In that case, environmental groups and several municipalities assert claims against the chief executives of the Overseas Private Investment Corporation (OPIC) and the Export-Import Bank of the United States (Ex-Im Bank), each in their official capacities, alleging that OPIC and Ex-Im Bank have provided funding for fossil fuel-fired power projects in foreign countries which emit greenhouse gases and contribute to global warming, without complying with the National Environmental Policy Act (NEPA) provisions requiring the preparation of environmental impact statements for federally funded projects likely to have an effect on the environment. The district court denied the defendants motion for summary judgment in August 2005, rejecting their arguments that plaintiffs lack Article III standing, that defendants funding decisions did not constitute final agency action subject to judicial review under the Administrative Procedure Act, and that OPIC is not subject to NEPA. 2005 U.S. Dist. LEXIS 42335, at *27-28.

n25

[25]. *State of Connecticut v. Am. Elec. Power Co.*, No. 1:04-CV-05669-LAP, Complaint (S.D.N.Y. filed July 21, 2004).

n26

[26]. *Id.* 1 at 1.

n27

[27]. *Id.* 3, 6 at 1-2. A virtually identical lawsuit was filed against the same defendants in the same court on the same day by environmental groups asserting purported rights to protect private lands owned and preserved by them for recreation, conservation, resource and wildlife protection purposes in New York and New Hampshire from the effects of global warming. *Open Space Inst., Inc. v. Am. Elec. Power Co.*, No. 1:04-cv-05670-LAP, Complaint (S.D.N.Y. filed July 21, 2004). The *Open Space Institute* action asserted both public nuisance and private nuisance theories of recovery but, like the *State of Connecticut* action, sought purely declaratory and injunctive forms of relief.

n28

[28]. See *State of Connecticut v. Am. Elec. Power Co.*, 406 F. Supp. 2d 265, 271-74 (S.D.N.Y. 2005) (dismissing both *State of Connecticut* and *Open Space Institute* actions in consolidated decision on the grounds that complaints in both actions implicated questions of overarching national and international environmental policy constituting non-justiciable political questions beyond the Courts subject-matter jurisdiction).

n29

[29]. The standard language of the general liability policy, obligating the insurer to indemnify the insured for all sums which the insured shall become legally obligated to pay *as damages* because of bodily injury or property damage to which this insurance applies, caused by an occurrence, and to defend the insured against actions seeking such relief, spawned voluminous litigation regarding whether amounts for which the insured was held liable by a governmental regulatory agency pursuant to an injunctive order requiring the insured to remediate environmental contamination caused by its acts or omissions constituted sums the insured was legally obligated to pay *as damages*. Although the weight of decisional authority ultimately swung in favor of policyholders on this question, a split in the caselaw persists. See and compare *Compass Ins. Co. v. City of Littleton*, 984 P.2d 606, 610, 621-23 (Colo. 1999) (costs to insured of complying with governmental cleanup order constitute damages), with *Patrons Oxford Mut. Ins. Co. v. Marois*, 573 A.2d 16, 18-20 (Me. 1990) (costs to insured of complying with governmental cleanup order are *not* damages). This entire issue is avoided, however, by cases involving claims for purely prospective injunctive relief, without a monetary component, as even courts applying the law of jurisdictions holding that environmental remediation costs are damages have readily recognized. See, e.g., *AIU Ins. Co. v. Superior Court*, 51 Cal. 3d 807, 799 P.2d 1253, 1279 (1990) (distinguishing environmental response costs deemed under California law to constitute damages covered by CGL policies from purely prophylactic costs incurred by the insured to prevent pollution from occurring in the future, for which no coverage exists).

n30

[30]. Although definitions of Loss vary among professional liability policies, where the term is defined as amounts the insured is legally obligated to pay as damages, the same result reached in the general liability context follows as to the global warming claims which seek purely prospective injunctive relief. See, e.g., 116 *Commonwealth Condominium Trust v. Aetna Cas. & Sur. Co.*, 433 Mass. 373, 742 N.E.2d 76, 78-79 (2001) (surveying cases holding that the term damages does not encompass equitable or injunctive relief and holding that professional liability policy defining Loss as adjudicated damages, settlements and defense expenses was not implicated by underlying action against policyholder that sought only equitable relief and attorneys fees and costs). This same reasoning would apply to prospective injunctive obligations imposed on a policyholder as part of a settlement. Additionally, any potential claim seeking relief in the form of preventing future harm could not, as a matter of logic, be for a Wrongful Act, a fundamental term that defines the scope of coverage afforded by professional liability policies.

n31

[31]. See *Comer v. Nationwide Mut. Ins. Co.*, No. 1:05-CV-00436-LG-RHW, First Amended Complaint at 11-13 (S.D. Miss. filed Sept. 30, 2005). The plaintiffs Amended Complaint, in an additional Cause of Action, named banks and mortgage-lending companies as yet a third group of defendants, against which claims for declaratory relief were asserted to preclude those defendants from bringing actions against plaintiffs for the value of mortgaged properties, destroyed or damaged by Hurricane Katrina, as to which the defendants failed to independently procure adequate (or any) mortgage insurance. *Id.* 39-44 at 14-16.

[55]. See *Kivalina*, Complaint, 269 at 65.

n56

[56]. One commentator theorized a lawsuit brought by the owner of a ski resort against greenhouse gas emitters, asserting that global warming has resulted in a diminution of natural snowfall levels resulting in the resorts loss of business. That type of action would not rest upon allegations of physical injury to the ski resort owners property or loss of use thereof, but rather upon diminished business opportunities and/or profit levels. Insurers would contend that this claim fits squarely within the parameters of the economic loss doctrine, and that general liability coverage would be barred accordingly. See generally 2 Allan D. Windt, *Insurance Claims and Disputes* § 11:1 at 274 & n.9 (4th ed. 2001 & 2006 Supp.) (collecting authorities).

n57

[57]. Cf. *Titan Holdings Syndicate, Inc. v. City of Keene*, 898 F.2d 265, 272 (1st Cir. 1990); *Martin Marietta Corp. v. Ins. Co. of N. Am.*, 40 Cal. App. 4th 1113, 1131-34, 47 Cal. Rptr. 2d 670, 681-83 (2d Dist. 1995).

n58

[58]. See *Massachusetts v. EPA*, 127 S. Ct. 1438, 1459-62 (2007).

n59

[59]. See, e.g., *Natl Union Fire Ins. Co. v. U.S. Liquids, Inc.*, 88 F. App'x 725, 729-31, 2004 U.S. App. LEXIS 2694 at *10-19 (5th Cir. Feb. 17, 2004) (absolute pollution exclusion in D&O policy barred coverage for securities and derivative litigation alleging that the company and its directors and officers concealed information regarding the company's illegal waste disposal activities).

n60

[60]. See, e.g., *Natl Union Fire Ins. Co. v. Sahlen*, 999 F.2d 1532 (11th Cir. 1993) (inaccurate statements in public filings that are incorporated into a policy application may warrant rescission).

n61

[61]. *State of California*, *supra*, Complaint, 61 at 13.

n62

[62]. *Kivalina*, *supra*, Complaint, 269 at 65.

n63

[63]. Although Davis and Yassemedis have suggested that the *Kivalina* suit is different from the *Comer* and *State of California* suits because of the Big Tobacco-style civil conspiracy and concert of action claims, no analysis is provided as to why this purported difference would likely lead a court to reach a different result. In reality, the *Kivalina* allegations are nothing new. In *Comer*, for example, plaintiffs asserted that [d]efendants actively engaged in Public Relations and Public Policy campaigns to divert the public's attention from the dangers posed by Global Warming, and that the defendants made materially false statements intending to persuade the Federal Government and state governments to refuse to regulate the emission of greenhouse gases, and to seduce the general public into consuming more of Defendants' products. *Comer*, *supra*, Third Amended Complaint, 36, 38 at 18-19. Such allegations were not deemed by the court to constitute any impediment to the dismissal of the case on political question grounds -- a development that Davis and Yassemedis inexplicably fail to even mention.

n64

[64]. *Comer*, 2006 U.S. Dist. LEXIS 33123, at *12; see Congressional Research Service, *Global Warming: The Litigation Heats Up* at 19 (updated Apr. 3, 2006), available at <http://ncseonline.org/NLE/CRSreports/06Apr/RL32764.pdf> (last visited May 21, 2008) (Causation, of course, is not only a component of the threshold standing test but a component of the plaintiffs' case on the merits. No relief under [Clean Air Act] section 202, the federal common law of nuisance, NEPA, or international law will

be forthcoming unless the science is there to link together the challenged acts of the [greenhouse gas] emitter with the alleged harms to the complainant. . . .[] In either the standing or case-in-chief contexts, the global warming issues before the courts reprise a common problem in environmental law: imposing liability for harms that are remote in time and place from the pollution sought to be abated, particularly where the pollution comes from multiple sources. (Footnotes omitted.)).

n65

[65]. From the standpoint of the degree of difficulty global warming claims pose to plaintiffs attempting to tie a specific defendant into the causation of an environmental condition to which that defendants entire industry has contributed, the cases might be analogized to the lead paint liability actions in which, due to the generic nature of the injury-causing product itself, the passage of time, and other factors, individual claimants have been unable to offer definitive proof as to which specific paint manufacturer was responsible for the particular paint that injured the claimant and/or his or her child. Although tort doctrines such as market share liability (or enterprise liability) have emerged as an alternative to strict requirements with respect to the establishment of proximate cause in order to respond to such situations -- see generally *Skipworth by Williams v. Lead Indus. Assn, Inc.*, 547 Pa. 224, 690 A.2d 169, 171-72 (1997), citing *Sindell v. Abbott Labs.*, 26 Cal. 3d 588, 607 P.2d 924, cert. denied, 449 U.S. 912 (1980) (describing doctrine) -- courts have been extremely reluctant to broaden the application of these doctrines beyond specific narrow circumstances (see *Skipworth*, 690 A.2d at 172-73), and there is no basis to presume that global warming claims will be held to come within their scope.

ABOUT THE AUTHOR(S):

Theodore A. Howard is a partner in the Insurance Practice Group of the Washington, D.C. law firm of Wiley Rein LLP. For more than 20 years, Mr. Howards practice has been principally focused on the counseling and representation of domestic and international property/casualty insurers in regard to complex insurance coverage claims and disputes, and litigation in the state and federal courts with respect to corporate policyholder demands for coverage arising in connection with asbestos, environmental contamination, defective drugs and medical devices, construction defects, HIV-contaminated blood, chemical exposure and analogous large liability problems. He is a frequent lecturer and writer regarding complex insurance coverage claims and litigation matters, and serves on the Editorial Board of *Coverage*, the journal of the ABA Litigation Section Insurance Coverage Litigation Committee. Mr. Howard is co-author of the *Practitioners Guide to Litigating Insurance Coverage Actions* (Aspen-Wolters Kluwer 2d ed.). He has been recognized as one of Americas Leading Lawyers for Business in the area of insurance law by Chambers USA Publications, and has been designated a Washington, D.C. Superlawyer by Law & Politics, Inc. He was recognized in 2006 by the Legal Aid Society of the District of Columbia with its Servant of Justice Award in recognition of his contributions to assuring equal access to justice for indigent clients through pro bono work. Mr. Howard is a graduate of the University of Notre Dame (B.A. 1978) and Harvard University Law School (J.D. 1981).

Kenneth E. Ryan, a partner in Wiley Reins Insurance Practice Group, represents insurers in a variety of coverage and insurance-related issues nationwide. The bulk of his practice involves general liability -- particularly catastrophic losses, environmental, toxic torts and other product liability claims -- directors & officers liability, professional liability, employment liability, advertising injury liability and related bad faith claims. Mr. Ryan has litigated insurance coverage and other commercial litigation cases in federal and state courts. He represents insurance clients regarding environmental coverage claims, including Superfund and Brownsfields sites, asbestos property damage and bodily injury claims. He also counsels clients and defends insurance claims involving individual and class-action employment claims. He assists insurance clients to develop practices, procedures and policy language to avoid future coverage

disputes and extra-contractual claims. He advises and/or defends insurance clients in developing insurance coverage areas such as mold claims, energy-market issues, climate change, e-commerce and other technology-related claims, as well as bankruptcy-related issues. Mr. Ryan and his colleagues also track legislative and regulatory developments impacting the insurance industry, such as the Terrorism Risk Insurance Act (TRIA), Optional Federal Charter initiatives, and increased scrutiny by the Financial Crimes Enforcement Network (FinCEN) and Office of Foreign Assets Control (OFAC). Mr. Ryan is a graduate of Boston College (BA in psychology), where he was a member of the Phi Beta Kappa honor society, and The George Washington University Law School, where he was a member of the Moot Court Board.

Justin D. Heminger is an associate in Wiley Rein LLPs Insurance Practice Group, where he represents general and professional liability insurers in litigating complex insurance coverage issues and counsels insurers on coverage, mediation and settlement issues. His prior experience includes internships with the United States Department of Justice, Criminal Division, Organized Crime and Racketeering Section and the Honorable John M. Facciola, Magistrate Judge on the United States District Court for the District of Columbia. Mr. Heminger is a *summa cum laude* graduate of The Catholic University of America, where he received a Bachelor of Music in Piano Performance and a *magna cum laude* graduate of The Columbus School of Law, The Catholic University of America, where he was an editor of the *Catholic University Law Review*. Upon graduation, he was awarded the Law School Alumni Society Award for academic excellence and dedication to the school and community.

Chandler on Fair Credit Reporting Act (15 USCS § 1681b)

2008 Emerging Issues 2346

Chandler on Fair Credit Reporting Act (15 USCS § 1681b): Congressional Bill Would Outlaw Use of Credit Scores in Personal Lines Insurance

By Seth J. Chandler

May 27, 2008

SUMMARY: Many insurers use credit scores to help underwrite personal lines policies such as automobile and homeowners insurance. Although three states prohibit use of credit scores, most do not. A bill pending in Congress will end the practice, however, if the Federal Trade Commission finds that use of this sort of consumer information is a substitute for race or ethnicity even if the effect is small.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: A bill pending in Congress is likely to effectively bar use of credit scores by personal lines insurers in the United States as a basis for pricing policies or otherwise engaging in underwriting. H.R. 5633, the Nondiscriminatory Use of Consumer Reports and Consumer Information Act of 2008, introduced this March by Representatives Luis Gutierrez (D-IL), Melvin Watt (D-NC), James McDermott (D-WA) and Barney Frank (D-MA), operates by amending section 604 of the Fair Credit Reporting Act (15 USCS § 1681b) to prohibit use of a consumer report or consumer information that the Federal Trade Commission determines would result in racial or ethnic discrimination or that represents a proxy or proxy effect for race or ethnicity.

Although by its terms the bill does not precisely ban use of credit scoring, it is fairly predictable that this will be its effect. The bill proposes to add section 604(h)(4) that defines the prohibited proxy for race or ethnicity as a substitute or stand-in for race or ethnicity, either by design or in effect, without regard to the extent of the effect. One might think that the use of the terms substitute and stand-in mean that the bill requires a high degree of statistical correlation between race/ethnicity and credit score, in which case it might be hard to establish a proxy effect given the existence of numerous variables that affect expected losses on various forms of insurance policies. After all, the bill could have defined proxy to mean simple statistical correlation. The final phrase of the sentence without regard to the extent of the effect will make such a pacifying interpretation of the bill difficult. It appears that the intent of the bill is that, if there is some statistically significant effect that results from the use of credit scores on the prices paid for personal lines insurance by the average member of some racial or ethnic group, the use of this sort of consumer information will be prohibited. Although it is possible that an agency or court unimpressed with the ban would require something more than correlation, there is little in the statutory language that would justify a tougher standard. The difficult case will come if the evidence shows that, yes, credit score and race are correlated but not after income and other correlated variables are taken into account. Will it then be the case that credit score is a substitute or stand-in for race? Statistical concepts are

slippery beasts.

Assuming, however, that mere correlation is required, what is the likelihood that the needed degree of statistical correlation will be found? One might think the proof would be easy to find. It is clearly true that income and wealth are positively correlated with credit score. And it is clearly true that being African American or Hispanic is negatively correlated in the United States with income and wealth. Thus, one might think that it therefore follows, as a matter of transitivity that being African American or Hispanic must be negatively correlated with credit score.

It turns out, however, that statistical correlation is sometimes transitive and sometimes not. Here are two examples of instances where statistical correlation is not transitive. The first comes from baseball. Players base hits and home runs are positively correlated. Players base hits and triples are positively correlated. But players triples and home runs are negatively correlated. The second example comes from the world of law schools LSAT scores and first year grade point average of the students at a school are positively correlated. Undergraduate GPA and first year grade point average of the students at a school are positively correlated. But undergraduate GPA and LSAT scores of the students at a school are negatively correlated. Those wanting to see the gory details may look up the work of Eric Langford, Neil Schwertman and Margaret Owens in the November 2001 issue of the *American Statistician* from which the baseball example is taken.

Still, just because there are exceptions to ones intuition about the transitivity of statistical correlation, does not mean that race and credit score will be one of them. Although the published and peer reviewed evidence on this point is a bit thinner and bit more equivocal than one might believe precisely because of the understandable sensitivity about collection of race-correlated credit scoring data, most of the better work that has been done on this point suggests that use of credit scores will, on balance, hurt African Americans and Hispanics. A study conducted for the Texas Department of Insurance in 2004-05 found African Americans and Hispanics disproportionately represented in groups with the lowest credit scores and underrepresented in groups with the highest credit scores. A 2003 study conducted by the Washington Insurance Commissioner found ethnicity to be correlated with credit score in some cases, though the correlation was not particularly strong after other variables such as age were controlled for. There is, to be sure, a contrary study by the Virginia Department of Insurance on use of credit scores, but the several aspects of the methodology appear flawed, notably the use of zip-code-aggregated data rather than individual data.

H.R. 5633 has several other noteworthy characteristics. For most of American history and certainly since the McCarran Ferguson Act of 1946, insurance regulation has generally been left to the states. This has particularly been the case with automobile insurance and property insurance, less so with health insurance. This bill represents a movement away from the traditions embodied in the McCarran Act. Only three states currently prohibit use of credit scores by automobile insurers (California, Maryland and Massachusetts), though legislative efforts to limit use are well underway in Michigan. The Colorado, Oklahoma, Nebraska and Wyoming legislatures as well as the voters in Oregon have recently rejected credit scoring prohibitions. Evidently, the sponsors of the federal bill believe that the laboratory of state regulation generally permitted by McCarran has run amok on this issue, generally giving too much leeway to insurers.

Second, the methodology by which a determination is to be made as to which types of information represent a proxy effect: for race or ethnicity is unusual. The Commission itself does not have to make a finding that inappropriate discrimination or proxy effects are occurring. No hearings evidently need be held on the subject. Instead, the findings needed to trigger application of the statute can occur simply if they are made in any study for which a report is submitted to Congress. This language, which appears unprecedented in the United States Code, may rest in some tension with the Administrative Procedure Act that generally requires some notice and hearing before findings of this sort are made. The apparent absence of any need for any sort of hearings is particularly problematic given the complexity of statistical analysis in this area.

Third, the limiting principle behind the bill is unclear. If it is thought that use of credit scoring is improper because it correlates with race and does not directly cause accidents, other rating measures may be vulnerable too. Construction

quality, for example, is used in part to set rates for homeowners insurance. Construction quality and race/ethnicity both correlate with the income of a prospective insured. While one can not be sure without further investigation, it would not be surprising if race correlated with construction quality too. It would be a peculiar outcome if the only sort of race-correlated information that could not be used in insurance underwriting was that which happened to emerge from a consumer reporting agency simply because that was the regulatory hook Congress took to address the issue.

ABOUT THE AUTHOR(S):

Seth J. Chandler is Foundation Professor of Law at the University of Houston Law Center, where he also serves as Co-director of the Health Law & Policy Institute. Past president of the American Association of Law School's section on Insurance Law, Professor Chandler has taught and written in the field of insurance law and regulation for 18 years with an emphasis on application of mathematical models and computer simulations to issues arising from the law and economics of insurance. He has also pioneered the use of the Mathematical computer language in legal analysis and has created various interactive demonstrations of insurance concepts. Professor Chandler holds an A.B. summa cum laude from Princeton University and a J.D. magna cum laude from Harvard Law School where he served as managing editor of the Harvard Law Review. A clerk for the late Judge Edward R. Becker, Professor Chandler practiced at Williams & Connolly and Munger, Tolles & Olson before becoming a full time academic in 1990. He served as Associate Dean for Academic Affairs and then Vice Dean of the University of Houston Law Center from 2002 through 2005.

Volpe on Florida Farm Bureau Casualty Insurance Company v. Cox

2008 Emerging Issues 2328

Volpe on Florida Farm Bureau Casualty Insurance Company v. Cox, 2007 Fla. LEXIS 1678: A Total Loss Caused In Part By a Covered Peril and In Part By an Uncovered Peril No Longer Requires Payment of Full Policy Limits By the Insurer

By Timothy Volpe

May 23, 2008

SUMMARY: The Supreme Court of Floridas decision in Cox sets a new precedent. Unlike the previous holding in Mierzwa, which required that full policy limits must be paid to the insured if the structure were deemed a total loss and a covered peril contributed to the loss, regardless if an excluded peril significantly contributed to the loss, the Cox decision lines up with the amendment to the VPL by the Florida Legislature in 2005 (post-Mierzwa).

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: In a stark departure from prior precedent, the Supreme Court of Florida reversed the lower appellate courts decision in this case and answered in the negative the following certified question of great public importance:

Does Section 627.702(1), Florida Statutes (2004), referred to as the valued policy law, require an insurance carrier to pay the face amount of the policy to an owner of a building deemed a total loss when the building is damaged in part by a covered peril but is significantly damaged by an excluded peril?

The unanimous decision provides several important points of guidance for the practitioner.

Prior Case Law. The Cox case, like the earlier *Mierzwa v. Florida Windstorm Underwriting Assn.*, 877 So.2d 774 (Fla. 4th DCA 2004), involved interpretation of homeowners coverages after storm damage in which both covered wind claims and uncovered flood claims were made. n1 In both cases, both perils contributed to the loss; in Cox the wind damage was less than fifty percent of the loss, in *Mierzwa* it was slightly more than fifty percent. n2

In *Mierzwa*, the Fourth District analyzed the prevailing precedent regarding the valued policy law (VPL) to conclude that when a building is covered as to a covered loss and the building is a total loss, the VPL mandates the carrier is liable for the face value of the policy . . . *Mierzwa* at 3. In fact, the *Mierzwa* court concluded the covered peril does not need to be *the* peril causing the total loss, it is sufficient if there is any covered liability which in combination with uncovered perils causes the loss. *Id.* (VPL does not require that a covered peril be *the* covered peril causing the entire loss; it need merely be *a* covered peril.)

Mierzwa paternalistically viewed the VPL as a legislative mandate to expand coverage in cases of total loss. The homeowner got full policy limits if any covered peril was involved in the total loss.

Unhappy with that interpretation, the Florida Legislature promptly responded in 2005 to *Mierzwa* by amending the VPL to limit the insurers liability to the amount of loss caused by the covered peril. *Cox at 3, see also Fla. Stat. § 607.702(1)(b) 2005*. The 2005 amendments to the VPL were expressly not made retroactive. This legislative response prompted the First District Court in *Cox* to conclude that the prior version of the VPL could not be interpreted to reduce an insurers responsibility in a total loss to pay stated policy limits even where covered and uncovered perils combine to produce the loss. *Cox, 2006 Fla. App. LEXIS 17891 at 4*.

The Florida Supreme Court rejected this broad reading of the pre-*Mierzwa* version of the VPL and narrowly construed the statute:

only to set the value of the property insured by the policy in order to conclusively establish the property's value when there is a total loss.

Cox, 2007 Fla. LEXIS 1678 at 3.

The unanimous Court agreed with the dissent filed by Judge Polston of the First District that the *Mierzwa* court erred by reading into the statute a requirement for the insurer to pay for damages caused by both excluded and covered perils. *Id. at 4*. The Supreme Court rejected the notion that the VPL intends that if a covered peril causes part of a total loss, that the insurer is mandated to pay for the total loss. *Id.*

In other words, the VPL does not trump the policy language excluding coverage for certain perils. *Id.* Giving effect to what it described as the plain language of the statute, the *Cox* court disapproved the *Mierzwa* analysis and its holding. *Id. at 5*.

Conclusions for the Practitioner. Given this result, an unwary practitioner might conclude that liability for loss is limited to that portion of the loss caused by covered perils. That is not necessarily so.

The Supreme Court was careful to limit its holding to only those cases in which a covered peril did not cause a total loss or constructive total loss. *Id. at 5 fn. 6*. Plainly, a different result could obtain for cases where a covered peril causes a total loss or constructive total loss.

Counsel should consider that most localities have ordinances providing that where repairs exceed fifty percent (50%) of the value of a structure, current building codes must be met. *See, e.g., Mierzwa, 2004 Fla. App. LEXIS 8804 at 4* (citing Ord. Sec. 104.3(3) of the City of Fort Lauderdale). In many instances this produces a constructive total loss. *Id.* Consequently, in such a case, if a covered peril, wind, produced damage to a structure requiring repairs exceeding 50% of the value of the structure, and additional damage was done by an uncovered peril, flood, then the insurer could be required to pay the full face value of the policy in settlement of the claim³ even though uncovered perils contributed substantially to the loss.

The Supreme Court of Florida's interpretation of the pre-*Mierzwa* VPL brings its approach into conformity with the amended post-*Mierzwa* VPL: if the covered perils alone would have caused the total loss, then the current VPL applies and the full policy face amount must be paid. *See Fla. Stat. § 627.702(1)(b)*.⁴

Conclusion. The Florida Supreme Court in *Cox* reined in arguably overexpansive interpretations of the VPL. This result coupled with the legislative changes in VPL post-*Mierzwa* are happy events for Florida insurers. The practical implications of the *Cox* holding are limited to those circumstances in which a covered peril does not cause a total loss or constructive total loss. Where covered perils alone cause a constructive loss, the VPL still applies to require full policy limits payment.

[Return to Text](#)

n1 . Both policies expressly excluded damages from flood.

n2

[2]. *Mierzwa, 2004 Fla. App. LEXIS 8804 at 4; Cox, 2007 Fla. LEXIS 1678 at 3.*

n3

[3]. In fact, given so-called law or ordinance coverage an additional 25% benefit beyond face may be payable. *See Mierzwa* at 6.

n4

[4]. Given the significant changes to the VPL in 2005 and the express legislative directive to apply such changes prospectively, this is an unusual outcome to say the least.

Coverage for Global Warming Risks Under D&O Policies

2008 Emerging Issues 284

Hersh on Coverage for Global Warming Risks Under D&O Policies

By Mark Hersh

May 20, 2008

SUMMARY: For many companies, global warming is a new risk management issue. Not only are there financial and other business risks associated with global warming, the risk of legal claims undoubtedly will continue to rise with the earth's temperature. In particular, the actions of directors and officers in managing and disclosing global warming risks likely will face increased scrutiny. What role will D&O insurance play in protecting directors and officers, as well as companies, from global warming claims? D&O insurance practitioner Mark Hersh of Reed Smith LLP examines this issue by considering three questions: (1) whose risks and what kind of risks does D&O insurance typically cover; (2) what sort of claims pertaining to or arising from global warming might potentially fall within the coverage of a D&O policy; and (3) how is a D&O policy likely to respond to such claims, i.e., what coverage issues are likely to be raised. He concludes that D&O policies may provide important protection in the event of global warming claims against officers and directors, and in some cases companies themselves. However, there are potentially serious coverage issues depending on policy language, and companies should try to negotiate for D&O policy language that will maximize the chances of coverage should a global warming claim be made.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Coverage for Global Warming Risks Under D&O Policies

By Mark Hersh

Global warming, or climate change, now figures prominently on the national and international agenda. And though skeptics may still exist, there is substantial scientific evidence correlating rising global temperatures and the emission of greenhouse gases from human activity. The United States Supreme Court acknowledged this last year, in holding, *inter alia*, that greenhouse gas emissions fall within the Clean Air Acts definition of pollutant and that the EPA's refusal to regulate greenhouse gases was arbitrary, capricious or otherwise not in accordance with law [see *Massachusetts v. EPA*, 127 S. Ct. 1438, 1460-1463 (2007)].

For many companies, global warming also represents a new risk management issue. Not only are there financial and other business risks associated with global warming, the risk of legal claims undoubtedly will continue to rise with the earth's temperature. When considering insurance coverage for corporate risks associated with global warming, Directors and Officers liability (D&O) insurance may not immediately spring to mind. But with increased attention on

global warming issues, the actions of directors and officers in managing and disclosing global warming risks likely will face increased scrutiny. Even if D&O insurance is less likely to be implicated by global warming claims than other kinds of corporate insurance, there are circumstances where it may come into play.

This commentary examines this issue by considering three questions: (1) whose risks and what kind of risks does D&O insurance typically cover; (2) what sort of claims pertaining to or arising from global warming might potentially fall within the coverage of a D&O policy; and (3) how is a D&O policy likely to respond to such claims, i.e., what coverage issues likely will be raised. As explained below, D&O policies may provide important protection in the event of global warming claims against officers and directors, and in some cases companies themselves. However, there are potentially serious coverage issues depending on policy language, and companies should try to negotiate for D&O policy language that will maximize the chances of coverage should a global warming claim be made.

D&O Coverage Generally

Types of Coverage. Virtually all D&O policies have what is known as Side A and Side B coverage, and many also have Entity coverage. In addition, many companies now purchase supplemental Side A coverage.

Side A coverage. Historically, the purpose of D&O insurance was to protect directors and officers from personal loss resulting from their service to a company. In the vast majority of cases, though, directors and officers are indemnified by their company and never need direct access to D&O insurance proceeds.

Typically, D&O insurance protects directors and officers (and sometimes employees) directly in three situations: (1) if the company is in bankruptcy or otherwise financially unable to meet its indemnification obligations; (2) if the director or officer does not meet the standard of conduct required for indemnification by the company (which is a rare situation); or (3) if a company cannot indemnify directors and officers for derivative judgments and settlements (because such funds simply go right back to the company) [see generally E. Norman Veasey, Jesse A. Finkelstein & C. Stephen Bigler, *Delaware Supports Directors with a Three-Legged Stool of Limited Liability, Indemnification, and Insurance*, 42 *Bus. Law.* 399, 417 (1987)]. D&O coverage provided directly to corporate officers and directors is known as Side A coverage.

Side B coverage. D&O policies also commonly have provided coverage to the company itself for amounts that it indemnifies its directors and officers for claims made against them. This coverage is known as Side B coverage. D&O insurance policies traditionally have provided both Side A and Side B coverage. They typically apply a significant retention deductible to Side B claims, while applying a small or no retention or deductible to Side A claims.

Entity coverage. Over the last 10 to 15 years, it has become increasingly common for D&O policies to include a third kind of coverage, known as entity coverage. This provides coverage for claims made directly against the company. Particularly in the case of public companies, entity coverage usually is limited to Securities Claims against the company, which generally means claims concerning the sale of the company's stock or other securities. One very common example of a Securities Claim is a class action by company shareholders alleging that the stock price of the company was inflated by misrepresentations to the marketplace. Typically, a D&O policy has one set of limits that is shared by the Side A, Side B, and entity coverage.

Supplemental Side A coverage. Some companies also recently have supplemented their D&O insurance policies with stand-alone Side A or last resort policies. A stand-alone Side A D&O policy generally functions in the same way that a Side A section of a traditional D&O policy would respond, i.e. it covers loss where the company cannot (because of insolvency) or is not permitted (under its by-laws or applicable law) to indemnify the directors and officers. However, a supplemental stand-alone Side A policy has its own set of limits, often provides broader coverage terms than the main policy (this is known as difference in conditions, or DIC), and is unlikely to be affected if the company goes into bankruptcy (since it covers only the directors and officers, it likely will not be deemed an asset of the bankrupt estate). A few companies also have purchased stand-alone Side A policies just for their independent directors, who may

be concerned that in the event of a claim, policy limits will be depleted by the corporate insiders, who are more likely to have greater culpability in any wrongdoing.

Scope of Coverage. D&O insurance typically covers Loss arising from Claims made against directors and officers for Wrongful Acts. With respect to insured individuals, a Wrongful Act may include alleged breaches of duty, neglect, errors, misstatements, misleading statements or omissions by the insured in his or her capacity as a director or officer of the company or any matter claimed against a director or officer solely by reason of his or her status as a director or officer. The company itself is insured for the Wrongful Acts of the individual insureds (though usually only with respect to securities claims).

D&O policies are always or virtually always claims made policies, meaning that coverage is triggered when the claim is made, not when the allegedly wrongful conduct took place, as in commercial general liability or occurrencebased policies. Thus, a D&O policy may cover conduct that occurred several years before the policy inception. However, notwithstanding their claims made nature, D&O policies often have provisions excluding coverage for claims based on conduct occurring prior to a specified date. In addition, most D&O policies state that claims that relate to or arise out of the same or essentially the same Wrongful Acts as those alleged in a prior claim will be deemed to have been made at the same time as the prior claim. This related claims language may exclude claims that are based upon or arise out of a claim or Wrongful Acts alleged in a claim made prior to the inception of the policy. On the other hand, it may allow coverage (without application of a new retention or deductible) for claims that may be asserted after a particular policy has expired if those claims are related to a claim that was made during the policy period.

Because the trigger of coverage under a D&O policy generally is when a claim is made, the definition of Claim is important. Virtually all D&O policies now define the term Claim. The definition typically encompasses lawsuits and may include written or verbal demands for monetary or non-monetary relief. Policies vary as to coverage for administrative, arbitration, investigative, or criminal proceedings (though the latter often are covered once there is the return of an indictment or similar charging document). Investigations by regulatory agencies may not be covered if the definition of claim includes only judicial or administrative proceedings. In addition, under some definitions of claim, an informal inquiry may not be covered.

Like all insurance policies, D&O policies have relatively standard exclusions, and may also have exclusions specifically crafted for the particular insured. The exclusions that may be applicable in the context of global warming claims are discussed below. Most D&O policies have policy periods lasting one year, and then may be renewed from year to year. Thus, each year companies with D&O insurance programs are well-advised to evaluate their D&O program to make sure their policies meet or exceed the current market standard. Many of the key terms in D&O policies are negotiable at the time of placement or renewal, and policy language obviously can make all the difference if a claim later is made. As explained below, companies may be able to negotiate some language to maximize their chances of coverage for claims pertaining to global warming.

Global Warming Claims That May Implicate D&O Insurance.

There are three types of claimants that might bring global warming claims against a company or its directors and officers: (1) corporate shareholders; (2) regulators; and (3) third parties who are neither shareholders nor regulators. These are discussed below.

Third-Party Claims. The third category of potential claimants warrants only brief discussion. Because directors and officers primarily owe their duties to the company and its shareholders, claims by third parties directly against directors and officers generally are not viable and therefore are rare. In the context of global warming, there is unlikely to be a viable claim by third parties against officers or directors. However, the costs of defense may be substantial even

for claims without merit, and D&O insurance can pay those costs in such cases (subject to any retention). If a third party were to sue directors or officers in connection with a global warming matter most likely in addition to the company itself it presumably would be a Claim under the D&O policy, subject to the exclusions and other coverage issues discussed below.

Third-party claims against the company itself are much more likely. Just as over the past few decades there have been numerous third-party tort claims against companies relating to environmental issues (e.g. hazardous waste, asbestos, water and air pollution), we may well see many future third-party claims against companies alleging that they have contributed to the problem of global warming. In fact, some lawsuits of this kind already have been filed [see, e.g., Third Amended Class Action Complaint, *Comer v. Murphy Oil, U.S.A.*, No.1:05-cv-00436-LG-RHW (S.D. Miss. Apr. 19, 2006) (post-Katrina class action by Gulf Coast residents against oil and energy companies alleging, *inter alia*, that greenhouse gas emissions contribute to hurricanes); *Connecticut v. American Electric Power Co.*, 406 F. Supp. 2d 265 (S.D.N.Y. 2005) (suits against power companies based on greenhouse gas emissions dismissed as nonjusticiable political question), *appeal docketed*, No. 05-5104-cv (2d Cir. Sept. 22, 2005)].

However, as discussed above, D&O policies for public companies typically limit entity coverage to securities claims, and so environmental tort suits against public companies typically will not fall within even the potential coverage of a D&O policy. For private companies that do have entity coverage for non-securities claims, a global warming claim might fall within the potential coverage of its D&O policy, subject to the coverage issues discussed below (including the pollution exclusion clause, which may preclude any coverage).

Shareholder Claims. A corporate shareholders suit is the sort of legal proceeding that typically does fall within the potential scope of D&O coverage. A shareholder suit involving global warming issues most likely would take one of two forms: securities class actions and derivative suits.

Securities class actions. First, shareholders might bring a securities class action, in which shareholders typically allege that they purchased company stock at artificially inflated prices because the company made misrepresentations to the marketplace, often in its annual or quarterly reports or other SEC filings. These could be affirmative misrepresentations or failures to disclose information where there was a duty to disclose, or both. Typically in securities class actions, the shareholders allege that they lost money when there was some sort of corrective disclosure i.e. the truth came out causing the company's stock price to drop [see *Dura Pharmaceuticals, Inc. v. Broudo*, 125 S. Ct. 1627, 1632-1634 (2005) (shareholder who claims securities fraud must allege and prove that the defendant's conduct caused an actual economic loss); see generally 26A Michael Kaufman, *Securities Litigation Damages* § 20:28 (2006)].

In the global warming context, a securities class action might allege that a public company misrepresented or failed adequately to disclose its policies related to global warming or its global warming risks. Such conduct need only violate broadly worded federal securities laws to be actionable, but class action plaintiffs may strengthen their case by alleging violations of specific disclosure requirements, particularly in cases of non-disclosure. Currently there are no specific disclosure requirements pertaining to global warming under federal law, but some existing general requirements could apply to global warming issues. Two components of SEC Regulation S-K seem particularly applicable. Item 101 requires companies to disclose any material affects of compliance with environmental laws, and Item 303 requires disclosure of information on any known trends, events and uncertainties likely to have a material impact on the company's business [17 C.F.R. §§ 229.10199(c)(xii) & 229.303(a)(3)(ii); see generally Elizabeth E. Hancock, *Red Dawn, Blue Thunder, Purple Rain: Corporate Risk Liability for Global Climate Change and the SEC Disclosure Dilemma*, 17 *Geo. Intl Env'tl. L. Rev.* 233 (Winter 2005)].

Where a company has made misrepresentations to the market regarding global warming issues, the corrective disclosure the event causing the drop in stock price might take a number of forms. These include the announcement of a regulatory action or investigation of the company relating to global warming issues, or the announcement of a significant third-party lawsuit against the company regarding global warming issues. These events, if unexpected, could cause a significant drop in stock price, though how the market will react in such cases involves some guesswork and

likely will depend on the particular circumstances.

If such a class action is filed against a company and it has entity coverage under its D&O policies, it would be a Securities Claim that potentially would fall within the scope of D&O coverage, subject to the exclusions and other coverage issues discussed below. If the lawsuit also named directors or officers, it almost certainly would be a claim against them that potentially could fall within D&O coverage, again subject to coverage issues discussed below.

However, it is uncertain how much exposure directors or officers actually have to securities class actions pertaining to global warming. Under the Private Securities Litigation Reform Act of 1995 (PSLRA), the requirements for pleading securities fraud are high, requiring particularity beyond that of most other types of cases. The PSLRA requires plaintiffs to plead specific facts showing that statements by defendants were false or misleading when made to plead facts giving rise to a strong inference that the defendant acted with the requisite scienter to deceive investors [*15 U.S.C. § 78u-4(b)*]; *see also Tellabs Inc. v. Makor Issues & Rights Ltd.*, 127 S. Ct. 2499, 2504-2505 (2007) (strong inference of scienter means inference that is cogent and at least as compelling as any opposing inference of nonfraudulent intent)].

These requirements apply to each defendant and often are particularly difficult to satisfy with respect to individual defendants, who would have to be shown to be personally responsible for the company's alleged public misrepresentations. Because the assessment of global warming issues and disclosure requirements pertaining to global warming may be something of a grey area, proving or even adequately alleging scienter on the part of individuals could be an especially formidable obstacle to securities class action plaintiffs. Nevertheless, there may be fact patterns such as suspicious insider stock sales that precede a corrective disclosure that could give rise to viable claims against directors or officers.

Derivative suits. The second kind of shareholder suit that might be based on global warming issues is a derivative suit. Though there may be variations depending on the state in which the company is incorporated, a derivative suit is brought by shareholders in the name of the company, so the company itself is not a defendant (though it often is a nominal defendant). Derivative suits essentially allege breaches of fiduciary duties in the management of the company, seeking to hold directors or officers liable for losses incurred by the company [*see generally Tooley v. Donaldson, Lufkin & Jenrette, Inc.*, 845 A.2d 1031 (Del. 2004) (discussing difference between direct and derivative suits)].

Derivative shareholder suits pertaining to global warming are perhaps more likely than securities class actions to be filed against officers and directors. If a company faces or has incurred significant losses because of a global warming issue, a derivative suit could be filed. Such losses could result from regulatory actions, third-party suits or securities class actions (derivative suits often accompany securities class actions), or business losses resulting from allegedly inadequate planning for global warming or other mismanagement.

In derivative suits, decisions by directors (and possibly officers) generally are protected by the business judgment rule, which grants corporate decision-makers considerable latitude to exercise their best judgment and limits the degree to which shareholders or courts may second-guess those decisions [*see In re Walt Disney Co. Derivative Litigation*, 906 A.2d 27, 52-53 (Del. 2006)]. Again, because decisions pertaining to global warming may be relatively uncharted territory, proving a breach of duty by officers or directors may be particularly challenging for derivative action plaintiffs. Nevertheless, future derivative suits stemming from global warming issues seem likely, if not inevitable.

If and when such derivative suits are filed, they are likely to be claims potentially within the coverage of D&O policies. Indeed, Side A coverage under D&O insurance policies is particularly important to derivative action defendants. As stated above, because a derivative suit is on behalf of the company, any recovery by the plaintiffs that is for the benefit of the company generally may not be paid by the company itself. (However, the company may be able to pay the part of any settlement or judgment covering plaintiffs attorneys fees, which may be substantial.) Therefore, either those sums are paid by the individual defendants out of their own assets, or they are paid by the D&O insurer pursuant to Side A coverage.

Regulatory Claims. Both federal and state agencies may regulate companies with respect to environmental issues, though there might be limits on state regulation based on federal preemption or related considerations [see Note, *Foreign Affairs Preemption and State Regulation of Greenhouse Gas Emissions*, 119 *Harv. L. Rev.* 1877, 1878 (2006)]. Thus, global warming claims by federal (and possibly state) environmental regulators may be made in the future. This is particularly true in light of the United States Supreme Courts decision in *Massachusetts v. EPA* [127 S. Ct. 1438, 1458, 1460 (2007)], holding that greenhouse gas emissions fall within the Clean Air Acts definition of pollutant and therefore within the scope of the EPAs regulatory authority, and that the State of Massachusetts had standing to challenge the EPAs refusal to regulate greenhouse gases.

In addition, just as shareholders could bring suits based on alleged corporate misrepresentations concerning global warming issues, federal and/or state corporate or securities regulators could bring regulatory actions for the same alleged misconduct. As discussed above, though at this time public companies have no special disclosure requirements pertaining to global warming issues, the generic requirement that they disclose material information could be grounds for regulatory action.

Moreover, given the heightened awareness of global warming, the regulatory landscape could change. On September 18, 2007, the Washington Post reported that a coalition of state officials, state pension fund managers, and environmental organizations were formally petitioning the SEC to require public companies to assess and disclose their financial risks from climate change and legislation [Steven Mufson, *SEC Pressed to Require Climate-Risk Disclosures*, The Washington Post, Sept. 18, 2007]. The same article reported that four days earlier the N.Y. Attorney General had subpoenaed five energy firms pursuant to an investigation into whether the companies had properly disclosed the financial risks of carbon dioxide emissions from new coal-fired plants. Thus, the disclosure of global warming risks may well be fertile ground for future regulatory and other government action.

When regulatory investigations are opened or enforcement actions are taken against companies or their officers or directors, the threshold coverage question under a D&O policy is whether a claim has been made within the meaning of the policy. D&O policies now almost always define claim, but the definitions vary from policy to policy. In particular, policies vary in their coverage for regulatory or other governmental matters. Frequently, an investigation of a company is not covered, but an investigation of individual directors or officers is covered. However, some investigations are covered only if they are formal, as evidenced by a subpoena, target letter, Wells Notice (essentially an SEC notice that the recipient is a target of an investigation), or similar document. Some policies also provide that an investigation of a company will be covered only if the investigation is also maintained against an individual insured. Companies concerned about this issue should try to negotiate with their D&O insurers for a broad definition of claim that will include investigations.

Once a governmental investigation results in regulatory action, coverage under a D&O policy is more likely. However, absent a formal lawsuit or the filing of a regulatory proceeding, there still is the potential for dispute as to whether a Claim has been made [see, e.g., *Avondale Indus., Inc. v. Travelers Indem. Co.*, 887 F.2d 1200, 1206 (2d Cir. 1989) (where an insured received a demand letter from the Louisiana State Department of Environmental Quality, the demand letter commence[d] a formal proceeding against [the insured] and triggered coverage)]. To minimize ambiguities and thus disputes, the definition of claim now often will include regulatory or administrative proceedings commenced by the filing of a complaint, notice of charges, or similar document. Again, companies should seek the clearest and broadest definition possible to maximize coverage and minimize disputes.

Even if a regulatory action is considered a Claim, there may be coverage issues regarding the relief sought by the governmental agency. D&O policies cover Loss, and always define Loss to include damages. However, fines or penalties are usually, if not always, excluded from the definition of Loss, and thus are not covered. Because governmental regulatory or enforcement actions often do involve fines or penalties, in some cases coverage for such actions may be limited to the costs of defense.

Significant D&O Coverage Issues for Global Warming Claims

Even if a lawsuit or other legal action is a Claim under a D&O policy and thus potentially within the scope of coverage, there are typical exclusions and other policy provisions that may limit or preclude coverage. Some policy exclusions, like the so-called fraud exclusion, might apply in any kind of case depending on the facts, but do not present issues that seem particularly applicable to global warming claims. (A fraud exclusion might apply to a securities fraud case involving global warming, but is virtually always triggered only by a final adjudication or judicial finding of fraud.) A few standard exclusions do present issues that are potentially applicable to global warming claims, however, and they are discussed below. The most significant of these is the pollution exclusion.

In considering the issues discussed below, it bears keeping in mind three widely-accepted principles of insurance policy construction: (1) grants of insurance coverage should be construed broadly; (2) exclusions to coverage should be construed narrowly; and (3) ambiguities in policy language should be construed in favor of the insured [see 2-6 Appleman on Insurance 2d § 6.1].

Pollution Exclusion. One of the standard exclusions in a D&O Policy is known as the pollution exclusion. Though the language of this exclusion will vary from policy to policy, one example of a pollution exclusion clause is as follows:

The insurer shall not be liable to make any payment for Loss in connection with any Claim made against the Directors and Officers or, with respect to insuring Agreement (C), the Company:

(E) for, based upon, arising from, or in any way related to:

(1) the actual, alleged or threatened discharge, dispersal, release or escape of pollutants; or

(2) any direction, request or voluntary decision to test for, abate, monitor, clean up, remove, contain, treat, detoxify or neutralize pollutants, nuclear material or nuclear waste.

Including without limitation any Securities Claim or any other Claim by or on behalf of the Company or its shareholders in their capacity as such.

Pollutants, include, but are not limited to, any solid, liquid, gaseous or thermal irritant or contaminant, including without limitation, smoke, vapor, soot, fumes, acids, alkalies, chemicals, odors, noise, lead, oil or oil products, radiation, asbestos or asbestos-containing products, waste and any electric, magnetic or electromagnetic field of any frequency. Waste includes, but is not limited to, material to be recycled, reconditioned or reclaimed.

Significantly, this particularly provision explicitly excludes even securities and derivative claims the bread and butter of D&O policies that are based on pollution. As discussed further below, pollution exclusion clauses need not be so restrictive in this regard.

The pollution exclusions potential impact on D&O coverage for global warming claims is obvious, at least if greenhouse gases fall within the definition of pollutants. The definition of pollutants above is fairly typical of such insurance policy exclusions in its breadth and might well include greenhouse gas omissions. Certainly insurers would so argue, and would cite to *Massachusetts v. EPA* [127 S. Ct. 1438, 1460 (2007)], in which the Supreme Court held that greenhouse gas emissions fall within the Clean Air Acts definition of pollutant and therefore within the scope of the EPA's regulatory authority. But that case does not dispose of the issue, since the Supreme Court was interpreting a particular statutory provision, not an insurance policy exclusion. Because policy exclusions must be construed narrowly in favor of coverage and any textual ambiguity also must be construed in favor of coverage, policyholders might have some argument that a pollution exclusion clause in their policy does not apply to greenhouse gas emissions, depending on the language of the exclusion.

Assuming that a pollution exclusion clause would apply to greenhouse gases, is this the death knell for any D&O

coverage for global warming claims? Not necessarily. First of all, as discussed above, Securities Claims shareholder class actions and derivative actions are the sort of global warming claims most likely to fall within the potential coverage of a D&O policy. Where a pollution exclusion clause is silent on the question of whether it applies to Securities Claims (unlike the sample clause above), an insured may have some room to argue that it does not. In *Owens Corning v. National Union Fire Insurance Co.* [No. 97-3367, 1998 U.S. App. LEXIS 26233 at *16 (6th Cir. Oct. 13, 1998)], the insured corporation and some of its directors and officers were sued by shareholders based on alleged misrepresentations regarding the company's potential liability for asbestos claims. The Sixth Circuit held that coverage for that Securities Claim was not precluded by an asbestos exclusion in the D&O policy, reasoning that the lawsuit arose out of the alleged misrepresentations rather than the use of asbestos, and that to hold otherwise would render coverage for Securities Claims illusory, since asbestos was at the core of the company's business. A similar argument might be made for a Securities Claims based on global warming, depending on the language of the policy and other circumstances.

However, there is a substantial risk that a court would limit *Owens-Corning* to its particular facts or simply not follow it, and in fact at least one other federal court of appeals has reached a different result based on a similar set of facts. In *Nat'l Union Fire Ins. Co. of Pittsburgh, Pa v. U.S. Liquids, Inc.* [88 Fed. Appx. 725 (5th Cir. 2004)], the insured, a provider of waste management services, was sued in a consolidated securities class action lawsuit and a shareholder derivative suit. The plaintiffs alleged that U.S. Liquids had acquired smaller companies without regard to or disclosure of those companies' improper waste disposal practices, and that it failed to implement regulatory controls in the purchased companies while actively concealing its misdeeds. U.S. Liquids argued that the pollution exclusion clause in its D&O policy did not apply to certain allegations, including the allegations of misrepresentations. The court disagreed, finding that all of the allegations in the case emanated from the alleged pollution and therefore the pollution exclusion clause defeated coverage for the entire lawsuit [see also J. Wylie Donald & Loly Garcia Tor, *Climate Change and the D&O Pollution Exclusion*, 41 Tort Trial & Ins. Practice L. J. 4 (Summer 2006) (extensive discussion of the *Owens Corning* and *U.S. Liquids* decisions)].

Since these decisions were rendered, many D&O pollution exclusion clauses now explicitly address the issue of whether they apply to Securities Claims. In the example above, the clause clearly states that it does apply to Securities Claims. But many D&O insurers now provide language carving out Securities Claims from the pollution exclusion clause. Such language can make the critical difference with respect to coverage for global warming claims under a D&O policy. As discussed above, most companies (at least public ones) have D&O entity coverage only for Securities Claims anyway, and directors and officers are not likely to have global warming claims made against them except by shareholders. By negotiating a pollution exclusion carve-out for Securities Claims in their D&O policies, companies can obtain important protection for their directors and officers as well as for the companies themselves.

Pollution exclusion clauses in D&O policies also may contain a carve-out for non-indemnifiable claims against officers and directors, i.e. Side A claims. This protection is likely to be particularly important for derivative suits, since the company may not indemnify officers or directors for settlement payments or judgments that are for the benefit of the company.

Another way to avoid the effect of the pollution exclusion on D&O coverage for global warming claims is to purchase a policy without a pollution exclusion clause. This probably is not an option for a comprehensive D&O policy with Side A, Side B, and entity coverage, in which pollution exclusions are standard. But D&O insurers commonly do now offer stand-alone Side A difference in conditions policies without a pollution exclusion clause. These will cover officers and directors (but not the company) to the extent that they are not indemnified by the company for claims against them relating to global warming. Accordingly, for companies concerned about protecting their directors and officers from global warming claims, a stand-alone Side A policy may provide an additional layer of protection.

Property Damage and Bodily Injury Exclusion. Another standard exclusion in D&O policies is the exclusion for property damage and bodily injury. Though the language of this exclusion varies by policy, one example is as follows: The insurer shall not be liable to make payment for Loss in connection with any Claim for bodily injury, sickness,

disease, death, or for damage to, destruction of, or loss of use of any tangible property. Depending on the particular facts and the policy language involved, this exclusion could limit coverage for global warming claims under a D&O policy, though this is not likely.

Unlike the pollution exclusion, which usually employs broad language excluding claims based upon, arising from, or in any way related to pollution (as in the example above), the property damage and bodily injury exclusion typically excludes claims for bodily injury or property damage. This limits the scope of the exclusion and likely makes the exclusion inapplicable to shareholder class actions and derivative actions arising from global warming issues. Class action plaintiffs sue for their stock losses, not bodily injury or property damage. Derivative plaintiffs sue on behalf of the company for losses to the company, which is not bodily injury and is unlikely to be property damage. Accordingly, if the narrow for language is not already in the bodily injury and property damage exclusion, companies should negotiate for this language.

Other types of global warming claims conceivably could involve property damage or bodily injury, because plaintiffs could allege the effects of global warming may have implications for both (e.g., flooding, hurricanes, or loss of coastline). However, as discussed above, such tort-based claims by third parties are not likely to be made against the officers and directors of a company under current U.S. law, as they generally do not owe duties to third parties. Regulatory actions against officers and directors for bodily injury or property damage (as opposed to for inadequate disclosures) may be somewhat more likely, though still not probable. Companies concerned about the risk to their officers and directors should explore the purchase of a stand-alone Side A policy that either does not have a property damage and bodily injury exclusion, or has one that carves out global warming claims.

With regard to global warming claims against the company itself, most public companies and many private ones will not be affected by the property damage and bodily injury exclusion, because they will only have entity coverage for Securities Claims. For those companies that have broader entity coverage, a global warming claim alleging property damage or bodily injury possibly could be excluded from coverage, at least in part. In those circumstances, the company should check its policy to see if there is an allocation clause, as it may have an argument for partial coverage if the claim contains allegations that go beyond property damage or bodily injury.

Retroactive Dates, Related Claims and Potential Claims. As discussed above, D&O policies almost always are claims-made policies, so that coverage is triggered when the claim is made, not when the allegedly wrongful conduct took place. However, D&O policies sometimes also have provisions excluding coverage for claims based on conduct occurring prior to a specified date, or for claims related to other claims pending prior to a specified date. Such provisions could potentially preclude coverage for global warming claims.

Typically, where a D&O policy contains an exclusion based on conduct occurring prior to a specified date, the specified date will be at least several years prior to the inception of the policy, often beyond the statute of limitations of most potential claims. Global warming claims conceivably could present special problems in this area, because they may be based on alleged corporate conduct spanning a long period of time going back many years. On the other hand, Securities Claims based on global warming the type of Claim most likely to be covered by a D&O policy in any event are likely to be more temporally limited, for at least two reasons. First, plaintiffs allegations of knowingly or recklessly wrongful conduct will be stronger if based on conduct occurring after the body of scientific evidence related to global warming had been accumulated and the issue was firmly in the public consciousness. Second, shareholder class actions are likely to be more problematic if the alleged class period is too long. Nevertheless, companies should pay close attention to retroactive dates, and the possible effects on global warming claims, when purchasing their policies.

Policies may also contain exclusions for claims related to other claims that were made or pending prior to a specified date. In fact, even without such specific exclusions, policies normally will cover only Claims first made during the Policy Period, and will exclude Claims related to other Claims first made prior to the Policy Period. For example, if a securities class action was filed in 2005 alleging certain misrepresentations, it may be covered by whatever insurance policy was in effect that time. But if another securities class action is filed two years later during a later Policy Period, it

may be excluded from coverage under that later policy if it is deemed to be related to the first claim. (While it could be covered under the previous policy, the previous policy may have depleted limits or less favorable terms.) Depending on the facts, the question of when two claims are related may be difficult to resolve, and it is an issue that has spawned much litigation [*see, e.g., Highwood Props. Inc. v. Executive Risk Indem., Inc.*, 407 F.3d 917, 924 (8th Cir. 2005) (holding that the concept of relatedness is not ambiguous if the facts of the case comfortably fit within the commonly accepted definition of the concept, but is ambiguous if the facts are close to the margins)].

Because there are very few global warming claims at this time, this may not be a significant issue at present. But companies and their directors and officers should keep it in mind for the future. In particular, companies should be alert to regulatory actions that may, several years later, give rise to lawsuits or other Claims. Where possible, companies should negotiate for policy language that will not broadly exclude future claims. And where potential Claims do seem likely to be excluded under a future policy, a company may wish to park a potential Claim in its current policy by providing a notice of circumstances. Most D&O policies allow insureds to report specific circumstances that may give rise to a Claim, and then if a Claim later arises out of those circumstances, it will be considered to have been made at the time of the initial reporting.

Accordingly, if a company is aware of circumstances that may give rise to a global warming claim for example, a regulatory inquiry or a letter threatening litigation there may be tactical advantages to reporting them to its D&O insurance carrier. This is especially true if D&O carriers require more global warming-related disclosures in connection with policy applications and renewals. If a company is required to disclose information pertaining to potential global warming claims in connection with a renewal or the purchase of new insurance, its insurer may attempt to exclude future coverage of such potential claims. In these instances, the company may need to report the potential claim to its current insurer in order to avoid a gap in coverage.

Conclusion

Global warming represents a new risk management issue for companies and their management. The actions of directors and officers in managing and disclosing global warming risks likely will face increased scrutiny in the coming years, resulting in new claims against them. D&O insurance, the main purpose of which is to protect directors and officers from personal loss resulting from their service to a company, may provide important protection for officers and directors (and in some cases companies themselves) in the event of global warming claims against them. In particular, securities class actions and derivative suits are the most likely kinds of global warming claims to be made against officers and directors, and also the most likely to be covered by D&O insurance. However, there are potentially serious coverage issues applicable to global warming claims, in particular a pollution exclusion clause that is common in D&O policies. Many D&O policy terms are negotiable, and companies should try to negotiate for D&O policy language that will maximize the chances of coverage should a global warming claim be made. Carving out securities class actions and derivative claims from the pollution exclusion would be particularly important. Purchasing a stand-alone Side A policy without a pollution exclusion clause would provide an additional layer of protection.

ABOUT THE AUTHOR(S):

Mark Hersh is a partner at Reed Smith LLP and Deputy Head of Reed Smith's Insurance Recovery Group. He joined Reed Smith when the firm combined with Sachnoff & Weaver in 2007. Mr. Hersh concentrates his practice on the representation of policyholders who have disputes or potential disputes with their insurance carriers, with an emphasis on D&O, E&O, and other corporate and management liability insurance. He also represents clients in connection with fidelity bond coverage and counsels policyholders on insurance coverage outside the dispute context.

Mr. Hersh is an experienced trial and appellate lawyer. Prior to joining Sachnoff & Weaver in 2000, he spent nearly

nine years as a federal prosecutor with the U.S. Attorney's Office in Chicago, receiving the Director's Award for Superior Performance as an Assistant U.S. Attorney. He is a former Law Clerk to the Honorable Joel M. Flaum, United States Court of Appeals for the Seventh Circuit, and received his law degree from Stanford University.

Slowing The Race To The Courthouse: Diana C. Manning On New Jerseys Recent Limitation of The First Filed Doctrine In Insurance Coverage Cases

By Diana C. Manning

May 15, 2008

SUMMARY: Forum selection is a primary consideration when commencing any civil action. In early 2008, New Jersey courts emphasized the importance of analyzing the special equities when determining the proper forum for a coverage action in two cases. These recent New Jersey Supreme Court decisions serve as a warning that New Jersey courts will not afford deference to first filed actions where strategic tactics dictate choice of forum.

ARTICLE: Cite as: Manning, Diana C. Slowing The Race To The Courthouse: New Jerseys Recent Limitation of The First Filed Doctrine In Insurance Coverage Cases. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Forum selection is a primary consideration when commencing any civil action. In the past, coverage counsel could reasonably rely on the presumption that the forum of the first filed action would be favored over that of a later filed action in a different jurisdiction involving substantially similar issues and parties. In early 2008, however, New Jersey courts emphasized the importance of analyzing the special equities when determining the proper forum for a coverage action on two separate occasions. The New Jersey Supreme Court decision in *Sensient Colors, Inc. v. Allstate Ins. Co., et al.*, 193 N.J. 373 (2008) and the Appellate Division decision in *Century Indemnity Co. v. Mine Safety Appliances Co., et al.*, 398 N.J. Super. 422 (App. Div. 2008) serve as a warning that New Jersey courts will not afford deference to first filed actions where transparent strategic tactics dictated the choice of forum, and the second jurisdiction bears a more significant relationship to the issues at hand. Most importantly, such forum jockeying may implicate the insurers duty of good faith.

The First Filed Doctrine. New Jersey recognizes as a general rule that the court which first acquires jurisdiction has precedence in the absence of special equities. *Sensient Colors*, 193 N.J. at 386 (citing *Yancoskie v. Del. River Port Auth.*, 78 N.J. 321 (1978)). [A] New Jersey state court ordinarily will stay or dismiss a civil action in deference to an already pending, substantially similar lawsuit in another state, unless compelling reasons dictate that it retain jurisdiction. *Id.* (citing *OLoughlin v. OLoughlin*, 6 N.J. 321 (1951)). Despite this presumption, both the *Sensient Colors* and *Mine Safety* Courts emphasized the special equities component when rejecting the insurers first-filed choice of forum. Importantly, both Courts frowned on an insurers preemptive strike to gain application of more favorable law.

Sensient Colors, Inc. v. Allstate Ins. Co., et al. *Sensient Colors* involved a dispute over coverage for environmental liabilities stemming from a polluted property located in the city of Camden, New Jersey. After providing a defense under a reservation of rights, Sensients primary insurer without warning filed suit in New York, thereby denying Sensient the opportunity to select its own forum for resolving the coverage dispute. *Sensient Colors*, 193 N.J. at 393. Soon thereafter, the policyholder filed a similarly styled action in the New Jersey Superior Court, Camden County.

The New Jersey trial court dismissed the policyholders second-filed action and the Appellate Division reversed. The New Jersey Supreme Court affirmed the Appellate Division and held that the trial court abused its discretion by failing to properly consider the special equities favoring New Jerseys retention of jurisdiction over the second filed action. The Supreme Court clarified the rule in considering a comity stay or dismissal:

[A] party moving for a comity stay or dismissal must show that there is a first-filed action in another jurisdiction involving substantially the same parties, claims, and legal issues as the action in this state. Once that is established, the party proposing a stay or dismissal must demonstrate the presence of one or more special equities that overcome the presumption favoring the first-filed action.

Id. at 393. Despite this presumption, the special equities favored the second-filed New Jersey action.

Paramount to the Supreme Courts analysis was New Jerseys strong public policy interest in the remediation of environmental contamination within its borders. *Id.* at 394. While recognizing that choice of forum does not dictate the applicable choice of law, the Supreme Court expressed concern regarding the application of New York law to the New Jersey site issues because of the likelihood that New York law would recognize the pollution exclusion contained in many of the policies. New Jersey does not enforce a pollution exclusion applicable to accidental or unintentional pollution. The Supreme Court stated that it was certain that a New Jersey court will apply the laws of this state because New Jerseys laws favor making insurance proceeds available for remediating environmental contamination and compensating the victims of such contamination. *Id.* at 396. Interestingly, the Court seemed to disapprove the insurers jockeying for the more hospitable insurance laws of New York in selecting the forum for its action. *Id.* at 396.

Century Indemnity Co. v. Mine Safety Appliances Co. In *Century Indemnity Co. v. Mine Safety Appliances Co.*, 398 N.J. Super. 422 (App. Div. 2008), the Appellate Division applied the *Sensient Colors* holding in dismissing a first-filed New Jersey action in favor of a later filed Pennsylvania action, both related to the policyholders asbestos related liabilities. Though the Court recognized that the policy interest in remediating contaminated properties was not implicated, and comity was not directly in issue because the Court was considering dismissal of the first-filed action, the Court applied the *Sensient Colors* analysis because it provided a useful framework for analysis of a circumstance in which two competing actions are pending, and a court is called upon to determine which should prevail. *Id.* At 428.

In *Mine Safety*, the forum choice appeared to be driven by the insurers desire to gain application of more favorable law. The insurer sought application of the modified pro rata allocation methodology recognized in *Owens-Illinois, Inc. v. United Ins. Co.*, 138 N.J. 437 (1994), over Pennsylvanias joint and several approach to allocation. *Mine Safety*, 398 N.J. Super. At 428-29. Pennsylvania law also imposed a joinder requirement that would require the insurer to implead the 23,000 underlying asbestos claimants in order to proceed with a declaratory judgment claim. *Id.* At 429. See *Vale Chemical Co. v. Hartford Accid. & Indem. Co.*, 516 A.2d 684 (Pa. 1986). Given these issues, the Court held that a choice of law determination was critical to determining the similarity of the competing actions. If New Jersey allocation law applied, the Pennsylvania action, which under the applicable joinder rules could not proceed as a declaratory judgment action, would not provide the insurer adequate relief. After finding it likely that Pennsylvania law would apply based on a place of contracting analysis because both the insurer and policyholder were incorporated and had their principal place of business in Pennsylvania, the Court held that it [was] reasonable to assume for purposes of determining the adequacy of Pennsylvania as a forum, that no greater relief would be afforded to [the insurer] here than will be afforded in the Pennsylvania action. *Id.* At 437.

Most significant for purposes of forum selection was the Courts disapproval of the insurers preemptive action in the

race to the courthouse. The insurers New Jersey action was filed contemporaneously with a breakdown in cost sharing negotiations, and in response to the policyholders tender of its defense under Pennsylvanias joint and several allocation methodology. Under these circumstances, the Court considered the insurers unseemly haste to establish jurisdiction in a state with which the parties had no relevant contact, but one whose law favors the insurers position. *Id.* At 438-39. The Court emphasized cases in other states dismiss[ing] first-filed preemptory declaratory judgment actions instituted to obtain a forum advantage, so as to permit the natural plaintiffs action to proceed in the plaintiffs chosen court. *Id.* At 438.

Analysis. Both the *Sensient Colors* and *Mine Safety* decisions affirmed the presumption that under principles of comity, the first court to obtain jurisdiction is ordinarily the court to retain jurisdiction. Significant to the insurance coverage practitioner, however, is New Jerseys emphasis on the policyholders choice of forum, and the parties strategic choices in selecting the initial forum.

Indeed, the *Mine Safety* Court expressly referenced decisions permitting the natural plaintiff to proceed in its chosen forum, regardless of whether its action was first filed. *Mine Safety*, 398 N.J. Super. at 438. The *Sensient Colors* Court described the insurers preemptive declaratory judgment action as a strategy designed to deny *Sensient* the opportunity to select its own forum for resolving the coverage dispute. *Sensient Colors*, 193 N.J. at 393. Significantly the preemptive action was mentioned contemporaneously with the Courts citation to the insurers duty to act in good faith with its insured. *Id.* at 393-94 (citing *Pickett v. Lloyds*, 131 N.J. 457 (1993)). While the Court did not engage in any bad faith analysis, its citation to *Pickett* and reference to the duty of good faith highlights yet another important consideration for the practitioner when counseling insurers on the selection of a judicial forum to resolve coverage issues.

Given these recent rulings, the practitioner is cautioned to carefully evaluate a cases connection to the chosen forum. While the first-filed rule remains a rebuttable presumption, both the *Sensient Colors* and *Mine Safety* decisions signal a willingness to find special equities to rebut this presumption where the first-filed action can be characterized as an insurers attempt to avail itself of a more favorable jurisdiction with little connection to the actual controversy at issue. While the costs in battling over the proper forum are certainly significant, the implication of an insurers duty to act in good faith when selecting a judicial forum could raise the stakes even higher. This issue should be of paramount concern to those practitioners representing insurers contemplating the filing of a declaratory judgment action.

Chandler on Florida Statute § 627.0628: Regulating Insurance for Hurricanes

2008 Emerging Issues 2307

Chandler on Florida Statute § 627.0628: Regulating Insurance for Hurricanes

By Seth J. Chandler

May 15, 2008

SUMMARY: Florida has been understandably on the forefront of the critical issue of how to assess the validity of hurricane modeling. In theory, creation of an approved public model as has occurred under Florida Statute section 627.0628. There is the possibility that the public model, which essentially discounts the effects of global warming, will come to displace rather than supplement or bound private efforts.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: An issue that will arise with heightened salience if global warming continues to increase the frequency of hurricanes hitting the American coasts is how to assess rates charged by insurers covering windstorm loss. Rates that are too low lead to irresponsible insurers snapping up business but becoming insolvent when the time to pay the bills come dues. The result can be anti-insurance under which people end up transferring their wealth from possible futures in which bad things happen to possible futures in which good things happen. Rates that are too high lead to the amassing of war chests hurt economic development and are particularly burdensome for the poor.

But how is a regulator to tell? Reviewing life insurance rates or auto property claims is not particularly difficult. Regulators and actuaries have access to reams of statistics validated over many years and there is little risk of major change in the relevant risks. Particularly with the uncertainties surrounding global warming, however, modeling of the sort needed to determine a fair premium with any modicum of precision is very much a dark art. It is art, in the sense that no one really knows for sure the future of our terrestrial climate, particularly when one attempts to predict the effects of warming in particular parts of the earth. It is dark in the sense that those who have a clue are understandably reluctant to release the details of their methodologies. Magicians, after all, never tell, not because they are mean but because their tricks are their intellectual property.

Fla. Stat. Part I represents one resolution of this issue, but one likely to cause difficulties for the private insurance market in Florida and, potentially, for Floridas financial solvency. Fla. Stat. § 627.0628 establishes a government body, the Florida Commission on Hurricane Loss Methodology (FCHLM) composed of the state insurance consumer advocate, five government officials and five faculty from Floridas state university system selected by the Chief Financial Officer of the Florida State Board of Administration. The commission has at least two major tasks: reviewing the actuarial methodologies employed by insurance companies setting rates involving windstorm risk and evaluating a public model, which serves as the floor for the rates of Citizens Property Insurance Corporation, the statutory body

created in 2002 under Fla. Stat. § 627.351(6) that has become the largest property insurer in Florida with more than one million policyholders.

The Florida regulatory scheme draws a distinction in the handling of trade secret or proprietary data and algorithms between proceedings before the Commission to determine the reliability of various computer models used in private industry and review of proposed insurance premiums based on those models. Under Fla. Stat. § 627.0628(3)(e), documentary and testimonial submissions to the FCHLM that would disclose trade secrets used in designing and constructing a hurricane loss model are exempt from the various open meeting and sunshine rules that would otherwise apply. But the secrecy lasts only so long. Under the second sentence of Fla. Stat. § 627.0628(3)(c), findings made by FCHLM pursuant to these hearings are admissible and relevant in consideration of a rate filing by the office or in any arbitration or administrative or judicial review only if the office and the consumer advocate appointed pursuant to Fla. Stat. § 627.0613 have access to all of the assumptions and factors that were used in developing the actuarial methods, principles, standards, models, or output ranges, and are not precluded from disclosing such information in a rate proceeding.

The insurance industry protests that this second provision guts both trade secret protection and, derivatively, use of private models. Private modelers, they say, demand genuine trade secret status for the intellectual property in their work that does not disappear the minute there is controversy. Moreover, they say that the statute ends up making it difficult for Florida insurers to reinsure their losses reinsurance that is needed to diversify the risk pool and necessary if smaller insurers with local expertise are to have any chance of doing business in Florida. The reinsurers, many of whom are not directly subject to the jurisdiction of the Florida Office of Insurance Regulation, use these same private models. So, if the reinsurers are pricing policies on the basis of models that can not be revealed and that demand a higher premium than those based on approved models, private insurance basically does not work.

Supporters of the provision say with some justification that review of catastrophe models without access to the devilish details is largely meaningless. Some even question whether the reluctance to provide data is due to their own models lack of support for the rates sought.

The second task of the FHCLM, superintending development of a public model pursuant to is presumably an answer to this dilemma. In 2001, the Florida Office of Insurance Regulation requested development of a public hurricane model to be developed by a team led by Florida International University. Although some submissions to the team would be proprietary, its work and outputs would not be. After several years of work, the team delivered models in 2005 and 2006, but and this appears largely to be a source of some controversy relied on historic data contained in the HURDAT data set from 1900-2003 to determine hurricane landfall frequency and intensity. Thus, although the data set contained some of the high intensity years during the early twentieth century it basically ignored the view of many scientists that global warming had mooted out the relevance of that data. It also apparently disregarded HURDAT data from the 1880s and 1890s, a period of high hurricane intensity in the United States.

FHCLM approved the public model for use in August 2007. Certain aspects of the model such as the damage model were supported by experience with Hurricane Wilma, but the more difficult issue of assessing the validity of frequency and intensity of hurricanes in light of global warming has not been (and realistically can not be) supported by just a few years experience. The problem is not unlike that of predicting performance in sports: is the performance of an athlete to be measured more by recent events or more by a long track record where one has reason to believe but isn't certain, after all that a the athletes performance is declining? Under Fla. Stat. § 627.0628(1)(c), once approved by the FHCLM, insurers in Florida appear to be able to use the public model to justify rate filings.

Florida has been understandably on the forefront of the critical issue of how to assess the validity of hurricane modeling. In theory, creation of a public model as competition for private models is a sensible response to the problems of assessing private models. Whether Floridas choice to disregard global warming and to largely displace private models is a wise one, however, remains to be seen. As all readers of the Harry Potter series know, Defense Against the Dark Arts is a treacherous subject.

Ossyra on TIG Insurance Co. v. Aon Re, Inc.,

2008 Emerging Issues 2302

Ossyra on TIG Insurance Co. v. Aon Re, Inc., No. 05-11450, 2008 U.S. App. LEXIS 5482 (5th Cir. 2008): Statute of Limitations Issues In Long Developing Reinsurance Disputes

By James D. Ossyra

May 12, 2008

SUMMARY: The statute of limitations is a much litigated issue, particularly where a claim takes a long time to develop, as is often the case in reinsurance related disputes. The law in this area varies in both theory and application from state to state. This case illustrates if an aggrieved party waits for the case to fully develop, the limitations period may pass, and the claim lost, before that party is even aware of the scope of its harm.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Application of the statute of limitations can be a uniquely local (and difficult) issue, and accordingly, it can be a devastating trap for the unwary practitioner or plaintiff client, or a golden opportunity for the astute defendant. Statutes of limitations are a black and white issue; if a claim is filed after the limitations period has run, it is subject to early and likely complete dismissal. The case of *TIG Insurance Co. v. Aon Re, Inc., No. 05-11450, 2008 U.S. App. LEXIS 5482 (5th Cir. 2008)* provides a perfect example.

The primary issue in application of a statute of limitations is determining the date on which the limitations period begins to run. This issue is often case-dispositive. In some areas of commercial law, such as a reinsurance-related dispute, where a claimed wrong may be a long time developing, a misstep in this analysis can be fatal. In *TIG v. Aon*, it would be fair to say, plaintiff lost its claim before it even knew it had it, because of the application of the unique Texas rule on determining the trigger date for the limitations period.

In *TIG v. Aon, Texas Law on Statute of Limitations Prevented TIG From Pursuing a Seeming Legitimate Claim*. The genesis of *TIG v. Aon* was a prior arbitration between TIG, as an insurer/cedent, and U.S. Life, its reinsurer. U.S. Life sued TIG for rescission of its reinsurance agreement with TIG because Aon, TIGs agent, failed to provide loss information on a substantial book of business before U.S. Life agreed to the reinsurance. U.S. Life won its case and was awarded rescission by the arbitrators. The faulty disclosure took place when the reinsurance agreement was entered into in 1998, the arbitration was filed in late 2002 or early 2003, and it was decided in May 2004. TIG promptly thereafter (in 2004) brought suit against Aon for its breach of duty and negligence in failing to make proper disclosures on TIGs behalf. Aon moved to dismiss that case on the grounds that the applicable two and four year statutes of limitations in Texas (the governing jurisdiction) had run. Although TIG claimed it did not know of Aons malfeasance until U.S. Life brought it up in the arbitration, the District Court granted Aons motion and dismissed TIGs claim. TIG appealed.

The Fifth Circuits decision hinged on the discovery rule. That rule will toll the running of the limitations period until the plaintiff knew or, exercising reasonable diligence, should have known of the facts giving rise to the cause of action. *Id.*, 2008 U. S. App. LEXIS 5482 at *15. Needless to say, whenever the fact pattern extends over a long period of time, as is often the case in reinsurance disputes, this rule presents either a serious problem or opportunity.

In *TIG v. Aon*, the Court applied Texass variation of the rule, relying on *Murphy v. Campbell*, 964 S.W. 2d 265 (Tex. 1997). TIG said the rule applied to toll the statute until the arbitration revealed the problem with Aons disclosures. However, in Texas, the discovery rule is applied objectively and categorically, *i.e.*, the particular knowledge or circumstances of the plaintiff is irrelevant. In Texas, the court must apply a two-pronged analysis of whether the nature of the injury [is] inherently undiscoverable, and whether the injury itself [is] objectively verifiable. *TIG v. Aon*, 2008 U.S. App. LEXIS 5482 at *16. Unless those two questions can be answered in the affirmative, the discovery rule would not apply, and the cause of action accrues and the limitations period begins to run when the alleged wrong has caused a legal injury, however slight. *Id.* at *12. The Court found that Aons failure caused legal injury when the faulty disclosures were made, because that non-disclosure gave U.S. Life a right of rescission at that very moment. Because TIG *could* have reasonably discovered Aons failure to pass on the loss information (*i.e.*, it was not inherently undiscoverable), which failure occurred more than even four years prior to its bringing suit against Aon, TIG could not take advantage of the discovery rule and lost the case.

Other Jurisdictions Handle the Discovery Rule Differently. One particular problem that practitioners and their clients face with the discovery rule is that the formulation, and its application, can vary from state to state. Contrast Texass formulation of the discovery rule with some other important insurance and reinsurance jurisdictions.

Consider the case of *Hermitage Corp. v. Contractors Adjustment Co.*, 166 Ill. 2d 72 (1995), out of the Illinois Supreme Court. That case is very closely analogous to *TIG v. Aon*, but reaches a contrary conclusion. In *Hermitage Corp.*, plaintiff had hired the defendant to prepare and file a mechanics lien (much like TIG hired Aon to submit its loss data). The mechanics lien was faulty, and some years later, after Hermitages lien claims were substantially reduced in litigation over their validity, Hermitage sued defendant Contractors Adjustment for negligence. Contractors Adjustment moved to dismiss on statute of limitations grounds. The circuit court denied the motion but certified the question to the court of appeals. The appellate court reversed, followed the reasoning that was used in *TIG v. Aon*, and dismissed all claims on statute of limitation grounds on the theory that the statute was triggered when the faulty lien was filed. The Illinois Supreme Court however, reversed the appellate court, and found, under its interpretation of the discovery rule, that the limitation period was only triggered when the court had decided that the lien was faulty, some years after it was originally filed. The court applied a generous standard that when a party knows or reasonably should know both that an injury has occurred and that it was wrongfully caused, it must inquire as to its legal remedy, and therefore the statute is triggered at that point. *Id.*, 166 Ill. 2d at 86. The Illinois Supreme Court allowed the claim to proceed (a strong dissent would have followed the theory of cases like *TIG v. Aon*) reasoning that the plaintiff could not have known that its injury was wrongfully caused until the lien was challenged. Accordingly, turning back to *TIG v. Aon*, if TIG had filed its case against Aon in Illinois, it might well have won its limitations argument.

To complicate matters further, some jurisdictions have decided the tolling question legislatively. New York is a case in point. There, the New York legislature has determined that, absent specific situations set out in the statute itself, the limitations period cannot be tolled by date of discovery principles, adopting a strict standard of accrual of a cause of action when all the facts necessary to the cause of action have occurred and an injured party can obtain relief in court. *McCoy v. Feinman*, 99 N.Y. 2d 295, 301 (2002), quoting *Ackerman v. Price Waterhouse*, 84 N.Y. 2d 535, 541 (1994). See N.Y. C.P.L.R. 201. While taking a slightly different approach, New York thus applies a rule like Texas, where accrual time is measured from the day an actionable injury occurs, even if the aggrieved party is then ignorant of the wrong or injury. *McCoy*, 99 N.Y. 2d at 301.

Florida has a similar statutory scheme. Florida has set out the specific situations when tolling might apply, such as evading service of process, adjudicated incapacity of the plaintiff, or partial payment on a written instrument. Fla. Stat. § 95.051. If the situation is not on the list, then the courts are prohibited from extending the period for filing a claim

beyond the limitations period. Fla. Stat. § 95.051(2). Florida courts will, though, analyze when a cause of action accrues initially, and might apply the delayed discovery doctrine to the analysis. See *Hearndon v. Graham*, 767 So. 2d 1179 (Fla. 2000) (holding that the possibility of repressed memory syndrome was such that it could not grant a motion to dismiss a sexual abuse complaint on statute of limitations grounds, and if the syndrome was ultimately proven, then agreeing that the cause of action would not have accrued until the memory was recovered).

In fact, as the Florida case law indicates, a limitations period can be delayed not just by tolling it after an action accrues, but by delaying the accrual altogether. See *Peat, Marwick, Mitchell v. Lane*, 565 So. 2d 1323 (Fla. 1990). In *Peat, Marwick*, the court defined a professional malpractice action to include redressable harm, which in Florida apparently means a defined injury, not just a possible injury based on breach of a duty or contractual right, as in *TIG v. Aon*. *Peat, Marwick*, 565 So. 2d at 1325-27 (action for accountant malpractice accrued when tax court entered judgment against plaintiff, not when the IRS deficiency notice was received).

Evaluation of The Statute of Limitations Must Be Thorough and Come Early In the Process. The long and short of statute of limitations analysis is that it needs to be looked at immediately upon any inkling of a redressable wrong. Further, the lesson of *TIG v. Aon* is that where a wrong has occurred, even if that wrong is nascent, all avenues of recovery must be promptly evaluated with statute of limitations issues firmly in mind. While a cost-conscious approach might lead to putting off an investigation until the real harm is developed, that can be fatal. And, a cursory review to determine the applicable limitation period is clearly not enough; concepts of tolling and accrual can have dramatic impacts on the analysis. *TIG v. Aon* is a clear example. Cases from other jurisdictions illustrate the issue as well. See *Queensway Financial Holdings Ltd., et al. v. Cotton & Allen, P.S.C.*, 237 S.W. 3d 141 (Ky. 2007) (applying an analysis much like *TIG v. Aon*). Some states have rejected a lenient discovery rule outright. See *Antone v. Morriss*, 720 N.W.2d 331 (Minn. 2006). Thus, the jurisdiction in which the dispute is to be decided is also extremely important. A long-tail commercial dispute, like the reinsurance brokers negligence alleged in *TIG v. Aon*, might find a more plaintiff-friendly forum, at least on this particular issue, in jurisdictions like Illinois, instead of Texas.

ABOUT THE AUTHOR(S):

James D. Ossyra is a partner in Foleys General Commercial Litigation and Insurance and Reinsurance Litigation Practices, as well as its Insurance Industry Team. Mr. Ossyra has worked in all areas of complex commercial dispute resolution, primarily in litigation matters in courts throughout the United States. He focuses on reinsurance matters and construction and real estate workouts, and has extensive experience in commercial fraud and other business torts and breach of duty or contract. Mr. Ossyra has experience in all aspects of dispute resolution -- from the initial filing of an action in the courts through the trial and appeal. His experience also includes work on complex negotiated settlements, representation of clients in contested arbitration proceedings, and mediations. Mr. Ossyra has substantial trial experience. Recent cases include a major reinsurance dispute that ultimately resulted in a three-week trial in the federal court in Kansas City, Kansas, and a contentious commercial dispute over a software development contract that resulted in a two-week arbitration in Chicago. A member of the Litigation Section of the American Bar Association and a member of the Chicago Bar Association, Mr. Ossyra is also president and board member of the Evanston Township High School Alumni Association. Mr. Ossyra received his law degree from Boston University (J.D., magna cum laude, 1983) and his undergraduate degree from Harvard University (B.A., cum laude, 1978). He is admitted to practice in Illinois and Colorado and before the U.S. District Court for the Northern District of Illinois, the Court of Appeals for the Fourth and Seventh Circuits, and the U.S. Supreme Court. He is a member of the Trial Bar for the U.S. District Court for the Northern District of Illinois.

Financial Guaranty Insurance and the Subprime Crisis

2008 Emerging Issues 272

Gkonos and Cawley on Financial Guaranty and the Subprime Crisis

By James Gkonos and Mark Cawley

May 8, 2008

SUMMARY: In their analysis of financial guaranty insurance and the current subprime crisis, authors James S. Gkonos and Mark C. Cawley describe the nature of financial guaranty insurance and trace its history from its roots in suretyship, through the founding of monoline insurance companies dedicated solely to financial guaranty insurance, to the current regulatory regime. The commentary details the state statutes or regulations specifically tailored to the financial guaranty industry and describes basic regulatory principles common to these statutes. The commentary also explores the crisis facing the financial guaranty industry, the roots of that crisis in the subprime mortgage meltdown, and proposals floated by various federal and state officials to adapt the regulatory scheme to the problems highlighted by the subprime crisis and the possibility of additional regulatory restrictions on the activities of financial guaranty companies.

ARTICLE: Financial Guaranty Insurance and The Subprime Crisis:

The Current State of the Industry and Challenges for the Future

By James S. Gkonos and Mark C. Cawley

INTRODUCTION

Financial guarantees are not new products. Since the inception of suretyship, sureties have been guaranteeing debts. Historically, early sureties were individuals, who guaranteed debts through provision of collateral or directly guaranteeing the underlying debt. Even with the advent of surety companies, various forms of financial guarantees were considered part of the normal lines of business of sureties. Lease bonds, deposit guaranty bonds, appeal bonds, bonds that guaranteed savings from the installation of equipment, commercial bonds that agreed to pay a liquidated amount considered to be the damages resulting from failure to perform, and other bonds referred to as miscellaneous bonds all guaranteed financial obligations.

In the 1970s and 1980s the growth of the financial guaranty business virtually exploded as the capital markets grew dramatically and insurance companies saw significant opportunities to profit from the guarantee of capital markets transactions. Monoline companies (those with only a single line of business) existed, such as Ambac Assurance Corp.

(Ambac) and MBIA Insurance Corporation (MBIA), but their design was a result of their chosen business model rather than any regulatory requirement. Both monoline and multiline companies were, and continue to be, involved in the business of providing financial guarantees. For much of this period, capital markets participants also saw insurers as attractive credit support providers because many had superior credit ratings and premiums were significantly cheaper than letters of credit and other collateral because of the lower capital adequacy requirements imposed by the regulators and rating agencies.

In 1989, New York enacted the first statutory provisions that mandated the separation of financial guarantee insurance from traditional surety products and required that companies licensed in New York issuing such insurance be separately licensed. More importantly, the New York statutory provisions prohibited (with certain exceptions) multiline insurers from issuing financial guarantee insurance and placed significant capital adequacy and risk limitation requirements on the monoline companies. The National Association of Insurance Commissioners (NAIC), the New York legislature and ultimately other states imposed these requirements because they felt that financial guarantees involved low-frequency, high-severity risks in areas that multiline insurance companies lacked experience and training. n1 The NAIC and these legislatures believed that consumers of traditional insurance products, such as auto, property, and casualty, should not be exposed to the effects of the high-severity nature of risks associated with financial guarantees. n2 The legislatures also believed that the high severity nature of these risks required higher capital retentions to avoid the potential that a single loss could affect the solvency of such companies. n3 Further, they recognized, particularly with credit enhanced transactions, because the pricing was linked to the interest savings by the capital markets sellers, that the less experienced insurer was betting against the markets, or was relying on the law of large numbers. n4 As a result, greater regulation of the business was thought to be desirable. Approximately 14 companies have become licensed as monoline companies in New York. Since the enactment in 1989 of the New York laws, several other states have enacted similar laws or regulations.

The recent events regarding subprime mortgages and their effects on the capital markets have vividly demonstrated the propriety of concerns regarding the potential for high severity losses and the need for greater capital adequacy. Unfortunately, the subprime crisis has also exposed an oversight in the legislative structure. The legislative focus on solvency ignored the effect that a mere downgrade of a bonding company's rating would have on the company itself and on important sectors of the capital markets. This commentary will provide some additional perspective on the current state of the regulation of financial guarantee insurance and the monoline companies. It will also address the current regulatory initiatives proposed in the wake of the subprime crisis.

WHAT IS FINANCIAL GUARANTY INSURANCE?

At its most basic level, financial guaranty insurance provides a guarantee, usually unconditional and irrevocable, that protects the holder of a financial obligation against the non-payment of principal and interest. Insurers who issue such coverage are sometimes referred to as monoline carriers because financial guaranty insurance is the only type of insurance they offer. On the other hand, multiline carriers, as discussed above, are generally prohibited from issuing financial guaranty insurance, but offer a variety of other lines such as, property and casualty, errors and omissions, automobile, and the like.

The use of monoline companies to issue financial guaranty insurance is a relatively new concept. The first financial guaranty companies, Ambac and MBIA, were founded in the early 1970s, initially guaranteeing the principal and interest on tax-exempt and taxable bonds issued primarily by states, political subdivisions, and various other public authorities and agencies. Since then, additional monoline carriers have entered the market and, over time, have expanded their business models to provide not only insurance for public debt but also credit support enhancement for other classes of business, such as swaps, hedges, asset-backed securities, and collateralized debt obligations.

Financial guaranty insurance plays a critical role in capital markets transactions. It benefits the debt issuer by increasing the credit worthiness of the debt. For example, if a AAA-rated financial guaranty company insures an A-rated municipality's bonds, the bond issuance acquires the credit-worthiness of the insurer regardless of the

municipalities underlying credit-rating. Such insurance increases the marketability of bonds issued by municipalities with sub-AAA ratings and makes it more likely that investors will invest in such debt, which in turn increases the availability of capital for public finance debt. The municipality obtains an additional benefit in that it can issue bonds at a lower interest rate that reflects the higher credit rating of the insurer and, in the process, save interest costs reflecting the difference in yield on an insured bond from that on the same bond if uninsured. This reduces the debt burden on such municipalities, which presumably is passed on to taxpayers in the form of lower taxes or increased services.

Investors benefit from financial guaranty insurance because it provides a safer investment, reduces price volatility related to changes in the issuers credit quality and increases loss protection in the event of default. Indeed, some investors are prohibited from owning sub-AAA debt (as in the case of some mutual funds) and, without financial guarantee insurance, could not invest in otherwise attractive public debt.

Monolines began expanding their business lines in the late 1990s and through the turn of the millennium by adding new products to their lines of business through the guarantee of credit derivatives and securitization products. Many financial guaranty companies expanded their business models from insuring municipal debt to insuring various credit derivative products--financial instruments whose price and value derives from the creditworthiness of the obligations of a third party. By 2006, the guarantee of credit derivative and asset backed securitization products comprised 40 percent of the revenue of the bond insurers. n5

Credit derivatives are bilateral contracts between a buyer and seller under which the seller sells protection against certain pre-agreed events occurring in relation to a third party, such as bankruptcy or default. Common credit derivatives include hedges and credit default swaps. A credit default swap is a bilateral contract, in which two counterparties agree to isolate and separately trade the credit risk of at least one third-party reference entity. The buyer of a credit swap receives credit protection. The seller guarantees the credit worthiness of the product and the payment of the losses that flow from a default or a drop in credit rating. Losses are often calculated through a marked to market formula that measures the changes in value of the reference entity on a present value basis.

Securitized products are typically debt obligations that are secured by cash flows from underlying collateral, such as mortgages, auto loans or credit card debt. The investor seeks certain minimum returns from its investment, which are to be obtained through the cash flows generated by the underlying collateral. Financial guaranty insurance assures that the cash flows necessary to obtain its required returns will be generated.

Collateralized debt obligations (CDOs) are constructed from a portfolio of fixed-income assets divided into different tranches of debt. The most senior tranches are rated AAA, while the lower tranches contain progressively lower-rated debt. Losses are applied in reverse order of seniority and junior tranches therefore offer higher interest rates to compensate for the added default risk. There are other more complicated products, commonly known as CDO-squareds, which are a type of CDO where the underlying portfolio includes tranches of other CDOs that may not have sold and have higher risks.

THE CURRENT REGULATORY REGIME

In theory, financial guaranty companies are subject to the laws and regulations of each state in which they are licensed or do business. In the majority of states, financial guaranty insurance is not a separate type of insurance. Instead, it is considered part of the surety line of business with no specific provisions relating to financial guarantees. Regulation of financial guaranty insurance is limited to a handful of states, specifically: California, Connecticut, Florida, Maryland, New York, and Wisconsin. Maryland is unique among these states in that it has promulgated regulations--rather than enacting a law--governing financial guaranty insurance. Each states law or regulation generally derives from the NAICs Model Financial Guaranty Insurance Act of 1986 and, for this reason, state regulatory schemes are substantially--but not completely--identical.

Of these states, New Yorks financial guaranty law is arguably the most influential. The simple reason is that the

majority of such insurers are incorporated there and/or are licensed to do business there. Currently, there are eight domestic financial guaranty insurers authorized to do business in New York (Berkshire Hathaway Assurance Co., Capital Markets Assurance Corp., CDC IXIS Financial Services, Inc., Financial Guaranty Insurance Co., Financial Security Assurance Inc., MBIA Insurance Corp., Radian Asset Assurance Co., and XL Capital Ltd.), and six foreign companies licensed to do business there (Assured Guaranty Corp., AMBAC Assurance Corp., Connie Lee Insurance Co., ACA Financial Guaranty Corp., MBIA Insurance Co. of Illinois, and FSA Insurance Co.).

New York's unique extraterritorial application of its insurance laws also guarantees the primacy of its financial guaranty statute. Although the New York Insurance Law does not purport to govern insurance written in another state and that has no connection to New York, section 1106(f) of the Law prohibits a foreign (*i.e.*, non-New York domiciled) insurer licensed in New York from doing outside of New York what it cannot do within New York. Stated differently, a foreign multi-line insurer that is permitted to write financial guaranty insurance in another state may not do so if it wishes to retain its New York license. In its effect, the scope of the New York Insurance Law is therefore quite broad and unabashed in its extraterritorial effect.

Common Regulatory Principles. Financial guaranty statutes share several regulatory principles in common. There are, however, significant differences among them as well. As an initial matter, two states--New York and California--prohibit multi-line insurance companies from writing financial guaranty insurance. ⁿ⁶ Florida-domiciled property and casualty insurers--assuming they meet certain stringent financial requirements--can issue financial guarantees in Florida. ⁿ⁷ A Florida-based property and casualty insurer, however, might place its New York license at risk if it chose to write financial guaranties in Florida.

As noted above, the rationale for these restrictions was in part the public policy concern that property/casualty and other types of insurers would use most of their surplus to write financial guaranty business to the detriment of providing other types of coverage, particularly in personal lines. Also a concern noted above, was the potentially large losses to which an insurer could be exposed in connection with the writing of financial guaranty business and its potential effect on an insurer's surplus and ability to pay claims in more traditional lines of coverage.

The applicable statutes broadly define financial guaranty insurance as any guaranty under which loss is payable, upon proof of occurrence of financial loss, to an insured as a result of any one of the following five events:

(1) a failure of any obligor on or issuer of any debt instrument or other monetary obligation . . . to pay when due to be paid . . . principal, interest, premium, dividend or purchase price of or on, or other amounts due or payable with respect to, such instrument or obligation, when such failure is the result of a financial default or insolvency or, provided that such payment source is investment grade, any other failure to make payment, regardless of whether such obligation is incurred directly or as guarantor by or on behalf of another obligor that has also defaulted;

(2) changes in the level of interest rates, whether short or long term or the differential in interest rates between various markets or products;

(3) changes in currency exchange rates;

(4) changes in asset values; or

(5) other events that the Insurance Commissioner determines to be substantially similar to the foregoing events. ⁿ⁸

Despite this broad definition of financial guaranty insurance, states permit financial guaranty companies to insure only certain types of risk. New York, for example, allows licensed financial guaranty companies to insure the timely payment of U.S. dollar debt instruments or other monetary obligations only in the following categories:

. municipal obligation bonds;

- . special revenue bonds;
- . industrial development bonds;
- . corporate obligations;
- . partnership obligations;
- . certain asset-backed securities, trust certificates and trust obligations;
- . installment purchase agreements executed as a condition of sale;
- . consumer debt obligations;
- . utility first mortgage obligations; and
- . any other debt instrument or financial obligation that the Superintendent determines to be substantially similar to any of the foregoing or shall otherwise be approved by the superintendent. n9

Other states likewise limit the class of insurable risks to a subset of the risks encompassed by the definition of financial guaranty insurance. n10

New York law exempts from the definition of financial guaranty insurance certain other insurance products, including:

- . insurance against default where insurance is payable only upon occurrence of a fortuitous physical event, equipment failure, or inability to recover a natural resource;
- . fidelity and surety insurance;
- . credit insurance;
- . credit unemployment insurance;
- . residual value insurance;
- . mortgage guaranty insurance; and
- . guaranteed investment contracts issued by life insurers. n11

This list varies slightly among state laws governing financial guaranty insurance. For example, California specifically excludes title insurance from the definition of financial guaranty insurance, while Florida excludes, among other things, lease, purchase and sale, or concessionaire surety bonds. n12

Financial guaranty insurance statutes also set forth requirements intended to safeguard the financial solvency of financial guaranty companies. The following financial parameters are common among the states regulating financial guaranty insurance.

Minimum Capital and Surplus. All states impose certain minimum capital and surplus levels. In New York, for example, the minimum initial capital and surplus requirements for a financial guaranty insurer is \$75 million, and at all times the company must maintain a policyholders surplus of at least \$65 million. n13 California is somewhat less stringent in that it requires paid-in capital of at least \$15 million and a surplus of at least \$85 million before it will issue a license to do business. n14

Contingency Reserves. New York and California require financial guaranty insurers to maintain an additional contingency reserve based upon the greater of 50% of premiums written for each category of security guaranteed or a sum arrived at by multiplying specific factors by the principal amount being guaranteed for each class of security. n15 The amounts are based upon both the principal guaranteed and the relative risk of the type of bond, with municipal bonds assigned the lowest factor and non-investment grade securities receiving the highest. Florida requires contingency reserves based on percentages of net principal outstanding on various types of guarantees. n16 Other states, like Connecticut, require contingency reserves calculated according to the accounting requirements of the NAIC Accounting Practices and Procedures Manual. n17

Aggregate Risk Limitations. States also limit the amount and type of securities that a financial guaranty insurer may insure. The limitations are typically expressed in the form of percentages of the insurers surplus and contingency reserves. n18

Single Risk Limits. Additionally, state statutes limit a financial guaranty insurers exposure to any one risk (net of collateral and reinsurance) to a percentage of the aggregate of the insurers surplus to policyholders and contingency reserves. n19 Typically, statutes impose different limitations based on whether the insured obligation is municipal debt, asset-backed securities, or other types of obligations. For example, with respect to municipal debt, the New York financial guaranty law limits exposure to a single municipality's insured annual debt service to no more than 10 percent of the aggregate of the insurers surplus to policyholders and contingency reserves. In addition, the aggregate unpaid principal due by a single municipality at any time may not exceed 75% of the aggregate of the insurers surplus to policyholders and its contingency reserves. The single risk limits for asset backed securities are governed by a more complex formula in which the insured average annual debt service, the insured unpaid principal (as calculated by the prescribed formula), and the single largest asset in any pool supporting the securities cannot exceed 10 percent of the insurers surplus to policyholders and contingency reserves.

A violation of the aggregate or single limit restrictions could result in an order of the insurance department to limit writing to certain lines or to cease writing altogether. In the worst case scenario, the violation could result in the initiation of insolvency proceedings against a monoline. n20 Recently, Financial Guaranty Insurance Corporation (FGIC) announced that it had violated the single limit restriction and had voluntarily ceased writing new business of any kind. n21 As of the date of this commentary in April 2008, the New York Superintendent of Insurance is awaiting a plan from FGIC detailing how it will cure this violation.

Limitation on Non-Investment Grade Securities. States require that the majority of securities insured by financial guaranty companies be investment grade. Typically, states require that at least 95% of such securities be investment grade. n22

Limitation on Investments in Securities Insured. In an effort to avoid an aggregation of risks, California and New York limit a financial guaranty insurers investment in any one entity insured by that insurer to no more than 4% of its assets. n23

Limitations on Reinsurance. Several states also impose limitations on the amount of business that a financial guaranty company can cede under a reinsurance agreement, unless the reinsurer is another licensed financial guaranty insurer. n24 Interestingly, even though New York generally prohibits multi-line insurers from issuing financial guarantees above \$10 million, it permits them to reinsure them in far larger amounts. n25 The ceding monoline, however, can only get a maximum credit for the reinsurance of 50% of the aggregate risk. n26

Rating Company Impact. While the rating companies do not directly regulate the monolines, they have a substantial impact on their ability to do business. Because a transaction will borrow the rating of the insurer or credit support provider, the higher the rating of the insurer the more its services will be in demand. It can also achieve better pricing because of the benefit it provides and the demand for its services. Accordingly, the ratings provided by the rating agencies are crucial to the business success or failure of the monolines.

In addition, in 2000, S&P introduced a new rating product for any insurers providing guarantees or credit support for capital markets transactions: The Financial Enhancement Rating (FER). S&P combined the financial strength rating with an assessment of the ability and willingness of an insurer to pay capital markets immediately and without regard to potential defenses. n27 In published reports regarding the FER, S&P has stated that it believes the failure to honor a claim drawn under an acknowledged policy, regardless of defenses and irrespective of legal or commercial disputes that routinely arise relative to insurance claims, will impair the insurers credibility in the capital markets and, consequently, its market position and financial flexibility. n28 S&P stated that, in the event that a rated insurer failed to pay a claim, particularly on S&P rated transactions, the companys FER rating and its financial strength rating, would likely be reduced. n29 Most of the major monolines have obtained FER ratings from S&P. While not direct regulation, the specter of a ratings downgrade provide ample incentive for monolines to pay promptly.

THE CURRENT BOND INSURER CRISIS

The current crisis for the monoline insurers was brought about by a change in the underwriting philosophy and mix of risks undertaken by the monoline bond insurers. For much of their history, the bond insurers predominant business line was the guarantee of public finance debt. The business was low frequency and low severity risks and was profitable for the bond insurers. However, as these companies sought new ways to grow and earn additional premium, they became more involved in the guarantee of capital markets transactions. This line of business grew to become one of the bond insurers main lines of business. S&P reported in 2006 that guarantees on the public finance business had dropped from 81% of the aggregate business of the bond insurers to 61% in 2004, while asset backed securitizations and structured finance transactions (domestic and international) rose dramatically from 19% to 39%. n30

At least three of the major monoline bond insurers became heavily involved in the guarantee of securitizations of mortgage debt obligations, and more particularly the securitization of subprime mortgage debt obligations. MBIA, Ambac, and FGIC all became heavily involved in the guarantee of swaps, CDOs, and CDO-squareds involving subprime mortgages as the underlying collateral. As the majority of the guaranteed tranches were rated AAA by one or more of the rating agencies, the capital retention requirements were low and the lower premiums charged by the monolines reflected both the lower perceived risk and the lower capital adequacy requirements.

The first major indication of a problem occurred in October, 2007 when Merrill Lynch, one of the major investment bank purveyors of these securitized products, announced that it was taking \$8.4 billion in writedowns on its subprime mortgage securitized business. n31 At that time, analysts became more focused on the potential for losses in the billions.

In December, 2007, Fitch Ratings (Fitch), one of the major ratings agencies, lowered the ratings on over 2000 CDO transactions involving subprime mortgages--dropping the ratings by an average of 9.6 levels. Standard & Poors (S&P), another rating agency, reported during that period that bond insurers faced potential losses of approximately \$19.0 billion. n32 Fitch also required that each of the four major bond insurers raise an additional \$1.0 billion in capital in order to maintain their rating of AAA.

As the bond insurers reported their fourth quarter 2007 financial results, the major bond insurers reported significant losses. For example, MBIA reported a fourth quarter 2007 loss of \$2.33 billion on its guarantees of subprime related business. n33 At least one-third of that loss was reported to be a result of lower ratings of the subprime transactions guaranteed by MBIA, while the other two thirds related to increased defaults on the underlying collateral. n34

In late January and early February of 2008, Fitch downgraded FGIC and placed MBIA on negative watch. Fitch, despite MBIA's request that it withdraw its rating of MBIA, shortly thereafter reduced MBIA's ratings to AA. Moodys reduced FGIC's rating from Aaa to A3. S&P reported that the potential MBIA and Ambac downgrades could also lead to bank credit rating reductions. Moodys also reduced the credit rating of MBIA's major reinsurer, Channel Re, from Aaa to Aa3. In late February, 2008 S&P affirmed the AAA rating with a negative outlook for MBIA and Ambac. Both

MBIA and Ambac, however, reported that that they had not written any significant new business since November, 2007.

As discussed previously, the major benefit to insureds in the public finance business is the reduction in interest rate and the corresponding increase in attractiveness of the investment. The inability of the major bond insurers to write new business dramatically reduced the available capacity of bond insurance for public finance. This lack of capacity meant that some public finance transactions could not go forward, or could only proceed at a substantially increased cost. As a result, badly needed infrastructure or municipal development projects have been delayed or scrapped. Further, the likely result is that projects that have gone forward have done so at higher costs and caused the curtailment of other governmental services or projects.

The substantial losses that the bond insurers have incurred and the less stable nature of their credit ratings also have made them less attractive as credit support for other capital markets transactions. In conjunction with the losses suffered by the commercial banks as a result of the subprime crisis and the tightening of credit as a result, the reduced ability to transfer such debts to the capital markets due to lack of adequate credit support also has contributed to the tightening of credit.

PROPOSED CHANGES TO THE REGULATORY REGIME

The recent credit downgrades of certain major guaranty companies--and the resulting havoc this has wreaked on the municipal debt market--have prompted calls at the federal and state level for changes in the regulation of financial guaranty companies. Representative Paul Kanjorski, who serves as Chairman of the Subcommittee on Capital Markets, Insurance, and Government Sponsored Enterprises, is currently conducting an investigation into the issue. Recently, Treasury Secretary Paulson has added his voice to the calls for federal regulation when he expressed support for an optional federal charter for insurance companies. It is unclear whether the subprime crisis has added the necessary traction for the additional support necessary to overcome the substantial objection of the states to federal regulation.

On April 16, 2008, New York Superintendent Eric Dinallo on behalf of the National Association of Insurance Commissioners testified before Representative Kanjorski's committee and strongly asserted that regulation of insurance should remain with the states. As to state regulation of insurers who interact with the financial sector, Superintendent Dinallo suggested that Congress should go further and make clear that insurance regulators occupy a standing fully equal to that of the SEC, the Federal Reserve, the OCC and other federal regulators [and also to] clarify that state insurance regulators are functionally equivalent to insurance regulators in other nations for the purposes of international negotiations and dialogues. n35

As part of the Subcommittee's investigation, Representative Kanjorski requested the input of various insurance commissioners, including those of New York, Wisconsin and Maryland on the need for reform in the bond insurance market and the monoline insurers. The Commissioners pointed to three main areas of reform: (1) restrictions on lines of business from guaranteeing transactions that are too volatile or too complex to adequately evaluate; (2) decreased reliance on rating agencies and increased reliance on the independent evaluation of risk positions by the domiciliary insurance department; and (3) the potential to change the regulatory standard from a solvency standard to a sustainability of the business model standard.

Restrictions on Writing New Business. Several insurance commissioners have indicated that the new rules of the road going forward might include restrictions on writing new business. Superintendent Dinallo of New York suggested that it may be advisable to restrict [monolines] activities around risks that may be too volatile or lacking in transparency to evaluate accurately. n36 The Wisconsin Insurance Commissioner suggested that the ability of the monoline bond insurers to guarantee exposures other than municipal bond risks may also be limited in this process. n37

Indeed, at the public hearing on February 14, 2008, then-Governor Elliott Spitzer testified that New York was considering the possibility of splitting the public finance business from the capital markets guarantee business a good

business, bad business approach. Since that time several of the major bond insurers, MBIA, Ambac, and FGIC have indicated that they intended to split the public finance business away from other business into a separate company. Although Ambac has since appeared to move away from this structure, MBIA has indicated that it expects to split its business in the next five years. FGIC appears to be considering such a split on a more imminent basis. n38

Since no state except Pennsylvania currently has statutes that permit an insurance company to divide itself, any such split would have to be accomplished through a portfolio transfer and/or some kind of assumption reinsurance vehicle with an affiliated company. n39 While both of those vehicles would leave some potential liability with the ceding company, the reinsurance would provide an adequate credit against the liabilities that might actually be incurred, thus splitting the liabilities and capital requirements between the two companies. It is still too early to tell whether MBIA, FGIC or any other monoline will ultimately carry out such a split, or whether the potential was raised merely as leverage in their respective discussions with banks and potential investors.

Independent Evaluation of Monoline Risks. Superintendent Dinallo also suggested that the New York Insurance Department would no longer rely heavily on rating agencies to evaluate the risks underlying monoline policies, but rather, that the Department would invest in the necessary assets to evaluate risks independently. n40 If the bond insurers are permitted in the future to continue to invest in highly complex transactions like CDOs, then it is unclear how the various Insurance Departments will be any better positioned than the ratings agencies or the companies to assess the risks inherent in such transactions. If, however, the monolines are restricted to writing only public finance transactions and capital markets transactions that are fully transparent, then the need for independent evaluation by the Insurance Departments may not be as necessary. The current pronouncements by the NAIC and the Insurance Departments of New York, Wisconsin, and Maryland give the markets no further guidance as to how the interplay between these two variables will be resolved.

Solvency vs. Business Model Regulation. These new rules of the road may also include a change from reviewing the financials of the bond insurers from a solvency perspective to an evaluation of sustainability of business model. n41 The concept that a regulator will regulate more than solvency is a new and untried concept in insurance regulation.

Traditional notions of insurance regulation have focused on concepts of fair dealing with policyholders, maintaining competition in the marketplace and protecting policyholders when an insurance company became impaired or insolvent. There are no laws in place other than general laws that permit insurance commissioners to take action against insurers when they present a hazard or danger to policyholders. n42 As in the case of New York, those laws only permit the regulator to place the insurer under conservatorship or into liquidation or rehabilitation. Such an action would likely place a monoline in default of its obligations as credit support provider under the standard International Swaps and Derivatives Association (ISDA) documentation for capital markets transactions, which might require the monoline to post significant amounts of collateral, which could jeopardize the monolines financial condition.

Accordingly, it is likely that new statutes and regulations would have to be enacted or promulgated that would permit the insurance commissioners to take action to protect a monoline company in the event of some occurrence that would be considered damaging to its business model. In the case of the monolines, the critical event identified by the regulators is the potential for downgrade by the rating agencies and the effect on the public finance business. How the regulators would be able to regulate the ability of ratings agencies to analyze and rate monolines is at best murky. The regulations could require a specified notice period to the company and the Insurance Department to correct any deficiencies that would cause a ratings downgrade. However, the ratings companies did give the monolines some time to correct their perceived deficiencies, such that MBIA and Ambac were able to preserve their AAA ratings. The mere potential for downgrade created a significant lack of trust in the monolines and brought some of the companies, such as MBIA and Ambac to a near halt.

It is also very unclear how the business model to be sustained would be defined. Would it only apply to AAA companies, whose potential drop (even a small drop) in rating appeared to have the greatest effect on the public finance market, or would it have to be applied to all monolines? How would such regulations avoid being anticompetitive by

protecting existing competitors, whose business might be affected by price competition from new entries in the market. Such potential regulations create a myriad of questions that cannot be answered at this point until the regulators provide more direction as to their thought processes.

It does seem relatively clear that no changes will be forthcoming in the very near future. In his testimony before the House Subcommittee on behalf of the NAIC, Superintendent Dinallo asserted that change in the insurance market should be implemented gradually. Superintendent Dinallo stated:

Any change(s) enacted should provide sufficient time for implementation so that any economic outcomes can be viewed from an approaching distance rather than develop abruptly. Allowing a period of time to assess outcome development will allow the course of regulation to be changed in time to avoid outcomes that later prove to be intolerable or overly onerous. n43

CONCLUSION

The potential for change in the regulation of the monolines does not appear to be imminent. How that change will occur and what effects such changes may have on the monolines business is not yet known with any certainty. It does appear that some further restrictions will be placed on the types of capital markets transactions that monolines may be able to guaranty in the future. It is also likely that further participation in transactions involving CDO-squareds is likely to be banned, and that at least some requirements for minimal levels of transparency in capital markets transactions will be required.

It is unclear whether the bond insurers will split the public finance business from their existing and future capital markets transaction business in the near future. Given the lack of efficient means of achieving a complete cessation of liability for the ceding monoline under existing methods of portfolio transfers and assumption reinsurance, it is more likely that if such a split is contemplated, it will be accomplished over time by the creation of a new company to write new business, with old business runoff from the pre-existing monoline. It is probably also a safe bet that the monolines will continue to endure significant regulatory and market scrutiny. Whether and how such scrutiny will be institutionalized at the regulatory level is yet unclear.

ABOUT THE AUTHOR(S):

James S. Gkonos is Special Counsel in the Litigation Department and Vice-Chairman of the Insurance Practice Group in the Philadelphia office of Saul Ewing LLP. Mr. Gkonos practice includes advising clients regarding financial guarantees and the interaction between the insurance and insurance insolvency laws and capital markets transactions. Mr. Gkonos also regularly advises clients on reinsurance and the regulatory issues relating to reinsurance. Mr. Gkonos reinsurance experience includes handling the commutation of hundreds

of reinsurance agreements as well as the negotiation of insurance disputes and drafting reinsurance treaties.

As a member of the Litigation Department of Saul Ewing, Mr. Gkonos also concentrates his practice on complex civil litigation, primarily involving insurance and reinsurance matters. Mr. Gkonos has litigated reinsurance arbitrations, complex insurance litigation in state and federal courts and represented clients in appellate proceedings involving insurance related matters.

Mr. Gkonos was formerly a Vice President and Chief Counsel for a major U.S. surety where he supervised the legal department which handled numerous complex domestic and international transactional and litigation matters. Mr. Gkonos has also successfully managed international litigation in the United Kingdom, Japan, China, Argentina, Brazil, Finland and the Virgin Islands relating to failed ship building contracts, hotel construction contracts, power station construction contracts, design-build operate contracts, water purification contracts and counter guarantees. In addition, he has handled subpoenas from the Securities and Exchange Commission, various Senate and House committees, the Office of the New York Attorney General, the New York District Attorney and various insurance departments.

Mark C. Cawley, Special Counsel in Saul Ewings Litigation Department, represents insurance companies in litigation involving mergers and acquisitions, complex insurance coverage disputes, reinsurance disputes, and insurer bad faith.

He has particular experience representing insurers and other companies in class action lawsuits. He also has represented individuals and companies in the insurance industry involved in government investigations, particularly with respect to the ongoing investigations into the use of finite reinsurance.

Insurance Coverage for Global Warming Litigation

2008 Emerging Issues 273

Davis and Yassemedis on Insurance Coverage for Global Warming Litigation

By James Davis and Andrea Yassemedis

May 6, 2008

SUMMARY: In its 2007 decision *Massachusetts v. EPA*, the Supreme Court legally recognized global warming as the most pressing environmental challenge of our time and held that certain plaintiffs may have standing to sue for damages due to global warming. As the number of suits alleging damages due to climate change threatens to explode, businesses facing the possibility of massive damage awards and high defense costs will seek coverage under their insurance policies. The purpose of this commentary, written by James M. Davis and Andrea Yassemedis of Reed Smith LLP, is to discuss the key legal issues facing policyholders and their insurers in confronting claims related to global warming under traditional insurance products and to look at ways the insurance industry is developing and innovating in response to a predicted flood of global warming litigation. Overall, the commentary concludes that policyholders should receive coverage for most claims related to global warming, but that the insurance industry must continue to generate new products and programs that help policyholders mitigate their exposure and cover claims that could seriously threaten a company's long-term sustainability.

ARTICLE: Insurance Coverage for Global Warming Litigation

By James M. Davis and Andrea Yassemedis

INTRODUCTION

In February 2008, Kivalina, a tiny Inuit village on a barrier reef on the Chukchi Sea in Alaska, announced that it had to move to avoid falling into the sea. Rising global temperatures had melted the sea ice, villagers said, and left them unprotected from storms and waves that were rapidly eroding swaths of the coastline. Kivalina's lawyers declared that 20 U.S. oil, coal, and utility companies who emitted large volumes of greenhouse gases should be footing their relocation bill of as much as \$400 million. n1

The startling nature of Kivalina's lawsuit gives a glimpse into the massive potential consequences--both

environmental and economic--of global warming. What makes the Kivalina suit particularly worrisome, to both corporate policyholders and their insurers, is that unlike previous suits this one may not be dismissed on the grounds that global warming is a political question. n2 In addition to state and federal public nuisance claims like those dismissed in other cases as political questions, the Kivalina lawsuit also seeks recovery under theories of civil conspiracy and concert of action. These latter claims are based on allegations of a decades-long and continuing concerted misinformation campaign about the effects of global warming that comes straight from the successful tobacco litigation playbook.

Of course the Kivalina case exists largely due to the 2007 decision in *Massachusetts v. EPA*, wherein the Supreme Court legally recognized the danger of global warming, declaring that

A well-documented rise in global temperatures has coincided with a significant increase in the concentration of carbon dioxide in the atmosphere. Respected scientists believe that the two trends are related. For when carbon dioxide is released into the atmosphere, it acts like the ceiling of a greenhouse, trapping solar energy and retarding the escape of reflected heat. It is therefore a species--the most important species--of greenhouse gas. n3

The Court further held that certain potential plaintiffs had standing to bring lawsuits resulting from damages due to global warming.

Now that the Supreme Court has called global warming the most pressing environmental challenge of our time, n4 the number of suits alleging damages due to climate change is likely to explode. n5 The impact of such suits upon the defendant businesses is clear, but global warming will also have a correspondingly profound effect on the insurance industry that shields people and businesses from risk. Businesses may seek coverage under general or specialized liability policies. If profits fall and disgruntled shareholders seek redress from the corporate officers whom they allege played a role in authorizing the emission of greenhouse gases, those officers may also turn to their insurers. Both businesses and private individuals whose property is destroyed by cataclysmic weather may turn to their casualty insurers. Health insurers may face more and more claims due to heat- and pollution-related injuries. The insurance industry's response to these claims will have an enormous social and financial impact worldwide.

The purpose of this commentary is to discuss the key legal issues facing policyholders and their insurers in confronting claims related to global warming under traditional insurance products and to look at ways the insurance industry is developing and innovating in response to a predicted flood of global warming litigation. Overall, the commentary concludes that policyholders should receive coverage for most claims related to global warming, but that the insurance industry must continue to develop new products that help policyholders mitigate their exposure and cover claims that could seriously threaten a company's long-term sustainability.

GENERAL LIABILITY COVERAGE FOR CLAIMS RELATED TO GLOBAL WARMING

Companies that emit greenhouse gases may face suit from private litigants and state attorneys general who allege damages due to global warming. Private class actions may allege a host of health problems linked to climate change, from heat stress (which caused the death of more than 35,000 upwards of the norm during the European Heat Wave of 2003) n6 to respiratory and coronary disease n7 and childhood asthma. n8 Other private plaintiffs may be homeowners, like the 14 individuals who filed a class action based on global warming against almost 150 oil and coal companies after they were denied coverage for property damage caused by Hurricane Katrina. n9 State attorneys general have already begun to bring suit for damages due to global warming. n10 They could follow the model adopted in the litigation against the tobacco industry in the 1990s n11 and band together to force a settlement from several industries for financial damages they have suffered and will continue to suffer due to global warming. n12 Even if courts dismissed such suits, they would arguably provide a tool by which states could bring public pressure to bear on the federal government to regulate greenhouse gases. n13

Several key issues will determine liability coverage for global warming liabilities. All standard-form general liability policies contain expected or intended and pollution exclusions that must be addressed. Courts interpreting occurrence policies will face a host of other issues, including whether global warming is an occurrence, how many occurrences are at issue in a particular global warming claim, and which of potentially decades of liability policies are triggered. Once the court has made these determinations, it must then decide how to allocate liability for greenhouse gas emissions among triggered policies.

INTERPRETING THE POLLUTION EXCLUSIONS

As one court noted, [r]arely has any issue spawned as many, and as variant in rationales and results, court decisions as has the pollution exclusion clause. n14 The confusing jumble of case law interpreting the pollution exclusion is the results of decades of contention between insurers and their policyholders. n15 Perhaps in part because the law remains unsettled, the pollution exclusion will undoubtedly be a key issue in the coverage battle for global warming claims.

The 1973 Pollution Exclusion. In 1973, the insurance industry responded to the growing number of environmental lawsuits by adopting a pollution exclusion that barred coverage for bodily injury or property damage arising out of the release of irritants, contaminants, or pollutants into the environment, except if the release was sudden and accidental. n16 While insurers represented the exclusion as nothing more than a clarification that intentional pollution was excluded, n17 they soon began denying coverage for most claims related to pollution. Early cases litigating coverage under policies containing the exclusion found many and varied grounds for siding with policyholders. Some courts held that the insurance companies were bound to their earlier representations that the exclusion did nothing more than clarify existing coverage. n18 Other courts found the exclusion ambiguous, and applied the doctrine of *contra preferentem* to interpret the ambiguity against the drafter. n19 Still others looked to the reasonable expectations doctrine, which requires a court to look to the policyholders reasonable expectations when interpreting policy terms--sometimes even when those terms are unambiguous. n20 Some recent decisions have held that the 1973 pollution exclusion unambiguously requires a calamitous one-time release of pollutants, n21 but policyholders have continued to argue successfully that the 1973 pollution exclusion is ambiguous on its face and that the ambiguity must be resolved in their favor to permit coverage for damages resulting from continuing environmental pollution. n22

Applying the 1973 exclusion to global warming will present some new interpretive problems. First of all, it is not certain whether greenhouse gases would be considered irritants, contaminants, or pollutants under the 1973 exclusion. CO₂ is not an irritant or contaminant, and it was not recognized as a pollutant prior to the Supreme Courts decision in *Massachusetts*. n23 Second, the same reasoning that prevented insurers from barring coverage for continuous environmental pollution should apply to global warming claims as well: insurers should be estopped from taking positions contrary to their early representations that the exclusion merely clarified coverage, and the ambiguities in the exclusion should be construed in favor of policyholders based upon the doctrine of *contra preferentem*. Given that companies purchased CGL policies to provide broad protection for their normal business activities, the doctrine of reasonable expectation should apply to cover claims from greenhouse gas emissions that Congress, the executive branch, and administrative agencies have all chosen not to regulate or to characterize as a pollutant. n24

The 1986 Pollution Exclusion. When Congress passed the 1980 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and imposed strict liability for hazardous waste cleanup and response costs, the insurance industry responded by adopting a new, broadened pollution exclusion--the 1986 absolute pollution exclusion--intended to eliminate coverage for liabilities incurred for prolonged release of pollutants. The 1986 exclusion denies coverage for bodily injury or property damage arising out of the actual, alleged or threatened discharge, dispersal, seepage, migration, release, or escape of pollutants. n25 Unsurprisingly, insurers and their policyholders continued to disagree about the coverage provided under the 1986 pollution exclusion. With varying success, insurers argued that the exclusion bars coverage for all toxic torts, and policyholders contended that the exclusion is limited to long-term environmental pollution. n26

The changes incorporated by the 1986 pollution exclusion should not prevent coverage for global warming

liabilities. First of all, liability resulting from emissions that contributed to global warming is vastly different from the CERCLA-type liability discharge the 1986 exclusion was meant to address. Global warming is a worldwide phenomenon, and the steps needed to mitigate and address its effects are completely unlike the local environmental cleanup mandated by CERCLA. n27 Second, the 1986 exclusion is *de facto* ambiguous--dozens of courts have interpreted it in different ways, n28 and documents produced by different insurance companies establish confusion within the industry itself over its meaning and application. n29 Given its ambiguity, the exclusion must be interpreted against the drafter, the insurance company, to provide the insurance coverage reasonably expected by the policyholder.

Applying the Expected or Intended Exclusion. Because insurance companies often deny coverage on the basis that the policyholder expected or intended the accident or occurrence, the interpretation of this exclusion will be a key issue in determining insurance coverage for global warming claims. The first question is whether the exclusion bars coverage only for expected or intended results (the majority rule) or whether it precludes coverage for any damages arising from an intentional act (the minority position). n30 In the context of global warming, a court applying the intended result rule would bar coverage only if it found the company actually intended to raise sea levels, melt snow pack, or cause other severe damage as a result of a worldwide increase in temperatures. A court applying the minority intended act rule, however, would bar coverage based on a company's mere intention to emit greenhouse gases during its regular operations. Because it would punish policyholders for intentions and acts that they, regulators, and insurance companies accepted as innocuous, application of the minority rule to global warming claims would be unreasonably harsh. Courts are far more likely to read the exclusion to apply only where a company expected or intended the damage that resulted from their greenhouse gas emissions.

The second question presented by the expected or intended provision is whether an objective or subjective standard should apply. n31 Under the subjective standard applied by the majority of courts, mere knowledge of pollutant emissions n32 or warnings regarding its dangers n33 does not establish intent to injure--coverage is denied only if the record shows specific evidence of subjective intent. n34 In contrast, the minority of courts that apply the objective standard deny coverage if the damage was reasonably foreseeable or natural and probable, or if injury could be inferred from the policyholders acts. n35 Insurance companies could not convincingly argue that damage due to global warming was reasonably foreseeable prior to its recent recognition by the scientific community and the U.S. legal establishment. n36 No matter which standard the courts apply, the expected and intended provision should not bar coverage for global warming claims.

DEFINING AND COUNTING OCCURRENCES

Courts adjudicating coverage for global warming claims under an occurrence policy n37 must answer several additional questions: whether global warming fits the definition of an occurrence and, if so, how many occurrences there have been.

The meaning of an occurrence is governed by the definition contained in the particular policy at issue. Before 1973, commercial general liability policies with standard-form language defined an occurrence as an accident, including injurious exposure to conditions, which results during the policy period in bodily injury or property damage. n38 The language including exposure to conditions clarifies that the policy covers gradual bodily injury and property damage. n39 Policies with post-1973 standard-form language define occurrence as an accident, including continuous or repeated exposure to conditions, which results in bodily injury neither expected nor intended from the standpoint of the insured. n40 Under either of these definitions, the potential for coverage is clear. Liability for corporate emissions of greenhouse gases would be based upon the continuous or repeated exposure of property or persons resulting from the

release to the atmosphere of greenhouse gases that very few people--and no governmental authority--even recognized as harmful until very recently. n41

Although long-term damage from emission of greenhouse gases plainly fits the policy definition of an occurrence, it is less certain how many occurrences any particular claim would involve. The number of occurrences is often a key issue in insurance litigation because it may determine the amount of coverage available to the insured. Generally, a finding of twice the occurrences means twice the available coverage--but the policyholder will generally pay for that increased coverage with one deductible per occurrence as well. Therefore, where the total losses are greater than a single policy limit, a policyholder cannot receive full indemnification unless the court finds multiple occurrences. On the other hand, where the total losses are less than a single policy limit, a policyholder will recover more if the court finds a single occurrence and thus the policyholder pays only one deductible. n42 Determining the number of occurrences may depend on the particular facts of each claim.

DETERMINING TRIGGER

Determining which policies can be reached to cover a particular claim is a question of trigger. Claims-made policies are simply triggered when a claim is made. Trigger of insurance policies, in contrast, is extraordinarily complicated because the occurrence may involve exposure to conditions over a long period of time or take place years before the injury. Although a continuous trigger is often the appropriate result in long-tail claims, courts have adopted several different trigger theories to address such situations:

- (1) Exposure trigger: Each policy in effect during the claimants course of exposure to the cause of the injury or damage is triggered;
- (2) Manifestation trigger: Each policy in effect when the injury is or should have been discovered is triggered;
- (3) Injury-in-fact trigger: Each policy in effect when there is actual injury or damage is triggered;
- (4) Continuous (or triple) trigger: Each policy in effect at any time from exposure to sickness (or latent damage) through manifestation is triggered. n43

Courts are likely to consider the theory of underlying liability imposed in determining which policies are triggered. If companies are held liable for their entire history of greenhouse gas emissions, courts could apply the exposure theory to trigger each policy in effect during that history. If companies are held liable for emissions only after CO₂ levels reached a level capable of causing significant environmental damage, courts could apply the manifestation theory to trigger policies in effect after measurable damage to the environment due to greenhouse gases was discoverable or a continuous trigger at that point in time. Courts could also apply the injury-in-fact theory and trigger policies in effect at the moment real environmental injury occurs--such as a significant number of hurricanes or rise in sea levels due to melting ice. n44

ALLOCATING LIABILITY

After a court determines which policies must respond to a global warming claim, it must decide how to allocate liability among them. n45 Most CGL policies, whether claims-made or occurrence, promise to pay all sums that the policyholder becomes legally obligated to pay as damages. n46 The majority of courts focus on the all sums language to hold each insurer jointly and severally liable for the policyholders entire loss, up to the limits of that insurers coverage. n47 Thereafter, insurers may seek contribution from each other based upon any other insurance clauses in the policies. n48 A minority of courts allocate liability among triggered insurers on a pro rata basis. Pro rata apportionment

can mean that each insurer pays an equal share of liability, that each insurer pays a share of liability in proportion to its time on the risk, or that each insurer pays a share of liability in proportion to the amount of risk it assumed overall. n49 If the loss is so large that it exceeds a single layer of coverage, courts may require a policyholder to horizontally exhaust by exhausting its insurance at the same level of coverage before seeking indemnity from the next layer of coverage. n50

The long-tail nature of global warming liability will give the courts allocation method profound financial significance for both policyholders and insurance companies. A pro rata approach could place policyholders in financial jeopardy by requiring the policyholder to contribute for years of self-insurance or pay multiple deductibles before reaching coverage. Companies may even be required to litigate with dozens of insurers and successfully recover payment from each before reaching the excess insurance for which they contracted. Pro rata allocation of global warming claims would also result in a windfall for insurance companies who had promised to pay all sums for which their policyholders became liable. The majority all sums approach better assures policyholders of recovering for their losses because each insurer will be jointly and severally liable. This would protect corporate policyholders who might otherwise be bankrupted while still allowing a tapped insurer to distribute the loss by seeking contribution from other triggered insurers. n51

D&O INSURANCE COVERAGE FOR CLAIMS REGARDING GLOBAL WARMING

As corporations come under increasing fire for global warming, they may face shareholder or class action suits alleging that management did not properly disclose potential liability in annual reports, registration statements, or SEC filings. n52 Shareholders are already disgruntled by a perceived lack of action: between 1994 and 2002, 62 shareholder resolutions on global warming issues were filed in the SEC, n53 and in 2005, the Investor Network on Climate Risk convened a summit in New York where leading European and U.S. institutional investors managing over \$3 trillion in assets called on U.S. companies, Wall Street firms, and the SEC to require comprehensive disclosures about the financial risks of climate change. n54

Decisions made by directors and officers--including those regarding greenhouse gas emissions--are protected under the business judgment rule and will not be second-guessed as long as they are made in good faith and do not involve gross negligence or a gross abuse of discretion. n55 Nonetheless, the potential costs of defending these complex suits and paying any settlements or judgments stemming from them are enormous, n56 and corporations will therefore turn to their Directors and Officers (D & O) insurance for coverage. The Coverage A provision of a D & O policy pledges that the insurer will indemnify the directors and officers for all Loss--amounts paid in judgment or settlement and defense costs--that they become legally obligated to pay due to a Wrongful Act committed in their professional capacity. n57 Wrongful Acts generally include negligent acts, errors or omissions, and breach of a director or officers professional duties of care, diligence, and candor. n58 In shareholder suits alleging improper disclosure of potential liability for greenhouse gas emissions, breach of the duty of candor would be the Wrongful Act most at issue.

Like general liability policies, most D & O insurance contains broad exclusions for environmental pollution claims. n59 While the pollution exclusions in D & O policies do not follow a standard form, n60 they typically exclude coverage for claims arising out of actual, alleged or threatened discharge, release, escape, seepage, migration, dispersal or disposal of Pollutants into or on real or personal property, water or the atmosphere. n61 Unlike CGL policies, D & O policies do not contain any sudden and accidental language, and they typically provide shareholder derivative suit carve outs that provide an exception to the broad wording of the pollution exclusion. n62 Cases involving shareholder suits for improper disclosures have therefore focused on the degree of causal connection required by the D & O pollution exclusions arising out of language. The decisions have not been entirely consistent, n63 but some general principles have emerged. It appears that the pollution exclusion may bar coverage for wrongful acts that actively concealed known polluting activity, but that omissions or declines in stock prices that are incidental to environmental issues will be covered. n64 Where a corporate policyholder has failed to disclose potential environmental liability, coverage may depend on how well the policyholder articulates intervening causes between the emissions and the claim. n65

Assuming corporate directors and officers have appropriately accounted for the potential affects of climate change in their deliberations, they should not be liable for business losses resulting from global warming. n66 Insurers, however, are well aware of the enormous risk of large damage awards and high defense costs, and may seek to rescind policies based upon alleged misrepresentations in the application. n67 Policyholders should meet an insurers attempts to rescind a policy by insisting that the insurer meet strict state law requirements, which typically require immediate notice and a material misrepresentation by the policyholder in its completion of a sufficiently clear coverage application. n68 Corporate policyholders should also keep in mind that their D & O policies contain carve-outs that will provide coverage for shareholder derivative suits. There may be ambiguity as to whether greenhouse gases are excluded pollutants under the particular terms of a D & O policy, and directors and officers thus would reasonably have expected coverage for climate change damages. n69

FIRST PARTY INSURANCE CLAIMS REGARDING GLOBAL WARMING

Insurance companies are not just concerned, however, about an impending spike in liability coverage claims. Perhaps even more troublesome is the possibility that global warming could cause an enormous surge in worldwide property damage and business interruption. Thus, global warming could cause a wide swath of insurance policies to be triggered with increasing frequency. Among them: policies covering damage to property, crops, and livestock; business interruption and supply-chain distribution insurance; and a range of health- and life-insurance products. n70 An uptick in claims also means significant collateral costs, including increased litigation expenses. n71

Many industries may suffer firsthand, tangible consequences of global warming. For example, industries that count on natural resources as raw materials--including forestry, fisheries, ranching, and agriculture--undoubtedly will be significantly affected by climate change. n72 So, too, will industries that require certain natural resources as a pre-requisite for their service--including tourism and the ski industry. n73 Commodity and manufacturing industries could experience gaps in their supply chain. n74 In general, almost any kind of business might experience severe business interruption as a result of a catastrophic weather event credited to global warming. n75 A significant percentage of the commercial losses from Hurricane Katrina, for example, were due to business interruptions. n76

LOOKING FORWARD

How Policyholders Should Respond to Global Warming Exposure. Insurance companies often turn to a defense called the known loss doctrine, which applies when a policyholder knows of a threat of economic loss and that loss is certain to occur. n77 The purpose of the known loss doctrine is to preserve the fundamental tenet that only contingent losses may be insured. n78 Some courts apply this defense to bar coverage only if the policyholders liability for damage was already determined when it contracted for the insurance; n79 others permit the defense if the policyholder knew or had reason to know of a substantial probability that it would suffer the loss. n80

The question of when major emitters of greenhouse gases had reason to know of a substantial probability that it would suffer losses due to global warming was made much more difficult by the Supreme Courts ruling in *Massachusetts*. Recent suits filed against oil, coal, and motor vehicle companies arguably put many companies on notice that they too could become targets of global warming litigation. n81 While these arguments are only viable regarding policies issued post-*Massachusetts*, companies that produce large volumes of greenhouse gases should now be taking steps to protect themselves from liability for future emissions, whether through improved efficiency or through carbon-trading programs.

How Insurers Are Responding to Global Warming Exposure. Global warming has the potential to dwarf the risks presented by asbestos and environmental claims. While many casualty insurers have responded by altering their underwriting processes and developing new green products, liability insurers have been slow to respond. A few specialized environmental policies now include exclusions for greenhouse gas emissions, n82 but existing general

liability products neither explicitly provide nor explicitly exclude coverage for losses due to global warming. As of yet, most liability insurers have not altered their underwriting processes to address this increased exposure, n83 and few new liability products have been developed.

Casualty Insurer Response. Some casualty insurers have taken a proactive approach to limiting climate change liability by encouraging engineering improvements in properties they insure. For example, to reduce exposure to hurricanes, MetLife and Allstate provide incentives to customers for wind-proofing their homes, and Allstate and State Farm have pushed for safer building codes in high-risk areas. n84 A number of other property insurers have lobbied the public sector to improve land-use planning and reduce losses. n85 Casualty insurers concerned about global warming exposure have also been introducing new products intended to reduce carbon emissions. As environmentally friendly building practices become increasingly popular, insurers have responded with new products to encourage green and energy-saving building practices. n86 Firemans Funds GreenGuard coverage, for example, is designed to encourage green construction and rebuilding with green technologies after a property is damaged in a covered loss. n87 Some insurers, like Firemans Fund, perceive green building as a way to lower their risk for future losses. n88 AIG, Allianz, Aon, Travelers, and Chubb likewise have formed practice groups specifically dedicated to developing insurance products for green business operations and clean energy. n89

Liability Insurer Response. D & O insurers have been particularly active in considering their potential exposure to global warming liability. For example, Swiss Re began considering climate change risks when evaluating D & O policies as long ago as 2002, and has participated in recent work of the Intergovernmental Panel on Climate Change. n90 Swiss Re also recently began requiring any policy applicant to disclose the companys emissions of greenhouse gases and whether it was responding to any potential threats related to global warming. n91 Although Swiss Re has reportedly discussed climate risk in its underwriting negotiations, n92 it has yet to turn away any applicant or develop any exclusion based on climate risk alone. n93

Another example of insurer concern is Marsh, an insurance broker that collaborated with Yale University and Ceres to launch the Sustainable Governance Forum on Climate Risk in September 2007. n94 In order to inform corporate boards about climate change liability, the Forum raised questions about whether and how a company has allocated responsibility for managing risks related to climate change; whether there is a committee of independent board members addressing climate change issues; whether and how a company quantifies and discloses its emissions profile; and how the company has planned for future regulatory scenarios. n95

Many companies have begun to reduce their greenhouse gas emissions, whether voluntarily or in response to obligations under the European Union Emissions Trading System. n96 Carbon-offset programs, modeled on the Kyoto Protocols Clean Development Mechanism (CDM), allow companies to invest in projects that reduce emissions as an alternative to expensive emissions reductions. As many companies employ carbon-offset projects in order to meet emissions-reduction targets, insurers have stepped in with carbon credit insurance products to aid companies in managing the risks of carbon trading. n97 Swiss Re, Munich Re, and AIG have each developed insurance products for Kyoto Protocol-related risks and carbon credit transactions. n98 In addition to developing these new products, insurance companies have worked with their business policyholders to assess their risks and reduce carbon emissions. n99 For example, Aon worked with the BG group to assess the effect of climate change on their assets and operations and inform them of opportunities presented by carbon trading and alternative fuel use. n100 HSB Solomon, an AIG company, likewise markets a program to identify ways to reduce carbon emissions through carbon trading.

As more and more lawsuits are brought against major emitters of greenhouse gases, the insurance industry will undoubtedly rewrite future policies to include additional broad exclusions explicitly directed to global warming, and it may create specialized liability products that address global warming. n101 What those policies will look like remains to be seen.

CONCLUSION

As the Kivalina villagers lawsuit shows, climate change is an increasingly important insurance issue. After the Supreme Court's ruling in *Massachusetts*--that carbon dioxide was a pollutant, and that potential plaintiffs had standing to raise global warming claims--companies that emit greenhouse gases could face enormous exposure to potential nuisance liability, defense costs, and now claims of conspiracy. Although policyholders are likely to receive coverage for the defense and payment of many claims related to global warming under existing policies, companies with potential liability should carefully examine their insurance strategy in order to reduce their exposure in the future and look to emerging insurance products to mitigate their risk of legal liability for global warming.

n37 There are two major types of CGL policies: claims-made and occurrence. The difference lies in what must happen before an insurer faces liability. Under a claims-made policy, the policyholder must give notice or tender a claim during the policy period to receive indemnification. Therefore, policyholders with claims-made liability policies are likely limited to indemnification from a single policy. In contrast, an insurer faces liability under an occurrence policy when an occurrence--which may take place at any time--causes damage during the policy period. Occurrence policies may therefore provide decades of coverage for long-tail liabilities.

n45 Some insurance companies argue that a policyholder facing long-tail liability can recover only up to the limits of one policy and cannot stack multiple policies to cover its loss. However, under most CGL policies, one occurrence may be a continuous or repeated exposure that spans decades and triggers multiple policies, and the insurers duty depends only on whether an occurrence causing bodily injury or property damage took place during that policy period. Morrison Mahoney LLP on Hartford Underwriters Ins. Co. v. Foundation Health Services, Inc.: Fifth Circuit Puts a New Wrinkle in Choice of Law Issues Concerning Right to Independent Counsel

By Michael F. Aylward

May 6, 2008

SUMMARY: Few issues have proved as expensive or vexing to insurers over the years as whether and when policyholders may retain their own defense counsel due to claimed conflicts of interest on the part of their insurers. An issue that has received little attention is the extent to which the right to independent counsel may reflect choice of law considerations.

ARTICLE: Few issues have proved as expensive or vexing to insurers over the years as whether and when policyholders may retain their own defense counsel due to claimed conflicts of interest on the part of their insurers. An issue that has received relatively little attention up to this point, however, is the extent to which the right to independent counsel may reflect choice of law considerations other than those that might ordinarily be assumed to govern the interpretation of the insurance contract itself.

In a recent opinion, the Fifth Circuit has now suggested that the right to independent counsel may arise from the law of the state in which the underlying action that the insurer is defending under a reservation of rights is pending, even if the insurers right to a defense pursuant to the policy is subject to the law of the jurisdiction where the policy was issued or the insured was headquartered.

Hartford Underwriters Ins. Co. v. Found. Health Servs., 2008 U.S. App. LEXIS 7621 (5th Cir. Miss. Apr. 9, 2008) arose out of fourteen different lawsuits that various Mississippi residents brought against Magnolia Health Care, Inc. which operates four nursing homes in Mississippi. Magnolia is a Mississippi corporation but maintains its corporate offices in Louisiana. At the time of the events in question, Magnolia was a subsidiary of Lunch, Inc. (later Foundation Health Services, Inc.), a Louisiana non-profit corporation that through its subsidiaries owns and operates health care facilities and nursing homes throughout the Southeast.

Magnolia tendered the defense of the 14 nursing home suits to Hartford, which had issued liability insurance policies to Lunch in 1997 and 1998. It was undisputed that Lunch, and not Magnolia, had applied for and procured the policies and that the policies were delivered to Lunch in Louisiana, where Lunch paid the policy premiums. Nevertheless, each of the four Magnolia nursing homes in Mississippi was listed on a schedule in the Hartford policies.

Upon receipt of these claims, Hartford issued a reservation of rights but agreed to engage counsel to provide a defense to Magnolia. It is unclear from the factual record recited in the various opinions in this case whether the insured rejected this defense or merely engaged lawyers of its own choosing to serve as shadow counsel. In any event, at the conclusion of the litigation, Magnolia demanded that Hartford reimburse it for fees incurred by independent counsel. After Hartford refused, the parties filed competing actions against each other with Hartford suing in federal court in Louisiana in October 2004 and Magnolia and Foundation bringing suit in state court in Mississippi a week earlier. After Hartford was able to remove its insureds action in Mississippi to federal court, the insured was able to persuade the federal district court in Louisiana to transfer its case to Mississippi so that the cases went forward in the U.S. District Court for the Northern District of Mississippi before Judge W. Allen Pepper.

The crucial question presented by this case was whether the law of Mississippi or Louisiana should control with respect to the question of whether a policyholder is entitled to independent counsel. Mississippi has recognized a right to independent counsel where an insurers reservation of rights creates a conflict of interest. In *Moeller v. American Guarantee & Liability Ins. Co.*,ⁿ¹ a Mississippi Supreme Court had ruled ten years earlier that:

When defending under a reservation of rights . . . a special obligation is placed upon the insurance carrier . . . Not only must the insured be given the opportunity to select his own counsel to defend the claim, the carrier must also pay the legal fees reasonably incurred in the defense.ⁿ²

Whereas Mississippi thus recognizes a policyholders right to independent counsel where its insurer has a conflict of interest, the District Court determined that Louisiana had yet to recognize such a right.ⁿ³ As a result, since a clear conflict existed between the law of Louisiana and Mississippi, the federal district court was forced to choose which law would control as regards the insureds claimed right to be reimbursed for its counsel fees.

Applying Mississippis choice of law rules, which are based upon the *Restatement (Second) of Conflict of Laws*, Judge Pepper concluded that Mississippi had the most significant relationship to the controversy. The District Court emphasized comments in Section 193 of the *Restatement* whereby policies that insure risks located in multiple states may be interpreted with the law of each such state insofar as it is the principal location of the insured risk. In this case, the District Court focused on the fact that Magnolia was an insured under the policies, only operated nursing homes in Mississippi and that Hartford had charged a premium for the risks associated with those Mississippi nursing homes and thus clearly contemplated the possible application of Mississippi law to claims arising out of insured locations in Mississippi. Applying Mississippis center of gravity test, Judge Pepper concluded that Mississippi law would apply. The court observed, moreover, that the present absence of Louisiana law in no way suggested that Louisiana would not ultimately reach the same conclusion as the courts in Mississippi (and many other states) had already reached confirming a policyholders right to independent counsel where a conflict of interest exists between it and its insurer.

Hartford appealed this ruling to the U.S. Court of Appeals for the Fifth Circuit, which affirmed Judge Peppers holding on April 9, 2008. In *Hartford Underwriters Ins. Co. v. Found. Health Servs.*, 2008 U.S. App. LEXIS 7621 (5th Cir. Miss. Apr. 9, 2008), the Court of Appeals affirmed the District Courts adoption of Mississippi law. The Court of Appeals disagreed with Judge Pepper concerning the application of Section 193, however. The Fifth Circuit noted that it had ruled in the past that Section 193 did not require that the law of a separate insured location be applied separately with respect to risks arising out of that location.ⁿ⁴ Unlike the federal district court, the Fifth Circuit found little significance in the fact that the policy in question insured risks in several different states. Accordingly, The location of the insured risk has less significance and Section 193 does not compel us to apply Mississippi law.

Instead, the court focused on the various considerations set forth in Section 188 of the *Restatement* including (a) the place of contracting; (b) the place of negotiation of the contract; (c) the place of performance; (d) the location of the subject matter of the contract; and (d) the domicile, residence, nationality, place of incorporation and place of business of the parties. Furthermore, the court emphasized the fact that these considerations need not be taken into account with

respect to the contract as a whole but could be determined to determine the law applicable to a specific issue, in this case, the right to independent counsel.

Weighing these various Section 188 considerations, the Fifth Circuit pointed out that the policies had been contracted for in Louisiana. However, while recognizing that other courts had declared that the place of contracting and place of negotiation might be paramount in disputes involving contract interpretation, the court observed that this case was different from the typical dispute involving the meaning of an insurance policy as the true issue was not one of contract interpretation wherein the court might have to ascertain the parties intent from the language of the contract and, at times, the circumstances surrounding formation of the contract, but rather involved the nature of the defense that was actually provided in Mississippi. As a result, it found that considerations with respect to the place of performance were of much greater consequence than those concerning the negotiation for and issuance of the actual policy.

As have other courts, n5 the court declared that the place of performance was not where policy premiums were paid or received but rather where the underlying claims triggering coverage were defended by appointed defense counsel. In particular, the court focused on Mississippis interest in ensuring that lawyers trying cases in its courts do not have conflicts of interest. The court declared that:

The duty to provide independent counsel when defending under a reservation of rights in Mississippi state courts is directly related to Mississippis interest in preventing conflicts of interest in litigation. Because this issue is closely connected to Mississippi courts and policy, the fact that the underlying suits were litigated in Mississippi courts is not really fortuitous, it is an important factor in determining which state has the most substantial relationship to the dispute.

The Fifth Circuit declined to find that Mississippis interest with respect to this concern was outweighed by the needs of the inter-state system, the relevant policies of the forum state or the expectations of the parties. As to the latter consideration, the court found that Magnolia would have been justified in expecting that Mississippi law would determine whether it was entitled to independent counsel in suits brought against it in Mississippi state court and that Hartford had no reason to expect otherwise given the fact that it had insured Magnolias nursing homes in Mississippi and might reasonably have anticipated the possibility that it would be obliged to defend Magnolia in Mississippi in tort claims arising out of those operations.

In conclusion, the Fifth Circuit declared that applying Section 188 of the *Restatement*, the most important consideration in this case was Hartfords performance of its obligations under the contract, which had taken place in Mississippi. Because the insureds right to independent counsel pursuant to the Mississippi Supreme Courts holding in *Moeller* that implicated Mississippi policy interests, the Fifth Circuit found that applying Mississippi law to this dispute was consistent with the needs of the inter-state system and in accordance with the reasonable expectations of the parties. The court left open the issue of whether any subsequent contractual disputes concerning the meaning of the policy itself might be subject to the law of Louisiana or some other state.

In the only other case in which such questions have been considered recently, a federal district court reached an opposite conclusion in *PhotoMedex, Inc. v. St. Paul Fire & Marine Ins. Co.*, 2008 U.S. Dist. LEXIS 8526 (E.D. Pa. Feb. 6, 2008), holding instead that the home state of the insured controlled both substantive issues of contract interpretation and issues pertaining to the scope of the insurers duties vis a vis independent counsel.

The issue in *PhotoMedex* was whether the law of Pennsylvania or California should govern concerning a CGL insurers claimed obligation to indemnify a Pennsylvania policyholder for a malicious prosecution award and the extent to which the fees charged by independent counsel should be determined in accordance with California or Pennsylvania law. PhotoMedex was a Delaware corporation with a principal place of business in Pennsylvania that operated throughout the United States. Nevertheless, despite St. Pauls argument that California law should apply in view of the fact that the underlying malicious prosecution claims arose entirely out of business operations conducted by the insured in California, Judge Yohn was persuaded that Pennsylvania law should apply based upon a *Restatement* analysis.

As had the Fifth Circuit in *Hartford Underwriters*, Judge Yohn was not persuaded that Section 193 compelled the application of California law merely because the claims involved a separate location, finding that this was not the principal location of the insured risk. Rather, as had the Fifth Circuit, the Pennsylvania District Court focused on the consideration set forth in Section 188. In *PhotoMedex*, however, Judge Yohn concluded that Pennsylvania had the most substantial contacts with and strongest governmental interest in the policy's coverage of defense and indemnity, focusing on the needs and interests of the home state of the insured being defended in contrast to the Fifth Circuit's focus on the concerns of Mississippi that lawyers litigating in its courts not have conflicts of interest.

These new opinions highlight the complexity and sophistication of choice of law determinations. Although most courts and litigants have presumed over the years that one law should apply with respect to all contract or related issues, courts in the past have sometimes taken into account the law of different states with respect to individual issues. In particular, there is a significant body of case law in which courts have declined to permit coverage for punitive damages focusing on the law of the jurisdiction where the damages are awarded even if the policy as a whole is subject to the law of another state where it was issued or the insured is domiciled. n6

The true mystery presented by *Foundation* is, in some respects, why the case arose at all. Even when an insurer defends under a reservation of rights, its obligation is only to engage one set of lawyers. As courts have recognized, the insurer is under no separate obligation to pay for a second set of lawyers. n7 This is not to say that the insured could not have refused to accept defense counsel appointed by its insurer had a true conflict of interest existed. In such circumstances, however, the insurer's obligation is to pay for one set of lawyers or the other, not both.

[Return to Text](#)

n1 . 707 So.2d 1062 (Miss. 1996)

n2 . *Id.* at 1069.

n3 . The court's declaration in this regard is puzzling as the author's own research has identified several cases in which Louisiana courts have, in fact, apparently recognized a right to independent counsel. See *Dugas Pest Control of Baton Rouge v. Mutual Fire, Marine & Inland Ins. Co.*, 504 So.2d at 1054 (La. App. 1987)(if the insurer chooses to represent the insured but deny coverage, it must employ separate counsel); *T.H.E. Insurance Co. v. Larsen Intermodal Services, Inc.*, 242 F.3d at 675 (5th Cir. 2001) and *Belanger v. Gabriel Chemicals, Inc.*, 787 So.2d at 565 (La. Ct. App. 2001). Although it does not appear that any Louisiana authority was cited in the district court, the Fifth Circuit's opinion took note of the fact that Louisiana has considered this issue in a related context but has taken a somewhat narrower view than Mississippi courts and has only required independent counsel where a concurrent conflict of interest is shown to exist as in cases such as *Belanger* and *National Union Ins. Co. of Pittsburgh v. Circle, Inc.*, 915 F.2d at 991 (5th Cir. 1990)(holding that insured is entitled to use its own lawyers where appointed defense counsel by the insurer is demonstrably inadequate to the task). Nevertheless, it appears that the Fifth Circuit found that these differences were sufficient to warrant a conclusion that a conflict of law existed and required its resolution.

n4 . *Sandefur Oil & Gas, Inc. v. AIG Oil Rig of Texas, Inc.*, 846 F.2d at 324 (5th Cir. 1988)(declaring that Section 193 is inapplicable here because the insured risk was located in various states and thus there was no single principal location of the risks insured).

n5 . A place of performance analysis also led a California Court of Appeal to apply California law to issues involving an insurers claimed duty to defend notwithstanding the fact that the insured was located in Texas and the policy at issue had been issued in Texas. However, the Court of Appeals ruling in *Frontier Oil Corp. v. RLI Ins. Co.*, B189158 (Cal. App. August 6, 2007) did not arise out of the *Restatement* or common law principles governing choice of laws but rather reflected specific language in Californias choice of law statute (Section 1646), which requires that the interpretation of contracts should be governed in accordance with the place of performance. In that case, the Court of Appeal ruled that the place of performance was the location of the lawsuit where the insured was being asked to carry out its contractual obligations by providing a defense and thus applied California law, not that of Texas.

n6 . *See Stonewall Surplus Lines Ins. Co. v. Johnson Controls, Inc.*, 14 Cal. App.4th 637, 17 Cal. Rptr.2d 713 (1993)(availability of coverage for punitive damages depends on the substantive law of the jurisdiction in which the damages are awarded).

n7 . *Herbert A. Sullivan v. Utica Mutual Ins. Co.*, 439 Mass. 837, 788 N.E.2d 522 (2003)(where insured acquiesced in carriers selection of counsel, it may not later demand that the insurer also pay for shadow counsel that it hired to augment the defense being provided by appointed defense counsel). *Accord Driggs Corp. v. Pennsylvania Manufacturers Association Ins. Co.*, 181 F.3d 87 (4th Cir. 1999)(full text available at 1999 U.S. App. LEXIS 9182).

ABOUT THE AUTHOR(S):

Michael F. Aylward is a senior partner in the Boston office of Morrison Mahoney LLP where he chairs the firms complex insurance claims resolution group. For nearly 25 years, Mr. Aylward has represented insurers and reinsurers in coverage disputes around the country concerning the application of liability insurance policies to commercial claims involving intellectual property disputes, environmental and mass tort claims and construction defect litigation. He is a frequent lecturer on insurance issues and has authored portions of various insurance treatises and is a frequent contributor to scholarly publications on legal issues. Mr. Aylward has taken a leadership role in legal organizations including the Defense Research Institute (Board of Directors (2000-2003); past Chair, Insurance Law Committee and Law Institute (2004-2006); and the International Association of Defense Counsel (Chair, Reinsurance, Excess and Surplus Lines Committee, Board of Editors, Defense Counsel Journal). He presently serves as the chair of the Reinsurance, Excess and Surplus Lines Committee of the Federation of Defense and Corporate Counsel.

Morrison Mahoney LLP on CIPS v. Agricultural Ins. Co: Illinois Court Expands the Obligations of Excess Insurers

By John T. Harding

April 30, 2008

SUMMARY: Although the obligations of a primary insurer to an excess insurer have been the subject of extensive litigation over the past two decades, far less often explored has been the issue of what duties are owed by one excess insurer to another excess insurer in a complex, multi-layered program. In a recent decision the Appellate Court of Illinois arrived at an answer that significantly expands the nature of the excess relationship.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: It has been widely recognized in jurisdictions throughout the United States that a primary insurer can be liable to an excess insurer for a negligent or bad faith refusal to settle a claim within policy limits, thereby exposing the excess insurer to liability for a judgment that could have been avoided. Courts have found such a cause of action to exist either under the theory of equitable subrogation, in which the excess insurer steps into the shoes of the policyholder to maintain a claim for a breach of the duties owed by the primary insurer to its policyholder or, in a handful of jurisdictions, based upon the theory that the primary insurer owes a direct duty to the excess insurer notwithstanding the absence of a contract between them. *See e.g., Ranger Ins. Co. v. Travelers Indem. Co.*, 389 So.2d 272, 275 (Fla. 1980)(under the doctrine of equitable subrogation, the duty owed an excess insurer is identical to that owed the insured); *First State Ins. Co. v. Utica Mut. Ins. Co.*, 870 F.Supp. 1168, 1175 (D. Mass. 1994)(relationship between primary and excess insurer is one of subrogation where the excess insurer steps into the insured's shoes); *Attorneys Liab. Protection Socy v. Reliance Ins. Co.*, 117 F.Supp.2d 1114, 1124 (D. Kan. 2000)(primary insurer owes a duty of good faith to excess insurer); *General Accident Ins. Co. v. New York Marine and Gen. Ins. Co.*, 727 A.2d 1050, 1054 (N.J. Super. App. Div. 1999)(the duty of good faith running from a primary insurer to an excess insurer exists as a result of the distinctive and unique relationship between the two carriers).

Far less often explored, however, has been the issue of what duties (if any) are owed among the excess insurers in a multi-layered program. For example, at what point does an excess insurer potentially have an obligation to effect the settlement of a claim? Does an excess insurer owe any duties or obligations to insurers that are excess to the layer of coverage it agreed to provide? Can the excess insurer ever be deemed the equivalent of a primary insurer with respect to the duty to settle a claim within the limits of its policy if the coverage beneath it has been exhausted?

In a recent decision that could have significant implications for the relationship between layers of excess insurers with respect to the settlement of claims, the Appellate Court of Illinois (5th District) ruled on January 14, 2008 that a

lower tier insurer owes a duty to insurers in layers above it to engage in meaningful settlement negotiations and that the underlying insurer may still owe that duty even if it could not settle the matter within its available policy limits. *Central Illinois Public Service Co. v. Agricultural Insurance Co., et al.*, 378 Ill.App.3d 728, 880 N.E.2d 1172 (Ill. App. Ct., 5th Dist. 2008)(CIPS). While the ruling did not dispose of the case but instead remanded the matter for trial, the CIPS decision represents a significant expansion of the duties that can be owed by one excess insurer to another in a complex, multi-tiered program.

The CIPS case arose out of an accident at one of the insureds power plants when an elevator dropped 15 floors, injuring 23 boilermakers who were working at the plant. CIPS had several layers of insurance, including primary coverage of \$5 million with Seaboard Surety; a first-layer excess of \$10 million purchased from Steadfast; a second-layer excess insurer (Great American) which provided \$15 million of coverage; and a third layer (American International Specialty Lines AISLIC) which provided the final \$25 million of coverage.

A partial settlement was reached with a group of 10 plaintiffs, which exhausted the coverage available from Seaboard and Steadfast. CIPS then requested that Great American and AISLIC agree to fund a \$29 million settlement with the remaining plaintiffs on the condition that the ultimate responsibility for the settlement would be decided in an allocation trial between CIPS and a co-defendant, Dover Elevator Company (Dover). Both Great American and AISLIC agreed to this procedure while reserving all of their rights. In the allocation trial, a jury found that CIPS was liable for 95% of the settlement. While the trial court reduced this figure slightly on motion, at the end of the day Great American remained responsible for its policy limit of \$15 million, with \$10.325 million being allocated to AISLIC.

CIPS then filed a complaint for a declaratory judgment against the insurers. AISLIC filed a counterclaim against Great American alleging that it had acted negligently and in bad faith, including by ignoring demands by AISLIC to enter into good-faith settlement negotiations with the underlying plaintiffs or to tender its policy limits so that AISLIC could undertake such negotiations. The heart of the claim asserted by AISLIC was that the case could have been settled for far less than the \$49 million that was ultimately paid and/or that a more favorable settlement with Dover could have been reached than the 95%/5% allocation determined by the jury at trial. AISLIC alleged claims against Great American under both theories of direct duty and equitable subrogation. The trial judge dismissed AISLIC's counterclaim, ruling as a matter of law that the assertion that Great American breached a duty to tender its policy limits to AISLIC so that AISLIC could try to settle for less than AISLIC ultimately had to pay after trial is beyond a logical extension of existing law.

On appeal, the Fifth District reversed the dismissal of the counterclaim, however, holding that the claims asserted by AISLIC were legally cognizable and should not have been summarily dismissed at the pleadings stage. The court defined the relevant inquiry as two-fold: *first*, whether an underlying excess insurer can be liable to a higher layer insurer; and *second*, whether the trial court correctly held that any such duty can only arise if there was an opportunity for the lower layer excess insurer to settle the claim within the limits of its own policy, as would typically be the standard applied in a more conventional primary/excess dispute. The court acknowledged that in deciding these issues no Illinois appellate court had directly addressed the question of what duties one excess insurer owes to another excess insurer, although at least one federal case had touched upon the question. *Liberty Mutual Ins. Co. v. American Home Insurance Co.*, 348 F.Supp.2d 940 (N.D. Ill. 2004)(holding that underlying excess insurer could not be liable to higher layer insurer since it lacked substantial control over the litigation).

The Fifth District declined to rule, however, that the decision in *Liberty Mutual* foreclosed the inquiry or controlled the outcome of the case before it. As the court noted:

The difficulty with *Liberty Mutual Insurance Co.* is the assumption that an excess insurer could not have control over litigation to the extent that its actions would not affect another insurer. . . . [and] fails to address the circumstance that complex litigation often progresses through stages in which the involvement, or control, [that] an insurer has in the litigation and settlement changes.

880 N.E.2d at 1179. On the facts before it, the Fifth District concluded that AISLIC had alleged that Great American in fact had the right to control the settlement negotiations, including based upon the provisions of its policies. AISLIC further alleged that once the carriers underlying the Great American policy had actually settled and exhausted their limits, the control of the settlement process passed up to Great American's layer. While Great American denied that it had actual control over the litigation and settlement process, the court noted that the issue of control in this case, however, is a factual question and a dismissal at the early pleading stage of the case was inappropriate. Thus, in the circumstances of this case, the court ruled that AISLIC had a viable claim that Great American was no differently situated than a primary insurer with a duty to defend, notwithstanding its technical status as a second-layer excess insurer. Accordingly, AISLIC could pursue a claim that Great American had negligently or in bad faith failed to negotiate a settlement that would have protected the upper layer insurer, applying the standard of care recognized by the Illinois Supreme Court in *Schal Bovis, Inc. v. Casualty Insurance Co.*, 314 Ill. App. 3d 562, 732 N.E.2d 1082 (1999).

The court went on to hold that the trial court had erred in ruling that Great American only owed a duty to AISLIC if there was proof that Great American could have settled the claim within the limits of its policy. Instead, the court ruled that a multi-factor approach must be employed in determining whether the excess insurer acted in bad faith, including a refusal to negotiate; advice of defense counsel; the prospect of an adverse verdict and the potential for damages in excess of the policy limits. See *O'Neill v. Gallant Ins. Co.*, 329 Ill.App.3d 1166, 769 N.E.2d 100 (2002). The court therefore held that AISLIC was *not* required to prove that the case could have been settled within the limits of the Great American policy for Great American to be potentially liable, noting: Assuming the truth of the allegations of the counterclaim, Great American was not asked to perform an impossible task. The factual question raised by the counterclaim is whether Great American *failed to participate in settlement negotiations in a meaningful way* so that AISLIC was exposed to greater damages. 880 N.E.2d at 1181 (emphasis added). Since this was a quintessential issue of fact, dismissal at the pleadings stage was held to be unwarranted.

The extent to which the *CIPS* decision will have a significant impact on the relationship among excess insurers in a complex program remains to be seen since, at this stage of the case, all that has been established is that AISLIC can pursue its rather novel theory against Great American. However, the decision clearly cautions against an approach to claims handling in which an insurer can feel safe in assuming that because it is relatively high in the food chain it has no obligations to other insurers in a complex program. Insofar as *CIPS* suggests that duties of good faith will be imposed in the factual circumstances of a claim scenario without regard to the technicality of whether an insurer is primary, umbrella, first layer excess or seventh layer excess, it serves as a cautionary note which requires an insurer to give serious consideration to how its decisions regarding settlement may be found in retrospect to have impacted another insurer. Particularly troubling is the courts apparent (and vague) imposition of a standard which requires the excess insurer to engage in meaningful settlement negotiations even when there is no demand within the limits of its layer or face the consequences of paying an excess judgment--a standard that is not routinely imposed on a primary insurer. In this regard, *CIPS* suggests that in certain situations the upper layer excess insurers obligations may be greater than those of the primary insurer who agreed to provide first dollar coverage and a defense.

ABOUT THE AUTHOR(S):

John T. Harding is a senior partner in the Boston office of Morrison Mahoney LLP, where he is a member of the firm's complex insurance and reinsurance practice groups. Mr. Harding has twenty years of experience in handling complex insurance, reinsurance and bad faith disputes in trial and appellate courts throughout the United States and in international arbitrations. These cases have involved diverse areas including products liability, pharmaceutical products and other medical devices, asbestos, environmental, employment discrimination and other matters. John has extensive experience serving as trial counsel in these cases, including a recent multi-week trial of an environmental coverage case in the United States District Court for the District of Rhode Island that resulted in a defense verdict. John is the author of numerous articles and a frequent speaker at DRI, Mealeys and other conferences as well as being the Publications Chair for the DRI's Insurance Law Committee. John has been named a Massachusetts Superlawyer in the field of insurance coverage for the past several years. John is a graduate of Duke University and Harvard Law School.

Cope on Qualcomm, Inc. v. Certain Underwriters at Lloyds London: No Drop Down Required, Insureds Expectation of Coverage Defeated by Clear Policy Language to the Contrary

By Carrie Cope

April 30, 2008

SUMMARY: Insurance specialist attorney Carrie E. Cope, a partner in the Chicago office of Tressler, Soderstrom, Maloney & Priess, LLP, discusses *Qualcomm, Inc. v. Certain Underwriters at Lloyds London*, a decision in which the court upheld the language of the excess insurers exhaustion clause as being clear and explicit interpreted in its ordinary and popular sense notwithstanding the insureds asserted expectation of coverage.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: While commercial insurers have been struggling mightily with the effects of a soft insurance market which include coping with reduced premiums and expanded coverage, excess insurers have been winning coverage battles on at least one front. Joining similar decisions in other jurisdictions, a California court has upheld an excess insurers decision not to drop down in the face of a settlement below its policy's limits and assertions that the insureds expectation of coverage should carry the day even notwithstanding the failure to exhaust the underlying limit.

In *Qualcomm, Inc. v. Certain Underwriters at Lloyds London*, 161 Cal. App. 4th 184, 2008 Cal. App. LEXIS 394, Qualcomm employees filed a class action lawsuit related to their alleged right to unvested company stock options. Other Qualcomm employees subsequently sued seeking accelerated vesting of stock options. Qualcomm tendered the claims to its directors and officers liability (D&O) insurers, which included National Union Fire Insurance Company of Pittsburgh, P.A. (National) and Lloyds. National had issued a primary D&O insurance policy to Qualcomm with a \$20 million limit of liability. The Lloyds policy afforded excess D&O coverage. In April 2004, Qualcomm engaged in mediation with both insurers on the issue of coverage for the litigation. Qualcomm ultimately settled with National on terms which released National from all future obligations under its policy in exchange for total payments of \$16 million. Qualcomm subsequently sued Lloyds for more than \$9 million in unreimbursed defenses and settlement expenses it had incurred in the litigation. Lloyds demurred on grounds that Qualcomms complaint failed to state sufficient facts constituting a cause of action and denied coverage on the basis that its policy's coverage had not been triggered since 1) the underlying insurance had not been exhausted by the payment of loss and 2) Qualcomm had violated the policy's maintenance clause. The trial court sustained Lloyds demurrer without leave to amend on grounds that the excess policy had not been triggered and entered judgment in Lloyds favor.

On appeal, Qualcomm challenged Lloyds policy language requiring the underlying policy's exhaustion through

payment of loss. The pivotal language stated: [Lloyds] shall be liable only after the insurers under each of the Underlying Policies [the National policy] have paid or been held liable to pay the full amount of the Underlying Limit of Liability. The policy also contained language stating: This Policy does not provide coverage for any loss not covered by the [National policy] except and to the extent that such loss is not paid under the [National policy] solely by reason of the reduction or exhaustion of the Underlying Limit of Liability through payments of loss thereunder.

Qualcomm disputed the clarity of the relevant excess policy language arguing that it was susceptible to two or more reasonable constructions in view of the Lloyds policy as a whole. Qualcomm also argued that it had a reasonable expectation of coverage in light of other decisions holding that primary insurance had been exhausted even where the primary insurer settled for less than the policy's limit. However, the court strongly rejected Qualcomms arguments, stating: [a]n expectation of coverage cannot *create* an ambiguity; it is merely an interpretive tool used to resolve an ambiguity once it is found to exist. The court also declared: An insured's subjective expectations do not dictate our analysis of the presence of ambiguity in the excess policy language. The court further explained that under the facts of the case, Qualcomms objectively reasonable expectations were that the primary coverage would need to be exhausted before the excess policy could attach.

In addition, the court noted that California case law has consistently protected an excess insurer's position when its obligations are set in clear phases. The court determined that the meaning of the wording of the policy's exhaustion clause, which made Lloyds liable *only after* the underlying insurers *have paid or been held liable to pay the full amount* of the underlying limit of liability, was clear and explicitly interpreted in its ordinary and popular sense. The court also rejected Qualcomms assertion that the purpose of the policy language requiring payment was actually intended to convey the manner of exhaustion rather than exhaustion itself given the plain meaning of the provision. In fact, in making its decision, the court relied on *Comerica Inc. v. Zurich American Ins. Co.*, 498 F. Supp. 2d 1019, 2007 U.S. Dist. LEXIS 54517 (Jul. 27, 2007), a case much analyzed in the D&O industry in recent months due, in part, to the nature of the underlying settlement, in which similar policy language was construed. Quoting *Comerica*, the Qualcomm court noted: Payments by the insured to fill the gap, settlements that extinguish liability up to the primary insurer's limits, and agreements to give the excess insurer credit against a judgment or settlement up to the primary insurer's liability limit are not the same as actual payment.

The court did not review Qualcomms argument that Lloyds had misconstrued the maintenance clause which Qualcomm argued was ambiguous and should be construed in its favor to increase coverage, given that Qualcomm had not complied with it although it was an express condition precedent to coverage. Moreover, the court rejected Qualcomms public policy argument (that promoting settlement and risk-spreading by insurance should compel Lloyds to pay even if the obligation contravenes the policy language), concluding that clear and unambiguous policy language should not be rewritten for any purpose.

Although the decision is a very good one for insurers in more than one respect, as it recognizes the clarity of specific excess wording and confirms the validity of such wording over the sometimes amorphous, often iconic and difficult to rebut concept of public policy, it is worth considering the underlying factual situation that created the coverage gap in the first place. As it is not uncommon for insureds and their insurers to seek a compromise in the midst of a coverage dispute, it is not unusual for such coverage gaps to occur and both parties may be better off addressing this issue on the front end of the insurance transaction in an effort to avoid the need for litigation at a later date.

Shidlofsky on UPLC v. American Home Assurance: The Use of Staff Counsel by Insurers in Texas

By Lee H. Shidlofsky

April 29, 2008

SUMMARY: An oft-raised question across the country is the legality of an insurers use of salaried staff attorneys to represent its insured when then insurers interests diverge from the clients. The Supreme Court of Texas held that an insurer can employ staff counsel to represent insureds as long as the insureds interest and that of the insurers are aligned in defeating the claim against the insured and no conflict of interest exists between the two.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Cite as: Shidlofsky, Lee H. *UPLC v. American Home Assurance: The Use of Staff Counsel by Insurers in Texas*. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

Framing the Issue Regarding the Use of Staff Counsel. An oft-raised question across the country is the legality of an insurers use of salaried staff attorneys to represent its insured when then insurers interests diverge from the clients. The Supreme Court of Texas has recently framed the question in *Unauthorized Practice of Law Comm. v. Am. Home Assur. Co.*, 2008 Tex. LEXIS 233 (Tex. 2008).

Liability insurers often obligate themselves to defend their insureds, and give them complete and exclusive control of that defense. In doing so, insurers utilize any one of three types of attorneys: (1) private law firms, whose work is paid for and overseen by the insurer; (2) captive law firms, whose lawyers are not employees of the insurer, but who have no other clients than the insurer; and (3) in-house, salaried corporate staff attorneys. According to the Court, each such attorney has the same obligation: Give the insured the same, unqualified loyalty that it would have if the insured had hired him or her directly and also protect the interests of the insured if the insurers instructions would otherwise compromise those interests. [*Id.* (citing *Employers Cas. Co. v. Tilley*, 496 S.W.2d 552, 558 (Tex. 1973); *State Farm Mut. Auto. Ins. Co. v. Traver*, 980 S.W.2d 625, 627 (Tex. 1998))]. Regarding the use of staff attorneys, a battle exists. Insurers contend that staff attorneys are more efficient, which lowers the insurers costs and--more importantly--the insureds premiums. On the other hand, opponents believe that when an insurer controls its staff attorneys as an employer would control any employee, the attorney-client relationship is at risk from the standpoint of the insured.

Getting to Unauthorized Practice of Law Committee. In 1998, Texas Unauthorized Practice of Law Committee filed a lawsuit against Allstate Insurance Company (Allstate), in which it alleged that Allstates use of salaried, corporate attorneys to defend its insureds in liability claims was conducted in violation of Texas law because it constituted the

unauthorized practice of law. [*Id.* (citing *UPLC v. Collins*, No. 98-8269 (298th Dist. Ct., Dallas County, Tex. 1998)).] Shortly after that suit was filed, Nationwide Mutual Insurance Company filed a declaratory judgment action against the Committee, seeking a declaration that Texas law did not prohibit the use of staff attorneys. In addition, Nationwide claims that, even if it did, such Texas law was in violation of the federal constitution. [*Id.* (citing *Nationwide Mut. Ins. Co. v. UPLC*, 283 F.3d 650, 651 (5th Cir. 2002)).] There, the Fifth Circuit analyzed Texas law and held:

[W]e believe that the law is fairly susceptible to a reading that would permit Nationwide to employ staff counsel on behalf of its insureds. While the Texas courts certainly may decide that Nationwides staff attorneys are engaged in the unauthorized practice of law, we believe that the law is uncertain enough on this issue that we should abstain from ruling on its federal constitutionality.

[*Id.* (quoting *Nationwide*, 283 F.3d at 655).] Thereafter, Nationwide re-filed its action in Texas state court and received a favorable ruling from the trial court, which was affirmed on appeal. The Committee, however, petitioned the Supreme Court of Texas to review the matter while the instant case was pending.

The instant case started as a result of a letter sent by the Committee to Katherine D. Woodruff, a salaried corporate attorney for American Home Assurance Co. (American Home), who was running her practice at Woodruff & Associates. The Committee informed Woodruff that she and her firm were being investigated for the unauthorized practice of law. In response to that letter, American Home, Woodruff & Associates and Travelers Indemnity Co. (Travelers) brought the instant lawsuit in which it sought a declaration that the use of staff attorneys did not constitute the unauthorized practice of law under Texas law. Eventually, after Woodruff and her firm were dismissed from the case, American Home, Travelers and the Committee cross-moved for summary judgment. At the lower court, the insurers' motions were rejected and the Committee's was granted. That court declared that each insurer's use . . . of staff counsel who are employees . . . to defend insureds (third parties) in Texas is the unauthorized practice of law. Judgment, however, was suspended by that court pending appeal. During that time, the parties agreed to the following policy:

If in the course of representing a party insured by [American Home and Travelers] any staff counsel employed in Texas by [such insurer, respectively] seeks advice about a potential conflict of interest between the insured and the insurance company, or any other question of professional ethics, such staff counsel will first consult with the Texas-licensed lawyer who is head of the staff counsel office, and thereafter, if the staff counsel's concerns are not resolved, counsel with an outside Texas firm, designated by [such insurer, respectively], on such question.

[*Id.*] On appeal to the Eleventh District Court of Appeals in Eastland, the lower court was reversed and the Committee's position was rejected in its entirety. [*Id.* (citing *UPLC v. Am. Home Assurance Co.*, 121 S.W.3d 831, 833, 846 (Tex. App.--Eastland 2003, pet. granted)).] In sum, the appellate court held that: (1) staff counsel do not face conflicts any different than counsel from an outside firm; (2) using staff attorneys does not violate any of Texas Disciplinary Rules of Professional Conduct; (3) the Supreme Court of Texas statement that an insurance defense lawyer owes unqualified loyalty to an insured was dicta and thus an insurer can be a client, as long as no conflict exists; (4) the use of staff counsel does not violate the Texas Business Corporation Act or the Texas Government Code, because if that is unauthorized, then so is the use of outside counsel; (5) Section 38.123 of the Texas Penal Code should not be read so as to prohibit the use of staff attorneys anymore than it should be read to prohibit insurance defense in general; and finally (6) only two states--North Carolina and Kentucky--actually prohibit the use of staff attorneys while many more do not. [*Id.* at *3*4 (citing *UPLC v. Am. Home*, 121 S.W.3d at 836*45).]

On appeal to the Court, two issues were presented:

(1) Does an insurer's use of staff attorneys to defend liability claims against its insured as contractually required constitute the unauthorized practice of law?

(2) If not, must the staff attorneys' affiliation with the insurer be fully disclosed to the insured?

Addressing these issues, the Court rejected the request by amicus curiae to determine what the practice of law

should be, and focused instead on what it is under current law. [*Id.*]

Texas High Court Finds that an Insurer Utilizing Staff Counsel is Not Practicing Law without Authorization. The parties in the instant lawsuit agreed that under Texas law a corporation cannot practice law and that the Supreme Court of Texas has inherent power to regulate that practice. In particular, the Court adopts rules governing admission to the practice of law, permitting only individuals meeting particular criteria that opportunity. Entities, including insurance companies, are excluded. [*Id.* at *5.]

Nevertheless, the Committee, argued that a more general provision of the Texas Business Corporation Act applies and it prohibits a corporation from transacting business in the state:

If any one or more of its purposes . . . is to engage in any activity which cannot lawfully be engaged in without first obtaining a license under the authority of the laws of this State . . . and such a license cannot lawfully be granted to a corporation.

[*Id.* (citing Tex. Bus. Corp. Code art. 2.01(B)(2)).] In rejecting that argument, the appellate court found that an insurance company is not organized for the purpose of practicing law. The Supreme Court, though, disagreed with that finding because the provision is not so flexible as it applies whenever any one of a corporations purposes is to engage in a licensed activity. Additionally, the Court rejected the lower courts finding that an insurers defense of its insured is collateral to its purpose of indemnifying its insured. The Court said that one is no less important than another. Regardless, the Court did not believe that it needed to construe that provision of the code because the Courts rules governing admission to practice law are sufficient to exclude insurance companies from engaging in *that* activity. [*Id.* (emphasis in original).]

The Court acknowledged that an insurance company is not engaging in the practice of law when it uses salaried corporate counsel to represent its own interests and such was not disputed by the parties to the case. The Court explained that such practice has long been held acceptable under Texas law because insurers clearly can hire in-house counsel to provide advice regarding the legal affairs of the company, as well as appear in court on the insurers behalf. The Courts view is congruent with that of the State Bar of Texas Committee on Interpretation of the Canons of Ethics, which has never found anything wrong with a corporation using in-house counsel. Quite simply, a corporation does not engage in practicing law by employing an attorney to represent itself, together with the common interests of other employers and affiliates. [*Id.* at *6.]

Moreover, the use of private counsel to defend an insured, does not equate to the practice of law. This is true because the practice of law involves the rendering of legal services *for someone else*. Only when a corporation employs attorneys to represent the unrelated interests of others does it engage in the practice of law. [*Id.* at *7.]

Thus, the more important question was whether an insurer is practicing law when it uses staff counsel to defend its insureds? On that issue, the Court stated that American Homes and Travelers reliance upon its earlier decision in *Utilities Insurance Co. v. Montgomery*, 138 S.W.2d 1062 (Tex. 1940), was clearly misplaced because that case involved the obtaining of non-waiver agreements, which are used to protect the insurers interest and not the insureds. n1 [*Id.* (citing *Montgomery*, 138 S.W.2d at 1064).] In any event, according to the Court, its opinion in *Montgomery* said nothing about the insurers interest in defending its insureds, and, more importantly, the Court never discussed whether the counsel at issue were staff counsel as opposed to private practice attorneys.

Instead, the Court said, its decision four years later in *Hexter Title & Abstract Co. v. Grievance Committee*, 179 S.W.2d 946 (Tex. 1944), was more on point. In that case, the Supreme Court of Texas held that Hexter was engaged in the unauthorized practice of law. The Court said that the corporations purpose was to accept applications for insurance and either insure the title as it was found or refuse to insure it. If defects in title existed, the Court explained, then the applicant had to cure them and the title insurer had no business meddling in the affairs of curing the title. As such, the Court concluded in *Hexter* that the company was engaged in the unauthorized practice of law, but emphasized that

Hexter was permitted to employ salaried attorneys to advise it on the state of title for its own uses; it was prohibited only from providing the same service to customers and prospective customers for their use. [*Id.* at *9.]

The Court gleaned three important factors from that case, which it felt should be considered in determining the issue before it in *UPLC*:

- (1) Is the company's interest being served by the rendition of legal services existing or only prospective?
- (2) Does the company have a direct, substantial financial interest in the matter for which it provides legal services?
- (3) Is the company's interest aligned with that of the person to whom the company is providing legal services?

With regard to the first factor, the Court found that an insurer renders legal services only to fulfill its contractual obligations under its insurance contract and does not use those services as a means of attracting business. Turning to the second factor, the Court acknowledged that the insurer clearly has a direct, substantial financial interest when it uses staff attorneys to defend its insured because if it manages to defeat the claim, then it does not have to pay the claim. Finally, as for the third factor—which the Court said was most important—the Court found that, in the vast majority of cases, the interests of an insurer and its insured are aligned, and such interests differ only when a coverage question exists or the rendering of the legal defense causes consequences that affect them differently. [*Id.*] Applying those factors, the Court said:

[W]e conclude that a liability insurer does not engage in the practice of law by providing staff attorneys to defend claims against insureds, provided that the insurer's interests and the insured's interests in the defense in the particular case at bar are congruent. In such cases, a staff attorney's representation of the insured and insurer is indistinguishable.

[*Id.* at *10.]

The Court then turned its attention to the issues raised by the Committee and several amici briefs regarding the conflicts present between an insured and an insurer, which can be exacerbated because of the employment relationship between the insurer and its staff counsel. More particularly, those parties argued that business pressure and loyalty in the employment relationship can endanger staff counsel's ability to exercise the independent judgment to which the insured is entitled. Further, they argue, the insurer's profit motive . . . is fundamentally inconsistent with the provision of independent legal services through staff attorneys. [*Id.*]

Importantly, the Court took note of the fact that those parties raising the issues did not bring forth any evidence of injury to a private or public interest as a result of staff counsel representing an insured. Considering that staff counsel have been used across the nation for decades, this dearth of evidence was telling. The Court explained that staff counsel resolve conflicts just as other attorneys do, and, if unable to do so, then they can withdraw just as any other attorney can. Importantly, the Court explained that the coverage questions most often raised involve the extent of policy limits and whether the claim at issue falls within the type of coverage provided. Interestingly, the Court said that in cases the insurer can always issue a reservation of rights letter, and, it said, insurers seem to do so now as a prophylactic measure, even though they may have no actual intent to pursue the coverage questions raised therein. On the same note, the Court seemed to give short shrift to reservation of rights letters when it said that [a] reservation-of-rights letter ordinarily does not, by itself, create a conflict between the insured and the insurer because it only recognizes that a conflict might exist later. [*Id.*] Further, the Court would not state that staff attorneys can never represent an insured when a routine reservation of rights letter is issued.

The Court did not dispute that problems can arise when defense counsel obtains information that the insured would expect to be kept confidential and away from the eyes of the insurer. In such situations, however, the Court felt that withdrawal by the attorney may be the best option whether it is a salaried employee of the insurance or works in private practice. [*Id.* at *11.] The Court said that, under Texas law, such knowledge could estop an insurer from using it altogether because it might be imputed to all employees of the insurer whether or not they are attorneys. But, while

these risks are present, they do not necessarily destroy the congruence of the insurers and insureds interest. [*Id.*] Regarding unqualified loyalty, the Court acknowledged that it is possible that counsel may fail to render the loyalty required because of business pressure, but that no evidence exists that a staff attorney is more likely to fail in that regard than counsel from a private firm. Additionally, the Court refused to find that, in comparison to private counsel, a staff attorney is more likely to adhere to its employers litigation guidelines even though doing so might compromise an insureds interests.

The Court, in a brief discussion, also may have answered a long-standing debate in Texas as to whether it is a one-client or two-client state. [*Id.* at *12.] Specifically, the Committee argued that defense counsel can only represent an insured under Texas law and that staff attorneys, by their nature of being employed by the insurer, necessarily violate that rule because they cannot represent the insured as well. In response, the Court said: But we have never held that an insurance defense lawyer *cannot* represent both the insurer and the insured, only that the lawyer *must* represent the insured and protect his interests from compromise by the insurer. *Id.* Accordingly, at least where a congruence of interest exists between the insurer and its insured, the Court suggests that Texas is a two-client state.

In sum, the Court addressed the concerns of the Committee and of amici, but found that they should not be avoided at all cost, as some are satisfactorily resolved. Nevertheless, it admitted that the use of staff counsel comes with risks. *Id.* Accordingly, the Court held:

If an insurer's interest conflicts with an insured's, or the insurer acquires confidential information that it cannot be permitted to use against the insured, or an insurer attempts to compromise a staff attorney's independent, professional judgment, or in some other way the insurer's and insured's interests do not have the congruence they have in the many cases in which they are united in simple opposition to the claim, then the insurer cannot use a staff attorney to defend the claim without engaging in the practice of law. But there are a great many cases that can be defended by staff attorneys without conflict and to the benefit of mutual interests. The use of staff attorneys in those cases does not constitute the unauthorized practice of law.

[*Id.*] In addition, when staff attorneys are representing insureds and congruence of interests exists, those attorneys are obligated to inform the insured of the attorneys relationship with the insurer. [*Id.* at *14.]

Dissenting thoughts . . . Justice Johnson authored a lengthy dissent that was joined by Justice Green. [See *Id.* at *14*22.] There, Justices Johnson and Green agreed that no problem exists when an insurer represents its own interests in a lawsuit if it chooses to do so. Rather, the Justices concern arises because under Texas State Bar Act, an insurer simply cannot represent a client (i.e., its insured). They argued that when a staff attorney acts on behalf of the insured such acts are imputed to the insurer. Thus, when salaried corporate attorneys represent an insured, the *insurer* is representing the insured in violation of the Act, as the insurer is practicing law without a license. Accordingly, Justices Johnson and Green would have reversed the appellate courts decision.

Conclusion. By finding that the use of staff counsel does not constitute the unauthorized practice of law, the Supreme Court of Texas did not diverge from the findings of most states across the nation. In that respect, the Courts opinion is somewhat unremarkable. What raises eyebrows, though, is the Courts seemingly nonchalant opinion of reservation of rights letters. In particular, the Court said that such letters do not necessarily create a conflict of interest between the insurer and the insured and are used more often for prophylactic measures. While it certainly is true that every reservation of rights letter does not create a conflict of interest, the opinion raises an interesting question as to the continued viability of the independent counsel doctrine. In other words, while the Court recognizes the long-standing rule that any type of attorney owes unqualified loyalty to its client (i.e., the insured), it seems to minimize the conflict of interest raised by a reservation of rights. Moreover, the Courts opinion begs the question: When does a sufficient

conflict exist that warrants granting an insured the right to select independent counsel?

[Return to Text](#)

n1 . Notably, while the Court treats reservation of rights letters and non-waiver agreements as the same thing, such is not the case. Reservation of rights letters are unilateral in nature, whereas the non-waiver agreements are bilateral, requiring consent from the insured.

Vespole on Hager v. Gonsalves

2008 Emerging Issues 2246

Vespole on Hager v. Gonsalves: New Jersey Court Puts New Spin on Cooperation Clause

By Mark R. Vespole

April 29, 2008

SUMMARY: In *Hager v. Gonsalves*, 398 N.J Super. 529 (App. Div. 2008), decided on March 7, 2008, Judge Stephen Skillman, Presiding Judge of the Appellate Division, put a new spin on this old issue, which may give insurers a reason to re-think their coverage strategy when their insureds breach the cooperation clause of the policy.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: In *Hager v. Gonsalves*, 398 N.J Super. 529 (App. Div. 2008), Rutgers Casualty Insurance Company ("Rutgers") issued an automobile liability insurance policy with a \$50,000 limit to Chilito for his vehicle. The policy included a typical cooperation clause, which required those seeking coverage under the policy to "cooperate in the investigation, settlement or defense of any claim or suit". On October 18, 2002, Gonsalves, who was not a named or listed insured under Chilito's policy, was driving Chilito's insured vehicle while intoxicated and was involved in an accident with Hager, who was injured. According to the police report and two independent eyewitnesses, Gonsalves crossed into Hager's opposing lane of travel while attempting a left-hand turn without yielding, as a result of which the two vehicles collided. Gonsalves was issued multiple summonses for driving under the influence of alcohol, driving with a suspended license, reckless driving, etc. Gonsalves failed to appear in Municipal Court to answer the summonses, and a warrant was issued for her arrest. There was no question that the accident was caused exclusively by Gonsalves negligence, although there also may have been a potential dram shop claim if the intoxicated driver was served alcohol while visibly intoxicated by a tavern or social host. Rutgers first received notice of the accident from Hager's attorney more than five weeks after it had occurred.

Rutgers immediately sent a letter to its insured about the accident and reserved its right to disclaim coverage. Rutgers also made numerous, unsuccessful attempts to contact Chilito and Gonsalves by letter and phone over a period of several months. Having heard nothing from either its insured or the driver of the insured vehicle, on May 1, 2003, Rutgers disclaimed coverage for the October 18, 2002 accident based upon its insured's lack of cooperation with its investigation of the accident.

Subsequently, Hager filed a negligence lawsuit seeking damages for bodily injuries against Chilito and Gonsalves. Rutgers hired an attorney to defend Hager's lawsuit, but also filed a declaratory judgment lawsuit to disclaim coverage based upon breach of the cooperation clause. Finally, based upon Rutgers' disclaimer of coverage, Hager notified his own automobile insurer, High Point Insurance Company ("High Point") of a claim for Uninsured Motorists coverage.

High Point filed a third lawsuit against Chilito, Gonsalves and Rutgers seeking a declaration that Rutgers' policy provided coverage to Chilito and Gonsalves for the accident. The High Point and Hager lawsuit were consolidated.

On cross-motions for summary judgment by Rutgers and High Point, the trial court held that even though Gonsalves and Chilito unquestionably breached the cooperation clause of Rutgers' policy, Rutgers could not establish the likelihood of a successful defense of its insured, even if there had been cooperation. Relying upon established caselaw, the trial judge ruled that since Gonsalves was undeniably responsible for the underlying accident, Rutgers was not prejudiced by the breach of the cooperation clause. Additionally, the trial court rejected as speculative Rutgers' argument that the failure of the insured and the driver of the insured vehicle to cooperate precluded it from determining whether or not Gonsalves was a permissive user of the vehicle.

In reversing the trial court's decision, Judge Skillman held that because the driver of the insured vehicle, Gonsalves, would have been entitled to coverage under Rutgers' policy only if she were a permissive user at the time of the accident, Rutgers "irretrievably lost" the opportunity to determine whether Gonsalves had permission to use the insured vehicle. Judge Skillman found no basis for simply assuming permissive use, especially in light of the New Jersey Supreme Court's opinion in *French v. Hernandez*, 184 N.J. 144, 151 -- 157 (2005) (holding that there was no coverage under an employer's auto liability policy for an employee who did not have implied permission to take a vehicle from the employer's garage on a non-workday while intoxicated). Since Rutgers' lost opportunity was directly attributable to the failure of Gonsalves and Chilito to comply with the cooperation clause of the policy, Rutgers was entitled to disclaim coverage for the Hager accident. Judge Skillman's conclusion that Rutgers was entitled to disclaim coverage was based upon the "total lack of cooperation on the part of Gonsalves and Chilito", as well as the fact that the coverage claim was being pursued by another insurance company, rather than Rutgers' own insured or the injured party.

The Appellate Division did reject Rutgers' alternative argument on appeal that an insurer can disclaim coverage on account of its insured's breach of the cooperation clause of the policy, even if it did not suffer appreciable prejudice. In doing so, the Court relied upon its earlier decision in *Solvents Recovery Service of New England v. Midland Insurance Company*, 218 N. J. Super. 49, 55 (App. Div. 1987). The Court in *Solvents Recovery* applied to the cooperation clause the rationale of the New Jersey Supreme Court's seminal decision in *Cooper v. Government Employee Insurance Company*, 51 N.J. 86 (1968). *Cooper* required an insurer to demonstrate prejudice in order to disclaim coverage based upon an insured's breach of the notice provision of the policy. The Hager court found no reason to change or distinguish the analysis of *Solvents Recovery*.

The primary principle to be gleaned from *Hager* is that in proving "appreciable prejudice, insurers are not limited to "irretrievably lost" rights only impacting its ability to successfully defend its insured for the underlying occurrence. Instead, insurers now need to ascertain whether or not an insured's failure to cooperate has prejudiced their ability to make a coverage determination. An insurer's inability to render a coverage position as a basis for prejudice was not previously raised in any New Jersey cases interpreting either the cooperation or the notice provision of a liability insurance policy. Indeed, even if the underlying claim against the insured is indefensible, irrespective of insured's lack of cooperation, a breach of the cooperation clause could result in a disclaimer of coverage if it prevents the insurer from ascertaining facts necessary to render a coverage determination. Prior to *Hager*, if there was no basis for a meritorious defense of its insured to the underlying claim, insurers typically abandoned any hope of disclaiming coverage, notwithstanding the insured's utter lack of cooperation.

There are several caveats in *Hager*, however, which must be considered. First of all, as noted by Judge Skillman, the coverage claim against Rutgers was asserted by another insurer, the injured plaintiff's Uninsured Motorists insurer, and not the named insured. Of course, if the coverage case in *Hager* had been filed either by the named insured or the driver of the insured vehicle, the coverage issue of permissive use would likely be resolved. More importantly, however, in *Hager*, the coverage claim was not brought by the injured party, who in fact had another available source of recovery through his own Uninsured Motorists coverage.

The curious issue obviously left unresolved by *Hager* is whether or not an insurer will be permitted to establish

appreciable prejudice when an insured's total lack of cooperation prevents it from making a coverage determination, if that would result in the injured plaintiff having no source of recovery for damages. Two factors which may play a role in a Courts decision on this issue are the insurers good faith in attempting to locate and contact its insured and the legitimacy of the coverage issue. The Hager court clearly accepted Rutgers numerous letters and phone calls to the insured and the driver of the insured vehicle as a sufficient effort to obtain cooperation. The Court also found that the coverage issue relating to permissive use was genuine enough to warrant a disclaimer. Whether that will be enough if the injured plaintiff has no other source of recovery remains to be seen. However in anticipating a New Jersey court's response to this issue, insurers should spare no effort in attempting to obtain the cooperation of their insureds, and in articulating a sound basis for its inability to resolve a critical coverage issue.

ABOUT THE AUTHOR(S):

Mark R. Vespole is a partner in the Newark, New Jersey office of Tressler, Soderstrom, Maloney & Priess, a national litigation and insurance services law firm. Having tried and litigated numerous commercial, insurance and securities matters in state and federal courts and before arbitration panels throughout the country, Mr. Vespole's practice includes insurance coverage and defense litigation arising out of first-party and third-party property and casualty, life and health, professional liability, employment practices and directors and officers liability policies, as well as corporate raiding, and securities arbitrations and compliance matters for broker-dealers and registered representatives.

Mr. Vespole has written and lectured extensively for a variety of insurance and securities trade publications and organizations covering a broad range of topics, including insurance coverage, bad faith, corporate raiding in the securities and life insurance industries, noncompete agreements, replacements of life insurance policies, contestability clauses, product liability and mold litigation.

Mr. Vespole is an Honors graduate of the University of Notre Dame and Seton Hall Law School. He is admitted to practice in New Jersey, the United States Supreme Court, the United States Court of Appeals for the Second Circuit and Third Circuit, United States District Court of New Jersey and the United States District Court for the Southern, Eastern, Western and Northern Districts of New York. He has been certified by the New Jersey Supreme Court as a Civil Trial Attorney since 1988.

Time to Put a Stake Through the Heart of the Tort of Bad Faith

2008 Emerging Issues 268

Zalma on Time to Put a Stake Through the Heart of the Tort of Bad Faith

By Barry Zalma

April 28, 2008

SUMMARY: Insurance Coverage lawyer, consultant and expert witness, Barry Zalma, discusses the perceived need to discard the so-called tort of bad faith because it has outlived its usefulness and because it has created a greater abuse than it was designed to cure. Although the tort of bad faith was created with good intentions to cure a perceived wrong it has fallen victim to the law of unintended consequences. The author opines that it is time to put a stake in the heart of the tort of bad faith. He concludes that insureds who are wronged by their insurer should limit their recovery to contract damages.

PDF LINK: Enhanced Emerging Issues Commentary (\$)

ARTICLE: Time to Put a Stake Through the Heart of the Tort of Bad Faith

By Barry Zalma

When US law was first organized based on English Common law, when a contract was breached only contract damages could be recovered. Tort damages were limited to tortious conduct and the two categories of damages were mutually exclusive.

In a typical contract, one party has a duty to perform (construct a building, deliver goods, convey real estate, pay indemnity) and the other party has a duty to pay money. Breach by the performer may take the form of nonperformance, defective performance, or delay in performance. The primary purpose of damages for breach of a contract is to protect the promisee's expectation interest in the promisor's performance. Damages should put the plaintiff in as good a position as if the defendant had fully performed as required by the contract.

Insurance, like all parts of modern society, is subject to the deprivations of the law of unintended consequences. The Law can be defined as the understanding that actions of people -- and especially of government or the courts -- always have effects that are unanticipated or unintended. Insurance is controlled by the courts, through appellate decisions, and by governmental agencies through statute and regulation. Compliance with the appellate decisions,

statutes and regulations different in the various states is exceedingly difficult and expensive.

In the USA alone people pay to insurers more than 700 billion dollars in premiums and insurers pay out in claims as much or more than they take in. Profit margins are small because competition is fierce and a years profits can be lost to a single firestorm, earthquake, hurricane or a flood.

Neither the courts nor the governmental agencies seem to be aware that in a modern, capitalistic society, insurance is a necessity. No person would take the risk of starting a business, buying a home or driving a car without insurance. The risk of losing everything would be too great. By using insurance to spread the risk among all the costs of taking the risk to start a business, buying a home or driving a car becomes possible.

Insurance has existed since a group of Sumerian farmers, more than five thousand years ago, scratched an agreement on a clay tablet that if one of their number lost his crop to storms the others would pay part of their earnings to the one damaged. Over the eons insurance has become more sophisticated but makes essentially the same deal as did the ancient Sumerian farmers.

An insurer, whether an individual or a corporate entity, takes contributions (premiums) from many and holds the money to pay those few who lose their property from some calamity, like fire. The agreement, a written contract to pay indemnity to another in case a certain problem, calamity or damage occurs by accident, is called insurance.

In a modern industrial society almost everyone is involved in or with the business of insurance. Insurers provide protection against

- . the risk of becoming ill
- . losing a car in an accident
- . losing business due to fire
- . becoming disabled
- . losing their life
- . losing a home due to flood or earthquake
- . being sued for accidentally causing injury to another

The persons insured are dependent on their insurer to take the risk the insureds are not willing to take alone.

Insurance contracts can be simple or exceedingly complex, depending upon the risks taken by the insurer. Regardless, insurance is only a contract whose terms are agreed to by the parties to the contract. Over the last few centuries almost every word and phrase used in insurance contracts have been interpreted and applied by one court or another. Ambiguity in contract language became certain. However, the average person saw the insurance contract as incomprehensible and impossible to understand. Ostensibly to protect the public Insurance Regulators decided to require that insurers write their policies in easy to read language. Because they were required to do so by law insurers changed the words in their contracts into language that people with a Fourth Grade education could understand. Precise language interpreted by hundreds of years of court decisions were disposed of and replaced with imprecise, easy to read language.

The law of unintended consequences came into play and instead of protecting the consumer from imprecise language, an attempt to force insurers to deal fairly with the insureds resulted in thousands of lawsuits determined to

impose penalties on insurers for attempting to enforce ambiguous easy to read language. The multiple lawsuits cost insurers and their insureds millions (if not billions) of dollars to get court opinions that interpret the language and reword their easy to read policies to comply with the court decisions. For more than thirty years the unintended consequence of a law designed to avoid litigation has done exactly the opposite.

The attempts by the Regulators and Courts to control insurers and protect consumers were made with the best of intentions. The judges and regulators found it necessary to protect the innocent against what they perceived to be the rich and powerful insurers.

In 1958 the California Supreme Court created a tort new to U.S. jurisprudence when it decided *Comunale v. Traders & General Ins. Co.*, 50 Cal. 2d 654, 658-659, 328 P.2d 198 (1958). A tort is a civil wrong from which one person can receive damages from another for multiple injuries. The tort was called the Tort of Bad Faith and was created because an insurer failed to treat an insured fairly and the court felt that the traditional contract damages were insufficient to properly compensate the insured. The court allowed the insured to receive, in addition to the contract damages that the insured was entitled to receive under the contract had the insurer treated the insured fairly, damages for emotional distress and punitive damages to punish the insurer for its wrongful acts.

Insureds, lawyers for insureds, regulators and courts across the U.S. cheered the action of the California Supreme Court and most of the states adopted the tort created by the California Supreme Court.

After the creation of the tort of bad faith, if an insurer and insured disagreed on the application of the policy to the factual situation, damages were no longer limited to contract damages as in other commercial relationships. If the court found that the insurer was wrong it could be required to pay the contract amount **AND** damages for emotional distress, pain, suffering, punishment damages, attorneys fees and any other damages the insured and the court could conceive. It was hoped that the tort of bad faith would have a salutary effect on the insurance industry and force insurers to treat their insureds fairly. However, claims for \$40.00 wrongfully denied resulted in \$5 million verdicts. Juries, unaware of the reason for and operation of insurance decided that insurers that did not pay claims were evil and that they wrote contracts so they never had to pay. They punished insurers severely even when the insurers conduct was correct and proper under the terms of its contract. The massive judgments were publicized and many insurers decided fighting its insureds in court was too expensive regardless of how correct its position was on the contract.

Most of the massive verdicts were reversed or reduced on appeal. The bad actors raised their premium and lost little business. Other insurers, faced with the massive verdicts allowed fear to control reason, and paid claims that were improper or fraudulent. The extra cost was passed on to all insurance consumers, not to the insurers who acted improperly. They, in fact, profited since they continued their wrongful acts and paid the few insureds that sued while honest insurers paid frauds and claims they did not owe for fear of being painted with the same brush as the bad actor.

The law of unintended consequences struck. The tort of bad faith, designed to help the innocent, resulted in punishing the honest and correct insurers, honoring the insurers who acted in bad faith with profit, allowed many frauds to succeed and caused contract terms and conditions to be ignored.

Basic contract law, including almost all contracts other than insurance contracts, in cases involving a failure to perform, the plaintiff's expectation interest is measured by money damages measured by the difference between the contract price and the cost of completing the contract by another.

In construction contracts, for example, damages for defective or incomplete construction generally are measured by the cost of repair or the cost of completion. In contracts for the sale of goods, on the other hand, damages for nonconformity with the contract generally are measured by the diminution in value of the defective goods. The purpose of both measures is to place the plaintiff in as good a position as if the defendant had performed the contract according to its specifications.

The general rule of damages in tort is that the injured party may recover for all detriment caused whether it could

have been anticipated or not while contract damages are limited to that anticipated by the contract.

In *Comunale* insureds were allowed to recover against insurers in both tort and contract.

In so doing the California Supreme Court changed everything when it held:

Although a wrongful refusal to settle has generally been treated as a tort (see Keeton, Liability Insurance and Responsibility for Settlement, 67 *Harv. L. Rev.* 1136, 1138; Anno., 131 A.L.R. 1499, 1500), it is the rule that where a case sounds both in contract and tort the plaintiff will ordinarily have freedom of election between an action of tort and one of contract. (*Eads v. Marks*, 39 *Cal. 2d* 807, 811 [249 P.2d 257].) An exception to this rule is made in suits for personal injury caused by negligence, where the tort character of the action is considered to prevail (*Huysman v. Kirsch*, 6 *Cal. 2d* 302, 306 [57 P.2d 908]; *Krebenios v. Lindauer*, 175 *Cal. 431* [166 P. 17]), but no such exception is applied in cases, like the present one, which relate to financial damage (cf. *County of Santa Clara v. Hayes Co.*, 43 *Cal. 2d* 615, 619 [275 P.2d 456]; *Jones v. Kelly*, 208 *Cal. 251*, 255 [280 P. 942]).

Comunale was allowed to sue both in contract and tort and obtain contract, and tort damages, for the breach of the contract of insurance and its implied covenant of good faith and fair dealing.

In California the *Comunale* decision established that breach of an implied covenant, that is, breach of contract, as the theoretical basis of the claim allowed the plaintiff to recover contract and tort damages. This was a major change in jurisprudence and because a few people were harmed by bad actors in the insurance industry created an evil system that allows a few to grow rich from insurance claims while those who invest in insurance or who seek only the indemnity promised by the insurance policy, are subject to the law of unintended consequences.

In more than 60 years of application across the U.S. the tort of bad faith has not had a salutary effect on the insurance business. Insurance costs more than is reasonable or necessary so that sufficient funds exist to pay claims and tort damages from those insureds who believed they were done wrong. Suits relating to claims presented for the 1994 Northridge earthquake in California are still pending seeking tort and punitive damages for failure to pay what the insureds believed they were owed. In Louisiana and Mississippi multiple millions were paid to settle claims that flood damage was covered as a result of hurricane Katrina although the policies excluded flood and the plaintiff insureds failed to buy flood insurance. Abuse of insurers is so rampant and so successful that lawyers argue of multimillion dollar fees and have even attempted to (or successfully) bribed judges to increase their recovery.

The tort of bad faith is like the mythical Vampire. It hides in the dark. The truth about the tort of bad faith will die only if it is put into the light of day. It does not solve the problem anticipated. Rather it makes a few lawyers very rich, a few insureds receive indemnity for which they did not bargain and makes the cost of insurance to those who wish only to receive the benefits of the contract prohibitive.

In New York, for example, the courts were unwilling to adopt the widely-accepted tort cause of action for "bad faith" in the context of a first-party claim, because they recognized that to do so would constitute an extreme change in the law of this State. New York accepted the more conservative approach adopted by the minority of jurisdictions that the duties and obligations of the parties [to an insurance policy] are contractual rather than fiduciary [*Beck v Farmers Ins. Exch.*, 701 P2d 795, 798-799 [Utah 1985]].

Therefore, in order to ensure the availability of an appropriate and sufficient remedy, we adopt the reasoning of the Beck court that there is no reason to limit damages recoverable for breach of a duty to investigate, bargain, and settle claims in good faith to the amount specified in the insurance policy. Nothing inherent in the contract law approach mandates this narrow definition of recoverable damages. Although the policy limits define the amount for which the insurer may be held responsible in performing the contract, they do not define the amount for which it may be liable upon a breach. [*Acquista v. New York Life Insurance Company*, No. 2277, 2001 NYSlipOp 06087, (N.Y.App.Div. 07/05/2001)]

New York refused to allow a tort to be created out of a breach of contract. [*Batas v. Prudential Insurance Company Of America*, 281 A.D.2d 260, 724 N.Y.S.2d 3 (N.Y.App.Div. 03/20/2001)]

In California, and most states that allow a breach of an insurance contract to support a tort cause of action only allow it to go in one direction. Insurance litigants are not equal. An insured can obtain tort damages for bad faith breach of the insurance contract but an insurer may not receive tort damages for bad faith breach of an insurance contract.

The inequality of treatment of insurers and insureds resulted in a distinction between tort and contract liabilities that convinced one state supreme court to reject comparative bad faith as a defense in a bad faith action against an insurer because the [insurer's] tort cannot be offset comparatively by the [insureds] contract breach. It characterized the differing legal concepts as apples and oranges. [*Stephens v. Safeco Ins. Co. of America (Mont. 1993)* 852 P.2d 565, 568-569]. In addition a different court rejected a comparative bad faith defense for an insured's misperformance of its contractual duties in a bad faith action against the insurer for refusal to defend. [*First Bank v. Fidelity and Deposit Ins. (Okla. 1996)* 928 P.2d 298, 306-309]

In California, the decision in *Agricultural Ins. Co. v. Superior Court* (1999) 70 Cal.App.4th 385 agreed. *Agricultural* involved a bad faith action arising out of an insurance claim for earthquake damage. After the insurer paid the claim in part controversies arose, ultimately leading to the insureds suit for breach of contract and bad faith. The trial court stayed the action to allow the insurer to complete its investigation. The insurer did, and then cross-complained, contending that the insureds claim was in significant part falsified a ground usually sufficient to allow the insurer to declare the policy void and deny all payments.

The insurer pleaded various contract theories, and also the tort theories of fraud and so-called reverse bad faith, i.e., tortious breach of the covenant of good faith and fair dealing by the insured. The insured demurred to the tort theories, and the trial court sustained the demurrers without leave to amend. The decision made the following amazing conclusion:

Although there is an implied covenant of good faith and fair dealing in every contract, although each party is bound by it, and although this principle applies to insurance contracts (see, e.g., *Liberty Mut. Ins. Co. v. Altfillisch Constr. Co.* (1977) 70 Cal.App.3d 789, 797), the potential liability for breach is different for insurers and insureds. In summary, an insured may be held liable in contract for breaching the covenant, but cannot be held liable in tort. (Emphasis added)

The Fourteenth Amendment to the U.S. Constitution provides, in part:

No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

If the law allows an insured to sue for tort damages as a result of a breach of the covenant of good faith and fair dealing equal protection should allow an insurer to sue the insured for tort damages as a result of the breach of the same covenant. Some litigants cannot, under our system of constitutional law, be more equal than others.

Although the courts may think so, the insured's breach of the covenant of good faith and fair dealing is also separately actionable as a contract claim and that some forms of misconduct by an insured will void coverage under the insurance policy. (*Imperial Cas. & Indem. Co. v. Sogomonian* (1988) 198 Cal.App.3d 169, 182. The court in *Agricultural* believed that contract remedies adequately serve to protect an insurer from the insured's misconduct without creating the logical inconsistencies and troublesome complexities of a defense of comparative bad faith. In so doing it ignores the logical inconsistencies and troublesome complexities of the tort of bad faith. What is good for the insured should be good for the insurer.

In *Kransco v. American Empire Surplus Lines Insurance Company*, 23 Cal.4th 390, 2 P.3d 1, 23 Cal.4th 951, 97 Cal.Rptr.2d 151 (Cal. 06/22/2000) the California Supreme Court agreed with *Agricultural* and held that [A]n insured

does not bear a risk of affirmative tort liability for failing to perform the panoply of indefinite but fiduciary-like obligations contained within the concept of insurance bad faith.

An insurer can commit the tort and is obliged to pay tort and punitive damages. An insured, who is totally evil, whose only interest in the insurance agreement is to defraud the insurer, who refuses to cooperate with the insurers investigation, who does everything possible to harm the insurer, cannot commit the tort. This decision is as logical as stating that only black men can commit a battery while black women, white or Asian men and women cannot commit the tort of battery regardless of how hard the victim is battered. It is a statement that equal protection applies to all citizens of the U.S. except insurers since they can only be the tortfeasor and never the victim. Because of the lack of equal protection, plaintiffs lawyers and their clients take advantage of insurers and use their wits and energies to set up the insurer for bad faith.

In *Wade v. Emcasco Insurance Co.*, 483 F.3d 657 (10th Cir. 04/10/2007) the Tenth Circuit recognized that the undisputed evidence in the record showed that Plaintiff's counsel's sole reason for rejecting the insurers offer of settlement made after the running of an arbitrary deadline was his hope to pursue a bad faith claim against the insurer. As a result it refused to allow the plaintiff to pursue the bad faith case. The Tenth Circuit also noted that although the impetus for insurance bad faith claims derives from the idea that the insured must be treated fairly and his legitimate interests protected. It is designed as a shield for insureds not as a sword for claimants. Courts should not permit bad faith in the insurance milieu to become a game of cat-and-mouse between claimants and insurer, letting claimants induce damages that they then seek to recover, while relegating the insured to the sidelines as if only a mildly curious spectator.

The California Supreme Court recognized, in a footnote to a dissent, in 1985 the problem when Justice Kaus wrote:

It seems to me that attorneys who handle policy claims against insurance companies are no longer interested in collecting on those claims, but spend their wits and energies trying to maneuver the insurers into committing acts which the insureds can later trot out as evidence of bad faith. [*White v. Western Title Insurance Co.*, 40 Cal. 3d 870, 710 P.2d 309, 221 Cal. Rptr. 509 (Cal. 12/31/1985)]

It is time to put a stake in the heart of the tort of bad faith. Insureds who are wronged by their insurer should limit their recovery to contract damages. They should be compelled to waive the tort and sue in assumpsit. If the tort of bad faith must exist it must be applied equally. The abuse of the tort of bad faith has become so extreme that the tort must be eliminated or otherwise made fair.

If there is a tort of bad faith as the courts seem to believe the Fourteenth Amendment to the U.S. Constitution requires equal protection. An insurer who is wronged by its insured should have the same right to tort damages and punitive damages for breach of the covenant as can the insured. Americans do not live on George Orwells Animal Farm. No litigant is more equal than another.

Practice Insights

When faced with a bad faith suit it is essential to plead the violation of equal protection if there are facts to support the allegation.

Insurers who believe they are defrauded should file for both breach of the covenant and for the tort of fraud.

Insurers should seek to have policies declared void if there is a misrepresentation or concealment of a material fact.

ABOUT THE AUTHOR(S):

Barry Zalma, Esq., CFE, is an insurance coverage attorney. He is the founder of Barry Zalma, Inc., a California law firm whose practice emphasizes the representation of insurers and those in the business of insurance. He is also the founder and chief consultant with Zalma Insurance Consultants who consult with insurers, plaintiffs' counsel and defense concerning insurance bad faith, insurance coverage and insurance claims handling matters and, if needed, often serves as an expert witness at trial. Mr. Zalma is recognized as an expert on insurance claims handling, insurance bad faith, and insurance fraud. He is the author of several books relating to insurance, insurance coverage, insurance claims handling and insurance regulations including Chapters 12 and 13 of the New Appleman Insurance Law Practice Guide, November 2007, Matthew Bender & Company, Inc., a member of the LexisNexis Group. Sonnenschein Nath & Rosenthal LLP on Bad-Faith Claims in New York

By William T. Barker, Justin N. Kattan and Rachel G. Balaban

April 25, 2008

SUMMARY: Plaintiffs have long sought to recover in excess of policy limits against insurance carriers who are alleged to have handled or denied claims in bad faith. Until recently, the New York Court of Appeals has squarely rebuffed any such efforts. However, in its decisions in *Bi-Economy Market, Inc. v. Harleysville Insurance Co.*, 2008 N.Y. Lexis 278 (Feb. 19, 2008) and *Panasia Estates, Inc. v. Hudson Insurance Co.*, 2008 N.Y. Lexis 275 (Feb. 19, 2008), the Court of Appeals permitted insureds to seek consequential damages, in excess of policy limits, against an insurer that was alleged to have violated its insurance contract in bad faith. This commentary examines that decision and important questions it left unresolved.

ARTICLE: Sonnenschein Nath & Rosenthal LLP on Bad-Faith Claims In New York Following *Bi-Economy Market, Inc. v. Harleysville Insurance Co.* and *Panasia Estates, Inc. v. Hudson Insurance Co.*

By William T. Barker, Justin N. Kattan and Rachel G. Balaban

Based on its decisions in *Rocanova v. Equitable Life Assurance Society*,ⁿ¹ and *New York University v. Continental Insurance Co.*,ⁿ² the New York Court of Appeals appeared to have precluded any claim for insurance bad faith in failing to pay first-party benefits. Specifically, the court wrote in *Rocanova* that [a] complaint does not state a claim for compensatory or punitive damages by alleging merely that the insurer engaged in a pattern of bad-faith conduct.ⁿ³ So, an insureds recovery seemed limited to any benefits due plus interest.ⁿ⁴ But, in the recent cases *Bi-Economy Market, Inc. v. Harleysville Insurance Co. of New York*ⁿ⁵ and *Panasia Estates, Inc. v. Hudson Insurance Co.*,ⁿ⁶ the Court of Appeals permitted somewhat broader liability. In each case, the Court of Appeals allowed an insured to seek consequential damages in excess of policy limits against an insurer that was alleged to have violated its insurance contract in bad faith. These decisions raise many significant questions, including: What standard will be applied to determine when an insurer acts in bad faith? What types of damages will be recoverable when bad faith is proven? This commentary explores those issues.

Background: *Rocanova* and NYU

The issue in *Rocanova* was whether the insured had pled actionable claims for punitive damages based on the

carriers rescission of a disability income policy. *Rocanova* alleged breach of the implied covenant of good faith and fair dealing and various common law and statutory tort claims. n7 Equitable moved to dismiss all causes of action, except for the breach of the implied covenant, and to strike the demand for punitive damages. The trial court granted the motion in part, but rejected the motion to strike the demand for punitive damage. Equitable appealed, n8 and the Appellate Division affirmed. The Court of Appeals reversed, finding no basis for punitive damages. It initially defined the requirements for punitive damages as follows:

Punitive damages are not recoverable for an ordinary breach of contract as their purpose is not to remedy private wrongs but to vindicate public rights. However, where the breach of contract also involves a fraud evincing a "high degree of moral turpitude" and demonstrating "such wanton dishonesty as to imply a criminal indifference to civil obligations, punitive damages are recoverable if the conduct was "aimed at the public generally" Punitive damages are available where the conduct constituting, accompanying, or associated with the breach of contract is first actionable as an independent tort for which compensatory damages are ordinarily available, and is sufficiently egregious under the Walker standard to warrant the additional imposition of exemplary damages. Thus, a private party seeking to recover punitive damages must not only demonstrate egregious tortious conduct by which he or she was aggrieved, but also that such conduct was part of a pattern of similar conduct directed at the public generally. Clearly, then, the standard for awarding punitive damages in first-party insurance actions is "a strict one" and this extraordinary remedy will be available only in a limited number of instances. (citations omitted.) n9

All of *Rocanova's* tort claims had been dismissed, unless his bad-faith claim could be classified as a tort claim. The Court of Appeals summarily held that it could not be so classified.

NYU was an action on a commercial crime policy to recover for employee fraud in one of the University's bookstores, causing the University to pay for inventory it never received. n10 The University sued for breach of contract, breach of the duty of good faith, deceptive business practices in violation of a statute, and fraud. n11 The alleged deception and fraud was a false representation that the insurer, Continental, would investigate in good faith and pay covered claims. n12 The Court of Appeals found no sufficient allegation of any common law or statutorily created tort independent of the contract. n13

While the focus of *Rocanova* and *NYU* was punitive damages, they clearly held that bad-faith denial of an insurance claim was not an actionable tort.

A New Day: Bi-Economy Market and Panasia Estates

Notwithstanding the Courts decisions in *Rocanova* and *NYU*, plaintiffs in New York continued to seek ways to recover for what they claimed were bad-faith denials of benefits. The first appellate court to support such a claim was the First Department in *Acquista v. New York Life Insurance Co.* n14 In that case, the trial court dismissed a physicians bad-faith claim against his disability carrier. On appeal, the First Department recognized that to date, this State has maintained the traditional view that an insurer's failure to make payments or provide benefits in accordance with a policy of insurance constitutes merely a breach of contract, which is remedied by contract damages. n15 But the Court also cited to the courts and commentators around the country [who] have increasingly acknowledged that a fundamental injustice may result when benefits are denied in bad faith. n16 The Court further noted that many states have responded by recognizing bad faith as a tort, while others have expanded the scope of contract damages to include various types of foreseeable monetary damages beyond policy limits. Among the latter group, some states excluded compensation for mental and emotional distress, while others allowed for consequential damages for emotional distress. n17

The *Acquista* court declined to recognize a distinct tort cause of action for bad faith. However, it did adopt the reasoning of the Supreme Court of Utah in *Beck v. Farmers Insurance Exchange* that there is no reason to limit damages recoverable for breach of a duty to investigate, bargain, and settle claims in good faith to the amount specified

in the insurance policy. n18 In the First Departments view, [t]he problem of dilatory tactics by insurance companies seeking to delay and avoid payment of proper claims has apparently become widespread enough to prompt most states to respond with some sort of remedy for aggrieved policyholders. n19 Consequently, while plaintiff's cause of action alleging bad-faith conduct on the part of the insurer cannot stand as a distinct tort cause of action, we conclude that its allegations may be employed to interpose a claim for consequential damages beyond the limits of the policy for the claimed breach of contract. n20

While *Acquista* and similar decisions provided support to bad-faith plaintiffs, it remained to be seen whether the New York Court of Appeals would agree with this approach. The issue recently was put before the Court in *Bi-Economy Market, Inc. v. Harleysville Insurance Co. of New York* n21 and *Panasia Estates, Inc. v. Hudson Insurance Co.* n22

The insured in *Bi-Economy Market* asserted that the carriers inadequate and delayed payment of a business interruption claim led to the failure and eventual bankruptcy of its business. In assessing whether the insured could assert a claim for consequential damages, the Court of Appeals first stated the well-settled principal of New York law that contract damages include: . . . damages [which] naturally and directly [flow from the breach], i.e., in the ordinary course of things[and] which should have been foreseen at the time the contract was made. n23 This does not ordinarily allow consequential damages for nonpayment of money, because what the payee plans to do with the money is external to and irrelevant to the contract. n24 However, in reversing summary judgment in favor of the insurer, the Court of Appeals reasoned that the purpose of the agreement what the insured planned to do with the money was at the very core of the contract. n25 Specifically, the very purpose of business interruption coverage would have made [the insurer] aware that if it breached its obligations under the contract to investigate in good faith and pay covered claims, it would have to respond in damages to Bi-Economy for the loss of its business as a result of the breach. n26 The Court further held that the purpose of the insurance agreement at issue was not just to receive money, but to receive it promptly so that in the aftermath of a calamitous event the business could avoid collapse and get back on its feet as soon as possible. n27

The Court therefore concluded that the insurance contract included an additional performance-based component: the insurer agreed to evaluate a claim, and to do so honestly, adequately, and most importantly promptly, and that the insurer was necessarily aware that failure to perform would (a) undercut the very purpose of the agreement and (b) cause additional damages that the policy was purchased to protect against. n28 The Court of Appeals held that for such damages in excess of policy limits, the insurance company should stand liable. n29

Panasia Estates arose out of Hudsons denial of Panasias builders risk claim. The insured sought both contract benefits and consequential damages. n30 Hudson moved for partial summary judgment, including the dismissal of all of Panasias bad faith allegations and all prayers for consequential, extra contractual or incidental damages. The lower court refused to dismiss Panasias claim for consequential damages; the First Department affirmed and granted Hudson leave to appeal to the Court of Appeals. n31 The Court of Appeals affirmed, holding that consequential damages resulting from a breach of the covenant of good faith and fair dealing may be asserted in an insurance contract context, so long as the damages were within the contemplation of the parties as the probable result of a breach at the time of or prior to contracting. n32

Analysis

What Types of Damages Will Be Recoverable? Based on these decisions, it appears that consequential damages will often, perhaps always, be recoverable if they result from failure to evaluate a claim in good faith, i.e. honestly, adequately, and . . . promptly. n33 All insurance is designed to respond to some sort of calamitous event by indemnifying a resulting economic loss, and *Bi-Economy Market* suggests that this is enough to permit recovery of consequential damages for bad-faith denial of benefits.

It is not clear whether this reasoning will be extended to permit recovery of emotional distress damages resulting from bad-faith denial. But *Bi-Economy Market* suggests that it might be so extended. The Court of Appeals, citing the Utah Supreme Courts decision in *Beck* and a host of other state court decisions that contemplate recovery of emotional distress damages, stated that [a]n insured may . . . bargain for the peace of mind, or comfort, of knowing it will be protected in the event of a catastrophe. n34

There is no reason, however, to see *Bi-Economy Market* and *Panasia Estates* as retreating from the high threshold for punitive damages described in *Rocanova*. While the dissents in both decisions characterize the contemplated consequential damages as punitive, n35 the majority explicitly rejected that characterization, insisting that only compensatory damages are at issue. n36

What Does Bad Faith Now Mean? The big unanswered question is what conduct is required of an insurance company evaluating its insureds claim. The dissent in *Bi-Economy Market* fears that the majoritys decision will allow jurors to

decide whether claims should have been paid more promptly, or in larger amounts; whether an insurer who failed to pay a claim did so to put pressure on the insured, or from legitimate motives, or from simple inefficiency; and whether, and to what extent, the insurers slowness and stinginess had consequences harmful to the insured. All these very difficult, often nearly unanswerable, questions will be put to jurors who will usually know little of the realities of either the insureds or the insurers business. The jurors will no doubt do their best, but it is not hard to predict where their sympathies will lie. n37

But the extent to which those issues will be left to juries depends on the legal standard to be applied. Almost all jurisdictions imposing first-party bad-faith liability require, at least, that there be no reasonable basis for denial or delay of payment. n38 Most such jurisdictions add a requirement of subjective culpability, typically that the insurer knows that it lacked a reasonable basis to deny the claim or recklessly disregarded the lack of a reasonable basis. n39 Even under such standards, an insurer should be able to defeat most bad-faith claims on summary judgment, directed verdict, or, if necessary, on appeal. n40

New York will likely impose an even higher threshold than does either of the foregoing standards. *Bi-Economy Market* requires an insurer to evaluate a claim honestly, implying that bad-faith conduct must be dishonest, instead of merely reckless. A requirement of subjective dishonesty would present a substantial barrier to bad-faith claims. At a minimum, one would expect a standard at least as demanding as New York imposes for claims of bad-faith failure to settle third-party claims under a liability insurance policy.

Bad Faith Arising Out of the Failure to Settle. New York has long recognized that an insurers duty of good faith requires it to consider the insureds interest in avoiding exposure to excess judgments. n41 The governing standard for that duty was formulated in *Pavia v. State Farm Mutual Automobile Insurance Co.*, n42 where the Court of Appeals reversed a jurors bad-faith award.

In April, 1985, Pavia was injured in an accident while a passenger in a car driven by Rosato, a State Farm insured. Pavias injuries rendered him a hemiplegic and, by April 1986, State Farm had medical reports attesting to the severity of the injuries, and it had confirmation from its own medical examination by April 1987. Initial investigation indicated that Rosato was 100% liable. n43

Early in June 1987, Rosatos deposition was taken and suggested some possible liability defenses. Although regarding liability as extremely unfavorable, defense counsel recommended further inquiry into these defenses. n44 Late in June, Pavias counsel made a demand for the policys \$100,000 limit, to remain open for only 30 days. The offer expired without a response from State Farm. After the investigation into Rosatos possible defenses proved fruitless, State Farm offered to settle for a policy limit in January, 1988. The settlement offer was rejected. At trial, the jury

returned a verdict in the amount of \$6,322,000, with 85% of the fault attributable to Rosato. n45

Rosato assigned to Pavia his cause of action against State Farm for failure to settle. The jury was charged that State Farm should be found liable if its failure to settle involved a deliberate or reckless decision to disregard the insureds interests. A verdict was returned against State Farm. n46

On appeal, the Court of Appeals found that the jury had been properly instructed:

[T]o establish a prima facie case of bad faith, the plaintiff must establish that the insurers conduct constituted a gross disregard of the insureds interests--that is, a deliberate or reckless failure to place on an equal footing the interests of its insured. In other words, a bad-faith plaintiff must establish that the defendant insurer engaged in a pattern of behavior evincing a conscious or knowing indifference to the probability that an insured would be held personally accountable for a large judgment if a settlement offer within the policy limits were not accepted.

The gross disregard standard, which was utilized by the trial court here, strikes a fair balance between two extremes by requiring more than ordinary negligence and less than a showing of dishonest motives. The former would remove the latitude that insurers must be accorded in investigating and resisting unfounded claims, while the latter would be all but impossible to satisfy and would effectively insulate insurance carriers from conduct that, while not motivated by malice, has the potential to severely prejudice the rights of its insured. The intermediate standard accomplishes the two-fold goal of protecting both the insureds and the insurers financial interests. n47

Turning to the sufficiency of the evidence, the court reasoned that an insurer cannot be compelled to concede liability and settle a questionable claim simply because an opportunity to do so is presented. n48 Rather, it must be shown that an opportunity to settle existed at a time when all serious doubts about the insureds liability were removed. n49 The court rejected the argument

that whenever an injury is severe and the policy limits are significantly lower than a potential recovery the insurer is obliged to accept a settlement offer. The bad faith equation must include consideration of all of the facts and circumstances relating to whether the insurers investigatory efforts prevented it from making an informed evaluation of the risks of refusing settlement. In making this determination, courts must assess the plaintiffs likelihood of success on the liability issue in the underlying action, the potential magnitude of damages and the financial burden each party may be exposed to as a result of a refusal to settle. Additional considerations include the insurers failure to properly investigate the claim and any potential defenses thereto, the information available to the insurer at the time the demand for settlement is made, and any other evidence which tends to establish or negate the insurers bad faith in refusing to settle. The insureds fault in delaying or ceasing settlement negotiations by misrepresenting the facts also factors into the analysis n50

The court was hostile to the very concept that an insurers duties might be shaped by a time limit imposed by an insured:

[D]efendants failure to respond to the letter and overall delay under the circumstances of this case cannot serve as a basis for recovery. Permitting an injured plaintiffs chosen timetable for settlement to govern the bad-faith inquiry would promote the customary manufacturing of bad-faith claims, especially in cases where an insured of meager means is covered by a policy of insurance which could finance only a fraction of the damages in a serious personal injury case. Indeed, insurers would be bombarded with settlement offers imposing arbitrary deadlines and would be encouraged to prematurely settle their insureds claims at the earliest possible opportunity in contravention of their contractual right and obligation of thorough investigation. n51

As the court viewed the facts, Pavias demand came at a relatively early point in the litigation when there remained several significant questions about the insureds liability, which [State Farm] was entitled to investigate and explore. n52 While the investigation could have been completed more expeditiously, one could not convert inattention into a gross disregard for the insureds rights. n53 Moreover,

The facts that State Farms preliminary liability forecasts were unfavorable and that the investigation ultimately proved those forecasts accurate certainly do not establish that the insurer was unjustified in engaging in further investigation and failing to effectuate an early settlement. On the contrary, State Farms failure to conduct the continuing inquiry could have constituted a breach of its obligation to investigate and defend its insured. Moreover, State Farm should not be penalized for the delay in processing the claim and offering the full policy limits in settlement which resulted from its pursuit of an investigation prompted by its insureds representations which ultimately did not materialize.

By any view of the evidence, State Farms failure to promptly respond to the time-restricted demand did not amount to more than ordinary negligence an insufficient predicate for a bad-faith action. n54

Both the requirement of gross disregard for the insureds interests and the ancillary rules announced in *Pavias* sufficiency-of-the-evidence analysis are much more demanding for bad-faith plaintiffs than the rules followed in most other states. Most courts have required insurers to settle within limits, so long as the amount is one which an ordinarily prudent insurer without policy limits would accept. n55 Unless they have inadequate information to evaluate the claim, insurers are required to respect the time limits set by plaintiffs, because they may not get future opportunities to protect their insureds by settling within limits. n56 Nor can they wait until all questions of liability have been resolved, if doing so puts the insured at risk of an excess judgment when a within-limits settlement is a reasonable alternative. n57

Conclusion

The fact that New York law on the duty to settle is so much more demanding for plaintiffs than that elsewhere has two important implications. First, it strongly suggests that New York law on first-party bad faith will be at least as demanding, and probably more demanding than that in other states. More importantly, all or almost all states impose more demanding standards for first-party bad faith than for the duty to settle third-party claims. While the duty to settle is universally recognized, a large minority of states do not recognize any enhanced form of liability for first-party bad faith. n58 In considering settlement, insurers are generally required to compromise even substantial issues of liability or damages. n59 But, on first-party claims, they are entitled, in almost all states recognizing bad faith liability, to deny any claim that is fairly debatable. n60 If New York follows this pattern, it will likely apply the gross disregard standard to first-party claims as well as duty-to-settle claims. If so, there may be very few successful bad-faith claims.

Insurers facing New York bad-faith claims should aggressively argue for the application of a demanding standard to putative bad-faith claims. But carriers should also focus on demonstrating objectively reasonable grounds for delaying or denying payment, a showing that should preclude bad faith even under the least demanding of the standards commonly applied elsewhere. Such a focus may permit them to avoid entanglement in the issues left unresolved by *Bi-Economy Market* and *Panasia Estates*.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of *The New Appleman on Insurance Law*, now in preparation, and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged with *Insurance Litigation Reporter*, where he is currently Senior Contributing Editor and Editorial Board Director. He has been described as the leading lawyer-commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 *Duke L.J.* 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Justin N. Kattan practices in Sonnenschein's Litigation Practice Group and is

experienced in many areas of litigation, with a particular focus on both property insurance coverage and intellectual property. Most recently, Mr. Kattan represented Royal Indemnity Company in one of the largest property insurance cases in history (involving claims in excess of \$7 billion) -- *SR International v. WTC Properties LLC, et al.* -- in which Royal prevailed against Silverstein Properties with respect to a significant portion of its coverage. For the last two and 1/2 years, he has played a lead role in the court-ordered appraisal to determine the property and rental value losses sustained by the Insureds. Mr. Kattan has also represented prominent artists, songwriters, creative individuals, as well as media, recording and music publishing companies in a variety of intellectual property litigations. Notable cases include:

BMS Entertainment/Heat Music LLC, et al. v. Christopher Bridges, et al., United States District Court for the Southern District of New York, Case No. 04 Civ. 02584 (PKC) -- Obtained federal jury verdict on June 1, 2006 on behalf of recording artists and songwriters Christopher Bridges, p/k/a Ludacris, and Kanye West, and music publisher EMI April Music Inc. in a music copyright infringement case regarding the 2003 hit single *Stand Up*. Previously, briefed a successful discovery sanctions motion to preclude plaintiffs' experts testimony and reports and for fees and costs. *Frost, et al. v. Christopher Bridges, et al.*, United States District Court for the Southern District of New York, Case No. 06 Civ. 0874 (JSR). In September 2006, Mr. Kattan obtained summary judgment against a different set of plaintiffs claiming infringement against Kanye West & Chris Bridges again for the song *Stand Up*. *Scheft-Montilla v. Fernando Botero*, United States District Court for the Southern District of New York, 02 Civ. 7802 (MGC). Mr. Kattan successfully moved to dismiss Plaintiffs claims of defamation of property and unfair competition against renowned artist Fernando Botero. Mr. Kattan also has extensive experience with insurance sales practices claims, ERISA claims, employment and trade secrets litigation, and administrative actions before the Public Service Commission on behalf of large cable television companies.

Rachel G. Balaban is a member of the Litigation Practice Group at Sonnenschein. Her practice consists of commercial litigation and arbitration across a broad range of substantive areas, including business tort and contractual disputes, fraud, insurance, intellectual property and labor and employment-related matters. She also has experience litigating and counseling clients in the areas of constitutional and media law, including First Amendment and libel matters. Ms. Balaban was part of the trial team that successfully defended The Prudential Insurance Company of

America in a two-month jury trial in federal court in Miami, where numerous plaintiffs were seeking extraordinary punitive damages from Prudential for allegedly fraudulent sales practices. The victory was reported as Defense Win of the Month in *The National Law Journal*, March 25, 2002. Ms. Balaban also was part of the trial team that successfully defended Sears, Roebuck and Co. in a patent infringement jury trial in federal court in New Jersey.

About the Law Firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Cohen and Frain on 4th Street Investors LLC v. Dowdell : The Application of the Notice-Prejudice Rule in the Context of an Insureds Failure to Provide Any Notice of Claim, When So Required for Coverage Under the Policy

By Richard J. Cohen and Toni L. Frain

April 25, 2008

SUMMARY: In a case of first impression in Pennsylvania, the United States District Court for the Western District of Pennsylvania concluded that the notice-prejudice rule does not apply to claims-made policies in the context of an insureds failure to provide any notice of plaintiffs claim where his claims-made policy explicitly required such notice for coverage.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: In *4th Street Investors LLC v. Dowdell*, 2008 U.S. Dist. LEXIS 2980 (W.D. Pa. Jan. 15, 2008), Federal Insurance Company (Federal) won summary judgment dismissing garnishment proceedings seeking the proceeds of a Directors and Officers Liability Policy.

In July 1999, James Dowdell founded SafeDrive, a drivers education curriculum which he planned to market to Pittsburgh area high schools. Different from other driving courses, this program focused on interactive computer-based learning and simulated vehicle training. SafeDrives commercial operation began in January 2002, but was not profitable. Accordingly, Dowdell, SafeDrives CEO, explored with Berkowitz Perchalski, Inc. its willingness to recruit investors in SafeDrive, allegedly promising that SafeDrive would show a positive cash flow by the end of the first quarter in 2003 with a million dollar infusion of cash.

BPI agreed and was able to raise over one million dollars from its clients and other individual investors. However, even with this investment, SafeDrive was unable to show a profit. Most of the funds raised were used to amortize debt, leaving too little cash for additional equipment. When SafeDrive filed for bankruptcy protection in September 2003, its stock was virtually worthless.

On November 10, 2003, Federal Insurance Company (Federal), the issuer of a Directors and Officers Liability Policy which covered SafeDrive from 12:01 a.m. on November 11, 2002 to 12:01 a.m. on November 11, 2003 (D & O Policy), received a letter dated November 7, 2003 from BPIs counsel. The letter stated that plaintiff asserts a claim against SafeDrive and Dowdell:

based on certain misrepresentations, acts and omissions made by Mr. Dowdell in his capacity as an officer of the

company. This letter should be considered notice of a claim against the insured under the Directors & Officers Liability Coverage Section of the . . . policy. A copy of our clients Complaint will be sent under separate cover.

On November 11, 2003, Federal received a second letter from plaintiffs counsel, dated November 10, 2003, enclosing a draft complaint that plaintiffs counsel planned to file against Dowdell.

Federal was unable to make immediate contact with Dowdell. When he was finally located, Dowdell did not answer correspondence, or return Federal's phone calls. He did not assert a claim or communicate with Federal regarding coverage under the D & O Policy.

Even after suit was filed against Dowdell, Dowdell did not contact Federal. On May 25, 2005, plaintiffs filed a motion for summary judgment, which Dowdell did not oppose. The uncontested motion was granted and on September 5, 2005, a judgment was entered against Dowdell in excess of \$1 million. Six months later, plaintiffs filed interrogatories to Federal as garnishee, seeking to recover the proceeds of the D & O Policy. Federal filed a counterclaim for a declaratory judgment contesting its liability under the Policy and ultimately filed a motion for summary judgment. As of the time Federal filed its motion, Dowdell had not provided notice of or made a claim of any sort under the policy.

Federal contended that it was entitled to summary judgment because its insured failed to satisfy a condition precedent to coverage by not reporting a claim. An insurer's liability as garnishee is based on the insurer's breach of the insurance contract with the insured. Federal argued that it could not be liable to plaintiffs because its obligation to Dowdell was never triggered. The terms of the Policy specified that written notice of a claim from the insured was an express condition precedent to coverage. Federal argued that the only information it received regarding the policy was not, in fact, a claim, and was not provided by Dowdell.

The Court noted that strict construction of a policy's notice requirements is demanded in some instances, while substantial compliance is sufficient in others. The Court distinguished between occurrence-based policies and claims-made policies on this issue. In an occurrence-based policy, where the peril insured is the occurrence itself, notice provisions are written to aid the insurer in investigating, settling and defending claims. Notice provisions do not define coverage and should be liberally and practically construed. With these kinds of policies, an insurance company cannot invoke late notice to bar coverage unless they are able to demonstrate prejudice.

However, in a claims-made policy, notice clauses serve a different function. In a claims-made policy, where the making of the claim is the peril being insured, regardless of when the occurrence took place, notice clauses provide a certain date after which an insurer knows that it no longer is liable under the policy and allows the insurer to more accurately fix its reserves for future liabilities and compute premiums with greater certainty. A claims-made insurance policy represents a distinct bargained-for exchange between the insurer and insured. An insurer obtains the benefit of a clear and certain cut-off date for coverage. In return, the insured typically pays a lower premium. Allowing reporting to be delayed until after expiration of a claims-made policy would obliterate the distinction between claims-made and occurrence-based policies. It would be tantamount to awarding coverage to the insured gratis, something for which the insurer has not bargained. Thus, the terms of claims-made policies, including notice provisions, are subject to strict interpretation and lack of notice or late notice under a claims-made policy precludes coverage.

Applying these principles to the language of the Policy at issue, the Court found that under the D & O Policy, two things must happen before an insured can be covered. First, a claim must be made during the policy period. Second, the insured must provide Federal with written notice of that claim. If either of these requisites is missing, Federal is entitled to deny coverage. Where a claims-made policy is at issue, as here, an insurer may deny coverage based on lack of notice, without demonstrating prejudice. This benefits the insurer who is able more precisely to calculate risk, and the insured, who pays a significantly lower premium than is available under an occurrence-based policy. Insistence on notice from the insured makes sense for additional reasons. A third-party has no way of knowing whether the insured will invoke coverage for a particular claim. An insured may choose not to report a claim because of concern over

elevated premiums, may also choose to represent himself, or he may have alternate coverage. The Policy was written for his benefit, and it is up to him to decide whether to invoke its coverage.

The Court disregarded the fact that the claimant under the Policy provided the carrier with notice of its claim. The Court looked solely to what was required under the Policy. The Policy required the insured to put the insurer on notice. That the claimant did so did not change the result.

Dowdells complete failure to comply with the reporting provision of his claims-made policy precluded coverage for this claim. Accordingly, summary judgment in favor of Federal was granted.

ABOUT THE AUTHOR(S):

Richard J. Cohen, Esq. is the managing partner of the law firm of Goldberg Segalla L.L.P., which has offices in New York, Philadelphia, Hartford, Princeton, Buffalo, Rochester, Syracuse, Albany, White Plains, and on Long Island, and is the head of its insurance coverage litigation practice group. He graduated from the State University of New York at Buffalo School of Management, with distinction, and its School of Law, cum laude. Mr. Cohen's practice is almost exclusively first- and third-party coverage, bad faith, and reinsurance. He is a member of the New York and Pennsylvania Bars and is a national author and lecturer on coverage and bad faith, having spoken in New York, California, Arizona, Pennsylvania, Illinois, Louisiana, Maryland, Washington, D.C. and elsewhere on a wide variety of topics. Additionally, he is widely published and, among other things, has three times co-authored the annual "Survey of New York Insurance Law," published in the Syracuse Law Review. Mr. Cohen is a former National Co-Chair of the Insurance Company Relations Subcommittee of the Defense Research Institute, and former national membership Chair of DRI's Life, Health and Disability Insurance Section. He currently chairs insurance and construction subcommittees of DRI. He has been a CPCU instructor since 1999.

Toni L. Frain is an associate in the Buffalo office of Goldberg Segalla LLP, practicing in its insurance coverage litigation practice group. Ms. Frain graduated magna cum laude from the University at Buffalo, School of Law. During law school Ms. Frain worked on the Buffalo Environmental Law Journal, serving as Editor-in-Chief from 1998-1999. Prior to entering law school she graduated magna cum laude from the State University of New York, College at Geneseo with a Bachelor of Arts in Philosophy. Ms. Frain is a member of the New York Bar.

Travel Underwriting: MA statutes that restrict use of travel information

2008 Emerging Issues 2044

Poolman on Travel Underwriting: Mass. statutes that restrict use of travel information

By Jim Poolman

April 23, 2008

SUMMARY: SHORTENED: Former North Dakota Insurance Commissioner Jim Poolman discusses how insurers discriminatory practices in the use of travel information in the issuance, pricing and cancellation of policies first came to light. In addition, Poolman reviews the Massachusetts statutes which restrict insurers use of past or future lawful travel information when underwriting life and disability policies. Poolman also provides an insiders perspective on the industry and regulatory debate leading to the passage of this legislation. EXTENDED: The recent debate about how life insurance companies use applicants past foreign travel experience or potential future foreign travel plans in the underwriting process for their life insurance policies made its way to the Massachusetts legislature in 2006 and resulted in the passage of House Bill 5238 on August 9th of the same year. In this commentary Former North Dakota Insurance Commissioner Jim Poolman discusses how insurers discriminatory practices in the use of travel information in the issuance, pricing, and cancellation of policies first came to light after Congresswoman Debbie Wasserman-Schultz (D-FL) applied for a policy and was denied coverage after her agent asked a series of questions about her past and future travel plans, based on her desire to travel to Israel at some unknown point in the future. Poolman also reviews the Massachusetts statutes which restrict insurers use of past or future lawful travel information when underwriting life insurance and disability policies and some of the problems with the language in those statutes. Poolman writes: Some would argue that the bill is weak and a victory for insurers because of the use of the word solely. Insurance regulators along with policymakers constantly struggle over what the definition of solely really is. Poolman also writes: Some will argue that this use of the term solely provides no teeth in regulating the use of travel information in underwriting of life insurance and disability policies. Companies will have the opportunity to use this information almost completely in their underwriting decisions. There are consumer protection standards written into the law that do require insurers to base their use of travel information upon sound actuarial principles or related to actual or reasonably expected experience. This language could give the Massachusetts regulators an opportunity to investigate companies they believe are using this travel information in an arbitrary fashion. If this is proven the company could be cited for an unfair method of competition or unfair and deceptive act or practice pursuant to chapter 176D. Poolman also provides an insiders perspective on the industry and regulatory debate that lead to the passage of this legislation. Poolman states: There is certainly no consensus by regulators on whether to further regulate the underwriting practices of life insurance carriers. That lack of consensus will also transfer to state houses if they were to consider legislation. The underwriting practices of insurers are considered sacred ground, where regulators should stay out of that business, even though anti-discrimination laws and unfair trade practices statutes certainly apply. Poolman notes: As more Americans across the country travel around the globe, the issue of how companies gauge their risk of loss will become more complicated

and more difficult, and the potential for discrimination or unfair application of their standards could become more frequent. Although the Massachusetts statutes may not go far enough, Poolman concludes that these laws are certainly a start in the right direction.

ARTICLE: Cite as: Poolman, Jim. Travel Underwriting: A Discussion About the Massachusetts Statutes Which Restrict Insurers Use of Past or Future Lawful Travel Information in the Underwriting of Life Insurance and Disability Policies. LexisNexis Expert Commentary, (*Insert date you accessed the document online*).

The recent debate about how life insurance companies use applicants past foreign travel experience or potential future foreign travel plans in the underwriting process for their life insurance policies made its way to the Massachusetts legislature in 2006 and resulted in the passage of House Bill 5238 on August 9th of the same year.

The way life insurers have used travel in determining whether or not to issue a policy, limit coverage, or cancel a policy has come under fire from regulators and legislators around the country. The issue came to light after Congresswoman Debbie Wasserman-Schultz (D-FL) applied for a policy and was denied coverage after her agent asked a series of questions. At first the agent focused these pre-underwriting queries on Rep. Wasserman-Schultz's past foreign travel, but this line of inquiry eventually expanded to include questions about future travel plans that the Congresswoman had. After answering that she had no future foreign travel plans, Wasserman-Schultz was denied a policy based on her desire to travel to Israel at some unknown point in the future.

The Congresswoman took to the halls of Congress to spread her message that life insurance companies were discriminating against Americans who wanted to travel lawfully to foreign countries. The message has resonated with members of the United States House of Representatives as Wasserman-Schultz successfully attached language curtailing the practice to the Terrorism Reinsurance Act. The language was then removed in conference committee and was not included in its final passage. But the simple inclusion in the House of Representatives version shows the issue has struck a chord with other members of Congress, specifically those on the Financial Services Committee.

The use of lawful foreign travel has also resonated with state legislatures. The Massachusetts legislature passed their final version of a bill to address the practice by life insurers in August of 2006. The amendments to Chapter 175 of the General Laws specifically address the issue with both disability insurance and life insurance policies. Section 108J states that disability insurers or producers *shall not make a distinction or otherwise discriminate between persons, reject an applicant, cancel a policy, or demand or require a higher rate of premium for reasons based solely upon an applicants or insureds past lawful travel experiences or future lawful travel plans.* ALM GL ch. 175, § 108J (2008).

The law does not prohibit the use of past or future travel *when that action is based upon sound actuarial principles or is related to actual or reasonably expected experience and is not based solely on the destinations inclusion on the United State Department of State Travel Warning List.* The language is very similar for those insurers issuing life insurance policies. ALM GL ch. 175, § 122A (2008).

Civil Rights groups claimed victory in getting the legislation through the Massachusetts Legislature and signed by then Governor Mitt Romney (R). The Anti-Defamation League testified at a hearing at the National Association of Insurance Commissioners that they would have preferred a stronger bill in Massachusetts, but were happy with the result. The state is the home of a strong life insurance industry.

Some would argue that the bill is weak and a victory for insurers because of the use of the word solely. Insurance regulators along with policymakers constantly struggle over what the definition of solely really is.

In other areas of insurance law dictating what information insurance companies may use in their underwriting practice the word solely has often been used, specifically with property and casualty insurance companies use of credit information. Many states have adopted model legislation stating insurance companies cant base a rate or decline to issue

an insurance policy solely on a consumers credit information. Companies may create underwriting models that use ninety percent of a consumers credit information and ten percent other underwriting factors. Does that mean those companies are not violating the law because they are not basing their underwriting solely based on a consumers credit information?

Some will argue that this use of the term solely provides no teeth in regulating the use of travel information in underwriting of life insurance and disability policies. Companies will have the opportunity to use this information *almost* completely in their underwriting decisions. There are consumer protection standards written into the law that do require insurers to base their use of travel information upon *sound actuarial principles or related to actual or reasonably expected experience*. This language could give the Massachusetts regulators an opportunity to investigate companies they believe are using this travel information in an arbitrary fashion. If this is proven the company could be cited for an *unfair method of competition or unfair and deceptive act or practice pursuant to chapter 176D*.

Even though some will argue that the recent revisions to the Massachusetts law dont go far enough, it certainly is a start in an effort to regulate a practice that some will consider abhorrent. There is certainly no consensus by regulators on whether to further regulate the underwriting practices of life insurance carriers. That lack of consensus will also transfer to state houses if they were to consider legislation. The underwriting practices of insurers are considered sacred ground, where regulators should stay out of that business, even though anti-discrimination laws and unfair trade practices statutes certainly apply.

As more Americans across the country travel around the globe, the issue of how companies gauge their risk of loss will become more complicated and more difficult. The potential for discrimination or unfair application of their standards could become more frequent. Hopefully statutes like the one passed in Massachusetts will become more common.

ABOUT THE AUTHOR(S):

Jim Poolman was elected North Dakota Insurance Commissioner in 2000, and overwhelmingly reelected in 2004. While Insurance Commissioner, he was an outspoken leader at the National Association of Insurance Commissioners, serving as their Vice-President, Chairman of the Midwestern Zone, Chairman of the Life Insurance and Annuities Committee, Executive Committee on Principles Based Reserving, Chairman of the Producer Licensing Working Group; amongst a host of other leadership posts. In North Dakota he was instrumental in preserving a competitive marketplace while passing very important consumer protections ranging in areas from privacy of consumers medical and financial information, suitability in annuity sales, restrictions on the use of claims information, insurance fraud and life settlements, amongst others. Mr. Poolman has been a sought after speaker on numerous insurance topics around the country. In August of 2007, Mr. Poolman resigned his post in North Dakota to start an independent regulatory consulting practice based in Bismarck, North Dakota. Mr. Poolman received his bachelors of Business Administration degree from the University of North Dakota in 1992. Mr. Poolman also served four terms in the North Dakota House of Representatives before being elected Insurance Commissioner.

Poolman on Travel Underwriting: NAICs attempt to craft new protection standards

2008 Emerging Issues 2047

Poolman on Travel Underwriting: NAICs attempt to craft new protection standards

By Jim Poolman

April 23, 2008

SUMMARY: SHORTENED: Former North Dakota Insurance Commissioner Jim Poolman discusses the NAICs attempt to craft new consumer protection standards for life insurance companies that use information about past and future lawful travel to foreign countries in the underwriting process when issuing new policies or increasing coverage on existing policies. Poolman also reviews statutory and regulatory developments in Florida and the factors impacting whether there will be a consensus regulation on travel underwriting out of the NAIC. EXTENDED: Even though state legislatures in Massachusetts and Florida have passed new consumer protection standards, insurance regulators at the National Association of Insurance Commissioners continue to struggle with the development of a model law or regulation that would provide a uniform template for consideration by state legislatures across the country. In this commentary, former North Dakota Insurance Commissioner Jim Poolman discusses the NAICs attempt to craft new consumer protection standards for life insurance companies that use information about past and future lawful travel to foreign countries in the underwriting process when issuing new policies or increasing coverage on existing policies. Poolman discusses how the issue caught the attention of regulators at the NAIC, specifically Florida Insurance Commissioner Kevin McCarty, when Representative Wasserman-Schultz took to both Congress and the insurance regulatory community to tell the story of how she was denied life insurance based on her desire to travel to Israel at some future undetermined point in time and express her concern about potential discrimination with the use of this information in insurers underwriting practices. Poolman also reviews statutory and regulatory developments in Florida, which have placed a number of new restrictions upon insurers. Poolman also gives an inside perspective on the factors that continue to impact whether there will be a consensus regulation on travel underwriting out of the NAIC, including the ongoing debate between consumer representatives and organizations such as the American Council of Life Insurers and the American Academy of Actuaries that defend the sanctity of underwriting standards used by insurers. Poolman outlines the NAICs dual option approach and clarifies the dilemma that insurers face. Poolman writes: If there is no consensus among regulators on if and how to regulate underwriting as it relates to travel information, then states as the laboratories of innovation will consider their own standards. These standards could very well vary greatly from state to state, thus creating an even larger problem for insurers as they navigate the state based system of regulation. So, the question for insurers is: Do we support a uniform regulation we dont like, but could live with, or have different criteria in different jurisdictions that can create an even larger regulatory bureaucracy? In expressing his belief in the potential of creating a consensus on this issue, Poolman states: The political will of the new top leadership at the NAIC is larger than in the past year, and the lack of action in Congress creates an opportunity for the NAIC to take the lead on this very controversial but important issue. Poolman concludes: The use of travel information in underwriting will not go away

any time soon. If the NAIC does not address the issue in a meaningful way, the risk of Congress stepping in to address the problem will only escalate. Even though Congresswoman Wasserman-Schultz was unsuccessful in keeping language in this TRIREA bill that does not mean she won't be successful in the future. Many regulators are ready and able to tackle the issue responsibly. Keep an eye out for passage of revisions to the NAICs Unfair Trade Practices Model Act in 2008 to address the issue.

ARTICLE: Cite as: Poolman, Jim. Travel Underwriting: A Discussion About the NAICs Attempt to Craft New Consumer Protection Standards for Life Insurance Companies That Use Information About Past and Future Lawful Travel to Foreign Countries in Their Underwriting Process. LexisNexis Expert Commentary, *(Insert date you accessed the document online)*.

Issue: Discrimination or Not. Should lawful travel to foreign countries be used against a consumer who decides to apply for a life insurance policy or increase coverage? Even though state legislatures in Massachusetts and Florida have passed new consumer protection standards, insurance regulators at the National Association of Insurance Commissioners continue to struggle with the development of a model law or regulation that would provide a uniform template for consideration by state legislatures across the country. The NAIC has been discussing the issue for over two years and as of the beginning of 2008, the Life Insurance and Annuities Committee of the NAIC does not yet have a recommended work product.

History: Both State and Federal Issue? The issue arose almost two years ago when Congresswoman Debbie Wasserman-Schultz (D-FL) was denied life insurance because of questions related to past and future travel. She answered negatively when she was asked if she had any future travel plans, but when asked if she were to travel in the future where would she like to travel, she answered that she would love to eventually travel to Israel. She was denied coverage even though she had no future plans to complete any foreign travel. Representative Wasserman-Schultz took to both Congress and the insurance regulatory community to tell the story and express her concern about potential discrimination with the use of this information in insurers underwriting practices.

The issue caught the attention of regulators at the NAIC, specifically Florida Insurance Commissioner Kevin McCarty. McCarty had proposed rules under the Florida Unfair Trade Practices Act that were opposed by life insurers. Eventually the issue was settled by the enactment of amendments to Floridas Unfair Trade Practices Act, which were dubbed the Freedom to Travel Amendments to Section 626.9541 (1) (dd), F.S. This led to further rulemaking by Commissioner McCarty with the adoption of new regulation 69O-125.003, F.A.C. that fully implements the statute changes. The changes have a number of new restrictions on insurers, and a requirement to file the underwriting guidelines with actuarial backup to the Florida department.

A September 2006 hearing at NAIC featured videotaped testimony by Congresswoman Wasserman-Schultz, representatives of the Anti-Defamation League, and Birny Birnbaum from the Center for Economic Justice. The representatives favored restrictive regulation as to how past and future lawful foreign travel should be used. Life insurer representatives, specifically those from the American Council of Life Insurers, testified for no restrictions on the use of the information, or minimal regulation on how the information should be used.

The regulation of specific underwriting standards has long been debated. The theory has always been that if the standards were non-discriminatory, then they were not touched by regulators. The use of travel opened up the debate about whether the standard could be considered discriminatory, and is seen as arbitrary by which country an applicant had traveled to, had plans to travel to, or even considered traveling to in the Congresswomans case. In addition the specific standards with which travel underwriting is employed seem not to exist.

In the hearing, the American Academy of Actuaries defended the sanctity of underwriting standards used by insurers. In writing to the NAIC, the AAA has taken the position that any regulation of travel information should be

limited, which would still allow the travel information to be used if the insurer used sound actuarial principles in its underwriting decisions. Regulators questioned if that shouldnt be the goal of every fair underwriting decision. If so, insurers should be able to show regulators the actuarial basis by which these underwriting decisions are made. This continues to be a source of contention as the regulators continue to consider model regulations.

Will There Be A Consensus Regulation Out of the NAIC? After the September 2006 hearing, the NAIC worked towards creating draft changes to the model Unfair Trade Practices Act through a subcommittee of interested regulators. The NAIC Life Insurance and Annuities Committee failed to adopt the changes on an evenly split vote in March of 2007, in large part due to a requirement that mandated insurers file their guidelines with respective insurance departments so they can verify the use of sound actuarial principles. Insurers forcefully argued that this was unnecessary regulation that would increase bureaucracy and expense with little consumer benefit.

Outspoken leaders at the NAIC like Commissioner McCarty continue to push the formation of uniform regulation to create the standards he believes are necessary to prevent discrimination in underwriting practices as it relates to a consumers past and future travel information. On June 12, 2007 the NAIC took another crack at coming up with a consensus piece that regulators could use across the country when it released a new draft of amendments to the model Unfair Trade Practices Act.

At the fall meeting of the NAIC, the Life Insurance and Annuities Committee decided to take a dual-option approach to addressing the issue. The reason cited at the time was Congresswoman Wasserman-Schultzs successful inclusion of language in the *Terrorism Risk Insurance Revision and Extension Act of 2007 (TRIREA) (H.R. 2761)*. The language was ultimately not included in the final version adopted by Congress and signed by President Bush, so the NAIC is back to square one to consider the June 12 draft.

Insurers are faced with a dilemma. If there is no consensus among regulators on if and how to regulate underwriting as it relates to travel information, then states as the laboratories of innovation will consider their own standards. These standards could very well vary greatly from state to state, thus creating an even larger problem for insurers as they navigate the state based system of regulation. So, the question for insurers is: Do we support a uniform regulation we dont like, but could live with, or have different criteria in different jurisdictions that can create an even larger regulatory bureaucracy?

I believe the potential for creating consensus on this issue is significant. The political will of the new top leadership at the NAIC is larger than in the past year, and the lack of action in Congress creates an opportunity for the NAIC to take the lead on this very controversial but important issue.

Work continues on the revisions. A November 27th conference call of the Life Insurance and Annuities Committee showed progress towards reaching consensus, with affirmative comments coming from the new NAIC President Sandy Praeger (KS), and other key regulators on the Committee.

The use of travel information in underwriting will not go away any time soon. If the NAIC does not address the issue in a meaningful way, the risk of Congress stepping in to address the problem will only escalate. Even though Congresswoman Wasserman-Schultz was unsuccessful in keeping language in this TRIREA bill that does not mean she wont be successful in the future. Many regulators are ready and able to tackle the issue responsibly. Keep an eye out for passage of revisions to the NAICs Unfair Trade Practices Model Act in 2008 to address the issue.

Veach on Union Indemnity's Belated Distribution

2008 Emerging Issues 2045

Veach on Union Indemnity's Belated Distribution

By James Veach

April 23, 2008

SUMMARY: James Veach writes about a receiver's efforts to complete the liquidation of Union Indemnity Insurance Company, a New York insurer that failed more than two decades ago. Union Indemnity is a cautionary tale about the unintended consequences of litigation and the effect of legislative changes undertaken during the life of an insurance company receivership.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Twenty-two years after Union Indemnity Insurance Company (Union) failed, its receiver plans a first (partial) payment to its policyholders. In an Initial Report on the Status of the Liquidation of Union Indemnity Insurance Company of New York" (Report), Deputy Superintendent of Insurance Mark Peters, who heads up the New York Liquidation Bureau (NYLB), addresses the obvious question why did it take so long to make a partial payment?

In his Report, Mr. Peters mentions the indictment of his immediate predecessor, Deputy Superintendent Jodi Hall, but Ms. Halls tenure was relatively brief. Mr. Peters largely blames the delay on years of poor [Bureau] management. *Report*, p. 1. As an example of that poor management, Mr. Peters mentions the failure of the NYLB to have its financial statements properly audited . . . *Id.* (The NYLB recently commissioned an outside auditing firm to review Unions accounts and will, if necessary, adjust Unions balance sheets to establish a distribution percentage.)

Mr. Peters, however, also observes that "extensive litigation regarding . . . the collectibility of (Union's) reinsurance . . . complicated and hampered" his predecessors' efforts to collect reinsurance moneys due Union. *Report*, p. 2. This is a marvelous understatement, but the Report later describes in more detail the litigation fallout that earned the Union estate about \$48 million in damages collected from Union's directors and officers insurers, but cost the Union estate more than \$200 million in reinsurance recoverables.

With apologies to those who lived through it, the saga of the Liquidator's lugubrious litigation merits retelling, even though it can't be done justice in a few paragraphs. Nevertheless, in the spirit of the sub-prime meltdown, the shadow of an optional federal charter, and the wake of talk about "rehabilitating" bond insurers MBIA, Ambac, and FGIC, see, *e.g.*, S. Craig & L. Plevin, *Former Spitzer Aide Drives Bond-Insurer Rescue Talks*, *The Wall St. Journal*, Feb. 6, 2008, p. C1., we take a glance in the rearview mirror.

Rescission and Reinsurers. Broker Frank B. Hall & Company, Inc. (Hall) wholly owned Union, which was domiciled in New York and did business on both an admitted and non-admitted basis in almost every U.S. state, plus the District of Columbia and Puerto Rico. In addition to commercial and personal liability policies, Union also wrote medical malpractice and workers compensation *and* assumed reinsurance. A January 1985 report on examination revealed Unions impairment. In July 1985, when Union and its parent could not restore its surplus to policyholders, the Superintendent, acting pursuant to NYIL § 7405, obtained an order of liquidation.

In the 1980s and early 1990s, Unions Liquidators about seven Superintendents of Insurance (plus or minus acting or interim Superintendents) have filled that role were responsible for waves of litigation that shaped the estate. The Liquidator first hired outside counsel and sued some of Unions reinsurers. These reinsurers moved to compel arbitration. The Liquidator opposed the motion, but Supreme Court Justice Ira Gammerman, then overseeing the liquidation pursuant to NYIL Article 74, ruled for the reinsurers and directed that the parties arbitrate. *Corcoran v. AIG Multi-Line Syndicate, Inc.*, 143 Misc.2d 62 (Sup. Ct., N.Y. Co. 1989) (the AIG action).

The Liquidator appealed Justice Gammerman's judgment and the Appellate Division, First Department, reversed. Relying on case law holding that the liquidation court had exclusive jurisdiction over all claims concerning the Union estate and that arbitrators appointed pursuant to the reinsurance contracts at issue could not invade that exclusive jurisdiction, *Knickerbocker Agency Inc. v. Holz*, 4 N.Y.2d 245 (1958), the First Department sent the parties back to Justice Gammerman. *Corcoran v. AIG Multi-Line Syndicate, Inc.*, 167 A.D.2d 332 (1st Dept 1990). See also, *Corcoran v. Ardra Ins. Co., Ltd.*, 77 N.Y.2d 225 (1990) (decided at about the same time and extending the *Knickerbocker* holding to reinsurance disputes between the liquidator of an insolvent New York insurer and its alien reinsurers).

Meanwhile, the Liquidator had hired another outside law firm to sue Unions and Halls directors, officers, and affiliated companies for fraud and breach of statutory and fiduciary duties. This led to litigation over whether Unions Liquidator had exclusive standing to pursue these claims. Both the trial court and the First Department held that the Liquidator alone could pursue Hall and its D & O insurers on a theory that Hall had used Union as a safe harbor for risks that could not be placed elsewhere. *Corcoran v. Frank B. Hall & Co.*, 149 A.D.2d 165 (1st Dept 1989) (the Hall action).

The beneficiary of a Union surety bond brought a direct action against Union's reinsurers. Unions Liquidator, asserting his standing as the exclusive holder of Unions reinsurance recoverables, intervened, again asserting that he alone had standing to pursue Union's reinsurers. The reinsurers counterclaimed, alleging that their reinsurance contracts were fraudulently procured and that they the reinsurers were the victims of Halls loss-leading fraud. In support of their cross motion, the reinsurers quoted liberally from affidavits submitted during the litigation over who had the right to pursue Hall and its directors and officers for damages inflicted on Union while Hall operated Union.

In deciding the reinsurers' cross motion, Justice Gammerman considered not only the detailed allegations of fraud contained in the Liquidators suit against Hall, its officers, directors, and affiliates, but also the sworn and detailed affidavits submitted to the court describing the fraud. Justice Gammerman concluded that these affidavits and pleadings constituted judicial admissions by the Liquidator.

Relying on these judicial admissions, as well as other evidence of fraud and misrepresentation, the trial court found that Union had misrepresented its financial condition to its reinsurers. The trial court first rescinded the reinsurance contracts, but later on the Liquidators motion to reargue declared that the subject reinsurance contracts were merely unenforceable, thus relieving the reinsurers of their obligation to remit premium. See *In Re Liquidation of Union Indem. Ins. Co. of New York*, 200 A.D.2d 99 (1st Dept 1994), *affd*, 89 N.Y.2d 94 (1996) (the Michigan National action).

The reinsurers in the AIG action, having been forced to litigate rather than arbitrate, moved for summary judgment on the same theory that they too were the victims of Hall's and Union's misrepresentation. The trial court agreed and declared that their reinsurance contracts were unenforceable. The Appellate Division, First Department, affirmed. *Curiale v. AIG Multi-Line Syndicate, Inc.*, 204 A.D.2d 237 (1st Dep't 1994). In a separate decision, however, the First

Department later held that the Liquidator could collect a return of premium after the reinsurers had succeeded in having their reinsurance contracts rescinded. *Curiale v. AIG Multi-Line Syndicate, Inc.*, 225 A.D.2d 409 (1st Dep't 1996). Thus, the *Michigan National* and AIG actions eliminated . . . all of Unions reinsurance recoverables, which were then quantified at approximately \$200,000,000. *Report*, p. 16.

What about the Liquidators suit against: (1) Hall and its affiliates; (2) Halls (and Unions) directors and officers (and their insurers); and (3) Halls auditor, Touche Ross & Co. (and its E & O insurers)? The Liquidator had sued for \$140 million, but in 1997 the Liquidator settled for \$55 million to be paid over time pursuant to a structured settlement. In order to avoid waiting for all the installments, the Liquidator agreed to a \$48 million lump sum payment.

A Change in the Law. When Union failed in 1985, insurers that ceded to an insolvent New York insurer were entitled to share *pro rata* in the distribution of the assuming reinsurer's assets. NYIL § 7434 in McKinney's Consolidated Laws of N.Y., Book 27, p. 209 Legislative History (2000). In 1999, however, the New York legislature enacted a statutory scheme for prioritizing distributions. NYIL § 7434. The 1999 amendment created six classes of creditors. Policyholders were placed in class two; reinsurers were relegated to class six. No distribution could be made to a class six creditor until creditors with allowed claims in classes one through five had been paid in full.

The 1999 amendment effectively eliminated any hope for a reinsurance creditor's recovery in most insolvencies. Nevertheless, the 1999 amendment applied only to an insolvency proceeding commenced *after* June 29, 1999. Thus, the 1999 amendment did not apply to Unions cedants and Union's cedants were still entitled to a *pro rata* distribution.

In 2005, however, the New York Legislature further amended NYIL § 7434 such that the creditor classification scheme adopted in 1999 applied to *distributions* made after the effective date of the 2005 amendment, or May 11, 2005. Unions cedants/creditors are now class six creditors and subordinate to classes one through five.

Hearing on the Report: A Cedant's Objection. In October 2007, the Liquidator provided notice of a hearing to confirm the Report discussed above. In his Report, Mr. Peters provided a balance sheet of the estates assets and liabilities and proposed to use that balance sheet subject to adjustment based on any audit findings to make a first distribution to Union's creditors. The Liquidator asked the Court to set a November 15, 2007 bar date on claims against the estate. This would allow the Liquidator to cut off further submission of new losses covered by timely filed proofs of claim and determine a distribution percentage.

The Report reveals that of the 31,299 claims presented to the estate, 23,545 have been adjudicated. Of these claims, 1,269 were resolved by guaranty funds on the Liquidators behalf, 9,675 claims were allowed by Union's liquidator, and 12,601 claims were either disallowed or recommended for disallowance. 1,722 claims remain open, including 292 open reinsurance claims

At the December 18th hearing, Justice Karla Moskowitz, the Supreme Court Justice now responsible for overseeing the estate, determined that six parties had objected to the Report. The objecting parties consisted of three commercial policyholders, two cedants, and the purchaser of a policyholder claim. By the date of the hearing, however, the three policyholders, dazzled by the prospect of receiving even a partial distribution, had withdrawn their objections.

Of the remaining three objectors, only one appeared an off-shore insurer that had both ceded to and assumed business from Union. In his capacity as a cedant/creditor, the off-shore insurer argued, among other things, that the amendment of NYIL § 7434 discussed above was retrospective and unconstitutional. Justice Moskowitz heard argument on this objection, agreed to accept additional papers from the Liquidator, and took the Liquidators application to approve his Report (and the cedant's objection) under consideration.

* * *

The Union estate has seen many changes. Superintendents have come and gone, as have many administrators at the Liquidation Bureau. New Yorks insurance insolvency laws have been amended significantly. The Liquidation Bureau

itself has survived challenges with respect to how it functions and whether it is a state agency or something other than an agency of the state. See *Dinallo v. DiNapoli*, 9 N.Y.3d 94 (2007); see J. Veach, *Former NY Comptroller's Subpoenas May Affect New York Insurance Superintendent's Plans for Liquidation Bureau*, Mealey's Litigation Report: Insurance Insolvency, Vol. 19, #3, July 2007. And the Union estate sure made a lot of law, some of which is described above, and spent a lot of money doing so. What remains is the distribution of the estates remaining assets.

But the delay in making a first, partial distribution to Union's creditors continues. On January 2, 2008, Governor Eliot Spitzer appointed Justice Moskowitz to serve on the Appellate Division, First Department. J. Stashenko & D. Wise, *Spitzer Fills Two Vacancies on First Department Bench*, N.Y.L.J., Jan. 2, 2008. Another Supreme Court Justice must consider the Report (and the cedant's objection described above), but that assignment has not yet been made. Thus, the delay in making even a partial first distribution continues.

The Report notes that Unions Liquidator has installed new senior management and reorganized the Bureau. *Report*, p. 2. As noted, the Liquidator has hired a firm to conduct a "top-to-bottom audit" of all insolvent insurance estates. The NYLB also recently issued many requests for proposals to bring in other firms or consultants to collect reinsurance recoverables, defend and investigate claims, and provide legal advice and representation. In December, the Liquidator even issued a request for proposals for a "licensed architect" to conduct a "space audit" and provide a design proposal for its offices at 123 William Street in New York City.

Perhaps the Liquidator should also consider hiring an historian. Each failed insurer and reinsurer has its own cautionary tale to tell. Before relegating closed estates to the warehouse, how about a *real* closing report, one that focuses on why the company failed, the role of the regulator in these failures, and the consequences of the ensuing insolvency. A true closing report might help regulators, legislators, insurers, reinsurers, insurance consumers, and liquidators avoid repeating past mistakes.

ABOUT THE AUTHOR(S):

James Veach is a partner in Mound, Cotton, Wollan & Greengrass's New York City office. Mr. Veach has handled insolvency and run-off related matters for many years. His experience embraces New York Insurance Department-approved plans to avoid liquidation pursuant to New York's Regulation 141, as well as arbitration and litigation undertaken on behalf of cedants, reinsurers, general creditors, investors, and Receivers.

Mr. Veach serves on the Publications Committee of the Association of Insurance and Reinsurance Run-off Companies and is a member of the International Association of Insurance Receivers. He is admitted in New York and New Jersey and is also an ARIAS-U.S. certified arbitrator.

Mr. Veach gratefully acknowledges the assistance of Law Clerk Greg Wyles, but takes full responsibility for all errors of omission or commission in this article. Mr. Veach's views, of course, do not necessarily reflect those of MCW&G's clients, his partners, or any other non-attributed person.

Sonnenschein Nath & Rosenthal, LLP on Winning a Defense Verdict on Damages

2008 Emerging Issues 2046

Sonnenschein Nath & Rosenthal, LLP on Winning a Defense Verdict on Damages

By Alan S. Gilbert

April 23, 2008

SUMMARY: Plaintiffs in breach of contract cases often attempt to sustain their burden of proving proximate causation merely by substantiating but for causation and then forcing Defendants to prove a negative. *Emerald Inv. Limited P'ship v. Allmerica Fin. Life Ins. and Annuity Co.* re-affirmed the often-ignored notion that it is the Plaintiff that bears the burden of proving that the Defendants breach of contract proximately caused the alleged damages.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: *Emerald Investments Limited Partnership v. Allmerica Financial Life Insurance and Annuity Co.*, 2008 U.S. App. LEXIS 3513 (7th Cir. February 20, 2008), exemplifies the importance of the causation requirement in a breach of contract case. In *Emerald*, defendant Allmerica prevailed in a damages-only trial, after a summary judgment that Allmerica breached its contract with Emerald. (Sonnenschein represented Allmerica in the damages phase of the case.) The Seventh Circuit found that Emerald had failed to prove that its purported damages were proximately caused by Allmericas breach. While based on common law principles, the decision reflects the renewed emphasis on causation doctrines developed in the securities area. See *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336 (2005).

What Happened?

Background. Emerald purchased two variable annuities from Allmerica. Emerald used the annuities to engage in frequent market-timing trading between mutual fund sub-accounts. Emeralds market-timing trading, known as international time-zone arbitrage, involved buying large quantities of international mutual funds at the 4 pm close of the New York markets to take advantage of stale prices of the underlying international shares within the funds. Due to time zone differences, the international markets where the shares traded closed several hours before 4 pm New York time. The mutual funds were priced at 4 pm New York time based on the underlying shares closing prices in their home markets. Sometimes events during the period between the international markets close and the New York markets close (such as after hours trading, world news or a runup in other markets) indicated that the international shares prices would be higher when their markets opened the next day. At such times, the mutual funds price would not reflect those events. When that occurred, Emerald would take advantage of the funds stale prices by purchasing large quantities of the international mutual funds just before the 4 pm New York market close. After the anticipated international share price

rise was reflected in the mutual fund prices the next day or so, Emerald would sell the international funds and realize a profit.

This market timing essentially usurped profits otherwise available to the mutual funds long term holders and hurt the performance of the mutual funds and the variable annuities that held the funds shares. Facing pressure from the mutual funds to stop such harmful trading, Allmerica restricted Emeralds frequent trading. Emerald sued Allmerica in the federal district court in Chicago, alleging breach of provisions in its annuity contracts that allowed transfer of funds among mutual fund sub-accounts.

The Liability Ruling and Emeralds Damages Case. The district court agreed with Emerald on liability, granting summary judgment that Allmerica had breached the annuity contracts by restricting Emeralds trading. Emeralds damages expert claimed that Emerald would have made over \$150 million in lost profits through market timing trades for the expected duration of the annuities (over 20 years) if it had not been stopped by Allmerica. Emerald argued that but for Allmericas breach it would have continued to reap the huge 35-40% annual returns it had been making through its market timing.

Allmericas Attack On Emeralds Damages. Allmerica defeated Emeralds claims by attacking Emeralds damages theory on several grounds. The key to Allmericas defense was attacking Emeralds proof of causation of its alleged lost profit damages. Allmerica developed and presented evidence that Emerald would not have been able to profit from its market timing strategy even if Allmerica had not restricted its trading.

As a factual matter, Allmerica showed that the Scudder international mutual fund Emerald was trading in would have stopped Emeralds market timing if Allmerica had not. But this evidence was not rock solid; no one could know for sure what would have happened if the restrictions had not been placed on Emeralds trading, because Emerald was not actually able to trade through the Allmerica annuities. A jury facing this circumstantial evidence of what might have happened, along with the Courts clear finding that Allmerica breached its contracts with Emerald, might well have found that Emerald was entitled to all or most of the substantial damages it sought. That was a particular danger because an insurance company is never a jury favorite.

To deal with this, Allmerica turned to a legal strategy of forcing Emerald to bear the burden of proof on this issue. If Emerald bore the burden of proof, it would have to prove that it *would have made* substantial profits if it had not had its trading restricted, rather than Allmerica having to prove a negative that Emerald *would not have made* profits. Allmerica argued that Emerald bore this burden as part of its proof of the causation element of its breach of contract claim, *i.e.*, that Allmericas contract breach caused the damages Emerald claimed. *See e.g., Isaksen v. Vermont Castings, Inc.*, 825 F.2d 1158, 1165 (7th Cir. 1987) (We do not allow plaintiffs to obtain damages awards without proving what compensable damages were actually suffered as a result of the defendants unlawful conduct.) This argument was enhanced by the rule in Illinois, whose law applied, that the lost profits damages Emerald sought must be proved with reasonable certainty. *E.g., Midland Hotel Corp. v. Donnelly Corp.*, 118 Ill.2d 306, 316 (1987).

On the other hand, Emerald argued that Allmerica bore the burden of proving that Scudder would have prevented Emerald from making profits absent the breach since that was an affirmative defense to Emeralds damages claim.

The Burden of Proof Rulings. Both the district court and the Seventh Circuit rejected Emeralds argument. They held that proving that claimed profits would have been made absent a breach is part of the plaintiffs burden of proving damages causation. As Emerald had the burden of proving its damages, Allmerica was not obliged to plead or prove that Scudder would have cut off Allmerica and hence *Emerald*. 2008 U.S. App. LEXIS 3513, at **18. (Practice pointer: Allmerica deliberately did not plead as an affirmative defense that Scudder would have stopped Emeralds trading. If it had been so pleaded, the courts might have been more willing to put the burden of proof on Allmerica to show the cutoff would have occurred.)

The Damages Trial. The burden of proof rulings were critical to the outcome of the case. Since Emerald bore the

burden of proving it would have made profits absent Allmericas breach, Allmerica only had to prevent Emerald from meeting that burden.

Even though Emerald bore the burden of proof on the damages issue, Allmerica bore the burden of coming forward with evidence to rebut plaintiffs case. *See Moore v. Kulicke & Soffa Industries, Inc.*, 318 F.3d 561, 565 (3d Cir. 2003) (defendants must meet burden of producing some evidence to rebut plaintiffs case, but plaintiff retains the ultimate burden of persuasion). Thus, Allmerica developed and presented evidence showing why Emerald would not have made profits in the future. This included (1) documents and testimony from Scudder representatives about their efforts to stop market timing in their funds, (2) internal emails and other documents from Emerald itself about how various other mutual funds (including other Scudder funds) had stopped Emerald from market timing, (3) evidence about how the Securities and Exchange Commission had attempted to stop market timing and (4) Emeralds internal records of its own profit declines before trial due to the multi-pronged efforts to stop market timing.

In addition to showing a lack of damages causation, this evidence moved the focus of the case away from Allmericas judicially determined contract breach and Emeralds profitable history of market timing, bad facts for Allmerica. That evidence placed the focus on Emeralds harmful market-timing trading and Emeralds ever-declining profitability because its trading had been stopped elsewhere, bad facts for Emerald. This undoubtedly helped to lessen the sting before the jury of the courts finding that Allmerica breached its contracts with Emerald.

The Outcome. Having been instructed that Emerald bore the burden of proving that Scudder would not have stopped its trading, *i.e.*, that Emerald would have made the substantial damages it sought if the breach had not occurred, the jury awarded Emerald only a fraction of what it claimed, \$1.1 million.. The court of appeals then reversed even that relatively small award as being speculative, or in other words not proved. (2008 U.S. App. LEXIS 3513, at **11). n2

Analysis: Recent Securities-Law Loss Causation Concepts Are Now Being Applied To Common-Law Claims. In securities cases, courts require more than proof that the damages could not have occurred but for the wrongful act, *i.e.*, transaction causation; there must also be proof that the wrongful act actually caused the purported loss, *i.e.*, loss causation. *See Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336 (2005). Here, the requirement that Emerald prove that Allmericas breach actually caused Emerald losses was in essence requiring proof of loss causation, even though the Seventh Circuit did not use those terms. Judge Posner, who wrote the *Emerald* decision, has applied this same concept in other non-securities cases. *See Maxwell v. KPMG, LLP*, 2008 U.S. App. LEXIS 5896 (7th Cir. 3/21/08) (relying on securities law loss causation concept, court found that accountant whose allegedly negligent audits led plaintiff to purchase a company, was not liable for loss the acquired company caused plaintiff later when its business dried up due to industry downturn); *Movitz v. First Natl Bank of Chicago*, 148 F.3d 760, 765 (7th Cir. 1998) (relying on securities law loss causation concept, court found in common law tort case that bank not liable for loss in value of office building caused by downturn in real estate market even though plaintiff might not have purchased building at all but for bank errors in evaluating building for investment).

The loss causation concept is itself based on common law notions of proximate causation. *See Dura at 343-44*. Courts have now come full circle and are applying the loss causation doctrine as developed and refined in securities law cases back into common law cases.

Conclusion. The imposition of a loss causation requirement in securities cases has focused courts on the need to prove proximate cause for damages in common law cases. The *Emerald* case demonstrates how strong a causation defense can be, even in a damages-only trial after liability has already been established against the defendant.

n1 . Mr. Gilbert is a trial and appellate lawyer whose practice focuses on complex financial and commercial cases. He represented Allmerica in the damages phase of the case discussed in this article, both at trial and on appeal.

n2 . The Court of Appeals found damages testimony of Emeralds expert and Emeralds principal unreliable and not supportive of the verdict. In doing so, the Court relied, *inter alia*, on the evidence developed on the causation issue of how Emerald and other market timers generally had not been able to continue profiting from market timing after the date of Allmericas breach.

ABOUT THE AUTHOR(S):

Alan S. Gilbert has extensive experience in litigation and alternative dispute resolution before trial and appellate courts, arbitration tribunals and administrative agencies throughout the United States. He concentrates on complex commercial cases, with a particular emphasis on financial disputes and class actions. Mr. Gilberts litigation experience covers a wide range of areas, including contracts, securities, commodities, class actions, insurance, insolvency, real estate, construction, products liability, constitutional law, trade secrets, banking, lender liability, employee benefits, fiduciary responsibility, corporate control, and partnerships.

Current and recent representations:

Successfully defended variable annuity issuer in damages only case tried to jury after court finding that insurer breached annuity contracts by imposing trading restrictions. Obtained jury verdict of less than 1% of nine-figure damages originally sought and reversal of that verdict on appeal, leaving client with no damages liability

Defending insurer in four week arbitration hearing over \$150 million in residual value insurance coverage for auto leasing company. Case settled before closing arguments on favorable terms

Prosecuting nine-figure actions against accountants, lawyers and bankers of defunct student finance company

Defending company and its cash balance pension plan in putative national class action challenging payments to participants

Serving as national coordinating counsel for various insurers facing class actions in different jurisdictions, including defending Hurricane Katrina class actions in Louisiana and a putative national class action in Arkansas challenging use of claim adjusting software

Before coming to Sonnenschein in 1981, Mr. Gilbert served as law clerk to the Honorable William J. Bauer, formerly the Chief Judge of the United States Court of Appeals for the Seventh Circuit, and spent four years representing the poor in individual and class actions with the Legal Assistance Foundation of Chicago, an affiliate of the federal Legal Services Corporation.

Sonnenschein Nath & Rosenthal, LLP regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in Chambers USA: Americas Leading Lawyers for Business. Sonnenschein won the 2008 Chambers Award for Excellence in Insurance. The award recognizes Sonnenschein's work in both the litigation and regulatory areas and further confirms its reputation as a world-class provider of legal services to insurance industry clients. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Stempel on Vigilant Insurance Co. v. The Bear Stearns Co.

2008 Emerging Issues 2144

Stempel on Vigilant Insurance Co. v. The Bear Stearns Cos: Bear Stearns Takes a Hit on Insurance Coverage as Well as Stock Price, Independence

By Jeffrey W. Stempel

April 16, 2008

SUMMARY: The financial world was shocked to discover that investment banking firm Bear Stearns was on its way to being acquired by Morgan Stanley. A unanimous New York Court of Appeals held that Bear Stearns was without insurance coverage for an \$80 million settlement it reached with government regulators in 2002 in the absence of insurer consent. The decision may support stricter enforcement of insurance policy duties of notice and cooperation.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: March 2008 saw another casualty of the subprime mortgage lending crisis. Bear Stearns, a financial services company dating back to the Nineteenth Century, was discovered to be in financial trouble, so much so that there was immediate talk of a bailout or bankruptcy. Within days, investment bank J.P. Morgan rode to the rescue by offering to acquire Bear Stearns at the price of \$2/share, considerably down from the company's relatively recent high of \$80/share. Approximately 30 percent of the company stock is owned by employees or other insiders, many of whom now see their once formidable fortunes crashing down to a comparative pittance. As this is written, there is talk that the J.P. Morgan acquisition price may increase to \$8/share or may be challenged as unfair by disgruntled shareholders, who note that the estimated total acquisition price of \$236 million is less than the estimated value of the Bear Stearns headquarters building in Manhattan (valued at between \$400 and \$500 million).

Whatever the ultimate outcome of the Morgan Stanley-Bear Stearns acquisition and any attendant litigation, one thing is clear: Bear Stearns will not be getting a requested \$50 million of insurance coverage from its insurers in connection with the investment bankers' 2002 settlement of actions brought against it by government regulators. The New York Court of Appeals, in a unanimous March 13, 2008 decision, held that Bear Stearns improperly entered into the settlement without the insurers' consent and that the policyholders' unauthorized action voided coverage. *See Vigilant Ins. Co. v. Bear Stearns Cos.*, 2008 N.Y. LEXIS 542 (Mar. 13, 2008).

The decision, handed down in the midst of the larger bad news for the company, provides a window into the type of problematic, arguably reckless, decisionmaking that critics say was partly responsible for the company's demise. It also provides a roadmap for insurers wishing to protect themselves from voluntary settlements by policyholders and a cautionary tale for policyholders who wish to protect their potential for coverage when sued. In addition, the decision potentially breathes some new life into the sophisticated policyholder defense to coverage and may be part of a modest

trend toward greater judicial enforcement policy provisions designed to protect the insurer from slipshod or unduly self-serving conduct such as nonsettlement, notice, and cooperation clauses.

Insurer Vigilant issued a \$10 million professional liability policy to Bear Stearns that provided liability coverage for wrongful acts of the policyholder. Bear Stearns retained \$10 million of risk, with excess insurers Federal and Gulf providing an additional \$40 million of liability coverage upon exhaustion of the underlying \$20 million of retention and Vigilant coverage. Like most liability policies, the Vigilant policy contained language requiring that the policyholder not enter into settlement without the consent of the insurer if the amount of the settlement exceeded \$5 million. But this consent-to-settle clause was a particularly clear and reasonable one, providing that

The Insured agrees not to settle any Claim, incur any Defense Costs or otherwise assume any contractual obligation or admit any liability with respect to any Claim in excess of a settlement authority threshold of \$5,000,000 without the Insurers consent, which shall not be unreasonably withheld. . . The insurer shall not be liable for any settlement, Defense Costs, assumed obligation or admission to which it has not consented.

*See 2008 N.Y. LEXIS 542 at **8.*

In early 2002, the SEC, the NASD, the NYSE and several state Attorneys General began an investigation into the practices of research analysts working at financial services firms and the potential conflicts that could arise from the relationship between research functions and investment banking objectives with the inquiry focused on allegations that research analysts employed at ten major financial institutions, including Bear Stearns, were improperly influenced by investment banking concerns. *See 2008 N.Y. LEXIS 542 at **2.* This and related investigations taking place in the wake of the Enron and dot.com company collapses of 2001 grew out of concern that financial firms had in essence provided overly rosy analysis of businesses in order to curry favor so that the financial services firms could also score big investment banking fees in connection with public offerings and other capital-raising initiatives for these same businesses. It grabbed headlines at the time and undoubtedly raised significant concerns on Wall Street.

Not surprisingly, the investigation targets began talking about a global settlement with the regulators, undoubtedly as part of an effort to put the story behind it irrespective of the merits of the government claim. More surprisingly, Bear Stearns did not put primary insurer Vigilant or excess insurers Federal and Gulf in the loop, even though all policies restricted coverage if any settlement in excess of \$5 million were made without the insurers consent (the Federal and Gulf excess policies followed form to the Vigilant primary policy). In December 2002, Bear Stearns executed a settlement-in-principle document in which it agreed to consent judgments with the regulators and payment of \$50 million in retrospective relief, plus \$25 million to fund independent research and \$5 million for investor education. *See id.* at **3. The government regulators announced the settlement via press release, noting that it included nine financial firms in addition to Bear Stearns and would yield more than \$1.4 billion in payments. In April 2003, Bear Stearns executed a consent agreement binding it to final judgment in the U.S. District Court for the Southern District of New York. Under the terms of the agreement, the SEC was to present the settlement to the court for final approval. Three days later, Bear Stearns finally wrote to its insurers and requested their consent to the settlement. In October 2003, the federal trial court approved the settlement.

Vigilant, Federal and Gulf all denied coverage and filed the declaratory judgment action that eventually reached New Yorks highest court. In addition to raising the issue of an unauthorized settlement, the insurers also argued that an investment banking exclusion in the policy precluded coverage, that the payments of independent research and investor education did not qualify as losses under the policy, and that \$25 million of funds paid in settlement represented disgorgement of illegal profits and therefore should not be insurable as a matter of public policy. The state trial court and intermediate appellate court reacted differently to these arguments, with the Appellate Division siding with Bear Stearns on the inapplicability of the investment banking exclusion and the no-loss defense and finding triable issues of fact regarding the non-settlement clause and public policy defenses of the insurers.

The Court of Appeals based its ruling solely on the unauthorized settlement defense. In attempting to obtain

coverage even though it clearly had made a settlement deal without its insurers consent, Bear Stearns argued that it was not in breach of the policy because the settlement did not become final through judicial approval until nearly six months after the insurers were notified of the settlement. The Court of Appeals was having none of it, holding that Bear Stearns breached [the settlement] provision when it executed the April 2003 consent agreement before notifying the insurers or obtaining their approval [because] Bear Stearns did everything within its ability to settle the matter and no further action was required on its part. *See id.* at **9. The Court was

unpersuaded by the contention that a triable issue of act exists because the federal court did not approve the settlement until it entered a final judgment in October 2003. Parties are free to enter into a valid settlement agreement that is made subject to court approval. Notably absent from the agreement, however, was any provision similarly subjecting it to the insurers approval. Having signed the consent agreement, Bear Stearns was not free to walk away from it before entry of a final judgment. * * * In executing the April 2003 agreement, Bear Stearns settled a claim within the meaning of the insurance policy provision.

*See 2008 N.Y. LEXIS 542 at **9-**10 (citations omitted).*

The Court of Appeals decision seems unassailable as a matter of policy text, contract law and common sense. The policy states in straightforward language that the policyholder cannot expect coverage (at least for settlements exceeding \$5 million) unless the insurer consents. Because the insurer cannot unreasonably withhold consent, the provision is not unconscionable or otherwise problematic. The which shall not be unreasonably withheld language of the settlement approval provision protects the policyholder from being victimized by insurer intransigence and would put the insurer at risk of bad faith liability it allowed the policyholder to be skewered by a judgment that could have been avoided through a prudent settlement.

Further, unless the insurer is informed about the policyholders settlement activities until after a deal is done, the insurer has no opportunity to participate. Even if the federal court has not formally approved a settlement, the policyholder violates this type of a clause when it makes a deal with a plaintiff without at least notifying the insurer and giving the insurer a meaningful opportunity to participate in the negotiations and evaluate any proposed resolutions. If the insurers had been informed but were holding up a reasonable settlement, Bear Stearns might then have been permitted to properly settle even in the absence of insurer consent and still obtain coverage.

The Court of Appeals was particularly unsympathetic in that it noted that Bear Stearns was a sophisticated business entity that should have appreciated the meaning of the policy provision and the consequence of its acts. *See id.* at **10. Off and on since the 1970s, insurers have on occasion argued that a sophisticated insured approach should prevail to coverage disputes with business policyholders that have experience with particular policies and the assistance of brokers and counsel. In extreme cases, some insurers have argued (with occasional court approval) that contract axioms such as construction of ambiguities against the insurer as policy drafter should not apply. *See Hazel Glenn Beh, Reassessing the Sophisticated Insured Exception, 39 Tort & Ins. L.J. 85 (2003); Jeffrey W. Stempel, Reassessing the Sophisticated Policyholder Defense in Insurance Coverage Litigation, 42 Drake L. Rev. 801 (1994).*

Although this more aggressive version of the sophisticated insured defense to coverage has never taken hold, courts do appear to view sophisticated policyholders as more responsible for the consequences of breach of a policy provision than an unsophisticated policyholder might be. For example, a small business or individual might on occasion be forgiven for failing to apprise the insurer first before seizing on an opportunity for swift settlement or might be forgiven for thinking that the case is not really settled until there is court approval. However, a sophisticated entity such as Bear Stearns is expected to understand the policy provisions, to resist being stampeded into settlement before notifying the insurer, and to understand that a consent agreement effectively resolves the dispute even if formal judicial approval remains to be obtained. At the margin, the *Vigilant v. Bear Stearns* case provides at least a modest shot in the arm for insurers wishing to make renewed use of sophisticated insured arguments.

What explains the Bear Stearns conduct? And what can policyholders and insurers learn from the case?

Although it is possible that Bear Stearns and its counsel simply missed the consent-to-settlement provisions of the policy, this is unlikely in view of the sophistication of company and counsel. More likely is that Bear Stearns, with the advice of counsel, wanted to reach an accord as soon as feasible to put the bad publicity behind it and move the story off the news pages. Getting the insurers into the loop risked scuttling a swift settlement. Before paying \$50 million, the insurers might well want more protracted discovery and negotiation, perhaps even trial all of which conflicted with the policyholders desire to put the case in the rear view mirror as fast as possible. Rather than risk the insurers derailing the express train toward settlement, Bear Stearns perhaps entered the settlement knowing that coverage was at risk but hoping that its argument about formal judicial approval might be accepted by the courts, at least enough for denial of summary judgment and settlement with the insurers for some significant amount of coverage.

In addition to unauthorized settlement provisions, liability policies also contain provisions requiring that the policyholder provide prompt notice to the insurer and cooperate with the insurer in the resolution of a case. The general rule in most states (but not New York) is that late notice vitiates coverage only if the insurer can demonstrate that it was substantially prejudiced by late notice. The same approach is taken by most states regarding failure to cooperate: it defeats coverage only if the insurers ability to defend or settle the claim is substantially prejudiced. *See* Jeffrey W. Stempel, Stempel on Insurance Contracts § 9.01 (3d ed. 2006 & Supp. 2008).

In New York, timely notice is a condition precedent to coverage. Late notice to either a primary or excess insurer precludes coverage. However, a reinsurer can avoid coverage on late notice grounds only if it is prejudiced. Because of the strength of the late notice defense in New York, the Bear Stearns decision to settle without even notifying its primary and excess carriers seems particularly bizarre. Prompt notice to the insurers would not necessarily have scuttled any desire to reach a quick settlement if the settlement is reasonable. Putting an insurer on notice of a claim in New York or elsewhere triggers the insurers duty to settle.

Insurance policy provisions requiring the policyholder to cooperate with the insurer in the defense of a claim are usually subject to a similar analysis. Even a clear failure to cooperate will not result in loss of coverage unless the insurer can demonstrate that it was substantially prejudiced by the failure, which usually means the insurer must show that the policyholders failure to cooperate resulted in a less favorable result for the insurer. Although this places a significant burden on the insurer in failure-to-cooperate cases, it is not insurmountable. *See, e.g., Hager v. Rutgers Casualty Ins. Co., 2008 N.J. Super. LEXIS 52* (N.J. Sup. Ct., App. Div., March 7, 2008) (policyholders failure to cooperate prevented insurer from determining if driver of vehicle at time of accident was a permissive user, effectively precluding insurer from investigating potential coverage defense even if failure to cooperate did not prejudice defense of the underlying auto accident case); *MacLean Townhomes, LLC v. American States Ins. Co., 138 Wn. App. 186, 156 P.3d 278* (Wash. Ct. App. 2007) (policyholders consent to binding arbitration breaches cooperation clause and causes substantial prejudice as a matter of law because it effectively precluded the insurer from raising legal defenses cognizable in litigation but not arbitration).

Like notice and cooperation provisions, policy provisions requiring insurer consent to settlement have sometimes been subjected to a showing of prejudice required approach by the courts but in general have been taken more seriously by courts.

Policyholders would like a world where unauthorized settlements preclude coverage only when the insurer cannot demonstrate that it could have done better in negotiating or defending a case but they by and large have achieved this goal. Unless the insurer has a conflict of interest with the policyholder, defends under a reservation of rights, or fails to defend, the policyholder will generally lose coverage if it settles without the insurers consent. When the policyholder settles without even notifying the insurer or allowing the insurer to participate in settlement or defense activity, the policyholder is highly likely to lose coverage.

To avoid such coverage losses, policyholders should as a general operating principle always give their insurers prompt notice and full opportunity to assume defense and settlement of a case. Where the liability policy is indemnity-only and lacks a duty to defend, the policyholder should still provide prompt notice and keep the insurer

adequately apprised of the posture of the case and settlement activity.

Only where it is impractical or clearly counter-productive or fruitless to involve the insurer should the policyholder engage in an unauthorized settlement. For example, if the insurer breaches the duties of defense or settlement or acts in bad faith, the policyholder will often be freed of any consent-to-settlement requirement in the policy. However, even in such cases, the policyholder should ordinarily keep the insurer informed and give the insurer every chance to resolve a matter or evaluate the case so that it has an opportunity to assess the policyholders proposed settlement of a matter.

Conversely, insurers wishing to avoid being stuck with unauthorized settlements should first give thought to providing clear and fair consent-to-settlement language in their policies. The consent language in the Vigilant policy was both clear and fair, which made it much easier for the New York Court of Appeals to be unforgiving when confronted with the unauthorized settlement actions of Bear Stearns. Thereafter, insurers notified of a past or pending settlement should at least consider attempting to insert themselves into the case in order to oppose judicial approval of an unreasonable settlement or seek to set aside an unreasonable settlement.

Although such efforts are as a practical matter unlikely to be successful, they will make a record in which it is clear that the insurer has done all it could to avoid being prejudiced by the unauthorized settlement just in case the court deciding the coverage dispute is inclined to apply the approach of the late notice and failure-to-cooperate cases that require substantial prejudice to the insurer before a policyholders breach results in loss of coverage.

But what about an unauthorized settlement that is reasonable or likely to be seen as reasonable by the court? In this type of case, the insurer is probably better off following the lead of Vigilant, Federal and Gulf in the Bear Stearns case and simply asserting that insurer consent or at least the opportunity to evaluate and consent is a condition precedent to coverage and that there is no need for an inquiry as to whether the unauthorized settlement resulted in a more adverse financial outcome to the insurer.

The \$80 million Bear Stearns settlement does not seem unduly generous in light of the serious conflict of interest allegations and bad publicity surrounding financial services companies in the post-Enron 2001-2003 time period. Getting several sets of government regulators off the backs of an investment house was probably worth \$80 million to Bear Stearns. But even if the settlement was reasonable, the insurers were deprived of their opportunity to test the government regulators theories and do better in settlement. The actions of the policyholder deprived the insurers of that opportunity. As insurer counsel noted after the decision, the decision provides a place at the settlement table for insurers in cases where the policyholder wants to use insurance money as part of a settlement.

In future cases, even when presented with reasonable settlement opportunities, policyholders, particularly sophisticated ones, should remember the lessons of *Vigilant v. Bear Stearns* and notify and involve their liability insurers as soon as feasible even where this raises some risk that an insurer will delay or perhaps even scuttle an attractive settlement. Although insurer involvement may slow down some momentum toward settlement, the duty to settle and the duty of good faith should ordinarily discourage unreasonable resistance and delay by insurers. In failing to inform its insurers, Bear Stearns took a \$50 million risk that proved to be every bit as misplaced as the big bets the company put on subprime loans.

SEIGER AND KINGSLEY ON PANASIA ESTATES V. HUDSON INSURANCE COMPANY AND BI-ECONOMY MARKET V. HARLEYSVILLE: NEW YORKS NEW STANDARD WITH RESPECT TO FIRST-PARTY BAD FAITH CLAIMS

By Mark B. Seiger and Jeffrey L. Kingsley

April 16, 2008

SUMMARY: Previously, New Yorks highest Court did not recognize independent tort causes of action for an insurers alleged failure to perform its contractual obligation under an insurance contract. The First Departments decision in *Acquista v. New York Life Insurance Company* was not followed by New York Courts until the Court of Appeals rulings in *Panasia Estates v. Hudson Insurance Company* and *Bi-Economy Market v. Harleysville* on February 19, 2008.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The standard for a first-party bad faith claim in New York was perhaps significantly and permanently altered on February 19, 2008 with the Court of Appeals decisions in *Bi-Economy Market, Inc. v. Harleysville Insurance Co. of New York*, __ N.Y.3d __, 2008 N.Y. LEXIS 278 (N.Y., Feb. 19, 2008) and *Panasia Estates, Inc. v. Hudson Ins. Co.*, __ N.Y.3d __, 2008 N.Y. LEXIS 275 (N.Y. Feb. 19, 2008) respectively. Are extra-contractual damages far behind?

Until recently, New Yorks highest court did not recognize an independent tort cause of action for an insurers alleged failure to perform its contractual obligations under an insurance contract. *Rocanova v. Equitable Life Assur. Soc.*, 83 N.Y.2d 603, 634 N.E.2d 940, 612 N.Y.S.2d 339 (1994). The *Rocanova* decision, which was routinely followed throughout the state, stood for the proposition that an insured would typically receive contractual damages for an insurers failure to adhere to the terms and conditions of the insurance policy. Absent a showing of egregious tortious conduct directed at the insured that demonstrates a pattern of similar conduct direct at the public generally, punitive damages and other forms of extra-contractual damages were precluded in an insureds award. *Rocanova, supra*; see also *New York Univ. v. Continental Ins. Co.*, 87 N.Y.2d 308, 662 N.E.2d 763, 639 N.Y.S.2d 283 (1995).

For the past thirteen years since *Rocanova*, the only decision which provided insureds with a pathway towards receiving greater protection in first-party bad faith claims was the Appellate Division, First Departments decision in *Acquista v. New York Life Insurance Company* 285 A.D.2d 73 (2d 2001). In *Acquista*, the First Department noted the potentially adverse consequences to the harsh standard of *Rocanova*. In fact, the First Department noted that New Yorks standard was becoming atypical in the United States:

Yet, for some time, courts and commentators around the country have increasingly acknowledged that a fundamental injustice may result when a traditional contract analysis is applied to circumstances where insurance claims were denied despite the insurers lack of a reasonable basis to deny them

[Under the *Rocanova* standard] an award, at the conclusion of litigation for money damages equal to what the insurer should have paid in the first place, may not have actually achieved the goal of contractual damages, which is to place the plaintiff in the position he would have been in had the contract been performed.

Id.

As such, the *Acquista* court held that an insured may be employed to interpose a claim for consequential damages beyond the limits of the policy for the claimed breach of contract. *Id.* As significant as many practitioners believed *Acquista* to be at the time, it was never followed by any court in a subsequent decision until recently.

In *Panasia Estates v. Hudson*, the Court of Appeals once again revisited the issue of whether an insureds claim for consequential damages is barred by the terms and conditions of the insurance policy. The insured, Panasia Estates, commenced this action against *Hudson*, alleging that it breached the insurance contract by failing to properly investigate the loss and denying the loss as not covered under the policy. Panasia sought both direct and consequential damages that it claimed stemmed from Hudson's breach. Hudson, in turn, citing *Rocanova* moved for summary judgment claiming, among other things, that consequential damages were precluded by the policy's exclusions. The lower court in denying Hudson's motion for summary judgment citing to the reasoning in *Acquista*, namely that an insured may recover foreseeable damages, including consequential damages, beyond the limits of its policy, for breach of a duty to investigate, bargain for and settle claims in good faith.

By applying that logic, the Court held that Contractual exclusion in commercial property insurance policy for consequential loss did not bar Panasia Estate request recovery of consequential damages arising when Hudson's alleged breach arose out of its failure to properly investigate loss occurring when building suffered water damage during renovations.

Likewise, in *Bi-Economy Market v. Harleysville*, Bi-Economy commenced this action against Harleysville, asserting causes of action for bad faith claims handling, tortious interference with business relations and breach of contract, seeking consequential damages for failing to timely pay the full amount of its lost business income claim. Like Hudson, Harleysville, relying heavily upon the New York Standard on bad-faith claims, moved to dismiss the consequential damages portion of the complaint by stating that the terms and conditions of the policy excluded such damages. The lower court and Appellate Division, unlike *Panasia*, granted and affirmed respectively *Harleysville* motion and plaintiff appealed. The Court reversed the Appellate Division and denied Harleysville motion stating that to determine whether consequential damages were reasonably contemplated by the parties, courts must look to the nature, purpose and particular circumstances of the contract known by the parties ... as well as what liability the defendant fairly may be supposed to have assumed consciously, or to have warranted the plaintiff reasonably to suppose that it assumed, when the contract was made *Id.* The Court went on to conclude that the purpose of the contract was not just to receive money, but to receive it promptly so that in the aftermath of a calamitous event, as Bi-Economy experienced here, the business could avoid collapse and get back on its feet as soon as possible. *Id.*

The Courts Of Appeals in the tandem decisions of *Panasia* and *Bi-Economy* appear to breathe life in the *Acquista* position by stating that consequential damages are allowable in a first-party bad faith claim. Both decisions, however, attempt to distinguish between allowing an insured to be eligible for consequential damages while maintaining the position that punitive damages are still prohibited under New York law.

The significant shift in New York's standard was not unanimously adopted, as Judge Robert Smith admonished the majority's rulings in his dissent. Judge Smith claimed that the *Rocanova* standard was abandoned without even a reference to it. Judge Smith explained:

We held that punitive damages are not available for breach of an insurance contract unless the plaintiff shows both egregious conduct directed at the insured claimant and a pattern of similar conduct directed at the public generally. Today, the majority abandons this rule, without discussing it and without acknowledging that it has done so. The majority achieves this simply by changing labels: punitive damages are now called consequential damages, and a bad faith failure to pay a claim is called a breach of a covenant of good faith and fair dealing.

If Judge Smith is correct in his assessment on the significance of the Court of Appeals recent rulings in *Panasia* and *Bi-Economy*, then jurors will now be allowed to weigh in on the sufficiency of an insurers business practices. The end result might be a potential increase in these types of litigations going to trial, and the possibility that jurors might have an opportunity to make punitive-like awards. Practitioners, however, can only wait to see if Judge Smiths bleak view is correct.

Developments in Bad Faith--Time-Restricted Settlement Offers

2008 Emerging Issues 246

Richmond on Developments in Bad Faith--Time-Restricted Settlement Offers

By Douglas R. Richmond

April 14, 2008

SUMMARY: Allegations of bad faith permeate insurance litigation. In a common bad faith scenario, an insured or its assignee alleges that a liability insurer unreasonably failed to settle a claim against the insured within its policy limits, thus exposing the insured to excess liability. In the vast majority of jurisdictions, an insurer must be presented with a settlement offer or demand within its policy limits to be potentially liable for damages exceeding those limits. When a plaintiff's damages exceed available coverage, the plaintiff is unlikely to be satisfied by a policy-limits settlement offer, and is therefore motivated to attempt the artificial expansion of those limits. A time-restricted settlement offer is the plaintiff's lever for attempting to do so. The plaintiff's lawyer sends the insurer a settlement offer that expires in a relatively short time. The plaintiff's settlement deadline is arbitrary. The plaintiff hopes that the insurer will not accept the offer before it expires, thus supporting a future bad faith claim. In his commentary, Douglas R. Richmond, Senior Vice President in the Professional Services Group of Aon Risk Services, urges the view that time-restricted settlement offers are rarely reasonable, and that most of them are litigation ploys that should not support bad faith allegations.

ARTICLE: DEVELOPMENTS IN BAD FAITH--TIME-RESTRICTED SETTLEMENT OFFERS

By

Douglas R. Richmond

Introduction

Allegations of bad faith permeate insurance litigation. In a common bad faith scenario, an insured or its assignee alleges that a liability insurer unreasonably failed to settle a claim against the insured within its policy limits, thus exposing the insured to excess liability. In the vast majority of jurisdictions, an insurer must be presented with a

settlement offer or demand within its policy limits to be potentially liable for damages exceeding those limits if it does not settle and instead takes the case to trial and loses. Most insurers understand their implied duty of good faith and fair dealing and, accordingly, take very seriously any demand or offer within their limits. The problem is that when a plaintiffs damages far exceed available coverage, the plaintiff is unlikely to be satisfied by the insurers policy-limits settlement offer, as where, for example, the plaintiffs injuries are serious and the defendant is insured under a \$25,000 automobile liability policy. In such a case, the plaintiff--and, perhaps more accurately, the plaintiffs lawyer--is motivated to artificially increase the defendants insurance policy limits. A time-restricted settlement offer is the plaintiffs lever for attempting to do so.

In short, the plaintiffs lawyer sends the insurer a settlement offer that by its terms expires in a relatively short time. The plaintiffs deadline is arbitrary. The plaintiff hopes that the insurer will not timely accept the offer. In many cases, the insurer cannot fairly accept the offer in the time allotted. The offer may be sent to an agency instead of a claims office, or to the wrong claims office, whether by accident or design; the insurer may not have sufficient information to responsibly evaluate the claim before the offer expires; or, in cases in which multiple claimants are involved, the insurer may need time to consult with its insured or to evaluate all of the claims. In any event, if the insurer does not accept the offer by the plaintiffs deadline, the plaintiff withdraws it in the hope of obtaining a judgment exceeding the insurers policy limits. If that happens, the plaintiff will argue that the insurers refusal to settle was an act of bad faith, and that the company should be liable for the full amount of any subsequent judgment.

These tactics are often effective. The threat of bad faith liability has caused many insurers to pay more than their policy limits to settle cases in which they did not accept a time-restricted settlement offer before its expiration. In many cases, the insurer was not actually guilty of bad faith, but reluctantly saw settlement as being preferable to expensive, time-consuming, and potentially risky litigation. This is especially true in cases in which the plaintiff and insured entered into a sizable consent judgment following the insurers failure to settle on the plaintiffs terms.

Insurers ensnared in bad faith litigation resulting from their failure to accept time-restricted settlement offers understandably complain that they were set-up. Plaintiffs counsel acknowledge this, but consider their tactics a legitimate strategy to maximize their clients recovery. They reason that their professional duties of competence and diligence compel them to attempt to set-up insurers for bad faith where the policy limits are otherwise inadequate to compensate their clients. Self-interested justifications aside, time-restricted settlement offers are seldom reasonable. Cases in which such an offer is reasonable, perhaps as where a statute of limitations will soon run or pressing procedural deadlines (e.g., expert witness disclosure deadlines, dispositive motion deadlines, etc.) may materially affect the plaintiffs case, are rare. Most time-restricted settlement offers are litigation ploys that should not support bad faith allegations.

Case Law

Grumbling v. Medallion Insurance Co. n1 is among the earliest cases discussing time-restricted settlement offers. The plaintiff there was severely injured, and his wife killed, in an April 1973 automobile collision with Daniels, the defendants insured. Daniels was drunk and driving the wrong way on a four-lane highway. He had no assets other than his Medallion policy, which provided liability limits of \$10,000 per person and \$20,000 per accident.

Medallion immediately investigated the accident and concluded that it was a policy limits case. On June 15, 1973, Medallions adjuster received a letter from the plaintiffs lawyer offering to settle all claims (personal injury and wrongful death) for either Daniels policy limits or \$250,000, whichever was lower. The letter stated that the offer was open for 15 days.

The adjuster promptly called Medallions Portland claims manager, Dennis OLeary, to inform him of the offer, but the adjuster neglected to mention the 15-day time-restriction. The adjuster also forwarded a copy of the letter.

Unfortunately, June 15 was OLeary's last day with the company. He left the company without marking the Daniels file for special attention because (a) the adjuster had not told him of any such need and (b) he had yet to see a copy of the letter. n2 As a result, no one at Medallion with settlement authority reviewed the letter until June 20. An interim claims manager in Portland then forwarded it to the company's home office claims committee in Kansas City. The committee was aware of the plaintiffs deadline and urgently convened a meeting. The committee authorized a policy limits settlement on June 27, but did not timely communicate its decision in writing. No one from Medallion ever called the plaintiffs lawyer to extend the settlement deadline. Medallion did not offer to settle until July 3, one day after the plaintiffs deadline passed. The insurers claims manager received a letter from the plaintiffs lawyer withdrawing the settlement offer that same day. The plaintiff then sued Daniels and proceeded to trial, obtaining judgments against him of just over \$127,000. Daniels assigned his extracontractual claim to the plaintiff.

The *Grumbling* court concluded that Medallion acted in bad faith. The court was troubled by the fact that Medallion never called the plaintiffs lawyer to attempt settlement or to extend the deadline, holding off in favor of written communication to prevent misunderstandings. n3 The court equated the insurers failure to timely call the plaintiffs lawyer because company practice favored correspondence with preferring the insurers interest above those of the insured. n4 Fearing for future plaintiffs attempts to set-up liability insurers for bad faith, however, the court attempted to limit the reach of its holding. Nothing in the decision, the court said, was intended to lay down a rule of law that would mean that a plaintiffs attorney under similar circumstances could set up an insurer for an excess judgment merely by offering to settle within the policy limits and by imposing an unreasonably short time within which the offer would remain open. n5 Rather, the sequence of events, the stage of the proceedings at which the offer is made, and all other circumstances will determine whether duty requires a response to be made within a given time limit. n6

The court in *Grumbling* obviously was upset that Medallions claims staff in Kansas City did not call the plaintiffs lawyer to communicate acceptance of his offer within the time limit. n7 And, indeed, the failure by Medallions senior claims staff to make that call is curious. But all the facts suggest only that the insurer was perhaps negligent in handling the claim. (Even if Medallion was negligent, that negligence harmed no one.) Where was the bad faith? The company offered its full policy limits in settlement almost immediately. It missed the plaintiffs arbitrary deadline by one day. There certainly was no justification for the plaintiffs deadline. Nothing about the sequence of events or the stage of the proceedings--two of the courts principal measures for evaluating the reasonableness of time-restricted settlement offers--mandated swift settlement. Daniels had not even filed suit when his time-restricted offer expired. How was 15 days not an unreasonably short time to accept the offer? Courts typically allow at least 30 days for a defendant to answer a lawsuit even where it has conducted a thorough pre-suit investigation. The court effectively endorsed the bad faith set-up that it seemingly wanted to discourage.

The fact that Medallion apparently could have accepted the plaintiffs offer within the time allotted does not mean that time was reasonable. It remains true that the 15-day limit was tethered to no facts.

Long story short, *Grumbling* is a case about a court that became inflamed and ruled accordingly. The case illustrates the potentially damaging impact that evidence of mindless bureaucratic approaches to straightforward problems may have on juries and courts. The decision should not be read, however, as broadly supporting the use or propriety of time-restricted settlement offers.

Southern General Insurance Co. v. Holt n8 is another case in which a time-restricted settlement offer snagged an insurer. n9 Southern General's insured, Holt, ran a stop sign and struck another car, injuring the second driver, Fortson. Fortson's lawyer initially imposed a 10-day settlement deadline. He later extended the deadline by five days, simultaneously furnishing the company with certified medical records evidencing Fortson's injuries. n10 Southern General did not accept the plaintiffs offer within the time prescribed, nor did it seek additional time to evaluate the offer. Later, the insurer tried twice to settle the case by offering its \$15,000 policy limits. Fortson's lawyer spurned Southern General's overtures, and won an \$82,000 verdict. Holt then assigned to Fortson her claim against Southern General for negligent or bad faith refusal to settle. That in turn led to a \$213,000 verdict against Southern General. The case ultimately reached the Georgia Supreme Court.

The *Holt* court began its analysis by noting that under Georgia law, an insurer may be liable for failing to settle a case within its policy limits when that failure is the product of negligence, fraud or bad faith. n11 In deciding whether to settle, the insurer must give equal consideration to the insureds interests. Whether the insurer did so is a determination that generally rests with the jury, which must decide the issue in view of the existing circumstances. n12 An insurance company does not act in bad faith solely because it fails to accept a settlement offer within the deadline set by the injured persons attorney. n13 In this case, however, there was evidence that Southern General acted unreasonably, including unhelpful admissions by its claims manager and equally bothersome statements by its own expert witness.

According to the court, n14 Southern General argued that an insurance company has no duty to its insured to respond to a deadline to settle a claim within policy limits when [it] has knowledge of clear liability and special damages exceeding the policy limits. n15 The court rejected this argument, stating that the issue is whether all the facts show . . . whether the insurer acted unreasonably in declining to accept a time-limited settlement offer. n16

In *Pavia v. State Farm Mutual Automobile Insurance Co.*, n17 a passenger in the insureds automobile was catastrophically injured in an accident in which the insureds fault seemed clear. In July 1987, the plaintiffs lawyer wrote State Farm and offered to settle for the full amounts of the insureds policy limits, which were \$100,000. That offer was open for 30 days. n18 State Farm never responded, nor did it tell its insureds that there had been a settlement offer within their policy limits. On December 1, 1987, State Farm finally convened a meeting of its claims committee to evaluate the offer. After a short meeting, the committee concluded that the company should offer its policy limits. State Farm finally offered its policy limits on January 7, 1988. The plaintiff rejected State Farms offer, asserting the insurers delay as a principal reason for the rejection. n19

The plaintiff ultimately obtained a judgment of nearly \$4.7 million against State Farm. State Farm argued on appeal that its conduct did not amount to bad faith because its delay in responding to the plaintiffs offer was neither intentional nor deceitful. n20 An intermediate appellate court disagreed, reasoning that while an insurers failure to act before an arbitrary settlement deadline is not dispositive of its bad faith, the record supported the inference that State Farms claims personnel had adopted an attitude of complete indifference to [the plaintiffs] settlement overture. n21 State Farm apparently ignored or overlooked the plaintiffs letter for months without so much as acknowledging its receipt.

The Court of Appeals, New Yorks highest court, reversed the lower appellate court. n22 Applying settled bad faith principles, the Court of Appeals concluded that State Farms failure to meet the plaintiffs settlement deadline did not constitute bad faith. As the *Pavia* court explained:

Permitting an injured plaintiffs chosen timetable for settlement to govern the bad faith inquiry would promote the customary manufacturing of bad faith claims, especially in cases where an insured of meager means is covered by a policy of insurance which could finance only a fraction of the damages in a serious personal injury case. Indeed, insurers would be bombarded with settlement offers imposing arbitrary deadlines and would be encouraged to prematurely settle their insureds claims . . . in contravention of their contractual right and obligation of thorough investigation. n23

While State Farm could have acted more expeditiously, there was no evidence that it failed to investigate the claim, failed to evaluate settlement opportunities, or refused to offer its policy limits before trial once the insureds vulnerability was fully understood. The court thus reasoned that State Farm did not exhibit gross disregard for its insureds interests. State Farms conduct amounted only to mistaken judgment or administrative delay. n24

Wade v. EMCASCO Insurance Co. n25 is the most recent case involving an insurers delayed response to a plaintiffs settlement offer. *Wade* arose out of a serious traffic accident in Wichita, Kansas. EMCASCOs insured, Wade, allegedly ran a red light and struck another vehicle. A passenger in the second vehicle, Nguyen, was rendered quadriplegic as a result. Wades policy with EMCASCO provided a total of \$100,000 coverage for all claimants in an accident. After much pre-suit wrangling over medical records and other investigatory matters, the issue ultimately

became whether EMCASCO acted in bad faith by not settling with the plaintiff until either two or three weeks after the plaintiffs settlement offer expired. One of the plaintiffs lawyers testified that he managed the Nguyen claim, from its inception, with a bad faith claim in mind. n26 The plaintiffs other lawyer admitted that the plaintiffs motive in refusing EMCASCOS settlement offer . . . was to set up a bad faith claim against the insurer. n27

Analyzing Kansas law, the court observed that a plaintiff can recover under a bad faith theory only for excess judgment losses directly and naturally resulting from the insurers breach of duty. If a claimant arbitrarily withdraws an initial settlement offer and later rejects an identical proposal from the insurer, the court noted, then the claimants conduct is the legal cause of the failure to settle. n28 In that case, the insurer should not be required to bear any liability exceeding its policy limits. As the court explained:

The undisputed evidence shows that Mr. Nguyens legal team rejected EMCASCOS . . . settlement offer as part of a strategy to establish a bad faith claim against EMCASCO. . . . Holding an insurance company liable for the excess judgment . . . under these circumstances would be inconsistent with the cause of action for bad-faith or negligent refusal to settle. The cause of action for failure to settle is meant to protect the interests of the insured by requiring the insurer to conduct the litigation, including settlement negotiations, as if the insurance contract had no policy limits. . . . It is not meant to create an artificial incentive for third-party claimants to reject otherwise reasonable settlement offers that are within the policy limits. We would be turning the cause of action on its head by holding an insurance company liable when it eventually offered to settle the claim for the policy limits, but a claimant rejected the offer precisely in order to manufacture a lawsuit against the insurer for bad-faith refusal to settle. n29

The plaintiffs bad faith claim against EMCASCO accordingly failed.

Some Perspective and Practical Advice

Insurers must be wary of time-restricted settlement offers. They must always remember their obligation to give their insureds legitimate interests consideration equal to their own. To the extent possible, they should promptly respond to all time-restricted offers within their policy limits, even if it is only to request additional time to consider the offer. If they need information from a plaintiff to evaluate a claim, they should request it. Concerns about telephone conversations being misconstrued or misinterpreted when time is of the essence are easily avoided by the use of e-mail. Insurers should attempt to investigate claims expediently, so that they are not at an informational disadvantage when a time-restricted offer comes. Insurers should not disregard settlement offers within their policy limits simply because they consider them unreasonable. Serious cases always merit serious attention, especially where a time-restricted settlement offer is involved. If a time-restricted settlement offer is unreasonable, an insurer should consider making a reasonable counter-offer. To the extent possible, insurers should attempt to keep insureds informed of settlement offers and their intentions with respect to them.

Of course, the fact that an insurer does not succeed in accomplishing any of these steps does not necessarily mean that it is guilty of bad faith. The fact that an insurer allegedly errs or fails to meet a plaintiffs expectations does not mean that it has somehow subordinated the insureds financial interests to its own. Despite their best efforts, insurance companies are not always nimble organizations. Claims staff may need to set reserves, obtain settlement authority from superiors, and engage in a variety of legitimate administrative tasks in order to resolve a claim. Key managers may be unavailable at relevant times. The company may need to communicate with its insured before accepting an offer but be unable to do so for reasons beyond its control. The insurer, no matter how diligent, may not have had time to complete its investigation when a settlement offer arrives. Adjusters may fail to complete tasks because of competing critical demands for their time or because of unexpected crises or events. Sometimes adjusters may miss a detail or deadline simply out of normal human error. An adjuster may misunderstand a plaintiffs deadline or wrongly believe a plaintiffs lawyer to be flexible when, in fact, she is not. The list of valid and understandable reasons for not ideally responding to time-restricted settlement offers is lengthy. Again, none of these things are indicia of bad faith. None are necessarily unreasonable. On the other hand, an insurer cannot blindly rely on favored internal operating procedures to excuse a failure to respond to a plaintiffs settlement offer or to otherwise ignore an insureds legitimate interests. n30

If an insurer misses a time-restricted settlement deadline, but considers the plaintiffs offer reasonable, it should attempt to accept the offer after the deadline passes. If the plaintiff refuses to settle on the basis that the deadline has passed, the insurer should still offer to settle with the plaintiff for an identical amount (assuming the plaintiffs offer to have been reasonable, of course). The insurers goal here is to attempt to protect the insureds interests. Insurers must strive to be reasonable even if plaintiffs and their lawyers are not.

Plaintiffs lawyers considering time-restricted offers must give careful thought to them. What legitimate reasons are there for selecting a specific response time? Will your reasons withstand challenge as merely a bad faith set-up? Are the facts such that the insurer should be able to reasonably respond within the time stated? If the offer is within the insurers policy limits but is not for their full amount, what do you do if the insurer misses your settlement deadline? Do you simply withdraw the offer, or do you instead increase it? Under no circumstances should a plaintiffs lawyer behave dishonestly when making a time-restricted offer. For example, a plaintiffs lawyer should not counsel a client to send a time-restricted settlement offer to the incorrect claims office or claims professional in the hope of delaying the insurers response, nor should the lawyer do such things. A plaintiffs lawyer should not knowingly mislead an insurer or unreasonably withhold information in his control. Such tactics likely violate ethics rules that prohibit lawyers from engaging in conduct involving dishonesty, fraud, deceit, or misrepresentation. n31 These tactics may also implicate ethics rules prohibiting conduct prejudicial to the administration of justice. n32 At the very least, such sharp practices have the potential to backfire and impair the plaintiffs case in a variety of ways.

Courts must carefully scrutinize bad faith claims predicated on time-restricted settlement offers. The essential question in any bad faith case is whether the insurer subordinated the insureds legitimate financial interests to its own. The standard here, again, is reasonableness. The fact that an insurer does not accept a time-restricted settlement offer within the prescribed time does not, in and of itself, render the insurers conduct unreasonable. That is especially true where the insurer offers an identical amount in settlement within a reasonable time after a time-restricted offer expires. Courts must always take into account all of the surrounding facts and circumstances. A plaintiffs desire to resolve a claim by a stated date for purely subjective reasons is not a valid basis for imposing bad faith liability.

Courts should treat time-restricted settlement offers that remain open for less than 30 days as presumptively unreasonable. Most jurisdictions allow a defendant at least 30 days to answer a lawsuit, even where the facts on which the suit rests have long been known. Some states permit plaintiffs to recover prejudgment interest if a pre-suit settlement offer is left open for a statutorily prescribed period without being accepted and the plaintiff later recovers a judgment exceeding that offer. n33 In states where the statutory period is, say, 60 or 90 days, that time frame provides a sound basis for measuring the presumptive reasonableness of a time-restricted offer. After all, a legislative body has determined that such a period is required for a defendant to fairly evaluate allegations against it and to decide whether to settle or litigate. Any shorter period is by definition presumptively unreasonable when it comes to evaluating pre-suit settlement offers. On the other hand, there may be cases in which a shorter time restriction is reasonable. A shorter period may be required by the stage of the proceedings or the sequence of events, or because of other facts or circumstances. In such cases, a plaintiff should be able to rebut the presumptions suggested here.

Of course, different states apply different standards when evaluating insurers potential liability for failing to settle within policy limits. The majority rule requires some level of intentional wrongdoing by the insurer to support a bad faith claim. As the Arkansas Supreme Court has observed, [a]n insurance company commits the tort of bad faith when it affirmatively engages in dishonest, malicious or oppressive conduct in order to avoid a just obligation to its insured. n34 Following the majority approach, [m]ere negligence or bad judgment is insufficient so long as the insurer is acting in good faith. n35 Other states allow extracontractual recovery for an insurers mere negligence. Under either standard, however, time-restricted settlement offers should generally be rejected as a basis for extracontractual liability. An insurer will rarely miss a plaintiffs deadline because of dishonesty, malice, or oppression. If negligence is the test, the insurer still should not face extracontractual liability in most cases because the insurers failure to meet a plaintiffs deadline will breach no duty. The duty to settle is not limitless, after all, and an insurer breaches it even in a negligence-based regime only by acting unreasonably. If the insurer misses the plaintiffs arbitrary deadline but makes an identical settlement offer soon thereafter, then the insured or its assignee cannot establish that the insurers alleged

breach of duty caused any harm. n36

Conclusion

In a common bad faith scenario, an insured or its assignee alleges that a liability insurer unreasonably failed to settle a claim against the insured within its policy limits, thus exposing the insured to excess liability. When a plaintiff's damages far exceed available coverage, the plaintiff will often attempt to artificially increase the defendant's insurance policy limits through a time-restricted settlement offer. Though their use is understandable, time-restricted settlement offers are rarely reasonable. For the most part they are litigation ploys. Accordingly, courts should carefully scrutinize them when offered as a basis for a bad faith claim.

2008 Emerging Issues 231

Sonnenschein Nath & Rosenthal, LLP on Earthquake Coverage: Then and Now

By Cynthia Mellema, Jeff Butler and Norman Lau

April 2, 2008

SUMMARY: While earthquakes and earthquake insurance are primarily matters of concern in California, there have been earthquakes in 46 states since 1975 and insurers underwrite earthquake policies in all 50 states. The California experience with earthquake insurance is therefore potentially important well beyond the states borders. After the 1994 Northridge Earthquake, earthquake coverage became both expensive and limited. To encourage insurers back into the market, the California Legislature permitted earthquake insurers to reduce the scope of structural coverage, limit coverage for personal property and living expenses, and raise the deductible. Thereafter the California Legislature established the California Earthquake Authority, a privately funded, but publicly managed entity. The CEA now underwrites 70% of earthquake policies in California. The commentary describes how this system, as of yet untested by a major earthquake, is set up to work. This commentary further describes how homeowners, with or without earthquake insurance, should prepare their homes and themselves for the next large earthquake. It discusses the additional measures those with earthquake insurance should take, including dealing with the timing problems caused by the prompt notice provision and contractual limitations period typically found in property insurance policies.

ARTICLE: Sonnenschein Nath & Rosenthal, LLP on Earthquake Insurance Coverage: Then and Now

By Cynthia Mellema, Jeff Butler and Norman Lau

Introduction

Mention the word earthquake and most people immediately think of California. Earthquakes and earthquake insurance, however, are not just a California problem, but also a national issue. Insurers underwrite earthquake policies in all fifty states. Over 1,000 earthquakes are reported every year in Oregon and Washington. n1 The New Madrid Fault, which runs through Illinois, Kentucky, Missouri, Tennessee, and Arkansas, is another source of seismic activity, as is the Denali Fault in Alaska. Since 1975, the United States Geological Survey reports that there have been earthquakes in 46 out of the 50 states. n2 Nevertheless, population density and earthquake intensity in California have made that state the leader in earthquake law and insurance developments. Indeed, more than half of all earthquake

insurance policies are sold in California.

This is hardly surprising. In a recent article, members of the 1868 Hayward Earthquake Alliance, a diverse group dedicated to preparing the San Francisco Bay Area for the next large earthquake along the Hayward Fault, predicted that such an earthquake could impact five million people and cause more than \$500 billion worth of property damage. ⁿ³ This makes Hayward Americas most dangerous fault. It is difficult to ignore the probability of a catastrophic earthquake in the San Francisco Bay Area in the near future. The last five earthquakes along the Hayward Fault occurred on average 140 years apart and the most recent occurred 140 years ago, in 1868.

If the losses from a large Hayward Fault earthquake are as predicted, they would easily dwarf the losses Hurricane Katrina caused. Yet, where insurance covered somewhere between 30 and 40 percent of Katrinas economic losses, insurance would cover only about 10 percent of losses resulting from an earthquake along the Hayward Fault. ⁿ⁴ As such, it is an understatement to say that, as far as earthquakes go, California homes are pervasively underinsured. In fact, fewer than 12 percent of California homeowners carry earthquake insurance. ⁿ⁵

It is not difficult to fathom why so many Californians gamble by going without earthquake coverage: Following the 1994 Northridge Earthquake, that coverage is both expensive and limited.

Pre-Northridge Earthquake Coverage

In 1986, the California Legislature passed a law requiring residential property insurers to offer earthquake coverage with their homeowner policies. ⁿ⁶ And, before 1995, earthquake coverage offered by most insurers was relatively inexpensive and quite broad. With respect to structural coverage, most policies had a 10 percent deductible, which, while significant, was hardly what it would be today, considering the rise in property values over the last 15 or so years. The structural coverage also extended to appurtenant structures (such as swimming pools), making the deductible easier to reach. The two other major policy coverages personal property and additional living expenses were essentially equivalent to coverage available for other significant perils, such as fire. Moreover, because the insurance industry greatly underestimated the damage and therefore insured losses an earthquake could cause, premiums failed to reflect the risk.

The 1994 Northridge Earthquake a truly revelatory event for the insurance industry changed all that. While the 1989 Loma Prieta Earthquake was a significant seismic event (6.8 on the Richter scale), it resulted in something less than \$2 billion in insurance claims. ⁿ⁷ The Northridge Earthquake, by contrast, registered 6.7 on the Richter scale, but the ground acceleration was the highest ever recorded in an urban area in North America. ⁿ⁸ As such, the insurance industry faced some \$16 billion in Northridge Earthquake claims. ⁿ⁹

Faced with devastating financial losses and an obligation to offer earthquake coverage, and recognizing that losses from a similar (or larger) event in the future could be far higher, virtually all residential property insurers refused, as was their right, to write new homeowners policies in California. ⁿ¹⁰

Earthquake Insurance Coverage Today

To address the resulting earthquake insurance crisis and encourage insurers back into the market, the California Legislature created a no-frills earthquake insurance policy, known as the mini-policy. With the mini-policy, insurers were allowed to reduce the scope of structural coverage, limit coverage for personal property and living expenses, and raise the deductible from 10 to 15 percent. ⁿ¹¹ Naturally, premiums also were set to match the risk.

Then, in 1996, the Legislature established the California Earthquake Authority (CEA), a privately funded, but publicly managed entity. Homeowner insurers were given the option of selling their own earthquake insurance product, or participating in the CEA and offering CEA earthquake insurance policies. Most large insurers opted to discontinue their own earthquake insurance lines and let the CEA underwrite the policies instead. The CEA now underwrites more than 70 percent of earthquake policies in California. ⁿ¹² A combination of special assessments, reinsurance and

existing capital would allow the CEA to pay over \$8 billion in earthquake claims. n13

The standard CEA policy features coverage similar to the mini-policies. Like the mini-policies, a CEA policy is intended to cover damage to the home itself it does not cover damage to detached buildings, fences or retaining walls, swimming pools, irrigation systems and the like. The standard coverage for personal property is limited to \$5,000, though policyholders can pay more for up to \$100,000 in coverage. The standard additional living expense coverage is limited to \$1,500, but policyholders can pay more for coverage up to \$15,000. The standard deductible for CEA policies is 15 percent, although homeowners can pay more to have the deductible lowered to 10 percent. n14 Again, however, considering that a 1,700 square foot ranch house in certain California counties at risk is worth more than \$1 million today, extensive damage will have to occur before triggering even a 10 percent deductible.

While it may not bear on the decision whether to purchase a CEA policy, there may be issues concerning seamless claims handling and payment. As noted above, the CEA issues its policies through individual insurers. Following an earthquake, homeowners will submit claims to their homeowner insurers, not the CEA, and the insurers will adjust those claims. But, the fact that CEA issues the policy may play a significant role in coverage determinations. How this system works in practice has yet to be seen, given there have been no major earthquakes in California since the CEA was created. Inherently, however, this system could well be an administrative nightmare. Further, given the budget deficits in California, an understaffed CEA could end up a bottleneck for insureds obtaining benefits at the time they most need them. Time will tell.

California residents have other, though limited, options for earthquake insurance coverage. For example, some insurers (GeoVera (a St. Paul Travelers subsidiary) and Pacific Select) continue to offer stand-alone earthquake policies. The standard coverage under these stand-alone policies is comparable to CEA, but they offer more options in terms of higher coverage limits. Of course, additional coverage costs more (as it is, standard CEA coverage can cost as much or more than the coverage for all other perils to a home).

Considering the cost and limited coverage, it is not surprising that the percentage of homeowners choosing to purchase earthquake coverage in California has dropped from about 32 percent at the time of the Northridge Earthquake to approximately 12 percent today. n15 With major earthquakes occurring so infrequently, many choose not to think about earthquake insurance. Others assume, with some reason, even if they purchased earthquake coverage, their losses will be below the deductible or simply not covered. Yet others assume the government will provide relief in the event of a large natural disaster, though such governmental funding is often limited. At bottom, whether to purchase earthquake coverage is an intensely personal decision based on a number of factors that vary greatly household by household.

Considerations Before and After an Earthquake: Tips and Traps

With or without earthquake insurance, homeowners should prepare their home and themselves for the next large event. Among things to consider toward that end are bracing the homes water heater to minimize the risk of fire and water damage, installing flexible attachments to gas appliances and a gas shut off valve, fastening cupboard doors with childproof latches to prevent them from opening, fastening bookcases, mirrors, televisions and other tall or heavy objects to wall studs, and moving heavy and breakable objects to lower shelves. All family members should also know how to shut off the gas in case of emergency. Structurally, homeowners should consider bolting the homes wood frame to the foundation, or, for homes on raised foundations, having cripple walls braced. n16

All homeowners should also have an emergency plan in place in case of a large earthquake. The plan would include a designated, easily accessible meeting area for family members. As Californians learned during the past significant earthquake, one should not depend on telephone service or cell networks. Further, everyone should, at a minimum, maintain at home, in the office and each vehicle an emergency kit with food, water, medicine, first aid materials, flashlights, tools and clothing.

Those with earthquake insurance have a few additional considerations following a large earthquake. The first is to

notify their insurance agent and carrier promptly. Insured homeowners should then document the loss by photographing the damage and preparing an inventory of damaged personal property. Second, have a professional inspection of the structure. After both the Loma Prieta and Northridge Earthquakes, homeowners often spent little time visually inspecting the structure. Viewing only small drywall cracks and broken dishes, homeowners did not submit claims, believing their damage fell below the deductible.

The one significant historic trap for homeowners in prior earthquakes was their failure to promptly recognize hidden damage had occurred. Most property policies contain a prompt notice provision and a contractual limitations period. The latter requires insureds to submit a claim within one year of the date damage has occurred and file a lawsuit within one year of the closure of a claim, whether by payment or denial. n17

After serious earthquakes, there are always homeowners who find hidden earthquake damage (such as foundation cracks under carpeting or framing damage in attics) more than a year after the earthquake and submit claims to their insurers. The insurers, in turn, based on the contractual limitations provision deny these claims. In subsequent lawsuits, the courts have upheld these denials. n18 Even where homeowners *did* timely submit claims, the insurers adjusters, working under catastrophe conditions, sometimes missed the hidden damage, leading to the same result. n19

The solution for the potential hidden damage trap is to retain a structural engineer. Most good structural engineers will gather the raw data from the earthquake, determine the impact in each neighborhood, and based on the structures age and characteristics and their inspection, provide the homeowner evidence of earthquake damage or assurances that no hidden damage exists.

And finally, insured homeowners must understand that the burden to prove damage occurred from a covered peril rests with them, not the insurer. Accordingly, retaining consultants such as structural engineers and contractors may mean the difference between a timely submitted covered claim and a claim denied.

n17 [xvii] *Marselis v. Allstate*, 121 Cal. App. 4th 122 (2004) (insured could not bring suit more than a year after claim was closed). California Insurance Code section 2051.5 extended the limitations period to two years for claims arising out of a state of emergency.

n18 [xviii] See e.g. *Sullivan v. Allstate Ins. Co.*, 964 F. Supp. 1407 (C.D. Cal. 1997) (summary judgment granted for insurer on statute of limitations for claim brought more than one year after earthquake); *Hill v. Allstate*, 962 F. Supp. 1244 (C.D. Cal. 1997) (same); *Vashistha v. Allstate*, 989 F. Supp. 1029 (C.D. Cal. 1997) (judgment on pleadings granted for insurer for claim brought more than one year after earthquake).

n19 [xix] Since these cases were decided, the California Legislature has enacted consumer friendly provisions to help avoid the one-year limit. For example, California *Code of Civil Procedure* section 340.9 revived Northridge Earthquake claims previously barred by the statute of limitations.

ABOUT THE AUTHOR(S):

Cynthia Mellema, Jeff Butler and **Norman Lau**, are attorneys with Sonnenschein Nath & Rosenthal LLP. Ms. Mellema and Mr. Butler, partners at Sonnenschein, have had extensive experience with earthquake claims, providing advice to insurers and litigating cases arising from the Loma Prieta and Northridge Earthquakes. Both practice in Sonnenscheins San Francisco and Walnut Creek offices. Sonnenscheins Walnut Creek location is dedicated solely to the Firms insurance practice. Norman Lau is an associate attorney in Walnut Creek.

About the Law Firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in Chambers USA: Americas Leading Lawyers for Business. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

"This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex

cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings."

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Repercussions of the Subprime Mortgage Crisis for the Insurance Industry: Part III of III (E&O Ins.)

By Matthew R. Wildermuth

March 21, 2008

SUMMARY: This commentary explores the nature of the claims against these market participants, the factors that affect potential recovery against them and the extent to which insurance in the form of errors and omissions coverage may currently be available to soften the blow to these entities. In light of the increased scrutiny and proposed additional regulation under consideration in Washington regarding these market participants, this commentary also explores the extent to which these entities are likely to be able to maintain or procure effective insurance coverage for their operations and under what conditions it will be available. More specifically, this commentary addresses:-- Who is suing the loan originators and appraisers and why?;- What obstacles do the originators and appraisers face in having their errors & omissions coverage respond to the claims and suits against them?; and- Will originators and appraisers be able to obtain coverage in the future and, if not, what are the implications for the broader market?

ARTICLE:

Repercussions of the Subprime Mortgage Crisis for The Insurance Industry: Whos Suing Who and Who Has Coverage for What? Part III of III (Errors & Omissions Liability Policies)

By Matthew R. Wildermuth

Introduction

In a speech to the National Press Club on Thursday, March 13, 2008, Treasury Secretary Henry J. Paulson addressed the most recent statistics measuring the subprime mortgage crisis impact on the U.S. and world economy and described action the federal government was taking and proposed to take to stave off further deterioration in the marketplace. According to Paulson, as leader of the President's Working Group on Financial Markets, "Regulation needs to catch up with innovation and help restore investor confidence but not go so far as to create new problems, make our markets less efficient or cut off credit to those who need it." n1 While this may be a comfort to the broader

market, unless these new regulations will include provisions granting retroactive immunity to the market participants (which is highly unlikely), the marketplace and the courts will have to deal with the rising tide of claims and lawsuits arising out of the collapse of many mortgage-backed investments, including the steady rise in individual home foreclosures.

It is beyond the scope of this commentary to address in any detail the causes, the viability of the proposed remedies or the ultimate fallout of the subprime mortgage crisis. For purposes of this commentary, suffice it to say that the deepening housing slump has adversely affected the value of the collateral securing individual mortgage loans and that this problem has been compounded exponentially by investment vehicles that packaged large pools of mortgages into a single block which was then used as collateral for other debt obligations. These aggregated packages were supposed to be insulated from wild swings in value by the diversity of the properties and rendered more stable by being secured with hard assets (the borrowers homes). Billions of dollars of losses later, it turns out neither proposition was true. n2

Because the losses at issue already exceed tens of billions of dollars, the conduct underlying these losses will be oppressively scrutinized and criticized, with individual homeowners and investors seeking to recoup their losses by targeting not just the deepest pockets but from virtually any pocket capable of reimbursing them for their respective misfortune. This is where the focus can turn to market participants such as the mortgage loan originators and the appraisers who were some of the first parties in the financial food chain to render opinions either on the value of the property securing the loan or the relative ability of the borrowers to repay the loan. Most of these entities will have obtained errors and omissions coverage as a standard business practice to protect themselves against the occasional lawsuit that might arise out of an individual transaction gone bad. It is safe to say that neither the policyholders nor the insurers issuing the policies ever saw the current market conditions coming, and how these issues must be dealt with now that the litigation boom is in full swing has created substantial tension between these interests. This article therefore will explore the extent to which errors and omissions policies issued to these entities may respond to the current and expected claims and how this phenomenon may affect whether such coverage will continue to be available in the future.

Preliminary Considerations

As an initial matter, in exploring the extent to which collateral participants in the subprime mortgage market face liability, there is no getting around the fact that recent legal developments can be expected to have significant influence on who sues whom and the potential outcome of those claims. Although it will take some time before all of its effects are known, the United States Supreme Courts January 15, 2008 decision in *Stoneridge Investment Partners, LLC v. Scientific-Atlanta Inc.*, 128 S. Ct. 761 (2008) will definitely affect pending and future cases brought against institutions selling or trading securities based on an alleged failure to identify or disclose information about the potential risks of such investments, including securities collateralized by mortgage loan portfolios. In *Stoneridge*, investor groups sued cable operator Charter Communications for fraud and also pursued Scientific-Atlanta and Motorola, two companies that sold cable boxes that figured in some of Charter's fraudulent transactions. By a 5-3 vote, the Supreme Court said that because the investors victimized by Charter did not rely on any statements or omissions made by the vendors Scientific-Atlanta and Motorola, the vendors could not be held liable under Section 10(b) of the Securities Exchange Act of 1934. n3

Commentators have described one of the most significant impacts of the Courts ruling to be shielding third-party defendants in securities litigation -- including law firms, accountants and bankers -- from broad "scheme liability" for their tangential role in corporate fraud. n4 Other commentators do not consider the Courts *Stoneridge* opinion, standing alone, to have significant wide-ranging impact. However, when coupled with two other recent Court decisions (*Tellabs Inc. v. Makor Issues & Rights, Ltd.* n5 and *Dura Pharmaceuticals v. Broudo* n6), the Courts decision in *Stoneridge* ultimately makes it substantially more difficult to maintain class action securities claims against securities issuers and virtually impossible to rope in secondary participants such as accountants and lawyers. n7 While it remains to be seen

whether the Court's ruling in *Stonebridge* will have a chilling effect on secondary participant liability in contexts other than securities claims, we can be certain that defendants in suits arising out of the subprime mortgage mess will seek to apply or extend its approach to defeat claims where the claimant either had no contact with or cannot be shown to have relied on any information provided by the individual or entity at issue.

The E&O Policy Provisions Most Likely to Come into Play

In order to address the most prominent insurance coverage issues in this context within the scope of this article, by necessity, the analysis is limited to two specific market participants: loan originators and property appraisers. While other definitions may be more appropriate for purposes of applicable state regulations, for purposes of this discussion, this commentary will use the term loan originator to mean an individual who assists in arranging funding or negotiating contracts for a mortgage client but does not loan the money himself or herself and appraiser means an individual or entity licensed by the state to opine as to the potential value of a specific property, taking into account its location, specifications, features, neighborhood and the comparable value of substantially similar properties in the market at issue.

First, it is important to identify the source of potential exposure to the loan originators and appraisers. Neither participant has any direct role in deciding which individual mortgage loans will be included in any particular aggregation of loans when the securities firms create the collateralized debt obligations (CDOs) and they are not parties to the mortgage itself. Indeed, unless one were to go back to the thick stack of seemingly redundant documents that passed like a blur before the anxious homeowners at the closing, it would be difficult to identify the name of the loan originator or appraiser.ⁿ⁸ As a result, the threat to originators and appraisers arises more from the entities that purchase the loan downstream than from any individual borrower (although that will not prevent them from being named in a suit by the latter). In addition, the FBI has initiated a widespread investigation regarding the collateralization of mortgage loans, including a review of the role originators and appraisers may have played in the marked increase in home value appreciation in many markets that are now a hotbed of foreclosure activity.ⁿ⁹

Perhaps the most significant problem an individual mortgage loan originator faces in connection with the failure of loans included in a portfolio of mortgages sold to another lender is the latter's ability to exercise the repurchase clause of the agreement. Specifically, virtually all such transaction agreements include a warranty from the loan originator regarding the viability of the underlying mortgage loans and provide the purchasing lender an out should it come to light that the originator breached its warranty:

Upon discovery by either Seller or Purchaser of a material and adverse breach of any of the representations and warranties or of a material and adverse defect with respect to a mortgage loan, the party discovering such breach or defect has a duty to give prompt written notice to the other party within thirty (30) days of discovery. Within thirty (30) days of the earlier of its discovery, or Seller's receipt of notice of any breach of a representation or warranty or of such defect, Seller promptly shall cure such breach or defect in all material respects or repurchase the affected loan at a price as specified in Section 6.02.ⁿ¹⁰

The warranties at issue may relate to, among other things, the appraised and actual value of the underlying property, the documentation of the borrowers' income, assets and liabilities, representations regarding whether the property would be occupied by the borrowers and other significant contingencies.ⁿ¹¹ The contracts between the originator and the purchasing lender typically also require the originator to maintain adequate reserves on hand to meet potential repurchase demands from the purchasing lender, which, in practice, happens rarely (if ever).ⁿ¹²

In the typical insuring agreement in an errors & omissions policy issued to a real estate professional such as a loan originator, the insurer promises:

To pay on behalf of the Insured all sums which the Insured shall become legally obligated to pay as Damages resulting from any Claim(s) first made against the Insured and reported to the Insurer during the Policy Period, or

extended reporting period (if applicable), for any Wrongful Act of the Insured or any other person for whose actions the Insured is legally responsible, but only if such Wrongful Act occurs on or after the Retroactive Date and before the end of the Policy Period and occurs solely in the rendering of or failure to render Professional Services, as defined herein.

The policy defines Wrongful Act to mean any actual or alleged breach of duty, neglect, error, misstatement, misleading statement, or omission committed solely in the Insured's Professional Services. In turn, the policy defines Professional Services as the origination, sale, pooling and servicing of mortgage loans secured by real property.

In addition to standard exclusions precluding coverage for situations where the originator engaged in fraud or self-dealing, two exclusions will figure significantly in the coverage disputes between originators and their E&O carriers. The first precludes coverage for damages arising out of the failure of any real or personal property to have at any point in time any projected, estimated, represented, warranted, or guaranteed economic value. The second excuses the insurer from having to pay damages for which the originator is held liable [a]rising out of or in any way involving . . . (3) any loan or loans that have been sold by the Insured which have been repurchased or are required to be repurchased by the Insured; however this provision (3) shall not apply to such Claim(s) made against the Insured resulting solely from the rendering of or failure to render Professional Services.

In light of the depressed property values plaguing the national real estate market, the fight over how these two exclusions will be applied in practice has the potential to spill a lot of blood (or at least red ink). The guidelines governing the loans originators can bundle and sell upstream to other lenders typically contain specific loan to value ratios (LTV), meaning that the amount of the loan is not to fall below a certain value threshold. Lets say the assuming lender agrees to purchase a \$500,000 mortgage secured by the improved property and has an 80% LTV threshold. In order to remain qualified as an acceptable mortgage under the agreement between the assuming lender and the originator, the property must hold value of at least \$400,000 (\$500,000 x 80%). If the assuming lender can establish that the collateralized property's value has dipped below this level, it may be able to require the originator to take back the mortgage (and the risk of the loans default) as in the case described above. The originators failure to do so may result in the assuming lender ceasing to do business with it, a lawsuit compelling the originator to buy the loan back (plus interest, penalties and attorneys fees) or both.

A literal application of the two exclusions quoted above would spell serious trouble for the originator, as it has the potential to lose its entitlement to coverage both coming and going. In the first instance, the assuming lender may demand that the originator deposit funds in escrow with it to make up the difference between the represented property value and the current market value. As this claim arguably stems from the failure of the property to maintain a represented value, it would fall squarely within the exclusion. If the assuming lender did not require the originator to go directly out of pocket but instead opted to exercise the do-over provision requiring the originator to repurchase a substandard loan, the originator would be compelled to refund the amount received from the lender as part of the initial transaction and then have to manage the substandard property to prevent it (if possible) from going into foreclosure. Again, on its face, the second exclusion would bar recovery for any damages to the originator attributable to the lender exercising the repurchase option. Because few originators keep sufficient cash on hand to repurchase more than a few bad loans at any given time, multiple repurchase demands would substantially constrain the originators ability to commit to other loans in the pipeline and could in fact be fatal. If, as appears likely, the originator cannot turn to its E&O policy for relief for its inclusion of a loan that has since soured, the prospects are dim.

Appraisers, in contrast, generally are not required to make any specific and enforceable guarantees that a property will maintain its value for any specific period of time or as compared to other properties against which it was measured. That does not mean, however, that appraisers will be immune from the ravages of the subprime mortgage crisis. Indeed, there has been a significant recent uptick in the number of investigations and suits seeking to hold the appraiser accountable for assessing property values in a manner that was less than candid and objective. In one such case, the homeowners allege that home builder KB Home entered into a joint venture with Countrywide Financial as the mortgage lender and that the venture was using captive appraisers to artificially inflate home prices in California. n13 Specifically, the homeowners contend that the appraisal reports cited pending sales as comparable sales, even when the

sales were no longer pending because the buyers had walked away from the deals, used "dissimilar properties" in other developments as comparable sales and otherwise improperly skewed the results. n14

To the extent claimants such as these establish that the appraiser affirmatively conspired with the builder or lender to inflate prices, coverage under an E&O policy is simply not available. But what about the situations where the appraiser just got it wrong? Before the coverage implications can be assessed, there is a fundamental issue about causation, whether the party crying foul is the homeowner, the lender, or the downstream investor in the CDO. Appropriate questions of the claimant would be precisely how much reliance was placed on the appraisal, the extent to which a different appraisal would have prompted a different course of action and whether in fact an overly optimistic valuation caused the homeowner to no longer be able to afford to make monthly payments? In the authors opinion, the difficulty and associated opportunity costs likely to be incurred attempting to answer these questions with respect to any individual transaction militate against appraisers being targeted in the absence of an ability to tie them into a broader scheme such as that alleged in the KB Home suit. Should a litigant be able to overcome these hurdles, it is substantially likely that the appraisers policy would respond. That said, however, because a standard feature in virtually all E&O policies in place today stipulate that defense costs erode the limits of liability potentially available to respond to a judgment or settlement, a claimant could quickly find that it has cut off its nose to spite its face if the appraiser is not otherwise a deep pocket exclusive of its insurance protection.

Whats Next in the E&O Market for Mortgage Industry Professionals?

The impact of the subprime mortgage meltdown to the liability insurance industry will not be known for years, and part of how the story ends will depend on the extent to which regulatory and market reforms are enacted and enforced. The Bush Administration has promised to establish protocols to provide oversight to virtually every niche in the credit markets from mortgage brokers to the Wall Street firms that package home loans into securities, to the credit-rating firms that assess the risk of those securities, to the regulators who police the system. n15 As Treasury Secretary Hank Paulson explained in his March 13, 2008 speech unveiling the Administrations plans, "We aren't singling out any group of market participants, because ... there were mistakes made by all," including regulators. n16 Though still in the planning stages, regulators are considering a variety of methods to strengthen state and federal oversight of mortgage lenders and brokers, including the potential implementation of "strong nationwide licensing standards" for mortgage brokers. n17 Whether these efforts ultimately will result in real reform is anybodys guess.

Insurance industry analysts are resigned to the fact that insurers will suffer substantial losses related to the subprime mortgage crisis, although they do not expect it to be as dire an event for the industry as some have predicted. n18 Although litigation over a multitude of issues spawned by the subprime mortgage crisis is in its early stages, industry veterans are already projecting that liability insurance losses alone likely will exceed \$1 billion. n19 As much as liability underwriters wish they could steeply raise rates for any person or entity with meaningful exposure to the subprime market collapse, other factors affecting the larger insurance pricing cycle suggest that the market for liability insurance generally remains soft. n20 Underwriters therefore are making up for their inability to substantially raise premiums by establishing more stringent guidelines for undertaking the risk and requiring applicants to make substantially more detailed disclosures about the transactions comprising their loan portfolios. n21

For example, real estate professionals vulnerable to subprime losses and particularly mortgage originators should be prepared to provide at least the following information with their initial application for E&O coverage:

1. Estimated percentage of total loan origination that is Subprime;
2. Total Subprime Loans Originated (including purchased loans) in the past
12 months;
3. Approximate Loan to Value breakdown for Subprime Loans by percentage;

4. Type of Subprime Loans by percentage (Fixed Rate Loans vs. Adjustable Rate Mortgages (ARMS));
5. Percentage of any Subprime ARM Loans with monthly adjustment features;
6. Percentage of Interest Only Loans, New homes loans in a development, Spec Homes, n22 non-owner occupied homes, Refinance Loans, ARM Loans where Applicant only has to qualify at the initial payment level, Second Mortgages, and No Doc n23/Low Doc Loans. n24

In other words, underwriters have developed a high degree of expertise regarding the range of products that fall under the general banner of subprime and have moved aggressively to request information in the application that *should* expose where the real risk lies. However, these improvements in the risk selection process will not insulate insurers from the inevitable costs associated with managing and resolving the waves of claims that will soon be tendered by policyholders seeking a defense and indemnity for losses associated with the subprime phenomenon.

Conclusion

One can argue that the experts in the mortgage lending industry, the securities industry, the financial services industry, the insurance industry and the regulators of all of these entities should have seen this debacle coming. Whether true or not, policyholders and insurers alike currently must face the daunting reality that it will be a very long time before the insurance coverage issues this crisis will spawn will be brought to conclusion. If the industry analysts are correct, the subprime mortgage crisis eventually will be remembered as a mere blip among other, more adverse liability insurance events such as the savings & loan crisis and corporate looting cases such as Enron and WorldCom. Stay tuned.

The Erosion of the Duty to Cooperate Under CGL Policies

2008 Emerging Issues 209

Mason on the Duty to Cooperate Under CGL Policies

By Lawrence D. Mason

March 20, 2008

SUMMARY: In his commentary, Lawrence D. Mason examines the increasing problem of commercial general liability (CGL) insurance policyholders converting the claims process into an adversarial relationship with their insurers. The commentary finds that this trend is in direct violation of most CGL policies, specifically the Cooperation Clause in which the policyholder is obligated to cooperate with the insurer. The commentary offers practical guidance to practitioners servicing policyholder and insurer clients on how to proactively solve the problem. The commentary includes a discussion of the purpose of the Cooperation Clause, the duties and responsibilities of a CGL policyholder, and a policyholder's potential motivations for breach. The commentary features an analysis of court decisions of many jurisdictions evaluating the question of whether or not an insurer may successfully rely on its policyholder's failure to cooperate as a valid basis for disclaiming coverage.

ARTICLE: The Erosion of the Duty to Cooperate Under Commercial General Liability Insurance Policies: An Overview of Cases Across the Nation

By Lawrence D. Mason n1

Introduction

A disturbing trend has emerged in commercial general liability claims. Commercial general liability policyholders are increasingly converting the claims process into an adversarial relationship with their insurers. This "litigation" approach to claims is in direct violation of most commercial general liability ("CGL") policies--specifically, the Cooperation Clause.

Policyholder counsel should consider a more conciliatory approach for their clients. Breach of the CGL Policies duty to cooperate will result in a forfeiture of coverage. Counsel for the insurance industry must prepare their clients for how to address non-cooperative policyholders and provide them with "best practices" in an effort to steer the claims toward a more productive approach. If these efforts are unsuccessful, insurer counsel will need to provide guidance as to

the difficult burden typically placed on an insurer seeking to enforce its Cooperation Clause.

What Is the Purpose of the Cooperation Clause?

The initial purpose for including a "cooperation" clause in CGL policies was to prevent fraud. Insurers were frequently confronted with third-party claims where their policyholders were conspiring with plaintiffs, including making secret arrangements to increase the size of judgments in favor of the policyholders. The insurance industry's desire for protection against unscrupulous policyholders resulted in the drafting of an Insureds "Duties" provision. Most courts evaluating this issue have concluded that the primary objective of the Cooperation Clause is to prevent collusion between the policyholder and the injured, as well as to make possible the insurers investigation. *See, e.g., Martin v. Travelers Indem. Co.*, 450 F.2d 542, 553 (5th Cir. 1971); *M.F.A. Mut. Ins. Co. v. Cheek*, 66 Ill. 2d 492, 496 (1977); *Arton v. Liberty Mut. Ins. Co.*, 163 Conn. 127, 134 (1972); *M.F.A. Mut. Ins. Co. v. Sailors*, 180 Neb. 201, 204 (1966).

Duties and Responsibilities of a Policyholder: What Does the CGL Policy Require?

The standard commercial general liability policy includes conditions setting forth the insured's duties in the event of a claim. For example, a typical CGL policy is likely to contain an "Insureds Duties" provision similar to the following:

CONDITIONS

* * *

Insureds Duties in the Event of Occurrence, Claim or Suit

(a) In the event of an **occurrence**, written notice containing particulars sufficient to identify the **insured** and also reasonably obtainable information with respect to the time, place and circumstances thereof, and the names and addresses of the injured and of available witnesses, shall be given by and for the **insured** to the company or any of its authorized agents as soon as practicable. The **named insured** shall promptly take at his expense all reasonable steps to prevent other **bodily injury** or **property damage** from arising out of the same or similar conditions, but such expense shall not be recoverable under this policy.

(b) If claim is made or suit is brought against the insured, the **insured** shall immediately forward to the company every demand, notice, summons or other process received by him or his representative.

(c) The **insured** shall cooperate with the company and, upon the companys request, assist in making settlement, in the conduct of suits and in enforcing any right of contribution or indemnity against any person or organization who may be liable to the insured because of **bodily injury** or **property damage** with respect to which insurance is afforded under this policy; and the **insured** shall attend hearings and trials and assist in securing and giving evidence and obtaining the attendance of witnesses. The **insured** shall not, except at his own cost, voluntarily make any payment, assume any obligation or incur any expense other than for first aid to others at the time of accident.

* * *

For additional examples of CGL "Insureds Duties" provisions, see *Millers Standard Insurance Policies Annotated*

available on Lexis.com.

While it is clear from the "Insureds Duties" Condition that the policyholder must "cooperate with the company," this requirement is left undefined in the CGL Policy and is merely supplemented with fairly basic requirements related to the defense of the underlying action. Ignoring the true intent of the claims process, some policyholders have curiously argued that the fact that the phrase "cooperate with the company" is broadly worded is a basis for their decision to avoid compliance with contractual responsibilities. However, a closer look at current trends reveals two primary reasons for a policyholder's motivation to breach the Cooperation Clause: to maintain control over the resolution of the claim and to come out ahead financially.

To illustrate: A manufacturer is sued in a products liability action. Fearing that settlement will encourage additional lawsuits from other plaintiffs, the manufacturer withholds important information from its insurer concerning the nature of the claim, including the value of the case (*i.e.*, falsely giving the impression to the insurer that the claim is below the policy's self-insured retention), preventing the insurer's involvement in selection of defense counsel, undermining the insurer's ability to assume control of the defense, and keeping the insurer removed from litigation and settlement strategy.

When Has a Policyholder Breached Its Duty to Cooperate?: What Do the Courts Say?

Many courts have long held that a breach of the duty to cooperate relieves an insurer of responsibility under the CGL Policy and have concluded that any condition in a liability insurance policy requiring cooperation on the part of the policyholder is of great importance. *See, e.g., Waste Mgmt. v. Int'l Surplus Lines Ins. Co.*, 144 Ill. 2d 178 (1991). The duty to cooperate obligates the policyholder to disclose all facts within the policyholder's knowledge that may be significant to the insurer in determining its liability under the policy. *See, e.g., Employers Reinsurance Corp. v. E. Miller Ins. Agency*, 332 Ill. App. 3d 326 (2002). Willfully choosing not to cooperate after being contacted by the insurer constitutes a substantial and material lack of cooperation. *See, e.g., Gallaway v. Schied*, 73 Ill. App. 2d 116 (1966).

In *Employers Reinsurance Corp. v. E. Miller Ins. Agency*, 332 Ill. App. 3d 326 (2002), after receiving notice of a claim, the insurer attempted to investigate the claims in the complaint against the policyholder, but the policyholder failed to answer or supply anything in response to the insurer's request for information. The court stated that the policyholders are controlled by the provisions in the insurance policy with the insurer, which included a duty to cooperate. The court further noted that the cooperation clause imposed a broad duty of cooperation on the policyholder and was without limitation or qualification. Because the policyholder failed to cooperate, the court held that the insurer was excused from its duties to defend and indemnify under the policy. *Id.*, 332 Ill. App. 3d at 340.

In *Waste Mgmt. v. Int'l Surplus Lines Ins. Co.*, 144 Ill. 2d 178 (1991), the policyholder hired its own counsel, defended and settled the underlying action. Subsequently, the policyholder sought indemnification from the insurer for settlement costs and defense costs. The policyholder and the insurer filed declaratory judgment actions seeking a determination of their respective rights under the policy. The policyholder alleged that the settlement and defense costs incurred in the underlying action were reasonable. Moreover, the policyholder alleged that it had provided the insurer with advance notification of the settlement. The insurer denied coverage on the basis that the policyholder breached its duty to cooperate under the policy. During discovery, the policyholder refused to comply with its insurer's requests for information concerning the underlying action. The Illinois Supreme Court held that the policyholder's duty to cooperate required it to produce the requested information to the insurer. *Id.*, 144 Ill. 2d at 191. In reaching its holding, the court emphasized that the terms of the insurance contract control the scope of the policyholder's duties.

In *Waste Management*, the Illinois Supreme Court stated that the principles of law which govern contracts apply with equal force to contracts of insurance. A court must enforce clear and unambiguous provisions of the insurance policy, such as the cooperation clause, according to their plain meaning. *Id.*, 144 Ill. 2d at 191-192. The Illinois

Supreme Court further noted that the cooperation clause imposes a broad duty of cooperation on the policyholder and is without limitation or qualification. The policyholder accepted the contractual obligation of the duty to cooperate when it entered into the contract with the insurer. Moreover, the policyholder's duty to cooperate does not terminate upon the resolution of the underlying action. Under the policy, the policyholder is obliged to cooperate with the insurer for as long as the policyholder seeks to enforce the terms of the insurance agreement. *Id.*, 144 Ill. 2d at 192.

Attorneys researching coverage questions arising out of claims-handling problems may find the California Court of Appeals decision in *Rockwell Intl Corp. v. Aetna Cas. and Sur. Co.*, 26 Cal. App. 4th 1255 (1994) instructive. In *Rockwell*, the policyholder was a defendant in multiple environmental contamination lawsuits that spanned several years and triggered coverage under several CGL policies. Although some of the primary CGL insurers assumed the defense of the policyholder under a reservation of rights, other insurers denied coverage. Rockwell filed a declaratory judgment action seeking resolution of its coverage rights. During the written discovery phase, the insurance carriers demanded complete disclosure of Rockwell's file regarding the underlying lawsuits. Rockwell refused and claimed that some of the information sought was protected by the attorney-client privilege. Relying on the Supreme Court of Illinois' decision in *Waste Management, Inc.*, 144 Ill. 2d 178 (1991), the insurers argued that the attorney-client privilege was inapplicable to the declaratory judgment action because of the cooperation clause found within each insurance policy. Rejecting the theory endorsed by the Illinois Supreme Court in *Waste Management, Inc.*, that the duty to cooperate is without limitation or qualification as "fanciful," the California Court of Appeal noted that compliance under a cooperation clause could be obtained without disgorging every detail to the insurers. *Rockwell*, 26 Cal. App. 4th at 1260. The court concluded that the cooperation clause was drafted to ensure protection against policyholder/injured party collusion and was never intended to "operate as a waiver of the attorney-client privilege." *Id.*, 26 Cal. App. 4th at 1263. The court additionally emphasized that although a policyholder and its insurer can be united in interest, this could not be the case where the insurer has agreed to defend under a reservation of rights. Under those circumstances, the two parties are no longer united in interest, and the policyholder is entitled to select his or her own counsel free from its carrier's influence. *Id.*, 26 Cal. App. 4th at 1263-1264.

Consequently, insurers litigating in jurisdictions likely to follow the *Rockwell* approach will find it extremely difficult to avoid coverage based on a claim that the policyholder violated its duty to cooperate. A successful breach of the duty to cooperate defense is best achieved in those situations where the policyholder has misrepresented a material fact or colluded with the injured party. An insurer may also be successful on a failure to cooperate disclaimer where its policyholder has willfully refused to submit to the insurers reasonable requests. However, an insurer is unlikely to prevail in situations where the policyholder is simply unresponsive.

An Insurer Has a Heavy Burden to Avoid Coverage on the Basis That Its Policyholder Has Breached Its Duty to Cooperate: What Does an Insurer Have to Prove?

An examination of decisions both old and new addressing the issue of when a policyholder has breached its duty to cooperate reveals a fairly consistent trend. While there are some exceptions, most courts hold that an insurer must prove:

- (1) It was substantially prejudiced;
- (2) It exercised reasonable diligence to obtain the insured's cooperation; and
- (3) The policyholder's refusal to cooperate was willful.

See, e.g., *Davila v. Arlasky*, 857 F. Supp. 1258, 1264 (N.D. Ill. 1994); *M.F.A. Ins. Co. v. Cheek*, 66 Ill. 2d 492, 498-99 (1977). See also *Mazzuka v. Eatmon*, 45 Ill. App. 3d 929, 932, 934 (1977).

Clearly, an insurer has a heavy responsibility to actively take all steps possible to obtain its policyholder's cooperation. Given the reluctance of courts to forfeit coverage for an policyholder's failure to cooperate, an insurer must make substantial efforts to procure the policyholders assistance prior to denying a claim. Simply sending

correspondence to the policyholder's address (which goes unanswered) does not satisfy the insurer's burden to diligently seek the policyholders cooperation. Moreover, an insurer attempting to warn its policyholder of the seriousness of the failure to comply with CGL policy conditions, should emphasize that the policyholder's continued failure to cooperate will result in a loss of coverage under the policy. *See, e.g., Bowyer v. Thomas, 188 W. Va. 297 (1992)*. In *Bowyer*, the court held that simply apprising the policyholder of the duty to cooperate without setting forth the penalties was insufficient. *Id.*

As the following cases illustrate, a policyholder's failure to respond to an insurer's requests for information does *not* usually guarantee the insurer a successful denial premised upon the policyholder's non-cooperation.

- *Parr v. Gonzalez, 669 N.W.2d 401 (Minn. Ct. App. 2003)*: The court denied the insurer's lack of cooperation defense in a coverage action where it was found the insurer could have obtained requested information from sources other than the policyholder. The insurer did not establish that it acted diligently in attempting to secure cooperation from its policyholder where it only attempted to contact its policyholder on two occasions, by mail, and never telephoned or attempted to meet with its policyholder.

- *Bowyer v. Thomas, 188 W. Va. 297 (1992)*: Failure to appear at a scheduled deposition, standing alone, does not amount to a breach of the policyholders duty to cooperate. Where the policyholder previously appeared at a meeting with his assigned defense counsel and also contacted the insurer's claims adjuster on numerous occasions throughout the course of the litigation there was no breach of the policy's requirements.

- *Am. Guar. and Liab. Ins. v. Chandler Mfg. Co., 467 N.W.2d 226 (Iowa 1991)*: The policyholder's president failed to respond to multiple letters from assigned defense counsel and also failed to sign and return interrogatories so that they could be served upon defense counsel. The policyholder's president additionally failed to appear at trial despite receiving correspondence requesting his presence. However, the court noted that the insurer-assigned defense counsel could have obtained statements from him, could have obtained his deposition, and could have undertaken greater efforts to ensure that he was present at the trial. Accordingly, it was held that the insurer's attempts to achieve the assistance of the policyholder were not sufficient to support a finding that the policyholder had failed to cooperate.

- *Anderson v. Kemper Ins. Co., 128 Mich. App. 249 (1983)*: The insurer's attempt to extinguish coverage due to its policyholder's failure to cooperate was denied where the insurer was unable to establish it could not have secured the information sought from an additional source. The insurer also failed to establish "good faith" efforts to locate the policyholder.

- *Lappo v. Thompson, 87 Ill. App. 3d 253 (1980)*: Coverage was denied based on the policyholder's failure to appear at trial. Prior to declination, the insurer sent several letters to the policyholder notifying her of the trial. The court held that the insurer had the burden to establish by a preponderance of the evidence that it acted in good faith to secure the attendance of the policyholder at trial and that the policyholder's failure to appear was due to her refusal to cooperate. The court held that the insurer failed to establish the policyholder's refusal to cooperate or that it exercised a reasonable degree of diligence in attempting to secure her cooperation. Important to the court was the fact that the insurer did not attempt to contact the policyholder personally. Additionally, the court found significant that the policyholder misspelled her name when she signed a receipt for a certified letter because it created the possibility that she might have a literacy problem. Since this possibility was never pursued by the insurer, the court ruled that the insurer's burden to diligently seek its policyholder had not been met.

■ *Thrasher v. U.S. Liab. Ins. Co.*, 19 N.Y.2d 159 (1967): There is no doubt the insurer was damaged by its policyholder's failure to appear at trial. However, its attempts to locate its policyholder at the time of trial included calling his place of employment, checking neighborhood bars, and sending a letter to the policyholder the day before the opening of the trial. The court held that this was insufficient to establish that the insurer was diligent in its efforts to locate the policyholder. Moreover, the court also noted that the policyholder could not have willfully violated the duty to cooperate where he was never made aware that the insurer requested his appearance at the trial.

Non-Cooperation Defense Must Be Timely Asserted to Avoid Waiver/Estoppel

An insurer with a valid basis for asserting a failure to cooperate defense must do so promptly or risk waiver and estoppel challenges. The case of *Medical Mut. Liability Ins. Society v. Miller*, 52 Md. App. 602 (Md. Ct. App. 1982), highlights the risks to an insurer that delays in asserting its non-cooperation defense. In *Miller*, the insurer became aware of the policyholders misrepresentations a full year before disclaiming on the grounds that the policyholder failed to cooperate under the terms of his CGL policy. The court held that the insurer's delay was too long and, accordingly, the insurer was estopped from denying coverage.

Is Prejudice Required?

In nearly all jurisdictions, the answer is: **Yes**. For example, in *M.F.A. Mut. Ins. Co. v. Cheek*, 66 Ill. 2d 492 (1977), the Illinois Supreme Court established that in order for an insurer to prove breach of a cooperation clause, the insurer must prove it was substantially prejudiced. Prejudice is never presumed. *Id.*, 66 Ill. 2d at 499. Proof of substantial prejudice requires an insurer to demonstrate that it was actually hampered in its defense of the claim at issue by the violation of the cooperation clause. *Id.*, 66 Ill. 2d at 500. If this burden is not met, breach of the cooperation clause is no defense to coverage.

A minority of states do not require a showing of prejudice. For example, Tennessee applies the standard "no prejudice" rule for lack of cooperation disputes. See *Allstate Indem. Co. v. Fifer*, 47 F. Supp. 2d 913 (W.D. Tenn. 1998), but see *Thaxton v. Allstate Ins. Co.*, 1988 Tenn. App. LEXIS 102 (1988). Similarly, New Jersey and Georgia do not require an insurer to establish prejudice when denying coverage because of a policyholders failure to cooperate. See, e.g., *Griggs v. Bertram*, 88 N.J. 347 (1982); *Wolverine Ins. Co. v. Sorrough*, 122 Ga. App. 556 (1970).

In direct actions commenced against insurers by injured parties, some authority provides that the policyholder's breach of the duty to cooperate is not a valid defense unless there is collusion between the injured party and the policyholder. See *Schaefer v. N. Assurance Co. of Am.*, 513 N.W.2d 615 (Wis. Ct. App. 1994). However, under Wisconsin law, an insurer is no longer required to establish how the breach of the duty to cooperate prejudiced the policyholder. *Id.*

When Has An Insurer Been Prejudiced?

The question of whether or not an insurer has been prejudiced is a fact-specific inquiry. Counsel seeking answers to this issue are likely to find guidance from the following representative cases:

- . Where a policyholder chose to defend the underlying action with counsel of his own choosing without first notifying his insurer and then later sought reimbursement for defense costs at rates well in excess of the insurers standard rates, the court held that the higher defense counsel rates voluntarily incurred by policyholder amounted to a breach of the cooperation clause. See *Kerns v. Interlex Ins. Co.*, 231 S.W.3d 325 (Mo. Ct. App. 2007).

- . Where substantial prejudice has been shown, the policyholder will extinguish the insurer's duty to defend and

indemnify the insured for the underlying action. *See, e.g., Employers Reinsurance Corp. v. E. Miller Ins. Agency*, 332 Ill. App. 3d 326 (2002); *see also Gallaway v. Schied*, 73 Ill. App. 2d 116 (1966).

. Failure to appear and testify at trial, despite repeated requests from the insurer resulted in a finding that the cooperation clause had been violated. The court additionally concluded that the insurer had sustained prejudice due to the policyholder's failure to appear at deposition and at trial, which inhibited the insurer from presenting a defense. *See Allstate Ins. Co. v. State Farm Mut. Auto Ins. Co.*, 363 Md. 106 (2001).

. An insurer that chose not to participate in the litigation and did not criticize the handling of the claim by the policyholder's counsel and did not argue that the settlement amount accepted by the parties in the underlying action was unreasonable could not prove that it had been prejudiced by the policyholder's failure to keep the insurer fully apprised of the underlying action. *See Federal Ins. Co. v. X-Rite, Inc.*, 748 F. Supp. 1223 (W.D. Mich. 1990).

. In *Riffe v. Peeler*, 684 S.W.2d 539 (Mo. Ct. App. 1984), the court found prejudice where the policyholder refused to cooperate with defense counsel in preparing answers to interrogatories. The interrogatory answers were stricken and the court entered an interlocutory judgment on the issue of liability against the policyholder. Thus, the court held that the insurer had been prejudiced by the policyholder's non-cooperation. *Id.*, 684 S.W.2d at 543.

. In *Martin v. The Travelers Indemnity Co.*, 450 F.2d 542 (5th Cir. 1971), the court held that to establish prejudice the insurer must show that the policyholder made false statements or conducted himself in some other fashion materially prejudicing the insurer's ability to defend the action.

. In *Western Farm Bureau Ins. Co. v. Danville Construction Co.*, 463 S.W.2d 125 (Ky. Ct. App. 1971), the court held the non-appearance of the policyholder in the courtroom does not in itself constitute lack of cooperation; the nonappearance of the litigant in the courtroom during the trial will create some degree of detriment, but whether that detriment is material depends on other factors including whether the insured's testimony will be more harmful than beneficial.

. In *Travelers Ins. Co. v. Godsey*, 260 Md. 669 (1971), the court held that there is prejudice when the policyholder collaborates with the claimant to deliberately mislead the insurer and make it appear that the claimant was free from negligence or assumption of risk when in fact he clearly had been negligent or clearly had assumed the risk.

. In *McDonnell v. Hestnes*, 47 Wis. 2d 553 (1970), the court held that the insurer is not prejudiced by its reliance on the policyholder's false statements when these statements are contrary to the known and adjudicated facts.

Thus, it appears that substantial prejudice involves more than a loss of opportunity.

Protecting the Insurer's Rights

When faced with the problem of a non-cooperative policyholder, insurers' counsel should consider the following "best practices" when providing guidance to their clients:

. Be proactive, not reactive: As the case law discussed above illustrates, insurers must be diligent in attempting to secure the cooperation of their policyholders. It is additionally important for insurers to timely assert their non-cooperation coverage defenses.

. Oral and written communications: In this age of far-too frequent impersonal e-mail communications, claims professionals should be encouraged to supplement their written communications with telephone calls to discuss cooperation issues. In-person meetings are an additional tool that should be advocated to promote improved policyholder/insurer relations. It is essential that insurers explain to their policyholders the serious consequences of failure to comply with a commercial general liability policy's Cooperation Clause.

Conclusion

Counsel, whether representing policyholder or insurer interests, are encouraged to remind their clients that the purpose of the claims process is to provide for a non-adversarial exchange of information to assist the insurer in evaluating the claim. This procedure necessarily includes obtaining information relevant to the insurer's coverage determination. Cooperation additionally includes a policyholder's active participation in its own defense to ensure that any policyholder exposure is minimized. Policyholders that adopt a hostile approach and treat their insurers as litigation adversaries thwart these goals. Proactive approaches to non-cooperative policyholder issues are likely to reduce the need for litigation between insurers and their policyholders to resolve Cooperation Clause issues. The time has come for both sides of the insurance industry bar to jointly promote cooperation initiatives to prevent violations of a policyholder's contractual duty to cooperate.

ABOUT THE AUTHOR(S):

Lawrence D. Mason is a partner at Segal, McCambridge, Singer & Mahoney, a national litigation law firm dedicated to the protection of insurers' interests, where he manages his firm's Insurance and Reinsurance Practice. Mr. Mason's trial and appellate litigation practice is focused on insurance and reinsurance coverage, products liability, environmental and toxic tort, construction, and commercial litigation.

Mr. Mason is frequently called-upon to protect the interests of insurers and reinsurers in complex coverage disputes and to defend their insureds concerning a variety of third-party liability issues. He has extensive experience in the handling of large catastrophe losses and the cross-discipline problems that arise from these insurance claims.

Mr. Mason has successfully defended manufacturers against claims of negligent product design, failure to warn and breach of warranties. Mr. Mason has additionally counseled clients in litigation liability prevention, product recall campaigns, and the development of product package warnings and owner/operator manuals. Mr. Mason has also represented architects, engineers and contractors in a number of complex cases including breach of contract, failure of duty, environmental and building design issues.

Harbage and Haycock on California Healthcare Reform

2008 Emerging Issues 199

How State Politics and Ideology Derailed California Healthcare Reform

By Peter Harbage and Hilary Haycock

March 14, 2008

SUMMARY: California's year of health reform started with great promise but ended in ideological and political stalemate in the State Senate. Many of the reasons California reform broke-down were due to the state's unique legislative process, which created gridlock on health reform, in particular by isolating and alienating various members of the legislature. This extensive commentary by Peter Harbage and Hilary Haycock of Harbage Consulting explains the concepts and history of the health reform proposal in California. (Mr. Harbage has served as the senior health policy advisor to presidential candidate and former Senator John Edwards, as well as advised Governor Arnold Schwarzeneggers health reform team. During his career, he also served as the Assistant Secretary for Health at the California Health and Human Services Agency and as Special Assistant to the Administrator of the federal Health Care Financing Administration.) The commentary further analyzes each section of the comprehensive proposed legislation. To varying degrees, the legislation may be used as a template for future attempts at providing universal healthcare. The health reform effort in California offers important lessons for the national debate: it is possible to build broad coalitions of support for comprehensive reform if policymakers can make the tough compromises and tradeoffs necessary. But, ultimately, the commentary concludes that health reform will only be successful if leaders can overcome the power of ideologues on the Right and Left to block compromise reform in their effort to pursue their own perceived "perfect" solution.

ARTICLE: How State Politics and Ideology Derailed California Health Care Reform

By Peter Harbage and **Hilary Haycock**

INTRODUCTION

In January 2007, California Governor Arnold Schwarzenegger announced the most aggressive health reform plan since President Clintons effort in the early 1990s. Twelve months after he launched his campaign, and a month after receiving the blessing of the California State Assembly, the Senate Health Committee voted down the health reform plan compromise. The reasons for the failure are difficult to discern, as a disappointed Governor Schwarzenegger stated the day after the Senate Health Committee vote, We have to find out what is the reason and why it did not pass, adding, Not what has been given to the public, but what is the real reason . In acting, we call it the sub-layers, the different

colors underneath [Anthony York, *Postmortem analysis of health care bill*, Capitol Weekly, Jan. 31, 2008.]

This commentary discusses the reasons why a health reform effort with so much promise abruptly ended, in a majority-Democrat health committee no less. Simply put, Californias internal politics played a greater role than anything having to do with the policy debate, and so the story of Californias setback is primarily one about California. At the same time, California does hold important lessons for the national debate. The first lesson is to find the policy compromises that are necessary to achieve the second lesson, which is to build broad coalitions of support. The third lesson from California is the tragic power of extreme ideologues on the Right and Left to block compromise reform in their effort to pursue their own perceived perfect solution.

BACKGROUND

Encouraged by Massachusetts successful adoption of comprehensive health reform in 2006, Governor Schwarzeneggers 2007 State of the State address launched the year of health reform in California [Gov. Arnold Schwarzenegger, State of the State Address, Jan. 9, 2007, <http://gov.ca.gov/index.php?/press-release/5089/>]. California, however, faced significantly greater barriers than Massachusetts to enacting comprehensive reform. Most notable were its higher percentage of uninsured residents, a poorly funded safety net, and higher percentage of individuals in the individual health insurance market. California has the highest number of uninsured residents of any state in the nation; estimated at 6.5 million or 20 percent of the states population [UCLA Center for Health Policy Research, California Health Interview Survey, 2005].

The Governors plan was based on shared responsibility: the idea that individuals, employers, the government, insurers, and providers all have to put more resources into the system to achieve universal coverage. Not only did employers have a mandate to offer insurance, but individuals also were mandated to enroll. The plan called for subsidies to make insurance more affordable for individuals, as well as expansions in Medi-Cal (Californias Medicaid program) and Healthy Families (Californias State Childrens Health Insurance Program). Beyond the coverage expansion, the plan also contained aggressive steps for cost-containment, wellness, and prevention [Office of the Governor, Original Health Reform Plan, http://gov.ca.gov/pdf/press/Governors_HC_Proposal.pdf; the final version is available at <http://www.fixourhealthcare.ca.gov/plan>].

After vetoing an employer mandate bill in the fall sponsored primarily by the Assembly speaker, the Governor and legislative leadership agreed on a bill, officially designated Assembly Bill 1 of the First Extraordinary Session of the California Legislature in 2007 (AB X 1 1) called the Health Care Security and Cost Reduction Act (the Act). The Governors approach was popular among 60 to 70 percent of the population, as shown in several surveys by the Public Policy Institute of California and the Field Poll [Public Policy Institute of California Statewide Survey: Californians and Their Government, June 2007; The Field Poll, Large Majority Favors the Health Care Reform Package Making Its Way Through the Legislature, Dec. 21, 2007].

Yet, key interest groups greeted the plans announcement with skepticism [Allan Zaremborg, California Chamber of Commerce Press Release, Jan. 8, 2007, <http://www.calchamber.com/CC/News/Archive/2007/01082007PR.htm>]. In the Legislature, Republicans were negative [Dick Ackerman, Senate Republican Leaders press release, Jan. 8, 2007, <http://republican.sen.ca.gov/news/33/pressrelease4396.asp>; Tom Chorneau, *GOP lawmakers not on board with Schwarzenegger health plan; offer health savings accounts and tax breaks as alternative*, San Francisco Chronicle, March 14, 2007]. After a full year of work, the Assembly passed health reform only to watch the Act die in a bitter defeat in a Senate committee.

LEGISLATIVE POLITICS DECIDED THE FATE OF HEALTH REFORM

The legislative process was defined by several key characteristics that combined to create gridlock on health reform, in particular by isolating and alienating various members of the legislature, especially in the Senate. When it came time to vote, Senators were unprepared to take the bold step of moving health reform forward.

A Closed Process

While the Governor's initial health reform plan was crafted inside his administration, the plan evolved throughout 2007 in a series of closed meetings with stakeholders. The Governor's negotiation strategy was primarily one-on-one consultation with a broad range of stakeholders. Designed to create ample opportunity for stakeholders to freely share ideas and build support, the hope was that the significant stakeholder effort would develop a plan with broad backing prior to full engagement with the Legislature.

For much of 2007 while the stakeholder process continued, there was virtually no real role for legislators and the general public. There was only one informational hearing on the bill, which was held in mid-February. The Governor's plan was not released in legislative language as a bill until October -- well after legislative session typically ends. In an effort to spread distrust of reform and the process, opponents seized on the lack of a bill to assert that there was no way to know what the Schwarzenegger administration truly intended. The delay also created a perception that no legislator believed enough in the Governor's plan to introduce it. Unfortunately, the whole process was put on hold as the 2007 budget debate eclipsed the health care debate for several months during the summer of 2007 [Jordan Rau, *After long standoff, California lawmakers pass \$145-billion budget*, The Los Angeles Times, Aug. 22, 2007]. This delay to the closing of the debate would eventually prove a critical factor in why health care reform failed.

Tenuous Legislative Relations and Few Champions

At the beginning of the health care reform debate, the Republicans and Democrats in both legislative houses articulated their own health care reform plans. In December 2006, Assembly Speaker Fabian Nunez and Senate President Pro Tem Don Perata both released reform plans in what was widely considered to be an effort to get out ahead of the Governor's plan.

The Assembly plan was primarily an employer mandate, which eventually passed through the Assembly as AB 8 [AB 8, chapter 1, section 4800.01 subsection H, Assembly Speaker Fabian Nunez]. In contrast, the Senate leaders plan consisted more of a broad articulation of concepts in favor of reform. And in an even greater contrast, the Republican plans did not attempt to reach universal coverage [Tom Chorneau, *GOP lawmakers not on board with Schwarzenegger health plan; offer health savings accounts and tax breaks as alternative*, San Francisco Chronicle, March 14, 2007], which was what the Governor said was his top goal.

The tense relationship between the two legislative houses delayed the Senate's involvement. From the beginning, the Assembly Speaker appeared much more dedicated to health care reform than the Senate leader [Fabian Nunez, *Health care reform -- now; We can't let radicals stop my sensible plan for helping desperate Californians*, Los Angeles Times, Aug. 30, 2007]. Eventually, there was a formal agreement between the two leaders: the Assembly would lead on the health care debate while the Senate would take up a different topic -- water rights -- as its key issue. After it became clear that the water deal would fall apart, Senator Perata appeared even less amenable to working on health care reform [Mike Zapler, *Perata a surprise hurdle to health reform*, Oakland Tribune, Dec. 22, 2007]. The division of labor also meant that few if any Senators were engaged in health care reform and the marathon sessions that took place between the Speaker, Governor and stakeholders.

The one other figure in the Senate who was well positioned to offer leadership on reform was Senate Health Committee Chair Sheila Kuehl. While she held an informational hearing in February, Senator Kuehl has long been a single-payer advocate -- an approach not seriously taken into account in California's health care reform proposals. As a result, the Senator, a health care expert in her own right, opted not to play a constructive role in moving the reform effort forward. Prior to the final vote on health care reform in her committee, Senator Kuehl made it clear that she

would vote against any non-single payer reform plan [Shane Goldmacher, *Kuehl says health bill provides less help than advertised*, Capitol Alert from the Sacramento Bee, Dec. 20, 2007].

Even after Senator Perata, Speaker Nez, and the Governor reached an agreement in early December 2007, Perata quickly seemed to reverse course. After the Assembly passed the compromise Act, Senator Perata announced first that he would not call the Senate to order during the Christmas Holiday break [*Senate delays health care vote*, Capitol Weekly, Jan. 14, 2008]. Instead, he called for an analysis of the plan by the non-partisan Legislative Analysts Office (LAO) -- a step not taken for health care reform plans that had previously passed the Senate, such as the Speakers employer mandate and SB 840 (a single-payer bill, sponsored by Senator Kuehl, that the Governor vetoed in 2006). In addition, Perata used uncertainty about the size of the projected budget deficit -- and its implication for critical state health care programs -- as cover for opposing comprehensive reform measures [Editorial, *Perata's reasons for killing health bill: Huh? State Senate's leader leaves a sad legacy as historic opportunity dies on his watch*, Sacramento Bee, Jan. 30, 2008].

The closed process and legislative dynamics created a situation where there were precious few legislative leaders carrying the reform effort. Besides Speaker Nez, no other California legislator seemed to have been truly invested in the outcome of the reform process.

Divided Stakeholder Leadership

The common perception of health care reform is that labor and consumer groups will support the effort while employers and insurance companies (concerned about their profits) will oppose it. The California experience turns this paradigm on its head, showing that broad coalitions in support of health reform can be built over time -- and that labor and consumers can also challenge reform. But for the bulk of the legislative session, stakeholders continued to be divided as the policy was negotiated with the Administration and Legislature, and most of the Left-leaning organizations backed the Speaker and his employer-mandate approach.

Ultimately, there were important stakeholder endorsements. But the bulk of that support for the Governors plan did not come until the final months of the year. At the same time, there was always some level of opposition. The December 17, 2007 version of the Act as passed by the Assembly received letters of support or support if amended from 68 organizations and more than 700 individuals. Forty-two organizations and more than 350 individuals wrote in opposition to that version as well [ABX 1 1, Assembly Third Reading, Dec. 17, 2007, <http://www.leginfo.ca.gov>].

The Positions of the Stakeholders

This section assesses the political positions of stakeholders, with the final section of this commentary examining the policy details.

Consumer Groups and Unions. Few consumer groups supported the specifics of the Governors plan when it was announced. Eventually, most came to understand the political and policy reality that their long-time goals of coverage and guarantee issue could only be achieved in tandem with a mandate that individuals must obtain health insurance. Among the key supporters were Consumers Union, the American Association of Retired Persons (AARP), the State Employees International Union (SEIU), and Health Access, Californias major consumer advocacy group. The California State Council of Carpenters and the American Federation of State, County, and Municipal Employees Union (AFSCME) were also actively supportive of reform.

Some key labor groups also consistently opposed health care reform, such as California AFL-CIO and several of its key unions, including the Teamsters. Their primary concern was the affordability of health insurance that people would be required to purchase. The AFL-CIO was extremely critical during the autumn of 2007.

Insurance Companies. The Governor's Office had great success in building support with insurers. Many insurers, including Kaiser Permanente and Blue Shield of California, became vocal proponents. The holdout was Blue Cross of California, whose substantial profit margin in the individual market drove it to oppose health care reform altogether [*Blue Cross Earmarks \$2 Million To Fight Health Reform Plans*, California Healthline, May 25, 2007]. The Acts caps on insurer profits and requirements to offer insurance to all who want to buy it (two provisions originally proposed by the Governor) would cut at the heart of the Blue Cross profits.

Employer Perspectives. Employers were divided over health care reform. Steve Burd, CEO of Safeway, led the proponents, eventually helping to create an ad hoc group of mostly large employers that supported reform [Jonathan Cohn, *Whats the One Thing Big Business and the Left Have in Common?*, New York Times Magazine, April 1, 2007]. Other key employers and employer groups weighed in the affirmative as well, including the Los Angeles and San Diego Chambers of Commerce.

At the same time, other employer groups opposed reform, including the California Chamber of Commerce, the California chapter of the National Federation of Independent Businesses, and the California Restaurant Association. Their opposition focused on the burden of the employer mandate, particularly on small businesses [Marie-Anne Hogarth, *Business groups announce opposition to California health care bill*, Sacramento Business Journal, Jan. 10, 2008].

Providers: Institutional Supporters, Physician Neutrality. While initially skeptical, the strongest advocate from the provider community was the California Hospital Association, followed by the California Primary Care Association and the Public Hospital Association. Support from the hospitals hinged on the 4 percent provider revenue fee proposed by the Governor. Many hospitals initially viewed this fee negatively. However, the Governors intent was to use the fee to increase hospital rates under Medi-Cal (the states Medicaid program) and reduce the number of uninsured. Ultimately, hospitals saw the benefit [California Hospital Association, *The Clock Is Ticking: Action on Health Care Reform is Needed Now*, Press Release, Dec. 13, 2007].

In contrast, the California Medical Association started with a negative view of reform that changed only marginally over the year. There was significant resistance to the notion that all physicians should pay a 2 percent fee on their income to help expand health care coverage under the Governors vision of shared responsibility. Proposed increases to Medicaid reimbursements rates did not do enough to sway the organization, and the physician fee was dropped from consideration.

Counties and the Safety Net. In California, counties are integral to the health care safety net as well as critical political players. Under the expanded coverage from health care reform, counties and the safety net would be responsible for fewer uninsured people, but would also receive less of the subsidies currently generated by uncompensated care. This raised concerns about the financial viability of public hospitals. Eventually, the compromise Act offered guaranteed ongoing funding to public hospitals to give them a chance to transition to the new health system.

Big Tobacco. The tobacco lobby has always carried influence in the California Legislature [Daniel Weintraub, *The death of health care reform*, Feb. 10, 2008]. And its influence got a boost in 2006 following the defeat of a ballot proposition that would have tripled the states tobacco tax to pay for a number of health related efforts. It is difficult to

quantify the impact of the opposition, but most observers believe that the tobacco lobby played an important role [Anthony York, *Postmortem analysis of health care bill*, Capitol Weekly, Jan. 31, 2008].

Single-Payer Opposition. Single-payer advocates opposed the Governors and Legislatures efforts throughout 2007. California has several significant groups who either do or have supported single-payer approaches, such as the California Nurses Association and the Santa Monica-based Foundation for Taxpayer and Consumer Rights [Jamie Court, *Mandatory Health Insurance? No sale*, Los Angeles Times, Op-ed., Sept. 25, 2007]. Both groups were aggressive in their criticism.

No Republican Support

The Governor remained confident that he could secure Republican votes for his health care reform plan. Yet as a moderate, Gov. Arnold Schwarzenegger has had a tense relationship with the much more conservative Republican caucuses in both legislative houses [Evan Halper, *Schwarzenegger goes on offensive against GOP budget opponents*, Los Angeles Times, Aug. 14, 2007]. Ultimately, it became clear to all parties that no Republican votes for reform were to be forthcoming. In fact, the Republican budget-bunker even delayed the passage of the 2007-08 state budget by 52 days to try to prevent some programs from being funded. It was one of the longest delays in state history. The ideology of the Republican caucus against health spending could not be broken.

Two-Thirds Rule

California is one of less than a dozen states where a two-thirds vote is needed to raise revenue, and one of only three states that has a two-thirds requirement to approve the budget. The two-thirds requirement bestows significant power on the minority party. The reform plan raised revenue from within the state by implementing a hospital fee (designated officially as a tax), an employer fee on firms not offering insurance, and a cigarette tax as well as by new payments from previously uninsured individuals who would now pay insurance premiums.

As a result, there was an agreement between the Governor, the Speaker Nez, and Senator Perata to take a dual approach where the Legislature would pass out a reform plan, but voters would have to directly approve funding on a November 2008 ballot measure. Due to legal requirements, the bill was submitted in its final form at the end of December, before the Senate had agreed to take up health reform.

Consequently, when the Senate Health Committee met in January 2008, their only option was to vote up or down on the more than 200-page health plan. Several senators cited their inability to understand the full impact of the bill as well as their inability to offer amendments, as a reason for abstaining or voting no. Despite a years worth of work on health reform, several senators perceived that the bill was being rushed through their chamber. But the point was moot. With no Republican support for the bill, all but one Democratic vote was needed to move the bill forward. Senator Kuehl, the chair, was long understood to be a no vote. Days before the hearing, another Senator announced his opposition. Reports are mixed on the pressure that Senator Perata brought to bear to move the bill forward, but clearly key members of his caucus were acting contrary to his early December announcement in support of reform.

Tyranny of the Minority

As 2007 came to a close, all of the key legislative factors against reform collided. The closed process with few legislative champions made Senators feel isolated and un-invested in reform. And with no Republican support, and with a few Democrats dedicated only to single-payer reforms, that left little margin for error. There is a certain irony that the far Right and the far Left combined to stop health care reform. The lack of Republican support had a critical impact on the process in blocking the Democrats ability to fund health care reform because it forced the ballot initiative approach.

And by the time the bill arrived in the Senate committee, the ballot approach meant that the Senate would not be able to modify the bill, and left Senators feeling even more divorced from the health care reform process. Unsurprisingly, this is where the health care reform proposal in California ended.

POLICY CONTROVERSY

The controversy of the policy and budget issues certainly played a role in derailing health care reform. A broad and powerful coalition of supporters formed around the policy decisions. At the same time, those looking for reasons to oppose health care reform certainly found them. The plan was a work in progress, and it would have continued to evolve through implementation and beyond. But no single policy issue derailed reform. This section discusses the policy issues in detail while the next section discusses how the policy debate affected key stakeholders. In the appendix to this commentary, there is a detailed section-by-section analysis of the health reform bill [2007 Bill Text CA A.B. 1A].

Individual Mandate and Affordability

In January 2007, the Governor announced his plan calling for all Californians to purchase health coverage. The Governor pushed for the individual mandate as a way to achieve universal coverage. He felt that the only way to make sure that everyone has affordable health insurance is to be sure that everyone is in the insurance pool, spreading the risks and costs [Elizabeth Carpenter & Sarah Axteen, *Myths About the Individual Mandate*, New America Foundation, Feb. 18, 2008]. In addition, the Governor discussed at length the efficiencies universal coverage create by eliminating the hidden tax -- the higher premium costs the insured pay to cover the costs of the uninsured [Len Nichols & Peter Harbage, *Estimating the 'Hidden Tax' on Insured Californians Due to the Care Needed and Received by the Uninsured*, New America Foundation, May 21, 2007].

Initially, the individual mandate had virtually no support among Republicans, Democrats or most Left-leaning interest groups. Following lengthy negotiations, the Assembly Speaker and many critical stakeholders were able to reach a compromise with the Governor, which rested on resolving a number of issues, most significantly affordability and enforcement.

Affordability. Advocates raised immediate concerns that the Governor's plan did not do enough to make insurance affordable. The key to affordability lay in compromising on the size of the subsidies given to help individuals purchase insurance. After much debate between the Speaker and Governor, the two sides settled on a plan to limit premiums to 5.5 percent of family income.

Out-of-Pocket Costs. Opponents of the plan were concerned that there were no caps given for other cost-sharing and co-payments. Despite the fact that today's health system offers no such protection, there was a feeling that individuals could face an open-ended financial commitment for health insurance under the mandate without a cap.

Benefit Package. The minimum benefits needed to fulfill the mandate were left to be defined by the state in the future, raising concerns of the adequacy of the mandated coverage. Opponents stated that Californians would be required to purchase coverage without a clear sense of what benefits would be included for those in the statewide purchasing pool.

Enforcement. Regarding enforcement, the Governor eventually adopted an approach espoused by the New America Foundation that coverage should be seamless, meaning that every effort should be made to help people keep insurance [Peter Harbage & Len Nichols, *Coverage Without Gaps, Implementing Seamless Health Coverage in California*, New American Foundation, Sept. 2007]. Far from a punitive approach, the seamless concept is built on the idea that the government has a responsibility to take extraordinary steps to help people maintain coverage. The concept satisfied many who were concerned that the penalties could be harsh.

Guarantee Issue. The key issue in achieving compromise on the individual mandate was the guarantee issue. Today, underwriting rules prevent many people from obtaining insurance. Even worse are rescission policies that some insurance companies have used to drop coverage for those who need it once they start to make claims. Advocates saw the guarantee issue as a critical achievement, as it would allow all persons to have insurance.

Loss Ratios. Some advocates opposed the mandate because they said that it would be a boon to insurance industry profits. There were calls for rate regulation, which the Governor opposed. However, he did call for an 85 percent loss ratio. A loss ratio is a calculation of the percentage of the premium that is devoted to health care services. A loss ratio of 85 percent is an indication that 15 percent of premium dollars collected are on average dedicated to overhead and/or profits. The rate was reasonable for many insurers and gave a sense to many that price gouging would be prevented.

Employer Mandate

The Governor surprised observers by including an employer mandate in his original plan, calling for all but small employers (those with less than 10 employees) to pay 4 percent of payroll if they did not offer health insurance. In contrast, the Assembly plan would have required all employers to spend roughly 7.5 percent of payroll on health care. The two-sides agreed to a sliding scale of employer contributions between 1 percent and 6 percent, varying by firm payroll.

The policy remained controversial. Many employers were concerned about the fee, even at the lower 4 percent level. At the same time, many Democrats and unions kept up the pressure for higher employer participation, believing employers should have primary responsibility for offering health insurance. Neither side was entirely happy with the compromise [Julie Appleby, *California health reform gets sticky*, USA Today, Oct. 17, 2007].

Beyond the level of the fee, another key concern was the federal law limiting the ability of states to regulate health insurance benefits. Under the federal Employee Retirement Income Security Act (ERISA), there was concern that any fee on those firms not offering benefits would not be legal. A complex law with little history of judicial review, ERISA Section 514 [29 U.S.C.S. § 1144] is broadly interpreted to void all state regulation to the extent it relates to employer-sponsored health plans. Many Democrats and the Governor argued that the fee would be allowed by federal law. The County of San Francisco has been thus far successful in repelling the pending ERISA challenge to its health reform approach, which relies on an employer mandate for funding [Bob Egelko, *Appeals court lets S.F.'s universal health care law go forward*, San Francisco Chronicle, Jan. 9, 2008]. However, opponents pointed to cases in other jurisdictions where the federal courts intervened to stop reform from proceeding. [Amy Lynn Sorrel, *Federal court overturns Md. employer mandate*, Amednews.com., Aug. 14, 2006]. The lack of clear precedent created significant uncertainty in the debate around whether ERISA would pre-empt the employer mandate.

Funding Sources

The funding sources caused controversy in a number of ways.

Cigarette Tax. The Governors original plan had no cigarette tax, while the Speakers called for a \$2 per-pack increase. To help fund health reform, AB X 1 1s related ballot initiative, the Secure and Affordable Health Care Act of 2008, would have raised the cigarette tax by an additional \$1.75 per pack above the current \$0.88 rate, to a total tax of \$2.62 per pack [see The Secure and Affordable Health Care Act of 2008, Initiative #07-0103, Dec. 2007, available online at http://alankatz.files.wordpress.com/2007/12/health_careinitiative-20071228.pdf; see also State Board of Equalization, Staff Analysis of the Secure and Affordable Health Care Act of 2008, available online at <http://www.boe.ca.gov/legdiv/pdf/CigTaxInitiative.pdf>]. The cigarette tax proposal raised all the standard concerns. For example, much was made of a cigarette tax as a declining source of revenue. The inclusion of a cigarette tax also brought the opposition of big-time political player tobacco into the political discussion around reform.

Role of the Federal Government. There was significant controversy around whether the federal government would participate as a funding source. Despite statements by U.S. Health and Human Services Secretary Leavitt early in 2007 that funding would be available, public skepticism continued. Adding fuel to the concern that the federal government would oppose any increases in state health spending was President Bush's veto of the State Children's Health Insurance Program (SCHIP) renewal and expansion bill in October and again in December of 2007 [Kathy Robertson, *Bush veto hurts Schwarzenegger's health plan*, San Jose Business Journal, Oct. 3, 2007].

A key federal concern was the 4 percent tax on hospital revenues. The tax would have been used to draw down federal dollars for hospitals by increasing Medi-Cal reimbursement rates. The majority of California hospitals would be net winners because the increases would go to those seeing Medicaid patients. However, the state had signed an agreement in 2005 that would prohibit using hospital revenue for this purpose. Given the public statements of the Bush administration in support of this aspect of the plan, the Governor argued that federal government would allow the state to go forward despite that 2005 agreement.

In addition, federal permission would be needed to implement the proposed plan in other areas, including:

- A new Medicaid Section 1115 waiver to cover low-income childless adults;
- State plan amendment or waiver to expand Medi-Cal and the Healthy Families Program (HFP) eligibility;
- Elimination of the asset test in Medi-Cal; and,
- Approval to redirect certain federal funds from supporting the safety net to the purchase of insurance coverage.

Finally, there was concern about the call to use federal funds to expand California HFP to 300 percent of the federal poverty level (FPL), operated under the federal State Children's Health Insurance Program (SCHIP). After President Bush's repeated vetoes of an SCHIP expansion, Congress only passed a funding extension of the program through March 2009 that contains enough for existing programs -- not program expansions. Also, the federal government issued a directive in August 2007 that restricted states' ability to expand SCHIP at higher income levels. [Peter Harbage, *Assessing California's Ability to Comply with New Federal SCHIP Rules*, The California Health Care Foundation, Oct. 5, 2007].

Budget Impact and Budget Scoring. In the final stages of the health debate in December, a \$14-billion budget shortfall was announced. After reports of the budget situation began to circulate in December, Senator Perata called for the non-partisan LAO to determine the impact the Act would have on the state budget. Released in January 2008, the LAO report had sufficient information in it to serve the political purposes of both supporters and detractors [Health Care Reform, report by the California Legislative Analysts Office, Jan. 22, 2008, <http://www.lao.ca.gov/laoapp/PubDetails.aspx?id=1697>].

Although the report validated most of what the Governor and Speaker Nez had been saying with regard to costs, the LAO also offered alternative assumptions about the plan's costs to show how the plan may not work [Health Care Reform, report by the California Legislative Analysts Office, Jan. 22, 2008, <http://www.lao.ca.gov/laoapp/PubDetails.aspx?id=1697>].

The most significant of these raised the estimated monthly costs of providing health insurance to individuals from \$250 per person to \$300. At the higher cost, the state was projected to have an operating deficit of more than \$1.5 billion dollars in the fifth year of operation. Opponents also effectively leveraged this finding in conjunction with news reports of Massachusetts health reform budget overruns [Alice Dembner, *Subsidized care plan's cost to double: Enrollment is outstripping state's estimate*, The Boston Globe, Feb. 3, 2008].

Questions Regarding State Implementation

As with most pieces of legislation, the Act left operational details for state officials to develop later. However, opponents used the lack of details to question the state's ability to implement the complex law and prompt an important

policy debate. A few of the most significant concerns are discussed here.

Tax Credit Process. Reform would have used advanceable tax credits to help defray the cost of insurance for certain persons. Some questioned the ability of the state to screen for eligibility in advance.

Individual Mandate Enforcement Process. Many called into question the states ability to enforce the mandate, particularly the need to design a process for hardship exemptions. Opponents argued that a case-by-case approach to granting exemptions would have required considerable resources both in administrative time and expenses to create a new process for which California had no experience.

Employer Mandate Enforcement Process. To operationalize the employer mandate, the state would need to develop a payroll reporting and employer fee collection process. The operational details for this process, including the states ability to levy penalties for noncompliance and a budget for this process, were not specified.

Negotiation of Insurance Payment Rates for the State Pool. The plans authors argued that \$250 per member per month (PMPM) was in line with the states experience with Medi-Cal Managed Care, an average negotiated rate. However, the LAOs report raised concerns regarding the states ability to achieve a \$250 PMPM cost in the state purchasing pool. The LAO argued that just a 20 percent increase in the PMPM would significantly increase costs to the state.

Immigration. The Governors policy called for all persons to be insured, but left the coverage mechanism for immigrants as the counties responsibility. The issue left questions about the status of the undocumented simmering for those on both sides of the political spectrum. It is reasonable to assume that if health reform had proceeded further, immigration would have become a more contentious issue.

LESSONS

The 2007 experience in California holds three primary lessons for the broader health reform effort: how to find policy compromises; how to build broad coalitions of support and; how the pursuit of the ideological perfect can block the good.

Finding Policy Compromises

The ultimate California compromise legislation was a feat of balance between individual and collective responsibility, between affordability for individuals and sustainability for governments and employers. The Republican Governor and Democratic legislative leadership were also able to find balance and compromise in the details on cost-sharing, eligibility limits, employer contribution levels and a myriad of other aspects. This shows that a comprehensive reform plan allows room for building a plan that offers something for everyone.

Building a Broad Coalition of Support

It was just that feat of balance and compromise in the process of working out the final reform plan that allowed it to build such broad support among stakeholder groups as diverse as major employers, insurers, consumer groups and labor. Coalitions can be built that support comprehensive health care reform.

Pursuing the Perceived Perfect Can Block the Good

The Democrats in the California Senate who opposed or abstained from voting were in fact casting a vote for the status quo of the broken system. They did so for a variety of reasons, but the most compelling was that the compromise

plan was not their first perfect choice of reform single-payer for forces on the Left or a more open market for forces on the Right.

Thus, the most important national lesson from California is the need for leadership to unite not just moderates, but voices from the Right and the Left. Everyone must seek not their first choice, or their second choice of the status quo, but the harder third choice that will help Americans better afford and access health care now.

CONCLUSION

Barring extraordinary circumstances, it is unlikely California will achieve comprehensive health reform in 2008. An initiative has been put forward to cover all children, and there are other areas of possible interest around improving transparency and quality in the health care system.

California showed that health reform tried on a state level opens the process to a series of state-specific challenges and opportunities. While states cannot wait for the federal government, it is clear that a national solution is the best way to pursue health reform, in order to provide the resources and opportunity to truly solve our system crisis.

The national health debate will continue. Success in California would have brought additional momentum to the national debate, but given that the reasons for failure are California-specific, it is not clear that Californias failure will reduce national momentum. Senator Clintons plan bears strong resemblance to the California approach, as does Senator Obamas. Senator McCain has the beginning of a reform plan, and given the strength of the debate on the Democratic side, he will likely face the need for a higher standard in the general campaign. But whoever enters the White House in January of 2009 will be presented with the opportunity to lead the nation on this vital issue.

Appendix

Section-by-Section Analysis

This appendix provides a section-by-section analysis of the January 16, 2008 version of the Health Care Security and Cost Reduction Act, Assembly Bill 1 of the First Extraordinary Session of the California Legislature in 2007 [2007 Bill Text CA A.B. 1A]. While this appendix considers the bill, it does not examine the language that had been submitted for the accompanying ballot initiative and the financing measure. This appendix is written in the present tense not past tense as the bill still rests in the California Senate Health Committee but is in inactive status.

Section 1 names the legislation the Health Care Security and Cost Reduction Act.

Section 2 specifies the goals of this Act, which is to provide universal health care and establish a plan to do so. The steps include: (1) ensuring all Californians have access to affordable, comprehensive health insurance; (2) leveraging federal funds through existing programs; (3) maintaining the strength of the private health insurance system, while improving the availability and affordability of private coverage by reforming the private insurance market, enhancing access to preventive health services and chronic disease management programs, promoting cost-effective technologies, and implementing system-wide cost-containment strategies; and (4) early and ongoing evaluation of the reform implementation.

Section 3 expands the scope of practice of medical assistants to administer medications and perform other tasks, under the authorization of a nurse practitioner, nurse midwife or a physician assistant in any setting.

Section 4 left blank.

Section 5 establishes a nine-member task force to develop a recommended scope of practice for nurse practitioners by June 30, 2009. It specifies membership of this task force, and requires the Director of Consumer Affairs (DCA) to promulgate regulations that adopt the recommended scope of practice by July 1, 2010. This section becomes inoperative on July 1, 2011 and repealed as of January 1, 2012, unless a later enacted statute deletes or extends these dates.

Section 6 left blank.

Sections 7 to 10 specify provisions related to electronic prescribing, including defining the term electronic prescribing. By January 1, 2012, this section requires all prescribers and pharmacies in California to be able to transmit and receive prescriptions electronically. It gives the State Board of Pharmacy and other specified licensing boards authority and responsibility to ensure compliance, and requires prescribers to offer patients a written receipt containing specified information.

Electronic prescription systems must comply with national data exchange standards or be accredited, allow real-time verification of individual eligibility for benefits, and meet state and federal confidentiality and data security requirements, as well as state record retention and reporting requirements. In addition, this section expressly prohibits these systems from interfering with a beneficiary's freedom to choose a pharmacy or make prescribing decisions at the point of care.

Section 11 amends the Education Code to permit, but not require, school districts to distribute an information sheet to parents or guardians of specified students regarding health insurance requirements, based on a template to be developed by the California Department of Education (CDE). It also tasks CDE, in conjunction with the Managed Risk Medical Insurance Board (MRMIB) and the California Department of Health Care Services (DHCS), to develop a standardized template for this purpose, as specified, and to make the template available online or by written request. Both requirements have an effective date of January 1, 2010.

Section 12 codifies the individual mandate by amending the Insurance Code to require all California residents to enroll and maintain a minimum level of health insurance coverage for themselves and dependents as of July 1, 2010. Dependents are defined as a spouse or registered domestic partner, minor child of the subscriber, or a child over the age of 18 who is dependent on the subscriber.

This section requires MRMIB to establish, by regulation, the definition of minimum creditable coverage by March 1, 2009, as well as to establish standards for minimum creditable coverage that, at a minimum, apply to the individual market.

This section also provides the following exceptions to the individual mandate. MRMIB may grant exceptions to individuals if MRMIB determines that:

- The minimum level of coverage is not affordable or constitutes an undue hardship for that individual or family;
- The individual or family has an income at or below 250 percent of the FPL; or

- If premiums for that coverage exceeds 5 percent of the individuals or families income.

The mandate does not apply to people residing in the state for less than six months who, on that basis, are ineligible for guaranteed-issue health insurance.

This section also specifies that compliance with the individual mandate would not go into effect until several provisions of this bill are implemented, including implementation of the bills coverage expansions, purchasing pool provisions, and tax credit provisions.

Section 13 requires the California Health and Human Services Agency (CHHSA), after consulting with the California Public Employees Retirement System (CalPERS) and other affected provider groups, to develop performance benchmarks for quality measurement and reporting to create a common pay-for-performance model that will be offered in all state-administered health programs and promoted as a statewide framework for health care quality measurement and improvement.

Section 14 requires the Secretary of CHHSA, in collaboration with other relevant state agencies and an advisory body, to track and assess the impact of health care reform, including assessments of the sustainability and solvency of the pool, access, and affordability of health care, and the health care coverage market. The assessment must consider the impacts on the cost of health care to the state, employers, and local governments; the availability of insurance products; changes in employment and insurance markets; changes in racial and ethnic health disparities; and the overall health care delivery system, including capacity of providers and county safety-net systems. The Secretary is also required to submit the assessment to the Legislature by March 1, 2012 and every two years thereafter.

Section 15 requires CalPERS, by January 1, 2010 to provide its enrollees with an electronic personal health record (PHR) that, at a minimum, provides access to real-time, patient-specific information regarding benefit eligibility and cost-sharing requirements. It may also include additional patient health information available at the option of the enrollee. The PHR must adhere to national standards for interoperability, privacy, data exchange or be certified by a nationally recognized certification body. They must also comply with state and federal confidentiality and data security requirements.

Section 16 requires the creation of a Healthy Action Incentives and Rewards Program, as described in later sections.

Section 17 establishes the California Health Benefits Service Program (CHBS) within DHCS to expand cost-effective public health coverage options. By January 1, 2009, the CHBS must identify and report to the Legislature barriers and incentives to facilitating geographic expansion of, or the establishment and maintenance of, joint ventures between health plans that contract with, or are governed, owned, or operated by: a county board of supervisors, a county special commission, a county organized health system or a county authority. The report must also identify barriers that may inhibit the expansion of services by existing local health plans or by the County Medical Services Program (CMSP) into counties where there is not a local health initiative or county organized health plan.

The bill would require the CHBS to provide technical assistance to local health care delivery entities, such as local health initiatives or county organized health systems, to support joint ventures and other efforts to expand services to other geographic areas and populations, including technical assistance to contract with providers.

The section authorizes DHCS to contract with the joint ventures described above to provide health services to specified populations. This section also authorizes local health plans to form joint ventures to create integrated networks of public health plans that pool risk and share networks, and in doing so, would require participating health plans to seek contracts with public hospitals and other safety-net providers. All the joint ventures must obtain licensure under the Knox-Keene Act [Cal. Health & Safety Code §§ 1340 et seq.]. This section also creates a Program Stakeholder Committee within CHBS, comprised of 10 members as specified, who would meet quarterly to help CHBS fulfill its mission. DHCS must report on the implementation and progress of CHBS to the Legislature by November 1, 2009, as

well as make recommendations.

Section 18 establishes a prohibition on hospitals from balance billing. It prohibits non-contracting hospitals, as defined, from billing a covered patient for non-emergency services and post-stabilization care, other than applicable co-pays and cost shares. These requirements do not apply to non-contracting treating physicians who can continue billing patients for the difference.

Section 19 specifies that health care service plans that participate in the Medi-Cal managed care program are subject to filing, reporting, monitoring and survey requirements as established by the Department of Health Care Services. This section also specifies that the Department of Managed Health Care (DMHC) and DHCS are to develop a joint filing and review process for medical quality surveys.

Section 20 provides the director of DMHC with regulatory and program flexibility to facilitate new, modified, or combined licenses of local health initiatives, county organized health systems or the CHBS seeking licensure for regional or statewide networks to contract with MRMIB and to participate in the California Cooperative Health Insurance Purchasing Program (Cal-CHIPP), or to provide coverage in the individual or group markets. It requires the director to ensure all public health plans established meet essential financial, capacity and consumer protection requirements of the Knox-Keene Act.

Section 20.5 states legislative intent to establish mechanisms by which the state can defray costs of an enrollees public program participation by helping enrollees first take advantage of other non-state coverage opportunities. This section requires DHCS to consult with DMHC and DHCS to determine how to implement enhanced premium assistance programs and to report these findings to the Joint Legislative Budget Committee by July 1, 2009.

Section 21 prohibits private individual health insurance plans, except insurance explicitly defined as short-term limited duration, from refusing renewal of a policy except under the following circumstances:

- The policyholder failed to pay the premiums as established in the contract;
- The policyholder intentionally misrepresented themselves;
- The policyholder moves outside the service area; or
- The plan ceases to operate and gives 180-days notice to the state agency and the policyholder.

A plan that ceases to sell individual health insurance is barred from doing so in California for five years. If a plan withdraws an individual health benefit, it must notify the director and policyholder at least 90 days in advance and offer the individual choice of all benefit plans offered to businesses regardless of health status.

Section 22 prohibits health plans and insurers from canceling individual health coverage. The section lays out these limited exceptions:

- The individual fails to pay even after being given 15-days notice of failure to pay;
- The individual commits fraud or deception by using services of another health plan or knowingly permits such fraud or deception by another; or
- Good cause, as agreed upon in the contract.

This section establishes a process for individuals to appeal if they believe their policy was canceled or not renewed because of their health status. An individual may request a review by the DMHC, and if the complaint is found to be valid, the health plan or insurer will be notified. The coverage carrier then has 15 days to request a hearing or to reinstate the individuals benefits. If after the hearing the DMHC believes the cancellation was unlawful, the plan will have to reinstate benefits retroactively to the time of cancellation or failure to renew, and pay all incurred medical expenses from the date of cancellation or nonrenewal. Contracts established prior to the Acts adoption are not repealed.

Section 22.7 defines comparable benefits as any health plan contract in the same coverage choice category.

Section 23 requires health care service plans providing prescription drug benefits to make their most current

formularies available electronically to licensed prescribers and pharmacists by January 1, 2010.

Section 24 requires all health care service plans, except Medicare supplemental plans, to include a Healthy Action Incentives and Rewards Program (Rewards Program) after January 1, 2009 to help engage people in their health care. The Rewards Program will offer a health assessment tool to gauge overall health status and risk factors including smoking, alcohol and or drug abuse, and nutrition and physical activity practices. The program will provide access to a health care provider to review the assessment, and where appropriate, offer follow-up through a Web-based tool or nurse hotline.

The program will offer incentives and rewards to engage people and help them make good health choices, such as getting immunizations, proper screening services, doing the health risk assessment and participating in healthy lifestyle programs, such as smoking cessation, physical activity and good nutrition. Incentives may include but are not limited to health premium reductions, cash or gym memberships. If a health plan offers a premium reduction, it must be a uniform reduction offered after the program is completed.

The Rewards Programs must be priced consistently across all groups, potential groups and individuals without regard to health status, prior claims experience or risk profile. The same goes for the design of the incentives programs. Granting a health benefits plan cannot be conditional on enrollment in the Rewards Program. The programs must be pre-approved by the director of MRMIB, who has the power to suspend or withdraw any program that allows a health plan to market, sell or price health coverage for healthier, lower-risk groups. If any portion of this section is found noncompliant with federal law, the entire section will cease operation.

Section 25 requires the Office of Patient Advocate (OPA) to develop, and maintain on its Website, Office of Statewide Health Planning and Development (OSHPD) reports and data to help the public choose health plans, hospitals, medical groups and other providers.

Section 26 requires insurance carriers on or after July 1, 2010 to spend no less than 85 percent of after-tax revenues on health care benefits, as specified, excluding administrative fees. DMHC and the California Department of Insurance (CDI) are required to jointly adopt regulations to implement the requirement. Health plans and insurers must average costs across all products when calculating this medical loss ratio (MLR), including products of affiliated companies, regardless if they are under the jurisdiction of DMHC or CDI. DMHC and CDI can exempt new products in the first two years from the MLR if they are substantially different from the carriers previously existing products.

Section 27 allows health plans and insurers to communicate with enrollees electronically, under specified conditions.

Section 27.3 prohibits health plans and insurers from tying employees or contracted workers compensation to the percentage of the amount a claim is reduced for payment, the number of claims, or the cost of services for which the employee denied authorization or payment. The section sunsets on January 1, 2009 unless a separate statute extends it.

Section 27.5 repeats section 27.3.

Section 28 prohibits health plans and insurance carriers from establishing performance goals or quotas or providing additional compensation based on the number of people whose coverage is rescinded or the financial savings associated with the rescission of coverage to any person it employs or contracts with.

Section 28.5 specifies provisions regarding individual market reform and guarantee issue. This section institutes several reforms to the individual health insurance market. All health insurance carriers that sell individual private coverage must offer, accept and renew such coverage to all applicants within their service area. Guarantee issue is contingent on the individual mandate requirement.

This section establishes premium-rating rules for individual coverage. Individual rates must be based on geographic

location and perceived health risk (risk adjustment factors), as determined by the health plan. The geographic rating categories are limited to nine or fewer regions statewide, and it restricts how the regions are designed similar to the geographic rating limits currently imposed on small employer guaranteed-issue coverage. It also limits age rating to 12 categories, compared with the seven age range categories currently allowed for small employer coverage.

Health plans are prohibited from offering coverage on or after March 31, 2009 that provides less than minimum creditable coverage as defined by MRMIB. CDI and DMHC are prohibited from approving new products after the deadline that do not meet the defined minimum. Health plans, however, can indefinitely continue offering pre-existing plans that do not meet the criteria to those enrolled before the deadline. By July 1, 2010, all products a health plan markets, sells and approves must comply with the established minimum credible coverage.

Health plans may require individuals to provide information on health status and health history as necessary to apply the risk adjustment factors permitted, but they must use a standardized form and evaluation process that DMHC develops. Health plans also may ask individuals to provide that information voluntarily after coverage is issued for the purpose of providing care management services.

Notwithstanding those exemptions, health plans may reject an application for coverage from people meeting the following criteria: (1) new residents in the state for the first six months, unless they are eligible for coverage under the federal Health Insurance Portability and Accountability Act (HIPAA) [104 Pub. L. No. 191, *110 Stat. 1936 (1996)*] or can demonstrate at least two years of prior coverage; (2) individuals who are exempt from the individual mandate because of their income level, unless they can demonstrate prior creditable coverage or because they have received affordability or hardship exemption from MRMIB.

Pre-existing condition exclusions, waived conditions, or enrollment waiting periods are prohibited once guarantee issue is implemented, except for those people who fail to comply with the individual mandate for more than 62 days. For those people, the health plan can impose a pre-existing condition exclusion for up to 12 months, as specified.

The CDI and DMHC must by April 1, 2009 jointly develop and consistently enforce a system to categorize all health plan contracts and health insurance policies into five coverage choice categories with varying levels of coverage.

These categories must:

- . Provide a reasonable continuum of coverage;
- . Permit reasonable variation in the benefits to allow for a diverse market within each category;
- . Be enforced consistently between health plans and health insurers in the same marketplace regardless of licensure; and
- . Include one standard health maintenance organization (HMO) and one standard preferred provider organization (PPO).

To help consumers comparison shop, the carriers must offer coverage in all five choice categories, including at least one standard product in each category, and if the plan or insurer offers a specific type of benefit plan in one category a HMO, PPO, exclusive provider organization (EPO), or point of service they must offer the same type in all five categories. The Office of the Patient Advocate is to develop and maintain on its Website a matrix of the uniform benefits of all the individual health plan contracts and insurance policies arranged by coverage choice category.

Prices must reflect a reasonable continuum between the coverage choice categories and health plans cannot set price products at a rate lower than a product offered in a lower coverage category. The lowest choice category must offer the mandatory minimum creditable coverage, as determined by MRMIB.

Effective January 1, 2009, every health plan and health insurance policy must offer a Healthy Action Incentives and Rewards Program in each coverage category. A time frame for individual coverage to begin after health plans or insurance carriers receive payment for the first premium will be established. DMHC or CDI can force a plan to cancel contracts if it is determined to be financially insolvable.

Health plans that do not have sufficient health care delivery resources, as specified, and meet specified conditions are exempt from the guarantee issue requirement, as are health plans that do not offer coverage to individuals in the commercial market and whose membership and revenues are primarily from people eligible for Medicare or Medi-Cal.

The law would regulate how and when individuals can change coverage categories. Individuals can only move up to a higher coverage choice category on the anniversary date of the contract and if certain qualifying events occur (such as the death of the subscriber, marriage, divorce, birth of a child, etc.) and they can only move up one choice category per year.

Renewable private health insurance plans cannot refuse to renew a policy except under the following circumstances:

- Failure to pay;
- The policyholder engaged in material misrepresentation;
- The policyholder moves outside the service area; or
- The plan ceases to operate and gives 180-days notice to the state agency and the policyholder.

A plan that ceases to sell individual health insurance is barred from doing so in California for five years. If a plan withdraws an individual health benefit, it must notify the director and policyholder at least 90 days in advance and offer the individual the choice of all benefit plans offered to businesses regardless of health status. On or after July 1, 2010 health plans are prohibited from rescinding an individuals health benefits.

Premium rates must be in effect for no less than 12 months and must guarantee renewal, with specified exceptions, such as when a policyholder moves, fails to pay or engages in fraud or misrepresentation. When determining the premium for more than one subscriber, the rate should be based on the age of the youngest spouse or domestic partner.

For the first two years of the program, health plans can use the risk adjustment factor (rate increases or discounts for health status or health risk) to charge premium rates no more or less than 20 percent of the standard average rates. After the first two years, rates must be no more or less than 10 percent of the applicable standard risk rate. After four years, risk adjustment factors can no longer be used.

CDI and DMHC are required to jointly establish a maximum limit on the ratio between rates for individuals in the 60 to 64 years category and those in the 30 to 35 years category. DMHC, in consultation with the Insurance Commissioner and MRMIB, is to develop by March 1, 2009 a standardized form and uniform evaluation to be used by all carriers in how they determine any risk adjustment factor.

Insurance carriers and their agents or brokers must make specified disclosures related to individual rights, guarantee issue and renewal requirements and other specified regulatory requirements.

Health plans must demonstrate their compliance with the law to DMHC, must provide 20-days notice if they plan to change their benefit packages, and must file an amendment notifying changes to their standard risk rates before selling plans at the new rate. Specified information should be filed with DMHC if a health plan changes its offerings or standard risk rate.

DMHC and CDI, in consultation with outside actuaries and health plans participating in the individual market, are to develop a mechanism, as specified, by July 1, 2010 that helps health plans and insurers manage the risk of providing health coverage on a guarantee issue basis. No later than two years following implementation of guarantee issue, the director of DMHC and the insurance commissioner must make a finding related to the relative risk profile in individual

coverage, compared to the risk profile in Cal-CHIPP, and establish a reinsurance program, as specified, if specific risk profile differentials are identified. Reinsurance to compensate for adverse risk selection of more than 5 percent and up to 10 percent will be paid through a broad-based assessment on carriers, and risk selection differentials of more than 10 percent will be paid, subject to appropriation.

Section 29 requires the Department of Public Health (DPH) to maintain the existing California Diabetes program, contingent upon appropriation of state funds. This program provides information on diabetes prevention and management.

This section also establishes the California Comprehensive Diabetes Services Program (CDSP) within the Department of Health Care Services (DHCS). The DPH-run California Diabetes program will offer technical assistance to Medi-Cal regarding the scope of benefits provided through CDSP, which provides diabetes prevention or management services to specified fee-for-service Medi-Cal enrollees diagnosed with pre-diabetes or diabetes.

DHCS is authorized to define CDSP services, which may include diabetes screening, visits by certified practitioners, culturally and linguistically appropriate life-style coaching and self-management training, and regular and timely laboratory evaluations by the primary care physician. DHCS is also required to develop and implement incentives to encourage participation by Medi-Cal fee-for-service eligible beneficiaries and providers.

This section also requires DHCS to collect specified data to monitor health outcomes of participating Medi-Cal beneficiaries and to contract with an independent organization to evaluate the program, including short-term and long-term cost savings to expand CDSP to private or commercial insurance markets, and report on health outcomes and cost savings.

This section requires DHCS to secure all federal approvals to implement and fund CDSP, and permits the program to be implemented to the extent that federal financial participation is obtained. Implementation is also contingent on annual appropriation of state funds.

Section 30 requires DPH, in consultation with DMHC, DHCS, MRMIB and the Department of Insurance, to annually identify smoking cessation benefits provided by the 10 largest providers of health care coverage in the state (based on enrollment) and make this information available online.

To the extent funds are appropriated, DPH is required to increase the capacity of the California Smokers Helpline and expand public awareness of the helpline and other existing smoking cessation benefits. DPH will evaluate changes in awareness concerning the availability of smoking cessation benefits by beneficiaries and providers, based on changes of beneficiary awareness and use indicators, such as smoking rates, and changes in coverage for smoking cessation, resulting from the helpline expansion.

Section 31, contingent upon an appropriation, establishes the Community Makeover Grant Program within DPH to award grants to local health departments that act as local lead agencies in promoting active living and healthy eating. The grants would be based proportionally on population and given for specific purposes, including among other things, the creation of community infrastructure, coordination among local agencies, and local grants to promote physical activity in children, improve access to healthy foods and improve use of community recreation facilities. DPH must issue guidelines to local health departments on how to prepare a local plan to promote active living and healthy eating in order to prevent obesity and other related chronic diseases.

This section also requires DPH to track and evaluate obesity-related health indicators, including physical activity, diet, and community environment, as specified, to direct the most efficient allocation of resources for obesity prevention and to measure the extent to which funded programs promote the goals identified under the California Obesity Prevention Plan. These indicators will enable evaluation and comparison of obesity projects and programs, and the health and economic consequences of obesity.

Also, DPH is tasked to develop a public education campaign known as California Living, to the extent funds are appropriated. The purpose of the campaign is to stress the importance of obesity prevention that also frames active living and healthy eating in accessible, as well as culturally- and linguistically-appropriate, formats. The campaign is to be linked to community-level efforts, assist schools in promoting fresh foods and whole grains, and provide technical assistance to help employers that integrate wellness policies and programs into employee benefit plans and worksites.

Sections 31.1 to 31.6 make changes to the California Health & Safety Code regarding clinic funding under the Expanded Access to Primary Care (EAPC) program. This includes a program expansion by increasing income eligibility requirements for EAPC beneficiaries from 200 percent to 250 percent of the poverty level, but limits eligibility to individuals who lack private or employer-based coverage and who do not qualify for public health care coverage programs. Beneficiaries would be required to select a clinic as their medical home and, at the time their eligibility is determined, would be issued an ID card for use at that clinic.

This section, among other things, also requires DHCS to develop an electronic application process that also verifies annual income and issues ID cards upon eligibility determination by July 1, 2010. This section provides DHCS with the authority to contract with other entities, or use existing provider enrollment and payment processes. DHCS is also required to maximize federal funds available for these services.

Section 32 requires the Office of Statewide Health Planning and Development (OSHDP), beginning January 1, 2010, to collect and publish risk-adjusted outcome reports. Procedures and conditions required to be reported are to be divided among medical, surgical, and obstetric conditions. The office must publish the risk-adjusted outcome reports for surgical procedures, including for coronary artery bypass graft surgery and percutaneous coronary interventions (angioplasty and insertion of stents into blood vessels). OSHPD must compare risk-adjusted outcomes by hospitals and physicians, with specified exceptions.

This section also directs OSHPD to include in the annual reports, or make available separately at cost to the person requesting it, data assessing the statistical significance of hospital or physician data at 99%, 95% and 90% confidence levels. OSHPD will consult with the clinical advisory panel to report these results by hospital annually and by physician biannually.

Section 32.5 tasks OSHPD to obtain data necessary to complete risk-adjusted outcome reports from hospitals. It also establishes a process for the appointment of nine-member clinical panels to review and approve reports on risk-adjusted outcomes of hospital performance.

Section 33 establishes a 16-member California Health Care Cost and Quality Transparency Committee (Transparency Committee). The Transparency Committee is to represent specified areas of the health care system and consist of 10 people appointed by the Governor and six by the Legislature. It will meet once every two months, and develop, update and submit to the Secretary of CHHSA a detailed health care cost and quality transparency plan designed to provide public reporting of health care safety, quality and cost information, and to monitor implementation of the plan.

The committee must make its recommendations within one year of its first meeting, and review the plan every three years. The plan must include, but is not limited to, strategies to measure and collect data related to health care safety, quality, utilization, health outcomes and the cost of health care services from plans, insurers, medical groups, hospitals, etc. The Act requires the plan to collect data from health plans and insurers, medical groups, health facilities, licensed physicians, and other health care professionals, and include a process to assess compliance with data collection requirements, as well as a recommended fee schedule to fund implementation. Within 60 days of receiving the plan, the Secretary of CHHSA must accept the plan and develop regulations to implement it, or send it back to the Transparency Committee for further changes. The Secretary of CHHSA is responsible for seeing the plan implemented after its approval.

This section also requires OSHPD to identify a fee schedule for users of collected data and other financial resources to implement this provision. Proposed fees must be approved by the Governor and Legislature in the annual budget. Fees imposed on hospitals are specifically capped at 0.6 percent of operating costs, as specified. The Secretary must report to the Legislature every six years after the plans implementation, commencing on January 1, 2014, as to whether the Transparency Committee should continue or if changes are necessary.

Section 34 requires DHCS to identify best practices related to e-prescribing modalities and standards, and to make recommendations for statewide adoption of e-prescribing by January 1, 2009. This section also requires DHCS to develop a Medi-Cal e-prescribing pilot program contingent on the availability of federal funds or grants. DHCS may provide necessary e-prescribing technology, including equipment and software, to participating Medi-Cal prescribers.

Sections 34.3 to 34.7 repeat the language of Section 27.3 and Section 28 by prohibiting health plans from tying compensation or establishing performance quotas for employees of health insurance plans that are related to the percentage of the amount a claim is reduced for payment, the number of claims or the cost of services for which the employees denied authorization or payment.

Section 35 repeats the regulations of Section 26 establishing a Medical Loss Ratio of 85 percent on or after July 1, 2010.

Section 36 repeats Section 27, allowing health plans and insurers to communicate with enrollees electronically under specified conditions.

Section 37 amends the California Insurance Code in the same manner as Section 24, requiring all health care service plans, except Medicare supplemental plans, to include a Healthy Action Incentives and Rewards Program after January 1, 2009 to help engage people in their health care.

Section 38 amends the California Insurance Code in the same manner as Section 22.7. Specifically, it defines comparable benefits as any health plan contract in the same coverage choice category.

Section 39 amends the California Insurance Code in the same manner as a subdivision of Section 28.5 and prohibits all renewable private health insurance plans from refusing to renew a policy except under specified circumstances.

Section 42 amends the California Insurance Code to reform the individual insurance market in the same manner as Section 28.5 by requiring guarantee issue and renewal of individual coverage. The section specifies how health plans and insurers can create their rating systems and calls for the creation of five coverage choice categories.

Section 43 amends the California Insurance Code regarding family premium contributions for the Healthy Families Program (HFP). This section specifies what qualifies as family contribution, establishes a sliding scale for family contributions, and caps the monthly family premium contributions to the HFP to \$25 per child with a maximum of \$75 for families earning more than 250 percent of the FPL but less than 300 percent of the FPL, as of July 1, 2009. It also specifies discounts that can be applied to family premium contribution requirements for families meeting certain requirements.

Section 44 allows MRMIB, to the extent funds are made available, to provide or arrange for the provision of electronic PHRs for HFP enrollees. At a minimum, the records must provide real-time, patient-specific information about benefits and cost sharing via a Web-based system. The records may, but are not required, to include additional information, including laboratory results, prescription histories, claims histories and other information authorized by the enrollee. The PHRs must adhere to national standards for interoperability, privacy, data exchange or be certified by a nationally recognized certification body. They must also comply with state and federal confidentiality and data security

requirements.

Section 45 prohibits anyone administering or providing health benefits under the Healthy Families Program from eliciting information from an enrollee other than what is required to carry out the provisions of the law as applicable.

Section 46 establishes confidentiality rules for the Healthy Families Program and the Medi-Cal program.

Section 47 states nothing should preclude MRMIB from seeking voluntary feedback regarding the adequacy of the private and public health care delivery systems.

Section 48, among other things, amends the California Insurance Code to increase the income limit for HFP participants from 250 percent of the FPL to 300 percent of the FPL, effective July 1, 2009.

Section 49 amends the California Insurance Code to expand Healthy Families eligibility to children who otherwise meet program requirements regardless of immigration status, effective July 1, 2009.

Section 50 amends the California Insurance Code to specify that children or their uninsured parents or legal guardians who are qualified aliens cannot be determined ineligible solely based on their date of entry into the U.S. It makes these provisions contingent upon funding in the state budget.

Section 51 amends the California Insurance Code to specify when establishing a child's eligibility for Medi-Cal or Healthy Families, a parent or caretaker must sign under the penalty of perjury a form attesting that the child is not described in any of the categories for which federal financial participation for providing full-scope services is available.

Section 53 adds a new section to the California Insurance Code regarding the California Cooperative Health Insurance Purchasing Program (Cal-CHIPP). It establishes Cal-CHIPP as the state purchasing program or health insurance purchasing pool to be administered by MRMIB for the purpose of providing health care coverage to those eligible through participating health insurers, regulated by the CDI, or through health care service plans, regulated by the DMHC. MRMIB is given broad authority to operate Cal-CHIPP beginning January 1, 2009 and to begin providing health coverage through Cal-CHIPP on July 1, 2010.

Eligibility standards for enrollment and disenrollment in Cal-CHIPP are established, as well as the rights and remedies of those enrolled into two categories of Cal-CHIPP: Cal-CHIPP Healthy Families Program (CCHFP) enrollees and those who are not eligible for CCHFP.

The plans must adhere to the benefit requirements of the Knox-Keene Act [Cal. Health & Safety Code §§ 1340 et seq.], as well as provide prescription drug coverage. Enrollee cost-sharing levels must stay within levels that promote prevention and health maintenance, including appropriate cost sharing for physician office visits, diagnostic laboratory services and maintenance medications to manage chronic diseases. MRMIB must consider whether cost-sharing levels would deter an enrollee from obtaining appropriate and timely care when setting them.

The benefits offered to the purchasing pool will include at least three different coverage options:

1. A plan that offers the same benefits as the minimum coverage for the individual market;
2. A mid-range coverage product (defined as category three of the five coverage choice categories for the individual market);
3. A high-range, comprehensive benefit plan (category five). MRMIB may offer dental and vision coverage if specified conditions are met.

Premiums for these coverage options will equal the full cost of the coverage choice made by the enrollee. Enrollees eligible for the state health care tax credit may reduce their premiums by the value of the credit. MRMIB may provide

an additional contribution equal to 20 percent of the premium of a minimum benefit product to employees with incomes at or above 250 percent of the FPL whose employers pay into the California Health Trust Fund.

If MRMIB offers prescription drug coverage to Cal-CHIPP enrollees it may use bulk purchasing. If MRMIB decides to do so, it is allowed participation in other state or local government bulk purchasing programs, pursuant to collective bargaining with a labor organization. Health care service plans participating in such prescription drug arrangements and licensed by the DMHC must meet all the related Knox-Keene requirements.

MRMIB must collect and disseminate information on the quality and cost-effectiveness of Cal-CHIPP participating health plans and insurers. Confidentiality standards for Cal-CHIPP participants are established, as are the administrative duties of MRMIB in carrying out the purchasing pool program. Health plans and insurers participating in the program may contract with agents or brokers, at their own expense, to provide marketing and servicing of Cal-CHIPP health benefits.

Cal-CHIPP premiums must vary by income level. Individuals with a family income less than or equal to 150 percent of the FPL will have no premiums or out-of-pocket costs. Individuals with a family income above 150 percent of the FPL and less than or equal to 250 percent of the FPL will have premiums that cannot not exceed 5 percent of the familys net income.

As of January 1, 2010 through December 31, 1014, individuals and families with incomes between 250 and 400 percent of the FPL (\$43,000 to \$69,000 for a family of three) who receive coverage under Cal-CHIPP are eligible for a tax credit if their share of cost for a mid-range product exceeds 5.5 percent of their family income. The tax credit is limited to a specified maximum amount for a family based on family size and age. This credit phases down as income increases.

To be eligible for CCHFP coverage an individual must meet all of the following criteria:

- . Be a legal resident of the state;
- . Be 19 years of age or older;
- . Have family income between 101 and 250 percent of the FPL; and
- . Not be offered employer-sponsored insurance or have been offered coverage from an employer that does not make any financial contribution to the premium.

Eligibility for residents who do not qualify for Cal-CHIPP Healthy Families must meet all the following criteria:

- . Work for or be the dependent of an employee who works for an employer who elected to pay into the California Health Trust Fund;
- . Be an employee paying the full costs of coverage through an employee tax savings plan where the employer designates Cal-CHIPP in the cafeteria plan; and
- . Be eligible for the state health coverage tax credit established in this bill.

The Department of Health Care Services, in consultation with MRMIB, should convene a stakeholder group to develop an outreach and enrollment process for members of the pool program that is cost-effective and coordinated with Medi-Cal and the Healthy Families Program to ensure seamless access to coverage for all eligible Californians.

The initiative would establish a California Health Trust Fund for receipt of revenues from these sources, and would deem them to be revenues that are not subject to Proposition 98, the school funding initiative, and the Gann limit [i.e., various limits on government spending in California].

Section 54 makes changes to the California Insurance Code and addresses issues related to minimum creditable coverage. It begins by requiring MRMIB to establish regulatory standards for minimum creditable coverage that, at minimum, apply to the individual market and for purposes of the individual mandate by March 1, 2009. Minimum coverage must at least include coverage for physician, hospital and preventative services and be inclusive of existing coverage requirements under law. It then provides guidance on the development of these standards as well as specifying issues MRMIB must consider when defining minimum coverage, including the scope of services, enrollee and dependent deductibles, copayment requirements, and coverage of services outside the deductible.

This section also provides guidance to MRMIB on the development of a process for considering and granting requests for exemptions based on affordability and hardship. This includes specifying what criteria MRMIB must use when developing and reviewing affordability and hardship standards by which an individual may be exempt, establishing a process and timelines whereby individuals or families must obtain coverage after their exemption expires, identifying and tracking the number of individuals with exemptions, and reporting that information to the Legislature and Director of DMHC for establishing reinsurance mechanisms.

In addition, MRMIB must maintain an active statewide education and awareness program to inform all California residents of their obligation to obtain coverage and options for meeting the individual mandate. The language provides guidance on who MRMIB must work with to establish point-of-service methods to facilitate enrollment of individuals who do not have or maintain minimum coverage.

This section then requires MRMIB to develop an enforcement mechanism to ensure that uninsured individuals obtain the minimum creditable coverage, including informing non-covered individuals of the methods available to them to obtain affordable coverage. MRMIB must do so by employing, to the extent possible, existing state reporting processes used to collect information on employment and tax status of individuals. MRMIB must pay the cost of health care coverage on behalf of a previously uninsured individual who is enrolled by MRMIB in minimum creditable coverage after being uninsured for at least 62 days, and establish methods to recoup costs from these individuals. MRMIB may also enter into agreements with other state agencies or departments to perform activities related to the enforcement mechanism, and must report to the Legislature on the means and processes used to enforce the individual mandate by March 15, 2010.

Implementation of this section is contingent on appropriation of funds in the annual state budget.

Sections 55 and 56 establish unfair labor practices to prohibit employers from referring an employee or dependent of an employee to Cal-CHIPP for the purpose of separating that employee or dependent from the employers group health coverage. It also prohibits the employer from changing the employer-employee share-of-cost ratio or making modifications of coverage so the employees or their dependents enroll in Cal-CHIPP.

Section 57 allows employers to provide health coverage that includes a Healthy Action Incentives and Rewards Program, as specified. This section also allows an employer-offered program to include monetary incentives and premium cost reductions for non-smokers and smoking cessation.

Sections 57.1 to 57.7 amend the current California Revenue and Taxation Code to create the health care tax credit program.

Section 57.1 allows qualified taxpayers to receive an annual tax credit equal to the health coverage premium costs for qualified plans that are greater than 5.5 percent of the taxpayer's adjusted gross income. The amount of the credit is reduced by 1 percent for every 2 percent the taxpayers gross income exceeds 300 percent of the FPL. No one earning more than 400 percent of the FPL qualifies for the credit. Maximum monthly credits are also established.

Section 57.2 establishes the legislative intent to allow advances on the tax credit.

Section 57.3 states that the tax credits may be given to individuals between the ages of 50 and 64 whose income exceeds 400 percent of the FPL. This is limited by and contingent on available funding and cannot exceed \$50 million annually.

Section 57.4 creates a penalty in the tax code for individuals who fail to determine eligibility for the refundable credit. The penalty is \$1,000 for each failure.

Section 57.5 states MRMIB may share information with the Franchise Tax Board about individuals who purchased a health care plan that year.

Section 57.6 allows the Franchise Tax Board to share information with MRMIB in order to verify income, filing status and number of dependents.

Section 57.7 states all the Trust Fund monies must be spent each year and that the Franchise Tax Board is authorized to transfer the appropriate sum into the fund.

Section 58 requires the Employment Development Department (EDD) to establish a system to collect and report information related to employer health expenditures on behalf of their employees.

Section 58.5 establishes a system of fining employers who fail to maintain a cafeteria plan. The employers who fail without good cause will be fined \$100. The fine jumps to \$500 if the failure is willful.

Section 59 states that the Health Care Tax Savings Plan requires employers with one or more full-time employees to establish *Internal Revenue Code Section 125* accounts to allow employees to pay premiums for health coverage with pre-tax dollars.

Section 60 increases state funding that can be used for health care benefits for in-home supportive services (IHSS) workers by county or public authorities, which are entities who administer portions of the IHSS program in certain counties. This section provides three sequential 25 cent increases from the current 60 cents per hour, with two of three proposed increases contingent on estimated general fund revenues exceeding the prior years revenues by at least 5 percent. This section also specifies that, if the employee representative chooses, health benefits for IHSS workers can be provided through a trust fund.

Section 61, contingent on federal financial participation through a waiver, requires that Medi-Cal eligibility be simplified by eliminating the asset tests, which applies to certain Medi-Cal eligibility categories, and by no longer requiring Medi-Cal beneficiaries to file semi-annual status reports after July 1, 2010. They must file semi-annual address verification reports.

Section 62, effective July 1, 2010, extends coverage to the low-income caretaker relatives of the medically needy whose annual incomes are up to 250 percent of the FPL, as long as federal approval is obtained.

Section 63, effective July 1, 2010, extends coverage to medically needy 19- and 20-year olds with annual incomes up to 250 percent of the FPL, as long as federal approval is obtained.

Section 64 defines a benchmark benefits package for those Medi-Cal beneficiaries with net family income above

100 percent of the FPL as the same as the Cal-CHIP Health Families benefit package.

Section 65 requires DHCS to seek federal approval for a one-year eligibility test for those receiving benchmark benefits.

Section 66 tasks MRMIB with administering those benchmark benefits.

Section 67 specifies that children 19 and under will qualify for full-scope Medi-Cal benefits regardless of immigration status.

Section 68 establishes a new program to provide coverage to childless adults 21 and older who earn less than 100 percent of the FPL and do not qualify for Medi-Cal. Coverage in this program is limited to citizens, nationals or legal aliens who are not offered employer-sponsored health coverage. The covered benefits offered are the same as the Cal-CHIP Healthy Families plan, but also include long-term care, in-home supportive services and home and community-based services. Eligibility requirements for pregnant women and children will be used to determine eligibility for this new program, but the income disregards will not apply. Implementation of this program is contingent on a county share of cost.

Section 69 requires beneficiaries of this new program to file semi-annual status reports to update their eligibility status. The disabled, blind and aged, and those granted continuous eligibility are excused from this requirement.

Section 70 requires beneficiaries who are not required to make premium payments to file semi-annual address verification forms, starting July 1, 2010. If the beneficiary does not return the form, and follow-up by the county is unsuccessful, eligibility will be terminated. Exemptions from this provision are provided for the disabled, blind and aged, along with pregnant women and children 19 and younger.

Section 71 requires DHCS to maximize the availability of federal funding for the costs of providing Cal-CHIP Healthy Families to non-Medi-Cal beneficiaries.

Section 72 establishes baseline rates hospitals will be paid for caring for Medi-Cal beneficiaries if the expansions called for by this Act become inoperative. The rates are those which were in effect on June 30, 2010.

Section 73 specifies local coverage option (LCO) rules. Adults in the expanded Medi-Cal program, who live in a county where a LCO is available, will be covered exclusively by that LCO for the first four years it is available. After five years of operation of an LCO in a county, newly eligible individuals may enroll in the LCO, the county organized health system or one of the two-plan Medi-Cal managed care contractors in that county. LCOs are permitted to offer a limited network of providers with approval by DHCS and DMHC. DHCS must offer contract provisions to LCOs that limit the LCOs financial risk and provides for the state to share in profits or losses above or below the specified risk thresholds. Out-of-network emergency services providers for LCO enrollees must accept payments as payment in full if the rates comply with federal laws.

Section 74 requires DHCS to establish a Healthy Action Incentives and Rewards Program to be provided as a covered benefit under Medi-Cal. This section provides guidelines for this benefit, including, but not limited to, health risk appraisals, follow-up appointments with health care professionals to review findings of the appraisal, and incentives and rewards to engage individuals in their health. Implementing the program is contingent on DHCS seeking and obtaining federal financial participation and federal approvals, including any required state plan amendment or waiver.

Section 75 establishes the Comprehensive Diabetes Services Program to provide screening programs, lifestyle coaching and regular and timely lab tests to selected Medi-Cal beneficiaries. The program will only be implemented if state funds are allocated annually and if federal financial participation is available. CDHS must collect data to see if the

program improves health outcomes and saves money.

Section 76 establishes the Medi-Cal Hospital Stabilization Act and requires Medi-Cal to pay private and special district hospitals the maximum allowed under federal law. The payments would be adjusted annually by a cost escalator. The increased funds for the Medi-Cal rate increase would be generated by a 4 percent fee on hospitals. The collected fee would be matched with federal funds and paid back to hospitals in the form of a Medi-Cal rate increase. The hospitals would get a direct increase in rates for inpatient and outpatient fee-for-service Medi-Cal expansions.

In addition, Medi-Cal managed care plans would be paid more for the hospital services of those they cover, but the entire amount must be passed through to hospitals with the specific amounts subject to negotiation between the plans and the hospitals. In addition, hospitals will see an increase in revenue from coverage expansions.

The initiative provides for a new hospital fee of 4 percent of aggregate net patient revenue. According to Senate Health Committee analysis: Private and small public hospitals would pay the state approximately \$1.7 billion in fees in the first year of implementation, which would be almost doubled by obtaining federal matching funds. The total \$3.3 billion would then be paid to hospitals based on the formula in the Act. The hospitals would receive a rate increase of approximately \$1.5 billion for both inpatient and outpatient services. Six hundred million dollars would be paid to Medi-Cal managed care plans, which would pay the hospital. The specific amounts for individual hospitals are subject to negotiations between the plans and hospitals. Another \$600 million would be used for the hospital services paid for in the Medi-Cal and Healthy Families program expansions.

Public hospitals also would pay a new hospital fee. The rate increase for public hospitals would be different than for private hospitals as the state already provides the maximum funding allowed under state law. The funds raised by the fee on public hospitals would be used as general funding for ABX1 1. The state would provide a Medi-Cal rate increase for public hospitals with state funds, using state funds in lieu of local funds as the state match.

These funds would be matched with federal funds and then paid back to the hospitals, either directly or indirectly through increased payments from managed care plans and from payments for hospital services provided under the coverage expansions.

This section also requires \$25 million of the payments for public hospitals to be set aside for the Workforce Development Program Fund. This fund will be administered by the Office of Statewide Health Planning and Development (OSHPD), which will make allocations to counties exclusively for retraining health care workers in county hospital and clinic systems. Money in this fund is subject to legislative appropriation and can be rolled over for use in the following fiscal year.

The Act specifies that this section is only implemented to the extent that counties with designated public hospitals seeking reimbursement contribute toward the cost of care through a county share of cost.

Section 77 establishes the Medi-Cal Physician Services Increase Act to increase the Medi-Cal rates to physicians. The amount of the rate increase is not specified. Instead, this section would allow reimbursement to be established at a percentage of the amount paid by Medicare for the same services. The bill would also prohibit any reduction in Medi-Cal rates for physician services that are currently paid at or above the Medicare reimbursement rate. The amount of the increase in physician rates would be subject to appropriation in the annual state budget and would require obtaining federal matching funds. The bill would allow DHCS to set aside as much as 25 percent of the rate increase to be paid based on pay for performance measures.

Section 78 specifies that DHCS and MRMIB must take all reasonable steps to obtain the maximum amount of federal funds available to support the provisions in the Act.

Section 80 specifies that MRMIB may only expand Healthy Families to the extent funds are appropriated for those purposes in the annual State Budget or another statute.

Section 81 requires DHCS to work with the Department of Finance (DOF) to apply for amended federal waivers to maximize the availability of federal dollars and number of people eligible for federal cost sharing. This section provides DHCS with the flexibility to modify the Act to maximize federal funds. Specifically it may reduce eligibility for Healthy Families and Medi-Cal; increase cost sharing amounts; reduce benefits; and disadvantage applicants. Provisions of the Act are to be implemented as simultaneously as possible.

Section 82 establishes and lays out a plan to finance the Act, which is contingent on voter approval. The authors intent is for the Act to be funded by employers, individuals, federal, state and local governments, and health care providers. Specifically, (1) federal financial participation through Medicaid and S-CHIP; (2) county revenues from enrolling persons who would otherwise be eligible for county-funded care; (3) fees of 4 percent of patient revenues paid by acute care hospitals; (4) fees paid by employers; (5) premium contributions from employers and employees; (6) premium payments for individuals enrolled in publicly subsidized coverage and coverage in individual markets; (7) sales tax on cigarettes; and (8) other state funds made available through cost savings.

Section 83 requires the DOF to determine that the state has the necessary financial resources to implement the entire Act before it may go forward. The Act is to become operative the date the DOF files a finding with the Secretary of States office stating that sufficient state resources exist in the Health Care Trust Fund, the required federal approvals have been obtained, and that the required federal resources will be available.

Section 84 establishes the legislative intent for the state to develop and implement a transition plan by July 1, 2010 that will allow the state to use funding from the federal Ryan White Comprehensive AIDS Resources Emergency (CARE) Act of 1990 and other funding to pay for premiums and cost-sharing burdens. [See <http://hab.hrsa.gov/history.htm> for information on the CARE Act of 1990.]

Section 84.5 establishes that each provision of the Act is an integral part of health care reform and no provision should be severed from the remaining provisions. If any provision is determined to be invalid, the entire Act becomes inoperative.

About the Authors.

Peter Harbage, president of Harbage Consulting, has more than a decade of experience working to improve health policy at the federal, state and local level. In addition to consulting, Mr. Harbage is a Senior Fellow for the Center for American Progress, and he teaches a course in health policy for the University of Southern Californias School of Policy, Planning and Development.

Recently, Mr. Harbage has served as the senior health policy advisor to presidential candidate and former Senator John Edwards, as well as advised Governor Arnold Schwarzeneggers health reform team. During his career, he also served as the Assistant Secretary for Health at the California Health and Human Services Agency and as Special Assistant to the Administrator of the federal Health Care Financing Administration. Mr. Harbage has appeared on CNN and NPR, and he has been cited in various newspapers, including the *Los Angeles Times*, the *Washington Post*, the *San Francisco Chronicle* and the *Sacramento Bee*.

Hilary Haycock, who has extensive experience in health care media relations, is a senior consultant with the firm.

Sarah Arnquist and Lisa Chan provided outstanding research support in support of this project.

Enforcement of Arbitral Awards

2008 Emerging Issues 200

Enforcement of Arbitral Awards

By Publisher's Editorial Staff 2008

March 14, 2008

SUMMARY: Reinsurance policies often involve parties of different nations. Most such parties prefer to submit disputes that arise under these policies to arbitrators with expertise in the type of matters under dispute, rather than to the uncertainties attendant with foreign courts and foreign laws. Among the many advantages of arbitration in the international setting is the relative ease in obtaining the enforcement of arbitral awards. This is due to uniform standards established in what is commonly known as the New York Convention, an international agreement ratified by over 140 nations. However, this commentary points out that several recent federal court decisions have allowed for non-statutory defenses and other impediment to the enforcement of foreign arbitral awards. The commentary analyzes these cases (some involving reinsurance), observing a split among the U.S. Circuit Courts on several pertinent issues. The commentary advises that this case law should be considered when drafting arbitration agreements and counseling client on the risks of international arbitration.

PDF LINK: Core Emerging Issues Commentary (\$)

ARTICLE: A large portion of reinsurance agreements involve international parties. When disputes arise under these agreements, they may be governed by complex and varied foreign laws. Most companies are reluctant to rely on foreign courts and unfamiliar laws to protect their interests and prefer instead to submit their international disputes to private arbitration. Arbitration has a number of advantages over litigation, including flexibility, informality, and the opportunity to select neutral decision-makers with relevant expertise. See SIA Researchers: Positive Outlook For International Arbitration, 17-3 Mealey's Litig. Rep. Reinsurance 10 (2006).

One of the most significant advantages of arbitration in the international context is the general ease of enforceability of arbitral awards. No major multilateral treaty exists relating to enforcement of foreign judgments, and the laws governing enforcement vary widely from country to country. See Honorable Engagement Among Countries -- Enforcing Arbitral Awards Abroad, 16-4 Mealey's Litig. Rep. Reinsurance 13 (2005). By contrast, arbitral awards are enforceable in most industrialized nations pursuant to uniform standards set forth in the Convention on the Recognition and Enforcement of Foreign Arbitral Awards of June 10, 1958, 21 U.S.T. 2517 (U.S.T. 1970) (the New York Convention). The Convention is considered a foundation instrument of international arbitration, and has been successful in achieving widespread uniformity in enforcement of arbitral awards around the world. See

United Nations Commission on International Trade Law, 1958 -- Convention on the Recognition and Enforcement of Foreign Arbitral Awards -- the "New York" Convention,
http://www.uncitral.org/uncitral/en/uncitral_texts/arbitration/NYConvention.html.

Complete uniformity has not been achieved, however, as demonstrated by several recent federal court decisions recognizing non-statutory defenses and other obstacles to enforcement of foreign arbitral awards. These decisions are significant, in that they reduce the finality of foreign arbitral awards and ultimately impact the cost, complexity, and reliability of international arbitrations.

Practice Insight: Corporate counsel need to be aware that their clients may face unexpected challenges in obtaining enforcement of foreign arbitral awards in the United States. These case law trends should be considered when drafting arbitration agreements and counseling clients on the risks of international arbitration.

Part One of this Article discusses the legal framework for enforcement of awards under the Convention, including the Convention's general provisions requiring enforcement of foreign arbitral awards, the exclusive statutory defenses to enforcement, and implementation of the Convention in the United States.

Part Two of this Article examines current legal issues in the judicial enforcement of foreign arbitral awards under the Convention and the practical implications of these issues. The decisions discussed in Part Two include a United States Circuit Court split concerning the applicability of domestic common law defenses to awards covered by the Convention but rendered in the United States, the use of personal jurisdiction and venue as defenses to enforcement and the treatment of annulled foreign arbitral awards.

PART ONE: THE NEW YORK CONVENTION

The New York Convention is considered one of the most successful treaties governing international commercial law. As of January 2007, it had been ratified by over 140 countries, including all of the world's major economies. The primary purposes of the Convention are to promote arbitration and establish uniform standards for enforcement and recognition of international arbitration agreements and awards. *See Scherk v. Alberto-Culver Co.*, 417 U.S. 506 (U.S. 1974).

In furtherance of these purposes, signatories agree to enforce international arbitral awards, according to the procedural laws of the enforcing country, unless one of seven specific defenses set forth in the Convention is established. *See* Article V of the Convention. Those defenses are:

1. (a) The parties to the agreement were, under the law applicable to them, under some incapacity, or the said agreement is not valid under the law to which the parties have subjected it or, failing any indication thereon, under the law of the country where the award was made; or
- (b) The party against whom the award is invoked was not given proper notice of the appointment of the arbitrator or of the arbitration proceedings or was otherwise unable to present his case; or
- (c) The award deals with a difference not contemplated by or not falling within the terms of the submission to arbitration, or it contains decisions on matters beyond the scope of the submission to arbitration, provided that, if the decisions on matters submitted to arbitration can be separated from those not so submitted, that part of the award which contains decisions on matters submitted to arbitration may be recognized and enforced; or
- (d) The composition of the arbitral authority or the arbitral procedure was not in accordance with the agreement of the parties, or, failing such agreement, was not in accordance with the law of the country where the arbitration took place; or

(e) The award has not yet become binding on the parties, or has been set aside or suspended by a competent authority of the country in which, or under the law of which, that award was made.

2. (a) The subject matter of the difference is not capable of settlement by arbitration under the law of that country; or

(b) The recognition or enforcement of the award would be contrary to the public policy of that country.

Because the Conventions "basic thrust [is] to liberalize procedures for enforcing foreign arbitral awards," courts have construed these statutory defenses very narrowly. *Karaha Bodas Co., L.L.C. v. Perusahaan Pertambangan Minyak Dan Gas Bumi Negara*, 190 F. Supp. 2d 936 (D. Tex. 2001) (citing *Parsons & Whittemore Overseas Co. v. Societe Generale de L'Industrie du Papier (RAKTA)*, 508 F.2d 969 (2d Cir. 1974)).

The Convention is implemented in the United States through Chapter 2 of the Federal Arbitration Act, 9 USCS § 1 et seq., and has broad application. Pursuant to § 202 of the Act, any agreement or award arising out of a legal relationship that is commercial in nature and involves a foreign party, relates to foreign property, or has some other reasonable relation to one or more foreign states falls under the Convention. An award falling under the Convention must be confirmed, upon application of a party within three years of the award, if none of the defenses enumerated in the Convention are established. § 207. The domestic provisions of the Federal Arbitration Act, contained in Chapter 1, also apply to foreign arbitral awards to the extent they do not conflict with the Convention or Chapter 2 of the Act. § 208.

Although the Convention purports to establish uniform standards for enforcement of arbitral awards, the case law trends discussed in Part Two illustrate that parties seeking enforcement of awards still face challenges.

PART TWO: CURRENT ISSUES IN ENFORCEMENT

Domestic Common Law Defenses to Arbitral Awards

Currently, there is a split among the United States Circuit Courts concerning whether non-domestic arbitral awards, i.e., awards that were rendered within the United States but that fall within the Conventions coverage due to a foreign connection, are subject to review under domestic common law standards, such as manifest disregard for the law and arbitrary and capricious. It had been well established that the statutory defenses are the exclusive grounds for relief from enforcement of a foreign arbitral award issued in another country. A number of federal courts have held, however, that non-domestic arbitral awards are subject to these common law defenses and all other defenses available under the Federal Arbitration Act.

The Second Circuit Court of Appeals was the forerunner among these courts, holding in the 1997 case *Yusuf Ahmed Alghanim & Sons, W.L.L. v. Toys "R" Us, Inc.*, 126 F.3d 15 (2d Cir. 1997) that domestic law applies to non-domestic arbitral awards. The parties in *Alghanim*, a domestic licensor and a Kuwaiti licensee, entered into arbitration before the American Arbitration Association to resolve a licensing dispute. The arbitrators found in favor of the licensee, which petitioned the trial court to confirm the arbitrators award. The trial court confirmed the award, and the Second Circuit affirmed. Citing Article V(1)(e), regarding awards that have been set aside in the forum country, the court noted that [t]he Convention specifically contemplates that the state in which, or under the law of which, the award is made, will be free to set aside or modify an award in accordance with its domestic arbitral law and its full panoply of express and implied grounds for relief. *Alghanim*, 126 F.3d at 23. Turning to the licensors domestic defense, the court concluded that in this case the licensor had not established that the arbitrators acted in manifest disregard of New York law or the parties agreement.

The Second Circuit reaffirmed this position recently in *Zeiler v. Deitsch*, 500 F.3d 157 (2d Cir. 2007). The award in

Zeiler resulted from an arbitration that took place in New York but that involved Israeli parties and property and Jewish law. The court, relying on the rationale in *Alghanim*, held that the trial court should have applied domestic arbitral law in reviewing the award, although it further held that domestic law would not have controlled the outcome as a practical matter.

Joining the Second Circuit and following *Alghanim*, the Sixth Circuit held in *Jacada, Ltd. v. Int'l Mktg. Strategies, Inc.*, 401 F.3d 701 (6th Cir. 2005) that domestic law applied in determining whether to vacate an award rendered in the United States against a British corporation. The Fifth Circuit and the District of Columbia Circuit have also indicated that they would follow *Alghanim* and recognize domestic defenses as grounds to refuse enforcement of non-domestic arbitral awards. *Termorio S.A. E.S.P. v. Electranta S.P.*, 376 U.S. App. D.C. 242 (D.C. Cir. 2007) (discussing arbitral award rendered in Colombia); *Karaha Bodas Co., L.L.C. v. Perusahaan Pertambangan Minyak Dan Gas Bumi Negara*, 364 F.3d 274 (5th Cir. 2004) (discussing arbitral award rendered in Switzerland).

The Eleventh Circuit has taken a contrary view, holding that awards covered by the Convention may be challenged only on the grounds set forth in Article V of the Convention. The award in *Industrial Risk Insurers v. M.A.N. Gutehoffnungshutte GmbH*, 141 F.3d 1434 (11th Cir. 1998) was rendered by a Florida arbitration panel in favor of a German manufacturer and against a domestic company in a complex commercial dispute involving business risk insurance. The domestic company filed a motion to have the award vacated, arguing that it was arbitrary and capricious. The trial court denied the motion, and the Eleventh Circuit affirmed. Strictly construing the language of Article V of the Convention, the court held its list of defenses was exclusive and therefore concluded that no defense against enforcement of an international arbitral award under Chapter 2 of the [Federal Arbitration Act] is available on the ground that the award is arbitrary and capricious, or on any other grounds not specified by the Convention. *Industrial Risk Insurers*, 141 F.3d at 1446.

The Eleventh Circuit applied the same reasoning in *Four Seasons Hotels & Resorts v. Consorcio Barr S.A.*, 377 F.3d 1164 (11th Cir. 2004), holding that non-statutory defenses were not to be entertained in an action to enforce an award rendered in Florida involving a domestic company and a Venezuelan company.

Although the other Circuits apparently have not yet ruled on the issue, a federal trial court in the Ninth Circuit considering the issue expressly rejected the reasoning of *Alghanim* and adopted the reasoning of *Industrial Risk Insurers*. *Woodchem v. D.B. W., Inc.*, 2001 U.S. Dist. LEXIS 25290 (D. Or. 2001).

Practice Insight: The practical implications of this unsettled issue are significant. Parties relying on arbitration in international disputes need to be aware that in many federal courts, non-domestic arbitral awards are subject to review on the merits. Counsel should consider reducing the risk of unpredictable judicial interpretations of the law by including governing law provisions within arbitration agreements and provisions limiting judicial review on the merits. These decisions also illustrate the importance of the place of arbitration whether it takes place abroad or within the United States and careful consideration should be given to forum selection clauses in arbitration agreements.

Jurisdiction and Venue Defenses

Enforcement of foreign arbitral awards that may otherwise be valid under the Convention has also been denied on personal jurisdiction and *forum non conveniens* grounds.

The Fourth Circuit refused enforcement of an arbitral award for lack of personal jurisdiction in *Base Metal Trading v. Ojsc Novokuznetsky Aluminum Factory*, 283 F.3d 208 (4th Cir. 2002). The arbitration in *Base Metal* took place in Russia and involved a dispute between a Guernsey, Channel Island corporation and a Russian corporation over dealings in aluminum materials. The Channel Island corporation, which prevailed in the arbitration, brought a confirmation proceeding in Maryland, based on the arrival of a shipment of the Russian company's aluminum products in Baltimore Harbor. The trial court dismissed the proceeding for lack of personal jurisdiction, and the Fourth Circuit affirmed. The

court explained that while the Convention conferred subject matter jurisdiction on the courts, the constitutional requirement of personal jurisdiction still had to be met. The court found that the Russian Company's single shipment to Maryland was too minimum a contact to support a finding of personal jurisdiction.

In a reinsurance case, *Monegasque De Reassurances S.A.M. (monde Re) v. Nak Naftogaz of Ukr.*, 311 F.3d 488 (2d Cir. 2002), the Second Circuit upheld the application of the *forum non conveniens* doctrine to an award covered by the Convention. The underlying dispute in *Monegasque* was an alleged breach of contract between two natural gas companies, one from Russia and one from Ukraine. A Monaco reinsurer, which ultimately had to pay for the loss, instituted arbitration in Russia against the Ukraine company and obtained an award. The award was confirmed by a Russian court. In the reinsurer's action to confirm the award in the United States, however, the Ukraine company successfully argued *forum non conveniens*. On appeal, the Second Circuit affirmed. Relying on the Convention's provisions that the forum country's procedural laws apply, the court concluded that the doctrine of *forum non conveniens* barred the action. The court explained that the parties and their transactions had no connection to the forum other than that the United States was a signatory to the Convention.

The District of Columbia Circuit also recently applied personal jurisdiction and *forum non conveniens* defenses to an international arbitral award, ultimately concluding that the defenses were not established. See *TMR Energy Ltd. v. State Prop. Fund of Ukr.*, 366 U.S. App. D.C. 320 (D.C. Cir. 2005); but see *TermoRio S.A. E.S.P. v. Electrificadora Del Atlantico S.A. E.S.P.*, 421 F. Supp. 2d 87, 89 (D.D.C. 2006), *affd*, 376 U.S. App. D.C. 242 (D.C. Cir. 2007) (dismissing an action to confirm a Colombian arbitration award on the merits and on the alternative ground that Columbia was the more appropriate forum).

It is questionable whether applying a forum's jurisdiction and venue rules as procedural rules to bar enforcement is consistent with the purposes of the Convention. Personal jurisdiction and venue rules may vary greatly from country to country, and they are not specifically listed as defenses in Article V of the Convention. In any event, these decisions state the law currently, at least in some Circuits, and counsel should consider reducing the risk of an unpredictable outcome by using forum selection and consent-to-jurisdiction clauses in arbitration agreements.

Annulled Awards

Another class of unenforceable foreign arbitral awards is those that have been set aside by authority in the forum country.

Both the Second Circuit and the District of Columbia Circuit have refused to confirm annulled foreign arbitral awards. In an early case addressing this issue, *Baker Marine, Ltd. v. Chevron, Ltd.*, 191 F.3d 194 (2d Cir. 1999), a trial court denied enforcement of a Nigerian arbitral award that had been annulled by a Nigerian court. The Second Circuit affirmed, relying on the provision in Article V(1)(e) recognizing the defense that an award has been set aside by an authority in the forum country.

A trial court likewise denied enforcement of a Colombian arbitral award recently in *Termorio S.A. E.S.P. v. Electranta S.P.*, 376 U.S. App. D.C. 242 (D.C. Cir. 2007) on the ground that the award had been annulled by Colombia's highest court as violative of Colombian law. The District of Columbia affirmed, holding that because the record did not indicate that the proceedings in the Colombian court were tainted or not authentic, the court had to respect the award pursuant to the Convention.

These cases appear to conflict with the District of Columbia's decision in *Chromalloy Aeroservices v. Arab Republic*, 939 F. Supp. 907 (D.D.C. 1996), which upheld an Egyptian arbitral award, despite its annulment by an Egyptian court, based on the United States' strong public policy in favor of arbitration. The *Baker* court distinguished *Chromalloy* in part on the ground that the arbitration agreement in the latter case precluded either party from appealing the arbitrator's decision.

Even if the more recent decisions in *Baker Marine* and *Termorio* are technically correct, insofar as the Convention recognizes a forum country's jurisdiction to set aside domestic awards under its laws, they create a number of practical and legal issues that may not have been anticipated. For example, it is unclear what effect annulment by a court in the forum nation may have if the award was first confirmed in the United States. It is also unclear what standards courts will use in determining whether the foreign court proceedings were tainted or authentic. These cases provide an additional reason for counsel to consider provisions limiting judicial review of arbitral awards.

CONCLUSION

Arbitration is the favored method of dispute resolution in international commercial disputes because of its many advantages over litigating in foreign courts. While the Convention has made enforcement of foreign arbitral awards relatively easy, as compared to enforcement of foreign judgments, it is important to understand that it is not hurdle-free.

Practice Insight: Corporate counsel should be aware of the anti-enforcement trends in the federal courts and should incorporate this information into their practice strategies in order to better serve clients engaged in international business.

Stempel on N.Y. Embraces Consequential Damages in Bad Faith Claims

2008 Emerging Issues 191

New York Embraces Consequential Damages as a Remedy in Insurance Bad Faith Claims

By Jeffrey Stemple

March 13, 2008

SUMMARY: New York has historically been a friendly jurisdiction for insurers facing bad faith claims. It still is. But in a pair of late February 2008 decisions, *Bi-Economy Market, Inc. v. Harleysville Insurance* and *Panasia Estates v. Hudson Insurance*, the New York Court of Appeals, the states highest court, added a significant weapon to the arsenal of policyholders making bad faith claims. Taken together, these decisions permit policyholders, upon a showing of bad faith in refusing or delaying payment, to seek consequential damages flowing from the insurers failure to make timely, full payment under the policy.

PDF LINK: Enhanced Emerging Issues Commentary (\$)

ARTICLE: In a pair of recent decisions, the New York Court of Appeals, normally a court embraced by insurers (New York law is frequently the choice of insurers in drafting dispute resolution and choice-of-law clauses in policies), ruled that under apt circumstances, policyholders may seek not only payment of policy proceeds from insurers but also pursue consequential damages in cases where the insurer has acted in bad faith toward the policyholder. *See Bi-Economy Market, Inc. v. Harleysville Insurance Co. of New York*, 2008 NY Slip Op 1418, 2008 N.Y. LEXIS 278 (N.Y. Feb. 19, 2008); *Panasia Estates, Inc. v. Hudson Ins. Co.*, 2008 NY Slip Op 1419, 2008 N.Y. LEXIS 275 (N.Y. Feb. 19, 2008). *See also* Lexis Insurance Law Center Insider Perspective (Comments of Jeffrey L. Kingsley, Esq., Feb. 25, 2008). Reading the reaction of the two judges dissenting from the Courts two 5-2 majority opinions, one might mistakenly get the impression that the insurance world was coming to an abrupt end and that the Court had massively deviated from traditional contract principles. On balance, however, the Court majority opinions appears completely consistent with traditional non-insurance contract law and hardly spell doom for insurers.

What makes both *Bi-Economy* and *Panasia* noteworthy is that they are a significant expansion of New York insurance law that has arguably been too protective of insurers. Even after these decisions, New York law remains distinctly less favorable to policyholder than the bad faith law of most states, which treats bad faith breach of an insurance policy as a tort that gives rises to the full array of tort damages, including potential punitive damages. By contrast, even after *Bi-Economy* and *Panasia*, New York appears to subject insurers to the risk of punitive damages only if they commit independent torts other than bad faith (e.g., fraud, conversion, defamation) against a policyholder. The emerging new regime in New York makes it look more like states that treat first-party insurance bad faith claims as a type of contract claim rather than a tort claim). *See, e.g., Beck v. Farmers Ins. Exch.*, 701 P.2d 795 (Utah 1985)

(however, Utah, like most states, treats bad faith by a third-party insurer as a tort).

If adhered to and applied logically in the future, the two decisions arguably presage a regime in which the economic playing field formerly tilted in favor of insurers in coverage litigation, will be closer to level for a wide range of insurance products but remains more protective of insurers than the law of most states. Insurers will undoubtedly attempt to turn back these decisions and their implicit tide. In response, policyholders will undoubtedly argue that the decisions are correct and that for too long, insurers in New York, who are supposed to have fiduciary-like duties beyond those of ordinary contracting parties, have largely been immunized in most bad faith cases from paying anything beyond the policy limits even where they have acted unreasonably in breaching the insurance contract.

To the extent these decisions usher in a new era in New York, there is a silver lining for insurers: a sufficiently compensatory regime of consequential damages, prejudgment interest, and attorney fee awards may as a practical matter supplant the efforts of aggrieved policyholders to style matters as punitive damages claims, reducing some of the pressure insurers undoubtedly feel from these types of claims notwithstanding the punitive-damage dampening effects of *State Farm Mut. Auto. Ins. Co. v. Campbell*, 538 U.S. 408 (2003), which set a presumptive cap of nine times compensatory damages in cases with substantial harm to policyholders.

Bi-Economy v. Harleysville

In *Bi-Economy*, a Rochester, New York meat market suffered a severe fire, resulting in the complete loss of food inventory and heavy structural damage to the building and business related equipment. Bi-Economy had commercial property insurance with Harleysville, including business interruption coverage and replacement cost coverage on the building and its contents in what was styled as a Deluxe Business Owners policy. Under the terms of the coverage, the insurer was obligated to pay the actual loss of business income resulting from the necessary suspension of the policyholders operations as during a period of restoration necessitated by a covered property loss. In addition, the policy covered continuing normal operating expenses incurred, including payroll. As is typical in such policies, the period of restoration was defined as beginning with the date of the physical property loss necessary to trigger coverage and ending on the dates when the property should be repaired, rebuilt or replaced with reasonable speed and similar quality. See 2008 N.Y. LEXIS 278, at *1-3.

Bi-Economy submitted a claim. Harleysville disputed it and was willing to advance a little over \$163,000 to the policyholder in the early aftermath of the fire and cessation of business operations. More than a year later, after resolution pursuant to the policy's ADR clause, Bi-Economy was awarded more than \$407,000. During the pendency of the dispute resolution, Harleysville offered to pay only seven months of . . . lost business income, despite the fact that the policy provided for a full twelve months of such coverage. See 2008 N.Y. LEXIS 278, at *3. The family-owned meat market went out of business and never resumed operations. It sued its insurer, alleging that as a result of Harleysville's breach of the policy and bad faith performance the business collapsed. In addition to seeking the full award of business interruption benefits available under the policy, Bi-Economy also sought consequential damages arising from the business's demise that allegedly resulting from the foot-dragging and resistance of Harleysville.

In response, Harleysville argued that it was not responsible for consequential damages because of the policy's consequential loss exclusion and because of the general rule that the measure of damages for breach of an insurance policy is payment of the amount of coverage owed under the policy. The argument was a winner with the trial court (counter-intuitively known as the Supreme Court in New York) and the intermediate appellate court (the Appellate Division). But Harleysville's winning streak ended before the Court of Appeals, which held that the lower court erred in dismissing its breach of contract claim seeking consequential damages for the collapse of its business resulting from [the insurers'] failure to fulfill its obligations under the contract of insurance and remanded the case for further proceedings. See 2008 N.Y. LEXIS 278, at *4.

The court reiterated the traditional rule that in breach of contract cases, the non-breaching party normally can recover general damages that are the natural and probable consequence of the breach (citing *Kenford Co. v. County of*

Erie, 73 N.Y.2d 312, 319, 537 N.E.2d 176, 540 N.Y.S.2d 1 (1989)). In addition, the non-breaching party can also seek consequential damages that do not directly flow from the breach if such damages are within the contemplation of the parties at the time of contracting. In other words, if the non-breaching party is damaged as a result of the breach for risks foreseen or which should have been foreseen at the time the contract was made, these amounts should be recoverable in a contract action if the consequential loss was foreseeable or probable (citing *Ashland Mgt. v. Janien*, 82 N.Y.2d 395, 403, 624 N.E.2d 1007, 604 N.Y.S.2d 912 (1993), *Restatement (Second) of Contracts* § 351, and *Farnsworth on Contracts* § 12.14). See 2008 N.Y. LEXIS 278, at *5-6. This basic rule of contract damages is most famously associated with the 19th Century British case *Hadley v. Baxendale*, 9 Ex. 341 [1854] which was embraced almost from its inception by American courts.

Following these traditional rules of contract damages, the Court of Appeals noted that the questions of foreseeability and probability were to be determined according to nature, purpose, and particular circumstances of the contract known by the parties . . . as well as what liability the defendant fairly may be supposed to have assumed consciously, or to have warranted the plaintiff reasonably to suppose that it assumed, when the contract was made. (quoting *Kenford Co. v. County of Erie*, 73 N.Y.2d 312, 537 N.E.2d 176, 540 N.Y.S.2d 1 (1989) and *Globe Ref. Co. v. Landa Cotton Oil Co.*, 190 U.S. 540, 544, 23 S. Ct. 754, 47 L. Ed. 1171 (1903)). See 2008 N.Y. LEXIS 278, at *6.

Under the circumstances of the Bi-Economy loss, the Court found it well within the contemplation of the parties (and the expectations of both policyholder and insurer) that an undue delay in providing business interruption insurance benefits or significant underpayment of these benefits might well result in the destruction of a relatively small, family-owned business such as Bi-Economy that purchased insurance for the purpose of protecting itself from just such circumstances and which was unlikely to have sufficient capital or cash reserves to weather this type of large loss and cessation of business in the absence of promptly receiving the full benefits of the insurance it had purchased.

The purpose served by business interruption coverage cannot be clearer to ensure that Bi-Economy had the financial support necessary to sustain its business operation in the event disaster occurred Certainly, many business policyholders, such as Bi-Economy, lack the resources to continue business operations without insurance proceedings. Accordingly, limiting an insureds damages to the amount of the policy, i.e., money which should have been paid by the insurer in the first place, plus interest, does not place the insured in the position it would have been in had the contract been performed.

* * *

Thus, the very purpose of business interruption coverage would have made Harleysville aware that if it breached its obligations under the contract to investigate in good faith and pay covered claims it would have to respond in damages to Bi-Economy for the loss of its business as a result of the breach.

* * * [T]he purpose of the contract was not just to receive money, but to receive it promptly so that in the aftermath of a calamitous event, as Bi-Economy experienced here, the business could avoid collapse and get back on its feet as soon as possible. Thus, this insurance contract included an additional performance-based component; the insurer agreed to evaluate a claim, and to do so honestly, adequately, and most importantly promptly. The insurer certainly knew that failure to perform would (a) undercut the very purpose of the agreement and (b) cause additional damages that the policy was purchased to protect against in the first place. * * * When an insured in such a situation suffers additional damages as result of an insurers excessive delay or improper denial, the insurance company should stand liable for these damages. This is not to punish the insurer, but to give the insured its bargained-for-benefit.

See 2008 N.Y. LEXIS 278, at *9-12 (citations omitted).

The court did not regard the policys limitation on payment for consequential losses as a contract provision abrogating the general rule that non-breaching parties can recover reasonably foreseeable consequential damages flowing from the breach. Consequential loss provisions in a commercial property policy often provide that the insurer

will not pay for the consequential losses flowing from non-covered initial injury but will pay for the consequences of covered property damage. (There may also be consequential loss provisions covering these types of losses even if they flow in part from an uncovered loss if covered causes are also in the mix). This limiting language in the policy cuts off a policyholders ability only to obtain damages resulting from property damage that stems from a non-covered cause even if a covered loss lies somewhere within the causal chain. It does not operate as an abrogation of the traditional *Hadley v. Baxendale* rule that foreseeable consequential damages may be obtained as a remedy for breach of the contract under appropriate circumstances hinging on the context of the contract and the understanding of the parties.

Panasia v. Hudson

In *Panasia Estates v. Hudson Ins. Co.*, the policyholder owned commercial rental property in Manhattan that was undergoing renovation covered under a Builders Risk policy. In a scene perhaps all too familiar to developers and homeowners alike, the construction crew opened the building in order to perform work and then apparently neglected to adequately protect it from the elements during construction. Inclement weather caused rain to enter the building through the roof opening, resulting in extensive damage to the property. See 2008 N.Y. LEXIS 275, at *1 (footnote omitted). Panasia gave prompt notice to its insurer, but Hudson failed to investigate or adjust the claim until several weeks later and then denied coverage three months later, claiming that the loss was the result of repeated water infiltration over time and wear and tear rather than from a covered risk.

Panasia sued seeking coverage and consequential damages, claiming that the delay and denial of its insurer elongated the renovation process, causing it to lose substantial rental income. The trial court and the Appellate Division rejected Hudsons argument that consequential damages were barred as a matter of law, certifying the matter to the Court of Appeals, which affirmed. Citing its companion decision in *Bi-Economy v. Harleysville*, the *Panasia* Court held that

consequential damages resulting from a breach of the covenant of good faith and fair dealing may be asserted in an insurance contract context, so long as the damages were within the contemplation of the parties as the probable result of a breach at the time of or prior to contracting. Here, the courts below failed to consider whether the specific damages sought by Panasia were foreseeable damages as the result of Hudsons breach. Because the record before us is not fully developed on that issue, such claim must be considered by [the trial court].

See 2008 N.Y. LEXIS 275, at *3-4, citing *Bi-Economy* and *Kenford Co.*, *supra*.

The Dissenting Judges Excessive Complaints

Judge Smith, joined by Judge Read, dissented in both cases, using essentially the same opinion for both dissents. In the main, the dissent argued that consequential damages are simply another form of punitive damages and that consequential/punitive damages are a bad idea that unnecessarily increases the cost of insurance. Left begging was the question of whether stronger remedies for policyholders really do translate into significant premium increases in a pricing world dominated by the underwriting cycle and changing investment performance. Also unaddressed was the core policy question of whether higher premium prices (if they are the inevitable result of full compensation for policyholders) are simply a fair price to pay to provide greater incentives to insurers to honor their policies and eschew opportunistic behavior. Although stronger remedies for policyholders cannot ensure that insurance is properly paid to policyholders, they at least provide greater incentive to avoid self-dealing, needless delay, and excessive frugality in adjusting claims or interpreting policies.

The dissent started conventionally enough, by correctly noting that punitive damages against an insurer are not available for mere breach of an insurance policy but can be awarded only if there is also egregious tortious conduct toward the policyholder and a pattern of similar conduct directed at the public generally. See 2008 LEXIS 275, at *4-5, citing *Rocanova v. Equitable Life Assur. Socy*, 83 N.Y.2d 603, 634 N.E.2d 940, 612 N.Y.S.2d 339 (1994) and *New York Univ. v. Continental Ins. Co.*, 87 N.Y.2d 308, 662 N.E.2d 763, 639 N.Y.S.2d 283 (1995). In addition, New York law requires an independent tort (not mere bad faith breach of the policy). Consequently, a policyholder like *Bi-Economy* or

Panasia can get punitive damages only if the insurer has also committed fraud or another tort against the policyholder no matter how much an insurers conduct in adjusting claims might reflect a pattern of egregious misconduct toward the public.

Unfortunately, the dissent conflates punitive damages with consequential damages in a manner that is without support in contract, tort, or insurance law. According to the dissent, *Bi-Economy* and *Panasia* improperly relabeled punitive damages so that [p]unitive damages are now called consequential damages, and a bad faith failure to pay a claim is called a breach of the covenant of good faith and fair dealing. See 2008 LEXIS 275, at *5. But notwithstanding the dissenters characterization, the substantive law of torts, contracts, and remedies has long and consistently distinguished punitive and consequential damages and the *Bi-Economy* and *Panasia* majorities are consistent with this historical understanding.

As most lawyers and judges learned during first-year contracts, a mere breach of contract, even if intentional, will not give rise to punitive damages unless the breach is accompanied by an independent tort (e.g., conversion, tortious interference, defamation, etc.). Insurance contracts are different because in this area of the law the covenant of good faith implied in every contract is taken more seriously and because policyholders, having already parted with premium dollars and a chance to buy coverage from another insurer, are highly dependent on the insurers reasonable, good faith performance of the policy/contract. As a result, most states treat bad faith breach as an independent tort that may give rise to tort damages, which are generally broader in scope than contract damages. For example, a policyholder victimized by insurer bad faith may be able to recover damages for mental anguish while the victim of non-insurance contract breach ordinarily can get such damages only if she also satisfies the elements of the independent tort of intentional infliction of emotional distress or an analogous cause of action.

And to perhaps state the obvious, consequential damages are different from punitive damages. Consequential damages are calculated based on actual losses a policyholder suffers as a proximate result of the insurers breach and in New York only a bad faith breach will give the policyholder a right to seek consequential damages. For example, the Bi-Economy meat market alleged that it failed because its capacity to operate was destroyed by fire and it was unable to rebuild, keep continuity, and retain business without the promised full insurance coverage that never came. It not only suffered the physical damage of the fire but also the consequential damage of lost business and failure. Panasia alleged that it not only suffered physical injury to its building as a result of contractor negligence and water intrusion but also that the insurers failure to provide coverage lengthened the time the building was out of service and unable to bring in rental revenue. These are classic consequential damages and bear no relation to punitive damages.

Punitive damages, by contrast, are not calculated based on any loss suffered by the policyholder but instead are set at an amount designed (however imperfectly by a jury) to punish the insurer for its egregious misconduct and to deter the insurer and others like it from engaging in such conduct in the future. States have developed an array of factors to consider in calculating a fair punitive damage award, including the wrongfulness of the misconduct, the wealth of the defendant, and the defendants history of such misbehavior and awareness of its conduct. The impact on the policyholder has an indirect influence in that some states consider the impact on the victims in calculating the limits of a punitive award and also require that punitive damages bear a reasonable relationship to compensatory damages.

In the aftermath of *BMW v. Gore*, 517 U.S. 559 (1996), *State Farm v. Campbell*, 123 S. Ct. 1513 (2003), and *Philip Morris USA v. Williams*, 127 S. Ct. 1057 (2007), there now is federal constitutional law setting some out limits on punitive awards based on the (1) reprehensibility of defendants conduct; (2) the relation of a punitive award to the compensatory damages awarded; and (3) the punitive awards relation to state fines and other punishments. Of these factors, only No. 2, the proportionality prong, bears any relation to the injuries incurred by the policyholder or other non-breaching contract party. In *Campbell*, the U.S. Supreme Court in essence set a 9:1 presumptive outer limit on punitive damages, at least in cases where compensatory damages are substantial (post-*Campbell* cases have occasionally permitted much higher ratios (e.g., 75:1) where the amount of compensatory damages was slight on the theory that adhering to the 9:1 ratio in such cases would provide insufficient deterrence to defendants.

The dissent attempts in part to make its strained punitive-consequential connection because *Bi-Economy* and *Panasia* permit awards of consequential damages not simply by a breach of contract, but only by a breach committed in bad faith. See

2008 N.Y. LEXIS 275, at *6. But one might legitimately ask what the dissent is complaining about? The rule set forth in *Bi-Economy* and *Panasia* is still highly protective of insurers and gives them more rights than ordinary contracting parties. Under these decisions, insurers appear to face the risk of consequential damages only if they act in bad faith in denying, delaying, or undervaluing a claim. Would the dissent rather that consequential damages routinely be available for innocent or negligent breaches by an insurer?

The dissent also makes another doctrinal and historical error by arguing that consequential damages are only available in cases where the contract in question involved more than merely a promise to pay money. This is incorrect. For example, consider a bank that extends a letter of credit, which is merely the promise for the payment of money upon proper demand. The borrower acts in reliance on the bank's promise and expends money, time, and effort setting up or expanding a business. If the bank breaches the agreement and fails to provide the promised funds, the borrower of course may pursue not only the amount of the loan but also any consequential damages (e.g., landlord or supplier penalties) as long as the borrower demonstrates that these sorts of losses were foreseeable to the lender. The dissent attempts to manufacture a distinction in the case law (money-vs.-performance) that does not exist as a matter of history or logic.

The dissent also argues that consequential damages are improper in insurance matters because in insurance contracts or other contracts for the payment of money, the parties have already told us what damages they contemplated; in the case of insurance, it is payment equal to the losses covered by the policy, up to the policy limits. See 2008 N.Y. LEXIS 275, at *7. Again, the simple example above of a borrower stiffed on a loan or letter of credit by a bank belies this assertion, as do the situations faced by the policyholders in *Bi-Economy* and *Panasia*. The dissent confuses insurance policy limits with a liquidated damages clause. They are not the same thing. For example, in a property insurance policy, the policy limits are the most the insurer will pay for coverage of an insured risk. But any injury inflicted on policyholders due to contract breach or tortious conduct logically are neither determined by nor limited to the policy limits.

According to the dissent, punitive damages can do serious harm and exact too great a cost in that they force insurers to overpay out of fear that juries will see even legitimate claim denial as insurer bad faith. See 2008 N.Y. LEXIS 275, at *5. The dissent's fear is overblown. Without doubt, juries overly sympathetic to policyholders are a constant concern for insurers. But conversely, policyholders must constantly fear jurors who fear increases in their own premiums, who see policyholders as greedy opportunists, or who simply misunderstand the nature of various insurance products or insurer duties.

There may indeed be a balance of terror in modern coverage and bad faith litigation. But the important point is that it is a balance. In my experience, for every jury too quick to second-guess an insurer is another jury insensitive to situations where an insurer sacrifices policyholder interests in favor of its own. The dissent sees it differently (2008 N.Y. LEXIS 275, at *9-11) but it cites no empirical evidence in support of its view that jurors are putty in the hands of policyholder counsel. This is a pretty weak reed for arguing that insurers should not be subject to something approximating the ordinary rules of contract law damages. If insurers are to be immunized or subjected to only limited damages on public policy grounds, the burden of persuasion should be on insurers who wish not to be held to the ordinary rules of contract remedies.

The dissent also does nothing to distinguish insurance cases from ordinary contract cases, although the judicial system has allowed jurors (subject to judicial supervision) to make consequential damage determinations in the latter for roughly 250 years. The same jurors the dissent finds too ignorant to make consequential damage determinations in insurance cases are permitted to do so in all manner of complex business cases involving alleged breach and incurrence of consequential damages. One might thus ask rhetorically: how can it then be so bad for juries to determine consequential damages in cases involving delayed renovation of buildings or the consequences of a devastating fire at a

meat market?

Further, the dissent fails to appreciate how protective the *Bi-Economy* and *Panasia* decisions are for insurers and how insurers continue to have it better, at least as regards consequential damages, than most contracting parties. To get consequential damages against an insurer, the policyholder must show not only injury within the contemplation of the parties but also bad faith conduct. To get consequential damages from any other entity with which it contracts, a policyholder need only show injury within the contemplation of the parties.

The dissent also fails to appreciate the practicalities of potential policyholder claims for consequential damages. Although the theory of both contract remedies and insurance indemnification is that one can be made whole through litigation, any sane person with some experience with the legal system knows that one is seldom fully compensated in a contract/insurance policy suit at least not if one calculates the lost time and opportunity cost, which one seldom recoups through a judgment under even the most liberal rules of contract remedies. In addition, the economics of litigation argue against bringing small claims (with small increasingly being defined upward). Even in jurisdictions that have substantial prejudgment interest and fee-shifting in favor of the prevailing party, sensible people don't sue if they don't have to.

The Likely Practical Limitations of the Decisions

Applied to losses a policyholder incurs because of insurer sluggishness in responding to a claim or chiseling behavior regarding claim value, the rational policyholder will usually simply lump such behavior as long as it receives basic out-of-pocket indemnity pursuant to the policy and receives enough of it fast enough to avoid substantial injury. Unless the policyholder incurs substantial consequential damage from insurer breach, the rational policyholder will probably correctly conclude that it is better off foregoing litigation if it can simply get what it is owed under a policy's scope of coverage for tangible property damage or business interruption payments that are close enough to adequate and that come soon enough so that the business is not imperiled even if it is inconvenienced.

Only in cases like *Bi-Economy* or *Panasia*, where the insurer failures are substantial and the harm to the policyholder is substantial will a rational policyholder be likely to bring consequential damages claims if the insurer is smart enough to pay roughly what it owes for property damage within a time frame that is not egregiously tardy. The case report does not reflect the magnitude of Panasia's rent loss, but it logically was substantial. And *Bi-Economy* lost everything. The dissents' fears of a flood of increased litigation simply because New York now is somewhat more receptive to consequential damage claims against insurers are probably overblown.

Although proving up foreseeability in order to obtain a consequential damages award may not be easy, it will be easier in many cases than proving up independent torts such as fraud and willful, wanton, reprehensible conduct by the insurer (directed at both policyholder and the public) which must be shown by the higher standard of clear and convincing evidence rather than a mere preponderance of the evidence. In addition, the de facto capping of punitives by *BMW v. Gore* and *Campbell* makes punitive damages less attractive to seek vis-à-vis compensatory damages. Policyholders and counsel may well conclude that it makes more sense to invest litigation resources pursuing consequential damages rather than chasing a punitive damages rainbow. To the extent this occurs, insurers may find themselves with a more predictable and calculable inventory of claims against them than existed prior to *Bi-Economy* and *Panasia*.

Future Issues and Arguments

Left undecided by these cases and awaiting further examination is the degree to which consequential damages will be available as a practical matter in different insurance contexts. *Bi-Economy* involved business interruption coverage while *Panasia* involved a builders risk policy. In both cases, the majority found it relatively easy to see how failing to pay business interruption benefits could imperil the survival of a business and how delay in covering destruction of a building under renovation could cost the policyholder rental income. But what about an all-risk property policy, a homeowners policy, an auto policy, a jewelers block policy, or various liability policies? Policyholder counsel can

argue with some force that in these contexts as well the parties are aware that the insured can easily suffer additional injury when there is unreasonable and significant refusal to pay, underpayment or delay, which may force the policyholder to incur the costs of substitute housing, or transportation.

For basic physical injury to tangible business property, even in the absence of business interruption coverage, it would seem to flow from *Bi-Economy* that the business could be damaged where an insurer fails to pay policy proceeds owed. Liability policies created different issues but policyholders would also seem to have a strong argument that the potential adverse consequences of litigation when an insurer wrongfully fails to defend or settle a claim are known to the parties at the time insurance is purchased. In turn, *Bi-Economy* and *Panasia* may lead to enhanced consequential damages remedies in the liability insurance arena as well.

In response to such arguments, insurer counsel will argue that the business interruption coverage of a small family business and the builders risk coverage for a major commercial property renovation presented particularly strong cases to alleging the reasonable foreseeability of damages and permitting a consequential damages claim. Insurers should be sure to emphasize that *Bi-Economy* and *Panasia* did not enter judgment for the policyholders but merely allowed consequential damages claims to proceed. Whether those claims are persuasive and supported by the evidence are separate questions. Most important, even if the policyholder suffered great consequential damages, these decisions only permit recovery if there was also insurer bad faith.

There is, of course, the question of whether New York might eventually conclude that consequential damages should be available even in the absence of insurer bad faith. The bad faith prerequisite is at odds with basic contract law and makes even less sense for insurance matters because of the insurers heightened duties to policyholders as compared to those of ordinary contracting parties. But New York has a long history of being hesitant to expand policyholder remedies against insurers. In the face of two heatedly dissenting votes, the Court of Appeals is unlikely to expand the potential reach of *Bi-Economy* and *Panasia* in the near future. But the logic of permitting consequential damages against an insurer on the same basis as against other contract-breaching parties is sufficiently strong that one might expect to see the argument in future policyholder briefs. However, the bad faith prerequisite to consequential damages against insurers is completely understandable considering the historical evolution of insurance litigation and remedies in New York. Having leveled the playing field a bit between insurers and policyholders, the Court of Appeals is unlikely to go farther for policyholders in the near future.

2008 Emerging Issues 1999

Shidlofsky on Excess Underwriters v. Franks Casing

By Lee H. Shidlofsky

March 6, 2008

SUMMARY: One pressing issue in insurance law is the extent to which an insurer has the right to seek reimbursement from its insured of defense costs and/or indemnity payments when it ultimately is determined that no coverage exists. A divided Supreme Court of Texas reversed its earlier decision and concluded that no such right exists. In doing so, the Court signaled the end of the right of recoupment by an insurer against its insured in Texas.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: *Matagorda County--the first step on the way to *Franks Casing.** In 1993, three prisoners sued Matagorda County (and Sheriff Keith Gilgore) in federal court for damages arising out of assaults that occurred while they were incarcerated in the Matagorda County jail. [See *Matagorda County v. Tex. Assn of Counties County Govt Risk Mgmt. Pool*, 975 S.W.2d 782 (Tex. App.--Corpus Christi 1998, pet. granted).] Matagorda County tendered the defense of the claim to the Texas Association of Counties County Government Risk Management Pool (TAC), its law enforcement liability insurer. TAC contended that coverage was precluded because the county's policy included an exclusion for claims arising out of jail. Although it initially denied coverage, TAC ultimately defended Matagorda County under a reservation of rights, while also filing a declaratory judgment action seeking a declaration of no coverage under the policy.

In 1995, TAC was provided an offer to settle the underlying lawsuit for \$300,000, which was within policy limits. Although the county believed the offer was reasonable, its belief that the claim was covered caused it to refuse to fund the settlement. Thereafter, TAC issued a second letter reserving its rights. Therein, TAC informed Matagorda County that it was going to accept the settlement offer and later seek reimbursement of the full settlement amount, provided that the declaratory judgment action established that TAC was right and that the prisoners' claim was excluded from coverage. The county ignored TAC's letter. TAC settled the lawsuit as promised, and then amended its declaratory judgment action, requesting reimbursement of its defense and settlement costs.

At trial in the declaratory judgment action, the court granted TAC's partial summary judgment, finding that the jail exclusion precluded coverage for the prisoners' lawsuit. Trial proceeded on various defenses asserted by Matagorda County, and the jury returned a verdict finding that the county had accepted the jail exclusion and that it was estopped from claiming that it was unaware of its presence. Based on the verdict, the court awarded TAC its \$300,000 settlement payment and \$53,522.15 in attorneys' fees, which TAC paid in defense of the prisoners' lawsuit.

The county appealed, arguing that TAC had no right to reimbursement for either of the two amounts. In particular, Matagorda County argued that a right of reimbursement did not exist in the insurance policy and that such a right was not conferred in the unilateral reservation of rights letter issued by TAC. In fact, TACs reservation of rights letter never mentioned reimbursement. [See *Matagorda County*, 975 S.W.2d at 782.]

Relying, at least in part, on the Supreme Court of Californias decision in *Buss v. Superior Court*, 939 P.2d 766 (Cal. 1997), the Corpus Christi Court of Appeals rejected TACs claim for reimbursement of defense costs because TACs reservation of rights letter did not specifically notify Matagorda County that it would later seek defense costs. [See *Matagorda County*, 975 S.W.2d 782.] Although not holding such, the courts opinion strongly suggests that TAC at least would have had a quasi-contractual right to reimbursement of defense costs if it had specifically reserved its right to do so. The court noted that the Buss court found a quasi-contractual right of a liability insurer to collect from its insured reimbursement for defense costs of certain claims only if the insurer specifically reserved its right to seek reimbursement of defense costs at or before the time it provided a defense. [*Matagorda County*, 975 S.W.2d at 784.] Thereafter, the court held that reimbursement of settlement costs required a specific agreement by the insured to be bound by the settlement and to allow reimbursement to the insurer if the coverage issue is later determined against the insured . . . [Id. at 787.]

The appellate court decision left behind some unanswered questions. First, although implying that a unilateral reservation of rights would be sufficient to preserve a claim for reimbursement of defense costs, the court did not address whether Texas recognized such a claim. Second, although it held that a specific agreement was required for reimbursement of settlement costs under an equitable subrogation theory, the court did not elaborate as to whether anything but a bilateral agreement could trigger a claim for reimbursement under other reimbursement theories. The Supreme Court of Texas granted review of the case, but only to address the issue of reimbursement of settlement costs.

After noting that the issue before it was one of first impression in Texas, the Supreme Court began its analysis by examining the insurance contract. The Court noted that [i]t is undisputed that the insurance policy that defines the parties rights and obligations does not provide TAC a right of reimbursement; TAC first asserted such a right in its reservation-of-rights letter. It is similarly undisputed that the county did not otherwise expressly agree to reimburse TAC for the . . . settlement. [See *Tex. Assn of Counties County Govt Risk Mgmt. Pool v. Matagorda County*, 52 S.W.3d 128, 131 (Tex. 2000).] As such, the Court sought to determine whether Matagorda Countys consent to reimburse TAC may be implied or whether the circumstances presented warranted imposing, in law, an equitable reimbursement obligation.

The Court first considered whether an implied consent to reimbursement existed. TAC argued that the countys failure to respond to its second reservation of rights letter amounted to consent by acquiescence. The Court, however, disagreed. Relying on a Supreme Court of Wyoming decision, the Court held that a unilateral reservation-of-rights letter cannot create rights not contained in the insurance policy. [Id. (citing *Shoshone First Bank v. Pac. Employers Ins. Co.*, 2 P.3d 510, 515-16 (Wyo. 2000)).] Consequently, although silence by the insured after the insurer issues a reservation of rights letter implies agreement that the insurer will later contest coverage, the same silence cannot imply consent to additional obligations not contained in the insurance contract. [*Matagorda County*, 52 S.W.3d at 131.] Moreover, a meeting of the minds is an essential element of any implied-in-fact contract. [Id. at 133.] Thus, when an insurer attempts to add a reimbursement provision to the insurance contract, it only will be binding if first accepted by the insured. On the facts before the Court, TAC failed to get Matagorda Countys agreement, so no implied-in-fact contract existed and TAC could not seek reimbursement of the \$300,000 settlement. [Id. at 135.]

Because the Corpus Christi Court of Appeals did not actually issue a ruling as to whether Texas law recognized a right of reimbursement of defense costs and because that issue was not before the Supreme Court of Texas, the right of reimbursement of defense costs for those claims that are ultimately determined to be uncovered technically still is unclear in Texas. Nevertheless, technicalities aside, both the majority and the dissent in the Supreme Courts decision in *Matagorda County* unmistakably addressed the issue.

By relying upon the Wyoming Supreme Courts decision in *Shoshone*, the Court indicated how it would address the reimbursement of defense costs issue should it ever be squarely presented with it. The *Shoshone* court found that an insurer cannot unilaterally reserve its right to recoup defense costs. [*Id.* at 131 (noting that *Shoshone* reject[ed] the notion that the insurer could base a right to recover defense costs on a reservation letter).] The Courts also cited the Wyoming decision for the proposition that allowing reimbursement of defense costs via a unilateral reservation of rights would be tantamount to allowing the insurer to extract a unilateral amendment to the insurance contract. If this became common practice, the insurance industry might extract coercive arrangements from their insureds . . . [*Id.* at 133 (citing *Shoshone*, 2 P.3d at 516).] Thus, while not facing the issue head-on, the Courts statements and reliance on *Shoshone* strongly suggest that it would disallow any attempt by an insurer to unilaterally reserve its right to recoup defense costs for uncovered claims.

Even the dissent in *Matagorda County*, which discussed the defense costs issue at length, acknowledged that insurers should be on notice that todays decision may foreshadow how the court will decide the [defense costs] issue if it is presented. [*Id.* at 140 (Owen, J., dissenting).] Consequently, after the Supreme Courts decision in *Matagorda County*, a roadmap had been provided--albeit in dicta--for Texas trial courts and intermediate appellate courts. That is, while a unilateral reservation of rights likely is not sufficient to create a right of reimbursement of defense costs, such a reservation definitely is not sufficient to preserve an insurers right of reimbursement of indemnity payments.

Franks Casing I--Not quite Matagorda County. In *Excess Underwriters at Lloyds v. Franks Casing Crew & Rental Tools*, 93 S.W.3d 178 (Tex. App.--Houston [14th Dist.] 2002, pet. granted) (Brister, J.), Franks Casing Crew & Rental Tools, Inc. fabricated a drilling platform at its facility in Louisiana for ARCO. Several months later, the platform collapsed. As a result, ARCO sued Franks Casing and several other defendants. Franks Casing was insured under a primary policy with limits of \$1.0 million, as well as an excess policy with limits of \$10.0 million from Excess Underwriters. After being notified of the claim, Excess Underwriters issued a reservation of rights letter, stating that some of ARCOs claims against Franks Casing were not covered by the policies.

Before trial, ARCO offered a \$9.9 million settlement, but it was rejected by Franks Casing. Then, two weeks before trial began, Excess Underwriters contacted ARCO directly and attempted to settle the portion of the claim that it believed was covered, but no agreement could be reached. Subsequently, ARCO offered to settle all claims against all defendants for \$8.8 million, including a \$7.55 million contribution from Franks Casing. Because of the coverage issues that existed, Excess Underwriters offered to pay two-thirds of that amount if Franks Casing would pay the remaining one-third and agree to a waiver of all coverage issues. In the alternative, Excess Underwriters offered to pay \$5.0 million, leaving the coverage issues to be determined in arbitration. Franks Casing refused both options.

As the underlying lawsuit by ARCO proceeded to trial, it became obvious that Franks Casing was ARCOs target defendant. After the second day of trial, Franks Casings in-house counsel contacted ARCO and requested that it issue a settlement demand within the limits of the excess policy. In response, ARCO made a demand of \$7.5 million, which was immediately communicated to Franks Casings insurers. In communicating the settlement offer to Excess Underwriters, Franks Casing demanded that the carriers accept the settlement demand from ARCO. Agreeing that the case should be settled, Excess Underwriters stated that they would fund the settlement minus the primary limits but only if Franks Casing agreed to resolve the coverage issues at a later date. Franks Casing refused, sending a second letter to the carriers demanding that it accept ARCOs offer. Eventually, Excess Underwriters agreed to fund the settlement less any contribution from the primary carrier--but reserved its right to seek reimbursement from Franks Casing. The Excess Underwriters policy required approval of any settlement from its insured, which Franks Casing provided.

Before the settlement agreement was executed, Excess Underwriters filed a declaratory judgment action against Franks Casing. The trial court held that no coverage existed for ARCOs lawsuit, but, in interpreting *Matagorda County*, the court found that no right of reimbursement existed because Franks Casing had not expressly agreed that Excess Underwriters could seek recoupment. The appellate court affirmed, but it clearly was not happy about the decision. [See *Franks Casing*, 93 S.W.3d 178.] In recognition of that fact, the appellate court opinion--which was authored by Judge Brister before his rise to the Supreme Court--invited the Supreme Court of Texas to revisit the issue. [See *id.*]

Accepting the invitation, the Supreme Court of Texas initially concluded that *Matagorda County* did not control, finding it distinguishable from the facts before it. The Court noted that, in *Matagorda County*, it was concerned with the situation when an insurer has a unilateral right to settle and the insurer could accept a settlement that the insured considered out of the insureds financial reach. [See *Excess Underwriters at Lloyds v. Franks Casing Crew & Rental Tools*, 2005 Tex. LEXIS 418 (Tex. May 27, 2005) (*Franks Casing I*).] The Court viewed *Franks Casing I* in a different light:

The facts of the case before us today lead us to conclude that this concern is ameliorated if not eliminated in at least two circumstances:

- 1) when an insured has demanded that its insurer accept a settlement offer that is within policy limits; or
- 2) when an insured expressly agrees that the settlement offer should be accepted.

In these situations, the insurer has a right to be reimbursed if it has timely asserted its reservation of rights, notified the insured it intends to seek reimbursement, and paid to settle claims that were not covered.

[*Id.* at *3.] Having found those conditions satisfied in the case before it, the Supreme Court reversed the lower court, remanding the case to the trial court to render judgment in favor of Excess Underwriters. Notably, the Court concluded that [r]equiring an insured to reimburse its insurer for settlement payments if it is later determined there was no coverage does not prejudice the insured. [*Id.* at *4.] Moreover, the Court said that [t]he insurer should be entitled to settle with the injured party for an amount the insured has agreed is reasonable and to seek recoupment from the insured if the claims against it were not covered. [*Id.*] The Courts ruling had three concurring opinions and left many questions unanswered.

Franks Casing II--But on Second Thought. . . . *Franks Casing I* ignited a clash that was particularly loud between insureds and their defense counsel on one side of the fence and the insurance industry on the other. As evidence of that battle, a motion for rehearing was filed and an onslaught of *amicus curiae* briefs were filed on both sides. Insurers loved the result of *Franks Casing I*, whereas insureds and defense counsel strongly contested the result. Apparently, a similar battle existed between justices of the Supreme Court as well, as it took close to two years to issue a new opinion on rehearing.

In its new opinion, the Court, without ever mentioning its prior reasoning in the case, reversed itself, finding no exception existed to the rule set forth in *Matagorda County*. [See *Excess Underwriters at Lloyds London v. Franks Casing Crew & Rental Tools, Inc.*, 2008 Tex. LEXIS 92 (Tex. Feb. 1, 2008) (*Franks Casing II*).] In other words, no right of reimbursement exists after settlement if the insurer has not first obtained the insureds clear and unequivocal consent to the settlement and the insurers right to seek reimbursement. [*Id.* at *1.] Because *Franks Casing* had agreed only to first part--the settlement--but not the second part--the insurers right to seek reimbursement--the Court did not allow Excess Underwriters a right to reimbursement.

In support of its decision, the Court explained Texas law regarding reimbursement, beginning with its prior decision in *Matagorda County*. The majority explained that its analysis in that earlier case emphasized the dilemma faced by the insured and its insurer when a claimant presents a reasonable settlement offer, within policy limits, but coverage is unclear. If an insurer rejects such an offer, it faces significant potential liability for bad-faith insurance practices under Texas *Stowers* doctrine, if it eventually fails in its coverage contest against its insured. By refusing to allow a right of reimbursement, coverage in such cases is created even though it is ultimately determined not to exist. On the other hand, though, the insured in that same situation is forced to choose between rejecting a settlement within policy limits or accepting a possible financial obligation to pay an amount that may be beyond its means, at a time when the insured is most vulnerable. [*Id.* at *3 (quoting *Matagorda County*, 52 S.W.3d at 134).] The Court resolved that quandary, determining that the risk of coverage uncertainties was best placed with the insurer.

After discussing its reasoning in *Matagorda County*, the Court noted that several *amicus curiae* in *Franks Casing*

had warned that an implied right of reimbursement would create a significant conflict for defense counsel during settlement negotiations. Specifically, if the insured agrees that a settlement offer is reasonable, and the right of reimbursement is implied, defense counsels role in evaluating and recommending settlement possibly could advance the insurers interest over that of its insured. Thus, the *amici* argued, because defense counsel would be hindered, both the insured and insurer could be forced to retain settlement counsel to evaluate the case before it and formulate strategy for a future lawsuit regarding reimbursement. While it acknowledged that the fears may not be real, the Court noted that they foreshadow the significant distrust possible in the relationship between an insurer and its insured during settlement if the right of reimbursement were implied.

On a similar note, the Court discussed the concerns the *amici* held regarding the lack of incentive an insurer has for negotiating a favorable settlement for its insured when an implied right of reimbursement exists. In other words, because the insured likely will bear the obligation of paying a settlement if coverage is found to not exist, during settlement negotiations the insurer might shortchange the insured, curtailing attorneys fees and expenses, settling quickly at a high settlement amount, and avoiding any potential *Stowers* liability. Subsequently, any eventual litigation regarding reimbursement likely will be prolonged with the insured footing its own bill, effectively negating the insurance it purchased for the very purpose of hedging the risk and expense of future litigation. [*Id.* at *5.] The Court, finding that it had weighed these same concerns in *Matagorda County* and that the insurer was better positioned to handle them, the Court in *Franks Casing II* refused to overrule that earlier decision--even though it had done so in *Franks Casing I*.

The Court then addressed Excess Underwriters position that this case could be distinguished from *Matagorda County*. The carriers argued that, by actively requesting the settlement offer and demanding that its insurer settle the claim, Franks Casing impliedly had agreed to the right of reimbursement. The Court, however, failed to see how Franks Casings actions amounted to anything but an obvious demonstration that it believed the claim should be settled. Rather, both parties held firm in their respective coverage positions, including the existence (or not) of a right to reimbursement. The Court said, This is a far cry from impliedly consenting to reimbursement. . . . Given the parties explicit efforts to preserve their positions, it makes no more sense to say that Franks Casing impliedly agreed to reimburse the carriers than it would to say that the carriers impliedly agreed to waive their coverage position. [*Id.* at *5.] As such, because Franks Casings was consistent in its position that the insurers alone were responsible for the claims, its agreement to reimbursement could not be implied. Moreover, the Court did not believe the policys consent-to-settle language had anything to do with the Excess Underwriters right to reimbursement should they choose to negotiate settlement of a claim.

Excess Underwriters also alleged that the equitable theories of *quantum meruit* and *assumpsit* also favored the existence of a right of reimbursement. The same theories had been rejected by the Court in *Matagorda County*, but Excess Underwriters tried to distinguish that case because Franks Casing had sought The settlement demand from its claimant and specifically demanded that its insurer pay it. The Court determined that those distinctions failed to allay the concerns underlying its analysis in *Matagorda County*. The Court continued to be concerned that an insured would be forced to choose between rejecting a settlement within policy limits or accept a financial obligation in an amount that may be beyond its means. Accordingly, it refused to grant a right of reimbursement. Moreover, the Court refused to rewrite the parties contract or add to its language. In addition, the Court rejected a request that it overrule its decision in *Matagorda County* and follow opinions issued in California and Florida, both of which permitted a right of reimbursement.

In closing, the Court addressed the dissenting opinions of Justice Hecht and Justice Wainwright. Justice Hecht believed an equitable reimbursement obligation should have been imposed on Franks Casing. Justice Wainwright, on the other hand, thought Franks Casings acquiescence in the settlement meant Excess Underwriters should be entitled to an implied-in-fact right of reimbursement. The Court previously addressed these same arguments in *Matagorda County* and, once again, it refused to adopt either position. With regard to Justice Hechts opinion, the Court said that his approach would breed uncertainty and promote litigation rather than settle it. [*Id.* at *9.] That is, whether an insurer would be entitled to a right of reimbursement would depend upon the financial status of its insured. Those with less

economic heft than *Franks Casing* but more than Matagorda County might or might not be on the hook, depending upon how a court might view the equities presented. [*Id.*] Turning to Justice Wainwrights arguments, the Court again explained that *Franks Casings* could not be found to have agreed to the insurers right of reimbursement just because it stayed firm as to its position regarding coverage and demanded that the reasonable settlement offer be paid.

Commentary. The Courts holding in *Franks Casing II* is another in a growing line of favorable decisions for insureds in Texas, qualifying as one of the most significant decisions issued by the Supreme Court of Texas in recent years. Although never addressing its prior analysis in *Franks Casing I*, an opinion authored by Justice Owens who now is a judge on the U.S. Fifth Circuit Court of Appeals, the Court returned Texas law to its post-*Matagorda County* state. In other words, an insurer only is entitled to a right of reimbursement if the insurer: (1) obtains the insureds clear and unequivocal consent to a settlement offer; and (2) the insureds clear and unequivocal consent to the insurers right of reimbursement. This is significant in that defense counsel and/or coverage counsel for the insured are no longer constrained when a *Stowers* demand is received (Note: the Court assumed without discussing the issue that a demand within the policy limits of an excess policy qualified as a *Stowers* demand). Prior to *Franks Casing II*, a letter from defense counsel or coverage counsel stating simply that the settlement demand was reasonable might have subjected the insured to a right of recoupment. In light of the Courts ruling, however, defense counsel is free to evaluate the merits of the *Stowers* demand and coverage counsel is free to demand that the insurer accept the *Stowers* demand without fear of subjecting the insured to a right of recoupment. On the other hand, the insurer is left to weigh the extra-contractual risk of rejecting a settlement offer.

Whether this means that more insurers will be less likely to settle claims quickly on behalf of their insureds remains to be seen. Even with no guarantee of a right of reimbursement, however, insurers likely still will be willing to enter settlements when coverage is questionable in light of the continuing *Stowers* doctrine. Thus, even though it is not assured of a right to reimbursement, an insurer will think twice before rejecting a *Stowers* demand that could subject them to a significant financial obligation if they ultimately are wrong about coverage. That being said, a potential downside is that *Franks Casing II* likely will lead to more (and earlier) declaratory judgments in which insurers will attempt to obtain a declaration as to their rights and obligations when coverage under a policy is questionable. In fact, the Court basically encouraged insurers to seek prompt resolution of coverage disputes. Moreover, insurers may soon seek approval for amendatory endorsements specifically providing for a right of reimbursement from its insured.

Manning on Sahli v. Woodbine Bd. of Education

2008 Emerging Issues 2005

Manning on Sahli v. Woodbine Bd. of Education

By Diana C. Manning and Benjamin J. DiLorenzo

March 6, 2008

SUMMARY: In *Sahli v. Woodbine Bd. of Educ.*, 193 N.J. 309 (2008), the New Jersey Supreme Court held that counsel to local boards of education are not entitled to indemnification from the school district when sued in their capacity as counsel to the board. Given this bright line rule, practitioners representing boards of education are cautioned to review the terms of their professional liability coverage so that they are not left uninsured.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: As noted by Justice Albin, concurring in part and dissenting in part in the New Jersey Supreme Courts recent Opinion in *Sahli v. Woodbine Bd. Of Educ.*, 193 N.J. 309, 324 (2008), attorneys representing the nearly 600 local boards of education in New Jersey may be surprised to learn that they do not hold a position in local government. While Ronald Sahli, Esq., the appointed attorney for the Woodbine Board of Education was not ultimately responsible for legal fees incurred in defending a suit filed by a former Board employee against both the Board and the Boards attorney, the Supreme Courts ruling serves as a warning to attorneys representing local boards of education to carefully select and review their professional liability insurance policies to avoid a pitfall that leaves them uninsured.

The *Sahli* decision involved interpretation of N.J. Stat. Ann § 18A:16-6, which requires local boards of education to defend and indemnify any person holding any office, position or employment under the jurisdiction of any board of education in any civil action or administrative proceeding brought against these individuals. Both the Woodbine Board of Education and its attorney were sued by a former employee of the school district who alleged violations of the Conscientious Employee Protection Act (CEPA). The challenged conduct related to the attorneys participation in executive session board meetings wherein decisions regarding the plaintiffs employment status were made. During these meetings, the board attorney was appointed to act as secretary *pro tem* because of concerns regarding the standing secretaries past breaches of confidentiality. While the trial court held that board counsel was entitled to indemnification under N.J. Stat. Ann. § 18A:16-6, the Supreme Court affirmed the Appellate Divisions holding that as an independent contractor, board counsel did not qualify as an individual holding an office, position or employment under the jurisdiction of the Board of Education entitled to indemnification. The Supreme Court did, however, find the attorney was entitled to indemnification to the extent he was acting as secretary *pro tem*, an office of the Board. Similarly, the Supreme Court found that because the board attorney did not satisfy the definition of insured under the school districts Joint Insurance Fund policy, he was not entitled to coverage.

Clarification of The Nature of Board Counsel. The *Sahli* decision leaves little doubt that board attorneys are not entitled to indemnification for actions undertaken in their role as counsel to the Board. The Appellate Division opinion, summarily affirmed by the Supreme Court, was based on both the statutes legislative history and prior precedent finding independent contractors of the Board to be beyond the scope of the indemnification statute. Specifically, *Hartmann v. Maplewood School Transp. Co.*, 109 N.J. Super. 497 (App. Div. 1970), the Appellate Division held that a bus driver employed by an independent bus company was not entitled to indemnification under the statute. As explained by the *Sahli* Court, the *Hartmann* decision supports the proposition that a third party whose relationship to a board of education is purely contractual is not a person holding any office, position or employment with a board of education. Similarly, the Appellate Division reasoned that the absence of any discussion of board counsel in the statutes long legislative history further supported its conclusion.

Much like Justice Albin, many practitioners may quarrel with the Courts equation of a bus drivers contractual relationship with a board of education to that of the intimate role board counsel plays in school district decision-making. Regardless, the *Sahli* decision makes clear that statutory indemnification is unavailable to board counsel because they do not hold a position under the jurisdiction of the Board.

Professional Liability Insurance Issues Implicated. Important to practitioners is the potential impact of the *Sahli* decision on their ability to seek defense and indemnification from their professional liability insurance carrier when they are sued in their capacity as counsel to a board of education. The *Sahli* opinion contains minimal discussion of professional liability insurance coverage issues other than to recognize that the boards counsel was defended by his professional liability carrier in the employees civil action. The underlying matter settled without any contribution from board counsel, and the claim at issue in *Sahli* was a subrogation action driven by the attorneys insurance carrier. Although the coverage issues were not discussed, the implication to practitioners representing local boards of education is significant.

Many professional liability policies contain an exclusion for claims arising out of the insureds services and/or capacity as: a public official, or an employee of a governmental body, subdivision, or agency. While the *Sahli* Court rejected characterizing board counsel as one holding a position on a board of education, its holding was limited to the meaning of position under the indemnification statute. Professional liability coverage issues were not at issue.

However, broader coverage that limits the scope of the exclusion is available in the marketplace. For example, some policies include the above language, but limit the exclusion by stating that it is applicable unless the Insured is deemed an employee solely by virtue of rendering Professional Services to such governmental body, the remuneration for which services inures to the benefit of the named insured. This language indicates that if the relationship between the attorney and the local governmental body is solely one in which legal services are rendered, the exclusion does not apply.

The *Sahli* decision serves as an important reminder to practitioners serving as board counsel to carefully select and review the scope of insurance coverage provided by their professional liability policies.

Sonnenschein, Nath & Rosenthal, LLP on Wade v. EMCASCO Insurance Co.

2008 Emerging Issues 1977

Sonnenschein, Nath & Rosenthal, LLP on Wade v. EMCASCO Insurance Co.

By William T. Barker

March 3, 2008

SUMMARY: Plaintiffs with claims exceeding defendants insurance policy limits have sought to remove those limits by setting up the insurer for bad faith claims. A common method has involved making time-limited settlement demands while withholding information important to settlement evaluation. An insurer could argue that its conduct was reasonable with the information available to it but could not attack the plaintiffs conduct in the attempted set-up.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: [T]he doctrinal impetus for insurance bad faith claims derives from the idea that the insured must be treated fairly and his legitimate interests protected. . . . In other words, the justification for bad faith jurisprudence is as a shield for insureds--not as a sword for claimants. Courts should not permit bad faith in the insurance milieu to become a game of cat-and-mouse between claimants and insurer, letting claimants induce damages that they then seek to recover, whilst relegating the insured to the sidelines as if only a mildly curious spectator.

Peckham v. Continental Casualty Insurance Co., 895 F.2d 830, 835 (1st Cir. 1990).

On April 10, 2007, the United States Court of Appeals for the Tenth Circuit issued an opinion which gives insurers a new means of defending against bad faith claims manufactured by the conduct of plaintiffs. In *Wade v. EMCASCO Insurance Company*, n1 the plaintiff had made a policy-limits settlement offer, but then neglected to send the medical records and releases necessary for the insurer to evaluate the claim. When the insurer did obtain the necessary records and promptly authorized a policy-limits settlement, the plaintiff rejected the offer and brought a bad faith claim well in excess of the policy limits. The court in *Wade* ultimately rejected the bad faith claim, holding that it was the plaintiffs manipulative conduct that caused the failure to settle, not any bad faith on the part of the insurer. The below article lays out the problem surrounding bad faith set-ups, summarizes how prior cases have handled them, and then discusses the recent approach used in *Wade* to address them.

I. The Problem of Bad Faith Set-Ups

Since 1914, courts have began reading an implied duty of good faith and fair dealing into every insurance contract. n2 Actions arising out of this implied duty include claims against insurers for a bad faith failure to settle. n3 When an insured is held liable for a claim, the insurer is generally only obligated to pay up to the policy limits. n4 When,

however, an insurer has wrongfully rejected a settlement offer within the policy limits and the insured is subsequently held liable for an amount in excess of the limits, the insurer may be obligated to pay the full amount of the judgment.
n5

Such claims for a bad faith failure to settle are intended to protect the interests of the insureds who are presumed to be in an inferior financial and bargaining position to insurers. Courts have reasoned that if insurers are insulated from any liability in excess of the policy limits, they may be more willing to risk litigation and an obligation to pay the policy limits in the hopes of having to pay nothing. n6 By holding insurers liable for excess judgments when they have wrongfully refused a policy limits settlement, however, courts can better protect the interests of the insured who would otherwise have to pay the excess judgment.

The jurisprudence of bad faith claims is intended as a shield for insureds, protecting them from unnecessary excess judgments. n7 Instances of gamesmanship, however, have arisen in which third-party plaintiffs attempt to manufacture bad faith claims and use them as a sword. Insurers will generally be in a better financial position than their insureds, creating an incentive for an injured third-party plaintiff to find ways to hold an insurer liable for the entire judgment. To this end, plaintiffs have made attempts to induce insurers to stumble into bad faith claim traps. By using manipulative conduct such as settlement offers with unreasonably short deadlines, withholding information necessary to evaluate a claim, or arbitrarily withdrawing offers, claimants have been able to set traps for insurers in which any misstep may lead to a bad faith claim.

II. Prior Bad Faith Set-Up Cases

Because bad faith claims arise out of the insurers duty of good faith and fair dealing, much of the analysis has centered around whether the insurers conduct was reasonable. While this allows for arguments that a third-party plaintiffs conduct justified the refusal by the insurer, the focus in these cases is still squarely on the *insurers* conduct.

In *Brown v. Liberty Mutual Fire Insurance Company*, the third-party plaintiffs counsel made a request for the policy limits, but did not provide any information about the claimants medical condition and denied requests for authorization to obtain the medical records. n8 In affirming a summary judgment that the insurer did not act in bad faith, the court focused on whether the insurer had acted arbitrarily or in bad faith. n9 While the factors considered by the court included the nondisclosure of relevant factors by the insured, the court examined the factors in light of whether such conduct rendered the insurers conduct reasonable. n10 The court did not analyze the third-party plaintiffs conduct for independent culpability.

Similarly in *Safeway Insurance Company v. Botma*, the court focused on whether the insurer acted reasonably when it did not make a settlement offer until it received medical records. n11 Again, the claimant had delayed almost a year to forward medical records, but the ultimate consideration was whether this justified the insurers conduct. n12 In *Thomas v. Lumbermens Mut. Cas. Co.*, the claimants failure to deliver medical records was viewed in the light of whether the insurer conducted a reasonable investigation. n13

In *McCulloch v. Hartford Life & Accident Insurance Company*, the claimant (1) failed to provide a copy of her driver's license for several months and (2) submitted a physician statement from a doctor in Florida while she lived in Massachusetts, but these were given as justifiable reasons for the insurer refusing to pay, not as conduct to be analyzed separately as culpable. n14

While the court in *American Mutual Insurance Company v. Bittle*, described the deadline on claimants demand as arbitrary and unreasonable because it required the insurer to make a decision before having a chance to interview the investigating police officer, the court ultimately used this as a measure of the insurer acting in good faith. n15 In *Glenn v. Fleming*, the court affirmed a finding that the *insurer* had not acted in bad faith because the claimants settlement offer was premature and was only open for two weeks. n16

Even in a case in which the court felt the claimants conduct was a manipulative attempt to capitalize on a

miscommunication, the issue was still whether the insurers conduct had risen to the level of bad faith or not. n17

III. *Wade v. Emcasco Insurance Company*

Wade v. EMCASCO Ins. Co., 2007 U.S. App. LEXIS 8227 (10th Cir. 2007)

A. Factual Background. While all the preceding cases provided ways for an insurer to prove that its refusal of a settlement offer was reasonable, none took the approach found recently in *Wade v. EMCASCO Insurance Company*. In *Wade*, the Tenth Circuit shifted the paradigm and focused on the conduct that caused the refusal to settle, whether it be the conduct of the insurer, the insured, or the third-party plaintiff. n18 This sort of analysis opens up the possibility of analyzing the culpability of the third-party plaintiffs conduct independently, rather than just as a measure of how reasonable an insurers conduct was.

Counsel for the third-party plaintiff in *Wade* acted similarly to those in the cases discussed above. Ninh Nguyen was injured in a car accident with Jerry Wade, EMCASCOs insured. n19 Mr. Nguyen was in the hospital for a severe spinal cord injury, but there was some question as to whether or to what extent this injury had been caused by the accident. n20 An investigator was hired by EMCASCO to gather statements from the insured and witnesses to the accident, but the investigator had difficulty ever reaching the primary witness. n21

Mr. Nguyen retained Gary Patterson to represent him in the matter, and as early as March 29, 2001, Mr. Patterson had obtained a medical release from Mr. Nguyen. n22 Mr. Patterson requested an itemized list of medical expenses on April 6, 2001. n23 Despite repeated attempts by EMCASCO to obtain a copy of the emergency medical records and repeated promises from Mr. Paterson that he would send them, it would not be until October 30, 2001 that Mr. Patterson would forward the pertinent emergency medical records. n24

Despite this delay in providing medical information, Mr. Patterson made his first policy limits settlement offer to EMCASCO on May 1, 2001. n25 This offer *expired* a full two weeks before Mr. Patterson, himself, had even received Mr. Nguyens medical records from his time in the hospital following the accident. n26 Even once he received these records on June 28, 2001, Mr. Patterson waited four months before sending them to EMCASCO, and by that time all settlement offers had expired. n27 Mr. Patterson delayed the process in other ways as well. As early as May 21, 2001, Mr. Patterson had spoken with the key witness. n28 Though he knew EMCASCO was trying to reach the witness, Mr. Patterson only forwarded a copy of the witnesss statement on August 2, 2001, five weeks after he had received it. n29

Mr. Patterson made a second policy limits settlement offer on August 2, 2001. n30 Still without having sent the emergency medical records to EMCASCO, Mr. Patterson withdrew this offer on August 20, 2001. n31 In late October, frustrated with not having received the necessary medical records, David Cooper, counsel for EMCASCO, requested that Mr. Patterson supply EMCASCO with a release to obtain the records themselves. n32 Mr. Patterson promptly responded by sending a medical release, but signed it himself rather than have his client, the patient sign it; the medical release was not accepted by the hospital. n33

Finally after further prompting by Mr. Cooper, Mr. Patterson forwarded the necessary medical records on October 30, 2001, and EMCASCO, now able to evaluate the claim fully, authorized a policy limits settlement the very next day. n34 Having delayed EMCASCOs ability to evaluate the claim for at least four months, Mr. Patterson now felt that it was too late to settle for the \$100,000 policy limit and enlisted an attorney who specialized in bad faith claims to bring such an action against EMCASCO for \$3,000,000. n35

B. Discussion. The courts in the cases discussed above when presented with these facts may have reasoned that EMCASCO had acted reasonably in not settling before having received the necessary medical records. In affirming summary judgment in favor of EMCASCO, the Tenth Circuit in *Wade* did recognize this analysis of insurer conduct as important and considered the following factors established by *Bollinger v. Nuss*:

(1) the strength of the injured claimant's case on the issues of liability and damages; (2) attempts by the insurer to

induce the insured to contribute to a settlement; (3) failure of the insurer to properly investigate the circumstances so as to ascertain the evidence against the insured; (4) the insurer's rejection of advice of its own attorney or agent; (5) failure of the insurer to inform the insured of a compromise offer; (6) the amount of financial risk to which each party is exposed in the event of a refusal to settle; (7) the fault of the insured in inducing the insurer's rejection of the compromise offer by misleading it as to the facts; and (8) any other factors tending to establish or negate bad faith on the part of the insurer. n36

The *Wade* court, however, took the analysis further and wrote:

It is . . . necessary to take into consideration, in addition to the other pertinent *Bollinger* factors, relevant aspects of the third-party plaintiffs conduct, including any responsibility the plaintiff might have for the insurers lack of adequate information upon which to judge a proposed settlement offer and the reasons the plaintiff had for declining to entertain an offer after expiration of a deadline. n37

While the facts in *Wade* discussed above may have been enough to establish that EMCASCO acted reasonably, focusing on whether Mr. Petersons conduct was improper shifts the context of the facts and allows insurers greater leeway to argue that a bad faith claim should fail. The *Wade* court was convinced that Mr. Peterson had acted improperly and his conduct, not EMCASCOs, had caused the failure to reach a settlement and the excess judgment. n38

Furthermore, the court found that the undisputed evidence showed that Mr. Petersons sole reason for rejecting EMCASCOs settlement offer was so that he could pursue a bad faith claim. n39 In fact, Mr. Patterson had proceeded from the very beginning with a bad faith claim in mind. n40

The court believed that a finding of bad faith in such a situation would turn the law on its head and wrote:

The cause of action for failure to settle is meant to protect the interests of the insured by requiring the insurer to conduct the litigation, including settlement negotiations, as if the insurance contract had no policy limits. It is not meant to create an artificial incentive for third-party claimants to reject otherwise reasonable settlement offers that are within the policy limits. We would be turning the cause of action on its head by holding an insurance company liable where it eventually offered to settle the claim for the policy limits, but a claimant rejected the offer precisely in order to manufacture a lawsuit against the insurer for bad-faith refusal to settle. n41

Wade is a clear case of a third-party plaintiff attempting to set-up an insurer for a bad faith claim. Rather than just find that the insurer acted reasonably under these circumstances, the *Wade* court pointed the finger at the third-party plaintiff. Doing so opens up the possibility for insurers to mount successful attacks on third-party plaintiffs attempts to manufacture bad faith claims in the future. Rather than merely pleading innocence and defending their conduct, insurers in the future may be able to shift the analysis of blame to third-party plaintiffs improperly using an insureds shield as their sword.

2008 Emerging Issues 112

Wildermuth on the Repercussions of the Subprime Mortgage Crisis on D&O Insurance, Part II of III

By Matthew R. Wildermuth

February 28, 2008

SUMMARY: Now that the subprime mortgage crisis has crashed the party of Wall Street, financial institutions everywhere are evaluating whether such losses are going to incite investors to bring suit against the institution. This article addresses the issues that should be at the forefront of general counsel's mind when evaluating how any directors and officers liability policy the company has in place may respond to claims and suits of this nature.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: Introduction

To the extent there was any confusion about what it meant, the resounding thud heard on Wall Street during the first few weeks of January 2008 was the sound of the other shoe dropping. Despite previous assurances that the impact of the subprime mortgage meltdown was contained, on January 18, Merrill Lynch announced write-downs of \$14 billion attributable to subprime lending losses; Citigroup, not to be outdone, disclosed write-downs the same day totaling \$18 billion [Nick Timiraos, *Why Banks' Pain Could Continue*, Wall Street Journal (Jan. 19, 2008)]. At more than \$100 billion in losses across the financial institution industry (and still counting), the subprime-collateralized debt obligation fiasco is threatening to eclipse the havoc wreaked on the economy by the savings & loan crisis [*id.*].

It is beyond the scope of this commentary to address in any detail the causes, the viability of the proposed remedies or the ultimate fallout of the subprime mortgage crisis. For purposes of this commentary, suffice it to say that the deepening housing slump has adversely affected the value of the collateral securing individual mortgage loans and that this problem has been compounded exponentially by investment vehicles that packaged large pools of mortgages into a single block which was then used as collateral for other debt obligations. These aggregated packages were supposed to be insulated from wild swings in value by the diversity of the properties and rendered more stable by being secured with hard assets (the borrowers homes). Billions of dollars of losses later, it turns out neither proposition was true [*Finding Default*, The Economist, Jan. 17, 2008]. How Merrill Lynch, Citigroup, Bear Stearns and other financial experts others got into this mess (and took many of their equally sophisticated investors along with them) will be a critical part of the

analysis as the blame assessment process kicks into high gear (some of which has happened already) [Craig Karmin, *Springfield, Mass., Takes Aim at Merrill Over Subprime Losses*, Wall Street Journal, Jan. 19, 2008 at B1; Dan Levine, *Subprime Loans Could Yield Lots of Work for White-Collar Defense Lawyers*, The Recorder (Dec. 26, 2007)].

Because the losses at issue already exceed tens of billions of dollars, the conduct underlying these losses will be scrutinized in oppressive detail, not only by the investors seeking to recoup their losses but by the insurers to whom the accused entities will turn, seeking to maximize the coverage potentially available through the companies directors and officers liability policies (D&O policies). The stakes for all parties will be high and the battles over insurance coverage both for defense and indemnity costs will be bruising. Based on experience with other major meltdowns, lets look at what are expected to be three of the bloodiest battlegrounds as these disputes heat up.

The Insurers Attempt to Rescind the Policy Based on One or More Alleged Misrepresentations or Non-Disclosures in the Application Process

The key question here is whether the company made any misrepresentations or non- disclosures in its application for directors and officers liability insurance that are sufficiently material to the risk assumed or the terms and conditions under which coverage was provided that the insurer has grounds to deny coverage, whether based on fraud in the inducement or breach of the representation and warranty clause in the policy. Insurance practitioners are familiar with the "garden-variety" misrepresentation cases one often sees in life and medical insurance policies (failure to report existing conditions and prior procedures) and general liability policies (non- or under-disclosure of previous losses, current conduct presenting increased risk). In the D&O context, the lines are not so clearly drawn. The insurer seeking rescission must establish that the statements made (or omitted) in the application were (a) material and false at the time; and (b) actually contributed to the increased risk of loss under the policy [see Ostrager & Newman, *Insurance Coverage Disputes* (10th Ed.) § 20.02[a]]. This can be tricky given changes in the marketplace that happen daily that may impact a stocks value and the corporations bottom line. The court in *ClearOne Communications, Inc. v. Lumbermens Mut. Cas. Co.* [2005 U.S. Dist. LEXIS 26187, at *40 (D. Utah 2005), at *40], discussed in detail below, described the standard as follows:

A misrepresentation is material if it diminishes an insurers opportunity to evaluate or estimate risk. *Berger v. Minn. Mut. Life. Ins. Co.*, 723 P.2d 388 (Utah 1986); see also *Utah Power & Light v. Federal Ins. Co.*, 983 F.2d 1549, 1555 (10th Cir. 1993). The test for whether a fact is material to the risks assumed under an insurance policy is whether reasonable insurers would regard the fact as one which substantially increases the chance that the risk insured against will happen and therefore would reject the application [citations omitted]. A companys financial statements are indicative of its financial health and, therefore, generally evaluated by an insurer before issuing a policy. *Cutter & Buck, Inc. v. Genesis Ins. Co.*, 306 F. Supp. 2d 988, 1003 (W.D. Wash. 2004). In *Cutter & Buck*, the insurer sought to rescind a policy on the basis that the financial statements were materially misrepresented and it had relied upon them. The court noted the general principle that when an insurer asks for no information pertaining to a particular matter, it can be assumed that the matter is not material. *Id.* at 1003 [citation omitted]. But the court noted that the opposite is also true: This implies that when an insurer specifically asks information in regard to a certain matter, the presumption is that the matter is material. *Id.* [citing numerous non-Washington cases for this principle].

Given this focus on the content of the application and information provided in response, insurers continually have sought to improve the application form and incorporate new developments in the law.

One example of this is insurers incorporation of the reporting and certification obligations imposed under the Sarbanes-Oxley Act, which, among other things, requires C level executives to affirmatively seek out information within the corporation regarding the true financial picture and risks faced by the corporation. Specifically, the principal executive officer or officers and the principal financial officer or officers of a publicly traded entity must certify in each quarterly and annual report filed or submitted to the Securities & Exchange Commission that:

. he or she has reviewed the report;

. based on his or her knowledge, the report does not contain any untrue statement of a material fact or omit to state a material fact necessary in order to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by the report;

. based on his or her knowledge, the financial statements, and other financial information included in the report, fairly present in all material respects the financial condition, results of operations and cash flows of the issuer as of, and for, the periods presented in the report; [see Sarbanes-Oxley Act of 2002, 15 U.S.C. § 7241(a)(1)-(4).]

The certifying officers also must have disclosed to the corporation's auditors and to the audit committee of the board of directors any fraud, whether or not material, that involves management or other employees who have a significant role in the issuer's internal controls [*id.*].

D&O applications now routinely include statements the corporations make in their respective SEC disclosures as part of the representations and warranties constituting the policyholders formal insurance application. For example, a specimen wording comprising part of a Financial Institution Portfoliosm policy available from Chubb defines Application to mean:

All signed applications, including attachments and other materials submitted therewith or incorporated therein, submitted by the Insured to the Company for this coverage section or for any coverage section or policy of which this coverage section is a direct or indirect renewal or replacement. Application shall also include, for each Organization, all of the following documents whether or not submitted with or attached to any such signed application: (i) the annual report (including financial statements) last issued to shareholders before this policy's inception date; (ii) the report last filed with the Securities and Exchange Commission on Form 10K before the policy's inception; [quarterly statements, proxy statements, other SEC filings and the like].

[The referenced policy form, viewable at <http://www.chubb.com/businesses/csi/chubb2373.pdf>, is cited solely as an example and may or may not be the definition actually incorporated into any particular policy.]

Insurers thus obtain an extra measure of protection against material misrepresentations and omissions during the underwriting process. However, because the evidence pertinent to the insurers rescission claim now will be largely the same as the evidence the SEC, investors or others will employ to prove liability in the underlying action, sticky situations will develop as these competing interests come into conflict.

The *ClearOne* case illustrates how these issues may present in an actual case. [Although this case involved some claims that had already been resolved prior to the parties litigating the insurers rescission claim, it is one of the only rescission cases addressing the incorporation of Sarbanes-Oxley certifications in the application that has resulted in a dispositive decision.] In September 2002, ClearOne applied to National Union for a directors & officers liability policy. The application ClearOne submitted included the following statement in bold capital letters: All written statements and materials furnished to the insurer in conjunction with this application are hereby incorporated by reference into this application and made part hereof [2005 U.S. Dist. LEXIS 26187, at *5-12]. One of the application questions asked the applicant to either provide copies of its most recent SEC filings or direct National Union to an internet location where it could obtain them. ClearOne directed National Union to ClearOnes website for these documents and its CEO signed the application and certified the information provided therein was true and accurate [*id.*].

National Unions underwriters began evaluating the financial information and developed concerns about the manner in which ClearOne recognized revenues. The lead underwriter contacted ClearOnes broker to obtain confirmation that ClearOnes corporate officers had made the appropriate Sarbanes-Oxley disclosures to the SEC and requested the broker to have ClearOne expressly represent that ClearOnes revenue recognition practices had not previously resulted in any non-compliance notices from the SEC or any other regulatory officials [*id.*]. The broker made the requested inquiries

and reported back to National Union that ClearOne had executed the Sarbanes-Oxley statements and had not been the subject of any noncompliance notices. In reliance on these statements, National Union issued a D&O policy to *ClearOne* [2005 U.S. Dist. LEXIS 26187, at *11-12].

In early 2003, ClearOne notified National Union that it had been sued by various shareholders and that ClearOne and its CFO would be seeking coverage for their losses under the *Policy* [2005 U.S. Dist. LEXIS 26187, at *29]. During the course of those lawsuits, ClearOne acknowledged that its accounting practices in recording and recognizing revenues were not in compliance with generally accepted accounting principles and ultimately conceded that it had recognized revenue before the amounts charged to both distributors and nondistributors were considered fixed and determinable or reasonably collectible [2005 U.S. Dist. LEXIS 26187, at *25-26]. National Union responded to ClearOne's tender by directing ClearOne to the admissions it had made regarding its financial statements, stated that those financial statements were material to National Union's risk analysis and reminded ClearOne that National Union had relied on those financial statements in issuing the *Policy* [2005 U.S. Dist. LEXIS 26187, at *29]. Based on these misrepresentations, National Union sought to rescind the *Policy*.

The district court had little difficulty finding that ClearOne's financial statements were misstated but noted that rescission of an insurance policy requires proof of more than an innocent misstatement [2005 U.S. Dist. LEXIS 26187, at *40-42]. National Union argued that ClearOne's August 18, 2005 10K filing acknowledged that it inappropriately accelerated revenue in its 2001 and 2002 annual reports and SEC filings and admitted that its distributors did not have the financial resources to pay for ClearOne's products when delivered, thereby making the statements in its application incorporating those filings materially false as well [*id.*]. The district court ultimately agreed that ClearOne's representations could not be construed as being innocent:

The record, as discussed in the ClearOne's Business Practices section above, shows that ClearOne entered into Distributor Agreements with the stated policy of recognizing revenue when product shipped. But the common practice was that ClearOne did not require payment for product according to the terms of the Distributor Agreements and allowed the distributors to pay for product when it was sold. Additionally, ClearOne would ship product to the distributors without having received an order for that product. It is clearly these practices which gave rise to ClearOne's financial misstatements. ClearOne acknowledged that it was its business practices that caused the errors in its financial statements: We have a material weakness with respect to accounting for revenue recognition and related sales returns, credit memos, and allowances. Our accounting policies and practices over revenue recognition and related sales returns, credit memos, and allowances were inconsistent with generally accepted accounting principles in the U.S. (GAAP). ClearOne, through its practices, thus actually caused the inflated revenue figures. ClearOne, as an entity, was certainly aware of the conditions which gave rise to the misstated financial statements and had a reason to know that its financial statements were incorrect. Accordingly, the provision of those misstatements to National Union was not innocent [2005 U.S. Dist. LEXIS 26187, at *44-48].

The district court therefore granted summary judgment in favor of National Union, holding that the insurer had no obligation to provide coverage for the suits against *ClearOne* [2005 U.S. Dist. LEXIS 26187, at *50].

On appeal, the Tenth Circuit affirmed the district court's findings but remanded the case to address what the appeals court considered a factual dispute that, though easily addressed, had to be resolved through trial rather than on summary judgment [*ClearOne Communications, Inc. v. Nat'l Union Fire Ins. Co. of Pittsburgh*, 494 F.3d 1238, 1249 (10th Cir. 2007)]. The court found that the district court concluded that ClearOne, as an *entity*, clearly had knowledge of the revenue misrepresentations but did not address whether in fact whether the CEO (who signed the insurance application) had such knowledge [*id.*] Drawing all inferences in ClearOne's favor, the appeals court agreed that the record evidence regarding the CEOs actual knowledge of the misstatements in the 10-K was in conflict and thus not appropriate for resolution on summary judgment [494 F.3d at 1248-1250]. The court took pains to point out that

[o]n the other hand, whether she *should have known* about the misstatements is a different question, and perhaps an easier matter to establish. In the corporate context, corporate directors have a general obligation to know the financial

condition of their corporations. As a general rule an officer or director of a corporation is chargeable with knowledge of all matters relating to the affairs of the corporation which he actually knows or which it is his duty to know. Thus, in actions by strangers against an officer or director, the defendant will generally be charged with knowledge of all facts relating to the condition and business of the company which he might have known by the exercise of due diligence, whether actually known to him or not. *Gay v. Young Mens Consol. Coop. Mercantile Inst.*, *Gay v. Young Men's Consol. Coop. Mercantile Inst.*, 107 P. 237, 240 (Utah 1910); see also 2 Fletcher Cyc. Corp. § 465 ([T]he [corporate] officer is chargeable with the knowledge he or she should have had in the discharge of his or her duties.). Furthermore, under the Sarbanes-Oxley Act, the signing officer of a corporate 10-K (in this case, Flood) is required to certify the accuracy of the corporations financial statements and requires the officer to design[] . . . internal controls to ensure that material information relating to the [corporation] is made known to such officer[] by others within [the corporation]. 15 U.S.C. § 7241(a)(1)-(4) [494 F.3d at 1249].

In light of insurers express incorporation of Sarbanes-Oxley certifications into the representation and warranty provisions of the policy application, we can expect that insurers will be anxious to continue employing this new weapon in their arsenal to combat coverage for claims where the insured appears to have misrepresented material facts regarding its financial condition. As *ClearOne* illustrates, however, many of these disputes will require a full-blown trial to dispositively establish precisely what the policyholders directors and officers knew when. It is therefore an issue that will make policyholders and insurers nervous and in turn will send coverage litigators shopping for new cars.

Policy Exclusions for Fraud, Self-Dealing and Criminal Conduct

Adelphia Communications, Enron and TYCO, Inc. -- spectacular examples of corporations being used as the personal piggy banks of greed-driven corporate officers renewed the focus on the provisions in D&O policies barring coverage for fraud and profiteering from within the corporation [see, e.g., *In re Adelphia Communications. Corp.*, 298 B.R. 49, 53-54 (S.D.N.Y. 2003)]. To the extent this conduct does not trigger a suit by the insurer to rescind the policy as discussed above, the two policy exclusions most likely to come into play are the dishonesty and personal profit exclusions. We examine each in turn.

The Dishonesty Exclusion. A typical Dishonesty Exclusion in a D&O policy states:

the company shall not be liable to make any payment for loss in connection with any claims made against any of the insured persons brought about or contributed to by the dishonesty of such insured person if a judgment or other final adjudication adverse to such insured person establishes that acts of active and deliberate dishonesty or committing or attempting by such insured person with actual dishonest purpose and intent and were material to the cause of action so adjudicated [see Ostrager & Newman at § 20.20[f]].

As the court construed this language in *PepsiCo, Inc. v. Continental Cas. Co.* [640 F. Supp. 656, 660 (S.D.N.Y. 1986)], the insurer must await the outcome of the underlying litigation and is not permitted to put the directors and officers . . . on trial to determine whether or not they were, in fact, dishonest to the point that the policy will not cover them.

Significant for purposes of answering general counsels question regarding whether coverage may be available initially, this exclusion expressly requires a final adjudication of the alleged bad apples conduct, meaning the insurer cannot deny coverage based on the allegations of complaints, indictments or other documents [*id.* (exclusion for dishonesty applies only after a final judgment or other final adjudication); *In re WorldCom, Inc. Sec. Litig.*, 354 F. Supp. 2d 455, 460 (S.D.N.Y. 2005) (policy form entitling insured officers and directors to defense or advancement of defense costs requires insurer to fund such amounts pending adjudication that conduct falls within scope of exclusion)].

In the *Worldcom* coverage litigation, National Union provided the primary D&O coverage and Continentals policy was excess [354 F. Supp. 2d at 460]. The National Union policy contained the following provisions to which the Continental policy was deemed to follow form:

"NOTICE: . . . THE INSURER MUST ADVANCE DEFENSE COSTS PAYMENTS PURSUANT TO THE TERMS HEREIN PRIOR TO THE FINAL DISPOSITION OF A CLAIM."

. . .

This policy shall pay the Loss of each and every Director or Officer arising from a Claim first made against the Directors or Officers during the Policy Period or the Discovery Period (if applicable) and reported to the Insurer pursuant to the terms of this policy for any actual or alleged Wrongful Act in their respective capacities as Directors or Officers of the Company, except when and to the extent that Company has indemnified the Directors or Officers.

. . .

The Insurer shall, in accordance with and subject to Clause 8, advance Defense Costs of such Claim prior to its final disposition.

. . .

[Clause 8 of the policy provides:] Under both Coverage A and Coverage B of this policy, except as hereinafter stated, the Insurer shall advance, at the written request of the Insured, Defense Costs prior to the final disposition of a Claim. Such advanced payments by the Insurer shall be repaid to the Insurer by the Insureds or the Company severally according to their respective interests, in the event and to the extent that the Insureds or the Company shall not be entitled under the terms and conditions of this policy to payment of such Loss [354 F. Supp. 2d at 459].

After National Union entered into a settlement agreement with WorldComs bankruptcy trustee that was deemed to have exhausted the limits of the primary policy, WorldComs directors and officers turned to Continental and demanded that it advance defense costs in respect of the ongoing securities litigation [354 F. Supp. 2d at 459-460].

Continental then sought to have its excess policy rescinded based on an alleged misrepresentation in WorldComs application and argued that it had no obligation to provide defense costs or any other policy benefits to WorldComs officers and directors while its rescission claim was pending [354 F. Supp. 2d at 561-565]. The court rejected Continentals argument, holding that:

Until the issue of rescission is adjudicated, a contract of insurance remains in effect and the duty to pay defense costs is enforceable. In *Wedtech*, the Honorable Leonard Sand required an insurer to reimburse attorneys' fees as they were incurred by directors pending litigation of its right to rescind the policy as to each director. *Wedtech*, 740 F. Supp. at 221 (S.D.N.Y. 1990) (applying New York law). Relying on the policy's severability clause, the court found that the policy was not necessarily void *ab initio* with respect to each director. *Id.* at 218-19. Even more recently, the Honorable Helen Freedman held in insurance litigation arising from the criminal and civil lawsuits pending against Tyco officers that under New York law the duty to pay defense costs is unaffected by an unproven claim for rescission. *Tyco*, 2004 WL 583829, at *5. After surveying the law of several jurisdictions she found that where an insured has challenged the right of an insurer to rescind its policies and has sought an adjudication that the policies are binding, courts have enforced the obligation of the insurers to perform under the policies and to defend or to pay defense costs. *Id.* at *6. See also *PepsiCo*, 640 F. Supp. at 659, 664 (finding ongoing duty to pay defense costs where insurance company had asserted a right to terminate the policy at will) [354 F. Supp. 2d at 465].

The court therefore ordered Continental to immediately begin reimbursing the WorldCom directors and officers for defense costs as such costs were incurred [354 F. Supp. 2d at 470].

Based on the reports to date, the subprime losses appear to be less a product of affirmative dishonesty than a failure to perceive the real risk that the respective portfolios could reach their worst case scenario potential. That said, as time goes on, the issue of whether the marketers of these securities concealed information about the risk at the outset or as the adverse development materialized constitutes dishonesty as that term is used in the standard D&O policy exclusion will likely be litigated many times over.

The Personal Profit Exclusion. The standard D&O policy expressly excludes coverage for losses that arise out of or are attributable to the Insured or its directors and officers obtaining any personal profit or advantage to which the Insured was not legally entitled [see *Commercial Union Ins. Co. v. Auto Europe, L.L.C.*, 2002 U.S. Dist. LEXIS 3319 (N.D. Ill. 2002)]. The battle lines in respect of this provision initially were drawn at whether the exclusions use of the term *personal* profit indicated that it was intended to apply only to a natural person such as a director or officer, as a corporation does not have any personal rights [2002 U.S. Dist LEXIS 3319, at *8-10]. Because it can act only through its agents and is owned by its respective shareholders, the argument goes, it cannot obtain any personal profit or advantage [*id.*].

The court in *Auto Europe* ultimately relied upon, among other things, the Blacks Law Dictionary definition of person (a human being or an entity (such as a corporation) that is recognized by law has having the rights of a human being) to refute the policyholders contention [*id.*]. Because the complaint against the policyholder alleged that the corporation derived an improper benefit by overcharging its customers for value added tax on cars rented in Europe, the court found that the personal profit exclusion barred coverage for the corporation and its officers and directors as to both defense and indemnity [2002 U.S. Dist LEXIS 3319, at *11-13].

To date, little evidence has emerged that the large banks and brokerage houses have profited from the packaging of subprime loans into CDOs and related investments. To the contrary, the opposite seems to be true. There are, however, certain situations in which this issue is going to receive a lot of attention.

One such case is the opening salvo Barclays Bank launched through its December 18, 2007 complaint filed against Bear Stearns in the U.S. District Court for the Southern District of New York [Kate Kelly, *Barclays Sues Bear Over Failed Funds*, Wall Street Journal, Dec. 20, 2007 at C3. The complaint is available at <http://online.wsj.com/public/resources/documents/12192007barclays.pdf>]. While Barclays complaint is rife with allegations that Bear Stearns concealed and withheld information regarding the performance of the CDOs comprising the investment funds at issue, the complaint also alleges that Bear Stearns manipulated the fund to insulate itself from harsh losses and used multiple entities in the transaction chain to generate additional fees charged to Barclays or against the fund principal [see *Complaint* 53, 180-181]. Among other contentions, Barclays asserts that:

Bear Stearns ... used the Enhanced Fund as a place to unload excessively risky or troubled assets that could not be sold to other investors at the prices paid by the Enhanced Fund [*Complaint* 15];

Bear Stearns concealed the fund's falling net asset value from Barclays and investors in related feeder funds for as long as possible, instead of revealing the drop in value in, and the increased risk to, the Enhanced Fund, and instead of taking immediate and effective corrective action to correct problems with the Enhanced Fund [*Complaint* 5];

Bear Stearns and its management entity operated the fund deceptively, for their own or their conspirators gain, and bad faith, and in a grossly negligent manner, contrary to the duties that they owed Barclays [*Complaint* 105]; and

While the value of the fund was plummeting in February and March 2007, Bear Stearns senior manager Ralph Cioffi withdrew millions of dollars of his own money from the Enhanced Fund, while publicly making optimistic forecasts about the portfolio's prospects [*Complaint* 138].

Employing the personal profit formulation discussed in the paragraphs above, Barclays complaint clearly raises the

potential for Bear Stearns and its officers and directors to face potential liability for reimbursing its insurer(s) for any defense costs advanced pending a determination as to whether or not the conduct at issue constituted personal profit or advantage for which coverage would be barred. Because a meaningful portion of Barclays \$50 million investment and other amounts allegedly have been lost through the operation of the Enhanced Fund, the battles over whether Bear Stearns conduct was dishonest or constituted acts of personal profiteering will generate multiple rounds of trials and appeals.

Liability For The Corporate Entity

The astute general counsel will also want to investigate whether the corporation's policy provides protection to the entity itself, separate and apart from the individual directors and officers. Many insurers offer D&O policies affording optional coverage to protect the corporation itself against securities claims, sometimes along with the directors and officers and sometimes standing alone [David Gische, Directors & Officers Liability Coverage, at <http://library.findlaw.com/2000/Jan/1/241472.html>].

The addition of entity coverage for securities claims is a relatively new development, and addresses concerns and confusion raised by court rulings regarding allocation of policy proceeds between directors and officers, both as to indemnity and defense [see, e.g., *In re Adelphia Communications Corp.*, 298 B.R. 49, 53-54 (S.D.N.Y. 2003); *Nordstrom, Inc. v. Chubb & Son, Inc.*, 54 F.3d 1424 (9th Cir. 1995)].

The availability of entity coverage often generates disputes between various factions over the use of the policy proceeds, particularly when the entity is in bankruptcy. The corporate estate has an interest in preserving the policy proceeds for its own benefit; the directors and officers each have an interest in having the policy cover ongoing defense costs with respect to the claims and suits asserted against the company (which may or may not be subject to the automatic stay provisions of the Bankruptcy Code [11 U.S.C. § 362(a)]); and claimants whether shareholders, creditors or others also seek recovery for their alleged losses. Whether the corporation has priority in its claim for the use of these policy proceeds for its own defense ordinarily will be a function of how the provisions of the Insuring Agreements comprising the policy direct how those funds should be used [see Note, *In Re Adelphia Communications Corp.*, 49 N.Y.L. Sch. L. Rev. 1007-1018 (2005)].

Perhaps most significant for purposes of determining priority of payment of defense costs of the individual directors and offices is the extent to which the bankrupt corporation has a current property interest in the policy proceeds as opposed to a contingent obligation based on its obligation to indemnify directors and officers for reimbursable costs pursuant to the corporations bylaws. This was a critical issue in the *Adelphia* case, where, the corporate insured was in bankruptcy, the insurer was seeking to rescind the policy for material misrepresentations by the bad apples and the (relatively) innocent directors and officers were trying to fend off litigation already initiated against them [*In re Adelphia Communications Corp.*, 298 B.R. at 53-54. In reviewing the Bankruptcy Courts determination regarding the allocation of the policy proceeds, the District Court concluded that the corporate estates claim to the policy proceeds was not yet ripe:

Here, as far as I can tell, Adelphia does not have a property interest in the proceeds of the insurance policies yet. Although the D & O policies reimburses each estate to the extent that the estate advances funds because of the indemnification obligations in the charter or by-laws, see *Adelphia*, 285 B.R. at 592, "[i]t has not been suggested that any of the Debtors has made any payments for which it would be entitled to indemnification coverage, or that any such payments are now contemplated," *id.* at 587. Furthermore, "none of the Debtors [have] made or committed themselves to payments using their entity coverage." *Id.* Claiming the debtors now have a property interest in those proceeds makes no sense at this juncture. Such argument would be akin to a car owner with collision coverage claiming he has the right to proceeds from his policy simply because there is a prospective possibility that his car will collide with another tomorrow, or a living person having a death benefit policy, and claiming his beneficiaries have a property interest in the

proceeds even though he remains alive. No cognizable equitable and legal interest in the proceeds from the D & O policies has arisen here. Without legal and equitable interest in the proceeds, Adelpia's estate cannot be ascribed to hold a property interest in those proceeds [298 B.R. at 53-54].

Although some elements of the subprime mortgage industry will go or already have gone bankrupt, it is unlikely that any Wall Street titans such as Citigroup, Bear Stearns and Merrill Lynch, among others, will face such consequences. In some respects, that will make the battles over allocation all the more intense because real indemnification dollars could start flowing immediately as more suits like Barclays are filed and the long knives come out.

Conclusion

Whether the conflict first presents as a dispute over whether the corporate policyholder misrepresented information in its application (and the documents deemed incorporated in the application), whether the conduct of the policyholder or its directors and officers was dishonest or driven by personal profit, or whether the directors and officers defense costs will consume some or all of the coverage available to the corporate entity, the subprime mortgage crisis will spawn litigation over the parties respective rights and obligations under the operative D&O policies. Policyholders will sue insurers; insurers will sue policyholders; claimants will either participate directly in the litigation to protect their stake or will stand nervously on the sidelines cheering for whatever outcome provides them the greatest likelihood of recovery. In other words, this will be like most other significant financial, products-liability or natural crises encountered in the U.S. over the last two decades. While tremendous resources will be devoted to determining the origin of and blame for the underlying problems, more resources will be consumed answering what may now be the \$64 **billion** question: who ultimately is going to pay for it.

Shaya B. Pacific v. Wilson, Elser, Moskowitz, Edelman & Dicker

2008 Emerging Issues 1956

Milone and Lavella on Shaya B. Pacific v. Wilson, Elser, Moskowitz, Edelman & Dicker

By Richard D. Milone and Justin F. Lavella

February 26, 2008

SUMMARY: According to a decision of the New York Supreme Court, Appellate Division, Second Department, a lawyer hired to defend a client in a lawsuit or arbitration may be required to investigate the availability of insurance coverage and, if necessary, take steps to safeguard this asset as a fundamental component of the effective representation of a client. Moreover, the failure to take such steps could lead to a claim for legal malpractice.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Overview. When a lawyer is hired to defend a client in a lawsuit or arbitration, analyzing and pursuing the clients available insurance coverage is sometimes not expressly included in the scope of the attorneys engagement. However, according to a decision of the New York Supreme Court, Appellate Division, Second Department, investigating the availability of insurance coverage and, if necessary, taking steps to safeguard this asset, could be fundamental to the effective representation of a client, and the failure to take such steps could lead to a claim for legal malpractice.

That opinion, *Shaya B. Pacific, LLC v. Wilson, Elser, Moskowitz, Edelman & Dicker, LLP*, 38 A.D.3d 34 (N.Y. App. Div. 2006), denied a motion to dismiss by finding that it was an open question of fact whether a law firm, even one retained by a policyholders insurer, that failed to investigate the availability of insurance coverage exercised the reasonable skill and knowledge commonly possessed by a member of the legal profession. 38 A.D.3d at 41.

As a result of this ruling, it is incumbent upon any attorney defending a lawsuit or arbitration to take inventory of the insurance that might apply to that suit, and to take the steps necessary to preserve the insurance coverage. The harsh result for the law firm in the *Wilson Elser* case strongly encourages defense counsel to consider insurance issues, including the identification of applicable coverage and the noticing of actual or potential claims, at the outset of their engagement.

Background of the *Wilson Elser* Case. An individual who was injured on April 1, 2000, on the premises of the policyholder, Shaya B. Pacific, LLC (Pacific), sued seeking damages in excess of \$50 million. The policyholders primary insurance carrier, Certain Underwriters at Lloyds of London, hired the New York law firm Wilson, Elser,

Moskowitz, Edelman & Dicker LLP (Wilson Elser) to defend the underlying lawsuit on the policyholders behalf in July 2000. Approximately six months later, on January 21, 2001, the primary insurer -- but not the law firm -- advised the policyholder that because the underlying plaintiffs demand exceeded the primary policy's \$1 million limit of liability, the policyholder may wish to engage counsel of your own choice at your own expense to act on your behalf in regards to any potential excess judgment. The primary insurer also noted that the policyholder may wish to check with [its] insurance agent to determine if any excess insurance coverage is in force [and if so] to quickly notice any excess insurance carrier of this suit situation. *Id. at 36.*

In the liability phase of a bifurcated trial, the underlying plaintiff received a judgment finding the policyholder liable for his injuries. After this ruling, but before the awarding of damages, Wilson Elser placed an excess insurer, National Union Fire Insurance Company of Pittsburgh, Pa. (National Union), on notice of the claim. The National Union policy was not issued to the defendant, Pacific, but rather to a company named Greendel Developers, Ltd (Greendel). The record before the appellate court did not reveal the relationship between Pacific and Greendel, but presumably Pacific was either an additional named insured on Greendel's policy, or the two companies were related in some way that would give Pacific grounds to claim coverage under Greendel's policy.

This notice, which occurred more than two years after Wilson Elser's initial retention, sought coverage for any defense or indemnity costs exceeding the primary policy's limits. National Union denied coverage on two grounds. First, National Union asserted that there was insufficient proof that Pacific was entitled to insurance proceeds under Greendel's policy, and second, it asserted untimely notice. Under New York's strict law governing late notice, the failure to give prompt notice to an insurer can operate as a complete bar to coverage, regardless of whether or not the insurer suffered any resulting prejudice.

After the damages phase of the trial, the policyholder was ultimately found liable for more than \$6 million in damages, an amount well in excess of the primary policy's \$1 million limit of liability. Due to National Union's denial of coverage, no excess insurance coverage was available to cover the remainder of the damages award.

Pacific then sued Wilson Elser, alleging that the firm's failure to investigate the availability of excess coverage, and its failure to give timely notice to National Union at the time of its retention, constituted legal malpractice. The trial court dismissed the policyholders malpractice claim, but the appellate court reversed, finding that it could not conclude, as a matter of law, that Wilson Elser had no duty to advise its client concerning excess insurance coverage issues.

The New York Appellate Divisions Decision. The appellate division did not determine definitively that Wilson Elser had committed malpractice. It did, however, hold that a law firm in Wilson Elser's position has a duty to ascertain the existence of excess insurance coverage and, therefore, held that it was error for the trial court to have dismissed Pacific's complaint against Wilson Elser at the pleading stage.

The appellate court articulated a two-part inquiry. First, the court asked whether an attorney retained directly by a defendant in a personal injury action has any obligation to investigate the availability of insurance coverage for his or her client and to see that timely notice of claim are served. *Id. at 40.* And, second, if such an obligation exists [whether] it also binds an attorney who is retained to defend a personal injury action . . . by the defendant's carrier. *Id.*

The court answered the first inquiry in the affirmative. As support, the court stated that the policyholders case likely would turn on two questions: (1) what was the scope of the agreed representation and (2) did the attorney handling the matter, in light of all relevant circumstances, exercise the reasonable skill and knowledge commonly possessed by a member of the legal profession. *Id. at 41.* Because these questions were ones of fact, the court held that the policyholders legal malpractice action could not be dismissed on a pre-discovery motion. *Id.* (citing *Darby & Darby, P.C. v. VSI Intl, Inc.*, 95 N.Y.2d 308 (N.Y. 2000); *Firemans Fund Ins. Co. v. Farrell*, 289 A.D.2d 286 (N.Y. App. Div.

2001)).

The Effect of the Tripartite Relationship. The answer to the second question turned on the unique dynamics of the three-way relationship among a policyholder, its insurer, and its insurer-appointed defense counsel. Wilson Elser argued that, as a law firm hired by an insurer, it would place itself in a conflicted position if it were to provide advice to Pacific on insurance recovery issues.

Although recognizing that the tripartite relationship is fraught with potential conflicts of interest, and further acknowledging that it might raise conflict issues for Wilson Elser to advise Pacific with respect to its coverage rights against London (the primary insurer which was paying Wilson Elser's fees), the court found that identifying and preserving excess insurance coverage in this instance would not raise such concerns. A primary insurer is agnostic as to the existence of excess insurance sitting above its own policy, so Wilson Elser should have had no difficulty in assisting Pacific in preserving such coverage. Accordingly, Wilson Elser could not have breached any duty owed to the primary insurer by advising the policyholder on issues of excess coverage. The court thus refused to hold, as a matter of law, that Wilson Elser was excused from exploring the existence of excess coverage on the grounds that the primary insurer was paying its fees.

Observations on the Wilson Elser Decision. One lesson from the *Wilson Elser* decision is obvious: a defense lawyer, whether paid by the true client or by the client's insurer, must investigate and preserve applicable insurance.

The case also raises some additional, more subtle, questions.

First, how extensive is the duty of the law firm to investigate the existence and applicability of potential insurance? The facts of *Wilson Elser* indicate that the duty may be quite substantial. This was not a case where an excess insurance policy belonging to Pacific was handed to the law firm on a platter, and all that it needed to do was write a notice letter to National Union. Rather, the policy that Wilson Elser was accused of failing to preserve was issued to a separate company, Greendel, rather than Pacific. As a result, the Appellate Division declined to dismiss Pacific's claim that Wilson Elser had a duty to examine not only Pacific's own insurance program, but other parties' programs to the extent that Pacific might be entitled to claim under their policies. Unraveling the corporate history of a client and identifying other entities whose insurance might apply to the client's liabilities is a major undertaking. Under the *Wilson Elser* holding, it appears that defense counsel may be obligated to do so or risk malpractice liability.

Second, who pays for the time spent by defense counsel in identifying and preserving the client's potential sources of insurance recovery? The *Wilson Elser* opinion is silent on this point. Surely a law firm is not expected to perform this work at no cost. The policyholder will not want to pay fees out of its pocket after having been informed by its insurer that its legal fees are covered, particularly if the law firm was selected and directed by the primary insurer. The primary insurer, however, will likely contend that paying for insurance coverage advice is outside the scope of the duty to defend required by its insurance contract. It is a logical extension of the *Wilson Elser* decision, however, that a law firm must provide this service as part of providing a complete defense. Just as a good defense lawyer examines potential claims against third parties who may owe contribution or indemnity, *Wilson Elser* holds that it is incumbent on a defense lawyer to identify and secure applicable insurance. In the face of this holding, it is the view of these authors that a primary insurer's standard duty to defend, which includes all costs reasonable and necessary to the defense effort, must include the duty to pay for some insurance-related efforts on the part of defense counsel.

Third, one must wonder about the significance of the letter dated January 21, 2001, from the primary insurer, Lloyds, advising Pacific to engage independent counsel and consult with its insurance agent to determine if there was any excess insurance available. The letter, no doubt, was intended to assist Pacific, but at the same time was intended to provide cover to Lloyds itself, and potentially to Wilson Elser, in the event that excess insurance was needed and was not properly secured. While the letter may have given Wilson Elser a false sense of security, with hindsight it provided

no protection. Moreover, it raises the further question of whether Lloyds honored its own fiduciary duty to act in the best interest of its insured, Pacific. Perhaps Lloyds, having recognized that excess insurance may become necessary, should have done more than write one letter to Pacific and then wash its hands of the responsibility to make sure that excess coverage was preserved. If a law firm hired by an insurer to protect an insured will be charged with the duties outlined in the *Wilson Elser*, then it is reasonable to conclude that insurers must look closely at their own duties as well.

Finally, a tangential point is worth noting. Typically a policyholder is not permitted to sue either its attorneys or insurance broker for malpractice associated with the handling of insurance claims until its insurer has been legally absolved of any right to pay under its policy. The *Wilson Elser* opinion, however, does not state what became of Pacific's insurance coverage claim against National Union, other than to say that National Union denied coverage on two grounds. As a result, it is unclear whether Pacific litigated its coverage issues against National Union to conclusion or chose not to pursue its claim any further based on a view that New York's late notice rule was insurmountable. Nevertheless, it is debatable whether a mere denial from an insurer is sufficient proof that the coverage is truly lost, so that a malpractice claim against the policyholders' counsel would be justified.

Practice Tips for Legal Practitioners. Practitioners should consider several lessons from this cautionary tale.

First, tort defendants, insurers, and attorneys always should address insurance issues directly when defining the scope of the legal representation. As noted by the *Wilson Elser* court, the scope of the parties' retention agreement or engagement letter may indicate whether a duty to inquire about insurance exists. *Wilson Elser* would have had a solid defense to Pacific's malpractice claim if its retention letter had confirmed that its engagement did not include the duty to examine excess insurance. Law firms are wise to confirm in every engagement letter in which they represent a defendant in any kind of suit that their services will or will not include an examination of potentially applicable insurance.

Second, whether required by their retainer agreement or not, attorneys defending a lawsuit should take a close look at the availability of insurance at the outset of an engagement. Not only should the defendant's own insurance be considered, but also other parties' coverage under which the client may be an additional insured or otherwise have an ability to claim coverage rights.

Third, do not accept an insurer's denial of coverage at face value. Quite often insurers deny claims that they know are covered in the hopes that policyholders will not pursue them. Never assume that coverage is unavailable.

Fourth, if you are unable to perform a complete and thorough analysis of potentially available coverage, either due to an actual or perceived conflict, or due to lack of experience with insurance issues, consult with somebody who is in position to provide such an analysis.

Fifth, act quickly. Many times, decisions made at the outset of a representation may materially affect not only the amount but also the availability of insurance coverage. One such example is the decision to give notice. As noted in the *Wilson Elser* decision, under New York law, insurers will argue that coverage is forfeited if notice is not given within 30-60 days, and there is no requirement that the insurer prove that it was prejudiced by the delay. Most other states' laws are less strict, but nonetheless, late notice is an issue that can and should be avoided. In addition, most policies require policyholders to satisfy a number of other conditions or risk losing coverage. Such conditions include the duty to seek insurer consent, the duty to keep the insurer informed of developments, and the duty to cooperate.

Finally, defense counsel should not interpret *Wilson Elser* as creating an additional burden. The decision actually provides a new source of compensation for both the client and its defense counsel. While defense counsel in *Wilson Elser* was being paid directly by the primary insurer, in many instances a client may be paying such costs directly because it either ignored its insurance or was wrongly denied coverage by its insurer. Yet, under many policies, the insurer is required to pay its policyholders' legal fees directly.

If you have any questions about the *Wilson Elser* opinion or insurance coverage in general, please do not hesitate to contact the authors of this article.

2008 Emerging Issues 1957

Clifford on Storek v. Fidelity Guaranty Insurance Underwriters, Inc.

By Robert C. Clifford

February 26, 2008

SUMMARY: Robert C. Clifford discusses the issues raised by the U.S. District Court in *Storek v. Fidelity & Guaranty Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803 (N.D. Cal. 2007) and the duty of an insurer to provide a defense to a claim against an insured. Although *Storek v. Fidelity & Guaranty* is a federal trial court decision, the well-reasoned opinion may be persuasive in California cases involving an insurers duty to defend.

ARTICLE: *Introduction. Storek v. Fidelity & Guaranty Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803 (N.D. Cal. 2007), involved the duty of an insurer to defend its insured. The claim arose out of a family dispute between three brothers about the management of a building owned by the family. The defendant insurer issued a policy providing coverage to two brothers to protect them against losses they might sustain in connection with their ownership of the property. The policy provided in part that the insurer was obligated to pay "those sums that the insured becomes legally obligated to pay as damages because of bodily injury, property damage, personal injury or advertising injury". The policy also provided that the insurer was obligated "to defend the insured against any suit seeking those damages". While the policy was in effect, a dispute arose within the family about management of the property. Two of the brothers filed an action against the third brother alleging mismanagement, conversion and fraudulent actions.

In response, the defendant brother filed a cross-complaint, asserting 12 causes of action including accounting, breach of fiduciary duty, conversion, wasting of trust assets, conspiracy, breach of contract, intentional interference with prospective business advantage, quantum meruit, equitable contribution and fraud. The cross-defendants then tendered the cross complaint to their insurer, asserting the insurer was obligated to provide a defense to the cross-complaint. The insurer declined to defend on the basis that the cross-complaint did not raise a potential for coverage. The two brothers then filed an action against the insurer alleging that the insurer breached its duty to defend. The court granted the insurer's motion for summary judgment, holding that neither the allegations of the cross-complaint nor extrinsic evidence established that the insurer had a duty to defend.

General Principles as to the Insurer's Duty to Defend. An insurer's duty to defend an insured extends beyond the specific claims set forth in the pleadings. The duty is so broad that the insurer is obligated to defend an action so long as

the complaint contains language that creates a potential for liability under the terms of a particular insurance policy. Remote facts buried within causes of action that may potentially give rise to coverage are sufficient to invoke an insurer's duty to defend. *Storek v. Fidelity & Guaranty* citing *Pension Trust Fund for Operating Eng'rs v. Federal Ins. Co.*, 307 F. 3d 944, 951 (9th Cir. 2002).

In California, the seminal case of *Gray v. Zurich Insurance Co.* (1966) 65 Cal. 2d 263, 276, 54 Cal. Rptr. 104 held that the insurer must defend the insured if there is any possible factual or legal basis on which the insurer may eventually be obligated to indemnify the insured under any provision contained in the policy. An insurer's duty to defend extends to all actions that raise the "possibility" or "potential" for coverage. Courts frequently recite the mantra that an insurer's duty to defend is broader than the duty to indemnify. Any doubt as to whether the facts give rise to a duty to defend is resolved in the insured's favor. *Storek v. Fidelity & Guaranty* citing *CNA Casualty of California v. Seaboard Surety Co.* (1986) 176 Cal. App. 3d 598, 607, 222 Cal. Rptr. 276.

Although *Gray v. Zurich* and its progeny broadened the duty to defend imposed on the insurer, this duty is not unlimited. An insurer is not obligated to defend every claim asserted against the insured regardless of the scope of coverage; rather, its duty to defend is generally limited to claims within the policy's scope of coverage. See *Lipson v. Jordache Enterprises, Inc.* (1992) 9 Cal. App. 4th 151, 153, 11 Cal. Rptr. 2d 271.

Application of the Principles. In applying the principles concerning an insurer's duty to defend, the court in *Storek v. Fidelity & Guaranty* followed the two-step coverage analysis developed by the California Supreme Court in *Horace Mann Ins. Co. v. Barbara B.* (1993) 4 Cal. 4th 1076, 17 Cal. Rptr. 2d 263. First, the court compared the cross-complaint's allegations to the terms of the policy and found that the allegations did not trigger coverage because they pertained solely to the financial management of the real property. *Storek v. Fidelity & Guaranty Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803, 807 (N.D. Cal. 2007).

Here, the insureds (cross-defendants in the underlying action) had contended that the insurer owed a duty to defend because the cross-complaint contained facts which essentially stated a cause of action for defamation or slander. Specifically, they contended that the cross-complaint's allegations that the insureds had "inserted themselves into the [building] ownership relationship" and that they may have obtained their mother's authorization to make her trustee decisions implied that they had made slanderous statements about the cross-complainant during that course of conduct. The *Storek* court rejected the insureds' "tortured" analysis: "Simply put, there is nothing in the allegations set forth in the cross-complaint that even remotely suggests a potential for liability for personal injury, whether on a theory of wrongful eviction or on a theory of defamation, libel, or slander." *Storek v. Fidelity Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803, 808 (N.D. Cal. 2007).

Recognizing that, under California law, an insurer's duty to defend is not limited to the face of the cross-complaint, the *Storek* court next focused on whether extrinsic facts gave rise to a duty to defend. *Storek v. Fidelity Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803, 808 (N.D. Cal. 2007). The rationale of the extrinsic evidence rule is that neither the insured nor the insurer should be bound by the specific allegations advanced by a third party, when the circumstances of the case clearly establish, or eliminate, an insurer's obligation to provide a defense.

Here, the insureds contended that a series of pre-litigation e-mail exchanges between members of the *Storek* family supported a defamation cause of action, while post-litigation correspondence from the cross-complainant and his counsel complaining that the cross-complainant had been excluded from the property supported a cause of action for wrongful eviction, even though the cross-complainant had elected not to plead such a cause of action. Essentially, the insureds contended that California law required an insurer ". . . to provide a defense whenever extrinsic evidence raises the potential for liability." *Storek v. Fidelity Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803, 811 (N.D. Cal. 2007). The *Storek* court disagreed, ruling that California law is not so expansive that it requires an insurer to undertake a defense as to claims that are both factually and legally untethered for the third party's complaint. *Storek v. Fidelity Insurance Underwriters, Inc.*, 504 F. Supp. 2d 803, 812 (N.D. Cal. 2007). Instead, the court found that ". . . an insurer owes no duty to defend based upon mere 'speculation' as to claims that a third party might have brought." *Storek v.*

Fidelity Insurance Underwriters, Inc., 504 F. Supp. 2d 803, 811 (N.D. Cal. 2007). Here, the court found no evidence to impose a duty to defend because the underlying lawsuit set forth neither the facts nor the legal claims necessary to bring the lawsuit within the terms of the insureds' policy.

Conclusion. One lesson to be learned from the Storek decision is that even if the duty to defend is extremely broad, nevertheless, there are definite limits to constrain the imposition of a duty to defend upon an insurer. Secondly, it is established that even though the complaint does not provide a basis for imposing a duty, California law allows, indeed requires, insurers to consider evidence extrinsic to the allegations set forth on the face of a complaint.

Strategic Point -- Plaintiff. Counsel representing plaintiffs or cross-complainants in business litigation should consider asserting a cause of action, or multiple causes of action, that will trigger the defendant's or cross-defendant's commercial general liability coverage. Examples of such causes of action would typically include libel, slander, wrongful eviction, or other form of wrongful conduct arising from negligence.

Strategic Point -- Insured. Counsel for an insured seeking to impose a duty to defend upon an insurer must carefully review the complaint's allegations to determine whether they support a cause, or causes, of action that will trigger coverage under the insured's liability policy. Secondly, counsel should thoroughly investigate the circumstances that form the basis of the lawsuit at issue to determine whether extrinsic evidence that supports covered causes of action exists.

Strategic Point -- Insurer. Counsel for an insurer should recognize that although the duty of an insurer to defend is certainly broad, the duty is not unlimited and an insurer owes no duty to defend based upon mere speculation as to claims that a third party might have brought.

Cohen on Granite State Ins. Co. v. Ace American Reinsurance Co.

2008 Emerging Issues 1948

Cohen on Granite State Ins. Co. v. Ace American Reinsurance Co.

By Richard J. Cohen

February 25, 2008

SUMMARY: The follow the settlements principle refers to a duty of the reinsurer to follow the actions of the cedant in adjusting and settling claims. Subject to certain exceptions, it allows the cedant the right to decide what the scope of coverage actually is when the cedants policy is subject to more than one reasonable interpretation, and allows the cedant to make adjustments and settlements in conformity with that interpretation.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Simply stated, reinsurance is the act of insuring insurers for the risk of exposure the insurer takes on behalf of their own insureds. In concept, the insurer passes on to the reinsurer some of all of the risk it has underwritten. Reinsurance serves several purposes. In the first instance, it can increase the capacity of the insurer to accept risk, by providing to the insurer a partner with whom to share that risk. Relatedly, reinsurance can also strengthen the solvency of an insurer in order to satisfy and overcome any requirements that it operate under a certain solvency margin that is, the ratio of net premium income over capital reserves. Without reinsurance, capital reserves would be exhausted much earlier and it would limit the risk that the insurer could elect to take on thus limiting its capacity to insure. Reinsurance agreements are substantially less formal than the agreements between the re-insured (the cedant) and its insured. Under standard reinsurance industry practices, reinsurers are obligated to follow their ceding companys settlements with the cedants insureds so long as the settlements are made in good faith after reasonable investigation and do not involve *ex gratia* payments that is, one devoid of legal obligation. A following form clause found in a reinsurance contract provides that where there is a concurrence by and between that policy and the policy to be reinsured, the reinsurance policy will be construed as offering the same terms, conditions, and scope of coverage as exists in the cedants policy absent explicit language to the contrary. As a result, the policy of reinsurance indemnifies the reinsured policy for all payments made pursuant to its terms unless an exclusion is spelled out in the reinsurance policy. The follow the settlements principle refers to a duty of the reinsurer to follow the actions of the cedant in adjusting and settling claims. If the cedants loss settlement is not fraudulent, collusive or otherwise made in bad faith, and is not an *ex gratia* payment, the reinsurer, under the follow the settlements doctrine, cannot raise policy defenses against the cedant that might have been raised by the cedant against the original insured. The follow the settlements doctrine allows the cedant the right to decide what the scope of coverage actually is when the cedants policy is subject to more than one reasonable interpretation, and allows the cedant to make adjustments and settlements in conformity with that interpretation. For example, if the cedant enters into a settlement with its insured on the basis of a reasonable judgment that the insureds

challenge to the cedants coverage position would be sustained at trial, the reinsurer is required under the follow the settlement doctrine to indemnify the cedant for that exposure.

To just what lengths the cedant may go in deciding the scope of coverage and apportioning settlement dollars via agreement with its insured and still seek indemnity from its reinsurer may soon be put to the test. But while the final exam looms large on the horizon, the mid-term exam contained too many blanks so said New Yorks Appellate Division. In *Granite State Ins. Co. v. Ace American Reinsurance Co.*, 46 A.D.3d 436, 2007 N.Y. Slip. Op. 10464 (1st Dept., December 27, 2007), AIG, of which Granite State is an affiliate, issued excess umbrella liability policies to Castle & Cooke, Inc. (now known as Dole Foods Company), and then purchased facultative contracts of reinsurance from Ace American Re. In the early 1990s, Castle & Cooke was sued by thousands of its field workers in Central America and the Philippines for injuries allegedly suffered as a result of the workers exposure to Dibromochloropropane (DBCP), a pesticide. Through various of its affiliated companies, AIG had issued seven policies to Castle & Cooke, under which Castle & Cooke sought coverage for the DBCP claims. One of those policies was issued by Granite State in 1979. Relying on a DBCP exclusion, AIG ultimately disclaimed coverage under the Granite State policy, but agreed that its other policies did answer to the underlying claims. AIG and Castle & Cooke then entered into a future cost agreement setting forth which policies would provide defense and indemnity on an ongoing basis. After AIG realized it had paid more than the available limits with respect to defense and indemnity on one of its policies issued by affiliate National Union, its counsel advised it to move its overpayments to the Granite State policy, which, unlike the National Union policy, was reinsured by Ace. By addendum, AIG and Castle & Cooke then amended their future cost agreement to acknowledge that AIG had exhausted the applicable limits of its National Union policy and, to the extent any sums remained unpaid, they would become the responsibility of Granite State.

AIG then sent Ace a notice of loss based on the payment to Castle & Cooke that it had reallocated to the Granite State policy. Ace objected on two grounds: (1) that AIGs reallocation of the settlement to the Granite State policy was not in good faith and, alternatively, (2) that by doing so, AIG had made an *ex gratia* payment that was not covered by the Ace reinsurance contract. Granite State then brought action against Ace and Ace ultimately moved for summary judgment. The lower court denied the motion, and, on appeal, Ace argued that the lower court had conflated the two separate exceptions, thus requiring Ace to prove bad faith notwithstanding what Ace argued was an obvious *ex gratia* payment. The Appellate Division appears to have acknowledged that the court below failed to reach the issue of whether the payment was *ex gratia*. The appellate court, however, still affirmed the ruling below, finding a question of fact not only as to whether the reallocation of the settlement proceeds to the Granite State amounted to bad faith, but also as to whether the payment was, indeed, *ex gratia*.

This decision appears to have left some of the facts to the readers imagination. It certainly appears that AIG, advertantly or not, negotiated an agreement with its insured to move its obligation from a policy that may not have been reinsured, to a policy under which it had disclaimed coverage but which was reinsured. The decision is silent on what explanation AIG gave for doing so, as well as the basis for an argument on the part of the cedant that the payment under the Granite State policy was indeed an obligatory one. What is very interesting is that the court appears to have referred interchangeably to the follow the fortunes doctrine which requires the reinsurer to follow the cedants underwriting fortunes, and the related follow the settlements doctrine oftentimes referring to the fortunes doctrine as opposed to the settlement doctrine when describing the cedants actions in reallocating the settlement proceeds. The courts recitation of the relevant facts do not suggest any significant underwriting issue. AIG disclaimed under what the court referred to as a DBCP exclusion in the Granite State policy, and its insured did not challenge the disclaimer. Given the question of fact, however, the reader might surmise either that the basis for disclaimer may not have been so obvious after all, or, more significantly, that the court simply was not inclined to hold that the cedants actions were geared specifically and exclusively for purposes of passing the exposure on to the reinsurer and thus was either in bad faith or *ex gratia*. If the latter, we may be seeing the gradual expansion of the cedants discretion in managing its ultimate exposure. This certainly is a case to watch with interest, as it ultimately may provide guidance on just how much latitude a cedant may be granted in allocating its obligations in a way that allows it to seek recovery of its contribution through its reinsurance.

ABOUT THE AUTHOR(S):

Richard J. Cohen, Esq. Richard J. Cohen is the managing partner of the law firm of Goldberg Segalla L.L.P., which has offices in New York, Philadelphia, Hartford, Princeton, Buffalo, Rochester, Syracuse, Albany, White Plains, and on Long Island, and is the head of its insurance coverage litigation practice group. He graduated from the State University of New York at Buffalo School of Management, with distinction, and its School of Law, cum laude. Mr. Cohen's practice is almost exclusively first- and third-party coverage, bad faith, and reinsurance. He is a member of the New York and Pennsylvania Bars and is a national author and lecturer on coverage and bad faith, having spoken in New York, California, Arizona, Pennsylvania, Illinois, Louisiana, Maryland, Washington, D.C. and elsewhere on a wide variety of topics. Additionally, he is widely published and, among other things, has three times co-authored the annual "Survey of New York Insurance Law," published in the Syracuse Law Review. Mr. Cohen is a former National Co-Chair of the Insurance Company Relations Subcommittee of the Defense Research Institute, and former national membership Chair of DRI's Life, Health and Disability Insurance Section. He currently chairs insurance and construction subcommittees of DRI. He has been a CPCU instructor since 1999.

Aylward on Emerging Exposures Imperil Excess Insurers

2008 Emerging Issues 143

Aylward on the Disappearing Safety Net: Emerging Exposures Imperil Excess Insurers

By Michael F. Aylward

February 25, 2008

SUMMARY: Excess insurers have long relied on the principle that they would have no duty to indemnify their insureds until the underlying primary insurance had been exhausted. However, recent decisions of the Eight and Tenth Circuits and some state courts have been receptive to insureds' contentions that in certain instances they should obtain excess coverage for catastrophic losses where the underlying insurance has not been exhausted.

ARTICLE: Introduction

Traditionally, excess insurers have bound coverage and monitored claims with the comforting assurance that any obligations that they might owe to a policyholder will not arise until the underlying primary insurance had played its part. However, several recent opinions have made clear that this coverage "safety net" is increasingly threadbare and that excess insurers may, in fact, be held to owe coverage for risks far beyond what they may believe that they originally bargained for.

Two recent rulings from the U.S. Courts of Appeals for the Eighth and Tenth Circuits have opened the door to policyholder arguments that insureds can obtain excess coverage for catastrophic losses even if the stated underlying insurance is not exhausted. While some of these issues have been explored in the past in "drop-down" cases arising out of primary insurance insolvencies, these rulings point to new and potentially troubling (from the excess insurers' point of view) recovery strategies.

The Yaffe Companies, Inc. v. Great American Ins. Co.

In *The Yaffe Companies, Inc. v. Great American Ins. Co.* [499 F.3d 1182 (10th Cir. 2007), *reh'g denied*, No. 06-7057 (10th Cir. Nov. 20, 2007)], the owner of a scrap yard in Muskogee, Oklahoma sought coverage for nearly \$1.8 million that it had paid to settle bodily injury and property damage claims resulting from an explosion at its scrap yard. Yaffe sought coverage for these claims under a commercial general liability (CGL) policy issued by ACE American and an umbrella liability policy issued by Great American. The ACE CGL policy was written with limits of \$1 million per

occurrence and a general aggregate of \$2 million. Notably, however, the policy not only contained a \$10,000 deductible but the deductible was written on a "per claim" basis. Over that coverage was Great American's umbrella policy with a limit of \$25 million each occurrence and in the aggregate.

Ordinarily, one would not expect there to have been much of an issue with respect to the availability of coverage under the Great American policy as Yaffe's settlement payments clearly exceeded the \$1 million primary limit. In this case, however, because most of Yaffe's claim payments were for less than the \$10,000 deductible. As a result, ACE ultimately only paid \$497,999.10 -- less than half the total primary policy limit. Great American therefore contested Yaffe's demand that it pay the amount of \$785,986.89, the difference between the total amount of damages that it had paid and \$1 million.

In the ensuing coverage litigation, the U.S. District Court for the Eastern District of Oklahoma granted Great American's motion for summary judgment declaring that Great American's excess obligations only arose "when Yaffe becomes obligated to pay sums in excess of or, stated in another way, after exhaustion of, the \$1 million coverage provided by the ACE policy" [*Yaffe Cos. v. Great Am. Ins. Co.*, 2006 U.S. Dist. LEXIS 29482, at *10 (D. Okla. 2006)].

On appeal, Great American argued that the District Court had correctly found that its obligations did not arise until the ACE primary policy had become exhausted. The Tenth Circuit disagreed. It declared that the triggering event for Great American's coverage obligations was the point in time when the insured's liability exceeded \$1 million and did not depend on whether that amount was actually paid pursuant to the underlying insurance.

The Tenth Circuit focused on the insuring language in the Great American policy which stated that the insurer would pay on the insured's behalf "those sums in excess of the retained limit that the insured becomes legally obligated to pay by reason of liability imposed by law or assumed by the insured under an insured contract because of bodily injury, property damage, personal injury or advertising injury that takes place during the Policy Period and is caused by an occurrence happening anywhere."

The policy further stated that Great American would pay that portion of damages in excess of the "retained limit" which was the greater of:

1. the total amount stated as the applicable limits of the underlying policies listed in the Schedule of Underlying Insurance and the applicable limits of any other insurance providing coverage to the insured during the Policy Period; or
2. the amount stated in the declarations as self insured retention as the result of any one "occurrence" not covered by the underlying policies listed in the Schedule of Underlying Insurance or by any other insurance providing coverage to the insured during the Policy Period

And then up to an amount not exceeding the each occurrence limit as stated in the declarations.

Despite Great American's argument that it was unreasonable to trigger its coverage prematurely merely because the insured had saved premium by purchasing primary insurance with a "per claim" deductible rather than the more common "per occurrence" deductible term, the Tenth Circuit held that, "Yaffe's bargain with ACE should be irrelevant to the construction of the language of the Great American policy and that, in any event, any savings that Yaffe had achieved with respect to the premium that it paid to ACE was more than off-set by the fact that it ultimately paid half a million dollars in uninsured losses."

The court also distinguished Condition P in the Great American policy, which stated that coverage under this policy did not apply unless or until the insured or the underlying insurer is obligated to pay the retained limit, holding that this was merely meant to prevent the excess insurer from being obligated to drop down and was not inconsistent with this situation, where the primary insurance not only had been kept in effect but the actual retained limit had been paid by the insurers and the insured.

The Tenth Circuit concluded that the Great American policy was ambiguous and that summary judgment should not have been granted to Great American. The case was therefore remanded to the Oklahoma District Court for further findings with respect to whether Yaffe was, in fact, entitled to coverage. Although such a finding of coverage seemed likely, the Tenth Circuit declined to reach that conclusion as the Oklahoma District Court had precipitously granted summary judgment to Great American prior to Great American having had the opportunity to file an opposition to the insured's cross-motion for summary judgment.

This line of reasoning was disputed by Justice Brisco in a dissenting opinion. Brisco argued that the majority had erred in determining that the umbrella policy's reference to "the applicable limits in the underlying policies" merely set the threshold amount over which the umbrella policy would pay and failed to take into account the requirement that that \$1 million amount actually had been paid by the primary insurer. The dissent criticized the majority for ignoring the "key introductory language" of the policy which stated that Great American "will be liable only for that portion. . . in excess of the retained limit which is the greater of . . . \$1 million." While acknowledging that this language could perhaps be clearer, Justice Brisco held that its reference to "the applicable limits of the underlying policies" was obviously intended to mean that those policies had to be exhausted before coverage begins under the umbrella policy:

To conclude otherwise, as the majority does, effectively transforms the policy from its intended purpose as an excess policy into a primary insurance policy with a large deductible. If that is the proper interpretation, then one must ask why the policy repeatedly refers to the underlying policies and their applicable limits, and why the policy requires that those underlying policies be kept in full force and effect?

Justice Brisco also criticized the manner in which the majority had addressed the gaps in primary coverage resulting from the use of a "per claim" deductible. The dissent noted that deductibles cannot reasonably be considered to constitute a "gap" and that excess insurers were generally not responsible to reimburse policyholders for the amount of a primary policy deductible quoting other authorities to the effect that "the rationale for not including deductible payments as part of the limits of the underlying policy was grounded in the insured's decision to, in essence, become self-insured for the deductible amount as the result of a bargain reached with the primary insurer" [Couch on Insurance [otilde] 220:36 (3d ed.)]. Taking the policy as a whole, the dissent argued that summary judgment should have been affirmed for Great American.

Late in 2007, Great American moved for *en banc* reconsideration. This motion was denied by the full court on November 27, 2007. Interestingly, of the judges who considered the petition, only Justice Hartz, one of the two justices in the majority in the original panel, voted to grant *en banc* rehearing. It is unclear whether Hartz had doubts about the opinion he had joined or felt that it might have more influence and effect as restated as an opinion of the full court.

Yaffe should stand as an object lesson to excess underwriters of the perils not only of using "retained limit" language to define the threshold point at which the umbrella policy arises, but also of the danger of not fully taking into account the effect that certain features in a primary policy may have in prematurely triggering an excess insurer's obligations. One could easily conceive of similar issues arising where, unbeknown to the excess underwriter, the primary policy is written with burning limits. Similar issues have arisen in cases where certain types of coverage afforded under the primary policy have limits lower than are afforded by the policy as a whole, as is commonly the case nowadays with sexual abuse endorsements and employment practices liability (EPL) coverages. Over the years, insurers have found that including sub-limits of coverage are in many respects more effective than excluding coverage all together.

West Bend Mut. Ins. Co. v. Rosemont Exposition Services, Inc.

The potential peril presented by sub-limits was explored by the Illinois Appellate Court in its recent opinion in *West Bend Mut. Ins. Co. v. Rosemont Exposition Services, Inc.* [2007 Ill. App. LEXIS 1275 (1st Dist. 2007)]. In that case, Rosemont Exposition Services was sued by two former employees for defamation and retaliatory discharge. Rosemont tendered the defense of these claims to its general liability insurer (West Bend), which had issued both a \$1

million CGL policy and a \$5 million umbrella liability policy. The CGL policy contained an exclusion in the main body of the policy precluding coverage for employment practice liability claims. However, coverage was reinstated by endorsement with a separate limit of \$100,000. A similar EPL exclusion was contained in the umbrella policy.

West Bend duly accepted the defense of the underlying claims pursuant to the EPL endorsement in its CGL policy. However, after the limits of that became exhausted (defense costs were included within limits for this coverage), Rosemont demanded that West Bend continue to provide a defense pursuant to the main body of the CGL policy. Alternatively, Rosemont argued that the umbrella policy should drop down since the only available underlying insurance was now exhausted.

The Cook County Circuit Court agreed with West Bend, however, that neither the CGL nor the umbrella policy afforded coverage for EPL claims. These findings were affirmed by the Appellate Court. Having concluded that the underlying claims fell within the exclusion's definition of prohibited employment practices, the court ruled that it was clearly subject to the employment-related practices (ERP) exclusions in the CGL and umbrella policies.

Waste Management of Minnesota, Inc. v. Transcontinental Ins. Co.

Disputes with respect to the manner in which the retained limit may be deemed to be satisfied were also at the heart of the recent opinion from the U.S. Court of Appeals for the Eighth Circuit in *Waste Management of Minnesota, Inc. v. Transcontinental Ins. Co.* [502 F.3d 769 (8th Cir. 2007)]. In that case, a garbage truck loaded by Waste Management of Minnesota, Inc. and driven by one Chad Trenhile jumped a highway median and struck the car of Brian and Ellen Ross, injuring both the Rosses and Trenhile. The Rosses sued Waste Management, Trenhile and various trucking defendants. At the time, Waste Management had in place a \$1 million primary policy with Reliance Insurance Company which during the course of these proceedings was declared insolvent. Over the Reliance policy was an excess policy issued by Transcontinental.

The Ross claims were ultimately settled for \$2.3 million of which Transcontinental contributed slightly more than \$1.3 million. However, the Ross settlement did not resolve the pending Trenhile personal injury lawsuit against Waste Management and other parties. An issue arose, therefore, as to whether the \$1 million that other parties had paid to settle the Ross lawsuit satisfied the underlying \$1 million retained limit necessary to trigger Transcontinental's excess obligations as regards the Trenhile claim.

The Ross lawsuit had been settled through a combination of \$555,000 paid by the Minnesota Insurance Guaranty Association (on behalf of the insolvent Reliance Insurance Company), \$250,000 paid by the Rosses uninsured motorist's carrier (MSI), \$150,000 paid by Waste Management itself and an agreement on the part of the Rosses to reduce their judgment by \$30,000. Since the total payments by the insured and the Guaranty Association only came to \$705,000, Transcontinental disputed any obligation to accept coverage for the Trenhile claims as the \$1 million underlying retained limit had not been satisfied.

In the ensuing coverage litigation, the U.S. District Court for the District of Minnesota held that the Ross settlement payments had, in fact, exhausted the \$1 million underlying limits thereby triggering Transcontinental's duty to defend and indemnify Waste Management for the Trenhile claim [*Waste Management of Minnesota, Inc. v. Transcontinental Ins. Co.*, 2006 U.S. Dist. LEXIS 59864 (D. Minn. 2006), *aff'd*, 502 F.3d 769 (8th Cir. 2007)]. On appeal, the Eighth Circuit affirmed.

As a preliminary matter, the Eighth Circuit rejected Transcontinental's argument that the District Court's decision violated the Financial Impairment condition in its policy, which stated that the bankruptcy of an underlying insurer would not increase the excess insurer's obligations. The court observed that, had Reliance been solvent, it would have paid its full \$1 million limit with the result that Transcontinental would have paid exactly the same amount towards the \$2 million settlement as it ultimately did through the assistance of other parties. As a result, the court ruled that the District Court's decision was "true to the mandate" of the anti drop-down language in the policy and did not either

relieve or increase Transcontinental's obligation as an excess insurer of Waste Management. The court declared, therefore, that this argument was a "red herring."

The court next turned to Transcontinental's argument that only payments actually made by the underlying insurer or its policyholder counted against the underlying limits necessary to trigger its excess obligations. The Eighth Circuit noted, however, that the Transcontinental policies called for the excess carrier to pay any "ultimate net loss" in excess of the Reliance policy limit and that "ultimate net loss" was defined not as the amounts paid by Reliance or Waste Management but as the damages for which Waste Management was "legally obligated to pay." In keeping with its earlier opinion in *Reliance Ins. Co. in Liquidation v. Chitwood* [433 F.3d 660, 664 (8th Cir. 2006)] the court held, therefore, that exhaustion does not require an insurer to pay the full dollar value of a policy but only requires the insured to prove that the claims aggregating the full amount of the specific policy have been settled thereunder.

The court also rejected Transcontinental's argument that this analysis was contrary to the exhaustion clause in its policy which stated that the excess policy would continue in place of the exhausted amount of scheduled underlying insurance in the event exhaustion occurred by reason of payments of a combination of covered settlements or judgments. The Eighth Circuit held that this language did not require that the underlying insurers had actually paid their excess policies as long as their obligations to do so had been finally determined.

Having rejected all of Transcontinental's arguments, the Eighth Circuit concluded that Waste Management clearly became "legally obligated to pay" the \$2.3 million balance of the Ross judgment. The court found that, "[a] contrary ruling would result in the Reliance insolvency relieving Transcontinental of its preexisting contractual duties as an excess insurer, contrary to the Financial Impairment policy provision."

As with the Tenth Circuit's opinion in *Yaffe*, *Waste Management* reflects the ongoing tension between excess insurer arguments that their policies should not come into play until primary policies have actually been paid and policyholder claims that such language is either ambiguous or is in any event satisfied once their liabilities are determined to exceed the retained limit. Although not reflected in either opinion, excess insurers have argued in cases of this sort that the primary insurer acts as a kind of gatekeeper and that excess insurers rely on this gatekeeping function to ensure that any resulting determination of liability or judgment has fairly been disputed and adjudicated. What seems ultimately to have been determinative in the *Waste Management* case, however, was the fact that such safeguards likely already existed as the result of the arbitration and litigation process and that Transcontinental was left in no worse off position, not having been obligated to "drop down" to act as a primary insurer, than would have been the case had Reliance remained solvent. To the contrary, the court suggested that Transcontinental would in fact have obtained a windfall by being relieved of any payment obligations if its arguments had prevailed.

Allmerica Financial Corp. v. Certain Underwriters at Lloyd's, London

The interrelationship between primary and excess policies was also recently construed by the Supreme Judicial Court of Massachusetts. The issue in *Allmerica Financial Corp. v. Certain Underwriters at Lloyd's, London* [449 Mass. 621 (2007)] was whether "following form" language in an umbrella liability policy bound the excess insurer to follow not only the terms of the primary policy but the primary insurer's understanding and claims decisions with respect to those terms.

Allmerica, a life insurer, had been sued in a class action brought by policyholders who alleged that Allmerica had acted unfairly and deceptively in selling them various "vanishing premium" life insurance policies. Allmerica tendered the defense of this claim to its general liability insurer, Columbia Casualty. Columbia Casualty agreed to advance the cost of defending Allmerica pursuant to a reservation of rights. Although Columbia Casualty never accepted coverage for the claims, it ultimately agreed to pay its full \$20 million policy limit pursuant to a Settlement Agreement and Release towards the cost of settling the underlying class action. The Agreement specified that Columbia Casualty's payment was not to be construed as "an admission of coverage or lack of coverage for the claim for coverage submitted by Allmerica"

During the pendency of the class action settlement discussions, Allmerica also contacted Certain Underwriters at Lloyd's, London, which had underwritten the excess coverage over Columbia Casualty's primary policy. Several months later, Underwriters disputed any obligation to provide coverage for the claims in light of a wrongful acts exclusion.

In the ensuing coverage litigation, Allmerica contended that as the Lloyd's policy followed form to the underlying Columbia Casualty policy, Lloyd's was bound by the primary insurer's decision to settle and could not rely on exclusions that Columbia Casualty had chosen not to assert. In effect, Allmerica argued that the "following form" language extended not only to the terms of the underlying policy but the understanding and actions of the underlying insurer as regards those terms. Thus, coverage would extend not only to the written terms of the policy but its actual application to a claim.

While acknowledging that the issue was one of first impression in Massachusetts, the Supreme Judicial Court found authority in its prior rulings with respect to whether and when excess insurers were required to "drop down" due to the insolvency of primary insurers. The court found that these "drop down" cases demonstrated a basic point, namely that excess insurance is separate and distinct from primary insurance.

An insurance program involving a primary policy and one or more excess policies divides risk into distinct units and insures each unit individually. The individual insurers do not (absent a specific provision) act as co-insurers of the entirety of the risk. Rather, each insurer contracts with the insured individually to cover a particular portion of the risk.

The Supreme Judicial Court found that this analysis was not changed by the inclusion of "following form" language in the excess policies. Rather, the court declared that the follow form clause allowed policyholders to have coverage for the same set of potential losses (with the same set of exceptions) in each layer of the insurance program and did not bind the insurers to a form of joint liability should coverage in a prior layer fail. Rather, the court found that the "layer of risk each insurer covers is defined and distinct."

Furthermore, the court declared that excess insurers are "strangers" to primary contracts and that primary and excess insurers act independently of each other with respect to decisions about their policies, including coverage determinations and settlements. Relying on opinions of the Indiana Supreme Court and the U.S. Court of Appeals for the Third Circuit [*Allstate Ins. Co. v. Dana Corp.*, 759 N.E.2d 1049 (Ind. 2001); *Keystone Shipping Co. v. Home Ins. Co.*, 840 F.2d 181 (3d Cir. 1988)], the Supreme Judicial Court declared that, consistent with its own analysis of "drop down" cases, given the independent roles played by primary and excess insurers, excess insurers were not bound by the claims decisions of primary insurers. "In sum, absent an explicit contractual commitment to do so, an insurer is not bound by the settlement another insurer makes for the same claim, even if the language of the non-settling policy follows the form of the settling policy. The underwriters were entitled to make a determination concerning the merits of the underlying class action settlement and coverage under its policy independent of that made by Columbia Casualty."

In fact, this victory proved to be short lived for Underwriters. The court proceeded to find that although Underwriters was free to raise the prior claims exclusion and other defenses, those defenses were ineffective. As a result, the court ultimately concluded that the trial court had erred in granting summary judgment for Allmerica and remanded the case for further findings in keeping with its determination that the various Lloyd's exclusions did not apply nor were these claims uninsurable as a "known loss."

ABOUT THE AUTHOR(S):

Michael F. Aylward is a senior partner in the Boston office of Morrison Mahoney LLP where he chairs the firm's complex insurance claims resolution group. For nearly 25 years, Mr. Aylward has represented insurers and reinsurers in coverage disputes around the country concerning the application of liability insurance policies to commercial claims involving intellectual property disputes, environmental and mass tort claims and construction defect litigation. He is a frequent lecturer on insurance issues and has authored portions of various insurance treatises and is a frequent contributor to scholarly publications on legal issues. Mr. Aylward has taken a leadership role in legal organizations including the Defense Research Institute (Board of Directors (2000-2003); past Chair, Insurance Law Committee and Law Institute (2004-2006); and the International Association of Defense Counsel (Chair, Reinsurance, Excess and Surplus Lines Committee, Board of Editors, Defense Counsel Journal). He presently serves as the chair of the Reinsurance, Excess and Surplus Lines Committee of the Federation of Defense and Corporate Counsel.

Emerging Issues for Terrorism Insurance

By Jeffrey E. Thomas

February 14, 2008

SUMMARY: The federal Terrorism Risk Insurance Program Reauthorization Act of 2007 became law on December 26, 2007. It extended the Terrorism Risk Insurance Act ("TRIA") through the end of 2014 and made other changes to the Act. This Emerging Issues Analysis sets forth the basic principles and provisions of TRIA and the changes that were enacted in the 2005 and 2007 extensions of the Act.

ARTICLE: On December 26, 2007, President Bush signed the Terrorism Risk Insurance Program Reauthorization Act of 2007 into law. That Act extended the Terrorism Risk Insurance Act ("TRIA"), as modified, for another seven years. It also made a number of changes to the Act. This commentary will briefly outline the main principles of TRIA, the changes that were adopted in the extensions of the Act in 2005 and 2007, and then will identify significant emerging issues regarding the program. n1

I. TRIA Principles

Most fundamentally, TRIA is intended to supplement the market mechanism for insurance. After approximately \$36 billion in insured losses n2 that insurers paid without having collected any specific premiums for that risk, n3 insurers changed their attitude about the insurability of terrorism risk. Because of the unpredictable nature of terrorism risk and uncertain amount of associated damages, insurers were reluctant to provide terrorism coverage, n4 at least in any comprehensive way at prices that policyholders were willing to pay.

To address insurer reluctance to provide insurance, a plan was devised to pool the high-end risk through a industry-government partnership. This pooling was known as a federal "backstop" for terrorism insurance. A "backstop" is a statutory mechanism that provides federal government reimbursement of a significant portion of terrorism claims and then seeks reimbursement of some or all of those payments from the industry. It allows the market to function because the insurers still bear a significant amount of risk giving them market incentives and because the government does not provide insurance directly to consumers, instead relying on insurers to do so. The program does not set a price for this insurance (although states continue to regulate pricing after a brief, temporarily preemption by the program).

The program works as follows. Insurers for those lines covered by the Act are required to offer terrorism coverage

on the same conditions as coverage for non-terrorist losses under the policy. n5 If a policyholder chooses to buy terrorism coverage, in the event of a terrorist loss covered by the Act, the government will reimburse the insurer for 90% of the losses n6 after the insurer pays enough claims to satisfy and insurer deductible. This deductible is based on a percentage of direct earned premiums of the insurer in the previous year. n7 After making payments to reimburse insurers, the government must impose a tax on eligible insurance policies to recoup a specified "industry retention" amount, n8 and may recoup more than the industry retention if conditions are considered appropriate by the Secretary of Treasury, up to a maximum of 3% of premiums. n9 The maximum covered by the program was \$100 billion in a year. n10

Originally, the program only covered terrorism committed "by an individual or individuals acting on behalf of any foreign person or foreign interest." n11 The definition of what constituted terrorism is broad, n12 but to be covered by the Act the event must cause insured damages above a specified threshold n13 and must be certified by the Secretary of Treasury n14 (which is not subject to judicial review). n15 The lines of insurance included in the Act were commercial property and casualty insurance, including excess insurance, workers compensation insurance and surety insurance. n16

II. Amendments to TRIA

TRIA was extended in 2005 (for two years), n17 and then again in 2007 (for seven years). n18 The extensions also included some modifications. The most significant change was that the scope of the program was broadened to include domestic terrorism. n19 The amendments also made some changes to the lines of insurance that were covered. n20 In addition, the trigger for an event to be a covered "terrorist" event was raised to \$100,000,000, n21 the insurer deductibles were raised to 20% of direct earned premium, n22 and the industry retention (also known as the mandatory recoupment amount) was raised to \$27.5 billion. n23 The government's reimbursement rate was lowered from 90% to 85% (after insurer deductibles). n24 To address concerns about the cost of the program, the mandatory recoupment was changed to 133% of the difference between the industry retention (\$27.5 billion) and the amount that insurers paid for their deductibles and copayments. n25 The Secretary also was given discretion to charge up to 3% of premiums to help recover the money spent on the program. n26

III. Emerging Issues

Although the extension of the program addressed the most significant issue, whether we would continue to have the program, there are a number of important issues that remain. The issues addressed below are whether the program will become permanent; whether nuclear, chemical, biological and radiological risks should be included; whether the program sufficiently protects insurer solvency; the scope of the coverage for terrorism losses; and how allocation issues will be addressed.

A. Will the Program Become Permanent?

One of the major issues during the extension debate was the appropriate duration. The Democratically controlled House wanted a longer duration, or even permanent program. The President, however, has consistently maintained that this program was temporary until the insurance market could respond to terrorism risk. The President threatened to veto a bill that would have extended the program for 14 years; the seven year extension approved by the Senate was a compromise that the administration was willing to accept.

At the heart of this debate is the question of whether the market will be able to respond without governmental assistance. Terrorism is more difficult to predict and model than other kinds of risks. Terrorism is perpetrated by human actors who have the intention of causing harm. In order to generate greater fear and alarm, terrorists may act in ways that are unexpected. n27 The religious or political fervor of some terrorists and their willingness to commit suicide is another consideration that makes it difficult to model or prevent terrorist behavior. n28 Modeling is also complicated

by a lack of information. The historical data are limited and the wide variety of cultural and operational contexts for terrorist events makes much of the data incomparable. n29 Access to information is limited because of national security and law enforcement concerns.

Because of the unpredictability of a terrorist attack and the amount of losses caused by such an attack, insurers who plan for the worst have an incentive to not insure terrorism events or to charge a high premium to reflect the unpredictability of a terrorism event. Consequently, one of the questions is whether the market can provide terrorism insurance at a price that consumers are willing to pay.

TRIA, by reducing the amount of risk to be borne by insurers at the high end, has helped stabilize the price for terrorism insurance. In the first nine months after the adoption of TRIA, rates declined between 50 and 75%, and they continued to fall in 2003. By the third quarter of 2004, the typical price for terrorism coverage was about 4% of total premium for property coverage, compared to 10% a year before. n30 As prices declined, more policyholders purchased terrorism coverage. n31 According to a study conducted by Wharton Risk Management and Decision Processes Center at the University of Pennsylvania, "about 50% of commercial enterprises have purchased TRIA-line terrorism insurance." n32

Under the present market circumstances, the availability of terrorism insurance would have decreased if TRIA had been permitted to expire. n33 Without a federal backstop, it is expected that prices for terrorism insurance would increase, n34 which may result in consumers being unwilling to purchase the coverage. In addition, although reinsurers have re-entered the market for terrorism risk, they have only indicated a willingness to provide up to approximately \$5 billion to \$6 billion in coverage. n35 This is only a fraction of the \$27.5 billion industry aggregate in the current program year, and is less than one-fourth of the estimated \$30 billion in individual insurer retentions. Survey data show that reinsurers are not likely to significantly increase the coverage available for terrorism. n36 Without access to reinsurance or TRIA, many primary insurers would take actions to avoid underwriting terrorism risk as they did in the aftermath of September 11th. The Treasury Department study included a survey of insurers which found that nearly 50% of insurers responding reported that they did not plan to write terrorism coverage if TRIA expired. n37

It may be that over the next seven years the market will develop sufficiently to provide terrorism insurance without the federal program. Consultants and insurers continue to work on modeling of terrorism risk, and as those models are refined, reinsurers may become more willing to share the risk with primary insurers. On the other hand, critics of the program suggest that it amounts to "free" reinsurance, which undermines the ability of the reinsurance market to compete. The program, however, leaves significant risk on the insurers through the insurer deductible (20% of direct earned premiums) and the insurer co-pay (15% of insured losses after the deductible), which leaves an incentive to buy reinsurance.

B. Will the Program Be Expanded to Nuclear, Biological, Chemical and Radiological Attacks?

A second major issue that was debated during the 2007 extension was whether the program should be expanded to cover nuclear, biological, chemical and radiological (sometimes referred to as "NCBR") attacks. At the present, there is little insurance coverage available for such attacks. Although TRIA requires that insurers offer terrorism insurance to their policyholders, they are only required to offer terrorism insurance on the same terms and conditions as property and casualty coverage for non-terrorism losses. n38 Because most property insurance policies have long specifically excluded losses from nuclear events and for release of contaminants, which would likely exclude coverage for chemical, biological and radiological materials, TRIA does not require terrorism insurance to cover such events. n39

The absence of coverage for NCBR attacks represents a significant gap in insurance coverage for terrorism. The use of NCBR materials for a terrorist attack is a serious risk. According to RAND, "al Qaeda has long expressed an interest in the offensive employment of NBCR materials." n40 Although al Qaeda has yet to demonstrate any such capability in

an actual attack, they have made efforts to develop it. n41 Models have shown that a large-scale biological attack, such as with anthrax, could generate as much as \$90 billion in losses. n42 Nuclear or radiological attacks could have an even more severe impact. A "dirty bomb" could contaminate an area as large as ten square miles requiring demolition on a massive scale and astronomical losses. The RAND study concluded that the "most profound risk" of uninsured losses is in the area of a NCBR attack. n43 There failure to address NCBR risk in TRIA is therefore a significant limitation.

The 2007 extension recognized this issue by requiring a study. The Comptroller General is to study the availability and affordability of insurance covering NBCR risk, the outlook for such insurance in the future, and the capacity of private insurers and state workers compensation funds to manage NBCR risks. n44 This report is to be submitted to House and Senate committees not later than a year after enactment of the extension, and is to include a detailed statement of findings and recommendations for legislative, regulatory, administrative or other actions at the federal, state or local level. n45 Consequently, it is possible that this gap may be closed at some point in the future.

C. Does the Program Adequately Protect Insurer Solvency?

The insurer deductibles and co-payments leave a significant amount of risk for the insurers. On one hand, this creates an incentive to buy reinsurance. On the other hand, if primary insurers are unable to purchase reinsurance, the program may create a risk of insolvency unless the insurers can accumulate sufficient reserves to pay their share of terrorism claims. TRIA mandates that insurers offer terrorism coverage to their customers. Some insurers may charge a price that customers are unwilling to pay, which could limit the insurers' exposure. But insurance prices are regulated by the states, which have kept them artificially low from an actuarial standpoint. Moreover, regulation of workers compensation regulations precludes the exclusion of terrorism coverage, so those insurers cannot avoid the risk. This section will outline the insolvency risks of the current program.

One way of gauging the insolvency risk is to compare a risk to company surplus. Although the data are now somewhat dated, the Wharton study showed that insurer deductibles under the program created some insolvency risk. As a general matter, rating agencies generally require that no single risk account for more than 10% of an insurer's surplus. Yet at the 20% of direct earned premium level, terrorism risk would exceed 10% of surplus for eight out of the top 10 and 18 out of the top 30 insurers. n46

One reason for this problem is that direct earned premiums do not necessarily represent an insurer's ability to pay a loss. Certain lines of insurance and some companies may have less capital available even though they have significant premium income. One way to address this limitation would be to move to a deductible system more directly connected to an insurer's ability to pay. This has not been part of the debate about extension of the program, however, so it does not seem very likely to occur.

A second issue related to insolvency is pricing. Historically, price regulation of insurance was adopted to help insurers develop sufficient surplus to be able to pay claims in the long run. Thus, while consumers generally want lower prices, regulation should set prices high enough that insurers can create a sufficient pool to pay claims when they occur. Because of the uncertainty of terrorism risk, it is difficult to know how big the pool needs to be in order to pay claims after an event. Nevertheless, the Insurance Services Office developed a methodology to price terrorism risk, and suggested that a price of \$0.10 per \$100 of value for property coverage would be appropriate in high risk cities. Regulators in New York and District of Columbia, however, approved only \$0.03 and \$0.018, depending on the property. n47 Other states have also kept down the rates for terrorism insurance. n48 None of the states has adopted pricing at the level that was suggested by the Insurance Services Office. Some states used regulatory authority to lower the price requested by insurers, while others used their regulatory power to negotiate adjustments to the proposed pricing model. n49

By keeping the prices for terrorism insurance low, state regulation reduces the ability of insurers to build surplus to pay claims. In addition, state regulation interferes with the market mechanism. Artificially low prices interfere with the ability of insurers to buy reinsurance, which reduces the demand for reinsurance. The Wharton study found that "there is

relatively little private insurance to cover portions of losses below the TRIA deductible in urban areas and/or the price of reinsurance is prohibitively high relative to the premium that insurers can charge for coverage to commercial firms." n50 Although TRIA preempted the states' pricing and approval regulation when it was first adopted, this preemption was temporary. n51 Perhaps as more sophisticated models are developed or as the market for insurance softens the regulators will allow the pricing to be closer to the value of the risk, but if they do not, unless insurers have additional surplus generated from other insurance premiums, artificially low prices for terrorism could contribute to the risk of insolvency.

D. What Is the Scope of Terrorism Coverage Supported by the Program?

Although TRIA in theory supports the market mechanism to provide insurance coverage for terrorism, the question is the extent to which terrorism events are actually covered by insurance policies that are in compliance with the Act. It is important to keep in mind that while the Act requires that terrorism insurance be *offered*, it does not mandate that consumers purchase such insurance. While many are buying terrorism coverage, a substantial number of consumers are electing not to buy it. In those cases, coverage is unlikely (though as we will see below, not completely impossible). The following subsections discuss the definition of terrorism, the alignment of terrorism definitions between the program and insurance policy forms, transition issues created by the most recent extension, the impact of the requirements of standard fire coverage, and whether insufficient offering of terrorism or related notices could create insurance coverage.

1. Definition of Terrorism

Terrorism "is a phenomenon that is easier to describe than to define." n52 Although it has been a subject of considerable interest since the 1970s, there is no consensus as to how "terrorism" should be defined. n53 TRIA approaches this problem by using a very broad definition of terrorism combined with certification by the Secretary of Treasury. n54 The essence of the definition is a violent or dangerous act that is dangerous to human life, property or infrastructure, that causes damage in the U.S. undertaken "as part of an effort to coerce the civilian population of the U.S. or to influence the policy or affect the conduct of the U.S. Government by coercion." n55 To trigger coverage by the act, the insured losses must exceed \$100 million. n56 The Secretary's decision on certification is not subject to judicial review. n57

This approach raises one potential coverage problem because of the threshold requirement. Terrorist attacks that cause relatively small losses, less than \$100 million, are not covered by the program. Those policies that explicitly track the scope of the program therefore would not provide coverage. Although \$100 million is a relatively small loss compared to \$36 billion (the amount of insured damages from September 11th), a loss of that magnitude would be catastrophic for many policyholders.

A second coverage problem comes from the certification process. Although the use of a certification approach has the benefit of certainty for establishing that an event was a terrorist attack (and also reduces the transaction costs associated with that determination), it may not have the benefit of accuracy. It is possible that what is, in fact, a terrorist attack may not be certified by the Secretary of Treasury. The program does not allow any recourse to dispute the Secretary's decision. As a result, coverage to a certain extent depends on the decision of the Secretary. As a practical matter, a terrorist attack may create strong political incentives for the Secretary to certify that a catastrophic event was a terrorist act, which could make it easier for policyholders than having to prove an event was caused by terrorists.

2. Alignment of Terrorism Definitions

Even though the Secretary certifies that an event was caused by an act of terrorism, it is at least a theoretical possibility that policies with their own definition of terrorism could be construed more narrowly than a decision by the

Secretary. While some policy forms are careful to track the definition of terrorism used in the Act, others use the definition of terrorism developed by ISO before TRIA was adopted. n58 Insurers with their own definition of terrorism could decide that a certified act of terrorism does not meet the policy definition. That outcome, however, seems somewhat unlikely given that certification triggers a right to reimbursement under the program. On the other hand, the reimbursement program, as noted above, still leaves a substantial risk on insurers which may be enough of an incentive to deny claims.

The reverse of this scenario could benefit policyholders. Under policies with their own definition of terrorism, a policyholder might have coverage for losses that were not due to a certified act of terrorism. Some policies define terrorism to include disruption of an electronic, communication, information, or mechanical system and the advancement of political, ideological or religious objectives. n59 If insurance coverage is determined to be broader than that provided by the program, this would put the insurer at risk of having to pay for claims on its own without reimbursement under the program.

In addition to the broader definition itself, some policies have their own quantitative threshold requirements before coverage applies. For example, some policies require that there be at least \$25 million in insured property losses or 50 or more injured persons before the coverage applies. n60 As a result, while terrorism coverage could appear to exist based on the nature of the act, it may be necessary to measure the overall damages before coverage applies. Not only is this difficult to do, it creates the risk of a coverage gap when total losses are less than \$25 million and where there are fewer than 50 people injured. Like the program threshold, the individual policy thresholds may not seem significant in comparison to the losses from September 11th, but losses behold these thresholds could be significant to individual policyholders.

3. Transition Coverage Issues

Another coverage concern arises from the amendment of the statutory definition in the 2007 extension. To the extent that policy forms specifically incorporate the statutory definition, they will continue to be in harmony with the Act. But if the form has a definition that draws a distinction between foreign and domestic terrorism, it creates a transition issue until the policy is amended, or new insurance with the proper definition is purchased. TRIA requires that terrorism insurance be provided on the same terms and conditions as non-terrorism coverage. Where the statutory definition has been amended to include domestic terrorism, but the policy has not been amended, the policy is no longer in compliance with the Act. Because the policy excludes domestic terrorism, which is now covered by the Act, it offers coverage that is less than that required by the Act.

It is not clear how this conflict would be resolved. On the one hand, the policy was in compliance at the time it went into force, so it is arguably enforceable. On the other hand, the Act's extension was intended to expand the scope of TRIA's protection to include domestic terrorism. If a domestic terrorism takes place, TRIA's intention is that it should be covered. But by the terms of the policy it would not be covered even though the insurer could have access under the Act to reimbursement. The cleanest way to address this problem would be to amend policies so that domestic terrorism is included. This requires significant paperwork (approval of an amendment, and then delivery to policyholders), and may warrant charging some additional premium for the additional risk. Another possibility is that a court might use public policy or a doctrine like reasonable expectations to construe the policy as covering domestic terrorism even though by its terms it only applies to foreign terrorism. Should a court take this approach, it would raise the question of whether the federal government would be required to reimburse the insurer in light of the fact that the policy did not comply with the mandatory offering requirement.

4. Mandatory Coverage for Ensuing Fires

There is one situation where it may appear that there is no coverage, but under operation of state law coverage would apply. Some states mandate coverage for ensuing fire losses even though the fire was caused by an excluded peril. At the time of the September 11th attacks, 29 states required commercial property insurance to conform to the coverage of the so-called "standard fire insurance policy." n61 This mandates that property insurance provide coverage for fires that ensue from a terrorist event even if other damages from the terrorist events are specifically excluded by the policy. n62 After TRIA was adopted, 12 states modified their statutes to exclude in various ways ensuing fire coverage caused by acts of terrorism. n63 As of 2005, ensuing fire coverage for terrorism events was still mandated in 17 states.

5. Adequacy of Mandatory Offering and Related Disclosures

Another way that a policyholder might have terrorism coverage without electing to buy it could be due to an inadequate mandatory offering and/or disclosure. TRIA requires that terrorism insurance be offered and that certain disclosures be made explicitly, such as the possibility of proportional coverage in the event that a terrorism event exceeds the TRIA cap. The Act, however, does not do much to enforce these requirements. Although the Act includes civil penalties for noncompliance, n64 it seems unlikely that these penalties would be applied to inadequate offerings in individual cases. The Act also includes the penalty of non-reimbursement of claims for inadequate disclosures, n65 but this also seems unlikely to provide much help in individual cases. Courts handling individual claims after a terrorism event may be tempted to grant coverage based on the inadequacy of offerings and disclosures. When faced with terrorism losses that are excluded from coverage, policyholders are likely to argue that they did not have sufficient disclosure of their options and the consequences of their particular election. Such arguments are quite common with Uninsured and Underinsured Motorist Insurance, which many states require be offered to consumers. A body of law has developed giving Uninsured and Underinsured Motorist coverage as a matter of law when the insurer does not properly offer the coverage, disclose the options and consequences, and/or fails to properly document the election. n66 Courts may use a similar argument to find terrorism coverage based on inadequate offerings or disclosures, or, alternatively, may rely more generally on public policy or a doctrine such as reasonable expectations to find terrorism coverage.

E. How Would Losses Be Allocated If the Cap Is Exceeded?

The last group of emerging issues to be addressed relates to allocation. The program is quite clear that the cap for federal reimbursement is \$100 billion, and that insurers do not have any obligation to pay for terrorism losses once that cap has been met. n67 If the cap is exceeded, insurers are to pay a pro rata share of the insured losses. n68 For example, if there were \$150 billion in losses, insurers would pay 100/150, or 2/3 of the losses. This raises the possibility that the losses will need to be allocated among the policyholders.

To make this system work, of course, the insurers must know what their pro rata share will be prior to paying claims. If insurers pay claims and then learn that the cap is going to be exceeded, they would start reducing payments, but that would be unfair to those whose claims took longer to pay. While theoretically, insurers could ask those insured who have received claims checks to return a portion of the payment, it is hard to imagine that policyholders would cooperate voluntarily. To help address this situation, the 2007 extension requires that the Treasury Secretary report to Congress within 15 days after a terrorism event whether "the Secretary estimates that aggregate insured losses will exceed \$100,000,000,000." n69 (It is difficult to believe that the estimate made within 15 days of the event can be very accurate.) This estimate will put the parties on notice that the allocation system according to Treasury regulations will apply. The 2007 extension requires that such allocation regulations be adopted within 240 days after enactment of the extension, n70 with a report to Congress to be made within 120 days of enactment describing the process to be used for determining the allocation. n71 It is hard to envision an allocation system that will not be fraught with problems, but perhaps the Treasury can come up with a workable set of regulations.

A related problem would arise in the case of multiple events in a single program year. The program is designed

with an annual cap. n72 If the cap is exhausted by an attack early in the year, what will happen in the event of a second attack a few months later? Suppose, for example, the first attack results in losses of \$75 billion, and that a second attack causes another \$50 billion in losses. If \$75 billion is allocated to the first attack, that would only leave \$25 billion for the second, leaving those policyholders with only 50% coverage. It would make sense to allocate the losses for the year in the same pro rata way as if there were a single event that exceeded the cap, but the timing of notices, calculations of estimates, and payment of claims may not allow this. Perhaps the regulations adopted by Treasury will be sufficient to deal with this scenario, or perhaps it will never need to be addressed, but the statute does not provide any guidance.

V. Conclusion

TRIA has been successful in reducing the price for terrorism insurance and increasing its availability through the backstop mechanism. The program has been in operation for five years, and has now been extended for another seven, so it will continue to provide support for terrorism insurance.

A number of emerging issues arise from TRIA and its extension. Will the program be extended again or become permanent? It may be that the nature of terrorism risk will not allow the market to fully respond to that risk. On the other hand, as we learn more about the risk and continue to develop modeling techniques, perhaps the market will be prepared to address the risk without the federal backstop.

Will the program be extended to nuclear, chemical, biological and radiological risks? Those risks are significant and are not currently covered by the program. The 2007 extension requires that the Comptroller General study this issue and make recommendations, so perhaps they will be covered in the future.

Does the program sufficiently protect insurer solvency? The program includes insurer deductibles and copayments to create an incentive for the market, but the amounts are not based on the insurers' ability to pay. An insurer's ability to charge an actuarially sound price is limited by state regulation, which interferes with the insurer's ability to buy reinsurance. If the reinsurance market does not expand and a major terrorist attack occurs, some insurers may be put in financial jeopardy.

What is the scope of the coverage provided by the program? If policyholders elect not to buy terrorism insurance, they probably will not be covered. However, they may nonetheless have property coverage for damages due to an ensuing fire in those states that follow the "standard" fire insurance requirements that have not created an exception for terrorism. Alternatively, courts might be tempted to find coverage as a matter of law if the offering and disclosures were found to be inadequate. For those policyholders who buy the insurance, their coverage may turn on whether the threshold requirement has been met (\$100 million in insured losses) and whether the Secretary of Treasury certifies the event as caused by terrorists. Some policies may, however, provide somewhat broader or narrower coverage if they do not explicitly follow or reference the statutory definition. For the next year or so, policies that cover foreign terrorism may create a transition issue because of the amendment to expand the definition of terrorism to include domestic groups.

How will losses exceeding the \$100 billion cap be allocated? In theory, the losses are to be paid proportionately. It is hard to imagine how the information will be available to do this accurately, but Treasury has been charged with developing regulations to address this allocation problem. A related problem is multiple events within a single program year, which would also require some kind of allocation. Perhaps the regulations will address this problem as well, though the statutory extension does not specifically mention the multiple event scenario.

Morrison Mahoney LLP on Plastics Engineering Co. v. Liberty Mutual Insurance

2008 Emerging Issues 1900

Morrison Mahoney LLP on Plastics Engineering Co. v. Liberty Mutual Insurance

By Michael F. Aylward

February 12, 2008

SUMMARY: Although the Wisconsin Supreme Court had clearly adopted an actual injury approach to the issue of trigger of coverage in its 2004 opinion in *American Girl* ending years of controversy with respect to the appropriate trigger for long-tail claims, uncertainty continues to persist with respect to whether an insurers defense and indemnity duties in cases involving ongoing injuries or damage should be allocated in some respect and whether, insofar as such claims triggered both insured and uninsured periods, the insurers obligation should be correspondingly pro rated.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Despite its landfills, industrial facilities and Superfund sites, Wisconsin has lagged behind neighboring states such as Minnesota in the evolution of case law affecting long-tail claims for pollution or mass torts. To some extent, this paucity of precedents reflects the deep freeze that pollution coverage litigation went into between 1994 and 2003 when the declared law of Wisconsin was the most environmental clean up costs were not damages. n1 Despite the flood of new and re-opened claims since the Wisconsin Supreme Court reversed that view in *Johnson Controls*, litigants have found few and conflicting precedents to guide them, however, with respect to the key questions of how any covered damages should be allocated among insured and uninsured periods and how many policy limits may be triggered in such cases. This period of uncertainty may soon come to a close with a recent opinion of the U.S. Court of Appeals for the Seventh Circuit certifying key coverage issues to the Wisconsin Supreme Court.

The claims in *Plastics Engineering Co. v. Liberty Mut. Ins. Co.*, 2008 U.S. App. LEXIS 1194 (7th Cir. January 22, 2008) arise out of asbestos bodily injury claims brought against a manufacturer of molding compounds in Sheboygan, Wisconsin. Plenco, which has been in business since 1934, began manufacturing products with asbestos-containing components in 1950 and continued to do so until 1983. For much of this period, Plenco was insured by Liberty Mutual. n2

In 2004, Liberty Mutual which until that point in time had paid all of Plencos defense costs, settlements and judgments for its asbestos claims, advised its insured that it would henceforth only pay a proportionate share of reasonable and necessary defense costs. Liberty Mutual has, however, continued to pay all of Plencos defense costs, settlements and judgments albeit now under a reservation of rights. Nevertheless, Plenco sued Liberty Mutual in 2004 seeking a declaration that it was in fact obligated to pay all of its defense costs and judgments. In response, Liberty Mutual sought a declaration that it was not obligated to pay certain defense costs or indemnity corresponding to

uninsured periods and was entitled to a refund for overpaid amounts. In October 2006 a lower courtⁿ³ found that each individual claim against Plastics Engineering was a separate occurrence and that Plastics Engineering was entitled to recover under Liberty Mutuals primary policies under an all sums basis. Liberty Mutual appealed.

Although the Wisconsin Supreme Court had clearly adopted an actual injury approach to the issue of trigger of coverage in its 2004 opinion in *American Girl*ⁿ⁴ ending years of controversy with respect to the appropriate trigger for long-tail claims,ⁿ⁵ uncertainty continues to persist with respect to whether an insurers defense and indemnity duties in cases involving ongoing injuries or damage should be allocated in some respect and whether, insofar as such claims triggered both insured and uninsured periods, the insurers obligation should be correspondingly *pro rated*.

Several opinions of the Wisconsin Court of Appeals had suggested that insurers might allocate defense costs between covered and non-covered claims if there was a rational basis for doing so.ⁿ⁶ However, none of these cases involved long-tail claims. Meanwhile, the Seventh Circuit had adopted a time on the risk approach to allocation in several Wisconsin cases, although not always on the basis of Wisconsin law.

In the face of such conflicting case law, Wisconsin policyholders have waged an aggressive lobbying campaign in the state legislature to adopt all sums theories by law. To date, however, such efforts have been defeated by the insurance industry.ⁿ⁷

Wisconsin courts have also had relatively little occasion over the years to visit the issue of whether separate injuries giving rise to multiple claims against a policyholder trigger one or multiple occurrence limits. Indeed, outside of the conventional set of auto cases,ⁿ⁸ there is little or no occurrence case law in Wisconsin.

On appeal from the District Courts ruling in *Plenco*, Liberty Mutual urged the Seventh Circuit to apply a *pro rata* approach to its claimed defense and indemnity obligations. Liberty Mutual argued that its indemnity duties were limited not only by the express terms of its policies, but pursuant to the cause approach on the basis that the insureds liability arose out of a single occurrence.

Addressing the occurrences issue, the Seventh Circuit found that prior Wisconsin state court opinions failed to provide sufficient guidance to allow it to decide this issue. The court took note of *Society Ins. v. Town of Franklin*,ⁿ⁹ in which the Court of Appeals had ruled that damage to surrounding property emanating from the insureds landfill was held to involve a continuous occurrence triggering numerous limits of coverage. The Seventh Circuit noted, however, that the Court of Appeals had not addressed whether these claims involved separate occurrences in each policy year, however. Similarly, the continuous trigger analysis adopted by the Court of Appeals in *Wisconsin Electric Power Co.*,ⁿ¹⁰ in which the court had addressed issues involving claims against a power utility brought by farmers whose herds had been damaged by stray voltage, looked only to the issue of trigger of coverage, not the number of occurrences. The court found that such cases differed from the instant case in that the damage stemmed from exposure that happened at one geographic site whereas in this case the insured had manufactured asbestos at its Wisconsin plant that had allegedly caused injury to plaintiffs throughout the country as the result of the incorporation of the insureds product into other manufacturers products.

In light of this uncertainty and the significance of the issue, the Seventh Circuit elected to certify the occurrences issues to the Wisconsin Supreme Court. The Seventh Circuit also asked the court to advise whether a non-cumulation clause in Liberty Mutual policies were as being contrary to the requirements for other insurance wordings set forth in Wisconsin Statute Section 631.43(1).ⁿ¹¹ In this case, Liberty Mutual had argued that certain of its policies contained a variation of a non-cumulation clause wherein the insureds right to recover under the policy should be diminished by any payments received under earlier insurance for the same occurrence. Whereas Liberty Mutual had argued that this statute applies only to clauses that are expressly designed as other insurance terms, *Plenco* argued that it should also apply to non-cumulation clauses given their similar effect. *Plenco* argued, therefore, that the district court had incorrectly held

that Section 631.43(1) applies only to concurrent insurance policies rather than cases of this sort involving consecutive policies.

Finally, the Seventh Circuit agreed to certify the issue of whether Liberty Mutual had a right to *pro rate* its obligations to Plenco, either as regards defense costs or indemnity. In keeping with cases such as *Grube*, the Seventh Circuit agreed that Wisconsin law generally requires insurers to defend suits in their entirety. On the other hand, the court allowed that, This issue may become more complicated if Wisconsin courts follow a pro rata allocation approach for indemnification liability. In that event, If damages are allocated between insurers based on the percentage of the injury that happened in each policy period, the same principles of pro-rata may support allocation of defense costs. Given this uncertainty, the Seventh Circuit concluded that it was appropriate to certify this case to the Wisconsin Supreme Court under Circuit Rule 52 which allows a federal court to certify to the states highest court questions of state law that will control the outcome of a pending case.

The Seventh Circuits interest in certifying this question to the Wisconsin Supreme Court is all the more interesting in light of the fact that unlike several circuits, notably the Fifth and Eleventh Circuits, the Seventh Circuit only rarely certifies questions of state law. As a result, the Seventh Circuit has from time to time come into direct conflict with contrary rulings of state appellate authorities in cases involving the identical issue of state law. n12 It remains to be seen whether the Seventh Circuit feels chastened by its recent experience with Illinois courts or whether it is sensitive to the acute political ramifications of this issue in Wisconsin and prefers to shift the political burden of resolving this issue to the state Supreme Court. In either event, a great deal will ride on the ultimate outcome of this opinion if the Wisconsin Supreme Court agrees to accept review.

[Return to Text](#)

n1 . In 1994, the Wisconsin Supreme Court ruled 4-3 in *City of Edgerton v. General Cas. Co.*, 517 N.W.2d 463 (Wis. 1994) that environmental cleanup costs are not covered damages. Despite a series of confusing and conflicting opinions in the ensuing years, it was not until July 2003 that the Supreme Court ruled in *Johnson Controls, Inc. v. Employers Ins. of Wausau*, 665 N.W.2d 257 (Wis. 2003) that it had made a mistake in adopting such a narrow and technical interpretation of damages.

n2 . The parties stipulated to the fact that Liberty Mutual was defending under primary policies issued between February 1968 and January 1989 and umbrella policies issued between May 1970 and January 1984 and January 1986 to January 1998.

n3 . *Plastics Engineering Co. v. Liberty Mutual Ins. Co.*, 2006 U.S. Dist. LEXIS 78622 (E.D. Wis. October 27, 2006).

n4 . *American Family Mut. Ins. Co. v. American Girl, Inc.*, 673 N.W.2d 65 (Wis. 2004).

n5 . Early Wisconsin cases such as *Kremers-Urban Co. v. American Employers Ins. Co.*, 351 N.W.2d 156 (Wis. 1984) and *Lund v. American Motorists Ins. Co.*, 797 F.2d 544 (7th Cir. 1986) had suggested that it was the date of the insureds negligent act, not the time of the resulting damage, that was the trigger of coverage.

n6 . See *Sauk County v. Employers Ins. of Wausau*, 550 N.W.2d 439 (Wis. Ct. App. 1996) (holding that insurers obligation to pay defense costs (allowing allocation of legal fees between cost of defending lawsuit and cost of prosecuting counterclaim) and *Loosmore v. Parent*, 613 N.W.2d 923 (Wis. Ct. App. 2000) (holding that insurer had no obligation to pay for cost of cross-claim against co-defendant). On the other hand, in *Grube v. Dawn*, 496 N.W.2d 106, 122 (Wis. App. 1992), the Court of Appeals had ruled that apportionment would not be permitted where it was neither practical nor desirable and that an insurer must provide a complete defense even if only some of the claims against the insured were covered. See also *Lockwood Intl v. Volm Bag Co.*, 273 F.3d 741, 743 (7th Cir. 2001), the Seventh Circuit declared that if defense costs are readily apportionable between the covered and the uncovered claims, the insurance company need pay only for the former.

n7 . In 2005, for instance, insurer opposition helped to kill Assembly Bill 222 (Senate Bill 137), that had been promoted by Wisconsin paper and pulp companies that face significant environmental liability exposures as the result of the contamination of the Fox River.

n8 . See *Olsen v. Moore*, 202 N.W.2d 236 (Wis. 1972) (successive auto collision held to involve a single occurrence); *Welter v. Singer*, 376 N.W.2d 84 (Wis. Ct. App. 1985) (claims against trucker who ran over a bicyclist and then backed up into a car triggered a single occurrence limit); and *Danielson v. Gaspar*, 623 N.W.2d 182 (Wis. Ct. App. 2000) (various different theories of liability arising out of insureds negligent entrustment of vehicle held to only trigger a single occurrence limit).

2008 Emerging Issues 1899

Gerber & Biggie:Natl Union Fire Insurance Co. v. Underwriters at Lloyd's London

By Daniel W. Gerber and Brian R. Biggie

February 11, 2008

SUMMARY: Notice of a receivership action and civil action seeking specific performance does not constitute notice of a derivative action by share-holders. It is not up to the insurer, under a Directors and Officers policy, to scroll through documents received from the insured and determine whether notice has been provided. The obligation to comply with notice provisions remains with the insured, and Courts are reluctant to require an insurer to speculate as to the consequences that may result from specific wrongful acts on the part of the insured.

ARTICLE: For Every Policy And Every Potential Claim, Insureds and Insurers Must Be Conscious Of Whether Notice Is Necessary, and If So, Whether The Notice Requirements In The Policy Were Satisfied

While variations exist, insureds under Directors and Officers policies are required to provide prompt notice of a potential claim in order to be entitled to coverage. Policy provisions dictate to the insured what information is required and the manner such information must be submitted. The difficulty for the insured, is determining what constitutes a 'potential claim' and what 'wrongful acts' may give rise to a civil action.

Analysis

In *National Union Fire Insurance Company of Pittsburgh v. Underwriters at Lloyd's London*, So.2d , 2007 Fla. App. LEXIS 18750 (Fla. App. 3 Dist. 2007), PCA was a Miami based publicly traded health care company. PCA procured D&O coverage through Lloyds for the period of April 7, 1996 to September 8, 1997. National Union's policy provided coverage for the period of September 8, 1997 to September 8, 2003. In 1996, PCA and Sierra Health Services began discussing a merger. PCA's representatives disclosed to Sierra that it was under-reserved by \$100 million, which was in violation of Florida's insurance law. Despite this, the two companies continued with their merger.

PCA later disclosed that it was in fact under-reserved by \$130 million. This number was outdone by an audit that revealed PCA was in fact, under-reserved by \$190 million. As a result of the mounting deficits, the Florida Insurance Department filed a complaint seeking receivership, causing a court order effectively freezing PCA's assets. In March

1997, Sierra rescinded its agreement with PCA. In turn, PCA filed suit in federal court seeking specific performance of the agreement and Sierra filed an action seeking a declaration that it rightfully rescinded the agreement.

On April 29, 1997 PCA sent Lloyds a letter enclosing the Sierra complaint and the receivership pleadings from the Florida action and put Lloyd's on notice of a "potential claim brought by Sierra." Lloyds advised that the notice presented only a "potential claim situation" because no director or officer of PCA was named as a defendant. Lloyds stated that if a director or officer were added as a defendant then notice would be deemed given the date the Sierra letter was sent.

In November 1997, several shareholders filed suit against a number of PCA's directors and officers. PCA tendered the claim to Lloyds, which disclaimed coverage stating that notice of the Sierra complaint did not constitute notice of the shareholder action. The shareholder class action was settled with a contribution from PCA and National Union, resulting in a claim against Lloyds. National Union and PCA argued that Lloyds should have provided defense and indemnity in the shareholder action. The court disagreed.

The court stated, "[T]he essence, then, of a claims-made policy is notice to the carrier within the policy period." *Id. citing Gulf Ins. Co. v. Dolan, Fertig & Curtis*, 433 So.2d 512, 514 (Fla. 1983). Pursuant to the terms of the policy, proper notice required the following information, 1) the specific wrongful act; 2) the consequences which have resulted or may result therefrom; and 3) the circumstances by which PCA first became aware. The court held that the letter that enclosed the Sierra complaint and receivership pleadings did not put Lloyds on notice of a subsequent shareholder action filed against the directors and officers of PCA. The court went on to state,

Even if we assume that *In re PCA* asserted claims "arising out of" the wrongful acts alleged in the Sierra lawsuit, we conclude that the Sierra complaint and attached receivership pleadings did not adequately describe the consequences that resulted from PCA's wrongful acts and the circumstances of PCA's discovery of those wrongful acts. *Id.*

Notably, the court stated that it is the *insured* who is in the better position to evaluate the claim and its possible consequences. The court went on to state, "[I]ts obligation to provide notice cannot be shifted to the insurer to speculate as to the consequences that may result from specific wrongful acts by sifting through voluminous documents identified in the Sierra complaint and receivership proceedings." *Id.*

The *National Union* case is certainly not the first time an insured misinterpreted its obligations under a notice provision. In *National Union*, the insured believed that notice of a one claim (rescission and receivership actions) would be construed as notice of a separate subsequent claim (shareholder action). In contrast, the insured in an unreported 5th Circuit decision, chose not to forward notice of a potential claim because the insured did not believe notice was necessary. *Precis Inc. v. Federal Ins. Co.*, 184 Fed.Appx. 439 (5th Cir. Tex. 2006).

In *Precis*, the insured obtained a policy providing coverage for "written demands asserted against the insured's Directors and Officers. The insured's general counsel received letters demanding "consideration and adjustment" for damages the author stated were the result of the actions of the company and its general counsel. The insured did not believe that the letters constituted demands for monetary damages and therefore, did not promptly forward the letters to the insurer. When the letters were eventually sent to the insurer, nine months later, coverage was denied based on late notice. The court upheld that insurers disclaimer and stating that the letters triggered the insured obligation to provide notice.

Practice Tip

In the end, it is the insured who must decide whether to provide notice and if so, what information to include. General Counsel, Officers and Directors cannot assume forwarding pleadings or a letter alone, will satisfy a policy's requirements. Similarly, the decision not to forward information regarding a potential claim must be made with caution. In this decision, perhaps more than any other, that will determine an insured's entitlement to coverage.

General Counsel, Officers and Directors must be certain that the notice provided is specific and details the consequences of the alleged wrong acts. It is a mistake to assume an insurer will glean such information from demands for damages or even a complaint. By providing an explanation of the possible consequences of a wrongful act, insureds will be able to place an insurer on notice of claims that may not be readily apparent. This is essential given that it is unlikely a court will place such a burden on the insurer. Lastly, if there is ambiguity as to whether an occurrence constitutes a potential claim consider the nature of the occurrence and the potential resulting exposure in order to determine whether the insurer should be put on notice.

ABOUT THE AUTHOR(S):

Daniel W. Gerber is a partner of Goldberg Segalla LLP in New York. He maintains an international practice in commercial litigation with a focus on complex insurance coverage disputes and analysis, including reinsurance and excess insurance, as well as mediation and arbitration. He chairs his firms Life, Health, Disability and ERISA practice group and manages its Insurance Coverage practice group. He is an author for the renowned Insurance Treatise, New Appleman's Insurance Law Practice Guide, as well as Mealeys Emerging Insurance Disputes. Mr. Gerber is admitted to the United States Supreme Court, as well as all federal and state courts in New York and Pennsylvania. He argues regularly before the New York Court of Appeals and the U.S. Second Circuit Court of Appeals arguing the seminal case in New York on late notice in insurance law. He has received the Chairperson of the Year Award for his work as Chair of the Insurance Coverage Committee for the New York State Bar Associations Torts, Insurance and Compensation Law Section, and will chair the almost 3,500 member Torts, Insurance and Compensation Law Section in 2008. Mr. Gerber is also an active member of the Association of Life Insurance Counsel, the International Claims Association and the International Association of Defense Counsel, as well as the American Bar Associations Life, Health and Disability Committees. Mr. Gerber possesses an AV rating from Martindale Hubbell, a Super Lawyer designation from Law & Politics Magazine, and has been named consecutively by his peers to Business First's Who's Who in Law.

Brian R. Biggie is an associate at Goldberg Segalla LLP in New York. He concentrates his practice on complex insurance coverage disputes and analysis. He has successfully argued cases before the Third and Fourth Departments and practices in courts throughout New York. He is also admitted to practice law before the United States District Court for the Western District of New York and is a member of the Defense Research Institute and the New York and Erie County Bar Associations. Mr. Biggie currently serves as a Board Member for the Buffalo Alliance for Education and works on the Schools Committee with the Buffalo Niagara Partnership. For the past two years he has organized a gift-giving campaign for the benefit of over 300 local children in need. He is the 2006 recipient of the Commitment to Education Award from the Buffalo Alliance for Education. Brian received his B.A., cum laude, from Buffalo State College, and his J.D., from the George Mason University School of Law.

Meckler Bulger and Tilson LLP on the Impact of the Illinois Supreme Court's Decision in Kajima

By Meckler Bulger and Tilson LLP, Scott Seaman and Jason Schulze

February 8, 2008

SUMMARY: In their analysis of the Illinois Supreme Court's recent decision in *Kajima*, prominent insurance law and commercial litigators, Scott M. Seaman and Jason R. Schulze of the firm Meckler Bulger and Tilson LLP, address important issues relating to the targeted tender rule on concurrent coverage cases and Illinois law on allocation of losses in long-tail coverage cases.

ARTICLE: Introduction

The Illinois Supreme Court's recent decision in *Kajima Construction Services, Inc. v. St. Paul Fire and Marine Ins. Co.* [227 Ill. 2d 102 (2007)] involves the interplay between Illinois' "targeted tender" or "selective tender" rule and the requirements of "horizontal exhaustion." In this single, cogent opinion, the Illinois Supreme Court set proper limits on Illinois' targeted tender rule and provided clarity with respect to Illinois law on allocation. The decision makes clear that a targeted tender does not preempt the fundamental requirement of horizontal exhaustion. Further, the decision properly limits the application of the targeted tender rule to "circumstances where concurrent primary insurance coverage exists for additional insureds."

The decision also has implications with respect to long-tail claims and consecutive policies beyond making clear that the targeted tender rule has no application to such matters. Indeed, the decision further establishes that Illinois is a *pro rata* or horizontal exhaustion jurisdiction, not an "all sums" or "vertical exhaustion" jurisdiction.

This is the Illinois Supreme Court's first substantive foray into allocation-related issues since *Zurich Ins. Co. v. Raymark Indus. Inc.* [118 Ill. 2d 23 (1987)] ("*Raymark*") decided over 20 years ago. Notwithstanding substantial decisional authority demonstrating that Illinois is a *pro rata* jurisdiction, policyholders for years have used the *Raymark* decision to argue that Illinois is an "all sums" or "vertical spike" jurisdiction. The *Kajima* decision, at a minimum, limits the application of *Raymark* in the long-tail claim context to primary policies -- as many decisions applying Illinois law already have recognized -- and actually establishes that Illinois is a *pro rata* jurisdiction.

We begin with an overview of Illinois' targeted tender rule. Next, we examine Illinois jurisprudence on allocation spanning from *Raymark* to *Kajima*, visiting numerous Illinois appellate and trial court decisions and providing guidance to practitioners along the way. We then discuss the *Kajima* decision. Finally, we consider the impact of this decision both on the targeted tender rule and on the broader subject of allocation.

The "Targeted Tender" or "Selective Tender" Rule in Illinois

There is a line of cases specific to Illinois law that, under certain circumstances, allows a policyholder to tender its defense to one of its primary insurers (but not another) and thereby nullify the defending insurer's rights of equitable contribution as to both defense and indemnity against the non-selected insurer. Simply stated, where applicable, it allows a policyholder covered by multiple primary liability insurance policies to select or target which insurer will defend and indemnify it with regard to a specific claim and to make its selection stick.

This "targeted tender" or "selective tender" rule originated in *Institute of London Underwriters v. Hartford Fire Ins. Co.* [234 Ill. App. 3d 70 (1st Dist. 1992)] in the context of concurrent insurance contracts. The case arose out of a construction accident on the premises of an insured property owner. The property owner had coverage available to it both under its own insurance contract (under which it was a named insured) and under a contractor's insurance contract (under which it was an additional insured). The property owner tendered the underlying suit to the contractor's insurer and "notified [its own insurer] of the claim but unequivocally stated that [its own insurer] should not respond to the loss, but that the [contractor's insurer] was to provide the defense and indemnification for it under the [contractor's policy]" [234 Ill. App. 3d at 73].

The contractor's insurer defended the property owner in the underlying action. Fourteen months after the underlying action was filed, and against the wishes of the property owner, the contractor's insurer sent a letter requesting that the property owner's insurer contribute to a settlement of the underlying action. The property owner's insurer refused. The contractor's insurer subsequently settled the underlying action on its own and brought an equitable contribution action against the property owner's insurer [234 Ill. App. 3d at 72-73].

The appellate court held that the doctrine of equitable contribution "did not apply" on the facts of that case, even though the contractor's insurance and the property owner's insurance were co-primary. The court held that, where two insurance contracts potentially apply to a loss, the policyholder has the "right" to select which insurer is to defend and indemnify it by tendering its defense to one insurer and not the other, thereby foreclosing the selected insurer's right of contribution from the "excused" insurer [234 Ill. App. 3d at 78-79].

The court pointed out that the contractor's insurance contract, unlike the property owner's contract, did not contain an "other insurance" clause. The court refused to allow the contractor's insurer to claim any benefit from the "other insurance" clause of the property owner's contract, claiming that to do so would "elevate" the status of the contractor's insurer to that of a third-party beneficiary under the property owner's insurance contract [234 Ill. App. 3d at 77].

The appellate court concluded that the property owner's own insurance was never triggered. The property owner never tendered its defense to its own insurer (and, in fact, specifically instructed its insurer not to get involved in the defense or the indemnification of the claim). Further, the letter from the contractor's insurer to the property owner's insurer requesting that the latter contribute to the underlying settlement did not amount to a tender of the defense. As such, the property owner's insurer had no duty to respond to the underlying action in any way. As a result, the contractor's insurer was barred from seeking contribution from the property owner's insurer. The court believed that the property owner's concern that attributing the loss to the policy under which it was the named insured could result in an increase in premiums or cancellation of the policy justified allowing the property owner to have the right to select which policy participated [234 Ill. App. 3d at 78-79].

Subsequent to the appellate court's decision in *Institute of London*, the Illinois Supreme Court discussed the targeted tender rule in *Cincinnati Cos. v. West American Ins. Co.* [183 Ill. 2d 317 (1998)]. The issue in that case was

whether a primary insurer's duty to defend arose upon receipt of actual notice of the suit against its policyholder or upon the policyholder's tender of its defense to the insurer. The court held that actual notice triggered the duty to defend. In the course of the decision, the court commented favorably on the targeted tender rule and the policyholder's right to forgo coverage under a policy in order to protect itself against an increase in premiums or policy cancellation [183 Ill. 2d at 326]. The court also recognized that the targeted tender rule is not a one-way street. In other words, the policyholder may choose to forgo an insurer's involvement in the defense by instructing the insurer not to participate in the litigation. The court stated that the insurer would then be relieved of its obligation to the policyholder with regard to that claim [183 Ill. 2d at 326]. The court did not address whether or not the "selected" insurer would be precluded from pursuing a claim for equitable contribution against the "excused" insurer. [See also *Bituminous Cas. Corp. v. Royal Ins. Co. of Am.*, 301 Ill. App. 3d 720 (3d Dist. 1998) (applying the targeted tender rule and holding that it is only where its policy is triggered that the insurer becomes liable for the defense and indemnity costs of a claim and it becomes necessary to allocate loss according to the terms of the "other insurance" clauses of the policies).]

Targeted tender also was at issue in *Alcan United, Inc. v. West Bend Mut. Ins. Co.*, [303 Ill. App. 3d 72 (1st Dist. 1999)]. The *Alcan* case was a declaratory judgment action between two insurers, Reliance National Insurance Company and West Bend Mutual Insurance Company. Alcan United, Inc. was a named insured under the Reliance contract and an additional insured under the West Bend contract. Both the Reliance and West Bend contracts contained "other insurance" clauses. The *Alcan* court held that an "other insurance" clause merely governs apportionment of "available" insurance and, as such, does not "come into play" unless other coverage is "available" (i.e., the policyholder also tenders to another insurer) [303 Ill. App. 3d at 82], citing *Employers Ins. v. James McHugh Constr. Co.*, 144 F.3d 1097 (7th Cir. 1998)(applying Illinois law)]. As such, an "other insurance" clause does not prevent a policyholder from selectively tendering its defense to only one of its insurers, thereby precluding the "selected" insurer from obtaining equitable contribution from other insurers that also provide coverage.

The Illinois Supreme Court considered whether the presence of an "other insurance" clause precludes the application of the targeted tender doctrine in *John Burns Const. Co. v. Indiana Ins. Co.* [189 Ill. 2d 570 (2000)]. Burns, a general contractor, entered into a subcontract with a paving company that required the subcontractor to name Burns as an additional insured under its policy with Indiana Insurance Company. Burns sought to have Indiana defend and indemnify it in a subsequent slip and fall case. Indiana refused and Burns had its own insurer, Royal Insurance Company, defend. Burns and Royal filed an action seeking a declaration that Indiana had the exclusive obligation to defend and indemnify Burns. The trial court held the two insurers must contribute equally to the defense and indemnity of Burns. The appellate court affirmed, holding that Burns' initial tender to Indiana triggered the "other insurance clause" provision of the Indiana policy, which in turn activated Royal's duty to defend [189 Ill. 2d at 573].

The Illinois Supreme Court, in reversing the appellate court's holding that an "other insurance" clause provides a selected insurer the right to seek equitable contribution from another insurer, ruled that the presence of an "other insurance" clause in the insurance contract was "irrelevant" to the application of the targeted tender rule. The court began its analysis by reaffirming the principle that a policyholder has the right to choose which of its insurers will be required to defend and indemnify it. Addressing Indiana's argument that it could seek equitable contribution from Royal even though the insured had tendered to Indiana alone, the Court stated:

Indiana attempts to distinguish *Institute [of London]* by noting that the policy issued by Institute did not contain an "other insurance" provision and, therefore, Institute did not have a contractual right to involve Hartford. It was irrelevant that the Institute policy did not contain an "other insurance" clause, however. As the appellate court noted in *Institute [of London]*, the purpose of an "other insurance" clause is not to trigger coverage but to provide a method of apportioning coverage that would be triggered otherwise. [Citation omitted].

* * *

We . . . conclude that Indiana may not take advantage of the other insurance provision in its policy. The insurance provided by . . . Royal was not "available," in the language of the other insurance provision, for [John Burns] had

expressly declined to invoke that coverage. Moreover, we do not believe that the presence of the "other insurance" provision in the Indiana policy serves by itself to trigger the coverage afforded by Royal's policy. An "other insurance" provision does not in itself overcome the right of an insured to tender defense of an action to one insurer alone.

[*John Burns*, 189 Ill. 2d at 577-78.] Holding that Indiana should not benefit as the result of its own refusal to defend Burns, the Illinois Supreme Court also rejected Indiana's argument that Royal's policy was triggered when it took over the defense of Burns after Indiana rejected it [189 Ill. 2d at 578]. Accordingly, after *Burns*, it was settled law in Illinois that the selective tender doctrine could be applied in that type of concurrent coverage situation regardless of the presence of an "other insurance" clause in the policy of the selected insurer.

A couple of cases allowed a policyholder to "deactivate" a tender previously made under some circumstances "for purposes of invoking exclusive coverage with another carrier" [*Alcan*, 707 N.E.2d at 695; see also *Legion Ins. Co. v. Empire Fire & Marine Ins. Co.*, 354 Ill. App. 3d 699 (1st Dist. 2004), *appeal denied*, 215 Ill. 2d 598 (2005)]. The issue of the extent to which a policyholder may deactivate a tender or must renounce coverage under other policies likely will be the subject of future decisions.

The targeted tender rule generally has been applied in the context of claims involving concurrent primary insurance contracts in which the insured (often a general contractor) has its own policy and is named as an additional insured under policies issued to another (often a subcontractor who names the general contractor as an additional insured pursuant to a contractual obligation).

The targeted tender rule has not gained acceptance outside Illinois. In fact, the rule has been subject to considerable criticism as being an improper way to address an issue that could better be addressed -- as some courts have done -- by holding that co-insurers' "other insurance" clauses have no impact on their respective rights and obligations when the underlying parties' hold harmless and indemnity agreements address how the risk of loss is to be borne [see, e.g., *Am. Indem. Lloyds v. Travelers Prop. & Cas. Ins. Co.*, 335 F.3d 429, 436 (5th Cir. 2003) (applying Texas law) (noting "an indemnity agreement between the insureds or a contract with an indemnification clause, such as is commonly found in the construction industry, may shift an entire loss to a particular insurer notwithstanding the existence of an 'other insurance' clause in its policy"); *Hartford Cas. Ins. Co. v. Mt. Hawley Ins. Co.*, 123 Cal. App. 4th 278 (Cal. Ct. App. 2004) (holding that one primary insurer could not seek equitable contribution from another primary insurer based upon the indemnity provisions in the underlying construction contract)]. In addition, at least prior to *Kajima*, there has been some concern that policyholders may seek to have the doctrine applied outside its intended scope of concurrent policies under which the policyholder is the additional insured.

Illinois Case Law on Allocation of Losses

In 1987, the Illinois Supreme Court issued its decision in *Zurich Ins. Co. v. Raymark Industries, Inc.* [118 Ill. 2d 23 (1987)]. The court in *Raymark* primarily was focused on the issue of trigger of coverage in the context of asbestos-related claims under primary commercial general liability policies. The court ruled that, under the plain language of the policies "an insurer must provide coverage for a claim if the claimant sustained 'bodily injury' or 'sickness' or 'disease' during the policy period." In affirming the appellate court, the Illinois Supreme Court applied a "triple trigger," holding that the policies were triggered at the initial exposure, when the disease manifested itself, and at any interim time when the claimant manifested some sickness. The court further noted that, between the time exposure to asbestos ceases and the time an asbestos-related disease becomes diagnosable, there is no continuous injury. The court stated that "sickness" may take place in the period before clinical manifestation of the disease and whether and when a claimant suffered sickness must be determined on a case-by-case basis [*id.* at 29]. n1

After having fully analyzed the trigger issue and having rejected the application of a continuous (or exposure) trigger used in *Insurance Co. of North America v. Forty-Eight Insulations, Inc.*, [633 F.2d 1212 (6th Cir. 1980), *aff'd on rehearing*, 657 F.2d 814 (6th Cir.), *cert. denied*, 454 U.S. 1109 (1981)], the court simply held:

Having rejected the premise underlying the *pro rata* allocation approach adopted in *Forty-Eight Insulations*, we conclude that the appellate court did not err insofar as it declined to order the *pro rata* allocation of defense and indemnity obligations among the triggered policies.

[*Raymark*, 118 Ill. 2d at 57.]

The above quote constitutes the entirety of the court's consideration of the issue of allocation. The Illinois Supreme Court simply concluded that the appellate court did not commit reversible error insofar as it declined to order the *pro rata* allocation of defense and indemnity obligations among the triggered primary insurance policies on the facts of the case before it. The Illinois Supreme Court did not promulgate a rule governing allocation in Illinois and provided no indication whatsoever that it intended its refusal to reverse the lower court's allocation holding in *Raymark* to apply in any other case or context. Of course, the *Raymark* decision is 20 years old and predated a wealth of cases in Illinois and across the country specifically analyzing and addressing the important issues of allocation.

Post-Raymark Horizontal Exhaustion/Pro Rata Decisions

Since *Raymark*, there have been numerous cases applying Illinois law that have addressed issues regarding allocation of losses. A majority of appellate court decisions in Illinois have recognized the very limited nature of the *Raymark* decision on the issue of allocation and have concluded that: (1) horizontal rather than vertical exhaustion is required; (2) in the absence of a reliable method to prorate the loss based upon the claim-specific facts, a time-on-the-risk allocation applies; and (3) the policyholder is responsible for periods where it is self-insured or has no available insurance or insufficient insurance available for whatever reason. These cases have recognized that many policies with "all sums" language expressly limit coverage to injuries or damages "during the policy period" and have considered the requisite equities associated with a fair allocation.

In *U.S. Gypsum Co. v. Admiral Ins. Co.* [268 Ill. App. 3d 598 (1st Dist. 1994), appeal denied, 161 Ill. 2d 542 (1995)], the appellate court addressed the issue of allocation in the context of asbestos property damage claims. The court rejected the policyholder's vertical exhaustion argument because it would "blur the distinction between primary and excess insurance" and allow the policyholder "to effectively manipulate the source of its recovery, avoiding difficulties encountered as the result of its purchase of fronting insurance and the liquidation of some of its insurers" [*id.* at 654].

The appellate court decision in *Outboard Marine Corp. v. Liberty Mut. Ins. Co.* [283 Ill. App. 3d 630 (2d Dist. 1996), appeal denied, 167 Ill. 2d 617 (1997)] is particularly instructive. The case involved coverage for environmental property damage claims and was authored by the current Chief Justice of the Illinois Supreme Court, Robert Thomas, when he was a justice sitting on the appellate court. Justice Thomas rejected the policyholder's argument that *Raymark* required vertical exhaustion, noting that the case did not involve a claim for property damage or coverage for excess insurance. Justice Thomas wrote: "[t]his is the only fair approach. While the insurers agreed to indemnify OMC for 'all sums,' it had to be for sums incurred during the policy period. *Gypsum* supports the notion that OMC cannot shift its responsibility for uninsured years to its excess carriers" [*id.* at 642]. The court saw no justification to. Instead, the court applied a *pro rata* time-on-the-risk allocation with the policyholder being held responsible for uninsured periods.

In *Missouri Pacific R. Co. v. International Ins. Co.*, [288 Ill. App. 3d 69 (2d Dist. 1997), appeal denied, 174 Ill. 2d 567 (1997)], the appellate court ruled on the issue of allocation in the context of noise-induced hearing loss ("NIHL") and asbestos bodily injury claims. The court rejected the policyholder's argument that an "all sums" ruling was required by *Raymark* and the policy language, noting:

[w]e read nothing in *Zurich* as precluding the application of the *pro rata*, time-on-the-risk allocation method announced in *Outboard Marine* to the case at bar. *Zurich's* rejection of a *pro rata* approach was based on the narrow facts of the case before it, namely, that it had rejected the trigger analysis set forth in *Forty-Eight Insulations*. The court did not adopt a general rule forever precluding the application of a *pro rata* approach. As we explained in *Outboard*

Marine, such an approach is appropriate where, as here, a single continuous occurrence results in an unallocable loss implicating successive policy periods.

[*Id.* at 79.] The court rejected the policyholder's "all sums" argument, noting it ignored the requirement that such sums "must be on account of personal injuries that occur during the policy period" [*id.* at 77]. The court reversed the grant of summary judgment in favor of the policyholder and ruled that, on remand, the parties should be given the opportunity to present evidence that NIHL and asbestos claims may be measured and allocated, to a reasonable degree of medical and scientific certainty, to particular policy periods. If the injuries cannot be measured and allocated to particular policy periods, the *pro rata* time-on-the-risk allocation of damages approach used in *Outboard Marine* would be applied [*id.* at 78]. The court held that horizontal exhaustion is required and that the insured is responsible for uninsured periods [*id.* at 82].

Practice Insight: The foregoing language in the decision affording the parties an opportunity to make a factual showing about when injuries or damages took place should serve as an important reminder for practitioners to consider a fact-based allocation in the appropriate case. The most accurate allocation method -- and the one that most closely adheres to the requirements of most insurance policies -- is to determine precisely what injury or damage took place during each policy period or each uninsured period and allocate the loss accordingly. In many long-tail claims, the inability to make such a determination or the litigation costs associated with attempting to make such a showing has caused parties to advocate and courts to apply either a *pro rata* proxy or an all sums fiction for apportioning losses. Nonetheless, practitioners should consider with respect to a given claim whether factual evidence and/or expert testimony could be developed that would provide a meaningful basis to allocate losses consistent with the portfolio interests of the client.

The appellate court once again rejected the "all sums" argument and required horizontal exhaustion in *AAA Disposal Systems, Inc. v. Aetna Cas. and Surety Co.* [355 Ill. App. 3d 275 (2d Dist. 2005), appeal denied, 213 Ill. 2d 275 (2005)]. In that case, which involved environmental property damage, the court applied a *pro rata* time-on-the-risk allocation. Moreover, it held that the period of October 1, 1985 to June 24, 1988 must be included in the allocation notwithstanding the court's acknowledgement that no insurance coverage was available to the insured during that period. In addition, the court determined that the period in which coverage was provided by an insolvent insurer must be included in the allocation period [see also *Roman Catholic Diocese of Juliet, Inc. v. Interstate Fire Ins. Co.*, 292 Ill. App. 3d 447 (1st Dist. 1997) (applying a *pro rata* allocation in a sexual abuse case); *Illinois Cent. R.R. v. Accident & Cas. Co.*, 317 Ill. App. 3d 737 (1st Dist. 2000), appeal denied, 193 Ill. 2d 586 (2001) (ruling in favor of the horizontal exhaustion of policies and a *pro rata* allocation of losses in a case involving employment discrimination that took place over a period of years)]. n4

As the case histories demonstrate, over the years the Illinois Supreme Court repeatedly has declined to review appellate court decisions providing a *pro rata* or horizontal approach to allocation and requiring that the policyholder bear responsibility for periods of no insurance. In particular, the Illinois Supreme Court denied review in *Outboard Marine*, *Missouri Pacific*, and *AAA Disposal Systems, Inc.* n5

Post-Raymark All Sums/Vertical Exhaustion Decisions

Policyholders argue that a couple of Illinois appellate court decisions have sided with them by looking to the "all sums" language in some policies in a vacuum and by considering *Raymark* as requiring an "all sums," "pick and choose," or "vertical spike" allocation at least at the primary insurance level. One such decision is *Benoy Motor Sales, Inc. v. Universal Underwriters Ins. Co.* [287 Ill. App. 3d 942 (1st Dist. 1997)]. *Benoy* involved one insurer's obligation to 10 automobile dealerships in connection with various claims asserted by the Illinois Environmental Protection Agency and the United States Environmental Protection Agency at a single polluted site.

In *Benoy*, the appellate court reversed the trial court's ruling that held the insurer was required to pay each dealer only that part of the settlement amount and defense costs that relate to shipments of oil to the site while the policy was in effect and not to shipments made during gaps in coverage. The *Benoy* decision cites with approval to the *Raymark* decision and noted that an analogy to the facts of *Benoy* (which involved environmental contamination) to *Raymark* was "apt." The portion of the *Raymark* decision endorsed by the appellate court in *Benoy*, however, was the adoption of a triple trigger for asbestos bodily injury claims [*Benoy*, 287 Ill. App. 3d at 948]. Yet, the appellate court actually applied a continuous trigger and remanded the case for a determination of how much the insurer was obligated to pay on behalf of each policyholder [*id.*]. Accordingly, as another appellate court decision specifically found, *Benoy* simply "did not reach a decision regarding *pro rata* allocation" [AAA *Disposal*, 355 Ill. App. 3d at 287; *see also John Crane Inc. v. Admiral Ins. Co.*, No. 04CH8266, 2006 WL 1010495, *30 (Cir. Ct., Cook Cty., Ill. April 12, 2006) (noting that *Benoy* is "not applicable" because it "did not reach a decision regarding *pro rata* allocation")].

In a subsequent opinion authored by Justice Wolfson, the same appellate justice who authored *Benoy*, the court refused to hold that Illinois law required an "all sums" allocation [*Maremont Corp. v. Cont'l Cas. Co.*, 326 Ill. App. 3d 272 (1st Dist. 2001), *appeal denied*, 198 Ill. 2d 617 (2002)]. *Maremont*, like *Benoy*, was an environmental property damage coverage action. The trial court found the continuing pollution required it to apply a "continuous trigger" in determining coverage for a single occurrence. Because the policyholder could not prove the amount of damages that occurred during the years that Continental and London insured it, the court allocated damages to the various policies in proportion to the period of time each was on the risk. The trial court further found *Maremont* was required to horizontally exhaust all primary insurance before it could reach the Continental and London excess policies. Because the pro rated damages did not exceed the liability limits of the primary policies, the trial court ruled Continental and London could not be held liable, and granted their motions for summary judgment.

Although the appellate court opinion suggests that Justice Wolfson continues to believe that the "during the policy period" language does not serve as a limitation on the promise to pay "all sums," the court ultimately did not accept the policyholder's argument that *Outboard Marine* and the other *pro rata* decisions in Illinois ran contrary to *Raymark*. The court stated, "[w]hether *Zurich's no pro rata* holding applies to the kind of case before us is an issue that awaits another day" [*Maremont*, 325 Ill. App. 3d at 279]. In fact, the appellate court recognized that Illinois law required horizontal, rather than vertical, exhaustion and affirmed the decision of the trial court.

Practice Insight: As demonstrated in the previous section, most of the Illinois decisions appreciate that the "all sums" language found in many commercial general liability ("CGL") policies does not support vertical exhaustion because it cannot be read in isolation from the "to which this policy applies" qualifier and the express language limiting coverage to damages or injuries "during the policy period." In advocating any particular allocation methodology, it is important for the practitioner to understand the language in the subject insurance policies as well as the legal precedent in the relevant jurisdiction. Many excess policies are written on an "ultimate net loss" or "loss" basis and do not contain "all sums" language. Indeed, the Insurance Services Office ("ISO") replaced the "all sums" language with "those sums" language beginning with the 1986 CGL form. Most of the cases that have held in favor of an "all sums" or vertical exhaustion allocation -- which remains the minority view -- have placed their reliance mostly or entirely on a so-called promise to pay "all sums." Accordingly, practitioners representing insurers seeking a *pro rata* allocation with respect to policies that do not contain "all sums" language should forcefully point out the absence of any contractual basis to support an "all sums" ruling. [See generally Scott M. Seaman and Jason R. Schulze, Allocation of Losses in Complex Insurance Coverage Claims [otilde][otilde] 4.2 and 4.3 (2d Edition, Thompson West Legalworks 2006, 2007 Supp.) for a discussion of the various allocation theories and the arguments supporting them.]

A recent unpublished appellate court order addressed the issue of liability for defense costs associated with asbestos bodily injury claims [*Caterpillar, Inc. v. Century Indem. Co.*, No. 03-06-0181 (Ill. App. 3d Dist. Feb. 2, 2007), *reprinted in* 21-14 Mealey's Litig. Rep. Ins. 1 (Feb. 13, 2007) (unpublished decision), *appeal denied*, 225 Ill. 2d 629 (2007)]. The court in *Caterpillar* rejected the insurer's argument that the "during the policy period" language limited its obligation to pay a *pro rata* share of defense costs. The court held "there is nothing in the language of [the insurer's] policies that permits a *pro rata* reduction in its obligation to pay 'all sums' and defend 'any suit.'" In particular, the court

found that "*Raymark* is on all fours with the instant case" in that both cases involved a primary insurer's obligation to pay defense costs for asbestos bodily injury claims. The *Caterpillar* court held that "the policy language, as well as the precedent set forth in *Raymark*, direct an all sums allocation of defense costs." It appears that the factual similarity to *Raymark* drove the court's decision on defense costs.

The *Caterpillar* decision is of limited utility to policyholders. First, as an unpublished order, it is not precedential and may not be cited by any party except to support contentions of double jeopardy, *res judicata*, collateral estoppel, or law of the case [see Ill. Sup. Ct., R 23]. Second, the decision was issued prior to *Kajima*. Third, the holding relates only to primary policies in the context of asbestos claims. Finally, this case only involved policies issued by a single insurance company.

In seeking a "vertical exhaustion" result, policyholders often are relegated to citing the decision of the Massachusetts Appellate Court in *Chicago Bridge and Iron Co. v. Certain Underwriters at Lloyd's London* [59 Mass. App. Ct. 646 (2003)]. The allocation issues in *Chicago Bridge* involved nine years of successive policies issued by the only insurer defendant in that case [59 Mass. App. Ct. at 647]. Thus, because the environmental contamination spanned at least 50 years, the central argument was whether that insurer, as the lone defendant in the action, could limit its obligation to pay defense and indemnity for the environmental losses at multiple sites at issue on a *pro rata* basis, i.e., 9/50ths of the total loss at issue. The Massachusetts Appellate Court ruled that the insurer was obligated to pay the entire loss on the basis of an "all sums" allocation methodology. Although purporting to apply Illinois law, the Massachusetts Appellate Court relied mostly upon its own prior allocation ruling under Massachusetts law. Indeed, the Massachusetts Appellate Court specifically noted twice that an "all sums" ruling was consistent with Massachusetts law under that court's earlier decision in *Rubenstein v. Royal Ins. Co. of America* [44 Mass. App. Ct. 842 (1998), review granted, 428 Mass. 1109 (1998)]. Thus, *Chicago Bridge* appears to be more of a reflection of the court's view of Massachusetts law, than a true reflection of Illinois law.

In sum, the weight of pre-*Kajima* authority -- and certainly the better reasoned decisions -- support a horizontal exhaustion or *pro rata* allocation under Illinois law.

The Facts in the *Kajima* Case

Kajima, a general contractor, entered into a subcontract with *Midwestern Steel Fabricators* in connection with a construction project. The subcontract required *Midwestern* to maintain CGL coverage for *Kajima* as an additional insured. *Midwestern* subcontracted a portion of its contract to *Up-Rite Steel*. *Thomas Jones*, an employee of *Up-Rite*, was injured while working on the project and filed a personal injury suit against *Kajima* and *Midwestern*. *Kajima* had its own CGL policy with *Tokio Marine and Fire Insurance Company* with limits of \$1 million per occurrence. Pursuant to the requirements of the subcontract, *Kajima* also was an additional insured under a \$2 million primary policy and \$5 million umbrella policy issued to *Midwestern* by *St. Paul*. *Kajima* made a "targeted tender" to *Midwestern* and *St. Paul* to provide the exclusive defense and indemnification with respect to the *Jones* case [*Kajima Constr. Servs. v. St. Paul Fire & Marine Ins. Co.*, 227 Ill. 2d 102, 2007 Ill. LEXIS 1702 (2007), reprinted in 22-6 Mealey's Litig. Rep. Ins. 1 (2007)]. When *St. Paul* initially did not accept the tender, *Kajima* requested that *Tokio* handle the matter and pursue the defense and indemnity owed to *Kajima*. *St. Paul* later accepted the tender under a reservation of rights, but it refused *Tokio's* demand that *St. Paul* settle the *Jones* suit by paying \$3 million. Ultimately, the *Jones* case did settle for \$3 million, with *Tokio* paying its primary limits of \$1 million and *St. Paul* paying its primary limits of \$2 million [2007 Ill. LEXIS 1702, at *3].

Kajima and *Tokio* then filed a declaratory judgment action against *St. Paul* seeking reimbursement of the \$1 million paid by *Tokio*. On cross-motions for summary judgment, *Kajima* and *Tokio* argued that, based upon the targeted tender rule, *St. Paul* should have contributed an additional \$1 million from its umbrella policy because it was solely responsible for the defense and indemnification of *Kajima* without contribution from *Tokio*. *St. Paul* argued it was not required to contribute any of its umbrella limits because *Tokio* provided primary coverage and Illinois law requires that all primary policies be exhausted prior to an excess policy being implicated (i.e., horizontal exhaustion). The trial court

agreed with St. Paul, granting its motion for summary judgment and denying the motion of *Tokio/Kajima* [2007 Ill. LEXIS 1702, at *4]. The appellate court affirmed, holding "the selective tender rule should be applied to circumstances where concurrent insurance coverage exists for additional insureds" [2007 Ill. LEXIS 1702, at *4-5]. Nonetheless, to the extent "defense and indemnity costs exceed the primary limits of the selected insurer, the deselected insurer or insurers' primary policies must answer for the loss prior to invoking coverage under an excess policy" [2007 Ill. LEXIS 1702, at *23]. The Illinois Supreme Court subsequently allowed the petition of *Kajima* and *Tokio* for leave to appeal.

The Illinois Supreme Court's Decision in *Kajima*

The unanimous decision authored by Illinois Supreme Court Chief Justice Robert Thomas included a general discussion of horizontal exhaustion and the targeted tender rule. The court made clear that horizontal exhaustion requires not only that collectable primary insurance must be exhausted before excess insurance is impacted, but that the policyholder must also satisfy its responsibility for periods of fronting insurance, insolvent insurers, and self-insurance.

First, the court cited to *Gypsum* and quoted to the following language from *Gypsum* criticizing vertical exhaustion as allowing the policyholder to:

[e]ffectively manipulate the source of recovery, avoiding difficulties encountered as the result of its purchase of fronting insurance and the liquidation of some of its insurers. This would permit *Gypsum* to pursue coverage from certain excess insurers at the exclusion of others. Such a practice would blur the distinction between primary and excess insurance [citations omitted], and would allow certain primary insurers to escape unscathed when they would otherwise bear the initial burden of providing indemnification [*Gypsum*, 268 Ill. App. 3d at 654].

[2007 Ill. LEXIS 1702, at *6.]

Second, the court stated that, following *Gypsum*, "the appellate court continued to apply horizontal exhaustion to require an insured to first exhaust all available primary insurance coverage, *including self-insured periods*, before an excess policy can be reached" [2007 Ill. LEXIS 1702, at *7]. (Emphasis added.) n6

The court noted that its prior decisions addressing targeted tender are not entirely on point as those cases did not involve excess insurance policies [2007 Ill. LEXIS 1702, at *16]. Although the requirement of horizontal exhaustion originated in cases involving a continuous tort or long-term environmental and hazardous waste claims, the court ruled that the application of horizontal exhaustion was not limited to those types of claims. The court stated "[g]iven that the crux of horizontal exhaustion is the difference between primary and excess insurance, we see no reason to depart from horizontal exhaustion in this case" [2007 Ill. LEXIS 1702, at *18.]. In determining that the targeted tender rule does not prevail over horizontal exhaustion, the court relied upon the fundamental "difference between primary and excess insurance" and found Justice Freeman's discussion in *Roberts v. Northland Ins. Co.* [185 Ill. 2d 262 (1998)] (Freeman, C.J., concurring in part and dissenting in part, joined by Miller and McMarrow, JJ) (*quoting* S. Seaman & C. Kittredge, *Excess Liability Insurance: Law and Litigation*, 32 *Tort & Ins. L.J.* 653, 656 (1996)) to be "particularly instructive" [*Kajima Constr. Servs. v. St. Paul Fire & Marine Ins. Co.*, 227 Ill. 2d 102, 2007 Ill. LEXIS 1702, at *19 (Ill. 2007)].

In finding that the targeted tender rule does not preempt horizontal exhaustion, the Court stated:

[g]iven the clear distinctions between primary and excess insurance coverage, we decline to extend the targeted tender doctrine to require one insurer to vertically exhaust its primary and excess coverage limits before all primary insurance available to the insured has been exhausted. Extending the targeted tender rule to require an excess policy to pay before a primary policy would eviscerate the distinction between primary and excess insurance Consequently, we find that the better rule is that set forth by the appellate court -- that targeted tender can be applied to circumstances where concurrent primary insurance coverage exists for additional insureds, but to the extent that defense and indemnity costs exceed the primary limits of the targeted insurer, the deselected insurer or insurers' primary policy must answer for the loss before the insured can seek coverage under an excess policy. This holding preserves the distinction between

primary and excess insurance policies.

[2007 Ill. LEXIS 1702, at *22]. The court found that, despite Kajima's targeted tender to St. Paul, Kajima was required to exhaust its primary policies before invoking St. Paul's excess coverage [2007 Ill. LEXIS 1702, at *23]. The court, therefore, found it unnecessary to address St. Paul's alternative argument that the targeted tender rule does not apply in this case because Kajima did not knowingly forgo coverage from *Tokio* [2007 Ill. LEXIS 1702, at * 24].

The Impact of *Kajima* on Targeted Tender

The *Kajima* decision is significant in the context of concurrent coverage cases because it does not allow a targeted tender to trump the requirement of horizontal exhaustion. Accordingly, all primary coverage must be exhausted before an excess policy is required to respond regardless of whether the policyholder purports to make a targeted tender to implicate excess coverage.

The decision also is significant because the Illinois Supreme Court properly limits the application of the targeted tender rule to "circumstances where concurrent primary insurance coverage exists for additional insureds" [2007 Ill. LEXIS 1702, at *5]. Accordingly, a policyholder may not make a targeted tender to select insurers in the context of long-tail claims and consecutive policies. Such a limitation is entirely sound and may moot much of the criticism directed toward the targeted tender rule. Essentially, with this proper limitation, the targeted tender rule produces the same result as the law in those states that hold that "other insurance" clauses have no impact on co-insurers' respective rights and obligations where the underlying parties' indemnity agreements address how the risk of loss is to be borne. In other words, the properly limited targeted tender rule can be said to effectuate the intent of general contractors and subcontractors (or similar entities) where they agree that the former should be named as an additional insured under the latter's policy in connection with work and materials supplied by the latter under the subject construction contract. Under such circumstances, the naming of a general contractor as an additional insured under the subcontractor's policy is specifically done so that the general contractor may call upon the subcontractor's insurer to respond to a claim arising from the subcontractor's work or acts.

An insurer may exercise a degree of control of the situation in the underwriting process by agreeing or not agreeing to issue the policy or to restrict who may be named as an additional insured. In addition, an insurer also could include specific language in the policy that overrides a targeted tender. In *American Country Ins. Co. v. Kraemer Bros., Inc.* [298 Ill. App. 3d 805 (1st Dist. 1998)], the court upheld an endorsement that was drafted specifically to deal with the doctrine of targeted tender in Illinois. The endorsement required, in pertinent part, the policyholder to "[p]romptly tender the defense of any claim made or 'suit' to any other insurer which also has available insurance for a loss which we cover." [298 Ill. App. at 808]. The court held the provision was enforceable and was not against public policy. It noted that the Illinois Department of Insurance had specifically accepted and approved American Country's "cooperation" endorsement. n7

Targeted tender simply has no place in the context of excess policies, consecutive coverage, or long-tail claims. The concerns regarding policy cancellation and increase in premiums under policies in force that served as the justification for allowing a targeted tender in the first instance do not exist with respect to historic consecutive policies. The Illinois Supreme Court's decision in *Kajima* appropriately delineates the limited circumstances to which the targeted tender rule applies -- some circumstances involving concurrent primary coverage for additional insureds.

When faced with a purported targeted tender, the selected insurer must evaluate the claim and whether, and to what extent, the targeted tender rule applies. This involves consideration of applicable choice of law rules to determine in the first instance whether Illinois law applies as well as the facts and coverage issues presented. The insurer should confirm that it is subject to a targeted tender by communicating with the policyholder or its counsel directly, as opposed to relying upon communications with a putative de-selected insurer. The targeted insurer should take the appropriate steps to preserve any rights and contribution claims available to it. In appropriate circumstances, it may defend or pay under a reservation of rights. If there is a dispute regarding coverage or the targeted tender, the insurer may be well-served by

instituting a declaratory judgment action given Illinois law on estoppel.

Practice Insight: The de-selected insurer would be well-served by communicating with its insured and confirming in writing the insured's directions that the insurer not provide defense or indemnity for the subject claim. Recalcitrance on the part of the targeted tender may result in the de-selected insurer having to participate in the defense or indemnity on behalf of the insured and in instituting an action against the targeted insurer as was the case in *Kajima*.

One important issue that the Illinois Supreme Court did not address in *Kajima* is the extent to which the policyholder must forego or renounce coverage under the non-selective party in order to invoke the targeted tender rule. It is unlikely that a selected insurer will be able to avoid the impact of the targeted tender rule under circumstances in which the policyholder is required to seek defense or indemnity from another insurer because of the refusal by the targeted insurer to defend or indemnify it. Yet, a fundamental element of the targeted tender rule is that the policyholder must seek coverage under the *targeted* insurer's policy, not those of multiple insurers. Accordingly, the rule should not be used as a mechanism for gamesmanship, negotiation, or pursuit of multiple recoveries by the policyholder. Accordingly, the issue of renouncing or forgoing insurance under other policies likely will be subject to future decisions.

The Impact of *Kajima* on Allocation of Losses in Illinois

The *Kajima* decision also has implications with respect to long-tail claims and consecutive policies, in addition to making clear that the targeted tender rule has no application to such matters. The Illinois Supreme Court recognizes that horizontal exhaustion is required under Illinois law in the context of long-tail claims and consecutive policies as well as instances of concurrent coverage. Application of horizontal exhaustion is completely incompatible with an "all sums" or "vertical spike" allocation that policyholders have argued is required by *Raymark*. Allowing a policyholder to "vertically spike" would eviscerate the distinction between primary and excess insurance in the context of long-tail claims and consecutive policies just as it would in the context of concurrent primary policies. *Raymark* already has been determined to be limited to its facts and to primary policies by multiple decisions. At a minimum, *Kajima* supports this limitation.

Yet, the Illinois Supreme Court's holding regarding horizontal exhaustion, its citation with approval to decisions such as *Gypsum*, *AAA Disposal*, *Missouri Pacific*, and *Outboard Marine*, its quotation from *Gypsum*, and its statement regarding horizontal exhaustion applying to self-insured periods strongly suggest that Illinois law requires a *pro rata* allocation in all instances involving concurrent coverage, including cases limited to primary policies. Further, the decision supports prior decisions holding that the policyholder is responsible for all periods of self-insurance or periods where insurance is unavailable. Although the court did not discuss the merits of a time-on-the-risk as opposed to a time-on-the-risk and limits *pro rata* methodology, it did cite cases that employed the time-on-the-risk methodology and that was the methodology employed by Chief Justice Thomas in his appellate court decision in *Outboard Marine*. Accordingly, in the aftermath of *Kajima*, Illinois should be viewed as a horizontal exhaustion, *pro rata* allocation jurisdiction.

ⁿ¹ Recently, Cook County Judge Dorothy Kinnaird held an evidentiary hearing in the John Crane asbestos coverage case to determine whether medical advances over the past 20 years may require application of a continuous trigger or a trigger ruling other than the "triple trigger" ruling in *Raymark*. After hearing the medical

testimony, Judge Kinnaird concluded that the evidence was insufficient to prove that injury from exposure to asbestos is continuous from the time of exposure to the time of manifestation of disease. Instead of evidence of revolutionary medical developments that require revisiting the *Raymark* decision, Judge Kinnaird found the testimony supported the ruling in *Raymark*. See *John Crane Inv. v. Admiral Ins. Co.*, No. 04 CH 8266 (Cir. Ct., Cook Cty. Ill.) reported in 22-10 Mealey's Litig. Rep. Ins. 10 (2008).

n2 The court also held that the primary policies at issue did not obligate the insurers to assume the costs of defending actions against Raymark after their duty to indemnify has been discharged by the payments of judgments or settlements and they have made an orderly withdrawal from Raymark's defense.

n3 Football fans may recognize Chief Justice Thomas from his prior vocation. Prior to beginning a distinguished legal career, Justice Thomas was a place kicker. In college, he kicked the winning field goal to lead the Notre Dame Fighting Irish to a victory over the Alabama Crimson Tide in the 1973 Sugar Bowl and the 1973 National Title. He later played in the National Football League for the Chicago Bears.

n4 Various other courts applying Illinois law have found that Illinois law requires a *pro rata* allocation. See, e.g., *Great Lakes Dredge & Dock Co. v. City of Chicago*, 260 F.3d 789 (7th Cir. 2001), cert. denied, 535 U.S. 1012 (2002) (holding that "the Supreme Court of Illinois did not establish a principle that transcends the text of the insurance contracts. At least two appellate decisions in Illinois since *Zurich Insurance [Raymark]* have concluded that the Supreme Court of Illinois does not require joint and several liability independent of policies' language. [citations omitted]. Like the intermediate appellate courts in *Missouri Pacific* and *Outboard Marine*, we think that, when faced with the question, the Supreme Court of Illinois will follow the better reasoned (and more numerous) decisions that make policies' language the benchmark for [the allocation issue]."); *Illinois Central Railroad Co. v. Stonewall Ins. Co.*, Civil Action No. CV-99-3525 (Cir. Ct., Mobile Cty., Ala. June 2, 2006) (relying upon *Missouri Pacific* and noting that Illinois courts reject the "pick and spike approach" because insurers provide coverage for property damage that occurred "during the policy period" and the insured railroad was not entitled to select one policy period that provides full indemnification); *CBS Operations, Inc. v. Admiral Ins. Co.*, No. L-1739-99 (Super. Ct. Somerset Cty., N.J. Dec. 21, 2006) (holding that "the current state of Illinois law is that in environmental property damage cases with a continuous trigger on which coverage is based, such as in this case, Illinois courts are currently applying the *pro rata* time-on-the-risk allocation methodology.").

n5 Although policyholders may point out that the Illinois Supreme Court also denied review of the *Caterpillar* decision discussed in the next section, the Court's decision in *Kajima* was in the pipeline at the time.

n6 The Court cited several of the cases discussed previously in this article, including *AAA Disposal*, *Maremont Corp.*, *Missouri Pacific*, and *Outboard Marine*.

n7 In *Employers Ins. v. James McHugh Constr. Co.*, 144 F.3d 1097 (7th Cir. 1998) (applying Illinois law), the United States Court of Appeals for the Seventh Circuit rejected an insurer's argument that a standard "cooperation" clause required its policyholder to tender its defense to all insurers to protect the defending insurer's rights of contribution against other carriers. The court held that the "cooperation" clause was inapplicable to the enforcement of a claim against another insurer because the decision in *Institute of London* specifically allows a policyholder to choose one insurance company to provide the "whole defense" to an underlying action. The Seventh Circuit explained that the "cooperation" clause did not apply in the *McHugh* case because, after the policyholder chose to tender only to Wausau instead of its other insurers, "Wausau [was] the only insurer who was liable, period." 144 F.3d at 1106. Thus, Wausau's rights were extinguished by its policyholder's refusal to tender the defense to its other insurers.

2008 Emerging Issues 1844

Shidlofsky on PAJ, Inc. v. Hanover and XL Specialty v. Financial Industries Corp.

By Lee H. Shidlofsky

January 29, 2008

SUMMARY: In Texas Calculus, does PAJ + XL = Prejudice? Recent action by the Supreme Court of Texas may provide the answers. The notice-prejudice rule is a nationwide trend whereby an insurer is sometimes forced to prove that it was prejudiced by an insured's failure to timely notify it of a claim or lawsuit before the insurer can preclude coverage. On January 11, 2008, the Supreme Court of Texas issued an opinion on the matter in *PAJ, Inc. v. Hanover Insurance Co.*, 2008 Tex. LEXIS 8 (Tex. Jan. 11, 2008). That court also accepted a certified question from the *United States Fifth Circuit Court of Appeals. XL Specialty Ins. Co. v. Financial Indus. Corp.*, 2007 U.S. App. LEXIS 29373 (5th Cir. Dec. 19, 2007). The Courts efforts represent a step toward clarification of the notice-prejudice rule in Texas jurisprudence with respect to both occurrence-based and claims-made policies.

ARTICLE: The Background of PAJ. Hanover Insurance Company (Hanover) insured PAJ, Inc. (PAJ), a jewelry manufacturer and distributor, under a CGL policy that provided coverage for personal and advertising injury (a/k/a Coverage B). In 1998, PAJ was sued for copyright infringement by Yurman Designs, and, unaware that its policy covered the dispute failed to provide notice to its insurer until four to six months after the *Yurman* suit began. After notifying its insurer, PAJ filed a declaratory judgment action seeking a declaration that Hanover owed it a defense and indemnity in relation to the *Yurman* matter. For purposes of that action, PAJ and Hanover stipulated that the insured failed to provide its insurer with notice of the *Yurman* lawsuit as soon as practicable, as the policy required. In addition, the parties agreed that the failure to provide timely notice did not prejudice Hanover. Both parties then moved for summary judgment on the notice issue. At the trial court, Hanover's motion was granted and PAJ's was denied because that court held that Hanover could preclude coverage under the policy without first demonstrating that it somehow was prejudiced by its insured's late notice. That decision was affirmed by the Dallas Court of Appeals.

On appeal to the Supreme Court of Texas, Hanover posited that the prompt-notice requirement in its insurance policy was a condition precedent to coverage, which, if not adhered to, defeats coverage irrespective of prejudice to the insurer. PAJ, on the other hand, alleged that the prompt-notice provision is merely a covenant and therefore Hanover's performance under the policy is excused only if the breach of that covenant is material. Further, PAJ claimed, even if the requirement is a condition precedent to coverage, Texas law requires Hanover to prove that the untimely notice by

its insured caused it prejudice. Siding with PAJ, the Supreme Court of Texas held that only a material breach of the timely notice provision will excuse Hanovers performance under the policy. [*PAJ, Inc.*, 2008 Tex. LEXIS 8, at *3*4.]

The Supremes Reject *Cutaia*, Follow *Hernandez*. Hanover relied almost entirely upon the Texas high courts 1972 decision in *Members Mutual Insurance Co. v. Cutaia*, 476 S.W.2d 278 (Tex. 1972). In that case, the insurance policy at issue required the insured to immediately forward to its insurer any suit papers and stated that no action shall lie against the [insurer] unless, *as a condition precedent thereto*, there shall have been full compliance with all of the terms of this policy. [*PAJ, Inc.*, 2008 Tex. LEXIS 8, at *4 (citing *Cutaia*, 476 S.W.2d at 27879) (emphasis in original).] The insurer and its insured stipulated that the insurer was not prejudiced by the insureds failure to forward suit papers to it until five months after they were received, which the parties agreed was a violation of the policy's prompt-notice requirement. Under those facts, the Supreme Court of Texas agreed with the insurer that it did not need to prove that it was prejudiced by the insureds failure to comply with the policy's condition before barring coverage.

Importantly, though, the PAJ Court noted that in its *Cutaia* decision it had emphasized the apparent injustice which results in this particular case and deferred the issue to the Legislature or the State Board of Insurance. Following the courts advice, a year later, the State Board of Insurance issued Board Order 23080, which required the addition of the following language to CGL policies:

As respects bodily injury liability coverage and property damage liability coverage, unless the company is prejudiced by the insureds failure to comply with the requirement, any provision of this policy requiring the insured to give notice of action, occurrence or loss, or requiring the insured to forward demands, notices, summons or other legal process, shall not bar liability under this policy.

[*Id.* at *5 (citing State Board of Insurance, *Revision of Tex. Standard Provision for General Liability Policies-Amendatory Endorsement-Notice*, Board Order No. 23080 (Mar. 13, 1972)).] Notably, when Board Order 23080 was issued, coverage for personal and advertising injury--the coverage at issue in PAJ--did not yet exist in a CGL policy. In light of that fact, the Board Order did not mention personal and advertising injury. As a result, Texas courts were split as to whether a prejudice requirement existed for such Coverage B cases. [See, e.g., *Gemmy Indus. Corp. v. Alliance General Ins. Co.*, 190 F. Supp. 2d 915 (N.D. Tex. 1998), *affd without opinion*, 200 F.3d 816 (5th Cir. 1999); *McCutchin v. Trinity Universal Ins. Co.*, 1999 Tex. App. LEXIS 7394 (Tex. App.--Dallas Oct. 6, 1999, no pet.) (noting the Boards failure to subsequently amend the endorsement language to include personal and advertising injury). *But see St. Paul Guardian Ins. v. Centrum G.S. Ltd.*, 383 F. Supp. 2d 891, 90001 (N.D. Tex. 2003) (holding that prejudice is required irrespective of the nature of the claim).]

Two decades after the Board Order was issued, the Supreme Court of Texas issued its decision in *Hernandez v. Gulf Group Lloyds*, 875 S.W.2d 691 (Tex. 1994), in which that court found that one partys material breach of an insurance contract excused the other partys performance under the contract. In PAJ, the Court explained that its *Hernandez* decision made clear that courts must consider, among other things, the extent to which the nonbreaching party will be deprived of the benefit that it could have reasonably anticipated from full performance. [*PAJ*, 2008 Tex. LEXIS 8, at *7.] Looking at the insurance policy's settlement-without-consent provision, the Supreme Court of Texas, in *Hernandez*, held that, irrespective of whether a provision is a condition precedent or a covenant, an insurer could not avoid coverage under the policy because of an immaterial breach of the settlement-without-consent provision by the insured.

The PAJ court recognized that, since its *Hernandez* decision, Texas commonly has been referred to as a notice-prejudice state (i.e., an insurer must be prejudiced by late-notice before it can escape coverage). Supporting that acknowledgement, the court cited the U.S. Fifth Circuit Court of Appeals decision in *Ridglea Estate Condominium Association v. Lexington Insurance Co.*, 415 F.3d 474, 480 (5th Cir. 2005). In *Ridglea*, that court relied upon *Hernandez* while holding that Texas requires prejudice for late notice of a claim or suit, including in first-party

commercial property policies, even in those policies that were not subject to Board Order 23080.

In *PAJ*, the majority criticized the dissents belief that *Hernandez* somehow made a distinction between conditions precedent and covenants in regard to the notice issue. Rather, the Court said, the policy language in *Hernandez* was the same as the language before the Court in *PAJ*, and it never distinguished between conditions and covenants in reaching its conclusion that an insurer must first show prejudice before it could preclude coverage. The *PAJ* majority also questioned the dissents fundamental premise that the timely notice provision before us creates a condition precedent rather than a covenant. [*PAJ*, 2008 Tex. LEXIS 8, at *16.] While the *Cutaia* policy provision at issue was specifically characterized as a condition precedent, that very language was removed from the standard CGL language and, more importantly, was not included in *PAJ*s insurance policy. Moreover, when *PAJ* and Hanover bargained for the occurrence-based insurance contract, which is quite different from a claims-made policy, timely notice was not a central theme. [*Id.* at *17 (citing *Matador Petroleum Corp. v. St. Paul Surplus Lines Ins. Co.*, 174 F.3d 653, 658 (5th Cir. 1999)).] The dissent, by focusing on the type of coverage rather than the type of policy, entirely disregards this important distinction. [*Id.* (emphasis in original).] The *PAJ* Court then said:

Finally, and perhaps most disturbingly, the dissent's analysis of the policy language would impose draconian consequences for even *de minimis* deviations from the duties the policy places on insureds. The policy in this case requires, in the same section at issue, not only notice of suit as soon as practicable, but also that *PAJ* immediately send . . . copies of any demands, summonses or legal papers. Thus, under the dissent's construction, an insured's failure to promptly forward a deposition notice or a certificate of conference would work a forfeiture of coverage, even when the insurer is not at all harmed. This is precisely the result that Board Order 23080 attempted to avoid and we rejected in *Hernandez*.

[*Id.*] Accordingly, the Court held that an insured's failure to timely notify its insurer of a claim or suit does not defeat coverage if the insurer was not prejudiced by the delay. [*Id.*]

The Court Accepts XL on Certified Question. On the very day it issued its *PAJ* opinion, January 11, 2008, the Supreme Court of Texas also accepted a certified question from the U.S. Fifth Circuit Court of Appeals. [*XL Specialty Ins. Co. v. Financial Indus. Corp.*, 2007 U.S. App. LEXIS 29373 (5th Cir. Dec. 19, 2007).] In *XL*, the Court will address a claims-made, management liability policy, which requires Financial Industries Corporation (FIC) to notify XL Specialty Insurance (XL) of any claim against it as soon as practicable after it is first made. The policy makes that requirement a condition precedent to payment. FIC was sued in Texas state court for breach of contract and fraud, but did not notify XL of the suits until seven months later. Importantly, FIC's notice to XL was provided within the claims-made policy period. Further, as in *PAJ*, the parties stipulated that the late notification was a breach of the policy's prompt-notice provision but the breach did not prejudice XL in any way.

After receiving notice of the lawsuits against its insured, XL sought a declaration from the federal district court that the claims-made policy at issue did not cover FIC because it failed to provide timely notice. On motion for summary judgment, the district court found in XL's favor, holding that Texas law does not mandate that an insurer show it was prejudiced before precluding coverage to its insured under a claims-made policy. In fact, no Texas court had recognized the existence of any sort of prejudice requirement in claims-made policies. [See, e.g., *Fed. Ins. Co. v. CompUSA, Inc.*, 319 F.3d 746 (5th Cir. 2003); *EmCode Reimbursement Solutions, Inc. v. Nutmeg Ins. Co.*, 510 F. Supp. 2d 603 (N.D. Tex. 2007); *Hirsch v. Tex. Lawyers Ins. Exch.*, 808 S.W.2d 562, 565 (Tex. App.--El Paso 1991, writ denied) (To require a showing of prejudice for late notice would defeat the purpose of claims made policies, and in effect, change such a policy into an occurrence policy.).] FIC appealed the federal district court's ruling to the Fifth Circuit.

Discussing the Supreme Court of Texas decisions in *Cutaia* and *Hernandez*, the Fifth Circuit noted that the *Hernandez* opinion arguably was broad enough to encompass policy provisions other than the consent-to-settle provision because it reasoned that [i]nsurance policies are contracts, and as such are subject to rules applicable to

contracts generally, including the rule that a breach must be material--i.e., cause prejudice--to excuse performance by the non-breaching party.

That court also recognized that, as of December 19, 2007, four cases related to the notice-prejudice rule were before the Supreme Court of Texas. [See, e.g., *Prodigy Commcns Corp. v. Agric. Excess & Surplus Ins. Co.*, 195 S.W.3d 764 (Tex. App.--Dallas 2006, pet. granted).] In *Prodigy*, which also addressed a claims-made policy, the Dallas Court of Appeals upheld a summary judgment finding for an insurer where it denied coverage to its insured for violating the policy's prompt-notice requirement even though notice still was provided within the policy's reporting period. (Notably, on January 11, 2008, the Supreme Court accepted the petition in *Prodigy* and oral arguments are set for April 1, 2008.) In light of *Prodigy* and the other cases pending before the Supreme Court of Texas, the Fifth Circuit was hesitant to follow its earlier precedent that required a showing of prejudice for occurrence-based policies but not for claims-made policies. Accordingly, it certified the following question to the Supreme Court:

Must an insurer show prejudice to deny payment on a claims-made policy, when the denial is based upon the insured's breach of the policy's prompt-notice provision, but the notice is nevertheless given within the policy's coverage period?

[2007 U.S. App. LEXIS 29373, at *7*8.] Again, as noted, the Supreme Court accepted that certified question on January 11, 2008.

Discussion

The Supreme Court of Texas decision in *PAJ* is another victory for insureds. With the Court's 5-4 decision, insurers face an additional obstacle in denying coverage to insureds--now they must show that any late notice of a claim actually caused them prejudice. In *PAJ*, the insurance policy at issue was an occurrence-based policy, providing coverage for, among other things, personal and advertising injury. The Court, though, relied upon *Ridglea*, a decision that had extended the *Hernandez* ruling to a first-party commercial property policy. That reliance raises questions as to the continued validity of two other opinions in which courts held that prejudice was not required for first-party homeowners policies. [See *Chiles v. Chubb Lloyds Ins. Co.*, 858 S.W.2d 633 (Tex. App.--Houston [1st Dist.] 1993, writ denied) (refusing to apply a prejudice requirement because the Board Order was limited to CGL policies); *Flores v. Allstate Texas Lloyds Ins. Co.*, 278 F. Supp. 2d 810, 816 (S.D. Tex. 2003) (refusing to extend the prejudice requirement to a homeowners policy because the Board Orders promulgated by the Texas Department of Insurance, which require a showing of prejudice, are restricted to automobile and CGL insurance policies).] In essence, the Court has implied that all occurrence-based policies, not just those discussed in Board Orders promulgated by Texas Department of Insurance, inherently require a showing of prejudice before an insurer can bar coverage. Moreover, by its reasoning, it appears that the Court will apply a prejudice requirement beyond just notice and consent-to-settle policy requirements.

In the same vein, with *XL* and *Prodigy* now before it, the Supreme Court of Texas has an opportunity to clarify whether a prejudice requirement applies to claims-made policies when the notice, while late, still is within the claims-made policy period. Logic dictates that the same prejudice reasoning should apply in that situation, as long as the notice is made within the policy period.

Post-Claim Underwriting

2008 Emerging Issues 7

Post-Claim Underwriting

By Publisher's Editorial Staff 2008

January 9, 2008

SUMMARY: The insurance companies' practice of post-claim underwriting, most commonly seen in group health insurance policy handling, has led to: a California law prohibiting it; a class action suit against it; a Mississippi Supreme Court ruling allowing a jury to consider punitive damages for it; an administrative fine against Blue Cross of California; and a revision in a health insurance application form.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Post Claim Underwriting Defined

Once an insured fills out an insurance application, an underwriter conducts a risk assessment to determine whether or not the insurance company should make the insured an offer of insurance. Underwriting usually occurs before an insurance policy is issued. With post-claim underwriting, an insurance company does not begin the underwriting process until after an insured files a claim. Instead of conducting its risk assessment before a policy is issued, the insurer begins its investigation after the claim is filed often in order to find reasons for denying coverage on the ground that the insured committed fraud, misrepresentation, or concealment when filling out the application.

It is important for counsel to recognize whether or not an insurer has engaged in post-claim underwriting because an insured may have a cause of action against an insurance company for fraud and/or bad faith settlement practices. In some cases, an insured may even be able to recover punitive damages.

Identifying Post-Claim Underwriting

An insurance company engages in post-claim underwriting when it rescinds or cancels an insurance policy after an insured submits a claim, without proving that the insured willfully misrepresented his or her health status on an insurance application. The insurer conducts its risk assessment after a claim has been submitted, as opposed to when the insurance application was made. It denies coverage on the ground that the policy should not have been issued in the first place. The practice of post-claim underwriting is most common in the group insurance context. See Thomas C. Cady & Georgia Lee Gates, *Post Claim Underwriting*, 102 W. Va. L. Rev. 809 (Summer 2000). Counsel can identify a potential post-claim underwriting case through three insurance company practices.

Claim Sent Directly to Underwriting Department

Counsel can determine whether post-claim underwriting has occurred by noting that an insured's claim was submitted to the underwriting department of an insurance company, rather than being processed through its claims department. The underwriting department will have the insured sign a release for his or her medical records. It will review the medical records and attempt to identify an omission or inconsistency between the records and the insured's insurance application. The insurance company will then deny the insured coverage on the basis of misrepresentation, concealment, or fraud in the application. See Thomas C. Cady & Georgia Lee Gates, *Post Claim Underwriting*, 102 W. Va. L. Rev. 809, 813 (Summer 2000).

Application Process

Counsel may also be able to recognize if an insurance company is engaging in post-claim underwriting by looking at the insurance application. An oversimplified application, which does not ask about the applicant's health or only asks whether the applicant is in good health, provides a clue that post-claim underwriting is occurring. No medical examination will be required. An underwriting investigation will not be completed until after a claim is filed. Also, counsel should be aware that when an insurance company engages in post claim underwriting, the insurance application is issued immediately after the application is completed and the premium is paid. See Thomas C. Cady & Georgia Lee Gates, *Post Claim Underwriting*, 102 W. Va. L. Rev. 809, 814 (Summer 2000).

Delay in Processing Claim

A third clue counsel should be aware of is an unusually long delay between the insured's act of filing a claim and the insurer's notice of rescission of the policy. This indicates the practice of post-claim underwriting because the insurer is preparing its file thoroughly in order to support its decision to cancel the policy. See Thomas C. Cady & Georgia Lee Gates, *Post Claim Underwriting*, 102 W. Va. L. Rev. 809, 814 (Summer 2000).

Insurer's Bad Faith

Duty of Good Faith and Fair Dealing

Insurers owe insureds the duty of good faith and fair dealing. When an insurer engages in post claim underwriting and improperly denies a claim for insurance benefits an insured can file a cause of action against it for fraud or bad faith. Bad faith occurs if an insurer knowingly or recklessly denies a claim for insurance benefits without having a reasonable basis for doing so. This may involve failing to investigate an insured's health prior to the issuance of coverage. It has been stated that the practice of post-claim underwriting is illegal per se. See *Post-Claim Underwriting: A Life and Health Insurer's Boon or Bane*[dagger], Federation of Defense and Corporate Counsel Quarterly (Fall 2004).

Punitive Damages

When post-claim underwriting frustrates an insured's reasonable expectation of coverage, the insured is entitled to pursue a cause of action against an insurer under a theory of bad faith settlement practices and seek compensatory damages and, in the appropriate case, punitive damages. See Thomas C. Cady & Georgia Lee Gates, *Post Claim Underwriting*, 102 W. Va. L. Rev. 809, 816 (Summer 2000). In *Lewis v. Equity Nat'l Life Ins. Co.*, 637 So. 2d 183 (Miss. 1994), an insured filed suit in Mississippi against an insurer for its refusal to pay her benefits under an intensive care policy. The insured sought compensatory and punitive damages, alleging that the insurer denied her claim without performing an adequate investigation. A jury found that the insurer was liable to the insured for contractual damages. The trial court granted the insurer's motion for partial summary judgment on the insured's claim for punitive damages.

The Supreme Court of Mississippi reversed, holding that the trial court erred in refusing to place the issue of punitive damages before the jury. *See Lewis v. Equity Nat'l Life Ins. Co.*, 637 So. 2d 183, 184 (Miss. 1994). It stated that an insurer had an obligation to do its underwriting when a policy application was made and not after a claim was filed. *See Lewis v. Equity Nat'l Life Ins. Co.*, 637 So. 2d 183, 188-189 (Miss. 1994). The issue of punitive damages could go to the jury despite an arguable reason for denying a claim. *See Lewis v. Equity Nat'l Life Ins. Co.*, 637 So. 2d 183, 187 (Miss. 1994). The Supreme Court of Mississippi found that there were questions of fact regarding the adequacy of the insurer's investigation of the insured's claim and that a jury should have considered those questions. *See Lewis v. Equity Nat'l Life Ins. Co.*, 637 So. 2d 183, 187 (Miss. 1994).

California

Cal. Health & Safety Code § 1389.3 provides that: "No health care service plan shall engage in the practice of postclaims underwriting." It states that "postclaims underwriting" means the rescinding, canceling, or limiting of a plan contract due to the plan's failure to complete medical underwriting and resolve all reasonable questions arising from written information submitted on or with an application before issuing the plan contract." *Id.* Health insurers cannot cancel an individual policy unless an insured willfully misrepresents his or her health status or commits fraud in filling out an insurance application.

In California, insureds filed a class action against Blue Cross of California, which is a subsidiary of Wellpoint Health Networks, Inc., alleging claims of breach of contract and bad faith for cancelling coverage after the insureds filed medical claims. *Lawsuits Allege HMO Insurer Used Post-Claim Underwriting To Deny Health Benefits*, 10-7 Mealey's Man. Care Liab. Rep. 20 (2006). The parties settled the action. Under the settlement agreement, Blue Cross agreed to stop retroactively canceling an individual's health insurance coverage unless it could show that the insured intentionally misrepresented information on his or her insurance application. The settlement also included a new insurance application that was intended to reduce mistakes. *Blue Cross of California Settles Class Action Suit Over Policy Cancellations*, BestWire (May 15, 2007). The California Department of Managed Health Care fined Blue Cross \$1 million for rescinding policyholders' coverage after they filed a health insurance claim or received medical treatment in violation of state law. *State Regulators Fine Blue Cross of California \$1 Million for Routinely Rescinding Policyholders' Coverage*, BestWire (Mar. 23, 2007).

Conclusion

Insureds and their counsel should be aware of the practice of post-claim underwriting and know how to identify it. If an insured has been the victim of post claim underwriting, his or her counsel should realize that a cause of action could be filed against the insurer for bad faith. The insured may be able to recover punitive damages as well as compensatory damages.

Some states, like California, have laws that deter insurance companies from engaging in post-claim underwriting. Courts are also condemning the practice as unfair. The traditional sequence of underwriting and completing the underwriting process before a policy is issued permits the insurer to reduce the risk played by guesswork in assessing the risk it agrees to assume under the contract of insurance and also protects the insured's reasonable expectations of coverage. *See Thomas C. Cady & Georgia Lee Gates, Post Claim Underwriting*, 102 W. Va. L. Rev. 809, 868 (Summer 2000).

The National Insurance Act of 2007

2008 Emerging Issues 9

The National Insurance Act of 2007

By Publisher's Editorial Staff 2008

January 9, 2008

SUMMARY: A bill that would revolutionize insurance law and the insurance industry is pending before Congress. It would allow insurance companies to choose to be federally chartered or licensed by the federal government rather than by individual states. They then would deal with one group of regulators and one set of regulations rather than those of the several states.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: Introduction

Insurance companies have historically used the same information and statistics to set rates for various types of policies. In 1944, the U.S. Supreme Court, in *United States v. South-Eastern Underwriters Ass'n*, 322 U.S. 533 (U.S. 1944) held that rate setting involved interstate commerce and the use of standard rates and forms could violate the Sherman Antitrust Act. In response, Congress enacted the McCarran-Ferguson Act, which provided limited antitrust exemptions to insurance companies in using standard forms, setting rates, and exchanging risk information. "The calls for the repeal of McCarran, perhaps coupled with federal regulation of the insurance industry in place of the current state regulatory scheme, are gaining in intensity and momentum." Ruth T. Dowling, Patricia A. Sullivan and Marc S. Voses, *Antitrust Enforcement In The International Insurance Industry: How The EC's Examination Of The Block Exemption May (And Should) Inform The U.S. Debate Over The Future Of McCarran Ferguson*, 2-6 LexisNexis Antitrust Rep. NewsBrief 21 (2007). One response is the introduction by Senators John Sununu and Tim Johnson of 2007 S. 40, the National Insurance Act of 2007 in the Senate and by Rep. Melissa Bean (D-IL) and Rep. Ed Royce (R-CA), in the House.

The National Insurance Act is a proposal to allow insurance companies to be chartered by the federal government rather than by individual states. It also permits insurance brokers and agents to be federally licensed. In discussing the bill, Senator Johnson stated:

Since Gramm-Leach-Bliley, Congress has modernized the regulatory schemes for every part of the financial services industry except insurance. We have a responsibility to promote a balanced regulatory system that will allow the insurance industry to meet the highest standards of performance, innovation and progress; I believe the National Insurance Act of 2007 will achieve this.

Press Release, Senator John Sununu, SUNUNU, JOHNSON: MARKETPLACE DEMANDS INSURANCE REGULATORY REFORM, *Senators re-introduce "National Insurance Act" to respond to the needs of America's insurers and consumers*, May 24, 2007.

This commentary will examine some of the more important provisions in the proposal and some of the issues raised by it.

Reason for the Bill

At the current time, insurance is regulated state by state. Each state charters each individual insurance company permitted to underwrite insurance in its state. Each state regulates methods of insurance company bookkeeping, how premiums are to be invested, and minimum reserves to pay claims. States are actively involved in approving policy forms and rates, what must be included in different types of insurance policies, and payment of claims. There are insurance companies that underwrite insurance in every state and find it onerous to deal and comply with different regulations, particularly where they are writing insurance for entities that also have facilities nationwide.

In a press release when introducing the bill, Rep. Bean stated:

Regulatory obstacles currently discourage insurance innovation and nimble product development to capitalize on emerging growth markets. Eliminating the need to coordinate with 51 state regulators and accelerating the time to market potential will foster greater industry innovation and agility.

BEAN/ROYCE: BI-PARTISAN DEMAND FOR INSURANCE REGULATORY REFORM, *First bipartisan House version of National Insurance Act would offer insurance consumers and providers with much-needed regulatory alternative*. July 25, 2007.

Those supporting the bill believe it is market driven by the need for uniformity to enable insurers to work with one set of regulations and one group of regulators while writing insurance for companies located across the nation.

Provisions of the Bill

Optional nature

Under the proposal, no insurance company or producer would be required to be federally chartered or licensed. The regulations would parallel those established by the states, in the same manner that federal banks are chartered by the federal government, while still permitting states to charter banks and savings and loan associations. States would retain responsibility to charter and license insurers and producers and to regulate their activities.

Large nationwide insurance companies and producers might like the fact that they are dealing with one group of regulators and one set of regulations, when writing insurance for facilities in every state. Large companies, such as retail chains, multi-state manufacturers, delivery services, restaurant chains, real estate holding companies, or utilities may find it less costly and cumbersome to purchase insurance and to determine what is best for them.

On the other hand, states would be reluctant to give up their power to mandate minimum standards or to oversee insurers and producers to make sure that they perform or risk losing their ability to do business in the state. The National Association of Mutual Insurance Companies (NAMIC), through their president, John Bykowski, in testimony before the Committee on House Financial Services Subcommittee on Capital Markets, Insurance and Government Sponsored Enterprises, INSURANCE REGULATION CQ Congressional Testimony, Oct. 3, 2007, stated:

Notwithstanding the need to improve state-based regulation, NAMIC believes the decentralized system of state-based insurance regulation has inherent virtues that would be lacking in a national insurance regulatory system. State insurance regulation has the capacity to adapt to local market conditions, to the benefit of consumers and

companies, and affords states the opportunity to experiment and learn from each other.

Office of National Insurance

The proposal would create a new Office of National Insurance to promulgate regulations and oversee federally chartered and licensed insurance companies and producers. The ONI would be an independent agency located in the Department of the Treasury, with a Commissioner appointed to a five-year term by the President with the advice and consent of the Senate. The Commissioner is given six months to issue initial regulations concerning federally chartered and licensed insurance companies and producers. The powers of the Commissioner are to extend not just over federally chartered insurer and licensed producers, but also to any registered insurance self-regulatory organization. If enacted, the Commissioner would have up to two years in which to issue regulations governing the registration and operations of insurance self-regulatory organizations.

Chartering of Two Types of Insurance Companies

Title II of the proposed act covers the organization, incorporation, operation, and regulation of national insurance companies and national insurance agencies. Both life insurance companies and property/casualty insurance companies could choose to become federally chartered. While a holding company may own both, each would be separately regulated. Non-United States insurance companies may transact insurance in the United States through a United States branch by qualifying and licensing the branch to do business as a national insurer under the Act.

A life insurance company, at the time of its chartering as a National Insurance Company, may elect to adhere to participating policy procedures of the relevant law of the State in which its main office is located; or adhere to the participating policy procedures established by regulation of the Commissioner.

Property/casualty insurers will be subject to federal regulations and states are preempted from taking any action that would establish an asset or reduce its liability as a result of insurance ceded to a national insurer or a federally licensed reinsurer.

Licensing of Agencies and Producers

Title III of the proposed Act covers the licensing of insurance agencies and producers. A federally licensed agency or producer could sell insurance from a nationally chartered insurer in every state. A state licensed producer could sell insurance on behalf of any insurer, including National Insurers, operating within the state in which the producer holds a license.

Conversion Between State and Federal Charters

The bill provides for conversion of a state chartered insurer to one federally chartered and the right to convert back to state charter.

Applicable State Law

While federal law will control the operations of federally chartered insurers, state law will still apply in respect to state tax laws, liability of directors and officers, residual market mechanisms designed to make insurance available to those unable to obtain insurance, compulsory coverage of workers' compensation or motor vehicle insurance, and contract law.

Regulatory Powers

The Commissioner is required to issue financial regulations which are consistent with the statutory accounting practices promulgated by the National Association of Insurance Commissioners (NAIC) in its "Accounting Practices and Procedures Manual". Auditing, investing, risk-based management, and other accounting practices should also

follow model acts promulgated by the NAIC.

In respect to life insurance, the Commissioner is required to establish regulations consistent with the provisions of the Act. In respect to property and casualty insurance, the Act does not authorize the Commissioner to require a national insurer to use any particular rate, rating element, price, or form.

The Commissioner is required to issue regulations establishing standards for licensing agencies and producers, including such items as education, lines of insurance, and examination of producers. The Commissioner is also required to promulgate regulations concerning sales and marketing of insurers and producers to prevent unfair trade practices and fraud.

Enforcement Power

The Commissioner has the authority to conduct an investigation and to suspend or revoke a charter or license. In addition, those who violate a law, rule, or regulation may be fined up to a maximum of \$1 million.

Consumer Protection

The Senators and Representatives who introduced the bill have stated that the bill provides for a Division of Consumer Protection within the Office of National Insurance. Section 1105 of the bill calls for the creation of a Division of Consumer Affairs, with the duty to "support the Commissioner in the implementation and enforcement of the market conduct Regulations." The Commissioner is to issue regulations which address the advertising, sale, and administration of the insurance policies issued by national insurers, as well as claims under such policies and products. Those who are opposed to the bill contend that national insurers would not be subject to state imposed consumer protections, such as time limits in which claims must be paid.

Self-Regulatory Organizations

Self-regulatory organizations may also elect to be federally chartered. For such organizations, the Commissioner may review, approve, abrogate, modify, or add to the operating rules of an insurance self-regulatory organization. The Commissioner may also remove, suspend, or bar an individual from serving as an officer or director of an insurance self-regulatory organization, and may spend or revoke the registration of an insurance self-regulatory organization.

Other Powers of the Commissioner

The Commissioner has the authority to license reinsurers and non-United States insurers. Before any acquisition or merger with a nationally chartered insurer may take place, the Commissioner must approve of such transaction.

In the event a nationally chartered insurer cannot meet its financial obligations, the Commissioner must be named receiver and has the power to resolve or liquidate the financial matters of a national insurer. Regulations governing receiverships are to be based upon the Uniform Receivership Law adopted by the Interstate Insurance Receivership Compact Commission in September 1998.

State Guarantee Funds

State guarantee associations provide coverage to insureds when a state chartered insurer goes into receivership. Where state guarantee associations meet the levels of protection established by the NAIC, national insurers are required to participate in state associations in each state in which they offer insurance. To the extent a state does not provide the level of protection equivalent to NAIC model standards, a national insurer must join the National Insurance Guaranty Corporation, under the National Insurance Act, which will provide such protections to policyholders.

Antitrust Implications

Except in respect to standard insurance policy forms and § 3 of the McCarran-Ferguson Act, 15 USCS § 1013, the Sherman Act (15 USCS § 1 et seq.), the Clayton Act (15 USCS § 12 et seq.), the Federal Trade Commission Act (15 USCS § 41 et seq.), and the Robinson-Patman Antidiscrimination Act (74 P.L. 692), will be applicable to national insurers, national agencies, and federally licensed insurance producers to the same extent as other businesses are subject to such laws.

Responses to the Bill

Former Maine Insurance Superintendent Alessandro Iuppa, the National Association of Insurance Commissioners' most recent former president, testified before a House panel. He claimed that the U.S. market "demands far more dramatic action than the states alone are able to provide. . . . The need to operate within the state patchwork of regulation in the U.S. hinders insurers with risk issues confronting clients who operate on national and international bases." *Former NAIC Chief Touts Federal Regulator*, BestWire, Oct. 30, 2007.

Others supporting the bill include John Castellani, president of Business Roundtable, who sees the need for innovation and regulatory modernization in light of the global economy. *Business Roundtable Joins Federal Charter Campaign*, BestWire, Dec. 07, 2007. Treasury Secretary Henry M. Paulson Jr. sees the initiative as one to improve the global competitiveness of U.S. capital markets. The American Insurance Association supports the proposal creating a dual system, similar to that in banking.

Insurance industry groups are not uniformly in favor of the proposal. The National Association of Mutual Insurance Cos. (NAMIC), the Independent Insurance Agents & Brokers of America and the National Association of Professional Insurance Agents all oppose the measure.

NAMIC is urging Congress to strongly consider the issue before uprooting a system that has been in existence more than 150 years and has the support of property and casualty companies, and insurers alike. NAMIC contends the federal charter would create a cumbersome and over-regulated system, to the detriment of both policyholders and insurance companies. *NAMIC: Optional Federal Charter Would Hurt Consumers and Insurers*, NAMIC Online, (May 24, 2007).

Indiana Insurance Commissioner Jim Atterholt favors an interstate compact over the federal charter, even though federal oversight would not usurp the state's regulatory system. *Parties Choose Sides over Federal Insurance Oversight; Indiana Commissioner, Indianapolis-based National Association of Mutual Insurance Companies Favor Compact*, Indianapolis Business Journal, Aug. 20, 2007

While the bills apparently have bipartisan support and were introduced by bipartisan sponsors, there are political considerations. There is bound to be opposition to the bill because it creates a new bureaucracy. "John Bykowski, chief executive officer of Secura Insurance, said while the rate deregulation the NIA proposes has been long-sought by the industry, many fear the federal bureaucracy it creates could one day morph into something more onerous than what currently exists at the state level." *Subcommittee Chairman Maps Long and Winding Road to Regulatory Reform*, Best's Insurance News, Oct. 4, 2007.

Conclusion

Passage of the National Insurance Act will not be fast or easy.

Hearings on solvency protection. Hearings on enforcement systems. Hearings on product approvals. Hearings on best practices. Hearings on property/casualty and life, on agents and companies, on systems of federal charter, federal standards and regulatory federalism. Hearings, hearings, hearings, break-out sessions, hearings, bipartisan task forces. Oh, and some more hearings.

Such was the legislative plan laid out by Rep. Paul Kanjorski, chairman of the House Financial Services Subcommittee on Capital Markets and Insurance, as he convened the first in what is expected to be a lengthy series of

inquiries into ways to reform the U.S. insurance regulatory system.

Subcommittee Chairman Maps Long and Winding Road to Regulatory Reform, Best's Insurance News, Oct. 4, 2007. Although this was the second time this proposal has been introduced, (it was introduced in 2006 by Senator Sununu) its complexity will require careful consideration.

While large insurance companies and nationwide entities may welcome the uniformity presented by a nationally chartered insurer, state officials, and smaller insurers believe that it is far better for insureds that policies focus on the needs of the local community.

"Current inefficiencies in the insurance marketplace are driven by excessive rate and form regulation, which hamper competitive pricing, inhibit product and service innovation, and delay product delivery. Consistency, while desirable and cost effective, will not in and of itself lessen the marketplace inefficiencies resulting from regulatory models that do not uphold competitive economic principles," NAMIC President and Chief Executive Officer Charles M. Chamness said in a statement.

Treasury Review Sparks Comments on Federal Charter, Best's Insurance News, Nov. 26, 2007. The National Governors Association and the Independent Insurance Agents and Brokers of America have both opposed the creation of a dual regulatory system. *Insurance Groups Seek Governor Backing In Battle Over Optional Federal Chartering*; *Flurry of letters from opposing industry associations push to get or keep state chiefs on their side*, National Underwriter Property & Casualty/Risk & Benefits Management Edition, Sept. 17, 2007.

Another complicating factor is the decision in *Watters v. Wachovia Bank, N.A.*, 127 S. Ct. 1559 (U.S. 2007), which held that state consumer protection laws were preempted by the National Bank Act, 12 USCS § 1 et seq. There have been many comparisons to the banking industry where both federal and state chartered banks are allowed. Nevertheless, it is unclear to what extent state consumer protection laws affecting insurance companies would apply to nationally chartered insurers.

Cope on Coverage for Interrelated Wrongful Acts: Pivotal Concept A Moving Target

2008 Emerging Issues 1749

Cope on Coverage for Interrelated Wrongful Acts: Pivotal Concept A Moving Target

By Carrie Cope

January 7, 2008

SUMMARY: Whether wrongful acts are related is a pivotal concept in professional liability insurance policies for purposes of triggering coverage and the application of exclusions and other policy provisions. However, not all policies define terms that are significant in this context and the ultimate analysis of whether claims are related is extremely fact specific. A recent Ninth Circuit decision examines coverage for potentially related claims under policies that define the term interrelated wrongful acts, holding that the insureds acts were not related and recovery was not barred simply because multiple investors received advice from the same financial advisor.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: By far, the majority of professional liability policies issued in the U.S. marketplace are written on a claims-made basis and provide coverage for an insureds wrongful acts. The term wrongful acts is typically defined very broadly to include acts, errors or omissions of the insureds. Given that coverage is triggered under such policies by the filing of a claim against an insured, another, often pivotal, issue arises when more than one claim has been made against an insured and the claims are related in some way. Many professional liability policies contain provisions requiring that related claims or claims involving interrelated wrongful acts be treated as a single claim under the policy. This can be a crucial concept under many circumstances. For example, an insured may receive coverage for a claim filed after the end of the policy period (for which it would not have coverage if the operative policy was not renewed) if it is related to an earlier claim filed during the policy period. In another situation, if two claims are treated as a single claim for purposes of coverage under one policy, they would be subject to one aggregate limit of liability but also would typically be subject to one retention. Depending on the scope of the applicable policy's coverage, the treatment of a matter as a single claim or multiple claims may have a dramatic effect on the amount paid by the insurer under the policy and, if the policy contains a retention, deductible or coinsurance provision, it can impact the amount contributed by the insured as well. For example, if the insured has two consecutive policies with a \$10 million limit of liability and little or no retention, the insured may fight hard to have the insurer treat arguably related claims as two separate claims. On the other hand, if two consecutive policies have \$500,000 retentions, the same insured may argue that two claims should be treated as one claim. Whether potentially related claims will be treated as one or multiple claims depends not only on the policy language at issue, or lack of it, but very much on the facts of the particular case.

There is not a tremendous amount of case law addressing the meaning and scope of what constitutes interrelated wrongful acts in insurance policies. Policies drafted in recent years tend to address the concept by defining interrelated

wrongful acts, related wrongful acts or related claims. However, even if a policy does not specifically define such terms, some courts have found similar terms to be unambiguous.

In *Bay Cities Paving & Grading v. Lawyers' Mut. Ins. Co.*,ⁿ¹ the California Supreme Court addressed the issue of related acts in the context of a professional liability policy, holding there must be a logical and causal connection for acts to be related.ⁿ² The court reasoned that even though the word related can be broadly construed, it is not necessarily ambiguous, even if undefined within the policy. There is no single definition of related, appropriate in all cases, rather the word must be looked at in the context of the policy and particular circumstances involved.ⁿ³ Criteria used by the court to determine whether acts were related such that they constitute a single or multiple claims include:

- . whether the claims arose out of the same transaction;
- . whether they arose as to the same client; and
- . whether they were committed by the same party and resulted in a single injury.ⁿ⁴

A recent decision out of the Ninth Circuit addressed the scope of related wrongful acts in an exclusion. In *Fin. Mgmt. Advisors, LLC v. Am. Int'l Specialty Lines Ins. Co.*,ⁿ⁵ Financial Management Advisors (FMA) purchased an investment management policy from American International Specialty Lines Insurance Company (AISLIC) to cover claims made for wrongful acts related to investment advisory services. Two policies were issued with policy periods running from May 2002 through May 2003 and from May 2003 through May 2004, each subject to a \$2 million liability limit. The first policy contained an endorsement stating:

If written notice of a Claim has been given to the Insurer . . . then a claim subsequently reported to the Insurer alleging, arising out of, based upon or attributable to the facts alleged in the Claim for which such notice has been given, or alleging any Wrongful Act which is the same as or related to any Wrongful Act alleged in the Claim of which such notice has been given, shall be considered made at the time such notice was given.ⁿ⁶

The second policy contained the exclusion:

Any claim arising out of the facts alleged, or arising out of the same or related Wrongful Acts alleged or contained, in any claim which has been reported, or in any circumstances of which notice has been given, under any policy of which this policy is a renewal or replacement or which it may succeed in time.

Based on a joint reading of the endorsement and exclusion, the court noted that a claim brought under the second policy arising out of the same or related acts as a claim brought under the first policy would be treated as having been brought under the first policy, and would only receive coverage to the extent that the limit of the first policy was not exhausted by the earlier claim.ⁿ⁷

FMA and Malamed (FMA Parties) sought coverage under the policies for two separate lawsuits brought by unrelated investors, the Sitricks and Stein. The first suit was brought by the Sitricks, who invested in traditional equities and fixed income products managed by FMA, including several CBO funds. In December 2002, when the investments declined, the Sitricks filed suit against the FMA Parties alleging that Malamed made misrepresentations to dissuade the Sitricks from liquidating their equity investments, and Malamed misrepresented the risk involved in the CBOs managed by FMA to induce the Sitricks to invest in those funds. The FMA Parties tendered the claim to AISLIC and AISLIC agreed to assume the defense of the claim. In May 2004, the Sitricks and the FMA Parties reached a settlement, exhausting the limit of the first policy. Steinman filed the second suit in September 2004. Steinman, relying on Malamed's advice, invested in CBO II, which subsequently significantly declined in value. In his complaint, Steinman alleged that Malamed misrepresented the investment risk in CBO II and that FMA breached its contract with him given that Steinman's investment was placed in a higher risk category than what he had agreed to invest in. Again, FMA tendered the suit to AISLIC, who compared the two claims and ultimately denied coverage of the Steinman claim on the ground that it arose out of the same wrongful acts or wrongful acts related to the Sitricks claim.

In coverage litigation, the Ninth Circuit ultimately held that the two claims did not arise out of the same or related wrongful acts. ⁿ⁸ The court noted that the Sitricks and Steinman were unrelated investors with different investment objectives, were given investment advice at separate meetings on separate dates, and each had different investment packages. Further, the court found that both clients alleged different wrongful acts, the Sitricks' case largely based on misrepresentations concerning their equity investments and Steinmans case largely based on misrepresentations in the written materials of the underwriter and the commitment letter sent by FMA. Even with regard to the CBO II fund, the court found that both parties alleged different wrongful conduct relating to that fund. The court therefore reversed summary judgment in favor of AISLIC and remanded the case to the district court for proceedings consistent with their opinion.

Practice Tip. Generally speaking, in analyzing whether wrongful acts are related, courts tend to consider whether the construction of such terms ultimately result in the granting or denial of coverage for a claim. The issue commonly arises in more than one context in any given policy since it affects coverage triggers and exclusions, as well as deductibles and retentions. Consequently, it is not surprising that court decisions are sometimes inconsistent in their application of these terms.

Cope on Storm Clouds on the Horizon: New Assessment Concerns Florida Insurers

2008 Emerging Issues 1750

Cope on Storm Clouds on the Horizon: New Assessment Concerns Florida Insurers

By Carrie Cope

January 7, 2008

SUMMARY: Some Florida insurers are facing new assessments in the event the Citizens Property Insurance Corporation sustains a budget shortfall in the coming years. This is the result of the Florida State Legislatures expansion of Florida Statute § 627.351, to apply to all property and casualty premiums with limited exceptions. Depending on the weather, some insurers and their policyholders could face years of additional assessments which could ultimately test the solvency of the Florida insurance market.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Debris is only one of countless problems Floridians and their insurers have had to deal with after a series of catastrophic hurricanes hit Florida in recent years. On one hand, increasingly alarmed homeowners have been faced with widespread policy rate increases and nonrenewals. On the other hand, burdened insurers, who have been attempting to cope with the detrimental effects of catastrophic claims, have been prohibited from raising rates and, in some cases, withdrawing their books of business from the State. In 2002, the Florida Legislature responded to the turmoil by enacting Florida Statute § 627.351, which combined the Florida Residential Property and Casualty Joint Underwriting Association and the Florida Windstorm Underwriting Association and created the Citizens Property Insurance Corporation (Citizens). Citizens was designed to provide insurance to homeowners in high-risk areas and to others who could not find coverage in the open market. However, the impact of a series of hurricanes in 2005 created major difficulties for Citizens.

As a result of the severe 2005 hurricane season, Citizens incurred more than \$2.6 billion in losses stemming from 168,377 claims. The severity of the losses combined with insufficient premiums left Citizens with a staggering \$1.7 billion deficit. The Legislature came to the rescue by providing \$715 million to offset the \$1.7 billion shortfall. The balance of the shortfall was paid by assessment which was collected from insurers in proportion to their net direct premium for insurance in the State for the year preceding the assessment. This reduced an estimated \$920 million regular assessment against property insurers to about \$205 million, thereby reducing an estimated average 11 percent regular assessment to about 2.04 percent for property insurance policyholders in the State (including Citizens policyholders). As the \$1.7 billion deficit exceeded the amount allowed as a regular assessment, for the first time, insurers were assessed both a regular and an emergency assessment. If billed in one year, the remaining \$800 million of the deficit would have required an 8 percent emergency assessment for specified lines. However, the Legislature determined that the amount should be amortized and collected from policyholders over a 10-year period at a rate of

1.4%.

Recognizing the potential severity of the problem, a special session of the Florida State Legislature in January 2007 addressed concerns over potential future deficits by broadening the assessment base to include more insurance lines. Florida Statute § 627.351, was amended to apply to all property and casualty premiums except for workers compensation and medical malpractice premiums. The result has some insurers outraged. While it seems logical to some that insurers writing property insurance coverage for hurricane claims should share in the assessments, it also seems inequitable that other insurers who do not write such coverage should be impacted as well. For example, why should an insurer writing animal, elevator, or entertainment coverage be subject to the assessments merely because the coverage is offered in Florida?

While there are some exemptions from participating in regular assessments, they are quite limited. For example, a company writing less than .5% of the statewide aggregate direct written premium is exempt for the first three years they are doing business in the State. An insurer may request a deferment of the regular assessment under dire circumstances. If payment of the assessment would impair the company (meaning that its surplus would fall below \$4 million or 10% of business), or render it insolvent (meaning that its surplus would fall below zero), the company could seek a deferment. Another option is that an insurer may qualify to be a limited apportionment company. If the criteria set forth for this status is met, the payment can be spread out over a 12-month period rather than paid within 30 days of its receipt from the policyholder.

There is also concern among insurers over the conditions under which an assessment may be levied. No criteria exist for when an assessment is levied, other than Citizens need for additional funds. The assessment can apply if there is a catastrophic event or if there are other budgetary issues. Although there is great concern among some insurers writing property and casualty policies in Florida, the impact on many insurers may not be substantial unless the deficit sustained by Citizens is extremely high or Citizens sustains deficits over an extended period so that the assessments overlap. The amount of assessments a company will be subject to will be in direct proportion to the amount of business it writes in the State. For example, if an insurers direct premiums for insurance written in Florida in 2007 was \$6 million, and the total gross direct premiums written by all companies that are subject to these assessments was \$32.6 billion, the insurer would be responsible for .0184% of the regular assessment. Based on the 2005 deficit amount, the insurer would be assessed \$37,720. The impact of an assessment of this size depends, of course, on the size and solvency of the company subject to the assessment. While emergency assessments may be passed on directly to the policyholders, regular assessments may be recouped from them. This can impact the insurers in various ways. For example, in some circumstances the insurers may not be able to recoup these assessments from their policyholders which may impact them financially. Currently, experts are forecasting an above average hurricane season for 2008. n1 In the event insurers and their policyholders are subject to multiple overlapping assessments, the result could ultimately test the solvency of the Florida insurance market. However, if history is any indication of how the Florida Legislature will respond if that occurs, it is likely to come up with a long-term solution.

Impact of Hurricane Katrina on Insurance Law

2008 Emerging Issues 8

Impact of Hurricane Katrina on Insurance Law: Update on Recent Developments

By Publisher's Editorial Staff 2008

January 2, 2008

SUMMARY: The lessons and long-term consequences of Hurricane Katrina are beginning to emerge, as there is now underway: many key cases guiding litigation; several recently introduced bills in Congress with potentially far-reaching consequences; and emerging trends in new state regulations. The insurance practitioner needs to be aware of these emerging developments as they may well have a nationwide impact on the practice of insurance law.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: BACKGROUND

On August 29, 2005, Hurricane Katrina roared ashore in the Gulf Coast, causing widespread destruction that decimated the coastline and left thousands of people homeless. After digging out of the rubble, many policyholders were thankful they had a homeowner's or commercial property policy that could help them rebuild. However, they were surprised to discover that many of the risks they thought they were protected from were specifically excluded by their policies. Coverage denials and small payouts have driven policyholders to turn the courts to challenge the language of their policies where they had some initial successes, prompting David Rossmiller, a partner with Dunn, Carney, Allen, Higgins & Tongue and an expert on Hurricane Katrina litigation who was interviewed for this article, to state that for him:

[T]he greatest issue to emerge from Katrina litigation is one that is related to litigation but is really independent of it. That issue is public and political perception of the strength of one's case, which as we have seen in Katrina litigation, can be just as important, or even far more important, than real strength. Lawyers tend to like to conduct litigation without outside interference; they do not often feel comfortable reaching out to the traditional media, new media like blogs, and the community. But as policyholder lawyers proved, these are among the most potent weapons in litigation. Insurers were slow to understand and react, some never did. Others showed the ability to adapt, learn from past mistakes and embrace a sophisticated strategy of combining litigation and public relations. Any method of communication that is effective in communicating your side of the story is a method lawyers need to respect, understand and make use of.

Insurance companies have added to their negative public and political perceptions by pulling out of the hurricane-prone coastlines or dramatically raising premiums, which has put pressure on Congress to step in and resolve what has been referred to as a "crisis" in the property and casualty insurance industry. Allegations of bad faith and fraud

in the settlement of Katrina property damage claims is intensifying the call for widespread reform of the way insurance companies do business. States are also attempting to avoid the chaos and ill-will that followed Katrina with regulations designed to protect policyholders.

Though it is too early to definitively say what the lessons and long-term consequences to the insurance industry will be, there are several key cases guiding litigation, recent bills making their way through Congress, and trends in state regulation that the insurance practitioner should be aware of as they could have a nationwide impact on the practice of insurance law.

LEGAL ISSUE 1: LITIGATION

Katrina teaches us what we already know, that insurance is a natural fall guy anytime it doesn't pay a suffering human being. When you combine this with a jury pool also heavily affected by the disaster, you are looking at a circumstance very favorable to ambitious policyholder litigation and to taking a case to a jury. With Katrina, there were too many cases for them all to be tried, so test cases were pushed forward, and juries struck out at insurers for what they perceived to be lack of human compassion, which is not necessarily the same thing as saying insurers should just pay regardless of what the policy says, but can be the same. In such a situation, one has to question whether any defense will work with an inflamed jury pool.-David Rossmiller

The course of Hurricane Katrina litigation bears out Mr. Rossmiller's comments. Many policyholders, particularly along the hardest hit coastal regions, were dissatisfied with the small payouts or denials of their property damage claims based on the insurers' insistence that the water damage to their property was caused by flooding, and thus, specifically excluded from coverage. The policyholders have turned to the courts in suits challenging the flood exclusion and anti-concurrent causation clauses in standard homeowners' and commercial policies. These actions are beginning to make their way through the court system with cases coming out of the Fifth Circuit being among the first to shape the course of Katrina-related litigation. Initially, district court cases out of both Louisiana and Mississippi seemed to be supporting the policyholders' arguments, but recent decisions by the United States Court of Appeals in the Fifth Circuit have upheld the language of the insurers' policies.

Flood Exclusions Upheld

The standard homeowner's policy includes an exclusion for flood damage, which states that the policy excludes loss resulting directly or indirectly from water damage caused by "flood, surface water, waves, tidal waves, overflow of a body of water, spray from these, whether or not driven by wind." *In re Katrina Canal Breaches Consol. Litig.*, 2006 U.S. Dist. LEXIS 85779 (D. La. 2006). In the wake of Hurricane Katrina, insureds have challenged this exclusion as ambiguous.

In a case out of the Southern District of Mississippi, the issue of whether damage caused to property from water inundation as a result of Hurricane Katrina's "storm surge" was a flood within the meaning of the standard exclusion was quickly put to rest. In *Buente v. Allstate Prop. & Cas. Ins. Co.*, 2006 U.S. Dist. LEXIS 23742 (D. Miss. 2006), the plaintiffs suffered damage to their property as a result of water inundation from Hurricane Katrina. They argued that this damage was caused by a "storm surge," which was not specifically listed as a peril in their homeowners' policy. *Id.* The *Buente* court found that the water that entered the plaintiffs' home was tidal water from the Mississippi Sound and concluded that the inundation was a flood as that term is ordinarily understood. *Id.* Thus, the flood exclusions in Allstate's policy were unambiguous and enforceable.

A case out of the Eastern District of Louisiana, *In re Katrina Canal Breaches Consol. Litig.*, 2006 U.S. Dist. LEXIS 85779 (D. La. 2006), gave the insurance industry pause when the district court concluded that the language of the standard flood exclusion was ambiguous and did not include an "inundation of water" from a man-made cause such as the breach of the levees due to negligent design and maintenance. However, the United States Court of Appeals for the Fifth Circuit eased insurers' fears of a billion-dollar payout resulting from these alleged ambiguously worded exclusions

with its recent decision in *Vanderbrook v. Unitrin Preferred Ins. Co. (In re Katrina Canal Breaches Litig.)*, 495 F.3d 191 (5th Cir. 2007), which overturned the district court, stating:

By definition, whenever a levee ruptures and fails to hold back floodwaters, the result is a more widespread flood. That a levee's failure is due to its negligent design, construction, or maintenance does not change the character of the water escaping through the levee's breach; the waters are still floodwaters, and the result is a flood. *Id.*

Although noting that the Louisiana Supreme Court had not interpreted the standard flood exclusion in the context of the breached levees, the *Vanderbrook* court made an *Erie* guess in determining how it would resolve the issue, finding that "inundation of water" was a flood that was unambiguously excluded from the plaintiffs' all-risk coverage. *Id.*

Though it appears that the standard flood exclusion clause and its commonly understood definitions will be upheld in Hurricane Katrina litigation, it is wise to keep in mind that there have been no decisions from the state supreme courts interpreting this clause under each state's insurance law. However, Mr. Rossmiller finds it likely that the Louisiana Supreme Court will agree with the Fifth Circuit, stating that "for flood exclusions, the mass of court opinion nationwide agrees with the Fifth Circuit."

Wind vs. Water Litigation and the Anti-Concurrent Causation Clause

"Wind vs. Water" is a catchy phrase that was coined to indicate that the typical homeowners' insurance policy generally covers damage from wind and rain, but not damage from flooding. As Hurricane Katrina's winds of up to 175 miles per hour lashed the coastal areas that were later inundated with flood waters from the storm surge or the breached levees, whether or what percentage of damage was caused to an insured property by wind has become a hot topic of litigation. Cases out of Mississippi have begun to define "Wind vs. Water" litigation.

In *Guice v. State Farm Fire & Cas. Co.*, 2006 U.S. Dist. LEXIS 57571 (D. Miss. 2006), the United States District Court for the Southern District of Mississippi held that class action lawsuits were not favored for determining causation. The plaintiff had sought to certify a class of insured homeowners whose property was totally destroyed during Hurricane Katrina and who had been denied full coverage under their policies because the damage was caused by both wind and water. *Id.* The court denied the motion, finding that the nature and extent of the property damage the homeowners sustained would vary depending on the location and condition of the property before the storm struck and what combinations of forces caused the damage. *Id.* Thus, a class action was not a suitable method for resolving the homeowners' losses. *Id.* The court re-affirmed its position in denying Plaintiff's Motion to Reconsider the Issue of Class Action Certification in *Guice v. State Farm Fire & Cas. Co.*, 2007 U.S. Dist. LEXIS 34148 (D. Miss. 2007). Thus, practitioners should be prepared to try property damage claims on a case-by-case basis on the issue of causation.

In *Broussard v. State Farm Fire & Cas. Co.*, 2007 U.S. Dist. LEXIS 2611 (D. Miss. 2007), another case out of the Southern District of Mississippi, the court found that the evidence established that the plaintiffs' home was damaged by wind and that, ultimately, their home was a total loss. *Id.* State Farm claimed that the loss was the result of the storm surge, and therefore, excluded from coverage under the plaintiffs' homeowner's policy. *Id.* The court found that once the plaintiffs had established their prima facie case, the burden was on State Farm to prove, by a preponderance of the evidence, what portion of the total loss was attributable to flood damage, and therefore, excluded from coverage under the policy. *Id.* The court entered a directed verdict for the plaintiffs, stating that:

I find, as a matter of law, that State Farm has not met its burden of proof as to the segregation of this total loss into wind damages, which are covered, and water damages which are excluded from coverage. State Farm has also failed to establish or to offer evidence that would support a finding that the insured property sustained no wind damage. *Id.*

State Farm has appealed the directed verdict. When asked about the likelihood of the *Broussard* decision being affirmed on appeal, Mr. Rossmiller states that:

I am fairly certain at least some portion of the case will be reversed. Although Judge Senter focused on the statement of a probability of some small damage in directing the verdict and giving a bad faith instruction, the same wind expert said that the wind could not have damaged more than those few shingles and that storm surge is what destroyed the Broussards' home. State Farm also had a wave expert who testified that the storm surge was nine to 11 feet inside the home. The Broussards' expert, of course, testified the home was destroyed by a tornado. The jury could have been allowed to pick between the two interpretations. It will be interesting to see how the court rules on the burdens of allocation of proof.

Mr. Rossmiller believes it is likely that Judge Jones, who wrote the Fifth Circuit's decision in *Leonard v. Nationwide Mut. Ins. Co.*, 499 F.3d 419, 431-432 (5th Cir. 2007) will say that State Farm met its burden of proof.

While awaiting the Fifth Circuit's decision in *Broussard*, practitioners should be prepared to shoulder the burden of proof in segregating out what damage was caused to a policyholder's property by an excluded peril and a covered peril, once a prima facie case has been established.

Mississippi recognizes the efficient proximate cause doctrine as the default rule of causation when dealing with losses from a covered and an excluded peril under an insurance policy. *Leonard v. Nationwide Mut. Ins. Co.*, 499 F.3d 419, 431-432 (5th Cir. 2007). The doctrine provides that to recover under a policy, such as a homeowner's policy, the insured has to show that the covered peril was the proximate or efficient cause of the loss, regardless of whether an excluded peril contributed to the damage. *Id.* Insurers have found a way to protect themselves from the efficient proximate cause doctrine by the inclusion of anti-concurrent causation (ACC) clauses in standard homeowners' and commercial policies. The ACC clause denies coverage whenever a covered peril and an excluded peril combine to cause damage to a dwelling or personal property. Because most homeowners' policies cover damage from wind but not from water, many policyholders who suffered losses from Hurricane Katrina are challenging the validity of the ACC clause.

Mr. Rossmiller offers some observations on the Wind vs. Water debate and ACC challenges, stating that:

The wind versus water debate actually had several components. One was the false doctrine that damage from a force like a hurricane involves multiple causation of loss merely because two forces, one covered and one uncovered, cause damage to a structure. In reality, in Katrina, no one has been able to point me to a single example where specific damage to a particular portion of a house resulted from a combination of forces. Instead, where a house was damaged by wind and water, these forces caused separate property damage, and did not combine to cause precisely the same loss to property as that term is understood in insurance contracts. If they had, anti-concurrent cause language would have been implicated, but it was not, because separate damage was caused by separate single forces. The notion that anti-concurrent cause language was vital or even necessary to a determination of coverage for Katrina damage is entirely false. The great irony of Katrina litigation is that anti-concurrent cause language was relentlessly attacked by the media, policyholder lawyers, politicians and consumer groups, and the result of those attacks is that anti-concurrent cause language has been upheld on appeal by the Fifth Circuit and even arguably extended by those appellate decisions beyond where it was originally intended to go. These Fifth Circuit decisions are not without their own errors in understanding causation, and the ultimate result will be a resounding victory for insurers, who got more from the court than they should have expected.

The cases Mr. Rossmiller is referring to are *Tuepker v. State Farm Fire & Cas. Co.*, 2007 U.S. App. LEXIS 25786 (5th Cir. 2007) and *Leonard v. Nationwide Mut. Ins. Co.*, 499 F.3d 419 (5th Cir. 2007). When the matter was before the district court in *Tuepker v. State Farm Fire & Cas. Co.*, 2006 U.S. Dist. LEXIS 34710 (D. Miss. 2006), it held that because the plaintiffs' policy carried a Hurricane Deductible Endorsement, it was intended to cover damages sustained from the effects of the hurricane. The court concluded that to the extent that State Farm argued the hurricane relieved it of duty, "the policy is ambiguous and its weather exclusion therefore unenforceable in the context of losses attributable to wind and rain that occur during a hurricane." *Id.* However, the United States Court of Appeals for the Fifth Circuit disagreed. In *Tuepker v. State Farm Fire & Cas. Co.*, 2007 U.S. App. LEXIS 25786 (5th Cir. 2007), it found that the ACC clause clearly provided that the indivisible damage caused by both the covered and excluded was not covered

under the plaintiffs' policy. *Id.* The court specifically stated that "the Hurricane Deductible Endorsement ... [did] not in any way render the ACC Clause ambiguous." *Id.*

In *Leonard v. Nationwide Mut. Ins. Co.*, 438 F. Supp. 2d 684 (D. Miss. 2006), the court found that because a windstorm was a weather condition covered by the policy, the ACC clause was ambiguous because reading the policy as a whole allowed for windstorm coverage, while excluding such coverage if the windstorm occurred at the same time as a flood. *Id.* The court concluded that the most reasonable interpretation of the policy provided coverage for damage from windstorms, and such coverage was "not negated merely because an excluded peril (in this case storm surge flooding) occur[red] at or near the same time." *Id.* However, the Fifth Circuit also reversed *Leonard's* holding on appeal in *Leonard v. Nationwide Mut. Ins. Co.*, 499 F.3d 419 (5th Cir. 2007), finding that the ACC clause was unambiguous and that Nationwide's use of the ACC clause to supplant the efficient proximate cause doctrine was not forbidden by state law, statutory law, or public policy. *Id.*

Mr. Rossmiller offers his opinion that:

Tuepker was a much better decision than *Leonard*. Some relatively minor errors in causation were present in *Tuepker*, but nothing big. In *Leonard*, on the other hand, Judge Jones' analysis of causation was not nuanced and, in many particulars, wrong. Having written on anti-concurrent cause language a great deal, it was not surprising to me that the court upheld the language, but the simplest and best way of dealing with that language was for the court to point out that Judge Senter in the underlying decisions improperly ruled on anti-concurrent cause language, because it was not at issue. As I've mentioned, neither the damage to the *Tuepker* home nor the *Leonard* home involved multiple causes -- every bit of the loss was caused by single forces acting separately to cause different, single damage. Judge Jones gave an example in *Leonard* in which she said the anti-concurrent cause language would apply, and not even insurers in Katrina trial courts had said it would apply in such an example. I was distressed to see this, because it will cause mischief down the road and further muck up the understanding of anti-concurrent cause language. It appears to me the *Tuepker* panel did not agree fully with Judge Jones analysis, but what are they going to do, overrule the Chief Judge on a case with similar facts and similar policy language? It would have been better had *Tuepker* been the first case of the two, and *Leonard* had to adapt itself to *Tuepker's* analysis, rather than vice versa.

Mr. Rossmiller's comments indicate that some confusion about the ACC clause continues. However, as it now stands, the ACC clause has been upheld by the Fifth Circuit as unambiguous, enforceable, and not against public policy.

LEGAL ISSUE 2: LEGISLATIVE RESPONSE

Because of the slow recovery process and constituents' continuing outrage at the handling of insurance claims in the areas hit by Hurricane Katrina, the 110th Congress has been active in introducing bills that insurers and practitioners should follow as they could create massive changes in the insurance industry. Different legislative measures seek to end the wind vs. water debate, improve the health of the property and casualty insurance markets, and reform the insurance industry.

The Flood Insurance Reform and Modernization Act of 2007

The wind vs. water debate has been taken up by Congress in the form of a bill initially introduced as the *Multiple Peril Insurance Act of 2007*, 2007 H.R. 920, by Representative Gene Taylor (D-MS). The bill sought to amend the *National Flood Insurance Act of 1968*, 42 USCS § 4001 et seq., to make multiperil coverage for damage resulting from windstorms or floods available under the National Flood Insurance Program (NFIP). However, insurance industry leaders, FEMA, and the Bush Administration made it clear that the *Multiple Peril Insurance Act of 2007* was not favored in hearings before the House Financial Services Committee. The major concerns were that government insurance would displace policies available in the private market, that it would undercut incentives for people to mitigate risks, that it would displace state initiatives for addressing wind risk through private markets, and what the cost of expanding the federal program to taxpayers would be. *Flood Insurance: Hearing Before the Subcomm. on Housing*

and Community Opportunity of the H. Comm. on Financial Services, 110th Cong. (2007) (statement of David I. Maurstad, Assistant Administrator Mitigation, Federal Emergency Management Agency).

The provisions of the *Multiple Peril Insurance Act of 2007* were made a part of a bill introduced by Representative Maxine Waxman (D-CA), the *Flood Insurance Reform and Modernization Act of 2007*, 2007 H.R. 3121. The *Flood Insurance Reform and Modernization Act of 2007* sought to restore financial solvency to the NFIP and states that one of its purposes is to allow the NFIP to provide multiperil insurance coverage against loss of real or personal property from a windstorm or flood. The bill passed the House of Representatives by a vote of 263 to 146. 2007 Bill Tracking H.R. 3121.

However, in recent developments, multiperil coverage under the NFIP appears to be an issue that, if not dead, has been tabled for the time being. Senator Christopher Dodd (D-CT) introduced the *Flood Insurance Reform and Modernization Act of 2007*, 2007 S. 2284, to the Senate on November 1, 2007. The bill before the Senate does not contain the provisions that were once in the *Multiple Peril Insurance Act of 2007*. While Mr. Rossmiller states that "I was ready to listen about the wind coverage," he does add that "it was unsettling that no one could put a price tag on it. In the end, it appeared to have the makings of a boondoggle. Adding a boondoggle to a flood program badly in need of revamping is no solution."

Homeowners' Defense Act of 2007

Another approach to solving the crisis in property insurance market after Hurricane Katrina currently making its way through Congress is the *Homeowners' Defense Act of 2007*, 2007 H.R. 3355, a bill to ensure the availability and affordability of homeowners' insurance coverage for catastrophic events sponsored by Representatives Ronald Klein (D-FL) and Timothy Mahoney (D-FL). The purpose of the *Homeowners' Defense Act of 2007* is to establish a program to provide federal support for state-sponsored insurance programs. The legislation would create the "National Catastrophe Consortium," a body into which states' reinsurance funds, risk pools or primary insurance corporation could pool their catastrophe exposures and reduce their risk by purchasing reinsurance or selling catastrophe bonds. The Act also provides for the establishment of the National Homeowners' Insurance Stabilization Program, which would permit the U.S. Treasury to make liquidity and catastrophic loans to state and regional reinsurance programs to ensure the solvency of such programs, improve the availability of homeowners' insurance, and spread the risk of financial loss from a national disaster.

The Act passed the House by a vote of 255 to 155 on November 9, 2007 and was referred to the Senate Committee on Banking, Housing, and Urban Affairs. 2007 Bill Tracking H.R. 3355. On November 6, 2007, Senators Hillary Rodham Clinton (D-NY) and Bill Nelson (D-FL) introduced companion legislation in the Senate, 2007 S. 2310. Insurers, while supportive of the idea of spreading risk from national disasters, are leery of the idea of state insurers increasing their role in the private insurance market.

Insurance Industry Competition Act of 2007

Although there have been other attempts to repeal the exemption from the federal antitrust laws that was granted to the insurance industry by the *McCarran-Ferguson Act of 1945*, 15 USCS § 1011 et seq., over the years, concerns over the mishandling of insurance claims from Hurricane Katrina has caused the 110th Congress to introduce bills in the House and Senate to repeal the exemption. The *Insurance Industry Competition Act of 2007*, 2007 H.R. 1081, 2007 S. 618, was introduced in the House by Representative Peter DeFazio (D-OR) and in the Senate by Senator Patrick Leahy (D-VT), and would give the Federal Trade Commission and Department of Justice the power to enforce federal antitrust laws against the insurance industry. The *McCarran-Ferguson Act* currently provides an exemption to the federal antitrust laws for the "business of insurance" to the extent that it is regulated by the states. 15 USCS § 1012(b). Under the *Insurance Industry Competition Act of 2007*, the states would continue to regulate insurance companies but the FTC would have the authority to review unfair methods of competition.

Insurers maintain that while the *Insurance Industry Competition Act of 2007* was "couched in the language of the current natural catastrophe insurance debate," it is wholly unrelated. *Natural Disaster Insurance: Hearing Before the Subcomm. on Housing and Community Opportunity of the H. Comm. on Financial Services*, 110th Cong. (2007) (statement of Marc Racicot, President of the American Insurance Association). They claim that the repeal of the exemption will do nothing to improve the availability or affordability of property insurance in coastal areas.

Mr. Rossmiller appears to agree, bluntly stating that:

Talk of repealing McCarran-Ferguson is just pure bunk fed to the public to make politicians look like they care or have a clue. In reality, large insurers couldn't care less if McCarran-Ferguson is repealed. All that it really allows insurers to do is share actuarial data without being accused of an anti-trust violation. Large nationwide insurers have enough actuarial data of their own to price their products according to the risk. Small insurers don't, and they would tend to err on the side of increasing price to protect against insolvency, with the result that their products would be less competitive and consumers would suffer. Anti-competitive acts like price fixing and other forms of anti-market collusion are already illegal under the Sherman Act. McCarran-Ferguson is only a limited exemption.

Commission on Catastrophic Disaster Risk and Insurance Act of 2007

On January 12th, Senator Bill Nelson (D-FL) introduced the *Commission on Catastrophic Disaster Risk and Insurance Act of 2007*. 2007 S. 292. The purpose of the bill is to establish a nonpartisan commission on insurance reform prompted by the phenomenal property losses caused by the 2005 hurricane season. The Commission would assess the condition of the property and casualty insurance and reinsurance markets as well as the ongoing exposure of the United States to natural disasters and would make recommendations on legislative and regulatory changes that would improve the health of such markets. The Commission would issue a report 90 days after its members have been appointed. The bill was referred to the Senate Committee on Banking Housing and Urban Affairs, 2007 *Bill Tracking* S. 292, and it appears it was put on the calendar by Senator Dodd on November 1, 2007, 2007 *Bill Tracking* S. 2286. Companion legislation was introduced in the House of Representatives, 2007 *H.R.* 537.

It is important for any practitioner to be aware of and to keep current with the progress of these bills as the passage of any one of them could have far-reaching effects on the insurance industry and the practice of insurance law.

LEGAL ISSUE 3: TRENDS IN STATE REGULATIONS

After Hurricane Katrina, the hardest hit states have created rules to try to ensure a quick and fair resolution to property insurance coverage disputes and to try to keep policyholders informed and protected in the event of future disasters.

Mediation

In an attempt to resolve property claims quickly and painlessly, Mississippi, CMSR 28-000-087, Louisiana, 33 LR 795, and Alabama, Ala. Admin. Code r. 482-1-135-.01 through Ala. Admin. Code r. 482-1-135-.11, set up non-binding mediation programs for residential personal lines claims. Such mediation programs are becoming more the norm in disaster prone areas as they can lead to a quick resolution of a coverage dispute without the expense of drawn-out litigation. An interesting development in Mississippi to the mediation programs, which are generally available to policyholders who are not parties to coverage litigation, is CMSR 28-000-089. Because of overcrowded court dockets and the need for policyholders to have their residential insurance claims resolved quickly, Mississippi recently expanded its mediation program to allow parties involved in coverage dispute litigation to participate in the mediation program if a court order has been issued. Other states may follow Mississippi's lead after a natural disaster in order to provide residents with a swift resolution to their claims and to ease the burden on the court system.

Policyholders Coverage Explained

As Mississippi is the early battleground for the wind vs. water debate, it has created two regulations aimed at ensuring policyholders completely understand what is and is not covered under their property insurance policies. Other states, particularly in areas hardest hit by natural disasters, could follow Mississippi's lead in adopting rules that require insurers to explicitly inform policyholders of their rights and the limits of their policies.

After Hurricane Katrina, Mississippi now requires insurers to provide policyholders with written notice of any flood or earthquake exclusion in the insurance policy when it is issued and each time the policy is renewed. CMSR 28-000-088. The new rule was created to try to prevent the ongoing disputes over coverage that have arisen in the wake of Hurricane Katrina. The rule requires mandatory language that coverage is excluded for flooding from storm surge from a hurricane, surface water, flash floods, waves, tidal water, tidal waves, wind-driven rain or water or any other water from such events. The required language must also inform policyholders that they can purchase flood insurance from the National Flood Insurance Program.

Mississippi has also created the Mississippi Insurance Policyholder Bill Of Rights. The Mississippi Department of Insurance adopted Regulation 2007-1, effective September 1, 2007, after the events of Hurricane Katrina to try to foster a better understanding among residential insurance property policyholders of their rights under Mississippi law. 115 MSGR 79. Under the regulation, property and casualty insurers must provide policyholders with an outline of coverage and a standard checklist of policy contents. The Policyholder Bill of Rights is also intended to serve as standards for the Mississippi Insurance Department to follow in exercising its powers and duties. While the initial cost of the additional paperwork in complying with these regulations might cause insurers to balk, the explicitness required in ensuring that a policyholder understands the limits of the coverage could save unnecessary litigation down the road as well as encourage policyholders to obtain the coverage they need to be fully protected from a natural disaster. However, when asked whether the regulations will have such an effect, Mr. Rossmiller states that:

I think that such attempts, although well meaning, are foolish and doomed to failure because they fail to acknowledge that policy language is written as it is for specific reasons. Insurance coverage law is almost all common law, and insurers adapt policy language in response to court decisions. They also fail to understand that making policy language simpler usually means it becomes more, not less ambiguous. Besides that, what consumer ever reads an insurance policy? Do you? If I wasn't an insurance coverage lawyer, I would never look at an insurance policy. So laws that pretend that policyholders read and understand policies are founded on a notion that is refuted by empirical evidence.

Standardized Requirements after a Natural Disaster

After the 2004 and 2005 hurricane seasons left Florida's residential property insurance market in shambles, Florida adopted standardized requirements applicable to insurers after a hurricane or natural disaster, 69O-142.015, F.A.C. The regulation provides rules with respect to claims reporting requirements, grace periods for premium payments, and the temporary suspension of policy cancellation or nonrenewal after a hurricane or other natural disaster has occurred that prevents policyholders from paying their premiums or otherwise renewing and maintaining their coverage. Looking to find ways to protect their citizens after a natural disaster, other states could follow suit in creating similar rules. However, Mr. Rossmiller observes that "Florida's response to any insurance problem has been to increase regulation, and when that fails, they make another regulation. They are like Wile E. Coyote, with the Acme Rocket Pack. No matter how many times the thing explodes or runs him straight into a cliff, he straps on another rocket pack."

While the ultimate usefulness of such regulations is debatable, other states that might be in the eye of the storm could look to the lessons learned by the Gulf Coast states after Hurricane Katrina in order better prepare themselves and their residents for a natural disaster, it is important to keep an eye on insurance regulation trends coming out of those states to see what ideas take hold.

CONCLUSION

Although it has been more than two years since Hurricane Katrina blew ashore, it is still early to say what the lessons will be for the insurance industry and insurance counsel. Initially, the district court rulings seemed to be sympathetic to the policyholders' plight, overlooking precedent or sound policy language. However, recent appellate decisions have upheld standard policy language and exclusions. Congress has responded to the "crisis" in the insurance industry with a flurry of bills, most of which will likely fade away. If there will be insurance reform and what kind of reform remain open questions, though pressure from an angry public remains for some sort of change as a result of Katrina. States have also attempted to appease their citizens with regulations designed to protect policyholders and expedite the claims process. However, these regulations may only further muddy already cloudy waters. Thus, insurance law is still very much in a state of flux, and counsel must keep an eye out for new developments. Ultimately, Mr. Rossmiller may be right-the most important lesson for insurers and insurance practitioners may be that combining a litigation strategy with a public relations campaign is the way to avoid the negative perceptions and political repercussions that resulted after the storm.

2008 Emerging Issues 2954

Business Income Coverage in the Post-9/11 World: How Insurance Companies Have Changed the Claims Handling Playbook Since 9/11 and Hurricane Katrina

By Marshall Gilinsky and Richard Lewis

December 26, 2007

SUMMARY: The events of 9/11 and Hurricane Katrina set loose a torrent of litigation regarding the scope of coverage of business interruption insurance. The stakes are enormous because those catastrophes gave rise to insurance claims that: are often individually large; are collectively massive; are similar to many other claims, making precedents especially significant; and involve insurance forms of recent vintage with little case authority for guidance.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Introduction

The insurance claims that arose from the attacks of September 11, 2001 (9/11) and Hurricane Katrina were a watershed for the way in which insurance companies handle Business Income insurance claims. Those events also set loose a spree of judicial opinions regarding the scope of coverage for Business Income and other time element losses. Indeed, although Business Income coverage has been around for more than a century, about *half* of the time-element cases have been decided since September 11, 2001.

Historically, Business Income and other time element insurance claims were resolved generally by negotiation or appraisal. There are many reasons why such claims increasingly are being litigated, but perhaps the primary reason is the circumstances surrounding 9/11 and, to a lesser extent, Hurricane Katrina. Those catastrophes gave rise to insurance claims that: (1) were often, individually, very large, a condition that by itself led to disputes; (2) were collectively massive, putting at least an initial strain on the industry and its individual players; (3) were quite similar to other policyholders claims, which inclined claims handlers to be conservative, lest policyholders discover favorable claims positions and demand similar treatment; (4) involved forms of recent vintage, with little or no case authority to provide guidance or constrain insurance company claims handlers; (5) involved broad coverage forms, a product of the soft market just beginning to lift in early 2001; and (6) arrived at a time when the financial markets, in which insurance companies are huge investors, were retrenching dramatically. The confluence of these factors, combined with the growing role of outside coverage attorneys in shaping the response to first-party claims, led insurance companies to take newly restrictive coverage positions on policyholders time element claims.

This commentary will provide an overview of the issues that have been the focus of Business Income disputes between policyholders and their insurance companies since 9/11, with special attention paid to the ways in which insurance companies claims handling approach has changed during that period. The article will also suggest how policyholders can avoid the traps recently laid by the insurance industry and its lawyers.

The Non-Existent *Daubert* Exclusion

As a practical matter, Business Income claims are calculated based on projections of what the policyholders revenues would have been in a hypothetical universe where the loss event never occurred. By definition, this analysis represents what is, at best, a rough estimate of what probably would have happened had there been no loss. For most Business Income claims of even modest complexity, this analysis is typically done by separate forensic accountants retained by the policyholder and the insurance company. Although these accountants employ various mathematical and statistical techniques in their analysis, there is no one correct way to estimate any given loss, and no accountants results can ever be said to be 100% accurate, or verifiable with scientific certainty. For exactly this reason, such claims historically have been resolved via give and take discussions between each sides accountants, until they are in substantial agreement on a methodology for estimating the loss which typically yields a claim calculation somewhere in between the result initially obtained by each side.

In many 9/11 Business Income claims, and in some others stemming from the catastrophic hurricanes of 2004 and 2005, insurance companies took a much harder line in discussions over loss calculation methodologies. This forced many policyholders into litigation, where they were required to establish the amount of their damages predominantly through expert testimony by forensic accountants that worked up the Business Income loss projection models. Insurance companies argued that, in order to be admissible, such expert testimony had to meet the standards for reliability established in *Federal Rule of Evidence 702*, as well as *Daubert v. Merrell Dow Pharms.*ⁿ² and its progeny. Thus, once the parties were in court, many insurance companies sought to disqualify the policyholders forensic accountant and thereby effectively undermine the policyholders case by challenging the reliability and accuracy of the accountants Business Income loss calculation under *Dauberts* junk science standard. And in more than one case, insurance companies have succeeded in completely avoiding payment of claims simply by convincing the court that the forensic accountants analysis or the data on which that analysis was based were unreliable under the *Daubert* standard.ⁿ³

Such decisions effectively insert into the insurance policy a requirement that does not otherwise exist a requirement that the accountant or loss adjustor and the data and other evidence relied on in calculating the Business Income loss meet the *Daubert* standard. The reasoning behind such decisions is questionable because the calculation of such losses, by definition, is counterfactual and essentially calls for estimates of revenues in purely hypothetical business environments. Ultimately, results such as these embolden some insurance companies to take a hard line in discussions with their policyholders over Business Income loss calculations, especially in cases where it is difficult to tie the loss-causing event to the policyholders downturn in revenues with a great deal of precision, or where it is difficult to quantify the impact of potential alternate causes of the policyholders decreased revenues on its covered Business Income loss. For example, when a jewelry store damaged in a hurricane suffers a 50% downturn in revenues for the month following the storm, the insurance company is likely to argue that some portion of those losses are attributable to people simply not shopping for luxury products because they were busy dealing with more pressing matters like repairing the roofs on their houses, which alternate cause might not be covered under the jewelry stores policy. So how is the policyholders accountant expected to assess with mathematical reliability the extent to which earring buyers stayed home because they had leaky roofs versus the fact that the broken windows on the jewelers storefront were boarded up?

Although they are problematic for policyholders, decisions such as those noted above are in conflict with a long

line of cases holding that policyholders can prove their Business Income losses through various types of data and expert testimony n4 and do not need to be proved with mathematical precision. n5 When the shoe is on the other foot, insurance companies have lobbied hard for admission of their own forensic accountant evidence as crucial in Business Income cases. n6 Accordingly, there is ample ammunition to defend against improper attempts to inject the *Daubert* standard into the loss adjustment of Business Income claims, and policyholder advocates should be on the lookout for this unsavory insurance industry tactic. Finally, even where expert testimony is rejected under *Daubert*, it still may be possible to present lay testimony from a policyholders accountant to substantiate a Business Income claim. n7

The Undefined Use of Suspension in Business Income Provisions

Most Business Income provisions promise to pay for loss resulting from a suspension of the policyholders operations caused by damage or destruction of property at the premises. Historically, insurance companies have been somewhat successful in arguing to courts that the term suspension means total cessation and, thus, that a policyholder: (1) is entitled to Business Income coverage only during the period of time its operations are at a complete standstill; and (2) is entitled to no coverage if it is able to hobble along and continue operations despite property damage.

The total cessation argument is absurd for a number of reasons. First, the time during which coverage is owed is already measured by the Period of Restoration generally defined as the hypothetical period needed to repair or replace damaged property which clause is rendered moot by the total cessation doctrine. Second, most modern businesses are fully capable of conducting some business by fax, Blackberry, telephone, or laptop despite catastrophic destruction of their premises. Third, most policies contain clauses contemplating partial operations (e.g., giving the insurance company credit for sales of existing stock), and promising Extra Expense coverage for the above-normal costs of engaging in partial operations *during the Period of Restoration*. Fourth, courts adopting the doctrine are not consistent as to whether cessation is a trigger (i.e., the policyholder gets coverage for all losses after an instant of cessation) or whether it relates to the Period of Restoration (i.e., the policyholder gets coverage only for losses during the cessation). Incredibly, some courts come to both conclusions at once. n8 Accordingly, several years ago, the Insurance Services Office (ISO), the insurance industry drafting arm responsible for much of the first-party language in commercial use, included a definition of suspension in its standard-form policy that expressly makes clear that Business Income coverage includes lost profits during slowdowns.

Many modern policies based on broker, manuscript or insurance company forms do not include the ISO definition of suspension. Thus, insurance companies repeatedly raised the total cessation argument in 9/11 Business Income claims, n9 and even obtained judgments in 9/11 claims based on the argument. n10 Insurance companies continue to make this argument and win. n11 Given this potential pitfall, policyholders, at the point of sale, should insist on a definition of suspension akin to that in ISO forms which make clear that partial suspensions of operations are covered.

Location, Location, Location Is Now Being Ignored by Business Income Claims Handlers

Historically, Business Income cases gave policyholders the benefit of location by setting the Period of Restoration the period during which Business Income coverage is owed as the hypothetical time needed to repair or replace damaged property at the original location. If the policyholder relocated during that period, the insurance company got the benefit of any income earned by the substitute operations, but relocation did not end the Period of Restoration. n12

Since 1995, however, ISOs standard form has defined the Period of Restoration as the *lesser* of the time to repair or replace the physical damage at the original location or the time at which operations are resumed at a new permanent location. This modification devalues the policyholders pre-loss location, capping the loss of many policyholders at the point of relocation, despite the fact that their loss will continue at an inferior replacement location. Obviously, if you purchase a policy with ISO language, this argument will be open to the insurance company, although one court has concluded that whether a policyholder has permanently relocated is viewed by the policyholders subjective intent. n13

But what about policies without ISOs restrictive language? In seven 9/11 cases, the insurance companies all argued that the Period of Restoration was not equivalent to the period needed to rebuild the World Trade Center (WTC) where the policyholders had been located, but was the period needed to restart operations *anywhere*. These arguments had varying results:

In three involving firms with offices at the WTC, the courts concluded that the Period of Restoration was equivalent to the time needed to relocate the offices anywhere. n14 In two cases involving stores located in the mall in the concourse of the WTCenter, the courts concluded that the Period of Restoration was not the time needed to rebuild the WTC, but also rejected the insurance companies arguments that the period was equivalent to the time needed to replace anywhere; rather, the court found the policyholders were entitled to coverage for the time needed to find a reasonably equivalent location. n15 Two other courts, however, found that the businesses at issue a janitorial firm servicing the landlord and tenants at the WTC and a company providing temporary office space at the WTC, respectively were entitled to coverage during the hypothetical period needed to rebuild the WTC, essentially because the WTC location was of overwhelming importance given the nature of their operations. n16

Oddly enough, the only case of the above six to contain ISOs constriction of coverage was *International Office Centers*. The absence of such restriction should have been sufficient for the above courts to conclude that the Period of Restoration should be metered by the time necessary to replace at the original location.

Nonetheless, insurance companies will press this point, and policyholders will succeed in avoiding a truncated Period of Restoration only to the degree they can demonstrate that their location was of the essence of their operations. In other words, policyholders must establish that the purpose of Business Income insurance to do for the policyholder what it would have done absent the catastrophe would not be served by basing the Period of Restoration on replacement anywhere, if losses would continue at the inferior replacement location.

Seemingly Illusory Coverage Provided by Civil Authority Clauses

Civil Authority coverage is a Business Income coverage extension that typically covers loss when, in the wake of a catastrophe, civil authorities take actions which affect customer access to a policyholders property. Although the forms vary greatly, typical provisions require access (1) to be prevented or prohibited (2) as a result of property damage. Many policyholders made Civil Authority claims after 9/11, either for loss stemming from Mayor Giuliani's orders prohibiting traffic in lower Manhattan or for loss stemming from decreased customer demand in the wake of the order of the FAA.

The insurance industry, facing a vast number of such claims, strongly resisted them, urging two main defenses: (1) the orders were not as a result of the property damage on 9/11 but were issued to prevent further property damage; n17 and (2) access to premises such as hotels affected by the FAA order was not totally prevented or prohibited. n18

From a policyholders perspective, the first argument is akin to asking: which came first, the chicken or the egg? Take, for instance, the prototypical Civil Authority situation, where the collapse of a building causes city authorities to bar access to adjoining buildings: is such an order because of the existing collapse or because of fear of future collapse? One could make a strong case for either point, but accepting the latter would essentially render Civil Authority coverage illusory.

The second argument was almost universally accepted by courts addressing 9/11 claims, which found that access was not prohibited or prevented even if the policyholders business was dramatically down if it was possible for the customers, or even the policyholder itself, to physically reach the premises, regardless of whether commerce itself was feasible. This argument has also been accepted by one court addressing a Katrina claim. n19 Such holdings not only essentially render Civil Authority coverage illusory, they are often contrary to positions taken by the insurance industry in the press after a catastrophe, to the effect that delays in claims handling were attributable to the inability of claims handlers to reach affected property. The holdings are also contrary to decisions under a similar clause, covering loss caused by prevention of ingress or egress, which have taken a functional and realistic view of the term prevent. n20

As currently construed by the insurance industry, and most courts, Civil Authority coverage is illusory unless the order totally bars access to the policyholder's property by any means. If possible, at the point of sale, policyholders should insist on the terms hindered or impaired in place of prevented or prohibited.

Beware of Arguments as to the Wider Effects of the Loss

A number of insurance companies sought to slash Business Income or Civil Authority recovery on the ground that business in New York was slow after 9/11. In other words, the insurance companies sought to take advantage of the wider effects of the loss, and argue that, because the catastrophe was so big, the recoverable loss for any particular policyholder should be smaller. Note that this issue may be the primary sticking point in Business Income claims stemming from Hurricane Katrina: insurance companies will argue that pre-loss projections of profit must be revised downward because of the decrease in population in New Orleans and along the Gulf Coast.

Historically, issues surrounding the wider effects of a catastrophe in the Business Income context have arisen in cases in which policyholders, whose businesses were destroyed by storm, argued that their lost profits should include the hypothetical increased sales levels they would have enjoyed had the storm at issue spared their business but still flattened neighboring property. Not surprisingly, insurance companies resist such claims on the ground that a policyholder cannot reap a windfall by factoring in the wider effects of the same catastrophe which caused the loss. n21 No doubt insurance companies will take similar positions in Katrina claims where policyholders seek to take advantage of the wider effects of the loss.

Further, ISOs standard form already has two provisions addressing the wider effects of the loss: ISOs Business Income provisions state that favorable business conditions existing in the wake of a catastrophe do not affect the amount of loss, and ISOs Extended Business Income provision excludes loss as a result of unfavorable business conditions caused by the impact of the Covered Cause of Loss in the area where the described premises are located. Accordingly, policyholders facing insurance company efforts to slash Business Income recovery on the basis of the wider effects of the loss can point out that the insurance industry knows how to draft policies, and the absence of any provision granting the insurance company the benefit of the wider effects of the loss means that the insurance company is not entitled to any such benefit.

Beware the Period of Restoration for Unusual Businesses

The Period of Restoration often has a poor fit to businesses with a substantial lag between the time they provide a service or sell a good and the time they get paid. Insurance companies will argue that only losses fully realized during the Period of Restoration may be recovered; under such an interpretation, a law firm out of business a couple of weeks will have no recoverable loss because it will not perform services, bill for them and receive payment during that period. This argument has been accepted by some courts, n22 while other courts have taken a more functional view of when income is earned. n23

Policyholders can attempt to address this problem at the point of sale by purchasing a form which meters the loss in a manner more consistent with the nature of the business (i.e., billable hours lost for a law firm). Most forms, for instance, measure loss for manufacturing concerns in terms of the ultimate value of the product which cannot be manufactured, and not ultimate sales lost during the Period of Restoration. At a minimum, policyholders must resist insurance company efforts to have it both ways. For instance, many insurance companies seek to take advantage of credits for pent-up demand after the Period of Restoration; e.g., sales of eyeglasses to persons who had simply delayed purchase until after the neighborhood eyeglass shop reopens. An insurance company should not be permitted to confine loss to the Period of Restoration, but then seek credits for amounts earned afterward.

Beware of Insurance Company Arguments on Categories of Property Which Will Support a Business Income Loss

Historically, policyholders were entitled to make a Business Income claim when property at the insured premises typically, the building at which the policyholder was located was damaged, regardless of whether the policyholder owned or leased the specific property which was damaged. n24

In 9/11 claims, however, insurance companies took very narrow views on the property which, when damaged, would support a Business Income claim. For instance, in *Zurich Am. Ins. Co. v. ABM Indus Inc.*, n25 which involved a Business Income claim by the firm providing janitorial services to the WTC landlord and tenants, the insurance company variously asserted: (1) the policyholder could not make a Business Income claim from the destruction of property unless it was also entitled to recover for the value of that property (which would have surprised most of the WTCs tenants); and (2) the policyholder could not recover for loss from leased premises unless the policyholders lease required it to rebuild the leased premises if destroyed (ditto!). These positions failed, largely because of statutory law defining an insurable interest as any legitimate business interest in the continued survival of property. n26 Accordingly, an insurable interest in property employed in the operations of the policyholder is, under most forms, sufficient to support a Business Income claim if that property is destroyed.

Relatedly, as noted above, many policyholders in the WTC were surprised to find that their insurance company took the position that their Period of Restoration was the period needed to replace their particular office suite and not the entire WTC. Historically, the term premises has been broadly construed to include the entire building or complex in which a policyholder is located, and not a particular office suite. A number of insurance companies, however, have adopted a practice of listing a particular office suite i.e., WTC 1, Suite 7501 as the insured premises. Such practice may allow the insurance company to avoid paying Business Income losses caused by damage to the building which impacts the policyholders operations if there is no damage in the policyholders office suite. One should pay attention to this tack at the point of sale.

Conclusion

As noted above, Business Income claims which were once negotiated to resolution between independent adjusters (on the insurance company side) and loss adjusters or consultants (on the policyholder side) are now increasingly referred by insurance companies to coverage counsel. Unlike adjusters, coverage counsel are far less likely to be concerned about their relationships with the policyholder, and are far more likely to assume tenuous and highly restrictive coverage positions. Further, as a matter of ethics, attorneys retained by insurance companies owe no duties to policyholders and a duty of zealous advocacy to their client insurance companies; this is why hiring counsel to adjust claims is an act of bad faith. Many of the 9/11 and Katrina Business Income cases were handled by counsel, resulting in the various coverage-restricting positions outlined above. While such positions, if accepted by courts, dramatically restrict the coverage one would expect from a Business Income form, policyholders can expect insurance companies to take these positions in future claims, and should consider them in determining their appetite for Business Income coverage.

CGL Insurers Duty to Defend and Indemnify Claims rising Under the Fair Credit Reporting Act

By Matthew R. Wildermuth

December 26, 2007

SUMMARY: In his analysis of the insurance coverage implications of claims asserted against credit card companies for alleged violations of the Fair Credit Reporting Act ("FCRA"), insurance coverage litigation expert Matthew R. Wildermuth, Esq. explores whether such claims trigger a commercial general liability ("CGL") insurer's duty to defend or indemnify its insured and identifies potential pitfalls for insurers in responding to tenders of such claims.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Introduction

For many Americans, each days mail is likely to turn up at least one unsolicited offer encouraging the recipient to transfer current credit obligations to a new account with another credit card issuer, to create entirely new debt or to consolidate all outstanding unsecured debt with a home equity loan collateralized by the consumers home. With increasing frequency, these offers refer specifically to the consumers personal credit score and suggest that the consumer has been pre-qualified for credit at the terms the issuer has emblazoned on the envelope in bold red ink. To the extent the targeted consumer does not simply chuck these envelopes into the recycle bin or run them through the shredder, he or she may question:

- . Is this daily assault on my mailbox legal? (as discussed below, maybe);
- . Is there anything I can do to shut these things off at the source? (yes, you can n1); and
- . How can I be sure that this credit card company is not using my private credit score information for some improper purpose?

The answers to these questions generally can be found within the provisions of the Fair Credit Reporting Act (hereinafter FCRA) [15 USCS § 1681-1681x], a statute Congress first enacted in 1970 to ensure that consumer reporting agencies exercise their grave responsibilities with a respect for the consumers right to privacy. [15 USCS § 1681(a)(4)]. As with suits seeking to vindicate rights under similar consumer protection statutes, allegations that the putative new creditor violated the FCRA often take the form of class action complaints against the issuer or lender, who in turn may request its general liability insurers assistance to defend against and potentially settle the claims. Focusing on this latter

component of this trend, this article will (a) identify the most prominent coverage issues such claims present under standard commercial general liability (CGL) policy language; (b) explain the courts approach to resolving these coverage issues to date; and (c) offer tactical guidance to parties on both sides of the coverage dispute when framing their respective positions on coverage for alleged FCRA violations.

General Principles As To The Commercial General Liability Insurers Duty

To Defend And Indemnify Claims

The typical CGL primary policyⁿ² includes as a fundamental component of the insurance bargain the insurers obligation to assume and pay for the insureds defense against claims for which there is any potentiality for coverage.ⁿ³ Courts in most states employ the same basic approach to evaluate whether the asserted claims create the potential for coverage:

In determining whether an insurer owes its insured a duty to defend, a court looks to the allegations in the underlying complaint against the insured and compares those allegations to the relevant coverage provisions of the insurance policy ... If the facts alleged in the underlying complaint fall within or potentially fall within the coverage of the policy, the insurer's duty to defend is triggered. [citation omitted] Policies are liberally construed in favor of the insured, and any ambiguities or conflicts are resolved in favor of coverage. [*Canadian Radium & Uranium Corp. v. Indemnity Ins. Co.*, 411 Ill. 325, 332 (Ill. 1952).]

[See, e.g., *Employers Ins. v. Ehlco Liquidating Trust*, 186 Ill. 2d 127, 150 (Ill. 1999) (Illinois law); see also *Res. Bankshares Corp. v. St. Paul Mercury Ins. Co.*, 407 F.3d 631, 636 (4th Cir. 2005) (under Virginia law, an insurers obligation to defend an action depends on comparison of the policy language with the underlying complaint to determine whether the claims alleged in the complaint are covered by the policy).]

In contrast, in order for the insurer to be liable under the policy to indemnify its insured in respect of an underlying claim that has resulted in a judgment or a settlement against it, the insured must prove that the facts developed and claims adjudicated following the filing of the complaint actually come within the scope of coverage under the policy and are not subject to any policy exclusions. [See, e.g., *Crum & Forster Corp. v. Resolution Trust Corp.*, 156 Ill. 2d 384, 397-398 (Ill. 1993) (The duty to indemnify arises only in circumstances of actual coverage; if the insurance policy does not cover what is alleged in the claim, the insurer will not have a duty to indemnify based on that claim.)] This framework requires the court to measure the language of the policy against the outcome of the underlying proceeding, without regard to whether the potential for coverage existed at the time the claimant originally sought relief against the insured. [*Crum & Forster Corp. v. Resolution Trust Corp.*, 156 Ill. 2d 384, 397-398 (Ill. 1993).] In other words, unless the insured is found legally liable for conduct for which the policy actually provides coverage, the insurer has no duty to indemnify the insured even if the potential for coverage required it to defend the claims.

The Operative Policy Language At Issue In FCRA Claims

With these principles in mind, we now turn to the specific policy language courts typically will confront when resolving coverage issues arising out of FCRA claims asserted against the insured. A customary expression of the Insuring Agreement in a primary CGL policy reads as follows:

We will pay those sums that the insured becomes legally obligated to pay as damages because of bodily injury, property damage, personal injury, or advertising injury arising out of an occurrence. We will have the right and duty to defend any suit seeking those damages. We may at our discretion investigate any occurrence and settle any claim or suit that may result.

Property damage is defined as physical injury to tangible property, including all resulting loss of use of that property or loss of use of tangible property that is not physically injured. Advertising injury means injury arising out of one or more of the following offenses:

- a. Oral or written publication of material that slanders or libels a person or organization or disparages a persons or organizations goods, products or services;
- b. Oral or written publication of material that violates a persons right of privacy;

The policy defines an occurrence as an accident, including continuous or repeated exposure to substantially the same general harmful conditions. The first threshold in triggering coverage is that the claim at issue must allege either property damage or advertising injury as defined above arising out of an accident. If the claim meets this initial threshold, then the court will consider the application of any policy exclusions the insurer contends operate to negate or limit the coverage set forth in the insuring agreement. While the standard form CGL policy lists at least 13 specific exclusions, most important for purposes of this commentary are those that preclude coverage for property damage expected or intended from the standpoint of the insured, advertising injury caused by or at the insureds direction with knowledge that the [information] was false and advertising injury arising out of a willful violation of a penal statute committed by or with the consent of the insured. We address the potential applicability of each of these provisions to FCRA claims below.

The Purpose Of The FCRA And Elements Of Recovery

Congress enacted FCRA to ensure that consumer reporting agencies exercise their grave responsibilities with . . . a respect for the consumer's right to privacy. [15 USCS § 1681(a)(4). *See also Safeco Ins. Co. of Am. v. Burr*, 127 S. Ct. 2201, 2205 (U.S. 2007)

(Congress enacted FCRA in 1970 to ensure fair and accurate credit reporting, promote efficiency in the banking system, and protect consumer privacy.); *Perry v. First Nat'l Bank*, 459 F.3d 816, 825 n.2 (7th Cir. 2006) ([T]he FCRA is designed to protect the privacy of consumers' credit histories. . . .); *Stergiopoulos v. First Midwest Bancorp, Inc.*, 427 F.3d 1043, 1045-1046 (7th Cir. 2005) (In an attempt to achieve this balance between consumer privacy and the needs of a modern, credit-driven economy, [FCRA] limit[s] the furnishing of consumer reports to certain statutorily enumerated purposes.).]

Pursuant to the FCRA, a credit or lending institution may obtain or use a consumer report without the consumers written consent only if the issuer or lender obtains the information for certain permissible purposes, such as the extension of credit to the consumer, the review or collection of the consumers account, the underwriting of insurance for the consumer, in connection with a business transaction that the *consumer* initiates, or to make a firm offer of credit to the consumer. [15 USCS § 1681b.] The FCRA defines consumer report to mean any written, oral, or other communication of any information by a consumer reporting agency bearing on a consumers credit worthiness, credit standing, credit capacity, character, general reputation, personal characteristics, or mode of living which is used or expected to be used or collected in whole or in part for the purpose of serving as a factor in establishing the consumers eligibility for credit or insurance to be used primarily for personal, family, or household purposes . [15 USCS § 1681a(f).] The requesting entity must certify to the consumer reporting agency that it seeks the information for a permissible purpose under the FCRA. To the extent the requesting party asserts that the permissible purpose is to make a firm offer of credit, the offer must not be a gimmick but must actually have value to the consumer beyond the opportunity to do business with the requesting party. [See *Cole v. U.S. Capital, Inc.*, 389 F.3d 719 (7th Cir. 2004).]

In other words, the entity purporting to make a firm offer of credit cannot impose so many conditions or limitations on the proposed transaction that the offer is stripped of any practical benefit to the consumer:

The statutory scheme of the FCRA makes clear that a "firm offer" must have sufficient value for the consumer to justify the absence of the statutory protection of his privacy. A definition of "firm offer of credit" that does not incorporate the concept of value to the consumer upsets the balance Congress carefully struck between a consumer's interest in privacy and the benefit of a firm offer of credit for all those chosen through the pre-screening process. From the consumer's perspective, an offer of credit without value is the equivalent of an advertisement or solicitation. It is clear that Congress did not intend to allow access to consumer credit information "for catalogs and sales pitches."

[*Cole v. U.S. Capital, Inc.*, 389 F.3d 719, 726-727 (7th Cir. 2004).] The determination whether the specific offer giving rise to an individual or class action complies with the FCRA typically will be a fact-driven inquiry and, as a result, the costs to defend and settle such claims become substantial quickly. This in turn raises the stakes regarding whether some or all of those costs are covered under the defendants CGL policy.

Analysis Of FCRA Coverage Claims To Date

To fully understand the significance of the decisions evaluating coverage under CGL policies for FCRA claims, one must first appreciate the framework that has developed for analyzing coverage under the FCRA's sister statute, the Telephone Consumer Protection Act (hereinafter TCPA) [47 USCS § 227], known colloquially as the junk fax statute. Policyholders and insurers have been clashing over coverage for TCPA claims for several years and, because the TCPA and FCRA share common objectives and other attributes, decisions addressing coverage for TCPA claims ultimately have established at least some of the framework employed to evaluate insurers obligations in respect of FCRA claims.

The TCPA prohibits the use of any telephone facsimile machine, computer, or other device to send an unsolicited advertisement to a telephone facsimile machine." [47 USCS § 227(b)(1), (c).] The TCPA defines "unsolicited advertisement" to mean "any material advertising the commercial availability or quality of any property, goods, or services which is transmitted to any person without that person's prior express invitation or permission." [47 USCS § 227(a)(4).] The typical junk fax claim asserts that the transmission of unwanted faxes harmed the recipient both by wasting his ink and paper and by infringing his right to be free from unwanted intrusions. [See, e.g., *Am. States Ins. Co. v. Capital Assocs. of Jackson County, Inc.*, 392 F.3d 939, 943 (7th Cir. 2004).] Although courts generally regard the unauthorized dissipation of the recipients ink/toner and paper to constitute compensable property damage claim under the standard CGL policy language, insurers have argued successfully in some courts that the transmitting party's act of sending a facsimile to hundreds of recipients without permission rises to the level of intentionally causing damage and, therefore, is not an accident. [See, e.g., *Erie Ins. Exch. v. Kevin T. Watts, Inc.*, 2006 U.S. Dist. LEXIS 91762 (D. Ind. 2006) (intent to cause harm can reasonably be inferred where the insured knew its transmission of the unsolicited fax would, if successful, consume the target consumers ink and paper).]

Because the party transmitting the unsolicited offer to the targeted consumer in an FCRA claim bears all of the cost of presenting the offer, any claim that receipt of the offending offer constitutes property damage is considerably weaker.ⁿ⁴ As a result, the more fruitful area of inquiry for evaluating the extent to which decisions assessing coverage for TCPA claims apply to FCRA claims is the courts respective analysis of the privacy rights at issue. Specifically, the real fight turns on whether the right of privacy the TCPA and the FCRA seek to protect is the same right of privacy to which the CGL policy's provisions afford coverage. [See *Am. States Ins. Co. v. Capital Assocs. of Jackson County, Inc.*, 392 F.3d 939, 940, 943-944 (7th Cir. 2004); see also *Res. Bankshares Corp. v. St. Paul Mercury Ins. Co.*, 407 F.3d 631, 639-643 (4th Cir. 2005) (the word privacy carries different meanings in different contexts).]

The courts that have wrestled with this issue generally fall into one of two camps, with the pivotal distinction being whether the term privacy is construed more narrowly to encompass only an individual's interest in keeping certain information secret or is construed more broadly to extend to the right to not be disturbed or disrupted in the peaceful enjoyment of one's premises or person.ⁿ⁵ [See *Valley Forge Ins. Co. v. Swiderski Elecs., Inc.*, 223 Ill. 2d 352, 376-379 (Ill. 2006).] The courts in the former group reason that the specific torts listed within the definition of advertising injury

(e.g., libel, misappropriation of ideas) contemplate claims arising solely from a violation of the individuals interest in secrecy; because the TCPAs prohibition on unsolicited faxes protects solely against a persons interest in seclusion and is not concerned with the content of the communication (i.e., secret or public information), this is not the type of privacy interest for which coverage attaches. [See, e.g., *Res. Bankshares Corp. v. St. Paul Mercury Ins. Co.*, 407 F.3d 631, 641 (4th Cir. 2005).] In contrast, those courts that find privacy interests to include the amorphous right to be left alone treat the receipt of unsolicited junk faxes as a publication that, by intruding upon the consumers peaceful enjoyment, tramples upon his right to be free from disturbance. [See *Valley Forge Ins. Co. v. Swiderski Elecs., Inc.*, 223 Ill. 2d 352, 364-366 (Ill. 2006).]

Ironically, the insurers concerted efforts to develop this bright line demarcation between seclusion and secrecy privacy interests when challenging coverage for TCPA claims ultimately has proven to be problematic with the advent of FCRA claims. In decisions such as *Resource Bankshares*, the court accepted the insurers argument that the policy provision extending coverage for [o]ral or written publication of material that violates a persons right of privacy was intended to apply only to the victims secrecy privacy interests. [*Res. Bankshares Corp. v. St. Paul Mercury Ins. Co.*, 407 F.3d 631, 640-642 (4th Cir. 2005) (the advertising-injury offense part of the policies is exclusively concerned with those types of privacy which, like secrecy, are implicated by the *content* of the advertisements) (emphasis in original).] Confronted with an FCRA claim, those same insurers cannot credibly contend that a statute designed to protect a consumers interest in limiting access to his private credit history does not implicate the consumers secrecy interest. As a result, insurers have focused their attention on characterizing the lenders transmission of the credit offers directly to the consumer as not constituting a publication. [See *Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570 (D. Md. 2007).] Although it is still early in the game, to date, insurers efforts along these lines have yielded little success.

In *Fieldstone*, mortgage broker Fieldstone tendered to its insurer for defense and indemnity a lawsuit a claimant filed against it pursuant to the FCRA alleging that Fieldstone accessed his credit report without a permissible purpose. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570 (D. Md. 2007).] The insurer agreed to defend Fieldstone under a reservation of rights and then promptly sought a declaration that its standard CGL policies did not require it to defend or indemnify Fieldstone in respect of the FCRA claims. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570 (D. Md. 2007).] On cross motions for summary judgment, the insurer cited *Resource Bankshares* in support of its argument that the FCRA does not establish a right of privacy for which its policies provide coverage. The district court acknowledged that the *Resource Bankshares* court distinguished between two types of potentially affected privacy rights based on the *manner* of the advertisement and the *content* of the advertisement and further noted that courts determination that claims based on the TCPA were concerned with the manner of the advertisement rather than their content. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570 (D. Md. 2007).] The district court then explained that the FCRA complaint against Fieldstone presented nearly the opposite situation:

It is not solely the manner of the solicitation that forms the crux of Mr. Rhodess complaint; it is the action that undergirds the messages content: the unauthorized accessing of his credit records. Indeed, the Fourth Circuit cites, as a possible category of privacy interests, informational privacy, or control over the processing -- i.e., the acquisition, disclosure and use -- of personal information. [*Res. Bankshares Corp. v. St. Paul Mercury Ins. Co.*, 407 F.3d 631, 640 n.9 (4th Cir. 2005).] As both Zurich and Fieldstone point out, it would be difficult for Mr. Rhodes to prove his case without introducing the content of the letters he received, because in order to prove his FCRA claim, he would have to show that the solicitations did not include a firm offer of credit such that any unpermitted access to his credit records would be forgiven.

[*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570, at *11-12 (D. Md. 2007).]

Finding that the FCRA claim alleged against Fieldstone implicated the secrecy interests that clearly implicated the coverage provided, the district court then addressed whether the term publication within the phrase [o]ral or written publication of material that violates a persons right of privacy fell within the policys definition of advertising injury.

The court noted that because the policies did not define the term publication, the court was bound to give the term its customary, ordinary and accepted meaning. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570, at *11-12 (D. Md. 2007).] Citing to a dictionary definition of publication characterizing its meaning as to produce or release for distribution; specif.: PRINT, the district court concluded that the term could easily be read here to encompass the printing and mailing of written solicitations. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570, at *11-12 (D. Md. 2007) (citing Merriam-Websters Collegiate Dictionary 1006 (11th ed. 2003)).] As a result, the district court rejected the insurers contention that publication requires proof of distribution to a third party, noting that a majority of the Circuit Courts of Appeals that have addressed the meaning of the term within the advertising injury provision of a CGL policy found the term did not mandate disclosure to a third party. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570, at *14 (D. Md. 2007) (citing *Park Univ. Enters. v. Am. Cas. Co.*, 442 F.3d 1239, 1248-1249 (10th Cir. 2006).]

Similarly, the United States District Court for the Northern District of Illinois, applying Illinois law, rejected an insurers contention that the insureds transmittal of an offer governed by the FCRA did not constitute a publication that invaded the recipients right of privacy as its standard CGL policy used those terms. [*Pietras v. Sentry Ins. Co.*, 2007 U.S. Dist. LEXIS 16015, at *5 (D. Ill. 2007).] The court first examined the insurers claim that "publication" connotes dissemination to the public at large or certain to become public knowledge and found the insurers proposed definition flatly contradicted by the Illinois Supreme Courts decision in *Valley Forge*, in which a single fax transmission to a single recipient constituted "publication" under an identical policy provision. [*Pietras v. Sentry Ins. Co.*, 2007 U.S. Dist. LEXIS 16015 (D. Ill. 2007).] Finding that the *Valley Forge* decision dispositively resolved how courts applying Illinois law are to construe the term "publication" within the policys "advertising injury" provisions, the district court rejected the insurers attempts to promote a different interpretation of publication based on the common law tort of invasion of privacy. [*Pietras v. Sentry Ins. Co.*, 2007 U.S. Dist. LEXIS 16015 (D. Ill. 2007).] The court therefore found that the FCRA complaint asserted against the insured triggered the insurers duty to defend its insured and that the insurers refusal to assume the insureds defense against the claim constituted a breach of its duty to defend. [*Pietras v. Sentry Ins. Co.*, 2007 U.S. Dist. LEXIS 16015, at *12 (D. Ill. 2007).]

Potential Pitfalls When Assessing Coverage For FCRA Claims

As the *Fieldstone* and *Pietras* decisions confirm, the well-pled allegations of an FCRA complaint present at least the potentiality for coverage and therefore trigger a primary CGL insurers duty to defend. That said, policyholders should prepare to confront other challenges that CGL insurers may mount in connection with FCRA claims. First, notwithstanding favorable developments regarding the interpretation of provisions addressing privacy interests and publication discussed above, these advances will be for naught if the policyholder fails to prove that the claim meets all of the conditions of the insuring agreement.

As noted above, allegations in an FCRA complaint that accuse the policyholder of intentionally or willfully violating the Act expose the policyholder to the defense that the complaint does not allege an accident. With no accident, there is no occurrence and, therefore, no insurable event. A determination whether the policyholders conduct rises to the level of actual or inferred intent to cause harm likely will involve specific factual inquiries regarding the basis for the policyholders actions, and it would be foolhardy for policyholders to presume that insurers will not exploit the opportunity to make such inquiries in the appropriate cases. [*See, e.g., Prime TV, LLC v. Travelers Ins. Co.*, 223 F. Supp. 2d 744 (D.N.C. 2002) (the intent component of the "occurrence" analysis requires a subjective inquiry); *Waste Management of Carolinas, Inc. v. Peerless Ins. Co.*, 315 N.C. 688, 696 (N.C. 1986) ("Whether events are accidental' and constitute an occurrence' depends upon whether they were expected or intended from the point of view of the insured.").] Similarly, insurers may assert that such allegations trigger the exclusion for damages expected or intended from the standpoint of the insured. Although application of the expected intended exclusion requires a slightly different analytical approach from the no accident defense (the latter prevents coverage from attaching in the first instance), discovery regarding its potential application would require the same or a similar inquiry into the policyholders motives.

The standard CGL policy also excludes coverage for personal injury or advertising injury from publication caused by or at the insureds direction with knowledge that the underlying content was false. The typical junk fax complaint alleging violations of the TCPA did not address the facsimiles substantive content (if any), so coverage cases decided in that context provide no meaningful guidance for FCRA claims. Because a court will use an objective test to determine whether a particular solicitation offers sufficient benefits to the consumer to comply with the FCRA, issues regarding the truth or falsity of the information provided in the solicitation are not material in assessing liability under the Act. As a result, it appears that insurers would not get much mileage asserting this exclusion as a bar to coverage.

In contrast, insurers may find that the policy exclusion for damages arising out of the insureds Willful Violation of a Penal Statute has meaningful potential. In order to preserve the claimants right to seek and ultimately recover treble damages, the typical FCRA complaint expressly alleges that the defendant(s) willfully violated the FCRA in accessing the claimants credit history. Insurers may cite to this allegation in the underlying complaint as evidence that the claim falls outside of their coverage based on the policys exclusion for personal injury or advertising injury arising out of a willful violation of a penal statute committed by or with the consent of the insured.

Neither the *Fieldstone* court nor the *Pietras* court evaluated the merits of this defense to an FCRA claim. In *Fieldstone*, the court did not reach the issue of the potential applicability of exclusions because it found that sufficient potentiality for coverage existed to trigger the duty to defend and any decision regarding indemnity would be premature until the underlying case was fully resolved. [*Zurich Am. Ins. Co. v. Fieldstone Mortg. Co.*, 2007 U.S. Dist. LEXIS 81570 (D. Md. 2007).] In *Pietras*, the court precluded the insurer from asserting any coverage defenses as a sanction for breaching its duty to defend its insured against the FCRA claim the insured timely tendered to it. [*Pietras v. Sentry Ins. Co.*, 2007 U.S. Dist. LEXIS 16015, at *12-13 (D. Ill. 2007).]

This issue has, however, arisen in the context of TCPA claims, and the courts confronting it consistently have interpreted that statute to be remedial and not penal. [See, e.g., *Western Rim Inv. Advisors, Inc. v. Gulf Ins. Co.*, 269 F. Supp. 2d 836, 848 (D. Tex. 2003); *Terra Nova Ins. Co. v. Fray-Witzer*, 449 Mass. 406, 419-420 (Mass. 2007).] In a nutshell, courts have placed particular emphasis on the fact that the TCPA directs that the consumer receive his or her actual damages or the statutory amount rather than depositing such funds into an account to be used for the benefit of the general public (the latter being a hallmark of penal remedies). [See, e.g., *Western Rim Inv. Advisors, Inc. v. Gulf Ins. Co.*, 269 F. Supp. 2d 836, 848 (D. Tex. 2003); *Terra Nova Ins. Co. v. Fray-Witzer*, 449 Mass. 406, 419-420 (Mass. 2007).]

The TCPA and the FCRA each are designed to accomplish complementary consumer protection goals through a consistent regulatory scheme that allows the complaining consumer to recover actual or statutory damages for violation. Accordingly, I project that a court presented squarely with the issue whether the FCRA is a remedial or penal statute will find it to be remedial, thereby nullifying the effect of the exclusion for willful violation of a penal statute.

In light of the uncertainties in this developing area of insurance coverage law, a word of caution regarding the potential implications of an insurers breach of its duty to defend its insured against a timely tendered FCRA claim is warranted. Under Illinois law, if a complaint potentially provides coverage, and the insurer believes that a defense to coverage exists, the insurer has two options: it can either seek a declaratory judgment as to its obligations and rights under the policy, or it can defend the insured under a reservation of rights. [*Fidelity & Casualty Co. v. Envirodyne Engineers, Inc.*, 122 Ill. App. 3d 301, 303 (Ill. App. Ct. 1983).] If the insurer fails to exercise either of these options, and it is later determined that the claim was subject to the insurer's duty to defend the insured, the insurer is estopped from raising policy exclusions or non-coverage as a defense in a coverage action. [*Central Mut. Ins. Co. v. Kammerling*, 212 Ill. App. 3d 744, 748 (Ill. App. Ct. 1991).] Moreover, the estoppel doctrine has broad application and operates to bar the insurer from raising policy defenses to coverage, even those defenses that may have been successful had the insurer not breached its duty to defend. [*Employers Ins. v. Ehlco Liquidating Trust*, 186 Ill. 2d 127, 150 (Ill. 1999).]

Similarly, under Arizona law, an insurer that fails or refuses to defend its insured against a claim that subsequently is determined to have triggered coverage faces serious consequences. Once the insurer elects not to defend its insured,

the insured may take all steps necessary to protect itself against the claim, including entering into a settlement with the injured party through which the insured assigns its rights under the policy to the claimant in exchange for the claimants covenant not to execute on the insureds personal assets. [See *Holt v. Utica Mut. Ins. Co.*, 157 Ariz. 477, 483 (Ariz. 1988); *Damron v. Sledge*, 105 Ariz. 151, 153 (Ariz. 1969); *Arizona Property & Casualty Ins. Guar. Fund v. Helme*, 153 Ariz. 129 (Ariz. 1987).] Because Arizona courts treat an insurers refusal to defend to be equivalent to an assertion that the insurer has no interest in the outcome of the underlying action, an insurer that breaches its defense obligation will not be allowed later to intervene in the underlying action to challenge the evidence submitted at the damages hearing in the underlying action. [See *Damron v. Sledge*, 105 Ariz. 151, 155 (Ariz. 1969) (finding an insurers breach of the duty to defend so substantial and so antithetical to the essential purpose of the insurance contract as to forfeit its right to intervene).] Thus, under Arizona law, an insurer that refuses to defend at all has thereby accepted the risk that an unduly large verdict may result from the lack of cross-examination and rebuttal on damages issues that otherwise might have occurred if the insurer had actively participated in the underlying action. [*Damron v. Sledge*, 105 Ariz. 151, 155 (Ariz. 1969).]

Although the consequences for an insurers breach of its duty to defend its insured in other states are less severe than in Illinois and Arizona, n6 an insurer that refuses to defend its insured faces some degree of risk, even if that risk is only that the insurer will not be permitted to actively participate in the defense and settlement of the claim. To the extent coverage issues later may turn on the evidence introduced and theories tried to the fact finder in the underlying action, the non-defending insurer may forfeit its right to be informed of and involved in the development of the underlying case. In sum, then, the insurer may find it worthwhile to defend its insured under a reservation of rights until sufficient facts are known about the underlying FCRA claim to allow the insurer to seek a determination that may terminate its duty to defend.

Conclusion

The FCRA's remedial provisions encourage consumers to protect their privacy interest in the confidentiality of their personal credit scores by pursuing recovery against prospective creditors who have accessed their credit history without a permissible purpose. As these suits proliferate, defendant policyholders will in turn pursue insurance coverage from their CGL insurers for defense and settlement of the claims. Although it appears that policyholders have an initial advantage based on courts willingness to find that FCRA claims trigger the potential for coverage under policy provisions extending protection for damages arising out of publications that violate the recipients right of privacy, serious substantive coverage issues remain. In light of the uncertainties regarding coverage for such claims and the potential penalties for breaching the duty to defend, insurers may find it in their interest to err on the side of caution and defend their insureds against FCRA claims until the legal framework for evaluating such claims is better developed.

[Return to Text](#)

n1 . See FCRA § 604(e), 15 USCS § 1681b (Election of consumer to be excluded from pre-screened offer lists).

n2 . By typical CGL policy, I refer to the occurrence-based policy form introduced by the Insurance Services Office in 1986, and subsequently amended, to replace the prior policy form denominated as the comprehensive general liability policy form (also abbreviated at the time as CGL coverage). As pertinent here, the more recent ISO CGL form includes broad coverage for bodily injury and property damage liability

(Coverage A) and personal injury and advertising injury liability (Coverage B) subject to reductions in scope by endorsement. See Rupp's Insurance & Risk Management Glossary, <http://insurance.cch.com/RUPPS/commercial-general-liability-policy.htm>.

n3 . I confine my analysis in this article to the operative provisions of typical primary CGL policy forms, as excess CGL policies ordinarily do not require the excess insurer to defend the insured at the outset of a claim.

n4 . It is conceivable that a consumer targeted by unsolicited offers of credit could make out a claim for property damage to the extent that he or she has to pay extra amounts for waste disposal, recycling fees or shredder maintenance. However, any such claim seems attenuated at best in light of the FCRA's focus on the more ethereal secrecy concerns discussed below.

n5 . In contrast to the junk faxes prohibited under the TCPA, a firm offer of credit or other solicitation subject to the FCRA may be communicated by regular mail, facsimile, telephone or electronic mail. See 15 USCS § 1681h.

n6 . See, e.g., *SCSC Corp. v. Allied Mut. Ins. Co.*, 536 N.W.2d 305, 319 (Minn. 1995) (an insurer that elects not to defend its insured against a claim that triggers its coverage may be found liable for its fair share of the defense costs it refused to pay; as well as the reasonable fees and costs the insured (or another insurer) was required to expend to force the non-defending insurer to contribute to the insured's defense).

ABOUT THE AUTHOR(S):

Matthew R. Wildermuth founded Strategic Solutions in 2006 to provide mediation services to parties in complex insurance coverage disputes. Prior to forming Strategic Solutions, Mr. Wildermuth spent 17 years representing domestic and international insurers in high profile coverage litigation and consistently has been recognized as an Illinois Super Lawyer in Insurance Coverage Litigation and Counseling. He received his credentials in Mediation Training from DePaul University's Center for Dispute Resolution and is a court-approved mediator for the Law and Chancery Divisions of the Circuit Courts of Cook County and DuPage County, Illinois. Mr. Wildermuth also maintains a solo law practice in which he represents clients in commercial and intellectual property litigation.

ARTICLE: Environmental and Economic Costs

If our society fails to take the appropriate steps to meet the unequivocal challenges of global climate change, who will pay the price? We all will and a steep one at that. We will have to face not only the impact of global climate change in wildfires, flooding, droughts, rising sea levels, coastal erosion, mudslides, ever-more-powerful hurricanes, regions deforested and lives lost--but the economic cost--the money that will be necessary to rebuild infrastructure, replace lost homes and businesses, and even whole regions.

In a speech to the World Affairs Council, the Honorable Lord Peter Levene, Chairman of Lloyds of London, noted:

- . Between the 1960s and the 1990s, the number of natural catastrophes doubled.
- . Insured losses increased nearly seven-fold during the same period, most of which were weather-related.
- . 2005 was the worst year ever for the insurance industry, with global insurance claims exceeding \$83 billion, more than 80 percent resulting from the hurricanes in the United States.
- . Insurers need to be able to look policyholders in the eye and assure them that there will be funds available to cover their losses when disaster strikes--and the insurers can only stay around to pay if they price insurance realistically in relation to the underlying risk.

According to the Association of British Insurers, the costs of natural catastrophes fall on different parts of society depending on the arrangements.

. Where private insurance covers weather risks, the costs of climate change will be shared among the insured portions of society. With risk-based pricing, those at greatest risk pay most for this risk-sharing, while those who avoid risk pay least.

. Where government carries the risk directly or as insurer of last resort, the costs of natural catastrophes are borne by the taxpayer, contributing according to the tax regime of the country. There is no reward for avoiding risks, and no personal penalty for accepting them.

. Where there is no insurance or state-backed compensation for weather risks, the costs of natural catastrophes fall on the individual. In many cases, these costs could be a substantial portion of an individual's wealth, leading to devastating personal and business liabilities. The individual can only prevent potentially bankrupting costs by avoiding or carefully managing risks.

[Association of British Insurers: Summary Report, Financial Risks of Climate Change, § 4.1 (June 2005).] The questions about policy change with respect to global warming far outnumber any available answers. How much can we and our global economy survive?

The conventional wisdom that elevating the discourse about climate change will harm the economy is changing even more quickly than the climate. Companies and consumers are increasingly conscious that failure to take action to reduce the severity of climate change is the most significant risk to our future economy. Moreover, insurance regulators have begun to urge the industry to take affirmative steps to address climate change. The insurance industry--likely to suffer profound losses related to climate change even if the entire global community starts mending its ways immediately--is taking note of this sea change and responding.

Loss Prevention

One response is to encourage consumers to invest in loss prevention. There are many strategies, for example, for improving the disaster-readiness of insured structures. It only makes sense that such practices are cost-effective, sometimes extremely so. FM Global, a commercial property insurer with an engineering orientation, issued hurricane loss-prevention recommendations that nearly 500 of its insureds' facilities implemented prior to Hurricane Katrina. Those facilities located in the region impacted by the horrific storm suffered one-eighth the losses of those which had not done so. Thus, total customer investments of only \$2.5 million in loss-prevention strategies allowed these facilities to avoid approximately \$500 million in losses during Hurricane Katrina. n2 Less dramatic structural improvements encouraged by insurers are, for example, installing storm shutters and other upgrades to make homes less vulnerable to wind damage. Both MetLife and Allstate reportedly provide incentives to their customers for such wind-proofing steps. Other insurers, including State Farm and Allstate, lobby for more realistic building codes and their strict enforcement.

Rebuilding Right

Another response is a movement called Rebuilding Right that came into being after the catastrophic losses of Hurricane Katrina. According to Dr. Evan Mills:

Rebuilding Right . . . could involve everything from wetlands restoration to energy-efficient and disaster-resistant housing to renewably-based distributed energy supplies that are less vulnerable to disruption from future extreme weather events.

[See The CERES Report at 17.] In the category of rebuilding right, Dr. Mills includes innovative commercial insurance products that encourage building and rebuilding structures such that they meet current green construction standards. Examples of these are the Firemans Fund Green Upgrade product and Lexingtons Upgrade to Green coverage, discussed below. Insurers are making vigorous efforts to ensure that replacement buildings after losses meet all the appropriate code requirements to render them less susceptible to disaster.

The insurance industry is in an ideal position to assess emerging risks and to develop and market more creative and forward-looking insurance products in the coming years that will help business owners and individuals to lessen their own contributions to global warming and will save insurers losses as well.

Energy-Savings Insurance

Any effort to lower global greenhouse gas emissions to any significant degree must include--in large measure--reductions derived from improved energy efficiency and conservation of resources. Aware of this need, project developers are making efforts to lessen their environmental footprint. A very few insurers have developed policies that protect the installer or owner of an energy-efficiency project against losses resulting from the failure of the improvements to actually achieve the anticipated energy savings. Thus, energy savings insurance (ESI) is essentially the formal insurance of predicted energy savings. Others are providing performance bonds in states or countries that require a contractor to obtain a bond guaranteeing the predicted savings to be achieved by the energy efficiency measures taken. n3

There are multiple benefits to energy savings insurance. Among them are:

- . ESI transfers performance risk from the balance sheet of the entity implementing the energy savings project, thereby freeing up capital that would otherwise be needed to self-insure the projected savings.

- . ESI reduces barriers to market entry of smaller energy services firms who do not have strong enough balance sheets to self-insure the savings.

- . ESI encourages those implementing energy savings projects to go beyond standard measures and achieve more significant levels of energy savings by innovation.

- . ESI providers stand to be proponents of improved savings measurement and verification techniques, as well as maintenance, thus contributing to national energy savings objectives and possibly elevating the quality of information available for project evaluation. n4

Renewable Energy Project Insurance

Insurance is a critical factor in encouraging investment in renewable energy projects. It provides financial protection against losses resulting from delay or damage during the fabrication, transportation, assembly, and operational phases of the project--whether for technical reasons or caused by human error or natural event.

Insurers are developing new products to insure renewable energy projects. Munich Re, for example, piloted exploration risk insurance for geothermal energy companies. AXA has designed a comprehensive offering for wind farms, which generated \$14 billion in revenues for the insurer in 2006. n5 The AXA package can include construction insurance, physical damage and third-party liability insurance and coverage for delays in the building of a wind farm, loss of earnings and business interruption insurance once the operation is up and running. AXAs wind turbine coverage even compensates the policyholder for production losses if the wind farms annual wind levels fall below forecast. n6

Aon has created an agri-fuels group to provide risk management assistance to the rapidly growing biofuels industry. n7

Green Building Insurance

Clean and healthy buildings can reduce legal claims and liabilities. The cover story of the June 5, 2000 issue of *Business Week* reported the enormous surge in the number of cases of sick building syndrome. n8 There have been many toxic mold cases. Green buildings are healthier for tenants and the environment, and they are less risky, with air quality relatively free of indoor pollutants. They have benefited from the use of non-toxic paint products. Apparently in the developing consciousness of the insurance industry--they are better-constructed and less subject to losses.

The residential green building industry alone is expected to be a market of \$40 to \$50 billion by 2010. n9 Insurers are therefore racing to design new insurance products to accommodate this growing trend. Green buildings certainly lessen some risks. Green buildings tend to have better indoor air quality and lower energy costs. Commercial green buildings experience reduced absenteeism, and increased productivity. Firemans Fund product director Steve Bushnell has said, We perceive there is less risk in a building that is constructed with products and systems so state-of-the-art that they lower operating costs, increase resale values, create a healthier work environment, and provide an opportunity for greater workplace productivity.

In 2006, Firemans Fund was the first insurer to offer a line of non-residential Green Gard(SM) coverages. David Cohen of Firemans Fund explained that the development of the Green Gard began about four years ago at the urging of its parent company, Allianz, and Allianz commitment to finding solutions to global climate change. Market research demonstrated that green building was not a trend, said Cohen. It was quickly becoming mainstream. But our traditional coverages did not accommodate all the requirements for insuring green buildings. In response, Product Director Steve Bushnell, working closely with the United States Green Building Council and Dr. Evan Mills, came up with the concept, conducted the necessary research, and designed the new coverages. Realizing that the concept that the commissioning of green buildings goes to the very heart of the most common losses in commercial buildings, i.e., fires due to electrical problems, leakage from plumbing and roof problems, and losses due to the improper installation or operation of HVAC systems, the company concluded that a commissioned building--in which the electrical, plumbing, roofing, and HVAC systems are all integrated and approved by a trained and certified engineer--would suffer fewer losses than traditional buildings. Accordingly, the customer should pay lower premiums.

According to the Firemans Fund, [w]hether youve built green from the ground up, have made green renovations to existing buildings, or would like to rebuild as green in the event of a loss, we provide solutions to protect both your financial and environmental investments. n10 The insurer offers discounted Green Gard Certified Green Building Coverage for properties that meet the Leadership in Energy and Environmental Design (LEED) requirements n11 issued by the United States Green Building Council. n12 In the event of a loss, the insurer even covers the cost of engaging a LEED-accredited professional to oversee the repairs to the property. On May 1, 2007, The Tower Companies became the first enterprise in the Washington, DC metropolitan area to receive a 5% discount on property insurance from Firemans Fund for their green facility.

Firemans Fund also offers Green Gard commissioning coverage to both green-certified and traditionally designed buildings. This product ensures that, after a loss, the necessary repairs are environmentally friendly, they perform as intended, and they are integrated into other systems in the existing building. The insurer covers the cost of engaging a commissioning engineer to ensure that the building systems in the repaired or rebuilt structure (electrical, plumbing, heating and air conditioning) align with one another and provide top-notch performance. n13

Some examples of the innovative coverages? Green buildings often have vegetative roofs. Obviously, the typical sublimits on trees, shrubs, and other plants would not come close to funding the replacement of a vegetative roof after a loss. So Firemans Fund allows a green building owner with a vegetative roof a far higher sublimit for vegetation. Many green structures have photovoltaic or other environmentally friendly water-generating systems that require storage located at some distance from the primary structure. Though traditional insurance would not allow for coverage for

anything located more than 100 feet from the main structure, green building insurance does away with that limit for water storage facilities. If a solar-powered green building is selling power back to the grid, but then suffers a loss, Firemans Fund makes insurance coverage available to make up for the loss of that revenue stream.

Firemans Funds Green Gard coverages have been a success in the marketplace and have lent credibility to the importance of building green in the commercial construction and real estate arenas. They are now approved in all 50 states. The Green Upgrade form has been the most popular product. ⁿ¹⁴ It gives commercial property owners who *want* to go green the means to rebuild and replace with green alternatives after a loss. According to The CERES Report, Green Gard has helped elevate the discourse surrounding the emerging field of green financial services. ⁿ¹⁵

From a business standpoint, because green buildings *are* subject to fewer losses, it only makes sense to allow owners of traditional buildings to insure that--in the event they suffer a loss--they will have the means to rebuild with a green equivalent to their prior structure. If after suffering a total loss of a traditional building, the owner--through its coverage--ends up with an upgraded LEED certified green building, its future losses are likely to decline, its insurance costs should go down, and both the customer and the insurance company have lowered their risk, and the environment is the beneficiary. It is socially responsible business at its best.

Firemans Fund is presently expanding its coverages to include builders risk, to cover the additional time and costs necessary to maintain LEED certification after a loss. New green buildings under construction and existing buildings in the process of green renovations have unique exposures regarding loss of income and extra expenses that are not covered under traditional builders risk policies.

It may be more expensive and take longer to bring buildings back to peak efficiency and use following a loss when the building is to be green certified, explains Mike Halvey, vice president, commercial real estate, Firemans Fund. The green amendments to the builders risk policy will offer real estate owners protection of their green assets and pay for losses to green streams of income. These amendments protect against specific exposures--not ordinarily covered by traditional policies--for new green buildings under construction and existing buildings undergoing green renovations, including:

- . *Loss of earnings*: broadened to include coverage for the loss of income arising from the inability to feed surplus power and receive credits, reimbursement or rebates from the utility due to a covered loss to alternative power generating equipment.

- . *Soft costs*: broadened to cover additional reasonable commissioning expense, flush out expense, recycling expense and re-registration or recertification expense.

- . *Rental value*: broadened to include the additional time needed to comply with the extra procedures and process necessary to meet the level of green certification incorporated into the building design prior to the loss.

In addition to the builders risk policy, the new green amendments will also be available for historic buildings under course of certified historic rehabilitation, covering specific exposures related to rehabilitation projects and the preservation of unique features for historic properties. Additional commercial products that currently include green coverage options include senior living facilities and durable goods.

Firemans Fund is also striving to develop a personal line to provide homeowners insurance to those who have built green. Even more remarkable, Firemans Fund has responded to the recent California wildfires with an unprecedented offer--an innovative green upgrade for impacted policyholders. Firemans Fund will rebuild its Prestige Premier policyholders homes that were damaged or destroyed in the devastating Southern California wildfires green if policyholders desire. ⁿ¹⁶

Lexington Insurance (a member of AIG) also offers Upgrade to Green(SM) endorsements to policies of both homeowners and owners of commercial buildings. The Upgrade to Green product for residential properties, in the event

of a partial loss, could be expected to cover products and materials with an Energy Star rating or its equivalent. Coverage would be provided for repairs or replacement of damage to (or total loss of) appliances, heating and cooling equipment, lighting, windows, insulation, and home electronics (including office equipment). Claims could include reimbursement for green upgrade--renewable interior wood products (such as bamboo or cork flooring, for example), flooring or floor covering made from recycled materials, environmentally friendly paints, and more. When a total loss occurs, the new policies would allow the homeowner to rebuild to the applicable Energy Star option the policyholder has chosen.

Lexingtons Upgrade to Green commercial products would allow a policyholder that is not currently LEED certified to rebuild using LEED Silver criteria. If the policyholders property had been previously LEED-certified, the policy would be able to rebuild to a higher LEED certification (to the extent that is available). Coverage is available for the recycling of materials rather than the disposing of recyclables in landfills. Coverage is also available for the engagement of an architect or engineer with LEED certification to guide the design and/or rebuilding of the damaged part of the building. If the building is already LEED certified, the policy will cover the registration and certification fees for recertifying the building with the U.S. Green Building Council.

Why Should Coverage Lawyers Care?

Because green building insurance is such a new product, there is little if any legal analysis addressing how the new products will affect insurance coverage lawyers. To the extent that we are involved in advising clients about insuring their green buildings, we surely need to be aware of the new products. We need to recognize--and be able to communicate to our clients--that there are enormous differences between a green construction project and a traditional one, and between green facilities and their standard counterparts. Parties cant rely on standard contracts to address the risks involved. As coverage lawyers, the most important advice we can give to our clients is that they confirm that there is adequate insurance coverage (including professional liability insurance for design and building professionals) that account for the green nature of the work and that is the product that best suits the project on which they are embarking.

Green building designers and other professionals have been on the cutting edge of the culture for some time. Their passionate advocacy for green principles has caught the attention of the insurance industry, the second largest industry in the world (as measured by assets). Insurance and risk management professionals are lending their voices to the chorus encouraging the development of green practices. Insurance coverage lawyers should be carefully listening.

FL new statute & implementing regulation prohibiting discriminatory underwriting

2008 Emerging Issues 1646

Jim Poolman on Floridas new statute and implementing regulation prohibiting discriminatory underwri

By Jim Poolman

December 19, 2007

SUMMARY: The denial of an insurance policy of a Florida Congresswoman has shined the spotlight on the use of an applicants future travel plan when insurers underwrite life insurance policies. Policymakers as well as regulators are debating the issue across the country. Former North Dakota Insurance Commissioner Jim Poolman examines this politically sensitive issue and the new Florida regulations that govern how an applicants plans of future travel can be used, and the requirements placed on insurers to be able to use the information.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The use of lawful foreign travel in issuing life insurance policies has been the subject of debate by regulators and lawmakers for well over a year. The politically and emotionally sensitive issue was brought to light after Congresswoman Debbie Wasserman-Schultz (D-FL) applied for a life insurance policy through an AIG company, and was turned down for coverage based on questions asked of her for underwriting purposes. This raised a firestorm that has rippled through Congress and some state legislatures, and has caused some state insurance commissioners to pursue regulation in their states.

As the Congresswoman tells it, the story is an interesting one. According to Wasserman-Schultz, the agent who was taking the application for her life insurance policy asked her about her past foreign travel, and then went on to ask her if she had any future travel plans, to which she replied no. Then the questions became more nebulous. The Congresswoman was asked about *possible* future travel to any foreign country. Wasserman-Schultz responded that if she were to travel, she would very much like to go to Israel. According to the company, the policy was denied based on future foreign travel plans, in this case because of the instability in Israel.

The Congresswoman saw the denial of her life insurance policy as one of veiled discrimination. As a Jewish-American, Wasserman-Schultz sees Americans traveling to Israel on a constant basis, and saw the denial of her policy as discrimination against those of Jewish descent who want to travel to Israel. With the backing of the Anti-Defamation League and other human rights organizations, the Congresswoman took her case to the Congress and to state regulators across the country.

Congresswoman Wasserman-Schultz found a sympathetic ear in her home-state Insurance Commissioner Kevin McCarty who also saw this practice by life insurance companies as unfair discrimination. McCarty became a leading

voice on the issue with national regulators and his home state legislators. He pursued enabling legislation by amending the Unfair Trade Practices Act in the Florida legislature (see Fla. Stat. § 626.9541(1)(dd)) and has now implemented new regulation 69O-125.003, F.A.C., that now governs the underwriting of life insurance policies for Florida citizens. These additional requirements on insurers were designed to protect those Floridians who travel lawfully, but will be considered by insurers doing business in Florida as unnecessary burdens.

The new regulation prohibits insurers from refusing to write coverage, limit the amount of coverage to an applicant, or determine the rates, based on the intent of the applicant to engage in *future lawful foreign travel or based upon past lawful foreign travel, unless the insurer can demonstrate the insureds who have traveled or intend to travel are a separate actuarially supportable class whose risk of loss is different from those insureds who have not traveled and do not intend to travel*. In addition, insurers are prohibited from using past lawful foreign travel as a sole determinant in underwriting a life insurance policy.

It is important to pay specific attention to the separate actuarially supportable class language of the regulation, because the new requirements in the regulation require an insurance company to do a filing with the Florida Department of Financial Services (Department) demonstrating this new class. Before any underwriting decisions can be made by an insurer using this travel information, an insurer must first get the approval of the Department. This is to make sure that analysis is detailed and meets the requirements of the law. There are several requirements the actuarial analysis has to meet before the Department will consider approval such as: details of the specific impact of the proposed risk; demonstration that risk exposures will be similarly treated; use of statistically credible data specific and relevant to the risk, and the disclosure of underwriting and rating options with supporting documentation, just to summarize a few.

Insurers have many more requirements in the regulation, and a few are important to note. Companies are required to collect and maintain data related to the underwriting of their policies. Those insurers are to report to the Department information related to all policy denials, non-renewals, cancellations or limitations on coverage. Insurers are required to track the reason for each case and prepare a brief summary and report that information to the Florida Department each calendar year.

The Department lays out penalties for insurers who violate the new rule. The Department can levy administrative penalties because of unfair discrimination laid out in Fla. Stat. § 626.9541(1)(g) and (dd), but can also order restitution to the policyholder, issue coverage that was previously denied, and pay any valid claim incurred subsequent to the initial application date, if the underwriting model that uses lawful foreign travel is not filed with the regulator.

The new Florida regulations will continue the debate between those who see regulating underwriting practices of insurers as unnecessary and those who see the use of lawful travel to foreign countries, especially those with religious distinctions as discriminatory practices by insurers. The fundamental questions that must be asked of insurers: Does travel to foreign countries pose a significant risk to mortality that can be quantified? Are certain countries riskier than others? Obviously countries at war or countries where significant military action is taking place may have more risk, but is the risk only to those actively engaged in the military, and not to civilians who are visiting less dangerous parts of the country?

Some would argue that visiting certain areas in our large cities could pose a larger mortality risk than visiting the quiet ranching areas of Israel. Thus the debate about the quantification of mortality in the underwriting practices. Floridas new regulations that require the collection of data about the policy denials, cancellations, or limitations of coverage could provide data that will either subdue the debate about whether this is a significant issue, or give regulators and civil rights groups the necessary ammunition to clamp down further on the underwriting practices of life insurance companies. As stated earlier, some companies will consider the new regulations burdensome, so much so that some may even stop using the underwriting practice entirely. This could be an unintended consequence that some will consider a victory in itself.

ABOUT THE AUTHOR(S):

Jim Poolman was elected North Dakota Insurance Commissioner in 2000, and overwhelmingly reelected in 2004. While Insurance Commissioner, he was an outspoken leader at the National Association of Insurance Commissioners, serving as their Vice-President, Chairman of the Midwestern Zone, Chairman of the Life Insurance and Annuities Committee, Executive Committee on Principles Based Reserving, Chairman of the Producer Licensing Working Group; amongst a host of other leadership posts. In North Dakota he was instrumental in preserving a competitive marketplace while passing very important consumer protections ranging in areas from privacy of consumers medical and financial information, suitability in annuity sales, restrictions on the use of claims information, insurance fraud and life settlements, amongst others. Mr. Poolman has been a sought after speaker on numerous insurance topics around the country. In August of 2007, Mr. Poolman resigned his post in North Dakota to start an independent regulatory consulting practice based in Bismarck, North Dakota. Mr. Poolman received his bachelors of Business Administration degree from the University of North Dakota in 1992. Mr. Poolman also served four terms in the North Dakota House of Representatives before being elected Insurance Commissioner.

Godes on the State of NY Ins. Department Liquidation Bureau v. Generali Ins.

2008 Emerging Issues 1647

Scott N. Godes on the State of New York Insurance Department Liquidation Bureau v. Generali Insurance

By Scott N. Godes

December 19, 2007

SUMMARY: A recent New York Appellate Division decision is a breath of fresh air for policyholders. In *State of New York Insurance Department Liquidation Bureau v. Generali Insurance Co.*, the Appellate Division, First Department, found that insurance companies had to cover all shares of defense and settlement costs related to lead paint claims, and could not pro-rate the costs to the policyholder, even when there were significant periods of time in which the policyholder had no insurance.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: A recent New York Appellate Division decision is a breath of fresh air for policyholders. In *State of New York Insurance Department Liquidation Bureau v. Generali Insurance Co.*, 844 N.Y.S.2d 13; 2007 N.Y. App. Div. LEXIS 10659 (N.Y. App. Div. 2007) the Appellate Division, First Department, found that insurance companies had to cover all shares of defense and settlement costs related to lead paint claims, and could not pro-rate the costs to the policyholder, even when there were significant periods of time in which the policyholder had no insurance. This decision is critical, because it refuses to make policyholders cover shares of defense and settlement costs for periods where there is no insurance, and ensures that claims are paid in full when policyholders are defunct and therefore unavailable to pay claims.

The Underlying Lead Paint Claims. The underlying lead paint claims at issue alleged exposure to lead paint from 1982 through 1993. (Certain facts are based on the trial courts opinion, which contains additional details about the underlying facts. See *State of N.Y. Ins. Dept Liquidation Bureau v. Generali Ins. Co.*, No. 401446/2003, slip op. (N.Y. Sup. Ct. Apr. 4, 2006).) The policyholder owned the premises on which the alleged exposure occurred from 1988 through 1992. The policyholder was dissolved in 1994, but its insurance remained in place to resolve claims.

The Lack of Available Insurance. The policyholder bought insurance from the insurers who were party to this case Transtate Insurance Company (in liquidation, and represented by the New York State Liquidation Bureau) and Generali Insurance Co. Transtate had sold only 10.2 months of coverage for the property; Generali had sold only 5.5 months of coverage. There were 35 months that were uninsured.

The Insurers Could Not Discount Their Payments to Reflect Periods of When the Policyholder Had No Insurance. The Appellate Division rejected Generalis argument that, for purposes of paying defense and indemnity

costs, it should be obligated to pay based on a strict time-on-the-risk formula.

Generali proposed that the court create a fraction to determine the amount of loss it would cover. To create the fraction, Generali would take the entire period for which the policyholder was potentially responsible (*e.g.*, the period of the policyholders property ownership), and use that as the denominator in the fraction used to calculate payment. Here, Generali argued that there were 50.7 months of risk; using its proposed approach, Generalis share would be $x/50.7$. The numerator (x) would be the number of months that Generali had issued coverage. So, the full fraction would be $5.5/50.7$, meaning Generali would be responsible for approximately 10.8% of all defense and indemnity costs.

The court disagreed. First, the court found that the full amount of defense costs, without any discount for policy periods when the policyholder had no insurance, should be shared equally by the insurers. Just as significant, the dissenting opinion agreed with that formula for splitting defense costs equally. Accordingly, Generali was responsible for paying 50% of defense costs, rather than the 10.8% that it proposed.

Negotiation tip for coverage-in-place and claims handling agreements. Note that this is a great victory for policyholders, because the court refused to require policyholders to pay any defense costs, even in light of periods not covered by insurance. Therefore, when policyholders negotiate coverage-in-place or claims handling agreements, they should cite this case as supporting a refusal to be assigned shares of defense costs, without regard to uncovered periods.

Second, the court rejected Generalis proposed fraction for indemnity costs. It upheld the fraction employed by the trial court. Rather than using the entire period of time that the policyholder was on the risk as the denominator ($x/50.7$), the court used the number of months of available coverage ($x/15.7$). Thus, Generali was responsible for $5.5/15.7$, or 35% of all indemnity costs, rather than the 10.8% that it proposed. Transtate was responsible for the remaining $10.2/15.7$, or 65%, meaning the entire settlement was covered by the insurers, rather than assigning a portion to the policyholder (or, in effect, reducing the amount of the settlement money that the claimant could collect).

The court also found the formulas to be consistent with *Consolidated Edison Co. v. Allstate Insurance Co.*, 98 NY2d 208, 774 N.E.2d 687, 746 N.Y.S.2d 622 (2002) and *Serio v. Public Service Mutual Insurance Co.*, 304 AD2d 167, 168, 759 N.Y.S.2d 110 (2003), notwithstanding their holdings that costs should be allocated on a *pro rata* basis. The court distinguished those cases by explaining that, among other reasons, they did not involve settlements pertaining to risks extending over uninsured periods. The court noted that the *Consolidated Edison* decision explained that the use of time-on-the-risk proration in that case did not foreclose *pro rata* allocation among insurers by other methods and that this is not the last word on proration.

Import of the Decision. The decision should have great impact on policyholders who are negotiating with their insurers regarding any sort of payments defense or indemnity. Insurers, particularly when the applicable state law calls for *pro rata* allocation, take the position that the policyholder must pay portions of defense costs based on the fraction of time where the policyholder had not bought insurance. But this case establishes law in New York that the policyholder is not responsible for paying any defense or indemnity costs, without regard to the unavailability of coverage in certain years. Rather, the insurers must divide defense costs by equal shares, and indemnity costs by a fraction that looks to the number of months they were on the risk and that of existing insurance coverage in total.

ABOUT THE AUTHOR(S):

Scott N. Godes is an attorney in the Washington, DC office of Dickstein Shapiro LLP. Mr. Godes represents corporate policyholders in insurance coverage disputes. He is an experienced trial lawyer who has litigated complex insurance coverage disputes, including class actions, in state, federal, bankruptcy, and appellate courts, as well as in commercial arbitrations. Mr. Godes has a wide-ranging coverage practice, pursuing insurance in disputes relating to directors and officers claims for alleged securities violations; allegations of damaged computer data, hardware, and software; mass tort liabilities, including asbestos; environmental property damage; flood claims; allegations of improper

alcohol advertising; and class actions. Recently, Mr. Godes was lead counsel in *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, a landmark case decided by the New York Supreme Court that ruled there are millions of dollars of coverage for thousands of asbestos claims, even after the insurers claimed to have paid their full aggregate limits of coverage. Mr. Godes received his B.A., cum laude, from Middlebury College, and his J.D., with honors, from the George Washington University Law School.

Scott N. Godes on Bombar v. West American Insurance Company

2008 Emerging Issues 1648

Scott N. Godes on Bombar v. West American Insurance Company

By Scott N. Godes

December 19, 2007

SUMMARY: A recent Pennsylvania appellate decision is good news for policyholders. *Bombar v. West American Insurance Company* is a significant decision because it found that negligence and failure to warn claims do not fall within the completed operations hazard (or exclusion), even if the claims are against a company whose physical installation operations are complete. Not only is this decision favorable to companies facing bodily injury claims, but it is a terrific result specifically for former contractors facing asbestos claims the decision confirms that coverage without aggregate limits applies to their claims.

ARTICLE: A recent Pennsylvania appellate decision is good news for policyholders. *Bombar v. West American Insurance Company*, 932 A.2d 78, 2007 Pa. Super. LEXIS 2171 (Pa. Super. Ct. 2007) is a decision from Pennsylvania's Superior Court, on appeal from the Court of Common Pleas, which interpreted the products/completed operations hazard in a general liability policy. The court found that the insurance company could not rely on its products/completed operations hazard exclusion to deny coverage for a tort claim that resulted from the policyholders failure to install properly a backup alarm for a forklift, even though the bodily injury took place after the policyholder had finished physically installing the alarm and had sold and delivered it to the claimants employer.

This decision is critical for two reasons. First, it means that there is coverage under general liability policies for negligence and strict liability claims, even if the policies exclude coverage for claims falling within the products/completed operations hazard. Second, it means that for policyholders who face asbestos claims due to their former contracting operations, claims alleging negligence and strict liability are not subject to the aggregate limits for the completed operations hazard; they are subject only to per occurrence limits (without aggregates), found in premises/operations coverage.

The Tort Claim. The claimant in the underlying tort claim had her leg amputated after she was struck by a forklift that was driven in reverse without a backup warning alarm. The policyholder was the forklifts distributor. The policyholder had installed an aftermarket alarm to signal when the forklift was reversing, but the alarms wiring was installed in way that left wires hanging, and the wires were either disconnected by employees or were caught and ripped out while the forklift was moving. The claimant brought an action for strict liability and negligence, alleging that the faulty installation of the aftermarket alarm caused her injuries.

No Coverage for Claims Meeting the Products/Completed Operations Hazards Requirements. The policyholder had purchased a commercial general liability (CGL) policy that excluded coverage for claims meeting the products/completed operations hazard. The policyholder tendered the claim to its CGL insurer, but the insurer denied coverage, asserting that the products/completed operations hazard exclusion applied.

The policy defined the products/completed operations hazard as:

Products-completed operations hazard:

a. includes all bodily injury and property damage occurring away from premises you own or rent and arising out of your product or your work except

1. Products that are still in your physical possession; or

2. Work that has not yet been completed or abandoned. However, your work will be deemed completed at the earliest of the following times:

(a) When all of the work called for in your contract has been completed.

(b) When all of the work to be done at the job site has been completed if your contract calls for work at more than one job site.

(c) When that part of the work done at a job site has been put to its intended use by any person or organization other than another contractor or subcontractor working on the same project.

Work that may need service, maintenance, correction, repair or replacement but, which is otherwise complete, will be treated as completed.

Bombar, 932 A.2d at 87-88.

The Parties Contentions. The insurance company asserted that the claim met the requirements of the products/completed operations hazard, because the claimants bodily injury arose from the policyholders work, which was not in the policyholders physical possession, and had been completed at the time of the injury.

The claimant, standing in the shoes of the policyholder, asserted that the injury arose from the policyholders negligent failure to warn or provide instructions as to the backup alarm. She asserted that such claims are not within the products/completed operations hazard, and, therefore, not excluded from coverage.

The Courts Holding. The court explained that the thrust of the underlying claim rested upon negligence, including negligent failure to warn of defects in the alarm, and negligent installation, service, and maintenance of the alarm, among other counts. The court noted that at first glance, coverage may not exist, but, on further analysis, coverage was not excluded by the products/completed operations hazard.

The installation of the backup alarm by [the policyholder] was a service, but *it was not completed at the time the accident occurred because the installation was both faulty and negligent*, which the jury concluded gave rise to the complained of injury. 932 A.2d at 89 (emphasis added). Moreover, although the products/completed operations hazard purports to exclude claims alleging failure to warn after the installation was complete, *the warnings were not complete at the time the product was put to use*, because of the negligent failure to warn, and, therefore, the operation was not complete at the time of the accident or bodily injury. *Id.* Because the operation could not be complete, due to the failure to give proper warnings, the completed operations hazard could not apply.

Import of the Decision

Non-latent injury claims. The *Bombar* decision is critical in the context of straightforward strict liability tort claims for cases in which the policyholder had not purchased products/completed operations hazard coverage. Policyholder counsel should be aware of, and rely on, this case to refute insurers denials of coverage for product liability and negligence claims against policyholders who did not purchase, or already had exhausted their products/completed operations hazard coverage. Because the policyholders operations could not have been complete until the policyholder gave proper warnings regarding its product, the products/completed operations hazard cannot apply; policy exclusions for such coverage are irrelevant under *Bombar*.

Non-latent injury claims, including asbestos. The *Bombar* decision is even more critical in the context of asbestos claims against policyholders who face potential liability because they formerly installed, repaired, and/or removed asbestos products.

Under pre-1986 CGL policies, there were per occurrence or per accident limits of coverage, which applied to each asbestos claim, and there was no overall or general aggregate limit of liability, meaning the policy limit applied separately for each new accident or occurrence. *See, e.g., ACandS, Inc. v. Travelers Cas. & Sur. Co.*, 435 F.3d 252, 255--56 (3d Cir. 2006) (Alito, J.); *Natl Cas. Co. v. First State Ins. Group*, 430 F.3d 492, 494--95 (1st Cir. 2005). There were aggregate limits for the products and completed operations hazards, meaning a policyholder would exhaust this coverage after the aggregate limit had been paid, without regard to how many accidents or occurrences there were under the policy. *See, e.g., ACandS, Inc.*, 435 F.3d 252, 255--56. Not surprisingly, insurance companies historically assigned asbestos claims to the products hazard, so that the claims would be subject to an aggregate limit, and exhaust the policy.

But more recent case law confirms that asbestos claims, which are based on exposure to insulation contracting operations, do not fall within the products hazards of CGL policies; rather, they are covered by premises/operations coverage, which has no aggregate limit. *See, e.g., Contl Cas. Co. v. Employers Ins. Co.*, 839 N.Y.S.2d 403 (N.Y. Super. 2007). Insurance companies, desperate to find a way to make claims subject to an aggregate limit after their products hazard interpretation was rejected, began arguing that certain claims were subject to the completed operations hazard (which is subject to an aggregate limit). Many insurers have argued that even if the asbestos claims are based on exposure to contracting operations (which should be covered by premises/operations insurance), these claims later transform into completed operations claims, after the policyholder no longer is engaged in contracting operations. *See In re Wallace & Gale*, 385 F.3d 820 (4th Cir. 2004) (finding that claims due to exposure to ongoing contracting operations were not subject to the products or completed operations hazard, but became subject to the completed operations hazard during policy periods after the physical contracting operations had ended).

The *Bombar* decision rejects this recent insurance company position. Most, if not all, asbestos claims alleging exposure to asbestos released by insulation contractors assert the tort claims of negligence and failure to warn. *See, e.g., Commercial Union Ins. Co. v. Porter Hayden Co.*, 698 A.2d 1167, 1208 (Md. Ct. Spec. App. 1997). Under *Bombar*, such claims would not be subject to the completed operations hazard, because installation of [asbestos] was not completed at the time of the installation of the [asbestos] because of the negligent failure to warn, and, therefore, the operation was not completed. 932 A.2d at 89; *see also St. Paul Fire & Marine Ins. Co. v. A.P.I., Inc.*, No. C9-02-8084, slip op. at 19-20 (Minn. D. Ct. Sept. 27, 2005) (all asbestos claims . . . alleg[ing] . . . failure to warn or failure to instruct are not subject to the product hazard or the completed operations hazard). Because such claims are not subject to the products or completed operations hazard, they are subject to premises/operations coverage, which does not have an aggregate limit.

The difference between the types of coverage is critical. Because many policyholders face asbestos-related claims, billions of dollars in insurance coverage are at stake in how those claims are classified if the claims are premises/operations claims, not subject to aggregate limits, [t]he greater the number of occurrences, the larger [the insurers] liability to its insureds. *Travelers Cas. & Sur. Co. v. ACandS, Inc.*, No. 103059/03, slip op. at 2 (N.Y. Sup. Ct. July 18, 2003); *Natl Cas. Co. v. First State Ins. Group*, No. 04-10167-MLW, slip op. at 5 (D. Mass. Apr. 28, 2005), *affd*, 430 F.3d 492, (1st Cir. Dec. 2, 2005).

Practice tip for counsel representing policyholders facing asbestos claims. Make sure that the insurer is classifying claims properly. Under *Bombar* (and other cases, like *Continental Casualty*), asbestos claims due to alleged exposure to insulation contracting operations, such as installing pipe covering, or repairing insulation, or removing gaskets, are not subject to the products or completed operations hazards, whether coverage for those hazards was excluded or not.

If the insurers are either denying coverage (because the products/completed operations hazards were excluded from the policy, or have been exhausted), or simply eroding the aggregate limits for the products and completed operations hazards, cite *Bombar* to refute the insurers position. Keep in mind that a coverage action may be necessary. The proper coverage premises/operations for such claims likely is worth many times what it is worth for the products/completed operations hazards.

ABOUT THE AUTHOR(S):

Scott N. Godes is an attorney in the Washington, DC office of Dickstein Shapiro LLP. Mr. Godes represents corporate policyholders in insurance coverage disputes. He is an experienced trial lawyer who has litigated complex insurance coverage disputes, including class actions, in state, federal, bankruptcy, and appellate courts, as well as in commercial arbitrations. Mr. Godes has a wide-ranging coverage practice, pursuing insurance in disputes relating to directors and officers claims for alleged securities violations; allegations of damaged computer data, hardware, and software; mass tort liabilities, including asbestos; environmental property damage; flood claims; allegations of improper alcohol advertising; and class actions. Recently, Mr. Godes was lead counsel in *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, a landmark case decided by the New York Supreme Court that ruled there are millions of dollars of coverage for thousands of asbestos claims, even after the insurers claimed to have paid their full aggregate limits of coverage. Mr. Godes received his B.A., cum laude, from Middlebury College, and his J.D., with honors, from the George Washington University Law School.

Scott N. Godes on Continental Casualty Co. v. Employers Insurance Co. of Wausau

By Scott N. Godes

December 19, 2007

SUMMARY: A recent New York Supreme Court case is a landmark decision in favor of policyholders facing asbestos and other latent injury claims. In *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, Justice Richard Braun held that claims due to exposure to asbestos dust released during contracting operations are due premises/operations coverage (so-called non-products claims), and are not subject to the products hazard in comprehensive general liability insurance policies. This is significant because premises/operations coverage has no aggregate limit, unlike products/completed operations hazards under pre-1986 general liability policies, thus making multiple limits of coverage available for the asbestos claims at issue. Even though the insurance companies claimed that they had paid their full aggregate limits (more than \$100,000,000), Justice Braun held that there was coverage available for claims arising from exposure to dust released during contracting operations, and that coverage is not subject to aggregate limits. This commentary, written by Scott N. Godes, who was co-lead counsel in phase I of the *Continental Casualty Co.* case and represents policyholders in insurance coverage disputes, discusses the implications of this important decision.

ARTICLE: A recent New York Supreme Court case is a landmark decision in favor of policyholders facing asbestos or other latent injury claims. In *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, 839 N.Y.S.2d 403 (N.Y. Sup. Ct. 2007) (*Keasbey*), Justice Richard Braun held that claims due to exposure to asbestos dust released during contracting operations are due premises/operations coverage (so-called non-products claims), and are not subject to the products hazard in comprehensive general liability insurance policies. This is significant because premises/operations coverage has no aggregate limit, unlike products/completed operations hazards under pre-1986 general liability policies, making multiple limits of coverage available for the asbestos claims at issue. Even though the insurance companies claimed that they had paid their full aggregate limits (over \$100,000,000), Justice Braun held that there was coverage available for claims arising from exposure to dust released during contracting operations, and that coverage is not subject to aggregate limits. *Keasbey* confirms that significantly more insurance coverage is available for asbestos claims against insulation contractors that insurance companies have been willing to admit to their policyholders.

The Robert A. Keasbey Company. The Robert A. Keasbey Company (*Keasbey*) is a defunct insulation contractor that had installed, repaired, removed, and abated asbestos-containing insulation materials in the New York area, starting in the late 1800s and continuing for nearly a century. *Keasbey* also engaged in some straight sales of asbestos products

and mixed and relabeled asbestos cement products. Keasbey was dissolved by New Yorks Secretary of State in 2001.

Claims Against Keasbey. Over the past 20 years, Keasbey was sued in thousands of tort claims by claimants asserting that Keasbey caused their asbestos-related bodily injuries. Most claims settled, but some went to verdict. Even after it went out of business and was dissolved, claimants continued to sue Keasbey, and there were approximately 20,000 bodily injury claims pending against Keasbey at the time the *Keasbey* coverage case was litigated. Describing the types of tort claims against Keasbey, the court explained that claimants who have contracted asbestos-related diseases have sued defendant Keasbey seeking compensation due to alleged exposure to asbestos released [w]hen defendant Keasbey cut, sawed, mixed, and removed asbestos-containing materials as part of its insulation operations at various job sites. *Continental Casualty Co. v. Employers Insurance Co. of Wausau*, 839 N.Y.S.2d at 410. (N.Y. Sup. Ct. 2007).

CNAs Lawsuits Against Keasbey and a Defendant Class of Asbestos Claimants. Two of Keasbeys primary insurers (collectively, CNA) had continued to defend Keasbey against these tort claims, but in 2001, CNA filed a declaratory judgment action in New York state court against Keasbey and more than 100 individuals with claims pending against Keasbey, seeking a declaration that it owed no duty to defend or indemnify Keasbey for asbestos-related claims. CNA withdrew and refiled the action in 2003, as a defendant class action.

CNA alleged in its complaint that all of the pending asbestos-related claims fell within the products hazard, and, therefore, were subject to the aggregate policy limits, which, conveniently for CNA, were exhausted. CNA asserted that the argument that asbestos claims against an insulation contractor do not fall within the products hazard was a newly minted and meritless theory. Indeed, CNA and Wausau had treated all past claims against Keasbey as products hazard claims.

CNA also sued Employers Insurance Co. of Wausau (Wausau), which had sold Keasbey two primary policies, and One Beacon, which had sold a wrap up policy where Keasbey performed contracting operations.

The Parties Positions at Trial. The case was tried over a four-month period. The biggest issue at trial was whether all of the claims were subject to the products hazard. CNA, Wausau, and One Beacon asserted that all of the claims were subject to the products hazard. This was not surprising, because an aggregate limit of coverage applied to the products hazard, such that a single limit (here, \$10,700,000) applied to all claims, no matter how many claims were pending against Keasbey. The Defendant Class argued the opposite that every claim arising from exposure to insulation contracting operations was due premises/operations coverage, subject to a separate per occurrence limit (here, \$10,700,000 multiplied by the number of claims), and no aggregate limit applied. Under CNAs theory, because it and Wausau already had paid \$10,700,000 under their primary policies, there was no further coverage; under the Defendant Class theory, \$10,700,000 was available to cover each claim arising from exposure to contracting operations.

The Courts Holdings. Among other requests from CNA that the court rejected, Justice Braun denied CNAs request to apply the products hazard to all pending asbestos claims against Keasbey. Following the New York Court of Appeals holding in *Frontier Insulation Contractors, Inc. v. Merchants Mutual Insurance Co.*, 91 N.Y.2d 169 (1997), the court held that the products hazard applies to only certain asbestos claims those due to exposure to asbestos away from the policyholders premises, involving the policyholders product, and after the policyholder relinquished possession of

the product. *See Continental Casualty Co. v. Employers Insurance Co. of Wausau*, 839 N.Y.S.2d 403, 410--11 (N.Y. Sup. Ct. 2007).

Overall, the court held that the products hazard does not apply to asbestos claims arising from exposure to Keasbeys insulation contract operations, because Keasbey had not relinquished possession of the products at the time of the exposure. *See Continental Casualty Co. v. Employers Insurance Co. of Wausau*, 839 N.Y.S.2d 403, 411 (N.Y. Sup. Ct. 2007). Specifically, the court held:

Here, the claims by all of the claimants in the underlying actions were that they were injured away from the premises of defendant Keasbey. Plaintiffs [CNA] have not demonstrated that the injuries occurred after relinquishment of the asbestos products or after the operations were completed To the contrary, the evidence has shown that the injuries happened while the installation operations of defendant Keasbey were ongoing, which were covered under the operations coverage provisions of the subject insurance policies.

See Continental Casualty Co. v. Employers Insurance Co. of Wausau, 839 N.Y.S.2d 403, 411 (N.Y. Sup. Ct. 2007).

The court rejected all of the insurers arguments relating to the products hazard. As stated above, the court found that premises/operations coverage, not the products hazard, applies to claims based on exposure to dust released during contracting operations, rejecting the insurers arguments that all claims involving a product are subject to the products hazard. *See Continental Casualty Co. v. Employers Insurance Co. of Wausau*, 839 N.Y.S.2d 403, 411 (N.Y. Sup. Ct. 2007). . The court also rejected the argument that products were relinquished, for purposes of the products hazard, when products had been drop shipped to Keasbeys job sites. *See Continental Casualty Co. v. Employers Insurance Co. of Wausau*, 839 N.Y.S.2d 403, 411 (N.Y. Sup. Ct. 2007).

The Import of the Decision. The decision should have great impact on policyholders who face asbestos claim liability due to their insulation contracting operations. The courts refusal to apply the products or completed operations hazard, and the related aggregate limit, to claims based on exposure to contracting operations, means that numerous limits of coverage are available for such claims, rather than a single aggregate limit.

This holding is critical to policyholders facing asbestos, or other latent injury, liability due to alleged exposure to asbestos released during contracting operations or on the policyholders premises. Rather than just a single policy limit being available for such claims, numerous limits are available, restricted only by the number of accidents/occurrences at issue. Indeed, the court explained in *Keasbey*:

It is estimated by plaintiffs that approximately \$100,000,000 to \$250,000,000 is at issue in this action (or possibly even more).

See Continental Casualty Co. v. Employers Insurance Co. of Wausau, 839 N.Y.S.2d 403, 408 (N.Y. Sup. Ct. 2007).

Keasbey demonstrates that insurers cannot make blanket determinations that all asbestos claims are subject to the products hazard without regard to the policyholders past operations. Because many insurance companies have refused, and continue to refuse, to provide premises/operations coverage for asbestos claims against insulation contractors, *Keasbey* is a powerful decision to use to refute such determinations.

Policyholders facing such liability should ensure that their coverage is not being eroded wrongly because claims are assigned to the products/completed operations hazards. *Keasbey* makes clear that it is improper to assign claims due to exposure to contracting operations to products/completed operations hazard coverage, without regard to how the insurer treated the claims in the past.

Kohane: Duty to Cooperate Under a Liability Insurance Policy A 3-Step Approach

2008 Emerging Issues 1650

Kohane: Duty to Cooperate Under a Liability Insurance Policy A 3-Step Approach

By Dan D. Kohane

December 19, 2007

SUMMARY: Every policy of liability insurance establishes a duty on the part of the insured to cooperate with its insurer. Cooperation is essential to aid in the insurer's desire to provide a proper defense. What happen if the insured fails to assist in the defense on the case or otherwise materially and adversely impacts on the insurer's attempts to defend? What are the standards for establishing a breach of the duty to cooperate under a liability policy? Who has the burden of proof and how heavy is it? In *State Farm Mutual Automobile Insurance Company v. Campbell*, the Appellate Division of the State Supreme Court, Third Department, reminded carriers and counsel alike of the standards under which a liability insurance company can declare an insured in breach of an insurance policy's condition of cooperation. Dan Kohane discusses the cooperation obligation and the recent Appellate Division decision reviewing the protocols for establishing a breach.

ARTICLE: What is the Duty to Cooperate. In *State Farm Mutual Automobile Insurance Company v. Campbell* ___ AD3d ___. 2007 NY Slip Op 8238; 845 N.Y.S.2d 88; 2007 N.Y. App. Div. LEXIS 11117 (3rd Dept. 10/30/07), the Appellate Division of the State Supreme Court, Third Department, reminded carriers and counsel alike of the standards under which a liability insurance company can declare an insured in breach of an insurance policys condition of cooperation. New York State law allots the burden the proof to the insurer in establishing a breach of the cooperation clause, and it is a heavy burden indeed.

An insured under a liability policy has an obligation to cooperate with its insurer, whether that insured be named, additional or otherwise. Every commercial general liability, auto, homeowners, directors & officers and errors & omissions policy, and all others as well, establish contractual conditions requiring insureds to assist the carrier in the defense of litigation. Attorneys representing insureds under liability policies, whether appointed by the insurer or retained directly by the insured, need to understand the duty, as well as its breadth and scope. Likewise, it is critical to understand the burden placed upon carriers to establish a breach of that duty

An Overview of the Duty to Cooperate. Failure, on the part of an insured, to cooperate may have dire consequences on the continued availability of liability coverage, and can leave an otherwise covered claim uninsured. Insurance companies count on the continued involvement of their insureds in many aspects of the claim and litigation process. Insureds are charged with providing notice of accidents, occurrences, claims and lawsuits, and correspondingly

responsible for assisting the insurer in investigation, gathering and preserving evidence, participating in depositions and in appearing and testifying at trial.

As early as 1928, Judge Cardozo, in *Coleman v. New Amsterdam Cas. Co.* (247 NY 271, 274-276 [1928]), outlined the importance of the duty imposed on an insured to cooperate:

Co-operation does not mean that the assured is to combine with the insurer to present a sham defense. Co-operation does mean that there shall be a fair and frank disclosure of information reasonably demanded by the insurer to enable it to determine whether there is a genuine defense. The attitude of this assured was one of willful and avowed obstruction. It did not deny that it was in a position to give information, material and instructive, in aid of an investigation of the grounds of liability

The default of the assured was more than sluggishness or indifference, phases of thought and conduct that might be the subject of varying inferences when considered by a jury. It was so avowed and purposed that but one inference is possible. If this was cooperation, one is at a loss to imagine when co-operation could be lacking.

Under New York State Insurance Law § 3420(c), if an insurer alleges in defense of a claim against it for coverage that that the insured failed or refused to cooperate with the insurer in violation of any provision in the policy or contract requiring such cooperation, the burden shall be upon the insurer to prove such alleged failure or refusal to cooperate.

The cooperation clause is a multi-purpose provision. It has as its goal the assurance that the carrier is able to properly defend the lawsuit. Moreover, it is the mechanism by which a carrier is able to secure testimonial and documentary evidence from its insured in order to be able to put on a solid defense. It is also the clause that requires the insured to attend depositions, search records, produce documents and attend trials. In addition, it is designed to prevent collusion between plaintiffs counsel and the insured to make certain that the insured is not conspiring with others to have an unwitting insurer make payments that it need not or should not make.

The practitioner should understand that the cooperation clause attempts to make as certain as possible that insurer has a good handle on the facts and circumstances of the loss. In addition, the clause charges the insured with a duty not to misrepresent facts, or to change his, her or its story, so as to make the defense of the case more troublesome. It is also the tool insurance carriers rely upon to secure the assistance of their insureds in the prosecution of the subrogation effort, in third party practice or cross claims, in order to make certain that rights of contribution and indemnity can be enforced.

The clause also reminds that the insured should not make voluntary payments that can prejudice the rights of the insurer. An insured is obligated, as part of its cooperation responsibilities, to contribute its time to the defense of the lawsuit. The insured may be entitled to be reimbursed for out-of-pocket expenses, but not for the loss of earnings incurred by cooperation.

How is the Duty Breached? In the *State Farm Mutual Insurance Company v. Campbell* opinion, the court reminds us that while it is the insured who is charged with breaching a duty of cooperation, it is often the conduct of the insurer, in seeking that cooperation, that becomes the focus of the courts attention. An insured may not respond to letters and telephone calls sent by the insurer or defense counsel for any number of reasons. Perhaps the insured is no longer receiving mail or calls at the locations previously identified. The insured may not understand the communications received. He or she may be too infirmed or disabled to respond. It may be that the insured does not understand the importance of the contacts or the identity of the correspondent.

Accordingly, the courts focus on the attempts by the insurer to secure the insureds cooperation; and the counseling point is that the focus on the practitioners investigation should be the same. The standards set forth in the decision emanate from Judge Cardozos decision in *Coleman, supra* and from the 1967 decision from the Court of Appeals in *Thrasher v. United States Liability Ins. Co.*, 19 N.Y.2d 159, 168-169 and relying upon *Matter of Eagle Ins. Co. v Sanchez*, 23 AD3d 655; *Matter of Continental Ins. Co. v Bautz*, 29 AD3d 989, 990; *City of New York v Continental Cas.*

Co., 27 AD3d 28 and *State Farm Fire & Cas. Co. v Imeri*, 182 AD2d 683).

First of all, the insurer needs to demonstrate that the insured has by action or inaction materially hampered the insurers ability to properly defend the case. If so, there is then a three point test to evaluate the insurers conduct:

1. Did the insurer act diligently to bring about the insured's co-operation,
2. Were the efforts employed by the insurer were reasonably calculated to obtain the insured's co-operation and
3. Was the attitude of the insured, after his co-operation was sought, one of "willful and avowed obstruction."

In the *State Farm* case, the carrier failed to failed to establish that it was sufficiently diligent or that its efforts were reasonably calculated to bring about its insured's cooperation. In support of its conclusion, the court cited to *Rucaj v Progressive Ins. Co.*, (19 AD3d 270 [1st Dept. 2005]).

The *Rucaj* case provides an excellent backdrop to analyze the quality of the efforts made by the insurer to secure cooperation. In *Rujac*, the claims specialist employed by the liability insurer submitted an affidavit indicating that he contacted the insured by cell phone and asked him to send him information about proof of residence (which was never received). The claim representative then conducted a skip trace, and learned that the insured lived in both New York and Virginia. Eight months went by and the insurer did nothing to contact the insured until it learned that a default judgment had been entered. Only then did the insurer try to re-contact the insured by telephone. No attempt was made to send an investigator to the insureds Virginia residence on his mothers home in the Bronx, and no attempts were made to contact him at his place of employment.

The court, in *Racaj* found the undertaking by the carrier insufficient. It follows that the court found no proof that the insured willfully failed to thwart the insurer's attempt to investigate. The fact that the insured was aware of the lawsuit and did nothing was insufficient to establish a failure on the part of the insured to cooperate.

The message from these cases is clear: non-action by an insured is insufficient to establish willful and avowed obstruction." Without proof that the carrier met the three point *Thrasher* test, a lack of cooperation cannot be established to demonstrate a lack of coverage under the policy.

ABOUT THE AUTHOR(S):

Dan D. Kohane is a senior partner in the Buffalo, New York law firm of Hurwitz & Fine, P.C. and an adjunct Professor of Insurance Law at the Buffalo Law School. Mr. Kohane provides insurance coverage counsel and practices through the State of New York. He received his B.A., *magna cum laude*, from State University of New York at New Paltz in 1975 and his J.D. from the Buffalo Law School in 1979. He lectures widely on insurance coverage issues through the United States, Canada and Europe and has often been retained as an expert witness on matters relating to insurance coverage. Immediate Past President and currently Board Chair of the highly-selective Federation of Defense & Corporate Counsel, Mr. Kohane also serves on the Board of Directors of the DRI and the Lawyers for Civil Justice. He is admitted to practice in the State of New York, the Second Circuit Court of Appeals and the United States District Courts of the Southern, Western, Eastern and Northern Districts of New York. Mr. Kohane is the editor and publisher of *Coverage Pointers*, a bi-weekly electronic insurance newsletter and has recently completed a co-authoring a chapter which will be published in *Applemans New Insurance Law Practice Guide*.

Cope on Ryan v. Gifford

2008 Emerging Issues 1585

Cope on Ryan v. Gifford

By Carrie Cope

December 17, 2007

SUMMARY: Until now, the only substantive stock options backdating decisions have addressed motions to dismiss based on demand futility. This left open a key question: how would courts react to discovery disputes in the backdating context? In the first decision to tackle these questions, the influential Chancellor Chandler of the Delaware Court of Chancery has ruled that a company's internal investigation is discoverable because the special committee conducting the investigation waived the attorney-client privilege.

ARTICLE:

Over the last year, the insurance industry has been coping with the fallout of the stock options backdating scandal. As is now well known, it appears that for many years directors and officers of corporations from across the business spectrum engaged in the backdating of executive stock option grants. Essentially, these individuals retrospectively chose grant dates of their stock options, picking dates at which the stock price was lower than the date of the grant. This resulted in an instant paper profit to the recipients of the grant. After the scandal broke, derivative lawsuits were filed against scores of companies directors and officers alleging breaches of fiduciary duty, fraud, and related counts. Although backdating is not in itself illegal so long as the backdated grants are properly expensed, the defendants in backdating cases allegedly backdated options for their own benefit without following the proper accounting procedures.

In many cases, in order to proceed with a valid derivative claim, a plaintiff must plead that making a pre-suit demand on the board would have been futile because the board was interested in the subject matter and thus incapable of exercising its independent business judgment. In the last year, numerous courts have issued substantive opinions addressing the issue of demand futility in the context of backdating cases. One of the most important early decisions was *Ryan v. Gifford*, 918 A.2d 341 (Del. Ch. February 6, 2007) (the *Maxim* decision), where the influential Chancellor Chandler permitted a complaint to survive dismissal based largely on the plaintiffs allegations that statistically calculated returns on purportedly secretly backdated grants made to executives far outstripped the return to the company's investors, thus suggesting backdating. As such backdating is considered fraudulent, the Chancellor found that it was an act of bad faith on Maxims shareholders and thus a violation of the defendants fiduciary duties. In the wake of the *Maxim* decision, many California federal court decisions used it as a benchmark in dismissing several derivative cases, ostensibly because the cases at bar were distinguishable from the *Maxim* decision, most frequently because they

did not contain a statistical analysis of the returns on the allegedly backdated grants. More recently, however, plaintiffs attorneys appear to have synthesized the lessons from *Maxim* and the California federal court decisions and have amended their complaints accordingly. This frequently entails vastly expanded statistical analysis of the sort seen in the *Maxim* case but not included in many of the complaints initially filed. As a result, it now appears likely that many backdating cases will survive motions to dismiss based on demand futility and will enter the discovery phase of litigation.

Last month, Chancellor Chandler issued an opinion addressing various discovery disputes in the *Maxim* case. This is the first decision from the Delaware Court of Chancery on this issue, and like the original *Ryan v. Gifford* decision, will likely have widespread influence over courts addressing discovery conflicts in the backdating context.

In *Ryan v. Gifford*, Case No. 2213-CC (Del. Ch. November 30, 2007), the plaintiffs filed numerous motions to compel after the defendants failed to produce various documents. Interestingly, one of the successful motions asked that the defendants be required to produce computer records in their original file format, with metadata intact. As the Chancellor noted, the metadata is particularly important where the integrity of dates entered on documents was in dispute. The most important of these motions, however, concerned a production request by the plaintiffs asking for all communications that occurred between the special committee (appointed by Maxims board to investigate its historical options granting process) and the special committees attorneys, as well as communications between Maxim and the special committees attorneys. Specifically, the plaintiffs sought discovery concerning the communications between the attorneys and the special committee throughout the special committees investigation and the attorneys presentation of their final report to the special committee and Maxims board.

In addition to the traditional attorney-client privilege between the special committee and its attorneys, Maxim opposed the request to produce communications between the company and the special committees attorneys. According to Maxim, because the special committee was formed at its direction in direct response to the litigation challenging its grants, the special committee and Maxim shared a joint privilege. The Chancellor was unconvinced, holding that the joint defense privilege did not apply because the plaintiffs showing of good cause vitiated it. The Chancellor emphasized that the information sought by the plaintiffs was unavailable from any other source. The Chancellor found that even if a joint privilege existed, it was rendered irrelevant by his critical conclusion that the special committee had waived the attorney-client privilege it enjoyed with its attorneys. Over a two-day period, the special committee presented its final oral report to Maxims board. In addition to the special committee and its attorneys, the members of the board and attorneys from another law firm were present. The Chancellor ruled that the presentation of the report constituted a waiver of the attorney-client privilege because the client, the special committee, disclosed its communications concerning the investigation and final report to third parties the individual director defendants and the second law firm whose interests were not common with the client. This precluded the application of the common interest exception to protect disclosed communications. Indeed, because the special committee was formed to investigate wrongdoing and in response to litigation in which certain directors were named as defendants, the Chancellor noted that the relationship between the special committee and the individual director defendants was more akin to an adversarial relationship. Significantly, although the plaintiffs demonstrated waiver only with respect to the reports presentation, the Chancellor held that this partial waiver operated as a complete waiver for *all* communications regarding the subject matter of the report.

The potential impact of the Chancellors decision is difficult to underestimate. The standard procedure for many companies implicated in the stock options backdating scandal has been to create a special committee to investigate the companys historical options granting process. These special committees retain their own, independent attorneys to assist with the investigation. At the conclusion of the investigation, the special committee reports to the board regarding its findings. While the special committees general findings are often made public, the specific evidence they rely upon to reach those findings remains confidential and has not been accessible by derivative plaintiffs. Although much of the underlying evidence would likely be discoverable from other sources, the plaintiffs will now be able to examine how the special committees and their attorneys scrutinized and interpreted the evidence. In addition, there is always the possibility that the special committees may have uncovered evidence that would not have otherwise been revealed

during discovery.

The Chancellors decision will be particularly distressing for companies who have directors, named as defendants, still sitting on their boards, who were present when the special committee presented its finding to the board. This could potentially have the impact of providing plaintiffs with full access to all materials gathered by special committees and their attorneys during discovery. n2 With this decision, derivative plaintiffs have won an alarming and unanticipated victory, one whose implications are likely to impact many similar backdating cases in the future.

n1 The Chancellors rulings on the plaintiffs other motions were not insignificant. In addition, the defendants were required to create a privilege log for all documents relating to the termination of two of Maxims executives that had not been produced on grounds of privilege; the Chancellor is to review the log and the documents and will compel production of any documents he finds are not privileged. The defendants were also ordered to produce a CD or DVD of their production previously made to the SEC.

n2 The Chancellor did reaffirm that any notes made by attorneys during witness interviews could be work product, but he also ordered the special committees attorneys to provide him with copies of all such notes, and he stated that he would disclose them if he found that they did not include counsels thoughts, impressions, opinions, or conclusions or redacted versions if possible.

ABOUT THE AUTHOR(S):

Carrie Cope is a partner in the Chicago office of Tressler, Soderstrom, Maloney & Priess, LLP where she specializes in insurance law and has two synchronized practice areas of insurance regulation and specialty lines claim handling. In her regulatory practice, she represents insurers, agents, brokers, reinsurers, reinsurance intermediaries, alternative risk insurance groups and third party administrators on a wide variety of regulatory and compliance issues. She also has over fifteen years of experience in providing specialty lines claim handling and coverage consulting services to the insurance industry. Her coverage practice is primarily concentrated in the areas of directors and officers liability, professional liability, miscellaneous errors and omissions insurance and employment practices liability. She is a member of the Professional Liability Underwriting Society and she recently authored a chapter which will be published in *New Appleman Insurance Law Practice Guide*.

Cope on Requiring D&O Insurers to have the Duty of Defense under their Policies

By Carrie Cope

December 17, 2007

SUMMARY: Will the New York Insurance Department require D&O insurers to have the duty of defense under insurance policies issued to public companies? The New York Insurance Department is currently taking that position based on the New York legislatures failure earlier this year to pass legislation that would have explicitly exempted D&O policies from that requirement. This startling position conflicts with New York case law as well as the D&O insurance industrys longstanding practice. The decision effectively limits the rights of sophisticated insureds to defend themselves and would have an overall chilling effect on the D&O industry given that it applies to both admitted companies and insurers doing business in New Yorks Free Trade Zone.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: For many years the New York Insurance Department has permitted directors and officers liability insurers to issue insurance policies in which the insured has the duty of defense even though it required insurers issuing other types of liability insurance policies, such as automobile liability insurers, to defend their insureds. Earlier this year, the New York legislature failed to pass legislation that would have explicitly addressed the defense obligation under directors and officers liability policies by exempting them from the requirement that the insurer have the duty to defend the insureds. The proposed legislation amended N.Y. Ins. Law § 3420 by including language permitting the Department, via regulations promulgated by the superintendent, to authorize coverage on an indemnification basis with respect to directors and officers liability insurance policies or liability insurance policies insuring large commercial risks. Although the legislation did not pass, a position by the Department that the insurer must have the duty of defense under directors and officers liability policies would contravene New York law and not meet the needs of the archetypal insured purchasing directors and officers liability insurance. This is a significant issue as the requirement applies not only to insurers issuing policies in New York on admitted paper, but those writing insurance in the Free Trade Zone as well.

It is true that the proposed regulation would have *explicitly* excluded D&O policies from the requirement mandating that the insurer have the defense obligation. More significantly, however, the legislation would have statutorily required that all liability policies contain a duty to defend. As no such requirement is currently mandated by statute, it is counterintuitive to conclude that the requirement should be enforced, while the exception is no longer allowed.

In addition, a decision by the Department mandating that insurers have the duty of defense under D&O policies would conflict with New York case law, which explicitly acknowledges that an insured may have the duty to defend under a D&O Policy. In *National Union Fire Ins. Co. of Pittsburgh v. Ambassador Group Inc.*, 157 A.D.2d 293, 299 (1990), the court examined a D&O policy stating, the policy herein, as is the case with most directors and officers liability policies [emphasis added], does not impose an obligation to provide a defense, but only reimburse expenses incurred in the defense. See also *Amrep Corp. v. American Home Assurance Co.*, 81 A.D.2d 325, 440 N.Y.S.2d 244 (1981); *Gon v. First State Insurance*, 871 F.2d 863 (1989); *Federal Ins. Co. v. Kozlowski*, 18 A.D.3d 33, 35 (2005).

Moreover, other materials issued by the New York Insurance Department continue to support the Departments historical position permitting insureds to have the duty of defense under D&O insurance policies. For example, General Counsel Opinion 12-14-99 (#2), which interprets, in relevant part, N.Y. Ins. Law § 3420, acknowledges that the Department has approved D&O policy filings in which the insurer does not have the duty of defense.

Finally, a decision by the Department requiring D&O insurers to provide a duty of defense under their policies would not address the needs of the typical insured purchasing a D&O policy. D&O insurance policies are commonly purchased by corporations to address the risks inherent in their business activities. They may also be purchased by directors who sit on corporate boards. It is not unusual for the scope of coverage to be heavily negotiated and corporations often employ risk managers who are experienced in such negotiations. Given the sophistication of the typical insured, it is not surprising that they want to control the defense of any claims and thus, do not want the insurer to have the duty of defense under the policy. In high stakes litigation, the insureds invariably want to use counsel familiar with their business and with whom they are comfortable. They also want to control the defense strategy which is typically the right of the party having the duty of defense under the policy. This is such a pivotal issue that a decision by the Department that takes away the insureds right to defend themselves may encourage insureds to seek the desired coverage outside the State of New York, thus, potentially having a chilling effect upon the D&O insurance industry in New York.

Conclusion: A decision by the New York Insurance Department requiring D&O insurers to have the duty of defense under their policies is inconsistent with New York law and would unilaterally impose constraints on an established marketplace which has successfully met the needs of insureds for several decades.
