SEC Investigations: An Increasing Risk Leading to Unanticipated Coverage?

2008 Emerging Issues 1587

Cope on SEC Investigations: An Increasing Risk Leading to Unanticipated Coverage?

By Carrie Cope

December 17, 2007

SUMMARY: What happens when D&O policies do not expressly afford coverage for investigations by the Securities and Exchange Commission and other types of actions such as letters of inquiry? This is currently a pivotal issue given that SEC investigations have dramatically increased in recent years. However, only a few courts have addressed the issue directly.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Over the last few years, investigations by the Securities and Exchange Commission (SEC) into the activities of corporations and their directors and officers has continued to increase, from 2,926 pending investigations in 2003 to 4,146 pending investigations in 2006. While SEC investigations often result in formal judicial proceedings, they also involve other actions such as letters of inquiry, subpoenas and orders of investigation that do not progress much past the information-gathering stage. As the number of investigations continues to rise and the need to respond to SEC inquiries generate, in many cases, substantial defense or investigation costs, it is not surprising that corporations and their directors and officers are increasingly turning to their D&O insurance policies seeking coverage for those costs. In the wake of the rising tide of SEC investigations, one issue that is becoming of vital interest to insureds is whether some types of activities by the SEC constitute covered claims under their D&O policies. While lawsuits historically have constituted claims under D&O policies, other types of actions, such as a letters of inquiry, generally have not fallen within the claim definition. Although some of the newer policy forms on the market specifically define the term claim to include specific SEC actions, many existing policies were drafted when such coverage was not contemplated by insurers in drafting their policies, nor sought by insureds in purchasing their policies. The result is that insureds and their insurers sometimes end up battling over whether the policy's definition of claim was intended to encompass the costs incurred in defending some types of SEC activities.

Very few courts have addressed this issue directly. Among them, *Pepsico, Inc. v. Continental Casualty Co.*, 640 F.Supp. 656 (S.D.N.Y. 1986), involved several class actions filed against the insureds alleging fraud taken on the market for falsifying financial statements. The court does not provide much detail in its opinion analyzing coverage for costs incurred in the SEC investigations, but briefly states, because the litigation and the investigations were each directed at the same allegedly fraudulent activity, and directed against both PepsiCo and its directors and officers, it would seem that these defense costs are covered loss within the policy. The court's opinion on this issue is of limited value because it does not specifically evaluate the policy language potentially encompassing coverage for SEC investigations, but

addresses the issue only in very broad terms.

However, other courts have evaluated whether coverage is available for SEC investigations and other actions by considering whether specific actions taken by the SEC constitute a proceeding under the applicable policy and/or whether such proceeding subjects the insured to a binding adjudication of liability, or more generally, whether relief is sought from the insured. The policy in *Foster v. Summit Medical Systems, Inc.*, 610 N.W.2d 350 (Minn.App. 2000), defined Securities Action Claim as any judicial or administrative proceeding initiated against any of the directors and officers or the company in which they may be subjected to a binding adjudication or other relief... The SEC issued a subpoena duces tecum to the insured. The parties agreed that the subpoena was an administrative proceeding under the policy but disputed whether it was a proceeding in which the respondent may be subjected to a binding adjudication for relief. The court specifically defined relief as equitable redress or specific performance, and concluded that the SEC's ability to compel production of documents did not fit any reasonable reading of the term relief. Consequently, the SEC investigation was not a Securities Action Claim under the policy.

Two unpublished opinions out of California and Illinois also addressed the issue. While neither opinion holds precedential value, they provide some guidance as to how courts may address coverage for some types of SEC actions. In *JB Oxford Holdings, Inc. v. Certain Underwriters at Lloyds, London*, 2001 Cal.App.Unpub. LEXIS 111, the policy in question defined securities action claim to be any loss resulting from any judicial or administrative proceeding... in which they may be subjected to a binding adjudication of liability or other relief. The court noted that the SEC distinguishes between adjudicative proceedings and investigations because parties to adjudicative proceedings are given certain rights, while parties to investigations are not given the same rights. The court held that since the issuance of an SEC subpoena could not itself result in a potentially covered binding adjudication of liability or other relief, there was no possibility of coverage for costs incurred in connection with the subpoena.

In *Minuteman International v. Great American Insurance Co.*, 03-C-6067 (N.D. Ill. 2004), the policy's definition of Claim included a civil, criminal, administrative or arbitration proceeding made against any Insured seeking monetary or non-monetary relief and Securities Claim included any Claim (including a civil lawsuit or criminal proceeding brought by the Securities and Exchange Commission) The SEC issued an Order Directing Private Investigation and Designating Officers to Take Testimony, a subpoena, and a cease-and-desist order. In analyzing coverage for costs incurred during the SEC proceeding, the court focused on whether an SEC subpoena could be construed as a proceeding in which relief was sought, noting that under the policy, the definition of Claim applied to Securities Claim. The parties agreed that the SEC's activities were a proceeding. The court concluded that a demand for relief was broad enough to include a demand for something due, including a demand for document production or testimony. The court reasoned that if the insured did not comply with the subpoena, such relief would be sought through the courts, and concluded that the insured's cost of complying with the SEC subpoena demand was covered under the policy.

A New York court, in *Home Ins. Co. of Illinois v. Spectrum Info.*, 930 F. Supp. 825, 837 (E.D.N.Y. 1996), specifically addressed the scope of the SEC's definition of proceeding in the insurance policy context in a case where an insured did not disclose an SEC investigation on its application for coverage. The insurer argued that the term proceeding encompassed informal investigations based on definitions in Black's Law Dictionary and Webster's Dictionary. The court found that the meaning of the term with which an applicant is most likely familiar is the definition that should be used, that the insured had good reason to believe the inquiry in question was not a proceeding and that the word proceeding suggests something more than an informal inquiry.

Conclusion: In considering whether an insurance policy provides coverage for SEC investigations policy language, of course, is pivotal. However, many policies do not contain language specifically addressing coverage for SEC investigations or other types of actions. Given the increasing risk of incurring costs in conjunction with SEC investigations, the best strategy for insurers and their insureds is to address the issue up front, in the negotiation of the policy or upon renewal. Insureds may want to ensure that their policy's definition of claim specifically encompasses a full array of SEC actions, recognizing that their insurers will have a right to charge a premium for the additional coverage.

Cope on Shielding Insurers From Bad Faith in Settlement Negotiations

2008 Emerging Issues 1588

Cope on Shielding Insurers From Bad Faith in Settlement Negotiations

By Carrie Cope

December 17, 2007

SUMMARY: Is a White Waiver necessary for settlement discussions taking place prior to the mediation of California claims? A White Waiver protects an insurer against allegations from insured that a settlement offer was made in bad faith. California legislation enacted subsequent to the court opinion, out of which the White Waiver arose, appears to obviate the need to for a White Waiver for settlement negotiations during mediation but courts have not yet addressed how far that protection extends.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: An insurers obligation to handle claims in good faith is of paramount importance. n1 Given that the stakes can be high in an action for bad faith, even the most well-intentioned insurer must consider taking steps to insulate itself from potential liability in the often-multifaceted context of settlement negotiations. As California courts have held that an insurers good faith obligation does not end even after the commencement of litigation against it, n2 the insurer must fulfill its obligation to its insured while at the same time asserting its right to protect itself. An agreement called a White Waiver can protect an insurer from liability arising from allegations that it failed to fulfill its duty of good faith and fair dealing in settlement negotiations.

The term White Waiver originated after *White v. Western Title Insurance Co.*, the seminal California Supreme Court case addressing an insurers liability for failure to negotiate a settlement in good faith. In *White*, the court found the admission of settlement negotiations between the insured and its insurer was not barred from evidence when introduced to show the insurers bad faith in a subsequent action. Since the *White* ruling, it is increasingly common for insureds to assert that an insurers actions during litigation constitute bad faith conduct. To protect against admission of such evidence, counsel for insurers now commonly draft White Waivers prior to settlement negotiations involving claims subject to California law. Essentially, parties entering settlement negotiations agree, in writing, that all communications related to settlement discussions shall be considered confidential and not admissible as evidence in any proceeding for any purpose.

Subsequent to the *White* case, the California legislature enacted legislation that, in relevant part, addressed the confidentiality of settlement negotiations during mediation. n3 California Evidence Code § 1119 provides that:

(a) No evidence of anything said or any admission made for the purpose of, in the course of, or pursuant to, a

mediation is admissible or subject to discovery, and disclosure of the evidence shall not be compelled, in any proceeding in which, pursuant to law, testimony can be compelled to be given.

(b) No writing prepared for the purpose of, in the course of, or pursuant to, a mediation is admissible or subject to discovery, and disclosure of the writing shall not be compelled, in any proceeding in which, pursuant to law, testimony can be compelled to be given.

(c) All communications, negotiations, or settlement discussions by and between participants in the course of mediation or a mediation consultation shall remain confidential.

Given the plain language of California Evidence Code § 1119, and the legislative intent encouraging the promotion of candid communications between parties without fear that information disclosed in mediation will be used against them, n4 the scope of the Statutes would seem to obviate the need for a White Waiver with respect to settlement negotiations occurring during the mediation process. In fact, there is virtually an absolute bar n5 to admissibility of mediation discussions, reports, testimony or findings by any participant in the mediation in a subsequent proceeding. n6 Even communications that have taken place outside the confines of the mediation itself, such as emails sent prior to the mediation, have also been protected under the *Evidence Code* § 1119. n7 Consequently, it is not surprising that no California case has specifically addressed the need for a White Waiver in the mediation context.

Notwithstanding the language of California Evidence Code §§ 1115--1128 and the legislative intent behind it, one case came close to testing the limits of the Code in a manner that might have addressed the use of a White Waiver in a mediation setting, but the case was voluntarily dismissed before the issue was decided. *Epstein v. Superior Court*, 2d Civ. No. B 169884. n8

Practice Tip. Although the broad scope of California Evidence Code §§ 1115--1128 seems to foreclose the need for a White Waiver during mediation, prudent insurers should consider requesting that insureds execute a White Waiver for any settlement communications arguably outside the mediation context or the purview of the above referenced Code sections.

Practice Tip. The White Waiver addresses issues arising under California state law and does not apply in Federal Court. In Federal Court, under *Federal Rule of Evidence 408*, evidence of settlement negotiations may not be used to prove bad faith. n9 When drafting a White Waiver, the practitioner should consider including language confirming that the agreement is consistent with the California and Federal Evidence Codes.

Conclusion. The White Waiver can be an effective tool for protecting insurers against allegations of bad faith arising from settlement negotiations in situations where other protections, such as state and federal evidentiary laws, may not apply.

Gerber & Delaney: August Entertainment, Inc. v. Philadelphia Indemn. Ins. Co.

2008 Emerging Issues 1589

Gerber & Delaney: August Entertainment, Inc. v. Philadelphia Indemn. Ins. Co.

By Daniel W. Gerber and Sarah J. Delaney

December 17, 2007

SUMMARY: Most corporations, via their directors and officers, conduct the majority of their business through contracts and contractual relationships. Corporations should be aware: courts have held the contractual liability exclusion in directors and officers policies broadly, limiting coverage for a large portion of the directors and officers responsibilities.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: There are no standard industry-wide directors and officers coverage forms, nonetheless the contractual liability exclusion is a common exclusion in directors and officers coverage. Recently, courts have broadly construed the exclusion, and applied it to any claim remotely relating to a contract. This presents a problem for the insured because most of the transactions taking by directors and officers involve a contractual responsibility of some sort. Thus, in practical terms, the exclusion could swallow the coverage, and the insured and practitioner should be aware of the potential implications.

August Entertainment, Inc. v. Philadelphia Indemn. Ins. Co., 146 Cal.App.4th 565 (Cal. Ct. App. January 7, 2007), provides a tidy discussion of the exclusion and its application to both officers and corporations. It involves a contract relating to distribution rights for certain films owned by August Entertainment. The insured, InternetStudios, had entered the contract via one of its officers, a Robert Maclean. Following the execution of the contract, InternetStudios attempted to escape the deal because it became clear that InternetStudios was unable to actually acquire all of August's distribution rights, as originally believed when the agreement was entered into. It asserted that there was no agreement. Naturally, August took the opposite tact, and insisted that a binding agreement existed.

August and InternetStudios later agreed that Mr. Maclean was acting as an officer of InternetStudios, and on behalf of InternetStudios, but retained separate liability because he failed to advise August he was signing in that capacity, and the letterhead he used did not indicate that InternetStudios was a corporation. It was then agreed that judgment would be entered against Maclean, and his rights under the D&O policy would be assigned to August.

InternetStudios maintained a Directors and Officers policy with Philadelphia Indemnity Insurance Company. As with nearly all D&O policies, the Philadelphia policy provided coverage for the individual directors and officers liability, as well as for the company itself. With regard to coverage for Maclean's liability, August asserted that Maclean

was liable as an individual because, by signing the agreement on behalf of InternetStudios without the proper formalities, he became individually, but not personally, liable.

Although there is no contractual liability exclusion in Side A coverage (applying to the directors and officers personal liability), there is apparently still no coverage for breach of contract claims under that coverage according to *August*. The court held that there was no coverage for Maclean because: (1) an officer acting in an official capacity cannot be liable for a breach of corporate contract; and (2) an officer who is liable is excluded from coverage because he or she was not acting as an official. Thus, an officer could never breach a contract within the meaning of D&O coverage.

With regard to coverage for the company itself, the court held that a contract loss was not a loss created by a wrongful act; rather to allow such coverage would make the insurer an unwitting investor in the deal, noting that some courts hold that breaches of contract are not covered, even in the absence of an exclusion. Just because the contract may have been entered into negligently, it did not create coverage for obligations that were not actual losses. But the court did not go so far as to hold that breaches of contract were uninsurable *per se*. Rather, We do not suggest that officers who make seemingly minor scrivener errors must face financial ruin. Broader coverage may be available.

In the short time since *August Entertainment* was decided a number of other courts have addressed the issue. In *S.J. Amoroso Construction Co., Inc. v. Executive Risk Indemnity, Inc.*, (N.D.Ca October 30, 2007) (unpublished), the president of the insured, Amoroso, made representations regarding an assignment of liability relating to a construction contract. Amoroso was not actually a party to the contract in question. Amoroso eventually denied that the president was authorized to make the representations in question.

Ultimately, a lawsuit was brought alleging defects in the construction, and the insured sought coverage under their D&O policy. The D&O carrier disclaimed, and the insured sued asserting that the breach of contract exclusion only applies if the insured is a party to the contract. As an initial note the court, citing *August, supra*, found that there was no coverage for the named insured because it had disavowed the acts of its officer. In other words, because the insured disclaimed responsibility for the actionable statements, the statements were not made by an insured, and therefore no coverage was available to the insured. The insured apparently disavowed its way out of coverage in that regard.

With regard to the contract exclusion, the insureds negligence could not be independent from the contract because, even though the insured was not a signatory to the contract, it would have not had the opportunity to be negligent in its absence, citing *Spartas Company v. Federal Ins. Co.*, 481 F.Supp.2d 993 (E.D.Mo. March 7, 2007). The court also cited the public policy concern that allowing coverage for breach of contract claims would encourage insureds to breach contracts with impunity. In *Spartas* the claims against the insured and its officers were for conversion and unjust enrichment, clearly not contractual duties. The relationship to the party making those claims was contractual, however, and therefore it did not matter that the causes of action would exist unless the insured had entered into a contract.

In *Verticalnet, Inc. v. U.S. Specialty Ins. Co.*, 492 F.Supp.2d 452 (E.D.Pa. May 21, 2007), the insured corporation agreed to merge with another. Following the merger, the corporation was to issue new share certificates, and change the file registration statement with the state. It failed to do either, and a lawsuit resulted. The court held that although the failures were part of standard corporate duties, they arose due to the merger documents, and therefore were contractual. Although the policy did not contain a contractual exclusion, and therefore were not excluded, if such exclusion had existed, the court would have found it to apply. Thus, the formation and reconstitution of a corporation is contractual, and any missteps along the way do not result in loss *per se*, even if there is a palpable devaluation of the corporation. The existence and broad application of the contractual exclusion is tricky from both the perspective of the insured and the perspective of the insurer. Most corporations do most of their business through contracts. See *GE HFS Holdings, Inc. v. National Union Fire Ins. Co. of Pittsburgh, PA*, ____ F.Supp.2d ____, 2007 U.S. Dist. LEXIS 78769 (D. Mass. September 5, 2007).

As demonstrated by the above cases, contractual relations come in many forms, and result in many variant claims.

Therefore, the contractual liability exclusion, applied broadly, could eliminate coverage in many, if not all instances, which lends itself to the argument that directors and officers coverage is illusory for companies that deal mostly with contracts. But that is apparently not the case: the *GE HFS, supra*, court held that arising out of was to be read expansively, and that if a policy still provided coverage for some acts, an exclusion was not void simply because of a potentially wide exclusion.

Directors and Officers Coverage is most often procured to protect both directors and officers, as well as the corporation, from the missteps and potentially wrongful actions of the officers. The lesson to be learned from these cases is that coverage is often more restricted than anticipated, and coverage for many of a corporations activities is excluded. Yet, despite the apparent breadth of the exclusion, amount of resulting litigations is relatively small.

In-house counsel and insureds should be aware of the potential limitations of the exclusions, and the emerging number of instances where the insurer seeks to apply it. Indeed, as there are no standard D&O policy forms, it would be ideal if a corporation could negotiate a policy without the exclusion. In practical terms, arguably the insurer would still not be liable for the amounts directly related to a standard breach of contract because it would not be strictly a loss. *See August, supra*.

ABOUT THE AUTHOR(S):

Daniel W. Gerber is a partner of Goldberg Segalla LLP in New York. He maintains an international practice in commercial litigation with a focus on complex insurance coverage disputes and analysis, including reinsurance and excess insurance, as well as mediation and arbitration. He chairs his firms Life, Health, Disability and ERISA practice group and manages its Insurance Coverage practice group. He is an author for the renowned Insurance Treatise, New Appleman's Insurance Law Practice Guide, as well as Mealeys Emerging Insurance Disputes. Mr. Gerber is admitted to the United States Supreme Court, as well as all federal and state courts in New York and Pennsylvania. He argues regularly before the New York Court of Appeals and the U.S. Second Circuit Court of Appeals arguing the seminal case in New York on late notice in insurance law. He has received the Chairperson of the Year Award for his work as Chair of the Insurance Coverage Committee for the New York State Bar Associations Torts, Insurance and Compensation Law Section, and will chair the almost 3,500 member Torts, Insurance and Compensation Law Section in 2008. Mr. Gerber is also an active member of the Association of Life Insurance Counsel, the International Claims Association and the International Association of Defense Counsel, as well as the American Bar Associations Life, Health and Disability Committees. Mr. Gerber possesses an AV rating from Martindale Hubbell, a Super Lawyer designation from Law & Politics Magazine, and has been named consecutively by his peers to Business First's Who's Who in Law.

Sarah J. Delaney is a long-time member of Goldberg Segalla's growing insurance coverage team. Ms. Delaney's coverage experience covers a very broad range, including bad faith, personal and advertising injury, intentional torts, pollution claims, no-fault claims and fraud. She handles insurance coverage litigation and provides complex coverage opinions. Ms. Delaney graduated Phi Beta Kappa, magna cum laude from the State University of New York at Buffalo School of law, where she was a governmental law center fellow and publications editor of the Human Rights Law Review.

Ms. Delaney has lectured and presented on a number of topics relating to insurance coverage, including insurance coverage for the trucking industry, insurance coverage for construction operations, and comparative analysis of insurance coverage issues in the Northeast states. She is a regular contributor to CaseWatch: Insurance, Goldberg Segalla's bi-weekly insurance coverage newsletter.

Gerber and Bryan Richmond on Whether All Additional Insured Coverage is Primary

2008 Emerging Issues 1591

Gerber and Bryan Richmond on Whether All Additional Insured Coverage is Primary

By Daniel W. Gerber and Bryan D. Richmond

December 17, 2007

SUMMARY: Since the New York Court of Appeals decision in *Pecker Iron Works* and the First Departments decision in *BP Air-Conditioning*, arguments have been made from co-insurers in New York that an insureds coverage as an additional insured is always primary to any coverage as a named insured. However, due to the Court of Appeals recent decision in *BP Air-Conditioning*, practitioners and insurers should be weary of extending such an argument since any determination regarding priority of coverage requires a careful comparison of the policies other insurance clauses. Put simply, the policies other insurance clauses matter.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: A current debate in New York has been whether other insurance clauses in contracts of insurance have any effect when a party is named as additional insured. In other words, is all additional insurance primary? Since the Court of Appeals decision in *Pecker Ironworks of New York, Inc. v. Travelers Insurance Company*, 99 N.Y.2d 391 (2003) and, more recently, the First Departments decision in *BP Air-Conditioning Corp. v. One Beacon Insurance Group*, 33 A.D.3d 116 (1st Dept. 2006), arguments have been made from co-insurers in New York that an insureds coverage as an additional insured is always primary to any coverage as a named insured, regardless of whether the other insurance clause purports to provide excess coverage only. The Court of Appeals recent decision in *BP Air-Conditioning Corp. v. One Beacon Insurance Group* should put an end to this debate.

Pecker Iron Works of New York, Inc. v. Travelers Ins. Co. In 2003, New Yorks highest court rendered a decision in *Pecker Iron Works of New York, Inc. v. Travelers Ins. Co.* that has had a significant impact on the insurance and indemnification obligations a subcontractor and/or its insurer have in New York litigation. 99 N.Y.2d 391 (2003). In that case, the Court of Appeals determined that implicit in an obligors contractual obligation to procure liability coverage naming the obligee as an additional insured was the premise that the coverage for the additional insured under the obligors liability policy would be primary and noncontributory, even where the contract between the parties did not expressly state that such coverage would be or should be primary.

However, the Court of Appeals in *Pecker Iron Works* did not address the issue of priority of coverage between insurers. The *Pecker Iron Works* court simply examined whether *Pecker Iron Works* was entitled to primary or excess coverage from *Travelers* based upon the specific additional insured endorsement at issue. Once the court found that *Pecker Iron Works* was entitled to primary coverage from *Travelers*, it was not asked to consider the relationship

between Travelers and the other insurers policies. In other words, the court did not consider whether Travelers policy was the sole primary coverage or co-primary with the other insurer.

BP Air Conditioning Corp. First Departments Decision. The First Departments holding in *BP Air Conditioning Corp. v One Beacon Insurance Group*, 33 A.D.3d 116 (1st Dept. 2006) contains similar facts and appeared to base its holding on *Pecker Iron Works*. The lower court had granted BPs motion for summary judgment to the extent that One Beacon is obligated to provide a defense in the underlying action. It refused to declare that One Beacon was primarily responsible for BPs defense costs since no other policies were submitted on the motion and it could not ascertain whether some other carrier should be treated as co-insurer or excess insurer to One Beacon without comparison of the policy language.

In modifying the lower courts decision, the First Department Appellate Division in *BP Air Conditioning*, extended *Pecker Iron Works* by finding that between an insureds coverage as an additional insured, and its coverage as a named insured, the additional insured coverage is always sole primary, without comparison of the language used in the policies. To support its conclusion that the insurer affording additional insured coverage was the sole primary coverage, the *BP Air Conditioning* court relied exclusively on the following quote from the Court of Appeals decision in *Pecker Iron Works*:

When Pecker engaged Upfront as a subcontractor and in writing provided that Upfront would name Pecker as an additional insured, Pecker signified, and Upfront agreed, that Upfronts carrier--not Peckers would provide Pecker with primary coverage on the risk.

In its decision, however, the First Department apparently extended *Pecker Iron Works* beyond its intended reach by ignoring the circumstances of that case and setting aside the long-held and well-recognized tenet that insurance agreements, and not underlying subcontracts, govern priority disputes among insurers.

BP Air Conditioning Corp. Court of Appeals Decision. In the Court of Appeals recent decision, New Yorks highest court addressed this issue and clarified its holding in *Pecker Iron Works*. In its decision, the Court of Appeals first addresses whether an insurers duty to defend an additional insured is triggered by the allegations in the underlying Complaint or must await some judicial determination as to whether the loss occurred as a result of the work. Relying on a number of its previous holdings, the Court held that an insurers duty to defend is exceedingly broad and an insurer will be called upon to provide a defense whenever the allegations of the complaint suggest a reasonable possibility of coverage. Holding that One Beacon was obligated to provide coverage, the Court noted

A duty to defend is triggered by the allegations contained in the underlying complaint. The inquiry is whether the allegations fall within the risk of loss undertaken by the insured and it is immaterial that the complaint against the insured asserts additional claims which fall outside the policys general coverage or within its exclusionary provisions. The merits of the complaint are irrelevant and, an insureds right to be accorded legal representation is a contractual right and consideration upon which a persons premium is in part predicated, and this right exists even if debatable theories are alleged in the pleading against the insured. An insureds right to representation and the insurers correlative duty to defend suits, however groundless, false or fraudulent, are in a sense litigation insurance expressly provided by the insurance contract.

Turning to the issue of priority, the Court stated in the first paragraph of its decision that it was unable to answer a second question regarding priority of coverage since the relevant parties and policies at issue are not before us. In addressing the issue later in the decision, however, the Court nonetheless held that the First Department erred in finding that One Beacons additional insured coverage is primary and BPs coverage under its own policy is excess. Modifying the Appellate Divisions order by reinstating the Supreme Courts decision, the Court of Appeals held

In order to determine the priority of coverage among different policies, a court must review and consider all of the relevant policies at issue. Here, Supreme Court correctly concluded that because none of the other insurance carriers are

parties to this declaratory judgment action and no other relevant policies have been submitted, the priority of coverage cannot be determined.

Other Insurance Clauses Matter. Practitioners and insurers should learn from this case that additional insured coverage can not be deemed sole primary without a comparison of the other insurance clauses contained in the policies. Practically stated, other insurance clauses matter. The Court of Appeals decision in *BP Air Conditioning* should eliminate arguments stemming from the First Departments conclusion that *Pecker Iron Works* stood for the proposition that additional insured coverage is always sole primary without regard to the language utilized in the policies at issue. By concluding that the issue of priority cannot be judicially determined without a comparison of the policies, the Court of Appeals implicitly held that additional insured coverage is not always sole primary. Although the Court of Appeals did not expressly state that additional insured coverage is not always sole primary in its decision, practitioners and insurers should be weary of extending an argument based upon the *Pecker Iron Works* decision that coverage to an additional insured is primary without a careful comparison and analysis of the policies other insurance clauses.

Gerber on New York Insurance Dept. Liquidation Bureau v. Generali Insurance Co.

2008 Emerging Issues 1592

Gerber on New York Insurance Dept. Liquidation Bureau v. Generali Insurance Co.

By Daniel W. Gerber and Kimberly E. Whistler

December 17, 2007

SUMMARY: One of the fundamental principles recognized in New York regarding insurance coverage is that the duty to defend is greater than the duty to indemnify. The First Department recently expanded this already broad rule by holding insurers, who may have only provided coverage for a small percentage of time, will ultimately be found to cover years the insured did not otherwise have insurance. Moreover, the insured may avoid contributing to defense costs for years it was uninsured.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Any litigation that involves multiple occurrences over a span of many years, such as cases of lead paint or asbestos exposure, potentially triggering multiple insurance policies, will undoubtedly run into issues relating to costs to be borne by the insurers. Not only will issues arise with respect to priority of coverage, but the appropriate pro-ration of costs and, if the insured did not have insurance for a period of time, what costs the insured should incur. To only further murky the waters, costs associated with the defense versus indemnification will likely have to be examined separately.

Until recently, the state courts of New York have avoided constructing a steadfast rule to follow in determining the sharing of defense costs when the insured was either self-insured or underinsured for periods that would have triggered other policies of insurance. The First Department in *State of New York Liquidation Bureau v. Generali Insurance Company*, 44 A.D.3d 469, 844 N.Y.S.2d 13 (1st Dept. 2007) (*Generali*), however, recently issued a decision that could shape sharing of costs in these cases, which often are often costly in both time and money.

The State of New York Insurance Department, Liquidation Bureau (Liquidation Bureau), in place of the defunct Transtate, sought contribution for defense and settlement costs incurred in an underlying personal injury action, stemmed from alleged exposure to lead. Generali Insurance Company (Generali) moved for summary judgment and the Liquidation Bureau cross-moved. The lower courts decision was affirmed by the First Department in finding the Liquidation Bureau was entitled to half of the defense costs from Generali and that the two insurers should bear the entire amount of the settlement, including years the insured was uninsured.

The owner of the property at issue was Rosan Realty Corporation. Rosan was insured by Generali for approximately five and a half months and Transtate Insurance for a little over ten months during which time the plaintiff was exposed. Rosan was uninsured for approximately thirty-five months. Generali had initially disclaimed any

obligation to defend and indemnify Rosan. The Liquidation Bureau in turn defended the action and negotiated a settlement for \$600,000. The Liquidation Bureau then sought contribution from Generali for defense costs and the settlement.

In determining the amount of contribution, the lower court applied the Liquidation Bureau's formula of the ratio of the time on the risk to the entire time the property was insured. This analysis required Generali to contribute over \$200,000 to the settlement. The lower court rejected Generali's argument that the ratio of the time on the risk should be equated to the total time Rosan owned the property (including uninsured periods), which would have required Generali to only contribute \$65,000. Generali appealed this decision.

On appeal, Generali sought reversal of the lower court's decision on both defense costs and allocation of the settlement. In support of its contention that the court erred in its allocation of indemnity, Generali cited *Consolidated Edison Co. of New York v. Allstate*, 98 NY2d 208 (2002) and *Serio v. Public Serv. Mut. Ins. Co.*, 304 AD2d 167 (2003). Generali asserted it should only be responsible for its actual time on the risk. Generali argued that these cases limited its exposure to the time it actually insured Rosan and that it should only contribute based upon the entire time Rosan owned the property.

With respect to attorney's fees, Generali argued that the fees were easily apportioned and, therefore, should be allocated according to the time on the risk. Generali noted that the insured corporation was in existence for fourteen months after the initiation of the suit and argued that Transtate had ample opportunity to seek contribution from the insured. Generali further contended that the insured chose to forego obtaining insurance and should endure any resulting consequences. See *U.S. Fidelity & Guar. Co. v. Treadwell*, 58 F.Supp.2d 77 (S.D.N.Y. 1999).

The Liquidation Bureau distinguished the case law relied upon by Generali by noting that *Serio* dealt with a continuous exposure scenario, whereas the instant issue was how to deal with periods of no insurance coverage. Because the court in *Serio* did not address the issue of pro-rata for uninsured years, to a defunct company nonetheless, the Liquidation Bureau argues it is inapplicable. Moreover, it characterizes the actions of Generali as a gamble and stated that Generali was trying to limit its exposure having lost its bet. Considerable reference was made to Generali's failure to defend the insured and participate in the lawsuit, and it was implied that requiring Generali to contribute a significant share was equitable.

With respect to legal fees, the Liquidation Bureau referenced the long-standing principle of an insurer's overarching duty to defend its insured. The Liquidation Bureau rejected the argument that it could look to the insured for contribution to legal fees. Initially, the insured was not a party to the action, and therefore, the court had no authority to require anything of the insured. The brief noted that there was no case law discussing pro-rata to the insured affecting the right of contribution of one insurer against another, where one failed to pay any defense or settlement costs in similar circumstances. The Liquidation Bureau argued that in the absence of contrary case law, the court should look to the established principle that where a complaint pleads a covered occurrence within the scope of the policy, then the duty to defend against the entire complaint is triggered.

In a 3-2 decision, the First Department initially addressed allocation of the defense costs between Generali and Transtate/Liquidation Bureau. The court rejected Generali's contention that defense costs should be allocated according to its "time on the risk." Instead, the court upheld the lower court's determination that defense costs should be divided equally. Having affirmed this portion of the lower court's decision, the First Department turned its attention to the allocation of the settlement costs.

As stated, Generali argued its indemnification obligations should be determined based on its true time on the risk. See *Consolidated Edison*, *supra*, and see *Serio*, *supra*. The court rejected the applicability of these cases stating that the cases did not involve settlements pertaining to risks extending over uninsured periods. The First Department noted that the Court of Appeals decision in *Consolidated Edison* left open pro rata allocations by "other methods" and stated,

Under the particular circumstances presented, in which the plaintiff, in the face of Generali's unjustified refusal to honor its obligation, bore nearly the entire costs of defending and settling the underlying claim against the defunct insured, covering lengthy periods for which there was no applicable coverage, the proration formula employed by the motion court was manifestly fair and should stand. *See State of New York Liquidation Bureau, supra*.

In the end, the First Department's majority completely rejected the arguments made by Generali. Although not explicitly stated, it is arguable that the decision weighed so heavily in favor of the Liquidation Bureau, in part, because of Generali's refusal to defend the insured and/or otherwise participate in the action. The court seemed to suggest, that Generali gambled and lost and, therefore, could not seek to limit its exposure after the underlying case was resolved.

The dissent by two judges rejected Generali's argument as inequitable. Again, the court relied heavily on the fact that Generali had initially disclaimed coverage allowing the Liquidation Bureau to absorb all of the costs. Contrarily, the dissenters agreed with Generali's reliance on *Consolidated Edison* and *Serio, supra*. Recognizing those cases did not involve settlements including uninsured years and that this was a case of first impression in state courts, the dissent focused on the federal court decisions in *Stonewall Ins. Co. v. Asbestos Claims Mgmt*, 73 F3d 1178 (2d Cir. 1995) and *US Fidelity & Guaranty Co. v. Treadwell Crop, supra*.

The dissent found Generali's argument that the determination to be uninsured was a conscious one and should therefore provide that its own liability is limited to its actual time on the risk persuasive. Moreover, the judges rejected the Liquidation Bureau's argument that contribution can no longer be obtained from the insured because it was no longer a viable entity based on the fact the insured was viable for fourteen months after the declaratory judgment was commenced. As such, the Liquidation Bureau had an opportunity to seek contribution.

Practice Tip. While this case will likely be heard by the New York Court of Appeals, there are several potential trouble points raised in this case that a practitioner must consider. First and foremost, a practitioner must assess whether its case should be commenced in federal court or if, for defense counsel, whether it should be removed to federal court. If coverage litigation was pursued in federal court, the decision in *Stonewall, supra*, may be far more favorable to a client in Generali's position, than if in state court.

Further, the judiciary appeared to be in agreement that Generali should bear a greater apportionment of defense costs as a result of initial disclaimer of coverage. If nothing else, this decision reemphasizes that a practitioner or an insurer should proceed with caution before denying coverage. The court was obviously less sympathetic to Generali's position in light of the fact it failed to initially provide coverage, minimally for its insured defense costs. It is uncertain whether this case could have been decided differently if Generali initially provided coverage.

It should further be considered what implications this case has to an insurer when issuing a policy? Should an insurer have to look at the overall history of the insured's coverage and reconsider if there is a span of years where the insured was self-insured or uninsured? From this decision, this must be answered in the affirmative. The court seemed to ignore the fact that the insured may have made a conscious decision to forego coverage and made the insured's gamble a successful one.

If the dissent's position is taken, an insurer seeking contribution from other insurers or the insured should do so immediately. Manufacturers who face repeated litigation may be forced to consider bankruptcy, liquidation or dissolving their company. If the incidents happened during years there was no insurance coverage, the remaining insurers will likely be the parties who absorb the remaining costs. Otherwise, claimants may be left with no remedy. The dissent considered the fact the insured was a viable company at the time of the settlement. The Liquidation Bureau was, therefore, penalized for not seeking contribution from the insured prior to it becoming a defunct corporation.

2008 Emerging Issues 1593

Shidlofsky on Subrogation & the Made Whole Doctrine: Fortis Benefits v. Cantu

By Lee H. Shidlofsky

December 17, 2007

SUMMARY: Across the nation, in many jurisdictions, insureds have relied upon what is known as the made whole doctrine, wherein an insurer is not entitled to subrogation from its insured unless the insured has been fully compensated for its losses. Recently, however, the Supreme Court of Texas, in *Fortis Benefits v. Cantu*, 234 S.W.3d 642 (Tex. 2007), upended the traditional balance finding that an insurers contractual right to subrogation prevailed over the equitable made whole doctrine.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: A Medical Insurance Policy Opens the Door for Texas to Address the Made Whole Doctrine

Vanessa Cantu (Cantu) was seriously injured in an automobile accident in which she was not at fault. Fortis Benefits (Fortis), as her insurer, provided Cantu with benefits under her personal medical insurance policy. Later, Cantu filed a lawsuit against the driver of the car in which she was riding at the time of the accident, the drivers employer, the seller of the vehicle, and Ford Motor Company--the manufacturer of the vehicle. Fortis intervened and asserted it was entitled to equitable subrogation and reimbursement from any tort recovery in the amount of medical benefits paid under its policy. During a pre-trial conference, Fortis agreed with all the parties that it would be excused from the proceedings and would look only to Cantu during the post-verdict phase in order to resolve its claims.

Prior to trial, Cantu settled with the defendants for \$1.445 million. Thereafter, Cantu and Fortis disagreed as to the amount of the settlement, if any, that should be paid to Fortis. Thus, Cantu moved for summary judgment claiming that she had not been made whole by the settlement. Cantu contended that her past and future medical expenses (not to mention amounts for pain and suffering and the like) exceeded the settlement amount plus the amount paid to her by Fortis. Thus, Cantu argued, the made whole doctrine precluded Fortiss contractual claims of subrogation and reimbursement. The trial court granted Cantus motion for summary judgment and a divided court of appeals affirmed. [See *Fortis Benefits v. Cantu*, 170 S.W.3d 755 (Tex. App.--Waco 2006, pet. granted).] The Supreme Court, however, reversed and remanded the case to the trial court for further proceedings.

The History of the Made Whole Doctrine from Texas Point of View. The Supreme Court of Texas first

recognized the made whole doctrine in *Ortiz v. Great Southern Fire & Casualty Insurance Co.*, 597 S.W.2d 342 (Tex. 1980). The Court, in *Ortiz*, reversed a lower courts decision and held that [a]n insurer is not entitled to subrogation if the insureds loss is in excess of the amounts recovered from the insurer and the third party causing the loss. The *Fortis* Court explained that in deciding *Ortiz* it recognized that equity cuts both ways depending on the facts of a situation. Thus, just as equity requires prevention of an insured from obtaining a double recovery--first from the insurer and then from the tortfeasor--equity also means that if either the insured or insurer must recover less than its losses, then the insurer must take the loss as the insured paid the insurer to assume that risk. In other words, the insured must be made whole before the insurer. Many jurisdictions agree with this principle. [See, e.g., *Wasko v. Manella*, 849 A.2d 777 (Conn. 2004); *Ruckel v. Gassner*, 646 N.W.2d 11 (Wis. 2002); *Kral v. Am. Hardware Mut. Ins. Co.*, 784 P.2d 759 (Colo. 1989).]

The Supreme Court of Texas made clear that had *Fortis* sought equitable subrogation, then *Ortiz* would have been controlling case law. Because *Fortis* sought contractual rights of subrogation and reimbursement, however, the made whole doctrine did not apply. The Court discussed a Fifth Circuit opinion, as well as an El Paso Court of Appeals decision upon which the Fifth Circuit had relied. [See *Oss v. United Servs. Automobile Assn*, 807 F.2d 457 (5th Cir. 1987); *Means v. United Fid. Life Ins. Co.*, 550 S.W.2d 302 (Tex. Civ. App.--El Paso 1977, writ refd n.r.e.).] In *Oss*, the Fifth Circuit held that, in Texas, the same principles govern both equitable and contractual subrogation, and thus the made whole doctrine applied. Nevertheless, in *Fortis*, the Supreme Court rejected those decisions because *Oss* relied on *Means*, which was issued against a legal landscape that did not yet include the made whole doctrine.

Turning to the differences between legal (or equitable) and conventional (or contractual) subrogation, the Court noted that the first depends on principles of equity while the second is governed by contract and the rules of contract interpretation. The Court discussed the Austin Court of Appeals findings that the right of subrogation has been given unusually hospitable treatment in Texas, and that express subrogation agreements are given considerable weight. [See *Lexington Ins. Co. v. Gray*, 775 S.W.2d 679, 683 (Tex. App.--Austin 1989, writ denied).] The Court also discussed the Austin Court of Appeals opinion in *Esparza v. Scott & White Health Plan*, 909 S.W.2d 548 (Tex. App.--Austin 1995, writ denied), in which it backed down from its *Lexington* opinion. In *Esparza*, the appellate court held that a contractual subrogation provision does not answer the question of when and how much an insurer should be entitled to through subrogation. That court concluded that contracts confirm, but [do] not expand, the equitable subrogation rights of insurers, and the equities must still be balanced to achieve justice.

The Supreme Court of Texas then said in *Fortis Benefits*:

We do not disagree that equitable and contractual subrogation rest upon common principles, but contract rights generally arise from contract language; they do not derive their validity from principles of equity but directly from the parties agreement. The policy declares the parties rights and obligations, which are not generally supplanted by court-fashioned equitable rules that might apply, as a default gap-filler, in the absence of a valid contract. If subrogation arises independent of any contract, then an express subrogation agreement would be superfluous and serve only to acknowledge this preexisting right, a position we reject.

The Court found that its refusal to extend the made whole doctrine to contractual rights of subrogation and reimbursement was not a novel concept. It discussed precedent from the U.S. Supreme Court and the Fifth Circuit, dealing with ERISA subrogation cases. [See *Sereboff v. Mid Atlantic Medical Servs., Inc.*, 547 U.S. 356, 126 S.Ct. 1869, 164 L.Ed.2d 612 (2006); *Walker v. Wal-Mart Stores, Inc.*, 159 F.3d 938 (5th Cir. 1998) (per curiam). See also *N. Buckeye Educational Counsel Group Health Benefits Plan v. Lawson*, 814 N.E.2d 1210 (Ohio 2004); *Ex Parte State Farm Fire & Cas. Co. v. Hannig*, 764 So.2d 543 (Ala. 2000); *Medica, Inc. v. Atlantic Mut. Ins. Co.*, 566 N.W.2d 74 (Minn. 1997).] In *Sereboff*, the U.S. Supreme Court held that an ERISA health plan that included a written subrogation

right could not be altered by equitable defenses that were beside the point. And, in *Walker*, the Fifth Circuit held that language in an ERISA health plan providing for recovery against any and all third-party settlements meant the insurer was entitled to reimbursement for all medical benefits paid under the plan.

Finally, the Court reiterated that equity follows the law, and so equitable doctrines must conform to contractual and statutory mandates, not the other way around. Therefore, unless a contract violates positive law or public policy, equity must yield. Finding that subrogation and reimbursement claims clearly do not violate Texas public policy, the Court refused to allow equity to stand in the way of the parties contract. Similarly, the Court was loathe to rewrite the terms of the parties contract, noting that the Department of Insurance or the Legislature were better suited for that job. We agree with those courts holding that contract-based subrogation rights should be governed by the parties express agreement and not invalidated by equitable considerations that might control by default in the absence of an agreement.

Applying the New Law, Cantu is Made Less Than Whole. Having found that the made whole doctrine must yield to the parties contractual agreement, the Court addressed the terms of the insurance policy at issue. The provision entitled Subrogation Right entitled Fortis the right of subrogation to all rights of recovery Cantu may have against *any* person or organization, including the proceeds of *any* settlement, but limited to the amount of benefits *actually paid* by Fortis. The Court said: Nowhere does this provision suggest that Cantu must first be made whole for Fortis to recover. As a result, the specific language in the partys contract controlled and the equities embedded in the made whole doctrine were pushed aside. Thus, the Court held that Fortis was entitled to recover the total amount of benefits it paid to Cantu from the \$1.445 settlement.

For nearly three decades, Texas insureds have been entitled to the benefit of equity through the made whole doctrine. Similarly, in other jurisdictions across the country, the same has been true. Scorecards are always difficult to achieve when interpreting majority vs. minority views. In fact, amicus curiae briefs filed in *Fortis Benefits* took diametrically opposing views as to what the majority view was with respect to whether a contractual subrogation provision overrides the made whole doctrine. Either way, the *Fortis Benefits* decision has changed the insurance law landscape in Texas and may be persuasive for other jurisdictions grappling with the issue.

While logical on its surface, the Courts opinion deals a blow to insureds by prioritizing contract language over equity. Even so, as the Court noted, bargained-for contractual rights should take a back seat to positive law and public policy. The effects of the *Fortis Benefits* decision may not be clear quite yet. One can assume, though, that the reasoning of the decision will extend beyond health insurance to all forms of policies that contain specific subrogation language like that in *Fortis Benefits*. As such, after *Fortis Benefits*, insureds are faced with the reality that they actually are entitled to less of their settlements with third parties than ever before.

Jim Poolman On The State of Minnesota vs. Allianz Life Insurance Company

2008 Emerging Issues 1488

Jim Poolman On The State of Minnesota vs. Allianz Life Insurance Company

By Jim Poolman

December 13, 2007

SUMMARY: Former North Dakota Insurance Commissioner Jim Poolman discusses the lawsuit that Minnesota Attorney General Lori Swanson filed in Jan. 2007 against Allianz Life Insurance Company for violating Minnesotas suitability law in the sale of deferred annuities to senior citizens, analyzes the governing statute, outlines the terms of the parties settlement and suggests some lessons that insurers may take away from the settlement in terms of making suitability determinations and complying with suitability laws.

ARTICLE: On Jan. 9, 2007 Minnesota Attorney General Lori Swanson filed suit against Allianz Life Insurance Company of North America alleging that "Allianz and agents working on behalf of Allianz sold deferred annuities to Minnesota senior citizens that were not suitable for seniors' particular circumstances and/or misrepresented the terms and conditions of Allianz's deferred annuity products." The complaint cites that since 2000, Allianz sold 4,900 deferred annuities to Minnesota seniors over the age of 70 with a value totaling \$259,392,040. The suit was settled on Oct. 8, 2007 with a consent judgment agreed to by General Swanson, Allianz, and Hennepin County District Court Judge Kevin S. Burke.

Suitability Definition And Governing Statute. Attorney General Swanson alleges that Allianz violated Minn. Stat. Ann. Minn. Stat. § 72A.20, subdivision 34, which states that "In recommending or issuing life, endowment, individual accident and sickness, long-term care, annuity, life-endowment, or Medicare supplement insurance to a customer, an insurer, either directly or through its agent, must have reasonable grounds for believing that the recommendation is suitable for the customer."

Attorney General Swanson alleged that producers representing the Minnesota-based insurance company lured seniors into purchasing the products by using different estate planning and wealth management seminars. She said that these seminars led to the sales of deferred annuity products with lengthy surrender charges and product stipulations that force

the policyholders to annuitize at the maturity date rather than simply taking a lump sum distribution of the annuity. Swanson purported that these products were unsuitable because some of the seniors were on fixed incomes. If their financial status changed, the annuity would only allow them to withdraw a small portion of the annuity without penalty.

The issue of trying to accurately or properly define the "suitability" of a product has been frustrating to regulators and insurers alike. In addition to defining what is "suitable" it can be a difficult task for either an insurer or producer to determine what "reasonable grounds" are to determine this nebulous definition of "suitable." What may be appropriate for a customer at the time the product was purchased may not be appropriate months or years later as the insured's circumstances may change.

Producers are supposed to be charged with representing their clients' best interests, and so the question is often asked what the insurer's role should be in determining what is suitable. If one is to assume that the former is true, then the insurer should be able to solely rely on the producers' recommendation. Recent laws passed in several states based on the model drafted by the National Association of Insurance Commissioners focuses on the process of determining suitability rather than defining "suitability". The Minnesota statute does not define what processes should be used in determining suitability nor does it specifically provide a definition of what is suitable. In the absence of direction in the statute the agreement between the Minnesota Attorney General and Allianz lays out ground rules for processes that Allianz shall follow in determining whether their products are appropriate for the prospective customer.

Stipulated Relief: Enhanced Processes For Allianz In Determining Suitability. What are reasonable grounds for determining whether or not a product is suitable for a customer? As previously mentioned, the Minnesota statute does not define a process to be used in determining reasonable grounds. The agreement between the Attorney General's office and Allianz specifically addresses what processes will be used to reasonable determine suitability for a prospective insured. The detailed requirements impact those Allianz annuity purchasers in Minnesota age 65 or over on the date of the annuity application.

The processes described in the settlement agreement are similar to what is prescribed in legislation crafted by the National Association of Insurance Commissioners, but prescribed in much more detail. Ms. Swanson mandates that Allianz obtain from annuity applicants all reasonable information necessary to make sure the annuity products sold to consumers are suitable.

The consent agreement entered into with Allianz requires the insurance company to enhance their internal suitability system to have controlling threshold tests before an annuity contract could be issued. These tests apply specifically for those annuity applicants 65 and older. If one of the threshold tests is triggered, the annuity application must be subject to an "elevated review". If the product is subject to further scrutiny under the review process, Allianz must specifically document in the applicant's file "specific, objective evidence that clearly establishes that the sale is suitable to the applicant in light of his or her stated financial condition, needs and objectives."

The threshold tests include a number of very specific minimum income and asset requirements, as well as testing the premium paid for the annuity compared to the net worth of the prospective insured. One question the settlement begs is: "What magic is behind the very specific numbers included in the settlement?" For example, one of the threshold tests that would trigger heightened review for suitability is that the applicant's annual income is less than or equal to \$20,000. The specific dollar amounts are indexed up by 3% starting in January 1, 2009. Some will argue that these specific dollar amounts and percentages in the settlement document are arbitrary and will increase compliance costs for an unnecessary elevated review.

Many companies selling annuity products have created suitability forms to comply with the requirements of state laws. Many states are moving toward requiring insurers and their producers to gather an applicant's personal financial information including their tax status and savings objectives. These particular requirements are found in the National

Association of Insurance Commissioners (NAIC) model act being considered in state legislatures across the country. The Allianz settlement requires the company to use specific language in their forms to capture the asset, income, expense and net worth information that is far more detailed than prescribed by the NAIC model.

Restitution For Aggrieved Policyholders: Next Steps For Allianz. Under the terms of the settlement agreement, Allianz and the Minnesota Attorney General's Office will be setting up a claims review process for policyholders who felt they were aggrieved in the sale of their annuity. The claims process will have representatives of both the AG's office and the insurance company to review the purchase of the annuity and make a determination of whether or not the product was suitable at the time of sale. The parties will have the ability to determine if the contract should be rescinded, and, if the parties can't agree, an independent third party will make a decision. If the contract is rescinded, the policyholder will receive the full premium paid plus a mandated 4.15 percent interest compounded annually from the date the premium was paid to the date the contract was rescinded. Any amount paid previously to the policyholder under the terms of the annuity would be subtracted out of the payment of the rescinded contract.

The settlement agreement groups policyholders into three groups for making potential restitution. The first is any Allianz policyholder who has made complaint to the Attorney General's office in which the insurance company did not rescind the annuity contract. The second group of policyholders is those who have made complaint to Allianz directly and the contract was not rescinded. The third group consists of policyholders who were 65 or older when the annuity contract was issued.

Conclusion: Are There Lessons To Be Learned? Regulators' desire to hold insurance companies accountable for their sales practices and the practices of those producers contracted to sell for them is becoming more and more popular. Even though Minnesota law is vague when it comes to defining suitability, or what specific "reasonable grounds" are required for a company or producer to believe the annuity product being sold is suitable for the consumer, this settlement agreement sets out guidelines for what may be expected when selling these products, not only in Minnesota but elsewhere. Obviously the complaint against Allianz was not tested in the courts. We do not know what the company's defense would have been, or what processes were previously in place at the company to determine whether or not a product was suitable for the consumer. One has to think that juries will tend to fall on the side of the consumer against the insurance company. That is just the optics. As one who has been involved in the regulatory and legislative processes, sometimes laws and regulations are often drafted vaguely. Right or wrong, this is done so that the powers of regulators are expanded over the regulated, so that overarching settlements like the Allianz agreement can be achieved.

One important lesson to be taken from this settlement is that regardless of what the internal processes are in place for insurance companies to determine suitability, there should be constant review of these policies and procedures. Gathering more information from applicants rather than less can be a strong defense against a mandate to retroactively determine whether or not a product was suitable, as is prescribed in the Allianz settlement.

As one of the most aggressive marketers of annuity products based in Minnesota, I am sure the company was eager to settle a suit brought on by their home state law enforcement officials. The question yet to be answered is whether or not this makes Allianz less competitive in Minnesota with other carriers licensed to sell annuity products there. Right or wrong, if an independent producer has the opportunity to sell an annuity product, they may choose to sell for the company without the additional regulatory requirements brought on them by the settlement agreement. I vigorously disagree with that conduct, but it may be a reality to deal with in the future.

The company has just recently hired Patrick Nelson, the former Deputy in the Minnesota Department of Commerce as their new Suitability Officer. With Allianz Life Insurance Company of North America, and their recent settlement, it seems that suitability has become much more than just a regulatory buzzword.

Poolman on the NAIC Suitability in Annuity Transactions Model Act

2008 Emerging Issues 1490

Poolman on the NAIC Suitability in Annuity Transactions Model Act

By Jim Poolman

December 13, 2007

SUMMARY: Former North Dakota Insurance Commissioner Jim Poolman draws upon his experience as Chairman of the National Association of Insurance Commissioners Life Insurance and Annuities Committee to provide a unique perspective on the NAICs Suitability in Annuity Transactions Model Act. Former Commissioner Poolman discusses the difficulties regulators have experienced in reaching a consensus on issues relating to suitability, the accountability of both insurers and producers in the sales process, mitigation and enforcement by insurance regulators, and the difficult balancing act that regulators must perform in trying to avoid conflicting provisions imposed by other regulatory authorities.

ARTICLE: In recent years complaints made to departments of insurance about the sales of annuity products have increased across the country. Regulators, whether they be state insurance commissioners, state securities regulators, or FINRA (Financial Industry Regulatory Authority) are taking a much more aggressive aim at the sale of annuities to determine whether or not the sale of the product is "suitable" for the consumer. State insurance commissioners have drafted a model act that is being considered in state legislatures across the country to hold both the insurer and the insurance producer accountable in unsuitable sales of all annuity products whether they are variable or fixed in nature.

History--No Easy Consensus! Years ago, insurance regulators started discussions in order to draft laws to protect consumers against harmful annuity sales. With the understanding that annuity products can be good for many consumers, there are some consumers that sold annuity products that are not suitable for their personal needs. Complaints of high surrender charges lasting for many years and producers who never explained the potential downsides were becoming more frequent.

What was the definition of suitability? There is an old saying about pornography; nobody can seem to define it, but you know it when you see it. The same seemed to apply to unsuitable annuity sales. Regulators could not agree on a definition of suitability because it would be overly broad, ambiguous, and would not live up to the consumer protection standards for which regulators were striving. Early attempts at defining "suitability" for insertion into states' Unfair Trade Practices Acts clearly were becoming futile. Thus, regulators started to focus on the sales process being used to

distribute annuity products, and put consumer protections in place regarding the sales process, rather than attempt to define suitability.

The Model Act originally was voted by the membership of the NAIC in September of 2003. At that time, the legislation was only applicable to transactions of annuity products if the consumer was age 65 or over at the time of application. The specific age restriction was removed from the Model Act in June of 2006, and reaffirmed by the NAIC membership. Most states that have passed the Model Act have done so without the age restriction, so the legislation is applicable to annuity transactions with all consumers regardless of age.

Who Is Accountable In The Sales Process? Insurers And Their Producers. There is considerable debate about who is responsible for an unsuitable sale to a consumer. In many cases the insurer would like to say that the producer has sole responsibility in determining that the product being recommended to their customer is suitable for their needs. In regulators' minds, the producer does have significant responsibility in making a suitable recommendation for their customer, because even though they contract with individual insurance companies by appointment, they have a fiduciary responsibility to represent their customers' best interests. That being said, the insurer also has the responsibility to make sure that their appointed producers are acting ethically and within the bounds of the law. Thus, the National Association of Insurance Commissioners focused on defining the responsibility of both the producer and the insurer in the sales process in their Suitability In Annuity Transactions Model Act.

The Model Act specifically applies to transactions where a producer or an insurer is making a specific recommendation to a consumer. It does not apply to direct response solicitations, or transactions where there are employee-sponsored pension plans or welfare plans used to fund annuity products. These transactions were exempted because there typically is no producer making a recommendation to an individual consumer.

The NAIC's Model Act specifically lays out the responsibilities of producers to make sure they have the necessary information to make an appropriate and suitable recommendation in an annuity sale. In states where the Model Act has passed, producers now have to make a reasonable effort to obtain several pieces of financial information from the consumer. Examples of this information include: The consumer's financial status; the consumer's tax status; the consumer's investment objectives, and any other information considered to be reasonable in making recommendations to the consumer. Some consumers may refuse to supply this information to their insurance producer, and that does not bar the sale from taking place. But, under the Model Act, producers must have the applicant sign a refusal to give the necessary information or incomplete information.

With the clear responsibilities of insurance producers in the legislation comes the need to clarify where the responsibility of the insurer comes into play. The Model Act requires insurers to set up a system of compliance to make certain that insurers are also holding their producers accountable. This system is required to supervise the producer to make sure they have made the attempts to retrieve the necessary information to make a suitable recommendation of an annuity product. Insurers are required to have specific written procedures for compliance, and must conduct "*periodic reviews of its records that are reasonably designed to assist in detecting or preventing violations of this regulation.*" This system set up by the insurer must be adopted by any general agent and independent agency to supervise their producers.

Under the Model Act there is the ability to contract out the compliance system to a third party. This was added to accommodate companies that may not have significant compliance departments, thus giving them the opportunity to delegate the authority to better equipped third parties. If the insurer chooses to contract out to a third party, the insurer still maintains the obligation to review the third party to make sure that integrity of the compliance processes are being met.

Mitigation And Enforcement By The Commissioner. The Model Act provides very clear guidance for insurers

and producers who are not playing by the rules. The mitigation section of the law is broadly drafted to give the commissioner in the respective jurisdiction the ability to take corrective action with both the insurer and the producer to make sure the consumer's interests are protected, restitution is provided, and administrative penalties allowed by that state are imposed.

Trying To Avoid Conflicting Laws With Other Regulators--Necessary, But Sometimes A Difficult Balancing Act. Insurers and their producers who sell annuity products are subject to a number of different state and national regulators. When drafting the Model Act, the NAIC was very conscious of the number of regulatory authorities who have their hand in protecting consumers. The goal was not to create unnecessary and duplicative regulation, but to create a system where the chief insurance regulator could also hold an insurance company or producer licensed in their state accountable for misconduct in the sale of annuity products. The NAIC drafted a section in the Model Act that specifically provides for a safe harbor for insurers or their producers when the National Association of Securities Dealers (NASD, now FINRA) has reviewed a transaction and found that it complies with their conduct rules pertaining to suitability. This is obviously especially important for those producers and insurers who sell variable annuities.

The conduct rules for transactions involving variable annuities have seen change and significant debate among the players in the marketplace. FINRA Rule 2821 was approved by the Securities and Exchange Commission on September 7, 2007. The rule will actually take effect 180 days after FINRA issues their regulatory notice to all of their members. The rule heightens the suitability obligations which will include expanded review and approval requirements and increased training and supervision for variable annuity producers. The rule also specifically focuses on the replacements or exchanges in consumers' accounts. This comes from concern that consumers' products are being churned, where customers are sold new products in large part to bring about a new commission payment to the producer.

As FINRA's rules continue to change related to variable annuities, the safe harbor provided for in the NAIC Model Act will allow for both insurers and producers to avoid unnecessary regulations that drastically differ, but still allow for adequate consumer protection, all while giving the insurance regulator the power to hold both insurers' and producers' feet to the fire in monitoring annuity transactions for suitability.

Conclusion: Both Policymakers And Regulators Believe In Suitability Legislation. The National Association of Insurance Commissioners Model Act has gotten serious traction. With endorsements from the National Conference of Insurance Legislators, industry trade groups, and an annuity working group comprised of a cross section of regulators, the legislation should continue to have a successful path in state legislatures across the country. Companies should start preparing now for compliance in states that don't have suitability requirements because they are likely to come soon. They can use the NAIC Model Act as the template for the minimum standards to create systems of gathering necessary customer information, monitoring producers, and ensuring that their products are suitable for the customer. Better to prepare now than pay later!

Jennifer K. Mailander on Chinas Circular 91

By Jennifer K. Mailander

December 13, 2007

SUMMARY: Jennifer K. Mailander, an attorney with extensive experience in corporate and commercial law, insurance and risk management discusses the China Insurance Regulatory Commissions released Circular No. 91, entitled Circular of China Insurance Regulatory Commission concerning Printing and Distributing the Guidelines for the Compliance Management of Insurance Companies. Mailander outlines the basic compliance framework of the Guidelines, and also discusses extensive reporting, reviews and evaluations that must be performed under the Guidelines throughout all levels of an insurance company.

ARTICLE: In November, 2001, China was approved as a full member of the World Trade Organization (WTO). As part of its acceptance into the WTO, China agreed to adopt measures to better define and regulate practices within the insurance industry. To fulfill these requirements, China has revised and adopted several insurance-related laws, regulations, and guidelines. The most recent of these was issued on September 7, 2007 when the China Insurance Regulatory Commission (CIRC) released Circular No. 91, entitled *Circular of China Insurance Regulatory Commission concerning Printing and Distributing the Guidelines for the Compliance Management of Insurance Companies* (hereafter, *Guidelines*.) n1

China's acceptance into the WTO offered it a significant growth opportunity to expand its insurance market to include foreign investors. To accommodate this potential growth China also needed to significantly revamp and modernize its insurance and legal infrastructure. It's important to recognize that modern Chinese insurance law is relatively young and was introduced with the passage of the Insurance Law of the Peoples Republic of China in 1995. n2 The most interesting aspects of the *Guidelines* involve the compliance framework that is proposed and the incredibly detailed reporting requirements.

The Basic Compliance Framework. The *Guidelines* provide the overall framework for the compliance program of an insurance company doing business in China. The *Guidelines* consist of six chapters and 36 articles. The topics

covered include: General Rules, Compliance Duties for the Board of Directors, Board of Supervisors, General Manager, and Compliance Chief, Compliance Management, and External Supervision. The *Guidelines* are written in a very direct albeit somewhat simplistic manner. This is most likely because the document had to be translated into English and the sophistication may have gotten lost in translation.

Common compliance concepts and terms that are often assumed to be understood in much of the world are clearly detailed in the *Guidelines* because the concept of compliance is a relatively new one for China. For example, the *Guidelines'* identified purpose is to "regulate the governance structure of insurance companies and strengthen the compliance management of insurance companies" n3 Definitions for key terms such as "compliance", "compliance risk", and "Compliance management" are included. "Compliance" means that insurance companies and their employees "shall carry out insurance operation and management behaviors subject to the related laws and regulations, provisions of insurance regulatory organs, self-discipline rules of the industry, their internal management system and the ethic code of honesty and good faith." In more established legal systems terms like these are generally understood and do not require a definition.

The definition provided for "Compliance management" explains that an insurance company "shall prevent, identify, evaluate, report and handle compliance risks" by setting up a compliance department or positions, by setting up and implementing compliance policies, and by conducting actual compliance monitoring and training. n4 The *Guidelines* also provide directions on how to set up a compliance department. n5

While the *Guidelines* state that "Everybody is responsible for compliance," the concept of Compliance being enforced and supported from top level of management down is a theme that is repeated throughout the *Guidelines*. n6 First mentioned in Chapter I, Article 4, "The values board of directors and the senior managers of an insurance company shall advocate ethics and values of honesty and good faith, advocate such philosophies as voluntary compliance and compliance bringing about values, etc., and make internal compliance management and external supervision better interacted with each other." This concept of board and senior management support is most likely guidance received from more experienced members of the WTO. It has long been recognized that for a compliance program to be successful, a program needs buy in and continued support from all levels of senior management and a company's board of directors.

The largest portion of the *Guidelines* is focused on the responsibilities of the Compliance Chief and Compliance Department, detailed in Chapter III. While ultimate liability for compliance management lies with an insurance company's board of directors n7, the Compliance Chief and Department have overall day-to-day responsibility for compliance within the company and its branches. This responsibility ranges from "setting down and revising" compliance policies to training, to "monitoring, identifying, evaluating and reporting compliance risks." n8 This type of activity can obviously not be done in a vacuum and would necessitate a great deal of interaction with and knowledge of other departments and groups within a company. To address this issue, The *Guidelines* require the insurance companies to establish certain "rights" so that the Compliance Chief and Compliance Department can do their jobs. The *Guidelines* require the insurance company to ensure that Compliance gets invited to meetings, that there are "smooth" reporting channels, that Compliance have the ability to independently investigate violations, and any other rights as determined by the Board.

Reporting, Reviews & Evaluations. The *Guidelines* require extensive reporting, reviews and evaluations to be performed throughout all levels of an insurance company. There are at least 14 separate discussions on reporting, reviews and evaluations to be performed. It's easy to see how this could quickly become a bureaucratic nightmare with so many requirements, but very few explanatory details as to the ultimate goal of the reporting, review, or evaluation.

At the highest level of reporting, CIRC requires that each insurance company file an annual compliance report. The annual reports are to be presented to CIRC before April 30th of each year, for the prior year's activity. Prior to this, the annual report has to go through several internal reviews, first from the General Manager, then to the Auditing Committee and finally to the full board of directors for approval prior to presentation to CIRC. In addition, the Auditing Committee is required to conduct a review of the "semi-annual compliance report."

The General Manager is required to review and evaluate policies and compliance risks and verify the compliance risk management plan for the upcoming year. The Audit department (which cannot have direct management responsibility for the Compliance Department) is responsible for auditing and reporting on the Compliance Department annually. And at the individual level, insurance companies "shall prescribe compliance risk reporting routes" so that individuals know what to do in the event of a risk event or compliance violation. n9 The insurance companies are also required to set up an "effective compliance evaluation and accountability system" to assess the performance of senior managers. It is unclear as to who is responsible for setting up this accountability system.

Conclusion. The compliance framework and reporting requirements described in the *Guidelines* are quite detailed and seem to establish fairly thorough processes. However, process can only take a company or country so far. It is one thing to write detailed instructions on a compliance structure and reporting requirements. It is quite another to actually implement, integrate, and actually live the concept of compliance. A culture of compliance needs to be developed at the company level, the industry level, and the country level and this will take time.

Poolman on ND newly enacted statute on suitability of annuity transactions

2008 Emerging Issues 1489

Poolman on North Dakotas newly enacted statute on suitability of annuity transactions

By Jim Poolman

December 13, 2007

SUMMARY: Annuities are becoming more and more popular as financial planning tools for consumers of all ages. With the products becoming more complex, regulators across the country are giving these products increased scrutiny. More responsibility will be placed on both the insurer and the insurance producer to gather the necessary information to determine whether the product is suitable for the purchasers' personal circumstances.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: As baby boomers are retiring and aging, more and more assets are being transferred out of retirement plans and into other savings and investment options. Aggressive marketing of annuity products that compete against mutual funds, stocks and other insurance products are becoming more common. After receiving an increased number of inquiries from consumers and seeing potential regulatory pitfalls, state Insurance Commissioners are forcefully pursuing legislation to protect consumers from sales that may not be suitable for their personal situations.

The North Dakota Legislature recently passed Senate Bill 2155, sponsored by Senator Nicholas Hacker (R-Grand Forks) and signed by Governor John Hoeven (R). The statute became effective on August 1, 2007. N.D. Cent. Code, § 26.1-34.2-02 defines the responsibilities of both insurance producers and companies in the sales of annuities, and defines the powers of the Insurance Commissioner in enforcing this new law. The North Dakota statute follows the model act drafted and passed by the National Association of Insurance Commissioners.

The legislation received support from the American Council of Life Insurers, the North Dakota Insurance Commissioner, the North Dakota Association of Insurance and Financial Advisors, and the North Dakota AARP. This support has been consistent nationally as the model act moved through the drafting process at the National Association of Insurance Commissioners.

Duties of Producers And Insurers. Prior to the new enactment of these statutes there was no real clear definition of whose role it was to make sure an annuity transaction was suitable for the customer, nor what powers a regulator had in holding the parties involved in the transaction accountable for a sale of an inappropriate annuity product that clearly did not meet the expectations of the consumer, nor was suitable for their personal needs. N.D. Cent. Code, §

26.1-34.2-03 now makes it clear that an insurance producer or an insurer, if there is no producer involved in the transaction must gather information to make sure a sale is suitable. Much of this information is rather simple to gather: consumers' financial status, consumers' tax status and the consumers' investment objectives.

As is sometimes the case, consumers may not want to give personal financial information to determine whether or not a sale is suitable. They may just want to buy the product. A consumer may still purchase the annuity product after refusing to give the necessary information to the producer or the insurer. In this instance the consumer will have to attest to not giving the information. Under this provision there is no obligation to the insurer or the producer to make a suitability recommendation on the purchase. This protects both the insurer and the producer if the consumer files a complaint to an insurance department or other legal authority about the sale being unsuitable.

Under the new law insurers will be required to set up compliance programs to monitor their producers selling annuity products. Insurers are not required to review every solicited transaction, but must create a system to maintain written procedures to ensure suitable sales and conduct periodic reviews of their producing community to make sure they are complying with the new laws, and compliance programs of the insurer.

Insurers under the chapter are allowed to contract these monitoring and compliance functions out to a third party. This is designed to provide flexibility to companies that may not have large in-house compliance departments.

Many insurers have built "input" oriented compliance systems to flag sales that may not meet suitability tests. For example, some insurers will not proceed with a transaction unless all information that is required by statute is gathered, or require it to immediately have further review before an annuity contract is issued. Some insurers have set up "suitability" departments that will specifically review transactions of questionable suitability for the customer to make sure they err on the side of compliance. This is advisable, as annuity products are becoming more complex with various benefits or riders, and benefits and potential product risks that are becoming more difficult for consumers to understand.

Penalties. The new statute lays out new penalties that may be issued to enforce the new responsibilities of insurers and the producers in the marketplace. N.D. Cent. Code, § 26.1-34.2-04 allows the Commissioner of the North Dakota Department to order corrective action by the insurer or a producer for action that has harmed a consumer in an unsuitable sale. This corrective action may also be extended to a general agency or independent agency that employs or contracts with an agent to solicit or sell annuity products. The Commissioner may order monetary penalties against the insurer, producer or general or independent agency for violating the new chapter. These penalties may be reduced if the respective party responsible for the unsuitable sale takes corrective action quickly.

Oversight--Compliance Is Key. North Dakota like most state Departments of Insurance across the country has consumer service employees who process complaints lodged by consumers. This is most likely how initial information on unsuitable annuity sales is obtained. In some of these cases, the customer has already had initial contact with the producer or the company to air their grievance and has not received satisfaction. It is imperative that companies engaging in annuity business have strong internal complaint departments with specific written guidelines on how these complaints are being processed.

These complaints with Departments of Insurance can be the lead indicator of the need to pursue a market conduct examination of an insurer. Some market conduct examinations may be broad in scope, and others may be targeted toward a specific activity of the insurer, such as the compliance programs built into the suitability law just enacted in North Dakota.

Conclusion-Be Proactive. The North Dakota suitability statutes will resemble what many other states will be doing. In an era when annuity products that are becoming more popular yet more complex, companies will want to err on the side of caution when complying with the new laws. Compliance programs with more thorough "testing" of

transactions for suitability will prove more reliable and friendlier to regulators as they examine companies. Those companies and producers without clear written guidelines on how to test for suitability, that have poor recordkeeping and documentation and poor or undocumented procedures on how to handle grievances with their customers, will certainly be subject to the regulators' scrutiny.

Robinson on Workers Compensation and Suicide: Moore v. Western Forge Corp.

2008 Emerging Issues 1402

Robinson on Workers Compensation and Suicide: Moore v. Western Forge Corp.

By Thomas A. Robinson

December 8, 2007

SUMMARY: Within the workers compensation context, suicide cases usually present the basic legal question: Was the act of suicide an intervening cause breaking the chain of causation between the initial injury and the death? This Emerging Issues Analysis by Thomas A. Robinson analyzes *Moore v. Western Forge Corp.*, and discusses relevant issues related to suicide within the workers compensation context.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: Within the workers compensation context, suicide--that sad moment in which the primary actor and victim are the same--usually presents the following pattern of facts: a severe, or extremely painful, or hopelessly incurable injury, followed by a deranged mental state ranging from depression to violent lunacy, followed in turn by suicide. The basic legal question seems to be agreed upon by almost all authorities: *Was the act of suicide an intervening cause breaking the chain of causation between the initial injury and the death?*

In a recent case of first impression from Colorado, a state appellate court was faced with a highly unusual situation: a suicide that flowed not from the original injury, but from the denial of the injured employees workers compensation claim. This expert commentary analyzes the case, discusses relevant issues related to suicide within the workers compensation context, and observes that in spite of the unusual fact pattern involved, the Colorado court utilized traditional legal tests to determine that the surviving spouses tort claim against the employer and claims administrator could not be successfully maintained. The author points out that in spite of the strong general policy of ignoring worker fault within the workers compensation, suicide claims continue to be strongly disfavored, even when, as was the case with the recent claim from Colorado, there is a relatively powerful but for connection between the work-related injury and the conditions that lead the worker to take his or her own life.

Colorado Claimants Suicide After Reading Form Denying His Claim Held Not Compensable. In a case of first impression in Colorado, that states Court of Appeals, in *Moore v. Western Forge Corp.*, 2007 Colo. App. LEXIS 2199 (November 15, 2007), recently held that a widow (Moore), whose husband committed suicide shortly after he received a Notice of Contest from his employers workers compensation claims administrator stating that his claim was being contested pending completion of an investigation, could not recover in tort against the employer and the claims administrator for breach of defendants duty of good faith and fair dealing; her husbands suicide was an independent intervening act not proximately caused by the denial of the claim. Affirming the entry of summary judgment in favor of

the employer and claims administrator, the state appellate court concluded, in relevant part, that the defendants were not liable for the suicide, even if the trial court accepted as true Moores proof of a chain of actual causation in her husbands death.

Facts of the Case. Moores husband filed a workers compensation claim against his long-term employer. The employer was self-insured and used the defendant company to administer its claims. The claims administrator mailed decedent, who was at home awaiting surgery for his injury, a Notice of Contest stating that the claim was being contested pending completion of an investigation. Shortly after reading the notice, decedent killed himself.

According to Moores legal theory, because the employer and claims administrator owed her husband a duty of good faith and fair dealing, the breach of which would permit recovery of damages for decedents emotional distress, the defendants liability also extended to decedents suicide upon a showing of causation connecting the bad faith handling of the claim, the resulting emotional distress, and decedents uncontrollable impulse to kill himself.

The defendants countered in relevant part that because decedents suicide was an independent intervening act, even if one assumed the defendants had breached their duty of fair dealing and that such breach had resulted in emotional distress and further, that such emotional distress was a factor in decedents suicide, Moore nevertheless was still required to prove the requisite level of proximate cause and she had failed to do so.

Actual (But For) Causation Versus Legal (Proximate) Causation. The court agreed with the defendants. It acknowledged that there was a dispute of material fact as to whether or not defendants conduct had been the actual cause of decedents suicide and that if this was the sole question, the matter should have gone to trial and not have been disposed of with summary judgment. It added, however, that once actual causation was established, decedents widow still was required to show legal causation, that is to say, that the suicide was the proximate result of the denial of the claim and, according to the court, Moore had made no such showing. Quoting the Restatement (Second) of Torts § 455 (1965), the court recognized that

[i]f the actors negligent conduct so brings about the delirium or insanity of another as to make the actor liable for it, the actor is also liable for harm done by the other to himself while delirious or insane, if his delirium or insanity (a) prevents him from realizing the nature of his act and the certainty or risk of harm involved therein, or (b) makes it impossible for him to resist an impulse caused by his insanity which deprives him of his capacity to govern his conduct in accordance with reason.

The court observed in relevant part that the record failed to show that decedents suicide resulted from delirium or insanity that made it impossible for him to resist an impulse caused by his insanity. While Moores expert opined that the denial of the claim resulted in decedents uncontrollable impulse to commit suicide, there was no showing of the required intervening link--that this impulse was the result of delirium or insanity.

Dissenting Opinion. Judge Vogt dissented in relevant part, noting that the majoritys reasoning, while appropriate for cases in which the issue was the defendants alleged *negligent* infliction of emotional distress, was inapposite in the instant case, that while Moore had not alleged an intentional tort in so many words, her allegations of bad faith were significantly stronger than allegations of mere negligence, that she should have been allowed to proceed to a jury on her claim that the suicide resulted from her husbands emotional distress, and that the defendants should not benefit from the fact that the emotional distress caused by their breach of duty was so severe that it resulted in suicide and not lesser harm.

Typical Factual Pattern Within Workers Compensation Context. Within the workers compensation context, suicide most typically presents the fact finder with a severe, or extremely painful, or hopelessly incurable injury, followed by a deranged mental state ranging from depression to violent lunacy, followed in turn by suicide. For example, in another Colorado case (a workers compensation claim, not a tort claim, cited by dissenting Judge Vogt, but not by the majority), *Jakco Painting Contractors v. Industrial Commission*, 702 P.2d 755, 757 (Colo. App. 1985),

decedent suffered severe facial burns when he was splattered with paint remover. He underwent a series of surgical treatments, but his face remained badly scarred. He became self-conscious, depressed, and prone to fits of rage, during which he sometimes beat his wife. After one such incident, she fled with her children to a shelter for battered women. He threatened suicide if she did not contact him by a certain deadline, which she failed to do. He then carried out his threat. Both his psychiatrist and his plastic surgeon testified that the decedent had undergone significant personality changes after the accident and suffered from post-traumatic stress disorder. Following the Larson Chain of Causation Test (see *Larsons Workers Compensation Law* § 38.03), the court awarded death benefits. The suicide was not an independent intervening act; the decedents depression and delirium flowed from the original work-related injury and they supplied the necessary causal connection with the suicide.

Moore Represents Unusual Factual Twist. *Moore* represents an unusual factual twist in that the suicide was not so much connected to the original injury, but rather to the administrators denial of the decedents claim. The basic legal question--rather than being whether the act of suicide was an intervening cause breaking the chain of causation between the work-related injury and the death--became instead, whether the suicide broke the chain of causation between the *denial of the claim* and the death?

It is somewhat surprising that Moores tort claim could not survive a summary judgment motion given the fact that she had an expert who opined that her husbands suicide was causally connected to the denial of the claim. The appellate court drew a fine line between the denial of the claim and the suicide and indicated that along this fine line, an intervening condition--insanity or delirium--must be shown. According to the majority of the court, it was insufficient to show that the administrators denial caused the suicide; Moore had to show that the denial produced some sort of insanity or delirium and that the insanity or delirium, in turn, produced the suicide. That this question was resolved against Moore via summary judgment means, of course, that she cannot now go back and ask her expert a follow-up or rephrased question: Did the denial of the claim produce a form of insanity or delirium in the decedent and did that insanity or delirium cause the suicide?

Inadequacy of But For Relationship. The courts determination is not as unfair as it may seem at first blush, however. Moore had certainly established that but for the administrators denial, her husband would not have died. But the court was also concerned about a second but for relationship. But for the decision of the decedent to kill himself, he would not have died. We are back to the issue of independent intervening act. If decedent did not suffer from insanity or delirium, the court reasoned, his decision to kill himself could not be ignored. For the majority of the court, the decedent died not so much because the denial of his claim upset him; rather, he died because he decided to kill himself.

Tort Action Versus Claim for Death Benefits Under Workers Compensation. As noted above, there is an important jurisdictional difference between the instant case and *Jakco Painting Contractors* cited above. *Jakco* was not a tort claim, but rather a claim for death benefits under the Colorado Workers Compensation Act. For public policy reasons, one would expect a close case like *Jakco* to be resolved in favor of the worker or the workers dependents within the workers compensation setting. After all, within that setting the fault of the worker is generally not an issue. One should note, however, that in spite of *Jakco* and the closeness of the causation issues related to her husbands death, this was Moores second attempt to recover for her husbands death. She had already been unsuccessful in her attempt to gain workers compensation death benefits (in an unpublished decision, *2005 Colo. App. LEXIS 989* (June 23, 2005), a division of the court of appeals affirmed a decision of a panel of the Industrial Claim Appeals Office that upheld a denial of death benefits). The bottom line is that whether the case is in the tort arena or before an administrative agency administering the workers compensation law, successful resolution of the issue of independent intervening cause is crucial to recovery.

For further discussion related to the workers' compensation issues related to suicide within the workers compensation context, see generally *Larson's Workers' Compensation Law* § 38.01 et seq.

ABOUT THE AUTHOR(S):

Thomas A. Robinson, Durham, N.C., received his B.A., cum laude, for both Economics and History, in 1973 from Wake Forest University, his J.D. in 1976 from Wake Forest University School of Law, where he served as Managing Editor, Wake Forest Law Review, and his M.Div. in 1989 from Duke University Divinity School. From 1976 to 1986, Mr. Robinson was in private practice, where he focused on workers' compensation defense work. From 1987 to 1993, he was research and writing assistant to Professor Arthur Larson. Since 1993, Mr. Robinson has been the primary upkeep writer for Larson's Workers' Compensation Law (LexisNexis) and Larson's Workers' Compensation, Desk Edition (LexisNexis). He is a contributing writer for California Compensation Cases (LexisNexis) and Benefits Review Board -- Longshore Reporter (LexisNexis). He is also a contributing author of New York Workers' Compensation Handbook (LexisNexis) and a contributing editor for Workers' Compensation: The Survival Guide for Business (LexisNexis). Author of numerous short pieces on workers' compensation and employment law, Mr. Robinson has lectured widely on workers' compensation issues.

Workers' Compensation & Telecommuting: Wait v. Travelers Indemnity Co.

2008 Emerging Issues 1363

Robinson on Workers' Compensation and Telecommuting: Wait v. Travelers Indemnity Co.

By Thomas A. Robinson

December 5, 2007

SUMMARY: Large numbers of employees now commute not from their residence to the companys home office, but from a designated work zone within the home. This Emerging Issues Analysis by Thomas A. Robinson analyzes a recent case of first impression, in which a home-based employee who was attacked and severely beaten by an intruder was denied compensation. on the basis that her injuries did not arise out of her employment.

ARTICLE: In 2006, approximately 34 million American workers telecommuted to some degree (Telecommuting: A Reasonable Accommodation Under the Americans With Disabilities Act As Technology Advances, *19 Regent U. L. Rev.* 537, 544 (2006-2007)). In a recent Wall Street Journal article (Sue Shellenbarger, Good News for Professionals Who Want to Work at Home, *Wall Street Journal*, 11/15/2007, Page D1), it was reported that at Safeco, a Seattle-based insurer, some 1,500 of its 7,000 employees now work away from corporate offices. Large numbers of employees at IBM, UnitedHealth Group and other corporations now commute not from their residence to the companys home office, but from the kitchen to an office or specially designated work zone within the home. Issues arise as to the compensability of injuries sustained by employees in these home-based offices. Is the employer--who, after all, has little control over conditions within an employees residence--nevertheless responsible for workers compensation benefits along the same basis as if the employee were injured on the companys premises? The answer is mixed.

In a recent case of first impression from Tennessee, a home-based employee attacked and severely beaten by an intruder was denied compensation on the basis that her injuries did not arise out of her employment. This expert commentary analyzes the case, discusses relevant issues related to workers compensation and the telecommuter, and observes that the Tennessee decision should not be negatively viewed by the claimants bar. According to the author, the state courts reasoning actually shows a judicial temperament toward treating home-based and company premises-based employees on equal footing. The author also cautions the practitioner to differentiate between true telecommuter situations and those that merely fall within the category of hearthside activities.

Tennessee Telecommuters Assault in Home-based Office Held Not Compensable. In a case of first impression in Tennessee, the Supreme Court of Tennessee, in *Wait v. Travelers Indemnity Co.*, 2007 Tenn. LEXIS 1033 (November 16, 2007), recently held that severe injuries sustained by a telecommuting employee as a result of an assault at her home during working hours was not compensable; her injuries occurred in the course of her employment, but did not arise

from such employment. Acknowledging that there was some relationship between the employees home-based employment activities and her injuries, the court nevertheless held the connection was not sufficiently strong so as to support an award of benefits.

Wait worked as a senior director for the American Cancer Society. Because of the Societys lack of office space in Nashville, it allowed Wait to work from her Nashville home, furnishing Wait with all the necessary office equipment, as well as a dedicated telephone line, and a budget for the purchase of office supplies. Not only did Wait perform virtually all her work from her home office, her supervisor and coworkers often attended meetings at Waits house.

One work day, while she fixed herself lunch, Wait was attacked and severely beaten by a neighbor whom Wait had allowed into the house. Wait did not know it at the time, but the assailant apparently had been stalking her for some weeks or even months. Wait subsequently sought workers compensation benefits, contending the assault arose out of and occurred in the course of her employment with the Society. The chancery court disagreed, granted summary judgment in favor of the workers compensation carrier, and Wait appealed.

The Tennessee Supreme Court affirmed, although it did not utilize the rationale of the trial court. Treating the arising out of/in the course of the employment issue in a bifurcated fashion, the Court held that Waits injuries had, indeed, occurred in the course of her employment since, at the time of the assault, Wait was where the employer reasonably expected her to be and was performing actions which were either related to her work or were incidental to that employment. That Wait was fixing lunch was unimportant, indicated the Court, since such activity was not the sort that would ordinarily remove Wait from the work environment. Treating Waits residence as an extension of the employers premises, the Court pointed to ample case law supporting the rule that an on-premises lunch break was generally within the course of the employment.

According to the Court, Waits injuries did not, however, arise from her employment. Citing Tennessee case law that assaults originating from inherently private disputes or which were imported into the work place were generally not compensable within the workers compensation scheme for providing disability benefits, the Court indicated the evidence established that the assault had no inherent connection with the employment.

Furthermore, the Court refused to extend the so-called street risk doctrine to the facts of the case. Under that doctrine, if the employment exposes the employee to the hazards of the street, the necessary causal connection between the employment and the injury can be supplied by a showing that the employee was injured by a danger associated with that so-called street risk. The Court observed that over time, the street risk doctrine had been expanded to cover incidents well beyond streets and highways. For example, in *Jesse v. Savings Prods.*, 772 S.W.2d 425 (Tenn. 1989), a convenience store employee recovered benefits when she was raped and assaulted by an assailant. The court reasoned that the street risk doctrine applied when an employees indiscriminate exposure to the general public was one of the conditions under which the work was required to be performed. Likewise, in *Braden v. Sears, Roebuck & Co.*, 833 S.W.2d 496 (Tenn. 1992), the Tennessee Supreme Court held that the street risk doctrine satisfied the causal connection requirement where the employee was assaulted by unknown assailants as he removed paperwork from his employer's van while it was parked at his residence.

The *Wait* Court reasoned that nothing in Waits employment required any exposure to the public while she worked in her home. According to the Court, unlike the cases noted in the previous paragraph, nothing in the facts of the case indicated the assailant had attacked Wait because she was identifiable as an American Cancer Society employee, or because she was performing a job duty, or because she was safeguarding the societys property at the time. Her attack was totally unrelated to her status as an employee. Her injuries, therefore, did not arise from her employment and were not compensable.

Wait Case Is Not a Significant Defeat for the Telecommuter. In spite of the fact that the trial courts summary denial of Waits claim was affirmed by the Supreme Court of Tennessee, telecommuters should not view the decision as a stinging defeat.

. The Court utilized a standard arising out of and in the course of the employment rules in affirming the denial of Waits claim. In other words, the Court refused to say that all assaults of home-based employees are barred; it carefully examined the circumstances surrounding Waits injuries *in the same manner* as it would have had the injuries occurred at the employers primary premises. The Court certainly leaves the impression that if a similar assault had occurred on the employers primary work site, the claim similarly would have been denied because there was no causal connection between the employment and the assault. That the home-based employee be treated the same as if he or she was employer premises-based is all that can be expected.

. The Courts decision in *Wait* was not based on the employers inability to control the conditions of the home office. Employers have sometimes argued that it is unfair to saddle them with legal responsibility for injuries sustained at a work site, such as a personal residence, where they cannot and do not exercise any control. According to this argument, the financial cost of work-related injuries is an incentive to enforce safety guidelines and maintain a safe work environment. The notion is that since the employer cannot enforce a safe work environment at an employees residence, it should not bear the risk of injury. While this point was not central to the employers argument in *Wait*, there is little in the *Wait* decision that indicates the Tennessee court would rule favorably on those grounds in other telecommuting cases.

. *Wait* certainly appears to support the notion that injuries sustained while performing personal comfort activities--getting fresh air, using the toilet, or taking a short walk--are just as compensable when they are suffered by the home-based telecommuter as when they are sustained by employer premises-based employees. Here the Court clearly refused to sustain the employers argument that Waits claim was not compensable because her injuries occurred while she fixed lunch--an activity unrelated to her actual duties. The Court observed that latitude for on-premises lunches was given to those working at the employers office. The same sort of latitude should be given the telecommuter.

. *Wait* may help carve out an additional exception to the going and coming rule. At several points in its opinion, the Tennessee high court acknowledged that for the true telecommuter, ones home office should be considered part of the employers premises. Since the general rule in most jurisdictions is that an injury sustained during work-related travel between one part of the employers premises and another is compensable, an injury sustained in traveling from the office-in-the-home to the employers primary premises would appear to fall outside the ordinary going and coming rule. More specifically, if a worker like Wait sustained injuries in an accident as she traveled to the employers premises to attend a meeting, her claim would be compensable under this line of reasoning. It should, of course, be observed that the going and coming rule was not at issue in *Wait*.

Practice Point True Telecommuting Must Be Distinguished From Hearthside Activities. In *Wait*, the employee was engaged in rather formalized telecommuting. She was allowed to work out of her home because her employer lacked adequate office space within its own facility. Wait met with subordinates and supervisors in her home. She was provided with necessary office equipment and was given a special telephone line and an expense account for necessary office supplies. For all intents and purposes, her home office served as an extension of the Cancer Societys main Nashville premises. As noted above, this fact was an important consideration in the Courts reasoning. It should be remembered, however, that just because some work is conducted from the home does not mean a true telecommuting arrangement has been created, such that injuries sustained in and around the home or while traveling from the home to the employers facility are compensable.

Under the Larson rule, for a true telecommuting arrangement to be established, the home must be transformed into a work situs generally. Normally there must be some evidence that both the employer and the employee receive some important benefit from the arrangement and that the arrangement is part of the overall bargain of employment, less teachers who prepare lessons or correct papers at home, lawyers who take home briefs, salespeople who work on accounts at home, and newspaper columnists who polish up a bit of writing at home might be tempted to assert compensation coverage of all their movements to, from or around the house by virtue of some morsel of work carried around in their pockets (*Larsons Workers Compensation Law* § 16.10[1]). As at least one court has indicated, [the]

contemporary professional frequently takes work home. There, the draftsman designs on a napkin, the businessman [or woman] plans at breakfast, the lawyer labors in the evening. But this hearthside activity--while commendable--does not create a white collar exception to the going and coming rule (*Santa Rosa Junior College v. Workers Comp. Appeals Board*, 40 Cal. 3d 345, 220 Cal. Rptr. 94, 101, 708 P.2d 673, 680 (1985).) Nor does it mean that an employee injured at home while pursuing some of this hearthside activity has a compensable claim under the workers compensation system for providing disability and medical benefits.

For further discussion related to the workers' compensation issues related to work place assaults, see generally *Larson's Workers' Compensation Law*, § 8.01 et seq. For further discussion related to telecommuters, see generally *Larson's Workers' Compensation Law*, § 16.10 et seq.

ARTICLE: *Introduction.* In *Massachusetts v. EPA*, 127 S. Ct. 1438 (U.S. 2007), the U.S. Supreme Court held that the Clean Air Act authorized the Environmental Protection Agency (EPA) to regulate greenhouse gas emissions from new motor vehicles -- despite the EPA's contrary claim -- and that Massachusetts had standing to challenge the EPA's denial of a rulemaking petition to promulgate such regulations. Many commentators believe that this decision, and the increased public awareness of the threat of environmental damage caused by the emission of greenhouse gases will result in a substantial increase in litigation. See, e.g., James M. Davis & Noel C. Paul, *Managing the Risks of Global Warming: Avoiding the Mass Tort Template and Insurance Coverage Implications*, 17 Coverage 1 (LexisNexis).

The increase in environmental claims raises the question for potential emitters as to the availability of insurance coverage to provide indemnity and the payment of anticipated large defense expenses. In the business world, comprehensive general liability (CGL) policies ordinarily provide primary insurance coverage. The policies generally provide broad coverage, but such coverage is subject to various exclusions. Here, the pollution exclusion may be the primary roadblock for policy holders. However, on the flipside, the concept of an insured's reasonable expectation may be the key to obtaining coverage for liability arising from the emission of greenhouse gases.

The lesson to be learned here is that litigation concerning climate change and claims against entities who are involved in the emission of greenhouse gases will undoubtedly increase as a result of the Court's decision in *Massachusetts v. EPA*. The practical implications of the holding will be that class actions against polluters will escalate and both the plaintiff and defense bar, as well as in-house counsel, should be aware of the scope of the decision, the

prospective increase in litigation, and the potential insurance coverage issues that may result.

This commentary discusses the issues that affect the availability of coverage for damage caused by greenhouse gases. Policy holders will contend that the damage caused by greenhouse gases is within the terms of a comprehensive general liability policy and that the pollution exclusion contained in the policy is not effective to preclude coverage. In addition, policy holders will probably rely upon the doctrine of reasonable expectations for coverage. See James M. Davis & Noel C. Paul, *Managing the Risks of Global Warming: Avoiding the Mass Tort Template and Insurance Coverage Implications*, 17 Coverage 1 (LexisNexis).

Insurers, on the other hand, will most likely contend that the damage resulting from the emission of greenhouse gases is neither an occurrence nor an accident within the terms of a comprehensive general liability policy. See Seth A. Ribner & Deborah L. Stein, *The Costs of Climate Change: Why Industry Should Not Look to Liability Insurance to Bear Them*, 17 Coverage 1 (LexisNexis September/October 2007). In addition, insurers will likely contend that the doctrine of reasonable expectations is inapplicable as that doctrine is implicated only to assist in resolving ambiguities. Insurers may also contend that the injury did not occur during the policy period because the emission of greenhouse gases does not immediately cause damage, and a CGL policy is not implicated until damage is sustained.

General Principles of Interpretation of Insurance Policies. The interpretation of an insurance policy is a question of law and follows the general rules of contract interpretation. *Crane v. State Farm Fire & Casualty Co.*, 5 Cal. 3d 112 (Cal. 1971). The fundamental rules of contract interpretation are based on the premise that the interpretation of a contract must give effect to the mutual intention of the parties. *Vyn v. Northwest Casualty Co.*, 47 Cal. 2d 89 (Cal. 1956), *Nationwide Mut. Ins. Co. v. Devlin*, 11 Cal. App. 4th 81 (Cal. Ct. App. 1992). Under statutory rules of contract interpretation, the mutual intention of the parties at the time the contract is formed governs interpretation. See, e.g., Cal Civ Code § 1636. Such intent is to be inferred, if possible, solely from the written provisions of the contract. The clear and explicit meaning of these provisions, is interpreted in their ordinary and popular sense, unless used by the parties in a technical sense or a special meaning is given to them by usage. A policy provision will be considered ambiguous when it is capable of two or more constructions, both of which are reasonable. But language in a contract must be interpreted as a whole and in the circumstances of the case and cannot be found to be ambiguous in the abstract. See *Otter v. General Ins. Co.*, 34 Cal. App. 3d 940, 948 (Cal. Ct. App. 1973) and cases cited therein.

Insurance coverage is interpreted broadly so as to afford the greatest possible protection to the insured, whereas exclusionary clauses are interpreted narrowly against the insurer. See *Otter v. General Ins. Co.*, 34 Cal. App. 3d 940, 948 (Cal. Ct. App. 1973) and *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635 (Cal. 2003). An insurer cannot escape its basic duty to insure by means of an exclusionary clause that is unclear. It is well established that an exception to the performance of the basic underlying obligation must be so stated as clearly to apprise the insured of its effect. Thus, the burden rests upon the insurer to phrase exceptions and exclusions in clear and unmistakable language. The exclusionary clause 'must be conspicuous, plain and clear'. This rule applies with particular force when the coverage portion of the insurance policy would lead an insured to reasonably expect coverage for the claim purportedly excluded. *Bank of the W. v. Superior Court*, 2 Cal. 4th 1254 (Cal. 1992). The burden is on the insured to establish that the claim is within the basic scope of coverage and the burden is on the insurer to establish that the claim is specifically excluded.

Extent of Potential Litigation. Significantly, the *Massachusetts v. EPA* majority held that greenhouse gases constitute air pollution under the Clean Air Act, and that the Act authorizes the EPA to regulate such gases. *Massachusetts v. EPA*, 127 S. Ct. 1438, 1460 (U.S. 2007). In light of this holding, counsel for an injured person or entity should consider the liability of all potential contaminators. Given the numerous contributors of greenhouse gases, establishing the responsible entities will require sophisticated expertise to prove the degree to which damage is caused by the emission of greenhouse gases. Identifying the polluters and the issue of causation may prove to be a formidable task and the resolution of these issues will affect the issue of insurance coverage.

Because the Supreme Court recognized global warming as a redressable wrong, commentators have compared the possible increase in environmental litigation caused by global warming to the surge of asbestos claims and tobacco litigation which also involved multiple defendants and claimants. See James M. Davis & Noel C. Paul, *Managing the Risks of Global Warming: Avoiding the Mass Tort Template and Insurance Coverage Implications*, 17 Coverage 1 (LexisNexis). With an increase in greenhouse gas damage claims, the concomitant issue of whether insurance coverage is available to cover the claims comes into play.

Potential Insurance Coverage Problems. Numerous difficulties are present in attempting to determine whether insurance coverage exists in situations where continuous tortious conduct occurs that causes extended and cumulative damage to myriad claimants. An innumerable number of insurance policies with various insuring agreements, exclusions, definitions, policy periods and terms may be implicated. The potential defendants cover an extensive range of industries and businesses. Identifying the emitter will be a formidable task for the plaintiff, potential defendants and insurers.

Establishing causation may also be difficult when numerous potential polluters exist. Establishing the fault and responsibility for the damage incurred when there exist many possible causes for the damages incurred would prove difficult. Proof that the emissions causing the plaintiff's damage occurred within a particular policy period could be difficult not only for the plaintiff, but also for the emitter and the emitter's insurance carriers.

Insurance Coverage Analysis. The first task of counsel is to examine closely the liability insurance policies that may be implicated including the insuring agreement, the pertinent policy exclusions, terms, definitions, and policy dates. Beyond reviewing the policy, counsel should review any correspondence with the insurer or the producing broker. The insurance policy of an emitter most likely to be implicated is the comprehensive general liability (CGL) policy. Such a policy typically obligates the insurer to pay all sums for which the insured becomes legally obligated to pay as damages caused by bodily injury, property damage or personal injury.

A CGL policy generally provides coverage for bodily injury and property damage that occur during the policy period. However, the time of the emission of greenhouse gases is largely immaterial in establishing coverage. For example, the court in *Stonelight Tile, Inc. v. California Ins. Guarantee Assn.*, 150 Cal. App. 4th 19, 36 (Cal. Ct. App. 2007) stated,

[t]he timing of the accident, event, or conditions causing the bodily injury or property damage, e.g., an insured's negligent act, is largely immaterial to establishing coverage; it can occur before or during the policy period. Neither is the date of discovery of the damage or injury controlling; it might or might not be contemporaneous with the causal event. It is only the effect -- the occurrence of bodily injury or property damage during the policy period, resulting from a sudden accidental event or the 'continuous or repeated exposure to conditions' -- that triggers potential liability coverage.

Pollution Exclusion. The pollution exclusion in CGL policies is likely to be asserted by insurers to avoid coverage for greenhouse gas claims. A common pollution exclusion provision provides that the insurer does not cover bodily injury or property damage resulting from the actual, alleged, or threatened discharge, dispersal, release or escape of pollutants at or from the insured location. The terms, "pollution or pollutants" are commonly defined, in the definitions section of the policy, as "meaning any solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste materials. Waste materials include materials which are intended to be or have been recycled, reconditioned or reclaimed." See *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635 (Cal. 2003).

The California Supreme Court in *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635 (Cal. 2003) considered the applicability of the pollution exclusion and reviewed those jurisdictions that had taken a definitive position on whether the exclusion applied. The court noted that the narrower interpretation of the pollution exclusion appeared to be in the majority. However, there are a number of jurisdictions which have held that the pollution exclusion does preclude coverage under a comprehensive general liability policy. Courts have denied coverage on the grounds that the exclusion

is plain and unambiguous. See, e.g., *Reliance Ins. Co. v. Moessner*, 121 F.3d 895 (3d Cir. 1997); *Bernhardt v. Hartford Fire Ins. Co.*, 102 Md. App. 45 (Md. Ct. Spec. App. 1994); *League of Minnesota Cities Ins. Trust v. Coon Rapids*, 446 N.W.2d 419 (Minn. Ct. App. 1989).

In light of the lack of consensus as to the effect of the pollution exclusion, counsel contemplating litigation on the issue of whether coverage exists, such as a declaratory relief action, should carefully consider the question of venue. Despite the abundance of opinions construing the exclusion, courts have not reached a clear consensus as to its proper interpretation. For example, in *Gainsco Ins. Co. v. Amoco Prod. Co.*, 53 P.3d 1051, 1065 (Wyo. 2002), the Supreme Court of Wyoming commented on the conflict in authorities as to the intent and scope of the total pollution exclusion. The *Gainsco* court opined that it did not know if it was taking the majority position, but joined with those courts that have held that the total pollution exclusion is limited to the concept of environmental pollution. See also *American States Ins. Co. v. Koloms*, 177 Ill. 2d 473 (Ill. 1997) (comprehensive review of differing approaches taken by various jurisdictions).

Courts which have restricted the pollution exclusion's otherwise potentially limitless application hold that the exclusion applies only to hazards associated with environmental pollution. For example, *Doerr v. Mobil Oil Corp.*, 774 So. 2d 119 (La. 2000) held that the general purpose of pollution exclusions has remained constant: to exclude coverage for environmental pollution, and under such interpretation, the clause will not be applied to all contact with substances that may be classified as pollutants. In *Sullins v. Allstate Ins. Co.*, 667 A.2d 617, 622 (Md. 1995), the Court of Appeals of Maryland stated that the insurance industry apparently intended the pollution exclusion to apply only to environmental pollution. In *American States Ins. Co. v. Koloms*, 177 Ill. 2d 473 (Ill. 1997), the Supreme Court of Illinois also agreed with those courts which have restricted the exclusion's otherwise potentially limitless application to only those hazards traditionally associated with environmental pollution.

Jurisdictions which hold that the pollution exclusion applies to environmental pollution present a possible obstacle for an insured attempting to obtain coverage -- if the emission of greenhouse gases constitutes environmental pollution, the pollution exclusion will apply and bar coverage. Jurisdictions following this view appear to have found support in *Massachusetts v. EPA's* holding that greenhouse gases constitute air pollution under the *Clean Air Act*. *Massachusetts v. EPA*, 127 S. Ct. 1438, 1460 (U.S. 2007). Consequently, to ensure the best possible chances for triggering or obtaining insurance coverage for greenhouse gas damage claims, counsel should carefully craft pleadings that do not describe or otherwise characterize the emission of greenhouse gases as environmental pollution.

Background of the Pollution Exclusion. Because the issue of whether insurance coverage for environmental damage exists may hinge largely upon the applicability of the pollution exclusion, a review of the exclusion's background is helpful. In *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 643 (Cal. 2003), the California Supreme Court undertook such a review. Quoting extensively from the Illinois Supreme Court's comprehensive review in *American States Ins. Co. v. Koloms*, 177 Ill. 2d 473 (Ill. 1997), the *MacKinnon* court noted that insurance companies began adding the exclusion to their CGL policies in 1970, in the form of an endorsement. The endorsement provided in pertinent part "[the] policy shall not apply to bodily injury or property damage arising out of the discharge, dispersal, release or escape of smoke, vapors, soot, fumes, acids, alkalis, toxic chemicals, liquids or gases, waste materials or other irritants, contaminants or pollutants into or upon land, the atmosphere or any watercourse or body of water; but this exclusion does not apply if such discharge, dispersal, release or escape is 'sudden and accidental.'" *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 643 (Cal. 2003). At about the same time, Congress substantially amended the Clean Air Act, creating more stringent air quality standards. During the next 13 years, a significant amount of coverage litigation centered on the issue of ". . . whether the word 'sudden' was intended to be given a strictly temporal meaning such that, in order for the exception to apply, the discharge of pollution had to have been 'abrupt.'" *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 643 (Cal. 2003). The insurers responded by drafting a new version of the exclusion, now commonly referred to as the "absolute pollution exclusion." The exclusion's two most notable features included ". . . (i) the lack of any exception for the 'sudden and accidental' release of pollution, and (ii) the elimination of the requirement that the pollution be discharged into or upon land, the atmosphere or any watercourse or body of water." *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 644 (Cal. 2003). Such language appears to support the contention that the

exclusion would apply to the discharge of greenhouse gases into the atmosphere, provided that the gases were considered to be "pollution," within the meaning of the exclusion.

After thoroughly reviewing the history of the pollution exclusion and related policy concerns, the *MacKinnon* court embraced a narrow interpretation and concluded that the exclusion did not bar CGL coverage for a wrongful death action that arose from the landlord's application of pesticides at an apartment complex. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 650 (Cal. 2003). The Court explained that it was rejecting the insurer's broad interpretation of the exclusion because it would lead to the absurd result of classifying virtually any substance as an excluded pollutant. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 650 (Cal. 2003). Consequently, the *MacKinnon* holding would appear to support the contention that greenhouse gases, similar to pesticides, while harmful, do not constitute excluded pollutants. This argument finds further support in the California Supreme Court's rejection of the term, "absolute pollution exclusion" due to its overly broad connotations. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 644 (Cal. 2003).

Insured's Reasonable Expectations. A contention by an insurer that the pollution exclusion bars coverage for damages caused by greenhouse gases may also be contrary to an insured's reasonable expectations. The California Supreme Court has repeatedly held that the purpose of the comprehensive general liability policy is to provide the insured with the broadest spectrum of protection against liability for unintentional and unexpected personal injury or property damage arising out of the conduct of the insured's business. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 648 (Cal. 2003). The court noted that the coverage provision in the commonly used comprehensive general liability policy provides that the policy insures "all sums for which the insured becomes legally obligated to pay as damages caused by bodily injury, property damage or personal injury" demonstrates the insurer's intent to provide protection for ordinary acts of negligence and other fault-based conduct by insureds. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 649 (Cal. 2003).

Normally a policy holder who takes a "comprehensive" insurance policy with express coverage would expect his or her ordinary transactions to be covered. If the insurer creates an exception to the general import of the principal coverage clauses, the burden rests upon it to phrase that exception in clear and unmistakable language. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 648 (Cal. 2003). If this is not done, any ambiguity or uncertainty is resolved in favor of the policyholder. Indeed, an exception must be couched in terms which are clear to the ordinary mind, or any doubts as to meaning will be resolved against the insurer. *Ritchie v. Anchor Casualty Co.*, 135 Cal. App. 2d 245 (Cal. Ct. App. 1955).

In situations where insureds have been sued for damages resulting from the discharge of greenhouse gases, insurers will likely contend that the pollution exclusion bars coverage. However, an insured has a reasonable expectation of coverage for liability arising from normal business operations. Arguably, if an insured's normal operations involves the emission of greenhouse gases, a claim for damages should be covered despite the presence of the pollution exclusion.

Although a policy holder may contend that it had a reasonable expectation that the CGL policy would provide coverage for damage caused by the emission of greenhouse gases, the doctrine is employed only to assist in the interpretation of an ambiguous policy provision. The plain meaning of a policy governs, and insured's reasonable expectations are not considered except when the policy provisions are ambiguous. *Prudential Ins. Co. of Am. v. Superior Court*, 98 Cal. App. 4th 585, 598 (Cal. Ct. App. 2002), citing *Foster-Gardner, Inc. v. Nat'l Union Fire Ins. Co.*, 18 Cal. 4th 857, 868 (Cal. 1998). See also *Boghos v. Certain Underwriters at Lloyd's of London*, 36 Cal. 4th 495, 501 (Cal. 2005) ("If contractual language is clear and explicit, it governs. If the terms are ambiguous, the court

interprets them to protect the objectively reasonable expectations of the insured.")

An insurer cannot escape its basic duty to insure by means of an exclusionary clause that is unclear. The *MacKinnon v. Truck* court commented that it has repeatedly held that an exception to the performance of the basic underlying obligation must be so stated to apprise the insured of its effect. Thus, the burden rests upon the insurer to phrase exceptions and exclusions in clear and unmistakable language. The exclusionary clause must be conspicuous, plain and clear. This rule applies with particular force when the coverage portion of the insurance policy would lead an insured to reasonably expect coverage for the claim purportedly excluded. The burden is on the insured to establish that the claim is within the basic scope of coverage and on the insurer to establish that the claim is specifically excluded. *MacKinnon v. Truck Ins. Exchange*, 31 Cal. 4th 635, 648 (Cal. 2003).

The court in *Pipefitters Welfare Educ. Fund v. Westchester Fire Ins. Co.*, 976 F.2d 1037, 1044 (7th Cir. 1992) held that the pollution exclusion does not apply to injuries resulting from everyday activities gone slightly, but not surprisingly, awry. The court commented that there is nothing that is unusual about paint peeling off of a wall, asbestos particles escaping during the installation or removal of insulation, or paint drifting off the mark during a spray painting job. A reasonable policyholder would not characterize such routine incidents as pollution.

In *Saltarelli v. Bob Baker Group Medical Trust*, 35 F.3d 382 (9th Cir. 1994), the U.S. Ninth Circuit Court of Appeals applied the reasonable expectations doctrine to a health insurance policy's preexisting condition exclusion clause and held that it was unenforceable because it lacked a clear, plain and conspicuous statement of the exclusion. This doctrine, which grew out of the law of adhesion contracts and construction of ambiguities in insurance policies, has been formulated as follows: "In general, courts will protect the reasonable expectations of applicants, insureds, and intended beneficiaries regarding the coverage afforded by insurance carriers even though a careful examination of the policy provisions indicates that such expectations are contrary to the expressed intention of the insurer." *Saltarelli v. Bob Baker Group Medical Trust*, 35 F.3d 382, 384 (9th Cir. 1994).

The doctrine of protecting the reasonable expectations of the insured is closely related to the doctrine of contracts of adhesion. Where there is unequal bargaining power between the parties so that one party controls all of the terms and offers the contract on a take-it-or-leave-it basis, the contract will be strictly construed against the party who drafted it. *Garcia v. Truck Ins. Exch.*, 36 Cal. 3d 426, 438 (Cal. 1984); *Gray v. Zurich Ins. Co.*, 65 Cal. 2d 263 (Cal. 1966). Most courts recognize the great disparity in bargaining power between insurance companies and those who seek insurance. Further, they recognize that, in the majority of cases, a lay person lacks the necessary skills to read and understand insurance policies, which are typically long, set out in very small type and written from a legalistic or insurance expert's perspective. Finally, courts recognize that people purchase insurance relying on others, the agent or company, to provide a policy that meets their needs.

The result of the lack of insurance expertise on the part of insureds and the recognized marketing techniques of insurance companies is that "the objectively reasonable expectations of applicants and intended beneficiaries regarding the terms of insurance contracts will be honored even though painstaking study of the policy provisions would have negated those expectations." *Atwater Creamery Co. v. Western Nat'l Mut. Ins. Co.*, 366 N.W.2d 271, 277 (Minn. 1985).

The traditional approach to construction of insurance contracts is to require some kind of ambiguity in the policy before applying the doctrine of reasonable expectations. Some courts, however, have adopted the view that ambiguity ought not be a condition precedent to the application of the reasonable-expectations doctrine. *See, e.g., Hallmark Ins. Co. v. Superior Court*, 201 Cal. App. 3d 1014 (Cal. Ct. App. 1988), *Wint v. Fidelity & Casualty Co.*, 9 Cal. 3d 257 (Cal. 1973).

The reasonable-expectations doctrine gives courts a standard by which to construe insurance contracts without having to rely on arbitrary rules which do not reflect real-life situations and without having to bend and stretch those rules to do justice in individual cases. Ambiguity in the language of the contract is not irrelevant under this standard, but becomes a factor in determining the reasonable expectations of the insured, along with such factors as whether the

insured was told of important, but obscure, conditions or exclusions and whether the particular contract provision is an item known by the public generally. The doctrine does not automatically absolve an insured of the responsibility to read the policy. It does, however, recognize that in certain instances, such as where major exclusions are hidden in the definitions section, the insured should be held only to reasonable knowledge of the literal terms and conditions. The insured may show what actual expectations he or she had, but the fact-finder should determine whether those expectations were reasonable under the circumstances. *Atwater Creamery Co. v. Western Nat'l Mut. Ins. Co.*, 366 N.W.2d 271, 277 (Minn. 1985).

Exception to Reasonable Expectations Doctrine. The doctrine of reasonable expectations based upon the disparity of bargaining power and the fact that in the majority of cases an insured may lack the necessary skills to read and understand insurance policies may not apply to the policy holders in pollution cases where the defendant emitter is often a large corporation with a sophisticated and knowledgeable insurance department whose personnel are capable of understanding policy terms and are able to negotiate alternative policy provisions. *See, e.g., AIU Ins. Co. v. Superior Court*, 51 Cal. 3d 807, 823 (Cal. 1990).

Directors' and Officers' Insurance. Although the Comprehensive General Liability policy is the most likely principal source of insurance for an emitter of greenhouse gases, counsel should not overlook the possibility of implicating the company's directors and officers insurance policies. The directors' and officers' liability coverage might be implicated if there has been a failure on the part of the company's officers to recognize and disclose possible risks caused by a corporate emitter of greenhouse gases. Corporate officers may have a duty of care to remedy the problem of the emission of greenhouse gases and the resulting claims. Failure to anticipate claims relating to global warming and the emission of greenhouse gases may subject a director to liability and implicate his or her director's policy.

Conclusion. The U.S. Supreme Court's decision in *Massachusetts v. EPA*, 127 S. Ct. 1438 (U.S. 2007), coupled with increased public awareness of the threat of global warming, will most likely result in a substantial increase in litigation over damages allegedly caused by the emission of greenhouse gases. The increase in environmental claims raises the question for potential emitters as to the availability of insurance coverage to pay for defense costs and provide indemnity in the event of an adverse judgment or settlement agreement. As noted, commentators are split on whether coverage exists. *See, e.g., James M. Davis & Noel C. Paul, Managing the Risks of Global Warming: Avoiding the Mass Tort Template and Insurance Coverage Implications*, 17 Coverage 1 (LexisNexis May/June 2007) (arguing that coverage exists and the pollution exclusion does not apply); and Seth A. Ribner & Deborah L. Stein, *The Costs of Climate Change: Why Industry Should Not Look to Liability Insurance to Bear Them*, 17 Coverage 1 (LexisNexis September/October 2007) (arguing that greenhouse gas emissions are an ordinary industrial activity and are therefore not an "occurrence" within the meaning of a CGL policy). In any event, sufficient case law appears to exist on both sides of the argument, which means that the nation's courts will have to sort the matter out over a series of decisions in the years to come.

Kohane on Liberty Mutual Insurance Company v. Insurance Company of Pennsylvania

2008 Emerging Issues 1309

Kohane on Liberty Mutual Insurance Company v. Insurance Company of Pennsylvania

By Dan D. Kohane

December 4, 2007

SUMMARY: What will be the order of insurance coverage in a construction accident lawsuit where there are primary, co-primary and excess policies? For the practitioner, understanding the order of coverage among primary and excess policies is critically important.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

ARTICLE: The Appellate Division of the New York State Supreme Court unraveled the relationships grappled with the interrelationship between and among primary and excess policies in *Liberty Mut. Ins. Co. v. Insurance Co. of the State of Pa.*, 2007 NY Slip Op 6576 (N.Y. App. Div. 2007). The court held that two primary policies had to contribute equally to the resolution of a lawsuit before an excess policy, providing coverage over one of the two policies, had an obligation to contribute. Following that layer of coverage would be the excess carrier's policy which referenced the coverage limits on what would have otherwise been an employer's liability policy with unlimited coverage. Practitioners need to understand the order of liability coverage and the corresponding obligations of primary and excess carriers.

The Underlying Dispute. The underlying claim presented a typical New York construction lawsuit. A construction project was ongoing in New York City. In New York, where an injury occurs on a construction site, various provisions of the New York State Labor Law, including Section 200, 240(1) and 241(6) apply to permit an injured construction worker to bring an action against the owner, general contractor and agents, other than the worker's own employer, to recover for sustained injuries.

New York Exclusivity Rules. Under the exclusivity provisions of the Workers' Compensation Law, an employee may not sue his or her own employer. However, New York permits a party who is sued to implead the plaintiff's employer, even if the employer has provided Workers' Compensation benefits, in two instances. An employer can be sued for contractual indemnity, if it is a party to an enforceable contractual indemnity agreement with a party to the lawsuit. An employer can also be sued for common law negligence, for contribution, even without the presence of an indemnity agreement if the plaintiff has sustained a "grave injury" as defined by Section 11 of the Workers' Compensation Law. n1 In this case, both claims were being pursued. That led to a battle between the carriers over the obligation to defend and indemnify.

Surely, this dispute is important both to the insured as well as the claimant. The insured needs to know which carrier will provide it with primary defense.

In the underlying case, the injured construction worker-plaintiff was employed by General Industrial Service Corporation (General). Unable to sue his employer, he commenced an action against the project owner and construction manager seeking to recover for personal injuries under the provisions of the New York State Labor Law. Those defendants then commenced a third party action against General seeking both common law and contractual indemnity.

Policies Implicated. Three carriers insured General.

General had purchased a Commercial General Liability (CGL) policy through Diamond with liability limits of \$1,000,000 per person, per accident. Under that policy, Diamond had an obligation to defend General in any lawsuit that contained contractual liability claims. While the decision does not speak to it, it is likely the policy contained typical employer's liability exclusions. Those exclusions would redact coverage for claims made against the employer-insured for common law contribution in a lawsuit commenced by an employee, even if the claims against the employer were made by third-parties. Accordingly, Diamond would be on the risk for any contractual liability claims brought against General arising out of an "insured contract," but would have no obligation to indemnify the insured for common law contribution claims.

In addition to the CGL policy, General purchased a Workers' Compensation / Employer's Liability policy through The Insurance Company of the State of Pennsylvania and AIG (collectively referred to as AIG). That policy provided unlimited coverage under "Coverage B" for common law contribution claims made against General for employee injuries. See: New York State Insurance Department Circular Letter 1987-17 Supplement 1 [http://www.ins.state.ny.us/acrobat/CL17_87_1.PDF]. General also acquired an excess policy with Liberty Mutual Insurance Company (Liberty) that provided liability limits in excess of underlying policies.

AIG refused to participate in the defense of the third party action commenced against its insured, and would not contribute towards the settlement. The employee's personal injury claim was ultimately settled for \$2.5 million. Diamond contributed its policy limits of \$1 million, and Liberty contributed the \$1.5 million from its excess limits, reserving its right to seek reimbursement of those proceeds from the Workers' Compensation/Employer's Liability carrier (AIG).

After the settlement, Liberty instituted this declaratory judgment action seeking reimbursement of its \$1.5 million payment from AIG. The questions before the appellate court focused on the allocation of indemnity payments. As Diamond, the carrier that provided the defense was not a party to the declaratory judgment action, the recovery of an allocable share of defense costs was not before the court.

Allocation of Coverage. Providing counsel to practitioners, the court had to unwind the policies to determine the order of coverage.

The Appellate Division concluded that AIG was a primary insurer whose obligation to provide indemnity "took precedence over that of Liberty." AIG argued, unsuccessfully, that the claim by the project owner against General was an impermissible violation of the rule which prohibits insureds under the same policy from bringing claims covered by the same policy, the so-called, *anti-subrogation* rule. (see *Jefferson Ins. Co. of N.Y. v Travelers Indem. Co.*, 92 NY2d 363, 375 [1998]).

However, the court refused to grant judgment in favor of Liberty because it was not clear whether or not, in the underlying action, the owner and construction manager would have to secure a judgment in contribution, against the employer, General. Why?

Had the underlying case gone to verdict (remember, it was settled), the owner and construction manager could not have secured a judgment for contribution that would have triggered the employer's liability policy unless they would have established that the plaintiff suffered a "grave injury." Since the case did not go to verdict, and the record was not clear on the subject, the court remanded the matter back for a hearing on that specific question.

If a "grave injury" were not established, there could only be a contractual liability determination against the employer, and thus no trigger of the Employer's Liability Policy.

If a "grave injury" were established, the Appellate Division went on to determine the allocation of coverage for the settlement. On the first level would be the two primary policies, the Diamond \$1,000,000 CGL limit and the AIG Employers Liability limit.

The message from the court was clear; the primary carriers each had an obligation to defend and indemnify, so each would need to participate.

How does a policy with limited coverage share with a policy with unlimited coverage?

Liberty argued that since, in New York, under Coverage "B" of Employer's Liability policies there is an unlimited coverage, the Liberty policy should never be triggered. The court disagreed because the Liberty policy provided that coverage thereunder was "implicated by liability in excess of the insured's "Retained Limit," defined, in pertinent part, as "the total amounts stated as the applicable limits of the underlying policies listed in the Schedule of Underlying Insurance and the applicable limits of any other insurance providing coverage." In other words, the policy indicated an expectation it would be in excess of specific limits. As the Schedule of Underlying Insurance specifically listed the AIG policy and "attributes to it a \$1 million per-accident limit of insurance," the Liberty policy would provide coverage thereafter (*see State Ins. Fund v International Ins. Co.*, LexisNexis 1998 N.Y. App. Div. LEXIS 6541, *lv denied* LexisNexis 1998 N.Y. LEXIS 4924; *cf. Commissioners of State Ins. Fund v Aetna Cas. & Sur. Co.* LexisNexis 2001 N.Y. App. Div. LEXIS 6271).

AIG's final argument was that its coverage was limited to \$500,000, as there should be apportionment between the primary policies. The court rejected that argument since the Diamond policy was exhausted, thereby eliminating the apportionment issue. The excess policy would not be implicated until all the primary coverage was spent. Accordingly, Diamond's \$1,000,000 primary limits would be joined by the \$1 million AIG limits referenced in the Liberty policy and followed by \$500,000 paid by Liberty.

The counseling point is that allocation of coverage between and among carriers requires a close reading of policy language, particularly "other insurance" clauses. New York courts continue to insist, as a general rule, that all primary policies covering a risk be exhausted before implicating excess policies. By refusing to participate in the defense, AIG lost its opportunity to complain amount of the settlement.

[Return to Text](#)

n1 . Under Section 11 of the Workers' Compensation law, a "grave injury" is defined as "death, permanent and total loss of use or amputation of an arm, leg, hand or foot, loss of multiple fingers, loss of multiple toes, paraplegia or quadriplegia, total and permanent blindness, total and permanent deafness, loss of nose, loss of ear, permanent and severe facial disfigurement, loss of an index finger or an acquired injury to the brain caused by an external physical force resulting in permanent total disability." The burden of establishing a "grave injury" rests not on the plaintiff, but, by statute, on the third-party plaintiff(s), the parties that have commenced the

action against the employer.

Kohane on Guishard v. General Security Insurance Company

2008 Emerging Issues 1310

Kohane on Guishard v. General Security Insurance Company

By Dan D. Kohane

December 4, 2007

SUMMARY: When is an accident involving an automobile not an "automobile accident" for the purposes of liability insurance coverage? Often, the practitioner needs to know whether the automobile liability carrier or a general liability insurer has the obligation to defend and indemnify a motor vehicle owner.

PDF LINK: Click here for enhanced PDF of this Emerging Issues Analysis at no additional charge

RELATED CONTENT: Click here for more Emerging Issues Analysis related to this Area of Law

ARTICLE: What is "maintenance" of an automobile for purposes of determining the breadth of an "auto" exclusion in a CGL policy? The Court of Appeals provided some insight in *Guishard v. General Sec. Ins. Co.*, 2007 NY Slip Op 6581 (N.Y. 2007), __ NY3rd __ (9/11/07), when it held that an activity that transforms the auto's function is not "maintenance" and thus not excluded under a Commercial General Liability policy.

This case reminds us that it is critically important to identify the proper carrier entitled to notice following an accident. Not all accidents involving cars or trucks are "motor vehicle" accidents where coverage is provided by an auto carrier. The location of the accident provides guidance, but not necessarily the answer to the question: "who insures this risk?"

The Challenge to Identify the Proper Coverage. Surely, for the practitioner, whether it be claimant or insured's counsel, to promptly notify the appropriate insurer after an accident or loss or when litigation is commenced. All policies contain "prompt notice" provisions requiring the insured to notify an insurer of a loss or suit. New York Insurance Law § 3420(a)(3) empowers and obligates an injured party to notify the putative defendant's carrier as well. Best practices dictate that counsel act quickly to provide notice as a failure to comply with contractual provisions can result in a loss of liability coverage.

In the traditional automobile accident case, or the *slip and fall* or work-related accident, the practitioner has little difficulty in identify the type of insurer likely to be involved and entitled to notice. However, there are some closer questions and the practitioner is cautioned to consider carefully the nature and extent of the claim in order to pinpoint the right insurer.

The CGL Policy and its Relationship to Auto Accidents. As a general rule, commercial general liability (CGL) policies and homeowners policies are designed to exclude claims relating to automobile accidents. On a primary basis, motor vehicle accidents are ordinarily covered by personal and business auto policies.

The most common CGL form used in the industry is the Commercial General Liability form developed by the Insurance Services Office. In its grant of coverage, the typical CGL policy provides liability insurance protection to an insured for bodily injury or property damage caused by an occurrence which takes place during the policy period (for "occurrence" form policies). By way of an exclusion, the policy then removes from coverage for bodily injury or property damage claims which arise from "auto" accidents. n1

g. Aircraft, Auto Or Watercraft

"Bodily injury" or "property damage" arising out of the ownership, maintenance, use or entrustment to others of any aircraft, "auto" or watercraft owned or operated by or rented or loaned to any insured. Use includes operation and "loading or unloading".

Insurance Services Office, Form CG 00 01 10 01

Clearly, by its terms, the exclusion of coverage is broader than the traditional car accident.

For example, over a number of years, following the Court of Appeals decision in *Lalomia v Bankers & Shippers Ins. Co* (35 AD2d 114 [2nd Dept. 1970] *affd* 31 NY2d 830 [1972]) many CGL and homeowners policies provided coverage for claims of negligent *entrustment of a motor vehicle* was separate and distinct from a claim for *use and operation of a motor vehicle*. Thus, a claim of negligent entrustment was not excluded from a CGL policy. The industry reacted by adding the term "entrustment" to the "arising out of the ownership, maintenance, or use of * * * a motor vehicle" to the exclusion to eliminate those claims from coverage.

That being said, not every accident arising within, or upon, a vehicle would fall within the ambit of a liability automobile coverage. When faced with the question of determining which carrier is entitled to notice and likely to defend, counsel needs to focus on the cause of the accident, not just its location. If the accident arose out of the *use and operation or maintenance* of a vehicle, the motor vehicle insurer is more generally the one providing coverage.. The claim must be connected with the use of a vehicle, as a vehicle, or as the courts have described it: *automobile qua automobile*. (see, e.g., *Olin v Moore*, LexisNexis 1991 N.Y. App. Div. LEXIS 16383, 178 A.D.2d 517, [2nd Dept. 1991] [stabbing in car not covered]; *United Servs. Auto. Ass'n v Aetna Cas. & Sur. Co.*, 75 A.D.2d 1022 [4th Dept. 1980] [injury by spitball in car not covered]; *Empire Ins. Co. v Schliessman*, LexisNexis 2003 N.Y. App. Div. LEXIS 7669, 306 A.D.2d 512 [2nd Dept. 2003] [child falling off of non-moving truck not covered]).

The Importance of Rules of Contract Construction. When reviewing contract terms, the New York courts have set out some clear rules on policy construction and understanding those rules provides guidance to the practitioner "When interpreting [contract terms] in an insurance policy, we must construe the word[s] as would the ordinary [person] on the street or ordinary person when he [or she] purchases and pays for insurance. [I]n a case such as this one involving a policy issued to a business, by examining the "reasonable expectation and purpose of the ordinary business [person] when making an ordinary business contract .. The term "is not given a narrow, technical definition by the law. It is construed, rather, in accordance with its understanding by the average [person] .. who, of course, relates it to the factual context in which it is used" (*Miller v Continental Ins. Co.*, 40 NY2d 675, 676 [1976]). " (*Michaels v City of Buffalo*, 85 N.Y.2d 754, 757 [1995] citing, in part, *Johnson Corp. v Indemnity Ins. Co.*, 7 NY2d 222, 227 [1959]).

With respect to exclusionary language relied on by a carrier to deny coverage, the courts insist that "an insurer must establish that the exclusion is stated in clear and unmistakable language, is subject to no other reasonable interpretation,

and applies in the particular case" (*Continental Cas. Co. v Rapid-American Corp.*, 80 N.Y.2d 640, 593 N.Y.S.2d 966, 609 N.E.2d 506 [1993]). It follows that policy exclusions are given a strict and narrow construction, with any ambiguity resolved against the insurer (*Thomas J. Lipton, Inc. v Liberty Mut. Ins. Co.*, 34 N.Y.2d 356, 361, 357 N.Y.S.2d 705, 314 N.E.2d 37 [1974]). See *Belt Painting Corp. v. TIG Ins. Co.*, 100 N.Y.2d 377, 383 [2003]). It is with these rules in mind, that the Court review policy terms and exclusions.

"Maintenance" Examined. There have been few cases appellate cases that have interpreted the term *maintenance* in the exclusionary language which removes claims under the CGL policy if they arise from the *ownership, maintenance, use or entrustment* of an "auto". How broad is that term?

The New York State Court of Appeals took the opportunity to accept for review, and provide its insight on this question in the *Guishard* case. The question before the high Court was whether there was an obligation under a CGL policy with an "auto" exclusion, for the carrier to defend a lawsuit involving an eye injury that occurred when a van was being converted into a Mr. Softee ice cream truck. The CGL carrier argued that the work being performed on the truck fell within the auto exclusion, and thus outside of coverage. In support of this position, the insurer maintained that since the policy excluded claims for bodily injury "arising out of the ownership, maintenance, use or entrustment to others of any . . . 'auto' . . . owned or operated by or rented or loaned to any insured" a claim for injuries by an individual who was working on the truck conversion would be excluded under the policy's language.

The Appellate Division held that since the carrier had not submitted the policy schedule defining the term "auto," it had not demonstrated that the van fell within the relied-upon policy exclusion. The Court of Appeals accepted the case for review, and then resolved the case based on a different approach by considering the exclusionary language.

The Court of Appeals held that the CGL carrier was required to defend. The work being performed by the injured person did not constitute "maintenance" of an auto. "Maintenance," as that term is used in an insurance policy, means performance of work on "*an intrinsic part of the mechanism of the car and its overall function.*" The Court referenced cases where "maintenance" was established as those involving replacing or repairing a tire.

The Court opined that transforming a van in furtherance of its conversion to an ice cream truck aids in transforming the auto's function, an activity distinct from "maintenance." Accordingly, the conversion was not maintenance, and the exclusion did not apply. In turn, the CGL carrier was required to defend.

Surely, had the matter been submitted to the insured's automobile liability insurer, that carrier would have argued, likely successfully, that its policy, which provided coverage for "use, operation, maintenance, loading and unloading of a motor vehicle", did not apply to provide coverage for this accident.

The approach for the practitioner is clear. Look at terms in a policy as the ordinary policyholder purchasing that kind of a policy would understand those terms. For exclusionary language, consider whether the term is in clear and unmistakable language, and subject to no other *reasonable* interpretation. Following those guideposts, policy language become much easier to understand. For a more thorough discussion of the Auto Exclusion in the CGL policy, see Appleman on Insurance Law And Practice (2nd Ed.), Volume VI, Liability Insurance, Chapter 132 "coverage A" Exclusions In The Commercial General Liability (CGL) Insurance Policy, 21-132 Appleman on Insurance § 132.1.

Remember also, the importance of prompt notification to the right carrier, lest there be a loss of coverage. Counsel, unsure of who may provide risk protection may consider sending out notice to all carriers that may have some connection with the risk, and sorting out coverage denials at a later date. Rather one invest in an extra postage stamp and notify a larger number of carrier than risk the loss of coverage because of a failure to satisfy policy requirements.

[Return to Text](#)

n1 . "Auto" is a defined term and "means a land motor vehicle, trailer or semitrailer designed for travel on public roads, including any attached machinery or equipment.." Mobile equipment does not fall within the definition.

***Where Liability Ins. Meets Indemnity Agreements*Harleysville Ins. Co. v. Traveler**

2008 Emerging Issues 1311

Kohane on Where Liability Insurance Meets Indemnity Agreements--Harleysville Ins. Company v. Traveler

By Dan D. Kohane

December 4, 2007

SUMMARY: A common, complicated question that is present in most construction accident cases revolves around the relationship of liability insurance coverage to indemnity agreements contained in contracts between owners, contractors, and subcontractors. For many practitioners, trying to weave through insurance policies that may require a defense and indemnity and contractual indemnity agreements that might have different obligations can be daunting.

ARTICLE: Even the most experienced insurance practitioner can be perplexed by questions involving the interrelationship of indemnity obligations arising out of insurance policies, and parallel promises made in a contractual indemnity provisions that may be part of construction contracts or leases. The Court of Appeals recently denied leave to appeal to Harleysville Insurance Company (Harleysville) from an Appellate Division, Fourth Department order in *Harleysville Ins. Company V. Travelers Ins. Co. LexisNexis 2007 N.Y. App. Div. LEXIS 3450* , 38 AD3d 1364 (4th Dept. 2007), motion for leave den. by App. Div., *LexisNexis 2007 N.Y. App. Div. LEXIS 7271* , 41 AD3d 1323 (2007), motion for leave den. by Ct. App. 10/18/07).

The *Harleysville* case helps frame a procedure for the practitioner to follow when confronted with additional insurance questions that are presented along with indemnity obligations under leases or construction contracts. The case reminds us that the universes of tort and coverage are parallel ones, and that each needs be examined separately in order to ascertain primacy of obligations.

In *Pecker Iron Works of N.Y., Inc. v. Travelers Ins. Co.*, 99 N.Y.2d 391, 394 (2003), the Court of Appeals made it clear that insurance provided to an entity under a policy that adds that entity as an "additional insured" is a grant of coverage to the additional insured which is equal to that provided to the named insured.

Pecker's claim against Travelers arises from its status as an "additional insured" under the policy, so we begin with that document. It is undisputed that Travelers provided Upfront with primary coverage and that Upfront agreed to make Pecker an additional insured. "Additional insured" is a recognized term in insurance contracts, with an understanding crucial to our conclusion in this case. As cases have recognized, the "well-understood meaning" of the term is "an 'entity

enjoying the same protection as the named insured" (*Del Bello v General Acc. Ins. Co.*, 185 A.D.2d 691, 692, 585 N.Y.S.2d 918 [1992], quoting Rubin, Dictionary of Insurance Terms 7 [Barron's 1987]; see also *Jefferson Ins. Co. v Travelers Indemnity Co.*, 92 N.Y.2d 363, 372, 681 N.Y.S.2d 208, 703 N.E.2d 1221 [1998]; *Wong v New York Times Co.*, 297 A.D.2d 544, 547, 747 N.Y.S.2d 213 [2002]).

When Pecker engaged Upfront as a subcontractor and in writing provided that Upfront would name Pecker as an additional insured, Pecker signified, and Upfront agreed, that Upfront's carrier--not Pecker's--would provide Pecker with primary coverage on the risk. Pursuant to the policy provision at issue, Travelers agreed to provide primary insurance to any party with whom Upfront had contracted in writing for insurance to apply on a primary basis. When Upfront agreed to it, the policy provision was satisfied.

(*Pecker Iron Works of N.Y., Inc. v Traveler's Ins. Co.*, 99 N.Y.2d 391, 394 [NY 2003].)

The practitioner learns from *Pecker* that "additional insured" status provided to a general contractor by a subcontractor's policy should be considered primary coverage. The *Harleysville* decision takes this discussion to the next step, and considers the primacy questions when another policy also provides the general contractor with protection.

Harleysville provided primary coverage to a subcontractor, W.C. Roberson Plumbing & Construction Corp. (Roberson), and that policy also added the general contractor, Savarino Construction Company, Inc. (Savarino), as an additional insured. That additional insured status was provided pursuant to a contract between plaintiff's named insured, Savarino, and Roberson, whereby Roberson promised to provide Savarino insurance as an addition insured.

The Harleysville policy did just that. Of note, however, Savarino had its own commercial general liability policy issued by Travelers. Also, above the Harleysville primary policy was a Harleysville excess policy that insured the subcontractor but did not provide additional insurance protection to the general contractor, Savarino.

Harleysville recognized it had to provide additional insured status to Savarino, and when the lawsuit was commenced by the injured worker, Harleysville assumed the defense of the general contractor. Eventually, it settled the case with the injured worker. Harleysville then sought to recover contribution from Travelers by arguing that Travelers provided co-primary coverage for Savarino.

In the underlying lawsuit, it had already been determined that the indemnity agreement between the general contractor and the subcontractor was valid and enforceable. As a result, it was determined that Roberson was required to indemnify Savarino for any losses arising out of the work.

The Appellate Division, Fourth Department concluded that the proper approach to determine the primary obligation is to compare the *other insurance* clauses of the two first layer policies. It concluded that based on those clauses, the Harleysville first layer policy was primary and Travelers' policy was next in line.

Best practices dictate that no coverage decision can be made without examining the full policies and in this case, a careful examination of the *other insurance clauses*. Here, the court recognized that the *other insurance clauses* were not identical:

The dispute is whether, pursuant to the terms of the policies, Travelers' coverage of Savarino is primary along with plaintiff's primary coverage of Savarino as an additional insured. or whether Travelers' coverage of Savarino is excess to plaintiff's coverage. We have therefore examined "the purpose each policy was intended to serve as evidenced by both its stated coverage and the premium paid for it . . . , as well as . . . the wording of its provision concerning excess insurance" (citation omitted).

Although we note that both policies provide coverage for sums that the insured is legally obligated to pay as

damages for bodily injury and that the premium Savarino paid Travelers was for primary coverage. we disagree with plaintiff that the "other insurance" clauses in the policies are identical and that they therefore both provide primary coverage. Pursuant to the "other insurance" clauses in both policies, the policies provide primary coverage except that the coverage is excess where any other primary insurance is available to the insured for which the insured has been added as an additional insured by attachment of an endorsement. Savarino is added as an additional insured on plaintiff's primary policy, and thus the excess clause is triggered in the Travelers policy but not in plaintiff's policy.

We therefore conclude that the excess coverage clauses are not "deemed to cancel each other out" and thus do not result in coinsurance. Rather, pursuant to the terms of the policies, Travelers' coverage is excess to plaintiffs coverage, and we therefore 'conclude' that coverage under plaintiffs primary policy must be exhausted before Travelers is required to contribute under its policy (*see generally Cheektowaga Cent. School Dist. v Burlington Ins. Co.*, 32 AD3d 1265, 1268).

Accordingly, the court concluded that the first layer of primary coverage for Savarino would come from Harleysville. The Travelers policy then provided the next layer of coverage for the general contractor. There was no other coverage for the general contractor other than the Harleysville and Travelers policies.

However, that was only the first step of the analysis. The court was now faced with the enforceable indemnity agreement in the construction contract that called for Harleysville's insured, Roberson, to indemnify Savarino:

We note that, in the underlying third-party action, Savarino was granted summary judgment against Roberson on its cause of action for contractual indemnification. Travelers would therefore have a right of subrogation against Roberson in that third-party action. and, as a practical matter, would be entitled to reimbursement from Roberson for the amount that Travelers is obligated to pay plaintiff as excess coverage for Savarino's liability to Roberson's employee (*see generally United States Fid & Guar. Co. v CNA Ins. Cos.*, LexisNexis 1994 N.Y. App. Div. LEXIS 10528, 208 AD2d 1163, 1165).

Accordingly, the court determined that since Savarino was entitled to indemnity from Roberson, any money paid out by Travelers, could pass through that indemnity agreement to Roberson, and thus Harleysville. Travelers, therefore, would be fully protected by Harleysville, and Harleysville's excess policy provided the source of that reimbursement. Harleysville's excess policy, at the end of the day, had to pick up the settlement payments NOT because its policy proceeds came before the Travelers policy (a position expressly rejected by the court), but instead because the excess carrier's indemnity obligations to the subcontractor.

The practitioner must be cautioned that there may be times when reimbursement can not be obtained. This would occur if a claim between parties will violate the anti-subrogation prohibition; that is, if the parties were insured for the same loss under the same policy. *It has often been said that an insurer may not be subrogated to a claim against its own insured, at least when the claim arises from an incident for which the insurer's policy covers that insured (Pennsylvania General Ins. Co. v. Austin Powder Co.*, 68 N.Y.2d 465, 471 [1986]).

In light of the court's holding, the practitioner is presented with a checklist of documents to obtain, and an analysis to conduct, in order to determine which carrier will defend and eventually indemnify:

- a. Secure and examine the *other insurance clauses of all policies*;
- b. Determine the priority, if any, of all policies issued to the parties as primary policies, and assign defense and provide first layers of coverage based on the interrelationship of the *other insurance clauses*;
- c. Examine the excess or umbrella policies and, using the same analysis, determine who is insured under each, and the respective priority of coverage;
- d. Once the alignment is determined, consider the enforceability, scope and indemnity agreement in place between

and among the parties;

e. Remember anti-subrogation prohibitions.

The lesson to be learned is clear. When considering the interrelationship of insurance policies and indemnity agreements, all relevant documentation must be secured and dissected with the greatest of care. Questions relating to primacy of defense obligations, order of coverage and ultimate applicability of indemnity agreements are very important and must be answered with the utmost attention to the individual facts of each case.

The Wall Street Reform Act's Effect on the Insurance Industry

2010 Emerging Issues 5204

Reed Smith LLP on the Dodd-Frank Wall Street Reform and Consumer Protection Act's Effect on the Insurance Industry

By Paul Walker-Bright

July 18, 2010

SUMMARY: This commentary reviews the provisions of the Dodd-Frank Wall Street Reform and Consumer Protection Act that are pertinent to the insurance industry and opines on what those provisions portend for the regulation of the insurance industry in the future.

ARTICLE: On July 21, 2010, President Obama signed into law the "Dodd-Frank Wall Street Reform and Consumer Protection Act" (the "Dodd-Frank Act"), the most comprehensive legislative reform of the financial services industry since the Great Depression. n1 The Dodd-Frank Act will now be sent to President Obama, who likely will sign the bill into law soon. The Act has several provisions that directly or indirectly affect the insurance industry, and may indicate the beginning of greater federal regulation of insurance after decades of nearly exclusive regulation by the states.

Establishment of the Federal Insurance Office. Title V of the Dodd-Frank Act, the "Federal Insurance Office Act of 2010," establishes the Federal Insurance Office ("FIO") within the Department of the Treasury. n2 The FIO has the authority:

(A) to monitor all aspects of the insurance industry, including identifying issues or gaps in the regulation of insurers that could contribute to a systemic crisis in the insurance industry or the United States financial system;

(B) to monitor the extent to which traditionally underserved communities and consumers, minorities . . . and low- and moderate-income persons have access to affordable insurance products regarding all lines of insurance, except health insurance;

(C) to recommend to the Financial Stability Oversight Council that it designate an insurer, including the affiliates of such insurer, as an entity subject to regulation as a nonbank financial company supervised by the Board of Governors pursuant to title I of the Dodd-Frank Wall Street Reform and Consumer Protection Act;

(D) to assist the Secretary in administering the Terrorism Insurance Program established in the Department of the Treasury . . .;

(E) to coordinate Federal efforts and develop Federal policy on prudential aspects of international insurance matters, including representing the United States, as appropriate, in the International Association of Insurance Supervisors (or a successor entity) and assisting the Secretary in negotiating covered agreements . . .;

(F) to determine, in accordance with subsection (f), whether State insurance measures are preempted by covered agreements;

(G) to consult with the States (including State insurance regulators) regarding insurance matters of national importance and prudential insurance matters of international importance; and

(H) to perform such other related duties and authorities as may be assigned to the Office by the Secretary. n3

The FIO also will advise the Secretary of the Treasury on major domestic and prudential international insurance policy issues, and the Director of the FIO will serve in an advisory capacity on the Financial Stability Oversight Council. n4

The FIO has no regulatory authority, and primarily will monitor insurance issues of national importance and give reports to the Treasury Secretary and Congress on such issues. Regulation of insurance in the first instance remains in the hands of the states. n5 However, as discussed in more detail below, the authority to recommend that an insurer be designated as an entity subject to regulation as a nonbank financial company could have the effect of restricting the states' ability to regulate insurance companies so designated. Such insurers would be supervised by the Board of Governors of the Federal Reserve System, which would potentially entail meeting financial stability requirements different from those required under state regulations.

In addition, the Federal Insurance Office Act directs the FIO to conduct a study and submit a report to Congress on "how to modernize and improve the system of insurance regulations in the United States." n6 The FIO's report will be based on and guided by several considerations and factors, and was clearly intended to be detailed and comprehensive. n7 The FIO will make recommendations for legislative, administrative and regulatory changes that are necessary to carry out or effectuate the findings in the report. n8

It is interesting to note that in March 2008 the Treasury Department issued a report of its study of the financial services industry, including insurance, entitled "Blueprint for a Modernized Financial Regulatory Structure." n9 With respect to the insurance industry, the Treasury Department concluded that the state-based regulatory system was not the most efficient or effective way to regulate an industry that has become global in its scope. n10 The Treasury Department recommended establishing an optional federal charter that would provide a system of federal chartering, licensing, regulation and supervision of insurers, reinsurers and insurance producers. n11 The Treasury Department also recommended creating an Office of National Insurance and an Office of Insurance Oversight. n12 The Office of National Insurance would create and oversee the necessary regulatory, supervisory, enforcement and rehabilitative powers of the optional federal charter. n13 The Office of Insurance Oversight would promote international insurance regulatory policy for the United States and serve as an advisor to the Secretary of the Treasury on major domestic and international insurance policy issues. n14

In the March 2008 Treasury Department Blueprint, the Treasury Department has already come out in favor of a comprehensive scheme of federal regulation that would replace much, if not all, of the existing state-based regulatory regime. It appears that the Federal Insurance Office Act adopted the Treasury Department's recommendation to create an Office of Insurance Oversight, in the form of the FIO, but not the recommendation to create a federal agency with regulatory and enforcement powers over insurance. If the Treasury Department Blueprint can be considered foreshadowing of the FIO's report to be issued 18 months from now, further federal involvement in the regulation of insurance may be in the offing.

Section 314 of the Federal Insurance Office Act gives the Secretary of the Treasury and the United States Trade Representative the authority to negotiate and enter into "covered agreements" on behalf of the United States. n15 A "covered agreement" is an agreement entered into between the United States and one or more foreign governments, authorities or regulatory agencies, that relates to prudential measures in the business of insurance or reinsurance that achieve a level of protection for consumers substantially equivalent to the level of protection achieved under State insurance or reinsurance regulation. n16 If a State insurance measure results in less favorable treatment of a non-United States insurer in a jurisdiction that is subject to a covered agreement than a United States insurer, and is inconsistent with a covered agreement, it will be preempted by the covered agreement. n17

State-Based Insurance Reform. The Dodd-Frank Act contains various insurance reforms in the "Nonadmitted and Reinsurance Reform Act of 2010." n18 Part I of the Nonadmitted and Reinsurance Reform Act is intended to encourage States to "adopt nationwide uniform requirements, forms, and procedures, such as an interstate compact, that provide for the reporting, payment, collection, and allocation of premium taxes for nonadmitted insurance. . . ." n19

To accomplish this goal, the Act prohibits any State other than the home State of an insured from requiring any premium tax payment for nonadmitted insurance, but allows the States to enter into a compact or establish procedures to allocate premium taxes paid to an insured's home State among the States. n20

The placement of nonadmitted insurance will be subject to the regulatory requirements solely of the insured's home State, and no State other than an insured's home State may require a surplus lines broker to be licensed in order to sell, solicit or negotiate nonadmitted insurance to that insured. n21 After two years from the date of enactment, a State may not collect any fees relating to the licensing of a surplus lines broker unless the State has in effect laws or regulations that provide for participation in the national insurance producer database, maintained by the National Association of Insurance Commissioners ("NAIC"), for the licensure of surplus lines brokers. n22 The Nonadmitted and Reinsurance Reform Act imposes uniform standards for surplus lines eligibility and a procedure that makes it easier for commercial purchasers of insurance to obtain nonadmitted insurance. n23 The Comptroller General of the United States is directed to conduct a study of the nonadmitted insurance market to determine the effect of the Nonadmitted and Reinsurance Reform Act on the size and market share of the nonadmitted insurance market for providing coverage typically provided by the admitted insurance market. n24

Part II of the Nonadmitted and Reinsurance Reform Act attempts to create a more uniform regulatory environment for reinsurance. If the State of domicile of a ceding insurer is accredited by the NAIC, and recognizes credit for reinsurance for the insurer's ceded risk, no other State can deny such credit for reinsurance. n25 All laws, regulations, provisions or other actions of a State that is not the domiciliary State of the ceding insurer (except with respect to taxes and assessments on insurers or insurance income) are preempted to the extent that they (1) restrict or eliminate the rights of the ceding insurer or the assuming insurer to arbitrate disputes pursuant to a contractual arbitration provision, (2) require that a certain State's law shall govern the reinsurance contract, (3) attempt to enforce a reinsurance contract on terms different from those in the contract, or (4) otherwise apply the laws of the State to reinsurance agreements of ceding insurers not domiciled in that State. n26 The State of domicile of a reinsurer will be solely responsible for regulating the financial solvency of the reinsurer, as long as the State is accredited by the NAIC or has financial solvency requirements substantially similar to the NAIC's. n27

Potential Effect on Insurance Companies of the "Financial Stability Act of 2010." The Financial Stability Act of 2010 gives authority to the Board of Governors of the Federal Reserve System to supervise any "nonbank financial company" if "material financial distress" at the company or the "nature, scope, size, scale, concentration, interconnectedness, or mix of the activities" of the company "could pose a threat to the financial stability of the United States." n28 "Nonbank financial company" is broadly defined as a company, other than a bank holding company, that is "predominantly engaged in financial activities." n29 Although only "financial activities" of the company will be subject to supervision or the prudential standards, n30 what constitutes "financial activities" is based on Section 4(k) of the Bank Holding Company Act (Pub. L. No. 511, 70 Stat. 133 (1956), codified at 12 U.S.C. § 1841 *et seq.*). The Bank Holding Company Act expressly includes "insuring . . . in any State" as a "financial activity." n31 Thus, the broad

definition of "financial activities" encompasses insurance companies and holding companies whose subsidiaries include insurance companies (*e.g.*, the former AIG, Inc.). As discussed above, the FIO will have the authority to recommend that an insurance company be designated as a nonbank financial company subject to the Board of Governor's supervision. n32 The ultimate authority to designate a nonbank financial company as subject to the Board of Governor's supervision rests with the newly created Financial Stability Oversight Council ("FSOC"). n33

A nonbank financial company subject to the Board of Governor's supervision will be required to meet certain "prudential standards" concerning its operation. n34 These prudential standards will be established based on recommendations from the FSOC. n35 The prudential standards will be particularized to the various types of nonbank financial companies being supervised, and will be "more stringent than those applicable to other nonbank financial companies . . . that do not present similar risks" to the nation's financial stability. n36 The Board of Governors is directed to establish prudential standards for nonbank financial companies under its supervision with total consolidated assets equal to or greater than \$50 billion. n37

Among the specific recommendations the FSOC may make are requiring the nonbank financial company to maintain a minimum amount of contingent capital that is convertible to equity in times of financial distress, and to require the company to have a plan for rapid and orderly resolution in the event of material financial distress or failure. n38 The FSOC also may make recommendations to limit the risks that failure of any individual company could pose to nonbank financial companies, to require enhanced public disclosures by the nonbank financial company, and to require short-term debt limits to mitigate the risks associated with over-accumulation of such debt. n39

The FSOC also may recommend more stringent regulation of a financial activity to the primary financial regulatory agencies for that activity. n40 The primary financial regulatory agencies must then implement the recommended standards or, within 90 days after the recommendations are issued, explain in writing to the FSOC why they are not following the recommendations. n41

If the Board of Governors determines that a nonbank financial company under its supervision poses a "grave threat to the financial stability of the United States," the Board of Governors will limit the ability of the company to merge with, acquire, consolidate with, or become affiliated with another company, restrict the ability of the company to offer financial products, require the company to terminate one or more activities, impose conditions on the manner in which the company operates, or, if all else fails, require the company to sell off or transfer assets to unaffiliated entities. n42 The Board of Governors will establish regulations for the early remediation of financial distress of a nonbank financial company. n43

Finally, Title II of the Dodd-Frank Act sets forth procedures for the orderly liquidation of a financial company for which the Federal Deposit Insurance Corporation ("FDIC") and the Board of Governors have determined a receiver should be appointed. n44 For cases involving insurance companies, or a financial company which has an insurance company as its largest United States subsidiary, the FIO and the Board of Governors must make the determination whether to appoint a receiver. n45 The liquidation or rehabilitation of an insurance company will be conducted under the applicable State law. n46 However, if the appropriate State insurance department does not file the necessary judicial action to place the company into liquidation within 60 days of the determination by the FIO and the Board of Governors, the FDIC will have the authority to stand in the place of the State insurance department and file the appropriate judicial action to place the company into liquidation. n47

Conclusion. The Dodd-Frank Act has opened the door to federal regulation of the insurance industry, a door that has remained firmly shut since 1945. If, 18 months from now, the FIO comes to the same conclusion as the March 2008 Treasury Department Blueprint regarding the need for more comprehensive, nationwide regulation of insurance, the stage could be set for expanding the federal government's role in that direction. The federal government's expanded role almost certainly would come at the expense of state insurance departments and the NAIC. The FIO already is set to supplant the state regulators in negotiating "covered agreements" that deal with insurance issues on an international scale. State regulators must initiate liquidation proceedings with respect to insurers designated for receivership by the

FIO and the Board of Governors or risk having that function taken over by the FDIC. Some insurance companies, or holding companies with insurers among their major subsidiaries, are at risk of being placed under supervision by the Board of Governors after being declared, in the vernacular, "too big to fail." Such companies will have to comply with "prudential standards" concerning their operations in addition to, or instead of, state insurance regulations. The prudential standards may limit the ability of subject insurance companies to operate with the same level of freedom they now enjoy under the state-based regulatory regime. Overall, the states' ability to regulate insurance companies under the Board of Governor's supervision may be more limited as a result of the Dodd-Frank Act.

Insurance Coverage for Damages Arising from the Gulf Oil Spill

2010 Emerging Issues 5112

McCarter and English LLP on Insurance Coverage for Damages Arising from the Gulf Oil Spill

By Brian J. Osias and David C. Kane

June 12, 2010

SUMMARY: This commentary focuses on insurance considerations affected by the Gulf oil spill. Many types of damage that could result from the oil spill may be covered losses, under first-party, business interruption, directors and officers, and/or certain liability insurance policies, particularly Environmental Impairment insurance policies.

ARTICLE: I. INTRODUCTION

The recent oil spill in the Gulf of Mexico has become arguably the worst in United States history. n1 The federal government has estimated that between 12,000 and 19,000 barrels a day have leaked into the Gulf. n2 A subsequent estimate placed the leak as high as 30,000 barrels per day. n3 By early June, the spill was at least twice the size of the Exxon Valdez disaster of 1989. n4 Though initially downplaying the extent of damage, British Petroleum's ("BP") CEO finally acknowledged the spill is an "environmental catastrophe" a month after it occurred. n5 Third parties will invariably suffer damage from the oil onslaught and will seek reimbursement from their insurance carriers.

As the oil spill spreads, coastal property will be affected to a greater and greater extent. Hundreds of millions, perhaps billions, of dollars will be necessary for cleanup. Whole industries will suffer serious economic consequences. For many businesses, financial harm will last well beyond the eventual completion of cleanup. Thus, the damage levied by the spill will have far-reaching and long-lasting effects.

This article focuses on the more mundane, but nevertheless important, insurance considerations affected by the spill. Many types of damage that could result from the oil spill may be covered losses. Businesses must review their entire portfolio of policies for potential coverage. When potentially applicable policies are identified, a close examination of provisions becomes necessary to determine their application to specific claims.

II. The Gulf Oil Spill

The spill originated with the explosion of the Deepwater Horizon rig on April 20, 2010. BP, the largest investor in

the rig, leased the rig from its owner, Transocean Ltd. n6 The rig was located forty miles off the Louisiana coast. n7 Just before the spill, workers attempted to place cement seals at the bottom of the oil well, which led to a chemical reaction that created a methane gas bubble. n8[8] The methane gas, commonly found around oil reservoirs, escaped from the well into the drill column. n9 Around 9:47 P.M., workers on the rig heard the sudden release of methane gas. n10 The gas rapidly expanded through protective seals and barriers in the drill column and exploded. n11

An intense fire broke out on the rig with soaring temperatures and massive plumes of smoke. n12 Though many workers survived by diving overboard to escape the intense heat, eleven crewmembers died and dozens of others suffered injury as a result of the catastrophe. n13 After burning for two days, the rig sank into 5,000 feet of water. n14 For weeks afterward, oil gushed forth from the damaged well, spreading across the surface and throughout the subsurface of the water.

Original estimates suggested the amount of oil spilling from the leak was low. It has since become clear that incredible amounts of oil have spilled out of the well. BP has undertaken a number of attempts to stop the leak and prevent expansion of the spill, including drilling a relief well, n15 using chemical dispersants to break up the oil, n16 the failed "top kill method" of inserting drilling mud into the well, n17 and the "top hat" device. n18 Oil continues to flow from the well and has already reached the Gulf coast. Many scientists believe currents could carry it up the eastern seaboard. n19 Even if the leaked is stopped, the escaped oil will remain in the Gulf and continue to push to the coastline.

The spill has already had a significant ecological impact. Both oil and the dispersants used in the cleanup effort cause harm to wildlife. n20 Underwater life forms will be the first impacted. The effects on marine life, however, will not be limited to the Gulf because marine life from across the Atlantic use the Gulf as breeding grounds. n21 As oil reaches land, coastal life will suffer as well. Along the Louisiana shoreline, birds, turtles, insects, and other wildlife have been found covered in oil and, unfortunately, often dead as a result. n22 Harm to any species will affect many other life forms across the food chain.

III. Insurance Coverage Issues

Insureds have already begun to look to their carriers for reimbursement of costs associated with the oil spill. Policyholders may find that their policies provide coverage for their losses. This article analyzes the potential for recovery under property, business interruption, directors and officers, and liability policies for third parties who suffer oil damage.

A. First-Party Property Coverage

As the oil reaches land, beachfront real estate will suffer direct damage. Buildings, structures, and equipment belonging to coastal businesses may also be harmed. The cost of cleaning up and repairing any damage to property caused by oil can be extraordinarily expensive. For example, many resorts along the Gulf Coast have shoreline property. As tides carry the oil ashore, it will not only cover but penetrate the ground and any plant life within reach. Few vacationers are willing to visit oil contaminated resorts. These establishments clearly must remove the oil from their property to maintain business. First-party property policies may provide insurance recoveries to insureds for these costs.

First-party property policies, as opposed to third-party policies, provide coverage for an insured's own property. n23 Broadly speaking, these policies cover direct physical loss to covered property. n24 Two types of first-party property policies exist. The breadth of coverage depends on the type of property policy purchased. All risk property policies cover all property the insured owns unless specifically excluded. n25 All risk, of course, is a misnomer as the policies almost always exclude specified perils. The broad grant of coverage creates a higher likelihood of recovery for oil damage claims. An insured need only show it suffered property damage during the policy period. The burden is on the carrier to prove that an exclusion applies to preclude coverage. n26 Owners of all risk policies should carefully review the policy's exclusions for provisions that may bar oil related damages.

The other type of first-party property policy has a much more limited grant of coverage. Named peril policies cover only losses specifically named in the policy. n27 The insured has the burden to prove the loss falls within the grant of coverage. n28 In contrast with owners of all risk policies, insureds with named peril policies must review the entire policy for provisions that may provide coverage for the oil cleanup.

Coverage under a property policy depends on the cause of damage. In *Lititz Mutual Insurance Co. v. Boatner*, for instance, the insurer issued a windstorm policy. n29 A hurricane destroyed the insureds' home. n30 The insurer denied coverage based on an exclusion for loss caused by "flood, surface water, waves, tidal water, or tidal wave, overflow of streams or other bodies of water, or spray from any of the foregoing, all whether driven by wind or not," arguing a tidal wave destroyed the home. n31 The Court disagreed, finding the house had been destroyed by strong winds before the tidal wave came ashore. n32 Thus, the exclusion did not apply because wind, a covered cause of loss, was the actual cause of the damage.

First-party property policies usually contain contamination exclusions. Courts have applied these provisions to bar coverage to property damage caused by environmental harms. In *Hartory v. State Automobile Mutual Insurance Co.*, the policyholders incurred moving and living expenses when authorities forced them to evacuate their home after a methane gas contamination. n33 The insurer denied coverage based on an exclusion for "contamination." n34 The Court found contaminate meant "to render unfit for use by the introduction of unwholesome or undesirable elements." n35 As an "an unwholesome and undesirable element," the Court held methane gas constituted contamination and applied the exclusion to bar coverage. n36

Contamination exclusions, however, may not necessarily bar coverage for cleanup of oil from the Gulf spill. The standard exclusion often extends coverage for cleanup of pollutants from land or water caused by a covered loss. n37 The burden of proof depends on the type of policy, but if the oil damage constitutes a covered loss a policy with such a provision may provide coverage.

Debris removal provisions, which are standard in property policies, could be a source of coverage for removal of oil. In fact, courts have applied these provisions to cleanup of oil spills. In *Lexington Insurance Co. v. Ryder System, Inc.*, oil leaked from underground storage tanks at the insured's business. n38 The all risk policy covered all personal property including oil in pipelines. n39 The policyholder also sought coverage for cleanup of oil on the ground, citing the debris removal provision. The provision covered the "cost of demolition and removal of debris formerly an insured part of the property and no longer suitable for the purpose for which it was intended." n40 The insurer argued no coverage existed because the oil was not debris and was not subject to "demolition." n41 The Court found that the insured need only show a need for removal of debris and not demolition and held the oil constituted debris for which coverage existed. n42 Unfortunately for policyholders, many modern debris removal provisions explicitly exclude removal of pollutants. n43 This type of exclusion would in all likelihood bar recovery for cleanup of oil spill damage. Policyholders should take a close look at these provisions to determine the extent of any possible coverage.

Finally, sue and labor provisions may cover additional costs related to the cleanup of oil. These provisions provide for reimbursement of reasonable costs expended to mitigate losses. n44 The purpose of these provisions is to confer a benefit on the insurer by reducing the amount of damage the insurer might otherwise be forced to pay. n45 Sue and labor coverage can be valuable to numerous industries affected by the Gulf oil spill. For instance, fishing businesses may have to remove boats from water to land to protect them from damage. This will result in both moving and storage costs. Insureds should take advantage of their entitlement to costs incurred in preventing damage to their property from the oil spill.

B. Business Interruption

The Gulf oil spill will damage businesses in ways other than direct property damage. The property damage itself will limit or foreclose the ability of many businesses to operate, resulting in loss of income. For instance, oil damage to docks and boats may prevent fishermen from accessing the Gulf to fish. Similarly, coastline businesses that depend on

the shipping industry to receive goods will lose income if ports are damaged. The tourism industry has already faced a sharp decline. Coastline resorts inundated by oil may have to shut down during the time it takes to cleanup.

Business interruption insurance covers lost income resulting from direct physical loss to the policyholder's property. n46 The purpose of business income coverage is to compensate the insured for income it would have earned had there been no interruption. n47 In other words, business income coverage preserves "the continuity of the insured's earnings." n48 Considered a time element loss policy, it essentially picks up where a property policy leaves off by covering the effects of damaged property rather than the property itself. n49

Application of business income insurance to the oil spill is straight forward. An insured need demonstrate it suffered property damage that resulted in lost income. Recovery is limited to the amount of income the business would have earned during the cleanup period. n50 Courts make that determination by reviewing the business' income levels and trends prior to the interruption. n51 The policyholder, of course, must show an actual monetary loss compared with prior earnings. n52 If the company's past indicates it would not have earned income, the policyholder will be unlikely to recover.

Depending on policy language, some courts have held coverage exists only when a complete cessation of business results from the property damage. Some courts have actually held that a decrease in business may not trigger coverage if the business remains open. This has particular consequence in the tourism industry. In *Forestview v. All Nation*, for example, the insured resort suffered storm damage and closed four of its cabins. n53 The resort kept its remaining cabins open and continued to operate the resort. n54 The business interruption coverage provided the insurer would "pay for the actual loss of Business Income you sustain due to necessary suspension of your 'operations' during the 'period of restoration.'" n55 Interpreting the term "suspension," the court held that coverage did not apply to a partial termination of operations where the resort remained open. n56 Many policyholders may find themselves in a similar situation as oil damage will affect shoreline real estate but may not require a complete cessation of business.

"Extra expense" coverage, commonly found in business income policies, can also be a valuable source of recovery. The Court of Civil Appeals of Texas explained the purpose of "extra expense" insurance as:

...not for the cost of rebuilding or restoring the physical structure on the premises, but primarily for securing extra facilities and for "necessary emergency expenses" of a concrete or practical nature to compensate for extra expenses incurred in getting the business back in normal operation at the earliest practicable time. n57

In essence, insureds may recover extra expenses incurred to resume operations. To obtain recovery, the extra expenses claimed must have been necessarily incurred. n58 Like sue and labor provisions in property policies, extra expense coverage creates entitlement to reimbursement for indirect damages from the oil spill. The fishing industry, for instance, may need to replace damaged boats or equipment and these provisions may provide coverage in that regard.

C. Directors & Officers Liability Insurance

Corporate officers and directors have a duty to exercise reasonable care in the conduct of the business. This broad requirement subjects them to potential shareholder suits alleging, among other possibilities, negligent preparation for the oncoming oil spill. n59 In other words, shareholders may assert that officers and directors knew the oil would reach corporate property but failed to adequately prevent damage from occurring. These suits will implicate directors and officers coverage.

Most directors and officers policies contain an exclusion for environmental liability. As with all policies, these provisions vary. Some exclude coverage only for violations of environmental laws or suits brought to enforce environmental regulations. n60 This type of exclusion might not bar coverage for a suit alleging negligent preparation of property in advance of the pending oil spill. Other policies, on the other hand, contain much broader exclusions.

At least one court, however, has held a broad pollution exclusion does not apply to all pollution related claims. In

Sealed Air Corp. v. Royal Indemnity Co., corporate shareholders alleged securities violations against corporate directors and officers, claiming they misrepresented a predecessor company's liability for pollution and caused a decline in the stock price. n61 The insurer denied coverage on the ground that the exclusion for "financial loss to [the Company's] security holders . . . based on, arising out of, or in any way involving . . . the . . . discharge, release, escape, seepage, migration or disposal of pollution into the atmosphere" was broad enough to include the shareholder suit. n62 The New Jersey Appellate Division disagreed, finding the connection between the pollution exclusion and alleged securities violations too attenuated. n63 Policyholders seeking to avoid a pollution exclusion for suits alleging breach of corporate duties arising out of the Gulf oil spill may be able to make a similar argument.

Additionally, recovery is barred under directors and officers coverage for intentional breaches of corporate duties. n64 In light of the widespread media coverage of the expanding oil spill, insurers may argue that directors' and officers' breaches were intentional because they were fully apprised of the impending oil spill. The insurer has the burden to prove a breach was intentional. n65 Reassuringly for policyholders, coverage usually exists for wrongs that exceed simple oversight. n66

D. Liability Coverage

Third-parties will not face liability for the oil spill or its cleanup. However, third-parties could face liability for bodily injury caused by oil on their property or from others alleging property owners permitted oil to seep onto their property. Certain types of liability policies may cover liabilities faced by third-parties arising from the oil spill.

1. Commercial General Liability Policies

Commercial general liability ("CGL") policies, written on a per occurrence basis, provide coverage for liabilities arising from bodily injury or third-party property damage. n67 They were initially designed to cover all risks not specifically excluded by the carrier. n68 Until the early 1970s, CGL policies provided coverage for all liabilities arising from pollution related damages. n69

Most CGL policies have included some form of pollution exclusion since the early 1970s. n70 Initially, policies contained the "sudden and accidental" pollution exclusion, which still left policyholders with some coverage for pollution. n71 However, modern CGL policies usually contain a "total" or "absolute" pollution exclusion, which creates a complete bar for liability for environmental injuries. n72 Insureds holding policies with such exclusions will find their CGL policies do not provide coverage.

Not all liability policies, however, contain absolute pollution exclusions. For instance, Certain Underwriters at Lloyd's, London ("London") filed suit against BP in the Southern District of Texas on May 21, 2010. In the complaint, London alleges BP constitutes an additional insured under excess policies sold to Transocean only for "above land/water surface pollution from substances in Transocean's possession." n73 Thus, the complaint alleges BP does not have additional insured status because the oil emanates from a well below the water's surface. n74 London's pleading makes clear that some level of pollution coverage exists under its policies.

2. Environmental Impairment Liability Policies

Environmental impairment liability ("EIL") policies, on the other hand, provide coverage specifically for liabilities arising from environmental contamination. In fact, carriers purportedly developed EIL insurance to fill the hole in coverage created by inclusion of the standard pollution exclusion in commercial general liability policies. n75 These policies provide coverage for pollution related bodily injury and property damage liability as well as the costs of off-site cleanup. n76

Of course, EIL coverage will be of greater importance to BP and similar entities liable for remediation as opposed to those damaged by the spill. As mentioned, however, third-parties may find themselves facing liabilities arising from oil. Unfortunately, most small businesses without a serious pollution risk do not purchase EIL coverage, nor would they

likely be able to rely upon such coverage for the losses at issue. EIL policies, unlike CGL coverage, are drafted on a claims-made, rather than occurrence, basis. n77 Most policies contain an extended sixty day reporting period and permit the insured to purchase additional time to report claims. n78 However, where policies have no extended period, an insured may lose coverage if a subsequently purchased policy does not cover environmental accidents that occurred before inception. As claims made policies, an insurer need not show prejudice to escape coverage for late notice. n79 As a result, it is absolutely necessary to submit a claim for coverage as soon as possible.

To obtain EIL coverage, a business must submit an environmental assessment report prepared by an independent environmental consulting firm. n80 Based on the report and its own investigation, an insurer will usually issue an EIL policy that excludes any potential pollution risks. n81 This can be a major problem for companies seeking to obtain complete pollution coverage. However, it should have little consequence to policyholders along the coast affected by the oil, unless their EIL carrier considered oil a considerable enough risk to exclude at the time of policy issuance.

IV. Conclusion

Policyholders have a variety of potential coverages from which to seek reimbursement for damages arising from the Gulf oil spill. Close examination of policy provisions is necessary to determine whether the grant of coverage includes the damages claimed. In particular, policyholders must closely review exclusions for contamination, pollution, and oil to determine their application to oil claims. Most importantly, policyholders should collect and review all policies immediately to assess what costs and expenditures will have coverage.

McCarter and English LLP on Key Insurance Coverage Issues Associated with Chinese Drywall

By Brian J. Osias, Nicholas M. Insua and Jason M. Alexander

December 30, 2009

SUMMARY: Lawsuits are occurring alleging property damage and bodily injury arising from contaminated Chinese Drywall in residential construction. Insurance coverage disputes have followed, some resulting in declaratory judgment actions. Insurers' defenses include applying the pollution exclusion. Courts analyzing Chinese Drywall coverage disputes will likely look to analogous authority as to other underlying toxic torts, including mold and asbestos.

ARTICLE: INTRODUCTION

The use of contaminated Chinese Drywall in residential construction has been linked to serious health problems and extensive property damage. Homeowners, homebuilders, developers and contractors, among others, have therefore turned to their insurers looking for coverage. Insurers, however, have resisted claims related to contaminated Chinese Drywall invoking various policy provisions. Indeed, commercial insurers have filed declaratory judgment actions seeking declarations that they owe their insureds no coverage for claims arising from contaminated Chinese Drywall. After providing an overview of Chinese Drywall and associated claims, this article will focus on a few of the key arguments commercial insurers are asserting in liability coverage disputes with their policyholders over coverage for contaminated Chinese Drywall. Namely, the article discusses the pollution exclusion, whether Chinese Drywall claims constitute an "occurrence," and potential recoupment of defense costs.

BACKGROUND

Allegedly contaminated Chinese Drywall was imported into the United States mainly between 2004 and 2007. Prior to 2005, Chinese Drywall imports into the United States were miniscule. Since 2006, however, the United States imported an estimated 550 million pounds of contaminated Chinese Drywall. Tim Padgett, *Is Drywall the Next Chinese Import Scandal?*, Time, Mar. 23, 2009, <http://www.time.com/time/printout/0,8816,1887059,00.html> (last visited Dec. 10, 2009). The demand for foreign drywall was driven largely by the rebuilding efforts in the Southeastern United States after Hurricane Katrina, and other hurricanes, as well as by the mid-decade housing boom. *Id.* Although it is difficult to know how extensive the problem is, some have estimated that upwards of 100,000 homes may contain

allegedly contaminated Chinese Drywall. Duane Marsteller, *Extent of Chinese Drywall Problem Questioned*, Dec. 4, 2009, Miami Herald, <http://www.miamiherald.com/news/breaking-news/v-fullstory/story/1359617.html>.

The Consumer Products Safety Commission ("CPSC"), is heading a group of federal agencies, including HUD, the CDC and EPA, in investigating alleged problems associated with contaminated Chinese Drywall. CPSC, *Imported Drywall Fact Sheet*, September 2009 (can be found at www.billnelson.senate.gov/news/090923cpscfactsheet.pdf). Human exposure to the toxins released from the contaminated Chinese Drywall (mainly sulfurous gases) allegedly cause health problems including "irritated and itchy eyes and skin, difficulty in breathing, persistent cough, bloody noses, runny noses, recurrent headaches, sinus infection, and asthma attacks." *CPSC Drywall Information Center*, <http://www.cpsc.gov/info/drywall/investigation.html> (last visited Dec. 30, 2009). Contaminated Chinese Drywall has also been linked to the blackening and corrosion of metal surfaces like air conditioning coils, copper pipes and electrical wiring. *Id.* Such corrosion has led to the breakdown and malfunctioning of central air conditioning units, appliances, and electronics. *Id.*

The first complaints related to contaminated Chinese Drywall were received by the CPSC in late December 2008. Consumers complained of a "rotten-egg" odor and the corrosion of metal in their homes. The CPSC reports that as of November 2009, it has received over 2,700 complaints. Although those complaints have come from 36 states, Washington D.C., and Puerto Rico, they have been concentrated heavily in states with warm, humid climates. Approximately 95% of the complaints are from Florida, Louisiana, Mississippi, Alabama and Virginia. *CPSC Drywall Information Center*, <http://www.cpsc.gov/info/drywall/where.html> (last visited Dec. 30, 2009). Heat and humidity allegedly accelerate the release of toxins in the drywall. Jason Hannan, *Florida: Drywall has material that can emit corrosive gas*, *CNN.com*, Mar. 24, 2009, <http://www.cnn.com/2009/US/03/24/chinese.drywall/> (last visited Dec. 30, 2009).

INSURANCE COVERAGE LAWSUITS

Aside from lawsuits, including class actions, filed by homeowners against their homeowners insurers, at least two lawsuits have been filed by commercial insurers seeking to escape their coverage obligations in connection with claims arising from contaminated Chinese Drywall. See *Complaints in Builders Mutual Ins. Co. v. Dragas Mgmt. Corp., et al.* No. 2:09-CV-185 (E.D. Va. filed April 23, 2009), and *Am. Home Assur. Co. V. Peninsula II Developers, Inc.*, No. 09-CV-23691 (S.D. Fla., filed Dec. 11, 2009). Both complaints allege, inter alia, that the pollution exclusion serves to bar insurance coverage for claims arising from Chinese Drywall.

THE APPLICABILITY OF THE POLLUTION EXCLUSION TO CHINESE DRYWALL CLAIMS

As noted, Chinese Drywall claims have lead to denials of coverage based on the so-called pollution exclusion - just as with previous cases involving asbestos-containing building materials and mold. See Complaint in *Am. Home Assurance Co., supra*, at 26 (alleging that "Total Pollution Exclusion" barred coverage "for bodily injury and property damage ... associated with defective [Chinese] drywall, arising from the actual, allege [sic] or threatened discharge, dispersal, seepage, migration, release or escape of 'pollutants,' as that term is defined in the policy"). But a growing jurisprudence has recognized that the pollution exclusion should not apply to such claims, which are confined to the indoors and do not cause traditional, industrial pollution of the environment, of the type intended to be targeted by such exclusions.

For example, in *Nav-Its, Inc. v. Selective Ins. Co. of Am.*, 869 A.2d 929 (N.J. 2005), the New Jersey Supreme Court considered whether a pollution exclusion in a CGL policy precluded coverage for bodily injury claims resulting from alleged exposure to fumes from painting, coating and floor sealing work. The work was performed in a shopping center, and the claims were brought against the contractor by a tenant in the center. The pollution exclusion in *Nav-Its* provided that the insurer was not required to defend or indemnify a suit alleging injury arising out of a pollution hazard. The *Nav-Its* exclusion also defined "pollutant" to include "any solid, liquid, gaseous, or thermal irritant or contaminant," and defined "pollution hazard" to mean "an actual exposure or threat of exposure to the corrosive, toxic or other harmful

properties of any 'pollutants' arising out of the discharge, dispersal, seepage, migration, release or escape of such 'pollutants.'" *Id.* at 932. The carrier refused to defend or indemnify its insured, and the insured sought a declaration of the carrier's obligations. The New Jersey Supreme Court determined that the pollution exclusion did not bar coverage:

"We have reviewed the development of the pollution exclusion to assist our interpretation of the pollution exclusion in the Selective policy. Based on that review, we are confident that the history of the pollution-exclusion clause in its various forms demonstrates that its purpose was to have a broad exclusion for *traditional environmentally related damages*.

"Notably, we have not been presented with any compelling evidence that the pollution exclusion clause in the present case, when approved by the Department of Insurance, was intended to be read as broadly as Selective urges."

Id. at 936-37 (citations omitted) (emphasis added). The court concluded that "the scope of the pollution exclusion should be limited to injury or property damage arising from activity commonly thought of as traditional environmental pollution" and observed that this conclusion was consistent with the policy terms "discharge, dispersal, release or escape." *Id.* at 937. The court noted that the foregoing terms reflect "the exclusion's historical objective-avoidance of liability for environmental catastrophe related to intentional industrial pollution." *Id.* (citation omitted).

Similarly, the District of New Jersey, in *Baughman v. U.S. Liab. Ins. Co.*, No. 08-2901, 2009 U.S. Dist. LEXIS 106400 (D.N.J. Nov. 12, 2009), recently followed *Nav-Its* and refused to apply the pollution exclusion to claims for bodily injury resulting from exposure to mercury inside a daycare center. The court rejected the insurer's claim that the underlying case involved traditional environmental pollution, stating that "traditional environmental pollution does not include exposure to toxic materials released indoors." *Id.* at *28.

In another recent decision, *In re Idleaire Tech. Corp.*, 2009 Bankr. LEXIS 343 (Bankr. D. Del. Feb. 18, 2009), the insurers argued that the pollution exclusions in their policies precluded coverage for bodily injury claims brought against their insured, a manufacturer of truck HVAC systems, by truckers who were injured when the HVAC system allowed carbon monoxide to enter the sleeper cab of a tractor-trailer, resulting in serious bodily injury. The pollution exclusion in question precluded coverage for the "'contamination' of any 'environment' by 'pollutants' that are produced at any time, anywhere, in any way." *Id.* at *5. "Environment" was defined to include "any person, *any man-made object or feature*, animals, crops or vegetation, land, bodies of water, underground water or water table supplies, air and any other feature of the earth or its atmosphere, whether or not altered, developed or cultivated, including, but not limited to any of the above, owned, controlled or occupied by the insured." *Id.* at *6 (emphasis added). The United States Bankruptcy Court for the District of Delaware determined that the clause was latently ambiguous: "Because the terms 'irritant' and 'contaminant,' when viewed in isolation, are virtually boundless in their inclusion, for there is virtually no substance or chemical in existence that would not irritate or damage some person or property, the Total Pollution Exclusion is latently ambiguous" *Id.* at 30-31 (citation omitted). The court also determined that enforcing the exclusion as drafted would defeat the policyholders' reasonable expectations, and was thus contrary to applicable law. *Id.* at 27-28.

Not all courts agree, however, that pollution exclusions should not apply to "indoor" losses not associated with traditional, environmental pollution. In *CBL & Assoc. Mgmt. Inc. v. Lumbermens Mut. Cas. Co.*, No. 05-cv-210, 2006 U.S. Dist. LEXIS 51240 (E.D. Tenn. July 25, 2006), the owner of a shopping center sought coverage from two of its carriers for the claims filed against one of its tenants by a subtenant. The subtenant filed suit against the tenant, alleging, inter alia, negligent infliction of emotional distress resulting from a plumbing problem that "caused sewage, debris, waste and water to shoot out of the sink drains and flood [the space] during rainfalls." *Id.* at *6. Both insurance policies provided coverage, albeit for different periods of time, for bodily injury, and both contained a pollution exclusion precluding coverage for bodily injury "arising out of the actual, alleged or threatened discharge, dispersal, seepage, migration, release or escape of pollutants . . . [a]t or from any premises, site or location which is or was at any time owned or occupied by or rented or loaned to . . . any insured." *Id.* at *8 (emphasis added). The carriers denied coverage, and the owner filed suit, contending that pollution exclusions only apply to traditional environmental pollutants and not sewage and waste.

Noting that Tennessee courts had not yet determined the meaning of the pollution exclusion, the district court pointed to the policies' definition of pollutants: "any solid, liquid, gaseous or thermal irritant or contaminant, including smoke, vapor, soot, fumes, acids, alkalis, chemicals and waste." *Id.* at *19-20. Relying on a standard dictionary definition of waste, the court concluded that "the pollution exclusion is unambiguous and excludes from coverage the damages claimed by [tenant]. While the materials presented in [the space] do not fall under the definition of 'irritant,' it is clear that they do fall under the definitions of both 'contaminant' and 'waste.'" *Id.* at *21. In reaching its conclusion, the court noted:

"The Court is aware that there are two distinct lines of cases interpreting the pollution exclusion - one line supporting Plaintiff's argument and one line supporting Defendants' argument. In the first line of cases, the pollution exclusion clause is found, based on the original purposes behind the inclusion of such clause in insurance policies and the use of terms of art from environmental law, to be applicable only to traditional environmental pollutants. In the second line of cases, the pollution exclusion is found to be applicable to all types of pollution that fall under the letter of the clause, not just traditional environmental pollutants.

"The Court concludes, however, that Tennessee courts, if faced with this issue, would adopt the reasoning of the second line of cases and would conclude that the pollution exclusion applies to all types of pollution, including sewage, and not just to traditional environmental pollutants."

Id. at *22-24 (citations omitted). While the CBL court did not address that the pollution clauses specifically addressed pollution at a *premise*, it based its broad reading on Tennessee's "well-established principles," which "require the Court to determine the 'plain, ordinary and popular meaning' of the language at issue." *Id.* at *25-26.

ARE ALLEGED "CONSTRUCTION DEFECT" CLAIMS COVERED BY CGL POLICIES?

Many Chinese Drywall claims also will allege that the bodily injury or property damage arose from a construction defect. Insurance companies frequently deny such "construction defect" claims for a variety of reasons, including that construction defect claims allegedly do not arise from an "occurrence," they do not cause "property damage," or a series of exclusions - commonly, collectively referred to as the "business risk" exclusions - apply. This is an additional hurdle policyholders will have to clear when seeking coverage for Chinese Drywall claims. Further, as with the pollution exclusion, decisions are mixed about whether such claims should be covered.

For example, In *Times Fiber Communications, Inc. v. Travelers Indem. Co. of Ill.*, No. CVX05CV030196619S, 2005 Conn. Super. LEXIS 335 (Conn. Super. Ct. Feb. 2, 2005), the court held there was no occurrence where plaintiffs (policyholders) supplied their customer (Southwestern Bell Video Services) with millions of feet of telephone/coaxial cable used in residential dwellings that Southwestern Bell ultimately had to remove and replace because the cable did not meet National Electric Code requirements and was not UL approved and listed. The cable was installed inside of walls, so the removal and replacement of the cable required those walls to be torn open and repaired. The policyholders wrongly assured Southwestern Bell the cable was suitable for indoor residential use. Southwestern Bell sued the policyholders (in two actions) for its damages resulting from the need to remove and replace the cable. The policyholders sought a defense for Southwestern Bell's suits.

The policies at issue defined "Property Damage" as including both (1) physical injury to tangible property including the resulting loss of use of said property and (2) loss of use of tangible property that is not injured. The court first held that property damage does not include damage due to the cable's removal. "In this case there is no allegation that the [policyholders'] cable harmed anything. Instead, the claims are solely for replacement and repair costs resulting from the removal of the defective cable. It is clear that there would be no coverage if the cable could have been removed without causing damage to the surrounding walls and based on the analysis in *Weedo* the court finds that the allegations in this case are for contractual liability due to faulty workmanship instead of tort liability for physical damages." *Id.* at

*22.

Second, the court held that although the removal of the cable resulted in loss of use of tangible property (i.e., the residential dwellings), such loss of use was not caused by an occurrence and, thus there was no coverage. The policies defined "occurrence" to mean "accident, including continuous or repeated exposure to substantially the same general harmful conditions." "Accident" was undefined in the policy but has been interpreted by the Connecticut Supreme Court to mean an unintended or unexpected happening. According to the court, the allegations in Southwestern Bell's complaints did not constitute accidents:

"Our Supreme Court has stated that 'the "accident" is "the event" causing the injury, not the cause of that event.' In this case the alleged 'accident' would have to be the removal of the cable because this was and will be the event causing the injury to the [residential dwellings]. The alleged loss of use of property is therefore based entirely on harm which resulted from repair activities necessary to replace the nonconforming cable. The accident was therefore not the installation of the non-conforming cable as claimed by plaintiff. It is also clear that the decision to remove the cable and make repairs was not an accident and therefore not an occurrence. The repairs were not something that happened 'unexpectedly without design.' Accordingly, there are no allegations of property damage caused by an occurrence in the underlying complaints and the defendants had no duty to defend the plaintiffs in the California or Texas actions."

Id. at *29.

Similarly, the Pennsylvania Supreme Court has held that "faulty workmanship" does not constitute an occurrence for purposes of CGL coverage for "accidents." See *Kvaerner Metals Div. of Kvaerner U.S., Inc. v. Commercial Union Ins. Co.*, 908 A.2d 888, 899 (Pa. 2006) (stating that providing CGL coverage for faulty workmanship would improperly "convert a policy for insurance into a performance bond"). The *Kvaerner Metals* case involved construction of a coke oven battery for Bethlehem Steel Corporation. *Id.* at 891. The ovens were defectively constructed, and Bethlehem sued for breach of contract and breach of warranty. *Id.* The trial court found there was no "accident" triggering coverage. *Id.* at 894. On appeal, the Superior Court reversed, and the Supreme Court reversed again. The Supreme Court held that faulty workmanship does not constitute an "occurrence," defined as "an accident, including continuous or repeated exposure to substantially the same general or harmful conditions." *Id.* at 897-98. Whereas the *Kvaerner* court discusses several cases from Pennsylvania and other jurisdictions which hold that faulty workmanship might be covered if it causes damage to other property, *see id.* at 898-99 (citing, *inter alia*, *Snyder Heating v. Pa. Mfrs. Ass'n Ins. Co.*, 715 A.2d 483 (Pa. Super. Ct. 1998) (addressing third-party property damage caused by malfunction of an insured's product)), the Court's actual holding makes no mention of that nuance, and simply declares that faulty workmanship is not an occurrence.

In contrast, in Conn. Super. LEXIS 2268 (Conn. Super. Ct. July 27, 2006), the court held there was an occurrence where the insured was sued by the Bellagio Hotel for alleged defects in the design and construction of showers in over 2,500 Bellagio hotel rooms. The Bellagio alleged the defective design and construction resulted in water and mold exposure to the walls, floors, drywall, and so forth, surrounding the showers. The complaint, however, did not allege a date upon which the water and mold exposure began.

Travelers refused to defend the insured, claiming its policies expired prior to the date the alleged property damage occurred (Travelers policies expired on February 1, 1998 and the water leakage was discovered around March 1998). The court held that damage from water or mold may "occur over a period of time" and such damage can constitute an occurrence. The date on which the exposure began was vital to the court's resolution of the insurer's defense obligation:

"Therefore, the date at which this repeated exposure to water and mold began is paramount to the court's resolution of the plaintiff's motion. Travelers is correct in asserting that the underlying complaint does not allege a specific date when the property damage occurred that is within the policy period. However, in viewing the record in a light most favorable to the plaintiff, it is conceivable that the property damage began at some point during the policy period. If the alleged property damage began sometime between the installation of Laticrete's shower pans in September of 1996 and the

expiration of the policy period on February 1, 1998, then Travelers would have a duty to defend Laticrete."

Id. at *9. The event that triggers coverage, however, is not the installation of the product, but rather the water leaking through the product and causing damage to the property. The court inferred from the known facts that the triggering event (i.e., water damage) possibly occurred during the coverage period, therefore, Travelers could not escape its defense obligations. Id. at *10-11.

INSURERS TREATMENT OF MIXED CLAIMS

Underlying lawsuits arising out of Chinese Drywall, like other construction defect lawsuits, are likely to involve both covered and non-covered allegations. For instance, insurers generally agree that under a CGL policy allegations of negligence are covered, but may dispute coverage for counts alleging breach of contract or intentional conduct. In these sort of "mixed actions" insurers will often argue that they need only pay for costs associated with the covered counts (an approach which the law generally disfavors), or, alternatively, that they can seek to recoup costs expended in connection with uncovered allegations at the conclusion of the underlying lawsuit. Whether the insurer is entitled to do so is often a function of state law. Depending on the jurisdiction, the insurers' right to reimbursement may hang over the policyholder's head throughout the litigation concerning Chinese Drywall liabilities.

A seminal case on this topic is *Buss v. Transamerica Insurance Company*, 939 P.2d 766 (Cal. 1997), which held that an insurer may seek to recoup from a policyholder a share of defense costs. In the case, the insurer defended the policyholder based upon a single cause of action. After the case settled, the insurer sought reimbursement for the non-covered counts and the policyholder disputed the insurer's right to do so. The California Supreme Court held that the insurer may seek reimbursement in connection with claims that are not even potentially covered and that can be allocated solely to those claims. Id. at 772-74. More recently, the California Supreme Court issued a decision largely parroting the reasoning in *Buss*. See *Scottsdale Ins. Co. v. MV Transportation*, 115 P.3d 460 (Cal. 2005). Under *Buss*, however, the insurer must specifically identify its "right" to recoupment in a reservation of rights letter. See *Buss*, 939 P.2d at 784 n.27. Absent such a reservation, there would be no right to recoupment.

New Jersey is similar to California in terms of the law with respect to mixed actions, but demonstrates that the effect of the apportionment cases is muted by practical realities. Indeed, in cases involving a mix of covered and uncovered claims, the New Jersey Appellate Division has held:

"[The insurer's] duty to defend is limited to the allegations covered under the policy, provided that the defense costs can be apportioned between covered and non-covered claims. When the defense costs cannot be apportioned, the insurer must assume the cost of the defense for both covered and non-covered claims."

See *Hebala v. Healthcare Ins. Co.*, 370 N.J. Super. 260, 275 (N.J. App. Div. 2004), quoting *SL Indus., Inc. v. Am. Motorists Ins. Co.*, 128 N.J. 188, 214-15 (1992) (emphasis added), also citing *Cont'l Cas. Co. v. Bd. of Educ., Charles County*, 489 A.2d 536, 545 (Md. 1985) ("So long as an item of service or expense is reasonably related to defense of a covered claim, it may be apportioned wholly to the covered claim.").

Although *Hebala* states that the court may estimate an apportionment, the opinion makes clear that any such estimate must be based upon a careful and thorough review of the attorney bills. The court cites the following example:

"[I]f the insured's counsel deposed a witness as to issues relevant to [an uncovered claim] and [a covered claim], and simply recorded the time spent at the deposition without explanation - i.e., "attend deposition of Smith for 7 hours" - the court must endeavor to estimate how much of that time was (a) solely of interest to the [covered claim], (b) solely of interest to the [uncovered claim], and (c) otherwise indistinguishable. In that example, [the insurer] would be obligated to reimburse [the insured] for time falling within the second category but not the first; [the insurer] would also be obligated for the time falling within the third category to the extent it is reasonably related to the defense of the [covered claim]."

See 370 N.J. Super. at 278. *Hebala* also instructs that the amount of overlap between covered and non-covered claims must be determined -- with the overlap to the benefit of the insured. *Id.* at 266-67 ("the trial judge should not reduce [the amount recoverable] because the same services were rendered, or benefited, [the insured's covered claims].") Additionally, the insurer has the burden of persuasion, by a preponderance of the evidence, as to whether and how fees should be allocated. *Id.* at 280. These factors are likely to be important in Chinese Drywall cases because many of the defense costs will be coincidental. The defense lawyer will have to show up for the deposition, for example, in connection with the covered and non-covered counts and it often will be difficult to segregate time. Therefore, apportionment between covered and non-covered time may be difficult, if not impossible. This favors the policyholder.

Other jurisdictions go a step further and reject recoupment entirely. New York, for example, rejects the right of recoupment except where the policy specifically includes that right. CGL policies typically do not. *Federal Ins. Co. v. Kozlowski*, 792 N.Y.S.2d 397, 404 (N.Y. App. Div. 1st Dept. 2005), for example, recognized the concept of recoupment, but only in very limited circumstances. It noted "[t]his Court has recognized that *under a directors and officers liability policy calling for the reimbursement of defense expenses*" ... "insurers are required to make contemporaneous interim advances of expenses where coverage is disputed, subject to recoupment in the event it is ultimately determined no coverage was afforded." *Id.* (emphasis added). In *Allstate Ins. Co. v. Oles*, 838 F. Supp. 46, 55 (E.D.N.Y. 1993), on the other hand, the Court declined to order the insured to repay defense costs under homeowner's and umbrella policies that did not contain an express reimbursement provision:

"In addressing the recovery of attorney's fees, the Court notes that ... the main case relied upon by Allstate, does not address the issue of recovery of reasonable attorney's fees after counsel is permitted to withdraw as a result of a finding that the insurance coverage is excluded due to the intentional conduct of the insured. Additionally, none of the parties address this issue in any of the papers. In an independent review of the law, the Court was unable to locate binding precedent requiring the awarding of reasonable attorney's fees to Allstate in this type of situation. *Accordingly, the Court declines to award the reasonable value of the services rendered by Allstate's attorneys.*"

(Emphasis added). Similarly, courts have held that the concept of reimbursement is fundamentally inconsistent with an insurers' defense obligation. The United States District Court in Minnesota, for example, rejected outright an insurer's right to reimbursement:

"The question as to whether there is a duty to defend an insured is a difficult one, but because that is the business of an insurance carrier, it is the insurance carrier's duty to make that decision To allow the insurer to force the insured into choosing between seeking a defense under the policy, and run the potential risk of having to pay for this defense if it is subsequently determined that no duty to defend exists, places the insured in the position of a making a Hobson's choice. *Furthermore, endorsing such conduct is tantamount to allowing an insurer to extract a unilateral amendment to the insurance contract.*

"When an insurer tenders a defense or pays defense costs pursuant to a reservation of rights, the insurer is protecting itself as much as it is protecting its insured. Thus, we cannot say that an insured is unjustly enriched when its insurer tenders a defense in order to protect its own interests.... *Certainly, if an insurer wishes retain its right to seek reimbursement of defense costs ... the insurer is free to include such a term in its insurance contract.*"

See *Westchester Fire Ins. Co. v. Wallerich*, 527 F. Supp. 2d 896, 905-06 (D. Minn. 2007) (emphasis added), *aff'd in relevant part*, *Westchester Fire Ins. Co. v. Wallerich*, 563 F.3d 707, 715 (8th Cir. 2009) (stating that most recent decisions "have refused to recognize claims by insurers for reimbursement of defense costs expended under a unilateral reservation of rights, absent a provision for such reimbursement in the insurance policy.").

CONCLUSION

In short, Chinese Drywall has generated and will likely continue to generate extensive litigation. Although to date

the number of coverage suits related to Chinese Drywall have been relatively few in number, such lawsuits may increase over time. The battle lines between insurers and their insureds have likely already been drawn in connection with other, similar liabilities such as mold, asbestos and construction defect. Courts will be called upon to consider *inter alia* whether Chinese Drywall contamination is a "Pollutant," and whether defects associated with Chinese Drywall constitute an "occurrence," as well the treatment of defense costs for "mixed claims." These are three of the potential issues, but there will undoubtedly be a myriad of others. Although Chinese Drywall is not likely to tread entirely new ground in terms of coverage issues, nuances will without doubt present themselves as the coverage case law develops.

Sonnenschein on Insurance Subrogation and the Made-Whole Rule Under ERISA

2009 Emerging Issues 4760

Sonnenschein Nath & Rosenthal on Insurance Subrogation and the Made-Whole Rule: When Does and Should It Apply Under ERISA

By William T. Barker and Frank P. VanderPloeg

December 23, 2009

SUMMARY: First-party insurers are usually entitled under state insurance law to subrogation or reimbursement, typically subject to a requirement that the insured first be made whole for his injuries. Under ERISA, there is a multi-way split among the circuits as to whether and when a Plan's rights of subrogation or reimbursement will be conditioned on the beneficiary being made whole. This commentary examines the cases and analyzes the proper rules.

ARTICLE: Insurance policies and employee benefit plans commonly provide that, when benefits are paid for losses like damage to property or medical expenses, then the insurer is subrogated to the insured's rights to recover from any responsible tortfeasor and/or is entitled to be reimbursed out of any recovery the insured might make from any tortfeasor. Even without express provisions in the policy, state common law often would grant similar rights, but typically qualified by a requirement that the insured must be made whole before the insurer is entitled to any recovery.

This issue involves a significant difference between state insurance law (which almost uniformly applies some variation of the made-whole requirement) and federal common law of employee benefits under the Employee Retirement Income Security Act ("ERISA") (where there is a multi-way circuit split). This commentary examines and evaluates the various rules applied under ERISA, after providing background on state law. n1

I. BACKGROUND: INSURANCE SUBROGATION AND THE MADE-WHOLE REQUIREMENT

A. The Made-Whole Requirement, the Principle of Indemnity, and the Collateral Source Rule

One of the doctrines of insurance law is the "principle of indemnity," "[t]he concept that insurance contracts shall confer a benefit no greater in value than the loss suffered by an insured." n2 As a leading treatise explains:

"[I]t is now a generally accepted fundamental tenet of insurance law that opportunities for net gain to an insured through the receipt of insurance proceeds exceeding a loss should be regarded as inimical to the public interest. In other

words, insurance arrangements are structured to provide funds to offset a loss, either wholly or partly, and the payments made by an insurer generally are limited to an amount that does not exceed what is required to restore the insured to a condition relatively equivalent to that which existed before the loss occurred." n3

The principle of indemnity coexists with the collateral source rule, whereby a tortfeasor is liable for all damages suffered by the injured party, whether or not those damages have been compensated by insurance or some other collateral source. n4 Allowing subrogation or reimbursement reconciles those two rules, by compensating the injured party's loss, but allowing the collateral source to recover any payments made that would exceed the net loss after the tort recovery. n5 Thus, the primary burden of compensating tortious injuries is placed on the tortfeasor, with collateral sources playing a secondary role, only to the extent necessary.

The principle of indemnity serves two purposes of current significance. First, by eliminating any profit from suffering an insured loss, it avoids creating any incentive to cause such losses (as by arson) and it minimizes the incentives to take less care to avoid such losses. Second, by limiting the net amount the insurer must pay and allowing the insurer to set premiums appropriate for that net payment level, it avoids the need to charge higher premiums that would create double-recovery windfalls for some insureds at the expense of those who have no opportunity for such a double recovery. Such double recoveries are regarded as a form of unjust enrichment: while the insured has paid a premium for compensation of losses, premiums should take account of the principle of indemnity and should not include the costs of providing a net recovery in excess of the loss. n6 Paying higher premiums for a chance at a double recovery would have some elements of a lottery; rational insureds would not want to participate in such a lottery, because charges for the insurer's expenses and profits would make any expected recovery less than the cost. n7

In an ERISA case, the Seventh Circuit has summarized the argument for allowing subrogation or reimbursement rights to insurers (whether or not subject to a requirement that the insured be made whole):

"In the usual case the insured incurs a medical expense for which he is promptly reimbursed by the insurance company (or equivalent), which then exercises its right of subrogation and goes off on what sometimes proves to be a wild goose chase after a possible tortfeasor to whom the expense can be shifted. The insured is out of the picture - well, not entirely, because he is entitled to any excess recovery by the insurance company. Subject to this qualification, of which more later, the risk of an uncertain recovery is shifted from the individual to a specialist in bearing risk and enforcing claims - the insurance company. The price of the insurance is thereby reduced (or, equivalently, the insured can buy more insurance for the same price) because the insurance company acquires a contingent claim by virtue of the subrogation clause. Without subrogation, a part of the risk is shifted back to the insured. He pays more for the insurance because he retains, rather than (in effect) sells, a right to obtain through litigation a recovery that may actually exceed the actual loss that (after receiving the insurance proceeds) he suffered. This is because, by virtue of the collateral benefits rule, a tort plaintiff need not deduct from the judgment he receives in his tort suit compensation for the same loss which he may have obtained from another source, such as an insurance policy."

A legal right, for example a tort victim's right to sue his tortfeasor for damages, is like a lottery ticket. Its payoff is highly uncertain. Subrogation, consistent with the objective of insurance, transfers the lottery ticket from the individual policyholder to the collectivity of policyholders. The risk is spread, and by being spread eliminated or at least greatly reduced. Subrogation also eliminates the incentive to careless behavior created by the collateral benefits rule, which by enabling the insured victim of a tort to recover for the same loss from both the insurance company and the tortfeasor may (depending on the adequacy of tort damages) make the tort victim better off than he would have been had there been no accident. n8

A common-law rule providing insurers a right to subrogation or reimbursement, absent specific provision in the policy on that subject, both implements the public policy expressed in the principle of indemnity and fills a contractual gap by effectively implying contractual terms that probably correspond with what most buyers of insurance would want, if they were fully informed and asked to make a choice. n9 Such a rule is widely followed. n10

B. Implications of Tort Law Rules

A right to subrogation normally operates as a partial assignment by operation of law, entitling the subrogee to step into the shoes of the subrogor and sue the tortfeasor based on the subrogor's rights. Of course, the tortfeasor is entitled not to have the claim split between two lawsuits, but that problem can be avoided by having the insured and the insurer join in a single suit, each seeking recovery of its own portion of the claim. n11 More fundamentally, tort claims for personal injury are commonly held not assignable, a limit that would also preclude true subrogation. n12 One may question the rule against assignment, as applied to claims for medical expenses, n13 but even assuming that assignment is impermissible, the insurer should at least have a common-law right (absent a contrary policy provision) to reimbursement out of any recovery the insured may make, subject to the requirement that the insured be made whole, and equivalent contractual rights should be enforceable. n14 Contractual rights to reimbursement are usually enforced. n15

C. The Made-Whole Requirement in Insurance Law

Courts have taken a variety of approaches to the ability of contractual terms to override the made-whole rule. Many jurisdictions hold that the requirement that the insured be made whole before the insurer is entitled to recover cannot be overridden by any contrary contractual provision. n16

Other jurisdictions hold that contractual language can override the made-whole rule, though they differ on the standard to be applied in determining whether particular language does that. A few say that even general subrogation language, if unambiguous, will override equitable principles n17 Most jurisdictions that allow a contract to override the made-whole rule impose a heightened requirement of clarity and explicitness for contractual language to have that effect n18

Courts requiring clear and explicit contractual language typically do not consider sufficient provisions stating only that the insurer will be subrogated (without addressing priority), n19 that the insurer shall be entitled to reimbursement of "duplicate" payments (when any tort recovery is insufficient to fully compensate the insured and is not allocated to particular damages), n20 that the insurer shall be entitled to reimbursement "to the extent of [its] payment" n21 Language that has been held sufficient specifically addresses the issue of priority. n22 A particularly good, succinct example is:

"" Health Plan ... shall be entitled to the payment, reimbursement, and subrogation as provided in section C(1) regardless of whether the total amount of the recovery of the Member ... on account of the injury or illness is less than the actual loss suffered by the Member"" n23

II. WHAT RULES APPLY UNDER ERISA?

A. ERISA Background

"ERISA comprehensively regulates, among other things, employee welfare benefit plans that 'through the purchase of insurance or otherwise,' provide medical, surgical, or hospital care or benefits in the event of sickness, accident, disability, or death." n24 By a combination of expansive express preemption provisions and implied preemption of conflicting state law, ERISA is designed to "establish [employee benefit plan] regulation as exclusively a federal concern." n25

ERISA expressly preempts "any and all State laws insofar as they may now or hereafter relate to any employee benefit plan" covered by ERISA. n26 But this express preemption is subject to an exception (the "insurance saving clause"), providing that nothing in ERISA "shall be construed to exempt or relieve any person from any law of any State which regulates insurance." n27 The insurance savings clause, in turn, is subject to the "deemer clause" providing that (with certain exceptions) no employee benefit plan "shall be deemed to be an insurance company." n28

These preemption provisions create a distinction between ERISA plans that are funded and administered without insuring the benefit liability ("self-funded plans") and those that provide benefits by purchasing insurance ("insured plans"). "[I]f a plan is insured, a State may regulate it indirectly through regulation of its insurer and its insurer's insurance contracts; if the plan is uninsured, the State may not regulate it." n29 For a law to be deemed a "law ... which regulates insurance" within the meaning of the "insurance saving clause" it must satisfy two requirements: "First, the state law must be specifically directed toward entities engaged in insurance. Second, ... the state law must substantially affect the risk pooling arrangement between the insurer and the insured." n30

In addition to the express preemption provisions, ERISA impliedly preempts state law that conflicts with ERISA. The Congressional intent was "that a federal common law of rights and obligations under ERISA-regulated plans would develop." n31 As a result, all suits to enforce ERISA plan obligations are deemed to arise under federal law and are removable to a federal court, even if pleaded under state law. n32 "[A]ny state-law cause of action that duplicates, supplements, or supplants the ERISA civil enforcement remedy conflicts with the clear [C]ongressional intent to make the ERISA remedy exclusive and is therefore preempted." n33

"ERISA ... contains almost no federal regulation of the terms of benefit plans." n34 Consequently, the rights of beneficiaries depend almost exclusively on interpretation of the plan.

In the first instance, all ERISA claims decisions are made by those who administer the plan called upon to provide the benefits, subject to judicial review if the claimant brings a civil enforcement action. The administrators are fiduciaries and the standard of review is "guided by principles of trust law." n35 That standard depends on the powers conferred on the administrator by the plan: "A trustee may be given power to construe disputed or doubtful terms, and in such circumstances the trustee's interpretation will not be disturbed, if reasonable." n36 But a denial of benefits under ERISA "is to be reviewed under a *de novo* standard unless the benefit plan gives the administrator or fiduciary discretionary authority to determine eligibility for benefits or to construe the terms of the plan." n37 If the plan does give the administrator interpretive discretion and the administrator has a conflict of interest (as when the administrator is an insurer that must pay benefits from its own funds) the court must take account of that conflict as one, case-specific factor that may act as a tie-breaker whenever other factors are closely balanced. n38 By refusing to approve insurance policies granting the insurer interpretive discretion, a state regulator can effectively prohibit insured plans from escaping *de novo* review of claims decisions. n39

B. ERISA and State Law Restrictions on Subrogation

ERISA preempts any state-law restrictions on subrogation by self-funded plans. In *FMC Corp. v. Holliday*, n40 FMC maintained a self-funded health benefit plan. Holliday, a daughter of a Plan participant, was injured in an auto accident. FMC paid a portion of her medical expenses pursuant to the Plan. Her father also brought a negligence action on her behalf against the driver of the auto in which she had been riding as a passenger. The negligence claim was settled and FMC sought reimbursement for its medical payments (in accordance with the terms of the Plan). The Hollidays refused, relying on a Pennsylvania statute precluding any right to subrogation or reimbursement from a claimant's tort recovery. n41 The Supreme Court held the Pennsylvania statute preempted. n42

The Pennsylvania statute "related to" the Plan by directly restricting its right to subrogation or reimbursement:

"Pennsylvania's antisubrogation law prevents plans from being structured in a manner requiring reimbursement in the event of recovery from a third party. It requires plan providers to calculate benefit levels in Pennsylvania based on expected liability conditions that differ from those in States that have not enacted similar antisubrogation legislation. Application of differing state subrogation laws would therefore frustrate plan administrators continuing obligation to calculate uniform benefit levels nationwide." n43

On the other hand, the Pennsylvania statute was aimed at the insurance industry, so it could be saved by the insurance saving clause. n44 But the deemer clause prevented Pennsylvania from treating the Plan as an insurance

company. n45

It is doubtful that state common law imposing a made-whole requirement can be applied even to insured plans. n46 At least in most jurisdictions, that requirement is not specifically directed at the insurance industry, having arisen from the law of suretyship n47 and presumably applicable to all sorts of subrogation, not just subrogation by insurers. n48 There may be a possibility that jurisdictions prohibiting insurers from contractually overriding the made-whole rule impose that prohibition only on insurers, in which case it might be saved by the insurance saving clause. And, of course, a state insurance law or regulation imposing a made-whole requirement on insurance subrogation would govern an insured plan.

But even if state law is preempted, the possibility remains that the federal courts might adopt the made-whole requirement as a default rule under the federal common law of employee benefit plans.

C. Federal Common Law and the Made-Whole Requirement

1. The leading cases

There is a multi-way split in the circuits on issues relating to the made-whole requirement. Before analyzing the issues, we first review the leading cases. Putting aside the question of what legal rules are proper, the reader is invited to note how insensitive many of the decisions are to the language of the plans they are purporting to interpret.

a. Seventh Circuit. The Seventh Circuit addressed the made-whole requirement in *Cutting v. Jerome Foods, Inc.* n49 The beneficiary in that case had received \$90,000 in medical benefits from the Plan, had recovered \$126,000 from uninsured motorist coverage and \$500,000 on a product liability claim, and estimated her total damages at \$1 million (meaning that she had not been fully compensated). The Plan document provided that the Plan would be subrogated to "all claims" by the covered individual against a third party to the extent of "any and all payments" made (or to be made) by the plan." n50

In analyzing whether the made-whole requirement should be applied to an ERISA benefit Plan, the court found the choice to present a "close question," resolved in that case by the fact that the Plan gave the administrator discretion to interpret the Plan, requiring deference to the administrator's interpretation precisely because the question was close. n51 The court explained why it could be sensible to allow a reimbursement claim even where the beneficiary had not been made whole:

"A 'make whole' rule does not enable the insured to gamble on double recovery, as he would be doing without subrogation. The rule comes into play only if without it the operation of the subrogation clause would, by making the insured in effect pay back the policy benefits with money he has received for another loss caused by the injury that gave rise to the policy claim, leave him with an uncompensated injury. That would be the consequence of subrogating Jerome Foods to Mrs. Cutting's tort claim to the extent of the plan's medical benefits; the uncompensated nonmedical costs that she incurred as a result of the accident would be \$ 90,000 greater if subrogation is permitted. One can see why many state courts have thought that the inclusion of a boilerplate subrogation clause was not intended to have this effect - the effect, practically speaking, of curtailing coverage. To put this differently, rejection of "make whole" makes subrogation a lot like assignment. If insurance contracts required the insured to assign any tort claim he might have to the insurer, the price of the insurance would be lower but *effective* coverage would also be lower. The insured would recover only the policy limits, and not his full damages, even in a case in which a judgment had been secured against the tortfeasor, and collected, for those damages."

These arguments need not be thought decisive in favor of the make-whole rule. It is true that rejecting make whole would bring subrogation closer to assignment, but that would not necessarily be a bad thing. Assignment, by shifting the insured's tort rights to the insurance company, reduces the price of insurance and thus enables the insured to obtain more coverage, in effect trading an uncertain bundle of tort rights for a larger certain right, which is just the sort of trade that people seek through insurance. (The counterargument is that the make-whole rule is most likely to apply in a case of

catastrophic loss, such as the present, where full insurance is rare.) It can also be argued against the make-whole rule that it is administratively more complex, requiring the medical insurer to calculate the insured's total medical and nonmedical loss, and therefore that it makes insurance (or its equivalent in this case) more expensive to the insured - and makes it more expensive to him for the additional reason that he will have to pay for the additional coverage that the rule in effect provides. And no one's demand for insurance is unlimited. The counterargument on the administrative-complexity front is that subrogation (which the make-whole rule would eliminate in cases such as the present) involves an agency problem because of the insured's entitlement to any excess recovery that the insurer-subrogee obtains. The insurer, having no (or very little) interest in making money for the insured, may fail to press hard for an excess recovery. To which it can be replied that the make-whole rule simply shifts the disincentive to press hard from the insurer to the insured. n52

b. Ninth Circuit. In *Barnes v. Independent Automobile Dealers Ass'n Health Benefit & Retirement Plan*, the Ninth Circuit adopted the made-whole requirement as a "default rule" (one to be applied in the absence of a contrary provision in the Plan), finding that the requirement is a "general equitable principle of insurance law." n53

It further reasoned that the made-whole requirement:

"is consistent with ERISA's purpose of protecting participants in employee benefit plans. Because the make-whole rule does not permit an insured to recover from the tortfeasor and if the recovery would exceed the damages, it is also consistent with ERISA's related purpose of maintaining the interest of other employees in their benefit plans." n54

Despite the references to "the insured," the case involved a self-funded plan. n55 The Plan allowed benefits to be withheld pending determination of a third party's liability for the expenses and provided that, upon payment, the Plan "is subrogated to all rights of recovery to the extent of its payment." n56 But the Plan did not grant the administrator discretionary authority to construe the Plan, so review was *de novo*. n57 n58

Barnes's car was rear-ended and she incurred over \$23,000 in medical expenses; she recovered \$25,000 from the tortfeasor and \$5,000 of medical expenses from her auto insurer. n59 She claimed to have suffered over \$8,900 in lost wages and valued her tort claim (disregarding the tortfeasor's policy limit n60) at \$65,000, and the Plan did not dispute that. Accordingly, she had not been made whole, even if the Plan were required to pay the whole \$18,000+ in unpaid medical bills. The Ninth Circuit observed that it "would not apply the interpretive 'make-whole rule' as a 'gap-filler' if the subrogation clause in the Plan document specifically allowed the Plan the right of first reimbursement out of any recovery Barnes was able to obtain even if Barnes were not made whole." n61 But, relying on California insurance cases, it found "no such language." n62

Selection of the made-whole requirement as a default rule was presumably based on the belief (almost universal among state courts) that most insureds would prefer to pay a slightly higher premium for the greater protection provided by insurance with subrogation/reimbursement rights limited by the requirement that the insured first be made whole. Default rules are often set by what most parties probably would have expected, had they considered the issue. n63 But the Seventh Circuit's point in *Cutting* was that, even if that is what most insureds would prefer, not all insureds would agree. Insurance buyers could reasonably choose to pay a lower premium for the narrow coverage that results from giving the insurer priority in any third-party recovery. That is why the common law does not deny them that option.

c. Eleventh Circuit. In *Cagle v. Bruner*, n64 the Eleventh Circuit also adopted the made-whole requirement as a default rule. Bruner's son was injured in an auto accident, and he sought benefits from his union's Benefit Fund ("Fund"). During the son's hospitalization, the Fund demanded that Bruner sign a subrogation agreement and suspended payment when she refused to do so. The agreement provided that the Fund would be reimbursed in full from the proceeds of any recovery received because of the injury. n65 The Fund's trustees had discretion to construe the Plan, so their decisions would be set aside only if arbitrary and capricious. n66 The Plan provided that if the beneficiary or a

dependent "recovers the amount of medical expense paid by the Fund ... the Fund has the right to be reimbursed therefor through subrogation." n67

The court concluded that the Fund was not arbitrary and capricious in demanding reimbursement without any specific showing that medical expenses had been recovered from the tortfeasor, because the Plan called for reimbursement of the "amount of medical expenses paid by the Fund." n68 If the Fund were limited to reimbursement from recoveries identified as paid for medical expenses "Plan participants could destroy the Fund's subrogation rights by negotiating with the tortfeasor to label all or most of the damages received from the tortfeasor as 'pain and suffering,' even when they actually are intended to compensate for medical expenses." n69

However, the court held "that the make whole doctrine is a default rule in ERISA cases." It found that the relevant Plan language was "standard subrogation language, which we think does not demonstrate a specific rejection of the make whole doctrine." n70 While the trustees had discretion to interpret the Plan, the court disagreed with the Seventh Circuit that this permitted the trustees to override the made-whole requirement:

"the make whole doctrine exists because parties to an insurance contract do not always explicitly address what happens when the insurer pays less than the insured's total loss, and the insured achieves a recovery from a third party. The effect of the doctrine is to imply into ambiguous insurance contracts (including ERISA plans) a default provision governing that situation. Either the make whole doctrine is implied into the plan (the default scenario), or it is not (if there is clear language rejecting it). There is no interpretive question for the Fund to consider." n71

The court affirmed a declaration that the made-whole requirement applied to the Fund's claim for reimbursement. n72

d. Sixth Circuit. In *Copeland Oaks v. Haupt*, n73 the Sixth Circuit adopted the made-whole requirement as a default rule. Brooke Haupt, minor daughter of Plan participant Jeffrey Haupt, incurred serious and permanent injuries in an auto accident. The driver's insurance policy with Hartford provided coverage of \$100,000 for bodily injury liability and \$5000 for medical expenses, and Hartford paid the \$5000 and offered to settle the liability claim for \$100,000. A state court ordered that \$30,000 of the settlement be paid to the attorney for the Haupts and the remaining \$70,000 to a trust for Brooke's benefit. The Plan paid \$300,000 in medical expenses after the Haupts signed subrogation and reimbursement agreements, but (after the settlement) Brooke disaffirmed the agreement on the ground of her minority. Copeland Oaks sued, and all payments by Hartford were deferred.

The administrator had discretion to interpret the self-funded Plan, which provided that:

"The Covered Person agrees to recognize the Plan's right to subrogation and reimbursement. These rights provide the Plan with a priority over **any** funds paid by a third party to a Covered Person relative to the Injury or Sickness, including a priority over any claim for non-medical or dental charges, attorney fees, or other costs or expenses." n74

The Sixth Circuit relied on an unpublished opinion in *Marshall v. Employers Health Insurance Co.*, n75 in which it had utilized the made-whole requirement as a default rule "unless there is a clear contractual provision to the contrary." n76 It reasoned that:

"Such a rule is consistent with the equitable principle that [an] insurer does not have a right of subrogation until the insured has been fully compensated, unless the agreement itself provides to the contrary. Also, the make-whole rule is merely a default rule. If a plan sets out the extent of the subrogation right or states that the participant's right to be made whole is superseded by the plan's subrogation right[,] no silence or ambiguity exists." n77

For plan language to displace the default rule "it must be specific and clear in establishing **both** a priority to the funds recovered **and** a right to any full or partial recovery," and the language before the court failed to establish a priority right to a partial recovery. n78 Nor did it matter that the trustees had discretionary authority to construe the Plan, for the same reasons given by the Eleventh Circuit in *Cagle*. n79 But the record did not establish that Brooke had

not been made whole, so it was necessary to remand for determination of that issue. n80

The rules established by Copeland Oaks were applied in *Hiney Printing Co. v. Brantner*, n81 where the district court had properly found that the employee, Brantner, would not be made whole. n82 The Plan contained both a subrogation provision and a reimbursement provision:

"RIGHT OF SUBROGATION

"The Plan shall be subrogated to the extent of any payments under this Plan of health coverage to all of the Plan Member's right of recovery therefore irregardless [sic] of the entity or individual from who the recovery may be due. . . . Any amounts so recovered, however designated, shall be apportioned as follows: this Plan shall be reimbursed to the extent of its payments under this plan of health coverage. If any balance then remains from such recovery, it shall be applied to reimburse the Plan Member and any other policy providing benefits to the Plan Member as their interest may appear.

"REIMBURSEMENT

"If the Plan member recovers damages from any party or through any coverage named above, he must hold in trust for the Employer the proceeds of the recovery, and must reimburse us to the extent of payment made." n83

Hiney Printing, whose Plan was self-funded, contended that this language unambiguously established a right to priority over the insured as to any recovery. The Sixth Circuit disagreed, denying any right to subrogation or reimbursement. As to the subrogation provision, it reasoned that:

"While it may be true, as Hiney Printing argues, that the language contained in the subrogation provision establishes first priority to any funds recovered from a responsible party, *Copeland Oaks* commands that to avoid the application of the make-whole rule, the Plan must also unambiguously establish a right to any full or partial recovery. This the subrogation provision fails to do. Nor does the phrase 'to the extent of any payments' clearly disavow the make-whole rule. While this phrase may establish the Benefit Plan's subrogation rights regarding any amount it paid towards Brantner's medical expenses, it suffers from the same ambiguity as the plan language in *Copeland Oaks*: it does not address whether this right applies when Brantner has not been fully compensated for her injuries. We therefore find the subrogation provision ambiguous because it is silent as to whether the right of subrogation applies to partial recovery, and accordingly, the make-whole rule applies." n84

The court found no reason to regard the made-whole requirement any less applicable to the reimbursement provision, and it too failed to address priority to partial recoveries. n85

e. Fifth Circuit. While the Sixth, Ninth, and Eleventh Circuits have embraced the made-whole requirement, other circuits have not. The Fifth Circuit's decision in *Sunbeam-Oster Co. Group Benefits Plan v. Whitehurst* n86 took the lead in viewing the made-whole requirement more skeptically. Whitehurst, an employee, was severely injured when an 18-wheel tractor-trailer collided with his car. The self-funded Plan paid \$137,000 in medical expenses (up to the time briefs were filed in the appeal). Whitehurst's wife and minor child had seen him being pried from the car, and the three filed a negligence suit against the truck's driver, owner, and insurer. They collectively settled for the insurance limits of \$500,000, plus \$9,000 for property damage to the car. The \$500,000 payment was not allocated between medical expenses and the other claims settled. n87 The district court determined that Whitehurst's tort claim for his own injuries was worth \$2 million and his wife and child together had suffered another \$500,000 in damages. n88 Applying the made-whole requirement, the district court denied the Plan's claim for reimbursement, and it appealed. n89

The Plan's Summary Plan Description ("SPD") excluded "charges for which payment or reimbursement is received by or for the individual as a result of legal action or settlement." n90 Its section on "subrogation" provided that:

"Subrogation allows the Plan to recover duplicate benefit amounts. For example, if you are injured by another individual and incur \$1000 in covered expenses and you sue that individual and recover \$1000 the Sunbeam-Oster Plan does not pay benefits for those expenses. If the plan has already paid benefits, it has the right to recover payment from you."

Before Whitehurst's accident, the Plan issued to participants (but did not file with the Department of Labor) an "Insert and Summary of Material Modification" replacing the quoted language with the following:

"The Plan has subrogation and reimbursement provisions which allow the Plan to recover for benefits it pays which are duplicated from another source. The Plan provides an automatic lien on any funds subject to reimbursement or subrogation.

"Reimbursement gives the Plan the right to collect from you money that you receive in a settlement or lawsuit that covers expenses that the Plan has already paid for. . . .

"Reimbursement Example -- You are injured and receive \$ 1,000 in covered expenses from the Plan. The person who caused your injury agrees to settle with you and pays you the \$ 1,000. The Sunbeam-Oster Plan has a legal right to reimbursement from you of the \$ 1,000." n91

The district court's ruling rested on the conclusion that the SPD was silent as to priority of reimbursement when a beneficiary obtained only a partial recovery, leaving a choice among Plan Priority, a Make Whole priority for the beneficiary, or Pro Rata Sharing. It concluded that the SPD's references to "duplicate benefit amounts" and "benefits ... duplicated from another source" "merely preclude the participant for receiving a 'windfall' or 'double recovery'" and did not establish a Plan Priority. n92 The Fifth Circuit disagreed, opining that state law was preempted and that "the statutory context of ERISA" rendered commercial insurance policies "far from analogous." n93

It reasoned that insurance policies are subject to strict rules of construction favorable to the insured, rules not applicable to ERISA SPD's. n94 If the provisions here had been part of an insurance policy "they would surely have been drafted with more particularity and with a plethora of legalistic boilerplate."

"Instead, though, the particular provisions that here created the Plan's reimbursement right appeared in the SPD, a document that is expressly required by ERISA to be 'written in a manner calculated to be understood by the average plan participant,' and need only be 'sufficiently accurate and comprehensive to reasonably apprise such participants and beneficiaries of their rights and obligations under the plan.'" n95

There was no requirement for any more detailed plan document, and the Fifth Circuit held that. "[i]n light of these congressional imperatives and common industry practices, we should not (and will not) penalize the Plan, or other similar ERISA plans for that matter, for lack of technical precision or verbosity by labeling the Plan 'silent' or 'ambiguous' when it uses the kind of direct, jargon-free language that is mandated by ERISA for all summary plan descriptions and does not expressly address every conceivable factual variation of recovery, depending on which combination of source and fraction is under consideration at the time. In other words, the fact that the SPD for the Plan does not express a reimbursement priority for each possible combination or permutation - here, the beneficiary's partial recovery from the tortfeasor's insurer - is not a valid reason for branding the SPD as silent and subjecting it first to a search for the intent of the parties and then to a default rule of interpretation if their intent cannot be discerned." n96

The Fifth Circuit agreed with the district court that it did not matter whether the governing Plan document was the original SPD or the "Modification": "under either the central thrust of the Plan's reimbursement rights is made amply clear." n97 The Plan is entitled to obtain reimbursement for "duplicate benefit amounts" or "benefits duplicated from another source." n98 According to the Fifth Circuit, this language clearly dictated judgment for the Plan:

"When this language is read in context and viewed in light of all the circumstances, it can only mean that the Plan is entitled to be paid back by the beneficiary all amounts that the Plan has paid to the beneficiary, or on his behalf, to the

full extent - but only to the extent - that the beneficiary recovers from another source (such as insurance purchased individually, a tortfeasor, the insurer of a tortfeasor, or the like). Far from the kind of silence that would be tantamount to ambiguity, the only silence here is the understandable absence of separate, specifically articulated rules for situations of partial recovery and total recovery with variations depending on the nature of the source of recovery. This signifies nothing more than that, regardless of source, the rule is the same for total and partial recoveries. Again, the absence of more particularized and technical legal language addressing the partial recovery situation cannot be grounds for supplanting the Plan Priority rule when recovery is partial, and thereby penalizing the Whitehursts' fellow employees. This is doubly so when ERISA dictates that summary plan descriptions be simple and understandable by employees of varying backgrounds, and when the governing subrogation and reimbursement provisions express a reasonable and, indeed, the generally understood, meaning of these concepts.

"That judges and lawyers, who by education and experience are primed to discover ambiguity in contract language, might find gaps or contradictions in a summary plan description's ordinary, conversational language does not mean that the language is necessarily ambiguous or silent to the point of default for ERISA purposes." n99

Having decided that the Plan was clear, the court had no need to decide (and did not decide) what default rule it would apply if a plan were unclear. Nonetheless, having reviewed the various arguments and the authority for them, the court observed that "we have serious doubts whether we would ever approve or adopt the Make Whole rule as this circuit's default rule for the priority of recovery in reimbursement or subrogation between an ERISA plan and its participant or beneficiary under circumstances such as the ones we consider today." n100

f. Eighth Circuit. The Eighth Circuit followed *Sunbeam-Oster* under different Plan language. In *Waller v. Hormel Foods Corp.*, n101 the Wallers were injured in a head-on collision with a car being driven on the wrong side of the road. The self-funded Plan paid \$157,000 in medical expenses. The Wallers were offered \$200,000 (the available liability and underinsured motorist policy limits) for their tort claims. The Plan demanded full reimbursement, citing the following provision from the SPD, which apparently functioned as the governing Plan document:

"In the event of any payment by the company for health care expenses, the company shall be subrogated to all rights of recovery, which you or your dependent receiving payment may have against any person or organization." n102

The district court agreed that this language gave the Plan priority over the Wallers as to any recovery, but awarded part of the proceeds to the Wallers' attorney as a fee. n103 The Eighth Circuit affirmed that construction of the Plan.

The Plan did not define "subrogation," a term not familiar to laypersons. But the district court and the Eighth Circuit agreed that "this neither defeats reasonable expectations nor creates ambiguity" n104 A dictionary defined the term as substitution of one creditor for another, and the Eighth Circuit agreed with the district court that:

"the audience for which the plan was written - the average plan participant in an employer-funded plan would read this provision as meaning that the Plan has a "first priority" or "first dollar" claim to any recovery arising out of an injury up to the amount of medical benefits the Plan has paid on account of that injury." n105

The court rejected the argument that the term "subrogated" incorporated the made-whole requirement generally applied to insurance policies:

"[T]here is good reason not to read ERISA plans like insurance policies. 'The very heart of the bargain when the insured purchases insurance is that if there is a loss he or she will be made whole. The cases that originally applied subrogation to insurance contracts . . . never envisioned the use of subrogation as a device to fully reimburse the insurer at the expense of leaving the insured less than fully compensated for his loss.' Employer-funded medical benefit plans should not be viewed in this fashion." n106

Nor, for the reasons given in *Sunbeam-Oster*, did the Eighth Circuit agree that there was any ambiguity or silence giving room for application of a made-whole default rule. n107

Another aspect of the made-whole issue was presented by a case in which Deborah Shank, a Wal-Mart employee, was severely injured in an auto accident. The Wal-Mart Plan paid all of her medical expenses, totalling \$469,216. Shank obtained a settlement of \$700,000, which was reduced to \$417,477, after deducting fees and litigation costs. The court entertaining the tort action ordered that amount placed in a special needs trust for Shank. The Plan's Administrative Committee sued Shank, her husband, and the trustee for reimbursement of its payments. n108

ERISA authorizes a plan fiduciary to sue for "appropriate equitable relief ... to enforce ... the terms of the plan." n109 The Supreme Court had held that this permits an action to obtain reimbursement. n110 But it did not decide whether equitable relief of that sort was "appropriate" if the beneficiary had not been made whole. n111 The Eighth Circuit was not persuaded that this requirement should be imposed as a matter of federal common law. Courts should hesitate to create remedies beyond those created by Congress, and should "generally adopt new rules of federal common law only if they are necessary to fill gaps left by the express terms of ERISA and to effectuate the purposes of the statute." n112 *Waller* had concluded that the made-whole requirement originated in purposes of insurance policies not shared by ERISA plans, and the court saw nothing to counsel a different result in *Shank*. n113

The Plan language was extremely clear and explicit:

"The Plan has the right to . . . recover or subrogate 100 percent of the benefits paid by the Plan on your behalf . . . to the extent of . . . [a]ny judgment, settlement, or any payment made or to be made, relating to the accident These rights apply regardless of whether such payments are designated as payment for . . . [m]edical benefits [or] [w]hether the participant has been made whole (i.e., fully compensated for his/her injuries). . . . The Plan has first priority with respect to its right to reduction, reimbursement and subrogation." n114

The purposes of ERISA required that this be enforced:

"Among the primary purposes of ERISA is to ensure the integrity of written plans and to protect the expectations of participants and beneficiaries. Ordinarily, courts are to enforce the plain language of an ERISA plan 'in accordance with 'its literal and natural meaning.'" We therefore do not apply common law theories to alter the express terms of a written plan." n115

While Shank's personal situation was difficult, other interests must also be considered:

"Shank would benefit if we denied the Committee its right to full reimbursement, but all other plan members would bear the cost in the form of higher premiums. Reimbursement and subrogation provisions are crucial to the financial viability of self-funded ERISA plans, and, as a fiduciary, the Committee must 'preserve assets to satisfy future, as well as present, claims,' and must 'take impartial account of the interests of all beneficiaries.'" n116

While ERISA's purpose is to protect beneficiaries, that protection extends only to "'contractually defined benefits.'" n117 So, the limitation to "appropriate" equitable relief could not be utilized to protect other interests of the beneficiary from reimbursement claims.

g. First Circuit. In *Harris v. Harvard Pilgrim Health Care, Inc.*, n118 the First Circuit rejected treating the made-whole requirement as a default rule. Michael Harris sustained personal injuries in a motorcycle accident, and HPHC, the Plan administrator, paid \$102,874.29 in medical expenses. Harris and his wife eventually settled their tort claims for \$737,500, \$264,727.31 of which went for attorneys fees and expenses. They claimed not to have been made whole, because they had settled for two-thirds of the amount of their damages (in light of arguable comparative negligence). n119

The Plan did not give the administrator discretion to construe its terms. n120 The relevant terms were these:

"H.4. SUBROGATION. If another person or entity is, or may be, responsible to pay for expenses or services related to the Member's illness and/or injury which [HPHC] paid or provided, then [HPHC] is entitled to subrogation rights against such person or entity. [HPHC] shall have the right to proceed in the name of the Member, with or without his or her consent, to secure right of recovery of its cost, expenses, or the value of services rendered under this Agreement. *[HPHC] is also entitled to recover from a Member the value of services provided, arranged, or paid for, when the Member was reimbursed for the cost of care by another party.*

"H.5. MEMBER COOPERATION. The Member agrees to cooperate with [HPHC], and to provide all requested information, and *to assign to [HPHC] any monies received for services provided or arranged by [HPHC]*. The Member will do nothing to prejudice or interfere with the rights of [HPHC]." n121

The district court granted HPHC's request for reimbursement and the First Circuit affirmed. While recognizing that it was possible to adopt the made-whole requirement as federal common law, it declined to do so because it believed that such common law rules should be adopted "only as necessary to effectuate legitimate ERISA policy objectives." n122 Echoing *Sunbeam-Oster*, it reasoned that:

"Where an ERISA plan requires - without qualification - that plan participants reimburse the plan for benefits paid, the plan should not be construed to depend upon an implied contingency such as the 'make whole' doctrine, particularly since ERISA specifically envisions that covered plans be written in straightforward language comprehensible by the average plan participant. In such circumstances, 'the absence of more particularized and technical legal language addressing the partial recovery situation cannot be grounds for supplanting the Plan Priority rule.' Similarly, the instant ERISA plan explicitly 'entitled [HPHC] to recover from a Member the value of services provided, arranged, or paid for, when the Member was reimbursed for the cost of care by another party.'" n123

The court also noted that the costs of any benefits to the Harrises would be borne by other Plan members in the form of higher premiums. Moreover, determining whether participants such as the Harrises had indeed been made whole could require extensive litigation in the district court. Accordingly, the district court had properly required reimbursement here. n124

h. Third Circuit. In *Bill Gray Enterprises, Inc. Employee Health & Welfare Plan v. Gourley*, n125 the Third Circuit declined to adopt a common-law made-whole requirement that would override contrary Plan language, but did not address possible use of a default rule where Plan language is unclear. As the court viewed the case, the primary issue was whether the Plan's purchase of stop-loss insurance rendered it an insured plan, governed by Pennsylvania insurance law restrictions on subrogation. n126 Finding that the Plan was still considered self-funded and immune to state-law restrictions, n127 it turned to interpretation of the Plan, as applied to the facts before it.

Gourley, an employee of Bill Gray Enterprises, was severely injured when his car was struck by an uninsured drunk driver. The Plan paid \$141,401.35 for his medical expenses, though the stop-loss insurer funded all of the payments exceeding \$40,000. The Gourleys sued the tavern that served the drunk driver and obtained a judgment for \$1,182,500 for Gourley and \$67,500 for his wife (for loss of consortium). But the tavern was uninsured and filed for bankruptcy, leaving the judgment uncollectible. The Gourleys collected \$300,000 from their underinsured motorist insurer, and the Plan sued for reimbursement. n128

The Plan provided that when a Covered Person had a claim against a third party with respect to medical or other charges for which the Plan paid benefits:

"The Covered Person must:

"(1) assign or subrogate to the Plan his or her rights to recovery when this provision applies;

"(2) authorize the Plan to sue, compromise and settle in the Covered Person's name to the extent of the amount of medical or other benefits paid for the Injuries under the Plan and its expenses incurred by the Plan in collecting this

amount; [and]

"(3) reimburse the Plan out of the Recovery made from the other person, the other person's insurer or the third party the amount of medical or other benefits paid for the Injuries under the Plan and the expenses incurred by the Plan in collecting this amount;

"Amount subject to subrogation or reimbursement. All amounts recovered will be subject to subrogation or reimbursement. In no case will the amount subject to subrogation or reimbursement exceed the amount of medical or other benefits paid for the Injuries under the Plan and the expenses incurred by the Plan in collecting this amount." n129

The Plan administrator was given discretionary authority to interpret the Plan, so its interpretation was reviewed only for abuse of discretion. n130 But the first question was whether the Plan language was ambiguous: if not, any action inconsistent with the unambiguous meaning would be arbitrary and capricious. If the Plan terms were ambiguous, then the court would determine whether the administrator's interpretation was reasonable. n131 Gourley argued that the Plan was ambiguous in describing whether reimbursement is required when a Covered Person receives payments unrelated to medical costs and that his own insurance company might not be a "third party." The Third Circuit held that the language was unambiguous, stating that "'[a]ll amounts received will be subject to subrogation and reimbursement.'" n132 The term "third party" "clearly refers to any person or entity other than the Plan and the covered individual." n133 The court declined to adopt a common-law rule that would override Plan language. n134 But the Plan language unambiguously did not create any right of reimbursement of amounts received by Mrs. Gourley, who had received no benefits from the Plan, so the administrator's contrary interpretation was arbitrary and capricious. n135 The uninsured motorist carrier, having fully discharged its contractual obligations to the Gourleys (an in the absence of any evidence of fraud in doing so), had a good defense to the Plan's subrogation claim. n136

i. Fourth Circuit. The Fourth Circuit has not passed on use of the made-whole requirement as an interpretive rule, as the cases that have come before it have involved very clear requirements that the Plan be reimbursed first. n137 It has refused, for reasons similar to those in *Harris*, to adopt a federal common-law rule overriding Plan requirements for reimbursement in those cases where the beneficiary has not been made whole. n138

j. D.C. Circuit. In *Moore v. CapitalCare, Inc.*, n139 the Moores did not challenge the district court's ruling that the Plan unambiguously granted the Plan priority with respect to the proceeds of the tort claim. n140 Moreover, the Plan granted the administrator discretionary authority to construe the Plan, and the administrator's construction was reasonable. n141 So, the court did not address what default rule might be applicable if the Plan did not address priority. n142 While invited to adopt the made-whole requirement as a common-law rule overriding Plan language, n143 the court failed to do so, without discussion.

2. Analysis

a. a. ERISA and ERISA-based common law should not override plan terms on this issue. One issue on which there appears no division of authority is that ERISA and ERISA-based common law will not be applied to impose a made-whole requirement that is *contrary* to the provisions of the relevant Plan. ERISA allows benefit plan sponsors broad freedom to design welfare benefit plans that they believe will best serve the needs of participants, given the amounts available to finance those benefits. Reimbursements from participants who have not been made whole can be used to finance other benefits the Plan may provide. Viewed another way, when benefits must be paid from a fund (rather than from the assets of an insurer or plan sponsor), failure to recover reimbursements called for by the Plan may deplete the fund and impair its ability to pay promised benefits to others. Harsh as the result may be for participants required to reimburse plans when the participants have not been made whole, ERISA does not provide a proper basis for overriding Plan terms.

b. Courts should defer to reasonable interpretations by administrators with that authority. There is a

division in the cases regarding the ability of an administrator with discretionary authority to interpret a Plan in a way that overrides any default rule favoring a made-whole requirement. The Sixth and Eleventh Circuits say that, absent explicit language negating any made-whole requirement, there is no interpretive issue. n144 The Seventh and D.C. Circuits say that an administrator with discretionary authority may interpret the Plan to negate any made-whole requirement if the language of the Plan can reasonably be read in that way. n145 The latter result seems clearly correct. Precisely because courts are not free to override Plan terms on this issue, the role of any default rule is purely interpretive. If the Plan has provided an alternative interpretive mechanism, by granting the administrator interpretive authority, courts cannot properly displace reasonable interpretations by relying on a default rule that produces a different result. n146

c. Regardless of what the default rule may be, courts should pay careful attention to the Plan language being construed. One striking fact that emerges from review of the leading cases is how little attention courts on either side of the "made whole" issue have paid to the language of the Plans they purport to be interpreting. For example, the Sixth Circuit has found that Plans did not address priority in the event of a partial recovery even though they had the following language:

"The Covered Person agrees to recognize the Plan's right to subrogation and reimbursement. *These rights provide the Plan with a priority over any funds paid by a third party to a Covered Person relative to the Injury or Sickness,* including a priority over any claim for non-medical or dental charges, attorney fees, or other costs or expenses." n147

RIGHT OF SUBROGATION

"The Plan shall be subrogated to the extent of any payments under this Plan of health coverage to all of the Plan Member's right of recovery therefore irregardless [sic] of the entity or individual from who the recovery may be due. . . . *Any amounts so recovered, however designated, shall be apportioned as follows: this Plan shall be reimbursed to the extent of its payments under this plan of health coverage. If any balance then remains from such recovery, it shall be applied to reimburse the Plan Member and any other policy providing benefits to the Plan Member as their interest may appear.*" n148

In each instance, but especially in the latter, the italicized language calls for a Plan priority that makes sense only in the context of an incomplete recovery. And, in each case, the language had been interpreted that way by an administrator with interpretive discretion. At a minimum, each of those interpretations was reasonable, and the Sixth Circuit ought not to have rejected it.

On the other hand, the Fifth Circuit found that the Plan clearly rejected any made-whole requirement by calling for reimbursement of "duplicate benefit amounts" or "benefits it pays which are duplicated from another source." n149 But where the beneficiary has not been made whole, there is no way to show that the benefits have been "duplicated" by the tort recovery. Where a victim of a tortious injury has suffered both losses covered by a collateral source and losses not covered by that source and the assets available to the tortfeasor are inadequate to pay for the remaining recoverable damages, the collateral source has no right (absent contract language addressing the issue) to compel the victim and the tortfeasor to allocate any settlement to the portion of a loss that was covered by the collateral source. n150 Essentially, the Fifth Circuit took Plan language that unambiguously *codified* the made-whole requirement and read that language to *negate* the requirement.

The Eighth Circuit held that the made-whole requirement was negated by language stating that "the company shall be subrogated to all rights of recovery which you or your dependent receiving payment may have against any person." n151 That holding was based on an effort to determine how the average layperson would understand the word "subrogated," even though the court recognized that this word was unfamiliar to laypersons. n152 Because the drafter of the Plan chose to use a technical legal term, participants ought to be entitled invoke the technical meaning, and many courts hold that this includes the made-whole requirement. n153 At a minimum, this created an ambiguity that would make the default rule significant.

The First Circuit held that the made-whole requirement was negated by language stating that the Plan "is ... entitled to recover ... the value of services provided ... when the member was reimbursed for the cost of care by another." n154 The court made much of the requirement to reimburse the Plan, without noting that the obligation depended on a showing that the third party had reimbursed the member "for the cost of care." This is subject to exactly the same criticism as with the Fifth Circuit's decision in *Sunbeam-Oster*.

Courts called upon to interpret ERISA plans should pay careful attention to Plan language before resorting to default rules. Courts on both sides of the "made whole" issue appear to begin their analysis with a preferred outcome, though courts preferring Plan priority seem more prone to attributing dubious results to a supposedly unambiguous meaning of the Plan language. Moreover, while courts ought not to apply default rules where the Plan language really does resolve the issue, courts ought not to presume that Plan language is truly complete and resolves all possible issues: using an appropriate default rule that reflects what likely would have been intended is better than distorting language that truly does not address an issue in order to declare the Plan unambiguous.

d. ERISA-based common law should adopt the made-whole requirement as a weak default rule. Just as both sides of the "made whole" debate had relied on dubious interpretations of the plans at issue, both have also relied on dubious analysis.

Those supporting the made-whole requirement have looked to insurance law as the appropriate analogy. n155 But ERISA common law is based on trust law, not insurance law. n156 Insurance law regards satisfying the reasonable expectations of insureds as a primary objective of policy interpretation. n157 Trust law, on the other hand, is almost exclusively concerned with the intent of the settlor. Accordingly, the reasonable expectations of participants have far less importance under ERISA than under insurance law.

On the other hand, those refusing to adopt a make-whole default rule have assumed that negating that rule would require dense and detailed language unsuitable for an ERISA SPD. n158 If that would be a problem at all, the problem would occur only under a "strong" default rule requiring something close to "magic language" to negate it. n159 It would not be a problem under a "weak" default rule that required only that the language identify and respond to the problem of partial recovery. n160 It is actually relatively easy for plan sponsors who desire to override any make-whole requirement to insert appropriate specific language in plan documents - even the SPD. And sponsors typically have the benefit of expert consultants in designing plans and estimating their costs. So, absence of such language suggests that the sponsor has not regarded the issue as important. Thus, where a Plan is truly silent or ambiguous, a default rule applying a made-whole requirement would not upset any real expectations of the sponsor and would satisfy the reasonable expectations of the participant (as reflected in the almost universal insurance law rule).

Where a Plan is truly silent or ambiguous (and the administrator lacks interpretive discretion), the ERISA-based common law must supply some default rule, and the made-whole requirement is an appropriate one. Applying a default rule does not "alter" the terms of a Plan if the Plan does not address the issue in question.

n1 State law is examined in more detail in Barker, William T., "Sonnenschein Nath & Rosenthal on Insurance Subrogation and the Made-Whole Rule: When Does and Should It Apply Under State Law," *LexisNexis Emerging Issues Analysis*, 2009 *Emerging Issues* 4529 (Oct., 2009).

n2 Robert E. Keeton & Alan I. Widiss, , at 135 (1988).

n3 Id.

n4 Restatement (Second) of Torts § 920A(2) ("Payments made to or benefits conferred on the injured party from other sources [than the tortfeasor or others acting on the tortfeasor's behalf] are not credited against the tortfeasor's liability, although they cover all or a part of the harm for which the tortfeasor is liable.").

n5 Collateral Source Rule and Contract Damages, 71 *Cal. L. Rev.* 56, 82 (1983) (recognizing that availability of subrogation "is widely considered the optimal solution for the whole problem of collateral benefits on the ground that it prevents both the defendant from taking an undeserved advantage of the benefit and the plaintiff from being overcompensated"); *see also* (The plaintiff's assertion that he was entitled to recover for his full loss against the defendant railroad and also retain the proceeds that his insurance carrier sought by way of subrogation "could not be urged successfully. . . . Good morals and important considerations of public policy forbid that conflagrations should be made profitable.").

n6

[6] Courts resisting subrogation commonly assume that the insured has paid a premium to cover the entire loss insured, with no allowance for possible recovery by way of subrogation or reimbursement. That is an unwarranted assumption. But insurers litigating the permissibility of subrogation would be well advised to make a factual showing that potential subrogation/reimbursement recoveries have been properly accounted for in setting the premium.

In fact, past losses under similar policies are typically used to project future losses for which the premium must provide, and any subrogation/reimbursement recoveries for those past losses are treated as credits against those losses, so that the projections of future losses are automatically based on net losses after recoveries.

n7 *See also* A Michael Polinsky, *An Introduction to Law and Economics*, 53-55 (2d ed. 1989) (where one party to the transaction is risk averse (as most insureds are) and the other is risk-neutral (as insurers are), the risk is better allocated to the risk-neutral party).

n8

[8] *Cutting v. Jerome Foods, Inc.*, 993 F.2d 1293, 1297-98 (7th Cir.) (Posner, J.), *cert. denied*, 510 U.S. 916 (1993).

n9 See Jeffrey E. Thomas, *New Appleman on Insurance Law Library Edition* §§ 5.06[1] (public policy limits the terms to which contracting parties may agree), 5.06[2][b] (public policy influences interpretation of insurance policies), 5.05[2] (policies construed to satisfy the reasonable expectations of insureds, at least if ambiguous); *Cutting*, 993 F.2d at 1297 (7th Cir. 1993) (made-whole rule "exists only when the parties are silent. It is a gap filler."). See also note 62, below.

n10 See Johnny C. Parker, *The Made-Whole Doctrine: Unraveling the Enigma Wrapped in the Mystery of Insurance Subrogation*, 70 Mo. L. Rev. 723, 724-37 (2005) (discussing legal or equitable subrogation rule commonly applied by the courts). Indiana has a statute which reduces any subrogation lien or claim regarding personal injuries or death proportionately to any reduction of the tort claimant's recovery by comparative fault or uncollectability resulting from limited liability insurance or other causes. Ind. Code § 34-51-2-19. In effect, this mandates pro rata sharing of the recovery.

n11 See, e.g., *Cain v. State Farm Mut. Auto. Ins. Co.*, 121 Cal. Rptr. 200, 207 (Cal. Ct. App. 1975).

n12 See, e.g., *State Farm Fire & Cas. Co. v. Knapp*, 484 P.2d 180, 185 (Ariz. 1971); *21st Century Ins. Co. v. Super. Ct.*, 98 Cal. Rptr. 3d 516, 518 (Cal. 2009); *Allstate Ins. Co. v. Reitler*, 628 P.2d 667, 670 (Mont. 1981). But see *Aetna Cas. & Sur. Co. v. Assocs. Transports, Inc.*, 512 P.2d 137, 142-43 (Okla. 1973) (even though personal injury claim is ordinarily nonassignable, where tortfeasor had knowledge of insurer's rights and settled with insured without providing for insurer's claim, insurer entitled to sue on claim for medical payments it had made).

n13 See, e.g., *Peller v. Liberty Mut. Fire Ins. Co.*, 34 Cal. Rptr. 41, 42 (Cal. Ct. App. 1963) (noting such questions but disposing of them on the ground that the legislature had codified the prohibition on assignment).

n14 E.g., *Progressive West Ins. Co. v. Superior Ct.*, 37 Cal. Rptr. 3d 434, 442 (Cal. Ct. App. 2005).

n15 See cases collected in Annot., *Subrogation rights of insurer under medical payments provision of insurance policy*, 19 A.L.R.3d 1054, § 3 (1968, supplemented to 10/14/2009).

n16 A state-by-state examination of the cases is found in Johnny C. Parker, *supra* note 10, 70 *Mo. L. Rev.* at 738-773. Prof. Parker concludes that the made-whole requirement cannot be modified by contract in 16 states. *Id.* at 774.

n17 See cases cited in Barker, William T., "Sonnenschein Nath & Rosenthal on Insurance Subrogation and the Made-Whole Rule: When Does and Should It Apply Under State Law," *LexisNexis Emerging Issues Analysis*, 2009 *Emerging Issues* 4529 n.32 (Oct., 2009).

n62 *Id.* at 1395-96.

n63

[62] *See, e.g.*, Frank H. Easterbrook & Daniel R. Fischel, *The Economic Structure of Corporate Law*, 89 *Colum. L. Rev.* 1416, 1433 (1989) (courts should choose default terms "that the parties would have selected with full information and costless contracting"). There are arguments that courts should sometimes select "penalty" default rules, not on the basis of what the parties actually want, but for the purpose of providing incentives for one party to reveal information that will allow tailoring of the transaction in a more optimal manner. *See, e.g.*, Ian Ayres & Robert Gertner, *Filling Gaps in Incomplete Contracts: An Economic Theory of Default Rules*, 99 *Yale L.J.* 87 (1989). But the latter arguments concern contracts whose terms are bargained between the parties, and have little relevance to the sort of adhesion contracts involved in the usual insurance policy or employee benefit plan.

ABOUT THE AUTHOR(S):

William T. Barker is a partner in the Chicago office of Sonnenschein Nath & Rosenthal, L.L.P., with a nationwide practice representing insurers in complex litigation, including matters relating to coverage, claims handling, sales practices, risk classification and selection, agent relationships, and regulatory matters. He is a member of the Editorial Board of the *New Appleman on Insurance Law* Library Edition and a Consulting Author of the *New Appleman Insurance Law Practice Guide*. He has published over 100 articles and speaks frequently on insurance and litigation subjects. He was a Contributing Editor and then Editor of *Bad Faith Law Report* until that publication merged with *Insurance Litigation Reporter*, where he is currently Senior Contributing Editor and Editorial Board Director. He

has been described as the leading lawyer commentator on the connections between procedure and insurance. See Charles Silver & Kent Syverud, *The Professional Responsibilities of Insurance Defense Lawyers*, 45 Duke L.J. 255, 257 n.4 (1995). Mr. Barker is a member of the American Law Institute.

Frank P. VanderPloeg practices in the Chicago office's Employee Benefits and Executive Compensation Practice Group. Mr. VanderPloeg's background in tax-qualified retirement plans includes broad experience in the design, drafting, amendment and termination of pension, profit sharing, 401(k), leveraged ESOP, and stock bonus plans. He has implemented qualified plans for governmental and tax-exempt employers under the special tax regimes, and for Indian tribes in light of their unique legal status. He represents employers and other plan sponsors in plan qualification and tax deduction controversies with the Internal Revenue Service and in prohibited transaction exemption requests and other matters with the Department of Labor. In ESOP transactions he has represented the various interests of sponsors, selling shareholders, trustees, and lenders.

About the firm. Sonnenschein Nath & Rosenthal, LLP, regularly handles high-risk and complex matters for financial and insurance industry clients. Staffed with seasoned litigators and former insurance regulators, Sonnenschein lawyers are relentless advocates for its clients' interests.

For more than 70 years, Sonnenschein has partnered with insurance companies to understand their business and legal needs. Recent confirmation of Sonnenschein's outstanding insurance industry qualifications came in *Chambers USA: Americas Leading Lawyers for Business*. The 2007 edition identifies Sonnenschein as one of the top firms in the country representing insurers on their most complex matters. The Chambers description speaks for itself:

This powerhouse litigation firm is known for its sophisticated and thorough work in insurance and its ability to pull together a sterling set of resources. The firm fields a wide range of specialists, which it can use to staff complex cases. Its recent track record ranges from involvement in the WTC litigation to Hurricane Katrina-related issues. Matters are handled by a number of offices at any one time and practitioners are said to work tirelessly and creatively to help manage disputes and create briefings that are strong and impressive. Key areas of interest are bankruptcy and insolvency in insurance companies, class actions and catastrophic loss in both appeals and litigation. The firm also has strength in personal lines insurance and in regulatory proceedings.

When products are attacked, when lawsuits go national, when regulators join the fray, when reputations are on the line, leading businesses turn to Sonnenschein.

Information referenced herein is provided for educational purposes only. For legal advice applicable to the facts of your particular situation, you should obtain the services of a qualified attorney licensed to practice law in your state.

Ravis on the Permissible Discovery in ERISA Litigation

2009 Emerging Issues 4503

Ravis on the Impact of MetLife v. Glenn on Permissible Discovery in ERISA Litigation

By Talia Ravis

October 22, 2009

SUMMARY: The Supreme Court decision in Metropolitan Life Ins. Co. v. Glenn and its progeny have broadened the scope of permissible discovery in ERISA litigation. Discovery is now allowed to determine if the plan administrator had a conflict of interest and if that conflict played a role in the administrators decision to deny benefits to the plaintiff employee. The introduction of evidence extrinsic to the administrative record has also been allowed.

ARTICLE: Introduction. The scope of discovery under the Employee Retirement Income Security Act of 1974 ("ERISA") is generally determined by the applicable standard of review. In the past, discovery was often permitted under the *de novo* standard of review and under the heightened arbitrary and capricious standard of review, but generally very limited, or not allowed at all under the abuse of discretion standard of review (also known as "arbitrary and capricious" standard of review).

However, on June 19, 2008, everything changed when the Supreme Court issued its long awaited decision in *Metropolitan Life Ins. Co. v. Glenn*. n1 ERISA defense attorneys will argue that this bearing had no decision on discovery in ERISA litigation, but case law from around the country interpreting the meaning of *Glenn* has proven otherwise: This decision had a far-reaching affect on the courts' approach to handling discovery requests in ERISA cases. This article provides an understanding of *Glenn's* vast impact on the current state of discovery in ERISA litigation.

Understanding the Supreme Court's Ruling in *Glenn*. In *Glenn*, the Court stated, "Congress' desire was to offer employees enhanced protection for their benefits" citing *Varity Corp. v. Howe*, n2 (discussing congressional purposes in enacting ERISA). In discussing the standard for evaluating an insurer's conduct, the Court specifically pointed out that:

ERISA imposes higher-than-marketplace quality standards on insurers. It sets forth a special standard of care upon a plan administrator, namely, that the administrator "discharge [its] duties" in respect to discretionary claims processing "solely in the interests of the participants and beneficiaries" of the plan. [29 U.S.C.] § 1104(a)(1); it simultaneously

underscores the particular importance of accurate claims processing by insisting that administrators "provide a full and fair review' of claim denials," *Firestone*, 489 U.S. at 113 (quoting [29 U.S.C.] § 1133(2)); and it supplements the marketplace and regulatory controls with judicial review of individual claim denials, see [29 U.S.C. §] 1132(a)(1)(B).
n3

The *Glenn* Court addresses an insurer's conflict of interest when the insurer both determines an employee's eligibility for benefits and pays the benefits out of its own pocket. In *Glenn*, MetLife served as both the administrator and the insurer of the Sears, Roebuck & Company long-term disability plan, an ERISA governed employee benefit plan. The plan gave MetLife discretionary authority to determine whether a claim was valid, as well as obligated MetLife to pay valid benefits claims. The Court in *Glenn*, in revisiting *Firestone Tire & Rubber Co. v. Bruch*,ⁿ⁴ confirmed that a court should be guided by principles of trust law and therefore must view a plan administrator in the same respects as a trustee of a common-law trust. Accordingly, a benefit determination is to be considered a fiduciary act.

Under this analysis, the Court held that when a plan administrator both evaluates claims for benefits and pays benefits claims, a conflict of interest arises that must be considered by the courts. The Supreme Court explained that when judges review the lawfulness of benefit denials, they should take into account several different considerations, including a conflict of interest. This means that a reviewing judge must take into account the conflict when determining whether the trustee substantively or procedurally has abused its discretion.

Glenn mandates a more critical review of benefit determinations than required by previous standards. In situations where an insurer acts in the dual role of claim administrator and the payor of claims, *Glenn* has changed the law. In contrast to the minimal level of discovery previously allowed, *Glenn* calls for a much more probing review based on the higher standard of conduct imposed on insurers.

Glenn confirms the applicability of *Firestone*, and trust law, and for purposes of the appropriate standard of review, directs the use of a "combination-of-factors method of review."ⁿ⁵ Under such a review, courts will "take account of several different considerations of which a conflict of interest is one."ⁿ⁶ The Court explained:

In such instances, any one factor will act as a tiebreaker when the other factors are closely balanced, the degree of closeness necessary depending upon the tiebreaking factor's inherent or case-specific importance. The conflict of interest at issue here, for example, should prove more important (perhaps of great importance) where circumstances suggest a higher likelihood that it affected the benefits decision, including, but not limited to, cases where an insurance company administrator has a history of biased claims administration. See *Langbein*, [Trust Law as Regulatory Law, 101 Nw. U. L. Rev. 1315, 1317-1321 [2007] (detailing such a history for one large insurer). It should prove less important (perhaps to the vanishing point) where the administrator has taken active steps to reduce potential bias and to promote accuracy, for example, by walling off claims administrators from those interested in firm finances, or by imposing management checks that penalize inaccurate decisionmaking irrespective of whom the inaccuracy benefits.ⁿ⁷

The Court also provided guidance in assessing the importance of a conflict of interest indicating that procedural irregularities that benefit the insurance company require more weight to be placed on the conflict. The Court described the circumstance of MetLife encouraging Glenn to apply for Social Security disability benefits and then ignoring the agency's finding when terminating Glenn's benefit. The Court stated:

This course of events was not only an important factor in its own right (because it suggested procedural unreasonableness), but also would have justified the court giving more weight to the conflict (because MetLife's seemingly inconsistent positions were financially advantageous).ⁿ⁸

Thus, a Court may accord a conflict additional weight when an insurer's conduct results in a financial gain and that conduct is suspect for reasons such as procedural unreasonableness or inconsistency. There is no requirement of direct evidence of influence, *i.e.*, a smoking gun.

The Court rejected standard of review tests, such as the sliding-scale method of review applied by the Sixth Circuit. The Court explained:

Neither do we believe it necessary or desirable for courts to create special burden-of-proof rules, or other special procedural or evidentiary rules, focused narrowly upon the evaluator/payor conflict. In principle, as we have said, conflicts are but one factor among many that a reviewing judge must take into account. Benefits decisions arise in too many contexts, concern too many circumstances, and can relate in too many different ways to conflicts -- which themselves vary in kind and in degree of seriousness -- for us to come up with a one-size-fits-all procedural system that is likely to promote fair and accurate review. Indeed, special procedural rules would create further complexity, adding time and expense to a process that may already be too costly for many of those who seek redress. n9

Importantly, *Glenn* also described the applicable standard only in terms of the trust law "abuse of discretion" standard, and never used the administrative law "arbitrary and capricious" standard. This is important because the lower courts have applied an administrative law paradigm to restrict courts' review to the "administrative" record. *Glenn* clearly indicates that much evidence outside the record will be relevant to determining whether an insurer abused its discretion. For instance, the Court indicated a company's history of biased claims administration could increase the importance of the conflict of interest factor and the steps taken by the company to reduce potential bias and promote accuracy could reduce the importance of the conflict factor. This type of extrinsic evidence is not typically in the "administrative record."

Various Courts' Interpretation of the Meaning of *Glenn*. Since the Supreme Court handed down its decision in *Glenn*, many courts around the country have analyzed *Glenn*'s impact on the applicable standard of review and its resultant impact on allowable discovery pertaining to the insurer's conflict of interest as well as its impact on the decision-making process. While many courts have cautioned that *Glenn* does not necessarily *change* the applicable standard of review, several courts around the country have interpreted *Glenn* to have opened the door to allowing various types of discovery into conflicted insurers' practices regarding benefit determinations. For example, the Eighth Circuit evaluated *Glenn*'s application to the ERISA standard of review in *Chronister v. Unum Life Ins. Co. of America*:

There is no doubt that *Glenn* changed ERISA review in some ways. First, the Supreme Court determined specifically that when the entity that administers the plan "both determines whether an employee is eligible for benefits and pays benefits out of its own pocket" a conflict of interest exists. *Glenn*, 128 S. Ct. at 2346. Prior to *Glenn*, this Court held the opposite. Similarly, under this Court's pre-*Glenn* precedent, a financial conflict of interest would not trigger less-deferential review unless the claimant could show that the conflict was causally connected to the specific decision at issue. *Glenn* makes clear that, while a causal connection might be important in determining the appropriate level of scrutiny for a plan administrator's decisionmaking, such a connection is not required. *Glenn*, 128 S. Ct. at 2351. ("The conflict of interest should prove more important where circumstances suggest a higher likelihood that it affected the benefits decision.") Under *Glenn*, courts must analyze the facts of the case at issue, taking into consideration not only the conflict of interest, but also other factors that might bear on whether the administrator abused its discretion. n10

In *Waikken v. Unum Life Ins. Co. of Am.*, n11 another Eighth Circuit case, the court stated, "We are instructed by *Glenn* to give importance to this conflict of interest, perhaps great importance," *Glenn* [128 S. Ct. at 2351], depending on how closely the other factors are balanced."

In *Wilcox v. Wells Fargo & Co. Long Term Disability Plan*, n12 the court connected *Glenn*'s impact on the standard of review to discovery which should be allowed as a result of the Supreme Court's decision, when it held that *Glenn* "materially altered the applicable standard of review applicable to the review of a plan administrator's denial of benefits under ERISA, permitting consideration of evidence outside the administrative record to determine the appropriate weight to accord the conflict of interest factor."

In *Hogan-Cross v. Metro. Life Ins. Co.*,ⁿ¹³ the court stated, "Thus, the [*Glenn*] Court made clear that not all conflicts are created equal. Their significance in any given case depends upon all of the circumstances, including those suggesting a higher or lower likelihood that the conflict affected the decision."

The impact of *Glenn* can clearly be seen in the Seventh Circuit, where discovery as to the conflict of interest issue was essentially barred prior to *Glenn*. Earlier this year, Judge Hamilton, Chief Justice of the Southern District of Indiana, eliminated ERISA's ban on discovery when he made the following statement regarding discovery in ERISA benefit disputes:

"*Glenn* is not a case about discovery, but the Supreme Court's discussion of what evidence is relevant to a judge's decision necessarily requires that parties are allowed to conduct discovery outside of the administrative record. The Supreme Court wrote that the conflict "should prove more important (perhaps of great importance) where circumstances suggest a higher likelihood that it affected the benefits decision, including, but not limited to, cases where an insurance company administrator has a history of biased claims administration," but that the conflict also "should prove less important (perhaps to the vanishing point) where the administrator has taken active steps to reduce potential bias and to promote accuracy, for example, by walling off claims administrators from those interested in firm finances, or by imposing management checks that penalize inaccurate decision-making irrespective of whom the inaccuracy benefits." [128 S. Ct.] at 2351. *This passage of Glenn makes very clear that evidence of these considerations will be relevant, and such evidence is unlikely to appear in sufficient detail in the administrative record, at least in pending cases. If this information is relevant, it needs to be discoverable.* This is particularly true since the Court cautioned against the creation of "special burden of proof rules or other special procedural or evidentiary rules, focused narrowly on the evaluator/payor conflict." *Id.* Based on these teachings of *Glenn*, the previous opinions of the Seventh Circuit that made discovery in such cases nearly impossible to obtain appear to be superseded." n14

Courts around the country are allowing for conflict discovery on a daily basis, on account of *Glenn*. The above-referenced cases are just a sampling of courts' decisions that are opening the door to conflict discovery, and as a result, are greatly impacting the ways in which ERISA cases are currently being litigated.

Allowable Discovery As a Result of *Glenn*. Requested and allowable discovery in an ERISA benefit dispute will vary from case to case, depending on the pertinent facts and circumstances. Prior to *Glenn*, courts frequently allowed for discovery under the *de novo* standard of review, or in a case where the conflict of interest was a factor involving a self-insured plan administrator. Generally however, as a result of *Glenn*, the courts have been granting discovery pertaining to the insurer's conflict of interest as recognized in the fully insured context where the insurer is the payor of benefits in addition to the entity determining benefit eligibility. The conflict can be evidenced in various ways, and the cases discussed below give several examples of the types of discovery courts have allowed plaintiffs to pursue in order to determine the level of conflict surrounding the defendant's benefit determination, and, as a result, whether that conflict impacted the defendant's decision to deny the plaintiff's benefits.

In *Hogan-Cross v. Metro. Life Ins. Co.*,ⁿ¹⁵ the court found that information bearing on the manner in which a conflicted plan administrator compensates its outside consultants could be highly pertinent. The court stated, "Maintenance of compensation arrangements that create economic incentives for consultants to recommend denial or termination of benefits would have a material bearing on the likelihood that the administrator's conflict affects its benefit determinations." The court required the defendant to provide the approval and termination rates and statistics regarding long-term disability claims administered by MetLife in litigation. The court also required MetLife to provide the bases for and amounts of compensation paid to employees and outside consultants involved in evaluating plaintiff's eligibility for benefits.

In *Gessling*, discussed above, the court ruled that *Glenn* superseded *Semian v. Life Ins. Co. of North America*,ⁿ¹⁶ (discovery only allowed in "exceptional circumstances" where plaintiff had to make a *prima facie* showing of good

cause by pointing out the identity of the conflict) and allowed limited discovery into areas where the conflict could have affected the benefit decision. The scope of the discovery was limited into areas where the insurance company had a history of biased decision-making, but also included discovery into steps the insurance company has taken to reduce bias and promote accuracy. Further, one can infer from the ruling in *Gessling* that discovery issues under *Glenn* do not require a "good cause" showing by claimant.

Upon remand, the District Court of Arizona in *Wilcox v. Wells Fargo Long Term Disability Plan*,ⁿ¹⁷ limited discovery to the following areas: (1) whether any of the employees or consultants involved in deciding plaintiff's claim had a financial incentive to deny the claim; (2) defendant's general approval and termination rates for long-term disability claims involving fibromyalgia; (3) steps defendant has taken to reduce bias and promote accuracy, such as walling off claims administrators from those interested in firm finances; and (4) any factors or evidence considered by defendant in denying plaintiff's claim that are not contained in the administrative record. The court did not permit discovery into the training or experience of the claims handlers or the reserves for the claim or claims manuals or guidelines.

In *Walker v. Metro. Life Ins. Co.*ⁿ¹⁸ the court found gaps in the administrative record pertinent to the conflict of interest and MetLife's reliance on Network Medical Review ("NMR") and their reviewing physicians. The court propounded its own interrogatory to MetLife "to state and order the number of claims it has accepted or granted and rejected or denied after a review by a physician retained through NMR from 2005 through 2007." The court then ordered a trial in order to "fully vet MetLife's exercise of discretion and the role played by its conflict therein." Several additional orders pertaining to the expense and costs incurred in the defendant having to produce the information have issued, along with a new order to produce statistical numbers back to 2000.

In *Horton v. Liberty Life Assurance Co. of Boston*,ⁿ¹⁹ the court allowed discovery into a potential conflict of interest without commenting on the scope and extent of plaintiff's discovery.

In *Santos v. Hartford Life Insurance Co.*,ⁿ²⁰ the court, relying on *Glenn* allowed plaintiff's request for information about the criteria for selection of individuals for peer reviews and independent medical exams as they relate to potential bias. The court also allowed discovery into the history of the number of claims made and number of those claims granted or denied and the efforts by the insurance company to reduce bias of claims personnel, promote accuracy and wall off claims administrators. The court denied any discovery into the underlying rationale of the insurer's decision to deny benefits to the plaintiff.

In the Tenth Circuit, the District Court of Colorado issued a decision in *Kohut v. Hartford Life and Accident Ins. Co.*ⁿ²¹ The court reversed the Magistrate Judge's Recommendations which prevented the plaintiff's some limited discovery and remanded the case back to the Magistrate Judge to allow discovery. The court did not state what discovery was allowed.

In a 2009 ruling out of the Northern District of Indiana, the court allowed for discovery pertaining to the identifications and compensation of employees, consulting physicians, and other third-parties involved in the claim determination, claim approval and denial rates, as well as one defendant's policies and procedures regarding benefit eligibility determinations.ⁿ²²

Conclusion. As one can glean from the discussion above, *Glenn's* impact on discovery in ERISA litigation has been far-reaching. In what seems to be an effort by the courts to narrow the David-and-Goliath inequities between the insured plaintiff versus insurer defendant, *Glenn* would appear to be providing plaintiffs with greater opportunities to shore up their case while attempting to hold insurers accountable for their actions in determining claimants' eligibility for benefits.

When Bankruptcy Hits, Are Directors and Officers Stuck With the Bill?

2009 Emerging Issues 3504

Reed Smith LLP on Emerging Risks in Insurance: When Bankruptcy Hits, Are Directors and Officers Stuck With the Bill?

By David Rosenfield

April 2, 2009

SUMMARY: When an insured entity goes into bankruptcy, increasingly, insurers are refusing to allow policy proceeds to be used in defense of insured directors and officers for fear that a court will find them to be property of the insured debtors estate and thus subject to the United States Bankruptcy Codes automatic stay provision. This commentary suggests such a result is wrong, both legally and for public policy reasons.

ARTICLE: INTRODUCTION

Imagine you are an officer of a corporation that was flourishing prior to the recent economic downturn. You may never have given much thought to your corporation's directors and officers ("D&O") insurance program because even if you had been sued, your company indemnified you. If there was D&O insurance to cover that lawsuit, the company dealt with that. If any issues about that coverage ever arose, those issues never directly affected you.

Now imagine your company has gone into bankruptcy. And further imagine that-as is so often the case when companies go into bankruptcy-a lawsuit has been filed against your company, a lawsuit that names you as a defendant as well. The lawsuit against the bankrupt company is stayed automatically pursuant to the United States Bankruptcy Code (the "Code"). But the Code doesn't protect you as an individual, and the lawsuit against you proceeds. Before, your legal fees were always paid by your company (who was in turn indemnified by its D&O insurance carrier) or by the insurer itself. But now that your company is in bankruptcy, it is no longer able to indemnify you for your legal costs.

When you turn to your company's D&O insurer, you find it is also unwilling to pay your legal fees, citing fears that a court will find the insurance policy proceeds to be part of your bankrupt company's estate and thus subject to the automatic stay. The insurance carrier is concerned that any payments it made to you would violate the stay and not count toward its policy's limits. Suddenly, you face the prospect of paying the legal fees necessary to defend yourself in a lawsuit brought against you because of your service to a company that is now no longer able to assist you.

This situation seems unfair. When a corporation goes bankrupt, its directors and officers face not only the loss of corporate indemnification, but also the possible loss of D&O insurance that is supposed to backstop that indemnification. Their personal assets may be at risk, and the cost of simply defending the litigation may be crushing.

In light of the foregoing, this commentary analyzes an emerging issue of law which may become increasingly pertinent as today's recession leads to more and more corporate bankruptcies, and further, as more and more lawsuits are brought against those corporations, often as a result of activity which led those companies to declare bankruptcy in the first instance. In doing so, this commentary posits that D&O policies are intended primarily for the benefit of the individual directors and officers, rather than for the benefit of the corporations for whom those directors and officers serve. As a result, when an insured corporation declares bankruptcy, that should not preclude the directors and officers of that corporation from accessing insurance policy proceeds to defend themselves against litigation brought based on their service to the now bankrupt entity. Such a result would be contrary to an emerging trend of case law, as well as to the fundamental principles of fairness and public policy.

ANALYSIS

Insurance Policies Often Belong to the Insured Debtor.

Early cases dealing with the issue of whether an insured's bankruptcy stays the proceeds of the insured's insurance policies did not distinguish between insurance policies and the proceeds of those policies. See, e.g., *In re Johns-Mansville Corp.*, 40 B.R. 219 (S.D.N.Y. 1984) (where a debtor corporation filed for Chapter 11 bankruptcy after an onslaught of litigation stemming from its asbestos manufacturing, the insured's "insurance policies and their proceeds .. constituted 'substantial property of the [insured's] estate which will be diminished if and to the extent that third party direct actions against the insurance carriers result in plaintiffs' judgments."); *Minoco Group v. First State Underwriters Agency of New England Reinsurance Corp. (In re Minoco Group)*, 799 F.2d 517 (9th Cir. 1986) (refusing to allow two D&O carriers to cancel insurance policies issued to the insured debtor, reasoning that the policies were property of the insured debtor's estate and that allowing for cancellation of them would impair the debtor corporation's reorganization efforts).

More recently, however, courts have begun to distinguish between insurance policies and the proceeds of those policies for the purposes of determining whether they belong to an insured debtor's estate. In doing so, courts have agreed that insurance policies themselves belong to the party that purchased them. See, e.g., *Feld v. Zale Corp (In re Zale Corp.)*, 62 F.3d 746, 757-58 (5th Cir. 1995); *La. World Exposition, Inc. v. Fed. Insurance Co. (In re La. World Exposition, Inc.)*, 832 F.2d 1391, 1399 (5th Cir. 1987); *A.H. Robins Co. v. Piccinin*, 788 F.2d 994, 1001 (4th Cir. 1986); *In re First Cent. Fin. Corp.*, 238 B.R. 9 (Bankr. E.D.N.Y. 1999). However, there has been less agreement regarding how to treat the proceeds of insurance policies.

Insurance Policy Proceeds Generally Should Belong to the Individual Directors and Officers of the Insured Debtor.

The issue of who owns the right to the proceeds of insurance policies issued to a bankrupt corporation arises as a result of the Code's automatic stay provision. The Code provides that the filing of a bankruptcy petition operates as an automatic stay of "an act to obtain possession of property of the estate or property from the estate or to exercise control over property of the estate." 11 U.S.C.S. § 362(a)(3). The Code defines property of the estate as including "all legal or equitable interests of the debtor in property as of the commencement of the estate." 11 U.S.C.S. § 541(a)(1). Whether a particular insurance policy's proceeds should be deemed part of an insured debtor's estate and thus subject to the stay is a fact-specific inquiry. See *In Re First Cent.*, 238 B.R. at 17; Appleman on Insurance 2d § 146.8 (LexisNexis). See generally Nancy D. Adams, When Two Worlds Collide: Understanding D&O Coverage in the Bankruptcy Setting, 18 Coverage 26, 29-30 (ABA Jan./Feb. 2008). However, to avoid unjust situations like the one discussed above, the proceeds of D&O policies should not be deemed an asset of the bankrupt estate.

Courts that have grappled with this issue have considered a number of factors in determining who owns the proceeds of D&O insurance policies. Many of these factors weigh heavily in favor of finding insurance policy proceeds to belong to the insured directors and officers of an insured debtor, rather than to the insured debtor.

Courts considering this issue often look first to whether the policy provides coverage not only for individual directors and officers but also for the claims against the entity itself (known as "entity coverage"), as opposed to simply reimbursing the entity for amounts spent to indemnify insured directors and officers (known as "Side B coverage").ⁿ¹ If there is no entity coverage, courts are likely to find that the policy proceeds are not an asset of the insured debtor corporation's estate, reasoning that any right the debtor has is based entirely on the existence of claims against the debtor's directors and officers. See, e.g., *In re La. World Exposition, Inc.*, 832 F.2d at 1399 (finding that where the policy only provided direct coverage to the directors and officers and reimbursement coverage to the corporation, the debtor did not have a direct interest in the policy's proceeds and thus the proceeds were found not to be part of the debtor's estate).

Moreover, where a policy provides only for Side B coverage and the bankrupt entity is not paying the directors and officers' legal costs, the company has no claim to insurance proceeds and there is even further reason for courts to hold that the insurance proceeds are not an asset of the bankrupt estate. See *In re Zenith Labs, Inc.*, 104 B.R. 659, 665-66 (D.N.J. 1989) (finding policy proceeds not to be part of the insured debtor's estate where the policy provided only for Side B coverage and no action had been initiated in the debtor's name against any director or officer); *Youngstown Osteopathic Hosp. Ass'n v. Ventresco* ("*In re Youngstown Osteopathic Hosp. Ass'n*"), 271 B.R. 544, 550 (Bankr. N.D. Ohio 2002) (where the debtor was not required to indemnify the directors and officers, and therefore was not entitled to reimbursement under the policy, the proceeds were not property of the estate).

Some courts have held that, even where a policy provides for entity coverage, the primary purpose of D&O coverage is to protect individual corporate officers and directors. As one court explained, even where the policy provides for entity coverage, "[i]n essence and at its core, a D&O Policy remains a safeguard of officer and director interests and not a vehicle for corporate protection." *In re First Cent.*, 238 B.R. at 15. This principle serves the very important purpose of allowing corporations to attract and keep qualified persons to serve as officers and directors. See *Adelphia Communs. Corp. v. Associated Elec. & Gas Ins. Servs.* (*In re Adelphia Communs. Corp.*), 285 B.R. 580, 585 (Bankr. S.D.N.Y. 2002) (vacated and remanded on other grounds). See also *Arten & Hadden, LLP*, 335 B.R. 666, 672 (Bankr. N.D. Ohio 2005) (quoting *In re First Cent. Fin. Corp.*, 238 B.R. at 18 n.11) (stating "[T]he mere appendage of entity coverage to this Policy .. does not provide sufficient predicate, per se, to metamorphose the proceeds into estate property").

Even if the policy provides for entity coverage, a court may consider whether there are actual claims against the entity. Where claims have not been asserted against the debtor, any harm to the debtor is purely speculative. *In re CHS Electronics, Inc.* 261 B.R. 538 (Bankr. S.D. Fla. 2001); *In re Medex Regional Laboratories, LLC*, 314 B.R. 716, 722-23 (Bankr. E.D. Tenn. 2004); *In re First Cent. Fin. Corp.*, 238 B.R. at 17-18 ("If entity coverage is hypothetical and fails to provide some palpable benefit to the estate, it cannot be used by a trustee to lever himself into a position of first entitlement to policy proceeds.").

Courts also may look to certain policy provisions as evidence that the primary intended beneficiaries of the policy are insured directors and officers rather than the insured corporation. For example, many D&O insurance policies contain priority (or order) of payment clauses, which often stipulate that if Loss (i.e., defense costs, judgments or settlements) from any Claim exceeds the remaining available limits of liability, then the policy proceeds should first be used to pay the Loss of insured persons rather than the insured corporation. Several courts have cited to these provisions in support of finding policy proceeds not to be part of an insured debtor's estate. See, e.g., *Miller v. McDonald* (*In re World Health Alternatives, Inc.*), 369 B.R. 805, 808-811 (Bankr. D. Del. 2007) (finding that the priority of payments clause was evidence that the policy proceeds were primarily intended for the benefit of directors and officers). See also *In re Adelphia Communs.*, 285 B.R. at 585 (while finding policy proceeds to be part of the debtor's estate, the court expressly noted that the policies did not have a priority of payments provision, "providing in substance that payments on

account of the defense costs of directors and officers come ahead of payments for indemnification coverage and/or entity coverage"). See also *In re Classicstar, LLC*, No. 07-bk-51786, GeoStar's Mot. Re. Ins. Proceeds at 8-10 (Bankr. E.D. Ky. June 2, 2008) and June 18, 2008 order granting same; *Pure Weight Loss, Inc.*, No. 2:08-bk-10315 (JKF), Mot. Regarding Ins. Proceeds at 3-4 (Bankr. E.D. Pa. June 20, 2008) and July 16, 2008 order granting same.

Many D&O policies also contain clauses that explicitly provide that in the event of bankruptcy, the corporation waives any automatic stay or injunction which might otherwise apply in order to permit the use of policy proceeds to benefit insured persons of the insured corporation. See, e.g., *Classicstar, LLC*, Geostar's Mot. Re. Ins. Proceeds 8-10 and order granting same; *Pure Weight Loss, Inc.*, Mot. Regarding Ins. Proceeds 3-4 and order granting same. These clauses are intended to provide comfort to officers and directors that they will not lose insurance coverage for a covered Claim in the event of their company's bankruptcy. However, it is unclear whether such clauses can override the Code's automatic stay, and courts have not addressed the enforceability of such clauses.

Another factor is whether the policy, like most D&O policies, is a "wasting" policy, meaning that payments for Loss under the policy erode the policy's limits of liability, reducing the amount available to pay future Loss. In such cases, the individual directors and officers can argue that such policies are intended to be paid on a first come, first served basis and that, as such, the insured directors and officers should be able to access the policy proceeds as they incur defense costs or other Loss, irrespective of a corporation's bankruptcy status. See, e.g., *In re First Cent.*, 238 B.R. at 14.

Several courts also have noted that because the insured debtor could never actually receive and keep policy proceeds, those proceeds should not be found to be part of the insured debtor's estate. See *In the Matter of Edgeworth*, 993 F.2d 51, 55 (5th Cir. 1993) (stating that "[t]he overriding question when determining whether insurance policy proceeds are property of the estate is whether the debtor would have a right to receive and keep those proceeds when the insurer paid a claim" and finding that since the malpractice proceeds at issue were payable to insured parties who sued the debtor but not the debtor, they could not be held to be part of the insured debtor's estate); see also *In re Pelullo*, 1999 U.S. Dist. LEXIS 14920, at *8 (E.D. Pa.) (citing *Edgeworth* and finding that policy proceeds were not assets of the debtor's estate when they could only be used for the debtor's defense costs); *In re Sfuzzi, Inc.*, 191 B.R. 664, 668 (Bankr. N.D. Tex. 1996) (citing *Edgeworth* and finding that policy proceeds used to fund proposed settlement were not assets of the debtor's estate because the debtor would not be keeping the proceeds).

Finally, where an insurance program provides for substantial limits of liability, the insured directors and officers can argue that it is fundamentally unjust to find the insured debtor to be entitled to all of the insurance proceeds, despite often being only one of many insureds under the policy and despite being only one of many defendants in a given action.

Even Where Policy Proceeds Are an Asset of the Bankrupt Estate, the Automatic Stay Should Often Be Lifted to Allow for the Payment of Proceeds to Insured Directors and Officers.

Section 362(d)(1) of the Code provides relief from the automatic stay "for cause." n2 Despite holding that the insurance policy proceeds in question belonged to an insured debtor and were thus subject to an automatic stay, several courts have lifted the automatic stay to allow for the distribution of proceeds to individual directors and officers to defend themselves against Claims brought against them. In so doing, courts sensibly have weighed the harm it would cause to deny the funds to the individual directors and officers against the harm reducing the availability of the funds would bring to the bankrupt corporation.

For example, in *Exec. Risk Indem. v. Boston Reg'l Med. Ctr. (in Re Boston Reg'l Med. Ctr., Inc.)*, 285 B.R. 87 (Bankr. D. Mass. 2002), the court authorized the payment of expert costs, reasoning that "irreparable harm" to the individual directors and officers would result from their inability to present expert testimony-harm which was far greater than any harm the debtor might potentially suffer if the policy proceeds were reduced. Similarly, in *In re Cybermedical, Inc.*, 280 B.R. 12, 18 (Bankr. D. Mass. 2002) the court granted relief from the automatic stay to allow

former directors and officers of the debtor to use policy proceeds to defend themselves against the trustee's complaint (and further rejected the trustee's request that the underwriters be required to submit fee requests prior to advancing defense costs to ensure that such fees were reasonable). See also *In re Arter & Hadden, L.L.P.*, 335 B.R. at 673 (finding cause to lift the automatic stay because the Executive and Management Committee members could suffer "substantial and irreparable harm if prevented from exercising their rights to defense payments" to defend themselves against the trustee's complaint); *In re Allied Digital Techs. Corp.*, 306 B.R. 505, 513 (Bankr. D. Del. 2004) (concluding that the policy proceeds were not part of the debtor's estate, but that even if they were, cause existed for stay relief).

CONCLUSION

Returning to our unfortunate officer discussed at the outset of this article, it is easy to understand why a court considering such facts should find that the policy proceeds at issue belonged to the individual officer and thus were not subject to the Code's automatic stay upon the debtor corporation's bankruptcy. It is a relief to note that the court considering that particular case did in fact so hold. *Pure Weight Loss, Inc.*, No. 2:08-bk-10315 (JKF), July 16, 2008, Order Granting Mot. Regarding Ins. Proceeds. (Bankr. E.D. Pa. June 20, 2008).

What's troubling nonetheless, however, is that the officer involved in that case had to overcome many obstacles in order to gain the blessing of a court before his insurer would agree to continue distributing policy proceeds for his benefit. Left without the two pillars of insurance protection ordinarily afforded to directors and officers as a result of their insured entity's bankruptcy, corporate indemnification and the backstop of insurance coverage, this particular officer faced the bleak prospect of funding his own defense while the debtor's bankruptcy court deliberated as to who owned the insurance proceeds which the officer sought to access.

As more and more companies continue to declare bankruptcy, and as directors and officers of those companies continue to face litigation stemming largely from those bankruptcies, courts must act swiftly and clearly in granting those directors and officers continued access to D&O insurance policy proceeds. The arguments discussed in this commentary should lend further comfort to those courts that find themselves in the unenviable position of having to make such determinations.

[Return to Text](#)

n1 The third type of protection D&O insurance policies provide, and the type of coverage which brings to light the issues discussed in this article, is direct protection to the individual directors and officers, known as "Side A coverage." Where Side A coverage exists in conjunction with Side B coverage and/or entity coverage, an entity's bankruptcy will likely bring into play the issues discussed in this article, and consequently result in an insurer's reluctance to distribute policy proceeds to insured directors and officers. One way around this issue, however, is for a corporation to purchase stand-alone Side A coverage, which typically supplements a full D&O policy. Under this scenario, regardless of whether entity and/or Side B coverage also exists, separate limits of liability exist for the stand-alone Side A coverage, meaning such coverage will not be deemed property of the debtor's estate and an insurer has no grounds for withholding policy proceeds as a result of the insured entity's bankruptcy.

n2 Stating that "[o]n request of a party in interest and after notice and a hearing, the court shall grant relief from the stay provided under subsection (a) of this section, such as by terminating, annulling, modifying, or conditioning such stay--(1) for cause, including the lack of adequate protection of an interest in property of such

party in interest" (emphasis added). The Code does not define "cause." Rather, "cause" is a fact-specific inquiry determined on a case-by-case basis. See *In re Laguna Associates Ltd. Partnership*, 30 F.3d 734, 737 (6th Cir. 1994). See also *In re Plastech Engineered Products, Inc.*, 382 B.R. 90, 109 (Bankr. E.D. Mich. 2008) (determining cause requires consideration of many factors).

Ernst & Young 2009 Insurance Outlook--US Life Insurance

By Ernst & Young

February 8, 2009

SUMMARY: Ernst & Young presents its 2009 outlook for the U.S. life insurance industry.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The US life insurance industry will be dealing with the multiple lingering after-effects of the global financial crisis and deepening recession for some time to come. Both issues will continue to impact the balance sheets, operating performance, competitive positioning and even ownership of an important percentage of the industry. Yet effects will not be universally negative; opportunities will emerge as well. Insurers need both to adapt to this changed financial landscape and, at the same time, to deal with important underlying trends that have been developing for the past several years. In our view, in 2009, life insurers must:

1. Shift product and investment focus to align with risk
2. Retool risk modeling and measurement
3. Anticipate changes in the regulatory environment
4. Expect changes in accounting requirements
5. Address increasing expense imperatives
6. Capitalize on the retirement income market

Shift product and investment focus to align with risk

The implications of the current economic crisis may take months or perhaps years, to evaluate fully. Once the immediate crisis passes, insurers will have to adjust to an environment that has fundamentally changed -- both for them and for the consumer. The consumer is responding to the crisis with a different risk appetite and at least a temporary move away from variable separate account to fixed general account products. Variable annuity sales were down 18% in

the third quarter of 2008 compared with the third quarter of 2007. Sales in the second half are expected to have contracted even more dramatically. Fixed annuities are the beneficiary of this change, showing a 46% increase in sales in the third quarter of 2008. Universal life also increased its market share to 44%, up from a 41% share in 2007. Longer term, variable products may remain an important part of the product set but with reduced guarantees and higher pricing. Variable products are already rebounding with a wave of new generation products that have differing income guarantees at higher prices. Flexibility in choice of investment products will continue to be reined in, and fees for guaranteed income and withdrawal benefits are likely to rise.

Insurers face balance-sheet challenges after enjoying several years of very strong capital adequacy ratios. Based on an analysis of statutory reports, Conning Research & Consulting estimates the US life industry has realized and unrealized capital losses from bonds, preferred and common stocks of more than US \$35 billion through the third quarter, representing a 12% drop in surplus. This is before the additional turmoil that occurred in October and November. Conning now projects a 25% drop in surplus at year-end and continuing erosion in 2009, with additional asset markdowns and impairments possible.

These losses will not be evenly distributed across the industry, and competitive differentiation in capital strength and rating agency responses will emerge. Capital from external sources will be more costly and less dependably available than in the past, whether through debt or equity issuance. Some capital will nonetheless be raised, out of necessity even if on unfavorable terms, under rating agency pressure or regulatory requirement.

Some consolidation is also likely, under the same pressures. In this environment, it is clear that capital generated through internal operating performance will be critical for stability, to fund growth and to take advantage of emerging competitive opportunities.

General account investment performance will reemerge as a key competitive point of differentiation for life insurers. Life companies that are able to shift their focus quickly to guaranteed return products and generate superior fixed returns will gain at least a short-term advantage. In the deepening recession, with an expectation of increasing corporate defaults, this will be no small challenge. With declining reliance on rating agencies and bond insurers to support credit risk assumptions, investment departments will be forced to substantially strengthen their own analytics and research.

Operating challenges will accumulate to produce a squeeze on profits, when companies post reserves against guarantees, reduced fee income and less investment income as portfolios are de-risked. Threats to profitability in 2009 and 2010 also include the possibility of higher taxes and the increased costs of responding to rating agency downgrades and competitively mandated product changes.

Retool risk modeling and measurement

In the year ahead, life companies will need to incorporate risk management lessons learned in 2008 into their risk management processes. Insurers will go beyond refreshing models to focus on expanding information used for risk analysis and to understand better the realities of new and continually volatile financial market conditions.

A major lesson learned is that risk models generally do not provide reliable answers to how much remote-event risk is being borne by an organization. Risk models may provide insight into the proper application of information or into the additional data that is needed, but they should only play a part in the overall risk management process.

When it comes to modeling priorities, line managers and corporate functions will have increasing responsibility to ensure that lessons learned are incorporated into models. Adjustments may be needed to improve the modeling of changing economic and capital markets conditions. Policyholder behavior can significantly influence results through variable lapses, shifts in investment preferences and variations in premiums and deposits in response to changing

economic conditions.

On the asset side, modelers will pursue more complex credit ratings transition matrices, correlations between asset classes and sectors, the importance of maintaining liquidity under stress scenarios and methods of projecting both the deterioration and recovery of assets over time. Outputs from models and scenario tests will also need to be examined critically against real-world experience, with an increased respect for extreme and hypothetical worst-case scenarios.

Improved due diligence in the management of models can drive innovation in areas such as asset liability modeling. Models may also continue to provide insight to managers, and an opportunity to illustrate effects to third-party audiences in characteristics such as unexpected correlations, rates of decay or deterioration and aggregation risks. But the effort to improve models will fall flat without supervision by managers who are accountable and knowledgeable about real world trends and influences.

Anticipate changes in the regulatory environment

Will 2009 be the year that federal regulation gets a firm foothold in the insurance industry? Recent market events, including the federal involvement in banking, have added a sense of urgency to these discussions. Momentum for change in the regulatory structure of insurance is building, and the near-term uncertainty over the outcome presents challenges for the industry.

It is almost certain that the industry will face increased regulation as an outcome of the current crisis in the financial services industry. Regulation is likely to be more intrusive, encompassing more continuous monitoring of activities and financial performance, perhaps with higher standards of solvency over the longer term (even though there may be some loosening of standards to help companies out of the current crisis.)

The form of federal supervision favored in the US Treasurys 2008 report, *Blueprint for a Modernized Financial Regulatory Structure*, is the optional federal charter (OFC) -- allowing insurance organizations the opportunity to choose the form of regulatory oversight that they find most appropriate. At this stage, it appears OFC is giving way to the increased likelihood that federal regulation will be applied to some degree to all insurance and financial services sectors.

The case for regulatory convergence can be strongly made in the life industry, where geography matters little in product design or consumer preference. Life insurers operating internationally would welcome dealing with a single federal regulator for their US operations, especially if the regulations are harmonized with Solvency II, which is being developed in the European Union (EU). The life industry has already taken steps toward consistent product filings through the Interstate Insurance Product Regulation Commission, popularly called the Interstate Compact. Thirty-three states are members of the compact, and legislation is pending in five other states. In addition, the Securities and Exchange Commission (SEC) already has jurisdiction over insurance products that are considered securities, such as variable annuities.

The strongest argument for state control of life insurance regulation centers on consumer protection. A compromise on consumer protection may be reached by allowing state regulators to continue in that role while federal regulators address solvency and guaranty fund issues. Within the present state-based insurance regulatory structure, the guaranty fund is not designed to respond to events like the financial crisis of 2008. It is designed to handle specific failures of an individual entity, but not systemic failures that might broadly imperil the industry. States are hampered in addressing system-wide events because the process lacks the principle of a lead regulator, and the dollar value is potentially too large. State regulation is also structured to act by seizing a company when a situation forces the equivalence of bankruptcy, but is limited in the capability and tools to head off problems before they cause collapse.

Rating agencies currently act as a form of shadow regulators and may be able to influence behavior more

proactively, but they need to address the lack of consistency and transparency. Federal regulation could alter the competitive landscape of the life insurance industry and may result in banking and insurance converging more than has been seen so far. Opportunities to accelerate geographic expansion through both organic and acquisition channels will develop for those prepared to exploit those changes. Value will likely be created by those who can quickly adopt and defend strong regional and superregional market presence.

Expect changes in accounting requirements

Accounting issues will be critical in 2009 as companies prepare for the conversion to a market-consistent framework for financial reporting. This has been emerging for some time but will gain heightened urgency in the wake of the 2008 financial crisis. With the SEC's 2008 pronouncements regarding the convergence of US Generally Accepted Accounting Principles (GAAP) with International Financial Reporting Standards (IFRS), companies are beginning to prepare for the anticipated change to a market-consistent framework. Implementing principles-based and market consistent accounting challenges nearly every established system and operational facet of an insurance company. At the same time, once insurance companies are under a market-consistent system, their income statements and balance sheets could become more volatile as assets and liabilities are subject to market valuations.

This has been painfully evident in the unfolding financial crisis of 2008, even with only some assets marked to market and liabilities not marked to market at all. IFRS 4 Phase II and Solvency II have planned EU implementation dates of 2012 or early 2013. Between now and then, US companies need to build the infrastructure to accommodate the upcoming changes. This task would be a large operational undertaking, even in the best of times, but the financial crisis and recession have increased the challenge.

As companies plan for the upcoming changes, the definition of the market consistent framework itself may undergo changes as the impact of the financial crisis, and the role played by mark-to-market accounting of thinly-traded instruments, is better understood. The International Accounting Standards Board has allowed companies in certain circumstances to reclassify some financial instruments out of the trading category and into the held-to-maturity category, which is carried on a cost basis, to help resolve the credit crisis, while reaffirming the need for transparency in asset valuations in general. Under direction from Congress, the SEC is currently exploring modifications to mark-to-market rules as well, and is expected to issue a report on its findings on 2 January 2009. At present, it appears that the SEC will maintain mark-to-market rules but seek to refine their application.

Thus, companies need to be prepared for an uncertain roll-out of these requirements, both as to pace and particulars. This can increase the risks associated with some longer-term strategic decisions where changing accounting or related tax regimes may alter the nominal value of the decision. Company managements must at least keep up with their peers in adopting systems and information capabilities to respond to these changes as they unfold.

Address increasing expense imperatives

Given the current economic turmoil, both assets and net premiums are likely to fall in real terms in 2009, forcing insurers to significantly reduce expenses to maintain their competitiveness. This may prove more difficult for smaller companies because they lack the economies of scale enjoyed by larger players. But regardless of the amount of assets under management, 2009 will be a year when all insurers look to reduce expenses.

Total business processes, both core and noncore, combined with IT systems costs, comprise about 52% of total general business expenses. While insurers have traditionally outsourced non-core processes, in 2009 they will be pressed to reduce expenses associated with core functions as well. Many may turn toward alternative sourcing, which is the outsourcing of core tasks such as actuarial support, billing and collection and claims adjudication, to further reduce

expenses. Because these functions are core to their businesses, insurers need to consider the strategic risks of poorly executed alternative sourcing initiatives. Successfully managing alternative sourcing arrangements, therefore, requires a focused approach that incorporates four key considerations:

1. A clear understanding of the business case underlying the alternative sourcing and its impact on an insurers ability to achieve longer-term and strategic goals
2. A business plan to identify the service provider and transfer the process that considers the impact of changes to organizational and governance structures
3. The establishment of an early and close working relationship between insurer and service provider to identify and solve problems
4. Ongoing monitoring of the process by the insurer, who retains the ultimate responsibility for process quality

Outsourcing core functions also carries some risk associated with the long-term stability of the service provider. This is particularly true of service providers that are located in developing regions and emerging economies that may carry their own risk of either economic or political instability.

An alternate implication of pressures for expense reduction may be to seek scale through increased consolidation and Merger and Acquisition (M&A) activity. While the current economic environment may increase the availability of willing sellers in search of business combination solutions, the challenges of financing a transaction may be prohibitive for even the largest acquirers until the capital markets recover. At the same time, history has shown that the greatest challenge that companies face following an acquisition or merger involve managing the integration of business functions and business culture of the acquiring and acquired companies. The same key considerations may be applied to the successful integration of a merger or acquisition as would apply to a business collaboration achieved through outsourcing.

In a year of economic uncertainty and increasing pressure to reduce expenses, alternative sourcing or M&A might be good tactical choices, yet insurers must manage the strategic implications in 2009 and beyond.

Capitalize on the retirement income market

Consumers and employers have increased concern for the volatility and risk associated with investing for retirement income. This may cause both groups to seek alternative solutions to differentiate between planning for basic retirement income and longevity risk and investing for lifestyle opportunity. Insurance carriers, with their capabilities in combining insurance and investment expertise and scale, are positioned to develop products to meet these changing needs.

The impact of the 2008 financial crisis on individual 401(k) plans, IRAs and other retirement vehicles may have a lasting effect on consumer attitudes to retirement savings and investing. Many individuals have seen 25% 50% of their retirement savings wiped out in the crashes of the third and fourth quarter. This has presented a stark reminder of the risk being accepted coinciding with individual choice in personal retirement savings programs. At the same time, new appreciation of the risk of asset and income guarantees on savings products will force insurers to respond with tighter products and higher pricing.

More than half of the US \$17.6 trillion in US retirement accumulations at yearend 2007 is in defined contribution plans and IRAs, reflecting the long-term decline of defined benefit pensions. This concentration of assets, the recognition of longevity risk and concerns over the collapse of financial markets have individuals and employers seeking alternatives to funding income needs in retirement.

Recently, a number of innovative group products have been developed to allow savers in 401(k) plans to create predefined streams of retirement income that are guaranteed for life. In 2009 and beyond, insurers will continue to build on the idea of blending income guarantees with noninsurance asset accumulations subject to the risks that have pummeled the variable annuity product. Careful consideration of guarantee features, capital costs and prices will be needed. By refining their use of underwriting and risk segmentation, companies can create competitive products that help consumers manage the retirement income and longevity risks they face.

Accounting, regulatory and market forces are also stimulating an increase in the number of frozen defined benefit plans in the US as employers seek solutions to their own investment and longevity risk problems. This will create opportunities for financial services companies to meet the evolving needs of plan sponsors. Life insurers can capitalize by buying out frozen pension plans. In fact, US regulators have already signaled their willingness to consider changing regulations that currently bar buyouts between unrelated entities.

Ernst & Young 2009 Insurance Outlook -- Europe

2009 Emerging Issues 3360

Ernst & Young 2009 Insurance Outlook -- Europe

By Ernst & Young

February 8, 2009

SUMMARY: Ernst & Young presents its 2009 outlook for European insurers.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Financial services and insurance companies face enormous challenges in 2009 as they manage through the economic downturn and respond to shifts in market and consumer expectations. As with the rest of the world, Europe is headed into a recession, with unemployment expected to rise through 2010. For most insurers, operating results have deteriorated, resulting in lower investment income and the soft cycle affecting underwriting gains. Top-line growth is projected, but at a slower pace. As companies adapt to the changing financial landscape, opportunities will emerge to strengthen balance sheets, improve overall efficiencies and capitalize on innovative products in areas such as health insurance and retirement income. This Outlook discusses key considerations for European insurers in 2009:

1. Balance risks and opportunities
 - Life insurance and retirement-income services
 - General insurance
 - Health insurance
2. Rethink growth strategies in Central and Eastern Europe
3. Strengthen balance sheets and capital adequacy
4. Readdress operating issues
5. Prepare for changes in global regulatory oversight

BALANCE RISKS AND OPPORTUNITIES

Life insurance and retirement-income services. The fundamentals that began the slide have continued, and 2009 is expected to show further erosion in top-line growth and earnings. Life sales declined in 2008 in Western Europe, led by unit-linked products, although life sales increased in Central and Eastern Europe (CEE) and new pension and annuity premiums continued to grow in Europe overall. Life operating results deteriorated as investment income declined and fees were lower on plummeting values of asset-based products. Variable life and annuity products with embedded options and guarantees will continue to be negatively impacted by depressed equity markets. Deferred policy acquisition write-offs and/or reserve increases related to product guarantees will further drive down earnings in 2009.

Contract-holders values in unit-linked products and other asset-based funds declined substantially throughout 2008, and consumer sentiment has shifted as retirement savings have eroded and the illiquidity of some accounts place the retirements of millions of Europeans in jeopardy. Unit-linked product sales will continue to decline, and consumers will seek more traditional products as they focus on protection.

Product features will be more transparent going forward. Retirement products will provide for more clearly defined retirement income streams, and both life and retirement offerings will provide some upside participation in profits and investment earnings, with the investment portfolio managed centrally by the insurer. The insurers that come out on top will accurately judge consumer sentiment and will develop and bring to market products that meet savings and living benefit needs of various consumer segments. Retirement plans present an enormous opportunity for insurers and reinsurers. The challenge will be to develop more sophisticated asset-liability management techniques to maximize returns while managing longevity risk and efficiently deploying capital. Reinsurance will play a major role in managing these risks, and capital markets transactions will reemerge as solutions by the end of 2009.

General insurance. General insurance rates continued to decline during 2008. Despite an upswing in the rating cycle, there will be little top-line growth in 2009 as demand for primary insurance shrinks. Commercial insurance will be impacted by depressed property prices, recession in Western Europe and the slowing of CEE economies. We expect that insurers will curtail certain businesses, such as credit insurance. There may be opportunities for insurance mergers and acquisitions at a future date. However, transactions will be delayed until more capital is available and private equity investors can once again access the debt market. Motor rates will remain stagnant. Profit margins will be squeezed. There will be further asset write-downs, investment income will fall further, and loss ratios will increase as a result of lower rates and higher losses. These losses will be triggered by both the financial crisis -- such as D&O, E&O and credit insurance losses -- and a more litigious environment in Europe.

Early indications are that renewal pricing negotiations will support firming for a few selective risks and markets that have managed to decouple from the rest. Overall, competition and cash flow underwriting are keeping prices down. Prices are expected to firm in mid-2009, in part because insurers need for capital protection and capital-raising strategies will increase demand for reinsurance, and reinsurers will drive pricing up. Catastrophe bonds and sidecars, as alternatives to traditional reinsurance, are not likely to play a significant role in increasing reinsurance capacity in the short term, and therefore will not provide an alternative to rising prices.

Inflation risk, of concern coming into 2008, has subsided with the European Central Bank projecting average euro-zone inflation declining from an annualized 2.1% in October (3.8% overall for 2008) to 1.4% and 1.8% in 2009 and 2010, respectively. Even inflation in CEE, high in some of the countries, has subsided as recession dampens the economies of the developed countries and some emerging countries have constrained their heated economies in exchange for International Monetary Fund (IMF) safety-net funding. Inflation is not expected to have a major impact on losses in 2009.

Health insurance. Health insurance presents accelerated growth opportunities in Europe for 2009, for both life and nonlife companies. Today, all countries have some form of private medical health insurance that is supplemental to a public health system, covering copayments and services not provided by the public system and/or topping out services such as private hospital rooms. There are a few major health insurers operating in Europe in an otherwise highly fragmented marketplace, in part because of a culture of local healthcare delivery. However, the market will need to

consolidate to achieve quality and cost-containment objectives, and governments have started to look to private insurers to achieve these goals and bring more discipline to the sector.

Some of the cost drivers that need to be addressed include: (1) the escalating cost of the public system, particularly in the current economic environment; cost-shifting from the public system to consumers will continue to occur in 2009; (2) the cost of healthcare for an aging population; (3) consumers demands for better care and more timely access; and (4) the potential for government outsourcing of parts of the public systems, which is more likely to rise to the top of political agendas.

Product and marketing strategies will vary. For example, emerging markets are more likely to respond to critical illness and hospital cash policies than to comprehensive managed care policies. Significant investments are required, particularly in countries, such as Poland, where insurers are developing highly integrated business models, by building and owning parts of the healthcare delivery system. But, there are risks. Rates may be controlled by governments, administrative fees may be limited and medical and demographic underwriting may be restricted. Health insurance can be highly politicized, and the rules of the game could change in a short period of time, as demonstrated by Slovakia's recent attempts to nationalize private health insurance organizations.

Companies will have the ability to expand and enter new markets if they have proven expertise in provider contracting, medical management, disease management, care for the aged and administrative infrastructures for billing and reimbursement. Market entry takes planning, time and investment. For those who are serious about this sector, 2009 will be a critical year for positioning, in advance of market shifts and to gain an early-mover advantage.

RETHINK GROWTH STRATEGIES IN CENTRAL AND EASTERN EUROPE

In the beginning of 2007, it appeared CEE economies were sufficiently decoupled from the US and Western Europe to weather the financial crisis with only limited negative impact. But, the financial contagion that has spread to CEE countries is resulting in slower growth, plummeting stock markets and frozen credit markets. CEE insurance markets are projected to grow, but at a slower pace. Insurers should focus on simple and transparent protection products, such as savings, endowment and health. Longer term, as these businesses expand, demand will continue to increase for property-casualty insurance and for reinsurance for natural catastrophes and commerce (such as shipping, ports and pipelines). Insurers should target specific market segments, such as takaful, to expand their franchises in CEE countries. With greater capital and more political risks, Western European expansion will slow from its 2007 pace, and timeframes for realizing acceptable returns will be shorter. Multinational insurers will not pull back entirely from their expansion strategies, but capital to support these decisions will be scrutinized more carefully. In spite of slowing growth, companies must focus on human resources -- both domestics and multinationals have a shortage of skilled staff in the region, particularly in underwriting and actuarial science.

STRENGTHEN BALANCE SHEETS AND CAPITAL ADEQUACY

Investment valuations and income Insurers exposures to various asset classes and securities of specific troubled companies vary, but few companies have escaped the impact of declining asset values and investment returns. Determining asset fair values is a difficult process that requires both quantitative and qualitative assessments. In its October 2008 Global Financial Stability Report, the IMF estimated that globally only 55% of expected ultimate write-downs of \$1.4 trillion, related to US-originated and securitized mortgage, consumer and corporate debt, have been taken. Continued write-downs are to be expected. In October, the International Accounting Standards Board (IASB) issued amendments to IAS 30 and IFRS 7, and the US Securities and Exchange Commission

provided broader GAAP guidelines on market-valuing securities, bringing accounting practices in the US and

Europe more in line. Other changes are being contemplated by the IASB and, in the US, for statutory accounting by the National Association of Insurance Commissioners. Investment income will continue to decline in 2009. Central banks cut core interest rates October through December, with the Bank of England, European Central Bank and Swiss National Bank cutting rates by 200 bps, 175 bps and 175 bps, respectively. Further cuts are not ruled out, even though the key US and Swiss rates stood at a mere 1% at the end of November. There will be further cuts based on declining conditions.

Other pressures on income include increased costs of hedging, losses associated with ineffective hedges and foreign-exchange volatility. These factors will further erode companies capital.

Capital adequacy. How adequate capital is defined is changing, as rating agencies revisit requirements and the European Commission and individual countries consider modifications to proposed Solvency II regulations. For insurers, rating agency definitions are the primary driver, as companies focus squarely on capital protection and capital-raising strategies that will keep them at targeted ratings. Companies should complement the Solvency II regime with additional testing such as short-term liquidity testing and cash flow analysis that allows for a more holistic approach to anticipating the impact of adverse events. Furthermore, insurers should be cautious when discounting long term liabilities for financial reporting and for solvency tests. Such discounting may be permissible, and could take pressure off capital in the short term, but is likely to lead to reserve increases in future years when the credit turbulence subsides. Companies must be clear on the quality of capital components: what is tangible and what is the result of permissible accounting calculations.

Solvency II and its envisaged policies and risk-based approach of regulation extend great benefits to policyholders and to the industry and further supports financial stability. It is our expectation that the key principles will be implemented in a timely manner and issues regarding group supervision will be resolved in a way that addresses the concerns of those involved. The current financial crisis should also give further impetus for insurers to implement appropriate enterprise-wide risk management frameworks and to improve their management of capital and liquidity. In particular, the experience of the current crisis has demonstrated the need for contingency planning and scenario analysis to prepare firms for extreme and adverse events.

Companies will continue to seek the most efficient approach to allocating capital. Although sales of closed block and runoff businesses have slowed somewhat in 2008, they will improve as sellers look to free up capital to reinvest in core businesses and as acquirers focus on managing tail risk. Capital for potential acquisitions will be difficult to raise, but some insurers will have access to funds from government safety nets and others will take advantage of buying opportunities to make acquisitions in 2009.

READDRESS OPERATING ISSUES

Distribution. In prior periods, distribution of complex products had become difficult due to the amount of training required to sell these products. With the financial crisis driving simpler and more transparent product structures, insurers will realize increased productivity in traditional distribution channels and begin to more aggressively distribute products through web-based and social-networking mechanisms.

Distribution is a critical success factor in every insurance sector. In developing markets, distribution arrangements are evolving and many recent acquisitions and joint ventures have included long term distribution arrangements (10 years or more) with sellers and joint venture partners, particularly for bancassurance. In addition, a growing number of insurance companies have acquired financial advisors to complement their distribution mix. Distributors also have been consolidating to acquire expertise in niche markets and grow market share.

Innovation is critical, and companies are beginning to leverage web-based and mobile technology investments to reach new markets. Technology acquisitions made in the past 18 months will begin to be deployed in 2009, helping to

attract a broader spectrum of policyholders by reducing administrative hassles and improving customer service.

Expense Control. Cultural market restrictions and legal factors have historically limited European insurers ability to maximize expense reductions. Yet, Western European insurers made a large number of acquisitions in 2007 that have not yet been fully integrated. Cost-reduction initiatives are expected to increase substantially in 2009. Cost management and operational transformation will come from a deployment of technology, which provides a platform for growth and diversification. Insurers and distributors made numerous acquisitions of technology companies in 2007 and financial benefits and service quality will be realized as these technologies are deployed in 2009. Effective use of technology in general will be a key element of achieving operating efficiencies.

Outsourcing of business processes, IT infrastructure and applications have been increasing in recent years as outsourcing providers expanded in CEE countries. These arrangements are expected to expand, helped by the proximity and lower cost of CEE outsourcers.

PREPARE FOR CHANGES IN GLOBAL REGULATORY OVERSIGHT

IFRS 4 Phase II, Solvency II, and market consistent embedded value have planned implementation dates of 2012. Between now and then, all insurers need to build the infrastructure to implement the upcoming changes. This would be a large operational undertaking even in the best of times, but the credit crisis and recession have increased the challenge. The financial crisis will undoubtedly drive greater regulatory scrutiny, with regulators requiring greater disclosure and compliance. Market consistent valuations will come under pressure. An integrated-model approach may be discarded or delayed. Models may be significantly overhauled to add focus on liquidity and structural asset-liability management and to capture all activities of all entities in the group.

Ernst & Young 2009 Insurance Outlook -- Far East

By Ernst & Young

February 8, 2009

SUMMARY: Ernst & Young presents its 2009 outlook for insurance companies in the Far East.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The expansion of western European and US insurance companies into Asia will continue but at a slower pace, and some multinationals will divest Asian operations to raise capital, creating opportunities for other brave or heavily committed domestic and multinational insurers.

Governments of both developed and emerging nations continue to take unprecedented individual and collaborative steps, applying financial stimulus and evaluating necessary policy changes to stabilize and restore confidence in the financial system. Understandably nervous regulators are locking capital within each country, making it difficult for some structures to operate. In this context, these issues and considerations for insurance companies in the Far East are the focus of our Outlook.

1. Mitigate risks and seize opportunities
 - Property-casualty insurance
 - Life insurance
 - Health insurance
 - Reinsurance
2. Strengthen balance sheets and capital adequacy
3. Expand markets and distribution
4. Access new market segments
5. Monitor operating efficiencies and expense control

MITIGATE RISKS AND SEIZE OPPORTUNITIES

Property-casualty insurance. The financial crisis, catastrophe losses and a decline in top line growth are setting the stage for lower earnings in 2009. With further write-offs expected, investment income is unlikely to rebound quickly as companies investment strategies focus on earnings and credit quality. Overall, prices are not firming for renewals, but some relief in the property/casualty rate cycle is expected later in the year. Rates for certain lines in some countries will continue to be depressed as tariff regimes keep rates artificially low or as intense competition results in rate-slashing. The experience of the Indian market where, in the aftermath of the tariff abolition, rates for certain coverages fell by as much as 80%, illustrates this trend. This situation requires a more sophisticated approach to market segmentation, acquisition and retention strategies, and assessment of long-term customer profitability and value.

Natural catastrophes are always a wild card. Multinational insurers and reinsurers suffered from US hurricanes and other insured catastrophe losses totaling over USD20 billion in 2008. Domestic Asian insurers were impacted by their own catastrophes, such as the snowstorms in southern China and the Sichuan province earthquake. Insurers are pushing pricing increases more aggressively in 2009, and cannot count on repeats of the benign catastrophe years of 2007 and 2006.

Although at a slower pace, top line growth will probably continue in 2009, as demand increases for both personal and commercial insurance. In spite of the spreading recession in developed Asian countries, economic momentum continues, assisted by bail-outs such as Chinas USD586 billion infrastructure fund. Insurers and reinsurers have benefited from real estate development, and growth in manufacturing and import/exports that are expanding shipping and energy projects for gas and oil pipelines. Increased individual wealth has resulted in more insurable risks. And in China, underinsurance is still an issue, as evidenced by the Sichuan province earthquake in May. Overall losses were estimated at USD16 billion to USD48 billion, yet only about 2.5% of that amount was insured.

Earnings in 2009 are also at risk because growing economies increase exposures and unforeseen factors can influence pricing adequacy. Government-mandated risk-sharing pools, inflation, changing economic circumstances and tort reform are just a few of the factors for insurers to consider in managing growth, earnings and capital. Different variables must be considered for pricing and reserving when companies write new exposures such as commercial flood insurance. Mandatory risk-sharing pools (e.g., Indias Motor Third Party Insurance Pool for commercial vehicle business) provide hard-to-insure coverage and risk sharing among all market players; they are a cost of doing business that is likely to increase insurer losses.

Life insurance. Life insurance and savings/annuity product growth continued in 2008, although with mixed results country to country. For example, Chinas domestic life insurance premiums grew by 62%, based on PRC GAAP, in the first nine months, while Korea experienced modest growth of only 3.5% in the six months ended September 30. Overall growth will slow dramatically in 2009 as a result of financial market turmoil and erosion of the value and image of unit-linked products. Insurers need time to reposition their product portfolios and retrain distribution forces. Sensibly, some life insurers are investing in this area and realizing retention levels that western operations aspire to achieve. A few companies have shifted quickly to protection and are now outperforming the market. Some multinationals may withdraw from markets, or restrain sales, as they increase reserves and write-off deferred acquisition costs related to in the money guarantees.

The prognosis for the life insurance sector in 2009 is a rocky one. While many multinationals continue to expand in Asia, a shortage of capital could constrain their growth. As consumers shift from unit-linked to more traditional products, the demand is for long-term investment offerings with guarantees. Longer term, the industrys challenge is to develop and sell products that meet consumer needs, but do not expose companies to undue risk; and premium growth will vary from country to country. Countries such as China, where investment-linked products have yet to grow in popularity, may see less disruption. The ongoing emphasis on private pensions throughout Asia, and favorable tax incentives, will help prop up the market. Life insurers with mutual fund and asset management businesses are best positioned to provide alternatives for consumer savings. The insurers most likely to come out on top are those with

adequate capital, strong multinational or domestic brands, and a product portfolio able to meet the needs of a more risk-averse consumer.

Health insurance. The health insurance market will continue to experience long term growth, and those companies contemplating entry should use 2009 to set their strategies. Markets vary from country to country in terms of products offered, which range from critical illness and hospital cash policies to western-style managed care products. Penetration is still low in most countries but growing, as evidenced by the Korean market, where most of the growth in nonlife insurance premiums in the first half of 2008 was in the health insurance sector. Many newly industrialized and emerging countries are encouraging private health insurance to limit government funding and will be even more motivated to do so in the current financial crisis.

Growth is expected in the health sector by domestic insurers, such as LIC in India, which entered the health market in the past year. Multinationals already invested in the sector, such as Swiss Re in India and China and BUPA in Australia, will continue to expand. A few of the larger US health insurers that are focusing primarily on expatriate business will start to look for other opportunities. The shortage of capital and the longer-term nature of the opportunity will slow the pace of investment. However, that will not be the case in countries such as India, where regulators are encouraging additional investment and have proposed changes in insurance laws, including lower capital requirements for standalone health insurers.

Although opportunities are abundant, there are other considerations. Significant investments are required to contract a broad and high-quality health care delivery network, to establish medical/disease/ case management capabilities, and to develop administrative processes and systems such as billing and reimbursement. Human resource shortages present another challenge, and the ability to fully underwrite risks is limited in some countries. Interested companies should begin to evaluate the level of investment required by health care providers, other insurers, and government to help mature individual markets. Joint venture partners are essential to success, and must be selected wisely, to ensure that the full continuum of operating capabilities is assembled.

Reinsurance. Growth in infrastructure and commerce in developing economies requires the spreading of large risks, which will likely increase the demand for insurance in 2009. A new focus on financial solvency in countries such as China and Korea is driving regulation that requires this increased use of reinsurance. As indicated in Guy Carpenters 2008 study on World Catastrophe Reinsurance Markets, global rates have dropped by 10% on average in 2008 as opposed to 6% in 2007, including a 6% drop in Asia/Pacific region. Reinsurance demand is expected to place upward pressure on rates in 2009, reversing the previous two-year trend.

STRENGTHEN BALANCE SHEETS AND CAPITAL ADEQUACY

Few insurers have escaped the impact of declining asset values and investment income. Domestic insurers in some countries have been protected by regulatory limitations on equity holdings, but a common situation is over-exposure to cross-company domestic holdings in equities and corporate debt, and to troubled western institutions. Asset write downs may well continue. In its October 2008 Global Financial Stability Report, the International Monetary Fund estimated that globally only 55% of ultimate expected asset write downs of USD1.4 trillion, related to US-originated and securitized mortgage, consumer and corporate debt, have been taken.

Property-casualty insurers earnings are depressed in spite of the fact that many insurance markets are experiencing top line growth. Results are impacted by general business conditions, tariff regimes where rates may be inadequate, the soft rate cycle, and competition. Inflation has subsided in many countries, but continues at high enough levels in developing markets to influence the future payout of property and liability claims by insurers and reinsurers.

With this confluence of financial events, capital sufficiency is of greatest concern to insurers. The good news for Chinese insurers, but for few others, is that they raised large amounts of capital in an up market in 2007 (the three largest Chinese life insurers raised USD12.8 billion). But, numerous plans to raise capital are now on hold and it is

likely that capital raising programs such as Korean companies expected future IPOs have been set back, perhaps for years.

With new capital unavailable, failure of insurers becomes more likely, whether through risky investment practices or through increased vulnerability to other market shocks. Problems are particularly likely in the smaller to mid-sized life insurance market. Larger companies may be forced to sell subsidiaries to raise capital, exiting or refocusing their Asian operations. There may also be mergers and investments by Asian insurers in western-domiciled multinationals.

In current conditions, balance sheet risk is high and capital adequacy is difficult to evaluate. Counterparty risks add to uncertainty. Hedging strategies may be ineffective or difficult to evaluate, costs have increased significantly and pricing is highly erratic. Foreign exchange exposures and volatility increase risks and earnings fluctuations for companies with cross-border operations and with currencies pegged to the U.S. dollar (USD). Governments around the region have lowered interest rates to stimulate credit. The lower rates have generally led to higher policyholder liability reserves and strain in meeting regulatory solvency requirements. The complexity of accounting in the current environment should make insurers cautious in analyzing capital adequacy, to distinguish capital backed by tangible vs. intangible assets.

EXPAND MARKETS AND DISTRIBUTION

Many Asian insurers are joint ventures between companies from developed countries and domestic insurers, and, in some instances, domestic non-insurance companies. In several countries, foreign direct investment regulations limit ownership by offshore companies. For example, ownership is limited to 26% in India (anticipated to rise in the near future to a limit of 49%) and to 20% and 25% by single or multiple investors, respectively, in China (although foreign insurers may own 100% of a nonlife subsidiary and 50% of a life joint venture). Multinationals are seeking local knowledge and distribution, while their domestic partners are seeking product innovation, operating processes, systems and insurance know-how.

Less mature insurance markets are frequently characterized by numerous small, local or regional insurers that are not highly regulated and lack the underwriting discipline of more mature markets. These companies tend to under-price risks, and, in certain instances such as motor, where insurance is increasingly mandatory, contribute to the negative perception of the industry because of poor claim service. In 2009, consolidation and efforts to improve solvency regulations may accelerate, thereby setting the stage for improving consumers perceptions of the industry over the long-term.

Domestic insurers dominate the landscape in certain countries. In Korea, for example, the largest three insurance groups constitute more than 60% of the life and nonlife insurance market. Tariff regimes can shield local players from the rigors of true competition. Yet when tariffs are removed, as they were in India for motor insurance at the beginning of 2007, companies are often not fully prepared to operate in a more competitive environment. Tariff regimes, in general, can arbitrarily cap premiums and lead to pricing inadequacies.

Retail insurance markets are slowly developing, with variable standards. Multi-channel distribution strategies with geographic breadth are keys to growth in 2009. Until a few years ago, tied agencies were the predominant distribution channel, but growth and profitability were depressed by agent turnover, and poor policyholder retention. Multinational insurers invested heavily in distribution in 2007 and early 2008, particularly in bancassurance, many through long-term distribution partnerships. Yet while the growth of bancassurance is significant, this recent activity conceals a largely sub-optimal use of channel. Independent agency and broker distribution has also been growing, as entrepreneurs seize an opportunity where Internet and mobile technologies are beginning to be exploited. Companies will continue to pursue multichannel distribution and geographic feet-on-the ground expansion in 2009, looking specifically for distribution partnerships while investing heavily in training agents and sales representatives.

ACCESS NEW MARKET SEGMENTS

Insurers are exploring two promising potential market segments: micro-insurance and takaful. As with health insurance, investments in these segments may slow in 2009 due to capital constraints. But, for those companies with the interest and ability to invest, there are opportunities to be innovative.

Micro-insurance. The target population for micro-insurance includes people who are insurable but have no access or only informal access to insurance. They are mostly poor but have the means, perhaps with some subsidies, to pay an insurance premium. Micro-insurance offers opportunities, but companies need to be aware of risks before entering these markets. Countries such as India and China are helping define this market by mandating that insurers serve rural areas and the urban poor. In India one third of the 1.1 billion population is below the poverty line, and in China 800 million of the countrys 1.3 billion people live in rural areas. Other countries, such as the Philippines, Bangladesh and Indonesia, are also focused on developing micro-insurance markets. Simple products such as life and savings plans are most common, but health and agriculture are emerging to fill large unmet demand. Innovation is required to: effectively assess market needs, determine how insureds would buy and use services, provide simple products and processes, and utilize nontraditional distribution channels such as nongovernmental organizations, microfinance organizations and trade unions.

Takaful. An estimated 1 billion Muslims live in Asia, representing more than half the worlds Muslim population. Takaful targets Muslim communities with insurance that is structured to be Shariah-compliant. The underlying concept is not unlike that of a conventional mutual insurance company, although details of the corporate structure differ.

Takaful business has been growing at a rate of 10-20% per year and is expected to continue at a robust pace. Companies operate in over 23 countries inside and outside of Asia, and a retakaful market is being developed in the region that is attracting major conventional reinsurance players such as Munich Re and Tokio Marine. This market segment, too, requires innovation to effectively assess market needs and design products and processes that are responsive to those needs.

MONITOR OPERATING EFFICIENCIES AND EXPENSE CONTROL

The financial crisis has accelerated the need to achieve operating efficiencies and control expenses. Many companies will consider some restructuring in 2009 to meet these demands. However, differences among countries in business infrastructure, culture and regulations, and the existence of numerous joint venture arrangements, continue to present barriers to maximizing efficiencies. Those companies that are successful in leveraging technology and process improvements, and build a culture of continuous improvement, will increase their ability to grow profitably. Customer service will improve, and acquisitions can be integrated more easily onto a common operating platform. Multinationals and larger domestic companies have the most opportunity to achieve real cost savings as they benefit from economies of scale. Smaller companies will be at a disadvantage, and may show signs of consolidating in 2009.

As margins continue to be squeezed, IT and business process outsourcing may increase. Outsourcing initiatives require a rethinking of the entire business process, as companies consider which processes are core and should be retained, and which can most effectively be outsourced. Although recent IT industry scandals in India may increase the due diligence potential outsourcers will undertake before trusting their business to providers, regulators may look unfavorably on cross-border outsourcing, particularly of customer facing functions or policyholder data.

Human resource challenges in Asia include a shortage of qualified staff, particularly in technical areas such as underwriting, actuarial and finance. Similarly, companies will have difficulty finding experienced talent in process improvement, and may need innovative ideas to attract and retain the right capabilities.

Levine on Eight for '08: Insurance Measures in Review

2009 Emerging Issues 3252

Ken Levine and Sheri Holtz Levine on Eight for '08: Insurance Measures in Review

By Ken Levine and Sherri Levine

December 15, 2008

SUMMARY: "Eight for '08" reviews in an in-depth and readable fashion key state and federal legislative efforts on insurance topics such as catastrophic loss, suitability, bad faith civil liability, health care reform and federal regulatory efforts. The commentary highlights common themes and provides a singular reference for significant legislation and various related regulatory pronouncements that will affect the insurance industry for years to come.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: EIGHT FOR 08: INSURANCE MEASURES IN REVIEW

INTRODUCTION

At the risk of stating the obvious, 2008 has been an historic and memorable year. From the historic presidential election, creating for many a new opportunity for hope, to the floods in the Midwest or the collapse of Wall Street, resulting for many in lost opportunity and fear, 2008 will be a year that is hard to forget. In addition to the major headlines of the year, 2008 was also a memorable year for state and federal efforts pertaining to insurance. For some, it was a year creating opportunity for hope; for others, 2008 resulted in lost hope and lost opportunity. In honor of this memorable year for insurance regulation memorable for that which occurred as well as that which did not below are some highlights from 2008 in eight insurance topics: (1) Life Settlement Agreements/Stranger-Originated Life Insurance; (2) Suitability; (3) Bad Faith Civil Liability; (4) Property and Casualty: Flood and Other Natural Disaster; (5) Health (Autism, Mental Health Parity, and Accessibility/Affordability); (6) Producer Licensing; (7) Interstate Compact; and, (8) Federal Regulatory Effort.

LIFE SETTLEMENT AGREEMENTS and STRANGER-ORIGINATED LIFE INSURANCE

The year 2008 proved legislatively significant for the viatical and life settlement industries. According to one report, approximately 60 bills were introduced in legislatures across the nation. Life Settlement Solutions Market Watch, Regulatory and Compliance Update (Sept. 2008). Of those some 60 bills, 14 bills were signed into law. Two bills were vetoed: California (S.B. No. 1543, vetoed Sept. 30, 2008) and Rhode Island (Sub. A for S.B. No. 2603, vetoed July 3, 2008).

Most of the newly-adopted Acts serve as extensive revisions to existing statutes, to provide increased accountability and consumer protection against fraud, stranger-originated life insurance (STOLI) policies, and other unscrupulous practices. Hawaii and West Virginia, two states that previously did not regulate life settlement agreements, adopted new regulatory programs. Three states Maine, Arizona, and Indiana addressed STOLI transactions without adopting extensive revisions to the current regulatory approach. Florida adopted clarifying amendments to section 627.404, FLORIDA STATUTES, addressing insurable interest requirements, effective July 1, 2008. See 2008 Fla. Sess., Comm. Sub. for S.B. 648. The National Association of Insurance Commissioners (NAIC) and National Conference of Insurance Legislators (NCOIL) model acts provided the basis for most of these bills. A listing of states following the NAICs Viatical Settlements Model Act (amended June 4, 2007) and the states following the NCOIL Life Settlements Model Act (adopted Nov. 17, 2007) is provided below.

S.B. No. 704, Act No. 2008-124 (*codified at §§ 33-13C-1 to 18, W.Va. Code*)

NAIC

May 29, 2008

Hawaiiis Act sunsets in 2010.

Some provisions of the Ohio Act, such as Division (A) of section 3916.20, OHIO REV. CODE, addressing licensing, are effective December 11, 2008.

All of the newly-adopted acts employ various schemes to deter STOLI transactions and similar investment practices with the potential for negatively affecting the life insurance market by making life insurance significantly more expensive and less available. See Testimony of Mary Jo Hudson, Director, Ohio Department of Insurance, before the House Insurance Committee of the Ohio Legislature (Jan. 15, 2008). Some states, such as Ohio, Iowa, and Nebraska, increased the amount of time a life insurance policy must be held before a viatical agreement may be signed from two to five years. West Virginias new legislation also set this threshold at five years. Even in these states, it is possible to enter into a viatical settlement if the viator undergoes certain life changing events, such as terminal or chronic illness, the death of a spouse or child, divorce, retirement from full-time employment, or bankruptcy. These programs also allow for viatical agreements prior to two years after the issuance of a life insurance policy in limited circumstances where it can be proven, for example, that at all times during that period, the policy was (a) purchased with unencumbered assets, (b) no agreement to transfer ownership exists, and (c) neither the policy nor the insured has

been evaluated for settlement.

The NAIC and the NCOIL model acts, and their recently-enacted state progeny, prohibit fraudulent life settlement acts. Certain specified acts, including STOLIs, or omissions will qualify as fraudulent if there is an intent to defraud for the purpose of depriving another of property or for pecuniary gain. Other acts or omissions may likewise qualify as fraudulent without a similar showing of fraudulent intent.

Other methods used to deter fraudulent practices, and found as common elements, if not identical language, throughout the new acts address advertising and promotional materials, required disclosures to the viator as well as the insurer, proof of financial responsibility requirements for providers and brokers, annual reporting to the regulating entity disclosing information related to policies settled within five years since issuance, requirements to obtain affidavits or similar documents confirming that the insured is of sound mind and under no undue influence to enter into a contract as well as consenting to the release of medical records, new or revised broker and provider registration requirements, new or revised disclosure requirements, increased examination powers, required fraud warnings, requirements to adopt anti-fraud measures, and continuing education requirements for brokers. In addition, life insurers will not be held responsible for the acts or omissions of a provider or broker in connection with a viatical settlement transaction unless the insurer received some form of compensation in connection with the transaction. Listed below are examples of some of the mentioned revisions:

(a) Advertising and Promotional Materials. Various efforts to assure clear and truthful advertising of the risk and benefits of viatical agreements include requiring the filing of promotional, advertising and marketing materials with the regulating entity (i.e., Superintendent or Commissioner of Insurance), and prohibiting the use of certain words such as free, no cost, or the like.

(b) Annual Statements. Annual statements to be filed by March 1st of each year are now required in those states adopting or revising their regulatory programs. In addition to information required as adopted by agency rule, most of the newly required annual statements require detailed information relating to viatical agreements settled within the previous five years, such as total number settled and aggregate face amount. The details of this new requirement vary from state to state, but to provide an example, Connecticut registered viatical providers will be required to file in their annual statements, at a minimum, for any policy settled within five years of policy issuance, the total number, aggregate face amount and life settlement proceeds of policies settled during the immediately preceding calendar year, a breakdown of the information by policy issue year, the names of the insurance companies whose policies have been settled and the brokers that have settled said policies. 2008 Conn. Pub. Acts 08-175, § 5(a).

With the adoption by the Ohio General Assembly of House Bill 404, effective September 11, 2008, viatical settlement providers, as part of the application for registration process, are now required to provide proof of financial responsibility in the amount of \$250,000. In addition to the annual statement required by March 1st, viatical settlement providers in Ohio are required to file by May 1st of each year, an independently audited financial statement and unaudited financial statements on a quarterly basis within 45 days after the end of each quarter.

(c) Anti-Fraud Measures. Providers and brokers are required to adopt anti-fraud measures reasonably calculated to detect, prosecute, and prevent fraudulent life settlement acts. In addition, many states have adopted mandatory reporting requirements for persons engaged in the business of viatical settlements having knowledge or a reasonable suspicion that a fraudulent settlement activity has occurred or will occur and discretionary reporting for any other person having knowledge or a reasonable belief of a fraudulent viatical settlement act. See §§ 33-13C-14(c)(1) and (2), W.VA. CODE.

(d) Continuing Education Requirements. Some states like Connecticut, Hawaii, Iowa, Nebraska, and Ohio require brokers to attend on a biennial basis 15 hours of continuing education. Oklahoma requires 8 hours.

Ohios House Bill 404 imposes new requirements on life insurance companies too, creating, as referred to by some, a shared responsibility by all parties to protect consumers and prevent stranger originated life insurance policies.

Pursuant to section 3916.05(B), OHIO REVISED CODE, an insurance company that issues life insurance policies in Ohio shall include questions in its life insurance applications that are reasonably structured to identify and prevent stranger-originated life insurance. Insurers are required to file amended applications including such questions within 12 months following the adoption of rules by the Superintendent of Insurance. Life insurers are also required to file, on or before June of each year, a description of the measures taken by the insurance company to detect and prevent stranger-originated life insurance. § 3916.021, OHIO REV. CODE.

Two more examples of Ohios shared responsibility approach, with regard to licensing revisions, include: (a) requiring that any business licensed as a viatical settlement broker must maintain at least one person who is individually licensed as a broker to be responsible for the licensees compliance, § 3916.031, OHIO REV. CODE; and, (b) requiring that viatical settlement providers provide, as a condition of licensing, information concerning their providers receipt and use of life expectancy information and life expectancy providers, and a written plan of policies and procedures used to determine life expectancies. § 3916.03(C)(1)(c), OHIO REV. CODE.

In virtually all Acts adopted during 2008, STOLI transactions are specifically defined and listed as a prohibited fraudulent life settlement act or activity. Few of the definitions are identical, but among the subtle differences are two key elements: (a) the policy is purchased for the benefit of a third party beneficiary; and (b) the third party beneficiary has no insurable interest. In addition to identifying STOLI transactions among the list of prohibited activities, several states, such as Arizona, have declared STOLI transactions as violations of insurable interest laws and unfair trade practice laws. States addressing STOLI during 2008 without adopting extensive statutory revision include the following:

SUITABILITY

During 2008, Florida, Connecticut, and Idaho passed legislation affecting suitability determinations in annuity transactions. Concurrently, the Financial Industry Regulatory Authority adopted new suitability standards for variable annuities and the U.S. Securities and Exchange Commission pressed forward with federal regulation of equity-indexed

annuities.

During Floridas regular 2008 legislative session, the Florida Legislature passed Senate Bill 2082, known as the John and Patricia Siebel Act, to amend section 627.4554, FLA. STAT. The amended statute retained some standard information from the 2004 legislation and clarified or added new information which the agent, or insurer in direct sales, must obtain from the consumer to analyze suitability. For example, the agent must continue to determine the applicants tax status, investment objectives, and such other information used or to be considered relevant by the agent (with the term relevant replacing the term reasonable in this latter criterion). The bill clarified the financial status inquiry, by replacing that term with an examination of the applicants annual income; existing assets, including investment holdings; liquid net worth and liquidity needs; and, financial situation and needs. Further, SB 2082 added several new criteria: personal information, including the age and sex of the parties to the annuity and the ages and number of any dependents; the source of the funds to purchase the annuity; the applicants intended use of the annuity; and, the applicants risk tolerance. 2008 Fla. Laws ch. 237, §§ 9 and 13. These new criteria appear to have been culled from the Financial Industry Regulatory Authoritys (FINRA) new suitability standards for variable annuities, adopted by way of FINRA Rule 2821(1)(B)(2), effective May 5, 2008, as to all registered representatives.

This information must now be transcribed onto a Florida Department of Financial Services (FDFS)-adopted form, signed by the agent and the applicant, and, within 10 days of execution, forwarded on to the insurer or any third-party contracted by the insurer to supervise the agents suitability compliance. The consumers refusal to provide this information must also be documented on a FDFS-adopted form. Also on a FDFS-adopted form, before consummating an annuity exchange, the agent must indicate the differences between the consumers current and proposed annuity contracts.

The Florida Legislature also furnished the FDFS with an objective standard for determining the propriety of an agents suitability recommendation. The agent must now have an objectively reasonable basis for believing that the recommendation is suitable based on the facts disclosed by the consumer. This objective basis, coupled with the revised consumer information criteria for the agents analysis of suitability, arguably will enable the FDFS to apply an objective measure against the agents conduct.

In contrast with the Connecticut and Idaho statutory amendments, discussed below, Florida suitability law remained focused on the states senior population. Notwithstanding, during 2008, Florida endeavored by other means to address suitability in annuity transactions with other segments of the state. For example, by rule effective July 28, 2008, Florida seeks to ensure suitability in the sale of any annuity product by an [insurance producer or] insurer to an active duty service member of the United States Armed Forces. FLA. ADMIN. CODE rr. 69B-240.001(2) (2008) (applicable as to producers) and 69O-142.200(2) (2008) (applicable as to insurers). For legislative authority to promulgate this rule, the FDFS drew from its broad grant of rulemaking authority under Floridas Unfair Insurance Trade Practices Act, FLA. STAT. §§ 626.9541(1) and 626.9611 (2007). Under this new rule, the sale of an annuity to an enrollee of the Servicemembers Group Life Insurance (SGLI) program is deemed unsuitable unless, after a needs assessment, the producer and/or insurer demonstrate(s) that the applicants SGLI death benefit, together with any other military survivor benefits, savings and investments, survivor income, and other life insurance are insufficient to meet the applicants needs. FLA. ADMIN. CODE rr. 69B-240.001(6)(v) and 69O-142.200(6)(v) (2008); see also FLA. ADMIN. CODE rr. 69B-240.001(4)(f) and 69O-142.200(4)(h) (2008) (defining life insurance as including annuities, concerning regulation of producers and insurers, respectively).

A second example may be found in another statutory section amended by SB 2082. The Florida Legislature amended section 626.99(4)(a), FLORIDA STATUTES, to require that all annuity contracts, regardless of the purchasers age, provide an unconditional refund for a period of at least 14 days. 2008 Fla. Laws ch. 237, §8. A prior version of this bill limited this free look period to purchasers of annuities who were 75 years or older. This expanded free look period is intended to provide all annuity consumers adequate time after the transaction to review the suitability of their purchase. A third example may be found in a new requirement for agent continuing education. SB 2082 requires that, regardless of the age of any consumer to whom an agent intends to market an annuity, persons holding a life license in

Florida must complete at least 3 hours of FDFS-approved continuing education coursework on the subject of suitability in annuity and life insurance transactions. *Id.* at § 3 (amending FLA. STAT. § 626.2815(3)(k)). SB 2082 included a couple of amendments which suggest that the insurer retains ultimate responsibility for the actions of parties which it appoints, but leaves this question somewhat unanswered with regard to parties transacting the insurers products either without proper authorization or in contravention of the supervisory system the establishment of which the insurer ensured.

First, SB 2082 now specifically authorizes the Florida Office of Insurance Regulation (FOIR) to order the insurer to rescind the contract and either fully refund all premium paid on the contract or the accumulation value, whichever is greater. The fact that this penalty is directed at the insurer, without reference to the agent, suggests the insurers administrative exposure for harm to a senior by violation of the Florida suitability law, whether caused by the insurer or the agent. Second, in an apparent effort to temper this administrative penalty, SB 2082 amends the law to indicate that nothing in the amended statute shall subject an insurer to criminal or civil liability for the acts of independent individuals not affiliated with that insurer for selling its products, when such sales are made in a way not authorized by the insurer. Presumably, a way not authorized signals that the insurer can avoid evidence of a violation of Floridas suitability statute in a civil or criminal proceeding if the agent either lacked due authorization to represent the insurer by appointment, failed to adhere to the supervisory system enabled by the insurer, or otherwise exceeded the authority delegated the agent by way of other agreement or authorization. Insurers, thus, should endeavor to assure that a specific and clear supervisory system is established and followed, that business may only be produced by duly-authorized agents, and that the parameters of an agents authority are clearly delineated. The Sunshine States governor signed Senate Bill 2082 into law on June 30, 2008, with an effective date as to the suitability provisions, as amended, to take effect on January 1, 2009.

Meanwhile, Connecticut lawmakers amended that states authorizing legislation to enable the Connecticut Insurance Department (CID) to match the agencies suitability regulations with the National Association of Insurance Commissioners (NAIC) broadened version of the NAICs Suitability in Annuity Transactions Model Regulation (Suitability Model). During June 2006, the NAIC amended the Suitability Model to make it applicable to purchases and exchanges involving annuity consumers of all ages. By 2008, in keeping with the NAICs revision of the Suitability Model, the CID determined to broaden the scope of the Connecticuts regulations to address the suitability of recommendations to any annuity consumer regardless of age. The statutory authority for the CIDs rules, though, specifically limited the scope of regulation to seniors. To address this qualification, the CID proposed legislation to remove the term seniors from Section 38a-432a of the Connecticut General Statutes.

House Bill 5158 passed the Connecticut General Assembly on May 7, 2008, and the Governor signed the bill into law on June 12, 2008, repealing section 38a-432a, CONNECTICUT GENERAL STATUTES, and re-enacting the same language less any reference to seniors. On June 17, 2008, the CID formally published for adoption the agencies rules on Suitability in Annuity Transactions, indicating the agencies intent to remove all references to seniors. The 30-day comment period following publication passed without the CID receiving any comment. The CIDs suitability rule thus sets forth the standards and procedures for producer recommendations, commencing July 17, 2008, to all consumers that result in a transaction involving annuities.

The fifty-ninth Idaho Legislature passed House Bill 411, amending section 41-1940, of the Idaho Code, to remove reference to seniors in keeping with the NAICs amended Suitability Model. Thus, Idaho, like Connecticut, broadened the requirement for suitability determinations to annuity purchasers of all ages. In contrast to Connecticut, Idahos operative suitability provisions are set forth in the Idaho Code, facilitating a self-executing statutory implementation in lieu of Connecticuts additional step for implementation by way of rulemaking. The Gem States governor signed House Bill 411 into law on March 19, 2008, and the broadened version of the statute became effective on July 1, 2008.

The sale of equity-indexed annuities has grown dramatically since the introduction of these products during the mid-1990s. By 2008, more than \$123 Billion had been invested in indexed annuities. Public Meeting, U.S. Securities and Exchange Commission (Dec. 17, 2008) (opening statement of SEC Chairman Christopher Cox). The U.S. Securities

and Exchange Commission (SEC) actively observed the escalating sale of these products and identified the need for federal intervention in the traditional regulatory bailiwick of state insurance regulators, to guard against inappropriate sales to persons, particularly seniors, who misunderstood the product. On June 25, 2008, the SEC proposed rule 151A, to be codified at 17 C.F.R. § 230.151A, to regulate indexed annuities as securities under the Securities Act of 1933 (the Securities Act). On December 17, 2008, the SEC voted 4 to 1 to adopt proposed rule 151A for application to annuities issued on or after January 12, 2011.

Rule 151A defines the terms annuity contract and optional annuity contract for purposes of clarifying the status of indexed annuities under federal securities law. Specifically, section 3(a)(8) of the Securities Act, 15 U.S.C. § 77c(a)(8), exempts from regulation as a security [a]ny insurance or endowment policy or annuity contract or optional annuity contract, issued by a corporation subject to the supervision of the insurance commissioner . . . of any State or Territory of the United States or the District of Columbia. The rule removes from the Security Acts exemption an annuity contract or optional annuity contract under which: (a) the amounts payable by the insurer are calculated, in whole or in part, by reference to the performance of a security, including a group or index of securities; and, (b) the amounts payable by the insurer under the contract are more likely than not to exceed the amounts guaranteed under the contract. Indexed Annuities and Certain Other Insurance Contracts, Securities Act Release No. 8933 (June 25, 2008) [73 Fed. Reg. 37,752, 37,774 (July 1, 2008)]. The first prong of this two-factor test clearly ties the benefits of the annuity to the performance of an equity-based index. As to the principles-based standard of the second prong, the rule further specifies that an insurers determination with regard to amounts payable versus amounts guaranteed will be conclusive if, among other things, both the insurers methodology and the insurers economic, actuarial, and other assumptions are reasonable. *Id.* (to be codified at 17 C.F.R. § 230.151A(b)(2)(i)).

The SECs proposal of this rule did not go unnoticed. The National Association of Insurance Commissioners, several individual state insurance commissioners, the National Conference of Insurance Legislators, the Financial Industry Regulatory Authority (FINRA), members of Congress, trade associations, and various affected insurance and securities industry participants, filed some 4,800 comments with the SEC. A majority of these comments, most of which represented insurance interests, voiced strong opposition to the SECs potential displacement of state insurance departments current regulation of these equity-indexed annuities as a form of fixed annuities. Not surprisingly, many comments in support of the rule came from FINRA and representatives of the securities industry. For its analysis, the SEC posited that senior investors will now be able to benefit from the federal Securities Acts requirements concerning registration and disclosure, as well as protection against fraud, misrepresentation, and sales practice abuses. On the other hand, the SEC also estimated significant costs to insurers with the adoption of the rule, stating:

For purposes of the PRA, we have estimated an annual increase in the paperwork burden for companies to comply with the proposed rules to be 60,000 hours of in-house company personnel time and \$72,000,000 for services of outside professionals. We estimate that the additional burden hours of in-house company personnel time would equal total internal costs of \$10,500,000 annually, resulting in aggregate annual costs of \$82,500,000 for in-house personnel and outside professionals.

Securities Act Release No. 8933, 73 Fed. Reg. 37,752, 37,770 (July 1, 2008) (footnote omitted). Of course, printing and providing prospectuses, registration of persons as broker-dealers, actuarial analysis to determine amounts payable versus amounts guaranteed, and other expenses will necessarily add to these figures, and will weigh heavily on an insurers determination as to whether to forego the revenue generated by the sale of these products. It may be that these costs are pushed down to the consumers of these products, making these products a less attractive purchase when compared to other products.

Perhaps in a subtle attempt to mitigate against additional costs or to appease the concerns of state insurance regulatory officials, the SEC also proposed to exempt insurance companies from the periodic reporting requirements of sections 13 and 15(d) of the Securities Exchange Act of 1934 (Exchange Act), 15 U.S.C. §§ 78m(a) and 780(d), respectively, concerning indexed annuities and other securities that are now to be registered under the Securities Act. The SEC formally indicated the basis for proposing this rule as follows: We have proposed this exemption because the

concerns that Exchange Act financial disclosures are intended to address are generally not implicated where an insurers financial condition and ability to meet its contractual obligations are subject to oversight under state law and where there is no trading interest in an insurance contract. Securities Act Release No. 8933, 73 *Fed. Reg.* 37,752, 37,771 (July 1, 2008). Accordingly, rule 12h-7, to be codified at 17 *C.F.R.* § 240.12h-7, will provide insurers with an exemption from Exchange Act reporting with respect to indexed annuities and certain other securities that are regulated as insurance under state law, provided that the insurer and its financial condition remain subject to state insurance regulatory supervision and examination (assuming that the securities are not publicly traded), as well as other criteria. In contrast to the some 4,800 comments filed as to rule 151A, the SEC received 12 comments on rule 12h-7, all in favor of the new rule but suggesting slight textual revision.

Notwithstanding the anticipated tempering effect of rule 12h-7, the regulatory impact of rule 151A will have lasting repercussions for those competing to offer indexed annuities. These repercussions will adversely affect the competition among insurers and issuers of the product and the ability of the product to compete effectively against other products. The life insurance industry, though, tends to stand resilient in the face of adversity. One should not be surprised to learn of new products to replace the indexed annuity offerings of insurers who seek refuge from federal regulation.

BAD FAITH CIVIL LIABILITY

Since the adoption of Washingtons Insurance Fair Conduct Act of 2007, two more states have adopted legislation addressing insurer conduct: Colorado and Minnesota. The titles of the bills alone demonstrate the differences in manner in which these states have approached this issue. Colorados House Bill No. 08-1407 is entitled An Act Concerning Strengthening Penalties for the Unreasonable Conduct of an Insurance Carrier, and Making an Appropriation in Connection Therewith. Minnesotas Senate File No. 2822, on the other hand, is described as an Act Providing for penalties and recovery of attorney fees for certain insurance claims practices. The difference in approaches brings to mind the age-old question of how one approaches life, by looking at a glass as half-empty or as half-full; and, now, how one views insurers, as good faith actors or bad faith actors.

Colorados House Bill 08-1407, effective August 5, 2008, codified at sections 10-1-205(3)(d), 10-2-804(4), 10-3-1108(1)(a), 10-3-1114, 10-3-1115, 10-3-1116, 10-3-105(4)(c), 10-16-106.5 (5) (b), COLORADO REVISED STATUTES, prohibits an insurer from unreasonably delaying or denying payment of a claim for benefits owed to or on behalf of any first-party claimant, and creates a private cause of action to recover reasonable court fees and attorney costs and two times the covered benefit. Denial or delay is considered unreasonable if there was no reasonable basis for the action. In cases where the court finds an action brought pursuant to the Act to be a frivolous action, the court must award costs and attorney fees to the defendant.

In addition to creating a cause of action, House Bill 08-1407 amends section 10-3-1108, COLORADO REVISED STATUTES, to increase the monetary penalties for engaging in unfair or deceptive acts or committing other violations from \$1,000 to \$3,000 for each act or violation, and to increase the aggregate penalty from \$10,000 to \$30,000 unless the insurer knew or reasonably should have known that the insurer was in violation of new provisions prohibiting unreasonable delay or denial of payment. For this willful conduct, the bill increases the penalty to \$30,000 for each act up to an annual aggregate amount of \$750,000.

Other highlights of House Bill 08-1407 include:

(a) Amending section 10-3-1116(2), COLORADO REVISED STATUTES, to prohibit policies, contracts, and plans from containing any provision reserving discretion to the insurer to interpret the terms of the contracts.

(b) Revising the current definition of restitution to include costs and expenses for lost time from work and attorney fees. § 10-3-105(4)(c), COLO. REV. STAT.

House Bill 1407 does not apply to workers compensation, title, or life insurance.

Minnesotas Senate File No. 2822, Chapter 208, Laws 2008, effective August 1, 2008, codified at section 604.18, MINNESOTA STATUTES, raises the standard for seeking penalties against insurers by allowing the award of taxable costs when an insured can show that the insurer lacked a reasonable basis for denying benefits and that the insurer knew of the lack of a reasonable basis for denying or acted in reckless disregard of the lack of a reasonable basis. S.F. No. 2822, § 1, Subd. 2 (2008). Pursuant to subdivision 3 of the bill, a court may award, in addition to permissible pre- and post-judgment interest and costs, an amount equal to one-half of the proceeds awarded that are in excess of an amount offered by the insurer at least ten days before the trial begins, or \$250,000, whichever is less and attorneys fees actually incurred not to exceed \$100,000. Attorneys fees must be separately accounted for and not duplicative of the fees for the insurers attorneys. Punitive and exemplary damages are not allowed.

Subdivision 4 of the bill describes the procedure for seeking recovery. First, a claimant must file suit in court, but may not initially seek recovery under the Act. After initiating the action, the claimant may file a motion to amend the pleadings to claim recovery of taxable costs. The motion may be opposed by one or more affidavits showing no factual basis for the claim. If the court finds prima facie evidence in support of the motion, the court may grant the motion. An award of taxable costs is determined in a proceeding subsequent to any determination of the amount to which the insured may be entitled.

Insurance policies exempted from the Minnesota Act include workers compensation, health, nonprofit dental coverage, life insurance, annuities and fidelity insurance, as well as bonds. Section 2 of the bill clarifies that the Act only applies to causes of action that occur on or after the effective date.

PROPERTY AND CASUALTY: FLOODS AND OTHER NATURAL DISASTERS

Midwestern Response

Much of the Nation was effected by various storms and flooding throughout 2008. However, the Midwest suffered the brunt of the resulting flood damage. Iowa alone suffered estimated losses of approximately \$4 billion in damage to agriculture and \$4 billion in damage to businesses. Nonetheless, no Midwestern state enacted a legislative response in the form of an insurance mandate to these conditions. However, various states did employ regulatory means to govern the market.

For example, several states, such as Illinois and Indiana, issued directives setting in place moratoriums on policy cancellations and nonrenewals. For Illinois policyholders, Director Michael McRaith issued a bulletin, on June 17, 2008, to All Companies and Other Entities Licensed or Authorized to Transact Insurance Business in the State of Illinois. The Director recognized the disruption in mail service, due to flooding and displacement, and the possibility of inadvertent cancellations and nonrenewals of policies caused by this disruption. The bulletin directed that the following safeguards be immediately implemented for all lines of business, regardless of whether an insured resided in a county designated as disaster area:

(a) Tolling of Cancellations and Nonrenewals. The bulletin required that insurers reinstate any policy, with no lapse in coverage, cancelled or nonrenewed by notice issued on or after June 10, 2008. Further, the bulletin prohibited insurers from issuing any new cancellation or nonrenewal notices to affected policyholders until August 18, 2008, or a later time if deemed reasonable given an individual policyholders circumstance. The Division expected that any doubt as to this reasonableness standard would be resolved in favor of the policyholder.

(b) Other Insurance-Related Time-Period Extensions. The bulletin further required that insurers grant policyholders an extension of any policy provisions or other requirements that imposed a time limit for an insured or claimant to perform any act, such as the submission of a claim or proof of loss, reporting of information, submission of bills, or payment of funds. The Division set sixty days as the minimum period of time for this extension or, again, longer if deemed reasonable given an individual policyholders circumstance.

(c) Time-Period Extension for Repairs. The bulletin also required that insurers provide policyholders with an

extension of at least sixty days within which to repair affected property which cannot be repaired within any time period set forth in the operative policy, or within the statutory ninety-day time period for repairs prior to termination due to condition of the property.

(d) Cancellation or Nonrenewal Due to Increase in Risk. Although otherwise allowed under Illinois law, the bulletin prohibited insurers from canceling or nonrenewing policies covering property due to increase in the risk originally accepted or due to the geographic location of the risk.

(e) Other Exceptions to Policy Requirements or Rating or Underwriting Rules. The bulletin also required that insurers consider exceptions to any other policy requirements, or rating or underwriting rules, not otherwise identified in the bulletin, when such requirements or rules are not met as a result of the disaster. An example might be the use of network providers for non-emergency medical treatment.

(f) Medicare Beneficiaries. The bulletin required that insurers receiving inquiries from Medicare beneficiaries, regarding disaster-related health care delivery disruptions, provide these beneficiaries with the latest available Medicare information.

(g) Insurer Websites. Insurers were directed to post on their websites all actions taken to implement the requirements of the bulletin.

(h) Availability of the Division. Insurers were required to advise Illinois consumers of the availability of and contact information for the Division for filing a complaint regarding any disaster-related dispute or issue.

(j) Notice of Noncompliance; Grace Periods. The bulletin also directed any insurer unable or unwilling to comply with the directives of the bulletin to inform the Division in writing of the reasons for the insurers noncompliance. Where permitted by law, the Division would consider exceptions to insurer-specific requirements, such as grace periods for license renewals. Likewise, insurers were not required to file policy or rating manual changes with the Division in order to comply with any of the foregoing directives.

Iowa Governor Chet Culver suggested that the Iowa Legislature reconvene for a special session as floodwaters continued to ravage the Hawkeye State. Many prominent legislators agreed. Charlotte Eby, *The Need for a Special Session is Growing*, THE WATERLOO CEDAR FALLS COURIER, July 27, 2008. However, this suggestion never evolved into a session as the states budget continued to recede with the economy. The Division of Insurance issued Bulletin 08-08, on June 12, 2008, concerning Disaster Planning, wherein the Commissioner proclaimed: I am calling upon the Iowa insurance industry to provide maximum consideration to your insureds in the coming days. Four days later, the Division issued Bulletin 08-09, entitled *Deferral of Premium Payments and Policy Time Frames for Flood and Tornado Victims*, which supplements and expands on Bulletin 08-08. Unlike the directives of the Illinois bulletin, Iowa bulletin 08-09 expressly qualified itself as a request. Specifically, the Commissioner indicated a request that all insurance companies and other entities authorized to transact business in this state give their customers affected by this disaster the option of deferring payments coming due before the end of June, interest free, for up to 60 days from the original premium due date. Further, companies were requested to extended any contractual time limits by an additional 60 days or, like Illinois, any longer period that may be deemed reasonable under the specific circumstances related to the subject insured or claimant. The compulsory language of the bulletin came in the form of the Illinois directive: that noncomplying insurers notify the Division of their noncompliance. On June 24, 2008, the Division issued Bulletin 08-09a as a clarification of Bulletin 08-09 in the form of answers to questions apparently posed by insurers attempting to comply.

For Indiana policyholders, the Indiana Department of Insurance re-released a Consumer Alert, though also identified as a News Release and as Bulletin 163, on June 9, 2008. This document, unlike the directives of the Illinois bulletin, set forth various answers to common questions posed by Indiana residents concerning flood insurance.

The Wisconsin Commissioner of Insurance issued a similar set of answers to commonly asked questions. These

answers came in the form of a press release issued on June 12, 2008, targeting policyholders with Insurance Commissioner Offers Answers to Storm Damage Questions. Perhaps coincidental, perhaps not, the Commissioner issued a Bulletin to All Property and Casualty Insurers, on July 17, 2008, to remind these recipients of the statutory requirements for the proper issuance of notices for the renewal and nonrenewal of personal and commercial policies aside from workers compensation policies.

In contrast, legislation was introduced in the Minnesota Senate on February 21, 2008, mandating a flood insurance noncoverage disclosure for homeowners insurance policies issued in that state. The Governor signed Senate File No. 2980 into law on May 13, 2008, becoming 2008 Session Law Chapter No. 293, codified at section 65A.302, MINNESOTA STATUTES, and effective August 1, 2008. This new law requires that insurers annually notify policyholders in writing with a notice entitled, Important Information About Damage Caused by Flooding, in at least 18-point type. The notice must disclose that the policy does not cover damage caused by flooding and disclose sufficient information to allow the policyholder to contact the National Flood Insurance Program to inquire about purchasing flood insurance. The goal of this legislation was to eliminate much of the confusion that occurs when residents first learn that they are not insured against flood damage after a storm.

Southeastern Response, including Gulf Coast

Alabama passed two significant measures during 2008. First, Senate Bill 3 authorizes captive insurance companies to sell residential insurance along the Alabama coast. Proponents of the bill said the measure should create and encourage competition in the homeowners' insurance business along the coast because companies have cut back coverage since Hurricanes Ivan and Katrina. Governor Bob Riley signed Senate Bill 3 into law on May 8, 2008, designated as Act No. 2008-391, and codified at section 27-31B-3, and sections 27-31C-1 to 27-31C-9, CODE OF ALABAMA.

Alabamas second legislative measure, in the form of Senate Bill 296 codified the legal authority for Alabamas insurer of last resort, the Alabama Insurance Underwriters Association (AIUA). The joint underwriting association provides wind coverage on real estate on or near the Gulf Coast. The AIUA has been created and operated in accordance with a plan of operation approved by the Alabama Commissioner of Insurance. Now, as a creature of statute, the AIUA may carry over unexpended surplus from year-to-year, without lapse or transfer to the States General Fund for redistribution. Senate Bill 296 also authorizes the AIUA to deposit for its own account interest and investment earnings, and to issue bonds, surplus notes and other debentures, and accept goods, loans, and grants. This legislative authorization is intended to bolster the AIUAs financial viability. Governor Riley signed Senate Bill 296 into law on May 8, 2008, designated as Act No. 2008-392 (codification forthcoming).

Louisiana passed Senate Bill 160, authorizing insurers to file with the Insurance Commissioner a written petition for authorization to increase a policy deductible up to 4% of the value of the property being insured for named storms or hurricanes on a homeowners policy that has been in effect for more than three years. The legislation requires the Commissioner to promulgate rules to describe the prerequisite contents of the petition, including a requirement that the insurer itemize for the insured the premium savings based on the increase in the insureds deductible. Additionally, the bill prohibits insurers from including in a homeowners policy any provision which would apply more than one deductible to a loss resulting from a single incident. Governor Bobby Jindal signed Senate Bill 160 into law on July 9, 2008, designated as Act No. 854, and codified at sections 22:635.3(D), (E), and (F) and 636.2(E), (F), and (G), LOUISIANA REVISED STATUTES.

Louisiana also passed Senate Bill 44, which authorizes a "third invitation" for grants under the Insure Louisiana Incentive Program, provides for the recovery of unearned grants, and requires any unused money from the program to be used for a homeowner policy premium assistance program to reduce homeowner insurance premiums. Governor Jindal signed Senate Bill 44 into law on June 21, 2008, designated as Act No. 390, and codified at sections 22:3304(C), (D), and (F), and 36:696(B), and sections 22:3309(E) and 3312, LOUISIANA REVISED STATUTES.

Florida passed Senate Bill 2860, entitled the Homeowners Bill of Rights Act, signed into law on May 28, 2008, designated as Chapter No. 2008-66, and codified at various sections in chapters 215, 624, 626, and 627, FLORIDA STATUTES. This bill includes many provisions, covering an extensive range of insurer conduct, rate regulation and appeal, and a host of other issues. Some aspects of the bill are summarized below:

(a) Insurance Capital Build-Up Incentive Program. Revises the requirements for the Program, which provides for surplus note loans to insurers of up to \$25 Million, repayable over 20 years at the 10-year Treasury bond rate, as approved by the State Board of Administration (SBA).

(b) Notice to OIR of Nonrenewal. Requires an insurer planning to nonrenew more than 10,000 policies within a 12-month period to notify OIR 90 days before issuing any notices of nonrenewal.

(c) Payment of Undisputed Claim Amounts. Prohibits an insurer from failing to pay undisputed amounts of partial or full benefits owed under first-party property insurance policies within 90 days after determining the amount and agreeing to coverage, unless payment of the undisputed benefits is prevented by specified circumstances.

(d) Required Filing of Claims-Handling Procedures. Authorizes the Office of Insurance Regulation (OIR) to order an insurer to file its claims handling practices and procedures as a public record based on findings of a market conduct examination.

(e) Extension of Prohibition on Use and File. Extends for one additional year, until December 31, 2009, the current prohibition on insurers using the use and file option for property insurance rate increases.

(f) Repeal of Rate Arbitration Statute. Repeals the option for an insurer, for any property and casualty insurance rate filing (or any other filing), to appeal a rate filing disapproved by OIR to an arbitration panel in lieu of an administrative hearing.

(g) Expedited Hearings on Rate Filings. Provides for an expedited hearing process for rate filings.

(h) Required Use of Models Approved by Florida Commission on Hurricane Loss Projection Methodology. Requires that for purposes of a rate filing insurers must use a model or method found to be accurate or reliable by the Commission on Hurricane Loss Projection Methodology.

(i) Hurricane Mitigation Premium Credits. Requires OIR to develop, by February 1, 2011, a proposed method for insurers to establish windstorm mitigation premium credits (discounts) that correlate to the numerical rating of a structure pursuant to the uniform home rating scale.

(j) Extension of Rate Freeze. Extends the freeze on rate increases in Citizens Property Insurance Corporation (Citizens) from January 1, 2009, to January 1, 2010.

(k) Assessments for Citizens Deficits. Revises the required assessments to fund a deficit in each of Citizens three accounts (high risk, personal lines, or commercial lines).

(l) Access to Claims and Underwriting Files. Provides that a policyholder who has filed suit against Citizens has the right to discover the contents of his claims file to the same extent that discovery would be available from a private insurer.

(m) Disclosure of Windstorm Mitigation Rating. Effective January 1, 2010, requires disclosure of a homes windstorm mitigation rating, for a home insured by Citizens in the wind-borne debris region with an insured value of \$500,000 or more.

(n) Increased Notice of Nonrenewal. Increases the required notice of nonrenewal of a personal or commercial residential insurance policy from 100 days to 180 days if the policy has been written for five years or more.

(o) Public Hurricane Loss Model. Allows insurance companies to use, for a fee, the Public Hurricane Loss Model to determine rate requests in advance of filing.

(p) Multi-Policy Discount. Allows insurers to offer a multi-policy discount if the policyholder has wind-only coverage with Citizens or an insurer that has removed a policy from Citizens, provided that the same insurance agent services both policies.

(q) Transparency in Rate Regulation. For residential property insurance rate filings, requires the OIR to provide information on an Internet website of: all assumptions made by any OIR actuary; the overall rate change requested by the insurer; a statement describing any assumptions that deviate for actuarial standards of the Casualty Actuarial Society; and, a certification by the OIRs actuary that the actuaries recommendations are consistent with accepted actuarial principles.

Atlantic Coast Response

Maryland passed House Bill 1353, entitled the Omnibus Coastal Property Insurance Reform Act, and signed into law on May 13, 2008, as Chapter No. 540, codified at sections 19-208 through 19-211, CODE OF MARYLAND. The bill makes numerous changes to the law governing property insurance in coastal areas of Maryland, briefly described below:

(a) Hurricane and Storm Policies. The bill prohibits an insurer, issuing a homeowners policy, from adopting an underwriting standard that requires a deductible that exceeds 5% of the Coverage A-Dwelling Limit of the policy in the case of a hurricane or other storm unless the insurer has filed the underwriting standard for approval at least 60 days before the insurer proposes to implement that underwriting standard. The insurer must also provide the policyholder with an annual statement explaining the manner in which the deductible is applied.

(b) Loss Mitigation Discounts. The bill requires an insurer to offer at least one actuarially justified premium discount on a homeowners policy to a policyholder who submits proof of improvements made to the insured premises as a means of mitigating loss from a hurricane or other storm. These improvements must be inspected by a licensed contractor, and the insurer must be allowed to inspect the improvements.

(c) Risk Planning Models. Under the bill, insurers that use a catastrophic risk planning model or other model in setting homeowners insurance rates, or in refusing to issue or renew homeowners insurance because of the geographic location of the risk, must file a description of the specific model with the Commissioner and make arrangements to explain the model to the Commissioner.

(d) Material Reduction Plans. The bill prohibits an insurers withdrawal or reduction in writings unless in accordance with an approved plan of material reduction filed with the Commissioner at least 60 days before implementing the plan. The bill creates procedures for insurers to implement plans to reduce homeowners coverage in the State. A material reduction is defined as a reduction of homeowners policies in force for an insurer on a statewide basis by 3% or more due to cancellations or nonrenewals solely because the subject of the risk or the insureds address is located in a certain geographic area of the State.

(e) Department of Housing and Community Development. The bill requires the Department of Housing and Community Development to review current statewide building codes and develop enhanced codes for coastal regions of the State that promote disaster-resistant construction in these regions.

The provisions of the bill apply to all homeowners insurance policies issued, delivered, or renewed in the State on or after October 1, 2008, except for those concerning material loss mitigation discount plans, which apply to such policies issued, delivered, or renewed in the State on or after June 1, 2009.

National Flood Insurance Program Reauthorization

The most memorable event with regard to federal efforts to tinker with property and casualty insurance turned out to be somewhat of a non-event the simple reauthorization of the National Flood Insurance Program (NFIP) until March 2009. Despite efforts by both the House and the Senate to address the financial solvency of the program and propose other program reforms as part of the NFIP reauthorization, the key differences between the House and the Senate reauthorization packages could not be resolved before being eclipsed by the \$700 Billion Wall Street bailout package. In the end, the NFIP was reauthorized until March 6, 2009, as part of the Homeland Security Appropriations bill, H.R. 2638.

The unresolved differences between the House and Senate versions of the NFIP reauthorization legislation boiled down to two issues: 1) wind coverage, and 2) loan forgiveness. The House bill, H.R. 3121, entitled the Flood Insurance Reform and Modernization Act of 2007, would have expanded the NFIP to make wind coverage available in the form of a multiperil policy. Senate Bill 2284, proposed forgiveness of almost \$20 Billion of debt incurred as a result of Hurricane Katrina and other storms since 2005, and did not include any provision for wind coverage.

As described in Senate Report 110-214, the purpose of SB 2284 was to adopt key reforms to ensure that the program can continue to operate, is self-sustaining, and adequately identifies areas at risk of flood loss. The concern of the Senate sponsor was that the program would become nonfunctional causing policyholders to leave the program, leaving themselves unprotected and leaving the federal government subject to being called upon in the case of disaster. Senate Report 110-214, at 2. According to the Report, the Congressional Budget Office (CBO) could not predict when this would occur, but cautioned the program faces a future with inadequate resources to pay its obligations. *Id.* The CBO also projected that the proposed Senate reforms combined with the debt forgiveness would increase premium revenue over the next ten years by close to \$19 Billion and reduce outlays by about \$10.6 Billion relative to then-current law. *Id.* at 4. Some of the reforms would have included: 1) increasing the ceiling on average annual rate increases from 10% to 15%, 2) phasing out subsidized premiums for some policyholders, 3) requiring larger deductibles, 4) prohibiting FEMA from subsidizing new or previously unsubsidized policies; and 5) increasing civil penalties from \$350 to \$2,000 for lenders that do not enforce the mandatory flood insurance requirement. *Id.* at 6.

There was an attempt to amend SB 2284 to include wind coverage provisions offered by Senator Wicker of Mississippi. The amendment was defeated with only 19 Senators voting in support. Another amendment that received much attention, but ultimately was withdrawn by its sponsor, was Senator Bill Nelsons proposal to create a federal loan program for states that have created reinsurance funds.

HEALTH

Autism

During 2008, several states passed measures to require insurance coverage for individuals with autism, including Arizona, Louisiana, Florida, Pennsylvania, Connecticut, Illinois, and Massachusetts. Most of these measures will be discussed below. With the addition of the legislation in these states, some 27 states and the District of Columbia now have enacted legislation to afford coverage to insureds afflicted with autism spectrum disorders. According to a study by the Centers for Disease Control and Prevention, autism is now considered the most prevalent developmental disability in the United States.

The Arizona Legislature enacted House Bill 2847, also referred to as Stevens Law and signed into law on March 21, 2008, which prohibits certain insurers from excluding or denying coverage for a treatment or imposing dollar limits, deductibles and coinsurance provisions based solely on a diagnosis of an autism disorder, Aspergers syndrome, or pervasive developmental disorder. Stevens Law also prohibits the denial of coverage for medically necessary behavioral therapy services. Insurers affected by the law include hospital service corporations, medical service corporations, health care service organizations, group disability insurers, and blanket disability insurers; however contracts issued to an individual or small employer (an employer who employs at least two but not more than fifty employees) are exempt. Limited benefit coverage contracts and contracts for out-of-state service are also exempt. Coverage for behavioral

therapy is limited to a \$50,000 maximum benefit per year for an eligible child up to the age of nine and \$25,000 maximum benefit per year for an eligible child between the ages nine to sixteen. Stevens Law is codified at sections 20-826.04, 20-1057.11, 20-1402.03, and 20-1404.03, ARIZONA REVISED STATUTES, and applies to policies, contracts, and other evidence of coverage issued or renewed on or after June 30, 2009.

Legislation adopted by the Louisiana Legislature and signed into law on July 1, 2008, focuses on early detection and treatment. House Bill 958 (Act No. 648), codified at section 22:215.26, LOUISIANA REVISED STATUTES, requires coverage by most private insurance plans delivered or renewed on or after January 1, 2009, for the diagnosis and treatment of autism spectrum disorders in children less than seventeen years of age. Health coverage plans issued to employers with fifty or fewer employees and individually underwritten, guaranteed renewable policies are exempt from the new requirements. Insurers are prohibited from limiting the number of visits an individual may make to an autism services provider; however, annual and lifetime benefits are limited to \$36,000 per year and a \$140,000 lifetime maximum. Parity language included in the bill allows for financial requirements such as copayments and deductibles but only to the same extent that other medical services covered by the plan are subject to the same provisions. Treatment of autism spectrum disorders is defined to include five categories of care: 1) habilitative or rehabilitative care, 2) pharmacy care, 3) psychiatric care, 4) psychological care, and 5) therapeutic care.

On May 20, 2008, Florida Governor Charlie Crist signed into law the Steven A. Geller Autism Coverage Act (SB 2654) (the Geller Act). This Act requires coverage by group health plans and HMOs for screening, intervention and treatment of autism spectrum disorder in children younger than eighteen years of age, or children who have been diagnosed with a developmental disorder by the age of eight or younger and are still in high school. Small employers and individually written plans are specifically excluded from the mandate. Health plans and HMOs subject to the Act are required to provide coverage for well-baby and well-child screening for the presence of autism spectrum disorder and treatment through speech therapy, occupational therapy, physical therapy and applied behavior analysis provided by certified providers. Parity language requires that coverage may not be subject to dollar limits, deductibles, or coinsurance provisions less favorable to an insured than those that apply to physical illnesses, except as otherwise provided by the Act. However, pursuant to sections 627.6686(4) and 641.31098(4), FLA. STAT., coverage is limited to \$36,000 annually and \$200,000 over a life and treatment must be prescribed by a physician in accordance with a treatment plan. Coverage may also be subject to other general exclusions and limitations of the insurers policy or plan, such as coordination of benefits, participating provider requirements, and other managed care provisions.

Floridas Window of Opportunity Act is that portion of SB 2654 which sets forth the process for creating a Developmental Disabilities Compact through a workgroup comprised of private insurers, consumer groups, and other interested parties. Group insurance plans or HMOs who have signed the compact by April 1, 2009, and complied with the terms of the compact by April 1, 2010, will not be subject to the Geller Act autism mandates. If the compact workgroup is unsuccessful in drafting a compact, the autism mandate provisions of the Geller Act take effect April 1, 2009. The compact language was added to SB 2654 by the Florida House. One source has raised the possibility that such provisions might constitute an unconstitutional delegation of legislative authority. See Florida Senate House Message Summary (May 2, 2008).

Pursuant to section 624.916, FLA. STAT., the Florida Office of Insurance Regulation (FOIR) is charged with convening a workgroup for the purpose of negotiating a compact that includes a binding agreement among the participants relating to insurance and access to services for persons with developmental disabilities. Statutorily required members of the workgroup include: representatives of Florida licensed health insurers; representatives of licensed HMOs; representatives of employers with self-insured plans; two designees of the Governor, one of whom must be a consumer advocate; and, a designee of both the Senate President and the House Speaker. The Act sets forth four components that must be included in the agreement: a) a requirement that each signatory increase coverage for certain behavior analysis, services, and therapies when medically necessary due to the presence of a developmental disability; b) procedures for clear and specific notice to policyholders identifying the amount, scope, and conditions under which coverage is provided; c) penalties for documented cases of denial of claims for medically necessary services; and, d) proposals for new product lines that would complement traditional health insurance.

The workgroup held its first meeting on October 14, 2008. One of the key topics discussed centered on whether applied behavioral analysis should be considered a reasonable and necessary treatment for a developmental disabled person. FOIR Media advisory on Workgroup Discussing Coverage Options (Oct. 15, 2008). The group was charged with drafting specific proposals for coverage for the next meeting, which was scheduled for November 20, 2008. On November 18, 2008, the meeting was cancelled because no draft proposals had been submitted to the workgroup Chair.

Pennsylvania also enacted legislation, signed into law on July 9, 2008, requiring certain private insurers to provide coverage for diagnostic assessments and treatment of autism spectrum disorders. Like Florida, Arizona and Louisiana, House Bill 1150 (Act No. 62, codified at § 635.2, PA. STAT.) caps coverage at \$36,000 per year; but, coverage is for children or adults up to the age of 21, and Pennsylvania does not impose a lifetime maximum. Pennsylvanias new requirements do not apply to small employer group plans.

Illinois likewise passed legislation in the form of Senate Bill 934 (to be codified at 215 ILCS 5/356z.14). This bill responded to a complimentary veto message as to House Bill 4255 by Governor Rod R. Blagojevich. This revised legislation passed both Houses on November 20, 2008, and, on November 11, 2008, was sent to the Governor for signature into law. The Governor approved the bill on December 12, 2009. Senate Bill 934 will require insurers to provide to individuals who are under 21 years of age coverage of up to \$36,000 annually for the diagnosis and treatment of autism spectrum disorders not already covered by health insurance or a managed care plan. Thus, this mandate applies only to fully insured individual and group policies, not to self-insured benefit plans.

Connecticut and Massachusetts both took a different approach. The Connecticut Legislature amended its mental health parity law to include autism, by way of Substitute House Bill No. 5696, signed into law on June 5, 2008. Effective January 1, 2009, individual and group health insurance policies providing coverage for basic hospital expenses and basic or major medical surgery are required to provide coverage for physical therapy, speech therapy and occupational therapy services for the treatment of autism spectrum disorders as set forth in the DIAGNOSTIC AND STATISTICAL MANUAL OF MENTAL DISORDERS (4th ed.) [DSM-IV] to the extent such services are a covered benefit for other diseases and conditions under such policy. Public Act No. 08-132, §§ 1 and 2. The General Court of the Commonwealth of Massachusetts also amended its mental health parity law to include on a nondiscriminatory basis autism and other disorders, such as eating disorders, obsessive-compulsive disorder, post traumatic stress disorders, panic disorder and more, effective July 1, 2009. Chapter 256 of the Acts of 2008.

Mental Health Parity

Congress \$700 billion emergency economic assistance bill served as one of the most memorable legislative events in 2008. The passage of this Act ironically shared the spotlight with one of the 110th Congress most anticipated pieces of health insurance legislation, H.R. 1424, the Paul Wellstone and Pete Domenici Mental Health and Addiction Equity Act (the Wellstone Act). The irony lies in the fact that H.R. 1424 was used as a legislative vehicle to bail out Wall Street. Comprehensive mental health parity has been a goal for more than a decade, since the passage of the Mental Health Parity Act of 1996, which addressed parity requirements related to lifetime and annual dollar limits for mental health coverage. By contrast, governmental bail-out bills are rarely popular, nor does the average citizen perceive there to be much parity in such legislative efforts.

H.R. 1424 passed the House on March 5, 2008. From March 7, 2008, to October 1, 2008, H.R. 1424 simply rested on the Senate Legislative Calendar. In a flurry of activity between October 1 and October 3, 2008, amendments addressing the metastasized economic crisis were added to H.R. 1424, and the bill was renamed as the Emergency Economic Stabilization Act of 2008, the Energy Improvement and Extension Act of 2008; and the Tax Extenders and Alternative Minimum Tax Relief Act of 2008. President Bush signed the bill into law on October 3, 2008. The Wellstone Act is found at Section 512, Title V, Subtitle B, of Division C, the Tax Extenders and Alternative Minimum Tax Relief Act of 2008.

The Wellstone Act is intended to achieve more comprehensive and permanent parity by eliminating the sunset

provisions of the 1996 Act and expanding coverage to substance-related disorders as well as prohibiting discrimination with regard to financial requirements, treatment limitations, and out-of-network coverage. According to House Report 110-374, Part II, true parity is accomplished by amending the Employee Retirement Income Security Act of 1974 (ERISA), the Public Health Service Act of 1944 and the Internal Revenue Code so that all group health plans with 50 or more employees, whether they are self-funded or fully insured, equitably provide the delivery of physical and mental health benefits. The individual health market is not affected by this Act, nor does it apply to Medicare patients.

It is not the purpose of the Act to mandate mental health and substance use coverage. Group plans that do not currently provide mental health benefits are not affected by this Act. However, if a group plan provides mental health or substance use coverage, the plans mental health benefits must be equivalent to the plans physical health benefits. So, if a plan does not require cost-sharing among the plan and plan participant or beneficiary, such as a copayment or deductible, on medical and surgical benefits, the plan cannot impose cost-sharing with regard to mental health or substance use benefits. If a group plan includes such a requirement, out-of-pocket costs must be the same for both types of coverage. In addition, criteria for medical necessity determinations and reasons for denial of reimbursement under the plan must be made available by the plan administrator to current or potential participants, beneficiaries, or contract providers upon request.

The Wellstone Act also includes a cost exemption provision to relieve group plans of purported financial hardship imposed by these federal requirements. Under this exemption, if the new requirements result in an increase during a plan year of the actual total costs by an amount that exceeds 1% , or 2% in the case of the first year to which the requirements apply, of the actual total plan costs, such requirements do not apply to the plan for the following plan year. This cost exemption only applies for one plan year and the determination as to whether the exemption applies must be made after the plan has complied with the Acts requirements for the first six months of the plan year involved. Cost exemption determinations must be certified by a qualified and licensed actuary who is a member in good standing of the American Academy of Actuaries.

Pursuant to subsection (e) of the Wellstone Act, the amendments made by this section shall apply with respect to group health plans for plan years beginning after the date that is 1 year after the date of the enactment of this Act, regardless of whether regulations have been issued to carry out such amendments by effective date, except that the amendments made by subsections (a)(5), (b)(5), and (c)(5), relating to striking of certain sunset provisions, shall take effect on January 1, 2009. Collective bargaining agreements ratified before the enactment of H.R. 1424 are subject to a different effective date: The Wellstone Act shall not apply to plan years beginning before the later of (A) the date on which the last of the collective bargaining agreements relating to the plan terminates (determined without regard to any extension thereof agreed to after enactment of this Act, or (B) January 1, 2009.

In addition to mental health parity, on May 21, 2008, President Bush signed into law H.R. 493, prohibiting discrimination on the basis of genetic information with respect to health insurance and employment. The newly enacted law, Public Law 110-233, prohibits group health plans from adjusting premiums or contribution amounts on the basis of genetic information and from requesting or requiring genetic testing. This new measure employs excise taxes as for enforcement.

Accessible/Affordable Health Care

No end-of-the-year wrap-up would be complete without a discussion on health care reform and access to affordable health care. However, health care reform has the potential to become all-consuming. This discussion briefly examines three different reform packages and one ballot initiative, to sample the national temperament for measures addressing access and affordability.

Florida

On May 21 2008, Governor Charlie Crist signed into law CS/CS/SB 2534, Chapter No. 2008-32, Florida Laws,

effective upon becoming law, creating two new programs designed to provide affordable access: a) the Cover Florida Health Access Program, and b) the Florida Health Choices Program.

The Cover Florida Health Access Program does not rely on mandates. Rather, the Program creates a partnership program where private insurers negotiate with the state to provide affordable health for uninsured Floridians. Pursuant to the Act, Cover Florida plans must be portable, issued on a guaranteed-issue basis to enrollees, subject to exclusions for pre-existing conditions, and provide for cost containment through limits on services and caps on benefits and copayments. Cover Florida plans are required to provide *inter alia*, at a minimum, coverage for preventative services, screening, office visits, outpatient and inpatient surgery, urgent care, prescription drugs, durable medical equipment, and diabetic supplies. Persons eligible for coverage must be between the ages of 19 and 64, and cannot be covered by private insurance or eligible for coverage through a public health program such as Medicare, Medicaid or Floridas KidCare, and not have been covered for the past six months unless coverage was terminated for certain reasons. Interestingly, the bill expressly states that the Program is not an entitlement, clarifying that there is no cause of action for failure to make coverage available to eligible persons.

As an update, in late October, after a thorough bid process, United HealthCare and BlueCross Blue Shield were selected to provide statewide coverage under the Cover Florida Health Access Program. Regional plans were also chosen to provide coverage in northeast and southeast Florida.

The second program created by the Florida Legislature, the Florida Health Choices Program, is designed to be a single, centralized market for the sale and purchase of various products that enable individuals to pay for health care, including: health insurance plans, HMO plans, prepaid services, service contracts, and flexible spending accounts. Program participants may purchase these products over the Internet or through the services of a participating health insurance agent. The bill requires that the Program utilize methods for pooling the risk of individual participants and preventing selection bias. Policies sold as part of the Program are not subject to the licensing requirements, or various offering or coverage mandates, of the Florida Insurance Code.

Other matters covered by CS/CS/SB 2534 include:

(a) Amending Floridas Health Flex Plan Program, a program created to offer basic affordable health care to low income, uninsured residents, by expanding the population eligible to purchase such programs by raising the family limit income from 200 to 300 percent of the federal poverty level and extending the expiration date to July 1, 2013; and,

(b) Amending section 627.6562, FLORIDA STATUTES, to allow insurance policyholders the option to insure their unmarried, dependent children who are not married, without dependents of their own, and are either residents of the State or students, coverage until the age of 30.

Florida Senate Bill No. 2534 affected the following statutory sections of Florida law: sections 112.363, 408.909, 408.9091, 408.910, 409.814, 624.1265, 624.91, 627.602, 627.6562, 641.31, FLORIDA STATUTES.

Minnesota

Minnesota Governor Tim Pawlenty signed Senate File No. 3780, into law on May 29, 2008, as Chapter 358, Minnesota Laws 2008. This comprehensive health care reform bill addressed various issues such as health improvement and certification requirements for health care homes. Relevant to this discussion, Articles 3 and 4 of the bill addressed access and affordability. Here, the bill aims to increase access through better sharing of information to identify persons eligible for MinnesotaCare and modifying outreach requirements to make the application and renewal process easier to understand.

Specifically, Article 3 contains provisions relating to increasing access and improving the continuity of care. Article 4 of the bill contains provisions related to health insurance purchasing and making health coverage more affordable. The provisions related to the reform described in Article 4 include:

- (a) Establishing an electronic prescription drug program;
- (b) Recommending an essential health benefit set;
- (c) Developing a system of quality incentive payments to providers who meet specified targets;
- (d) Developing a method to calculate providers' relative cost of care and relative quality of care;
- (e) Developing a peer grouping system for providers;
- (f) Establishing uniform definitions for baskets of care, starting with a minimum of seven baskets;
- (g) Requiring employers with eleven or more current full-time equivalent employees in the State to establish a cafeteria or premium-only plan under *Section 125 of the Internal Revenue Code*;
- (h) Developing a proposal to provide employees with income below 300 percent of the federal poverty guidelines or less and with employer-subsidized coverage with a subsidy;
- (i) Establishing a health care review council.

S.F. 3780 also raised the income limit of \$50,000 to \$57,500 for parents on Minnesota Care and increased limit for adults with no children from 200 to 250 percent of the federal poverty level guidelines.

Minnesota Senate File No. 3780 affected the following statutory sections of Minnesota law: sections 43A.23, 62J.495, 62J.497, 62U.01 to 62U.09, 124D.1115, 145.986, 256B.0751 to 256B.0754, 256.01, 256.962, 256B.057, 256L.04 to 256L.07, 256L.15, MINNESOTA STATUTES.

New Jersey

On July 7, 2008, Governor Corzine of New Jersey commended the Legislature of the Garden State for actually doing something about universal health care, rather than just engaging in dialogue, with the passage of S1557, P.L.2008, ch. 38. Press Release, Office of the Governor, Governor Signs Progressive FamilyCare Legislation (July 7, 2008). S1557 adopts reform in three key areas:

- (a) Health care coverage, including expanding eligibility for the New Jersey FamilyCare Program to include parents whose income is between 133 percent and 200 percent of the federal poverty level and providing a KidsFirst mandate requiring health insurance coverage for all children 18 years or younger by July 2009;
- (b) Individual and small employer health reforms, such as revising the rating system for individual plans and reducing the number of standard plans a carrier must offer from five to at least three plans;
- (c) Increasing dependent coverage so that coverage does not terminate before the dependent reaches 30.

New Jersey Senate Bill No. 1557 affected the following statutory sections of New Jersey law: sections 2:14-17.29k, 17:22A-41.1, 26:2H-18.59j, 26:15-1, 26:15-2, 30:4J-11, 30:4J-11.1, 30:4J-12, 30:4J-18, 30:4J-19, 54:50-9, 54A:8-6.2, 17:22A-41.1, 17:48-6.19, 17:48A-7.13, 17:48E-30.1, 17B:27-30.5, 17B:27A-2, 17B:27A-2.1, 17B:27A-3, 17B:27A-4, 17B:27A-4.5, 17B:27A-4.7, 17B:27A-6, 17B:27A-7, 17B:27A-9, 17B:27A-11, 17B:27A-12, 17B:27A-16.5, 17B:27A-17, 17B:27A-19, 17B:27A-19.11, 17B:27A-19.16, 17B:27A-23, 17B:27A-25, 26:2J-10.3, 30:4J-18, 30:4J-19, NEW JERSEY STATUTES.

Wisconsin

Voters in 22 counties across Wisconsin showed overwhelming support for health care reform, by voting in the

2008 election in favor of a non-binding advisory referendum that posed the following question: Shall the next state Legislature enact health care reform legislation by December 31, 2009, that guarantees every Wisconsin resident affordable health care coverage with benefits that are substantially similar to those provided to state legislators? Without providing more detail as to how such coverage would be provided, it is difficult to speculate on the exact disposition for this measure in Wisconsin. Perhaps Wisconsinites are eager for major health care reform, or it may be that they simply want parity with the privileged few.

PRODUCER LICENSING

NARAB II

On September 17, 2008, the U.S. House of Representatives passed by voice vote H.R. 5611, the National Association of Registered Agents and Brokers Reform Act of 2008. Drafted with the assistance of the National Association of Insurance Commissioners, individual state insurance commissioners, and industry representatives, the bill, also referred to as NARAB II, received strong bipartisan support, including 48 bipartisan cosponsors.

H.R. 5611 proposes to amend the Gramm-Leach-Bliley Act to re-establish the National Association of Registered Agents and Brokers, a nonprofit corporation the purpose of which is to provide a mechanism through which licensing, continuing education, and other nonresident insurance producer qualification requirements and conditions can be adopted and applied on a multi-state basis while preserving states rights in licensing, supervision, enforcement, consumer protection, and unfair trade practices. The purpose of the bill, to paraphrase primary sponsor Representative David Scott, is to address the problem of reciprocity that has become worse as more and more agents operate across state lines, making it apparent that true nonresident licensing reform for insurance agents could only be achieved through legislation at the Federal level. 154 Cong. Rec. H8368 (daily ed. Sept. 17, 2008) (statement of Rep. Scott).

Despite its strong support in the House and support from industry groups such as the Independent Insurance Agents and Brokers of America, the National Association of Insurance and Financial Advisors, the National Association of Mutual Insurance Companies, the Property Casualty Insurers Association of America, and the Council of Insurance Agents and Brokers, H.R. 5611 has advanced no further in the Senate since the bill was referred to the Senate Committee on Banking, Housing and Urban Affairs on October 2, 2008.

California Broker/Agent Distinction

As background, on October 29, 2004, the California Court of Appeal for the First Appellate District decided the case of *Krumme v. Mercury Insurance Company*, 123 Cal. App. 4th 924, 20 Cal. Rptr. 3d 485, 2004 Cal. App. LEXIS 1832 (Cal. App. 1st Dist. 2004), cert. denied, 2005 Cal. LEXIS 597; 2005 Daily Journal DAR 768 (Cal. 2005). In *Krumme*, the court held that Mercury Insurance Company producers acting as brokers were considered agents and not brokers; and, as such, were not entitled to collect any broker fees. The court identified various functions of these producers as qualifying them as agents transacting on behalf of Mercury, such as: binding authority for Mercury; use of application forms, and rating and underwriting guidelines supplied by Mercury; advertisement that they represent Mercury in the same manner as appointed agents; and, other evidence of direct dealings with Mercury. Mercury, on the other hand, argued that the California Insurance Code did not differentiate a broker from an agent, and utilized the term broker-agent.

Debate over *Krumme* resonated among industry, consumer groups, the Department of Insurance, and others, in the years that followed the ruling. Some argued that the ruling in *Krumme* replaced California's totality of circumstances standard with an any one act test for determining an agency relationship. In reflecting upon the *Krumme* decision, the California Assembly attempted, in the Assembly's Third Reading Analysis, to place *Krumme* in a historic context, indicating: But there are two important elements to the decision: (1) the Court did nothing to change the longstanding common rule that whether a person is acting as a broker or an agent depends on the totality of circumstances; and (2) the Court rejected the any one act theory. The analysis further stated that certain groups have read more into the

Krumme Courts conclusions with regard to the application of a five-part test to determine broker or agent, and that the Insurance Staff were unable to locate any case that has held that any standard such as the one act test has replaced the totality of circumstances standard.

Confusion as to the roles and responsibilities of brokers and agents would hang over personal lines brokers and agents, insurers and consumers in California for more than three years after the *Krumme* decision. Finally, on February 22, 2008, Assembly Bill 2956 was filed for introduction in the California Assembly. By September 25, 2008, both Houses of the Legislature passed the bill, and Governor Arnold Schwarzenegger signed the measure into law as Chapter 304, Statutes of 2008, codified at *sections 1621, 1623, and 1732, of the CALIFORNIA INSURANCE CODE*. The new law, which only applies to admitted line producers, clarifies the distinction between a broker and an agent by establishing a new rebuttable presumption for qualification of a producer as a broker. No longer will the presumption of broker exist if a producer is simply licensed as a broker and acts like a broker. To enjoy the presumption, a producer must be licensed as a broker, maintain a specified bond, and disclose specific information to the consumer in a written agreement. The required disclosures are intended to eliminate any questions consumers may have regarding the role of the broker vis--vis the consumer or the insurer, the basic services the broker will provide, and the fees to be charged or the compensation the broker may receive from the insurer.

The presumption of broker status is rebutted if one of four conditions is present: (1) the licensee is appointed as an agent of the insurer for the particular type of insurance being transacted; (2) the licensee is authorized by written agreement with the insurer to obligate the insurer without first obtaining notification from the insurer to accept the risk; (3) the licensee is authorized by written agreement with the insurer to appoint other licensees as agents of the insurer; or (4) the licensee is authorized by written agreement with the insurer to pay claims on behalf of the insurer. In the absence of one of these conditions, the presumption of broker is rebutted based on the totality of circumstances indicating that the producer is acting on behalf of the insurer, putting to rest the notion that the any one act test is the correct standard for distinguishing a broker from an agent.

According to Senate staff, the bill was not intended to alter or affect existing caselaw regarding the significance or weight to be accorded factors that indicate that a broker-agent is acting on behalf of an insurer. Assembly Concurrence in Senate Amendments to AB 2956, p. 2 (Assembly Floor Aug. 13, 2008). Furthermore, section 1732 now clarifies that a broker may on behalf of an insurance company, collect and transmit premium or return premium and deliver policies and other documents evidencing insurance without such actions being construed to qualify the broker as an agent.

INTERSTATE COMPACT

The Interstate Insurance Product Regulation Commission (IIPRC) welcomed several new member states during 2008. For membership, each compacting state enacted into law the Model Interstate Insurance Product Regulation Compact (Compact). The IIPRC continued its efforts to expand its charge, to provide a uniform central filing point under one set of rules, for speed-to-market product review for asset-based insurance products to meet the demands of a competitive global insurance market while maintaining a heightened level of consumer protection. Wisconsin became the 31st state to join the Compact, with the enactment of 2007 Wisconsin Act 168, on March 25, 2008, to create section 14.82, WIS. STAT.

By mid-year Louisiana and South Carolina also joined the Compact, bringing to 54 percent the national premium volume represented by the IIPRC. The Governor of South Carolina signed Act 339 into law on June 11, 2008, codified at sections 38-95-10, et seq., SOUTH CAROLINA CODE. This Act becomes effective January 1, 2009, and will expire on June 1, 2014, unless extended by the South Carolina General Assembly. Louisiana House Bill 369 evolved into Act 353 upon approval by the Governor on June 21, 2008, with an effective date of August 15, 2008, codified at sections 22:1450.51 and 1450.52, LOUISIANA REVISED STATUTES.

In contrast, legislators in California, New Jersey, and New York introduced measures to adopt the Compact. However, these efforts failed to achieve passage during 2008. Legislation was introduced in California by way of Senate

Bill 1434 on February 21, 2008. The bill was to be heard before committee on March 27, 2008, but that hearing was cancelled at the request of the bills author. A second hearing was set for April 16, 2008, at which the committee received testimony. No further action was taken on the bill, while the deadline for passage of the bill out of its house of origin elapsed on May 30, 2008, and last day for passage of any bill occurring on August 31, 2008.

The New York Legislature passed Senate Bill No. S5053 on June 18, 2008. However, the Assemblys companion, Assembly Bill No. A8068, languished in committee. Meanwhile, in New Jersey, the Senate Commerce Committee reported favorably on Senate Bill No. 949. By October 23, 2008, the Assembly Financial Institutions and Insurance Committee reported favorably, with committee amendments, on the measure via Assembly Bill No. 2614. No further action occurred.

Since its inception in 2006, by 2008, the IIPRC adopted 44 uniform standards for the streamlined review of asset protection insurance products such as life, annuity, disability income, and long-term care insurance products. By early August 2008, the IIRC approved its 100th life insurance product.

FEDERAL REGULATORY EFFORT

Throughout 2008, there was much discussion regarding insurance industry regulatory reform at the federal level. But, as has been the case time and again, there was more action and political intrigue than solid results.

On March 31, 2008, the United States Treasury Department released its Blueprint for a Modernized Financial Regulatory Structure, which included various short-term, intermediate, and long-term recommendations for improving the countrys financial regulatory structure, enhancing financial innovation and strengthening consumer protection. The federal charter debate was clearly back in the spotlight. With regard to the insurance sector, the Blueprint recommended creating an optional federal charter, similar to the current dual-chartering system for banking, to encourage a more competitive U.S. industry. As contemplated by the Blueprint, an Office of National Insurance within the Treasury Department would oversee the new structure. The Blueprint also recommended, as an intermediate step, that Congress create a Federal Office of Insurance Oversight within Treasury to establish a federal presence in insurance for international and regulatory issues.

On March 17, 2008, Representative Paul E. Kanjorski, Chairman of the Subcommittee on Capital Markets, Insurance, and Government Sponsored Enterprises, Representative Deborah Pryce, Ranking Member of the Subcommittee, and others, introduced H.R. 5840, the Insurance Information Act of 2008. Somewhat similar in concept to the Blueprints recommendation, but bearing various modifications, H.R. 5840 proposed establishing the Office of Insurance Information within the Department of Treasury to: (a) receive, analyze, collect and disseminate information regarding all lines of insurance, except health insurance; (b) establish federal policy on international insurance matters and ensure consistency between state insurance laws and agreements relating to such policy and entered into with foreign governments; and (c) advise the Treasury Secretary on major domestic and international insurance policy issues.

On June 10, 2008, Chairman Kanjorskis subcommittee conducted a hearing on H.R. 5840, and on July 9, 2008, the subcommittee and full committee approved the bill with modifications addressing protection of confidential information and state preemption. Modifications were based on concerns raised at the hearing on June 10. The Subcommittee had also previously conducted a hearing on April 16, 2008, to discuss various state and federal proposals on insurance regulatory reform. Having completed the committee process and ready for the House Floor, H.R. 5840 was eventually scheduled to be considered by the House of Representatives on the suspension calendar, a calendar typically reserved for non-controversial bills. This set in motion a response from those opposed to the bill, including various consumer groups and the National Conference of Insurance Legislators. Allegations were made of disingenuous remarks linking the need for legislation with the recent AIG financial predicament as well as a failure to fully air all of the issues.

On September 16, 2008, Congressman Jackie Speier, representing San Francisco and San Mateo, California, released a harsh statement criticizing the bill for setting a dangerous precedent by allowing preemption of any state

insurance law or regulation deemed discriminatory toward foreign companies. In her statement, Representative Speier recognized California as having adopted some of the strongest consumer protection laws in the country. To quote Representative Speier, H.R. 5840 is the camels nose under the consumers tent toward abolishing hard-won [state] protections. Press Release, Office of Congresswoman Jackie Speier, Insurance Information Act Bad for Consumers (Sept. 16, 2008). On September 17, 2008, fellow Californian and Speaker of the House, Representative Nancy Pelosi removed H.R. 5840 from the House calendar.

CONCLUSION

Year 2008 saw no shortage of legislative proposals, at both the state and federal level, which will have a lasting effect upon the insurance industry. State legislatures and agencies, as well as the Congress and the SEC, diligently sought to address eight areas of significant interest to the industry discussed in this commentary. Indeed, 2008 will likely be cast as a trend-setting year for each of these topics and as a catalyst for related topics.

For constituents struggling with autism or mental health disorders, 2008 will likely be seen as the year upon which new hope was built. With regard to insurer conduct and bad faith civil liability, the two vastly differing approaches adopted in Colorado and Minnesota will likely provide models for legislative proposals in other states during 2009. There was much anticipation in 2008 with regard to the reauthorization of the National Flood Insurance Program. In the end, no significant changes were made. For some, this non-event will be remembered as the best possible result; while, for others, the year will be seen as one of lost opportunity. In contrast, major changes were adopted in various Gulf region states with the hope of protecting homeowners and affected state budgets from devastating loss. Despite the historic losses in the Midwestern States wrought by the floods of 2008, no major legislative responses were adopted. Future events will educate many legislators and regulators as to which approach best served their respective constituencies. Likewise, 2008 will serve as the prelude to the forthcoming discourse on the financial underpinnings of the industry. The demise of various financial giants affiliated with the industry may never be understood completely, but it is highly likely that 2008 will be remembered as the year that set the stage for change. As with each topic, depending on each participants unique perspective, opportunity abounds.

ABOUT THE AUTHOR(S):

Ken Levine is widely regarded as one of the nations premier insurance and warranty regulatory lawyers. With almost two decades of regulatory and administrative experience, Mr. Levine has represented purchasers in some of Floridas largest mergers and acquisitions, and represented several of the countrys largest trade associations in administrative proceedings, bid protests, rule challenges, and negotiated solutions, before numerous agencies of the State. During the early 90s, Mr. Levine served in various legal capacities at the Florida Department of Insurance (now the Florida Office of Insurance Regulation), including service as senior counsel in the Chief of Staffs Office and as the agencys Hearing Officer. He also led the Departments prosecutions of unauthorized insurers in federal courts from Florida to California; and successfully negotiated, through the U.S. Department of Commerce, to save from preemption by NAFTA various provisions of the insurance codes of Florida and of the various states in the Southeastern Zone of the NAIC. After having managed an office and the practice groups of two of Floridas largest law firms, Mr. Levine now serves as the senior partner of The Levine Law Group, in Tallahassee, Florida.

Sheri Holtz Levine has held positions directly involved with legislative and regulatory policy development at both the federal and state levels. Ms. Levine began her legal career twenty years ago in the Office of the General Counsel for the Florida Department of Natural Resources. She then moved to Washington, to serve as a legislative advisor to a prominent Florida Congressman on policy issues affecting proposed federal legislation. This experience returned Ms. Levine to various senior-level positions with the Florida House of Representatives. During her tenure in the House, Ms. Levine served as a Council Attorney, a Staff Director, and as a House Council Director, while also honoring a distinguished appointment by both the Florida Speaker of the House and the Florida Senate President to serve as the first Staff Director for the Joint Legislative Committee on Everglades Oversight. These experiences have enabled Ms.

Levine to provide superior service to clients in the form of legislative drafting, interpretation, application, and policy implication in her present role as managing partner of The Levine Law Group, in Tallahassee, Florida.

The authors express a special note of appreciation to their diligent research assistant, Ashley Paradela.

Shidlofsky on Additional Insured Status in Strict Eight Corners States

2008 Emerging Issues 1318

Lee Shidlofsky on Additional Insured Status in Strict Eight Corners States

By Lee H. Shidlofsky

December 4, 2007

SUMMARY: Insurance coverage can oftentimes be won or lost depending on whether a particular jurisdiction follows a strict "eight corners" analysis for determining the duty to defend or permits the introduction of extrinsic evidence. This issue is particularly relevant in the additional insured context. The Supreme Court of Texas will have the opportunity to determine whether the "eight corners" rule should be more lax in the additional insured context.

ARTICLE: Recent Texas Law Regarding the "Eight Corners" Rule Keeps Texas a Strict State-Maybe

In general, using evidence not available in a petition or insurance policy (i.e., "extrinsic evidence") in order to create (or defeat) a duty to defend violates a strict "eight corners" rule where only the petition and insurance policy are to be used in determining the insurer's obligation to defend its insured. Nevertheless, most jurisdictions recognize an exception to that rule when an insurer knows or reasonably should know facts that would establish coverage. Most commentators agree with this view as well.

Despite this majority approach, on June 30, 2006, the Supreme Court of Texas stuck with the general rule when it decided *GuideOne Elite Ins. Co. v. Fielder Road Baptist Church*, 197 S.W.3d 305 (Tex. 2006). There, the Court declined to adopt an exception to the "eight corners" rule in regard to analyzing an insurer's duty to defend. The Supreme Court, however, specifically limited its decision to situations when the extrinsic evidence is "relevant both to coverage and the merits" In other words, the Court refused to adopt any exception to the "eight corners" rule for "liability only" or "overlapping/mixed fact" scenarios:

[W]ere we to recognize the exception urged here, we would by necessity conflate the insurer's defense and indemnity duties without regard for the policy's express terms. Although these duties are created by contract, they are rarely coextensive.

Importantly, though, the Supreme Court did not disapprove of other case law and commentary that discussed a "coverage only" exception to the "eight corners" rule. As the Court recognized, authority exists for admitting extrinsic

evidence in "coverage only" situations—at least when the "coverage only" evidence involves fundamental, undisputed and easily ascertained coverage facts. While allowing extrinsic evidence in circumstances such as these technically violates a strict "eight corners" rule, considering "coverage only" evidence does not violate the contractual underpinnings of the duty to defend. And, insurers still will have to defend groundless, false, or fraudulent claims that otherwise state a potential for coverage. Under a "coverage only" exception, for example, insurers only will be able to avoid the duty to defend in situations when the insured has not paid premiums for a defense (e.g., when the defendant is not listed as an insured, or where the property is not scheduled on the policy). The Supreme Court, however, did not expressly say one way or the other whether it would recognize a "coverage only" exception.

Subsequent to the issuance of *Fielder Road*, one court noted the following:

Although the Texas Supreme Court explicitly rejected the use of extrinsic evidence that was relevant both to coverage and to the merits of the underlying action, it did not rule on the validity of a more narrow exception that would allow extrinsic evidence solely on the issue of coverage. In fact, the language of the opinion hints that the court views the more narrow exception favorably. For example, the court specifically acknowledged that other courts recognized a narrow exception for extrinsic evidence that is relevant to the discrete issue of coverage and noted that the Fifth Circuit had opined that, were any exception to be recognized by the Texas high court, it would likely be such a narrow exception.

[*Bayou Bend Homes v. Scottsdale Ins. Co.*, 2006 U.S. Dist. LEXIS 48887 (S.D. Tex. July 18, 2006).] More recently, one federal court expressly concluded that a "coverage only" exception exists in Texas. [See *B. Hall Contracting Inc. v. Evanston Ins. Co.*, 447 F. Supp. 2d 634, 647 (N.D. Tex. 2006) (holding that "coverage only" extrinsic evidence can be considered in the duty to defend analysis).] Likewise, the Fifth Circuit interpreted *Fielder Road* so as to permit extrinsic evidence in "coverage only" scenarios. [See *Liberty Mut. Ins. Co. v. Graham*, 473 F.3d 596 (5th Cir. Dec. 21, 2006).]

Even if admission of "coverage only" facts is allowed, an insurer should not be permitted to use such evidence to contradict allegations in a petition. Likewise, when a potential for coverage can be found from the face of a pleading, an insurer should not be permitted to develop extrinsic evidence through discovery in an effort to defeat the duty to defend. [See *Fair Operating, Inc. v. Mid-Continent Cas. Co.*, 193 Fed. Appx. 302 (5th Cir. Aug. 1, 2006) (affirming district court's order refusing insurer's request to undertake discovery of extrinsic evidence).]

A Strict "Eight Corners" Approach Impacts Additional Insured Status. The D.R. Horton case is just one example of how a strict "eight corners" approach to the duty to defend can affect additional insured status. In D.R. Horton, the Houston Court of Appeals addressed whether extrinsic evidence can be used to trigger the duty to defend for an additional insured. In 2002, James and Cicely Holmes sued D.R. Horton, alleging their house contained latent defects causing the propagation of toxic mold. The Holmeses' petition, however, was silent as to the subcontractors used by D.R. Horton to construct the home. More particularly, the Holmeses' petition did not name a single subcontractor, nor did it reference any damage caused by those subcontractors. D.R. Horton had extrinsic evidence, which demonstrated that the alleged damages were caused, at least in part, by work performed by its masonry subcontractor.

Knowing this, and because D.R. Horton required each subcontractor to name it as an additional insured under the subcontractor's CGL policy, D.R. Horton tendered the lawsuit to masonry subcontractor's liability carriers. Those insurers, however, refused to defend the homebuilder because the Holmeses' petition did not mention the use of or otherwise reference the masonry subcontractor (or any other subcontractor, for that matter). The insurer's refusal stemmed from language in the additional insured endorsement that limited liability to claims arising from the masonry subcontractor's work for the homebuilder.

In the declaratory judgment action against the additional insured carriers, D.R. Horton sought to introduce extrinsic evidence that the alleged damages were caused by the masonry subcontractor (i.e., the named insured). The trial court refused to allow the introduction of the evidence. The court of appeals, despite recognizing that D.R. Horton "produced

a significant amount of summary judgment evidence that . . . links [the masonry subcontractor] to the injuries claimed by the Holmeses," concluded that the trial court was right to exclude the evidence. Specifically, although never explaining its basis for such a classification, the court of appeals held that the extrinsic evidence before it related to both coverage and liability. Thus, the appellate court completely side-stepped the ongoing debate regarding an exception to the "eight corners" rule. As a result, the court of appeals affirmed the trial court and held that the masonry subcontractor's insurer had no duty to defend D.R. Horton. Moreover, because there was no duty to defend, and because the duty to defend is broader than the duty to indemnify, the appellate court also ruled that there was no duty to indemnify.

D.R. Horton has filed a petition for review with the Supreme Court of Texas, which requested full briefing in January 2007. In its petition, the homebuilder refutes the appellate court's finding that the extrinsic evidence at issue related to both liability and coverage. Rather, D.R. Horton argues that the extrinsic evidence it sought to introduce went solely to coverage. (i.e., additional insured status). Finally, D.R. Horton urges the Supreme Court to take Fielder Road one step further by expressly adopting a "coverage only" exception to the "eight corners" rule.

Discussion. Provided the Supreme Court of Texas takes the D.R. Horton case, it will have the opportunity to significantly direct insurance law throughout Texas and perhaps other jurisdictions that follow a strict "eight corners" approach to determining the duty to defend. Notably, the Supreme Court can soften the "eight corners" test by allowing a "coverage only" exception, or it can solidify the test by disallowing any exception to the rule. The latter result will cause significant problems in the additional insured context, as outlined by D.R. Horton.

To be more specific, by ruling against D.R. Horton, the court will significantly affect the rights of the homebuilder and its subcontractor vis-à-vis their bargained-for contract. That contract required the subcontractor to provide insurance covering D.R. Horton, which it did. Nevertheless, because the plaintiff-homeowner likely did not know the significance of that contractual requirement, and because the homeowner only is in contractual privity with the builder, it did not name or otherwise mention the subcontractor in its lawsuit against the builder. As such, in light of the fact that the additional insured must be sued for the acts of its subcontractor in order to trigger the subcontractor's policy, the subcontractor's insurer escapes a significant defense (and possible indemnity) liability. Moreover, the homebuilder (or its own insurer) is faced with what could be a costly lawsuit, and must go at it alone despite, as is the case with D.R. Horton, evidence proving that coverage should exist.

The same situation occurs in states where workers' compensation is considered the exclusive remedy for an injured worker with regard to its employer. When that worker, however, is employed by a subcontractor that agrees to perform work for a general contractor, the worker typically may still seek a remedy against the general contractor. Again, in these situations, the general contractor oftentimes requires the subcontractor to provide insurance under which the general contractor is made an additional insured. In a suit, however, between the injured worker and the general contractor, the worker cannot name its employer because of the workers' compensation bar and thus typically focuses its allegations only on the general contractor. [See, e.g., *Transport Int'l Pool, Inc. v. Continental Ins. Co.*, 166 S.W.3d 781 (Tex. App.-Ft. Worth 2005, no pet.) (refusing to allow a general contractor the right to introduce extrinsic evidence to prove up the negligence of a subcontractor)]. Accordingly, the general contractor, just as the homebuilder in D.R. Horton, does not get the benefit of its contract and is left to fund its own defense.

The Supreme Court of Texas has the opportunity to honor the contracts between these parties if it accepts the petition for review in D.R. Horton. Only time will tell, though, whether the court will keep things strict in Texas or take the first step in softening the rule while recognizing the contractual agreements made between parties such as those in a contractor-subcontractor relationship involving additional insured status. Moreover, as noted, this issue is not limited to Texas and applies to all states that adhere to a strict "eight corners" approach to the duty to defend.

For further discussion of the "eight corner" rules, New Appleman Insurance Law Practice Guide § 4.05[5][d] and New Appleman Premium Online Checklists § 15.05

Supreme Court of TX Weigh-In on Property Damage and Occurrence

2008 Emerging Issues 1315

Lee Shidlofsky on the Supreme Court of Texas' Weigh-In on "Property Damage" and "Occurrence" in the Realm of Construction Defect Claims: Lamar Homes v. Mid-Continent Casualty Company

By Lee H. Shidlofsky

December 4, 2007

SUMMARY: In recent years, the "property damage" and "occurrence" issues in the context of construction defect claims have been widely litigated. A number of states have conflicting case law, causing confusion for insureds and insurers alike across the country. Over the last few years, state supreme courts have weighed in on the issues several times. The Supreme Court of Texas addressed these issues in Lamar Homes v. Mid-Continent Cas. Co.

ARTICLE: Confusion in Texas and Across the United States Leads to Certification of Questions by the Fifth Circuit Court of Appeals

What constitutes "property damage" and an "occurrence" in the realm of construction defect claims against an insured general contractor for the acts and/or omissions of its subcontractors are perhaps the most litigated insurance issues over the last several years. In Texas alone, prior to the Supreme Court of Texas weighing in on the matter, at least twenty decisions in the residential construction context had been handed down by both the state appellate and federal district courts. Meanwhile, across the country, a split in authority continued to exist as the supreme courts in Pennsylvania and South Carolina favored the insurer, but the high courts of Tennessee, Wisconsin, and Kansas favored the insured. [*Kvaerner Metals Div. of Kvaerner U.S., Inc. v. Commercial Union Ins. Co.*, 908 A.2d 888 (Pa. 2006); *L-J, Inc. v. Bituminous Fire & Marine Ins. Co.*, 621 S.E.2d 33 (S.C. 2005); but see *Travelers Indem. Co. of Am. v. Moore & Associates, Inc.*, 216 S.W.3d 302 (Tenn. 2007); *Lee Builders, Inc. v. Farm Bureau Mut. Ins. Co.*, 137 P.3d 486 (Kan. 2006); *Am. Family Mut. Ins. Co. v. Am. Girl, Inc.*, 673 N.W.2d 65 (Wis. 2004).] Florida will soon enter the fray. [*J.S.U.B., Inc. v. U.S. Fire Ins. Co.*, 906 So.2d 303 (Fla. Ct. App. 2005), *pet. granted*, 925 So. 2d 1032 (Fla. 2006).]

For those reasons, the Fifth Circuit Court of Appeals certified questions involving these issues (as well as a bad faith issue) to the Supreme Court of Texas:

1. When a homebuyer sues his general contractor for construction defects and alleges only damage to or loss of use of the home itself, do such allegations allege an "accident" or "occurrence" sufficient to trigger the duty to defend or indemnify under a CGL policy?

2. When a homebuyer sues his general contractor for construction defects and alleges only damage to or loss of use of the home itself, do such allegations allege "property damage" sufficient to trigger the duty to defend or indemnify under a CGL policy?

3. If the answers to certified questions 1 and 2 are answered in the affirmative, does Article 21.55 of the Texas Insurance Code apply to a CGL insurer's breach of the duty to defend?

Texas Favors the Insured. On August 31, 2007, in a 6-3 opinion, the Supreme Court of Texas "conclude[d] that allegations of unintended construction defects may constitute an 'accident' or 'occurrence' under the CGL policy and that allegations of damage to, or loss of use of, the home itself may also constitute 'property damage' sufficient to trigger the duty to defend under a CGL policy." Addressing the third certified question, the court said, "We further conclude that the prompt-payment statute, formerly article 21.55, and now codified as sections 542.051-.061 of the Texas Insurance Code, may be applied when an insurer wrongfully refuses to promptly pay a defense benefit owed to the insured."

The Court rejected Mid-Continent's three main arguments against coverage. First, the Court dismissed Mid-Continent's claim that a CGL policy's purpose is to protect the insured from tort liability, not claims for defective performance under a contract. Second, Texas' high court brushed aside Mid-Continent's belief that defective work cannot be an "occurrence" because it is not accidental or, in other words, that a general contractor should *expect* that faulty workmanship will result in damage to the project itself. Finally, the Court refused Mid-Continent's argument that extending CGL coverage to a general contractor for damage to the project itself transforms a CGL policy into a performance bond.

In dismissing the contract versus tort distinction, the Court noted that Mid-Continent's reliance on the economic-loss rule was misplaced finding that it "is not a useful tool for determining insurance coverage." Moreover, the Court noted that "the CGL policy makes no distinction between tort and contract damages" and that the "insuring agreement does not mention torts, contracts, or economic losses; nor do these terms appear in the definitions of 'property damage' or 'occurrence.'" In other words, the Court, in following precedent, held that "the label attached to the cause of action-whether it be tort, contract, or warranty-does not determine the duty to defend." [*See Farmers Tex. County Mut. Ins. Co. v. Griffin*, 955 S.W.2d 81, 82 (Tex. 1997).]

Turning to Mid-Continent's second argument, the Court refused to accept "foreseeability" as "the boundary between accidental and intentional conduct," as that would render insurance illusory. The Court found that Mid-Continent's "argument includes a false assumption that the failure to perform under a contract is always intentional (or stated differently 'that an accident can never exist apart from a tort claim')." Thus, as the Court said, "a claim does not involve an accident or occurrence when either direct allegations purport that the insured intended the injury (which is presumed in cases of intentional tort) or circumstances confirm that the resulting damage was the natural and expected result of the insured's actions, that is, was highly probable whether the insured was negligent or not." Moreover, the term "occurrence" is not defined "in terms of the ownership or character of the property damaged by the act or event. Rather, the policy asks whether the injury was intended or fortuitous, that is, whether the injury was an accident." No one alleged that Lamar Homes intended or expected its work or its subcontractors' work to damage the home, so the Court concluded that the complaint in the underlying construction defect lawsuit alleged an "occurrence."

Addressing Mid-Continent's third argument, the Court concluded that coverage under a CGL policy and a performance bond are not necessarily mutually exclusive:

Any similarities between CGL insurance and a performance bond under these circumstances are irrelevant,

however. The CGL policy covers what it covers. No rule of construction operates to eliminate coverage simply because similar protection may be available through another insurance product.

With respect to the "property damage" requirement, the Court recognized that the "definition does not eliminate the general contractor's home" and that "allegations of cracking sheetrock and stone veneer are allegations of 'physical injury' to 'tangible property'" so as to qualify as "property damage."

Part of the Court's foundation for its affirmative answers to the first two certified questions was the presence of exclusions J5, J6 and L, otherwise known as the "business-risk" exclusions, which eliminate coverage for many construction-related losses. The "subcontractor exception" to exclusion L would be virtually meaningless, however, if faulty workmanship could not be "property damage" caused by an "occurrence" in the first place. The Court said that "when a general contractor becomes liable for damage to work performed by a subcontractor-or for damage to the general contractor's own work arising out of a subcontractor's work-the subcontractor exception preserves coverage that the 'your work' exclusion would otherwise negate."

In reaching this conclusion, the Court analyzed the evolution of the CGL policy and noted that inclusion of the "subcontractor exception" language was a purposeful addition to the CGL policy. *Id.* Likewise, although not in the policy issued to Lamar Homes, the Court noted that ISO has promulgated an endorsement (CG 22 94) that eliminates the "subcontractor exception" to exclusion L. *Id.*

Finally, the Court turned to the "prompt payment of claims" statute and, in particular, to the issue of whether a claim for breach of the duty to defend constitutes a "first-party claim" within the meaning of the statute. The Court recognized that a split existed between federal district courts, which had concluded that the statute applied to a breach of the duty to defend, and the state appellate courts that had concluded otherwise. Finding that a claim for breach of the duty to defend is a "first-party claim," the Court noted that "this loss belongs only to the insured and is in no way derivative of any loss suffered by a third party." Moreover, a "first-party claim" is not synonymous with a claim under a "first-party insurance policy." Further, the Court refused to accept Mid-Continent's position that the statute does not apply because the benefits are payable to the attorney rather than to the insured. Similarly, the Court rejected the contention that the statute was "unworkable in the context of the insured's claim for defense benefits" because "[a]s one amicus in this case submits, when the insurer wrongfully rejects its defense obligation, the insured has suffered an actual loss that is quantified after the insured retains counsel and begins receiving statements for legal services. These statements are the last piece of information needed to put a value on the insured's loss."

The Dissent Refuses to Read the Clear Terms of the CGL Policy. Justice Brister's dissent, which was joined by Justices Hecht and Willett, primarily focused on three things while refusing to find coverage: (i) the economic loss rule; (ii) the business risk rationale; and (iii) a law review article published in 1961. According to the dissent, "[s]elling damaged property is not the same as *damaging* property." In other words, the dissent contends that "Lamar Homes was sued for breaking promises, not for breaking property." Although contrary to what Lamar Homes argued, the dissent contended that "[e]very crack, stain, dent, leak, scratch, and short-circuit arising from a subcontractor's work (which will be most of them) must be repaired by the builder's insurer, who may have to pay the builder to repair its own home." Such a contention is without merit and ignores the business risk exclusions explicitly included in the CGL policy. In addition, both in its briefing and at oral argument, Lamar Homes readily acknowledged that a mere defect-in and of itself-does not constitute "property damage."

Moreover, while the dissent concedes that "the CGL policy does not distinguish between contract and tort claims, or mention economic loss," it nevertheless would hold that allegations of defective construction do not constitute "property damage" because such allegations are for pure economic loss. Likewise, the dissent concedes that "the subcontractor exception creates something of an anomaly when used in the construction industry" and that "the subcontractor exception has effectively rendered the CGL policy's your-work exclusion meaningless when issued to a general contractor," but nevertheless would rule against coverage based on the "property damage" definition. This reasoning, of course, violates well-established contract interpretation principles that require the policy to be read as a

whole and to give meaning to all parts of a policy.

Finally, despite readily acknowledging the split in authority in Texas, as well as nationwide, the dissent characterized the Court's opinion as adopting a minority view. The majority, on the other hand, contends that "[a]fter examining the dissent's list, we conclude that the dissent has neither discovered a majority rule nor analyzed this case to fit within it."

The dissent did not address the article 21.55 issue.

Conclusion

Although most "property damage" and "occurrence" cases like *Lamar Homes* arose in the context of residential construction, the Court's holdings are in no way limited to the residential construction defect context. Whether the insured is a homebuilder that builds ten homes a year or a large commercial contractor that builds stadiums, the definitions of "property damage" and "occurrence" are the same. Likewise, for the most part, the business risk exclusions are the same. Accordingly, at least in those policies that do not have endorsement CG 22 94, or similar endorsement, that eliminates the subcontractor exception, *Lamar Homes* should have far-reaching implications on how defective construction claims are adjusted. In particular, virtually every construction defect claim against a general contractor implicates the "property damage" and "occurrence" requirements. Moreover, the "prompt payment of claims" statute will provide CGL insurers an incentive to think twice before denying a defense.

At bottom, the clear difference between the majority opinion and Justice Brister's dissent is that the former applied the policy as written, while the latter relied on extraneous legal theories such as the economic loss rule and the business risk rationale, largely ignoring the actual policy language.

Finally, the Court acknowledged that it has similar issues pending in six separate petitions for review, but issued only the *Lamar Homes* opinion. In one such case, *Pine Oak Builders, Inc. v. Great American Lloyds Insurance Company*, LexisNexis 2007 Tex. LEXIS 741 (Tex. App.-Houston [14th Dist.] July 6, 2006, pet. granted), the Court granted the petition. That case involves the same issues decided in *Lamar Homes*, but also contains issues as to the proper "trigger" theory to be applied to "property damage" cases as well as whether a "coverage only" exception exists to the "eight corners" rule. Aside from *Pine Oak Builders*, it will be interesting to see whether the Court uses the other pending cases to further clarify its stance on the "property damage" and "occurrence" issues or whether it will simply issue one-page opinions that follow form to *Lamar Homes*. Stay tuned for further details.

ARTICLE: Overview

In an opinion that could wreak havoc for policyholders, a California Court of Appeals recently held that insurance companies are not liable under the terms of standard comprehensive general liability (CGL) policies to indemnify policyholders for settlement agreements. That opinion, *Aerojet-General Corp. v. Commercial Union Insurance Co.*, 155 Cal. App. 4th 132 (Ct. App. 2007), held that insurance companies are only obligated to indemnify policyholders for amounts they are ordered to pay by a court, not amounts they agree to pay as a result of a settlement agreement. Thus, a policyholder who decides to settle litigation against it, instead of allowing the suit to proceed to judgment, in effect forfeits its rights to coverage for the claim.

The *Aerojet* decision has far-ranging implications for policyholders whose insurers have denied coverage. This commentary discusses some of those implications and provides some practice tips for counsel representing policyholder clients contemplating settlement of a claim for which its insurer has denied coverage.

Background

The *Aerojet* case involved a dispute over insurance coverage for environmental claims. In 2000 and 2001, various California state agencies sued Aerojet alleging it was liable under CERCLA and related laws for the costs to remedy alleged groundwater contamination in the San Gabriel Valley. *Aerojet*, 155 Cal. App. 4th at 136. All of Aerojet's excess insurers denied coverage for the suits. In 2002, Aerojet settled the suits for approximately \$175 million. Aerojet then sued its excess insurers seeking indemnification for the settlement. *Aerojet*, 155 Cal. App. 4th at 136.

The policies at issue were CGL policies. The policies provided (with some slight variations) that the insurers would indemnify Aerojet for "all sums which the Assured shall become legally obligated to pay, or by final judgment be adjudged to pay, to any person or persons as damages" *Aerojet*, 155 Cal. App. 4th at 136. The excess insurers contended that the term "damages" meant damages "awarded against the insured by a court." *Aerojet*, 155 Cal. App. 4th at 136. They argued that because the environmental suits "were settled and not adjudicated against Aerojet to an award of damages," they were not obligated to indemnify Aerojet for the claims. *Aerojet*, 155 Cal. App. 4th at 136.

The California Court of Appeals agreed with the excess insurers, relying heavily on a case decided in 2001 by the California Supreme Court, *Certain Underwriters at Lloyd's of London v. Superior Court*, 24 Cal. 4th 945 (2001) ("*Powerine I*"). In *Powerine I*, the California Supreme Court held that the duty to indemnify a policyholder for "damages" was limited to "money ordered by a court" and did not "extend to expenses required by an administrative agency pursuant to an environmental statute." *Certain Underwriters at Lloyd's of London v. Superior Court*, 24 Cal. 4th at 971. Reading *Powerine I* literally, the *Aerojet* court held that "the term 'damages' as interpreted in *Powerine I* and used in liability insurance indemnity provisions means only money ordered by a court to be paid." *Aerojet*, 155 Cal. App. 4th at 143.

The court reasoned that because Aerojet had settled its environmental suits and there were no judgments entered in the record, only stipulations and orders for dismissal without prejudice, "the settlement costs are outside the scope of indemnity coverage in [the insurers'] policies." *Aerojet*, 155 Cal. App. 4th at 143.

Implications for Policyholders

Although *Aerojet* arose in the context of a coverage dispute for environmental claims, its scope may be much broader. The "damages" language construed by the court exists in almost all CGL policies. If the decision is upheld on appeal, it could potentially affect all types of policyholders, from non-profits to Fortune 500 corporations. The implications of the decision for policyholders are troublesome.

The Catch-22. The practical effect of the holding is to force policyholders whose insurers have denied coverage into a catch-22 position. If a policyholder enters into a settlement to resolve the underlying lawsuit against the policyholder, under *Aerojet*, the insurance company is absolved of its obligation to provide coverage for the settlement.

If, on the other hand, the policyholder decides to litigate the underlying suit to judgment, the judgment could end up being massive, and the policyholder would be still left to litigate with its insurers over whether the judgment is or is not covered. If it turns out not to be covered, the policyholder would be liable for the full amount of the judgment.

In other words, the policyholder is left to choose between a settlement that it will have to fund on its own, or a potentially larger judgment that might or might not be covered by insurance.

A Possible, But Perhaps Not Very Appealing, Loophole. The *Aerojet* court did allude to one possible escape from this conundrum. The court suggested that if *Aerojet* and the state agencies "sought for the terms of the agreement to be entered as the judgments in the lawsuits," the settlement amount may have been covered. *Aerojet*, 155 Cal. App. 4th at 144.

This option is not without its own potential risks. First, the language is dicta, and it is therefore uncertain whether such a judgment would, in fact, be deemed "damages" by a court.

Second, there is the obvious concern that having a judgment entered against a policyholder may present other problems that would outweigh the possible benefits of this course of action. Companies don't like to have judgments entered against them, as it invites more claims and is a red flag in the financial community. Moreover, insurers may still attack such judgments as collusive.

The Decline of Mediation and Settlement. The likely long-term effect of the *Aerojet* rule will be to discourage mediation and settlement of underlying claims. Any policyholder who knows that a settlement will result, or could result, in a forfeiture of coverage will be far less willing to consider the possibility of settlement.

If the policyholder does consider it at all, it will only be for an amount the policyholder knows it can afford to pay on its own, which, in most cases, will be lower than the settlement offer would be if insurance is potentially available. Such discounted offers may run into resistance both from the plaintiffs' attorneys and any mediators trying to mediate the underlying suit.

The likely result is that the *Aerojet* rule will discourage -- and in many cases foreclose -- mediation and settlement of underlying claims. Thus, whenever insurance is potentially available, settlements will become the exception rather than the rule, an outcome that harms all parties involved, including the courts.

Practice Tips For Policyholder Counsel With Clients Thinking About Settlement

Analyze the Law of the Relevant Jurisdiction, Which Might Follow A Different Rule. Counsel should be aware that the *Aerojet* ruling runs counter to the law in many other jurisdictions. Under most states' laws, when an insurer denies coverage for a third-party claim, the policyholder is entitled to settle the claim for a reasonable amount without jeopardizing its rights to coverage. See *Luria Bros. & Co., Inc. v. Alliance Assurance Co., Ltd.*, 780 F.2d 1082, 1091 (2d Cir. 1986) ("When an insurer declines coverage, as here, an insured may settle rather than proceed to trial to determine its legal liability"); *So. Guar. Ins. Co. v. Dowse*, 605 S.E.2d 27, 29 (Ga. 2004) ("an insurer that denies coverage and refuses to defend an action against its insured, . . . waives the provisions of the policy against a settlement by the insured and becomes bound to pay the amount of any settlement within a policy's limits made in good faith, plus expenses and attorneys' fees.") (internal quotation marks, alteration marks and citation omitted); *Guillen v. Potomac Ins. Co. of Ill.*, 785 N.E.2d 1, 11-12 (Ill. 2003) (noting insurer's concession that "generally speaking, once an insurer breaches its duty to defend, the insured may enter into a reasonable settlement agreement without foregoing its right to seek indemnification"); *Fireman's Fund Ins. Co. v. Sec. Ins. Co.*, 367 A.2d 864, 868 (N.J. 1976) ("Where an insurer wrongfully refuses coverage . . . the insurer is liable for the amount of the judgment obtained against the insured or of the settlement made by him.") (internal quotation marks and citation omitted).

It is therefore important for counsel to analyze choice of law issues carefully and determine how the law of the relevant state treats a policyholder's right to settle a claim when its insurer has breached its duty to defend and denied coverage. In states that have not addressed the issue, counsel for policyholders should inform their clients about the potential risk that the *Aerojet* rule could be applied in their case, and the ramifications of the rule for any settlement the client is contemplating. Failure to do so may have dire consequences for the client and could even put the attorney at risk for a malpractice claim.

Consider Negotiating With the Insurers. Generally, when an insurer denies coverage, policyholders have no obligation to involve the insurers in the defense of the underlying claim or any settlement negotiations. However, in light of *Aerojet*, policyholders who wish to settle a claim, but fear a loss of coverage could result, may want to consider opening a dialogue with their insurers, perhaps even involving the insurers in the settlement negotiations. By doing so, the policyholder may be able to persuade the insurer to agree not to deny coverage on the ground that it only owes coverage for court-ordered judgments.

At first blush, it may seem unlikely that an insurer would ever agree to this, but insurers may have strong incentives to reach such an agreement in some cases. When an insurer denies coverage, particularly in cases involving large insurance claims, the policyholder will challenge the denial in a coverage suit, and the insurer's coverage obligations ultimately will be decided by a court. Indeed, in some cases, insurers who deny coverage are *required* to file a declaratory judgment action to determine whether the denial was justified. See, e.g., *Shell Oil v. ACandS, Inc.*, 649 N.E.2d 946, 949 (Ill. App. Ct. 1995). Thus, in virtually every case, there is some risk to the insurer that it will lose the coverage case and be required to pay indemnity and defense costs for the claim.

A policyholder who is worried that a settlement could jeopardize its coverage rights will in many cases be unwilling or unable to settle the case, and will instead take the case to judgment. This is an incredibly risky venture for insurers. An adverse judgment in the underlying suit could result in massive liabilities and is sure to rack up substantial defense costs, all of which the insurer may ultimately be required to pay.

If the insurer decides that a proposed settlement of the underlying suit is reasonable, and the alternative is a potentially massive judgment and huge defense costs, the insurer may decide that the settlement is in the insurer's best interests. In order to facilitate that settlement, it may be willing to agree not to deny coverage on the ground that it only owes coverage for court-ordered judgments. The policyholder could then enter into the settlement, and the insurers' coverage obligations for the settlement and related defense costs would be decided in a subsequent coverage case.

Conclusion

The *Aerojet* decision should be of concern to all policyholders and their counsel, both inside and outside of California. Although decided under California law, the decision's impact may be much broader as other jurisdictions that have not decided the issue may look to the decision for guidance, or may determine to apply California law to particular claims. Counsel for policyholders considering settlement of underlying liability claims should evaluate the potential impact of the *Aerojet* decision and whether a proposed settlement could negatively impact their clients' coverage rights.

Repercussions of the Subprime Mortgage Crisis on CGL Insurance (I of III)

2008 Emerging Issues 2975

Repercussions of The Subprime Mortgage Crisis for The Insurance Industry: Whos Suing Whom and Who Has Coverage for What? Part I of III (CGL Policies)

By Matthew R. Wildermuth

December 2, 2007

SUMMARY: The tentacles of the current "subprime mortgage crisis" are destined to reach into every corner of financial institutions in the United States and abroad, including the insurance industry. In a three-part series, insurance coverage litigation expert Matthew R. Wildermuth, Esq. explores the claims arising out of this crisis. The first of these articles focuses on potential exposures under traditional commercial general liability policies

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Introduction

The bold-lettered banner hanging in Hillary Rodham Clintons 2008 presidential campaign headquarters may well now read Its the Residential Subprime Mortgage Meltdown, Stupid. There is no escaping its current and potential impact on the U.S. economy and, to a lesser degree, the world economy. On December 6, 2007, the U.S.-based Mortgage Bankers Association reported that the number of mortgage loans at least 30 days past due has now reached its highest point since 1986 as foreclosure starts increased across all loan types [Mortgage Bankers Association, National Delinquency Survey, <http://www.mortgagebankers.org/ResearchandForecasts/ProductsandSurveys/NationalDelinquencySurvey.htm>]. Subprime adjustable rate mortgages (ARMs) showed the worst deterioration, with a full 4.72% of the outstanding loans starting the foreclosure process during the period [Mortgage Bankers Association, National Delinquency Survey, <http://www.mortgagebankers.org/ResearchandForecasts/ProductsandSurveys/NationalDelinquencySurvey.htm>].

The savings and loan crisis of the 1980s and 90s ultimately resonated deeply within the insurance industry as bankers, securities dealers, lawyers, accountants and others faced massive claims from government agencies seeking to recoup amounts the government (and taxpayers) paid to effect the bailout [see, e.g., Federal Deposit Insurance Corporation, Managing the Crisis: The FDIC and RTC Experience 19801994 (1998), <http://www.fdic.gov/bank/historical/managing/history1-11.pdf>]. In light of increasing scrutiny of the usual suspects in widespread financial losses, we can expect increasing pressure to be applied to the liability insurance industry to defend and indemnify parties found to be responsible for some of the losses. The questions then become which policies for what claims? In a three-part series, this commentary will identify the extent to which commercial general liability,

directors & officers liability and professional liability policies, respectively, may respond to coverage issues implicated by the residential subprime mortgage crisis.

The Subprime Mortgage Crisis As Relevant To Liability Insurers

It is beyond the scope of this commentary to address in any detail the causes of the crisis, the viability of the proposed remedies or the ultimate fallout of the subprime mortgage crisis. For purposes of this commentary, suffice it to say that the deepening housing slump has adversely affected the value of the collateral securing individual mortgage loans and that this problem is compounded exponentially by the packaging of large pools of mortgages into funds made available for investment by parties outside the traditional lending food chain. Through the first 10 months of 2007, the projected rate of foreclosure filings against individual property holders subject to the packaged mortgages was 1.8 million nationwide, compared to 1.3 million for all 12 months of 2006, and the home loan default rate has not yet peaked [see Jeannine Aversa (Associated Press writer), *Home foreclosures streak to record high in third quarter*, Dec. 6, 2007, available at www.chicagolawbulletin.com]. This wave of mortgage foreclosures threatens to make the most severe slump in housing even worse by dumping more foreclosed properties onto an already glutted market, further depressing home prices and shaking consumer confidence.

The Bush Administration unveiled on December 6, 2007 a plan designed to mitigate the crisis by allowing subprime borrowers who are living in their homes and are current on their payments to avoid a costly reset of their mortgage interest rate for five years. According to the Wall Street Journal, the plan Treasury Department officials and the big U.S. banks have negotiated is aimed in part at helping slow the rate of decline in home values that typically accompanies high default and foreclosure rates and threatens to push the overall domestic economy closer to recession [see Andy Laperriere, *No Bailouts for Borrowers*, Wall Street Journal, Dec. 4, 2007, at A21]. A New York Times article stated the proposed plan "would allow distressed borrowers who are current on their payments to keep their low introductory rates and escape an increase of 30% or more in their monthly payments when the rates expire" [Edmund L. Andrews & Vikas Bajaj, *Lenders Agree to Freeze Rates on Some Loans*, N.Y. Times, Dec. 6, 2007, at A1]. Apparently, the hope is that by that time, the housing downturn will have stabilized and cleared out the glut of unsold homes, thereby allowing the residential real estate market to correct itself in a less hostile environment.

However, as both newspapers note, the Administrations plan would exclude many subprime borrowers from the proposed relief, including borrowers that currently are late on their payments (approximately 22% of the subprime group). As a result, the plan likely will face objections from low-income borrowers who won't be helped, and from investors who backed now-troubled subprime home loans that are at the heart of the mortgage crisis [see Sudeep Reddy, Douglas Belkin and Jonathan Karp, *Some Cry Foul Over Relief Plan For Borrowers*, Wall Street Journal, Dec. 4, 2007, at D1]. As a result, some critics assail the plan as a band-aid approach designed to stabilize the credit markets until a more comprehensive approach can be implemented (or, more cynically, until after the 2008 elections) [see, e.g., Yves Smith, *A Few More Thoughts on Subprime Rescue Plan*, Naked Capitalism, blog posted Dec. 1, 2007(<http://www.nakedcapitalism.com/2007/12/few-more-thoughts-on-subprime-rescue.html>)].

As pertinent to this analysis, regardless of the success of the plan proposed above, hundreds of thousands of owner-occupied properties already have gone on the auction block, and no part of the proposed plan would require the mortgage holders that foreclosed to give those properties back and let the mortgagors back into their homes. (A less publicized but still problematic symptom of the foreclosure process is that it typically allows the foreclosing mortgage holder to void any existing leases, thereby putting scores of blameless tenants out on the street as well [see Kelly Evans, *Tenants Pay as Landlords Default: Foreclosures Void Leases, Bring Eviction Notices; Bigger-Building Benefit*, Wall Street Journal, Nov. 23, 2007, at A2]). Millions more residential property owners who have mortgages they currently cannot pay (or soon will be unable to pay) will not get relief from the current plan and will be hurt badly. Some yet-to-be determined percentage of borrowers in these groups inevitably will file suit against any participant in the mortgage lending food chain that can be held accountable and is capable of responding to a judgment for damages. Here

is where it gets most interesting for liability insurers.

Indeed, some of the early victims of the crisis have already initiated suit. To provide a realistic framework for evaluating the most prominent insurance coverage issues arising in connection with such claims under a standard CGL policy, I have fictionalized one such complaint obtained from public records in federal court (but only a little the actual facts plead are more egregious) [see *Dodson v. DHI Mortg. Co.*, 2007 U.S. Dist. LEXIS 88131 (E.D. Va. 2007) (originally filed in the United States District Court for the Western District of Texas as Case No. 1:07-cv-00230-SS)]. The allegations include the following claims:

1. Defendant U. O. Lots (U.O.) is a mortgage lender and is a subsidiary of Decepticon Construction, Inc., a large homebuilder (Decepticon).

2. Plaintiffs obtained a mortgage from U.O. to finance construction of their new home at 123 Meltdown Drive to be built by Decepticon for \$930,195 (the new home"). **At the time, the Plaintiffs disclosed to U.O. orally and in writing that their gross annual income was \$131,000 and provided written confirmation of their incomes to U.O. and Decepticon as required by the contract documents. The Plaintiffs thereafter dealt exclusively with mortgage broker Gordon Gecko (Gecko), an employee and agent of U.O. and Decepticon.**

3. Gecko reviewed or had the opportunity to review Plaintiffs numerous income verification documents and to recognize that a combined income of \$131,000, exclusive of other debt obligations, would not permit the Plaintiffs to purchase a home with a purchase price of more than \$900,000. Although Plaintiffs debt-to-income ratio was too high, Gecko nonetheless encouraged Plaintiffs to purchase their new home and created false documents to further the transaction. Specifically, Gecko encouraged Plaintiffs to finance their \$82,000 down payment by borrowing the money against the equity of the home in which Plaintiffs were residing at the time, located at 4 Closure Drive (the "old home) with the assurance that, once their new home was built, they could sell their old home quickly and use the proceeds to finance the new home.

4. Decepticon delayed construction of the new home because it did not have the proper permits. By the time it actually completed construction, the local housing market collapsed and Plaintiffs were unable to sell their old home.

5. Plaintiffs did not and would not have qualified for the mortgage on their new home but for Geckos fraud and misrepresentations. Gecko did not submit Plaintiffs' income verification or accompanying documents to U.O.'s underwriters for review and approval, and instead submitted a stated income loan.

6. Gecko also provided Plaintiffs differing Truth in Lending Disclosure Statements ("TILDS") that contradicted each other and contradicted the oral representations Gecko made regarding the applicable interest rate or rates that Plaintiffs would be paying over the life of their mortgage.

7. U.O.'s disclosures on the Truth in Lending Statements it provided Plaintiffs were deceptive and violated Truth in Lending Act (TILA) [15 U.S.C. § 1601 et seq.] requirements that mandate clear and conspicuous disclosure of loan costs. The net effect of U.O.'s conduct was to create conflicting, misleading and incomprehensible disclosures such that an ordinary consumer would be confused and unable to discern the true cost of the loan at issue as an annual percentage rate.

8. U.O. was negligent in its failure to ensure adequate internal safeguards existed in its underwriting processes to prevent the abuses perpetrated by Gecko. The application for a stated income loan does not relieve U.O. of its obligations to verify the stated income, and this duty could have easily been discharged by U.O. with a simple phone call or confirmation contact from U.O.'s underwriters to Plaintiffs. U.O. and Decepticon failed to act as reasonably prudent mortgage lenders and home builders in the same or similar circumstances should have acted.

9. U.O.'s misconduct was outrageous, willful, malicious, and conducted with such reckless disregard for Plaintiffs' well-being that it violates any and all any boundaries of decency in a civilized society. Plaintiffs seek exemplary and punitive damages to deter U.O. from repeating similar conduct in the future.

The complaint seeks to rescind the home purchase agreement and mortgage loan, restitution and disgorgement, liquidated and exemplary damages and compensation for mental anguish. [For a similar scenario, see Jonathan Karp and Miriam Jordan, *How the Subprime Mess Hit Poor Immigrant Groups*, Wall Street Journal, Dec. 6, 2007, at A1.]

Finally, even a cursory discussion of the current crisis would not be complete without acknowledging that, as one analyst points out, affordability issues alone do not explain the sudden surge in delinquencies and defaults [see US Residential Mortgage Special Report: *The Impact of Poor Underwriting Practices and Fraud in Subprime [Residential Mortgage Backed Securities] Performance*, Fitch Ratings-Structured Finance, Nov. 28, 2007 (the Fitch Report)]. The Fitch Report explains that rapidly increasing home prices allowed borrowers to resell or refinance properties quickly, masking the poor underwriting and fraud associated with the increases in affordability products such as stated income and no money down loans, all of which was exposed when the residential home market plummeted across the U.S. [the Fitch Report]. However, these factors alone did not explain the spike in borrowers underperformance, suggesting that factors such as fraud might be playing a significant role. While several other factors certainly contribute to the current climate, Fitch's audit of a sample of underperforming loan files disclosed the following prevalent characteristics:

- . Fraud based on occupancy misrepresentation (i.e., the borrowers stated intent was to occupy the property but never actually did so, likely in the interest of flipping the property);

- . Failure to flag or follow up on suspicious items on credit reports, particularly very high FICO scores the prospective borrowers obtained by being listed as authorized users on someone else's credit accounts; and

- . Failure to evaluate stated income loans for reasonability (i.e., the implausibility of the represented income in light of the borrowers work history, current assets and lifestyle).

[The Fitch Report.] These chickens can come home to roost at many levels of the mortgage-backed securities food chain, beginning with the defaulting borrower and resonating all the way up and back down the distribution channel based on the representations and warranties provided as the individual loans or aggregations of the loans moved through the stream of commerce. As the Fitch Report explains:

In RMBS [residential mortgage-backed securitization] transactions, reps and warranties are given by the originator, issuer or other appropriate party, covering several areas, including the legality of the mortgage loan, the lien status, and condition of the property. In addition, some of the reps and warranties address compliance with the originators underwriting standards and a smaller number of transactions have specific reps and warranties for fraud. However, there are several challenges to relying on reps and warranties to remove loans from RMBS deals for a breach due to underwriting or misrepresentation/fraud. For many subprime loans, the program guidelines allowed the originator to base qualification on features such as stated income. Assuming that the originators underwriting standards did not require the verification through another means, or that a reasonableness test be conducted, the failure to perform these steps would not be an exception to their underwriting standards. Therefore, if the borrower or broker misrepresented the actual income, it is fraud on their part, but is it a breach of the reps and warranties? The same question would apply to borrowers who have artificially enhanced their FICO [i.e., credit score].

[The Fitch Report at pp. 8-9.] Although most of the agreements that package and pool these risks provide recourse to the extent any party in the chain knew or became aware of a fraudulent submission or

misrepresentation by requiring the transaction partner to repurchase the offending loan(s), the issue of whether such breaches on individual loans support rescission as to the entire pool (requiring the complaining entity to give back any profitable loans as well) or merely support a claim for damages remains a murky issue. This lack of clarity will contribute to the wave of litigation likely to occur at the borrower/originator/lender level.

General Principles Regarding The Scope Of Coverage Under Commercial General Liability Policies

The Insuring Agreement in a typical commercial general liability primary policy (CGL) n1 reads as follows:

We will pay those sums that the insured becomes legally obligated to pay as damages because of bodily injury, property damage, personal injury or advertising injury arising out of an occurrence. We will have the right and duty to defend any suit seeking those damages. We may at our discretion investigate any occurrence and settle any claim or suit that may result.

A fundamental component of the primary CGL policy is the insurers obligation to assume and pay for the insureds defense against claims for which there is any potentiality for coverage. Courts in most states employ the same basic approach to evaluate whether the asserted claims create the potential for coverage:

In determining whether an insurer owes its insured a duty to defend, a court looks to the allegations in the underlying complaint against the insured and compares those allegations to the relevant coverage provisions of the insurance policy ... If the facts alleged in the underlying complaint fall within or potentially fall within the coverage of the policy, the insurer's duty to defend is triggered. [citation omitted] Policies are liberally construed in favor of the insured, and any ambiguities or conflicts are resolved in favor of coverage [*Canadian Radium & Uranium Corp. v. Indemnity Ins. Co.*, 411 Ill. 325, 332 (Ill. 1952)].

[See, e.g., *Employers Ins. v. Ehlco Liquidating Trust*, 186 Ill. 2d 127, 150 (1999) (applying Illinois law); see also *Res. Bankshares Corp. v. St. Paul Mercury Ins. Co.*, 407 F.3d 631, 636 (4th Cir. 2005) (under Virginia law, an insurers obligation to defend an action depends on comparison of the policy language with the underlying complaint to determine whether the claims alleged therein are covered by the policy).]

In contrast, in order for the insurer to be liable under the policy to indemnify its insured in respect of an underlying claim that has resulted in a judgment or a settlement against it, the insured must prove that the facts developed and claims adjudicated following the filing of the complaint actually come within the scope of coverage under the policy and are not subject to any policy exclusions [see, e.g., *Crum & Forster Corp. v. Resolution Trust Corp.*, 156 Ill. 2d 384, 397-398 (1993) (the duty to indemnify arises only in circumstances of actual coverage; if the insurance policy does not cover what is alleged in the claim, the insurer will not have a duty to indemnify based on that claim)]. This framework requires the court to measure the language of the policy against the outcome of the underlying proceeding, without regard to whether the potential for coverage existed at the time the claimant originally sought relief against the insured [see, e.g., *Crum & Forster Corp. v. Resolution Trust Corp.*, 156 Ill. 2d 384, 397-398 (1993)]. In other words, unless the insured is found legally liable for conduct for which the policy actually provides coverage, the insurer has no duty to indemnify the insured even if the potential for coverage required it to defend the claims.

At the risk of oversimplifying the issue, the coverage available under the modern CGL form anticipates application to loss arising from the breach of a duty imposed by law independent of any duties the parties may owe each other pursuant to a contractual relationship in other words, tort liabilities [see generally *Data Specialties v. Transcontinental Ins. Co.*, 125 F.3d 909, 912-913 (5th Cir. 1997)]. The policy presupposes that no contractual relationship exists between its policyholder and any future claimant and therefore expressly excludes its application to liabilities assumed under a

contract (with limited exception). Specifically, policy exclusion b. states that the policy does not apply to bodily injury or property damage for which the insured is obligated to pay damages by reason of the assumption of liability under a contract or agreement.

Similarly, the policy will expressly exclude coverage for Bodily injury, property damage, personal injury or advertising injury due to the rendering or failure to render any professional service, as the relationship between the prospective claimant and the policyholder will be governed by statute, contractual or quasi-contractual agreements and expert standards of care [see, e.g., *Natural Gas Pipeline Co. v. Odom Offshore Surveys, Inc.*, 697 F. Supp. 921, 926 (E.D. La. 1988)]. As the second and third installments of this commentary will address, however, the fact that the modern CGL policy does not respond to losses of this nature is best explained by the fact that economic losses caused by failure to comply with statutorily mandated practices and procedures in the selling and servicing of a residential mortgage loan may well be subject to coverage under errors & omissions/professional liability policies or directors and officers coverage in connection with alleged bad investment advice.

With these principles in mind, we measure the specific allegations of our fictionalized complaint above (Complaint) against the operative policy provisions. First, nothing in the Complaint indicates that there was any physical harm to any tangible property. The policy defines property damage as physical injury to tangible property, including all resulting loss of use of that property or loss of use of tangible property that is not physically injured. Similarly, the Complaint does not allege any loss of use of tangible property (i.e., property that is capable of being handled or touched). Hence, there is no physical injury alleged.

But what about metaphysical injury such as the loss of the value of the home to the borrower? Simply put, economic losses arising out of disappointed commercial expectations are not considered by courts to constitute damage to tangible property as the modern CGL form uses that term. [See, e.g., *Hartford Accident & Indem. Co. v. Case Foundation Co.*, 10 Ill. App. 3d 115, 123-124 (1973) (investments, anticipated profits and financial interests in business ventures are not tangible property).] Similarly, virtually every court that has addressed the issue has rejected the proposition that pure economic losses qualify for coverage as damage to or loss of use of tangible property [*Giddings v. Industrial Indemnity Co.*, 112 Cal. App. 3d 213, 216-217 (1980) (economic loss is not damage or injury to tangible property covered by a comprehensive general liability policy); *Travelers Ins. Cos. v. Penda Corp.*, 974 F.2d 823 (7th Cir. 1992) (damages for inadequate value or consequent loss of profits without any claim of bodily injury or damage to other property is not property damage under the CGL policy)].

Along similar lines, no matter how real the fear and anguish consumers and investors experience as a result of these dramatic changes of fortune may be, such circumstances do not, standing alone, qualify for coverage under the modern CGL policy form. If the underlying economic loss is not covered under the CGL policy (as discussed above), then any derivative claim for emotional distress arising out of that economic loss likewise is not recoverable [see, e.g., *Keating v. National Union Fire Ins. Co.*, 995 F.2d 154 (9th Cir. 1993) (policy covers losses resulting from accidental events which cause bodily injury or property damage, not the giving of professional or investment advice); *First Investors Corp. v. Liberty Mut. Ins. Co.*, 152 F.3d 162, 166-167 (2d Cir. 1998) (CGL insurer had no duty to defend against claim for emotional distress arising out of economic losses caused by securities fraud)].

How about bodily injury? Predictably, borrowers losing their homes suffer anxiety, headaches, nausea and the like. The policy defines bodily injury as bodily injury, sickness or disease sustained by a person, including death resulting from any of these at any time. Though not completely foreclosed as a theory under which coverage might attach, most courts interpret the phrase bodily injury to include only claims for physical injury and to exclude claims for non-physical or emotional harm that is not derivative of a precipitating physical event [Holmes' Appleman on Insurance 2d § 129.2[D][1]]. Moreover, although some courts might construe the policy to cover such claims, the policyholder may win the battle but lose the war upon consideration of whether the harm was the result of an accident or coverage is otherwise barred by an exclusion (addressed below).

Next up is personal injury, defined as means injury, other than bodily injury, arising out of one or more of the

following offenses:

- a. False arrest, detention or imprisonment;
- b. Malicious prosecution;
- c. The wrongful eviction from, wrongful entry into, or invasion of the right of private occupancy of a room, dwelling or premises that a person occupies, by or on behalf of its owner, landlord or lessor;
- d. Oral or written publication of material that slanders or libels a person or organization or disparages a persons or organizations goods, products or services; or
- e. Oral or written publication of material that violates a persons right of privacy.

Of these, only c and e have any potential to the allegations of the Complaint above, and that potential is defeated fairly easily. Much as the borrower may wish to characterize the process by which he or she is forcibly removed from the premises in which he or she lives, a default in payment under the mortgage eliminates the borrowers claim that the actions taken by the owner are wrongful. Similarly, the foreclosing entity is not likely to be liable for a publication that is not privileged (contractually or judicially) unless it acts well outside the scope of what is necessary to exercise its rights under the mortgage. Of the many things that lenders and their agents are being accused of doing wrong, this does not seem to be one of them.

This leaves advertising injury as the last potential avenue for recovery under the CGL policy based on the Complaint at issue here. The policy defines advertising injury to mean injury arising out of one or more of the following offenses:

- a. Oral or written publication of material that slanders or libels a person or organization or disparages a persons or organizations goods, products or services;
- b. Oral or written publication of material that violates a persons right of privacy;
- c. Misappropriation of advertising ideas or style of doing business; or
- d. Infringement of copyright, title or slogan.

Here, too, it appears that only the claim for violation of a persons right of privacy is implicated here. For the reasons discussed above, there is little ground to be gained here.

To the extent a court were to find that the allegations of the Complaint fell within the scope of one of these coverage types, the policyholder would then have to overcome issues regarding the non-accidental nature of the damages. The policy defines an occurrence as an accident, including continuous or repeated exposure to substantially the same general harmful conditions. The Complaint specifically alleges that Gecko, U.O. and Decepticon intentionally misrepresented the facts, willfully violated the Truth in Lending Act [15 U.S.C. § 1601 *et seq.*] and common law and otherwise acted toward plaintiffs in a manner that was malicious.

These allegations expose the policyholders to the defense that the Complaint does not allege an accident. With no accident, there is no occurrence and, therefore, no insurable event. A determination whether the policyholders conduct rises to the level of actual or inferred intent to cause harm likely will involve specific factual inquiries regarding the basis for the policyholders actions, and it would be foolhardy for policyholders to presume that insurers will not exploit the opportunity to make such inquiries in the appropriate cases [*see, e.g., Prime TV, LLC v. Travelers Ins. Co.*, 223 F. Supp. 2d 744 (M.D.N.C. 2002) (the intent component of the "occurrence" analysis requires a subjective inquiry); *Waste Management of Carolinas, Inc. v. Peerless Ins. Co.*, 315 N.C. 688, 696 (1986) ("Whether events are accidental' and constitute an occurrence' depends upon whether they were expected or intended from the point of view of the

insured.")]. Similarly, insurers may assert that such allegations trigger the exclusion for damages expected or intended from the standpoint of the insured. Although application of the expected/intended exclusion requires a slightly different analytical approach from the no accident defense (the latter prevents coverage from attaching in the first instance), discovery regarding its potential application would require the same or a similar inquiry into the policyholders motives.

These allegations also bring into play the standard policy exclusion for personal injury or advertising injury arising out of the willful violation of a penal statute or ordinance committed by or with the consent of the insured. The Complaint alleges that Geckos and U.O.s disclosures regarding material terms of the mortgage, including annual percentage rates and the balloon payment feature, did not conspicuously and clearly disclose the total cost of the credit provided under the mortgage as TILA requires.

The determination of the applicability of this exclusion will depend on whether courts construe the TILA to be a penal or remedial statute. For some purposes, at least, the Seventh Circuit Court of Appeals has treated TILA as a remedial statute [see *Smith v. No. 2 Galesburg Crown Finance Corp.*, 615 F.2d 407, 414-415 (7th Cir. 1980)]. Accordingly, if the coverage claim survives to this point, the exclusion for willful violation of a penal statute might not bar recovery.

Conclusion

Time will tell whether the current crisis in subprime lending is amenable to a short-term fix while the credit markets stabilize or whether the current plan merely postpones an ultimate day of reckoning. Regardless of whose projections carry the day, there will be no shortage of litigation along the way as the interests that suffer the most will seek recourse wherever they can find it. For the reasons set forth above, however, it is unlikely that CGL insurers will bear the brunt of this particular misfortune.

Return to Text

n1 . By typical CGL policy, I refer to the occurrence-based policy form introduced by the Insurance Services Office in 1986, and subsequently amended, to replace the prior policy form denominated as the comprehensive general liability policy form (also abbreviated at the time as CGL coverage). As pertinent here, the more recent ISO CGL form includes broad coverage for bodily injury and property damage liability (Coverage A) and personal injury and advertising injury liability (Coverage B) subject to reductions in scope by endorsement. See Rupp's Insurance & Risk Management Glossary, <http://insurance.cch.com/RUPPS/commercial-general-liability-policy.htm>.

Rabine on Gutierrez v. Temp Star Services

2008 Emerging Issues 1154

Rabine on Gutierrez v. Temp Star Services

By Merle C. Rabine

November 27, 2007

SUMMARY: Recent interest in California Workers' Compensation Appeals Board panel decisions has been fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet. This Emerging Issues Analysis examines a recent panel decision, *Gutierrez v. Temp Star Services*, 2007 Cal. Wrk. Comp. P.D. LEXIS 50, in which the panel addressed the ongoing problem of determining liability.

ARTICLE: Despite recent interest in California Workers' Compensation Appeals Board panel decisions, fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet, most panel decisions are of little interest to anyone other than the parties whose case is being decided. When the Appeals Board wants to announce a position on a substantive or procedural issue, it does so by issuing an en banc decision or significant panel decision [see http://www.dir.ca.gov/WCAB/wcab_dars.htm]. Panel decisions, however, tend to be case-specific with the result determined by the facts of the case. Moreover, while Appeals Board panel decisions are citeable authority, particularly on issues of contemporaneous administrative construction of statutory language [see *Griffin v. WCAB*, 209 Cal. App. 3d 1260, 1264 (1989), fn 2, 54 Cal. Comp. Cas 145], they are not binding precedent, as are en banc decisions, on all other Appeals Board panels and workers' compensation judges [see *Gee v. Workers' Comp. Appeals Bd.*, 96 Cal. App. 4th 1418, 1425 (2002) fn. 6, 67 Cal. Comp. Cas 236].

This commentary examines a recent attempt of an insurer of a special employer to establish that it did not intend to cover employees of a temporary staffing agency (general employer) now covered by the California Insurance Guarantee Association (CIGA). Because the insurer placed in evidence only its policy, which did not explicitly exclude general employees, it failed to meet its burden of proof.

Special employers workers compensation insurance policy is not sufficient to prove that the special employer did not intend to cover general employees as against CIGA without other evidence: *Gutierrez v. Temp Star Services*, 2007 Cal. Wrk. Comp. P.D. LEXIS 50 (Appeals Board panel decision). *Gutierrez v. Temp Star Services*, 2007 Cal. Wrk. Comp. P.D. LEXIS 50 (Appeals Board panel decision) is the latest episode in the ongoing soap opera, CIGA and the General and Special Employers. It has been going on for five years, and the end is not in sight.

When the workers compensation insurance industry started to collapse at the beginning of this century, it turned out that the temporary staffing industry in California was insured by a number of entities that were disappearing into liquidation, with some liabilities assumed by CIGA. The claims of one such temporary staffing agency, Remedy Temp, and its special employers were consolidated at the trial level in 2002 for determination of whether the claims of Remedy Temp employees were covered claims under Calif. Insurance Code § 1063(c)(1) or whether insurance of the special employers was other insurance under Calif. Insurance Code § 1063(c)(9).

On October 31, 2002, Workers' Compensation Judge Robert Hjelle decided that the insurance of the special employers was other insurance, and dismissed CIGA as a party defendant. The Appeals Board affirmed in *Miceli v. Jacuzzi, Inc.*, 68 Cal. Comp. Cases 434 (2003) (Appeals Board en banc opinion). The Court of Appeal also affirmed. However, after rehearing, the Court of Appeal reversed in *General Casualty Insurance v. Workers Comp. Appeals Bd.*, 70 Cal. Comp. Cases 953 (2005) (subsequently ordered depublished by the Supreme Court). After reviewing the policy of Jacuzzi and its insurer, as well as submissions from the Department of Insurance and the Workers Compensation Insurance Rating Bureau, the court determined that neither Jacuzzi nor its carrier intended to cover special employees like Miceli. Therefore, the court held that Jacuzzi's insurance was not other insurance and that CIGA was liable for its covered claim.

On remand, the Appeals Board rescinded the consolidation order and its associated stay of proceedings. The Board stated: Because the consolidation and stay order is rescinded, each case previously covered by that order must now be individually addressed on its own particular facts. With regard to the application of *Insurance Code section 1063.1(c)(9)*, individual consideration of each case may require consideration of the particular insurance policies and endorsements in effect in each case. If it is found in a case that other insurance within the meaning of *Insurance Code section 1063.1(c)(9)* is available to an applicant, an order dismissing CIGA may be appropriate. If it is found that other insurance within the meaning of *Insurance Code section 1063.1(c)(9)* is not available to an applicant, an order dismissing CIGA would not be appropriate, but an order dismissing the general employer may be appropriate. Each case must be addressed on its own facts (*Miceli v. Jacuzzi, Inc.*, 71 Cal. Comp. Cases 599, 605 (2006) (Appeals Board en banc opinion)).

This brings us to Mr. Gutierrez, who suffered an industrial injury on June 10, 1999, in the course of performing duties for special employer Caitac, insured by Tokio Marine, while on the payroll of general employer Temp Star, then insured by Superior National Insurance Co., now liquidated and covered by CIGA. After trial, the WCJ determined that Tokio Marine's insurance policy indicates no intent to extend insurance coverage to special employees such as this applicant.

The Appeals Board panel reversed. The panel stated: Tokio argues in favor of the WCJs view that the intent of the parties is sufficiently evidenced by the provisions in the insurance policy regarding the payment of premiums. However, there is no evidence in the record that Tokio did not receive a premium to provide workers compensation insurance to special employees. Nor is there evidence that Temp Star and Caitac agreed that Temp Star would be solely responsible for providing workers compensation coverage for special employees or that workers compensation coverage for special employees would not be available through Tokio. The policy language regarding payment of premiums is not dispositive regarding the intentions of the parties, and we do not find that such intent can be persuasively inferred from that language *in the absence of other evidence* (emphasis added).

Thus, despite the Court of Appeals decision in *General Casualty (Miceli)*, the insurers of special employers will not escape liability when the general employer is now covered by CIGA on the basis of the insurance policy alone. The problem for the insurers of special employers is that, in 1999, it was very unlikely that anybody was thinking about the consequences of liquidation of insurers of general employers, since the wave of liquidations did not start until 2000. If the insurers of special employers are serious about escaping liability in these cases, they will have to present other evidence in addition to their policies, unless the policies include specific exclusions of special employees. That other evidence might include internal memoranda of special employers about what they did or did not wish to exclude, contracts between the general and special employers, and/or testimony of the participants about what they intended.

Otherwise, this panel decision seems to make it clear that if the insurer of the special employer does not present a serious case, it can expect to lose. CIGA wins again.

For further discussion of "other insurance" and CIGA, see Hanna, *California Law of Employee Injuries and Workers' Compensation* §§ 2.80, 2.84, Herlick, *California Workers' Compensation Law* § 3.34.

For general discussion of lent employees, see *Larson's Workers' Compensation Law* § 67.01 et seq.

Sumwalt on the Physician-Patient Privilege in Workers Compensation Cases

2008 Emerging Issues 1062

Sumwalt on the Physician-Patient Privilege in Workers Compensation Cases

By Vernon Sumwalt

November 20, 2007

SUMMARY: Popularized by the medical malpractice case of *Crist v. Moffatt*, 326 N.C. 326, 389 S.E.2d 41 (1990), the physician-patient privilege has become one of the most litigated evidentiary issues in workers compensation cases since the North Carolina Court of Appeals endorsed Crist's application in *Salaam v. North Carolina Department of Transportation*, 122 N.C. App. 83, 468 S.E.2d 536 (1996).

ARTICLE: For years, many appellate decisions in North Carolina have looked at the propriety of communications between parties and medical providers during litigation. Popularized by the medical malpractice case of *Crist v. Moffatt*, 326 N.C. 326, 389 S.E.2d 41 (1990), the physician-patient privilege has become one of the most litigated evidentiary issues in workers' compensation cases since the North Carolina Court of Appeals endorsed *Crist's* application in *Salaam v. North Carolina Department of Transportation*, 122 N.C. App. 83, 468 S.E.2d 536 (1996). This controversy led to the enactment of N.C. Gen. Stat. § 97-25.6 in late 2005, which did not so much change the law as it provided a more detailed map for previous routes to medical information. Still, the last two years of litigation has further developed--and clarified--this issue in cases arising under the North Carolina Workers' Compensation Act.

This Emerging Issues Analysis lays out the basic theory of the physician-patient privilege and provides advice on how to avoid its pitfalls in practice.

Introducing the physician-patient privilege. Most attorneys call this controversy the *Salaam* issue, although this casual reference mischaracterizes the issue as one that originates judicially rather than statutorily.

At common law no privilege existed as to communications between physician and patient. The physician, when called upon to testify, had no right to decline or refuse to disclose information on the ground that such information had been communicated to him confidentially in the course of his attendance upon or treatment of his patient in a professional capacity. *The public interest in the disclosure of all facts relevant to a litigated issue was deemed to be superior to the policy of recognizing, for the benefit of the patient, the inviolability of confidential communications.* Hence, statutes have been enacted in practically every jurisdiction making communications between physician and

patient privileged from compulsory disclosure. . . . In some jurisdictions, the privilege is absolute, and in others qualified.

State v. Martin, 182 N.C. 846, 849, 109 S.E. 74, 76 (1921). The case of *Shelton v. Morehead Memorial Hospital* noted that the physician-patient privilege is qualified in North Carolina. *See* 318 N.C. 76, 86, 347 S.E.2d 824, 831 (1986). As a general rule,

[n]o person, duly authorized to practice physic or surgery, shall be required to disclose any information which he may have acquired in attending a patient in a professional character, and which information was necessary to enable him to prescribe for such patient as a physician, or to do any act for him as surgeon, and no such information shall be considered public records under G.S. 132-1.

N.C. Gen. Stat. § 8-53. Because they are medical doctors, psychiatrists operate under section 8-53 when it comes to communicating with their patients, *e.g.*, *Flora v. Hamilton*, 81 F.R.D. 576, 578-579 (M.D.N.C. 1978); *Greene v. Greene*, 15 N.C. App. 314, 319, 190 S.E.2d 258, 261 (1972), while psychologists operate under a similar privilege codified at N.C. Gen. Stat. § 8-53.3.

The decision by the Supreme Court of North Carolina in *Martin* articulated the policy behind the statutory physician-patient privilege. *See* 182 N.C. at 849, 109 S.E.2d at 76. This policy aims to preserve the patients' privacy and to encourage open discussion between doctors and their patients about important medical concerns. When it comes to litigation, an attorneys' duty to maintain this confidential information is likewise sacrosanct under the Rules of Professional Conduct. *See* 27 N.C. Admin. Code 2, Rule 1.06(a) and (b). Comments 2 and 3 to Rule 1.06 of the Rules of Professional Conduct explain that a

fundamental principle in the client-lawyer relationship is that, in the absence of the client's informed consent, the lawyer must not reveal information acquired during the representation. . . . This contributes to the trust that is the hallmark of the client-lawyer relationship. The client is thereby encouraged to seek legal assistance and to communicate fully and frankly with the lawyer even as to embarrassing or legally damaging subject matter. The lawyer needs this information to represent the client effectively and, if necessary, to advise the client to refrain from wrongful conduct. Almost without exception, clients come to lawyers in order to determine their rights and what is, in the complex of laws and regulations, deemed to be legal and correct. Based upon experience, lawyers know that almost all clients follow the advice given, and the law is upheld.

. . . .

The rule of client-lawyer confidentiality applies in situations other than those where evidence is sought from the lawyer through compulsion of law. The confidentiality rule, for example, applies not only to matters communicated in confidence by the client but also to all information acquired during the representation, whatever its source. A lawyer may not disclose such information except as authorized or required by the Rules of Professional Conduct or other law.

(Emphasis added). Apart from the attorneys' interest in preserving confidentiality and the patients' interest in privacy, N.C. Gen. Stat. § 8-53 negotiates several other competing interests as well. Employers and carriers must have adequate access to medical information in order to investigate claims competently. Medical providers have an interest in avoiding collateral and unnecessary headaches involving the unauthorized disclosure of medical information. *Cf.*, *e.g.*, *Jones v. Asheville Radiological Group, P.A.*, 129 N.C. App. 449, 461, 500 S.E.2d 740, 747 (1998) (J. Greene, concurring in part and dissenting in part), *remanded for further proceedings*, 350 N.C. 654, 517 S.E.2d 380 (1999), *on remand*, 134 N.C. App. 520, 518 S.E.2d 528 (1999) (J. Walker, dissenting), *rev'd and dissent endorsed*, 351 N.C. 348, 524 S.E.2d 804 (2000) (per curiam) (This Court has recognized a claim of medical malpractice based on the authorized disclosure of confidential information.). And, finally, the Industrial Commission has an interest in facilitating the systemic efficiency of the workers' compensation laws in North Carolina. These competing interests are the catalyst behind the volume of workers' compensation cases in North Carolina involving the physician-patient privilege in recent

years. See, e.g., *Perkins v. U.S. Airways, Inc.*, 177 N.C. App. 205, 212, 628 S.E.2d 402, 406 (2006); *Mayfield v. Parker-Hannifin*, 174 N.C. App. 386, 388, 621 S.E.2d 243, 246 (2005); *Terry v. PPG Indus.*, 156 N.C. App. 512, 515, 577 S.E.2d 326, 330 (2003); *Reininger v. Prestige Fabricators, Inc.*, 136 N.C. App. 255, 261, 523 S.E.2d 720, 724 (1999); *Jenkins v. Public Serv. Co. of N.C.*, 134 N.C. App. 405, 518 S.E.2d 6 (1999) (J. Wynn, dissenting), *rev'd and dissent endorsed*, 351 N.C. 341, 524 S.E.2d 805 (2000) (per curiam); *Porter v. Fieldcrest Cannon, Inc.*, 133 N.C. App. 23, 30, 514 S.E.2d 517, 523 (1999); *Pittman v. International Paper Co.*, 132 N.C. App. 151, 155, 510 S.E.2d 705, 708 (1999); *Evans v. Young-Hinkle Corp.*, 123 N.C. App. 693, 695, 474 S.E.2d 152, 153 (1996).

Exceptions to the physician-patient privilege. Oddly enough, the parties in most of this litigation failed to take advantage of the exceptions to the physician-patient privilege, which include the following:

1. Consent of the patient, see N.C. Gen. Stat. § 8-53;

2. Waiver by the patient, see *Capps v. Lynch*, 253 N.C. 18, 116 S.E.2d 137 (1960), or the patient's attorney, see *Pittman*, 132 N.C. App. at 155, 510 S.E.2d at 708, which may be express or implied, see *Adams v. Lovette*, 105 N.C. App. 23, 28-29, 411 S.E.2d 620, 624 (1991); or

3. An Industrial Commission or court order that is necessary to a proper administration of justice and made pursuant to law, N.C. Gen. Stat. § 8-53, such as medical records for treatment of injuries that are either compensable or alleged to be compensable under N.C. Gen. Stat. § 97-25.6 (formerly N.C. Gen. Stat. § 97-25), for independent medical evaluations requested by employers under N.C. Gen. Stat. § 97-27(a), or for independent medical evaluations requested by employees under N.C. Gen. Stat. § 97-27(b).

Plaintiffs' counsel rarely had problems satisfying these exceptions and normally already had in their possession written authorizations from their clients. In contrast, defense counsel and their clients never satisfied these exceptions, not because they tried and failed, but because they failed to try. This raised significant ethical concerns in light of RPC 224, entitled *Communication with Physicians Providing Medical Treatment or Evaluations in Workers' Compensation Cases*, which is a North Carolina State Bar ethics opinion published on October 23, 1997, that made any violation of the physician-patient privilege an automatic violation of professional standards of conduct as well. In contrast to plaintiffs' attorneys, the employers, their insurance carriers, and their attorneys had not made any efforts to satisfy the exceptions to N.C. Gen. Stat. § 8-53 in the published decisions dealing with the physician-patient privilege, even though the exceptions had been available under the published cases and under the plain language of the statute for years.

The consequence was a growing--and unfounded--frustration from employers and insurance carriers. In 2005, the legislature enacted a placebo by passing N.C. Gen. Stat. § 97-25.6, which was little more than a detailed list of options that had always been available under N.C. Gen. Stat. § 8-53:

[C]ommunication with a medical provider may be authorized by (i) a valid written authorization voluntarily given and signed by the employee, (ii) by agreement of the parties, or (iii) by order of the Commission issued upon a showing that the information sought is necessary for the administration of the employee's claim and is not otherwise reasonably obtainable under this section or through other provisions for discovery authorized by the Commission's rules. In adopting rules or authorizing employer communications with medical providers, the Commission shall protect the employee's right to a confidential physician-patient relationship while facilitating the release of information necessary to the administration of the employee's claim.

Upon motion by an employee or provider from whom medical records or reports are sought or upon its own motion, for good cause shown, the Commission may make any order which justice requires to protect an employee or other person from unreasonable annoyance, embarrassment, oppression, or undue burden of expense.

The new statute also allows access to medical records for treatment restricted to a current injury or current condition for which an employee is claiming compensation from that employer and requires the employee to produce such records only when the request is in writing and the records are in the possession of the employee. . . N.C. Gen.

Stat. § 97-25.6 is similar to the scope to which Industrial Commission Rule 607 had previously allowed access to this information.

Practice tip: In worst-case scenarios, such as when plaintiff's counsel will not consent to a disclosure of necessary medical information or cannot because of the desires of the employee, employers and carriers can always get an order by the Industrial Commission allowing access to necessary medical information. However, the party seeking the order must show that it has exhausted less onerous options and that the order is the last resort.

Like other exceptions to the physician-patient privilege, the exceptions in N.C. Gen. Stat. § 97-25.6 are strictly construed and limited to medical records or reports only. *Cf. Sims v. Charlotte Liberty Mutual Ins. Co.*, 257 N.C. 32, 37, 125 S.E.2d 326, 330 (1962). Nevertheless, the new statute also allows access to medical information (i.e., other than records or reports) through use of a medical questionnaire promulgated by the Industrial Commission:

An employer or insurer paying compensation for an admitted claim or paying without prejudice pursuant to G.S. 97-18(d) may communicate with an employee's medical provider in writing, limited to specific questions promulgated by the Commission, to determine, among other information, the diagnosis for the employee's condition, the reasonable and necessary treatment, the anticipated time that the employee will be out of work, the relationship, if any, of the employee's condition to the employment, the restrictions from the condition, the kind of work for which the employee may be eligible, the anticipated time the employee will be restricted, and the permanent impairment, if any, as a result of the condition.

N.C. Gen. Stat. § 97-25.6. Any modification of this medical questionnaire or additional information supplementing its submission to the medical provider would violate the strict construction given to this exception and, thus, fall back within the general prohibition against disclosure under N.C. Gen. Stat. § 8-53. This conduct by an attorney, or an attorney's ratification of such conduct by a non-attorney (*see* 27 N.C. Admin. Code 2, Rule 5.3(c)), would also violate the professional standards set forth in RPC 224.

Practice tip: As a start, use the Industrial Commission's medical questionnaire when there is a medical question requiring investigation. If this is unsuccessful, negotiations with the employee's counsel could lay out a discovery plan under which the parties can agree on how to obtain the necessary medical information from the doctors, which might include depositions. In cases involving unrepresented employees, however, there is a risk in such negotiations because a waiver of the physician-patient privilege carries with it legal consequences from an evidentiary standpoint, and the request for such a waiver could constitute legal advice. Obtaining an Industrial Commission order is still the safest method of getting access to medical information.

Separating the elements of consent and the prohibition against *ex parte* communications. Perhaps the most heated issue dealing with the physician-patient privilege over the past few years deals with the two elements of (1) the patient's consent, and (2) the *ex parte* character of the communication between the doctor and employer or carrier. Both *Crist* and *Salaam* dealt with communications that were both non-consensual and *ex parte*. This left open the question of whether parties could get around the privilege by satisfying only one of the two elements. Needless to say, insurance carriers and employers took the position that they only had to copy the employee (or the employee's attorney) on correspondence to medical providers to circumvent the physician-patient privilege.

The appellate courts disagreed. In *Mayfield v. Parker Hannifin*, the North Carolina Court of Appeals held directly that the privilege prohibits disclosure unless the communication with the medical provider takes place on both (1) a consensual basis, and (2) a non-*ex parte* basis. *See* 174 N.C. App. at 388, 621 S.E.2d at 246; *cf. also Crist*, 326 N.C. at 332-334, 389 S.E.2d at 45-46. What this means is that there are two questions in the analysis of whether disclosure of medical information is allowed. First, is there an exception to the physician-patient privilege that applies? And, second, has the communicating party copied the other side simultaneously and by the same means of transmission as the correspondence to the physician? Both of these questions have to be answered in the positive before disclosure is

allowed.

Practice tip: Always copy the opposing party with communications with treating doctors. A failure to do so will frustrate the admissibility of medical information even if you had the party's consent to communicate. In addition, make every effort to get the employee's consent through appropriate negotiations and, if this fails, the previously mentioned option of getting an Industrial Commission order is always available.

The ironic thing about *Mayfield* is that the North Carolina legislature had been telling parties of this duality for years. N.C. Gen. Stat. § 97-25 had always provided an exception to the provisions of G.S. 8-53 . . . and the prohibition against ex parte communications at common law, at least until the legislature transplanted this language over to N.C. Gen. Stat. § 97-25.6 in 2005. This language indicates that the origin of the physician-patient privilege is statutory, while the prohibition against *ex parte* communications comes from common law. Therefore, the two elements are independent and distinct from one another, just as they have been for years, and both must be satisfied before disclosure is allowed.

The risk of not complying with the proper methods of getting medical information--that is, by satisfying one of the exceptions to the physician-patient privilege through appropriate means and formal discovery--has legal consequences, too. At its heart, the privilege is an evidentiary creature, meaning that a party may get access to medical information early on, only to have it kept out of evidence at a later hearing because the means of getting it were improper. *E.g.*, *Silvers v. Mastercraft Fabrics, LLC*, 2006 N.C. App. LEXIS 1162, at **15-23. This is the whole point behind *Crist* and *Salaam*: When it comes to getting medical information from an opposing party's physicians, everyone must play by the rules.

For general discussion of physician-patient privilege in workers' compensation cases, see *Larson's Workers' Compensation Law* § 127.11[3][c].

Robinson on Recent Workers' Comp. Cases Involving Retaliatory Discharge Claims

2008 Emerging Issues 951

Robinson on Recent Workers' Comp. Cases Involving Retaliatory Discharge Claims

By Thomas A. Robinson

November 15, 2007

SUMMARY: Should the retaliatory discharge exception be extended to situations in which the injured worker is not discharged, but is only demoted in retaliation for filing a claim? In the Emerging Issues Analysis, Thomas Robinson analyzes two recent decisions- *Trosper v. Bag 'N Save* and *Sims v. Ashley Furniture Industries* -- both of which offer interesting twists on retaliatory discharge claims.

ARTICLE: Anyone who thinks that workers' compensation law deals primarily with broken bones, low back injuries, and computations of average weekly wages has only to look at recent decisions from around the country to see that the issues examined within the "comp world" are as interesting and intricate as in most any other area of the law. This is particularly true where issues within the comp world intersect with those in tort law. Two recent decisions one from Texas, the other from Florida offer an interesting twist on medical malpractice claims, with the claimed injury in each case **not** being caused by any form of improper medical treatment, but rather by negligent or careless handling of paperwork associated with the worker's condition.

Texas Physician Found Liable for Negligent "Administration" of Paperwork Associated With Workers' Compensation Claim. In what appears to be a case of first impression, not only in Texas, but within the entire workers' compensation arena, a Texas Court of Appeals (Second District) has held a physician liable for negligent "administration" of paperwork associated with a patient's workers' compensation claim. In *Lowe v. Hernandez*, 2007 Tex. App. LEXIS 4507 (Tex. Ct. App. June 7, 2007), the court affirmed an order of a state trial court that entered judgment on a jury verdict in favor of a patient who sued her treating physician to recover economic losses incurred when the physician communicated to the patient's employer an incorrect assessment of the patient's physical limitations following a work-related injury and, based upon the physician's (incorrect) assessment, the employer terminated the patient's employment because it perceived the worker would never be able to perform the essential functions of the job.

In this unusual twist on the usual medical malpractice case, the plaintiff/patient did not contend her treatment had been negligently performed, but rather that the physician's administration of the medical reports and other documentation associated with her workers' compensation claim had been careless and inadequate and that the negligent

administration had been the proximate cause of her economic damage.

Hernandez was a long-term employee of a retail fabric store, rising over the years from part-time salesperson to store manager. One of the functions of her job was to maintain the ability to lift, control, and carry heavy merchandise weighing up to 50 pounds. As a routine part of her duties, she visited customer's homes for the purpose of calculating the required yardage for various decorating projects. During one such visit in 2001, she fell and broke her wrist.

She came under the care of Dr. Lowe, a board-certified orthopedic surgeon specializing in hand and lower arm procedures. Three days after the fall, Hernandez underwent surgery to realign the broken bone and she subsequently followed a rehabilitation regime designed to return her to work. Several months after the surgery, Hernandez asked Dr. Lowe if she could return to work, even on an accommodated basis, and Dr. Lowe agreed she could return as long as she did not use her injured arm. The employer allowed Hernandez to return to work with the limitations. Other employees assisted whenever heavy bolts of cloth needed to be lifted. Sometime later, Dr. Lowe modified his orders, indicating she could work with her injured hand and arm, but that she should not lift anything weighing more than five pounds.

Seven months after her injury and ensuing surgery, Hernandez underwent a functional capacity examination (FCE) to determine her rehabilitation progress. The FCE determined that Hernandez could sometimes lift up to 50 pounds and Hernandez returned to work. When Dr. Lowe completed the final paperwork regarding Hernandez' condition, however, he failed to consider the FCE, noting instead that she should not lift more than five pounds and that her condition had reached MMI. Based upon that medical report, the employer terminated Hernandez because she could not perform the primary functions of the job. Hernandez protested, indicating that she could lift 50 pounds, but to no avail. She confronted Dr. Lowe, who initially indicated the error was only clerical in nature, and she received an updated opinion showing her ability to lift up to 50 pounds, but by this time the job had been given to someone else. She subsequently found employment, but at a much reduced wage. She filed her civil action against Dr. Lowe, alleging that his malfeasance had cost her the difference in pay between the two jobs.

At trial, Dr. Lowe continued that expert testimony was required to show the connection between Hernandez' loss of the job and the five-pound lifting restriction. The trial court disagreed, noting that this was not a case in which the alleged negligence was in the treatment of Hernandez' condition, but rather in the handling of administrative duties. Lay testimony was completely adequate to prove the causal connection between Hernandez' termination and the alleged negligent handling of the paperwork.

Hernandez appears to be the first reported case in which an injured employee has sued his or her physician for negligent administration related to a workers' compensation claim. Where the medical care provider is not a treating physician, but merely an expert called in to render an opinion as to the claimant's condition, the medical expert has no similar duty with regard to the injured worker.

For example, in an earlier case from Arizona, *Hafner v. Beck*, 916 P.2d 1105 (Ariz. Ct. App. 1996), a psychologist hired by the workers' compensation carrier to provide an independent medical examination and who allegedly reported incorrect information to the carrier which resulted in a termination of benefits and therapy was, nevertheless, not liable to the claimant for the erroneous report; no doctor/patient relationship existed between the two and the appellate court indicated that the psychologist's duty was owed only to the carrier.

For further discussion related to the workers' compensation issues related to medical malpractice, see generally *Larson's Workers' Compensation Law* § 112.02[1] et seq.

Florida Nurse May Sue Employer in Tort for Mental Injuries Associated With Laboratory's Improper Release of HIV Test Results. In another recent case involving a medical malpractice tort action associated with a workers' compensation claim, the Florida Supreme Court, in a deeply divided per curiam decision (*Florida Dept. of Corrections v. Abril*, 2007 Fla. LEXIS 1902 (Oct. 18, 2007)), determined that an entity that negligently and unlawfully violates an employee's right of confidentiality and privacy in disclosing the results of HIV testing associated with a

work-related incident may be held responsible for the mental anguish and other psychological injuries associated with the breach of privacy.

Abril, a licensed practical nurse with the Florida Department of Corrections (the employer), gave unprotected mouth-to-mouth resuscitation to an inmate who was subsequently determined to be infected with hepatitis C. At that time it was not known whether the inmate might also be infected with HIV. Abril unsuccessfully sought testing for hepatitis and HIV through the employer's workers' compensation carrier, which contended that the resuscitation did not expose Abril to the risk of infection.

Subsequently, the employer's chief medical officer submitted a blood sample from Abril to a laboratory under contract with the state to provide clinical laboratory services for inmates for HIV testing. In spite of assurances from the lab that the results would only be sent to a "confidentially-secured" fax machine in the employer's medical office, the lab faxed the test results which indicated that Abril was positive for HIV to an unsecured fax machine in the employer's business office and to another fax machine in the employer's Tallahassee health services office.

Incidentally, there was some evidence that the test results were sent in response to a request for the information from another employee who was concerned that the use of the lab for the testing of Abril's blood might not have been authorized. It was later determined, through testing paid for by the employer's workers' compensation carrier, that the lab's HIV test on Abril had produced a false positive and that Abril had not in fact contracted HIV.

Abril and her husband filed a civil action against the lab and also against the employer, contending that both plaintiffs had suffered mental anguish and emotional distress arising from the lab's negligent failure to ensure the confidentiality and privacy of the HIV test results and the subsequent negligence of both the lab and the employer in causing those test results to be improperly disseminated to others.

Note that, as was the case in *Hernandez*, discussed above, Abril and her husband did not contend that the lab had been negligent in its testing procedures; rather, the plaintiffs claimed the lab had been negligent in broadcasting the test results in such a fashion that unauthorized personnel were able to see it, and that because the lab enjoyed a contract with the Department of Corrections the employer the Department was also liable under the doctrine of respondeat superior.

Also at issue was Florida's unusual "impact rule," which generally requires that "before a plaintiff can recover damages for emotional distress caused by the negligence of another, the emotional distress suffered must flow from physical injuries the plaintiff sustained in an impact" (*Reynolds v. State Farm Mut. Auto Ins. Co.*, 611 So.2d 1294, 1296 (Fla. Dist. Ct. App. 1992)). Practitioners should also note that Florida has a similar rule within the workers' compensation scheme; § 440.093, Fla. Stat., generally denies mental claims within the workers' compensation context unless there is some physical injury associated with the mental claim).

In *Abril*, the Supreme Court carved out yet another exception to the state's impact rule, holding it did not apply where the plaintiffs had alleged that emotional injuries resulted from a lab's breach of a duty of confidentiality under § 381.004, Fla. Stat. (special statute requiring that such test results be treated as confidential).

Commentary Regarding Exclusive Remedy Defense. Even a cursory reading of *Abril* discloses the fact that, technically, it isn't a "comp case." That begs the question, of course, as to whether it could or should have been. The employer did not apparently raise and the Supreme Court accordingly did not address the issue of exclusivity in its per curiam decision (the exclusivity issue was not apparently raised at the trial court level either), but practitioners should observe that under the circumstances of this case, the exclusivity defense might well have been interposed by the employer.

Abril's initial claim clearly arose out of her employment-related activity of rendering aid to an inmate. She clearly thought the incident was compensable; she sought to have the initial testing underwritten by her employer's workers' compensation carrier. While the carrier initially refused to pay for HIV and hepatitis testing, it subsequently acquiesced and paid for the second test that showed that the earlier testing procedures performed by the defendant laboratory had

resulted in false positive findings.

The carrier's belated decision to pay for the HIV testing in *Abril* was completely in line with the rule applicable in virtually all the jurisdictions that have ruled on the issue of the compensability of HIV testing following a work-related exposure (or potential) exposure to blood and body fluids. For example, in *Arkansas Dept. of Correction v. Holybee*, 46 Ark. App. 232, 878 S.W.2d 420 (1994), an appellate court approved the Arkansas Commission's holding that diagnostic and preventive measures for AIDS, tetanus, hepatitis and other infectious diseases were reasonably necessary for treatment of a Department of Corrections worker who was bitten by an HIV infected inmate. It disagreed with the employer's argument that reasonable medical care to treat the injury was simply the cleansing, suturing, and bandaging of the bite wound. Connecticut has a similar decision (see *Doe v. City of Stamford*, 241 Conn. 692, 699 A.2d 52 (1997)), as does Oregon (see *K-Mart v. Evenson*, 167 Or. App. 46, 1 P.3d 477 (2000)).

Only Wyoming, in *Williams v. State ex rel. Wyoming Workers' Comp. Div.*, 2 P.3d 543 (Wyo. 2000), has a contra decision. There, in spite of the fact that a police officer coming into contact with another's blood while attempting to break up a brawl, might reasonably be concerned about hepatitis, AIDS, and other diseases spread through contact with body fluids of infected persons, the Wyoming court refused to require the employer to bear the cost of such testing.

The strong rule in workers' compensation is that any injury incurred during medical treatment related to a compensable injury is, itself, also compensable (for an excellent discussion of the employer's liability for such aggravation caused by medical malpractice, see generally *Larson's Workers' Compensation Law* § 10.09[1]). For example, had Abril sustained a physical injury during the HIV testing, she would have been entitled to additional compensation, either in the form of medical expenses or disability payments, or both. Yet the employer would not be liable in tort for the negligent care; it would be liable under the workers' compensation scheme for providing benefits and there its liability would have ended. That her claim was for a mental injury, rather than a physical one, should not make any difference.

Consider the relatively common situation in which an employee sustains an injury arising out of and in the course of her employment and, because of the employer's prior arrangements, the employee is sent to a "company doctor" a physician retained to handle emergencies and other routine medical matters for the employer's injured employees. If the physician negligently harms the employee in the course of the treatment, the employer is liable, not only for the initial care, but for any additional medical costs and increased disability benefits caused by the physician's negligence but only inside the workers' compensation scheme, not outside of it. The employee's sole remedy against the employer is for additional workers' compensation benefits; she may not sue her employer in tort, even under a theory that the physician was the agent of the employer and that the employer is, therefore, liable under the doctrine of respondeat superior.

§ 440.11(1), Fla. Stat., the Florida exclusivity statute, is similar, in all important respects, to that in place in virtually all the other states. It would have been interesting to see how the court would have handled the exclusivity defense, had it been interposed by the employer. For further discussion related to the workers' compensation issues related to exclusivity, see generally *Larson's Workers' Compensation Law* § 100.01 et seq.

Robinson on Recent Medical Malpractice Cases Relating to Workers' Comp. Claims

By Thomas A. Robinson

November 15, 2007

SUMMARY: Two recent decisions, one from Texas, the other from Florida, offer an interesting twist on medical malpractice claims, with the claimed injury in each case not being caused by any form of improper medical treatment, but rather by negligent or careless handling of paperwork associated with the worker's condition. This Emerging Issues Analysis, written by Thomas A. Robinson, examines the recent Texas case, *Lowe v. Hernandez*.

ARTICLE: Anyone who thinks that workers' compensation law deals primarily with broken bones, low back injuries, and computations of average weekly wages has only to look at recent decisions from around the country to see that the issues examined within the "comp world" are as interesting and intricate as in most any other area of the law. This is particularly true where issues within the comp world intersect with those in tort law. Two recent decisions—one from Texas, the other from Florida—offer an interesting twist on medical malpractice claims, with the claimed injury in each case **not** being caused by any form of improper medical treatment, but rather by negligent or careless handling of paperwork associated with the worker's condition.

Texas Physician Found Liable for Negligent "Administration" of Paperwork Associated With Workers' Compensation Claim. In what appears to be a case of first impression, not only in Texas, but within the entire workers' compensation arena, a Texas Court of Appeals (Second District) has held a physician liable for negligent "administration" of paperwork associated with a patient's workers' compensation claim. In *Lowe v. Hernandez*, 2007 Tex. App. LEXIS 4507 (Tex. Ct. App. June 7, 2007), the court affirmed an order of a state trial court that entered judgment on a jury verdict in favor of a patient who sued her treating physician to recover economic losses incurred when the physician communicated to the patient's employer an incorrect assessment of the patient's physical limitations following a work-related injury and, based upon the physician's (incorrect) assessment, the employer terminated the patient's employment because it perceived the worker would never be able to perform the essential functions of the job.

In this unusual twist on the usual medical malpractice case, the plaintiff/patient did not contend her treatment had been negligently performed, but rather that the physician's administration of the medical reports and other documentation associated with her workers' compensation claim had been careless and inadequate and that the negligent

administration had been the proximate cause of her economic damage.

Hernandez was a long-term employee of a retail fabric store, rising over the years from part-time salesperson to store manager. One of the functions of her job was to maintain the ability to lift, control, and carry heavy merchandise weighing up to 50 pounds. As a routine part of her duties, she visited customer's homes for the purpose of calculating the required yardage for various decorating projects. During one such visit in 2001, she fell and broke her wrist.

She came under the care of Dr. Lowe, a board-certified orthopedic surgeon specializing in hand and lower arm procedures. Three days after the fall, Hernandez underwent surgery to realign the broken bone and she subsequently followed a rehabilitation regime designed to return her to work. Several months after the surgery, Hernandez asked Dr. Lowe if she could return to work, even on an accommodated basis, and Dr. Lowe agreed she could return as long as she did not use her injured arm. The employer allowed Hernandez to return to work with the limitations. Other employees assisted whenever heavy bolts of cloth needed to be lifted. Sometime later, Dr. Lowe modified his orders, indicating she could work with her injured hand and arm, but that she should not lift anything weighing more than five pounds.

Seven months after her injury and ensuing surgery, Hernandez underwent a functional capacity examination (FCE) to determine her rehabilitation progress. The FCE determined that Hernandez could sometimes lift up to 50 pounds and Hernandez returned to work. When Dr. Lowe completed the final paperwork regarding Hernandez' condition, however, he failed to consider the FCE, noting instead that she should not lift more than five pounds and that her condition had reached MMI. Based upon that medical report, the employer terminated Hernandez because she could not perform the primary functions of the job. Hernandez protested, indicating that she could lift 50 pounds, but to no avail. She confronted Dr. Lowe, who initially indicated the error was only clerical in nature, and she received an updated opinion showing her ability to lift up to 50 pounds, but by this time the job had been given to someone else. She subsequently found employment, but at a much reduced wage. She filed her civil action against Dr. Lowe, alleging that his malfeasance had cost her the difference in pay between the two jobs.

At trial, Dr. Lowe continued that expert testimony was required to show the connection between Hernandez' loss of the job and the five-pound lifting restriction. The trial court disagreed, noting that this was not a case in which the alleged negligence was in the treatment of Hernandez' condition, but rather in the handling of administrative duties. Lay testimony was completely adequate to prove the causal connection between Hernandez' termination and the alleged negligent handling of the paperwork.

Hernandez appears to be the first reported case in which an injured employee has sued his or her physician for negligent administration related to a workers' compensation claim. Where the medical care provider is not a treating physician, but merely an expert called in to render an opinion as to the claimant's condition, the medical expert has no similar duty with regard to the injured worker.

For example, in an earlier case from Arizona, *Hafner v. Beck*, 916 P.2d 1105 (Ariz. Ct. App. 1996), a psychologist hired by the workers' compensation carrier to provide an independent medical examination and who allegedly reported incorrect information to the carrier which resulted in a termination of benefits and therapy was, nevertheless, not liable to the claimant for the erroneous report; no doctor/patient relationship existed between the two and the appellate court indicated that the psychologist's duty was owed only to the carrier.

For further discussion related to the workers' compensation issues related to medical malpractice, see generally *Larson's Workers' Compensation Law* § 112.02[1] et seq.

Florida Nurse May Sue Employer in Tort for Mental Injuries Associated With Laboratory's Improper Release of HIV Test Results. In another recent case involving a medical malpractice tort action associated with a workers' compensation claim, the Florida Supreme Court, in a deeply divided per curiam decision (*Florida Dept. of Corrections v. Abril*, 2007 Fla. LEXIS 1902 (Oct. 18, 2007)), determined that an entity that negligently and unlawfully violates an employee's right of confidentiality and privacy in disclosing the results of HIV testing associated with a

work-related incident may be held responsible for the mental anguish and other psychological injuries associated with the breach of privacy.

Abril, a licensed practical nurse with the Florida Department of Corrections (the employer), gave unprotected mouth-to-mouth resuscitation to an inmate who was subsequently determined to be infected with hepatitis C. At that time it was not known whether the inmate might also be infected with HIV. Abril unsuccessfully sought testing for hepatitis and HIV through the employer's workers' compensation carrier, which contended that the resuscitation did not expose Abril to the risk of infection.

Subsequently, the employer's chief medical officer submitted a blood sample from Abril to a laboratory under contract with the state to provide clinical laboratory services for inmates for HIV testing. In spite of assurances from the lab that the results would only be sent to a "confidentially-secured" fax machine in the employer's medical office, the lab faxed the test results—which indicated that Abril was positive for HIV—to an unsecured fax machine in the employer's business office and to another fax machine in the employer's Tallahassee health services office.

Incidentally, there was some evidence that the test results were sent in response to a request for the information from another employee who was concerned that the use of the lab for the testing of Abril's blood might not have been authorized. It was later determined, through testing paid for by the employer's workers' compensation carrier, that the lab's HIV test on Abril had produced a false positive and that Abril had not in fact contracted HIV.

Abril and her husband filed a civil action against the lab and also against the employer, contending that both plaintiffs had suffered mental anguish and emotional distress arising from the lab's negligent failure to ensure the confidentiality and privacy of the HIV test results and the subsequent negligence of both the lab and the employer in causing those test results to be improperly disseminated to others.

Note that, as was the case in *Hernandez*, discussed above, Abril and her husband did not contend that the lab had been negligent in its testing procedures; rather, the plaintiffs claimed the lab had been negligent in broadcasting the test results in such a fashion that unauthorized personnel were able to see it, and that because the lab enjoyed a contract with the Department of Corrections—the employer—the Department was also liable under the doctrine of respondeat superior.

Also at issue was Florida's unusual "impact rule," which generally requires that "before a plaintiff can recover damages for emotional distress caused by the negligence of another, the emotional distress suffered must flow from physical injuries the plaintiff sustained in an impact" (*Reynolds v. State Farm Mut. Auto Ins. Co.*, 611 So.2d 1294, 1296 (Fla. Dist. Ct. App. 1992)). Practitioners should also note that Florida has a similar rule within the workers' compensation scheme; § 440.093, Fla. Stat., generally denies mental claims within the workers' compensation context unless there is some physical injury associated with the mental claim).

In *Abril*, the Supreme Court carved out yet another exception to the state's impact rule, holding it did not apply where the plaintiffs had alleged that emotional injuries resulted from a lab's breach of a duty of confidentiality under § 381.004, Fla. Stat. (special statute requiring that such test results be treated as confidential).

Commentary Regarding Exclusive Remedy Defense. Even a cursory reading of *Abril* discloses the fact that, technically, it isn't a "comp case." That begs the question, of course, as to whether it could or should have been. The employer did not apparently raise—and the Supreme Court accordingly did not address—the issue of exclusivity in its per curiam decision (the exclusivity issue was not apparently raised at the trial court level either), but practitioners should observe that under the circumstances of this case, the exclusivity defense might well have been interposed by the employer.

Abril's initial claim clearly arose out of her employment-related activity of rendering aid to an inmate. She clearly thought the incident was compensable; she sought to have the initial testing underwritten by her employer's workers' compensation carrier. While the carrier initially refused to pay for HIV and hepatitis testing, it subsequently acquiesced and paid for the second test that showed that the earlier testing procedures performed by the defendant laboratory had

resulted in false positive findings.

The carrier's belated decision to pay for the HIV testing in *Abril* was completely in line with the rule applicable in virtually all the jurisdictions that have ruled on the issue of the compensability of HIV testing following a work-related exposure (or potential) exposure to blood and body fluids. For example, in *Arkansas Dept. of Correction v. Holybee*, 46 Ark. App. 232, 878 S.W.2d 420 (1994), an appellate court approved the Arkansas Commission's holding that diagnostic and preventive measures for AIDS, tetanus, hepatitis and other infectious diseases were reasonably necessary for treatment of a Department of Corrections worker who was bitten by an HIV infected inmate. It disagreed with the employer's argument that reasonable medical care to treat the injury was simply the cleansing, suturing, and bandaging of the bite wound. Connecticut has a similar decision (see *Doe v. City of Stamford*, 241 Conn. 692, 699 A.2d 52 (1997)), as does Oregon (see *K-Mart v. Evenson*, 167 Or. App. 46, 1 P.3d 477 (2000)).

Only Wyoming, in *Williams v. State ex rel. Wyoming Workers' Comp. Div.*, 2 P.3d 543 (Wyo. 2000), has a contra decision. There, in spite of the fact that a police officer coming into contact with another's blood while attempting to break up a brawl, might reasonably be concerned about hepatitis, AIDS, and other diseases spread through contact with body fluids of infected persons, the Wyoming court refused to require the employer to bear the cost of such testing.

The strong rule in workers' compensation is that any injury incurred during medical treatment related to a compensable injury is, itself, also compensable (for an excellent discussion of the employer's liability for such aggravation caused by medical malpractice, see generally *Larson's Workers' Compensation Law* § 10.09[1]). For example, had Abril sustained a physical injury during the HIV testing, she would have been entitled to additional compensation, either in the form of medical expenses or disability payments, or both. Yet the employer would not be liable in tort for the negligent care; it would be liable under the workers' compensation scheme for providing benefits and there its liability would have ended. That her claim was for a mental injury, rather than a physical one, should not make any difference.

Consider the relatively common situation in which an employee sustains an injury arising out of and in the course of her employment and, because of the employer's prior arrangements, the employee is sent to a "company doctor"-- a physician retained to handle emergencies and other routine medical matters for the employer's injured employees. If the physician negligently harms the employee in the course of the treatment, the employer is liable, not only for the initial care, but for any additional medical costs and increased disability benefits caused by the physician's negligence-but only inside the workers' compensation scheme, not outside of it. The employee's sole remedy against the employer is for additional workers' compensation benefits; she may not sue her employer in tort, even under a theory that the physician was the agent of the employer and that the employer is, therefore, liable under the doctrine of respondeat superior.

§ 440.11(1), Fla. Stat., the Florida exclusivity statute, is similar, in all important respects, to that in place in virtually all the other states. It would have been interesting to see how the court would have handled the exclusivity defense, had it been interposed by the employer. For further discussion related to the workers' compensation issues related to exclusivity, see generally *Larson's Workers' Compensation Law* § 100.01 et seq.

CT Medical Fee Schedule & the Medicare Resource Based Relative Value Scale

2008 Emerging Issues 915

Embry on CT Medical Fee Schedule and the Medicare Resource Based Relative Value Scale

By Stephen C. Embry

November 11, 2007

SUMMARY: Connecticut recently joined a growing list of states that use Medicare Resource Based Relative Value Scales (RBRVS) for setting medical fees in workers' compensation cases. [Conn. Gen. Stat. § 31-280] If experience with other states is of any value in predicting the future, workers in Connecticut may soon find it difficult to find doctors willing to treat them. This article, written by Stephen C. Embry, examines the Connecticut experiment with RBRVS and warns that Connecticut may have adopted a failed strategy that may drive up the cost of providing care while reducing payments for care.

ARTICLE: Connecticut recently joined a growing list of states that use Medicare Resource Based Relative Value Scales (RBRVS) for setting medical fees in workers' compensation cases. [See Conn. Gen. Stat. § 31-280] If experience with other states is of any value in predicting the future, workers in Connecticut may soon find it difficult to find doctors willing to treat them.

Levine study. A recent study by Steven Levine and Ronald Kent of the Geffen School of Medicine at UCLA examined physician participation in workers' compensation in a number of states that have adopted fee schedules based on low RBVRS multiples. In all of the states studied -- Florida, Hawaii, Texas, West Virginia, Maryland -- doctor participation was very low and had declined with the reduction of medical fees following adoption of the RBRVS model.

Background on RBRVS. RBRVS was developed by Medicare to assign a relative value to most medical procedures. Procedures are evaluated based on the complexity, time and training involved in the service, and payments assigned based upon the relative value of each service. Thus, hip replacement surgery might be assigned a higher value than a routine office visit. A number of states have now adopted this system for workers' compensation fee schedules. Typically the workers' compensation schedule is a multiple of what Medicare will pay. For example, Texas neurologists are now typically paid 125% of what Medicare will pay for a procedure.

Problems with managed care. Part of the problem is that in the era of managed care the direct and overheard costs

involved in providing care to injured workers have dramatically increased. Doctor offices must spend increasing amounts of time and money filling out forms and getting authorization for care rather than treating workers. Doctors are complaining that paper work and preauthorization requirements direct resources away from medical care into insurance company bureaucracy. The aggravation and delays involved in having to get authorization for needed treatment has lead many physicians to drop out of the system. Physician offices in Los Angeles have reported that it is 2.5 to 3 times more costly for them to treat injured workers than to attend a patient whose bill will be covered by Medicare.

Doctors fleeing the workers' compensation system. Consequently, in those states with low RBRV multiples, doctors are fleeing the system, leaving the worker with no care.

In West Virginia less than 23% of orthopedists and only 11% of neurologists are still accepting those hurt at work. In contrast, Levine and Kent report that, in Texas, before the fee schedules, 63% of neurologists would treat injured workers, a figure that has fallen to 9% after "reforms".

Quality of physicians in the workers' compensation system. The Levine and Kent study also found that the quality of doctors remaining in the system has fallen since medical management became the norm. In Texas and West Virginia 50 to 55% of nonparticipating neurologists attended a United States medical school and are Board certified, but only 33% of those treating workers have these qualifications.

Graphic distribution of doctors in the workers' compensation system. The study also revealed that the geographic distribution of willing doctors was being affected. In Texas, prior to the adoption of RBRVS, rural availability of doctors was good. In the five years since adoption of low payments into the Texas workers' compensation system, rural access to physicians has nearly evaporated.

Impact of managed care regulatory burdens. While low rates of pay clearly have had a substantial impact of doctors' willingness to treat injured workers, it also appears that managed care regulatory burdens and added overhead has had an impact. Even though Medicare rates are lower than workers' compensation rates, the insurance company intrusion and interference is less, and doctors will accept lower fees in exchange for less control and aggravation. For example, while Medicare paid less than workers' compensation in Texas, 94% of Lone Star Neurologists will accept Medicare patients, but only about 9% will see any injured workers.

In a study of the cost of providing care in Texas completed in 2002 Brinker, et al., found that the overhead cost for treating injured workers with knee pain was 202% higher for those whose bills were covered by workers' compensation than similar Medicare payments. [Brinker, M.R., et al, "The Effect of Payer Type on Orthopaedic Practice Expense", J. Bone Joint Surgery, 2002 Oct. 84:8116-22] Anyone familiar with modern workers' compensation systems is aware of the frustrations, time delays and regulatory costs associated with insurance company managed care, Delays in payments and meddling in treatment has become endemic. Thus, managed care has become less care.

The California medical crisis. Nor does the drop in participation seem to be isolated in the past. California is now digesting recent legislation reducing workers' compensation benefits and increasing the regulatory burden on its doctors. As a result many doctors are now dropping out of that system and reporting that the reduced fees do not offset the extra costs of doing business in a managed care system. Consequently, orthopedist participation in California has fallen from 92% to 65%, while the percentage of neurologists treating workers has fallen from 80% to 37%. As the full impact of the California reforms work there way through the system, the effect is likely to escalate.

The Connecticut experiment. The Connecticut experiment may not be as hazardous to the health of the medical system as it has been in other states. The stated intention of the Connecticut legislation was not to reduce medical costs, but to simplify the billing process. In the past the Connecticut fee schedule has been based on reasonable and customary charges, which were regularly adjusted based on economic changes in the medical market. New procedures were added as needed. This presented a challenge to the Workers' Compensation Commission that was charged with collecting and analyzing changes in rapidly evolving fields. The driving force for adoption of RBRVS in Connecticut seems to have

been more a practical desire to find an off-the-shelf and comprehensive system for categorizing or coding health care procedures for billing purposes, rather than explicit cost controls. The legislation requires that the new fee schedule be revenue neutral.

The Commission is reportedly working with the medical profession to assure that this is the case. The legislation also provides discretion for the Chairman of the Workers' Compensation Commission to make adjustments where the Medicare schedule may not cover a procedure. The statute also limits "annual growth in total medical fees to increases in the annual percentage increase in the consumer price index for all urban workers."

Nevertheless, the adoption of the Medicare coding system is fraught with potential dangers, arising from structural imperatives and unintended consequences. One of the purposes of the coding system is a reallocation of funds and resources from complex procedures to preventive and office-based care. However, workers' compensation medical services tend to be less amenable to preventive care than the general practice of medicine, since the need for care arises from industrial accidents, rather than life style. Preventive care in workers' compensation is more a matter of encouraging employers to make safety improvements in the workplace, than monitoring cholesterol levels. Artificial constraints on medical costs and cost shifting of medical burdens to workers and physicians may reduce the employer's incentive for safety, thus increasing accidents and ultimately increasing the need for medical care. A system, which through economic disincentives, discourages involvement by orthopedic surgeons and neurologists, while at the same time producing an increased need for their services, is dysfunctional.

The act may also underestimate the powers of momentum and concentration as political motivators. Once the RBRVS system becomes entrenched, initial intentions will tend to fade as the internal rational and momentum of the plan takes over. The functional purpose of the Medicare codes is to encourage low-tech treatment and to discourage highly skilled services. Future policy makers may thus have their attention directed more to the imperatives of the Medicare system than the needs of injured workers. At the very least Medicare's purposes and intents will be incorporated into a workers' compensation system that may have other needs.

The concentration of influence arising from a national coding system is also likely to provide a dangerous opportunity for policy leverage. If payors can reduce their expenditures merely by modifying a single coding system, the desire and efforts to do so are likely to increase. The growth in use of the American Medical Association's *Guides to Evaluation of Permanent Impairment* provides a cautionary model. The stated purpose of the *Guides* is to provide a uniform model for evaluation physical impairment, so that an injury occurring in California could be compared to a similar injury affecting a worker in Connecticut. The *Guides* themselves caution that they are not to be used for measuring vocational disability. However, policy makers are increasingly being encouraged to use the *Guides* as a metaphor for disability, and, ultimately, compensation. This, in turn, has lead to political pressures on the AMA to revise and lower ratings, which is then leveraged into nationwide reduction of benefits for injured workers. At the very least, local policy makers are ceding their powers to national organizations and forces whose purposes and interests may not match local needs.

The debate over how much of medical care should be tied to employment plays an increasingly important role in the national debate on how best to assure public health. The recent transference of medical costs from historic employers in the automobile industry to employee managed health care trusts has potentially monumental consequences, not the least of which is that employers will now have added incentives to shed the cost of work-related injuries and transfer those to workers and union managed health care trusts.

A comparison of the failed states identified in the Levine and Kent article with Connecticut's experience shows that squeezing doctors is neither likely to improve care nor reduce costs. Hawaii, West Virginia, Maryland, Florida, California and Texas are near the bottom in medical payments to doctors, exceeding only Massachusetts. They are also among the states experiencing the greatest problems with medical availability. They generally limit doctor fees to 130% or less of Medicare allowance for similar care. Connecticut, on the other hand, is at the other end of the scale, paying around 200% of Medicare fees and ranking fifth in the nation. Despite the fact that Connecticut actually pays doctors at

a higher rate, its cost of medical care as a percentage of benefits is lower than most of the states with low physician participation problems.

According to the 2004 National Academy of Social Insurance study on "Workers Compensation, Benefits, Coverage and Costs", only 39.6% of Connecticut's benefits went to medical care, while the costs in the failed states were as follows: Maryland 41.4%, West Virginia 47.9%, Florida 59.1% and Texas 60.9%. Only in Hawaii was the percentage of benefits paid for medical care lower at 38.3%. So it does not appear that limits on doctor fees necessarily reduce costs, although it does seem to reduce participation of doctors.

The Connecticut cap on medical total costs, which ties them to the consumer price index, may also prove to be problematic. While it is true that medical costs have been rising faster than consumer prices, it is a mistake to assume that this is *per se* a bad thing. Costs have risen in part because medical science has improved the science of health. We now have surgical treatments allowing replacement and repair of knees, backs and hearts that were undreamed of when workers' compensation was created. These processes cost more, but it is doubtful that anyone would want to return to horse-and-buggy-medicine to save on costs. As our society has grown richer the percentage of income needed to meet basic needs have declined and more of our income now goes to discretionary spending on luxury and enjoyment of life. We spend more on vacations as well as more on medical care because we wish to have not merely more money but better health.

Conclusion. Connecticut thus may have adopted a failed strategy that may drive up the cost of providing care while reducing payments for care. If so, Connecticut workers may soon join those in Texas, West Virginia, Hawaii, Florida and Maryland in finding that Dr Kildare has left the building.

For further discussion of the California medical fee schedule, see Hanna, *California Law of Employee Injuries and Workers' Compensation* §§ 22.05[2], 27.01[8][b][ii], and Herlick, *California Workers' Compensation Law* §§ 4.26, 4.31[6].

For further discussion of the Florida medical fee schedule, see Dubreuil's *Florida Workers' Compensation Handbook* § 16.14

For further discussion of the Maryland medical fee schedule, see 1-10 *Maryland Workers' Compensation Handbook* § 10.3

For further discussion of the Texas medical fee schedule, see *Texas Workers' Compensation Handbook* § 10.06.

For general discussion of hospital and medical benefits, see *Larson's Workers' Compensation Law* § 94.01, et seq.

Rassp on Controversial Issues in AMA Guides and Calif. Workers' Compensation Cases

By Robert G. Rassp

November 11, 2007

SUMMARY: In order to get an accurate permanent disability rating for an injured worker in the CA workers' compensation system, counsel needs to develop the record in all AMA Guides cases by reading the instructions in the AMA Guides and making sure physicians applied the descriptions and measurements in the Guides properly and consistently with those instructions and with the 2005 Permanent Disability Rating Schedule.

ARTICLE: In order to get an accurate permanent disability rating for an injured worker in the California workers' compensation system, counsel needs to develop the record in all AMA *Guides* cases by reading the instructions in the AMA *Guides* and making sure physicians applied the descriptions and measurements in the *Guides* properly and consistently with those instructions and with the 2005 Permanent Disability Rating Schedule. This article discusses five of the most controversial issues in AMA *Guides* cases, the resolution of which may require judicial determinations and appellate law. These controversial issues are (1) apportionment, duplication, and overlap, and risk factors; (2) spinal injury cases, DRE vs. ROM, (3) muscle strength deficits; (4) complex regional pain syndrome and chronic pain, and (5) sleep disorders and obstructive sleep apnea. The discussion of these issues may give you some skills in how to develop the record so that an accurate rating can be established in a case. (Note: This article is excerpted from the 2008 Edition of *The Lawyer's Guide to the AMA Guides and California Workers' Compensation* (LexisNexis Matthew Bender).)

Apportionment, duplication and overlap. Apportionment, duplication and overlap have been and will continue to be a highly litigated and controversial issue, even in AMA *Guides* cases. The AMA *Guides* in fact make our cases ripe for litigation and controversy on the issue of apportionment. Apportionment in the *Guides* looks somewhat like Cal Lab Code § 4663 [see AMA *Guides*, Chapter 1, pages 11-12]. However, it appears that the authors of AMA *Guides* Chapter 1 confuse causation of an injury with causation of an impairment. California law requires that we distinguish between causation of an injury [see *Reyes v. Hart Plastering* 70 Cal. Comp. Cas 223 (Cal. Wrk. Comp. 2005)], and causation of permanent disability at the time the applicant is permanent and stationary or has reached maximum medical improvement [see *Escobedo v. Marshalls* 70 Cal. Comp. Cas 604 (Cal. Wrk. Comp. 2005); *E.L. Yeager Construction v. WCAB (Gatten)* (2007) 71 Cal. Comp. Cases 1687.

The important point here is that even the authors of the *AMA Guides* mandate the individualization of each person's impairment rating. Cal Lab Code § 4660 mandates that the state utilize a uniform, objective, and consistent method of rating industrial injuries. What is clear from reading *AMA Guides* Chapters 1 and 2 is that the only thing that is "uniform, objective and consistent" as mandated by the Calif. Labor Code is the actual use of the *AMA Guides*. But once you open the *Guides* and use its pages in a given case for a given applicant, any uniformity, objectivity or consistency is discarded in favor of both individualizing a person's impairment rating based in part on the effects of the impairment on that person's ADLs and individualizing apportionment of impairments to "other factors" if appropriate.

How do we deal with a prior award under Cal Lab Code §§ 4663 and 4664 when there is a new injury that occurs after January 1, 2005 and is rated under the *AMA Guides*? Suppose there is a 39-year-old nurse who sustains a low back injury in 1995 that resulted in a no heavy work restriction. That case would rate 30% permanent disability after adjustment for age and occupation. Now, in 2005, the same nurse has another lumbar spine injury. How would apportionment work in this case?

Can you subtract apples from oranges? The 1995 permanent disability was based upon work restrictions. The 2005 permanent disability is based upon a spinal impairment under *AMA Guides* Chapter 15, The Spine. So the 1997 Schedule is based upon loss of ability to compete in the open labor market while the 2005 PDRS is based upon the *AMA Guides* and the DFEC adjustment. Cases under the 1997 Schedule are the apples, and cases rated under the 2005 PDRS are the oranges.

One preliminary note: Since there is a reoccurrence of an injury to the nurse's lumbar spine, the ROM method would apply for rating the 2005 spinal injury [see *Rassp*, 1-3 Lawyer's Guide to *AMA Guides* and *CA Workers' Comp* § 3.15]. One other note is that the following analysis applies regardless of whether the prior injury was industrially related or not. The analysis applies under both Calif. Labor Code § 4664 for a prior award and Cal Lab Code §§ 4663 for a prior non-industrial injury with the same surgical results.

Can the WCJ subtract the prior percentage of permanent disability from the current permanent disability that was rated from permanent impairment to PD using the 2005 PDRS? No. There is no way you can use the direct subtraction of percentages now mandated by Calif. Labor Code § 4664 and current case law [see *Brodie v. Workers' Comp. Appeals Bd.* (2007) 40 Cal.4th 1313, 72 Cal. Comp. Cas 565 (Cal. Wrk. Comp. 2007)]. This is because the percentages of permanent disability derived from impairment ratings are totally different from the ratings based upon work restrictions. Another way to put it is that you would be subtracting apples from oranges, which you cannot do. Therefore, there would be only two ways apportionment can occur in this type of case, both under Cal Lab Code §§ 4663:

1. Have the treating or evaluating physician determine what impairment rating under the *AMA Guides* the prior injury would have been and subtract that impairment rating from the current one; or
2. Default to analyzing apportionment under Cal Lab Code §§ 4663: What approximate percentage of permanent disability is directly caused by the 2005 lumbar spine injury and approximately what percentage of permanent disability is caused by other factors, including the prior 1995 industrial lumbar spine injury?

AMA Guides Chapter 1 permits the first method mentioned above if the physician can rate the prior injury using the *AMA Guides* retrospectively. For example, if the nurse had suffered a one level lumbar disc herniation resulting in a laminectomy from the 1995 injury then a physician today using the *AMA Guides* could reasonably conclude that the nurse had a DRE Category III lumbar spine impairment rating (between 10% and 13% WPI) if the physician can discover through review of records, reviewing the applicant's deposition, etc., that the nurse had surgery and determine her quality of life afterwards.

The physician could then pinpoint approximately where within the DRE III category the nurse was when she was declared permanent and stationary from the 1995 injury, based upon how well the nurse felt or functioned after being

released from care for the first injury. Since the ROM method would be used due to the new injury to the lumbar spine in 2005, the physician would then subtract the DRE III rating from the current ROM rating, which would be consistent with both Calif. Labor Code § 4664 and Cal Lab Code §§ 4663.

Applicant's counsel may object to the first method on the grounds that a retroactive DRE rating under the *AMA Guides* is too speculative. Defense counsel may object since this method does not take into account "other factors" besides the prior ratable injury. However, it is reasonable from an evidentiary standpoint that this method could pass scrutiny by the WCAB as to whether the physician's opinion that gives a retroactive impairment rating constitutes substantial medical evidence. Again, the physician would have to state how and why he or she came to his or her conclusions about a retroactive impairment rating and the rationale for doing so.

We are also faced with the issue under Cal Lab Code §§ 4663 about whether the nurse could argue that her lumbar spine condition improved and she rehabilitated from the prior injury since the presumption of Calif. Labor Code § 4664 cannot apply (remember, you cannot subtract apples from oranges) [see *Kopping v. Workers' Comp. Appeals Bd.* (2006) 142 Cal. App. 4th 1099, 48 Cal. Rptr. 3d 618, 71 Cal. Comp. Cas 1229 (Cal. Wrk. Comp. 2006)].

But what if the nurse injures her neck instead of her lumbar spine in 2005? How does apportionment work when the prior spinal award or injury was to the lumbar spine and the new industrial injury is to the cervical spine? Is there consideration for overlap? Is there such a thing as overlap and duplication in *AMA Guides* cases?

If the nurse has a prior lumbar spine award of 30% permanent disability based upon the 1995 injury and she now has a DRE Category IV 25% cervical spine impairment, is there any adjustment to the cervical spine rating on account of the prior award to the lumbar spine? Maybe not, even though the impairments are within the same region, i.e., the spine. Remember, Calif. Labor Code § 4664(c)(1) and (c)(2) mandate that an impairment rating cannot exceed 100% in a person's life time for any single body region, including the spine. In this case, it is arguable that a cervical spine injury results in separate impairments than a lumbar spine injury.

If the nurse had both cervical and lumbar spine injury in 2005, each impairment rating would be combined using the Combined Values Chart and then rated for permanent disability with any "overlap" being covered by the Combined Values Chart [see 2005 PDRS, page 1-11].

However, the 2005 PDRS at page 1-5 states:

It is not always appropriate to combine all impairment standards resulting from a single injury, since two or more impairments may have a duplicative effect on the function of the injured body part. The *AMA Guides* provide some direction on what impairments can be used in combination. Lacking such guidance, it is necessary for the evaluating physician to exercise his or her judgment in avoiding duplication.

One example would involve a single injury to the elbow and shoulder of the same arm resulting in muscle strength deficits-reduced strength of the elbow would probably overlap with reduced muscle strength in the shoulder. Notice here that the 2005 PDRS refers to multiple impairments resulting from a single injury to the same region. It is doubtful that this rule in the 2005 PDRS would apply to impairments to different regions of the body from the same injury.

Therefore, it is an open question about whether duplication and overlap occur in *AMA Guides* cases. Defendants may want to make the medical-legal argument that there is overlap and duplication for impairments that occur within the same region like in spinal injury cases involving impairments to the cervical and lumbar spine caused by the same injury. Applicant's counsel may argue that Calif. Labor Code § 4664(c)(1) and (c)(2) already account for overlap and duplication as does the application of the Combined Values Chart.

However, in the example above involving the nurse, since the lumbar spinal injury and the cervical spinal injury occurred separately, 10 years apart, there is probably no overlap or duplication unless it can be proved that the effects on the applicant's ADL functioning for each injury overlap in some manner. One can argue that ADL functioning is

affected differently for a lumbar impairment than they are by a cervical spinal impairment.

Risk factors. In the struggle to determine apportionment of permanent disability under Cal Lab Code §§ 4663 and 4664, physicians, attorneys, and judges are now confronted by the role, if any, of risk factors to apportionment to causation. In every case to determine causation of permanent disability, can a physician apportion to "other factors" to include such risk factors as genetics, age, gender, family history, race, national origin, or life-style choices such as smoking, a high cholesterol diet, or lack of exercise?

Remember, a risk factor is not a pathology or a disease process itself. For example, high cholesterol is a risk factor for heart disease and stroke in the long term but it may not be causing disability at a given time. But can apportionment of causation of permanent disability to risk factors be appropriate?

For example, an injured employee may have a strong family history of hypertension or diabetes but there is no direct evidence that the offspring of hypertensive or diabetic parents are doomed to have hypertension or diabetes. So how can a physician conclude with reasonable medical probability that an applicant, who is claiming that stress on the job caused, aggravated, or accelerated the development of his or her hypertension, also has significant apportionment to risk factors, such as a strong family history, when, in fact, there is no evidence that the risk factor itself is causing permanent disability?

This argument sounds quite persuasive but what is missing from the analysis from a defense perspective is that stress is also a "risk factor" that must be considered along with other risk factors. Some people who have significant occupational stress do not develop heart disease or hypertension even though they have a strong family history of those conditions.

The debate continues on the applicant's side that risk factors only are considered for causation of an injury and cannot be considered as part of what causes the permanent impairment-but for the industrial injury or exposure, the applicant would not have suffered a heart attack, stroke, etc. Resolution of the role of risk factors that underlie an industrially related medical condition must be determined by reasonable medical probability with the physician explaining how and why a risk factor is causing permanent disability in accordance with the analysis outlined in the *Escobedo* case discussed above.

The WCAB has reiterated its position that the burden of proving apportionment rests on the defendant and that a defendant's failure to provide an adequate basis for apportionment requires a finding that there is none [*Pullman Kellogg v. Workers' Comp. Appeals Bd.* (1980) 26 Cal. 3d 450 (Cal. 1980), 605 P.2d 422, 161 Cal. Rptr. 783, 45 Cal. Comp. Cases 170]. In order to validly apportion permanent disability to a risk factor, a physician must, with reasonable medical probability, indicate that an applicant personally suffers from an underlying pathology.

Physicians must distinguish between the causation of the applicant's injury e.g., elevated cholesterol levels that placed him or her at greater risk of heart disease or stroke, and the causation of the applicant's disability. Physicians must understand the language of the WCAB in *Escobedo*, which reads: "[T]he percentage to which an applicant's injury is causally related to his or her employment is not necessarily the same as the percentage to which an applicant's permanent disability is causally related to his or her injury."

The debate and discussions over the role of risk factors in causing permanent disability will continue until there are appellate decisions that establish the level of proof required to allow valid apportionment to a risk factor. The question of a genetic pre-disposition to certain diseases will also evolve since the science behind genetic testing for certain pre-dispositions is becoming more accurate, reliable, and available in mainstream clinical medicine. An employee's right to medical privacy concerning genetic testing has yet to be tested in the courts in a California workers' compensation case. However, even if an applicant has a genetic pre-disposition to a disease process, if an industrial injury occurs that lights up the condition, then the discussion about what caused the injury and what caused the

permanent disability will be in the forefront of our case law development in the very near future,

In every case, since medical evidence is driven by reasonable medical probabilities, physicians must indicate in their conclusions how and why risk factors are playing a role in causing permanent disability. The development of the record by legal counsel is crucial in this regard so that a judge can weigh the evidence and determine whether a conclusion that a risk factor is causing permanent disability constitutes substantial evidence.

Spinal injury cases DRE vs ROM. There are inconsistent statements within the text of *AMA Guides* Chapter 15 in reference to when the ROM method applies and when the DRE method applies. In fact, there is controversy about whether there needs to be a "radiculopathy" in order for the ROM to apply. In some places, the text indicates that there has to be some form of radiculopathy for the ROM method to apply, and in the actual spinal disorders rating table (Table 15-7), there is no such requirement, nor is there any definition of what a "soft-tissue lesion" is. Are bulging discs or annular tears examples of "soft-tissue lesions?" In addition, there is no definition of the term "injury" in the *AMA Guides*. The authors of the *Guides* never contemplated the California nuance that repetitive or heavy work activities can be a contributing factor to the onset of the development of an impairment- also known as a continuous trauma "injury."

This raises the point of controversy. Is the determination of which spinal impairment rating method applies-DRE or ROM-a medical determination by a physician, a rating determination by a DEU rater, or a legal determination to be made by a workers' compensation judge? Remember, WCAB Rule of Practice and Procedure, Rule 10602 creates the division of labor between a DEU rater and a WCAB trial judge [see 8 Cal. Code Reg. § 10602]. Rule 10602 mandates that DEU raters indicate the rating formula based upon instructions from the WCJ and that the DEU rater does not determine permanent disability. The ultimate determination of a person's permanent disability is strictly within the purview and powers of a WCJ only. See the discussion on the role of the rater vs. role of the judge in Rassp, 1-2 Lawyer's Guide to *AMA Guides* and CA Workers' Comp § 2.06[4][b]

In many of our cases, we are receiving informal ratings from the DEU that state in essence "Cannot rate as ROM, physician should have used DRE." This creates an unnecessary delay in our obtaining informal ratings to assist the parties to resolve cases prior to trial. The fact is that since the WCJ ultimately determines permanent disability, the judge will be the final arbiter of which spinal impairment rating method applies in a given case-DRE or ROM-because the WCJ has the power to determine permanent disability in each case doing substantial justice in every case as mandated by the California Constitution, Art. XIV § 4.

Counsel is reminded that you hold the keys to developing the record in these cases so that the WCJ can weigh the evidence in favor or against using either the DRE or ROM method in a given case. Use the actual language in the text of the *AMA Guides*. For example, in *AMA Guides* Chapter 15, page 379, the authors state that you use the ROM method:

When an impairment is not caused by an injury, if the cause of the condition is uncertain and the DRE method does not apply, or an individual cannot be easily categorized in a DRE class.

What do these terms mean? A physician, a judge, a rater and an attorney may have different interpretations of each of them. For example, if an individual falls under a DRE Category 1, he or she has a 0% WPI. But if the physician believes the person should have an impairment rating less than 5% but greater than 0% WPI, then perhaps the phrase "an individual cannot be easily categorized in a DRE class" may cause one to argue the rating falls under a "DRE Gap" and that the case should be rated using the ROM method.

The language in the *AMA Guides* is inconsistent and vague when it comes to when you can use the ROM method. One school of thought says that there has to be a radiculopathy in order for the ROM method to apply, while the other school of thought is that there does not need to be a radiculopathy for ROM to be used. The authors of the *AMA Guides*

on page 380 indicate that you use the ROM method:

When there is multiple involvement in the same spinal region (eg, fractures at multiple levels, disc herniations, or stenosis with radiculopathy at multiple levels or bilaterally).

On the same page, the authors go on to say:

Use the ROM method if: .. (d) there is recurrent disc herniation or stenosis with radiculopathy at the same or different level in the same spinal region ..

Does there have to be a "disc herniation with radiculopathy" or just a recurrent disc herniation for the ROM method to apply? Does there have to be radiculopathy from multiple level herniations, recurrent herniation at the same level, or stenosis, or does there only have to be radiculopathy from stenosis and none required for recurrent or multi-level disc herniations? The raters are instructed to indicate that the ROM method applies in these cases only when there is radiculopathy, otherwise they are instructed to use the DRE method.

To add to the confusion, when you apply the ROM method, the first step after deciding to use the ROM method requires you to rate the case under Table 15-7, page 404 of the *AMA Guides*, the spinal disorder rating (and then you combine that rating with the range of motion rating and combine that with the neurological ratings, if any). Table 15-7 provides under Section II(B):

Intervertebral disk or other soft tissue lesions .. Unoperated on , with medically documented injury, pain and rigidity associated with none to minimal degenerative changes on structural tests. [*footnotes omitted*]

The authors do not define "soft tissue lesion", and there is nothing that mentions a requirement that a radiculopathy be present. A rating under this type of spinal disorder alone is 4% WPI for the cervical spine, 2% WPI for the thoracic spine, and 5% WPI for the lumbar spine. You can see how use of the language in the *AMA Guides* can be interpreted to fill in a DRE gap if the medical evidence in the case justifies the rating under the ROM method.

Remember that a radiculopathy is any kind of discomfort that is coming from the spinal nerve roots-pain, numbness, shooting pain, burning, throbbing, stabbing pain, or paresthesias (pins and needles sensation). The authors in the *AMA Guides* also warn us that EMG and nerve conduction studies do not detect all types of radiculopathies. So a person can complain of radicular symptoms without any positive findings on an EMG/NCV testing.

In using the DRE method, the physician must distinguish between the criteria for a DRE Category II and a Category III based at times on the difference between whether a radiculopathy is "non-verifiable" (DRE Category II) or "verifiable" (DRE Category III). The determination of whether a radiculopathy is verifiable or non-verifiable has nothing to do with the credibility of the applicant. The determination is a medical judgment call by the physician based upon the clinical findings.

Muscle strength deficits. Under the *AMA Guides*, can an impairment rating be based upon muscle strength loss? For example, an AME was confronted with a case involving a patient who has carpal tunnel syndrome at the right wrist, right thumb de Quervain's tenosynovitis, and right elbow medical epicondylitis. The AME wanted to use grip strength as a ratable impairment.

He opined in his report that the reason he wanted to use grip strength loss was because of the three diagnoses that occurred in this case which involve three areas that immediately affect the patient's midforearm, which is primarily responsible for grip and pinch strength. The physician stated that he felt the loss of strength was permanent and the best method of rating the overall impairment because there was no loss of motion nor ratable neurological deficits, except, arguably, grade 4 motor deficits for the median and ulnar nerves.

In this case, the physician stated his rationale for his use of the muscle strength loss method of rating impairment,

he followed the instructions in the *AMA Guides* while using the muscle strength loss rating method, and his conclusions may constitute substantial evidence. Bear in mind, however, in no less than four places, the authors of the *AMA Guides* caution physicians not to use grip loss as a primary or even secondary method of evaluating impairments, especially if there are other methods that more accurately reflect the person's impairment.

In fact, there are tables throughout *AMA Guides* Chapters 16 and 17 along with specific instructions that allow the use of muscle strength deficits to be rated in addition to other ratable factors. See *AMA Guides*, Tables 16-31 through 16-35, pages 507-510, for upper extremities, and Tables 17-7 and 17-8, pages 531-532, for lower extremities.

If you have an upper or lower extremity case that involves muscle strength loss, make sure you read and understand the instructions in the *AMA Guides* Chapter 16, page 508, which pertain to the use of the tables for muscle strength deficits:

In a rare case, if the examiner believes the individual's loss of strength represents an impairing factor that has not been considered adequately by other methods in the *Guides*, the loss of strength may be rated separately. .. [T]he impairment due to loss of strength *could be combined* with the other impairments, *only* if based on unrelated etiologic or pathomechanical causes. [*Emphasis in original*]

The authors of this quote do not define the terms, "unrelated etiologic or pathomechanical causes." Perhaps an example of this is if there was a loss of motion of the wrist, thumb or elbow joints because of an injury *and* there is muscle strength deficits due to disuse or other etiologies that are not related to the loss of motion of the joint. The instructions require the physician to state the reason why muscle strength loss is being used as a method of rating impairment either alone or in combination with other methods.

One of the most misunderstood and misquoted instructions in the *AMA Guides* involving muscle strength deficits is set forth in the *AMA Guides*, Chapter 16, Section 16.8a, page 508:

Decreased strength *cannot* be rated in the presence of decreased motion, painful conditions, deformities, or absence of parts (eg, thumb amputation) that prevent effective application of maximal force in the region being evaluated. [*Emphasis in original*]

If you have a case in which ratings based upon muscle strength loss are being described, you must develop the record and have the physician justify his or her use of this method by making sure that all of the instructions in the *AMA Guides* for the use of muscle strength loss are being properly followed.

Complex regional pain syndrome. Complex Regional Pain Syndrome is controversial within the medical community with disagreements among orthopedic surgeons, anesthesiologists, neurologists, physiatrists, and pain management specialists as to the diagnostic criteria, who is most qualified to provide treatment, and what modalities are effective for treatment of the condition.

The condition was discovered during the civil war when about 3% of soldiers wounded in an upper or lower extremity with no bone involvement from the bullet wound (a "through and through wound") would develop hypersensitivity and disuse of the affected limb with changes in the nails, sweating, discoloration of the limb, severe burning pain and sometimes trophic changes in the skin or bone. We have seen this condition arise in some of our cases, usually the result of a fairly innocuous injury or routine surgery and sometimes the applicant completely loses the use of the limb.

The current accepted nomenclature that medical physicians at least have agreed to is calling the disorder Complex Regional Pain Syndrome, Type I RSD and Type II Causalgia. Type II Causalgia involves damage to a nerve and the symptoms follow a predicted and obvious nerve distribution. CRPS Type I RSD does not involve a nerve distribution but involves the entire limb or a major part of one. The symptoms are exactly the same and the consequences of CRPS can be devastating on a person's personal, social and occupational functioning, sometimes resulting in total

incapacitation.

The *AMA Guides* refer to CRPS in Chapter 13, Table 13-22, Page 343, Chapter 16, Section 16.5e, Pages 495-496 and Table 16-16, Page 496, Chapter 17, Section 17.2m, Page 553, Chapter 18, Table 18-2, Page 571, and Chapter 18, Table 18-3, Page 575. Remember, there are different authors for each of the chapters in the *AMA Guides* with some inconsistencies between chapters on the same subjects. In addition, the diagnostic criteria for CRPS has changed since the *AMA Guides* 5th Edition was published in November 2000.

So what if measurements and descriptions of *AMA Guides* 5th Edition are no longer valid based upon current scientific consensus? What if an underlying medical condition has new diagnostic criteria that were not anticipated or accepted when the 5th Edition was published? What if a medical condition that did not result in a ratable impairment is now considered ratable?

We know, for example, that in November 2007, the 6th Edition of *the AMA Guides* will be published, and Chapter 18, Pain, has WPI ratings for pain, whereas the 5th Edition does not. Can a physician assign an impairment rating for pain using the 6th Edition since there is now a consensus to rate pain using a new WPI method in the 6th Edition of the *Guides*? Statutorily, the answer is "no" because Cal Lab Code § 4660(b)(1) mandates the use of the 5th Edition and it would take legislation to change Cal Lab Code § 4660(b)(1) to adopt the use of the 6th Edition of the *AMA Guides*.

However, since the *AMA Guides* 5th Edition allows ratings by analogy using clinical judgment, a physician can rate impairments in cases in which the diagnostic criteria for a medical condition has changed from that listed in the 5th Edition. Because the diagnostic criteria for CRPS has changed since November 2000, new medical criteria for the diagnosis is probably admissible, but the record must be developed in order to show that the diagnostic criteria has changed by consensus and an applicant has the new criteria that results in an impairment based upon the November 2000 version listed in the *AMA Guides* 5th Edition.

In CRPS cases, some points need to be made. First of all, the actual diagnosis is rare. Secondly, there are now diagnostic criteria for a clinical medical practice and stricter diagnostic criteria for research purposes. In a research setting, the diagnostic criteria for CRPS must involve 8 out of 12 symptoms listed in *AMA Guides* Chapter 16, Table 16-16, Page 496. Curiously, there is no equivalent Table for CRPS in lower extremity cases in Chapter 17.

In contrast, in a clinical medical setting, the diagnosis is reached by the physician using clinical judgment and usually involves finding at least 6 out of 12 symptoms, sometimes even less than 6, depending upon the severity and location of the presenting symptoms.

Orthopedic surgeons take the position that they are the most qualified to diagnose and treat CRPS because their clinical practices identify CRPS patients since CRPS emerges in orthopedic patients more often than in other medical specialties. The clinical definitions of CRPS Type I RSD and Type II Causalgia are a result of clinical practitioners who see these patients during their clinical practices. Research medicine is involved to try to find effective and safe treatments for these difficult to treat patients. Academic medicine is trying to develop national standards for diagnosis of CRPS and litigation medicine is trying to determine whether a person actually has a CRPS disorder and what is causing it if the disorder even exists. You have art, science, practicality and politics involved all at once.

The best advice to counsel in these CRPS cases is to utilize *AMA Guides*, Chapter 13, Section 13.8, pages 343 and Tables 13-15 for CRPS of the lower extremity and Table 13-22 for CRPS of the upper extremity. These two Tables and the instructions on page 343 all utilize a clinical medicine criteria for diagnosis of CRPS. In contrast, Table 16-16, which is within the CRPS section in *AMA Guides* Chapter 16, The Upper Extremities, Page 496, utilizes the research medicine criteria for CRPS. Which one do you use in an upper extremity CRPS case? You need to develop the record and make your medical-legal arguments and let the physicians and ultimately the WCJ decide which one applies in a given case.

Chronic pain. In certain cases, we see applicants who have a fairly routine injury such as the development of

carpal tunnel syndrome or a herniated lumbar disc, surgery is performed, and then all heck breaks loose and the applicant becomes severely disabled. These cases, fortunately, are rare in clinical medical practices. The diagnosis and treatment of chronic pain syndromes have developed into a medical specialty in its own right and some discussion is in order here.

In clinical medical practice, it is not so much what the chronic pain syndrome is called; rather, it is more relevant as to what the presenting symptoms are and what is the best way to treat them. The *AMA Guides* refer only once to independently ratable chronic pain syndromes in Chapter 13, The Central and Peripheral Nervous System, Section 13.8, page 343.

Do not confuse a diagnosis of a chronic pain syndrome that is discussed as a ratable permanent impairment in Section 13.8 of the *AMA Guides* and the up to 3% WPI add-on for pain that has a greater than expected effect on a person's ADL functioning as indicated in *AMA Guides*, Chapter 18, and page 1-12 of the 2005 PDRS. In order to have a ratable permanent WPI impairment for a stand-alone diagnosis of a chronic pain syndrome, there must be one of the three diagnosis mentioned in Section 13.8: CRPS-RSD; CRPS Causalgia; or "posttraumatic neuralgia." The instructions in *AMA Guides*, Chapter 13, Section 13.8, page 343, state:

To rate an impairment for causalgia, posttraumatic neuralgia, and RSD in an upper extremity, see Table 13-22. If a lower extremity needs to be rated for causalgia, posttraumatic neuralgia, or RSD, use the station and gait impairment criteria in Table 13-15.

"Posttraumatic neuralgia" is not defined in the *AMA Guides*, so counsel needs to rely on the clinical expertise of the diagnosing physician to determine if this criteria can be used to rate a condition as a "chronic pain syndrome." Bear in mind, "neuralgia" is defined as severe, stabbing, throbbing, or burning pain along a nerve distribution. So there has to be neuropathic pain for a chronic pain syndrome to be ratable as a stand alone impairment. Counsel must develop the record to determine the nature of the chronic pain syndrome and its origin.

Sleep disorders. There is significant disagreement within the workers' compensation community about the role that sleep disorders have on rating permanent disability in cases in which the *AMA Guides* apply.

First of all, sleep that is nocturnal and restful is an ADL pursuant to *AMA Guides* Chapter 1, Table 1-2, page 4. Although case law is pending on this issue, common sense tells us that if a person is suffering from a sleep disorder caused by pain from an industrial injury and because sleep is an ADL affected by the injury, then up to 3% WPI can be added to the underlying impairment rating that is causing the pain.

In fact, conservative physicians will indicate in their reports that sleep disturbance is already included within the impairment rating given for the underlying medical condition. Liberal physicians will want to add up to 3%, arguing that the sleep disturbance is not already included in the underlying rating and that since sleep is an ADL listed in the *AMA Guides*, then up to 3% WPI can be added. Alternatively, liberal physicians will want to rate any sleep disorder that is related to an industrial injury, regardless of its cause, including pain.

So can a sleep disturbance or disorder be ratable in its own right? The answer is "yes" as long as the cause of the sleep disorder is not pain from an underlying injury. There has to be a direct cause or a link between the industrial injury and the sleep disorder other than pain. But how is a sleep disorder diagnosed?

There is an entire chapter of the DSM-IV TR devoted to sleep disorders-how to diagnose, evaluate and categorize them. The authors of the DSM-IV state unequivocally that in order to diagnose a sleep disorder, there must be polysomnography performed in a sleep laboratory. The DSM-IV TR categorizes sleep disorders into different types that include forms of insomnia (not enough sleep), hypersomnia (too much sleep) and such disorders as narcolepsy, sleep disorders associated with a psychiatric condition (e.g., clinical depression), sleep disorders associated with a medical condition (e.g., head injury), and substance induced sleep disorders (associated with use of a substance including medications).

The other problem with sleep disorders is that it is very difficult to predict whether a sleep disorder is permanent. We know that long term use of sleep medication is contraindicated; in fact, long term use of sleep medication can cause a substance induced sleep disorder. The argument is that if a patient needs sleep medication, then there is a sleep disorder that needs to be evaluated without use of medication, much like a hearing loss is evaluated without hearing aids.

But once you have a diagnosis of a sleep disorder under the DSM-IV TR, does the applicant have to be evaluated using the 2005 PDRS for psychiatric conditions, with the limitations of Cal Lab Code § 3208.3, a final GAF score, and a 40% increase for the DFEC adjustment? Remember, Cal Lab Code § 4660(b)(1) mandates that we use the descriptions and measurements of the *AMA Guides* to determine permanent disability.

For now, we are taking a strict approach to the issue of when a sleep disorder can be rated in a workers' compensation case. Case law may clarify some of the controversies that arise in cases that involve an allegation of a sleep disorder.

Since sleep is a function of the brain and central nervous system, we need to look at *AMA Guides* Chapter 13, The Central and Peripheral Nervous System, Section 13.3c, Arousal and Sleep Disorders, page 317, Table 13-4, which is operative in our cases. The instructions on page 317 are controlling:

It is expected that the diagnosis of excessive daytime sleepiness has been supported by formal studies in a sleep laboratory

The clinician can evaluate sleepiness with the Epworth Sleepiness Scale, which assesses the likelihood of dozing . . . in different situations . . . [footnote omitted]

This type of emphatic language in the *AMA Guides* is precisely the tone used in academic medicine to stress a point. If you ask most clinical practitioners, they will almost uniformly agree that you do not need a polysomnogram in every case in order to diagnose a sleep disorder. In a clinical medical practice, if a patient presents to a psychiatrist or psychologist with objective evidence of depression and an anxious state, with a haggard countenance, it is probable that the patient has a ratable sleep disorder.

However, the *AMA Guides* do not have any qualifying language to the contrary, and together with the instructions in the DSM-IV TR, if you have a case in which a sleep disorder is suspected or claimed, then a polysomnogram is required. In addition, a Multiple Sleep Latency Test (MSLT) is also recommended to see how a person's sleep latency (how long it takes to fall asleep) affects ADL functioning. These studies generally take 21 consecutive hours in a sleep laboratory and can cost up to \$3,600 under the current fee schedule.

There is an argument being made by some physicians that for a Class I or Class II sleep disorder rating under Table 13-4, only an Epworth Sleepiness Scale is needed. But if you read the actual instructions in the *AMA Guides* page 317, there is no qualifying language when the authors state "it is expected" that sleep studies be conducted in a laboratory. All an Epworth Sleepiness Scale consists of is a self report visual analog scale of eight questions, worth up to 3 points each. If a patient scores 10 points, he or she has a Class II sleep disorder impairment rating under Table 13-4, which is a 10%-29% WPI stand alone impairment rating.

A Class II sleep disorder rating of 10% WPI to 29% WPI involves "Reduced daytime alertness, interferes with ability to perform some ADLs." This covers just about everyone during our MCLE seminars! Realistically, a person who has a sleep disorder has very serious problems-personally, socially and occupationally-and this diagnosis should never be taken lightly. For example, a patient who wakes up once an hour is not getting adequate sleep and usually is visible in that person's countenance. A sleep study in a sleep laboratory will show restorative sleep with deep delta waves and adequate rapid eye movement time (i.e., at least 90 minutes of REM a night). So again, development of the record is essential if an applicant is claiming a sleep disorder.

Practice Point. Defense counsel is urged to take the deposition of the applicant if a sleep disorder is alleged in order to determine whether the condition is caused by pain from an injury. In addition, other causative factors can be discovered, such as allergies to a pillow, an animal that sleeps in the same room, or a spouse or significant other who snores and disrupts the applicant's sleep patterns. Remember, 25% of the adult population suffers from a diagnosable sleep disorder. People who live in cities have a greater incidence of sleep disorders than the population who lives in rural areas. So the cause of sleep disorders can be multifactorial. A good benchmark to determine, subjectively, if someone has a sleep disorder is if he or she wakes up once an hour or is one who regularly sleeps less than 6.5 hours per night.

Practice Point. Attorneys who represent applicants have to be circumspect before you allege a sleep disorder since, in many cases, if a person has diminished day time alertness, his or her driver's license may be in jeopardy, and physicians have a statutory duty to report anyone who has a neurological condition that may affect his or her ability to safely operate a motor vehicle.

For further discussion of apportionment and risk factors, spinal injuries (DRE vs. ROM), muscle strength deficits, complex regional pain syndrome, chronic pain, sleep disorders, and obstructive sleep apnea, see Rassp, Lawyer's Guide to AMA Guides and CA Workers' Comp §§ 5.06, 5.07, 5.13, 5.14, 5.15, 5.19.

Sweeny on Wainwright v. Newport News

2008 Emerging Issues 913

Sweeny on Wainwright v. Newport News

By Peter M. Sweeny

November 10, 2007

SUMMARY: Virginia's one major seaport is in its Tidewater Region. Industry and commerce center around Hampton Roads, which is home to one of the largest naval bases in the world as well as major civilian shipping industries. Workers' compensation practitioners in the Tidewater who represent injured workers are often faced with dual jurisdiction. In this Emerging Issues Analysis, Peter M. Sweeny discusses how this common practice was challenged.

ARTICLE: Virginia's one major seaport is in its Tidewater Region. Industry and commerce center around Hampton Roads, which is home to one of the largest naval bases in the world as well as major civilian shipping industries. Workers' compensation practitioners in the Tidewater who represent injured workers are often faced with dual jurisdiction: the Virginia Workers' Compensation Act [Va. Code Ann. § 65.2-100 et seq.], and the federal Longshore and Harbor Workers' Compensation Act (LHWCA) 33 USCS § 901 et seq.] Frequently, benefits are better under the LHWCA but to preserve their client's state rights practitioners will file a claim with the Virginia Workers' Compensation Commission and advise the Commission that the injured worker is currently receiving benefits under the LHWCA. This common practice was challenged in *Robert B. Wainwright v. Newport News Shipbuilding and Dry Dock Co.*, 50 Va. App. 421, 650 S.E.2d 566 (2007), decided on September 25, 2007.

Background of case. Robert B. Wainwright, a forklift operator for Newport News Shipbuilding and Dry Dock Company, was injured on March 6, 1996. Under Virginia law, the statute of limitations for filing a workers' compensation claim is two years from the date of the accident [Va. Code Ann. §65.2-601]. Thus, Wainwright had until March 5, 1998 to file his claim. While a claim for compensation is must be filed within two years of after the accident, the employee is not required to prove the disability during the two-year period. Rather, the employee must prove that disability occurred within the two-year period [*Metro Machine Corp. v. Lamb*, 33 Va. App. 187, 532 S.E.2d 337 (2000)].

By letter dated April 5, 1996, and filed with the Virginia Workers' Compensation Commission on April 10, 1996, Wainwright asserted a "[c]laim for all benefits to which he is or may be entitled pursuant to the Virginia Workers' Compensation Act." However, Wainwright advised the Commission that a hearing did not need to be scheduled because

he was pursuing a concurrent claim under the LHWCA. Newport News Shipbuilding and Dry Dock responded on October 31, 1997, notifying the Commission that they accepted Wainwright's claim as compensable but that as the claimant "was being paid benefits under the [LHWCA]" there were no issues that needed to be resolved at that time.

In February 1998 an issue developed over Wainwright's request for medical attention. By letter dated February 12, 1998 and received by the Commission on February 20, 1998, Wainwright requested a hearing in connection with his desire to continue receiving treatment from his long-time treating physician and licensed clinical psychologist to whom he had been referred. Wainwright was asserting that the employer was "attempting to medically manage" his claim. Medical management by the employer is prohibited in Virginia [*Schwab Constr. v. McCarter*, 25 Va. App. 104, 486 S.E.2d562 (1997)]. No other issue was raised in Wainwright's letter.

The Commission responded to Wainwright's letter by informing the employer that it was "in receipt of a claim for medical benefits in this case" and directed the employer to submit a response to the claim. The employer responded that it accepted claimant's claim as compensable and that Wainwright was receiving benefits under the LHWCA. As to the issue raised in Wainwright's application for hearing, the employer advised the Commission that continued treatment by the claimant's treating physician was "the only issue to be resolved."

A hearing was held before a deputy on October 2, 1998. The deputy issued her opinion on April 6, 1999, directing the employer to offer the claimant a panel of physicians skilled in chronic pain management from which the claimant was to choose a new treating physician. No other determinations or rulings were made in her opinion, and neither party requested a review of the decision by the full Commission.

No further action was taken in the claim until October 27, 2003, when Wainwright filed a request for a hearing "for payment of indemnity and medical benefits and authorization of a treating physician." Wainwright was actually requesting temporary total disability benefits for the period October 2, 2002 to July 5, 2004; temporary partial disability benefits for a ten-week period beginning July 6, 2004; and resumption of temporary total disability benefits thereafter. In response to this application for hearing, the employer asserted, *inter alia*, that Wainwright's request for disability benefits was barred because it "was not timely filed" within the two-year time limit of Va. Code Ann. § 65.2-601 ("a claim shall be filed with the Commission within two years after the accident.").

A new deputy conducted hearings and on August 9, 2005, issued an opinion that, although Wainwright's April 5, 1996 letter constituted a valid claim for benefits, his October 29, 2003 application was "time barred and/or barred by the doctrine of *res judicata*" because Wainwright "could have sought an award for record purposes' [at the October 2, 1998 hearing] in order to preserve his rights under the [Act]." Wainwright sought a review by the full Commission of this opinion. Upon review the full Commission determined that the doctrine of *res judicata* did not apply to bar Wainwright's claim because his 2003 request for benefits sought compensation for a period that was "different that that sought by him in the previously litigated claim." However, a majority of the full Commission affirmed the deputy's decision denying Wainwright benefits. Reciting the history of the claim, the full Commission held:

Based on the record, it appears that the claimant opted to forego his opportunity to pursue entry of an award of disability benefits at the October 2, 1998 hearing. That issue was before [a deputy] and could have been litigated. We frequently have held that the Commission does not adjudicate cases piecemeal. Issues that are raised and not pursued are deemed abandoned, unless specifically deferred. We find that by choosing not to appeal the Deputy Commissioner's April 6, 1999, Opinion, the claimant abandoned his April 10, 1996, claim for disability benefits.

One Commissioner dissented, concluding that the claimant's request for benefits was not time barred because the claim was not previously adjudicated and because the claimant was disabled due to his injuries within two years of the workplace accident. From this opinion Wainwright sought his appeal to the Virginia Court of Appeals.

The real issue in this case was whether or not Wainwright had abandoned a part of his claim by not pursuing it for seven and a half years after his accident. The employer contended, alternatively, either that Wainwright's April 5, 1996

letter did not constitute a valid claim within the statute of limitations, or that his 2003 claim for benefits was time-barred and subject to the doctrine of *res judicata*. The thrust of the employer's argument was that the claimant should not be allowed to adjudicate his case piecemeal and that the Commission had rightly prevented this.

The Virginia Court of Appeals reversed the Virginia Workers' Compensation Commission, basing their decision on three points, discussed below.

Valid claim was filed within statute of limitations period. First, the court concluded that Wainwright's April 5, 1996 letter making a "[c]laim for all benefits to which he is or may be entitled pursuant to the Virginia Workers' Compensation Act" was a valid claim filed within the statute of limitations. The court noted that the intent and purpose of Va. Code Ann. § 65.2-601 is to require notice to the employer of its potential liability for an injury sustained by an employee. Citing *Cheski v. Arlington County Pub. Schs.* [16 Va. App. 936, 434 S.E.2d 353 (1993)], the court noted that the claim must identify (1) the employer, (2) the date of accident, (3) the location of the accident, and (4) the injuries suffered, as well as (5) fairly apprise the commission that a claim is being made. Whether the information filed with the Commission is sufficient to constitute a timely filing is a question of fact, and the Commission had concluded that the April 5, 1996 letter here constituted a valid claim. Therefore, Va. Code Ann. § 65.2-601 did not dictate the outcome of the case.

No abandonment of claim occurred. The second point is, perhaps, the more far reaching conclusion. The court held that Wainwright had not abandoned his claim for disability benefits and that the Commission's analysis was flawed. The Virginia Workers' Compensation Commission had rested its conclusion on its finding that the issue of disability was raised before the first deputy at the original hearing in October of 1998 "and could have been litigated" but was not pursued by the claimant. The court found that there was no evidence in the record to support this finding.

What is critical here is the Virginia Workers' Compensation Commission's tendency to hold that all issues that existed prior to a decision are disposed of by the decision *even if the issues were not the subject of the hearing*. Neither Wainwright nor his employer raised any other issue at the original hearing other than the question of the appropriate treating physician. As Wainwright was, at the time, being paid disability benefits under the LHWCA, the employer (and the Commission) knew that Wainwright was suffering a disability within two years of the accident. "While a claim for compensation must be filed within two years after the accident, the employee is not required to prove the disability during the two-year period" [quoting *Metro Machine Corp. v. Lamb*, 33 Va. App. 187, 532 S.E.2d 337 (2000)]. The Virginia Court of Appeals found that since Wainwright had filed a valid and timely claim and had suffered disability within two years of the accident, he had not abandoned his claim by seeking a hearing on that claim seven and a half years later.

Claim not barred by doctrine of *res judicata*. As its third point, the court rejected the claim that the doctrine of *res judicata* barred Wainwright's claim. The record was clear that the only issue before the deputy at the original hearing was one other than a claim for disability benefits. In rejection of the Virginia Workers' Compensation Commission's "piecemeal adjudication" argument, the court found that the employer had failed to meet the burden of proving by a preponderance of the evidence that the issue of payment of disability benefits was previously raised and decided by the deputy in her 1999 opinion.

Practical effect of *Wainwright* decision. In light of this decision, Virginia practitioners on both sides of claims will have to carefully review the claims being made and the issues being submitted for decision by the Virginia Workers' Compensation Commission. The defense will now have a harder time making a case that a claimant abandoned a part of his or her claim. Claimants will have to be wary of language being included in defenses or decisions that have a broader reach than the facts and circumstances merit.

For further discussion of the LHWCA, see *Larson's Workers' Compensation Law* § 145.01 et seq. (LexisNexis

Matthew Bender).

For further discussion of the two-year statute of limitations for requesting benefits under the Virginia Workers' Compensation Act, see Virginia Workers' Compensation Law and Practice § 7.08 (LexisNexis Matthew Bender).

CA WC Panel Decisions: *Kong v. San Francisco* and *Sanchez v. Sunrise Mushroom*

2008 Emerging Issues 910

Rabine on Calif. WC Panel Decisions: *Kong v. San Francisco* and *Sanchez v. Sunrise Mushroom*

By Merle C. Rabine

November 9, 2007

SUMMARY: Recent interest in CA Workers' Compensation Appeals Board panel decisions has been fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet. This Emerging Issues Analysis examines recent panel decisions involving "overlap" between factors of disability in the 1997 and 2005 Permanent Disability Rating Schedules and unreasonable refusal to submit to surgery under Labor Code § 4056.

ARTICLE: Despite recent interest in California Workers' Compensation Appeals Board panel decisions, fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet, most panel decisions are of little interest to anyone other than the parties whose case is being decided. When the Appeals Board wants to announce a position on a substantive or procedural issue, it does so by issuing an en banc decision or significant panel decision [see http://www.dir.ca.gov/WCAB/wcab_dars.htm]. Panel decisions, however, tend to be case-specific with the result determined by the facts of the case. Moreover, while panel decisions are citeable authority, particularly on issues of contemporaneous administrative construction of statutory language [see *Griffin v. WCAB* (1989) 209 Cal. App. 3d 1260, 1264, fn 2, 54 Cal. Comp. Cas 145], they are not binding precedent, as are en banc decisions, on all Appeals Board panels and workers' compensation judges [see *Gee v. Workers' Comp. Appeals Bd.* (2002) 96 Cal. App. 4th 1418, 1425 fn. 6, 67 Cal. Comp. Cas 236].

This commentary examines two recent panel decisions, one involving "overlap" between factors of disability in the 1997 and 2005 Permanent Disability Rating Schedules, and the other involving unreasonable refusal to submit to surgery under Labor Code § 4056. In both cases, the employers failed to sustain their burden of proof of affirmative defenses.

Employer fails to sustain burden of proving overlap between factors of disability under the 1997 and 2005 Permanent Disability Rating Schedules, resulting in no apportionment despite prior awards of permanent disability under Labor Code § 4664(b): *Kong v. City and County of San Francisco*, 2007 Cal. Wrk. Comp. P.D. LEXIS 22. In *Strong v. City and County of San Francisco* (2005) 70 Cal. Comp. Cas 1460 (Cal. Wrk. Comp. 2005)

(appeals board en banc), the appeals board held that when an employee suffers an industrial injury causing permanent disability to one region of the body, and when there is a prior award of permanent disability involving any other regions of the body, Cal Lab Code § 4664 requires apportionment of overlapping permanent disabilities. ("Overlap" occurs when a new injury results in factors of disability that are the same as ones that already existed as the result of a prior injury or condition.)

The Court of Appeal agreed in *Kopping v. Workers' Comp. Appeals Bd.* (2006) 142 Cal.App.4th 1099 [71 Cal. Comp. Cas 1229 (Cal. Wrk. Comp. 2006)]. But the court rejected the appeals board's reading of Labor Code § 4664(b) and held that the employer has the burden of proving overlap.

Since these cases were handed down, it has been clear that the appeals board would have to confront the issue of whether the factors of disability under the 2005 Permanent Disability Rating Schedule (PDRS), which complies with Labor Code § 4664(b) by requiring descriptions and measurement of physical impairments in the AMA Guides, and the factors of disability under the 1997 PDRS (work restrictions, objective and subjective factors of disability) are sufficiently similar to allow for overlap between an injury rated under the 2005 PDRS and prior injuries rated under the 1997 PDRS. The panel decision in *Kong v. City and County of San Francisco* 2007 Cal. Wrk. Comp. P.D. LEXIS 22 (Cal. Wrk. Comp. P.D. 2007) directly confronts this issue.

Applicant, a police officer, sustained a cumulative trauma injury to his heart and cardiovascular system. Prior to this injury, he had three prior stipulated awards: 32% for right knee and left ankle injuries; 30% for bilateral knee injuries; and 38% for a bilateral shoulder injury.

The heart injury was rated under the 2005 PDRS. The rating was 78%, based on percentages of "impairment of the whole person." As to the prior injuries, the bilateral shoulder injury and the bilateral knee injury were rated based upon work restrictions. There was no evidence of the basis of the rating of the right knee and left ankle injuries.

The WCJ found no apportionment to the prior injuries, despite the conclusive presumption in Labor Code § 4664(b) that the permanent disabilities caused by those injuries continue to exist. The panel affirmed, stating: "[W]hile there is no prohibition per se on proving overlapping disabilities between the 2005 PDRS, with its impairment-based system, and prior rating schedules, with their system of subjective and objective factors and work restrictions, defendant failed to carry its burden, under *Kopping*, that there is any overlap between the present heart disability and the prior orthopedic disabilities in this case."

As a practical matter, defendants should not expect to prevail on apportionment under Cal Lab Code § 4664 when the current injury is rated under the 2005 PDRS and the prior injury under the 1997 PDRS unless they can demonstrate that the factors of disability for the prior injury are the functional equivalent of the impairments measured according to the AMA Guides. When the current and prior injuries are to the same body part, it may be possible to examine the medical reports used to arrive at the ratings in the prior awards to see whether descriptions and measurements can be rated under the AMA Guides, even though the AMA Guides were not in use at the time that the medical reports were produced. When the current and prior injuries are to different body parts, it is hard to imagine how the factors of disability can be found to overlap. But nothing in the *Kong* decision limits the creativity of defendants seeking to prove overlap.

Proving overlap between factors of disability under the 2005 PDRS and 1997 PDRS is difficult, but not necessarily impossible. The parties should adjust their expectations accordingly. At the least, it is clear that a defendant that wants to prove apportionment under Cal Lab Code § 4664 must be prepared to prove overlap. Simply submitting the prior awards, even if the basis of those awards can be ascertained, should be expected to fail.

Employer fails to prove that applicant's refusal of surgery was unreasonable and is liable for permanent disability despite Labor Code § 4056: *Sanchez v. Sunrise Mushroom*, , 2002 Cal. App. Unpub. LEXIS 6445 (California Unpublished Opinions 2002), 2007 Cal. Wrk. Comp. P.D. LEXIS 19. Labor Code § 4056 provides that no

compensation is payable for disability caused, continued, or aggravated by an unreasonable refusal to submit to medical or surgical treatment, "if the risk of the treatment is, in the opinion of the appeals board, based upon expert medical or surgical advice, inconsiderable in view of the seriousness of the injury." The employer has the burden of proving that the refusal is unreasonable (*Gallegos v. Workers' Comp. Appeals Bd.* (1969) 273 Cal.App.2d 569 [34 Cal. Comp. Cases 322]).

Unreasonable refusal to submit to medical treatment is a defense that is seldom raised and almost never succeeds. In *Sanchez v. Sunrise Mushroom*, 2002 Cal. App. Unpub. LEXIS 6445 (California Unpublished Opinions 2002), applicant sustained an industrial injury to his right knee and back. All physicians who evaluated him recommended right knee arthroscopy and partial meniscectomy. Applicant refused. The WCJ found his refusal unreasonable and did not award applicant that portion of his permanent disability that resulted from his refusal.

The panel reversed. Applicant was evaluated by an AME, who noted that: "[arthroscopic surgery] is a damned if you [do], damned if you don't decision from the long-term perspective. . . . Bottom line, the patient's refusal to have appropriate has not affected his long-term disability." On the basis of this evidence, the panel found that defendant had not met its burden of proving that the refusal to undergo surgery was unreasonable and that surgery would have reduced disability to a particular extent. It remanded the case to the WCJ to rate applicant's permanent disability without applying *Lab Code § 4056*.

What is interesting about this case is that the WCJ found applicant's refusal to undergo surgery to be unreasonable. The AME had noted that applicant's personality and chronic pain behavior syndrome increased the likelihood of a compromised result from even the most ideal surgical procedure. Furthermore, because of applicant's degenerative joint disease, meniscectomy would likely have speeded up the arthritic process leading to further surgery and likely knee replacement. Unfortunately, the panel opinion does not disclose the WCJ's reason for finding the refusal of surgery to be unreasonable. But the panel was not impressed and had little trouble reversing the WCJ's decision.

In the present medical climate, it is much more likely that applicants will be subjected to unnecessary treatment than that they will refuse required treatment. An applicant might refuse needed treatment based on religious principle, and that would be a difficult case. Otherwise, I think it is very unlikely that a WCJ or a commissioner will conclude that refusal to undergo surgery is unreasonable. This is a defense that is seldom raised and almost never succeeds. The defense burden of proving unreasonable refusal is a very steep, uphill burden. In almost all cases, raising this defense is likely to be a waste of energy.

For further discussion of apportionment of permanent disability, see Hanna, *California Law of Employee Injuries and Workers' Compensation*, §§ 8.05-8.07, and Herlick, *California Workers' Compensation Law* § 7.05, 7.44-7.47.

For further discussion of refusal to submit to surgery, see Hanna, *California Law of Employee Injuries and Workers' Compensation* § 5.05[9], and Herlick, *California Workers' Compensation Law* § 4.27.

Mayerson on Pins v. State Farm Fire & Cas. Co.

2008 Emerging Issues 874

Mayerson on Pins v. State Farm Fire & Cas. Co.

By Marc Mayerson

November 5, 2007

SUMMARY: In *Pins v. State Fram Fire & Casualty Co.*, the Eighth Circuit ruled that an insurer need not defend an insured where damage was caused by tortious conduct by the insured and not by an accident. In this commentary, Marc Mayerson, insurance lawyer and partner at Spriggs & Hollingsworth and law professor at George Washington University, examines *Pins* in the context of other cases discussing whether an insurer has a duty to defend an insured against intentional torts.

ARTICLE: Insurers Duty to Defend their Insureds Against Intentional Torts

The duty to defend undertaken by an insurance company is an essential component of the peace of mind coverage provided by liability insurance protection. Given the breadth with which the duty to defend is ordinarily construed by the courts, the defense-cost coverage of a policy is also referred to as litigation insurance that is, insurance against the risk and burden of suits brought against the insured. Disputes have raged over whether that litigation insurance applies, however, to suits against the insured alleging an intentional tort.

In most states, the test for whether an insurer will have a duty to defend is whether the suit against the insured might eventuate in a judgment covered by the duty to indemnify that is, the insurance companys obligation to pay for the damages owed by the insured on account of bodily injury, property damage, or wrongful acts. If the claim against the insured permits proof of a covered indemnity claim, the insurer has a duty to defend. Thus, if a lesser included offense would be covered by the duty to indemnify, the insurer has the obligation to mount a defense. *E.g. Abrams v. General Star Indem. Co.*, 67 P.3d 931 (Ore. 2003) (conversion claim).

Naturally, if an insurer has a duty to defend where the claim or suit against the insured *might* result in a covered judgment, the insurers obligation to defend may apply even though the judgment ends up being uncovered. *E.g. Tanner v. State Farm Fire & Cas. Co.*, 874 So.2d 1058 (Ala. 2003); *Automobile Ins. Co. v. Cook* (N.Y. Jun. 8, 2006). (Note that public policy does not prevent the insurer from having a duty to defend even if that public policy would bar the insurer from indemnifying the insured for its deliberate misconduct. *E.g., Horace Mann Ins. Co. v. Barbara B.*, 4 Cal. 4th 1076

(*Cal. 1993*.) In this way, the duty to defend is broader than the duty to indemnify: a claim might need to be defended even if it need not be paid or even if it is uncertain whether initially the claim will need to be paid by the insurance company. *E.g.*, *Fresno Econ. Import Used Cars, Inc. v. United States F&G Co.*, 142 *Cal. Rptr.* 681, 685 (*Cal. App. 1977*). If the undisputed facts developed in the underlying case show that there is no duty to indemnify, the insurer may be able to terminate its defense prospectively. *See Fircro Inc. v. Fireman's Fund Ins. Co.*, 343 *P.2d* 311 (*Cal. App. 1959*); Marc S. Mayerson, *Insurance Recovery of Litigation Costs: A Primer. for Policyholders and Their Counsel*, 30 *Tort & Ins. L.J.* 997, 1000 *n.16*; *see also Sterlite Corp. v. Continental Cas. Co.*, 458 *N.E.2d* 338, 344 (*Mass. Ct. App. 1983*) (holding that an insurer can, by certain steps, get clear of the duty [to defend] from and after the time when it demonstrates with conclusive effect on the third party that as a matter of fact -- as distinguished from the appearances of the complaint and policy -- the third party cannot establish a claim within the insurance, but that [w]hat is not permitted is that an insurer shall escape its duty to defend the insured against a liability arising on the face of the complaint and the policy by dint of its own assertion that there is no coverage in fact).

But what about the situation where the allegations of the complaint, if true, show there is no duty to indemnify and there is no covered lesser-included offense? Insurers typically argue, often with success, that there is no duty to defend such a complaint. *E.g.*, *Farmland Mut. Ins. Co. v. Scruggs*, 886 *So. 2d* 714 (*Miss. 2004*). The paradigm case involves allegations of an intentional tort against the insured, the essential elements of which negate coverage.

The intentional consequences of an intentional act may still be the basis for coverage, where the legal consequences are not anticipated by the insured. The Illinois Court of Appeal addressed a recurring fact pattern recently, where a contractor cut down trees on the wrong property. Finding it immaterial that the underlying complaint alleges intentional torts, the Illinois court found that the insured did not expect liability for the physical injury of cutting down the trees. *Pekin Ins. Co. v. Miller*, 854 *N.E.2d* 693, 696 (*Ill. App. 2006*)

Pins. In *Pins v. State Farm Fire and Cas. Co.* (8th Cir. Feb. 8, 2007), the Eighth Circuit was called upon to get involved with a domestic love triangle, in which the insured had an affair with someones wife, and the cuckold filed suit for alienation of affections. The policy provided coverage for loss, defined as an accident . . . which results in bodily injury. The insurer conceded that the injury at issue was bodily injury (though without any physical harm being alleged, *cf. Lavanant v. General Accident Ins. Co.*, 595 *N.E.2d* 819 (*N.Y. 1992*)). The insurer denied coverage, however, on the ground that affairs of the heart (or body) are not accidents or, in this case, that the cuckolds injury was expected or intended by the insured.

The Eighth Circuit analyzed the elements of proof for the tort claim of alienation of affections under the applicable law (South Dakota). The court found that intent to injure the marital relationship was the *sine qua non* of the tort. As the court explained, the acts must have been done for the very purpose of accomplishing this result. Slip op. at 4 (citation omitted). The policyholder argued that the record was not sufficient to find conclusively that he expected/intended injury; but distinguishing prior authority, the Eighth Circuit found there were no circumstances where an accidental loss was even arguably possible. Slip op. at 5. The court concluded that proof of the underlying *tort ipso facto* and *ipso jure* meant the injury was expected or intended, holding:

[T]he comfort and consortium injuries alleged by [the husband] were sufficient to state a claim for alienation of affections, and under South Dakota law, [the husband] could not recover on this claim unless he proved that Pins intended to cause those specific injuries. In these circumstances, any loss to [the husband] was expected or intended by Pins and could not be deemed an accident. Therefore, State Farm had no contractual duty to defend.

Slip op. at 5.

Put differently, the court found that State Farm issued a homeowners policy, not a home-wreckers policy.

Notwen. The Eighth Circuits conclusion that there was no duty to defend where the elements of proof by definition negated coverage is consistent with a Tenth Circuit opinion decided two months before, *Notwen Corp. v. Am. Econ. Ins.*

Co., 2006 U.S. App. LEXIS 29645 (10th Cir. 2006). The gravamen of the underlying tort in *Notwen* was that trade secrets were misappropriated and the tortfeasor-insured allegedly used corporate and bankruptcy maneuvers to try to shield its misconduct. While recognizing that unintended consequences of an intentional act still may qualify as covered conduct, the court found that the complaint against *Notwen* admitted of no such possibility. Compare *Cincinnati Ins. Co. v. Eastern Atl. Ins. Co.*, 260 F.3d 742 (7th Cir. 2001). As in *Pins*, the policyholder sought to argue that there was a dispute of fact whether it was culpable and that those facts should be aired out in the underlying action which the insurer should be defending. The Tenth Circuit rejected this argument in part, reasoning:

[T]he argument is patently circular, rendering the exclusion of intentional torts from the liability policy meaningless, at least under the circumstances presented here: it asserts, in effect, that a duty to defend against intentional-tort claims excluded under the policy is nevertheless triggered whenever the insured seeks to defend itself (with the insurers assistance) in a lawsuit alleging intentional-tort claims.

Notwen, 2006 U.S. App. LEXIS 29645, at *9-10.

Cf. Evett v. Corbin, 305 S.W.2d 469, 472 (Mo. 1957).

While courts are reluctant to confer on insureds the power to compel their insurers to defend solely by their incanting a denial of the allegations, policyholders reasonably do expect their insurers to protect them when they are wrongly accused of torts. Whatever conduct may have led to the suit is one that qualifies as a covered act (no violation of an exclusion applies) and the insureds being compelled by external circumstances to pay money to fix something (in this instance, a not-meritorious suit) is a casualty in as much as the infestation of lawyers is as unanticipated as a lighting strike.

Lowell. Many insurance-coverage lawyers are familiar with the California Supreme Courts landmark decision in *Gray v. Zurich Ins. Co.*, 419 P.2d 168 (Cal. 1966), but there is a lesser-known companion case to *Gray* decided concurrently that addresses the important issue of insurers duty to defend against intentional torts: *Lowell v. Maryland Casualty Company*, 419 P.2d 180 (Cal. 1966). Standard liability policies provide that the insurer will defend an insured even if such suit is groundless, false or fraudulent. The California Supreme Court in *Lowell* found this groundless, false or fraudulent language to be key in giving rise to a reasonable expectation that the insurer will defend a suit that, if the allegations were true, would not be covered, but where the insured also could obtain a defense verdict of non-liability. (This is different from an insured not being liable for intentional injury but being held liable of the lesser-included offense of negligently caused injury.) So long as there was a substantial basis for the insureds contention of non-liability, the insurer is required to defend:

The insured could reasonably expect that the insurer would furnish him a defense against the groundless charge that the insured had committed an assault and battery against the third party. The insured would not expect that the insurer could avoid the obligation of defense on the ground that such obligation covered only covered accidents which were indemnifiable under the policy and that an assault and battery was not such an indemnifiable accident. The policy promised a defense even if [the third party] suit is groundless.

419 P.2d at 182.

Lowell was in some regards an easy case because the insured obtained a defense verdict in the tort case and the policy expressly afforded defense to groundless, false or fraudulent claims; the exclusion for assault and battery did not apply (since the insured was found not guilty). See *Travelers Ins. Cos. v. N. Seattle Christian & Missionary Alliance*, 650 P.2d 250 (Wash. Ct. App. 1982). Thus, given that *Lowell* was if defense were not granted an insured who would be left with a gap in coverage for defense costs that incurred to the insurers benefit (by avoiding a potentially larger loss or a change in the course of the mounting of the successful defense, cf. *Arenson v. National Auto. & Cas. Ins. Co.*, 48 Cal.2d 528 (1957)), the court reached out to find an obligation to reimburse the cost of the successful defense. Nevertheless, forty years after *Lowell*, insurers and insureds continue to tangle over the applicability of the duty to

defend to cases of intentional torts.

Richmond on Excess Versus Primary Insurers: The Bad Faith Battle

2008 Emerging Issues 2969

Douglas R. Richmond on Excess Versus Primary Insurers: The Bad Faith Battle

By Douglas R. Richmond

November 2, 2007

SUMMARY: Excess insurance presents a special problem. A primary insurer may decline to settle a claim within its policy limits secure in the knowledge that it cannot be held liable for bad faith to its insured because any verdict or judgment that exceeds its limits will be paid by the excess carrier. Here the primary insurer is gambling with the excess insurers money instead of the insureds. But what is the excess insurer to do?

ARTICLE: INTRODUCTION

The terms primary, excess and umbrella describe types of liability insurance policies. A primary policy provides the first layer of insurance coverage. Primary coverage potentially attaches immediately upon the happening of an occurrence, or as soon as a claim is made. The primary insurer is first responsible for defending and indemnifying the insured in the event of a covered or potentially covered occurrence or claim.

An excess policy provides coverage above an underlying limit of primary insurance. Excess coverage generally is not triggered until the underlying primary limits are exhausted by way of judgments or settlements. A true excess policy does not broaden the underlying coverage; it simply increases the amount of coverage available to compensate for a loss.

An umbrella policy is like an excess policy in that it is written in addition to a primary policy to protect the insured against liability for catastrophic losses that would exceed the limits of affordable primary coverage. An umbrella policy differs from an excess policy in a critical aspect: an umbrella policy typically insures against certain risks that a concurrent primary policy does not cover. Accordingly, the terms excess policy and umbrella policy are not synonymous, although an umbrella policy is much more like an excess policy than it is a primary liability insurance policy. n1 This article will treat excess and umbrella insurers identically, and refer only to excess insurers.

Excess and umbrella policies, like all insurance policies, contain an implied duty of good faith and fair dealing. The implied duty of good faith and fair dealing essentially requires that neither party to a contract do anything to impair or injure the others right to receive the benefits of their agreement. An insurer that breaches its duty of good faith and fair dealing to its insured breaches its contract, and also may be said to commit the tort of bad faith. The prototypical bad

faith claim in the liability insurance context is a situation in which a primary insurer with exclusive control over the settlement of a claim against its insured fails or refuses to settle within its policy limits because it allegedly places its financial self-interest ahead of its insureds interests. In other words, the insurer is seen as gambling with the insureds money.

Excess insurance presents a special problem. A primary insurer may decline to settle a claim within its policy limits secure in the knowledge that it cannot be held liable for bad faith to its insured because any verdict or judgment that exceeds its limits will be paid by the excess carrier. Here the primary insurer is gambling with the excess insurers money instead of the insureds. But what is the excess insurer to do? Because the excess carrier has no contractual relationship with the primary insurer it has no apparent contractual protections, whether express or implied. n2 Bad faith law provides the answer. DISPUTES BETWEEN EXCESS AND PRIMARY INSURERS

Most bad faith cases involving excess coverage grow out of a primary carriers failure to settle a case within its policy limits. A primary insurers failure to settle a case within its policy limits when the facts should require it to do so, thereby exposing its insured to personal liability, is the essence of the third-party bad faith tort. A primary insurers wrongful failure to settle a case within its policy limits is no less offensive when an excess insurer must bear liability for the resulting judgment above the primary carriers limits. n3 Allowing excess insurers to sue primary insurers for bad faith encourages reasonable settlements, prevents primary insurers from obstructing settlement, prevents unfair distribution of losses among primary and excess insurers, and reduces the cost of excess insurance. n4

The theory on which an excess carrier pursues a primary insurer for alleged bad faith may be pivotal. For example, courts typically reject equitable contribution because excess and primary policies do not cover the same risk. n5 A few courts hold that a primary insurer owes an excess insurer a direct duty of good faith and fair dealing. n6 These courts reason that when a primary insurer refuses to settle in bad faith, the excess insurer is in the same position as an insured. n7 Fairness dictates the imposition of a direct duty of good faith on the primary insurer, because the excess carrier relies on the primary carrier to discharge any claims handling and defense obligations. n8 Direct duty jurisdictions reason that an excess insurer may:

[R]ely on [a] primary insurer to act reasonably in (1) discharging its claim-handling obligations; (2) discharging its defense obligations; (3) properly disclosing and apprising the excess carrier of events which are likely to effect that carriers coverage; and (4) safeguarding the rights and interests of the excess carrier by not placing the primary carriers own interests above that of the excess insurer. n9

Furthermore, recognizing a direct duty in favor of an excess carrier is in the public interest as the settlement of good-faith disputes at or near the amount of an expected judgment will be promoted, with the consequence of less litigation over disputes that should not be logically litigated, as well as the result of lower insurance premiums for excess coverage. n10

Most courts reject the direct duty theory. n11 Under the majority rule, the duty to settle that a primary insurer owes an excess insurer derives from the primary insurers duty to the insured, such that an aggrieved excess insurer may sue on an equitable subrogation theory. n12 For an excess insurer to sue a non-settling primary insurer via equitable subrogation the excess insurer must prove that the primary insurer failed to fulfill some duty to the insured, n13 and it must pay some portion of the verdict or judgment at issue. n14 At the very least, the insured must be exposed to an excess judgment. n15

As between direct duty theory and equitable subrogation, the latter represents better contract law and insurance law. Though direct duty proponents may argue that their way avoids equitable defenses (such as estoppel) that might operate to deny an excess carrier redress, that simply is not so; equitable defenses work on legal claims as well as those sounding in equity. n16 A primary insurer in a direct duty jurisdiction also may have perfectly valid defenses to an excess insurers bad faith claim that do not sound in equity.

There are two situations, however, in which the recognition of a direct duty arguably makes some sense, contract law hurdles aside. First, consider the situation in which the plaintiff is willing to settle only for an amount that exceeds the primary insurers policy limits. An insurer generally owes its insured no implied duty to settle where no offer is made within its limits. n17 Under equitable subrogation theory, the absence of a policy limits settlement offer allows the primary insurer to try the case unencumbered by potential bad faith liability even though it is gambling with the excess insurers money. The excess insurer can have rights against the primary carrier no greater than those enjoyed by the insured, which would be none. Second, what of the situation where the insured insists on trying the case despite the risk of a verdict greater than the limits of its primary policy? Perhaps the insured is concerned about its reputation or about business interests that might be harmed by a decision in the case at bar. If the excess insurers right to sue the primary carrier for bad faith is derivative, any claim the excess insurer might have will be foreclosed by the insureds decision to roll the dice. n18

As for the first scenario, why should an excess insurer be given any rights greater than an insured? There is no evidence of such a need. Moreover, this is exactly the risk for which the excess insurer bargained. With respect to the second scenario, it will rarely come to pass. Standard primary liability insurance policies grant the insurer the right to settle as it deems expedient. Such provisions trump the insureds desire for vindication by a jury. Additionally, if the insured irresponsibly insists on a trial, an excess insurer may avoid liability by asserting the insureds breach of its duty of good faith and fair dealing. The excess carrier does not need to be able to sue the primary insurer in light of the defense the insureds conduct affords.

Practice Insight: The theory on which an excess insurer may recover against a primary insurer is unsettled in many jurisdictions. Lawyers handling suits on behalf of excess insurers in these states are safest pleading the excess carriers claim as one for equitable subrogation, but there likely is little harm in alternatively pleading a direct duty.

California Union Insurance Co. v. Liberty Mutual Insurance Co. The case of *California Union Insurance Co. v. Liberty Mutual Insurance Co.* n19 illustrates the burdens primary insurers may bear when trying to resolve a case short of an excess carriers coverage. In that case, a telephone companys (CTI) second-level excess insurer, California Union, sued its underlying insurer, Liberty Mutual, for negligence and bad faith in failing to settle a case within Liberty Mutuals policy limits. Liberty Mutual had issued CTI a \$1 million primary policy and a \$1 million first-level excess policy. California Union had issued a \$4 million excess policy above the Liberty Mutual excess policy.

The plaintiff in the underlying case, Hauck, was catastrophically injured while inspecting a roof. Liberty Mutual provided CTI with a defense to Haucks suit. Hauck initially demanded \$37.5 million to settle. Despite her belief that CTIs liability clearly exceeded the limits of Liberty Mutuals coverage, the responsible Liberty Mutual claims handler refused to offer the companys \$2 million policy limits toward settlement. California Union reserved its entire \$4 million policy limits shortly thereafter based on the advice of its monitoring counsel.

As discovery proceeded the case got worse from the defendants perspective. Even so, Hauck reduced his settlement demand to \$16 million. Liberty Mutuals defense counsel asked for authority to settle the case and California Union formally demanded that Liberty Mutual do so. California Union was prepared to contribute to a settlement but would not do so until Liberty Mutual exhausted its \$2 million policy limits. At a meeting of all concerned on the defense side, Liberty Mutual advised that it had no plans to contribute to any settlement.

A settlement conference was ultimately convened and all of the defendants except CTI settled for a combined \$4.4 million. Despite the fact that Liberty Mutuals defense counsel advised it to offer its \$2 million policy limits in settlement and another excess carrier above California Union urged Liberty Mutual to move quickly toward settlement, Liberty Mutual refused to offer more than \$400,000. Even when it became apparent that Liberty Mutual could settle the case for \$1.6 million, it refused to offer more than \$800,000.

Haucks lawyer tried the case solely against CTI. The jury returned a \$16,038,737 verdict for Hauck, reduced by 40 percent for Haucks comparative fault. One month later, California Union and Liberty Mutual settled with Hauck for

\$5,723,242, with Liberty Mutual paying its \$2 million policy limits and California Union contributing \$3,723,242. California Union then sued Liberty Mutual for bad faith in failing to settle the case.

Both carriers moved for summary judgment in the bad faith action, and the case was decided on their cross motions. Liberty Mutual argued that California Union was equitably estopped from pursuing its claims because the presence of California Unions monitoring counsel at the settlement conferences altered the negotiating landscape because it signaled to Hauck that the excess carrier was concerned by the case, and therefore that more money might be forthcoming. n20 The *California Union* court quickly dispatched this argument.

An excess insurer can be estopped from recovery if its own actions induced the defendant to try the case Likewise, if an excess insurance carrier participates in settlement negotiations and approves the settlement amount, it may have waived its right to challenge the settlement later Neither of those situations exists here, and the mere hiring of monitoring counsel does not create equitable estoppel. n21

Liberty Mutual next asserted that California Union had suffered no harm because it had reserved its entire \$4 million policy limits. This argument failed easily. Under Illinois law, if a primary insurer breaches its duty to settle, the excess verdict itself constitutes damages.

The court ultimately concluded that no reasonable trier of fact could find that Liberty Mutuals actions were reasonable. There was virtually no evidence that Liberty Mutual met its duty of care to CTI and, by way of equitable subrogation, its duty to California Union. The court thus entered summary judgment for California Union, awarding the excess insurer \$3,723,242 (its portion of the settlement) plus interest and costs.

Of course, there may be cases in which the primary insurer mishandles settlement or misjudges the value of the case, but these blunders are meaningless because the plaintiffs damages are so great that the case could never be settled within the primary policy limits. n22 Alternatively, there may be cases in which a primary insurer reasonably believes that there is no chance of a verdict exceeding its policy limits, but an excess verdict in fact results through no fault of the primary insurer. n23 There are also cases in which a primary insurer contributes its full policy limits to a settlement to which the excess insurer also grudgingly contributes despite its belief that the case could have been settled within the primary policy limits. n24 In all of these cases an excess insurer that pays all or part of its policy limits will not be able to prevail on a bad faith claim against the primary insurer. Where the excess insurer contributes to the settlement, there is no excess judgment on which to predicate a bad faith claim. n25 An excess insurers bad faith suit will fail in the other cases either because there is no bad faith or because the primary insurers failures or errors are not the cause of the excess insurers claimed damages. Indeed, the excess insurer has no damages; it paid under its policy not because of the primary insurers bad faith, but because it realized the risk it insured.

Finally, some courts decline to recognize a cause of action for excess insurers against primary insurers, whether by way of equitable subrogation or pursuant to a direct duty theory, even where the primary insurers conduct clearly is blameworthy. n26 These courts reason that excess insurers that are forced to indemnify their insureds for judgments greater than their primary policy limits have suffered no injury. n27 Rather, the excess judgments about which they complain are exactly the risk for which they bargained and collected premiums. n28

To be sure, excess insurers bargain for the risk they accept above the limits of underlying primary insurance and they collect premiums for the risk they assume. But their willingness to assume risk and to price it reasonably is at least to some extent predicated on rational behavior by their underlying primary insurers. Furthermore, this simplistic approach to analyzing a primary insurers liability for bad faith vis--vis an excess insurer sometimes causes courts to incorrectly analyze the issues.

National Surety Corp. v. Hartford Casualty Insurance Co. n29 In this case, for example, the court reasoned that allowing excess insurers to sue primary insurers for bad faith on equitable subrogation theory could cause primary insurers to raise their premiums because they would face assuming and paying the cost of excess insurers economic

risk. n30 Primary insurers would, in turn, pass this cost along to the many insureds who do not purchase excess insurance. n31 But this reasoning represents the height of voodoo economics, because an excess insurer suing a primary insurer for bad faith via equitable subrogation is merely stepping into the insureds shoes. There is no new risk to the primary insurer; only the identity of the plaintiff has changed. The primary insurer is bearing exactly the same risk that exists in the absence of excess insurance--the risk that its reckless or malicious behavior will expose it to extracontractual liability. Indeed, to refuse excess insurers a right of action is to encourage primary insurers to behave irrationally.

Fortunately, the Sixth Circuit recognized the many flaws in the district courts reasoning in *National Surety*, and reversed the decision. n32 In doing so, the court of appeals embraced the majority rule recognizing equitable subrogation. n33

Federal Insurance Co. v. Travelers Casualty & Surety Co. n34 This 2002 Alabama decision, arose out of a \$4.5 million wrongful death verdict against Pearce Construction Co. (Pearce). The case could have been settled before trial for \$350,000. The case was settled for \$4.6 million while on appeal; Pearces primary insurer, Travelers, paid \$1 million, and Pearces excess insurer, Federal, paid the remainder. Federal sued Travelers in federal court to recover the portion of the settlement that it paid. Ultimately, the Eleventh Circuit certified two issues to the Alabama Supreme Court related to Travelers alleged bad faith liability for failing to settle the wrongful death action within its policy limits.

The Alabama Supreme Court held that in the absence of contrary contractual obligations, a primary insurer owes no duty of good faith to an excess insurer with respect to the settlement of a lawsuit against an insured. n35 As the court explained:

In a typical insurance contract, the insured expressly relinquishes to the insurer the right to control the defense and settlement of any action arising under the contract. The insureds reliance on the abilities and good faith of the insurer is therefore necessarily at a maximum. In this case, not only did federal not in any way relinquish the right to Travelers, Federal's policy expressly reserved to Federal [t]he right to participate in the investigation, settlement, or defense of any claim or suit that we feel may create liability on our part under the terms of the policy.

Furthermore, there is a difference in bargaining power between an insurer and an insured in drafting and negotiating the insurance contract. . . . However, in the absence of separate contractual duties, the primary and excess insurance carriers stand on more equal footing. . . . Simply put, the primary-insurer/excess-insurer relationship does not involve the same policy considerations that justify imposing on those insurers the duty of good faith that currently exists between an insured and his insurer. n36

Having dispatched of any direct duty of good faith and fair dealing, the court turned to the doctrine of equitable subrogation and Federal's claim that it should be allowed to sue Travelers as Pearces subrogee. The court rejected this approach as well. Briefly, a subrogated insurer stands in its insureds shoes and may assert only those claims that the insured might validly assert. Where an excess insurer fully satisfies a judgment exceeding an insureds primary policy limits, the insured never suffers personal liability. Simply put, equitable subrogation cannot exist to provide a conduit to assert what are conclusively nonexistent rights. n37

CONCLUSION

There is no questioning the importance or prevalence of excess insurance and umbrella coverage, nor the potential for controversy between them and primary insurers. Recognizing the tension between primary and excess insurers, several insurance industry associations and interested insurers jointly created the Guiding Principles for Primary and Excess Insurers in 1974. These principles are:

1. The primary insurer must discharge its duty of investigating promptly and diligently even those cases in which it is apparent that its policy limit may be consumed.

2. Liability must be assessed on the basis of all relevant facts which a diligent investigation can develop and in the light of applicable legal principles. The assessment of liability must be reviewed periodically throughout the life of a

claim.

3. Evaluation must be realistic and without regard to the policy limit.

4. When from evaluation of all aspects of a claim, settlement is indicated, the primary insurer must proceed promptly to attempt a settlement, up to its policy limit if necessary, negotiating seriously and with an open mind.

5. If at any time, it should reasonably appear that the insured may be exposed beyond the primary limit, the primary insurer shall give prompt written notice to the excess insurer, when known, stating the results of investigation and negotiation, and giving any other information deemed relevant to a determination of the exposure, and inviting the excess insurer to participate in a common effort to dispose of the claim.

6. Where the assessment of damages, considered alone, would reasonably support payment of a demand within the primary policy limit but the primary insurer is unwilling to pay the demand because of its opinion that liability either does not exist or is questionable and the primary insurer recognizes the possibility of a verdict in excess of its policy limit, it shall give notice of its position to the excess insurer when known. It shall make available its file to the excess insurer for examination, if requested.

7. The primary insurer shall never seek a contribution to a settlement within its policy limit from the excess insurer. It may, however, accept contribution to a settlement within its policy limit from the excess insurer when such contribution is voluntarily offered.

8. In the event of a judgment in excess of the primary policy limit the primary insurer shall consult the excess insurer as to further procedure. If the primary insurer undertakes an appeal with the concurrence of the excess insurer, the expense shall be shared by the primary and the excess insurer in such manner as they may agree upon. In the absence of such an agreement, they shall share the expense in the same proportions that their respective shares of the outstanding judgment bear to the total amount of the judgment. If the primary insurer should elect not to appeal, taking appropriate steps to pay or to guarantee payment of its policy limit, it shall not be liable for the expense of the appeal or interest on the judgment from the time it gives notice to the excess insurer of its election not to appeal and tender its policy limit. The excess insurer may then prosecute an appeal at its own expense being liable also for interest accruing on the entire judgment subsequent to the primary insurers notice of its election not to appeal. If the excess insurer does not agree to an appeal it shall not be liable to share the cost of any appeal prosecuted by the primary insurer.

9. The excess insurer shall refrain from coercive or collusive conduct designed to force a settlement. It shall never make a formal demand upon a primary insurer that the latter settle a claim within its policy limit. In any subsequent proceedings between excess insurer and primary insurer the failure of the excess insurer to make formal demand that the claim be settled shall not be considered as having any bearing on the excess insurers claim against the primary insurer.

Although many primary and excess insurers either declined to adopt the Guiding Principles or have withdrawn as signatories to them, at least two courts have specifically applied the Guiding Principles as though they are an industry standard, with liability flowing from of their breach. n38

In summary, bad faith litigation between primary and excess insurers shows no signs of abating. The size of many losses and verdicts gives excess insurers a powerful incentive to vigorously pursue their interests. It is critical for insurance lawyers to understand the contours of bad faith law in this context.

Robinson on Recent Workers Comp. Cases: Blood Transfusion, Migrant Worker, Etc.

By Thomas A. Robinson

October 19, 2007

SUMMARY: Anyone who thinks that workers compensation law deals primarily with broken bones, low back injuries, and computations of average weekly wages has only to look at recent decisions from around the country to see that the issues examined within the comp world are as interesting and intricate as in most any other area of the law. This commentary, written by Thomas A. Robinson, the contributing writer for Larson's Workers' Compensation Law, surveys recent decisions where appellate courts have been called upon to rule on a host of unusual issues: refusal of blood transfusions on religious grounds, injuries sustained by migrant workers collecting work documents in Mexico, compensability of injuries sustained during horseplay, the effect on continuing disability benefits of earnings from a former workers illegal drug trade, a **\$25,000 penalty for the failure to pay a \$100 phone bill, to name a few.** **Robinson speculates that while an employee who was a member of a well-known and recognized religion, such as Jehovah Witnesses, might be granted workers compensation benefits although medical treatment was declined by the employee, a member of a small, unknown, and unrecognized, religion might not receive the same protection.**

ARTICLE: Overview

Anyone who thinks that workers compensation law deals primarily with broken bones, low back injuries, and computations of average weekly wages has only to look at recent decisions from around the country to see that the issues examined within the comp world are as interesting and intricate as in most any other area of the law. Within the past few months, appellate courts have been called upon to rule on a host of unusual issues: refusal of blood transfusions on religious grounds, injuries sustained by migrant workers collecting work documents in Mexico, compensability of injuries sustained during horseplay, the effect on continuing disability benefits of earnings from a former workers illegal drug trade, a **\$25,000 penalty for the failure to pay a \$100 phone bill, to name a few.**

Refusal of Blood Transfusion for Religious Reasons as Grounds for Disqualifying Worker or Worker's Survivors From Workers' Compensation Benefits. In *Wilcut v. Innovative Warehousing*, 2007 Mo. App. LEXIS 915 (Mo. Ct. App. June 19, 2007), the Missouri Court of Appeals held that the refusal of a blood transfusion based on religious grounds was not an unreasonable refusal of medical treatment that would support a denial of further workers' compensation benefits to the worker or the worker's survivors. Holding that an injured worker's religious beliefs should

be given the benefit of broad latitude, the appellate court held the Missouri workers' compensation laws contemplated that there might be instances in which medical procedures involving little risk to the worker might nevertheless be refused on religious grounds without that refusal being treated as an intervening cause of further injury or death.

In *Wilcut*, a truck driver was involved in a work-related accident in which he sustained severe injuries. He was taken to a hospital for treatment and died there seven days later. His medical care was complicated by the fact that he refused to accept a blood transfusion on the grounds that it was not permitted by his faith. He instructed his doctors that, as a Jehovah's Witness, he could not receive the transfusion. At the time of his refusal, the truck driver was fully aware of the implications of his decision and had the support of his wife and family.

The employer did not object to the driver's decision, and paid the funeral expenses and death benefits for nearly two years. When the employer later stopped the payments, the widow sought their reinstatement. The law judge determined that the driver's refusal of medical treatment was not unreasonable under the Missouri statute, Mo. Rev. Stat. § 287.140.5., but the Commission found the refusal unreasonable both because the physical risk in receiving the units of blood was minimal, compared to the near certainty that the driver would have survived his injuries if he had been transfused, and because it found that Jehovah's Witnesses could seek forgiveness of their sins within the doctrines of their faith. Noting that the employer had not objected to the decision of the driver, that the Missouri statutory scheme seemed to contemplate that certain medical procedures might be refused on religious grounds, and that the Commission had virtually disregarded the truck driver's religious beliefs, the appellate court held that an employee's religious beliefs be liberally considered. Under these facts, the court held the driver's refusal to accept a blood transfusion was not unreasonable. A spirited dissent filed by Justice Romines means the issue will receive additional review by the Missouri Supreme Court.

Although the Missouri Court of Appeals did not base its findings on waiver grounds, one can legitimately wonder whether the fact that the employer had willingly paid Wilcut's funeral expenses and death benefits for two years to the Wilcut's survivors played some role in the decision.

Wilcut is only the second reported workers' compensation decision involving the refusal of a blood transfusion on religious grounds. In an early California case, *Martin v. Industrial Accident Commission*, 147 Cal. App. 2d 137, 304 P.2d 828 (1956), an employee sustained serious injuries when scaffolding on which he was working collapsed. The employee was taken to the hospital where he was advised that a blood transfusion was necessary. The employee, a Jehovah's Witness, refused any transfusion for religious reasons. The employee and his wife, both orally and in writing, confirmed to hospital authorities and the attending physician that he would rather die than have a transfusion. The employee died shortly after surgery and, according to expert testimony, would probably have survived had he been given transfusions of whole blood. The industrial commission denied the claim. On review, the court affirmed. The court found that there was substantial evidence to support the commission's finding that the proximate cause of the employee's death was not the injury he suffered at work but his unreasonable refusal to accept proper medical care. The court reasoned that the employee could not voluntarily choose to unreasonably forego medical care, whether for religious reasons or any other, and then require the employer to pay compensation for consequences that could have been avoided.

It should be observed that by virtue of a 1984 amendment, the Longshore and Harbor Workers' Compensation Act provides that nothing in the Act prevents an injured employee from relying "in good faith on treatment by prayer or spiritual means alone, in accordance with the tenets and practice of a recognized church or religious denomination," and further, that any employee who relies upon such prayer or spiritual means alone for healing shall not be considered to have unreasonably refused medical or surgical treatment.

33 U.S.C.S. § 907(k) provides as follows:

"(k) Refusal of treatment on religious grounds.

(1) Nothing in this Act prevents an employee whose injury or disability has been established under this Act from relying in good faith on treatment by prayer or spiritual means alone, in accordance with the tenets and practice of a *recognized* church or religious denomination, by an accredited practitioner of such recognized church or religious denomination, and on nursing services rendered in accordance with such tenets and practice, without suffering loss or diminution of the compensation or benefits under this Act. Nothing in this subsection shall be construed to except an employee from all physical examinations required by this Act.

(2) If an employee refuses to submit to medical or surgical services solely because, in adherence to the tenets and practice of a *recognized* church or religious denomination, the employee relies upon prayer or spiritual means alone for healing, such employee shall not be considered to have unreasonably refused medical or surgical treatment under subsection (d)." [Emphasis added]

The Longshore Act provides no guidance in determining which churches or religious denominations are *recognized* and which are not. One might, therefore, encounter a situation in which the members of a small, unknown church might hold beliefs substantially similar to those in a well-known denomination, such as the Jehovah's Witnesses, and might not be protected under the literal terms of the statute.

The Court of Appeals of Oregon considered that question in *Kemp v. Workers' Compensation Department*, 65 Or. App. 659, 672 P.2d 1343 (1983) and held that, to the extent the Oregon statute, ORS 656.010, allowed members of "well-recognized" churches to exercise their right to refuse medical treatment without penalty, but did not allow the same right to members of small, not "well-recognized" churches, it was unconstitutional.

For further discussion of refusal of reasonable medical treatment within the workers' compensation context, see generally 1-10 *Larson's Workers' Compensation Law* § 10.10.

Injuries Before Hiring--Migrant Worker's Acts Related to the Securing of Necessary Work Visa Found Insufficiently Related to Employment to Support Claim. An agricultural worker, a citizen and resident of Mexico, who had worked at a particular Virginia farm during the harvest seasons of 1996-1998 and who was killed in a bus accident in July 1999 as he traveled from Morelas to Monterrey, Mexico to pick up employment papers, including a work visa, which were required to qualify the worker to work again in 1999 for the Virginia farm, did not sustain an injury arising out of and in the course of the employment, held a Virginia court in *De la Rosa Herrera v. Martin*, 49 Va. App. 469, 642 S.E.2d 309 (2007).

Acknowledging that the protections of workers' compensation law are not required to wait until all relevant employment papers have been drafted, signed, and delivered, that in many cases it is sufficient if the employee has been told "to report to work," the appellate court determined that there was insufficient connection to the employment under the facts to bring the worker within the protection of the Virginia Workers' Compensation Act. In spite of the fact that he had worked for the farm for a number of years and anticipated working at that same farm again, the employment contract had not yet been completed. While the employment visa was necessary, so were other documents that could only be completed in Virginia. Accordingly, the Virginia commission had no jurisdiction over the widow's claim.

Herrera appears to be the only reported case involving a migrant worker sustaining an injury prior to the completion of required employment paperwork. As harsh as the decision may appear, particularly in light of the fact that the Herrera had worked for the Virginia farm for several prior seasons and there was little, if any, question that he would again be hired, the Virginia decision is in line with a number of important long-standing decisions within the workers' compensation context. For example, in *Miller v. T. H. Browning Steamship Co.*, 73 F. Supp. 185 (W.D.N.Y. 1947), *aff'd*, 165 F.2d 209 (2d Cir. 1947), the employer had a contract with the seamen's union which required the employer to call upon the union to furnish help before attempting to fill any job directly. The employer called the union for an oiler; the union sent the plaintiff to the ship; and the plaintiff on his way along the deck to report for work fell into an open hatch. Although one gets the impression that the plaintiff would have been hired as a matter of course, still he had not been officially accepted by the employer as an employee, nor had he made any agreement with the employer

that would bind him or prevent him from turning and walking off the ship if he had chosen to do so. On this reasoning, the court set aside a verdict of \$77,000 in favor of the employee under the Jones Act.

Similarly, in *Posey v. Industrial Commission*, 87 Ariz. 245, 350 P.2d 659 (1960), under a union agreement the contractor would requisition employees from the union, the union would furnish, by referral, the employees requisitioned, and "the contractor would notify the union immediately when such employees were hired." One half day's travel time plus transportation expense of \$5 was noted on the claimant's Work Clearance slip. The claimant was injured in an automobile accident en route to the job site. The majority held that the claimant had not been hired, since the master agreement with the union laid down only the conditions of a contract between the contractor and the referred members, who were subsequently hired at the job site. A vigorous dissent emphasized the distinction between a contract for hire relating to a specific master agreement with a union and the definition of an employment contract relating to compensation with its purpose "to protect workmen from economic loss due to injuries attributable to employment."

It is difficult to argue with the dissent in *Posey*: that for compensation law purposes, contract law technicalities should be subordinated to the reality of the relationship existing from the time the claimant begins the journey toward the job pursuant to the overall-contract governing the way hiring is done in this particular employment. The same could be said for the migrant worker, such as *Herrera*, who completes virtually all routine paperwork in his or her home country and only awaits a formal "rubber-stamping" of familiar forms in the United States.

For further discussion related to injuries sustained before hiring, see generally 2-26 *Larson's Workers' Compensation Law* § 26.02[3].

Supervisor's Strong Encouragement Related to Continuing Education Course Found Sufficient to Bring Event Within Employment for Purposes of Workers' Compensation. In *Murphy v. Mt. Sinai Hosp.*, 37 A.D.3d 919, 829 N.Y.S.2d 728 (2007), a New York appellate court sustained an award of disability benefits to a nurse practitioner who suffered multiple injuries in a traffic accident while attending a continuing education conference. A supervisor and mentor admitted that she had supplied the nurse practitioner with a brochure advertising the conference and "strongly encouraged" him to take advantage of the employer's policy advocating employee participation in such courses. That evidence, coupled with the fact that the employer's payment records reflected that the nurse received remuneration for two "conference days", was more than sufficient to support an award of benefits.

Murphy is consistent with the general rule that the compensability of an employee's injury while traveling to or attending conventions, institutes, seminars, and trade expositions generally turns on whether the claimant's contract of employment contemplated attendance as an incident of the work. It is **not** enough that the employer would benefit indirectly through the employee's increased knowledge and experience. Where there is active encouragement, as in *Murphy*, or where the employee is paid a travel allowance or given other substantial benefit, the injury is deemed to be within the course and scope of the employment.

Note generally that while employment connection may certainly be supplied by requiring attendance; it is not necessary (attendance was not, for example, required in *Murphy*). It is also sufficient if attendance, although not compulsory, is urged or expected.

Practitioners and other interested parties should note that the injury need not always be directly connected to the continuing education, seminar, or activity to support an award of compensation benefits. Thus, in *Missouri Dept. of Social Servs. v. Blatter*, 655 S.W.2d 819 (Mo. Ct. App. 1983), a social services employee attending a two-day training seminar was struck and killed by a car while crossing the street from a night club to the employee's hotel. An award was affirmed on the basis that attendance at the night club social gathering had itself been encouraged by the employer.

For further discussion related to the compensability of injuries while participating in various professional

educational pursuits, see generally 2-27 *Larson's Workers' Compensation Law* § 27.03[1][a].

Ohio Court Indicates Earnings From Injured Worker's Illegal Drug Trade May Be Considered in Determining Extent of Disability. In an unusual recent case from Ohio, *State ex rel. Lynch v. Industrial Comm'n*, 171 Ohio App. 3d 453, 2007 Ohio 292, 871 N.E.2d 618, the appellate court determined that it was appropriate to reduce an injured worker's permanent disability benefits by an estimate of the income the worker earned in his illegal drug trade.

This decision appears somewhat at odds with the ordinary rule that in disability claims, since the usual issue being tested is the claimant's ability to command regular income as the result of his or her personal labor, income from a business owned by the claimant should not be used to reduce disability, even though the claimant contributes some work to it. For example, in *Hensley v. Industrial Maint. Overflow*, 166 N.C. App. 413, 601 S.E.2d 893 (2004), review denied, 2005 N.C. LEXIS 522 (N.C. May 4, 2005), a North Carolina court held that neither the income from a tobacco allotment the claimant leased to relatives nor the income from a mobile home park the claimant owned established wage-earning capacity.

In *Lynch*, however, the court was understandably uneasy in treating the claimant's ill-gotten gains with the same respect as those afforded to a legitimate business enterprise. It reasoned that engaging in a continuing criminal enterprise for profit was sustained remunerative employment, just as other legitimate and legal endeavors might be.

For further discussion of post-injury income and disability indemnity payments, see generally 4-83 *Larson's Workers' Compensation Law* § 83.05.

Employer's Choice of Medical Care Provider Does Not Apply to Choice of Pharmacy. An Alabama appellate court, in *Davis Plumbing Co. v. Burns*, 2007 Ala. Civ. App. LEXIS 253 (Ala. Civ. App. April 20, 2007), ruled that while the employer is allowed to choose the physician under Ala. Code § 25-5-77, it may not choose the particular pharmacy from which the claimant will receive medication.

The "choice of doctor" question is one of the most contentious within the workers' compensation world. It arises out of the necessity of balancing two desirable values: the value of allowing an employee, as far as possible, to choose his or her own doctor, and the opposing value of achieving the maximum standards of rehabilitation by permitting the compensation system to exercise continuous control of the nature and quality of medical services from the moment of injury. If the injured employee has completely unlimited free choice of doctor, in some cases he or she may select a doctor, because of personal relationship or acquaintance, who is not qualified to deal with the particular kind of case, or who at any rate is incapable of providing service of the quality required for the optimum rehabilitation process.

Like a number of other states, Alabama allows the employer to make the choice of medical care provider. The court here held that policy did not extend to every level of medical care and did not give the employer a veto over the employee's drug store. *Davis Plumbing* appears to be the only reported case in which a "choice of pharmacy" was at issue. It shows that even in states where there is substantial freedom on the part of the employer in shepherding the employee through the workers' compensation medical process, there are limits beyond which the courts are reluctant to go.

For further discussion related to the responsibility of the employer to provide medical care related to injury, see generally 5-94 *Larson's Workers' Compensation Law* § 94.02[1].

Delaware Adopts "Larson" Test for Horseplay Cases. In *Grabowski v. Mangler*, 2007 Del. LEXIS 301 (Del. July 9, 2007), an exclusivity issue case, the Delaware Supreme Court expressly adopted the "Larson" four-part test for horseplay cases, indicating that the arising out of the employment question depended upon the following factors: (1) the extent and seriousness of any deviation; (2) the completeness of the deviation; that is to say, whether it was co-mingled with the performance of the employment duty or involved an abandonment of that duty; (3) the extent to which horseplay had become part of the employment environment; and (4) the extent to which the nature of the employment might be expected to include some horseplay.

Here a number of co-workers held the worker down and wrapped him from ankles to shoulders in duct tape. Their actions caused injury to the worker's back, and he claimed psychological injuries as well. He sought and received workers' compensation benefits and later sued his co-workers in tort. When they claimed they were immune from tort liability because of the exclusive remedy provisions of the workers' compensation act, the trial court agreed. On appeal, however, the Supreme Court reversed and indicated the trial court should consider the issues utilizing the Larson test.

Among the issues the court will need to consider is whether or not horseplay had become such a pervasive practice at the employer's facility that the employer actively or tacitly acquiesced in the activity. Most of us are familiar with work environments in which clowning around, practical jokes and the like are the norm, where an atmosphere of "one-upmanship" can exist, where the level of prankish activity builds and builds until it is virtually out of control. Courts generally are reluctant to remove those prankish acts from the employment where the employer looks the other way or actively participates.

While courts will seldom explicitly say so in their opinions, they often treat male-dominated work environments--construction and highway maintenance, for example--differently from work inside an office. Following what amounts to a "boys will be boys" attitude, courts often treat incidents of horseplay around the construction or road site as small deviations and allow recovery of workers' compensation benefits. Pranks within the office environment are more likely to be held to have fallen outside the ordinary course of employment.

For further discussion related to the workers' compensation issues related to horseplay, see generally 6-111 *Larson's Workers' Compensation Law* § 111.03[3].

Colorado Court Affirms \$24,900 Penalty for Delay in Paying Phone Bill. A Colorado court recently affirmed the imposition of 83 penalties of \$300 each, totaling \$24,900, against an employer for a three-month delay in paying a \$107.79 cellular telephone bill where the injured worker had been awarded cell phone services necessary to make emergency calls. In *Associated Bus. Prods. v. Industrial Claim Appeals*, 126 P.3d 323 (Colo. Ct. App. 2005), the Colorado court noted that the administrative law judge had imposed a penalty of \$300 per day for the 83 days of non-payment and that the statute, Colo. Rev. Stat. § 8-43-304(1), would have allowed a penalty of up to \$500 per day.

Note that the employer here had voluntarily supplied the cellular telephone as part of the overall medical care provided to the injured worker. This appears to be the only reported case where an employer or carrier has supplied such telephonic equipment on this basis.

Last year, the California Workers' Compensation Appeals Board, in *Tune & Lube v. Workers' Comp. Appeals Board (Derboghossian)* (2006) 71 Cal. Comp. Cas 795 (writ denied) held that the imposition of multiple penalties against an employer, totaling in excess of \$10,000, for the employer's delayed payment of home health care and nursing services provided by the employee's wife, transportation costs, costs of a computer and a scanner, physical therapy costs, and a seeing-eye dog, did not violate the \$10,000 cap on penalties under the Senate Bill 899 amendments to Cal. Labor Code § 5814, when the penalties attached to separate and distinct acts of delayed payment and were awarded against different species of benefits.

Issues connected to the imposition of penalties continue to be some of the most contentious within the workers' compensation law setting. For further discussion related to the imposition of multiple penalties, see generally 1-10 Hanna, *California Law of Employee Injuries & Workers' Compensation* § 10.40[5], and 8-135 *Larson's Workers' Compensation Law* § 135.02.

ABOUT THE AUTHOR(S):

Thomas A. Robinson, Durham, N.C., received his B.A., cum laude, for both Economics and History, in 1973 from Wake Forest University, his J.D. in 1976 from Wake Forest University School of Law, where he served as Managing

Editor, Wake Forest Law Review, and his M.Div. in 1989 from Duke University Divinity School. From 1976 to 1986, Mr. Robinson was in private practice, where he focused on workers' compensation defense work. From 1987 to 1993, he was research and writing assistant to Professor Arthur Larson. Since 1993, Mr. Robinson has been the primary upkeep writer for Larson's Workers' Compensation Law (LexisNexis) and Larson's Workers' Compensation, Desk Edition (LexisNexis). He is a contributing writer for California Compensation Cases (LexisNexis) and Benefits Review Board ServiceLongshore Reporter (LexisNexis). He is also a contributing author of New York Workers' Compensation Handbook (LexisNexis) and a contributing editor for Workers' Compensation: The Survival Guide for Business (LexisNexis). Author of numerous short pieces on workers' compensation and employment law, Mr. Robinson has lectured widely on workers' compensation issues. He is also a member of the LexisNexis National Workers' Compensation Advisory Board.

Kissiah on Significant 2007-2008 Changes in Georgia Workers' Compensation Law

By Richard C. Kissiah

October 4, 2007

SUMMARY: Significant changes have occurred in the Georgia workers' compensation law in 2007 through legislation passed by the Georgia General Assembly and signed into law by the Governor, through the revision by the State Board of Workers' Compensation of its Rules & Regulations, and through decisions by the Supreme Court of Georgia and the Court of Appeals of Georgia. This commentary was written by Richard C. Kissiah, who practices almost exclusively in the field of workers' compensation law and is the author of Kissiah's Georgia Workers' Compensation Law (LexisNexis Matthew Bender) as well as an author and lecturer on the subject of Georgia workers' compensation law for the Atlanta Bar Association, the State Bar of Georgia, the Institute of Continuing Legal Education, and the State Board of Workers' Compensation.

ARTICLE: A number of changes have been made in Georgia workers' compensation law. Most of them are effective July 1, 2007. Some of them were effectuated by changes in the Georgia Workers' Compensation Act by the General Assembly that were signed into law by the Governor. Other changes were effectuated by the State Board of Workers' Compensation through its revision of its Rules & Regulations. Still other changes were made by the Georgia courts through case-law decisions interpreting the Act, and the Boards Rules.

Statutory Changes

Increase in Benefit Rates. Section 6 of HB 424 amends O.C.G.A. § 34-9-261 to increase, as to accidents occurring on or after July 1, 2007, the maximum weekly temporary total disability and permanent partial disability benefit rates from \$450 to \$500, and to increase the *minimum* temporary total disability benefit rate from \$45 to \$50. Section 7 of HB 424 amends O.C.G.A. § 34-9-262, as to accidents occurring on or after July 1, 2007, to increase the maximum weekly temporary *partial* disability benefit rate from \$300 to \$334 per week.

Dismissal by Operation of Law. Section 2 of HB 424 ends dismissal by operation of law as to applications for hearing filed on or after July 1, 2007. However, as to applications for hearing filed with the Board on or after July 1, 1985, but prior to July 1, 2007, it still provides that, as to an application for hearing for which no hearing is conducted for a period of five years, the application for hearing shall automatically stand dismissed [O.C.G.A. § 34-9-100(c)].

While dismissal by operation of law as to an application for hearing may be helpful to an employer in a case that is a so-called change in condition case, if it can be said that an application for hearing and an application for change in condition are one and the same thing, dismissal by operation of law of a mere application for hearing probably does not dismiss the underlying claim itself.

Section 2 of HB 424 also creates a *new* dismissal by operation of law provision that applies to the underlying claim itself rather than to a mere application for hearing. It provides that the underlying claim itself shall stand dismissed with prejudice by operation of law, *if*: (1) the claim is an occupational injury claim rather than an occupational disease claim; (2) the claim involves a date of injury on or after July 1, 2007; (3) neither disability benefits nor even medical benefits have been paid with regard to the claim; and (4) no hearing is conducted for a period of five years from the date of the alleged accident [O.C.G.A. § 34-9-100(d)(1) & (2)].

Farm Laborers. In two cases involving employees of the same alligator farm, Prehistoric Ponds, the Court of Appeals held that an employee of an alligator farm would not be included in the definition of farm laborer, so that the employee would be subject to the Act and, as such, eligible for workers' compensation benefits. The Court of Appeals based the decisions on its belief that alligators are considered wildlife, rather than livestock or fur-bearing animals, and its further belief that working with wildlife is not farm labor. However, within Section 1 of HB 424, the Georgia General Assembly has since amended O.C.G.A. § 34-9-2(a) to include, within the definition of farm laborer, and to therefore exclude such individuals from coverage (unless the farmer and farm laborer opt into coverage), any person employed by an employer in connection with the raising and feeding of and caring for wildlife, as such term is defined in paragraph (77) of Code Section 27-1-2.

Time within Which Employer May Appoint a Rehabilitation Supplier. Section 3 of HB 424 amends O.C.G.A. § 34-9-200.1(a) to increase, from fifteen days to twenty days, the period of time from the date of notification that an injury has been determined to be catastrophic, within which the employer has to appoint the employers choice of rehabilitation supplier. It further amends the aforementioned Code subsection to change, from the word will to the word shall the provision that where the employer fails to select a rehabilitation supplier, within that twenty day time period, A rehabilitation supplier shall be appointed by the board to provide services at the expense of the employer.

Medical Evaluations. While it has long been the policy of the Board to include psychiatric evaluations and psychological evaluations within the evaluations allowed under O.C.G.A. § 34-9-202, it seems that some individuals had nonetheless argued that the Board lacked statutory authority to do so. Section 4 of HB 424 should put any such argument to rest. It amends both O.C.G.A. § 34-9-202(a) as to employer-requested medical evaluations and O.C.G.A. § 34-9-202(e) as to employee-requested medical evaluations, to make it clear that such evaluations may include physical, psychiatric, and psychological examinations. Further, just in case there was any doubt, it also amends O.C.G.A. § 34-9-202(a) to make it clear that it applies not only to male employees but also to female employees.

Charges for Prescription Drugs and Other Items & Services. The Board has long had statutory authority over the fees of physicians and the charges of hospitals. A question arose as to whether the Board also had authority as to charges for prescription drugs and as to charges for other items and services under the Act. Section 5 of HB 424 amends O.C.G.A. § 34-9-205(a) to make it clear that the Board has authority not only over the fees and charges of hospitals but also authority as to charges for prescription drugs, and charges for other items and services under this chapter

Drug-Free Workplace Programs. SB 96 amends O.C.G.A. § 34-9-415 to provide for on-site testing and oral testing in drug-free workplace programs. More specifically, the amendment added the following language to subsection (b) of O.C.G.A. § 34-9-415, as to what types of tests are acceptable: Urinalysis conducted by laboratories, testing at the employer worksite with on-site testing kits, or use of oral testing that satisfies testing criteria in this article shall be deemed suitable and acceptable substance abuse testing. It also adds, as to O.C.G.A. § 34-9-415(d)(5), concerning which individuals are permitted to conduct drug testing, two sections: (D) For the purpose of a pre-job offer screening only, a person trained and qualified to conduct on-site testing; or (E) For the purpose of a pre-job offer screening only, a person trained and qualified to conduct oral testing, if an oral test is used. Therefore, in light of these changes, it is

permissible to use on-site and oral testing, and, for pre-job offer screening, to use non-medical, but trained and qualified personnel to conduct the tests.

Subsequent Injury Trust Fund Assessments for Former Self-Insureds. Effective May 18, 2007, O.C.G.A. § 34-9-358 has been amended by SB 131, in pertinent part, to provide, among other things, that: An employer who has ceased to be a self-insurer prior to the end of the calendar year shall be liable to the [Subsequent Injury Trust] fund for the assessment of the calendar year. Such employer who has ceased to be a self-insurer shall continue to be liable to the fund for assessments in subsequent calendar years so long as payments are made on any workers' compensation claims made while in self-insured status.

Georgia Insurers Insolvency Pool. Effective January 1, 2008, HB 408 creates O.C.G.A. § 33-41-20.1 so as to allow an association or industrial insured captive insurance company issuing workers' compensation insurance contracts to be permitted to join or contribute financially to the Georgia Insurers Insolvency Pool under Chapter 36 of this title or any other plan, pool, or association guaranty or insolvency fund in this state.

Georgia Case-Law: Decisions of Note

Penalties May Be Assessed Even Where Income Benefits Are Not Late. O.C.G.A. 34-9-221(b) provides, in pertinent part that, after the employer has paid the first payment of income benefits, all subsequent benefits that are thereafter paid by the employer shall be due and payable in weekly installments; provided, however, that the board may, in its discretion, authorize payments to be made in different installments if it determines that this would be beneficial to all parties concerned. In the *Renu Thrift Store* case, the employer nonetheless, during certain periods of time, paid the claimant on a bi-weekly basis, rather than a weekly basis, even though the employer had no order from the Board authorizing it to do so. The Board assessed a fifteen percent penalty against the employer for each bi-weekly payment. The employer appealed noting, among other things, that each bi-weekly payment was actually one timely payment and one early payment such that none of the payments were late so that a fifteen percent penalty should not have been assessed by the Board. The Court of Appeals upheld the assessment of the fifteen percent penalty as to each bi-weekly payment, effectively noting that even if the payments had been timely, and even if the payment had been early, because they were not *weekly*, as O.C.G.A. § 34-9-221(b) requires, and because there had been no alternate schedule of payments approved by the Board, payments should have been made in weekly installments and the Board was therefore authorized to assess a fifteen percent penalty for those weeks for which the employer failed to pay the claimants income benefits weekly rather than bi-weekly [*Renu Thrift Store, Inc. v. Figueroa, Ga. App. No. A07A1116 (6-20-07), 286 Ga. App. 455, 2007 Ga. App. LEXIS 674*].

Effect of Failure to Pay Penalties. Where an employer who pays income benefits fails to pay statutory late payment penalties due and thereafter controverts overall liability on the claim, the Court of Appeals has long held that the employers failure to pay the statutory late payment penalties bars the employer from controverting overall liability on the claim [*Cartersville Ready Mix Co. v. Hamby, 224 Ga. App. 116, 479 S.E.2d 767 (1996)*].

In the *Fallin* case, the claimant argued that the employers failure to pay late payment penalties owed the claimant prevented the employer from even asserting a change in the claimants condition. The Court of Appeals rejected the claimants contention. It held that while the failure of an employer to pay late payment penalties owed a claimant would prevent the employer from disputing the compensability of the claimants injury, the employers failure to pay the late payment penalties would *not* prevent the employer from asserting that the claimant had undergone a change for the better in his condition [*Fallin v. Merritt Maint. & Welding, Inc., 283 Ga. App. 485, 642 S.E.2d 122 (2007)*].

Catastrophic Designation. In a claim involving an accident occurring on or after July 1, 1997, in which the claimant is seeking catastrophic designation under O.C.G.A. § 34-9-200.1(g)(6), the claimant bears the burden of proving that the on-the-job injury not only prevents him from being able to perform his prior work, but also that it prevents him from being able to perform any work available in substantial numbers within the national economy for which he is qualified. If the claimant simply proves that she is unable to perform her prior work, but offers no evidence

that her on-the-job injury prevents her from being able to perform any work available in substantial numbers within the national economy for which she is qualified, the Board has no authority to determine the presence or absence of that second prerequisite based solely on the Board's own experience. Further, mere testimony from the claimant herself that she has looked for work, without anything else, certainly would not satisfy the claimant's burden of proving the second prerequisite [*Reid v. Georgia Bldg. Auth.*, 283 Ga. App. 413, 641 S.E.2d 642 (2007)].

Liability Between Successive Insurers. In the *TIG Specialty Insurance* case, the first carrier (TIG) insured the employer as of the date of the claimant's 12-20-00 on-the-job injuries. Coverage changed from TIG to a second carrier (Zenith) as of 2-1-02. The claimant's condition worsened to the point where he ceased work, with a doctor's excuse, on 5-8-02. TIG commenced payment of workers' compensation disability benefits to the claimant from the date of his 5-8-02 disability but, almost two years later, in February 2004, TIG requested a hearing to determine whether it was entitled to reimbursement from the new carrier, Zenith. The claimant and Zenith both filed motions to dismiss the first carrier's hearing request. The ALJ denied both motions but the Appellate Division reversed, dismissing TIG's hearing request after concluding that TIG was barred by the statute of limitations provisions of O.C.G.A. § 34-9-221(h), from seeking to shift liability from itself to Zenith.

The Court of Appeals noted that O.C.G.A. § 34-9-221(h), provides, in pertinent part: Where compensation is being paid without an award, *the right to compensation* shall not be controverted except upon the grounds of change of condition or newly discovered evidence unless notice to controvert is filed with the board within 60 days of the due date of first payment of compensation. [emphasis by court]. The Court of Appeals noted that the first carrier had asserted that it was not challenging the claimant's right to compensation, but that it was only disputing which of two successive insurance carriers should be responsible for compensation. The Court of Appeals relied upon its earlier decision in the *Columbus Intermediate Care Home* case to find that the sixty day statute of limitations provision of O.C.G.A. § 34-9-221(h) is inapplicable and should not reach a controversy between two insurance companies wherein the compensability of the claimant's injury goes unchallenged. The Court of Appeals held that this would be true even where, as here, the Board had apparently felt that the claimant's continued right to compensation was in jeopardy, presumably under a theory by the Board that if the first carrier's request for hearing was granted, and if the ALJ found a new injury occurred in May 2002, the second carrier might be able to successfully challenge payment because the claimant had not filed a claim for a May 2002 injury. However, the Court of Appeals noted that there had been no finding of a new injury and that the question of whether there was a new injury was a question of fact to be determined by the ALJ but that the ALJ had been unable to make any such determination because the Appellate Division had dismissed the hearing request. The Court added that, Due process demands that TIG be provided an opportunity to show that Zenith is responsible for such compensation. [*TIG Specialty Ins. v. Brown.*, 283 Ga. App. 445, 641 S.E.2d 684 (2007), citing *Columbus Intermediate Care Home v. Johnston*, 196 Ga. App. 516, 396 S.E.2d 268 (1990)].

Scope of Employment. A majority of the Supreme Court of Georgia affirmed the Court of Appeals decision in the *Ray Bell Construction* case, concluding, as had the Court of Appeals, that while the employee may have initially deviated from the scope of his employment, he had resumed continuous employment by the time of his on-the-job accident so that his accident was a compensable one. However, three members of the Supreme Court of Georgia vigorously dissented from the decision. They felt that the employee had the on-the-job accident at a time when he was performing no duties on behalf of the employer, and that the employee's ultimately fatal accident was simply not a compensable one. The dissenters also believed that the majority had given the doctrine of continuous employment a far broader application than it should have [*Ray Bell Constr. Co. v. King*, 281 Ga. 853, 642 S.E.2d 841 (2007)].

Average Weekly Wage. In the *Caremore* case, the claimant sought to increase her average weekly wage (AWW) to include the value of the meals that her employer allowed her to purchase during her employment, for one dollar per day even though the meals were worth four dollars per day, for the net value to her of three dollars per day for the five days per week that she had worked. The employer argued that the meal subsidy was not a benefit furnished without charge to be included in the computation of her AWW, since the claimant paid a dollar per day for the meals, and pointed out that Board Rule 260(a) provides that, in the computation of AWW, the employer shall include, in addition to salary, hourly pay or tips, the reasonable value of food, housing and other benefits *furnished . . . without charge to the*

employee which constitute a financial benefit to the employee and are capable of pecuniary calculation [emphasis by court]. The Court of Appeals noted that the Act is a humanitarian measure which should be liberally construed to effectuate its purpose, and added that, we are not inclined to give Rule 260(a) the technical reading advocated by Caremore as it does not serve to effectuate the Acts purpose of providing relief to injured workers. Here, as Caremore stipulated that the meals subsidy provided Hollis a net economic benefit, the Board did not err in concluding that such benefit should be included in calculating Holliss average weekly wage. [*Caremore, Incorporated/Wooddale Nursing Home v. Hollis*, 283 Ga. App. 681, 642 S.E.2d 375 (2007)].

Preauthorization. Some employers have argued that the Board went beyond its authority in promulgating Rule 205 concerning preauthorization of treatment or testing. In the *Caremore* case, the employer was sent on 3-4-04 a Form WC-205 by the authorized treating physician seeking preauthorization for an evaluation but the employer failed to respond to it within five business days as the Rule requires. While the employer eventually denied the request on 3-25-04, the claimants attorney argued that Caremores failure to respond within five business days meant that the evaluation, under Rule 205, should be regarded as having automatically been preapproved despite Caremores denial. Caremore eventually preauthorized the evaluation. The Court of Appeals therefore did not address the question of whether Rule 205s automatic preauthorization provision is valid. However, the Court of Appeals held that where there was a failure to timely respond to the Request for Preauthorization, the Board does have the authority to assess civil penalties payable to the Board and attorney fees payable to the claimants attorney where the employer willfully failed to comply with the Boards rules [*Caremore, Incorporated/Wooddale Nursing Home v. Hollis*, 283 Ga. App. 681, 642 S.E.2d 375 (2007)].

Overpayment of Disability Benefits. In the *Renu Thrift Store* case, the employer ultimately realized that, for almost five years, it had overpaid the claimant by almost ten thousand dollars. The employer therefore unilaterally suspended payment of the claimants weekly disability benefits and sought to recoup the overpayments. The Court of Appeals held that the employer was barred, by the statute of repose set forth within O.C.G.A. § 34-9-245, from claiming credit for any workers' compensation disability benefit overpayments that it had made to the claimant more than two years prior to the employers application for reimbursement. It held that this was true regardless of the overpayment provisions of O.C.G.A. § 34-9-243(a). The employer was therefore found to be entitled to only about three thousand dollars of overpayments. It also held that the Board had authority to find the employers unilateral suspension of benefits without a court order to be so unreasonable as to justify an assessment of attorney fees against the employer [*Renu Thrift Store, Inc. v. Figueroa*, Ga. App. No. A07A1116 (6-20-07)].

Failure to Pay Ten Days Advance Notification of Suspension of Benefits. Where an employer unilaterally suspends payment of a claimants temporary total disability (TTD) benefits based upon the claimant having been released to unrestricted work by the authorized treating physician, the employer must pay ten days advance notification of suspension of benefits [O.C.G.A. § 34-9-221(i)]. Where an employer fails to do so, a question arises as to whether the employer should be forced: (1) to retroactively recommence payment of the claimants TTD benefits from the date of the suspension until the date the employer resuspends benefits with the requisite ten days advance notification of suspension; (2) to retroactively recommence payment of TTD benefits until the date of the ALJ award; (3) to retroactively recommence payment of TTD benefits until the date of the hearing; or (4) to simply pay ten days TTD benefits, or the part of the ten days TTD benefits that it has not paid.

In the *Reliance Electric* case, the claimant was paid TTD benefits until her authorized treating physician released her to unrestricted work on 7-25-03. On 7-29-03, Reliance issued a Form WC-2 notice stating that the claimants benefits would be suspended on 8-10-03. It in fact suspended her benefits on that date. However, the WC-2 was not filed with the Board until 8-4-03. The Board treated the date it received the WC-2 notice as being the date the claimant would have received the WC-2 notice. It therefore found that the claimant had received only six days advance payment rather than the statutorily required ten days. The claimant waited until nine months after the suspension to even request a hearing. A hearing was finally held eight months after that. The ALJ ordered the employer to pay TTD benefits from the date of suspension until the date of the award (nineteen months worth of accrued TTD benefits) due to the employers failure to pay the entirety of the ten days advance notice. The Appellate Division held that it was the date of

hearing rather than the date of the award that should have been used so that it ordered the employer to pay TTD benefits from the date of suspension until the date of the hearing (seventeen months worth of accrued benefits).

The Court of Appeals rejected both approaches. It noted that what the Code subsection required was payment of ten days notice, that the claimant had already received six days, and that she was therefore entitled to only four days TTD benefits. The Court of Appeals also noted that the Board certainly has the authority to assess attorney fees payable by the employer to counsel for the claimant if the Board finds the employers failure to pay the requisite ten days advance notice of suspension of benefits is without reasonable grounds [*Reliance Elec. Co. v. Brightwell*, 284 Ga. App. 235, 643 S.E.2d 742 (2007)].

Motion to Set Aside Award. Where an employer receives a notice of an ALJ hearing but chooses not to participate, and where the hearing is held and results in an award which the employer does not appeal, the employer cannot later try to set aside the Boards award and successfully avoid a superior court action to enforce the award, even where the award mistakenly finds the employer to lack insurance that it actually had. This is because the employer easily could have corrected the problem by participating in the proceedings before the ALJ of which it was repeatedly notified, and, at the very least, by timely appealing the ALJs decision [*Winnersville Roofing Co. v. Coddington*, 283 Ga. App. 95, 640 S.E.2d 680 (2006)].

Failure of Superior Court to Serve Parties with Decision. After a superior court judge has decided a case, unless notice of the decision has been waived, it is the duty of the judge to file his or her decision with the clerk of the court in which the case is pending and to notify the attorney or attorneys of the losing party of the decision [O.C.G.A. § 15-6-21(c)]. Yet, in the *Parker* case, neither the employer nor the claimant received a copy of the superior courts judgment with regard to a workers compensation appeal. After the time within which the employer could have applied for discretionary appeal had already expired, the claimants attorney advised the employers attorney of the judgment. The employer filed a motion seeking to vacate and reenter the judgment so that the employer could timely pursue an application for discretionary appeal. The superior court refused to grant the motion.

The Court of Appeals reversed the superior court. As to the superior courts argument that the employer had failed to be diligent, since the employer should have known that the superior court had to rule within twenty days or the workers compensation decision would be automatically affirmed, the Court of Appeals noted that that did not change the fact that the superior court itself had failed to perform its duty mandated by law. It also ruled that the superior court had erred in determining that the provisions of O.C.G.A. § 34-9-105(b) would have divested it of subject matter jurisdiction of the case if it vacated the original judgment, further holding that the *Taylor Timber* case on which the superior court had relied was distinguishable. It ordered the superior court to grant the employers motion and to vacate and reenter the judgment so that the employer would have time within which to file an application for discretionary appeal [*Wal-Mart Stores, Inc. v. Parker*, 283 Ga. App. 708, 642 S.E.2d 387 (2007)].

End of Employment Aggravation. The Court of Appeals held that the Board had properly found that the claimant was *not* entitled to further workers' compensation benefits where her work-related injury had caused a temporary aggravation of a pre-existing condition and where that aggravation had resolved. The Court noted that there was evidence to support such a finding by the Board in the form of the opinion of the claimants authorized treating physician, Dr. Godlewski. The Court acknowledged that there was a conflict in the medical evidence, with Dr. Godlewski testifying that, although a precise medical base line was impossible to determine, he believed that Bembry had returned to the baseline of her pre-injury condition and that the sprains caused by her injury were resolved, but with the claimants personal physician, Dr. Wilson, expressing his definitive opinion that Bembrys previous condition was aggravated by the fall and that she had not returned to her pre-injury baseline. The Court noted that the question of whether to give more weight to the opinion of Dr. Godlewski than to the opinion of Dr. Wilson was a question for the Board rather than the superior court or the Court of Appeals itself to decide. It rejected the claimants contention that Dr. Wilsons opinion should be given more weight than that of Dr. Godlewski because Dr. Godlewski had sought Dr. Wilsons opinion, and rejected the claimants contention that Dr. Godlewskis opinion should not be given any weight because Dr. Godlewskis opinion was not framed in the form of a medical certainty that the claimant had returned to her

pre-injury baseline. As to the latter point, the Court of Appeals noted that medical certainty is not required and that medical probability is the applicable standard with regard to such an issue. It therefore concluded that the Board had properly relied upon Dr. Godlewskis opinion as evidence in finding that the claimants work-related injury had resolved [*Bibb County Bd. of Edu. v. Bembry, Ga. App No. A07A1525 (7-30-07), 2007 Ga. App. LEXIS 862*].

Board Rule Changes

Effective July 1, 2007, the State Board of Workers' Compensation has made a number of changes with regard to its Rules & Regulations. Some of the more significant changes are discussed below.

Limitation on a Medical Providers Right to Recover Payment. The Board has created a new, 120 day, time limit on the period of time within which a medical provider may challenge the amount of the payment which it has received from the employer-insurer. In that regard, it provides, Any challenge by a medical provider to the amount of payment for goods, services, or expenses shall be submitted to the payor within 120 days of payment. Failure by a medical provider to challenge the amount of payment of such goods, services, or expenses within 120 days shall result in the waiver of additional payment. [Board Rule 203(b)(2)].

Medical Bills. The Georgia Workers' Compensation Act has long provided, No physician, hospital, or other provider of services shall be entitled to collect any fee unless reports required by the board have been made. [O.C.G.A. § 34-9-205(a)]. Board Rule 205 had specified, Reports required by the Board include State Board of Workers' Compensation Form WC-20(a), or HCFA 1500, HCFC 1450, or UB 92 . . . Effective July 1, 2007, the Board has added to the aforementioned list of acceptable forms the Form UB-04 [Board Rule 205(a)].

Settlements. The Board has revised its Rules to provide, if the stipulated settlement agreement provides for a Medicare Set-Aside Arrangement (MSA), the stipulated settlement agreement shall contain a provision as to the actual cost of the MSA. [Board Rule 15(d)].

The Board has also added a provision to its Rules requiring that where a case is being settled with a claimant who is represented by an attorney, and where that attorney is seeking payment for his or her expenses out of the settlement, the attorney shall certify that the expenses comply with Rule 1.8(e) of the Georgia Rules of Professional Responsibility and Board Rule 108. [Board Rule 15(e)].

The Board had been requiring that a Form WC-4 marked final be filed with any liability settlement or no-liability settlement as a prerequisite for Board approval of the settlement. However, the Board has revised its Rules & Regulations so that, effective July 1, 2007, one no longer needs to submit a Form WC-4 with a liability settlement or even a no-liability settlement but must instead submit such a Form WC-4 Within 30 days of final payment made pursuant to an approved stipulated settlement . . . [Board Rule 61(b)(5)(F)].

Challenge to Expert Witness Testimony. Effective July 1, 2007, Any challenge to the testimony of an expert under O.C.G.A. § 24-9-67.1 shall be made no later than 15 days prior to the hearing. Failure to raise a timely challenge shall result in a waiver of the challenge unless otherwise agreed to by the parties and the Administrative Law Judge. [Board Rule 102(E)(3)(e)].

O.C.G.A. § 24-9-67.1 establishes a methodology for determining what expert testimony will be accepted in Georgia civil cases. It essentially is a *Daubert* standard designed to avoid so-called junk science testimony from expert witnesses [*Daubert v. Merrell Dow Pharmaceuticals, Inc., 509 U.S. 579 (1993)*].

Costs for Appeal to Superior Court. Where a party is dissatisfied with a decision by the Appellate Division of the State Board of Workers' Compensation and appeals same, that party must file his appeal with the Board, which thereafter copies the record and transmits it to the clerk of the superior court. However, effective July 1, 2007, the Board has revised its Rules so that, Any party filing with the Board an appeal to Superior Court shall pay the reasonable copying and transmittal costs of the Board. Upon good cause shown, the Board may waive the copying and transmittal

costs. [Board Rule 105(f)].

Ten Days Advance Notice of Suspension of Benefits. It may often be difficult to determine exactly when a claimant has received the ten days advance notification of suspension of disability benefits which O.C.G.A. § 34-9-221(i) requires. The Board rule to that effect had been somewhat poorly worded. It had provided, The date of filing with the Board, in the absence of compelling evidence to the contrary, shall be considered the date of filing. However, effective July 1, 2007, the Board has revised the aforementioned rule to read: The date of filing with the Board in the absence of compelling evidence to the contrary, shall be considered the date of *notice* [emphasis added], so as to make it clear [Board Rule 221(i)(2)]. Similarly, the Rules were revised to provide that the date affixed by the Board to Forms WC-2 or WC-2A is going to be considered the date of notice to the employee or dependent in the absence of compelling evidence to the contrary. . . . [Board Rule 221(i)(3)].

The Board has further clarified that where a claimants benefits are being suspended based upon a release to unrestricted work by the authorized treating physician, the physician must have examined the employee within sixty days of the effective date of the release and a copy of the report to that effect must be attached to the Form WC-2 notice [Board Rule 221(i)(4)].

Form Filing. The Board is going to reject any document or form filed with it unless there is a file set up at the Board. Further, there is not going to be a file set up by the Board unless the Board has first received either a Form WC-1 or a Form WC-14 [Board Rule 60(h)].

The Board has further revised its Rules to provide that the instructions on the back of any Board form must be sent to the employee but are *not* to be filed with the Board itself [Board Rule 61(b)].

Cancellations and Postponements. If a case is set for a mediation, or a hearing before an ALJ or the Appellate Division, or if a Request for Change of Physicians or a motion is pending, then, if the issues are resolved or the case settles, the parties or their attorneys are required to immediately notify the ADR Division (in the event of a mediation), the Board or assigned ALJ (in the event of a hearing, request or motion), or the Court Clerk of the Appellate Division (in the event of an Appellate Division hearing) first by telephone call and then, if so instructed, by subsequent written or electronic confirmation. Where a party or attorney fails to follow this procedure and is unable to show good cause for that failure, that party or attorney may be subject to assessment of civil penalties payable to the Board and/or assessed attorney fees and/or costs and, in the event of a hearing, to liability for the court reporter charges [Board Rules 100(h)(3), 102(C)(1), 102(D)(4), 103(b)(8), 200(b)(1)].

Fee Schedule

The State Board of Workers' Compensation has authority to annually publish a schedule of maximum allowable charges with regard to the fees of physicians, surgeons and other healthcare providers. The Board has revised the Fee Schedule effective April 1, 2007. It includes a new provision requiring the use of generic drugs when they are available unless the physician prescribing the drugs handwrites either Brand Medically Necessary, or Brand Necessary.

The Board also added a provision, Prescription drugs will be reimbursed at the current average wholesale price (AWP) as published by Medispan, plus a dispensing fee of **\$6.00 for generic medications and \$4.00 for single-source brand medications. All bills submitted for reimbursement must include the National Drug Code (NDC) of the product provided. When the authorized treating physician prescribes pharmaceuticals, the prescription will indicate by stamp or other means that it is for a workers' compensation claim.**

Also effective July 1, 2007, the Board has created its first Non-Emergency Transportation Fee Schedule. It recognizes two types of non-emergency medical transportation: ambulatory transportation (which can include the transportation of wheelchair-bound individuals) and transportation by lift vans (which would include an individual who needs to be transported to and from the van by stretcher). It establishes maximum mileage rates for each of the two types of non-emergency transportation, as well as caps on surcharges for waiting time,

weekends, wheelchair movement, and no-call/no-show charges [<http://sbwc.georgia.gov> at Fee Schedule Medical].

For Further Discussion on Workers Compensation in Georgia, see statute of limitations for change in condition 1-9 Georgia Workers' Compensation Law § 9.06 (LexisNexis Matthew Bender), farm laborers 1-3 Georgia Workers' Compensation Law § 3.07 (LexisNexis Matthew Bender), medical evaluations 1-18 Georgia Workers' Compensation Law §§ 18.10--18.11 (LexisNexis Matthew Bender), payment penalties 1-22 Georgia Workers' Compensation Law § 22.09 (LexisNexis Matthew Bender).

For Further Discussion on Workers Compensation Law, see subsequent injury trust funds 5-91 *Larson's Workers' Compensation Law* § 91.01 (LexisNexis Matthew Bender), successive insurers 9-153 *Larson's Workers' Compensation Law* § 153.01 (LexisNexis Matthew Bender), concept of average weekly wage 5-93 *Larson's Workers' Compensation Law* § 93.01 (LexisNexis Matthew Bender), continuous employment of resident employees 2-24 *Larson's Workers' Compensation Law* § 24.03D (LexisNexis Matthew Bender).

ABOUT THE AUTHOR(S):

Richard C. Kissiah is the Managing Partner of the law firm of Kissiah & Lay, where he practices almost exclusively in the field of workers' compensation law. The law firm is located in Alpharetta (a suburb of Atlanta). Mr. Kissiah is a member of the Atlanta and Georgia Bar Associations. He is also a member of the Defense Research Institute. He was the chairman of the Atlanta Bar Association's Workers' Compensation Section in 1993-1994 and is presently on the board of directors for the Atlanta Medical Association's Medical-Legal Committee. He has also been an author and lecturer on the subject of Georgia workers' compensation law for the Atlanta Bar Association, the State Bar of Georgia, the Institute of Continuing Legal Education, the State Board of Workers' Compensation, and numerous chambers of commerce and employer associations. He is an attorney-instructor for the Certified Workers' Compensation Professional (CWCP) program. He is the author of *Kissiah's Georgia Workers' Compensation Law* (LexisNexis Matthew Bender) and also a member of the LexisNexis National Workers' Compensation Advisory Board.

Rassp and Ponzio on Noteworthy California WCAB Decisions Denied Judicial Review

2008 Emerging Issues 597

Rassp and Ponzio on Noteworthy California WCAB Decisions Denied Judicial Review

By Robert G. Rassp and James Ponzio

October 3, 2007

SUMMARY: Each month important "writ denied" cases (California Workers' Compensation Appeals Board decisions denied judicial review) are reported in California Compensation Cases. This commentary by Robert G. Rassp and James Ponzio examines four recent writ denied cases dealing with medical treatment in the form of two-level arthroplasty disc surgery, attorney's fees in a situation where a compromise and release was entered into with an unrepresented applicant, an applicant's blood-borne methicillin-resistant staphylococcus aureus (MRSA), which was found to be a compensable consequence of his left shoulder injury, and a recent review of case law that covers the criteria for eligibility for Subsequent Injuries Benefits Trust Fund benefits. Robert G. Rassp was the Chair for the State Bar Workers' Compensation Law Section Executive Committee in 2000-2001 and is currently active as a member of that committee, and James Ponzio is a Certified Specialist in Workers' Compensation who exclusively represents employers and insurance carriers before the California Workers' Compensation Appeals Board and appellate courts.

ARTICLE: Each month important "writ denied" cases (California Workers' Compensation Appeals Board decisions denied judicial review) are reported in *California Compensation Cases*. This article examines four recent writ denied cases dealing with medical treatment in the form of two-level arthroplasty disc surgery, attorney's fees in a situation where a compromise and release was entered into with an unrepresented applicant, an applicant's blood-borne methicillin-resistant staphylococcus aureus (MRSA), which was found to be a compensable consequence of his left shoulder injury, and a recent review of case law that covers the criteria for eligibility for Subsequent Injuries Benefits Trust Fund benefits. To read the full summary for each case as reported in *California Compensation Cases*, click on the case citation. The headnote for each case is reprinted below, followed by commentary from the applicant's perspective and, for the first two cases, the defense perspective as well.

Medical Treatment; ACOEM Guidelines

Glagola Construction Company v. W.C.A.B. (Larios) (2007) 72 Cal. Comp. Cas 1016 (writ denied)

Headnote

Medical Treatment--American College of Occupational and Environmental Medicine Guidelines--WCAB awarded

applicant construction carpenter/laborer further medical treatment to cure or relieve effects of his 12/18/2004 injury AOE/COE to low back and spine, including, but not limited to, two-level arthroplasty disc surgery recommended by applicant's treating physician and supported by agreed medical examiner, based on opinions from treating surgeon and agreed medical examiner and applicant's offer of proof, when applicant previously underwent failed lumbar laminectomy and hemilaminectomy for his injury, his treating surgeon recommended either two-level arthroplasty disc surgery (using artificial discs) or arthrodesis/fusion, applicant chose arthroplasty disc surgery, agreed medical examiner indicated he would prefer fusion but found arthroplasty disc surgery was also reasonable and supported choice of type of surgery made by applicant and treating surgeon, agreed medical examiner stated that treating surgeon was excellent surgeon, WCAB found that suggested surgery was outside ACOEM Guidelines, or, alternatively, that it was within Chapter 6 of Guidelines, which stated that treatment to increase function in chronic pain patients was appropriate, and there was no authority for defendant's contentions that requested surgery should be denied because it was experimental or not approved by Federal Drug Administration [See generally 1-5 CA Law of Employee Injuries & Workers' Comp §§ 5.01, 5.02[(3), 5.03(4), 22.01(1)].

Commentary

Applicant's Perspective. This is a very interesting case for the fact that the decision about whether to perform a two level inter-vertebral disc replacement surgery as opposed to a two level fusion was turned into a medical-legal issue. Here, the AME was leery of a two level disc replacement surgery in the lumbar spine but deferred to the judgment of the treating physician based upon that physicians expertise and reputation in spinal procedures.

This decision is significant for the difficulty in having a judge decide what is in the best interest of the applicant from a medical standpoint. All legal practitioners in workers compensation cases are faced with new medical procedures and technologies and the determination about whether an applicant in a workers compensation case should be subjected to those procedures. This problem can be called the Be careful what you wish for issue for what if the medical procedure fails and the procedure does not result in functional restoration of the applicants personal, social, and occupational activities?

The problem here is that many medications and medical procedures have unknown long term effects. For example, research may eventually show that disc replacement surgeries only work at one level and not two within the same sub-region of the spine, or that the disc replacement surgery only works in the cervical spine and not in the lumbar spine because of the weight of the torso on the lumbar spine is 100 times greater than the stress and weight of the head on the cervical spine. These issues have to be determined in a research setting over a long period of time, at least 5-10 years post surgically, and the disc replacement components and procedures were only recently approved by the FDA in the United States, i.e., in August 2005. So there is very little data on the long term effects of these procedures.

The defendants were too late in raising the issue of whether the surgeon in this case had a financial interest in the outcome of the surgery or in the sale and use of the disc replacement component. The WCJ was probably made aware of the fact that researchers in new and/or experimental medical procedures including investigational new drugs, biologics or devices including disc replacement surgical procedures encourage injured workers to be allowed in the inclusion criteria for medical research. The ethics of including injured workers in these research studies permit such participation because of the necessity to determine side effects, short and long terms risks, and benefits of those procedures and products since injured workers are part of the general population of potential patients [See 45 C.F.R. 46, 21 C.F.R. 50, 21 C.F.R. 56].

Disc replacement surgery is currently intended to delay a traditional fusion because of the knowledge that fusions cause adjacent segmental vertebral degeneration. The FDA and manufacturers of these devices are interested in long term safety and efficacy profiles of them after FDA approval (called a Phase 4 or post approval marketing study). If an injured worker enrolls in any medical research study involving the disc replacement procedure, the sponsor of the study,

not the workers compensation claims administrator, pays for the device or the surgical implant procedure. In all medical research studies involving the disc replacement procedure, the patients who enroll in the studies do not know if they actually receive the disc replacement rather than a traditional fusion until after they wake up from the surgical procedure because the surgeons do not know for sure whether any patient is within the inclusion criteria for the disc replacement device until the surgical site is under direct observation by the surgeon, which is why the patients consent to either the disc replacement or a traditional fusion prior to the surgery and as part of the informed consent process. In a non-research study setting, the best medical practice is for the surgeon to do the same thing, i.e., to obtain consent from the patient to do one or the other procedure. This is now becoming the standard of care in a clinical medical practice involving spinal surgery.

For the purpose of determining the need for treatment in workers compensation cases, the WCAB emphasized that the ACOEM Guidelines are limited in scope and application and Chapter 6 allows treatment in chronic pain cases to include anything that restores function. The Board decision also reminds us that just because a medical protocol is not listed in ACOEM does not mean that it cannot be authorized. A medical procedure that is outside ACOEM must cure or relieve the effects of an industrial injury. In addition, the WCAB decision is significant as the panel indicates two ways to rebut denials of treatment based upon the ACOEM Guidelines:

- . Use of Chapter 6 of ACOEM if the medical condition has become chronic or lasting more than 90 days and the medical procedure not listed in ACOEM will probably improve or restore personal (ADL), social and/or occupational functioning; or

- . Another nationally accepted treatment protocol from other accepted peer reviewed guidelines, such as the Official Disability Guidelines (ODG).

What is also interesting about this case is that the Court of Appeal granted attorney's fees to the applicants attorney due to the contention by the court that the defendant's petition for writ of review had no reasonable basis.

Defense Perspective. This case involves the interesting issue of how much control defendant can have over the question of what type of spinal surgery an applicant should undergo, rather than whether spinal surgery is appropriate at all. All parties conceded that spinal surgery was appropriate, and so the question was whether the somewhat experimental surgery proposed by the treating physician was appropriate. The result is not surprising as the AME indicated that he supported the procedure, although he would prefer fusion. What is surprising is that defendants attempted to mandate a particular type of surgery. The treating physician and patient would be in quite a quandary if the WCJ had mandated a procedure that neither the treating physician nor the patient were comfortable with. It is not surprising that the defendant's petition for writ of review was found unreasonable by the Court of Appeal.

Attorney's Fees; Compromise And Release

Monument Car Parts v. W.C.A.B. (Teach) (2007) 72 Cal. Comp. Cas 1021

Headnote

Attorney's Fees--WCAB ordered defendant to pay applicant's attorney's fees under Cal. Labor Code § 4064(c), when applicant claimed injury AOE/COE on 4/3/2004, parties filed compromise and release while applicant was unrepresented, compromise and release contained provision that "filing of this document is the filing of an application on behalf of the employee," WCAB did not approve compromise and release but instead suspended action on

compromise and release pending receipt of further information, WCAB later allowed applicant to withdraw from compromise and release, applicant obtained counsel, both parties obtained qualified medical evaluators, WCAB found that defendant did not advise applicant of his right to panel qualified medical evaluation, did not offer adequate settlement, did not respond to WCJ's request for documents, and did not appear at scheduled mandatory settlement conference, and that applicant's attorney provided valuable services, and WCAB construed filing compromise and release here to be filing application for adjudication of claim, based on terms of compromise and release itself, 8 Cal. Code Reg. § 10878, and WCAB panel decision, *Robinson v. Hawthorne Machinery Corp.* (2002) 30 CWCR 76 [2002 Cal. Wrk. Comp. P.D. LEXIS 107] (panel decision) [See generally 2-20 CA Law of Employee Injuries & Workers' Comp §§ 20.01(1), (4), 20.02(2), 22.11].

Commentary

Applicant's Perspective. This is an interesting case where the defendant cajoled the unrepresented applicant into accepting an inadequate compromise and release. To make matters worse for itself, the defendant failed to comply with the WCJ's orders prior to an adequacy hearing to produce documents, to give applicant his rights to a panel QME, and then to appear at a hearing. This set the stage for two things to happen: (1) for the applicant to retain legal counsel; and (2) for the WCJ to award attorney's fees under Cal. Labor Code § 4604(c).

We have not seen a case like this since just after Cal. Labor Code § 4604(c) was enacted as part of the workers compensation law reforms during the early 1990's. That enactment resulted in at least two cases that limited the award of attorney's fees if the defendant failed to pay benefits after a panel QME report was issued that was favorable to the applicant and the defendant had to pay benefits or file an Application. During what was referred to as the window period, which was for dates of injury from 1/1/91-12/31/93, the Application for Adjudication of Claim and the Declaration of Readiness to Proceed were incorporated into the same document and the claim form was a jurisdictional document.

This issue is now being addressed in a similar way as a decision known as *Ferguson v. Kemper Insurance Co.*, WCK 10961, (1994) 22 CWCR 83, which was later reversed in a decision called *Peterson v. State of California* (1995) 60 Cal. Comp. Cas 1206 (Appeals Board en banc opinion), which refers to attorney's fees under Cal. Labor Code § 4066 and disapproves the panel decision in *Ferguson*, which was a Cal. Labor Code § 4064 case. Those cases eventually resulted in limiting the application of Cal. Labor Code § 4064(c) to a very narrow set of cases involving unrepresented applicants where the defendant refuses to pay benefits based upon a panel QME's findings and files an Application for Adjudication of Claim.

This case reminds us of *Dwight Smith v. Workers' Comp. Appeals Board* (S150528) 2007 Cal. LEXIS 6780, which is now before the California Supreme Court on the issue of an award of attorney's fees pursuant to Cal. Labor Code § 4607 when a defendant fails to authorize medical treatment in a post award case.

The WCAB statement that the filing of a C&R is equivalent to the filing of an Application is well reasoned and consistent with the language embedded within the C&R form and by 8 Cal. Code Reg. § 10878. This case is a warning to the defense community to seriously take what a WCJ says about the adequacy or inadequacy of a settlement. This issue may recur as cases under the AMA Guides are presented for approval and the WCJ feels that there is something intrinsically wrong with a settlement and wants further documentation or other evidence from a defendant who may be uncooperative. A defendant cannot be dilatory in its obligation to respond to inquiries by a judge if a settlement is submitted on behalf of an unrepresented applicant.

Defense Perspective. This case is an example of the adage bad cases make bad law. 8 Cal. Code Reg. § 10878 has long held that the filing of either a compromise and release, or stipulations with request for award, shall constitute the filing of an application. Cal. Labor Code § 4064(c) holds that when the employer files an application at a point in time when the applicant is unrepresented, the employer shall be liable for applicants attorney's fees incurred by the employee in connection with the application. Once the WCAB gets over the hurdle of whether the C&R was filed by the employer, the imposition of attorney's fees became pretty much automatic. The combination of the filing of the settlement documents and the applicant later hiring an attorney would seem to mandate the payment of the attorney's fee, whether or not the settlement was reasonable. The WCAB has been loathe to award such fees, however, as to do so does in fact discourage settlements with pro per applicants. It is only in terrible factual situations such as this one are the rights under Cal. Labor Code § 4064(c) pursued, thereby making rather bad precedent from the employers perspective.

The WCAB has not yet reached the question of how the applicants attorney's fee will be calculated. Will it be calculated as a percentage of the recovery as in the WCAB panel decisions of *Telson v. Disneyland Hotel* (2000) 28 CWCR 177, and *Ferguson v. Kemper Insurance Co.*, WCK 10961, (1994) 22 CWCR 83 (reversed on the question whether it was a Cal. Labor Code § 4064 case at all) (both awarded under Cal. Labor Code § 4064 or Cal. Labor Code § 4066), or at an hourly rate as in *Town of Hillsborough v. W.C.A.B. (Sommer)* (2003) 68 Cal. Comp. Cas 304 (writ denied), and *Meek v John Muir Hospital*, 2006 Cal. Wrk. Comp. P.D. LEXIS 10 (Appeals Board panel decision) (both Cal. Labor Code § 5814.5 cases)? If the attorney's fee to be awarded is a percentage of the recovery, will it be strictly the difference in recovery between what defendants had originally agreed to settle for versus what was ultimately received, or the whole recovery? We would expect the WCAB to use its discretion in this regard to avoid encouraging applicants attorneys from requesting a fee where no valuable service was provided.

Injury AOE/COE; Compensable Consequence Injuries

***Ralphs Grocery Company v. W.C.A.B. (Romano)* (2007) 72 Cal. Comp. Cas 1028 (writ denied)**

Headnote

Injury AOE/COE--Compensable Consequence Injuries--WCAB held that reports of applicant's qualified medical evaluator, coupled with medical records, constituted substantial evidence to support finding that applicant's blood-borne methicillin-resistant *Staphylococcus aureus* (MRSA) was compensable consequence of his 12/20/2003 left shoulder injury and caused injury to his cardiovascular and cardiopulmonary systems, neck, and cervical and thoracic spine, with resulting paralysis, when applicant underwent left shoulder surgery on 8/29/2005, applicant began to have shoulder pain and stiffness as well as flu-like symptoms after surgery, applicant was hospitalized on 11/7/2005 and diagnosed with blood-borne MRSA that affected various internal and orthopedic systems, applicant's qualified medical evaluator and treating physicians opined that MRSA was most likely due to shoulder surgery, and WCAB did not find opinion of defense qualified medical evaluator to be persuasive [See generally 1-4 CA Law of Employee Injuries & Workers' Comp §§ 4.94, 34.16(3)].

Commentary

Applicant's Perspective. This case demonstrates how important it is for counsel to develop the record in a case that involves unique medical issues. The case shows how to develop the record in such matters by having one physician review all relevant records and then having him or her rebut the conclusions of any other physician that are contrary to that physicians own medical conclusions. The case shows how the evaluating physicians report constituted substantial medical evidence because that physician focused on the most significant medical records and stated how and why the

defense evaluator was wrong in his conclusions. [Note: This commentator is taking over the case from applicants counsel due to his retirement.]

Subsequent Injuries Benefits Trust Fund; Labor Disabling Injury

Rea v. W.C.A.B. (Rasmussen) (2007) 72 Cal. Comp. Cas 1035 (writ denied)

Headnote

Subsequent Injuries Benefits Trust Fund--Labor Disabling Injury--WCAB reversed WCJ's decision and found that applicant, who suffered industrial injuries to his right upper extremity and right thumb on 6/10/2003 and during period 6/8/2003 through 6/8/2004, and had at age nine suffered non-industrial amputation to his left arm two inches below shoulder, was entitled to Subsequent Injuries Benefits Trust Fund benefits pursuant to Cal. Labor Code § 4751, when applicant's amputation rated at 70 percent under 1997 Schedule for Rating Permanent Disabilities, rating was not rebutted by showing that applicant had long career as pharmacist since this did not establish that applicant had rehabilitated from amputation, WCAB found that amputation was not susceptible to rehabilitation, applicant testified that he performed his job as pharmacist with great effort and some difficulty, and applicant's vocational rehabilitation expert testified that applicant was excluded from 68 percent of jobs in labor market due to his amputation and was precluded from 97.5 percent of all jobs when amputation disability combined with his industrially-related disability [See generally 1-8 CA Law of Employee Injuries & Workers' Comp § 8.09].

Commentary

Applicant's Perspective. This case is a review of the relevant case law and covers the criteria for eligibility for Subsequent Injuries Benefits Trust Fund (SIBTF) benefits. The case is a modern reiteration of the law that there are two prongs of eligibility for SIF benefits--first, that there is a prior industrial or non-industrial permanent disability that rates greater than or equal to 70%, and, second, that the subsequent injury results in permanent disability that is greater than 5%. The decision also reaffirms the notion that the costs and expenses of a vocational expert witness are recoverable as a cost pursuant to Cal. Labor Code § 5811.

The WCAB is allowing reimbursement to applicants attorneys for expert witnesses in recent cases involving the use of vocational experts to rebut the 2005 Permanent Disability Rating Schedule (2005 PDRS), to provide direct testimony of diminished future earning capacity, and like in this case, to provide evidence that a persons prior medical condition was disabling in the open labor market, despite the individuals ability to work and his or her disability.

The question this case does not answer is, what if the subsequent injury is on or after 1/1/2005 and the 2005 PDRS applies with the *AMA Guides*? It appears from this decision that the WCAB relied on the 1997 Schedule for Rating Permanent Disabilities (2007 Schedule) to indicate the amputated left arm condition from age 9 rated 81% permanent disability and the 2004 subsequent industrial injury rated 14% permanent disability under the 1997 Schedule. The amputation of the arm under the *AMA Guides* would rate a 60% Whole Person Impairment (WPI) [see *AMA Guides*, Chapter 16], which would also adjust to over 70% permanent disability. But we do not know whether the 2004 subsequent injury would rate greater than 5% permanent disability under the *AMA Guides* and 2005 PDRS. The WCAB does not indicate whether it would accept a rating for the prior disability under the 1997 Schedule and the subsequent injury under the *AMA Guides* and 2005 PDRS and apply the same analysis it did in this case.

The WCAB also indicated that it would not bail out neither the defendant nor the SIBTF for their failure to depose

the AME about apportionment of the subsequent injury in accordance with the decision in *Escobedo v. Marshalls* (2005) 70 Cal. Comp. Cas 604 (Appeals Board en banc opinion). In other cases, the WCAB does not hesitate to reverse and remand a case for further development of the record on the issue of apportionment when the defendant also fails to conduct adequate discovery on that issue prior to trial. There appears to be significant inconsistencies between WCAB panels on the issue of when to remand for further development of the record on apportionment and when not to because a defendant failed to conduct adequate discovery prior to trial.

Vernon Sumwalt on Proving Causation of Work-Related Medical Conditions

2008 Emerging Issues 575

Vernon Sumwalt on Proving Causation of Work-Related Medical Conditions

By Vernon Sumwalt

October 2, 2007

SUMMARY: A significant percentage of North Carolina appellate decisions have addressed the issue of causation in workers compensation cases over the past several years. In *Legette v. Scotland Memorial Hospital*, 640 S.E.2d 744 (2007), the Court of Appeals affirmed the Commissions finding that lifting a patient had caused or aggravated a nurses lymphedema in her arm, even though conflicting medical testimony indicated that her history of breast cancer placed her at an increased chance of contracting lymphedema as well. This commentary, written by Vernon Sumwalt, a Board Certified Specialist in North Carolina workers' compensation law, places the issues in *Legette* in their broader contexts and then breaks them down in a practical guide on how to avoid reversal on appeal.

ARTICLE: A significant percentage of North Carolina appellate decisions have addressed the issue of causation in workers compensation cases over the past several years. In *Legette v. Scotland Memorial Hospital*, ___ N.C. App. ___, 640 S.E.2d 744 (2007), the Court of Appeals affirmed the Commissions finding that lifting a patient had caused or aggravated a nurses lymphedema in her arm, even though conflicting medical testimony indicated that her history of breast cancer placed her at an increased chance of contracting lymphedema as well. This commentary places the issues in *Legette* in their broader contexts and then breaks them down in a practical guide on how to avoid reversal on appeal.

The big picture of causation. *Legette* focuses on the issue of causation. Generally speaking, injured employees in workers compensation cases have the burden of proving each and every element of compensability, including causation. [*Watts v. Borg Warner Automotive, Inc.*, 171 N.C. App. 1, 8, 613 S.E.2d 715, 719 (2005), affd, 360 N.C. 169, 622 S.E.2d 492 (2005) (per curiam)]. For injuries under N.C. Gen. Stat. § 97-2(6), the arising out of element incorporates the causation between an accident and its medical consequences. This element is satisfied if (1) the work conditions placed the employee at an increased risk of injury, [see *Goodwin v. Bright*, 202 N.C. 481, 163 S.E.2d 576 (1932)], or the employees activities at the time of the injury provided an appreciable benefit to the employer, [see *Fortner v. J.K. Holding Co.*, 319 N.C. 640, 357 S.E.2d 167 (1987)]. For occupational diseases under N.C. Gen. Stat. § 97-53, there is causation if the work-related exposure significantly contributed to the development of the disease [see *Rutledge v. Tultex Corp.*, 308 N.C. 85, 101-102, 301 S.E.2d 359, 369-370 (1983)]. At one time, the Supreme Court of North Carolina required medical evidence to establish causation to a requisite degree in all cases involving complex medical issues, thus suggesting that cases involving uncomplicated issues do not need expert testimony [see *Click v. Pilot Freight Carriers, Inc.*, 300 N.C. 164, 167, 265 S.E.2d 389, 391 (1980)]. However, it is now clear that non-expert

testimony suggesting a causal relationship is not a sufficient basis upon which to find causality. [*Cummings v. Burroughs Wellcome Co.*, 130 N.C. App. 88, 91, 502 S.E.2d 26, 28 (1998)].

In *Legette*, for example, defendants expert, Dr. George Paschal, testified that causation between the employees accident and development of lymphedema was not likely. Plaintiffs counsel then deposed the employees family doctor, Dr. James Currin, who testified that causation between the two probably existed. The Commission gave more weight to Dr. Currins opinion and, thus, awarded the employees claim [see 640 S.E.2d at 747-748]. The late designation and deposition of Dr. Currin not only satisfied the employees burden of proving causation before the Commission, but it also provided a competent foundation for the Commissions Opinion and Award on appeal.

Practice Tip--Get an Expert! In every workers compensation case where the compensability of a medical condition is in dispute, failure to have an expert to address causation is fatal to the claim and may even constitute legal malpractice.

Reliability of expert opinions. In *Legette*, defendants attacked Dr. Currins causation opinion on several grounds. First, defendants alleged that the opinion was not sufficiently reliable under *State v. Goode*, 341 N.C. 513, 461 S.E.2d 631 (1995), and *Howerton v. Arai Helmet, Ltd.*, 358 N.C. 440, 597 S.E.2d 674 (2004). These two cases set forth a three-part test for the evaluation of expert testimony:

- (1) Is the experts proffered method of proof sufficiently reliable as an area for expert testimony?
- (2) Is the witness testifying at trial qualified as an expert in that area of testimony?
- (3) Is the experts testimony relevant?

[*Legette*, 640 S.E.2d at 755]. Although the *Legette* court fell short of explicitly holding that this standard applies to workers compensation cases, it nevertheless proceeded to follow the three-step analysis in resolving *Legette*.

Practice Tip--Dont Forget the Formal Evidentiary Rules. Workers compensation proceedings have always enjoyed a relaxed procedural environment, including the introduction and admission of evidence [see, e.g., *Tucker v. City of Clinton*, 120 N.C. App. 776, 780, 463 S.E.2d 806, 810 (1995)]. Even so, most significant appellate decisions on the issue of causation in North Carolina over the last decade have resorted to traditional principles of evidence that apply to non-administrative settings in determining whether evidence is competent for purposes of the appellate standard of review in workers compensation cases [see, e.g., *Holley v. ACTS, Inc.*, 357 N.C. 228, 581 S.E.2d 750 (2003)]. The lesson to be learned is to not get so comfortable with the relaxed evidentiary atmosphere that you forget to lay the appropriate foundation for your proof of causation through expert testimony.

Support in published medical literature not necessary. Second, Defendants attacked the reliability of Dr. Currins medical opinion because he did not cite any established medical techniques or review any studies establishing that a single incident can aggravate pre-existing lymphedema. [See *Legette*, 640 S.E.2d at 755]. On several previous occasions, North Carolina appellate courts had rejected similar arguments requiring corroboration through medical literature, [e.g., *Matthews v. City of Raleigh*, 160 N.C. App. 597, 607, 586 S.E.2d 829, 837-838 (2003)], and the Court of Appeals took the opportunity to reject it again in *Legette*.

Practice Tip--Do Your Research. Although several cases have now held that medical literature does not need to substantiate an expert opinion on causation, it certainly helps if research supports your theory of the case [cf. *Buck v. Proctor & Gamble Mfg. Co.*, 52 N.C. App. 88, 94, 278 S.E.2d 268, 272 (1981) (opinion should address reasonable probabilities according to scientific knowledge and experience)]. The practitioner should always conduct medical research to corroborate expert opinions in the clients favor. As a practical matter, most medical professionals are more concerned with treating patients than with substantiating their opinions through scholarly articles for purposes of litigation. Doing this work for them will make doctors more comfortable during examination and more confident in their opinions on causation.

No most advanced specialty doctrine. Although it did not address the issue explicitly, the court in *Legette* implicitly carried out its earlier decisions refusing to endorse the most advanced specialty doctrine in North Carolina. Under this doctrine, testimony by a doctor with more specialized credentials or experience is given controlling weight over non-specialists [e.g., *Perkins v. U.S. Airways, Inc.*, 177 N.C. App. 205, 211, 628 S.E.2d 402, 407 (2006); *Armstrong v. W.R. Grace & Co.*, 175 N.C. App. 528, 532, 623 S.E.2d 820, 823 (2006)]. In *Legette*, for example, defendants pitted the testimony of Dr. Paschal, a board-certified expert in surgery, against that of Dr. Currin, a board certified family practitioner who had treated approximately one hundred patients with numerous appointments each. The Court of Appeals affirmed the Commissions endorsement of Dr. Currin's testimony [see 640 S.E.2d at 756].

This endorsement reflects the standard of review that appellate courts have over the Commissions evaluation of witness credibility. The decision concerning what weight to give expert evidence is a duty for the Commission and not [appellate courts]. [*Adams v. Metals USA*, 168 N.C. App. 469, 483, 608 S.E.2d 357, 365 (2005), *affd*, 360 N.C. 54, 619 S.E.2d 495 (2005) (per curiam)]. Furthermore, [t]he degree to which an expert testifies as to causation, be it probable or most likely or words of similar import, goes to the weight to the testimony rather than to its admissibility. [*Martin v. Martin Bros. Grading*, 158 N.C. App. 503, 507-508, 581 S.E.2d 85, 88 (2003)].

Practice Tip--Stick with the Specialists Whenever Possible. Because doctors are already treating injured employees in most cases by the time employees seek legal representation, it is often beyond the practitioners control as to who the medical experts will be in a given case. In day-to-day practice, however, it normally takes compelling clinical experience for a non-specialist to override the credibility of a specialist. The practitioner should consider directing the employees medical care to a qualified specialist for proper treatment and investigation into causation.

Probability, not possibility. The Court of Appeals also looked at the competency of the evidence in terms of the degree to which the two experts testified on causation [see 640 S.E.2d at 756-757]. Generally speaking, expert opinions expressed in terms of *probability* are competent [see *Peeler v. Piedmont Elastic, Inc.*, 132 N.C. App. 713, 718-718, 514 S.E.2d 108, 112 (1999)], while expert opinions based on *possibility* are not, [see *Holley*, 357 N.C. at 234, 581 S.E.2d at 754]. This distinction reiterates the standard of proving causal factor[s] by a preponderance of the evidence in workers compensation cases before the Commission [*Gutierrez v. GDX Automotive*, 169 N.C. App. 173, 177, 609 S.E.2d 445, 448 (2005)].

In *Legette*, the court noted that Dr. Currin repeatedly testified to a *medical certainty* that Plaintiffs accident at work *probably* aggravated her pre-existing lymphedema and that we are not faced with a situation where Dr. Currin only presented could or might testimony. [See 640 S.E.2d at 756 (emphasis added)]. Thus, the plaintiff satisfied the requisite degree of proof before the Commission, and competent evidence supported the Commissions finding of causation on appeal.

Practice Tip--Memorize the Magic Language of Probability. In light of *Legette* and the remaining workers compensation appellate cases addressing the issue of causation over the past several years, the practitioner should avoid restricting the examination to only possible causes and should instead make sure to elicit testimony of probable causation.

This is most easily done through word choice in hypothetical questions. The following words often denote possibility and should be avoided: *assume, capable, chance, conceivably, conjecture, could, doubt, guess, hypothesize, imagine, may, maybe, might, perhaps, possible, postulate, potential, skeptical, speculate, suppose, surmise, take for granted, and unlikely*. In contrast, the following words are associated with probability and should be incorporated while questioning experts: *absolutely sure, best candidate, certainly (or reasonable certainty), greater chance, likely, more likely than not, more/most common, not unlikely, probably, and usually*.

The possible-probable distinction has its foundation in logic, which recognizes that an event must be possible

before it is probable. For example, if it is probable that the Court of Appeals will issue a published decision in the *Legette* case, it must first be possible for this to happen. However, there are two corollaries to this principle. First, an event that is impossible can never be probable. And, second, something may be possible even though it is not probable. Most workers compensation cases in which the proof of medical causation is insufficient to withstand appellate scrutiny fall into this latter category.

Practice Tip--List the Possible Causes, and Then Rule Them Out to Reach the Most Probable One. To get around witnesses who are reluctant to commit their opinions in terms of probability, the practitioner can ask the witnesses to list all possible causes of the medical condition, only to then use extrinsic evidence to have the witness eliminate these in order to reach the most probable one in the list by default. For example, if the possible causes of RSD are previous trauma, illicit drug use, previous stroke with hemiplegia, and cervical spondylosis, the expert can look to the patients medical history in ruling out the ones that are not supported by the history and in deriving the most probable cause through process of elimination.

Getting around the fallacy of *post hoc ergo propter hoc*. Finally, the *Legette* court held that Dr. Currins testimony was competent even though defendants characterized it under the *post hoc, ergo propter hoc* fallacy [see 640 S.E.2d at 756-757]. In *Young v. Hickory Business Furniture*, the Supreme Court of North Carolina held that [i]n a case where the threshold question is the cause of a controversial medical condition, the maxim of *post hoc, ergo propter hoc*, is not competent evidence of causation. [353 N.C. 227, 232, 538 S.E.2d 912, 916 (2000)]. But *Legette* was different in two ways.

First, *Legette* recognized that the rule in *Young* only renders expert opinions on causation incompetent when *post hoc* reasoning takes place with respect to controversial diagnoses [see 353 N.C. at 232, 538 S.E.2d at 916]. Unlike the controversial diagnosis of fibromyalgia in *Young*, the diagnosis of lymphedema in *Legette* was a differential diagnosis well-known to all medical experts who testified [see 640 S.E.2d at 756-757]. This distinction acknowledges the common-sense observation that the consequences of an injury do not surface until after the injury occurs, which falls under the classic *post hoc* pattern and also validates the importance that this temporal sequence can lend to the causation analysis, notwithstanding the fallacy.

Second, the court distinguished *Young* by pointing out that Dr. Currin, unlike the doctors in *Young*, had made an effort to rule out other possible causes of lymphedema in reaching the conclusion that Plaintiffs accident was the probable cause [see 640 S.E.2d at 757]. Although the decision did not say so explicitly, *Legettes* reasoning implicitly validated the methodology behind differential diagnosis, which is sometimes referred to as differential etiology.

This is a clinical process whereby a doctor determines which of several potential diseases or injuries is causing the patients symptoms to symptoms associated with known diseases, conducting physical examinations, collecting data on the patients history and illness, and analyzing that data--until a final diagnosis for proper treatment is reached. . . . *Differential diagnosis is the basic method of internal medicine and enjoys widespread acceptance in the medical community. . . . Generally speaking, when properly conducted the technique has important non-judicial uses, is generally accepted as valid by the medical community, and has been subjected to use, peer review, and testing. . . .*

Even with all the advances of medical science, the practice of medicine remains an art. *A properly conducted and explained differential diagnosis is not junk science.* If a differential diagnosis provides a sufficient basis on which to prescribe medical treatment with potential life-or-death consequences, *it should be considered reliable enough to assist a fact-finder in understanding certain evidence or determining certain fact issues.* [*Coastal Tankships, U.S.A., Inc. v. Anderson*, 87 S.W.3d 591 (Tex. App. 2003) (emphasis supplied)].

This validation fits well within the informal evidentiary environment of workers compensation cases, since even the formal rules of evidence recognize that technical theoretical arguments should not trump facts that are statistically

reliable on the issue of causation. [Cf., e.g., *Fed. R. Evid.* 703 advisory committee notes (Thus, a physician in his own practice bases his diagnoses on information from numerous sources and of considerable variety, including statements by patients and relatives, reports and opinions from nurses, technicians and other doctors, hospital records and x-rays. . . . The physician makes life-and-death decisions in reliance upon them. His validation, expertly performed and subject to cross-examination, ought to suffice for judicial purposes.)].

For discussion of general principles of occupational disease, see 3-52 *Larson's Workers' Compensation Law* § 52.01 et seq.

For discussion of lymphedema and breast cancer, see 18-312 *Attorneys' Textbook of Medicine* (Third Edition) P 312.130.

ABOUT THE AUTHOR(S):

Vernon Sumwalt practices with the Sumwalt Law Firm in Charlotte, North Carolina, in the areas of workers compensation, workplace torts, and Social Security disability. He is a board certified specialist in workers compensation law by the North Carolina State Bar and has presented at over forty continuing legal education seminars. In addition to numerous articles in legal periodicals, he has co-authored *The Law of Workers Compensation in South Carolina* (2nd ed. 1998, 3rd ed. 2003, and 4th ed. 2005), and *The Law of Automobile Insurance in South Carolina* (4th ed. 2000 and 5th ed. 2002), and he wrote the workers compensation chapter in *The South Carolina Law of Damages* (1st ed. 2004), all published by the South Carolina Bar. Mr. Sumwalt serves on the Executive and Amicus Committees of the Workers Compensation Section of the North Carolina Academy of Trial Lawyers, and he is on the Workers Compensation Section Council of the North Carolina Bar Association. Mr. Sumwalt is also a member of the American Association for Justice (AAJ), the Workplace Injury Litigation Group (WILG), and the National Organization of Social Security Claimants Representatives (NOSSCR). He is also a member of the LexisNexis National Workers' Compensation Advisory Board. He received his undergraduate degree at the University of Miami in 1994 and his law degree from the University of South Carolina in 1998.

Rassp on Affirming Fuentes Rule for Permanent Disability Indemnity Calculation

2008 Emerging Issues 576

Rassp on Affirming Fuentes Rule for Permanent Disability Indemnity Calculation

By Robert G. Rassp

October 2, 2007

SUMMARY: The California Supreme Court resolved in *Brodie v. Workers' Comp. Appeals Bd.*, 40 Cal. 4th 1313, 72 Cal. Comp. Cas 565, 2007 Cal. LEXIS 4334 (May 3, 2007), the conflict among the state appellate courts as to the correct Formula to be applied for determining the apportionment of subsequent permanent disability ratings. This commentary, written by Robert G. Rassp, the author of The Lawyer's Guide to the AMA Guides and California Workers' Compensation, examines from the perspective of an applicants attorney the ramifications of the interpretation in *Brodie* of Cal. Labor Code § 4663 and Cal. Labor Code § 4664 and Formula A.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: The entire workers compensation community has been anxiously awaiting the California Supreme Court's final decision in the conflicting courts of appeal cases in *Brodie*, *Welcher* and the companion cases since oral argument took place in Southern California on April 3, 2007. Under new Cal. Labor Code § 4663 and Cal. Labor Code § 4664, the debate has raged on as to which formulas, "A," "B," "C" or "modified C" apply in cases involving legal apportionment and whether the adoption of Formula A in *Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal. 3d 1, 547 P.2d 449, 128 Cal. Rptr. 673, 41 Cal. Comp. Cas 42, is still applicable despite the repeal of former Cal. Labor Code § 4750. Formula A, which has been the law for the past 30 years, provides that the percentage of apportionment to prior injuries or illnesses that resulted in a permanent disability had to be subtracted from the overall percentage of permanent disability to determine liability for a current employer [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.07(2)(d)(i); 1-7 Herlick, California Workers' Compensation Law § 7.44(1)].

The legal conclusion as to whether percentages or dollars are subtracted when there is legal apportionment was thrown into a major debate and became one of the first issues under SB 899 that resulted in conflicting courts of appeal decisions and that needed speedy resolution by the Supreme Court for uniformity of decisions throughout California. This commentary analyzes the Court's decision in *Brodie v. Workers' Comp. Appeals Bd.* (2007) 40 Cal. 4th 1313, 72 Cal. Comp. Cas 565, 2007 Cal. LEXIS 4334, (*Brodie/Welcher*) on an issue-by-issue basis, followed by a discussion of the ramifications of the decision.

Key Provisions of Court's Decision. The following are key provisions extracted from the Court's decision in *Brodie/Welcher*:

. Formula A in *Fuentes* was originally determined applicable on statutory construction under former Cal. *Labor Code* § 4750. The philosophy was based upon Section 4750 that the current industrial portion of the overall disability needs to be considered in isolation, wholly independent of any nonindustrial or previous industrial disability [See *Fuentes*, 16 Cal. 3d at 5-6].

. The Court in *Brodie/Welcher* reaffirmed the policy that had existed behind former Cal. *Labor Code* § 4750 to encourage employers to hire the handicapped. Remember, the permanent disability payment schedule went from a linear increase by percentages to a progressive increase by percentages as of 1972. The notion in adopting Formula A in *Fuentes* was because an employer who hired an employee with a prior disability (whether work related or not) would not have to fear greater compensation costs if that worker with a prior disability were to be injured [See *Fuentes*, 16 Cal.3d at 5].

. When the legislative intent in enacting a particular statute is clear, the Cal. Labor Code § 3202 general rule of liberal construction will not compel a contrary result. The legislative intent with respect to how benefits were to be calculated after apportionment was never articulated in SB 899 except to change the law of apportionment to apply to causation of permanent disability and a conclusive presumption that a prior permanent disability award is still permanent.

. The Court in *Brodie/Welcher* states: Certainly nothing in current section 4663 or section 4664 expressly requires formula A, B, C, modified C, or any other approach to calculating compensation [under section 4658].

. The Court answered the following question in the negative: Did the Legislature intend to adopt a new and different formula when it adopted new and different language governing apportionment? Of course, under prior Cal. Labor Code § 4750, the Legislature never adopted any formula for calculating benefits after apportionment, which led to the *Fuentes* decision.

. SB 899 did not indicate the Legislature intended "to overthrow long-established principles of law [i.e., using Formula A per *Fuentes*] unless such intention is clearly expressed or necessarily implied."

. The Court compared old apportionment law with the new and stated with respect to the old law: In short, so long as the industrial cause was a but-for proximate cause of the disability, the employer would be liable for the entire disability, without apportionment.

. The Court goes on to say about rehabilitation from prior disabilities: The plain language of new sections 4663 and 4664 demonstrates they were intended to reverse these [full or partial rehabilitation between a first and second injury resulting in permanent disability] features of former sections 4663 and 4750. The Court then cites *Kopping v. Workers' Comp. Appeals Bd.* (2006) 142 Cal. App. 4th 1099, 1115, 48 Cal. Rptr. 3d 618, 71 Cal. Comp. Cas 1229, and *Sanchez v. County of Los Angeles* (2005) 70 Cal. Comp. Cas 1440, 1452 (Appeals Board en banc opinion).

. Former Cal. *Labor Code* §§ 4663 and 4750 were "inconsistent with the new regime of apportionment based on causation, as well as the conclusive presumption [of section 4664(b)] that previous permanent disability still existed for apportionment purposes." Former Cal. *Labor Code* § 4750 allowed trial judges to disregard a prior permanent disability if the applicant proved rehabilitation that is squarely at odds with new Cal. Labor Code § 4664(b). Repeal of Cal. Labor Code § 4750 was necessary to adopt an apportionment by causation regime.

. The legislative history for SB 899 is silent on a possible change from Formula A to any other formula.

. Citing the legislative history of SB 899, the Court seems to agree that there is a perceived crisis in skyrocketing workers compensation costs.

. There was no intent to raise workers compensation benefits other than those mentioned in SB 899, such as raising from 6 weeks to 16 weeks of payments of permanent disability for each percentage of PD over 70%.

. The Court chose Formula A and in Footnote 14 of its opinion indicates that Formula A creates equality from an employer-based perspective, whereas Formula C creates equality from an employee-based perspective.

. The Court gives deference to the WCABs holding in *Nabors v. Piedmont Lumber & Mill Company* (2005) 70 Cal. Comp. Cas 856 (Appeals Board en banc opinion) that incorporated Formula A because the Legislature did not intend to get rid of it. The Legislature did not intend to amend settled law and alter the status quo concerning the appropriate formula.

. The tables in section 4658 are for compensating the current injury only, not the totality of an injured workers disabilities. . . .

Impact of Current Political Climate. Although the Court's decision is disappointing to applicants' attorneys and labor advocates, the decision to adopt Formula A was a foregone conclusion and is not unexpected from an academic standpoint. The Legislature did not expressly reverse *Fuentes* in SB 899 by adopting a different method of calculating permanent disability after apportionment even though it could have done so. Reduced permanent disability awards in certain cases along with medical control have been on the business and insurance communities wish list for years. The political climate for change was not in the direction of increasing benefits to injured workers who had a prior award or previous injury or illness that resulted in permanent disability. The struggle to adopt a new formula in this political environment was noble but poorly timed.

Doctrine of *Stare Decisis*. The absence of legislative intent to change the method of calculating permanent disability after apportionment set the stage for the Court to rely on the doctrine of *stare decisis* from 30 years of the application of *Fuentes* without any compelling reason to change it. Going from what has been a less restrictive apportionment regime to a more restrictive one based upon causation of permanent disability with reductions in awards for pathology, asymptomatic conditions, prior awards and retroactive prophylactic restrictions is anathema to the idea that *Fuentes* should be reversed simply on the basis that the statute it was based on was repealed under SB 899.

Court's Public Policy Argument. That being said, there is virtually no evidence supporting the Courts assertion that the public policy in favor of hiring the handicapped is the main reason for adopting Formula A, thereby saving employers liability and money for new injuries. The Courts reliance on this notion is not based on any empirical data in 1977, or 30 years later, in 2007. This was a political fiction that is not based on any actual studies, research, or evidence-based facts presented to the Court leading up to both *Fuentes* in 1977 and now *Brodie/Welcher* in 2007.

This is especially true in light of current privacy and anti-discrimination laws that prohibit disclosure of protected health information and the existence of a disability or handicap, and whether a prospective employee must disclose if he or she has ever filed a workers compensation claim or suffered a work related injury as part of an employment application. The protections under the Americans with Disabilities Act [See 42 U.S.C.S. § 12101 et seq.], Family Medical Leave Act [See 29 U.S.C.S. § 2601 et seq.] and Californias Fair Employment and Housing Act [See Cal. Government Code § 12900 et seq.] did not exist in 1977 when *Fuentes* was decided by the Court, and those protections are probably more effective in promoting the public policy of hiring the handicapped than the use of Formula A in workers compensation cases.

The fact that the Court rejected the notion that Formula C (dollars minus dollars) should apply in cases in which subsequent industrial injuries occurred while the employee was employed by the same employer is troubling since the logic propounded by the trial judge in *E & J Gallo Winery v. Workers' Comp. Appeals Bd. (Dykes)* (2005) 134 Cal. App. 4th 1536, 37 Cal. Rptr. 3d 208, 70 Cal. Comp. Cas 1644, made legal and moral sense. Since successive permanent disabilities to the same parts of body result in progressive amounts of permanent disability indemnity, an employees ability to compete in the open labor market was greatly affected. If the employee is working for the same employer with successive injuries, there is no issue involving the public policy in favor of hiring the handicapped to protect the employer from being liable for a progressive permanent disability. A successively injured worker with the same employer should enjoy the progressive permanent disability payment schedule since the hire the handicapped public policy would not apply in those situations.

However, perhaps the Court did not want to invite litigation over equal protection for cases involving the same progressive disabilities but with injuries with separate employers or claims administrators.

Court's Discussion of Rehabilitation. The Courts discussion about rehabilitation from a prior disability is also troubling. It is clear in the regime of the new apportionment law that the Legislature intended to require prior awards of permanent disability to be subtracted from current ones involving the same parts of body pursuant to new Cal. Labor Code § 4664(b). However, in *dicta*, the Court seems to hint that injured employees may have a difficult, if not impossible, burden of proving rehabilitation from a prior injury that did not result in an award or any prior nonindustrial injury or condition. The Court has cast some doubt about whether rehabilitation can be claimed under apportionment under new Cal. Labor Code § 4663 by saying that the Legislature intended to reverse partial or total rehabilitation features of former Cal. Labor Code § 4663 and Cal. Labor Code § 4750.

The Court then cites the WCAB's en banc opinion in *Sanchez*, which held that an employee *can* prove a form of rehabilitation i.e., that a current permanent disability is caused by a different factor than the one that caused the prior disability to the same body part [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.07(2)(c); 1-7 Herlick, California Workers' Compensation Law § 7.46(3)]. So, on the one hand, the Court is saying that the Legislature intended to disallow claims of partial or total rehabilitation from a prior award, yet on the other hand it is saying that you can prove rehabilitation from a prior award if the new permanent disability is caused by a different factor than the one that caused the prior disability to the same body part. It is no wonder why the Court itself said they like to give great deference to the WCAB because of that agency's expertise in workers compensation matters. So now that the Court has spoken, indirectly, on the issue of rehabilitation from a prior disability, can we still claim that an employee has totally or partially recovered from a prior disability that did or did not result in an award?

The *dicta* in *Brodie/Welcher* implies the answer is "no," but in citing the *Sanchez* and *Kopping* cases, the Court seems to defer to the WCAB on that issue when the facts are similar to those that occurred in *Sanchez* or *Kopping*, i.e.,

the employees current disability was independent from the prior one even though both disabilities involve the same part of body, for example in the *Sanchez* case, the lower extremity. Perhaps from an applicants attorney standpoint, the conclusive presumption in Cal. Labor Code § 4664 is not always conclusive after all.

Effect of Court's Decision on Successive Injuries. We also have the burning question about whether the Courts decision in *Brodie/Welcher* affects established law for successive injuries under *Wilkinson v. Workers' Comp. Appeals Bd.* (1977) 19 Cal. 3d 491, 564 P.2d 848, 138 Cal. Rptr. 696, 42 Cal. Comp. Cas 406. Remember, *Wilkinson* also involved successive injuries and was decided after *Fuentes* by the same Court in 1977. The Court in *Wilkinson* extensively cited *Fuentes* by saying that the decision in *Fuentes*, adopting Formula A, does not overrule the *Bauer* Doctrine [See *Bauer v. County of Los Angeles* (1969) 34 Cal. Comp. Cas 594 (Appeals Board en banc opinion)], [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.07(2)(d)(ii)-(iii); 1-7 Herlick, California Workers' Compensation Law § 7.46(2)].

The *Bauer* Doctrine established the rule that if an employee suffers successive industrial injuries and becomes permanent and stationary at the same time for all injuries, then there is one overall permanent disability rating rather than separate ones for each industrial injury. This doctrine became even more important after 1972 when the permanent disability payment schedule went from linear increases to progressive increases for permanent disabilities in higher percentage ratings.

The Court in *Brodie/Welcher* is silent on the issue of how successive industrial injuries that become permanent and stationary at the same time are to be rated. The Court in *Wilkinson* simply stated that its decision in *Fuentes* did not overrule the *Bauer* Doctrine so there can be one overall rating for successive injuries that become permanent and stationary at the same time if the injuries involve the same employer and the same parts of body. We will probably see more litigation on this issue alone in cases involving the *AMA Guides* and the 2005 Permanent Disability Rating Schedule (2005 Schedule) in which the concept of separate body regions are applicable for rating purposes and apportionment under Cal. Labor Code § 4664(c).

Using the same logic the Court used in *Brodie/Welcher*, it is fair to say that the *Wilkinson* decision remains the law until the Court says otherwise, because there is nothing in SB 899 or in the legislative history of SB 899 that indicates the intent of the Legislature to overrule *Wilkinson*.

Practical Effects of Court's Decision. So what are the practical effects of the Court's decision in *Brodie/Welcher* on our law practices? It is obvious that in the current political climate in workers compensation law, the Court has saved employers and their claims administrators millions, if not billions, of dollars by, in effect, avoiding life pension cases in successive injury cases in which the employee is permanent and stationary at different times, either from prior industrial or nonindustrial injuries. Individuals with successive serious permanent disabilities will have to rely on public assistance programs, Social Security disability, and other means besides the private welfare program of workers compensation. Does the Court's decision violate the compensation bargain? This is a question left to the politicians, and with the Court essentially applying *stare decisis* in upholding the use of Formula A, there is no doubt that the compensation bargain remains the same, albeit in a weakened state.

Much of this issue will fade into the twilight, and more significant battles will be fought in litigation over how the Courts decision affects cases in which a prior industrial injury is rated under the 1997 Schedule for Rating Permanent Disabilities (1997 Schedule) and new injuries are rated under the *AMA Guides* and the 2005 Schedule involving the same body parts. You cannot subtract percentages based upon work restrictions under the 1997 Schedule from impairment and permanent disability ratings based upon the *AMA Guides* and the 2005 Schedule. This is because the 1997 Schedule is based upon reduced ability to compete in the open labor market, while the 2005 Schedule is based upon impairments under the *AMA Guides* adjusted by a diminished future earning capacity [See 1-2 Lawyer's Guide to *AMA Guides* and CA Workers' Comp § 2.02(2)-(3)].

For example, a no heavy work restriction for a 39-year-old nurse with a lumbar spine injury under the 1997

Schedule rates 30% permanent disability. The same nurse in a post 1/1/05 lumbar spine injury case would be rated using Chapter 15 of the *AMA Guides*, The Spine, and her rating under the 2005 Schedule would probably be less than 30% permanent disability. If you use the subtraction of percentages Formula A method mandated under *Brodie/Welcher*, the result would be inequitable and in some cases result in a negative percentage rating. This would be like subtracting apples from oranges. Formula A cannot apply in cross-over cases involving a prior award under the 1997 or earlier schedules and the 2005 Schedule.

By example, a hypothetical case arises when there are successive injuries to a lumbar spine for the 39-year-old nurse who suffers a specific lumbar spine injury in 1997 resulting in a 30% permanent disability award. She returns to work in 1998, has a second specific injury to her lumbar spine in 2004, returns to work in 2004, and has a continuous trauma injury to her lumbar spine from the beginning of her employment in 1990 through 2007. How would her permanent disability be evaluated assuming liability for all injuries have been accepted?

Under the *Brodie/Welcher* decision, the prior award under the 1997 Schedule is 30% and would be presumed to exist at the time of the new injuries pursuant to Cal. Labor Code § 4664(b). Since the employee returned to work after her 2004 specific injury and before 1/1/05, the 1997 Schedule would apply for that case if the employee's lumbar condition became permanent and stationary prior to 1/1/05. For the continuous trauma injury through 2007, the *AMA Guides* would apply.

If the employee's lumbar spine condition became permanent and stationary after each separate injury occurred, then there would be three separate ratings of permanent disability: the 1997 and 2004 specific injuries under the 1997 Schedule, and the 2007 injury rated under the 2005 Schedule. To arrive at the rating for the 2004 specific injury, the permanent disability from the prior 1997 specific injury (30%) would be subtracted from the percentage of permanent disability based on the 1997 Schedule for the 2004 injury. For example, if the 2004 injury resulted in a restriction to light work, which takes a 50% permanent disability rating standard under the 1997 PDRS, the prior award of 30% would be subtracted, leaving a 20% rating standard for the 2004 injury. This would be consistent with applying Formula A, as affirmed by the Court in *Brodie/Welcher*, which will now apply in all pending cases.

The employee would argue that she could present evidence under the *Sanchez* case that her prior award of 30% for the 1997 specific injury was due to a lumbar spinal condition that is different from the lumbar spinal condition that is a result of the 2004 injury and continuous trauma injury, and that the percentage of permanent disability from the prior award should not be subtracted from the 2004 rating from the 1997 Schedule because she was able to rebut the presumption that the prior 30% award should be subtracted from the award for the 2004 specific injury.

The evaluating or treating physician would then have to indicate the impairment rating for the continuous trauma injury of 2007 under the *AMA Guides* and he or she would have to apply apportionment under Cal. Labor Code § 4663 to indicate approximately what percentage of the employee's overall permanent disability to her lumbar spine is directly the result of continuous trauma and what percentage of her permanent disability is caused by the prior two specific industrial injuries and any other nonindustrial factors. It is impossible for a judge or the parties to be able to use Formula A to take the 2005 Schedule rating for the 2007 continuous trauma injury and subtract the prior 30% award from that rating applying Cal. Labor Code § 4664, because ratings under the 1997 Schedule cannot be subtracted from ratings under the 2005 Schedule since that would be unreasonable to subtract a permanent disability rating based upon work restrictions from one that is based on whole person impairment ratings.

The issue of how to calculate permanent disability payments with prior awards or prior injuries will require application of Formula A only in cases in which the same permanent disability rating schedule is used for all injuries. Otherwise an inequitable result will occur. But what happens if the nurse's lumbar spine condition as a result of her 2004 specific injury and 2007 continuous trauma injury became permanent and stationary at the same time? Under *Wilkinson*, how do you calculate her permanent disability, and how does Formula A apply?

The treating or evaluating physician would first have to indicate what the overall permanent impairment rating is

for the nurses lumbar spine condition. The physician would have to indicate in his or her apportionment discussion approximately what percentage of the permanent impairment to the lumbar spine is due to the continuous trauma injury and the specific injury of 2004, and how much of the impairment is due to the prior 1997 specific injury and any other factor. Cal. Labor Code § 4664(b) and the use of Formula A could not be used in this case at all since the prior award was for permanent disability under the 1997 Schedule and the current permanent disability is based on the 2005 Schedule. The award in this case would be determined by taking the overall permanent disability rating percentage from the 2005 Schedule and subtracting from it the percentage of apportionment for the prior industrial injury and any other factor that is causing permanent disability.

Thus, Formula A from *Brodie/Welcher* will not apply in cross-over cases, and its application will occur only when a prior award is based upon the same rating schedule as the current injury. Even if the prior 1997 lumbar spine injury was nonindustrial, Formula A would apply only to the extent of the judge subtracting from the overall percentage of permanent disability under the 2005 Schedule the percentage of impairment caused by other factors, including any prior industrial or nonindustrial injuries to the same part of body.

Effect of Court's Decision on Injured Workers' Permanent Disability Benefits. The Court in *Brodie/Welcher* in footnote 10 states that the principle of Occams razor that the simplest of competing theories should be preferred over more complex and subtle ones applies judicially as well as scientifically. The citation by the Court is ironic since this is a case in which the Court has saved millions of dollars for the employer/claims administrator community by adopting Formula A under SB 899 in a new workers compensation system that seems to sharply cut, with a razors edge, injured workers benefits for permanent disability. The Court accomplished this by two swipes of the razor by adopting Formula A instead of Formula C and by implying in *dicta* that rehabilitation from a prior injury that resulted in a disability may no longer be legally possible.

For insight and discussion on apportionment, see 1-8 CA Law of Employee Injuries & Workers' Comp §§ 8.05--8.07, 1-7 Herlick, California Workers' Compensation Law §§ 7.44--7.47, and 1-6 Lawyer's Guide to AMA Guides and CA Workers' Comp § 6.02.

For information on the lumbar spine, see 4-13A Attorneys' Textbook of Medicine (Third Edition) §§ 13A.00--13A.90; 1-5D Proving Medical Diagnosis and Prognosis §§ 5D.01-- 5D.08, 6.01--6.07; Common Diagnostic Procedures §§ 9.02, 19.02, 7.02[9], 27.08; and 1-15 Occupational Injuries and Illnesses §§ 15.01--15.17.

ABOUT THE AUTHOR(S):

Robert G. Rassp of Sherman Oaks, CA, received two undergraduate degrees from the University of California at Irvine in 1978 and his law degree from Loyola Law School in 1981. He has practiced workers' compensation and Social Security disability since 1981. He was the Chair for the State Bar Workers' Compensation Law Section Executive Committee in 2000-2001 and is currently active as a member of that committee. He is the author of *The Lawyer's Guide to the AMA Guides and California Workers' Compensation* (LexisNexis Matthew Bender). He has conducted workers' compensation seminars on a variety of topics, including the *AMA Guides*, and is a frequent speaker at State Bar workers' compensation seminars. Mr. Rassp also serves on the LexisNexis California Workers' Compensation Editorial Board.

Rabine on Audiss and Dover, Recent California WCAB Panel Decisions

2008 Emerging Issues 566

Rabine on Audiss and Dover, Recent California WCAB Panel Decisions

By Merle C. Rabine

October 2, 2007

SUMMARY: Recent interest in California Workers' Compensation Appeals Board panel decisions has been fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet. This commentary, written by Merle C. Rabine, the past Chairman of the Workers Compensation Appeals Board, examines two recent panel decisions: one involving "the bump" in permanent disability payments set forth in Labor Code § 4658(d)(2), (3), which is supposed to encourage return to work, and the other involving "contemporaneous" notices of termination and injury, which do not bar compensation pursuant to Labor Code § 3600(a)(10).

PDF LINK: Click Here for Enhanced PDF of Commentary

ARTICLE: Despite recent interest in California Workers' Compensation Appeals Board panel decisions, fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet, most panel decisions are of little interest to anyone other than the parties whose case is being decided. When the Appeals Board wants to announce a position on a substantive or procedural issue, it does so by issuing an en banc decision or significant panel decision [see http://www.dir.ca.gov/WCAB/wcab_dars.htm]. Panel decisions, however, tend to be case-specific with the result determined by the facts of the case. Moreover, while panel decisions are citeable authority, particularly on issues of contemporaneous administrative construction of statutory language [see *Griffin v. WCAB* (1989) 209 Cal. App. 3d 1260, 1264, fn 2, 54 Cal. Comp. Cas 145], they are not binding precedent, as are en banc decisions, on all Appeals Board panels and workers' compensation judges [see *Gee v. Workers' Comp. Appeals Bd.* (2002) 96 Cal. App. 4th 1418, 1425 fn. 6, 67 Cal. Comp. Cas 236].

This commentary examines two recent panel decisions, one involving "the bump" in permanent disability payments set forth in Cal. Labor Code § 4658(d)(2), (3), which is supposed to encourage return to work, and the other involving "contemporaneous" notices of termination and injury, which did not bar compensation pursuant to Cal. Labor Code § 3600(a)(10).

Employers substantial compliance with requirement of offer of regular work in Labor Code § 4656(d)(3)(A) results in 15% reduction in PD payments under Labor Code § 4658(d)(2), (3): *Audiss v. City of Rohnert Park*, 2007 Cal. Wrk. Comp. P.D. 9 (Appeals Board panel decision). Cal. Labor Code § 4658(d)(2) and (3) provide that an employer must notify an injured employee within 60 days of a disability becoming permanent and stationary whether or not the employer offers the employee regular work, modified work, or alternative work. If not, each permanent

disability (PD) payment from the date of the end of the 60-day period is increased by 15%. If employment is offered on a form prescribed by the administrative director, each PD payment from the date of the offer is decreased by 15%, whether or not the employee accepts the offer. If the employer terminates the offered work before PD payments have been completed, the amount of each remaining PD payment is increased by 15%.

These sections, known as the bump, reflect a public policy of encouraging employers to continue to employ their disabled employees. It is based on RAND data that demonstrate that employees who return to work after an industrial injury with their at-injury employers sustain lower wage losses than employees who do not. The 15% increase of PD for employees who are not offered work, and the 15% decrease for employees who are offered work, are intended to incentivize employers and employees to maintain their employment relationship.

I know of no evidence as to whether these sections make any difference in the real world. I expect that studies are going on now, and at some point we will know whether these sections have any effect. They have been operative for more than two years, and they seem to have produced remarkably little litigation to date. *Audiss v. City of Rohnert Park*, 2007 Cal. Wrk. Comp. P.D. LEXIS 9, (Appeals Board panel decision), which was decided on April. 2, 2007, is the first WCAB panel decision that I have seen on the subject.

Applicant, while employed as a recreation supervisor for the period ending October 26, 2005, sustained an industrial injury to her right wrist. She lost no time from work. Her treating physician found her condition to be permanent and stationary (P&S) on April 2, 2006. He issued a permanent and stationary report dated March 31, 2006, but faxed it to the claims administrator on July 5, 2006. The report rates 3%. He noted that applicant was capable of returning to her usual and customary job (which she had never left) with use of a wrist brace.

On July 21, 2006 (more than 60 days after applicant was P&S), the claims administrator sent applicant a form DWC-AD 10003 Notice of Offer of Regular Work. She accepted the offer on July 25, 2006. The claims administrator also sent applicant, who has never been represented by an attorney, Stipulations with Request for Award, providing that her permanent disability was 3% at \$187 per week, a 15% reduction pursuant to Cal. Labor Code § 4658(d)(3)(A).

The WCJ refused to accept the stipulation. Not only did he reject the 15% reduction, but he apparently awarded a 15% increase on the ground that the employer had not complied with the statute. (*Note*: It is not clear from the WCAB opinion exactly what the WCJ did or why.)

The WCAB panel reversed. First, they held that it was not unreasonable for the employer to wait for the P&S report before offering regular work, as defendants receipt of the physicians final opinion on the extent of applicants ability to engage in her usual and customary occupation was a necessary prerequisite to its determination that the job offer was appropriate, particularly where the applicant continued to work during the period.

Of course, the statute says nothing about necessary prerequisites. Furthermore, if the employer had offered employment on the day applicant was P&S and terminated the employment after receipt of the P&S report, it would have incurred no penalty under Cal. Labor Code § 4658(d)(3)(B), since all of the PD indemnity would already have been paid out.

Second, the panel held that [t]he continuation of applicants regular work throughout the period after her injury and her permanent and stationary date is sufficiently equivalent to the notice of regular work. We see no reason to deprive an employer of the benefits of Section 4658(d)(3)(A) where the employee has not been temporarily disabled through the permanent and stationary date.

If you were sufficiently nave, you might have thought that the plain language of the statute and the employers failure to comply with it was sufficient reason. The statute makes no exception for injured employees who continue to work at their regular employment. It provides for a decrease in PD only when the employer has made the formal offer within the prescribed time limit, and then the decrease only applies to PD payments after the offer is made. Here, the offer was untimely, and if it had been timely, there would have been no reduction because of the timing of the

payments.

But it appears that plain language is a disfavored mode of statutory interpretation, at least as it involves Senate Bill 899. For example, see *Vera v. Workers Comp. Appeals Bd.* (filed 8/2/07, certified for publication 8/30/07) *Cal. App. 4th* [72 *Cal. Comp. Cas.* 1115], in which the Court of Appeal blithely concluded that indicating the existence of permanent disability in Cal. Labor Code § 4660(d) means permanent and stationary. (Note: I was the dissenting commissioner in the underlying panel decision, *Vera v. Sapper Construction Company*, 2005 *Cal. Wrk. Comp. P.D. LEXIS* 50 (Appeals Board panel decision).)

On the other hand, I would not rely heavily on the *Audiss* panel decision in a future case in which applicant is represented by an attorney and the stakes are higher. Here, the benefits of Section 4658(d)(3)(A) to this employer were \$297.00. If the PD rating is higher and the potential increase or decrease is more significant, I anticipate that future parties and WCAB panels will look more carefully at the statute.

Contemporaneous notices of termination and injury do not bar compensation pursuant to Labor Code § 3600(a)(10): *Dover v. Fresh Start Bakeries*, 2006 *Cal. Wrk. Comp. P.D. LEXIS* 53 (Appeals Board panel decision). Cal. Labor Code § 3600(a)(10) provides that no compensation shall be paid when a claim for compensation is filed after notice of termination or layoff, unless the employee demonstrates, among other things, that the employer had notice of the injury prior to the notice of termination or layoff. It seems straightforward either the employer did or did not have notice of the injury prior to notice of termination. But nothing is simple.

In *Dover v. Fresh Start Bakeries*, 2006 *Cal. Wrk. Comp. P.D. LEXIS* 53 (Appeals Board panel decision), applicant was a probationary employee working as an industrial machinery engineer. He claimed to have sustained an industrial injury to his back on January 1, 2005. He said that he tried to report the injury but that his supervisor had already left for the day. When he arrived at work the next day, he was contacted by his supervisor and told to report to the front office. While walking together to the front office, the supervisor told applicant that he was to be terminated, and applicant told the supervisor about the industrial injury.

The WCJ, while finding that applicant was scrupulously honest in his testimony, held that the injury was barred by Cal. Labor Code § 3600(a)(10) because the employer did not have notice of the injury prior to the notice of termination.

The WCAB panel reversed. (Note: I was the lead Commissioner on this panel decision.) The panel determined that [s]ection 3600(a)(10) is not intended to bar compensation to an injured worker merely because the employer intends to terminate the employee. Instead, the statute is intended to bar claims made in retaliation for a personnel action involving termination or lay off.

As to the facts of the case, the panel reviewed the transcripts of the testimony of applicant and his supervisor. There was no contradiction between them as to the content and timing of their conversation on the way to the front office. The panel concluded that both applicant and [the supervisor] testified that notice of injury was *contemporaneous* with notice of termination. Indeed, the record shows the injury claim was discussed during the exit interview and that applicant was referred for medical treatment before he was terminated (emphasis added). The fact that one statement followed another during a conversation was not enough to conclude that the injury was barred because notice of injury to the employer occurred after notice to the employee of termination, especially when there was no reason to believe that applicants report of injury was made in retaliation for the notice of termination. This is as close as it gets.

For further discussion of "the bump" in permanent disability payments, see 2-32 Hanna, CA Law of Employee Injuries & Workers' Comp § 32.04[3][a], and 1-7 Herlick, California Workers' Compensation Law § 7.51.

For further discussion of post-termination notice of injury, see 1-4 Hanna, CA Law of Employee Injuries & Workers' Comp § 4.65, and 1-10 Herlick, California *Workers' Compensation Law* § 10.02.

ABOUT THE AUTHOR(S):

Merle C. Rabine was a Commissioner of the California Workers' Compensation Appeals Board from April 2000 to January 2007. He was Chairman of the Appeals Board from April 2000 to June 2005. Mr. Rabine is presently a member of the LexisNexis National Workers' Compensation Advisory Board. McCoy on Elimination of Second Injury Funds and Impact on Iraqi War Veterans

2008 Emerging Issues 532

McCoy on Elimination of Second Injury Funds and Impact on Iraqi War Veterans

By Doug McCoy

October 1, 2007

SUMMARY: Second Injury Funds began in America in 1916 and were then modified following World War II to encourage the hiring of disabled war veterans. Beginning in 1992, however, states began to close their Second Injury Funds. This commentary by Doug McCoy of McCoy Consulting, examines the policies behind the closure of Funds and the potential impact on Iraqi War Veterans and others.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Second Injury Funds began in America in 1916 and were then modified following World War II to encourage the hiring of disabled war veterans. The first state to enact legislation to form a fund was New York [see N.Y. Work. Comp. Law § 15(8)]. Over the next 30 years, most states created some form of Second Injury Fund. The final state to enact legislation to form a Fund was Georgia on July 1, 1977 [see O.C.G.A. § 34-9-352].

Beginning in 1992, however, states began to close their Second Injury Fund. This commentary examines the policies behind the closure of Funds and the potential impact on Iraqi War Veterans and others.

How Second Injury Funds Worked

Second Injury Funds took two forms: (1) The Fund took over the handling of the claim and paid the injured worker for the disability and or medical cost above the amount of the workers compensation injury; or (2) the Fund reimbursed the employer/carrier after specified threshold amounts were met. For example, in the case of New York, reimbursement was made after 208 weeks of indemnity were paid [see N.Y. Work. Comp. Law § 15(8)(e)]. In Georgia reimbursement was made after the first \$5,000 was paid in medical and after 104 weeks of indemnity were paid [see O.C.G.A. § 34-9-360(a), (b)].

The effect of both types of Funds was to eliminate the additional costs as a consequence of a prior impairment combining with a subsequent injury to create a greater disability and medical costs.

Reasons for Eliminating Second Injury Funds

Funds were built up by a charge against carriers in cases of death without dependents. Sometimes there were special appropriations; and sometimes a small percentage assessment was made against carriers (or employers) [see 5-90 *Larson's Workers' Compensation Law* § 90.01(2)].

Businesses and insurers lobbied their state legislatures to eliminate the Funds, because in their opinion only a small group of employers or insurance carriers benefited, while all employers paid for the cost to administer the Funds and pay claims that qualified. In effect they felt there were more losers than winners.

On September 6, 2000, Edward Reinfurt, Vice President of The Business Council for the State of New York, testified before the Governor's Study Commission on Workers' Compensation Special Funds. Mr. Reinfurt stated that business was recommending elimination of New York's Fund even though, in the short term, it could mean higher workers compensation costs for some employers.

Acknowledging its purpose to encourage the hiring of disabled World War II veterans, he commented, "That seems reasonable. For what these veterans did for our country and for future generations, it was little to ask."

Mr. Reinfurt went on to testify that the New York Fund had outlived its original intent, citing that most World War II veterans were beyond retirement age, and New York's workplace accident rate was 38 percent below the national average.

9/11 and Its Aftermath

New York did not eliminate its Fund in 2000. Almost one year later, though, New York and the rest of America experienced the unthinkable. On September 11, 2001, terrorists successfully brought the World Trade Center twin towers crashing down, killing or injuring the largest number of civilian American workers in a single accident. On March 19, 2003, America sent troops to war in Iraq.

During his testimony Mr. Reinfurt argued that the Americans with Disabilities Act of 1992 eliminated the discrimination in employment for disabled Americans that existed in the post-war era of World War II.

As of September 11, 2007 we are still in Iraq, and New York has finally eliminated their Second Injury Fund earlier this year. New York is not alone in this respect, however. Many states have repealed their Second Injury Fund statutes, bringing the Fund in each of those states to closure.

States Where Second Injury Fund Eliminated or Reopened in a Different Form

Alabama. Fund repealed on 5/19/92.

Colorado. Fund does not apply to injuries occurring on or after 7/1/93 and for occupational diseases occurring on or after 4/1/94 [C.R.S. § 8-46-104].

Connecticut. Fund abolished in 1995.

District of Columbia. Fund repealed for injuries occurring on or before 4/16/99 [D.C. Code § 32-1508(6)(c)].

Florida. Fund eliminated; no claims allowed after 12/30/97 [see Fla. Stat. § 440.49].

Georgia. Fund eliminated; no claims allowed for injury dates on or after July 1, 2006 [O.C.G.A. § 34-9-368].

Kansas. Fund abolished for accidents after 7/1/94.

Kentucky. Fund eliminated for injuries occurring after 12/12/96.

Maine. Fund eliminated in 1992.

Minnesota. Fund abolished for claims arising after 6/30/92.

Nebraska. Fund eliminated for injuries sustained after 12/1/97.

New Mexico. Fund eliminated in 1996.

New York. Fund eliminated for all cases with a date of disablement after 7/1/2007 [N.Y. Work. Comp. Law § 15(8)(h)]. [Note: N.Y. Work. Comp. Law § 125 was amended in 2007 to prohibit discrimination against injured veterans in hiring. N.Y. Work. Comp. Law § 125-a, effective 4/12/2007, provides that any employer or insurance carrier that discriminates against an injured veteran shall be guilty of a Class A misdemeanor].

Oklahoma. Fund eliminated in 2000.

Oregon. Fund closed and reopened in a different form in 1987 [see Preferred Worker Program in ORS § 656.622].

Rhode Island. Fund repealed in 1998.

South Carolina. Fund abolished on 7/1/2013.

South Dakota. Fund eliminated in 1999.

Utah. Fund eliminated for all injuries occurring after 7/1/94 [Utah Code Ann. § 34A-2-702].

Vermont. Fund eliminated in 1999.

West Virginia. Fund eliminated in 2003.

The Human Cost of War: Both Military and American Contractors

Just like during and following World War II, we have hundreds and thousands of disabled veterans returning from war. It is estimated that there are approximately 100,000 injured soldiers as of September 11, 2007, with anticipation of an estimated five more years of hostilities. These estimates included minor injuries as well as amputations, loss of sight, and traumatic brain injuries.

In addition to the soldiers, there are a large number of civilian contractors working in Iraq. Nearly 300 American companies supply workers in the war zone. They comprise the largest civilian force in American military history. During the first quarter of this year alone, 3,430 civilian contractors have filed claims for wounds suffered in Iraq. For every four American soldiers killed in Iraq, there is also one American civilian employee killed.

Post-Traumatic Stress Disorder

There are many more returning soldiers that suffer from a less obvious disability, post traumatic stress disorder (PTSD).

PTSD is a disabling condition that can occur after exposure to a terrifying event in which grave physical harm occurred or was threatened. One of the traumatic events that can trigger PTSD is military combat. One traumatic event most often associated with PTSD for men is combat exposure. This also applies to women exposed to combat [see National Institute of Mental Health, 2001].

Americans with Disabilities Act

The Americans with Disabilities Act (ADA) does not contain a list of medical conditions that constitute disabilities. Instead, the ADA has a general definition of disability that each person must meet [see EEOC Technical Assistance Manual, Title I of the ADA 2.2]. Some people with PTSD will have a disability under the ADA, while others will not.

A person has a disability if he/she has a physical or mental impairment that substantially limits one or more major life activities, has a record of such an impairment, or is regarded as having such an impairment [see EEOC Technical Assistance Manual, Title I of the ADA 2.2].

While it is true the ADA protects disabled workers from discrimination, it only applies to employers with 15 or more employees [see 9-152 Larson on *Employment Discrimination* § 152.02]. According to the U.S. Census Bureau, approximately 18% of all employees in the United States work for firms with less than 15 employees.

The ADA is designed to protect employees, not employers, while the Second Injury Funds became a solution to the dilemma of an employer bearing the full cost of disability for an employee that already had a permanent impairment. Second Injury Funds usually made the employer ultimately liable only for the amount of disability attributable to the particular injury occurring in its employment, while the Fund paid the difference between that amount and the total amounts to which the employee is entitled for the combined effects of the prior and present injury [see 5-91 *Larson's Workers' Compensation Law* § 91.01].

Only time will tell if there is a substantial impact on returning service men and women and others without Second Injury Funds.

For further discussion of Second Injury Funds, see 5-91 *Larson's Workers' Compensation Law* § 91.01 et seq.

For further discussion of the New York Special Fund for Second Injuries, see 1-2 New York Workers' Compensation Handbook § 2.16, 5.59.

For further discussion on the Georgia Subsequent Injury Trust Fund, see Kissiah's *Georgia Workers' Compensation Law*, §§ 32.01-32.08.

For further discussion of the Florida Special Disability Trust Fund, see 1-20 Florida Workers' Compensation Handbook § 20.01 et seq.

For further discussion of the California Subsequent Injuries Benefits Trust Fund, see 1-8 Hanna, CA Law of Employee Injuries & Workers' Comp §§ 8.09, 31.20(4); 1-8 Herlick, *California Workers' Compensation Law* § 8.01 et seq.

For further discussion of the Americans with Disabilities Act, see 9-151 Larson on *Employment Discrimination* § 151.01 et seq., 152.01 et seq., 153.01 et seq., 154.01 et seq., 155.01 et seq., 156.01 et seq., 157.01 et seq., 158.01 et seq., see also 1-1 ADA: Employee Rights and Employment Obligations § 1.01 et seq.

For further discussion of post-traumatic stress disorder, see 12-101A Attorneys' Textbook of Medicine (Third Edition) P 101A.00 et seq.

ABOUT THE AUTHOR(S):

Doug McCoy is Principal of McCoy Consulting, an independent firm that provides consulting services to stakeholders in the property casualty insurance industry. He began his career as a multi-line claim adjuster in the property casualty claim operation of a major insurer. In 1992 he became the Divisional Vice President of Commercial Lines. In 1994 he became the Chief Operating Officer of a large workers' compensation managed care organization. Mr. McCoy's extensive industry experience includes representation on the National Council on Compensation Insurance Fraud Study Committee, Governor's Study Committee on Workers' Compensation, Warm Springs Institute for Rehabilitation Advisory Committee, Learning Services Head Injury Center Advisory Committee, and Pharmacy Management Services, Inc., Advisory Committee. He currently serves as a member of the Licensure and Self-Insurance Sub-Committee of the Chairman's Advisory Committee for the Georgia State Board of Workers' Compensation and of the Georgia CompScope Multi-state Advisory Committee for the Workers' Compensation Research Institute. He has been appointed by the Governor of Georgia, Roy Barnes, to serve on his Workers' Compensation Review Commission. Mr. McCoy has spoken on numerous topics concerning claims management throughout the country and has written articles for Business Insurance, Risk and Insurance Management, Rough Notes, and the Wall Street Journal. He is the author of Workers' Compensation: The Survival Guide for Business (LexisNexis Matthew Bender) and a member of the LexisNexis National Workers' Compensation Advisory Board.

Levy on War Hazards Compensation Act for Overseas Injured Civilian Employees

2008 Emerging Issues 531

Levy on War Hazards Compensation Act for Overseas Injured Civilian Employees

By Roger A. Levy

October 1, 2007

SUMMARY: Hostilities in Eastern Europe, Afghanistan, and most recently Iraq and other countries in the Middle East have caused many employers concern and uncertainty over workers compensation exposures to employees working in those parts of the world. This Emerging Issues Analysis examines the War Hazards Compensation Act, one of the primary federal statutes that addresses these matters.

ARTICLE: Hostilities in Eastern Europe, Afghanistan, and most recently Iraq and other countries in the Middle East have caused many employers concern and uncertainty over workers' compensation exposures to employees working in those parts of the world. Many consultants, technical representatives, advisors and all variety of workers have been sent overseas to assist directly or indirectly with the war effort. Many construction workers have already been sent to assist in the rebuilding of war-torn Iraq. Those whose memories do not date back to the Vietnam era may not be familiar with the two primary federal statutes which address these matters -- the Defense Base Act ("DBA") and the War Hazards Compensation Act ("WHCA") -- although all one has to do is pick up a newspaper, magazine or turn on the nightly news to read or hear the latest. A brief synopsis of the WHCA may be useful both as to events that may have happened or that may happen, as our military involvement hopefully winds down and the rebuilding effort gears up.

For expert commentary on the DBA, see *Roger A. Levy on the Challenges of Applying the Defense Base Act to Civilian Employees Injured Overseas*.

Purpose of WHCA. The general purpose of the WHCA is to shift to the United States government the costs of compensating certain civilian employees (domestic and foreign) of private companies who are working overseas in furtherance of American foreign policy and are injured or killed by a war risk hazard.

Coverage Under the WHCA. The WHCA can be found at 42 U.S.C.S. §§ 1701--1717. Because the Act does not provide for any appeal of an agency ruling, there are no reported appellate court or Benefits Review Board decisions. This Act imposes liability upon the United States for the prescribed benefits. It is not an act which imposes liability on an employer other than when the United States is the employer.

Section 101(a) of the Act provides for payment by the Division of Federal Employees' Compensation ("DFEC") when injury or death is the result of the hostile act of an enemy force to certain employees or contractors to the government [See 42 U.S.C.S. § 1701(a)]. These benefits are identical to those provided in the Federal Employees' Compensation Act ("FECA") [See 5 U.S.C.S. §§ 8101-- 8193].

Section 101(b)-(d) of the Act provides for certain payments by DFEC to the account of a detained person as discussed below who has been taken captive by a "hostile force". No injury is required and in fact proof of the lack of such is required as a prerequisite. These benefits may exceed weekly compensation prescribed in the LHWCA or DBA for an injury [See 42 U.S.C.S. § 1701(b)-(d)].

This provision of the WHCA applies where such a person is detained by hostile forces, is missing under circumstances supporting an inference that such absence is due to belligerent action of a hostile force, or is marooned by virtue of failure of the United States or its contractors to repatriate.

It is upon Section 104(a)-(c) of the Act that the vast majority of claims are made. It is the section that provides for reimbursement to an employer or carrier when benefits have been paid because of an injury or death to an employee as a result of a "war-risk hazard" [See 42 U.S.C.S. § 1704(a)-(c)].

DFEC's liability is triggered when there is an injury that occurs to a qualifying employee which "arose from a war-risk hazard." [See 42 U.S.C.S. § 1704(a)(1)]. The employees are generally those covered by the DBA, those covered by the Non-Appropriated Fund Instrumentalities Act, those employed directly by the United States, and those providing welfare or similar services for the Armed Forces of the United States. The injury must occur outside of the United States.

What Is a War Risk Hazard? All injuries occurring in a war zone are not covered under the WHCA. Injuries independent of the surrounding conflict are not covered.

The Act contains a lengthy, complicated definition which goes on for a number of paragraphs. In summary, it requires an armed conflict, but not necessarily a declared war. The injury may arise out of any of the following: discharge of a missile; use of any weapon, explosive or other noxious thing by hostile forces; combating an attack or imagined attack; action of a hostile force or person without use of specified weapons; discharge or explosion of munitions stored for use in a conflict; collisions of vessels or aircraft operating under conditions which would not be considered safe in normal times but are dictated due to the contingencies of the conflict (such as operating without running lights).

What About Terrorist Activity? Not specifically set forth in the WHCA definition is whether terrorist activity qualifies as a war-risk hazard. The Act was written in 1942. The world has changed dramatically since then. As a result, the Department of Labor has shown flexibility and an ability to adapt by including injuries and death as a result of terrorist activity within the definition.

Benefits and Administration of the WHCA. If a person is not entitled to receive benefits under any other workers' compensation statute, that person receives benefits as if he were covered under the FECA. Claims are administered by the U.S. Department of Labor, Office of Workers' Compensation Programs (OWCP). For those detained or marooned, there is a presumption of total disability.

Where there is coverage for injury under any other workers' compensation law, benefits must be paid pursuant to such law. The United States will then reimburse the insurer or self-insured employer for injuries proximately caused by a war-risk hazard occurring outside of the United States. Such reimbursement is administered by the Department of Labor, and is paid out of the fund established for payment of benefits under FECA. Reimbursement is also available for allocated claims expenses according to proof, and for unallocated claims expenses deemed 15% of the benefits paid.

To obtain reimbursement, a request should be filed, along with supporting documents, with the Employment

Standards Administration, U.S. Department of Labor/Office of Workers' Compensation Programs, 1240 E. 9th Street, Room 851, Cleveland, Ohio 44199. The documentation required includes proof of liability (such as an insurance policy or self-insurance certificate), any compensation orders, medical reports, statements of the employee or employer, claim forms, bills and proof of payments. Especially significant is evidence that the injury arose out of a war-risk hazard. Reimbursements are commonly annual. The Department of Labor may take over payment directly, but will only do so after the extent of liability has been determined.

A key provision in WHCA is that *no* reimbursement is allowed if the insurance carrier charges additional premium for the war risk hazard.

Detention Claims. Sadly, this provision has become more prominent given the way in which war is being conducted at present in the Middle East, Afghanistan and South America. Twenty-first century warfare involves the utilization of civilian contractors to perform certain parts of the military's work which, in the past, was done by enlisted men and women.

Necessary Elements for "Detention". The WHCA is implemented by 20 C.F.R. §§ 61.1--61.404 (2002). Subpart D contains the provisions relating to claims for detention benefits arising under Section 101(b) of the WHCA [20 C.F.R. §§ 61.300--61.307]. These provisions contain the basic framework for filing a claim for detention benefits [20 C.F.R. § 61.3 (2002)].

One of the preliminary matters to be resolved is whether the injured worker is a "specified" employee [42 U.S.C.S. § 1701(a)(1) (2003)]. A person is a specified employee if one of the following applies:

1. He is covered under the Defense Base Act;
2. He is engaged by the United States under a personal service contract;
3. He is covered under the Nonappropriated Fund Instrumentalities Act;
4. He is engaged for personal services by the United States under the Mutual Security Act; or

5. He is engaged by an American employer to provide welfare or similar services to the Armed Forces and the injury or death is casually related to a war-risk hazard. [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-7 (U.S. Dept. Lab. 1994)]

There is no requirement that the person actually be engaged in the course of his employment at the time of his disappearance or death [20 C.F.R. § 61.300(a) (2002)].

If the person is shown to be a specified employee, it must then be demonstrated that he has been "detained by a hostile force or person" in order to receive detention benefits [20 C.F.R. § 61.300 (2002)]. This determination is made on a case-by-case basis and is fact sensitive. The standard of proof for showing that the person has been detained by a hostile force is not clear, but in any event, it is not a high threshold [See 20 C.F.R. § 61.303 (2002)]. The showing "may be made on the basis that the employee has disappeared under circumstances that make detention *appear probable*." [See 20 C.F.R. § 61.303 (2002) (emphasis added)]. However, in making the determination that an employee has been detained, considerable weight will be given to the information from the department or agency having knowledge of the circumstances surrounding the employee's absence [See 20 C.F.R. § 61.303 (2002) (noting that conclusion of agency will be prima facie evidence of employee's status)].

Even if an employee is otherwise eligible for benefits, he can still be denied disabilities benefits for several reasons. For example, an otherwise eligible employee will not receive detention benefits when he resides in the place of employment, does not live there solely due to his employment, and he is detained under circumstances outside the course of his employment. That is, if the employee lives in proximity to where he works, for non-work purposes, *and* he

is detained outside the course of employment, he cannot receive detention benefits [See 20 C.F.R. § 61.303(d) (2002)]. Other events that may disqualify a specified employee include: the employee being detained by the United States as a prisoner of war; the individual receives workers' compensation benefits paid from any other source for the same period of detention; the person is a foreign national and is entitled to compensation benefits from a foreign country on account of the same detention; or the person has been convicted of any subversive act against the United States or its allies [See 20 C.F.R. § 61.303(d)(2)-(5) (2002)].

Time for Filing. The time limitations for filing for detention benefits are the same as those under the Federal Employees' Compensation Act (FECA) [See 20 C.F.R. § 61.302 (2002)]. Generally, written notice of injury must be provided by the employee, or someone on his behalf, within 30 days [5 U.S.C.S. § 8119 (2003)]. An original claim for compensation is to be filed within three years after the occurrence of detention/injury/death [5 U.S.C.S. § 8122 (2003)]. However, failure to comply with the above specified time periods will not preclude the employee from receiving benefits where notice could not have been given due to "exceptional circumstances." [See 5 U.S.C.S. § 8122(d)(3) (2003) (indicating that Secretary may excuse failure to comply due to exceptional circumstances)].

Duration of Detention Benefits. Once an employee has started to receive detention benefits, there are several grounds for which they may be terminated [See 20 C.F.R. §§ 61.303--61.305 (2002)]. Detention benefits cease upon the employee being returned to his home or place of employment [20 CFR § 61.305 (2002)]. If death is "in fact established," detention benefits are also terminated. A more problematic issue is that detention benefits also cease when death "can be legally presumed to have occurred." [20 C.F.R. § 61.303 (2002)]. The OWCP has authority to make a finding of death based on evidence that the employee disappeared under circumstances that make death appear probable or when the employee has been detained for a prolonged period of time. In making this presumption, the OWCP should consider not only the circumstances of the disappearance, but also the wishes of the employee's survivors. In order to invoke this presumption, an OWCP Senior Claims Examiner must prepare a memorandum to the Director and a compensation order for the Deputy Director for Federal Employees' Compensation to sign. A copy of the compensation order must be sent to the employee's survivors and should be accompanied by a letter telling the survivors of the procedure for filing a claim for death benefits [42 U.S.C.S. § 1716 (2003); *Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-17 (U.S. Dept. Lab. 1994)].

The employee's dependents are frequently the first to learn about any changes in the employee's status. That is, they are frequently the first to know if the employee has passed away or if he/she has been released from detention, thus triggering the termination of detention benefits. Therefore, the OWCP claims examiner should maintain contact with the employee's dependents by sending them a "yearly inquiry" where the claims examiner can ask for any new information concerning the employee's status [42 U.S.C.S. § 1716 (2003); *Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-17 (U.S. Dept. Lab. 1994)].

Consequences of Receiving Detention Benefits. An employee meeting the definition of "specified employee" is due certain benefits [See 20 C.F.R. §§ 61.300, 61.304, 61.306 (2002)]. As soon as the employee is "detained" [see "Necessary Elements", above], he is considered totally disabled until the point he is returned to his home, his place of employment, or to the "jurisdiction of the United States." [20 C.F.R. § 61.300(b) (2002); see "Duration of Benefits", above]. Detention benefits also cease when the employee is determined to be dead [20 C.F.R. § 61.300(b) (2002)]. When an employee is released from detainment, the OWCP "may pay" the cost of transporting the employee from the point of release to his home, the place of employment, or another place within the United States. While this language seems to suggest that the OWCP has discretion in determining whether to pay the costs, it appears the only time the OWCP would not pay the cost of transportation for a released employee is in the event that the employee is to be furnished transportation under any agreement with his employer [20 C.F.R. § 61.306(a) (2002)]. In the event that the employee should die during his detention, the OWCP may provide the cost of transporting the body to the deceased's home or any place the employee's next of kin designates [20 C.F.R. § 61.307 (2002)].

Prior to the time of release or death the employee is considered totally disabled and is entitled to compensation at 100% of his Average Weekly Wage (AWW) [20 C.F.R. § 61.300(c) (2002)]. The compensation is to be paid by the

OWCP from the Employees' Compensation Fund [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-17 (U.S. Dept. Lab. 1994)]. The only limitation is that the employee's AWW used to compute the detention benefits cannot exceed the AWW paid to civilian employees of the United States in the "same or most similar occupation" in the area nearest to the place of employment. This compensation is to be credited to the employee's account. In the event that the detained employee has dependents that reside in the United States, its territories, or possessions, the OWCP may pay the dependents 70% of the credited benefits. Although the regulations are not explicit, they seem to imply that the remaining 30% shall continue to be credited to the employee's account [20 C.F.R. § 61.300(c) (2002)].

An employee's detention benefits are not subject to the monetary limits that are found in Sections 6(b) and 9(e) of the LHWCA [20 C.F.R. § 61.304(a) (2002)]. Section 6(b) limits compensation for disability or death to 200% of national AWW [33 U.S.C.S. § 906(b)(1) (2003)]. However, one limitation on the amount of compensation to be paid to a detained employee and/or his dependents is that if either the dependents or the employee receives any other federal benefit in lieu of wages during the time of detention, and the United States paid for those, the OWCP is entitled to credit for such payments [20 C.F.R. § 61.304(b) (2002)]. A second limitation on detention benefits is that, generally, disability compensation may not be paid at the same time detention benefits are paid. The one exception to that general rule is that payment for scheduled losses may be made at the same time the employee receives detention benefits [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-17 (U.S. Dept. Lab. 1994)].

Process. In most instances the provisions of FECA apply with respect to the administration of claims made under the WHCA because payment is made from the fund established by FECA [James Michael Zimmerman, *Extraterritorial Employment Standards of the United States: The Regulation of the Overseas Workplace* 1027 (Quorum Books 1992)]. However, as noted above, the computation of disability and death benefits and the determination of pay rate and beneficiaries are made in accordance with the LHWCA [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-6 (U.S. Dept. Lab. 1994)]. Because both acts govern claims under the WHCA, either regular FECA or LHWCA forms may be used to claim benefits under the WHCA [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-5 (U.S. Dept. Lab. 1994)].

Prior to receiving compensation from the fund governed by FECA, the employee or dependent must obtain a determination from the Longshore District Director that no compensation is payable under the DBA [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-10 (U.S. Dept. Lab. 1994)]. This claim should be filed in the proper office for the filing of a DBA claim of injury. The employee, dependent, employer, or its attorney can accomplish this by submitting a DBA claim to the District Director [See e-mail from Richard Robilotti, Dist. Dir., *FECA Procedure Manual on WHA Claims* (Mar. 7, 2003)]. The goal here would not be to receive an award for DBA benefits but rather to obtain a ruling that, while the employment may fall under the DBA, there is no evidence to support a claim for such benefits. Section 61.301 governs what must be included for filing a claim for detention benefits [20 C.F.R. § 61.301 (2002)]. The following information should be provided [20 C.F.R. § 61.301 (2002)]:

1. Name of employee;
2. Address of employee;
3. Occupation of missing employee;
4. Name of dependent (if making the claim);
5. Address of dependent;
6. Relation of dependent to employee;
7. Name of employer;

8. Address of employer;
9. Contract number under which employee was employed;
10. Date of capture or detention;
11. Place of capture or detention;
12. Circumstances of capture or detention;
13. Date of release (if applicable);
14. Place of release (if applicable);
15. Circumstances of release (if applicable).

The claim must be supported by proof of employment, evidence of disability (if any), and evidence of death and/or detention. The showing of death and/or detention can be made through the use of investigative reports, newspaper clippings, etc. [See 20 C.F.R. § 61.301 (2002)]. While the claimant has the burden of establishing entitlement [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-10 (U.S. Dept. Lab. 1994)], the employer must provide information about the circumstances of the detention and the employee's pay rate at the time of capture [20 C.F.R. § 61.301(a) (2002)]. The OWCP claims examiner has the responsibility of developing the factual and medical evidence that is submitted to the District Director. Additionally, after development of case, the claims examiner is to draft a memorandum on whether the injury, detention, or death was the result of a war hazard [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-10 (U.S. Dept. Lab. 1994) (indicating that claims examiner is to undertake any necessary development of factual and medical evidence submitted)].

The District Director then reviews the claim and determines whether there is a claim under the DBA [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-10 (U.S. Dept. Lab. 1994) (indicating that claims examiner is to undertake any necessary development of factual and medical evidence submitted)]. If the DBA claim is denied, the District Director shall issue an order establishing the facts of the case. This order, along with a WHCA application and all above-referenced supporting evidence and information must then be submitted to the Branch of Regulations and Procedures, OWCP-DFEC, 200 Constitution Ave. NW, Washington D.C., 20210, Room S 3229; Attention to: Vinicia McNeil, Chief of Branch of Regulations & Procedures [See 20 C.F.R. § 61.301 (2002)].

The procedure to be followed when the employee is presumed dead is slightly different from the process above, when it can be shown that the employee has been released or has passed away. When the employee has been detained or missing for a "prolonged period of time," the OWCP claims examiner must prepare a memorandum, indicating that death is probable. The claims examiner is to send this memorandum to the Director and a compensation order for the signature of the Deputy Director Federal Employees' Compensation. A copy of the signed compensation order must be sent to the employee's survivors, accompanied by a cover letter advising the survivors of the procedure for filing a claim for death benefits [See *Federal Employees' Compensation Act Procedural Manual*, Trans No. 94-39. 4-0300-10 (U.S. Dept. Lab. 1994)].

Following one of the two processes above, benefits can then be credited to the detained employee or his dependents. At that point, the only task of the OWCP claims examiner is to make yearly inquiries of the dependent(s) to ensure there has been no release from detention or death. [See *Federal Employees' Compensation Act Procedural Manual*, Trans No. 94-39. 4-0300-10 (U.S. Dept. Lab. 1994)] Similarly, the dependent has an affirmative duty to notify the OWCP of any changes in the status of the missing employee [20 C.F.R. § 61.305 (2002)]

Conclusion. The handling of detention benefits under the WHCA could certainly be considered "arcane." [John M. Vittone & Augustus A. Simpson, Jr., *Judges' Benchbook*, § 60.5 (2002)]. However, as arcane as they may be, the

WHCA's provisions governing detention benefits provide needed compensation for loss of earnings of employees held captive by a hostile force [See James Michael Zimmerman, *Extraterritorial Employment Standards of the United States: The Regulation of the Overseas Workplace* 1025 (Quorum Books 1992)]. The detention benefits allow for the detained employee to receive 100% of his AWW, or his dependents to receive 70% of that amount, and are not subject to limitations found under the LHWCA [20 C.F.R. § 61.300(c), 61.304(a) (2002)]. Because the detention benefits are more generous than other compensation schemes, several conditions are placed on the payment of the benefits. Besides being a specified employee detained by a hostile force, the employee must not fall within one of the other exclusionary grounds [See "Necessary Elements for 'Detention'", above]. Death and a finding of presumed death further limit the right to receive detention benefits.

No less arcane is the process for filing a claim for detention benefits under the WHCA. The process unintuitively involves first seeking a denial of claim under the DBA and then submitting the claim to the Branch of Regulations and Procedures [See "Process", above]. The employer's/carrier's primary role involves supplying information to the OWCP to facilitate the OWCP's handling of the case. While the carrier may assist in submitting claims, the OWCP has the primary responsibility of developing the factual and medical evidence and determining if the individual is a specified employee detained as a result of a war hazard [*Federal Employees' Compensation Act Procedural Manual*, Trans. No. 94-39. 4-0300-10 (U.S. Dept Lab. 1994)].

Levy on Applying Defense Base Act to Civilian Employees Injured Overseas

2008 Emerging Issues 530

Levy on Applying Defense Base Act to Civilian Employees Injured Overseas

By Roger A. Levy

September 28, 2007

SUMMARY: Hostilities in Eastern Europe, Afghanistan, and most recently Iraq and other countries in the Middle East have caused many employers concern and uncertainty over workers compensation exposures to employees working in those parts of the world. This commentary, written by Roger A. Levy, who is Of Counsel to Laughlin, Falbo, Levy & Moresi, San Francisco, and specializes in the defense of cases brought under the Longshore and Harbor Workers' Compensation Act, examines the Defense Base Act, one of the primary federal statutes that addresses these matters.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Hostilities in Eastern Europe, Afghanistan, and most recently Iraq and other countries in the Middle East have caused many employers concern and uncertainty over workers compensation exposures to employees working in those parts of the world. Many consultants, technical representatives, advisors and all variety of workers have been sent overseas to assist directly or indirectly with the war effort. Many construction workers have already been sent to assist in the rebuilding of war-torn Iraq. Those whose memories do not date back to the Vietnam era may not be familiar with the two primary federal statutes which address these matters the Defense Base Act (DBA) [42 U.S.C.S. § 1651 et seq.] and the War Hazards Compensation Act (WHCA) [42 U.S.C.S. § 1701 et seq.] although all one has to do is pick up a newspaper, magazine or turn on the nightly news to read or hear the latest. A brief synopsis of the DBA may be useful both as to events that may have happened or that may happen, as our military involvement hopefully winds down and the rebuilding effort gears up.

For expert commentary on the WHCA, see *Roger A. Levy on the War Hazards Compensation Act for Overseas Civilian Employees Injured by a War Risk Hazard or Detained by a Hostile Force*.

Purposes of DBA. The general purpose of the DBA is to provide uniform and generous compensation benefits to certain civilian employees (domestic and foreign) of private companies doing work overseas in furtherance of American foreign policy.

Benefits and Administration of the DBA. The DBA is a relatively brief piece of legislation which basically sets forth the coverage requirements and provides that once those coverage requirements are met, the Longshore and Harbor Workers Compensation Act (LHWCA) applies [See 33 U.S.C.S. § 901 et seq.]. This coverage is situs intensive. That is, the work must occur over-seas at a location specified in Section 1(a)(1)-(6) of the DBA [See 42 U.S.C.S. § 1651(a)(1)]

-(6)]. In addition, such work must be pursuant to a contract for employment services outlined more particularly in Section 1(a)(4)-(6) [See 42 U.S.C.S. § 1651(a)(4)-(6)]. The same forms are used, proceedings are before the same agencies, and the benefits are, with some exception, the same as provided by the LHWCA.

There are some differences, however. The minimum compensation rates for the LHWCA do not apply to DBA claims. This acknowledges the reality that many local nationals are hired and paid at salaries commensurate with local custom. Dependency for aliens and non-nationals of the United States who are not residents of the United States or Canada is limited to spouse, child or parent. Compensation payable to such aliens or non-nationals may be discharged by payment of one-half the commuted value of future installments. Unlike the LHWCA, the DBA does not share concurrent jurisdiction with state compensation laws. The DBA supersedes application of state law, and is an exclusive remedy.

DBA Overview. The DBA was enacted in 1941, at least partially in anticipation of the United States' imminent involvement in World War II. Its purpose was to protect American citizens who travel abroad to work on foreign U.S. military bases by affording them a uniform scheme of workers' compensation benefits delivered in an expeditious manner. Today, many of those covered are non-citizens or resident aliens in the United States because they fall into coverage as employees of U.S. contractors or their sub-contractors unless specifically waived pursuant to the DBA.

Coverage under the Act was later amended to extend coverage to employees who are employed in public work as defined by the Act. Overall, the DBA has served its purposes well by affording a workers' compensation remedy based on the benefits afforded under the LHWCA to non-military and non-government civilian employees when they are injured at work under one or more of the six circumstances outlined in Sec.1(a)(1)-(6) of the Act [See 42 U.S.C.S. § 1651(a)(1)-(6)].

Over the past 66 years, though, the playing field has changed. American activity overseas has escalated and has taken on a more pervasive persona. In response to this change, the DBA is being applied under circumstances which were probably never contemplated by its authors.

The most significant change has been the result of outsourcing much of the work traditionally done by the armed-services of the United States. Particularly, the military has outsourced a great deal of its traditional non-combat work to private contractors, causing these employees to come under the protection of the DBA. Today, there are DBA employees in every imaginable field from security and logistics to information technology consulting. Overall, military outsourcing has been the driving force behind the sharp increase in employees covered by the DBA in the 21st century.

There are workers covered by the DBA in a vast number of nations throughout the world. However, they are predominantly involved in work relating to the present military actions in Iraq and Afghanistan. Although the total number of DBA covered employees today is uncertain, as of December 5, 2006, the Washington Post estimated that there were over 100,000 employees of private contractors in Iraq. Not surprisingly, these private contractors have made up the majority of DBA claims over the past three years.

Claims by these private contractors do not fit the mold of the traditional LHWCA/DBA claim. This broad shift in the makeup of DBA claims has raised legal and procedural issues of first impression in the courts. There are the following difficulties to the establishment of traditional defenses to these cases: (1) the Office of Administrative Law Judges's (OALJ) fast-track policy for war-zone cases, (2) the discovery quagmire, (3) employer inexperience/resistance, (4) the DBAs applicability to foreign national claimants, and (5) the earnings spike and labor market study problem.

OALJs Fast-track Policy. In 2004, the OALJ issued a memo directing that all DBA claims originating out of Iraq and Afghanistan to be fast-tracked. This means that a subject claim must be set for trial within 45 days of its referral. Ideally, the goal of this decision is to assist civilian contractors to obtain a quick resolution of their claims, recognizing that these employees have placed themselves in a work environment that little resembles the work place of a traditional LHWCA/DBA worker. However, as discussed below, the costs to both sides can be high, and it is questionable whether

the goal is really achieved. Given the regulations which apply to pre-trial discovery, 45 days is precious little time to properly prepare for trial. This is especially true in light of the special problems encountered in claims brought by foreign nationals.

The Discovery Quagmire. Hand in hand with the fast-track policy is the discovery quagmire. The fast-track policy magnifies the discovery constraints set forth in 20 C.F.R. § 702.331 et seq., which essentially start the discovery race from the moment the Office of Workers' Compensation Programs (OWCP) refers the case to the OALJ. Anyone who has dealt with the frustration of delays in obtaining answers to interrogatories and requests for admissions, arranging depositions, and obtaining subpoenaed records knows that 45 days is a blink of an eye in such processes.

Moreover, independent medical examinations and labor market studies are all but out of the question as a pre-trial exercise, not to mention the round of depositions they usually spawn. Most ALJs are sympathetic to the parties plight in this regard and are usually generous in allowing post-trial proceedings to address this dilemma. Nonetheless, routinely conducting discovery post-trial leads to a host of other problems.

Foreign National Claimants. These concerns are more pronounced when dealing with claims from foreign-nationals who, as mentioned above, find themselves under the coverage of the DBA by virtue of direct employment by U.S. companies or as employees of foreign companies who have sub-contracted with U.S. contractors or who have contracted directly with agencies of the U.S. government. As time passes, many of these people have found themselves in legitimate disputes with their employers and carriers, have retained counsel, and have entered into the dispute resolution process leading ultimately to ALJ trials. In these cases, the fast-track policy and discovery quagmire become even more problematic for obvious reasons.

Employer Inexperience. Many employers are familiar with their obligations both to the Department of Labor (DOL), their carrier and defense counsel. However, many are not, and, as a consequence, many of the DOL required reports are filed late or, in some instances, not at all. Information and evidence such as employer reports of incidents, the names and availability of witnesses, initial medical treatment records, and official reports to aid the carrier and its counsel in DBA claims are often difficult or impossible to obtain. This is not to suggest that these employers, usually foreign, are prone to ignore these obligations but are, rather, simply uninformed.

The Earnings Spike and Labor Market Study Problem. Many individuals who accept work under defense contracts to provide services in war-zones do so because they are attracted by the promise of high wages for their efforts. This reality has spawned a number of issues related to the calculation of average weekly wage (AWW), retained wage earning capacity, and securing labor market studies.

For example, an issue arises regarding the calculation of AWW when a worker leaves a relatively low-paying job at home for one paying often as much as five times more overseas. The Benefits Review Board has addressed the issue twice, coming up with essentially the same result in each case. In one opinion, *Zimmerman v. Service Employees International, Inc.*, BRB No. 05-0580 (February 22, 2006), the Board rejected the use of Sec. 10(a) on two grounds [see 33 U.S.C.S. § 910(a)]. First, it said that since the employee was a 7-day-a-week worker, Sec. 10(a) did not apply as it only applied to 5- and 6-day workers. Second, it said that Mr. Zimmerman's work as a truck driver in the U.S. was not the same as the truck driving he did in Kuwait, and, therefore, he did not satisfy the "shall have worked in the employment in which he was working . . . the whole of the year . . ." requirement. It accepted a Sec. 10(c) approach based on the number of days worked in Kuwait (44) divided by 44 to arrive at an acceptable daily wage for the purpose of calculating AWW.

In the second case, *Proffitt v. Service Employees International, Inc.*, 40 BRBS 41 (2006), the Board came to a similar result after saying the ALJ improperly but harmlessly relied on Sec. 10(b) to determine AWW [see 33 U.S.C.S. § 910(b)]. It said that Sec. 10(c) should have been utilized by relying on the value of the contract and dividing by 52. The same result was reached with this method as the one used by the ALJ.

There are a number of ALJ decisions and stipulations by parties in individual cases that creatively address the issue under Sec. 10(c). When there is less than 52 weeks of work under the DBA, some judges are "blending" the high pay earned with the actual earnings at home to make up the 52-week difference and dividing by 52. There are also cases where the parties have taken the value of the 52-week contract and added it to the earnings in the 52 weeks prior to the contract, then dividing by 104 for a fair AWW.

Further, now that many injured workers are reaching maximum medical improvement, problems arise as to the proper locale for labor market surveys. For example, when the worker is living in Chicago when hired, then travels to Iraq to work under a defense base contract and is injured, then returns to the United States and goes to the family home in upper Michigan, what is the proper labor market? Securing any labor market surveys at all is impossible when the injured worker is living in far-flung places such as the Philippines or Pakistan. Even when a labor market survey can be accomplished, is it fair to force the employer to pay TTD at a high rate based on the claimants overseas wages and compare that AWW to the post-injury domestic labor market? Even the higher paying jobs in the domestic labor market will likely be paying a much lower weekly wage than the claimant earned under the DBA contract with hazard pay, differential pay and bonus add-ons.

Zone of Special Danger. Much has been said about this concept and the mistaken notion of "24-hour coverage". While there is no mention of it in the Act itself, the courts have created a doctrine of coverage which extends beyond the traditional requirement that the injury arise out of and occur within the employment (AOE-COE). It recognizes that the circumstances of the assignment overseas may present a special risk not encountered by similar employment at home, and as such the employee should be covered when facing these risks even though not technically in service to the employer at the time of injury. Before such an unorthodox analysis takes place, it is best to determine first, if there is coverage under one of the more traditional extensions to coverage such as the "bunk-house", "employer furnished recreation" or "commercial traveler" rules.

There are precious few cases dealing with this issue. They start with a U.S. Supreme Court decision in *OLeary v. Brown-Pacific-Maxon*, 340 U.S. 504, 71 S. Ct. 470; 95 L. Ed. 483 (1951) and extend most recently to a Ninth Circuit court decision in *Kalama Services, Inc. v. Director, Office of Workers' Compensation Programs*, 354 F.3d 1085 (9th Cir. 2004), cert. denied, 543 U.S. 809 (2004). These decisions seem to recognize that an employer should be held to a higher or broader level of responsibility when the obligations or conditions of employment create the zone of special danger out of which the injury arose. [See *OLeary v. Brown-Pacific-Maxon*, 340 U.S. 504, 507, 71 S. Ct. 470; 95 L. Ed. 483 (1951)]. It is unfortunate that the court uses this language because it has led to confusion over the concept and its application. For example, some have mistakenly misinterpreted the language to require that the geographical area itself must be dangerous in order for the doctrine to apply.

In *OLeary* the employee drowned while trying to rescue fellow employees in a canal located in Guam during off-duty recreation. Unfortunately, the zone of special danger language was used but in fact, one could ask if the Court was really establishing a situational risk approach as arguably in that case, there was nothing especially dangerous in the activity that might not have been encountered at home in the United States. In fact, in many of the cases, it is hard to see a traditional special danger in the facts. But when viewed in terms of a situational risk, the results make more sense.

There are just a few reported cases that find that coverage should not be extended on the basis of the zone of special danger. In one, *Gillespie v. General Electric Company*, 21 BRBS 56 (1988), it was determined that a worker who died as a result of asphyxiation while engaged in an off-duty act of auto-eroticism was not covered. In another, *Kirkland v. Air America, Incorporated*, 23 BRBS 348 (1990), a widow was denied death benefits for her complicity in the killing of her husband during a burglary in their home while assigned overseas in DBA covered employment.

For Further Discussion on the Longshore Act, see *Larson's Workers' Compensation Law*, § 145.01 et seq.

Denis Paul Juge on Status of PPO Litigation in Louisiana: Whats The Problem?

2008 Emerging Issues 528

Denis Paul Juge on Status of PPO Litigation in Louisiana: Whats The Problem?

By Denis Paul Juge

September 27, 2007

SUMMARY: Litigation has been filed in both federal and state courts in Louisiana concerning the discounting of payments by silent PPOs to healthcare providers for medical services that are provided to patients for treatment under the Louisiana workers compensation act. This commentary, written by Denis Paul Juge, the author of Louisiana Workers' Compensation, examines the impact of the PPO statute, La. Rev. Stat. §§ 40:2201-2210, on workers compensation patients and their healthcare providers and analyzes the status of this litigation.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: Physicians, chiropractors, physical therapists, diagnostic facilities, and hospitals who have executed contracts with preferred provider organizations (PPOs) have had their bills for medical services reduced in accordance with the terms of their contract. This practice has been in operation for many years and has been applied (where the contract provides) to medical services provided to patients who are injured at work and entitled to medical treatment under the Louisiana workers compensation act. The PPO creates a network of providers who have agreed to these discounts and then contract with insurers, third party administrators (TPAs), and employers to provide the discounts to the employers.

Several years ago an attorney in the Lake Charles area, Tom Filo, was asked by one of his medical provider clients to determine if these PPO contracts were enforceable in workers compensation cases because they noticed that the employee did not have a PPO card (as they do in health insurance cases). According to the providers, the first notice that they had that these patients were covered under a PPO contract was when the provider received an Explanation of Review (EOR) which would show the discount taken and the reference to the PPO.

From this initial complaint Mr. Filo researched the Louisiana laws regulating PPO contracts and the workers compensation act. The attorney for the medical provider came to the conclusion that they could challenge the discounts taken under two theories:

1. That the PPO discounts were improper under the PPO statute [La. Rev. Stat. §§ 40:2201-2210] because the employee did not have a PPO card (or other form of notice to be discussed latter) and;
2. That even if the PPO discounts were not in violation of the PPO statute, they violated the workers compensation

act [La. Rev. Stat. 23:1021, et seq.] in that no provider payments can be lower than the reimbursement schedule.

The PPO Statute: La. Rev. Stat. §§ 40:2201-2210.

- . Created by Acts 1984, No. 374 The Any Willing Provider Act;
- . Purpose Control the rising costs of health care;
- . Original act did not have requirement for notice to provider (such as a PPO card) nor did it provide any penalties;
- . Any willing provider provision was struck down by federal court as preempted by ERISA. [*CIGNA Healthplan vs. State of Louisiana*, 82 F.3d 642 (U.S. 5th Cir. 1996)]

The 1999 Amendments to the PPO Statute.

- . Notice is to be given to the Provider that an entity will access the PPO discount [La. Rev. Stat. § 40:2203.1]:
- . by patient presenting PPO card or
- . written notice that entity is accessing the PPO
- . Violation of above:
- . provider not bound by PPO agreement and
- . penalties and attorney fees
- . group purchasers subject to penalties and fees
- . However, notice provisions are not required when providing health benefits through its own network or direct provider agreements or to such agreements of a group purchaser.

What Was The Reason For The Law Change in 1999?

- . According to some legislative observers the amendments were designed to address the issue of silent PPOs.

The Silent PPO. The best example of the silent PPO is the leasing of a PPO network by one PPO (PPO#1) to another PPO (PPO#2) so that the party paying for the lease (PPO#2) can gain access to discounts that PPO #1 has negotiated with a provider. When the patient covered by that insurance plan goes to the provider, the employer (either directly or through its TPA or insurer) pays the provider the discounted rate. Some PPO contracts permit such arrangements. The exhibits at the end of this article show the traditional PPO arrangement [exhibit B] and the leasing of a PPO [exhibit C].

Objections to Silent PPO. Providers contend that the patient is not aware of this silent agreement and, thus, is not selecting the provider because of the PPO contract thus there is no steerage of the patient to the provider.

Provider Suits Involving PPO Discounts in Workers Compensation. Medical providers have opened up two theaters of battle on the PPO issue:

1. Class action suit [*Gunderson et al. v. F.A. Richard & Associates, Inc., et al.*, #2004-2417, 14th JDC Judge

Wyatt]. Suit alleges PPO contracts violate provisions of the PPO Statute that regulate PPO agreements. Damages are twice the value of services but in no event less than the greater of **\$50 per day during period of non-compliance or \$2,000 plus attorney fees [La. Rev. Stat. 40:2203.1]**.

2. Over 4,000 suits in the Office of Workers Compensation seeking payment of discounted fees plus penalties and attorney fees.

Class Action Suit. Plaintiffs Class action suit seeks to have all providers included in class who have had their fees for services rendered to workers compensation claimants reduced under a PPO contract.

Defendants Suit names several parties including a TPA, an insurer, and a PPO. The suit seeks to have all group purchasers as defined in La. Rev. Stat. § 40:2202 named as a class of defendants and, thus, subject to the penalties and attorney fees provisions. The trial court has held that TPAs are included in definition of group purchasers.

Class Certification -- The district court judge has certified the plaintiffs class. This ruling has been appealed to the Third Circuit (one issue raised on appeal is whether Lake Charles Memorial Hospital should be included in the plaintiffs class since it operates a PPO (Physician Hospital Organization). The defendants have also filed an exception to the courts subject matter jurisdiction contending that the OWC is the proper court to adjudicate these issues. The district judge denied the exception and this issue has also been appealed to the Third Circuit Court of Appeals.

Settlements in the Class Action Suit. Two of the PPOs have entered into settlements with the providers. FOCUS (Concentra) agreed to pay 12 Million Dollars and FARA (a TPA that owned a PPO network) has agreed to pay 10 Million Dollars. These settlements will not relieve the employers, insurers, or TPAs who relied upon these PPO contracts unless they are able to establish that they are entitled to indemnification.

Suits Filed in the Office of Workers Compensation

Allegations:

1. PPO contracts unenforceable because of notice defects under the PPO Statute;
2. The workers compensation law [La. Rev. Stat. § 23:1033] prohibits employer contracts that pay less than fee schedule [La. Rev. Stat. § 23:1203].

Demand:

1. Payment of the discounted fees;
2. Penalties and attorney fees [La. Rev. Stat. § 23:1201.F].

Employers Response:

1. Reimbursement Schedule is a ceiling and not the floor; Louisiana fee schedule is one of highest in nation;
2. Utilization Review Regulations [LAC 40:I.4733] recognize the right to a lower than fee schedule rate based on a pre-negotiated amount;
3. The PPO Statute was not intended to regulate PPO contracts involving workers compensation but was, rather, intended to apply only to the health and accident claims.

The defendants in these suits have filed exceptions of prematurity, prescription, various affirmative defenses, and

reconventional demands against the plaintiffs for breach of the PPO contracts.

New Judge Appointed for PPO Cases in District 3. A retired district court judge, Frank McGee, has been appointed by the Director of the OWC to take charge of the over 4,000 PPO suits filed in District 3 (Lake Charles). Judge McGee spoke to the attorneys representing the plaintiffs (medical providers) and the defendants (employers, TPAs and insurers). Judge McGee urged the attorneys to consolidate as many issues as possible to streamline the litigation process. Although most of the suits have been filed in District 3, similar suits have been filed in the other districts and there appears to be a new waive of these suits being filed in all of the OWC districts.

Federal Court Litigation. Suits for Declaratory Judgment Several of insurers and TPAs have filed complaints in federal court to challenge the claims of the medical providers. The first of such suits was *Liberty Mutual Insurance Company v. Dr. Clark Gunderson and Lake Charles Memorial Hospital*, No. 04-2405, 2006 U.S. Dist. LEXIS 10278 (D. La. 2006). Liberty Mutual filed this suit seeking a declaratory judgment from the court that the Louisiana workers compensation law did not prohibit discounts below the fee schedule and that its PPO contract (First Health) was not in violation of the PPO Statute. Judge Trimble granted Liberty's motion for summary judgment. In his memorandum ruling Judge Trimble noted:

The PPO Contract between Liberty Mutual and First Health is an agreement of [a] group purchaser [i.e. First Health]. Accordingly, the language of the statute is clear that the notice requirements do not apply to group purchasers when providing health benefits through their own network or to such agreements of group purchaser. This is the logical and reasonable interpretation of the statute and is in line with the Legislatures intent to contain escalating health care costs. Furthermore, and more significantly, this was the expectation of the parties when they entered into the PPO Contract and Provider Agreements

Declaratory Judgment Suits in District Courts. Self-Insured groups and local third party administrators who do not have diversity of jurisdiction needed for suit in federal court have filed suit in the state district courts to have the courts declare that the workers compensation law permits discounts below the fee schedule and that the PPO relied upon by them is either not regulated by the PPO Statute or is not in violation of that regulation. No decisions have been rendered as yet on these suits.

Providers have also a filed declaratory judgment suit. However, the suit was ultimately dismissed by the Third Circuit Court of Appeals. In *Lake Charles Memorial Hospital v. Superior Carriers, Inc.*, No. 06-807, 942 So. 2d 754 (La. Ct. App. 3d Cir. 11/2/06), the provider filed a declaratory judgment action in the 14th JDC (Judge Carter), seeking a finding by the district court that the PPO discounts taken by the employer were invalid due to failure to give notice under the PPO statute and because no reduction can be taken below the Louisiana reimbursement schedule. The district court judge granted the providers summary judgment and held the discounts totaling **\$4,144.50 to be invalid for both reasons urged by the plaintiff. An appeal was taken to the Third Circuit Court of Appeals. The Third Circuit reversed the trial court, finding the district court lacked subject matter jurisdiction for adjudicating provider disputes with employers as these disputes are within the jurisdiction of the OWC. The court also stated that the PPO statute claims of the providers should be adjudicated in the OWC. This would suggest that the class action suit pending in the 14th JDC should be dismissed on the basis that the district court does not have subject matter jurisdiction.**

Putting the Pieces Together. While the statutory basis for the provider claims may differ, the legal issues in the provider class action suit and the claims filed in the OWC are identical. The providers allege that the contracts in which they agreed to be paid less than the fee schedule should not be enforced because the schedule is the minimum and not the maximum they can charge. Alternatively they argue that the PPO contract (whether it was Focus, First Health, FARA, Metracomp, Medcomp, or Corcare) violated the notice requirements of the PPO statute and thus any discounts under that contract are underpayments entitling them to the penalties and attorney fees established in the PPO statute (against the group purchasers) as well as penalties and attorney fees under the workers compensation act (against the employers and insurers).

The various courts that will consider these claims will need to rule on several issues before granting relief to the providers:

1. Does the workers compensation act permit a provider to contract with a payor to receive less than the fee established in the reimbursement schedule? If the court finds that no discount below the fee schedule is permitted by law, then there is no need for any further inquiry and the amount discounted would be owed to the provider and the court would then need to consider whether penalties and attorney fees are owed for the underpayment of the fee.

2. However, if the court finds that there is no statutory prohibition against such contracts, then the court will need to consider the remaining issues. One such issue is whether the legislature intended to include PPO contracts involving workers compensation claims when it created and amended the Any Willing Provider Act of La. Rev. Stat. Tit. 40. A finding that it did not would end all claims of the providers in both the class action litigation and the thousands of claims in the OWC.

3. If the regulations of the PPO statute do apply to PPO contracts involving workers compensation, then the question for the court is whether the particular PPO contract requires any special notice to the provider that a particular insurer, TPA, or other entity was accessing the contract, or does the contract fall within the exception to the notice provision. This legal issue has been reviewed by a federal judge in the *Liberty Mutual* (Judge Trimble) case and a state district court judge (Judge Wyatt) in the class action suit. The state district court judge gave a very narrow interpretation of the statutory exception to the notice requirements of the PPO statute, while the federal district court judge rendered a broader interpretation of the statute. Judge Wyatt of the state district court concluded that the only situation in which a PPO is not required to give prior notice to a provider that an entity is accessing the PPO contract is if it owns the PPO (such as FARA a TPA that owns its PPO [See exhibit A]. Judge Trimble of the federal district court, on the other hand, considered all PPO contracts that did not involve leasing to another PPO to be within the notice exception. Thus, under Judge Trimble's interpretation, the PPO arrangement in exhibit B would not require the PPO statute notice to the provider, but the arrangement in exhibit C would involve a silent PPO and the PPO that had contracted with the provider would be required to meet the notice provisions of the PPO Statute.

4. Should the court that is reviewing these issues conclude that the PPO utilized by the defendant (employer or insurer) did not violate the notice provisions of the PPO statute, then the claim of the provider would be dismissed. A contrary finding, however, would result in an award in favor of the provider for the amount discounted.

5. The final issue for the court, assuming that it has determined that the PPO discount was improper either because no discounts are permitted under the workers compensation act or the PPO contract at issue did not comply with the notice provisions of the PPO statute, is whether penalties and attorney fees should be awarded. The defendants have raised the exception of prescription (one year from the date of the failure to pay the full amount owed under the fee schedule) and have also argued that no penalty or attorney fees are warranted when the legal issues are novel and not clearly established in the statute or jurisprudence. The providers contend that the law is clear in establishing the fee schedule as the minimum fee owed to a provider despite the contractual agreement signed by the provider.

Legislative Efforts The Governors Advisory Committee. In the 2006 legislative session, bills were introduced at the urging of the providers and the business community. The Director of the Office of Workers Compensation, Karen Winfrey, called upon the members of the Governors Workers Compensation Advisory Committee to meet with other interested parties to work towards an agreement on a legislative bill that would address the PPO issues. Despite the efforts of all involved to hammer out a compromise bill, no agreement could be reached and the session ended with no legislative action taken on this issue. More recently, the representatives of the providers and employers met on several occasions but were again unable to agree on a legislative resolution of the PPO dispute.

2008 Emerging Issues 526

Embry on Crossing the Jensen Line and Coppola v. Logistec Connecticut, Inc.

By Stephen C. Embry

September 26, 2007

SUMMARY: In *Coppola v. Logistec Connecticut, Inc.* (2007) 283 Conn. 1, 925 A.2d 257, the Connecticut Supreme Court reversed the Connecticut Workers' Compensation Commission and ruled that the state has concurrent jurisdiction with the federal government over certain claims involving injuries incurred on navigable waters. This commentary, written by Stephen C. Embry, a past chairman of the American Trial Lawyers Section on Workers' Compensation, examines the Court's ruling and the status of the Jensen line of cases.

ARTICLE: In *Coppola v. Logistec Connecticut, Inc.* (2007) 283 Conn. 1, 925 A.2d 257, the Connecticut Supreme Court reversed the Connecticut Workers' Compensation Commission and ruled that the state has concurrent jurisdiction with the federal government over certain claims involving injuries incurred on navigable waters.

Michael Coppola was working as a longshoreman in the hold of a ship in New Haven Harbor when the steps on which he was descending broke, resulting in a broken hip and wrist. He filed claims under the Connecticut Workers Compensation Act [see Conn. Gen. Stat. § 31-275 et seq.] and the Longshore and Harbor Workers Compensation Act [see 33 U.S.C.S. § 901 et seq.]. He was eventually awarded compensation under the Longshore Act and the next day the respondent moved to dismiss the state workers' compensation claim for lack of jurisdiction. Logistec Connecticut, Inc. claimed that since Coppola was involved in maritime employment on a vessel floating in the navigable waters of the United States, his state claim was barred by *Southern Pacific Company v. Jensen* (1917) 244 U.S. 205, 37 S. Ct. 524; 61 L. Ed. 1086.

The Connecticut Workers Compensation Commission reasoned that since *Jensen* held that admiralty interests could not be hindered or burdened by state workers compensation systems, the Commission therefore lacked jurisdiction in this case. Its decision was appealed to the Connecticut Supreme Court, which concluded that the respondent and commissioners were in error and held instead that Connecticut had jurisdiction over this claim. The Court remanded the case to the Connecticut Workers Compensation Commission.

Southern Pacific Company v. Jensen. The genesis of the journey begins with *Southern Pacific Company v. Jensen* (1917) 244 U.S. 205, 37 S. Ct. 524; 61 L. Ed. 1086 (*Jensen*) in which Justice McReynolds held for a divided court, under remarkably similar circumstances, that an award of **\$5.87 per week to the widow of Christen Jensen, a**

deceased longshoreman who was killed during the course of his employment, ran afoul of U.S. Const. Art. III, § 2, which confers admiralty jurisdiction upon the courts of the United States. Justice McReynolds stated that the Congress could not have intended to place the rules and limits of maritime law under the disposal and regulation of the several states. He noted that it was certainly true that in fact Congress had done this regularly by allowing states to enact statutes relating to commercial liens for repair of vessels [see *The Lottawanna*, 21 Wall. 558], and acknowledged that it would be difficult, if not impossible, to define with exactness, just how far the general maritime law may be changed, modified, or affected by state legislation. That this may be done to some extent cannot be denied. [See *Jensen* at p. 215]. However the extension of the State Workers Compensation Act seaward was found to be offensive, the remedy barred, and Mrs. Jensen left to fend for herself and her two children.

Perhaps the reason for this can be gleaned from Justice McReynolds' suggestion that Congress had a policy of encouraging investments in shipping while limiting the liability of the owner. In any case, the *Jensen* line was born and state jurisdiction was generally held at the end of the waters edge.

The Impact of the *Jensen* Line. Unfortunately *Jensen* left workers with no remedy and Congress was required to take steps to fill the gap. It took several efforts to do this, although the first attempt was rejected by Justice McReynolds in *Knickerbocker Ice Company v. Stewart* (1920) 253 U.S. 149, 40 S. Ct. 438, 64 L. Ed. 834, where he struck down a federal statute affirming that Congress did in fact intend to extend the rules of work related accidents and compensation acts seaward [See also *State of Washington v. W.C. Dawson & Company* (1924) 264 U.S. 219; 44 S. Ct. 302; 68 L. Ed. 646]. After several attempts, the Congress enacted the Longshore Act in 1927, providing a remedy for injuries occurring upon navigable waters of the United States.

However, as is so often the case, accidents and injuries paid little attention to Justice McReynolds or the *Jensen* line, and the courts had to deal with increasingly arcane rules to examine where the injury had occurred in order to determine whether Longshore Act jurisdiction attached.

In *Davis v. Department of Labor & Industries* (1942) 317 U.S. 249; 63 S. Ct. 225; 87 L. Ed. 246, Washington State law was found applicable after Mr. Davis fell from a drawbridge he was dismantling and his body was found floating in the Snohomish River. In *Davis*, the court was not asked to reconsider *Jensen* and the confusion resulting from the uncertainty injected into the law by that case. However, Justice Black simply noted that a presumption of constitutionality attached to the State Act and that therefore U.S. Const. art. III, § 2 was no obstacle to the claimants recovery. This created a Twilight Zone, the extent of which was left undefined.

Other excursions followed as in *Calbeck v. Travelers Ins. Co.* (1962) 370 U.S. 114, 82 S. Ct. 1196, 8 L. Ed. 2d 368, where injuries on new vessels under construction upon the navigable waters of the United States were found to be "maritime, but local," and it was held that the State Workers Compensation Act could validly be applied to such injuries.

Extension of the Longshore Act. In light of the confusion created by the Twilight Zone, the maritime but local rule, and other semantic imponderables, Congress acted in 1972 to extend the Longshore Act landward to include injuries occurring upon the adjoining land areas customarily used in maritime employment. The move to dual and concurrent jurisdiction was strengthened in *Sun Ship, Inc. v. Pennsylvania* (1980) 447 U.S. 715, 100 S. Ct. 2432, 65 L. Ed. 2d 458, which held that concurrent jurisdiction was not offensive.

The *Coppola* Decision. In *Coppola* the respondent sought to resurrect the confusion and complexities injected into the law by *Jensen* and *Knickerbocker*. The Connecticut Supreme Court in a 40-page decision reviewed the twisting course of the law and declined to add to the confusion. Instead the Court made clear that the thrust of events, culture, and the law in the near century since *Jensen* had been toward simplicity and uniformity.

The *Coppola* Court noted that other state and federal courts had expressed increasing reservations regarding *Jensen* in the last 90 years. They cited *Mooress Case* (1948) 323 Mass. 162, 80 N.E.2d 478, a quintessential maritime case in

which a worker was injured on a floating drydock. In *Mooress Case* it was found that *Davis* had so weakened *Jensen* that Massachusetts law was held applicable [See *Bethlehem Steel Co. v. Moores* (1948) 335 U.S. 874].

The *Coppola* Court further noted that the momentum to dual and concurrent jurisdiction had been recognized by a variety of states. In *Lane v. Universal Stevedoring Co.* (1973) 63 N.J. 20, 304 A.2d 537, for example, the New Jersey Supreme Court held that the state had jurisdiction over a longshoreman's injury that occurred in a hold of a ship floating in the navigable waters of the United States.

The *Coppola* Court concluded that the *Jensen* concern with uniformity had been addressed by the Longshore Act and that the existence of the state remedy did not act to lessen the reach of the Federal Act.

The *Coppola* Court was not persuaded that the extensions of the state acts seaward had the effect of undermining administrative efficiency. *Davis* was intended to reduce uncertainty and confusion arising from *Jensen*. Thus, the presumption of constitutionality of the state acts flowing from *Davis* and *Baskin v. Industrial Accident Comm'n* (1949) 338 U.S. 854, 70 S. Ct. 99, 94 L. Ed. 523, was to be expanded.

The *Coppola* Court cited *Larson's Workers' Compensation Law* § 145.02(6) for the proposition that the courts have better things to do than spend their time tracing ghostly definitional boundaries between the repair of a ship and the reconversion of a ship, and that the courts have too much self-respect to say with a straight face that awarding state workers compensation benefits would shatter the uniformity of maritime law.

Is *Jensen* Dead? The question arises then, is *Jensen* dead, and, if so, what caused the illness?

The answer to the first question is "not quite." *Jensen* remains good law if the proposition is reversed. U.S. Const. Art. III, § 2 grants Congress the power to pass laws in admiralty, and the Longshore Act arises under that section. Thus, Congress clearly had the power to enact the federal law, that is, the Longshore Act is constitutional.

Jensen as originally presented, however, stood this proposition on its head, suggesting that extensions of state workers compensation laws to the territorial waters of the state was impermissible. In *Jensen* itself the Court acknowledged that it was difficult to understand why this should be the case, since it was black letter law that state laws protecting commercial liens and business interests were constitutional even though they affected admiralty rights [See *The Lottawanna*, 21 Wall. 558]. Apparently the Court felt that the Constitution was not offended by state action designed to protect commercial interests but viewed state action designed to protect workers as unacceptable.

It appears that the driving force that compelled the introduction of confusion and uncertainty in *Jensen* was cultural rather than legal.

Justice McReynolds elucidated and expanded his *Jensen* reasoning in the *Knickerbocker* decision, which followed his musings in *Jensen* by three years. Speaking about workers compensation law that had only recently made its way to the American shores, he said, if the new and revolutionary principle of compensation, involving the creation of a liability without fault, hitherto unknown in any system of law, is to be extended to maritime employments, this must be done by a law enacted by Congress establishing a uniform system throughout the country." [See *Knickerbocker Ice Company v. Stewart* (1920) 253 U.S. 149, 40 S. Ct. 438, 64 L. Ed. 834].

Nearly a century later, workers compensation does not seem to be so new and revolutionary; but rather much more conservative and designed to limit and protect commercial interests from the full effects of work related injuries. Commercial activity has increased exponentially as the humanitarian remedy took the edge of the economic impact of industrial injuries. The finger of the law has moved on, and it is clear that *Jensen* made little sense and has caused much harm, particularly to Mrs. Jensen who had become widowed at age 29 when her husband was taken from her and her two children. The *Jensen* decision took from her the **\$5.87 per week, but protected the Southern Pacific Company from the revolutionary principle of liability without fault.**

For Further Discussion on the Longshore Act, see *Larson's Workers' Compensation Law* § 145.01 et seq.

CA Supreme Court Affirming the Fuentes Rule for the Calculation of Permanent D

2008 Emerging Issues 489

Ponzio on the California Supreme Court Affirming the Fuentes Rule for the Calculation of Permanent D

By James Ponzio

September 11, 2007

SUMMARY: The California Supreme Court resolved in *Brodie v. Workers' Comp. Appeals Bd.*, 40 Cal. 4th 1313 (2007), the conflict among the appellate courts as to the correct formula for calculating the permanent disability indemnity when there is apportionment to either a previous industrial disability, to non-industrial causes, or both. James Ponzio asserts that the determination of apportionment has thus taken on increased importance for permanent disability awards. Ponzio concludes that because for some body parts, the ratings under the 2005 Schedule are significantly lower than under the 1997 Schedule, the practical effect of *Brodie* will be that in subtracting out the old percentage of disability under the 1997 Schedule, there will frequently be claims under the 2005 Schedule in which there will be no indemnity due, despite an obviously worsened condition. This commentary, written by James Ponzio, a Certified Specialist in Workers' Compensation and partner with Mullen & Filippi who exclusively represents employers and insurance carriers, examines from the perspective of a defense attorney the major implications and unanswered questions of the *Brodie* interpretation of Cal. Labor Code §§ 4663, 4664 and Formula A.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: On 5/3/07 the California Supreme Court issued its unanimous decision in five consolidated cases [See *Brodie v. Workers' Comp. Appeals Bd.* (2007) 40 Cal. 4th 1313, 72 Cal. Comp. Cas 565, 2007 Cal. LEXIS 4334 (May 3, 2007)]. Although the factual scenarios differed, all of these cases dealt with the question of how to calculate the permanent disability indemnity due under the recently revised Cal. Labor Code § 4663 and the newly enacted Cal. Labor Code § 4664, when there is apportionment to either previous industrial disability, or to non-industrial causes, or both. The Court upheld the calculation method defined by *Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal. 3d 1, 547 P.2d 449, 128 Cal. Rptr. 673, 41 Cal. Comp. Cas 42. That calculation method provides for subtraction of the percentages of disability, rather than providing for merely subtracting the dollars that would be attributable to the non-industrial or prior industrial causes [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.07(2)(d)(i); 1-7 Herlick, California Workers' Compensation Law § 7.44(1)]. This decision favored the defendants in these matters, and rejected any claim that the recent enactment of Cal. Labor Code § 4663 and Cal. Labor Code § 4664 was designed in part, to benefit injured workers. This commentary will discuss some of the major implications of this important decision as well as the questions left unanswered by the Court.

Background. Permanent disability indemnity is one of the benefits provided for by the California workers compensation system. It is the only benefit that is apportionable to non-industrial, or prior industrial causes. Once one is

assigned a permanent disability rating, reference is made to a table promulgated pursuant to Cal. Labor Code § 4658 in order to determine the dollar value of that rating. The permanent disability rating schedule provides for graduated benefits, whereby the more serious the injury, the more money each percent of disability is worth. For example, an injury in 2003 that caused 30% disability is worth \$23,310, while a 60% rating for that same date of injury is worth \$64,056.25, almost three times as much. The graduated schedule is made more so for injuries of 70% or more, because of the addition of a life pension. A 100% rating is payable at the temporary disability rate (usually higher than the permanent disability rate) for life.

The 1976 *Fuentes* decision dealt with the question of how to calculate permanent disability indemnity, after apportionment. The *Fuentes* court determined that the proper way to calculate permanent disability indemnity after apportionment was simply to determine the percentage of industrial permanent disability after apportionment, and assign the appropriate dollar amount to that percentage. The Court rejected other approaches, including one suggesting that the overall permanent disability before apportionment be calculated, and then the only subtraction would be for the dollars that would be assigned to the *apportioned out* disability. The *Fuentes* rule was followed from 1976 until it came under attack based on the 2004 reform legislation [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.07(2)(d)(i); 1-7 Herlick, California Workers' Compensation Law § 7.44(1)].

In 2004, SB 899 was enacted. This piece of legislation caused major changes throughout the California workers compensation system, many of which are still not fully understood. As part of this legislation, the statutes governing apportionment of permanent disability were changed. Instead of allowing apportionment solely to the extent of disability that would be present absent the industrial injury, the standard was changed to apportionment of causation of the permanent disability. The new Cal. Labor Code § 4664(b) also provided for almost automatic apportionment for a prior permanent disability award, disallowing evidence regarding medical rehabilitation. In changing the standards for apportionment, the legislature repealed or amended the statutes that the *Fuentes* court relied on, and substituted an amended Cal. Labor Code § 4663 and a new Cal. Labor Code § 4664 in their place.

With the repeal of former Cal. Labor Code § 4750 and the amendment of Cal. Labor Code § 4663, a question arose as to whether the *Fuentes* method of calculation was still valid in light of the fact that it was based on the now repealed Cal. Labor Code § 4750. A number of cases wound their way through the California workers compensation system on this issue, with various permutations, involving prior industrial permanent disability, non-industrial disability, as well as disability to overlapping body parts. The California Workers' Compensation Appeals Board addressed this issue in *Nabors v. Piedmont Lumber & Mill Company* (2005) 70 Cal. Comp. Cas 856 (Appeals Board en banc opinion). That divided en banc decision upheld the *Fuentes* calculation method. Thereafter a number of Courts of Appeals entertained the issue and reached widely divergent decisions. The First District Court of Appeals reversed the WCAB en banc in *Nabors* and found that the dollars only attributed to apportionable causes should be subtracted. *Nabors v. Workers' Comp. Appeals Bd.* (2006) 140 Cal. App. 4th 217, 44 Cal. Rptr. 3d 312, 71 Cal. Comp. Cas 704. The Fifth District, with its finding in *E&J Gallo Winery v. Workers' Comp. Appeals Bd. (Dykes)* (2006) 134 Cal. App. 4th 1536, 37 Cal. Rptr. 3d 208, 70 Cal. Comp. Cas 1644, agreed with the First District. Another Division of the First District basically agreed with the *Nabors* court and the *Dykes* court, but calculated the dollars to be subtracted in a different method. *Brodie v. Workers' Comp. Appeals Bd.* (2006) 142 Cal. App. 4th 685, 47 Cal. Rptr. 3d 825, 71 Cal. Comp. Cas 1007. Meanwhile the Third District upheld the *Fuentes* calculation in the *Welcher* cases consisting of matters involving *Welcher*, *Strong*, *Williams*, and *Lopez* [See *Welcher v. Workers' Comp. Appeals Bd.* (2006) 142 Cal. App. 4th 818, 47 Cal. Rptr. 3d 888, 71 Cal. Comp. Cas 1087]. Because of this conflict the Supreme Court accepted the *Brodie* case and the *Welcher* cases for review and advanced them on the Courts schedule.

The Brodie/Welcher Decision. The Supreme Court affirmed the *Welcher* decisions, reversed *Brodie* and affirmed the calculation method previously utilized under *Fuentes*. This decision applies to situations in which the apportionment is to prior awards (*Brodie*, *Welcher*, *Strong* and *Williams*), where the present disability is total (*Lopez*), where the

apportionable disability is due to non-industrial causes (*Lopez*), and where the prior disability is to other, overlapping body parts (*Strong*). The Courts discussion makes it clear that it makes no distinction for calculation purposes between the apportionment under Cal. Labor Code § 4663 or Cal. Labor Code § 4664.

Remaining Issues and Problems. Although the Court clarified this individual issue, there are still major apportionment issues under Cal. Labor Code § 4663 or Cal. Labor Code § 4664 winding their way through the WCAB and the courts. A sample of these issues is as follows:

1. Does it apply to total permanent disability? One of the cases affirmed as part of the Supreme Courts decision was *Lopez*, one of the cases consolidated with *Welcher* at the Court of Appeals level. *Lopez* involved a person who was totally permanently disabled after the industrial injury, in conjunction with the non-industrial apportionment. Although the Supreme Courts decision dealt solely with the calculation aspects, the affirmation of the lower court allows for apportionment of a total disability award. This is contra to several lower court decisions, including *Webster v. Workers' Comp. Appeals Bd.* (1989) 54 Cal. Comp. Cas 228 (court of appeal opinion not published in official reports), which previously held that when an old orthopedic disability overlapped the new orthopedic disability, there was no apportionment towards a 100% award that was a compensable consequence of the new injury.

2. How can Cal. Labor Code § 4664(b) be applied when there is an obvious worsening, but also prior awards. Cal. Labor Code § 4664(b) provides that when an applicant has received a prior award of permanent disability, that disability is presumed to still exist at the time of the subsequent industrial injury. Assume there was a prior award of 60% to the spine. At the pre-reform trial on the subsequent injury, applicant showed total medical rehabilitation and was awarded another 50% for the spine. There is now a Petition to Reopen on the subsequent injury, and assume further that applicants present disability is 100%, of which 80% is attributable to the subsequent industrial injury. Does this applicant receive any additional indemnity or is he barred from increasing his 50% rating by virtue of the prior award in the prior case of 60%? The problem exists as well with overlapping body parts per *Strong*.

3. How can the apportionment be calculated under Cal. Labor Code § 4664(b) when comparing ratings under the 1997 Schedule vs. the 2005 Schedule? At the present time it seems fairly clear that for some body parts, the ratings under the 2005 Schedule are significantly lower than under the 1997 Schedule. The practical effect of the *Brodie/Welcher* decision will be that in subtracting out the old percentage of disability under the 1997 Schedule, there will frequently be claims under the 2005 Schedule in which there will be no indemnity due, despite an obviously worsened condition [See generally 1-2 Lawyer's Guide to AMA Guides and CA Workers' Comp § 2.02(2)-(3)].

4. When there is apportionment under both Cal. Labor Code § 4663 and Cal. Labor Code § 4664(b), how is the calculation done? Cal. Labor Code § 4663 provides for apportionment based on causation. Cal. Labor Code § 4664(b) provides that prior awards are to be considered still in effect, and basically to be subtracted out. Does the proper method of calculation involve first subtracting out the prior award, and then dividing the remainder based on causation, or vice versa? For example, if applicant had a previous award of 30%, and now has a disability of 80%, one-fourth of which is due to non-industrial causes, do you subtract out the 30% prior award first, and then the one-fourth of the remaining 50%, leaving 37%. Or do you first apportion out one-fourth of 80%, leaving 50%, and then subtract out the prior award, netting 20%? This question becomes further complicated if the *Wilkinson* doctrine is still alive and several injuries are combined under the *Wilkinson* doctrine and different apportionment calculations apply to each of the injuries. [See *Wilkinson v. Workers' Comp. Appeals Bd.* (1977) 19 Cal. 3d 491, 564 P.2d 848, 138 Cal. Rptr. 696, 42 Cal. Comp. Cas 406], [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.07(2)(d)(ii)-(iii); 1-7 Herlick, California Workers' Compensation Law § 7.46(2)].

5. What does apportionment to causation mean and what is substantial evidence to support it? In *Escobedo v. Workers' Comp. Appeals Bd.* (2005) 70 Cal. Comp. Cas 604 (Appeals Board en banc opinion), the WCAB attempted to establish the standards for apportionment and laid out the burdens of proof regarding such. The Supreme Court in *Brodie/Welcher* seems to support, in dicta, the *Escobedo* decision allowing for apportionment to pathology and asymptomatic causes, citing *E. L. Yeager Construction v. Workers' Comp. Appeals Bd.* (2006) 145 Cal. App. 4th 922, 52

Cal. Rptr. 3d 133, 71 Cal. Comp. Cas 1687 [See 1-8 CA Law of Employee Injuries & Workers' Comp § 8.06(1); 1-7 Herlick, California Workers' Compensation Law § 7.44(1)].

6. How do we deal with different occupational variants and ages? Cal. *Labor Code* § 4664 provides that a previously awarded permanent disability is presumed to still exist at the time of the subsequent industrial injury. It does not state that the prior rating is to be subtracted, although that is the common practice. How is this to be dealt with when the applicant changes occupations and as is usually the case, moves from one to another age bracket? Is the standard rating to be subtracted using the new occupation and age, or is the prior final rating to be subtracted?

7. How do we deal with the situation where the prior rating was after apportionment? If the prior permanent disability is presumed to still exist, and if the prior permanent disability included both apportionable disability and reimbursable disability, which is conclusively presumed to still exist? Is it the industrial portion only or the entire prior disability?

The practical effect of the *Brodie/Welcher* decision is to increase the importance of the apportionment decision. The determination of apportionment of permanent disability will have a greater impact on the parties than a contrary decision in *Brodie/Welcher* would have had. In light of that increased importance, it is expected that the WCAB and the courts will more carefully scrutinize apportionment opinions by physicians to ensure that they constitute substantial evidence.

For insight and discussion on apportionment, see 1-8 CA Law of Employee Injuries & Workers' Comp §§ 8.05--8.07, 1-7 Herlick, California Workers' Compensation Law §§ 7.44--7.47, and 1-6 Lawyer's Guide to AMA Guides and CA Workers' Comp § 6.02.

Rabine on Recent California Workers' Compensation Appeals Board Panel Decisions

2008 Emerging Issues 487

Rabine on Recent California Workers' Compensation Appeals Board Panel Decisions

By Merle C. Rabine

September 5, 2007

SUMMARY: Recent interest in California Workers' Compensation Appeals Board panel decisions have been fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet. This commentary, written by Merle C. Rabine, examines recent panel decisions on expert DFEC testimony and outpatient surgery centers' burden of proof regarding the reasonableness of their charges.

PDF LINK: Click Here for Enhanced PDF of Commentary

ARTICLE: Despite recent interest in California Workers' Compensation Appeals Board panel decisions, fueled by continuing uncertainty of interpretation of parts of Senate Bill 899 and by discussion and debate on the Internet, most panel decisions are of little interest to anyone other than the parties whose case is being decided. When the Appeals Board wants to announce a position on a substantive or procedural issue, it does so by issuing an en banc decision or significant panel decision [see http://www.dir.ca.gov/WCAB/wcab_dars.htm]. Panel decisions, however, tend to be case-specific with the result determined by the facts of the case. Moreover, while panel decisions are citeable authority, particularly on issues of contemporaneous administrative construction of statutory language [see *Griffin v. WCAB* (1989) 209 Cal. App. 3d 1260, 1264, fn 2, 54 Cal. Comp. Cas 145], they are not binding precedent, as are en banc decisions, on all Appeals Board panels and workers' compensation judges [see *Gee v. Workers' Comp. Appeals Bd.* (2002) 96 Cal. App. 4th 1418, 1425 fn. 6, 67 Cal. Comp. Cas 236].

Expert Diminished Future Earning Capacity (DFEC) Testimony Fails to Rebut Rating: *Magana v. Essey International, Inc.*, AHM 127643, 2007 Cal. Wrk. Comp. P.D. LEXIS 26 (Appeals Board panel decision). In *Costa v. Hardy Diagnostic* (2006) 71 Cal. Comp. Cas 1797 (Appeals Board en banc opinion), the Appeals Board held that the 2005 Permanent Disability Rating Schedule (PDRS) was prima facie evidence of the permanent disability attributed to an injury, pursuant to Cal. Labor Code § 4660(c). While the Appeals Board held that Cal. Labor Code § 4660(c) continues to allow the parties to present rebuttal evidence to ratings under the 2005 PDRS, it did not address what kind of evidence would be relevant and/or persuasive. That would be determined on a case-by-case basis.

Magana v. Essey International, Inc. is one of those cases. Applicant sustained industrial injury to his left ankle and left foot on February 5, 2005. Medical evaluation by a physician (status unspecified in the opinion) rated 12%. Applicant presented a witness who concluded that he had sustained a 27% diminished future earning capacity loss.

Defendants expert concluded that applicant would not sustain any wage loss in the future. The WCJ awarded 12% permanent disability, based on the rating of the medical evaluation.

The Appeals Board panel noted that Cal. Labor Code § 4660(a) demonstrates that the DFEC modifier is not the sole determining factor of permanent disability. The panel implies, but does not hold, that rebuttal evidence must rebut the DFEC modifier that is included in the 2005 PDRS. The panel stated in relevant part: To simply convert a DFEC percentage to the overall percentage of PD, as suggested in applicants petition herein, is invalid under *Labor Code section 4660(d)* . . . and is insufficient to rebut a rating thereunder.

Furthermore, the rating under the PDRS falls within the range of evidence of DFEC loss. The panel stated in relevant part: [T]he range of DFEC loss was 0 to 27%, according to expert testimony. Therefore, the PD rating herein, which is based upon the DFEC modifier in the 2005 PDRS, essentially is in accord with the range of expert evidence on DFEC and as such is inherently reasonable and probable.

The opinion does not describe the expert testimony offered by either party. So we do not know how they tried to rebut the rating. All we know is that they failed. They did not convince the WCJ or the three commissioners who decided this case. The fact that a rating falls within the range of evidence on DFEC loss may not be determinative if a future panel is convinced that one or the other of the experts succeeds in rebutting the rating.

The most interesting aspect of this opinion is the language stating that DFEC evidence may be offered only to rebut the DFEC modifier, not the overall rating. The implication is that even if Applicants expert had successfully rebutted the DFEC modifier, the rating would not be 27%. The panel does not say what the rating would be. This issue will most likely be addressed by future panels. Ultimately, this is an issue that will be resolved by the Appeals Board in an en banc decision or by the appellate courts.

Outpatient Surgery Centers Have Burden of Proving That Their Charges Are Reasonable Expenses Under Cal. Labor Code § 4600: *Pfeffer v. Fisher Construction*, POM 0252332, 2007 Cal. Wrk. Comp. P.D. LEXIS 10 (Appeals Board panel decision), *Jimenez v. Galaxy Shade Systems*, ANA 0377538, 2007 Cal. Wrk. Comp. P.D. LEXIS 11 (Appeals Board panel decision). In the mid 1990s, outpatient surgery centers became a new cottage (or mansion) industry in workers compensation. They were not regulated by a fee schedule under Cal. Labor Code § 5307.1. They were not covered by the restrictions on self-referral in Cal. Labor Code § 139.3. So they started charging whatever they wanted, which was a lot. Claims administrators initially responded by paying whatever was billed, apparently on the mistaken belief that they could not challenge the charges because of the presumption of correctness of the treating physician under former Cal. *Labor Code* § 4062.9 (now repealed). After a while, they started complaining about the fees. Attempts to address the problem legislatively were blocked by the surgery centers.

After the Legislature failed to address the issue of outpatient surgery facility fees in 2002, the Appeals Board issued its en banc decision in *Kunz v. Patterson Floor Coverings, Inc.* (2002) 67 Cal. Comp. Cas 1588. The Appeals Board held that although the Official Medical Fee Schedule did not apply to outpatient surgery facility fees, those fees must be reasonable. The Appeals Board outlined the kind of evidence that would be useful in determining reasonableness and also set out the burdens of going forward of the parties.

After *Kunz*, I had thought that the major claims administrators and outpatient surgery centers would develop comprehensive data to determine reasonableness of facility charges for various common procedures, especially epidural injections. Indeed, one carrier (Zenith) negotiated a fee schedule with some of the outpatient surgery centers. But based on my review of many of these cases while I was a commissioner, I found that litigation over outpatient surgery center liens was extremely haphazard. In some cases the outpatient surgery center introduced evidence of what it accepted, the defendant introduced no evidence, and the surgery center won. In other cases the surgery center introduced no evidence beyond its lien, the defendant introduced evidence of payments to other outpatient surgery centers and to inpatient facilities, and defendant won. None of the parties seemed to be paying much attention to the guidance in *Kunz*, and the results were all over the map.

In *Pfeffer* and *Jimenez*, the panels seem to have caused a little bit of a stir by reminding the parties that the outpatient surgery centers have the burden of proving that their charges are reasonable expenses. In *Pfeffer* the surgery center billed \$65,000 for services (unspecified in the opinion). Apparently, the sur

gery center did not introduce any evidence on reasonableness, either in its case in chief or in rebuttal. Instead, it contended that defendant had the burden of proving that the fees were unreasonable. Defendant produced a witness. The parties stipulated to defendant's offer of proof that the witness was an expert and that she would testify that the average fee for an inpatient facility was \$6,593.12. The WCJ awarded \$6,593.12. The panel denied lien claimant's petition for reconsideration. It held that it was proper for the WCJ to rely on inpatient charges. It also held that an outpatient surgery center facility fee that is nearly ten times as great as the fee that inpatient facilities could legally receive for the same services shocks the conscience and is manifestly unreasonable.

In *Jimenez* the outpatient surgery center filed a lien for \$31,007. The WCJ awarded the entire amount. The WCJ stated that defendant had not raised the issue of reasonableness and that therefore she was required to award the entire amount. The panel reversed. After reviewing the requirements of *Kunz*, the panel emphasized that the medical provider always has the burden of proof as to reasonableness, whether it is raised at trial or not [See also *Gee v. Workers' Comp. Appeals Bd.* (2002) 96 Cal. App. 4th 1418, 67 Cal. Comp. Cas 236 (WCAB must take judicial notice of all federal and state decisional, constitutional, and statutory laws)]. The panel emphasized: [E]ven in the complete absence of contrary evidence from a defendant, a WCJ need not accept a billing statement which is on its face unreasonable. The panel remanded the case to develop the record.

There is really nothing new here. The outpatient surgery centers have the burden of proof as to reasonableness, and some of the kinds of proof that may be convincing are outlined in *Kunz*. The Appeals Board will not accept a billing statement which is on its face unreasonable, but even that is susceptible of proof. It appears that the parties to the ongoing lien litigation have decided that it is not worth the effort to put on a serious case. As long as that happens, the results will continue to be all over the map, and, in my opinion, a serious waste of judicial resources.

McCoy on the Closing of the Georgia Subsequent Injury Trust Fund

2008 Emerging Issues 485

McCoy on the Closing of the Georgia Subsequent Injury Trust Fund

By Doug McCoy

September 4, 2007

SUMMARY: On July 1, 2006 the Georgia legislature closed the Subsequent Injury Trust Fund to new claims with injury dates on or after that date. This commentary, written by Doug McCoy, examines the impact of this legislation, the steps claims handlers should take to preserve claims, and the strategies that recovery specialists should take as soon as possible to recover payments from the Fund on inactive claims.

PDF LINK: [Click Here for Enhanced PDF of Commentary](#)

ARTICLE: It all began 30 years ago on July 1, 1977, when Georgia opened a new agency, the Subsequent Injury Trust Fund [See O.C.G.A. § 34-9-352]. Georgia was the last state in the nation to enact legislation to create a Fund to encourage the hiring and retention of disabled workers by protecting employers from large workers' compensation claims.

On July 1, 2006 the Georgia legislature [see HB 1405] closed the Subsequent Injury Trust Fund to new claims [See O.C.G.A. § 34-9-368]. Not so fast! Even though the legislation stopped new claims from being submitted to the Fund with injury dates on or after July 1, 2006, the Fund is still operating, paying claims, and assessing insurers and self-insured employers in the state. Payments will continue to be made by the Fund on accepted claims indefinitely [See O.C.G.A. § 34-9-368(a), (c)].

In fact, in the year following July 1, 2006, the Fund paid more claims and assessed more money than ever before! The assessment for insurers and self-insured employers in 2007 was 10.15 percent for **\$204.5M. Those assessments are projected to continue indefinitely into the future to pay claims accepted by the Fund with injury dates prior to July 1, 2006. That means assessments will be made based on claims paid at a time when there will be no opportunity to make a claim with the Fund [See O.C.G.A. § 34-9-368(b)].**

The worst case scenario for a new insurance company to the state after July 1, 2006 or a large self-insured employer that provides jobs in the state and that starts business in the state after July 1, 2006, would be that they will be assessed to pay claims and never have the opportunity to make a claim themselves.

Acceptance; Automatic Denial. Now that the legislature has taken steps to eliminate the Fund, many do not understand that the Fund will be around for many years to come. All claims filed with the Fund since July 1, 1977 to the

present that have not been accepted by the Fund, now must be perfected for acceptance or they are automatically denied by the Fund on July 1, 2009 [See O.C.G.A. § 34-9-362(d)].

Statute of Limitations; Request for Hearing. Once that automatic denial occurs, the only way to toll the statute will be to request a hearing before the State Board of Workers Compensation [See O.C.G.A. § 34-9-362(g)]. All claims not perfected by July 1, 2009, and have no hearing requested, will be forever barred by a statute of limitations created by HB 1405.

Placing Fund on Notice. The Fund is still taking new claims and will continue to take new claims after July 1, 2009. If claims handlers have not placed the Fund on notice of any claim that occurred from July 1, 1977 to July 1, 2006, and not more than 78 weeks of benefits have been paid, they may place the Fund on notice of their claims at any time in the future [See O.C.G.A. § 34-9-362(a)]. Other than the 78 weeks of benefits paid, there is no time limit for such claims. Once claims handlers have placed the Fund on notice, however, they will have three years from that date to perfect their claim [See O.C.G.A. § 34-9-362(e)].

Many claim handlers or recovery consultants advise putting the Fund on notice when a claim is established. I suggest waiting until the very last minute, which provides more time since the three years begins to run from the date the Fund is placed on notice [See O.C.G.A. § 34-9-362(e)].

Prior Impairment. There are many other things about the Fund that folks, even recovery specialists, overlook. For instance, the employer is not required to have prior knowledge in all cases. One of the more effective mergers for reimbursement involves an individual who has a prior impairment of mental retardation. The statute states that it shall not be necessary for the employer to know the employees actual intelligence quotient or actual ranking in relation to the intelligence quotient of the general population. [See O.C.G.A. § 34-9-361(12)].

The statute deals with conditions that are presumed hindrances to employment. If it can be shown that an employee has mental retardation that does not meet the definition in the statute of a presumed hindrance to employment, then a claim can still be pursued. The list found in O.C.G.A. § 34-9-361 is not all inclusive for prior impairments; rather, these are only conditions that are considered presumed hindrances.

The statute defines mental retardation as the employees intelligence quotient such that he or she falls within the lower two percent of the general population. This is what I call the Forrest Gump statute for slight mental retardation. Many workers in laboring jobs have an IQ of 70 or below and would fall within this category. In such cases the employer does not have to know what the IQ is or the ranking in relation to the IQ of the general population.

Case Study of Prior Impairment: Mental Retardation. Not long ago, an associate was handling a claim involving an injured employee who placed a propane tank in a washer with an open flame. Due to his slight mental retardation, the employee placed the container with 15 pounds of propane in the washer, which resulted in an explosion and burns to the employee.

The employer had no knowledge of the employees IQ and only considered him a little slow. That was sufficient to recover not only the indemnity but also the medical since the merger was defined in O.C.G.A. § 34-9-351(1)(A), i.e., had the preexisting permanent impairment not been present, the subsequent injury would not have occurred. This was missed by the prior recovery specialist.

Inactive Claims. There are 138,823 inactive claims filed with the Fund now by 1,122 difference insurers and self-insured employers in Georgia. Some of these claims are below the threshold for recovery and some have no potential, but there are hundreds of millions of un-recovered dollars that have been abandoned. These claims will be forever closed by statute if not perfected by July 1, 2009.

Strategies for Fund Recovery on Inactive Claims. Many recovery specialists pursue the low hanging fruit, i.e., those claims that are obvious that the Fund will accept. If they are willing to climb up in the tree, though, there is plenty

more fruit that can be picked.

In another recent claim accepted by the Fund, 11 years after the injury, the recovery specialist and defense attorney had both ruled out any possibility of Fund recovery. The initial notes the adjuster made was that the employee had a history of anxiety and depression. Even though the subsequent injury was a neck injury, the catastrophic designation and pain treatment arose from the psychoneurotic impairment.

Psychoneurotic disability with confinement for more than six months is a presumed hindrance to employment [See O.C.G.A. § 34-9-361(13)]. In this case, even though the requirement for a presumed hindrance to employment was not met, the anxiety and depression was proven a hindrance to employment and the Fund accepted the claim.

Claims for other impairments other than mental retardation and psychoneurotic disability are being overlooked and recoveries abandoned. Now is the time to take a subsequent look at all claims for Fund recovery. The prior permanent impairment need not be caused by an injury, but it must be known by the employer, considered a hindrance to employment, and merge with the subsequent injury by (1) causing the injury, or (2) creating a greater disability. A third merger is created when death would not have been accelerated had the preexisting permanent impairment not been present [See O.C.G.A. § 34-9-351].

Insurance carriers and TPAs should not be confused by the list of impairments found in O.C.G.A. § 34-9-361. These are only permanent impairments that are presumed hindrances to employment. There are many other impairments not found on this list that can merge with the subsequent injury to qualify for acceptance by the Fund.

If insurance carriers and TPAs examine claims already submitted to the Fund that are inactive, the worst case scenario is to insure they have no claims that recovery can be made, and the best case scenario is they make recovery from the Fund. It is found money.

In many instances for an insurance carrier or TPA, it is insurance to confirm they have done all they can to recover their policyholder's or client's money. Not taking the steps to insure that they have made a full recovery from all claims with potential could be considered an error or omission and create a liability for which there is no remedy from the Georgia Subsequent Injury Trust Fund.

The Fund was created to make recovery payments. Insurance companies and TPAs should make sure they are making the maximum recovery possible under the statute before it is too late.

For Further Discussion on the Georgia Subsequent Injury Trust Fund, see *Kissiah's Georgia Workers' Compensation Law*, §§ 32.01-32.08.

ABOUT THE AUTHOR(S):

Doug McCoy is Principal of McCoy Consulting, an independent firm that provides consulting services to stakeholders in the property casualty insurance industry. He began his career as a multi-line claim adjuster in the property casualty claim operation of a major insurer. In 1992 he became the Divisional Vice President of Commercial Lines. In 1994 he became the Chief Operating Officer of a large workers' compensation managed care organization. Mr. McCoy's extensive industry experience includes representation on the National Council on Compensation Insurance Fraud Study Committee, Governor's Study Committee on Workers' Compensation, Warm Springs Institute for Rehabilitation Advisory Committee, Learning Services Head Injury Center Advisory Committee, and Pharmacy Management Services, Inc., Advisory Committee. He currently serves as a member of the Licensure and Self-Insurance Sub-Committee of the Chairman's Advisory Committee for the Georgia State Board of Workers' Compensation and of the Georgia CompScope Multi-state Advisory Committee for the Workers' Compensation Research Institute. He has

been appointed by the Governor of Georgia, Roy Barnes, to serve on his Workers' Compensation Review Commission. Mr. McCoy has spoken on numerous topics concerning claims management throughout the country and has written articles for Business Insurance, Risk and Insurance Management, Rough Notes, and the Wall Street Journal. He is the author of Workers' Compensation: The Survival Guide for Business (LexisNexis Matthew Bender) and a member of the LexisNexis National Workers' Compensation Advisory Board.

Aylward on "Occurrence" and "Occurrences" in Mass Shooting Claims

2008 Emerging Issues 169

Aylward on "Occurrence" and "Occurrences" in Mass Shooting Claims

By Michael F. Aylward

February 7, 2007

SUMMARY: Michael F. Aylward, Chair of Morison Mahoney LLP's Complex Insurance Claims Resolution Group, explores cases addressing the intersection of these themes. It highlights the December 27, 2007 opinion of the Pennsylvania Supreme Court in *Donegal Mut. Ins. Co. v. Baumhammers* in which the court found coverage but limited the insureds' recovery to a single policy limit.

PDF LINK: Premium Emerging Issues Commentary (\$)

ARTICLE: Columbine, Virginia Tech, the Amish Shootings . . . Behind the sensational headlines and human tragedy that accompany mass shooting incidents, an often unseen drama is played out to determine who will compensate the victims of these crimes. More specifically, will liability insurers provide coverage and, if so, in what amount? In the following article we will analyze these "spree" claims with a particular emphasis on the Pennsylvania Supreme Court's opinion in *Donegal Mut. Ins. Co. v. Baumhammers*, n1 the most recent case to address these questions.

Whether presented in the context of sexual assaults, mass shootings or other "spree" crimes, cases in which a single individual's criminal acts cause injury to multiple individuals present two distinct insurance coverage issues: First, do such claims arise out of an accidental "occurrence" arising as they do out of the intentional acts of a criminal? However, because the policyholder seeking coverage is not the perpetrator but rather a parent, employer or entity with responsibility for the conduct of the perpetrator, plaintiffs have argued with some success that the insured's negligent hiring, training or supervision of the perpetrator is a basis for liability independent of the perpetrator's crimes. Where coverage has been found to apply, a second question is how many indemnity limits the insurer must pay to satisfy its insured's liabilities: one, reflecting the overall negligence of the insured, or several, in light of the specific cause and circumstances of each victim's injuries?

The incidents giving rise to *Baumhammers v. Donegal Mutual* began on April 28, 2000, when 34 year-old Richard Baumhammers went on a shooting spree that, over the course of two hours, killed five people and wounded another. Baumhammers began by shooting and killing his neighbor, Anita Gordon, whose home he then set on fire. Richard next got in his car and drove to Scott Township where he shot and killed Anil Thakur and seriously wounded Sandip Patel. He then drove to Robinson Township where he shot and killed Ji-Ye Sun and Thao Pak Pan. Finally, Baumhammers

drove to Center Township where he shot and killed Gary Lee.

Richard Baumhammers was tried and convicted of first degree murder with respect to the five killings and aggravated assault and attempted homicide for the shooting of Patel. Thereafter, Patel and the estates of his deceased victims filed suit against Baumhammers and his parents in the Court of Common Pleas. Their Complaint alleged that the parents had failed to procure adequate mental health treatment for Baumhammers, had failed to take his hand gun away from him and had failed to notify law enforcement authorities of the fact that he possessed a hand gun.

Richard Baumhammers and his parents sought a defense to these claims under a homeowner's policy issued to the parents by Donegal Mutual. n2 Donegal Mutual agreed to provide a defense to the underlying lawsuits under a reservation of rights and filed an action for declaratory relief, seeking a declaration that there was no "occurrence" and that the most that it possibly owed was the policy's \$300,000 per occurrence limit as all the claims arose out of "continuous or repeated exposure to substantially the same general harmful condition." n3

In 2001, the Court of Common Pleas ruled that Donegal Mutual had no duty to defend or indemnify Richard Baumhammers. However, the court ruled that Donegal Mutual owed coverage for the claims against the parents and declared that each of the victims constituted a separate "occurrence" for purposes of determining the insurer's indemnity obligations. On appeal, the Superior Court (Pennsylvania's intermediate appellate court) initially issued an opinion reversing the holding of the Court of Common Pleas. That decision was withdrawn, however, and following re-argument *en banc*, the Superior Court ruled 5-3 in *Donegal Mut. Ins. Co. v. Baumhammers*, n4 that the trial court had correctly found that the underlying claims involved six separate "occurrences." Donegal Mutual appealed.

Nearly ten months after hearing oral argument, a sharply divided Pennsylvania Supreme Court ruled a few days before the end of 2007 that the Superior Court had been correct in finding coverage but had erred in its determination of the number of "occurrences." The majority declared that innocent insureds whose negligence enables the intentional acts of a co-insured to cause injury are entitled to coverage despite the intentional and criminal acts of the perpetrator. The court distinguished its holding in *Gene's Restaurant, Inc. v. Nationwide Ins. Co.*, n5 in which it had ruled that an intentional willful assault was not an "occurrence." Rather, in keeping with its earlier opinion in *Mohn v. American Casualty Co.*, n6 the Supreme Court observed that the fact that the event causing the injury may be traced to an intentional act of a third party does not preclude the occurrence from being an accident insofar as negligence is claimed with respect to the policyholder. Likewise, the court cited the Third Circuit's opinion in *Nationwide Mut. Fire Ins. Co. v. Pipher*, n7 in which coverage had been found for claims against a landlord who failed to install doors on a second-floor apartment where a tenant was subsequently murdered by a burglar. In keeping with these earlier opinions, the Pennsylvania Supreme Court refused to find that the extraordinary shooting spree embarked upon by Baumhammers was the natural and expected result of the negligence of the parents. As a result, considering these claims from the standpoint of the parents, the Supreme Court held that they exhibited the degree of fortuity necessary to constitute an "accident." n8

While the *Baumhammers* court's declaration of coverage is hardly unique, numerous courts have adopted an analysis similar to the one undertaken by the Pennsylvania Supreme Court, n9 other leading courts have held that theories of negligent hiring, training or supervision and the like do not trigger coverage since those theories of negligence did not result in any injury to the plaintiff and in view of the fact that the plaintiff's injuries would not have occurred but for the intentional or criminal acts of the third party. Thus, in *Farmers Alliance Mut. Ins. Co. v. Salazar*, n10 the U.S. Court of Appeals for the Tenth Circuit ruled in an Oklahoma case that allegations of negligent supervision against the mother of a murderer could not be an "occurrence" as an "occurrence" is the event that causes the plaintiff's injury, not the remote cause of that injury. n11

Having found that the underlying theories of negligence against the Baumhammers constituted an "occurrence," the Pennsylvania Supreme Court turned to the issue of whether the Superior Court had correctly determined that each individual victim was a separate "occurrence." Here, the Supreme Court fragmented into three different camps. The majority opinion, which reflected the views of Justices Baldwin, Castille, Saylor and Eakin, concluded that only a single

"occurrence" limit should be triggered by the various wrongful death and personal injury actions. Chief Justice Cappy dissented, arguing that the Superior Court had correctly found six "occurrences." Justice Baer likewise dissented but proposed an intermediate approach wherein separate claimants might be aggregated together insofar as their injuries occurred in close proximity to each other.

Writing for the majority, Justice Baldwin held that, just as the determination of whether there was an "occurrence" reflected the conduct of the insureds without regard to the intentional or criminal acts of their son, the number of "occurrences" must reflect the acts for which the insureds were held to be liable and not the actions of their son. While the Supreme Court agreed with the Superior Court that a "cause" test was appropriate, it held that the "cause" in question was the cause of the insureds' liability, not the immediate injury-producing act that caused the death and injuries of the underlying claimants.

The Pennsylvania Supreme Court took issue with *Koikos v. Travelers Ins. Co.*, n12 the 2003 Florida Supreme Court opinion that the Pennsylvania Superior Court had focused on in adopting a "six occurrences" finding. *Koikos* arose out a case in which gang members, having been "dissed" by a rival gang at the insured's restaurant, returned with guns, with fatal results to several patrons. On a certified question from the federal court, the Florida Supreme Court held that each injured victim was a new "occurrence." The court rejected Travelers' contention that the relevant consideration was the single omission of its policyholder in failing to provide proper security. Further, the Florida Supreme Court refused to find that the "continuous and repeated exposure to conditions" language was relevant in considering the acts or omissions of the policyholder for which it was deemed to be legally responsible, ruling instead that this language was intended to broaden the scope of earlier coverage so as to clearly afford coverage for incidents in which injuries resulted from environmental exposures or other conditions that occurred over an extended period of time:

We conclude that the inclusion of the "continuous or repeated exposure" language does not restrict the definition of "occurrence" but rather expands it by including ongoing and slowly developing injuries, such as those in the field of toxic torts. Therefore, we reject Travelers' reliance on the "continuous or repeated exposure" language as a basis for concluding that *Koikos*' negligent failure to provide security constitutes a single occurrence under the terms of the policy. The victims were not "exposed" to the negligent failure to provide security. If the victims were "exposed" to anything, it was the bullets fired from the intruder's gun.

As a result, the *Koikos* court had declared that "it is the act that causes the damage, which is neither expected nor intended from the standpoint of the insured, that constitutes the 'occurrence.'" The court found that "focusing on the immediate cause -- that is the act that causes the damage, rather than the underlying tort-that is the insured's negligence, is also consistent with the interpretation of other forms of insurance policies." n13

In *Baumhammers*, however, the Pennsylvania Supreme Court declared that *Koikos* had been wrong to base the number of "occurrences" on the actions of third parties rather than the negligent conduct of the insured. Instead, the *Baumhammers* court looked to the Nevada Supreme Court's opinion in *Washoe County v. Transcontinental Ins. Co.*, n14 in which the County had been sued for negligently licensing a day care center at which an employee had sexually abused children over a three-year period. The Nevada Supreme Court held that despite the number of incidents and children abused, the appropriate application of the "cause test" resulted in only a single "occurrence" reflecting the insured's overall negligence in failing to properly certify or license the day care facility. The court explained that where the insured is not itself directly responsible for the injuries, "[t]he focus of the inquiry should not be on the number, magnitude or time of the injury but rather on the cause or causes of the injury." Because each of the separate incidents of molestation arose from the same proximate cause, that is to say the County's negligent failure to license the facility, that negligence constituted a single "occurrence."

The *Baumhammers* majority also took note of other cases in which courts around the country have found only one "occurrence" for shooting spree cases. Thus, in *Travelers Indem. Co. v. Olive's Sporting Goods, Inc.*, n15 a sporting goods store was sued by several individuals who were injured after a person to whom the store had sold a gun went on a shooting spree. In these circumstances, the

Arkansas Supreme Court held that all of the claims against the insured arose out of the same "occurrence," which is to say the insured's sale of the gun.

The court also cited *RLI Ins. Co. v. Simon's Rock Early College*,ⁿ¹⁶ a case in which the Massachusetts Appeals Court ruled in 2002 that claims against a college for failing to prevent a shooting spree by a deranged student all arose out of a single "occurrence." In 1992, Wayne Lo, a student at Simon's Rock, went on a shooting spree killing two students and injuring four other individuals. Simon's Rock was sued by the injured students and their families alleging that it had been negligent in allowing the incident to occur. The College's primary insurer (American Alliance) argued that these claims all arose out of the same "occurrence" and that its maximum indemnity obligation was therefore \$1 million. The excess insurer (RLI) contended that the injuries had occurred over a span of time in different places, resulting in different injuries to different individuals and therefore involved multiple "occurrences" such that the primary policy's \$3 million aggregate limit must therefore be paid before it had any obligation to provide coverage for the underlying losses. The Superior Court and, on appeal, the Appeals Court ruled that these claims involved a single "occurrence."

RLI argued that the "cause" test required that the number of occurrences be measured by "the immediate cause of the victims' injuries, i.e., Low's shooting."ⁿ¹⁷ The Appeals Court disagreed:

We conclude that when the issue is the number of occurrences, we must look to the "cause" of the injury by reference to the conduct of the insured for which insurance is afforded.

.....

Where the underlying claims against the school and its employees are for negligence, it is their alleged negligent acts or omissions in failing to prevent Low from using his gun that constitute the occurrence for purposes of determining general liability coverage."

The court observed that the unambiguous language of the policy at issue "clearly contemplates the possibility that multiple acts taking place over a space of time may contribute to a single occurrence for purposes of coverage." Despite the fact that the underlying claims alleged several discrete acts of negligence on the part of the College (its failure to search Low's room, to confiscate his weapons parts, to call his parents or to call the police), the court held that these were not separate "occurrences" but rather evidence of an arguably inadequate policy of security and student supervision that contributed to Low's ultimate access to a murder weapon. As a result, the court concluded that the "occurrence" giving rise to the College's liability was the alleged failure or inadequacy of its security policy.

In keeping with cases such as *Olive's Sporting Goods* and *Simon's Rock*ⁿ¹⁸ the *Baumhammers* majority declared that:

Determining the number of occurrences by looking to the underlying negligence of the insured recognizes that the question of the extent of coverage rests upon the contractual obligation of the insurer to the insured. Since the policy was intended to insure parents for their liabilities, the occurrence should be an event over which parents had some control Although this is a disturbing case with tragic consequences, we are compelled to conclude that parents' alleged negligence constituted but a single occurrence for purposes of coverage under the Donegal insurance policy.

Writing in dissent, Justice Cappy argued that the Supreme Court should have followed the Superior Court in finding six separate "occurrences" based on *Koikos*. He also contended that it was premature to determine the limits of coverage available for indemnity since there had not yet been a finding of liability on the part of the parents.

Finally, Justice Baer argued in his dissent that there should have been four "occurrences." In contrast to the majority's approach, which focused on the negligent conduct of the insured or Chief Justice Cappy's analysis, which looked solely to the acts that had caused the plaintiffs' injuries, Justice Baer argued that the better question was to look to whether there was "one proximate uninterrupted and continuing cause" that resulted in separate injuries or damage. In

this case, he observed that although six individuals had been shot, those injuries arose out of four separate shooting incidents as Richard Baumhammers traveled from location to location. As a result, he concluded that both of the individuals shot at Scott Township and the two individuals shot at Robinson Township could both be grouped as two "occurrences."

Determining the number of "occurrences" is generally not difficult in cases where the insured is the direct cause of the plaintiffs' injuries. In recent years, most of the controversy concerning the number of "occurrences" has reflected cases where the insured is a remote actor, either where the insured manufactures a product that subsequently results in injury to numerous individuals or where, as in *Baumhammers*, the insured is sued for failing to prevent losses caused by a third party.

While courts across the country have accepted the notion that a "cause" test should apply, there is little uniformity with respect to whether the application of a "cause" test should consider direct or remote causes. As may be seen in the asbestos cases, a "cause" test that looks to the specific circumstances concerning each plaintiff's specific disease or injury is little different from the "effect" analysis that was abandoned years ago. Nevertheless, as with Justice Baer's dissenting opinion in *Baumhammers*, courts have been uncomfortable in applying a "cause" test that groups together events that are not proximate in time and space and that have often occurred decades apart throughout the United States under widely differing circumstances.

Ultimately, for all of its twists and turns, the majority in *Baumhammers* got it right. The appropriate focus of the "occurrence" analysis is on the conduct of the insured. If a court is to hold that an insured is entitled to coverage due to independent acts of negligence and notwithstanding the fact that the direct cause of the plaintiffs' injuries are actions for which coverage would not be allowed under a policy (i.e., criminal or intentional assaults), then the same analysis should be applied with respect to determining the number of "occurrences."

Oddly, Justice Cappy also got it right. A court should not consider the actions of a third party in determining whether there is an "occurrence" and then apply an inconsistent analysis in adopting the number of occurrences analysis. Since casualty policies are intended to provide coverage for an insured's claimed liability, the appropriate focus should be on the insured's liability, not the facts or circumstances giving rise to each claimant's injuries.

n1 1 938 A.2d 286 (Pa. 2007).

n2 2 Both the parents and Richard Baumhammers were "insureds" under the policy as Richard Baumhammers, although no longer a minor at the time of these incidents, was a member of his parents' household.

n3 3 The "Limits of Liability" section of the Donegal Mutual policy stated that, "all bodily injury and property damage resulting from any one accident or from continuous or repeated exposure to substantially the same general harmful condition shall be considered to be the result of one occurrence."

n4 4 2006 PA Super 32 (Pa. Super. Ct. 2006).

n5 5 519 Pa. 306 (1988).

n6 6 458 Pa. 576 (1974).

n7 7 140 F.3d 222 (3d Cir. 1998).

n8 8 The issues that consumed the *Baumhammers* court might have been avoided under more recent editions of the HO-3 form, which contain an "intentional acts" exclusion barring coverage for "bodily injury or property damage which may reasonably be expected to result from the criminal or intentional acts of an insured person or which in fact are intended by an insured person."

n9 9 See *Silverball Amusement v. Utah Home Fire Ins. Co.*, 842 F. Supp. 1151 (W.D. Ark. 1994), *aff'd per curiam*, 33 F.3d 1476 (8th Cir. 1994) (allegations that the insured failed to properly supervise an employee who sexually abused children were held to constitute an "occurrence"); *United States Fidelity & Guar. Co. v. Open Sesame Child Care Ctr.*, 819 F. Supp. 756 (N.D. Ill. 1993) (insurer must provide coverage for allegation that day care operator negligently hired employees who committed sexual assaults); *Westfield Cos. v. Kette*, 77 Ohio St. 3d 154 (Ohio 1996) (negligent supervision claims against the wife of a child molester were covered under their homeowner's policy); *United Fire & Cas. Co. v. Shelly Funeral Home, Inc.*, 642 N.W.2d 648 (Iowa 2002) (corporate insured was entitled to coverage, despite the intentional acts of one of its directors, since the plaintiffs' injuries were unexpected or unintended from its standpoint).

n10 10 77 F.3d 1291 (10th Cir. 1996).

n11 11 Similarly, other courts have pointed out that independent theories of liability, while not based on the actual criminal conduct, would not have given rise to injury but for the fact that they allowed the intentional acts to occur. See, e.g., *Erie Ins. Exch. v. Claypoole*, 449 Pa. Super. 142 (Pa. Super. Ct. 1996) (claimed negligence of bus company in hiring and supervising rapist would not have given rise to injury but for employee's intentional acts); *Sweet Home Cent. Sch. Dist. v. Aetna Commercial Ins. Co.*, 263 A.D.2d 949 (4th Dept. 1999) (allegations that school district was negligent in hiring teacher who sexually assaulted pupils did not allege a covered "occurrence" as it is "the nature of the underlying acts, not the theory of liability, that governs."

See also *Commercial Union Ins. Co. v. Roberts*, 7 F.3d 86 (5th Cir. 1993) (Texas law); *Farmers Union Mut. Ins. v. Kienenberger*, 257 Mont. 107 (1993).

n12 12 849 So. 2d 263 (Fla. 2003).

n13 13 *Koikos* is in keeping with two earlier opinions of the *Florida District Courts of Appeal In Am. Indem. Co. v. McQuaig*, 435 So. 2d 414 (Fla. 5th DCA 1983), a homeowner engaged in a shoot-out with the police, injuring three officers with successive shotgun blasts. The District Court of Appeals held that each shotgun blast was a separate "occurrence." Likewise, in *N.H. Ins. Co. v. RLI Ins. Co.*, 807 So. 2d 171 (Fla. 3rd DCA 2002), a tenant in the insured's apartment building fired three separate shots at different times and places inside the apartment complex, injuring three individuals and killing two. The families of the victims sued the apartment building owner alleging that he had been negligent in failing to provide proper security that might have precluded such events from occurring. The Third District of the Florida District Court of Appeal concluded that each separate incident was a different "occurrence." The court ruled that "the act which causes the damage constitutes the occurrence." The Third District concluded that "there were three separate acts of shooting, causing three separate injuries to three separate persons in three separate instances. This is not a case with one proximate, uninterrupted continuing cause resulting in the deaths and injuries but rather three separate causes. New Hampshire did not incur any liability because of the aggressor's residence, but rather liability attached when the aggressor fired three shots which resulted in injury to the three victims."

n14 14 110 Nev. 798 (1994).

n15 15 297 Ark. 516 (1989).

n16 16 54 Mass. App. Ct. 286 (2002).

n17 17 54 Mass. Ct. at 290.

n18 18 To similar effect is *Bomba v. State Farm Fire and Cas. Co.*, 379 N.J. Super. 589 (App. Div. 2005), in which the Appellate Division of the New Jersey Superior Court ruled that claims against a homeowner for injuries suffered in an incident where the insured's adult son shot at various police officers on three occasions,

injuring several officers, constitute a single "occurrence." The court rejected the insured's contention that each separate gunshot was a new "occurrence," holding instead that inasmuch as the claims against the insured were based upon their negligence in allowing their son access to gun, the underlying injuries all shared the same "cause."

ABOUT THE AUTHOR(S):

Michael F. Aylward is a senior partner in the Boston office of Morrison Mahoney LLP where he chairs the firm's complex insurance claims resolution group. For nearly 25 years, Mr. Aylward has represented insurers and reinsurers in coverage disputes around the country concerning the application of liability insurance policies to commercial claims involving intellectual property disputes, environmental and mass tort claims and construction defect litigation. He is a frequent lecturer on insurance issues and has authored portions of various insurance treatises and is a frequent contributor to scholarly publications on legal issues. Mr. Aylward has taken a leadership role in legal organizations including the Defense Research Institute (Board of Directors (2000-2003); past Chair, Insurance Law Committee and Law Institute (2004-2006); and the International Association of Defense Counsel (Chair, Reinsurance, Excess and Surplus Lines Committee, Board of Editors, Defense Counsel Journal). He presently serves as the chair of the Reinsurance, Excess and Surplus Lines Committee of the Federation of Defense and Corporate Counsel.
