The manner of allocating prepaid mortgage insurance premiums is set forth in temporary regulations. n166.4.2 With respect to mortgage insurance provided by the Federal Housing Administration or private mortgage insurance (but not mortgage insurance provided by the Department of Veterans Affairs or the Rural Housing Service), n166.4.3 an individual taxpayer may allocate prepaid premiums over the shorter of (1) the stated term of the mortgage, or (2) a period of 84 months. n166.4.4 This allocation requirement applies whether the qualified mortgage insurance premiums are paid in cash or are financed, without regard to source. n166.4.5

No deduction is allowed for the unamortized balance if the mortgage is paid before its term (except in the case of qualified mortgage insurance provided by the Department of Veterans Affairs or Rural Housing Administration). n166.5

Mortgage servicers must report the amount of all mortgage insurance premiums, including prepaid mortgage insurance premiums, received in the calendar year from any individual if that amount is \$600 or more for any calendar year. n166.6 The reporting requirement applies, whether premiums are paid, by cash or financing, without regard to source. The reporting requirement applies, however, only to premiums for mortgage insurance provided by the Federal Housing Administration, Department of Veterans Affairs, or the Rural Housing Service (or their successor organizations), or to private mortgage insurance. n166.7 Whether a person receives \$600 or more of mortgage insurance premiums is determined on a mortgage-by-mortgage basis. A recipient need not aggregate mortgage insurance premiums received on all of the mortgages of an individual to determine whether the \$600 threshold is met. Therefore, a recipient need not report mortgage insurance premiums of less than \$600 received on a mortgage, even though it receives a total of \$600 or more of mortgage insurance premiums on all of the mortgages for an individual for a calendar year. n166.8

[2] Points

Generally speaking, points paid on a loan are deducted ratably over the term of the loan because they constitute prepaid interest. n167 However, a major exception exists in the case of points paid on a home mortgage loan for the purchase or improvement of, or secured by, a principal residence. Such points are deductible in the year paid to the extent that, under Treasury Regulations, the payment of points is an established practice in the geographic area involved and the amount of the payment does not exceed that generally charged in the area for a home loan. n168 This rule is narrower than the rule allowing a deduction for qualified residence interest--it applies only to points paid with respect to debt secured by the taxpayer's principal residence, not to points paid with respect to debt secured by a second residence.

If the five criteria listed below are met, the Service will treat as deductible in the year paid points paid by a cash-basis taxpayer with respect to a home mortgage:

- (1) They are designated as points (for example, as "loan origination fees", "loan discounts", "discount points" or "points") on the "RESPA" closing statement.
- (2) They are calculated as a percentage of the principal amount.
- (3) They are paid to acquire the taxpayer's principal residence, and the loan is secured by that residence. n169
- (4) They are paid directly by the taxpayer and are not derived from loan proceeds.
- (5) They conform to an established business practice of charging points for loans for the acquisition of personal residences in the area in which the residence is located, and the amount of points does not exceed the amount generally charged in that area. n170

Many individuals pay points in connection with the refinancing of their personal residence. These points must generally be amortized over the life of the refinanced mortgage. n171 However, in certain circumstances, a current deduction is allowed for points paid in connection with refinancing the mortgage on a principal residence. n172 In *Huntsman v Commissioner*, the taxpayer's original mortgage was a three-year loan with a balloon payment. The year after the taxpayers took out their original loan they obtained a home-improvement loan secured by a second mortgage. In the following year the taxpayers obtained permanent financing and used the proceeds from that loan to pay off the two earlier loans. The court found the points on the permanent financing to be fully deductible because of the time period involved. The permanent mortgage was deemed obtained in connection with the purchase of the home within the meaning of *IRC Section 461(g)(2)*. n173 The IRS will not follow *Huntsman* outside the Eighth Circuit. n174

Revenue Procedure 87-15 n175 allows the taxpayer, as a matter of administrative convenience, to allocate the deduction for points that are not currently deductible ratably (i.e., on a straight-line basis) over the indebtedness period. *Revenue Procedure 94-27* further clarifies the current deductibility of points paid in connection with the acquisition of a principal residence. n176

[3] AMT Provisions Relating to Deduction of Home Mortgage Interest

[a] In General

The regular tax provisions that apply with respect to the deduction of home mortgage interest generally apply for AMT purposes as well, subject to several differences. n176.1 For regular tax purposes, a deduction is allowed for "qualified residence interest." n176.2 For AMT purposes, the deduction allowed is for "qualified housing interest." n176.3 There is a relatively minor difference in the type of home that can support a mortgage interest deduction for AMT purposes. As for regular tax purposes, a taxpayer's principal residence will support an interest deduction. n176.4

For a second residence to qualify for an AMT qualified housing deduction, however, it must be a qualified residence, as for regular tax purposes, but it also must be a "qualified dwelling." n176.5 A "qualified dwelling" is a house, apartment, condominium or mobile home not used on a transient basis, including appurtenant structures and property. n176.6 A cooperative apartment that qualifies for a regular tax deduction would also qualify for an AMT interest deduction. n176.7

As a practical matter, a home that meets the regular tax requirements for deductibility of interest almost always meets the AMT requirements. The primary exceptions are mobile homes used on a transient basis, boats, and house trailers. These can qualify as a second residence for regular tax purposes if they have sleeping, cooking and toilet facilities. They cannot, however, qualify as a second residence for AMT purposes. n176.8

[b] Rules for Loans to Acquire, Construct, or Improve Property

For AMT purposes, interest on a housing loan is deductible only if the proceeds are used to acquire, construct, or substantially improve the residence that secures the loan. n176.9 This is the same rule as for regular tax purposes. n176.10 Therefore, except for mobile homes used on a transient basis, boats, and house trailers, n176.11 acquisition indebtedness that qualifies for a regular tax interest deduction will also generate an interest deduction for AMT purposes. n176.12

For home equity indebtedness, however, a restriction applies for AMT that does not come into play for regular tax purposes. For AMT purposes, interest on a home equity loan is not deductible unless the loan proceeds are used to acquire, construct, or substantially improve a principal residence or a dwelling that is a qualified residence of the taxpayer. The residence for which the expenditure is made need not be the residence that secures the loan, but it must be a principal residence or a dwelling unit that is qualified residence. Thus, if the proceeds of a home equity loan (up to \$100,000) n176.12.1 on a taxpayer's principal residence are used to make a down payment for a qualifying second home, the interest would be deductible for both AMT and regular purposes. n176.13 For regular tax purposes, in contrast, a home equity loan may be used for other purposes (such as purchasing a car), and an interest deduction may still be taken on up to \$100,000 of debt. n176.14 For this reason, home equity loans frequently increase AMT income.

[c] Refinancing Rules

The AMT rules on refinancing of mortgage debt are generally the same as for regular tax purposes--generally, the refinanced amount cannot exceed the debt outstanding immediately before the refinancing. The debt being refinanced must also be indebtedness that otherwise qualifies for the AMT interest deduction. n176.15

The same rule applies with respect to home mortgages that have been refinanced more than once. Interest paid on a home mortgage that has been refinanced more than one time is deductible as qualified housing interest for purposes of the AMT only to the extent that the interest on the mortgage that was refinanced is qualified housing interest and the amount of the mortgage indebtedness is not increased. A home equity loan is not deductible for AMT purposes unless it is used to acquire, construct, or substantially improve a principal residence or a qualified residence. n176.16

Example:

In Year 1, A borrows \$100,000 to purchase a principal residence (the Year 1 mortgage). In Year 10, the outstanding principal balance on the Year 1 mortgage is \$90,000, and A refinances the \$90,000 balance of the Year 1 mortgage (the Year 10 mortgage). In Year 15, the outstanding principal balance on the Year 10 mortgage is \$80,000. A refinances the \$80,000 balance of the Year 10 mortgage and borrows an additional \$30,000. Thus, the total amount of A's mortgage in Year 15 is \$110,000 (the Year 15 mortgage). A does not use the \$30,000 to acquire, construct, or substantially improve any property that is a principal residence or a qualified residence. At no time does A's indebtedness to acquire a principal residence or a qualified residence exceed \$1,000,000. A is not a married individual filing a separate return.

When A refinances the Year 1 mortgage in Year 10, the refinanced amount equals the amount of the outstanding principal. Thus, the interest paid or accrued on the Year 10 mortgage is deductible as qualified housing interest for purposes of the AMT because the interest on the Year 1 mortgage is qualified housing interest and the amount of the loan is not increased.

Similarly, when A refinances the Year 10 mortgage in Year 15, the interest on the Year 15 mortgage

is qualified housing interest to the extent of the outstanding principal balance of the Year 10 mortgage at the time of the refinancing. This is because the interest on the Year 10 mortgage is qualified housing interest. However, as part of the Year 15 refinancing, A borrows an additional \$30,000, which is not used to acquire, construct, or substantially improve any property that is a principal residence or a qualified residence. Accordingly, for AMT purposes, A may deduct only the interest paid or incurred on \$80,000 and not the interest attributable to the additional \$30,000 of the \$110,000 of the Year 15 mortgage.

n176.17

[d] Grandfather Provisions for Pre-July 1, 1982 Debt

For AMT purposes, more generous provisions apply for debt incurred before July 1, 1982. Interest on this debt is deductible for two residences--the taxpayer's principal residence, and a qualified dwelling used by the taxpayer or any member of the taxpayer's family. Unlike later-incurred debt, there is no requirement that the debt be incurred to acquire, construct, or substantially improve the residence in order to be deductible. n176.18

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.05

§ 9.05 Tax-Free Distributions From Retirement Plans for First-Time Homebuyers

[1] In General

Qualified taxpayers may receive distributions from their individual retirement accounts without penalty if the proceeds are used to purchase a "first home." n177 As is explained below, this provision is not actually limited to a taxpayer's "first" home. The 10-percent additional tax on early distributions from qualified plans does not apply to a distribution to an individual from an individual retirement plan if the distribution is a qualified first-time homebuyer distribution. n178 Note that only the 10 percent additional tax is waived; the distribution from the IRA (other than from a Roth IRA) is subject to the regular income tax rules applicable to distributions from an IRA. A "qualified first-time homebuyer distribution" is any payment or distribution to the extent it is used by the individual within 120 days of receipt to pay qualified acquisition costs with respect to a principal residence n179 of a first-time homebuyer. The first-time homebuyer may be the individual from whose plan the distribution is received, that individual's spouse, or any child, grandchild or ancestor of that individual or that individual's spouse. n180 If the purchase or construction of the residence is delayed or cancelled, the distribution may be rolled over to an IRA within 120 days after the date the distribution is received. n181

The lifetime dollar limitation for payments received by an individual that can be treated as qualified first-time homebuyer distributions is \$10,000. n182 If a residence is owned by several related or unrelated co-owners, each co-owner who is eligible under these rules should be able to receive a \$10,000 qualified first-time home buyer distribution to apply to his or her share of the qualified acquisition costs of the "first home." There are no income level restrictions on the ability of taxpayers to take advantage of this provision.

"Qualified acquisition costs" include costs of acquiring, constructing, or reconstructing a residence, including usual or reasonable settlement, financing, or other closing costs. n183

[2] First-Time Homebuyer Defined

A "first-time homebuyer" is any individual if: n184

- (1) that individual (and the individual's spouse) n185 has had no present ownership interest in a principal residence during the two-year period ending on the date the principal residence in question is acquired; and

(2) any rollover period under former IRC Section 1034, as in effect before its repeal, has not been suspended with respect to the individual on the day before the date the distribution is applied to the acquisition of that residence by virtue of service in the armed forces or residency outside the United States. n186

1-9 Federal Taxes Affecting Real Estate § 9.06

§ 9.06 First-Time Homebuyer Credit

A first-time homebuyer is allowed a refundable tax credit equal to the lesser of a specified dollar limit or 10 percent of the purchase price of a principal residence located in the United States. The credit is available only for a principal residence purchased on or after April 9, 2008 and before December 1, 2009. n186.1 For qualifying residences purchased before January 1, 2009, the dollar limit for the credit is \$7,500 (\$3,750 for a married individual filing separately). For qualifying residences purchased after December 31, 2008, the dollar limit is \$8,000 (\$4,000 for a married individual filing separately). n186.2 The credit is discussed in detail in Chapter 5, at § 5.09.

1-9 Federal Taxes Affecting Real Estate § 9.07

§ 9.07 Exclusion for Payments Under Home Affordable Modification Program

In response to the contraction in the economy in 2008 and 2009, President Obama announced in February 2009 the Homeowner Affordability and Stability Plan (the Plan), which helps at-risk homeowners modify their mortgages to avoid foreclosure. Part of the Plan is the Home Affordable Modification Program (HAMP). n186.2.1 HAMP, a component of the Plan, is intended to assist homeowners who have defaulted, or are at risk of default, on their mortgages. Under HAMP, homeowners that make timely payments on their modified loans are eligible to have incentive payments made on their behalf to lenders/investors. Each month that a homeowner makes a mortgage payment on time, the homeowner accrues an amount toward a Pay-for-Performance Success Payment. A payment of the accrued amounts is made annually, to reduce the principal balance on the homeowner's mortgage loan. Homeowners can receive principal reductions of up to \$1,000 per year for up to five years, subject to a *de minimis* threshold. The Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation have a substantial role in administering HAMP. The IRS has ruled that any payments received by a homeowner under the HAMP program are excludable from gross income under the general welfare exclusion. n186.3

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.20

§ 9.20 Disallowance of Personal, Living, and Family Expenses

Unless expressly provided otherwise in the Internal Revenue Code, no deduction is allowed for personal, living, or family expenses. n187 Therefore, the typical costs of maintaining a household that is owned and occupied by the taxpayer as a personal residence are not deductible. This would include costs of insurance, rent, water, utilities, and repairs and maintenance. n188 The cost of a first telephone line to any residence of a taxpayer is also non-deductible. n189

Otherwise personal expenses connected with a personal residence that may be deducted include real property taxes, n190 allowable mortgage interest or interest on a home equity indebtedness, n191 and casualty losses. n192

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.21

§ 9.21 Deductions Under IRC Section 280A

[1] Home Office Deductions Restricted

IRC Section 280A was adopted in part to prevent taxpayers from deducting expenses connected with their home even if they used the home in part for business or income-producing purposes. Under its general rule, a taxpayer cannot claim otherwise allowable business deductions with respect to the use of a dwelling unit that is used by the taxpayer during the taxable year as a residence. n193

IRC Section 280A provides several exceptions, under which otherwise deductible business expenses connected with a trade or business in a home may be taken. An expense is deductible if it is allocable to a portion of the dwelling unit n194 that is exclusively used on a regular basis n195 as one of the following: n196

- the principal place for any trade or business of the taxpayer; n197
- a place of business used by patients, clients, or customers in meeting or dealing with the taxpayer in the normal course of the taxpayer's trade or business; n198 or
- in the case of a separate structure which is not attached to the dwelling unit, in connection with the taxpayer's trade or business. n199

In the case of an employee, the use must be for the convenience of his or her employer in order for deductions to be allowed. n200

Separate exceptions from the general disallowance rule under *IRC Section 280A(a)* apply to allow deductions for the following:

- certain storage use; n201
- use in providing day care services; n202 and
- certain rental use. n203

A separate gross income limitation may restrict to deductions under *IRC Section 280A*. Any deductions allowed cannot exceed the excess of the gross income derived from the trade or business use for the taxable year, over the sum of certain deductions allocable to that income (such as interest and taxes). n204

NOTE:

In approaching any potential business/rental deduction originating in the taxpayer's home, or any rental of property owned by the taxpayer, the preliminary inquiry must be to determine whether *IRC Section 280A* even applies. This involves checking whether the taxpayer falls within the definitional provisions of the statute. The first step is determining whether a "dwelling unit" is involved, n205 and whether the taxpayer uses it during the taxable year as a "residence." n206 "Dwelling unit" and the type and amount of use that constitutes personal use as a residence are specifically defined by statute. n207 If *IRC Section 280A* does not apply, the practitioner must still determine whether there is a profit motive and whether *IRC Section 183* may deny any otherwise allowable deduction.

If the taxpayer falls within the parameters of *IRC Section 280A*, the practitioner must determine whether the taxpayer meets one of the exceptions for business use, n208 storage use, n209 rental use, n210 or day care use n211 of the property. n212 If the taxpayer does not meet one of these exceptions, then deductions other than those that can be itemized without regard to business use of the property (i.e. qualified mortgage interest, real property taxes, and casualty losses) will be denied. n213

If the taxpayer does meet one of the exceptions, deductions must be properly allocated between business and personal use. n214 Rental expenses must be properly attributed to rental periods, as well. n215 Then, it must be determined whether deductions are limited by the gross income limitation. n216 All of the steps involved in approaching these deductions entail detailed definitions and special rules for specific circumstances.

[2] Deductions Allowed Without Regard to Business Use of Home

The general rule disallowing deductions under *IRC Section 280A* does not apply to non-business deductions that are otherwise allowable, such as real property taxes, n217 qualifying home mortgage interest or interest on a home equity loan, n218 or casualty losses. n219

NOTE:

Although not prohibiting their allowance as deductions, *IRC Section 280A* does require that the above deductions be allocated between business and personal use of the dwelling unit. n220 For rental expenses, the above deductions must be properly attributed to rental/non-rental use periods as well. n221 These allocations in turn will determine what portion of the above deductions may be taken as an itemized deduction on Schedule A, or as a business-related deduction on some other schedule, such as a Schedule C (from a home business), Schedule E (rental real estate) or some other schedule. See § 9.21[4], below for a discussion of allocation of expenses between personal and business use of a residence and § 9.30[2], below, for rules for determining the attribution of expenses attributable to rental property.

[3] Taxpayers Subject to *IRC Section 280A* Limitations

Only individuals, S corporations, partnerships (including LLCs treated as partnerships), trusts, and estates are subject to *IRC Section 280A*. n222 C corporations are not subject to *IRC Section 280A*. n223 C corporations that are partners in a partnership, however, would be indirectly affected by any *IRC Section 280A* limitations that applied to the partnership.

[4] Allocation of Expenses Between Personal and Business (or Rental) Use of Residence

[a] Allocation Requirement

A taxpayer subject to *IRC Section 280A* who uses part of a home for business and part for business or rental use must allocate the expenses that are allocable to the entire dwelling unit between personal and business uses. n224 The allocation may be done by any method that is reasonable under the circumstances. The most typical means is by square footage, according to the percentage of the total floor space that is used for business purposes compared to the total square footage of the dwelling unit. If rooms in a dwelling unit are of approximately equal size, allocation may be by the number of rooms used for business purposes compared to the total number of rooms. n225 For purposes of determining the percentage of space used exclusively for business, any space that can actually be used must be included in the computation of the total square footage of a residence. This can even include attic space. n226

NOTE:

Traditionally, the IRS has not been too picky about exact square footage. It is to a taxpayer's advantage to compute the deduction both on a number-of-rooms (if the rooms are roughly the same size) and square footage, and then take the larger deduction. n227

NOTE:

A separate allocation of expenses based on rental/non-rental use periods must be made with respect to a dwelling or a portion of it that is rented out. For a dwelling unit that is rented, expenses must be attributed between rental use of the unit and personal use periods if the taxpayer makes personal use of the dwelling unit for even a single day during the year. This attribution of expenses is required even if the taxpayer's use is not so extensive as to be use of the unit as a residence. n228

[b] Manner of Allocating Expenses

Any expense that is attributable only to a certain portion of the dwelling unit is allocated in full to that portion. Thus, a repair to a home office, costs of painting a home office, or installation of blinds in a home office (if a *IRC Section 179* deduction is claimed) are allocable in full to the business portion of the property and would be fully deductible. n229 The IRS refers to these kinds of expenses as "direct" expenses. n230

Expenses incurred with respect to parts of the home not used for business are referred to by the IRS as "unrelated" expenses. n231 These unrelated expenses are not deductible and cannot be allocated in part to a home office, based on business/personal use of the home. For example, a repair to kitchen fixtures or costs of painting a bedroom cannot be allocated in part to a home office, based on business/personal use of the home. n232 In addition, expenses that are not related to the use of the dwelling unit for business purposes also cannot be allocated in part to a home office and deducted. Thus, costs of lawn care or landscaping would ordinarily not be deductible. n233

NOTE:

Lawn care, snow shoveling and similar items arguably could be allocable to business use and therefore could be deductible if shown to be necessary to the proper maintenance of a home office. This might be the case if a taxpayer meets with patients, clients or customers in a home office, especially if the home office has a separate entrance. n234

The allocation of expenses to business use of a dwelling unit according to square footage or number of rooms generally comes into play for what the IRS calls "indirect" expenses. These are expenses incurred in keeping up and running the entire home, and therefore they benefit both business and personal use portions of a dwelling unit. Examples of indirect expenses that may be deductible to the extent properly allocated to the business use portion of the dwelling unit are the following: n235

- real estate taxes;

- deductible mortgage interest;
- rent;
- utilities and services; including internet expenses; n236
- insurance;
- depreciation;
- repairs that benefit the entire home, such as a furnace, roof, or gutter repair;
- expenses attributable to the purchase and operation of a security system; n237 and
- domestic cleaning services.

NOTE:

Usually, the business percentage for the above items will equate to the square footage or number of rooms used for business purposes. If a taxpayer can prove a higher use for the business purposes--as for special lighting, heat, or additional insurance that are specifically for business purposes--then a higher deduction may be possible. The problem is that billing information is unlikely to provide the information necessary to support a higher deduction. n238

NOTE:

Casualty losses can be a direct expense, indirect expense, or unrelated expense, depending on the part of the dwelling unit affected by the casualty. Storm damage to a roof, for example, would be an indirect expense, part of which could be allocated to the business use of the home and deducted. In contrast, a kitchen fire that did not damage any other part of the house would be an unrelated expense. n239

No part of the first telephone line to a home may be deducted as part of a home office expense, n240 but costs of additional phone lines, or additional telephone services used in a business above the cost of a basic connection, may be allocable in full to the business use of the home if used exclusively for business purposes. Long distance calls related to business use would also be deductible. n241

[c] Depreciation of Home Office

Depreciation deductions may be claimed under *IRC Section 280A* in connection with business use of a dwelling unit. Depreciation of tangible personal property used exclusively in business use of the home is a direct expense allocable entirely to business use, and may be deducted in full unless limited by the gross income limitation. Depreciation may also be claimed on the portion of the dwelling itself that is allocable to business use, based on the percentage of business use, and the amount of the adjusted basis allocable to the dwelling unit. n242 A 39-year recovery period must ordinarily be used. n243 Taxpayers may elect to expense qualifying property under *IRC Section 179*.

[5] Gross Income Limitation to Deductions Under *IRC Section 280A***[a] Deductions Restricted to Gross Income from Specified Uses**

Otherwise allowable deductions under *IRC Section 280A* that are attributable to business use, storage use, or use of the home for day care services n244 are subject to a gross income limitation. The same gross income limitation applies with respect to rental use of a dwelling unit if the unit is used by the taxpayer during the taxable year as a residence. n245

Under the gross income limitation, the total deductions attributable to any of the above uses cannot exceed the excess of the gross income derived from that use over the sum of the following deductions allocable to that income: n246

- the deductions allocable to that use that would be allowable without regard to that use, such as real property taxes and qualified mortgage interest; n247 and
- the deductions that are allocable to the trade or business activity (or rental activity) in which the use occurs, but which are not allocable to the use of the property itself. This would include such expenses as salaries, supplies, or in the case of rental property, advertising costs to obtain a tenant. n248

The general purpose of the gross income limitation is to prevent taxpayers from using deductions from the business use of a home to generate or increase a net loss from the business to which the deductions relate. This in turn prevents a loss resulting from home office deductions from offsetting income from other sources and activities. n249

[b] Determination of Gross Income

In determining a taxpayer's gross income for purposes of applying the gross income limitation, only gross income derived from the qualified business use of the dwelling unit (*i.e.* the uses under *IRC Section 280A(c)(1)*--as a principal place of business, a place to meet patients, clients or customers, or use of a separate structure in connection with a trade or business)--is taken into account. n250 If the office is used for multiple qualified business activities, however, income from all those different activities may be included. It is not necessary that all the gross income be reported on the same Schedule in order to be included. n251

Example:

S, a teacher at a school outside the home, also conducts a retail sales business out of a home office in his home. The home office is the principal place of business for the retail business. S may take into account only the gross income from the use of the office for the retail sales business in applying the gross income limitation. Even if S uses the office to correct student papers and prepare class presentations in the office, no portion of S's gross income from teaching may be taken into account in applying the gross income limitation. n252

Example:

Tom is engaged in the business of acquiring, constructing, improving, leasing, and managing commercial real property. He also derives income from installment sales of property that he leased in the business during prior years. He reports income from business operations on a Schedule C, but also reports income from leasing and selling property on Schedules B, D, and E. Income from all the different sources may be taken into account in applying the gross income limitation because they all constitute income from the taxpayer's business. n253

[c] Order in Which Deductions Are Allowed in Applying Gross Income Limitation

Deductions must be taken in a specified order in applying the gross income limitation. The ordering rule is intended to prevent deductions under *IRC Section 280A* that are related to a dwelling unit from creating a deductible business loss or being applied against other income that is not related to the dwelling unit. To this end, taxpayers are required to first offset income earned in the dwelling unit by expenses that would be deductible in any event, even if the dwelling unit were not used for the activity. Only after these deductions are exhausted may the taxpayer claim deductions related to the dwelling unit itself. As for the deductions related to the dwelling unit itself, deductions that do not reduce the basis of property must be taken before deductions that do reduce the basis of property. At any point, where the deductions exceed the gross income related to the dwelling unit, no further deductions are allowed. n254

In applying the gross income limitation under *IRC Section 280A(c)(5)*, deductions must be taken in the following order

and may be taken only to the extent described: n255

(1) Deductions allowable with respect to the dwelling unit without regard to any trade or business use. This would include real estate taxes, mortgage interest, and casualty losses. n256 See § 9.21[4], above, for a discussion of the allocation of expenses between business and personal use.

NOTE:

By requiring an allocable part of the above items to be deducted before all other business deductions, this ordering rule prevents taxpayers from deducting mortgage interest and taxes on a Schedule A, and deducting only other business expenses on a Schedule C, Schedule E, or Schedule F. n257

(2) If there is still income derived from the business use of the dwelling unit after taking the deductions in (1), then amounts otherwise allowable as deductions by reason of the business use of the property, but which are not allocable to the use of the unit itself. This would include typical trade or business expenses, such as compensation, supplies, a separate business phone, and depreciation on business equipment. n258

(3) If there is still income derived from the business use of the dwelling unit after taking the deductions in (1) and (2), amounts otherwise allowable by reason of business use of the dwelling unit, other than those which would result in an adjustment to the basis of property. This would include an allocable share of utilities, repairs, insurance and other similar costs relating to the dwelling unit.

(4) If there is still income derived from the business use of the dwelling unit after taking the deductions in (1)-(3), amounts otherwise allowable by reason of business use of the dwelling unit that result in an adjustment to the basis of property. This would include depreciation allocable to the business portion of the dwelling unit.

NOTE:

The proposed regulations provide only three "ordering" levels of deductions. The statute, which was amended after the proposed regulations were promulgated, clarifies that the deductions in paragraph (2) above, which are not allocable to the use of the dwelling unit, must be taken before the deductions that are allocable to use of the dwelling unit. n259

[d] Carryover of Disallowed Deductions

Any deduction that is disallowed under the gross income limitation may be carried forward to the following tax year and allowed as a deduction with respect to qualifying use of the residence in that year. Any deduction carried over to a later year is subject to the gross income limitation in the carryover year, even if the dwelling unit is not used as a residence during that year. n260

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.22

§ 9.22 "Dwelling Unit" Defined

[1] Broad Definition of "Dwelling Unit" Under *IRC Section 280A*

IRC Section 280A comes into play only if deductions are claimed with respect to the use of a dwelling unit that is also used by the taxpayer as a residence. n261 For this purpose, a *dwelling unit* is quite broadly defined to include a house, apartment, condominium, mobile home, boat, or similar property. n262 The ownership of shares in a cooperative housing association has been held to be a dwelling unit, n263 and so have motor homes. n264 The standard for being a dwelling unit is simply that basic living accommodations, such as a sleeping space, toilet and cooking facilities, must be present. n265 A dwelling unit also includes all structures and other property appurtenant to that dwelling unit. n266

The issue sometimes arises as to whether an area used for a trade or business is part of the taxpayer's "dwelling unit" so as to be subject to *IRC Section 280A*. In resolving this issue, courts look to whether the areas used as a business are physically or functionally separate from the area used as a personal residence by the taxpayer. Applying this test, the Tax Court in one case found that all three levels of a townhouse constituted a "dwelling unit," and concluded that an art gallery located on the first floor and basement was therefore subject to *IRC Section 280A*. Although the living quarters were "separate" in that they were on the second floor, no partitions or walls separated the residence area from the art gallery, there was no door on the steps between the gallery and the residence, and the taxpayer had to pass through the gallery to gain access to the residence. The court also mentioned that the building had a single real estate assessment and one sewage and water bill. n267 Other cases have made similar holdings. n268 Local commercial or other zoning is not relevant to whether a portion of a residence used as a business is part of the taxpayer's dwelling unit under *IRC Section 280A*. n269

[2] Hotel Exception

A "dwelling unit" does not include that portion of a unit that is used exclusively as a hotel, motel, inn, or similar establishment. n270 Thus, any portion of a dwelling unit that is used exclusively as a hotel, motel, inn, or similar business will not be considered part of the dwelling unit, and deductions related to it will not be subject to the disallowance under *IRC Section 280A(a)*. n271 Two requirements must be met for the hotel exception to apply. First, the property must be regularly available for occupancy by paying customers. Second, no person having an interest in the property can have used the unit or a portion of it as a residence during the taxable year. n272 The second requirement has been strictly construed to mean that *any* personal use of a unit during a taxable year precludes the hotel exception from applying. n273

NOTE:

The hotel exception can apply to a unit entered in a rental pool if the owner does not use it as a residence during the taxable year. n274 The hotel exception may also apply to a variety of situations not typically thought of as "hotels". For example, the proposed regulations state that the exception is available for a portion of a home used to furnish lodging to students who pay rent under a long-term basis. A room so used would not be considered part of the taxpayer's "dwelling unit", and so the restrictions of *IRC Section 280A(a)* would not come into play. n275 This interpretation seems to conflict with authority that allows deductions for bedrooms in a home that are rented to third parties, but treats the bedrooms as part of the taxpayer's dwelling unit and applies *IRC Section 280A* in determining the amount of deductions allowed. n276

[3] Single Structure with Multiple Dwelling Units

A single structure may contain multiple dwelling units. For example, each apartment in an apartment building is a separate unit. Similarly, if a basement of a house contains living accommodations, it may also qualify as a separate dwelling unit. If it does, the deductions related to it would not be subject to *IRC Section 280A* based on the taxpayer's use of another part of the structure. All structures and other property appurtenant to dwelling unit which do not themselves constitute dwelling units, however, are considered part of the larger dwelling unit. Thus, a garage appurtenant to a home owned and occupied by the taxpayer would be considered part of the taxpayer's dwelling unit if it were rented out, and would therefore be subject to *IRC Section 280A*. n277

PLANNING GUIDE:

The exact physical and functional separation necessary to allow a separate apartment in a taxpayer's home to be considered a separate dwelling unit from the taxpayer's living space is not entirely clear. Any kind of open stairwell to the taxpayer's living space, or structural arrangement requiring a tenant to enter the apartment via a common area shared by the taxpayer, would probably prevent the apartment from being a separate dwelling unit. At the least, a separate entryway for the apartment is probably necessary. n278 There are several tax advantages to having a separate apartment in a home treated as a separate dwelling unit rather than a part of the taxpayer's dwelling unit. The restrictions of *IRC Section 280A*--including the gross income limitation n279--will not apply to limit deductions related to the unit. Thus, subject to the passive activity limitations, all relevant expenses that are properly allocable to the unit may be deducted. Provided the taxpayer actively participates in the rental activity--which is highly likely in this type of rental--even deductible losses of up to \$25,000 per year may be available. n280

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.23

§ 9.23 What Constitutes Use as a Residence

[1] 14 Day/10 Percent Rule

IRC Section 280A restrictions apply only if the taxpayer uses the dwelling unit with respect to which deductions are claimed as a residence. n281 Detailed rules clarify which uses by the taxpayer and others will constitute use as a residence. n282 In general, a dwelling unit is used as a residence for a taxable year if the taxpayer uses it or a portion of it for personal purposes for the greater of the following: n283

- 14 days; or
- 10 percent of the number of days during the year that the unit is rented at a fair rental.

For purposes of the 10-percent alternative of the residence test, a unit is not treated as rented at a fair rental for any day for which it is used for personal purposes. n284

[2] Personal Use of a Dwelling Unit

[a] Use That Is Treated as Personal Use

If a taxpayer makes personal use of a residence on a day, the residence cannot be considered rented out at a fair market value for that day. n285 This can be important because a reduction in the number of days a unit is treated as rented out at a fair rental likewise reduces the number of days the taxpayer must use the dwelling unit in order for it to be considered use as a residence. n286 This, in turn, may trigger the application of *IRC Section 280A*.

In general, a taxpayer is deemed to have used a dwelling unit for personal purposes for a day if the unit is used in any of the following ways for any part of that day: n287

- For personal purposes by (1) the taxpayer, (2) any other person who has an interest in the unit, or (3) a family member of either the taxpayer or other owner. n288 Any person who holds an interest in the unit (other than a security interest or an interest under a lease for fair rental) is considered to have an interest in a unit, even if there are no immediate rights to possession and enjoyment under the interest. n289

1-9 Federal Taxes Affecting Real Estate § 9.23

- Use by any individual under an arrangement that enables the taxpayer to use some other dwelling unit (whether or not a rental is charged for the use of the other unit, and regardless of the length of time the taxpayer uses the other unit). n290 This is a typical house swapping arrangement.

- Use by any individual (other than an employee who is furnished lodging for the convenience of the employer that is excluded from the employee's gross income), n291 unless for that day the unit is rented at a fair rental. n292

- Charitable donation of the right to use the property, when the charitable organization sells the use of the unit at a fund-raising event, and the "purchaser" uses the unit. n293

- Certain use by a pass-through entity that has an interest in the dwelling unit. n294

Example:

Tom and his neighbor Eric are co-owners of a beach condominium. The unit is rented out throughout the year to third parties. The unit is not used as a principal residence by anyone. Tom uses the condominium for 15 days during the year but Eric does not use the unit at all. Because of the co-ownership, both Tom and Eric are treated as having made personal use of the unit during the period of Eric's use. n295

Example:

Jeff rents his beach condominium to Mary, and Mary rents her mountain cabin to Jeff. Both parties pay a fair rental price. Jeff is treated as making personal use of the beach condominium on the days that Mary uses it because her use is under an arrangement that allows Jeff to use Mary's cabin. For the same reason, Mary is treated as making personal use of her cabin on the days Jeff uses it. n296

NOTE:

Special rules apply for determining personal use of units that are in time-sharing arrangements and units that are in rental pools. n297 These rules come into play only with respect to rental use of property and are discussed in §§ 9.30[3], and § 9.30[4], below.

[b] Rental at Fair Market Value for Use as Principal Residence

A taxpayer is not treated as using a dwelling unit for personal purposes due to the existence of a rental arrangement for any period if for that period the unit is rented at a fair rental to any person for use as that person's principal residence. n298

Example:

Christine owns a rental property that she rents to her son. The son does not have an ownership interest in the property. He uses the property as his principal residence and pays a fair rental. The son's use of the property is not treated as personal use by Christine. n299

Additional requirements must be met to avoid personal use, however, if the dwelling unit is rented to a person having an ownership interest in it. In that case, the taxpayer is not treated as using the unit for personal purposes only if the rental is pursuant to a shared equity financing agreement. n300 The determination of whether a fair rental is charged under a shared equity financing agreement is determined as of the time the agreement is entered into, and taking into account the occupant's qualified ownership interest. n301

A shared equity financing agreement is an agreement under which: n302

- two or more persons acquire qualified ownership interests in a dwelling unit; and

- the person(s) holding one or more of those interests (1) is entitled to occupy the dwelling unit as a principal residence, and (2) is required to pay rent to at least one other person holding a qualified ownership interest in the dwelling unit.

A "qualified ownership interest" is an undivided interest for more than 50 years in the entire dwelling unit and appurtenant land being acquired in the transaction to which the shared equity financing agreement relates. n303 A taxpayer's rental agreement with a partnership of which he is a partner may qualify as a shared equity financing agreement. n304

Example:

S forms a partnership with his parents to purchase shares in a cooperative housing building. After the purchase, S pays a fair rental to the partnership and lives in the co-op. The partnership's expenses with respect to the co-op exceed its income, and S reports his share of partnership losses on his return. The rental agreement qualifies as a shared financing agreement because S and his parents, as partners of the partnership, each hold a qualified ownership interest in the co-op and because, under the lease with the partnership, S is entitled to occupy the co-op as his principal residence, and is required to pay rent to one or more persons holding a qualified interest in the co-op--i.e. the partners. The personal use limitation of *IRC Section 280A(c)(5)* does not apply, and S is entitled to deduct his share of the partnership's deductible rental losses. n305

[c] "Day" Defined

For purposes of *IRC Section 280A*, a *day* is any 24-hour period for which a day's rental would be paid. Thus, a personal using a dwelling unit from Saturday afternoon through the following Saturday morning would be treated as using the unit for seven days even though the person was on the premises on eight calendar days. n306

[d] What Constitutes "Fair Rental"

What constitutes a fair rental in any given situation is determined under a "facts and circumstances" standard. n307 The term *fair rental* is the amount at which property would change hands between a willing lessee and a willing lessor, neither being under any compulsion to enter into the transaction and both having reasonable knowledge of the relevant facts. n308 The IRS states that fair rental cannot be "substantially less" than the rents charged for similar properties. n309

An additional consideration applies with respect to co-owners. A co-owner is treated as charging a fair rental only if the co-owner charges an amount that is equal to the fair rental of the entire unit multiplied by that co-owner's fractional interest in the unit. n310

[3] Use of Dwelling Unit for Maintenance and Repairs

A dwelling unit is generally not used for personal purposes on any day it is principally used to perform repair or maintenance work. n311 Taxpayers who visit second homes sometimes claim that the main purpose of various visits is for maintenance, repair, inspection, or similar "non-personal use" purpose. Such a claim is likely to be rejected unless the taxpayer has evidence to support it, such as receipts, work reports, or time logs. The presence of additional family members who do not perform repairs or maintenance can also indicate personal use of the dwelling, unless the taxpayer is engaged in repair and maintenance on a "substantially full time basis" for that day. n312

Proposed regulations clarify when the use of a unit for repairs and annual maintenance does not constitute personal use. A taxpayer is not deemed to have used a dwelling unit for personal purposes on any day on which the principal purpose of the use of the unit is to perform repair or maintenance work. Whether repair or maintenance is the principal purpose of the use depends on all facts and circumstances, including the following: n313

- the amount of time devoted to repair and maintenance work;
- the frequency of the use for repair and maintenance purposes during a taxable year; and
- the presence of companions.

If a taxpayer is engaged in repair and maintenance on a substantially full time basis for a day, however, the dwelling unit cannot be treated as used for personal use by the taxpayer merely because other individuals who are on the premises are not engaged in repair and maintenance. n314

[4] Personal Use of Unit Owned by Pass-Through Entities

Special rules apply in determining personal use in a dwelling unit in which a partnership (or LLC treated as one), trust, estate, or S corporation has an interest. n315 Any partner (or LLC member), beneficiary, or shareholder that owns an interest in one of these pass-through entities is referred to as beneficial owner of the entity. n316 Any of these pass-through entities is considered to have made personal use of a dwelling unit on any day on which any beneficial owner of the entity would be considered to have made personal use of the unit. Personal use is determined as if each beneficial owner had an interest in the unit. Thus, for example, use by a family member of a partner would be considered personal use by the partnership. n317

NOTE:

The effect of the above rules is that use of a dwelling unit by a beneficial owner of the entity can subject the other beneficial owners of the entity to the gross income limitations of *IRC Section 280A(c)(5)* with respect to their shares of tax items related to the unit.

There is an exception regarding personal use attribution for partnerships. A partnership may rent a dwelling unit to a partner for use as a principal residence without having that partner's use of the dwelling unit for that purpose treated as personal use of the unit by the partnership. The exception applies, however, only if the following requirements are met: n318

- the partnership owns an interest in the dwelling unit;
- a partner rents the unit at a fair rental for use as the partner's principal residence; and
- the items of income, gain, loss, deduction, or credit of the partnership related to the unit are allocated among the partners in accordance with their percentage ownership interests in the partnership.

When the exception applies, the partner making use of the unit is subject to the gross income limitations n319 with respect to items related to the unit that are allocated to that partner, but the other partners are not subject to those limits with respect to their allocable share of partnership items because the renting partner's use is not attributed to the partnership itself. n320

Another minor exception can come into play when a dwelling unit is rented at a fair rental to a third-party occupant, and a beneficial owner of the pass-through entity makes personal use of the unit in some manner other than by being a temporary guest of the occupant of the unit. n321 In that case, actual personal use by a beneficial owners is treated as personal use by the pass-through entity. Deemed personal use by a beneficial owner, n322 however, as by reason of the personal use of the unit by a family member of the beneficial owners, is not treated as personal use by the entity for this purpose. n323

[5] Special Rule for Use of Dwelling Unit as Principal Residence Before or After Qualified Rental Periods

For purposes of applying the gross income limitation n324 to deductions that are allocable to a qualified rental period, certain use of a dwelling unit as a principal residence by the taxpayer is disregarded. n325 There are two circumstances when the taxpayer's use of the residence is disregarded. The first is when the taxpayer rents the dwelling unit, or holds it for rental, at a fair rental for 12 or more consecutive months. The rental period may begin or end in the taxable year in which the taxpayer uses the property as a principal residence. In that case, the taxpayer's use of the property as a principal residence is ignored for purposes of determining whether the gross income limitation applies to deductions allocated to the period of rental. This exception is intended to cover situations where a taxpayer lives in a principal residence before or after renting it, as where a taxpayer moves elsewhere for a temporary job. n326

Example:

Jill moves out of her principal residence on February 28 of Year 1 to take a job in another city. She rents the residence at a fair rental price from March 15 of Year 1 until May 15 of Year 2. She moves back into the residence as her principal residence on June 1 of Year 2. Jill's use of the home from January 1 to February 28 of Year 1 and from June 1 to December 31 of Year 2 is ignored for purposes of determining if Jill makes personal use of the residence for purposes of applying the gross income limitation n327

The second circumstance arises when a taxpayer rents or tries to rent a home, and the rental period terminates because the home is sold or exchanged. This exception applies only if the taxpayer rents the dwelling unit or holds it out for rental, at a fair rental, for a consecutive period of less than 12 months, and that rental period begins in the same taxable year as the year the taxpayer uses the dwelling unit as a principal residence. n328

Example:

Terry moves out of his condominium on January 31 of Year 1. He has used it as his principal residence. He offers it for rent at a fair rental beginning February 1 of Year 1, but is unable to find a tenant until April 1 of Year 1. On November 1 of Year 1, Terry sells the condominium. Terry's use of the condominium during January is not treated as personal use for purposes of applying the gross income limitation to rental deductions attributable to the rental of the unit during the year. n329

NOTE:

The taxpayer's personal use of the home is disregarded *only* for purposes of applying the gross income limitation to deductions attributable to the rental use of the property. The use *is* treated as personal use for all other purposes of *IRC Section 280A*. Thus, the personal use by the taxpayer *is* taken into account for purposes of dividing expenses between personal/rental use of the property. n330

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.24

§ 9.24 Exclusive and Regular Use Requirements Under IRC Section 280A

[1] Exclusive Use Requirement

[a] Exclusive Use Required for *IRC Section 280A* Deductions

Deductions are permitted under *IRC Section 280A* only if a portion of the dwelling is exclusively used on a regular basis for a qualifying purpose. Thus, both an "exclusive use" and a "regular basis" use requirement must be met. n331 "Exclusive use" requires that a portion of a dwelling unit be used solely for business. There can be no use of that portion at any time during the taxable year for other than business purposes. Any use for nonbusiness purposes will violate the requirement and prevent the deduction of home office expenses. Necessary repairs and maintenance, however, will not cause a taxpayer to violate the exclusion use requirement. n332

The "exclusive use" requirement is strict, unforgiving, and narrowly construed by both the IRS and courts. Even rare or occasional personal or family use of a home office, or personal use of space only during "nonbusiness" hours, violates the exclusive use test and precludes deductions under *IRC Section 280A*. n333

In one rare case in which the exclusive use requirement was given a *de minimis* exception, the court held that the storage of a lawn mower in a garage that was otherwise eligible for home office deductions did not prevent the exclusive use requirement from being met because whatever space was occupied by the lawn mower was *de minimis*. n334 Another case allowed the exclusive use to be met by a walk-in closet because the only other use made of it was to walk to and from the bathroom of the studio apartment. n335 Given the rarity of these cases, however, taxpayers should never expect a *de minimis* use exception to save them from the denial of a home office deduction. Apart from a *de minimis* exception, there are only two exceptions in which the exclusive use requirement does not apply with respect to home office deductions--the storage of inventory or product samples, n336 and the use of a home to provide day care services. n337

[b] Separately Identifiable Space

The portion of the dwelling unit that must satisfy the exclusive use requirement must be a room or other separately identifiable space. It is not necessary that the portion be marked off by a partition. n338 Thus, the "exclusive use" test can be an entire room or a portion of one, so long as that portion is separately identifiable. Whether there is a separately identifiable space for this purpose is a question of fact.

Not surprisingly, the resolution often resolves around issues of credibility. The absence of a wall, partition, curtain or some other divider is a factor considered by the courts, often to the taxpayer's detriment. The absence of a partition may cause a court to view the evidence with a somewhat more critical eye. n339 Thus, it is obviously helpful to a taxpayer's case if there *is* a physical partition--whether it be curtain or file cabinets--if only a portion of a room is used for a qualifying purpose. n340

Furnishings in a room may be relevant in determining whether there is a separately identifiable space. The presence of personal furniture--such as a television, sofa, or bed--in a "business use portion" of a dwelling unit can lead to a finding that the exclusive use test is not met, largely because it damages the taxpayer's credibility about how the area is in fact used. n341 The absence of personal furnishings, in contrast, can be helpful to the taxpayer's case, especially if the furnishings that are present are appropriate only for a business purpose. n342

The presence or absence of particular furnishings does not guarantee any particular result, however. It is merely one piece of evidence for a court to consider. The absence of personal furnishings will not save a taxpayer who uses a home office for both business and personal purposes. n343 Conversely, the presence of personal furnishings is not always fatal. In one surprisingly lenient case, the court allowed home office deductions with respect to a living room in an attorney's home, even though the room was furnished with two sofas, some easy chairs, a coffee table, a lamp table, and a piano. The court found credible the taxpayer's testimony that he and his wife rarely entertained and that the room was used only to meet with clients. The court also believed his testimony that he never played the piano in the year in issue. n344

The particular room for which exclusive business use is claimed also seems to play a part. Claims of exclusive business use for a kitchen or dining room are routinely rejected. While the summary explanation usually given is simply that the taxpayer has failed to show that the room was used exclusively for business purposes, an unstated rationale may be that it is hard for a court to imagine a taxpayer living in a home and not making personal use of those rooms without extraordinary evidence to the contrary. n345

[c] Multiple Businesses

The exclusive use requirement n346 does not demand that a home office be used exclusively in connection with only one business or only one of the types of uses enumerated in *IRC Section 280A(c)(1) (A), (B), and (C)*--i.e. principal place of business; place for meeting patients, clients or customers; or separate structure used in connection with a trade or business. Expenses attributable to the use of a home office in conducting two or more businesses are deductible if the requirements of *IRC Section 280A* are otherwise met. The existence of two or more businesses, *per se*, does not prevent the deductibility of expenses attributable to business use of a home. n347 Furthermore, it is not necessary that the business activities of each business be physically segregated. n348

If more than one business is conducted out of the home, however, the activities from each business must separately and independently satisfy all requirements of deductibility under *IRC Section 280A*. If they do not, the IRS and the Tax Court take a hard-line position that the entire home office area is thereby tainted because the exclusive use test is not met. As a result, no deductions are allowed either for that business or any other business conducted in the same space. n349

[2] Regular Use Requirement

Deductions are allowed under *IRC Section 280A* only if the portion of the dwelling unit is used exclusively for a qualifying purpose on a regular basis. n350 Proposed regulations offer little guidance as to what "regular basis" means, stating only that the determination of use on a regular basis must be made in light of all the facts and circumstances. n351 Courts offer more guidance, holding that regular use means use on a continuing basis. Occasional, intermittent, or

incidental use is insufficient, even if that portion of the dwelling is used for no other purpose. n352

The burden is on the taxpayer to prove regular use. If proof consists of nothing more than the taxpayer's testimony, deductions are likely to be denied. n353 The parameters of regular use are not at all clear, however, and the IRS can be surprisingly lenient on occasion. In one case, the IRC conceded "regular" use, even though the taxpayer did not provide any services connected with that use after January 8 of the calendar year in question. n354

[3] Storage Use of Dwelling Unit

An exception applies under *IRC Section 280A* with respect to certain storage use of a dwelling unit. Under it, deductions may be taken in full if all of the following requirements are met: n355

- the space is used on a regular basis as a storage unit;
- the items stored are inventory or product samples of the taxpayer;
- the stored items are held for use in the taxpayer's trade or business of selling products at retail or wholesale;
- the dwelling unit is the sole location of that trade or business; n356 and
- the space used is a separately identifiable space suitable for storage.

The storage unit includes only the space actually used for storage. Thus, if a taxpayer stores inventory in one portion of a basement, the storage unit includes only that portion, even if the taxpayer makes no other use of the basement. n357

Several points are worthy of note with respect to the storage use exception. First, it is not necessary that the space be used exclusively as a storage unit; only storage use on a "regular basis" is required. Thus, an area used for storage of inventory, but also for other purposes, can qualify for the storage unit exception. n358 The "regular basis" requirement is intended to prevent taxpayers from claiming a deduction when inventory or product samples are only stored occasionally at home. n359 Exactly how frequent storage must be to constitute storage on a "regular basis" is not clear, but presumably, the storage should be for most of the time or at least on a continuing basis. Proposed regulations offer little guidance, stating only that the determination of use on a regular basis must be made in light of all the facts and circumstances. n360

Second, the inventory/product sample and retail/wholesale selling business requirements impose strict limits on the materials that can be stored under the exception. n361 Deductions cannot be claimed for the storage of any other materials, such as business records or files, n362 or supplies or equipment used in a trade or business. n363

[4] Day Care Services

[a] Exclusive Use Not Required for Day Care Services

An exception under *IRC Section 280A* allows a deduction for items that are allocable to the use of any portion of a dwelling unit on a regular basis in the taxpayer's business of providing day care. The qualifying day care may be for children, individuals 65 or older, or individuals who are physically or mentally incapable of caring for themselves. n364 The day care exception is available only if state licensing requirements are met. n365 Day care services are those which are primarily custodial in nature and which are provided only certain hours during the day. Any educational, developmental, or enrichment activities provided must be incidental to the primary custodial services. Services that are primarily education or instructional in nature do not qualify as day care services. n366

Use of the home in providing day care services does not need to be exclusive, but it must be regular. To meet the regular use requirement, a day care business use must be continuous, ongoing, or recurring. Incidental or occasional use is insufficient. n367

[b] Allocation Formula When Day Care Use Is Not Exclusive

A day care provider should compute day care business use deductions for the home by multiplying total allowable costs by two fractions. The first fraction is the total square footage in the home that is available for day care use throughout each business day and that is regularly so used in that business, divided by the total square footage of the home. n368

A second fraction must then be computed under a statutory allocation formula, taking into account the number of hours of day care use (including substantiated preparation and clean-up time). The deductible amount is based on the ratio of the number of hours the portion is used for day care purposes to the total number of hours the portion is available for day care use, i.e. 24 hours a day, or 8,760 hours per year. n369 The IRS has ruled that for purposes of computing the ratio, if a portion of a residence is available for day care use throughout a business day and is regularly used for that purpose, that portion will be considered as used for day care throughout the business hours of that day. The taxpayer is not required to keep records of the specific hours of usage of that portion of the residence during business hours. Also, the occasional non-use of that portion of the residence during the day will not disqualify it from being considered regularly used for day care services. The ruling clarifies, however, that the occasional use of a room that is ordinarily not available as part of the routine provision of day care services (such as a bedroom ordinarily restricted from day care use but used occasionally for naps) will not be considered as used for day care throughout the business day. n370

The amount of the deductions as computed may be further limited by the statutory gross income limitation. n371

Example:

A, a calendar year individual, operates a full-time licensed day care facility. A's day care business is regularly operated 11 hours each day (from 7 a.m. to 6 p.m.), five days a week, 250 days a year. A also spends one-half hour before and one-half hour after regular business hours preparing for and cleaning up after the children. Thus, the total hours of use is 3,000 hours. During the business hours, A provides day care for several young children other than A's children. Some children arrive at A's home for day care at 7 a.m., and some do not leave A's home until 6 p.m. At any particular time during A's business day, A has at least one child (other than A's children) in A's home for day care. The total floor area of A's home is 1,600 square feet. Although no rooms in A's home are used exclusively for A's day care business, several rooms in A's home are available for day care use throughout A's business day and are regularly so used as part of A's routine provision of day care. The total floor area of these rooms is 1,200 square feet.

In addition to interest and taxes of \$5,000, A incurs \$4,000 of costs during the year for electricity, gas, water, trash collection, general maintenance, and insurance with respect to the use of the home for day care and as a personal residence. The total depreciation for A's home (computed as though the entire home were depreciable) is \$1,000. Thus, A's total costs for the year are \$10,000. Assume that the gross income limitation does not come into play to limit the deductions. n372

To compute allowable deductions under *IRC Section 280A(c)(4)* related to the day care business, A must multiply the total costs incurred during the year with respect to the home (\$10,000) by two fractions. The first fraction is the total square footage in A's home that is available for day care use throughout each business day and that is regularly so used in that business, divided by the total square footage of A's home [1,200/1,600]. The second fraction is the total hours in the year that the day care business is operated (including substantiated preparation and clean-up time), divided by the total number of hours in a year [3,000/8,760]. Thus, A may deduct \$2,568.49 [$\$10,000 \times (1200/1600) \times (3000/8760)$]. n373

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.25

§ 9.25 Trade or Business Requirement

[1] Taxpayer Must Engage in Trade or Business

The business use exceptions under *IRC Section 280A* that qualify for deductions all require a connection with a trade or business of the taxpayer. n374 No trade or business requirement applies for the rental use exception. n375 Any trade or business of the taxpayer may qualify; it need not be a taxpayer's only or even primary trade or business. n376

The Code does not contain a general definition of "trade or business" for general application, however, or a special definition of the term for purposes of *IRC Section 280A*. Courts do offer guidance--a trade or business is present only if the taxpayer is involved in the activity with continuity and regularity, and the taxpayer's primary purpose for engaging in the activity is for income or profit. A sporadic activity, a hobby, or an amusement diversion does not qualify. n377 In addition, activities undertaken in preparation to enter a trade or business do not qualify as a trade or business. n378

[2] Investing and Trading Activity as a Trade or Business

No deductions are allowed under *IRC Section 280A* for the use of a home in connection with an activity that is merely for the production of income, but which is not a trade or business. Numerous cases involve investors who claim that their management of their personal investments is a trade or business. Cases uniformly hold that that a full-time investor is not engaged in a trade or business no matter how extensive or substantial the investments might be. Therefore, no deductions are allowed under *IRC Section 280A* for an area of the home used to manage those investments. n379 The absence of any suitable office or other place outside the taxpayer's residence in which the taxpayer may manage investments does not change this result. n380

Traders, as opposed to mere investors, *are* considered to be engaged in a trade or business and may qualify for deductions under *IRC Section 280A*. Taxpayers are considered to be traders only if their trading is substantial and they seek to profit from short-term swings in the market. n381 Investors, in contrast, generally seek profit through interest, dividends, and capital appreciation of securities. n382

The difference between a trader and an investor is not always clear, and there is no clear line beyond which a level of activity goes beyond investing and becomes a trade or business of being a trader. In one case, taxpayers were held to be investors, rather than traders, even though they made 326 sales of stock during the year, involving approximately \$9 million worth of stocks or options which had been purchased for approximately \$10 million. In addition, over 62

percent of the sales involved stocks held for less than 31 days. A triggering factor in the court's decision was that most of the activity took place in the first quarter of the year, with virtually no activity in the last quarter. In addition, the taxpayer had substantial income from other activities. Finally, the taxpayer was not a member of any stock exchange nor was he licensed under any state or federal laws as a dealer or sales person of stocks or securities. n383

[3] Ownership and Management of Rental Property as a Trade or Business

The ownership and management of rental properties may constitute a trade or business for purposes of claiming deductions under *IRC Section 280A*. Courts distinguish ownership and management of real property from ownership and management of stocks and securities, and have held that the rental of even a single parcel of real property for the production of income can constitute a trade or business. n384 The management activities connected with the property, however, must be substantial, regular and continuous, or no trade or business will be present. n385

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.26

§ 9.26 Principal Place of Business Requirement

[1] Determining a Taxpayer's Principal Place of Business

If the trade or business requirement and exclusive and regular use requirements are met, n386 deductions are allowed for expenses allocable to a portion of a dwelling unit that is used as the "principal place of business" for any trade or business of the taxpayer. n387 A taxpayer's "principal place of business" is not simply an important or necessary place of business, but rather the "most important, consequential, or influential" one. n388

Although a taxpayer may have more than one trade or business, there may be only one principal place of business for any particular trade or business. A taxpayer with multiple trades or businesses may have a different principal place of business for each one. n389 In a given case, there may not even be a principal place of business for a taxpayer's trade or business. n390

The "principal place of business" requirement is obviously satisfied if all activities in the business are conducted from one location in a home office. If activities in the trade or business are conducted in multiple locations, however, whether the requirement is satisfied is often unclear. Subject to a statutory safe harbor for administrative and management activities conducted out of a home office, n391 a two-part standard applies in determining if a home office is a taxpayer's principal place of business. The standard was set forth in a US Supreme Court decision, *Commissioner v Soliman*. The two considerations taken into account are: n392

1. the relative importance of the activities performed at each business location where business activities are conducted; and
2. the time spent at each business location.

Soliman involved home office deductions claimed by a self-employed anesthesiologist who spent the majority of his time administering anesthesia and post-operative care in several local hospitals. None of the hospitals provided him with an office. He used his home office 10 to 15 hours per week for billing, scheduling appointments, various other paperwork and reading medical literature. Applying the considerations listed above, the U.S. Supreme Court found that the home office was not the taxpayer's principal place of business because the administrative functions performed in the home office were less important than the professional services performed in the hospitals. The Court therefore denied

the claimed home office deductions. n393

COMMENT:

The *Soliman* standard places great importance on whether the nature of the trade or profession requires the taxpayer to meet or confer with a client or patient or to deliver goods or services to a customer. If it does, the place where that contact occurs is likely to be the most important indicator of the principal place of business. n394 Thus, in the case, because the taxpayer provided anesthesiologist services in the hospitals, and because the hospitals had equipment with unique or special characteristics, his home office was not his principal place of business. The Court noted that although the functions performed in the home office may be necessary to the taxpayer's business, this is not a controlling factor, but only one factor to consider in assessing the relative importance of the functions performed at each of the competing locations. The Court also noted that there might be cases when there was no principal place of business, and the courts should not strain to conclude that a home office qualifies for the deduction simply because no other location seems to be the principal place of business. In short, a taxpayer's home office does not become a principal place of business by default. n395 Unless a home office qualifies for the administrative/management activities exception, the *Soliman* standard applies to determine whether a home office is a principal place of business. n396

The IRS has issued a revenue ruling indicating how it applies *Soliman's* "relative importance" and "time" tests. It first applies the "relative importance" test. The comparison of the relative importance of the different activities depends on the characteristics of each business. If the nature of the trade or business requires a taxpayer to meet or confer with clients or patients or to deliver services or goods to customers, the place where that contact occurs is given "great weight" in determining where the most important activities of the business are performed. If the nature of the business requires that its services are rendered or its goods are delivered at a facility with unique or special characteristics, this is a further and weighty consideration that the facility is where the most important activities of the business are undertaken. If the "relative importance" test yields no definitive answer to the principal place of business inquiry (which may occur, for example, if the taxpayer delivers goods or services to customers both at the home office and elsewhere), the IRS looks to the "time" test. The application of the two tests may result in a determination there is no principal place of business. n397

NOTE:

Revenue Ruling 94-24 continues to apply, to the extent not superseded by the later-enacted statutory safe harbor for administrative and management activities. n398 Thus, where administrative or management activities are not performed in the home office, *Soliman's* weighing analysis is still necessary.

Taxpayers in the following post-*Soliman* cases have been allowed home office deductions because their home office was their principal place of business:

- A textile designer whose main activity was designing textiles in her home. n399
- Professional musicians who use a portion of their home office for practicing. The Second and Ninth Circuits stress that much more of a musician's time is spent practicing at home than performing or recording. These courts have noted the necessity of daily practice to a professional musician, and rejected the Tax Court's analysis of a musician's performances to a "delivery of services" in weighing the importance of the activities performed at home and elsewhere. n400
- A band singer/manager who worked in the home office 30 hours per week doing various managerial and administrative activities; the band recorded and edited tapes at the home studio as well. n401
- A professional pianist who also used her home to give piano lessons. n402

The following taxpayers, however, have had home office deductions denied on the grounds that their home office was not their principal place of business:

- An attorney who did some work at home, but saw all clients at a principal office elsewhere. n403
- A minister, who used his home office to prepare for services that were performed elsewhere. n404
- An insurance agent who interviewed customers and made insurance sales outside the home office. n405
- A taxpayer who spent 60 percent of her time outside the home inspecting vintage items for a costume company, and 40 percent at her home office where she maintained a computer and sorted, researched, and labeled the inventory. n406
- An architect who performed most of his drafting activities required by his employment at his home office, but failed to show what activities he performed at the office of his employer and other work sites. The "relative importance" test did not provide an answer, and the taxpayer spent less time in his home office than elsewhere. n407
- A teacher who used a home office for drawing, preparing lessons, developing photographs and storing cameras and equipment. n408

A number of post-*Solimon* cases have denied home office deductions based on a finding that the administrative/managerial duties performed at the home office were less important than duties performed elsewhere, and that the home office was therefore not their principal place of business. These cases would likely be resolved differently under the statutory administrative/management activities exception. n409

[2] Safe Harbor for Administrative and Management Activities Conducted in a Home Office

The result in the *Solimon* case was felt by many to be harsh and unfair because it denied home office deductions to taxpayers who had no place but their home to conduct necessary administrative and managerial duties connected with their trade or business. In response, a statutory safe harbor was enacted. Under it, the "principal place of business" requirement is satisfied, and home office deductions may be permitted, if: n410

- the office is used by the taxpayer for the administrative or management activities of any trade or business of the taxpayer; and
- there is no other fixed location of the trade or business where the taxpayer conducts substantial administrative or management activities of that trade or business.

Thus, a taxpayer can qualify for home office deductions by performing *either* administrative *or* management activities at the home office, as long as the taxpayer conducts *neither* substantial administrative *nor* substantial management activities at another fixed location. n411 The IRS states that "occasional" administrative or management activities may be performed outside the home office without violating the safe harbor. n412

COMMENT:

The statutory safe harbor supersedes and overrules *Soliman's* weighing analysis. If the safe harbor is met, it makes no difference that the most important activities of a taxpayer's trade or business may be performed outside the home. The home office will still qualify as the taxpayer's principal place of

business. The statutory safe harbor also allows home office deductions for the many taxpayers who have no other fixed place of business, but spend most of their working time in a variety of locations outside the home. The availability of wireless internet accessibility, laptops, Blackberries, iPhones, iPads, and other communication devices have made the statutory framework for home office deductions somewhat anachronistic, if not obsolete, for many taxpayers. The safe harbor, however, allows taxpayers whose "office" travels with them to deduct expenses of maintaining a space in the home, provided that administrative or management activities of the trade or business are performed there. n413

Many administrative and management activities will satisfy the statutory safe harbor, and taxpayers should be sure that these functions are performed in the home office, if activities of the trade or business are performed in multiple locations. The IRS lists the following illustrative--but by no means exhaustive--examples of activities that are administrative or managerial in nature: n414

- billing customers, clients, and patients;
- keeping books and records;
- ordering supplies;
- setting up appointments; and
- forwarding orders or writing reports.

In accord with Conference Committee reports accompanying the legislation that enacted the safe harbor, the IRS has also indicated that the following activities will not disqualify a home office as a principal place of business: n415

- Others conduct the taxpayer's administrative or management activities at locations other than the home office. This could occur if another company does the taxpayer's billing from its own separate place of business.
- The taxpayer conducts administrative or management activities at places that are not fixed locations of the taxpayer's business, such as a car, hotel room or airport.
- The taxpayer occasionally conducts minimal administrative or management activities at a fixed location outside the home.
- The taxpayer conducts substantial non-administrative or non-management activities at a fixed location outside the home. This could involve meeting with or providing services to customers, clients, or patients at a fixed location of the taxpayer's business outside the home.
- The taxpayer has suitable space to conduct administrative or management activities outside the home office, but chooses instead to use the home office for those activities.

[3] Principal Place of Business When There Are Two or More Businesses

The determination of a principal place of business that is required when business activities are conducted in a home office and at other locations applies only when single trade or business is involved. No such determination needs to be made when a trade or business that is completely conducted out of the home is separate and distinct from some other trade or business that the taxpayer conducts elsewhere. In that case, the principal place of business for the business conducted out of the home is determined without reference to any separate trade or business of the taxpayer. n416

Whether a "separate" trade or business is present is not always clear; the determination of whether a separate trade or business exists is a question of fact, and depends on the nature of the activities and the duties involved. If the activity conducted out of the home office is closely related to the supposedly distinct and separate trade or business activity conducted elsewhere, the two may be found to be part of the same trade or business. If that occurs, the home office may be found not to be the taxpayer's principal place of business. n417 A taxpayer conducting two or more related businesses should completely segregate the operations of each in order to lessen the possibility of their being treated as a single trade or business. n418

More than one taxpayer may claim home office deductions with respect to a single residence. For example, a husband and wife conducting separate businesses in different parts of a home may each claim home office deductions if statutory requirements are met for each business. n419

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.27

§ 9.27 Home Office Used for Meeting Patients, Clients, or Customers

There is a "home office" exception to the general rule disallowing deductions connected to the taxpayer's residence. Deductions are allowed for any home office that is regularly and exclusively used by patients, clients, or customers in meeting or dealing with the taxpayer in the normal course of the taxpayer's trade or business. The deduction is allowed whether or not the home office is the taxpayer's principal place of business. n420 The use of the dwelling unit by patients, clients, or customers must be "substantial and integral" to the conduct of the taxpayer's business. If meetings are merely occasional or irregular, the exception is not available. n421

NOTE:

Perhaps the most stringent and unreasonable requirement for home office deductions under this exception is that the patients, clients, or customers must be physically present on the premises. Telephone or other telecommunication contact will not suffice, regardless of how extensive or frequent that contact is. n422 This restriction assures that email and other forms of electronic communication would also not qualify.

The term "patients, clients, and customers" has not been clearly defined. In one case involving an editorial page editor of the *New York Times*, the editor made frequent telephone contact with *New York Times* employees, prominent politicians, community leaders, and others. Although home office deductions were denied because the contact from the home office involved only contact by telephone, the court stated that politicians, labor leaders, and community leaders would qualify as "patients, clients, or customers" under the statute. n423 The term probably does not include partners, co-employees or consultants, however. The term has been interpreted to exclude students. n424

PLANNING GUIDE:

Because of the importance of regular meetings, taxpayers seeking to claim home office deductions under the *IRC Section 280A(c)(1)(B)* exception should, whenever possible, schedule meetings at the home office rather than elsewhere. A taxpayer should also maintain and keep records to establish the frequency and regularity of meetings in the home office. Failure to do so may result in a denial of home office deductions. n425

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.28

§ 9.28 Home Office Deductions for Separate Structures

One "home office" exception to the general rule disallowing deductions connected with a taxpayer's home applies to separate structures. With respect to a separate structure that is not attached to the dwelling unit used by the taxpayer as a residence, deductions are allowed if the structure is used exclusively on a regular basis "in connection with" the taxpayer's trade or business. There is no requirement that the structure be the taxpayer's principal place of business, nor is it necessary that customers, clients, or patients ever be present. n426

PLANNING GUIDE:

The "in connection with" standard is less stringent than the standards for home office deductions for offices that are inside the dwelling unit. Taxpayers will find therefore it easier to claim home office deductions for offices in non-attached structures. A detached garage or any other building standing away from the house will qualify. There are no restrictions as to the type of free-standing structure that would qualify, other than that it be "appurtenant to, but not attached to" the dwelling unit. An artist's studio, a florist's greenhouse or carpenter's workshop would all qualify. n427

The statute and proposed regulations do not define the term "appurtenant," but in one case, the Tax Court said the term meant directly related to something else, but not an essential part of it or not attached to it. In the case, the court found that an office building was appurtenant to the taxpayer's house because it was only 12 feet from the house and on the same residential lot. Although the court rested its determination primarily on physical proximity, it also mentioned that all of the expenses for the property, taxes, utilities, interest, and insurance, were included in common bills. This close relationship convinced the court that the office building was appurtenant to the house. Deductions related to the office building were therefore subject to *IRC Section 280A*. It did not matter that the taxpayer later obtained a different address for the office building. n428 A carport attached to a home is not a separate structure. n429

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.29

§ 9.29 Use of Home Office by Employee for the Convenience of the Employer

[1] Qualifying Employee Use of Home Must Be for Convenience of Employer

An employee may be entitled to home office deductions under any of the business use exceptions only if the exclusive use of the home office is for the convenience of the employer. n430 Neither the statute nor the proposed regulations, however, provide any guidance as to when an office will be considered used for the convenience of the employer. n431

Cases have clarified when a home office is used for the convenience of the employer as follows:

- where the employee is required to maintain the office as a condition of employment; n432
- when the home office is necessary for the functioning of the employer's business; n433
- when the home office is necessary to allow the employee to perform duties properly. n434 or

A deduction is not allowed when an employee maintains the home office purely for his or her convenience, comfort, or economy. n435 That a home office may be appropriate or helpful to the employer does not automatically establish that the home office is maintained for the convenience of the employer. n436

NOTE:

The "convenience of the employer" standard of the statute is deceptively strict. n437 The phrase was added in 1976 in response to earlier Tax Court cases that had allowed home office deductions for employee home offices that were "appropriate and helpful" to the employer. n438 The absence of any clarification in the proposed regulations creates a mine field of sorts for employees hoping to deduct home office expenses. Court cases seeking to clarify the standard focus on the employer's needs and the employee's function within the employer's organization, but it is not at all clear how the employer's needs and the employee's position within the company are to be measured. In an audit, the employer's input would be important, especially regarding the specific functions that the employee must perform and how those functions are facilitated by a home office. For many situations, there is a colorable claim that an employee's home office assists the employer through efficient conduct of the employer's business, but whether the home office is "necessary" so as to meet the standard for convenience of the employer is a judgment call that may be contested by the IRS Whether the employer provides suitable office space is a

relevant factor, but the fact that an employer provides inadequate office facilities is not dispositive of whether a home office is for the convenience of the employer. n439 Especially in situations where offices provided by an employer are shared, are not private, or are unsafe, an argument can be made that a home office, by sparing an employer the cost of providing a suitable private office, thereby is for the convenience of the employer. Any facts offered by a taxpayer that would demonstrate why a private space is necessary to successfully perform job duties would be helpful. n440 Nevertheless, cases have found that the "convenience of the employer" standard is not met even when there is a strong showing of bad working conditions at the employer's office--typically at a college or school. That the provided office is small, crowded and noisy, or that the level of security for both property and personal safety is deplorable will not necessarily support a finding that a home office is for the convenience of the employer. n441

If an employer requires a home office, the convenience of the employer standard would seem to be automatically met. The IRS might question a manufactured employer "requirement" to maintain a home office that was requested by an employee. But if the employee were to make a request to an employer that a home office is required, and the employer wrote a letter imposing a home office requirement, or amended the employment contract to impose it, the IRS would likely find the standard to be met. Any requirement that the employee be available at the home office during specified hours should also be documented. Employees not infrequently are allowed to work from home one or two days a week, rather than commute to the employer's office. To the extent any employment arrangement allows this type of flexibility, home office deductions are more likely to be allowed if the home office requirement is structured as a condition of employment. n442 Of course, the employee would still need to meet exclusive use and other requirements of *IRC Section 280A* in order to deduct home office expenses.

[2] Treatment of Rental by Employee to Employer

A special statutory disallowance rule disallows any deductions otherwise allowable under *IRC Section 280A* that are attributable to the rental of a dwelling unit (or a portion of it) by a taxpayer to an employer during any period in which the taxpayer uses the dwelling unit or a portion of it in performing services as an employee for the employer. n443 The disallowance applies both to deductions related for exclusive home office use by the employee n444 and to deductions attributable to rental use of the dwelling unit. n445 The provision was added to overturn a Tax Court decision that allowed a taxpayer to claim offsetting rental expenses under *IRC Section 280A(c)(3)* against an above-market rental payment from the taxpayer's corporation to maintain an office (and related garage space) in his home. The taxpayer could not have claimed business expenses relating to its use because space rented did not meet the requirements for home office deductions under *IRC Section 280A(c)(1)*. n446

The IRS has explained the statutory rule in a technical assistance memorandum involving an S corporation of which the taxpayer was the sole shareholder and sole employee. The taxpayer rented a portion of his home to his S corporation for a reasonable rent. During the period of rental, the taxpayer used the rented portion in performing services as an employee. The taxpayer also used the dwelling unit as a principal residence. The IRS ruled that the taxpayer could not deduct business expenses related to the rental. The taxpayer could deduct home mortgage interest, real property taxes, and personal casualty losses to the extent permitted by other statutory provisions, n447 but could not deduct otherwise allowable trade or business expenses, n448 business casualty losses, n449 or depreciation n450 to the extent those expenses and losses were attributable to the use by the employee of the dwelling unit in performing services for the employer. n451

[3] Itemized Deduction Restriction for Employees

Employees may deduct home office expenses if they meet the "convenience of the employer" standard, as noted in § 9.29[1], above. n452 Any employee home office deductions, however, must be deducted as miscellaneous itemized

deductions on Schedule A. As such, they are deductible only to the extent that they, along with other specified deductions, exceed two percent of the taxpayer's adjusted gross income. n453 Furthermore, for taxable years beginning before January 1, 2010, n454 they, along with other itemized deductions, are subject to phase-out if the taxpayer's adjusted gross income exceeds specified amounts. n455

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.30

§ 9.30 Rental Use of Residence

[1] Deductions Allowed for Rental Use of Residence

An exception to the general disallowance rule of *IRC Section 280A* allows taxpayers to deduct items that are attributable to the rental of the dwelling unit or a portion of it. n456 The manner and extent to which *IRC Section 280A* applies in a given rental situation depends on the amount of use made of the rental property by the taxpayer:

- If the taxpayer does not use the property for personal purposes at all, *IRC Section 280A* will not apply to restrict the deductions related to the rental. n457
- If the taxpayer makes personal use of the property for at least a single day during the taxable year, but not enough to constitute use of the property as a residence (i.e. the taxpayer's use does not exceed the greater of 14 days or 10 percent of the days the unit is rented at a fair rental), n458 then an attribution of rental expenses between rental use periods and other periods must be done in accordance with *IRC Section 280A(e)*. The gross income limitation, however, does not apply. n459
- If the taxpayer's personal use of the property constitutes use of the property as a residence, n460 then an attribution of rental expenses between rental use periods and other periods must be done in accordance with *IRC Section 280A(e)*. Often, an additional allocation of expenses will be necessary between rental use/personal use, as when a taxpayers rent part of their home to tenants who share part of the taxpayers' own living space. n461 In addition, any deductions related to the rental of the property are subject to the gross income limitation of *IRC Section 280A(c)(5)*.

[2] Determining Expenses Attributable to Rental

The amount of rental expenses that is deductible under the rental use exception is determined after applying the attribution rule for those expenses under *IRC Section 280A(e)*. n462 The attribution of expenses attributable to rental must be done for any year in which the taxpayer n463 makes use of a dwelling unit for personal purposes *on any day during the taxable year*. A single day of personal use will therefore trigger the attribution rule for rental expenses, even if the taxpayer's use does not constitute use of the dwelling unit as a residence under the 14 day/10 percent of the days the unit is rented at a fair rental rule. n464

NOTE:

If the taxpayer uses the dwelling unit for a single day, but does not make personal use of the unit that constitutes use as a residence, n465 only part of *IRC Section 280A* applies. In that case, *IRC Section 280A(e)* comes into play, and an attribution of expenses between rental and personal use based on the periods of rental use must be made (in the manner discussed immediately below). Because there is no personal use of the dwelling by the taxpayer as a residence, however, the gross income limitation does not limit the deductions attributable to the rental activity. n466 Therefore, a taxpayer may be able to claim a loss from the rental during the year if attributable rental expenses exceed rental income. In contrast, if the taxpayer's personal use of the dwelling unit constitutes use of the unit as a residence, n467 the gross income limitation does limit the amount of attributable rental expenses that can be deducted. n468

Under the attribution rule, the amount of deductible expenses attributable to the rental of the unit cannot exceed the amount of those expenses multiplied by a fraction. The numerator of the fraction is the number of days during the year that the unit or portion of it is rented at a fair rental, and the denominator is the total number of days during the year that the unit or portion of it is used for any purpose during the year. n469 That a unit may be used for personal purposes by the taxpayer on a particular day does not prevent that day from being counted as a day on which the unit is rented for fair rental. Days on which the principal use of the unit is the making of repairs or maintenance work are disregarded in both the numerator and denominator of the fraction. n470 The attribution rule does not apply to deductions that would be otherwise deductible whether or not the unit was rented, such as mortgage interest and property taxes. n471

NOTE:

One might think that the "total number of days during the year that the unit or portion of it is used for any purpose during the year" in the denominator would include all 365 days of the year, but that is not the case, at least for maintenance-type expenditures related to rental of the unit. Only days in which the unit is rented at fair rental or actually used by the taxpayer are taken into account in determining the amount of deductible expenditures, at least with respect to maintenance expenditures. Days in which the unit is idle and not used by anyone, and days the unit is used for repair and maintenance are not included for purposes of determining the percentage of maintenance expenses that are deductible under attribution fraction. n472

However, for mortgage interest and real property taxes, which accrue ratably over the entire year, the allocation to rental use is determined according to the ratio of the number of days a unit is rented over the total number of days in the entire year--i.e. 365 days. n473 This is to the taxpayers' benefit. Because interest and taxes on the property are deductible whether or not connected to business use of the property, attributing a smaller of those items to rental use allows taxpayers to claim a larger amount of otherwise non-deductible maintenance expenses related to that rental use.

Example:

S owns a vacation home that is held out for rent for 180 days a year. During the year, it is actually rented out for only 120 days. S is deemed to have made personal use of the home for 15 of those 120 days. The unit is used for one or more purposes (other than repair or maintenance) on 160 days during the taxable year. The amount that S may claim as repairs, maintenance, and similar rental expenses may not exceed 120/160 of the total expenses paid or incurred with respect to the unit during the year. As for mortgage interest and real property taxes, which are deductible without regard to the rental use of the unit, 120/365 of those items are attributable to rental use of the vacation home. If S itemizes deductions, S may deduct the remaining 245/365 of those items on a Schedule A. n474

[3] Time-Sharing Arrangements**[a] Time-Sharing Generally Treated as Personal Use**

A time-sharing arrangement is any arrangement whereby two or more persons with interests in a dwelling unit agree to exercise control over the unit for different periods during the taxable year. It doesn't matter whether the co-owners have undivided interests in the unit for the entire year, or each has the sole interest in the unit for a stated length of time during the year. n475

Each person with an interest in dwelling unit subject to a time-sharing arrangement is treated as making personal use of the unit during any period the unit is used by another owner of a time-share interest in the unit. n476 This result comes about because each person with an interest in a unit subject to a time-sharing arrangement is considered to have a continuing interest in the unit, regardless of the terms of the interest under local law. n477 Because the interest is a continuing one, the general attribution of use between co-owners applies throughout the year with respect to all the owners with an interest in the unit. n478 Therefore, if the time-share owners as a group use the dwelling unit for the greater of 14 days or 10 percent of the total days it is rented to others at a fair rental price, then each of the owners of a time-share interest in the unit is treated as using the unit as a residence during the year. n479

[b] Allocation Under Time-Sharing Arrangements

If a person with an interest in a dwelling unit under a time-sharing arrangement makes personal use of the unit during any day of the year, n480 then an allocation of expenses must be made in accordance with *IRC Section 280A*, based on the taxpayer's expenses for the unit, the number of days the unit is rented at a fair rental, and the number of days during the taxable year that the unit is used for other purposes. n481 The gross income limitation on deductions n482 is applied on the basis of the taxpayer's rental income and expenses with respect to the unit. n483

[4] Rental Pools

[a] "Rental Pool" Defined

A *rental pool* is an arrangement under which multiple dwelling units are made available for rental, and persons with interests in the units agree to share at least a substantial part of the rental income from the units without regard to actual use of the various units. That an occupancy fee or other payment may be made for actual use of a unit does not prevent the arrangement from constituting a rental pool if the percentage of the rental income in which the participants in the arrangement share is substantial. n484 Rental pools typically allow the taxpayer use of a unit for a specified period. For other times, the unit is made available for rent to third parties. Rental pools typically guarantee some rental payment for a dwelling unit even when a unit is not rented, and a greater payment when the unit is rented. n485 A rental pool can also involve a fixed rent regardless of whether a unit is ever rented to any third parties. n486

Proposed regulations dealing with rental pools provide a definition, include rules for determining personal use of a taxpayer of a unit in a rental pool, and provide an election to average rental use. n487

[b] Personal Use Under Rental Pools

The key issue dealing with personal use with respect to rental pool units comes into play with respect to the second prong of the test for determining whether a dwelling unit is used as a residence, so as to trigger the restrictions of *IRC Section 280A*--i.e. does the taxpayer make personal use of the unit for more than 10 percent of the days the unit is rented to others at a fair rental price? n488

A taxpayer's own use of his own unit in a rental pool generally constitutes personal use under *IRC Section 280A*, for purposes of determining whether the taxpayer uses the unit as a residence. n489 Some rental pools have reciprocal use arrangements under which a participant whose unit is rented may use another unit in the pool on that day. Any use of a taxpayer's unit by another participant in the pool under such an arrangement is treated as personal use of the unit by the taxpayer for that day. n490

Unless a taxpayer elects to average rental use, n491 then for purposes determining the use of the unit as a residence and allocation of items to different uses, the number of days on which the unit is rented at fair rental and the number of days on which the unit is used for any purpose is determined according to actual use of the unit. n492 Availability of a unit for rental through a rental pool on a day does not ordinarily constitute rental at a fair rental for that day, or use of the unit for any purpose. The unit must actually be rented. If the unit is so rented, the day counts as a day of rental at fair rental even if the taxpayer receives only a portion of the rent paid. n493

One case, however, has carved an exception under which a unit in a rental pool may be treated as being rented at a fair rental on any day it is available for rent in the pool, even if the unit is not rented. The case involved a rental pool arrangement in which the managing association paid a guaranteed fixed rent under a lease agreement, regardless of whether the taxpayer's particular unit was rented out or not. The court found this to constitute a fair rental for each day during the entire period the unit was in the pool, including days the unit was not actually rented. The court was persuaded both by the amount of rent paid (an amount comparable to fair market rate on an annual basis for other properties) and the relatively long length of time the lease covered (30 months). In addition, the amount negotiated under the lease was based on the amount the managing association felt would be generated from the taxpayer's specific unit, rather than on an average profit that would be derived from all units in the rental pool. (The taxpayer was also entitled to additional rent if the total rent received from the unit exceeded a specified amount, but this event never occurred. The rental rate for other units in the pool did not affect the amount the taxpayer would receive.) n494 The court distinguished two other cases, which involved pooling agreements that guaranteed some payment when the units were not rented, but a greater payment when the units were rented. n495

COMMENT:

The end result in *Razavi* was that the taxpayer was not treated as using the unit in the rental pool as a residence for the year. This was because of the larger number of days the unit was found to be held for fair rental--which increased the number of days under the "10 percent test" that the taxpayer could make personal use of the unit without having it be treated as use of the unit as a residence. Therefore, the restrictions of *IRC Section 280A* were not triggered. n496

[c] Election to Average Rental Use

A taxpayer with a unit in a rental pool may elect to average rental use. If the election is made, the number of fair rental use days a unit has is determined by an averaging formula. n497 The election may be made only as follows:

- the taxpayer must sign and furnish to the pool management a document stating that the taxpayer irrevocably consents to the averaging of rental use for the pool season;
- all pool participants must unanimously consent to the averaging of rental use for the season; and
- the pool management must send to the taxpayer a written notice stating that participants have given unanimous consent in electing average rental use. The notice must also provide the taxpayer with information necessary to comply with the average rental use election regulations.

NOTE:

A consent may apply for more than one pool season. In the event there is not unanimous consent, or if the pool management fails to provide the required notice, the IRS may require all participants to determine the use of the units according to their actual use. n498

If the election is made, all taxpayers with units in the pool must determine the number of days that a unit is rented at fair rental during its participation in the rental pool during the pool season in accordance with a formula. Use of the unit on

days other than participation days and all use of the unit other than use at fair rental is determined according to actual use of the unit. n499 Under the averaging formula, the number of days that a unit in the rental pool is treated as rented at fair rental is determined by (1) dividing the number of days the unit participates in the pool by the aggregate number of participation days of all units, and (2) multiplying this figure by the number of days all units in the pool are rented at fair rental. n500

Example:

Peggy has a dwelling unit in rental pool all the units in which have elected to average rental use. Peggy's unit participates in the pool for 80 days, and the aggregate number of participation days of all units in the electing pool is 480. The units in the participating pool are rented at a fair rental for a total of 300 days.

Peggy's unit is treated as rented at a fair rental for a total of 50 days, determined as follows: n501

$$80/480 \times 300 = 50 \text{ days}$$

If a single pool season for which an average rental use election has been made overlaps two taxable years, the number of days of fair rental allocated to a unit must be allocated between the years according to the number of days in each year that the unit participates in the pool divided by the total number of participation days during the pool season. n502

[d] Gross Rental Income from Rental Pools

A taxpayer participating in rental pool may have gross rental income even if the taxpayer's particular unit is not actually rented. The rental income would include all amounts received or accrued by reason of participation in the pool (including payments such as occupancy fees). Amounts that are clearly not rental income need not be included; this would include items such as interest earned on deposits held in escrow on behalf of rental pool participants. n503

[5] Rental of Less Than 15 Days

If a dwelling unit used by a taxpayer as a residence during a taxable year, and it is actually rented for less than 15 days during that year, then (1) no deduction otherwise allowable because of the rental is allowed, and (2) any rental income is not included in gross income. This rule applies notwithstanding any other provisions in *IRC Section 280A*, or the for-profit rules of *IRC Section 183*. n504 There is no requirement in this provision that a fair rental be charged. Therefore, a below-market rental of a residence for more than 15 or more days in the year will prevent this exception from applying. n505

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.31

§ 9.31 Application of For-Profit Rules to Deductions Under IRC Section 280A

When *IRC Section 280A* applies to a dwelling unit for a taxable year (i.e. the taxpayer uses the dwelling unit as a residence and claims business or rental deductions connected with its use), the "for-profit" or hobby loss rules of *IRC Section 183* generally do not apply to the unit for that year. This rule allows taxpayers who rent out a portion of a dwelling unit to offset rental income with expenses attributable to the rental use of the residence that are otherwise allowable, such as mortgage interest paid. The offset is permitted without regard to profit motive. n506

The taxable year is taken into account for purposes of applying the 5-year profit presumption of *IRC Section 183(d)*, however. n507 Under that presumption, an activity is presumed to be engaged in for profit (so that deductions are allowable and are not limited to the gross income from the property) if gross income exceeds deductions from the activity in any three of five consecutive tax years, unless the IRS proves otherwise. n508

If *IRC Section 280A* does not apply for a taxable year, *IRC Section 183* may limit deductions related to an activity conducted in a dwelling unit if the activity is not engaged in for profit. Deductions in that case are limited to the following: n509

- deductions that would be allowable without regard to whether the activity is engaged in for profit (i.e. qualified mortgage interest and real property taxes); and
- other deductions that would be allowed if the activity were engaged in for profit, but only to the extent that the gross income from the activity exceeds the deductions allowed in paragraph (1).

CHAPTER 10 Dealer Versus Investor Status

1-10 Federal Taxes Affecting Real Estate § 10.01

§ 10.01 Tax Effect of Dealer Versus Investor Status: An Introduction

How a real estate owner is characterized for tax purposes--as a "dealer" or, instead, as an "investor"--has a profound impact on the tax treatment accorded to the real estate he owns. One of the major tax distinctions between dealer and investor status concerns the tax rate to which gains or losses are subject: Gains from sales of real property by a dealer are usually subject to ordinary income rates, while gains realized by an investor are usually eligible for preferential capital gains rates. With losses, a dealer is typically permitted a deduction for the full amount of the loss, while an investor may have the deductibility of any capital loss limited by *IRC Section 1211*.

Another area where the dealer/investor distinction is important is depreciation. Dealers usually cannot depreciate property they hold for sale to customers, while investors can take deductions for depreciable property.

Dealers generally cannot use the installment method to report their property dispositions and cannot use the like-kind exchange rules under *IRC Section 1031* to defer gains on the property they hold primarily for sale. In addition, dealers and investors are afforded different treatment for their sale expenses, such as commissions, legal fees, advertising, etc. A dealer treats these expenses as ordinary business deductions, while an investor treats them as a reduction of the sale proceeds.

For all these reasons, a taxpayer's characterization as a dealer or investor has significant tax ramifications. Unfortunately, the law provides few "bright line" tests to help taxpayers determine which category they fall into. As the following discussion shows, this makes it difficult to predict how the Service or the courts will treat a particular taxpayer.

CHAPTER 10 Dealer Versus Investor Status

1-10 Federal Taxes Affecting Real Estate § 10.02

§ 10.02 Statutory Underpinnings

[1] In General

When a taxpayer sells real estate, he will typically want capital treatment if the sale produces a gain or ordinary income treatment if the disposition produces a loss. The first place to look to determine the taxpayer's chances of success is *IRC Section 1221*, which defines the term "capital asset."

Paragraph (a)(1) of that section says that the term excludes "property held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business." If a taxpayer's sale falls into this category, his gain or loss will not be capital. ⁿ¹ Moreover, the transaction will not qualify for the special treatment *IRC Section 1231* affords. ⁿ² Only in those relatively rare circumstances where the taxpayer falls within the provisions of *IRC Section 1237* can he hope to get capital gain treatment. (As discussed in *Section 10.05*, below, Section 1237 provides that, under certain circumstances, subdividing real property, coupled with active sales efforts, will not by themselves cause a taxpayer to lose his investor status.)

The statutory phrasing quoted above appears to contemplate three requirements for the exclusion from capital asset status:

- (1) the taxpayer must hold the property primarily for sale to customers,
- (2) in the ordinary course and
- (3) as part of the taxpayer's trade or business.

This analysis suggests that real estate held primarily for sale to customers could, nonetheless, be considered a capital asset (or eligible for Section 1231 treatment) if the sale is *not* in the ordinary course or effected as part of the taxpayer's trade or business. Thus, some taxpayers have argued that they were entitled to capital treatment when they liquidated their real estate holdings, rather than selling them in the ordinary course. Similarly, some taxpayers have argued that a particular sale was not done as part of a trade or business.

Although there are some exceptions, discussed in *Section 10.03[2]* and *[3]*, below, most courts have ignored this

three-pronged analysis and, instead, focused on just the first. n3 If the court determines that a taxpayer holds the property primarily for sale to customers, it takes a "cut to the chase" approach--labeling the seller as a "dealer" rather than an "investor"--and accords the transaction ordinary income treatment. n4

[2] Self-Employment Tax

Only rental income received by an individual in the course of a trade or business as a real estate dealer is included in determining net income from self-employment for purposes of the self-employment tax. n4.1 Other rental income from real estate and from personal property leased with it is not taken into account. Whether an individual is a real estate dealer for purposes of the self-employment tax is determined using the same principles as under the regular income tax. n4.2

CHAPTER 10 Dealer Versus Investor Status

1-10 Federal Taxes Affecting Real Estate § 10.03

§ 10.03 Distinction Between Dealer and Investor

The distinction between dealer and investor has been a continuing source of litigation. In one case, the court prefaced its opinion by stating:

"This controversy brings before us the 'old, familiar, recurring, vexing and oft-times elusive' problem of whether to treat profit arising out of sales of subdivided real estate as capital gains or ordinary income." n5

Basically, a dealer is anyone who holds property primarily for sale to customers in the ordinary course of a trade or business, n6 such as a builder or developer. In an important tax decision involving a taxpayer holding property for more than one purpose, the Supreme Court said that "primarily" means "of first importance" or "principally." Thus, a taxpayer's principal reason for holding property is the one considered when a court must determine whether the taxpayer is a dealer with respect to the property. n7

An investor is a passive owner of property who holds it for future accretion in value. An investor also may be a person who holds property for its present income-producing potential, such as a landlord.

Although the distinction between dealer and investor appears simple, litigation arises because a taxpayer's status must necessarily be interpreted from his activities in connection with the real estate. Whether the real estate was being held primarily for sale to customers is a question of the taxpayer's intention or motive. Intent, of course, can be determined only by considering the taxpayer's overt acts at the time he purchased the property, during his ownership of it, and at the time of sale.

Further complicating matters are several decisions concluding that a taxpayer can be a dealer with respect to some assets, while an investor with respect to others. n8 Of course, the Service and the courts are inclined to question a dealer's argument that a particular asset was held just for investment--particularly if the real property has appreciated. n9 Nonetheless, taxpayers have sometimes prevailed on this issue. n10

A dealer who wishes to treat some assets as held for investment must, at a minimum, make a clear distinction for those assets in books and records of the various properties held. Failure to segregate investment properties may result in ordinary income treatment on their disposition. n11

Each question of dealer or investor status typically presents its own set of unique circumstances. This makes it difficult for a taxpayer to proceed in this area with any definite degree of assurance about the type of gain being generated, except in the most clear-cut situations. The discussion that follows should, however, help a taxpayer focus on the facts that are most important to the Service and the courts.

[1] Factors to Consider

Repeated litigation in the dealer/investor area has resulted in the development of a list of factors which courts routinely consider to determine a taxpayer's status. These factors, roughly in order of importance, are discussed below. Except in rare situations, a taxpayer will be considered a dealer only if several of these factors point in that direction.

[a] Number and Frequency of Sales

Numerous and frequent sales are the hallmark of a dealer. Thus, this is usually the first, and most significant, n12 factor that a court considers when deciding a taxpayer's status. Although there are some exceptions, n13 numerous sales over an extended period of time make it difficult for a taxpayer to convince a court that he is an investor. n14

On the other hand, infrequent sales favor a finding that the taxpayer is an investor. n15 In fact, the Fifth Circuit n16 and Tax Court n17 have entertained the notion that a taxpayer is automatically entitled to investor status if the taxpayer sells an entire property in a single sale and has not previously been involved in similar sales. The Tax Court has subsequently questioned this notion, concluding that it may not produce the correct result if, for example, the seller subdivides the parcel prior to the bulk sale, or the transaction involves a prearranged sale of a building which the seller has constructed to the purchaser's specifications. n18 Thus, the notion of automatic investor treatment in these circumstances seems limited to the Fifth Circuit.

Taxpayers often assume that there is some set number of transactions which will push them into the dealer category. In fact, the cases indicate this is not so. The Tax Court has held that just one sale in one year was enough for dealer status where the seller, before the property's acquisition, agreed to sell the property to a third party. n19 The Fifth Circuit, on the other hand, has held that a taxpayer was not a dealer when selling 90 homes in one year. n20 And there are many other decisions falling in between, with little consistency from case to case. n21 While this produces little certainty for taxpayers, one fact seems certain: The fewer the taxpayer's sales, the greater his chance of being characterized as an investor.

[b] Extent of Improvements

In many instances, a taxpayer improves property to put it in a salable condition. These enhancements are activities which courts typically associate with dealers, rather than investors. Thus, extensive development activities n22--which may significantly increase a seller's profit--may also significantly increase the likelihood that the taxpayer will be treated as a dealer. n23 This is so even if the taxpayer disposes of the improved and subdivided property in a bulk sale. n24

It is usually clear whether a taxpayer's activities will be treated as improving the real estate he owns. Subdivision, n25 dedication of streets, installation of sewers and utilities, and the like, fall into this category. n26 So does the removal of liens, if doing so makes the property more marketable. n27 Moreover, it makes no difference if the taxpayer makes the improvements without any immediate expectation of selling the property. It is enough that the improvements actually make the property's sale easier. n28

In one case, however, the taxpayers bought a large tract where they built their dream home. They built their home, but later subdivided the rest of the tract into 10 smaller lots. They made significant improvements to develop and sell the

excess lots, but many of these were necessary for the building of their own home, even if the tract had not been divided. For this and other reasons, the court found that the taxpayers were not dealers with respect to the excess lots. n28.1

Development of property is such an important indication of dealer status that some cases state that this factor, together with frequent sales, is usually sufficient for a court to find dealer status. n29 Failure to develop a property, however, does not necessarily prove that a taxpayer holds that property as an investor rather than as a dealer, especially if the taxpayer's business typically involves real estate sales both with and without development. n29.1

[c] Sales Efforts

The courts have routinely considered the activity of the taxpayer and his agents in advertising and otherwise promoting sales in determining whether a taxpayer is a dealer. n30 A taxpayer who engages in extensive marketing efforts is more likely to be considered a dealer than one who takes a passive marketing approach. n31

Whether this approach makes sense is another question. An investor is presumably as interested in maximizing his profit as is a dealer. Thus, extensive marketing efforts would not seem to be inconsistent with a seller's investor status. On the other hand, a taxpayer's casual approach to selling may simply be an indication that his real estate is so desirable that he can wait for sellers to approach him. While some courts have questioned the significance of a taxpayer's marketing activities in determining his tax status, n32 many others treat these activities as an important indication that the taxpayer is a dealer. n33

Sales activities which courts have found noteworthy range from the relatively modest effort of putting up a "for sale" sign, n34 to the more significant effort required to maintain a sales staff and sales office. n35 Advertising is another fact which the courts sometimes consider as indicative of a dealer, n36 unless there is such demand that the seller need not advertise, n37 or the potential buyers are so few that word of mouth is an adequate marketing method. n38

A taxpayer need not personally conduct real estate sales to be a dealer; he may act through agents. Unfortunately, the cases differ on when it is proper to attribute an agent's activities to the principal, for purposes of determining the principal's tax status. Some cases have not attributed an agent's actions when the taxpayer did not supervise or closely control the agent, but reached an opposite result where there has been close supervision of the agent. n39 Other cases hold that the degree of the taxpayer's supervision and control is irrelevant and will always attribute the agent's action to the principal. n40

A few things in this area, however, seem relatively certain. For obvious reasons, the activities of a *purchaser's* broker should not be attributed to the seller for purposes of determining the *seller's* status as a dealer or investor. n41

Perhaps for less obvious reasons, the courts are generally more willing to consider a seller's activities separately from those of his agent when the seller has acquired the real estate by inheritance or devise. n42 As discussed in *Section 10.03[1][e]*, below, courts are usually inclined to treat a taxpayer as an investor when he tries to sell property "thrust upon" him following the death of the prior owner. Allowing this type of seller to use an agent to isolate himself from day-to-day marketing activities may simply be another manifestation of the special tax treatment these taxpayers often receive.

Whatever the rationale for this approach, a person acquiring property from a decedent should seriously consider delegating sales activities to agents if the person wants to be considered an investor. This will be particularly important if the property has experienced significant post-death appreciation. n43

[d] Purpose For Acquiring, Holding and Selling the Property

Sometimes a taxpayer's purpose for acquiring property is the same as his reason for holding and subsequently selling the

property. A person may, for example, purchase a parcel expecting to quickly subdivide it and then sell it piecemeal. Under such circumstances, a court would have little problem concluding that the taxpayer held the property primarily for sale to customers in the ordinary course of his trade or business. n44 Consequently, he would be treated as a dealer.

Similarly, a person with few real estate assets may purchase a small rental property, collect rents for an extended period of time, and then sell the whole property to one purchaser. n45 Here, the taxpayer's behavior indicates an opposite result. n46

Unfortunately, life is typically not so cut and dried. A taxpayer may purchase a lot, holding it as an investment for several years. When he is finally ready to sell the property, he may realize that improving and subdividing it will significantly increase what he can receive for the asset. In deciding the seller's tax status, should it make a difference that his original purpose for acquiring the property was to hold it as an investment? Or should his tax status be based on his purpose at the time of disposition?

Here, as with other investor/dealer issues, the courts have not been consistent. The notion appears to be that the taxpayer's purpose in acquiring the property is of interest, n47 and is properly considered in determining the purpose for which the taxpayer holds the property at the time of sale, n48 but will not carry the day when there has been a change in his purpose. Put another way, most courts give greater weight to the taxpayer's intent or purpose at the time of sale rather than to his purpose when he acquires the property or during the period he holds it. n49 The primary exception to this rule is the case where unanticipated events outside of the taxpayer's control make it impossible for him to continue the property's original use. n50 In one case, a taxpayer had initially acquired lots for development and sale in the ordinary course of business. Litigation relating to the development resulted in the taxpayer's selling 56 lots to another developer. That developer defaulted on the sales contract, and, as part of the settlement, 28 lots were eventually returned to an entity controlled by the taxpayer. Although the entity provided financing and received 96 percent of the sales proceeds, the other developer continued to perform the developing, marketing and sales. The Tax Court held that the proceeds received by the taxpayer's controlled entity from the sale of 28 lots were capital in nature, because the initial plan to develop and sell lots had been abandoned, and its purpose for holding the lots at the time of sale was simply to dispose of them and thus facilitate the settlement with the other developer. n51

An interesting variation on this subject involves a taxpayer who constructs an apartment building, intending to rent the apartments. If he subsequently decides to sell the property, his situation appears to be somewhat different from the person who improves and subdivides undeveloped land: Unlike that person, our taxpayer has done nothing to "carve up" his property, except to build apartments at the beginning of his holding period. If he has been a passive investor with respect to the apartments following their construction, he may have a better chance than the subdivider of being characterized as an investor when he sells the building.

In fact, there is some authority supporting investor status if the taxpayer sells the entire building in a bulk sale, or sells individual units with relatively little marketing. n52 The taxpayer's chances of prevailing on this issue increase the longer the taxpayer holds the rental property prior to sale. n53

[e] Manner in Which Property Was Acquired

Courts frequently consider the manner in which real estate is acquired as relevant to the question of the taxpayer's intent. Acquisition by inheritance or devise, n54 dissolution of a trust, n55 liquidation of a corporation, or by foreclosure of a mortgage n56 tends to favor a finding that the seller is holding the property as an investor.

The courts have often been very liberal in allowing estate beneficiaries to retain their investor status even after they have made significant efforts to improve and market the decedent's real estate. n57 However, an estate beneficiary who sells the decedent's real estate and reinvests the proceeds in other real estate may have a harder time convincing the court that he is merely a passive investor. n58

At least one court has concluded that the donee of a lifetime gift should be treated differently from an estate beneficiary in determining whether the taxpayer is an investor. n59 The event that causes an estate beneficiary to become the real estate's new owner--i.e., the prior owner's death--is not normally something that is motivated by tax planning objectives. The same cannot be said for a lifetime gift. For example, a real estate dealer might make a gift of real estate to her college-student-daughter in the hope that the daughter's investor status might apply to the transferred property--thereby producing a lower tax when the daughter sells the property. In these situations, the donor's activities are likely to be attributed to the donee--particularly if the property is sold shortly after the donee receives it. n60

[f] Holding Period

A typical dealer is interested in turning over his inventory as quickly as possible. An investor, on the other hand, is likely to take a long-term view, hoping that his asset will appreciate over time.

Because of this distinction, courts have considered the length of time a taxpayer holds an asset as some indication of the taxpayer's status as a dealer or investor. A long holding period is, obviously, viewed as buttressing the taxpayer's argument that he is an investor rather than a dealer. n61 A short period points to the taxpayer's being a dealer. n62

A long holding period does not, however, insure investor status. n63 The taxpayer may have been an investor for a lengthy period before substantially improving and extensively marketing subdivided parcels of the property. It is likely, in these circumstances, that a court would conclude that the taxpayer, at the time of sale, is a dealer, notwithstanding the long holding period. n64

[g] Miscellaneous Factors

Courts have considered a variety of other factors in determining a taxpayer's status. They are typically afforded less weight than the factors discussed previously, but, in close cases, they may tip the balance one way or the other.

(1) *Taxpayer's Real Estate Income.* If most of a taxpayer's income over an extended period is from real estate, this increases the likelihood that any particular disposition will be treated as if the property was held for sale to customers. n65 Minimal real estate income, on the other hand, suggests that the taxpayer is an investor, especially if that income is a small percentage of the taxpayer's total income. n66

(2) *Use of the Sale Proceeds.* Dealers need to replace sold inventory with new inventory. If a taxpayer uses the proceeds from the sale of the real estate in question to purchase additional real estate, a court is more likely to conclude that the seller is a dealer, rather than an investor. n67 Taxpayers who retain the proceeds are less likely to be dealers, but will instead be treated as selling a capital asset. n67.1

(3) *Taxpayer's Public Image As Dealer.* A taxpayer who belongs to a real estate dealers' association or who publicizes personal involvement in the real estate business is likely to be treated as a dealer by the courts and the IRS. The nature of the taxpayer's business as shown in press releases, directory listings, and tax returns can be relevant in this regard.

[2] The "Ordinary Course" Requirement

As noted in *Section 10.02, above*, *IRC Section 1221(a)(1)* technically provides three requirements that must be met before property can be excluded from capital asset treatment. The second of these requirements is that the asset be disposed of in the "ordinary course" of his trade or business. If a taxpayer's sales are not in the "ordinary course," the taxpayer may be entitled to have the property treated as a capital asset under *IRC Section 1221* or, more likely, taxed under *IRC Section 1231*.

Most of the cases in this area involve dispositions that the taxpayer attempted to characterize as liquidations, rather than as sales in the ordinary course. In the typical case, the taxpayer has held the property for *investment* purposes. n68 However, he disposes of the property in a way that--without other facts--would normally result in the courts' characterizing him as a dealer.

Just as there are no hard and fast rules for determining whether a taxpayer is an investor or dealer, the reported decisions do not provide clear tests for determining whether a taxpayer has liquidated--rather than sold--his investment. It certainly helps if there is some exigency compelling the sale n69 or if the taxpayer can show that continued ownership is unlikely to be profitable. n70

A taxpayer's activities must, of course, be consistent with a liquidating intent. For example, his case is strengthened if he liquidates his holdings expeditiously, since a lengthy disposition period suggests that the taxpayer has, in fact, become a real estate dealer. n71 His chances of a favorable result are also greater if he makes few, if any, improvements to the property after deciding to sell it, and if he does not reinvest the sale proceeds in real estate. n72

[3] The "Trade or Business" Requirement

The third requirement under *IRC Section 1221(a)(1)* is that the asset be disposed of as part of the taxpayer's "trade or business." If the taxpayer's sales do not rise to the level of a trade or business, the taxpayer may be entitled to have the property treated as a capital asset under *IRC Section 1221* or, more likely, taxed under *IRC Section 1231*.

As a practical matter, this third requirement provides relatively little independent assistance to taxpayers trying to avoid ordinary income treatment. The courts that have deigned to separately consider this third requirement typically determine whether there is a trade or business by using the same tests that they use to determine whether the taxpayer is a dealer. n73 Thus, a taxpayer who is found to be a dealer under the first test described in *Section 10.03[1]*, above, should expect the court to conclude that he is also engaged in a trade or business.

[4] Sale By Bankruptcy Trustee

A sale of real estate by a bankruptcy trustee of a corporation will take the same character it would have had the sale occurred in the ordinary course of the bankruptcy debtor's trade or business. Working with a trustee to liquidate assets does not constitute a new business, so as to automatically give ordinary gain or loss treatment to the sale. Therefore, if real property sales would not be in the ordinary course of the bankruptcy debtor's trade or business, a sale by the bankruptcy trustee will be given capital gain or loss treatment. One court held that this result ensues even if the real property was acquired after the debtor filed for bankruptcy. n73.1

Note:

A possible exception to the automatic carryover characterization from the bankruptcy debtor's trade or business could occur if a trustee is given authority by order of the bankruptcy court to expand or change the nature of the debtor's trade or business in a way that might cause recharacterization of gains or losses from a sale.

(n6)Footnote 10. See cases cited in N 8, above, and: *Olstein et al v Commr*, TC Memo 1999-290; *Stevenson v Commr*, TC Memo 1999-280 (real estate broker held two lots for investment); *Fraley v Commr*, TC Memo 1993-304, 66 TCM 100 (1993); *Huey v US*, 504 F2d 1388, 74-2 USTC P 9766 (Ct Cl 1974); *Municipal Bond Corp v Commr*, 341 F2d 683, 65-1 USTC P 9247 (8th Cir 1965); *Mathews v Commr*, 315 F2d 101, 63-1 USTC P 9360 (6th Cir 1963).

(n7)Footnote 11. *Daugherty v Commr*, 78 TC 623 (1982). See also *Tollis v Commr*, N 8, above.

(n8)Footnote 12. See *Graves v Commr*, N 9, above; *Norris v Commr*, TC Memo 1986-151, 51 TCM 852 (1986); *Royster v Commr*, TC Memo 1985-258, 49 TCM 1594 (1985), *aff'd per curiam* 820 F2d 1156, 87-2 USTC P 9398 (11th Cir 1987); *Byram v US*, 705 F2d 1418, 83-1 USTC P 9381 (5th Cir 1983); *Suburban Realty Co v US*, 615 F2d 171 (5th Cir 1980); *Wood, Jr v Commr*, TC Memo 2004-200, *aff'd in unpubl opinion* 2005-1 USTC P 50,434 (11th Cir 2005); *Harris v Commr*, TC Memo 1983-774, 47 TCM 760 (1983); *Biedenharn Realty Co v US*, N 5, above. *Matz v Commr*, TC Memo 1998-334 (taxpayer failed to convince court he was a dealer, and therefore could not claim ordinary losses from sale of real estate).

(n9)Footnote 13. See, eg, *Buono v Commr*, 74 TC 187 (1980), *acq* 1981-1 CB 1 (sales mandated by government entities).

(n10)Footnote 14. See, eg, *Sanders v US*, 740 F2d 886, 84-2 USTC P 9767 (11th Cir 1984); *Jarret v Commr*, TC Memo 1993-516, 66 TCM 1224 (1994) (case involving real estate attorney who sold property); *US v Winthrop*, 417 F2d 905, 69-2 USTC P 9686 (5th Cir 1969); *Gault v Commr*, 332 F2d 94, 64-2 USTC P 9517 (2nd Cir 1964). See also *Suburban Realty Co v US*, N 3, above, an extreme case where the number and frequency of sales factor, by itself, was sufficient to classify the taxpayer as a dealer. Usually, a court will not characterize a taxpayer as a dealer unless there is at least one other factor, in addition to frequent sales, indicating dealer status. See, eg, *Byram v US*, 705 F2d 1418, 83-1 USTC P 9381 (5th Cir 1983); *Goldberg v Commr*, 223 F2d 709, 55-1 USTC P 9519 (5th Cir 1955).

(n11)Footnote 15. See, eg, *Rymer v Commr*, TC Memo 1986-534, 52 TCM 964 (1986); *Adam v Commr*, 60 TC 996 (1973); *Scheuber v Commr*, 371 F2d 996, 67-1 USTC P 9219 (7th Cir 1967); *Cole v Usry*, 294 F2d 426, 61-2 USTC P 9651 (5th Cir 1961); *Smith v Commr*, TC Memo 1961-42, 20 TCM 232 (1961).

(n12)Footnote 16. *Bramblett v Commr*, 960 F2d 526, 92-1 USTC P 50,252 (5th Cir 1992).

(n13)Footnote 17. *Buono v Commr*, N 13, above; *Thomas v Commr*, TC Memo 1981-387, 42 TCM 496 (1981) .

(n14)Footnote 18. *S & H, Inc v Commr*, 78 TC 234 (1982) .

(n15)Footnote 19. *Id.*

(n16)Footnote 20. *Goldberg*, N 14, above.

(n17)Footnote 21. See, eg, *Rice v Commr*, TC Memo 2009-142 (8 lots in 8 years eligible for capital gains); *Ayling v Commr*, 32 TC 704 (1959) (13 lots over four years eligible for capital gains treatment); *Olstein et al v Commr*, TC Memo 1999-290 (sale of 28 developed lots resulted in capital gain); *Harris v Commr*, TC Memo 1983-774, 47 TCM 760 (1983) (taxpayer is dealer when 26 lots were sold over five years); *Brodnax v Commr*, TC Memo 1970-164, 29 TCM 733 (1970) (taxpayer is investor when 28 properties sold over three years); *Jenkins v Commr*, TC Memo 1970-53, 29 TCM 240 (1970) (taxpayer is investor when 10 properties sold in two years); *Sottong v Commr*, TC Memo 1966-268, 25 TCM 1366 (1966) (taxpayer is dealer when 71 properties sold over three years); *Oace v Commr*, 39 TC 743 (1963) (taxpayer is investor when roughly 10 properties sold over five years).

(n18)Footnote 22. To determine the extent of a taxpayer's improvements, some courts look at the actual dollar amount which the taxpayer expends. *Scheuber v Commr*, TC Memo 1961-43, 20 TCM 235 (1961) . Others focus on the expenditures compared to the pre-improvement value of the property. *Kaltreider v Commr*, 255 F2d 833 , 58-2 USTC P 9542 (3rd Cir 1958). At least one court has accepted the notion that improvements to previously-subdivided property do not, by themselves, require a finding that the taxpayer was a dealer. *Dunlap v Oldham Lumber Co*, 178 F2d 781 , 50-1 USTC P 9134 (5th Cir 1950).

(n19)Footnote 23. See, eg, *Jarret v Commr*, TC Memo 1993-516, 66 TCM 1224 (1993) ; *Sanders v US*, N 14, above; *Turner v Commr*, 540 F2d 1249 , 76-2 USTC P 9660 (4th Cir 1976); *Byram v Commr*, N 4, above; *Gault*, N 14, above. See also *Rev Rul 59-91*, 1959-1 CB 15 . But for cases where the taxpayer was found to be an investor, despite substantial improvements, see, eg, *Simpson v Commr*, TC Memo 1962-71, 21 TCM 371 (1962) ; *Ayling v Commr*, 32 TC 704 (1959) , *acq* 1959-2 CB 3 . Many of the cases permitting investor status where the taxpayer has made significant improvements involve taxpayers who acquired their property by inheritance or devise. See 10.03[1][e], below.

(n20)Footnote 24. See, eg, *Lawrie v Commr*, 36 TC 1117 (1961) ; *Engassar v Commr*, 28 TC 1173 (1957) .

(n21)Footnote 25. Just arranging for subdivision may not, by itself, constitute improvement. See *Buono v Commr*, N 13, above. But cf *Rev Rul 57-565*, 1957-2 CB 546 ; *Weil v Commr*, 3 TCM 528 (1944) ; *Chapman v Commr*, 3 TCM 604 (1944) . See also *Ayling v Commr*, 32 TC 704 (1959) , *acq* 1959-2 CB 23 (land-use studies and topographical surveys can be undertaken without causing dealer status) and *Ltr Rul 9331013* .

(n22)Footnote 26. But see *Gangi v Commr*, TC Memo 1987-561, 54 TCM 1048 (1987) (\$100,000 paid for maintenance and cosmetic improvements to convert an apartment building to condominiums does not preclude capital gain treatment).

(n23)Footnote 27. *Miller v Commr*, TC Memo 1962-198, 21 TCM 1070 (1962) , *Brady v Commr*, 25 TC 682 (1955) , *acq* 1956-1 CB 3 .

(n24)Footnote 28. *Van Sickel v Commr*, 55 TCM 407, TC Memo 1988-115 (1988) (in determining whether taxpayer was a dealer, the court considered improvements undertaken to protect the property's zoning, rather than to sell the property).

(n25)Footnote 28.1. *Rice v Commr*, TC Memo 2009-142 .

(n26)Footnote 29. *Biedenharn Realty Co v US*, N 5, above; *Gault*, N 14, above; *Achong v Commr*, 246 F2d 445 ,

57-2 USTC P 9828 (9th Cir 1957)

(n27)Footnote 29.1. See *Medlin v Commr*, TC Memo 2003-224 .

(n28)Footnote 30. See, eg, *Byram v US*, 705 F2d 1418 , 83-1 USTC P 9381 (5th Cir 1983); *Biedenharn Realty Co v US*, N 5, above; *Brodnax v Commr*, TC Memo 1970-164, 29 TCM 733 (1970) ; *US v Winthrop*, N 14, above; *Crosswhite v US*, 369 F2d 989 , 67-1 USTC P 9123 (Ct Cl 1966).

(n29)Footnote 31. *Hancock v Commr*, TC Memo 1999-336 ; *Rice v Commr*, TC Memo 2009-142 (only advertising involved a sign on the property; all lots were sold to friends or by word of mouth); but see *Erfurth v Commr*, TC Memo 1987-232, 53 TCM 767 (1987) (capital gain treatment for bulk sale of advertised and subdivided property when sale made following foreclosure threat).

(n30)Footnote 32. See, eg, *Suburban Realty*, N 3, above; *Jersey Land & Development Corp v US*, 539 F2d 311 , 76-2 USTC P 9587 (3rd Cir 1976); *Thompson v Commr*, 322 F2d 122 , 63-2 USTC P 9676 (5th Cir 1963); *Chandler v US*, 226 F2d 403 , 55-2 USTC P 9740 (7th Cir 1955).

(n31)Footnote 33. See, eg, *Huey v US*, 504 F2d 1388 , 74-2 USTC P 9766 (Ct Cl 1974); *Temple v US*, 355 F2d 67 , 66-1 USTC P 9165 (5th Cir 1966); *Fishback v US*, 215 F Supp 621 , 63-2 USTC P 9555 (DSD 1963).

(n32)Footnote 34. See, eg, *Sottong v Commr*, TC Memo 1966-268, 25 TCM 1366 (1966) .

(n33)Footnote 35. See, eg, *Wood v Commr*, 25 TC 468 (1955) .

(n34)Footnote 36. See, eg, *Galena Oaks Corp v Scofield*, 218 F2d 217 , 55-1 USTC P 9127 (5th Cir 1954).

(n35)Footnote 37. See, eg, *Koch v US*, 457 F2d 230 , 72-1 USTC P 9291 (7th Cir 1972); *Winthrop*, N 14, above; *Nevin v Commr*, TC Memo 1965-53, 24 TCM 294 (1965) ; *Thompson*, N 32, above; *Patrick v Commr*, 275 F2d 437 , 60-1 USTC P 9334 (7th Cir 1960). See also *Daugherty v Commr*, 78 TC 623 (1982) ; *McManus v Commr*, 583 F2d 443 , 78-2 USTC P 9748 (9th Cir 1978) , cert den 440 US 959 (1979); *Juleo, Inc v Commr*, 483 F2d 47, 73-2 USTC P 9529 (3rd Cir), cert den 414 US 1103 (1973); *Stockton Harbor Ind Co v Commr*, 54-2 USTC 9664, 216 F2d 638 (9th Cir 1954) , cert den, 349 US 904 (1955) , indicating that a dealer will still be treated as a dealer when property he is holding for sale to customers is, instead, taken in a condemnation proceeding. But see *Ridgewood Land Co v Commr*, 477 F2d 135 , 73-1 USTC P 9308 (5th Cir 1973), and *Commr v Tri-S Corp*, 400 F2d 862 , 68-2 USTC P 9541 (10th Cir 1968), suggesting that, under these circumstances, a switch to investor status is possible in the Fifth and Tenth Circuits.

(n36)Footnote 38. *Daugherty*, N 37, above; *Mensik v Commr*, TC Memo 1968-8, 27 TCM 28 (1968) , app dismissed (7th Cir, 6/2/69); *Gault*, N 14, above; *Yara Engr Corp v Commr*, TC Memo 1963-283, 22 TCM 1448 (1963) , aff'd per curiam 344 F2d 113 , 65-1 USTC P 9354 (3rd Cir 1965).

(n37)Footnote 39. See, eg, *Sanders v US*, N 14, above; *Williams v US*, 84-1 USTC P 9384 (ND Tex 1983); *Pointer v Commr*, 419 F2d 213 , 70-1 USTC P 9118 (9th Cir 1969); *Voss v US*, 329 F2d 164 , 64-1 USTC P 9290 , 13 AFTR2d 834 (7th Cir 1964) ; *Freberg v Commr*, TC Memo 1964-129, 23 TCM 784 (1964) ; *Est of Walton*, 21 TCM 346, TC Memo 1962-63 (1962) ; *Bauschard v Commr*, 279 F2d 115 , 60-2 USTC P 9533 (6th Cir 1960); *Smith v Dunn* 224 F2d 353 , 55-2 USTC P 9543 , 47 AFTR 1418 (5th Cir 1955) ; *Achong v Commr*, 246 F2d 445 , 57-2 USTC P 9828 , 51 AFTR 899 (9th Cir 1957) . See also TAM 8415002 .

(n38)Footnote 40. See eg, *Brown v Commr*, 143 F2d 468 , 44-2 USTC P 9376 , 32 AFTR 1007 (5th Cir 1944) ; *Hansche v Commr*, 457 F2d 429 , 72-1 USTC P 9304 , 29 AFTR2d 72774 (7th Cir 1972) ; *Yunker v Commr*, 256 F2d 130 , 58-1 USTC P 9487 , 1 AFTR2d 1559 (6th Cir 1958) . The division on this issue is particularly acute in the Fifth Circuit, where several cases have permitted capital gain treatment based, in part, on the taxpayer's use of an agent (*Cole v Usry*, N 15, above; *Gamble v Commr*, 242 F2d 586 , 57-1 USTC P 9516 (5th Cir 1957); *Fahs v Crawford*, 161 F2d

315 , 47-1 USTC P 9233 (5th Cir 1947); *Smith v Dunn*, N 39, above), while other decisions of the same Circuit have cited the taxpayer's failure to use an agent in support of finding the taxpayer entitled to capital gain treatment (*Barrios Est v Commr*, 265 F2d 517 , 59-1 USTC P 9377 (5th Cir 1959); *Alabama Mineral Land Co v Commr*, 250 F2d 870 , 58-1 USTC P 9162 (5th Cir 1957); *Consolidated Naval Stores Co v Fahs*, 227 F2d 923 , 56-1 USTC P 9132 (5th Cir 1955); *Ross v Commr*, 227 F2d 265 , 55-2 USTC P 9773 (5th Cir 1955)).

(n39)Footnote 41. *Williams v US*, 84-1 USTC P 9384 (ND Tex 1983).

(n40)Footnote 42. See, eg, *Est of Mundy v Commr*, 36 TC 703 (1961) , acq 1962-2 CB 5 ; *Yunker v Commr*, N 40, above; *Mackall v US*, 162 F Supp 522 , 57-2 USTC P 9882 (ED Va 1957); *Smith v Dunn*, N 39, above.

(n41)Footnote 43. Any pre-death appreciation would escape taxation because of the basis step-up afforded under IRC 1014.

(n42)Footnote 44. See IRC 1221(a)(1). For cases indicating that a real estate dealer is presumed to acquire real property as inventory, see *Drozda v Commr*, TC Memo 1984-19, 47 TCM 885 (1984) ; *Horton v Commr*, TC Memo 1954-161, 13 TCM 899 (1954) . See also *Walsh v Commr*, TC Memo 1994-293, 67 TCM 3134 (1994) , aff'd 95-2 USTC P 50,398 (8th Cir 1995). A real estate dealer may be able to be an investor with respect to real estate he segregates from his usual inventory, provided he also behaves like an investor with respect to the segregated property. See the cases cited in N 8, above.

(n43)Footnote 45. Property which generates current income, such as rental property, timberland, etc, is more likely to be considered as held for investment than property which does not throw off income. See, eg, *Rouse v Commr*, 39 TC 70 (1962) (rental property); *Bessemer Properties, Inc v Tomlinson*, 1962-1 USTC P 9277, 9 AFTR2d 790 (SD Fla 1962) (rental property); *Goldstein v US*, 1958 US Dist LEXIS 4642, 1958-1 USTC P 9365, 1 AFTR2d 1169 (ED Wash 1958) (rental property) ; *Dunlap v Oldham Lumber Co*, N 22, above (timberland). But see *Johnson v US*, 280 F Supp 412 , 67-2 USTC P 9752 (NDNY 1967), and *Starke v Commr*, 312 F2d 608 , 63-1 USTC P 9199 (9th Cir 1963), for examples of other cases where non-income-producing land was treated as held for investment when the taxpayer was generally passive with respect to the real estate, and did not engage in significant dealer-type activities.

(n44)Footnote 46. Acquiring real estate with the ultimate intention of reselling does not by itself result in a determination that the property was held primarily for sale in the ordinary course of business. See, eg, *Biedenharn Realty Co*, see N 4, above; *Dunlap v Oldham Lumber Co v Commr*, N 22, above; *Howell v Commr*, 57 TC 546 (1972) .

(n45)Footnote 47. See, eg, *Azar Nut Co v Commr*, 931 F2d 314 , 91-1 USTC P 50,257 (5th Cir 1991); *Buono v Commr*, N 13, above; *US v Winthrop*, N 14, above; *Gault v Commr*, N 14, above.

(n46)Footnote 48. *Hancock v Commr*, TC Memo 1999-336 (court noted that taxpayer's corporation had held lots as inventory, which indicated she was a dealer and could claim ordinary loss when she sold them); see *Parkside, Inc v Commr*, 571 F2d 1092 (9th Cir 1977) , rev'g TC Memo 1975-14 .

(n47)Footnote 49. See, eg, *Rice v Commr*, TC Memo 2009-142 (most of large tract bought for dream home was later subdivided; capital gains treatment was allowed); *Sanders v US*, N 14, above; *Biedenharn Realty Co, Inc v US*, N 5, above; *Home Co v Commr*, 212 F2d 637 , 54-1 USTC P 9399 (10th Cir 1954); *Ehrman v Commr*, 120 F2d 607 , 41-2 USTC P 9537 (9th Cir 1941).

(n48)Footnote 50. See, eg, *Erfurth v Commr*, N 31, above; *Cousins Properties, Inc v US*, 77-2 USTC P 9508 (Ct Cl Tr Div 1977); *Huey v Commr*, 504 F2d 1388 , 74-2 USTC P 9766 (Ct Cl 1974); *Oahu Sugar Co v US*, 300 F2d 773 , 62-1 USTC P 9309 (Ct Cl 1962); *Butler v Commr*, TC Memo 1960-218, 19 TCM 1219 (1960) ; *Barrios Est v Commr*, N 40, above. See also *Biedenharn Realty Co, Inc v US*, N 5, above.

(n49)Footnote 51. *Olstein et al v Commr*, TC Memo 1999-290 .

(n50)Footnote 52. See, eg, *Goldberg v Commr*, N 14, above; *Delsing v US*, 186 F2d 59, 51-1 USTC P 9125 (5th Cir 1951); *Victory Housing No 2, Inc v Commr*, 205 F2d 371, 53-1 USTC P 9446 (10th Cir 1953). Extensive marketing efforts increase the likelihood that the seller will be treated as a dealer. See, eg, *Home Co v Commr*, N 49, above; *Rollingwood Corp v Commr*, 190 F2d 263, 51-2 USTC P 9374 (9th Cir 1951); *King v Commr*, 189 F2d 122, 51-1 USTC P 9304 (5th Cir 1951), cert den 342 US 829 (1951). See also *Ferguson v Commr*, TC Memo 1987-257, 53 TCM 864 (1987).

(n51)Footnote 53. See 10.03[1][f], below, which generally discusses the impact of the taxpayer's holding period on his status.

(n52)Footnote 54. See, eg, *Est of Simpson v Commr*, 21 TCM 371, TC Memo 1962-71 (1962); *Est of Walton*, 21 TCM 346, TC Memo 1962-63 (1962); *Est of Mundy v Commr*, 36 TC 703 (1961); *Riedel v Commr*, 261 F2d 371, 58-2 USTC P 9966 (5th Cir 1958); *Camp v Murray*, 226 F2d 931, 55-2 USTC P 9766 (4th Cir 1955). See also *Mackall v US*, 162 F Supp 522, 57-2 USTC P 9882 (ED Va 1957), where the court held that an estate beneficiary was an investor with respect to the property acquired from the decedent, even though the beneficiary had previously engaged in activities as a real estate dealer.

(n60)Footnote 62. See, eg, *Stanley, Inc v Shuster*, aff'd per curiam 421 F2d 1360, 70-1 USTC 9276 (6th Cir 1970), cert den 400 US 822 (1970); *Bauschard v Commr*, 279 F2d 115, 60-2 USTC 9533 (6th Cir 1960); *Clayton v Commr*, aff'd per curiam 245 F2d 238, 57-1 USTC 9447 (6th Cir 1957).

(n61)Footnote 63. See, eg, *Van Sickel v Commr*, 55 TCM 407, TC Memo 1988-115 (1988); *Margolis v Commr*, 337 F2d 1001, 64-2 USTC P 9755 (9th Cir 1964); *Broughton v Commr*, 333 F2d 492, 64-2 USTC P 9583 (6th Cir 1964); *Real Estate Corp v Commr*, 35 TC 610 (1961).

(n62)Footnote 64. See, eg, *Philhall Corp v US*, 546 F2d 210, 77-1 USTC P 9116 (6th Cir 1976); *Biedenharn Realty Co v US*, N 5, above; *US v Winthrop*, N 14, above; *Barney v Commr*, TC Memo 1967-17, 26 TCM 109 (1967); *Yara*, N 38, above.

(n63)Footnote 65. See, eg, *Suburban Realty Co v US*, N 3, above; *Gartrell v US*, 619 F2d 1150, 80-1 USTC P

9329 (6th Cir 1980); *Est of Segel v Commr*, 370 F2d 107 , 67-1 USTC P 9139 (2nd Cir 1966); *Vidican v Commr*, TC Memo 1969-207, 28 TCM 1099 (1969) ; *Nadalin v US*, 364 F2d 431 , 66-2 USTC P 9548 (Ct Cl 1966); *Miller v US*, 339 F2d 661 , 65-1 USTC P 9117 (Ct Cl 1965); *Tomlinson v Dwelle*, 318 F2d 60 , 63-1 USTC P 9493 (5th Cir 1963); *Kelley v Commr*, 281 F2d 527 , 60-2 USTC P 9635 (9th Cir 1960). But see *Biedenharn Realty Co v US*, N 5, above, where the IRS argued that this factor is irrelevant. The Fifth Circuit seemed to accept this argument in *Biedenharn*, but then appeared to reach a different conclusion in *Suburban Realty*. Note that a taxpayer may have significant real estate income in one year as a result of the bulk disposition of significantly appreciated real estate. Even if this income dwarfs the taxpayer's non-real estate income, it will not be considered as indicating that the taxpayer is a dealer, assuming the taxpayer's involvement with the real estate otherwise points to his being an investor. See *Crosswhite v US*, 369 F2d 989 , 67-1 USTC P 9123 (Ct Cl 1966); *Austin v Commr*, 263 F2d 460 , 59-1 USTC P 9245 (9th Cir 1959).

(n64)Footnote 66. See, eg, *Adam v Commr*, 60 TC 996 (1973) ; *Hoover v Commr*, 32 TC 618 (1959) .

CHAPTER 10 Dealer Versus Investor Status

1-10 Federal Taxes Affecting Real Estate § 10.04

§ 10.04 Use of Controlled Entities

It is common for a person or partnership to purchase land, intending to hold it for investment. The property appreciates substantially after several years, and the taxpayer decides to subdivide and sell the property piecemeal.

A significant portion of the profit which the taxpayer enjoys on the property's sale is due to the appreciation which took place when the property was held for investment. The balance presumably relates to the taxpayer's efforts to improve and sell the property.

As indicated in *Section 10.03, above*, the taxpayer may be able to convince a court that the entire profit is entitled to capital gain treatment. If, however, the taxpayer is very active in improving the land and makes many sales following extensive marketing efforts, the taxpayer is likely to be characterized as a dealer, with the *entire* gain taxed as ordinary income.

This outcome seems unfair to the taxpayer, since a significant portion of the gain resulted from the period when the land was held for investment. It would be appropriate for this portion of the gain to receive capital gain treatment, even if the balance of the profit--resulting from the subdivision and improvements--was taxed as ordinary income.

Unfortunately, the courts have not bifurcated the gain in this fashion. The all-or-nothing approach which they use has encouraged taxpayers to fashion self-help remedies designed to increase the likelihood of capital treatment for the investment gain.

One way taxpayers have tried to do this is by selling the property to a controlled corporation. A common fact pattern involves a partnership which owns land that has appreciated during the investor phase. Before improving and marketing the property, the partnership makes an installment sale of it to a corporation which the partners control. n74 The hope is for capital gain treatment of the appreciation occurring before the sale to the corporation. n75 Subsequent gain, most of which will typically result from improvement and marketing of the property, is taxed as ordinary income to the corporation. To avoid double taxation, the shareholders should elect S corporation status.

The Service has used two theories to deny capital treatment for the gain resulting from the sale to the corporation: n76

- (1) The transfer of the real estate is a contribution of capital or a tax-free transaction under *IRC Section*

351. In either case, the transaction is not treated as a sale, and the transferor does not recognize gain on the transfer. The corporation takes the transferor's basis. n77

(2) Even if the transfer is taxable, the property sold to the corporation is already dealer property in the seller's hands when the sale is made.

[1] Treating the Transaction as a Sale

The Service had some early successes in the Fifth and Seventh Circuits, arguing that the sale to a controlled entity should be recast as a contribution to capital or as a Section 351 transaction. n78 More recent cases in the Claims Court and Fourth Circuit have found for the taxpayer, n79 at least when:

- (1) the property is sold to the controlled entity at its fair market value;
- (2) the controlled entity is not undercapitalized (so that the transaction has economic substance);
- (3) appropriate formalities are adhered to; and
- (4) assuming the corporation provides a note to the seller, the note is enforced. n80

[2] Preserving the Seller's Investor Status

The Service's second tack in combating the use of controlled corporations is to argue that the real estate is already dealer property at the time the taxpayer sells it to the controlled corporation. The courts have, in some cases, concluded that controlled entities were mere vehicles for the taxpayer's development activities, thus finding that the property was being held primarily for sale to customers even at the time of its sale by the taxpayer to the controlled corporation. n81 However, the fact that the corporation is controlled by the seller should not, by itself, result in the corporation's activities being attributed to the taxpayer. n82

Sometimes the taxpayer's activities before the sale to the corporation are sufficient to allow a court to treat the taxpayer as a dealer. n83 A taxpayer has the best chance of avoiding this result if the taxpayer is not otherwise a real estate dealer and has not previously sold real estate to a controlled corporation to avoid ordinary income treatment. Of course, the taxpayer should delay all development, marketing and actual sales until the corporation owns the property.

[3] Installment Sales Issues

The sale of appreciated land to a controlled corporation is typically structured as an installment sale. Assuming that the installment provisions are effective for tax purposes, the taxpayer defers tax on the appreciation occurring before the sale.

The primary risk in these situations is that the Service will be effective in characterizing the taxpayer as a dealer. Dealers are generally precluded from using the installment method. n84 This means that, if the taxpayer is a dealer, all of the gain through the time of sale will be immediately taxable, and at ordinary rates to boot! Compounding the problem is the fact that the cash the taxpayer receives from the sale will probably be much less than the resulting tax liability. (Remember that the purchaser, a controlled corporation, will probably be able to give the seller only a promissory note and a small cash down payment.)

Even if the taxpayer is treated as an investor, so that installment sale treatment is allowed, an additional problem may result from the application of *IRC Section 453A(c)*. That section requires a taxpayer to pay interest on certain tax liabilities deferred because of the installment method. n85 In cases where the property is both valuable and has

significantly appreciated, this interest expense may wipe out much of the savings the taxpayer hopes to achieve by having the pre-sale appreciation taxed at capital, rather than ordinary, rates. n86

FOOTNOTES:

(n1)Footnote 74. This tack can, of course, also be used by an individual owner. Note that it is generally disadvantageous for a partnership to sell the property to another partnership which the first partnership's partners control. The Service may be able to use the aggregation theory to deny the taxpayers any benefit from the sale. *IRC 707(b)(2)* may present other problems.

(n2)Footnote 75. This approach does not work with depreciable real estate because *IRC 1239* taxes gain on this kind of property as ordinary income when sold to a related party. See Chapter 6 for a discussion.

(n3)Footnote 76. But see *Biedenharn Realty Co, Inc v US*, N 4, above, a case that did not involve a sale to a controlled corporation. There, the Service actually argued that the taxpayer should have used such a sale if it wanted to have its pre-dealer appreciation taxed as capital gain. The Fifth Circuit chided the Service, noting that the Service would then probably have attacked the sale on the basis of *Ackerman v Commr*, 335 F2d 521 , 64-2 USTC P 9670 (5th Cir 1964), discussed in N 83, below.

(n4)Footnote 77. *IRC 362(a)*.

(n5)Footnote 78. *Burr Oaks Corp v Commr*, 365 F2d 24, 66-2 USTC P 9506 (7th Cir 1966), cert den 385 US 1007 (1967) ; *Aqualane Shores, Inc v Commr*, 269 F2d 116 , 59-2 USTC P 9632 (5th Cir 1959).

(n6)Footnote 79. *Bradshaw v US*, 683 F2d 365 , 82-2 USTC P 9454 (Cl Ct. 1982); *Piedmont Corp v Commr*, 388 F2d 886 , 68-1 USTC P 9189 (4th Cir 1968). These cases, and the ones in the preceding note, are discussed in detail in Bird, "Planning for the Sale of Land to a Controlled Corporation," 21 *J Real Est Tax'n* 264 (1994).

(n7)Footnote 80. These four requirements come from *Bradshaw v US*, N 79, above.

(n8)Footnote 81. For cases where the Service was successful with this argument, see, eg, *Cappuccilli v Commr*, 668 F2d 138 , 82-1 USTC P 9118 (2nd Cir 1981); *Boyer v Commr*, 58 TC 316 (1972) ; *Engassar v Commr*, 28 TC 1173 (1967) ; *Lakin v Commr*, 249 F2d 781 , 58-1 USTC P 9120 , 52 AFTR 923 (4th Cir 1957) ; *Burgher v Campbell*, 244 F2d 863 , 57-2 USTC P 9740 , 51 AFTR 463 (5th Cir 1957) . For cases where the argument did not succeed, see, eg, *Bramblett v Commr*, 960 F2d 526 , 92-1 USTC P 50,252 (5th Cir 1992); *Ronhovde v Commr*, TC Memo 1967-243, 26 TCM 1251 (1967) ; *Gordy v Commr*, 36 TC 855 (1961) , acq 1964-2 CB 5 .

(n9)Footnote 82. See *Bramblett*, N 81, above, citing *National Carbide v Commr*, 336 US 422 (1949) , as applied by *Commr v Bollinger*, 485 US 340 (1988) .

(n10)Footnote 83. See, eg, *Ackerman v US*, N 74, above; *Brown v Commr*, 448 F2d 514 , 71-2 USTC P 9634 (10th Cir 1971); *Browne v US*, 356 F2d 546 , 66-1 USTC P 9243 (Ct Cl 1966). For a different result, favorable to the taxpayer, see *Bramblett*, N 81, above; *Cary v Commr*, TC Memo 1973-197, 32 TCM 913 (1973) . For additional discussion of this subject, see Bird, "Treatment of Capital Gain on Sale of Land to a Related Development Corporation," 22 *J Real Est Tax'n* 225 (1995).

(n11)Footnote 84. See *IRC 453(b)(2)(A)* and Chapter 7.

(n12)Footnote 85. This is discussed in greater detail in Chapter 7.

(n13)Footnote 86. Note that, if the corporation sells some or all of the property within two years after the purchase from the taxpayer, *IRC 453(e)* treats the amounts the corporation receives as if the corporation paid them to the taxpayer. The agreement between the taxpayer and the corporation should provide that, in these circumstances, the

corporation will pay sufficient cash to the taxpayer so that the taxpayer can satisfy tax liabilities arising from these sales.

CHAPTER 10 Dealer Versus Investor Status

1-10 Federal Taxes Affecting Real Estate § 10.05

§ 10.05 Intended Relief--IRC Section 1237

IRC Section 1237 deals with the type of gain to be realized on the sale of real property. It provides, in effect, a test for determining whether a taxpayer holds real property for sale in the ordinary course of business. It generally has limited application n87 but, when it does apply, the benefits can be significant. n88

The regulations contain perhaps the best analysis of the section's intent:

"This rule is to permit taxpayers qualifying under it to sell real estate from a single tract held for investment without the income being treated as ordinary income merely because of subdividing the tract or of active efforts to sell it." n89

[1] Benefits From Qualification

When a taxpayer meets the requirements of *IRC Section 1237*, partial capital gains treatment is available to the taxpayer. Classification of the gain under *IRC Section 1237* is somewhat complex, and is discussed at length below.

[2] Requirements for Qualification

There are several basic requirements for qualifying under this section: n90

- the taxpayer cannot be a C corporation; n91
- the taxpayer cannot have previously held the tract in question for sale to customers in the ordinary course of business;
- in the same tax year in which the sale occurs, the taxpayer cannot hold any other real property primarily for sale to customers in the ordinary course of business;
- the tract must have been held by the taxpayer for at least five years, except when acquired by inheritance; n92
- the seller cannot make any improvements to the property that will substantially enhance its value.

n93

As a practical matter, it is the final requirement which, in many cases, makes *IRC Section 1237* of extremely limited value.

[3] Qualification of the Taxpayer

For tax years beginning after 1996, the benefits of *IRC Section 1237* are available to taxpayers other than C corporations. Thus, S corporations may now take advantage of *IRC Section 1237*. n94 For tax years beginning before 1997, only noncorporate taxpayers could use *IRC Section 1237*. n95 Thus, S corporations were not able to take advantage of the provision for those years.

IRC Section 1237 is inapplicable to real estate dealers, n96 and thus it again puts at issue the distinction between a dealer and an investor. The taxpayer's status with respect to other real estate that he or she owns jointly or as a member of a partnership is considered in making the determination. n97 For purposes of determining whether a taxpayer owns other property for resale, the taxpayer is not generally considered to hold property owned by other family members, an estate or trust, or a corporation. n98

In determining whether a taxpayer is a dealer for purposes of *IRC Section 1237*, subdivision and selling activities are disregarded. n99 A taxpayer may be treated as a dealer under *IRC Section 1237*, however, if, in addition to the activities of subdividing and selling permitted under this section, there is other substantial evidence indicating dealer status. Such other evidence may include a taxpayer's activities in prior years in connection with the property, his intention at the time of acquisition and during his ownership of the property, or the establishment of a permanent real estate office. Other factors, such as holding a real estate dealer's license, selling other investment property, acting as a real estate salesperson, or merely owning other vacant property, will not result in dealer classification. However, any combination of the foregoing, taken in conjunction with the permitted activities with respect to the land in question, may result in dealer status. n100

NOTE:

It should be noted that failure to meet the requirements of *IRC Section 1237* does not prevent a taxpayer from attempting to qualify for capital gains treatment outside the provisions of *IRC Section 1237*. n101

[4] Qualification of the Property

IRC Section 1237 applies to sales of lots or parcels which are part of a real estate tract. The Service interprets this to preclude the applicability of *IRC Section 1237* upon the conversion of an apartment complex to a condominium because the realty interest sold is transferred exclusive of the land underlying the building. n102

The term "tract" is defined as a single piece of real property, or two or more pieces of real property, providing that they were contiguous at some time during the taxpayer's ownership. For purposes of determining whether the properties are contiguous, the interposition of a road, railroad, stream or similar property is ignored. n103

This section requires that the tract be held as an investment by the taxpayer for a period of five years or more, unless the property was acquired by inheritance. In the case of inherited property, the necessary holding period for capital gains treatment (more than 12 months) is mandated. n104 Inheritance does not include property acquired by survivorship in a joint tenancy, nor does inheritance appear to include the surviving spouse's one-half interest in community property. Generally, the usual holding period rules apply so that, in some cases, such as that of a gift, there is a tacking on of the prior owner's holding period.

[5] Requirement of No Substantial Improvements

IRC Section 1237 is inapplicable if the taxpayer or certain others make substantial improvements on the tract which substantially increase the value of the lot or parcel sold. n105 This is a dual test. The improvements must be substantial and, in addition, the improvements must substantially enhance the value of the parcel sold.

Under *IRC Section 1237(a)(2)*, improvements made by other parties may, in some cases, be considered to have been made by a taxpayer. These other parties include related interests, such as members of a taxpayer's family, a corporation more-than-50-percent-owned by a taxpayer (directly or constructively), an S corporation that included the taxpayer as a shareholder, or a partnership of which a taxpayer was a member at the time that the improvements were made. Also included are nonrelated interests, such as a lessee if the improvement takes the place of rental income, or a governmental body if the improvements constitute an addition to basis for the taxpayer. n106

Substantial improvements include the building of shopping centers, the construction of commercial or residential buildings, and the installation of hard-surface roads or utilities, such as sewers, water, gas or electric lines. n107

The building of temporary structures, surveying, filling, draining and clearing the tract, and the construction of all-weather access roads, including gravel roads where climatic conditions require, are not considered substantial improvements. n108

A special rule is available to neutralize the effect of substantial improvements when the tract has been held by the taxpayer for ten years or more. n109 In such cases, improvements consisting of the building or installation of water, sewer or drainage facilities or roads, including hard-surface roads, will not be considered substantial. This special rule has other conditions, however, in that the taxpayer must prove that without the improvement, the parcel sold would not be marketable at local prevailing prices for similar sites. Further, a taxpayer cannot claim any tax benefit for the cost of the improvement, either as an expense or as an addition to basis of the parcel sold. n110

A taxpayer must make an election, in accordance with regulations, to take advantage of this rule for property held at least 10 years. n111

PRACTICE TIP:

The election under *IRC Section 1237(b)(3)(C)* is binding only if the property would otherwise be considered property held primarily for sale to customers in the ordinary course of the taxpayer's trade or business under *IRC Section 1221(a)(1)*. Because that determination is generally a question of fact, a taxpayer should make a protective election under *IRC Section 1237(b)(3)(C)* if substantial improvements have been made to property held at least 10 years. The election would become effective only if there is a determination that sales do not qualify for capital gains treatment under *IRC Section 1221*. n112 However, if the tract was acquired by foreclosure, the improvements may be made under this special rule without establishing that they were necessary to market the lots at prevailing prices. In such cases, the cost of the improvements may be capitalized as part of the cost of the land. n113

As stated above, the relief provided by *IRC Section 1237* will only be inapplicable if the improvement, in addition to being in itself substantial, directly and substantially enhances the value of the parcel sold. n114 This will necessarily involve some interpretation, since the regulations state that: "Whether improvements have substantially increased the value of a lot depends upon the circumstances in each case." n115

The increase in value is measured by the difference between the value of the improved parcel and an appraisal of the value of the parcel before improvement. The regulations provide guidelines in that an increase of 10 percent or less in the value of the parcel because of the improvement is not considered substantial. An increase of more than 10 percent, while not automatically considered substantial, would require consideration of other relevant factors. n116

Other parcels in the tract that are unaffected by the improvement would still be eligible for the special provisions of *IRC Section 1237*. n117

[6] Classification of Gain Under *IRC Section 1237*

The classification of the gain on the sale of property which qualifies under *IRC Section 1237* depends on the number of parcels sold from a particular tract and, to some extent, on the timing of the sales. The gain on the first five parcels sold is capital gain, providing that no additional parcels are sold in the same taxable year. n118

If a sixth parcel is sold in the same taxable year, ordinary income results to the extent of 5 percent of the selling price of all parcels. If the sixth parcel is not sold until the next taxable year of the taxpayer, the gain on the first five parcels retains its character as capital gain. The gain on the sale of all additional parcels is still ordinary income to the extent of 5 percent of the selling price.

Example:

Selling price	\$.....20,000
Basis (cost of parcel)	10,000
Gross gain on sale	10,000
Expenses of sale	600
Net gain on sale	9,400
Ordinary income:	
Five percent of selling price (5% x \$20,000)	\$.....1,000
Less--Expenses of sale	600
Amount of gain treated as ordinary income	400
Amount of gain treated as capital gain	\$.....9,000

In the computation of the amount of ordinary income, the section provides a benefit in that expenses of sale of the parcels are to be deducted first from the ordinary income portion of the gain. n119 Any remainder of these expenses must be applied as a reduction of the capital gain.

A taxpayer presumably may have more than one tract that qualifies under *IRC Section 1237*. Since the classification of the gain depends on the number of parcels sold from the same tract, the definition of a tract, as discussed previously, is of utmost significance.

[7] Limited Application of *IRC Section 1237*

Though generally limited in application, *IRC Section 1237* can be of substantial benefit to the investor faced with ordinary income treatment on certain property subdivided for sale. As indicated, the section transforms what would otherwise be ordinary income into capital gains. Care must be taken in the section's application, however, as no identifiable guideline is provided for qualification as an investor.

IRC Section 1237 points out the difficulties of legislating in the area of dealer versus investor. Of far greater benefit would be a more exact and liberal interpretation by the courts or the Treasury Department of the definition of an "investor" in real estate.

FOOTNOTES:

CHAPTER 11 Subdivision and Tract Development

1-11 Federal Taxes Affecting Real Estate § 11.01

§ 11.01 An Overview of Tax Planning for the Developer

The main tax problem tract developers face is how to allocate capitalizable costs to each unit so that income from sales can be properly determined. This chapter discusses various allocation techniques and explains how the developer can use them to its full advantage.

A more general tax concern for the tract developer is the timing of income and expenses from the development. Most developers are interested in deferring the recognition of taxable income.

The early stages of a real estate development project will often produce losses as a result of expenses that are currently deductible. (The extent to which these expenses are currently deductible is, in most cases, dependent on the application of the uniform capitalization rules, which are discussed in Chapter 3.) No income is generated because, in most developments, the creation and sale of a marketable asset requires more than one accounting period. However, the developer may consider selling some parcels of land in a raw state so that this gain absorbs the currently deductible expenses; this approach will also provide cash to finance improvements.

The early tax losses can be a valuable financial benefit which offsets ordinary income from the developer's other activities or investments. The extent to which the developer can do this will, to a large extent, depend on the application of the passive loss limitation rules. (These are discussed in Chapter 13.) To a lesser extent, loss carryover periods may create problems for a developer that expects losses to continue for such an extended period of time that the loss carryovers may expire before the anticipated profits are received. Detailed tax projections in these circumstances may highlight opportunities for timing income and expenses to produce the best tax result.

Tax considerations also come into play when a developer determines that it will not use certain lands. As discussed in *Section 11.04*, below, the developer may realize tax savings by making a charitable contribution, an abandonment, or a dedication of property to a governmental authority.

CHAPTER 11 Subdivision and Tract Development

1-11 Federal Taxes Affecting Real Estate § 11.02

§ 11.02 Allocation of Land Costs

In a land development project, whether large or small, one of the critical elements from a tax standpoint is the allocation of the land development costs to different parcels within the project. The failure of many promising development ventures can be traced to defective cost allocations. A carefully planned cost allocation realistically reports income or loss and conserves vital cash flow through the proper payment or deferral of income taxes.

[1] General Principles of Allocation

After the developer has determined its land cost (see discussion in Chapter 2), the developer must apportion this cost among the several parcels in the development. The Regulations require that the cost basis be "equitably apportioned" among all parcels. n1 The developer cannot postpone the realization of gain or loss on the sale of individual parcels by arguing that the developer is first entitled to a tax-free recovery of the entire property's basis. n2

While "equitably apportioned" is a vague concept, some general guidelines do exist. "Equitable" does not necessarily mean "ratable;" that is, if the price of 100 acres is \$100,000, each acre would not necessarily carry a \$1,000 cost. n3 If some acres are obviously more valuable than others, they should receive a greater cost basis. n4 On the other hand, the taxpayer should refrain from unrealistic allocations because, if it fails the "equitable test," the Service has authority to make the allocation for the developer. n5

To ensure equitable apportionment, the Tax Court has generally required that the allocation be made at the time of purchase rather than at the time of sale. n6 This rule is based on the premise that the cost of an item is determined at the time of its acquisition, and should not fluctuate. In addition, this approach prevents the taxpayer from making "self-serving" allocations in years after the acquisition.

A developer can easily make an incorrect initial allocation, or there may be unanticipated subsequent events that affect the fairness of the allocation. There is some authority supporting a reallocation if the taxpayer erred when making the initial allocation. n7 Unanticipated subsequent events, however, are unlikely to permit the taxpayer to reallocate basis. n8

The taxpayer's allocation of its land cost usually has another effect: The allocation typically controls the legal fees and other indirect capitalized expenses apportioned to each parcel. n9

[2] Land Cost Allocation Techniques

The size and complexity of a project, the nature of the land, and the period of development all enter into deciding which allocation method should be used. Sometimes, in a large development, a combination of one or more methods is proper. The following sections discuss some of the more widely used basic techniques of allocating land costs.

[a] Acreage Method

The acreage method is the simplest and easiest allocation method to apply. The total cost of the property is allocated to the various parcels, either on a square-footage basis or on the basis of the number of equal-sized lots or parcels. This method is used when it is not shown that any particular part or parcel of the property is any more desirable than any other portion. n10

This allocation may be used in a development where all lots sell in the same price range and no land will be set aside for special purposes. In other situations, this method may result in a distortion of profits and, thus, cannot be used. For instance, a block of land may be hilly, with certain portions unusable or of marginal use. To allocate costs on a pro rata basis would result in allocating cost basis to land that may never be sold, or sold at a loss or profit that would be disproportionate to other parcels sold.

[b] Relative-Value Method

When evidence clearly establishes that certain portions of a tract are more desirable and more valuable than others, the allocation of cost should be made on the basis of relative value. n11 Relative value is computed by taking into account factors such as topography, geology, location, desirable features, natural landscape and proximity to improvements.

The developer has the burden of supporting its relative values, but it can rely on several sources. These include the assessed valuation by the local property tax assessor or by expert testimony, n12 mortgage release values determined by the secured creditor, offers from willing purchasers, and valuations by independent appraisers. On occasion, greater weight to support relative market values has been granted to actual offers received from willing buyers rather than to appraisals or mortgage release values. n13

In housing developments, corner lots and sites with good views generally are more valuable than others. Thus, a builder is justified in allocating greater costs to them. The accessibility and contour of the land must also be considered. Hilly or rough land that requires heavy grading and other developmental costs to convert the lots into a salable condition creates special problems. Generally, a developer should allocate a lower cost to land that requires high development costs, such as grading, filling, retaining walls, drainage facilities, etc. To do otherwise would distort the relative profit on these lots as compared with those without these costs.

On larger tracts, the projected use of a land parcel may affect the cost allocations. Such uses are varied and might include residential, commercial and industrial development; schools, churches and other public buildings; and community areas, such as parks, recreational facilities, golf courses, etc. A land development project may have one or more of these uses, each of which has a different relative value and each of which should carry a different cost. For instance, land set aside for single-family dwellings may have a greater value than land used for commercial development, or vice versa.

[c] Selling-Price Method

In limited circumstances, courts have considered the selling price of land as a basis of allocation, particularly when another allocation method cannot be well documented. Thus, the selling price may be used to allocate basis in a case where nothing occurred to change the relative values of two parcels between the dates of acquisition and sale. n14

[d] Unit Allocation Method

The unit allocation method is a modified form of the relative-value method. This method is especially effective in allocating improvement costs. It is explained and illustrated in *Section 11.03[3][a], below*.

[e] Discounting Present Value Method

This method takes into account the time value of money and the period in which the various components of a development are to be improved and sold. For a project that spans a number of years, a present-value concept of allocating land cost has been developed for financial accounting that could have application for tax purposes as well.

Discounting is a technique that can only be used in conjunction with one of the cost allocation methods previously discussed. The basic theory is that the sooner a parcel is developed and sold, the sooner the developer realizes the return of its capital and profit, and the sooner these proceeds can be reinvested. Financial resources and market conditions generally prevent the development of the entire project at one time; therefore, since the earlier-developed parcels help finance the later ones, the cash flow generated from the first sales is more valuable and should be shielded by a greater portion of the land costs. The result represents a conservative accounting technique which recognizes the time value of money and the inherent risk factor in normal tract development.

Use of the discounting method is not specifically authorized by the Code or the Regulations. However, the proper application of this method appears to produce an "equitably apportioned land cost allocation." n15

[f] Hybrid Methods

Many valid allocations must rely on a mixture of methods to match costs effectively with revenues. For example, the cost of an entire development could be allocated to several parcels according to a unit allocation method. Then, within each parcel, an acreage method could be used to allocate costs to several tracts. Once the tract cost is determined, the allocation to individual lots could be based on a relative-value method.

[3] Complications in Land Cost Allocation

Many special situations can arise that make land cost allocation difficult. The following sections discuss common complications:

[a] Step Purchases

If land for development is purchased in several steps at different prices, should each parcel bear its own cost or should all acquisition costs be lumped together and reallocated by one of the recognized methods? This problem requires analysis of the reasons for the differences in price. If several parcels are integrated into one development, the Tax Court n16 seems to feel that the costs should be lumped together and allocated as if the parcels had not been separately acquired. No standards for determining whether a given project is integrated have been delineated. Presumably, if the facilities and land planning are interdependent, the project is integrated. n17

If the price differential is caused by the peculiarities in the vendor's bargaining position, the difference in cost should be equitably apportioned throughout the entire development. Thus, if a landowner knows that the developer needs the landowner's land for access to parcels already purchased by the developer and is able to ask a premium on the sales price, the premium is properly allocable throughout the entire development. n18

[b] Unusable Land

When raw land is acquired in a large package, some portions may not be marketable. For example, sloping terrain,

marshy or rocky areas, or poor drainage may physically prevent development. Further, the marketing of other parcels may not be permitted by local law. Often, the developer will be required to set aside lots for schools, churches and other public buildings in order to receive approval for its subdivision map. In addition, the project's master plan may be required to provide for open areas or green belts.

Financial accounting generally requires allocation of the cost of the unusable land to the land to be developed and sold. For tax purposes, this land may be treated in several different ways.

If the developer maintains control of the unusable land, case law may disallow allocation of the cost to parcels currently being sold. n19 In one specific case, a developer owned an island but only developed lots around the shoreline; the center of the island was used as a park and recreational area. The taxpayer was required to carry the park area at its cost, which was determined by the relative-value method. The court indicated that the cost of unmarketed land can only be allocated if it is "permanently beyond the possibility of sale and gain." n20

However, if the developer can show that the land will never be developed, an allocation of the cost to the marketable lots may be allowed. In any event, the allocation should be clearly supported since the Service will not allow an allocation of unused land costs to current sales as a means of shifting income to future periods when the land is sold.

The more dependable method of increasing the cost of current sales is an irrevocable transfer of unusable property. n21 If this is not required by local subdivision law, a voluntary dedication to public use will achieve the same result. Presumably, the cost of dedicated land would be required to be allocated to marketable land (see *Section 11.04*, below).

Another tactic is abandonment. If the developer is willing to relinquish all proprietary rights to the property, the developer can achieve a current ordinary deduction as an abandonment loss, but the developer must establish a supportable cost basis. n22 The problem is that, if the developer is willing to abandon property, its basis may be difficult to establish, especially by a relative-value method.

Since the validity and timing of the abandonment depend upon the intent of the taxpayer, a quitclaim deed can avoid disputes with the Service. This, of course, presumes that the party to whom the land will be transferred will accept the quitclaim.

Abandonment of "unusable" land is not always advisable. Although the land cannot be developed as part of the developer's project, it still may have value to another party for another purpose. If that value is significant, the land should be sold rather than abandoned.

[c] Lower of Cost or Market

The developer may fully intend to develop a parcel of land and may even have begun subdivision work when it becomes apparent that further development would not be economical. Sound financial accounting treats this land, either developed or undeveloped, as inventory which should be valued at the lower of cost or market. However, cases and Service pronouncements prohibit the use of inventory accounting for real estate, thus barring a write down of land cost to a lower market value. n23

The courts have relied on three rationales for denying a write down of land cost:

- (1) The tax law requires an inventory accounting practice that "conform[s] as nearly as may be to the best accounting practice in the trade or business." n24 Since 1928, it has been settled that real estate cannot be accounted for under the tax law's usual inventory rules (now lodged in Section 471). n25
- (2) Annual revaluation of real estate is impractical since there are neither common markets nor frequent

transactions to aid in determining market price.

(3) All land is unique and one property does not necessarily establish the value of another property.

[d] Capital Gain Property

Not all the land in a single project will necessarily be held for sale to the public. The developer may designate some portion as investment property or property used in a trade or business. ⁿ²⁶ Of course, property held for investment or as property used in a trade or business may receive favorable capital gain treatment under *IRC Section 1222* or *Section 1231*.

For example, a taxpayer may be able to achieve Section 1231 treatment by holding property for lease as a commercial center or as an industrial park. The taxpayer can argue that this land is held in the trade or business of leasing property, and therefore is eligible for capital gain or ordinary loss treatment under Section 1231. In any event, support for this treatment should be established as soon as possible by a clear demarcation of this type of property: that is, the taxpayer should properly designate this property on the appropriate books and records, zoning, applications, and the overall master plan for the development.

CHAPTER 11 Subdivision and Tract Development

1-11 Federal Taxes Affecting Real Estate § 11.03

§ 11.03 Allocation of Improvement Costs

Although the problems involved in allocating improvement costs to lots are similar in principle to those involving land costs, they do involve some unique issues. The following sections discuss some of these issues.

[1] Engineering, Planning and Legal Costs and Interest Expense

When a builder incurs engineering and surveying costs on an overall master plan for the development of a particular project, or legal fees associated with the project, the expenditures must be capitalized and allocated in the same fashion as the builder's basis in the land. ⁿ²⁷ Costs of engineering and subdivision planning allocable to specific projects or parcels must be allocated to these projects. Occasionally, certain specific planning costs will overlap two or more projects, in which case the costs must be allocated on some reasonable basis, such as acreage, front footage, or some other equitable method. The method need not be the same as that used to allocate land costs.

Interest expense which the taxpayer incurs in connection with the development of the project is subject to the uniform capitalization (UNICAP) rules provided in *IRC Section 263A(f)* and the regulations under that Section. These are discussed in Chapter 3.

[2] Estimation of Future Costs

Estimating the future cost of completing improvements for a tract is one of the most critical problems of successful real estate development planning. These costs are often substantial and extend over a period of several years, making this cost allocation difficult to anticipate successfully. Since many of the lots may be sold before the improvements are completed, failure to anticipate all estimated costs can result in several adverse consequences. First, if the sales price is based on estimated cost plus a reasonable profit, the sales price could be unrealistic when related to actual costs. In other words, the actual costs might eat up all or most of the anticipated profit. Second, an inadequate deduction for cost of sales would be taken on the tax return, and the advantage of deferring income tax liabilities would be lost. Third, lack of income tax deferral would unfavorably alter the development's projected cash flow.

Since the accurate determination of future costs is so important, most large developers continually review and update the cost pool through engineering and cost studies. Sound accounting and tax practice require that these be updated at least annually. ⁿ²⁸

Historically, developers of residential property were allowed to estimate the cost of future common improvements they were obligated to make with respect to property that had been sold and to include an allocable share of those estimated costs in the property's basis. Case law originally established the developer's ability to include these estimated future costs in basis. n29 The IRS accepted this approach, subject to certain procedural requirements, in Mimeographed Letter 4027 n30 and then in *Revenue Procedure 75-25* . n31

The situation changed in 1984 when Congress enacted the economic performance rules in *IRC Section 461(h)*. Although most commentators felt that the statutory provision was inapplicable to the estimated costs of future improvements, the preamble to the proposed Section 461(h) regulations, issued June 7, 1990, addressed the fate of *Revenue Procedure 75-25* as follows:

"[B]ecause economic performance must occur in order for a liability to be taken into account, the estimated cost of future improvements to subdivided real estate may not be added to the basis of lots sold if economic performance has not occurred with respect to those costs. Therefore, the statute and regulations override *Rev. Proc. 75-25* ." n32

In response to a barrage of adverse taxpayer comments and political pressure concerning *Revenue Procedure 75-25* , the Service issued Notice91-4 , n33 which provided significant relief to developers who would have been adversely affected by the proposed revocation of *Revenue Procedure 75-25* . In general, the Notice grandfathered taxpayers who had elected to use *Revenue Procedure 75-25* and allowed taxpayers to elect it on properties currently under development. The Section 461(h) rules would not apply to the estimated costs of future improvements for those taxpayers who had received IRS permission to use *Revenue Procedure 75-25* . Further, *Revenue Procedure 75-25* would continue to be available to taxpayers until further guidance was issued under Section 461(h).

When the regulations under Section 461(h) were finalized on April 10, 1992, the IRS concurrently issued *Revenue Procedure 92-29* to provide guidance in this area. n34 This revenue procedure allows developers to elect to allocate estimated future costs using the "alternative cost method." As discussed below, this method is somewhat less favorable than the method permitted by *Revenue Procedure 75-25* , but more favorable than the approach the Service took in the proposed regulations under Section 461(h).

[a] Overview of the Alternative Cost Method

By way of introduction to the alternative cost method, consider the following example:

Example:

A developer is building a subdivision with 10 homes of equal value. As part of the subdivision, the developer is contractually obligated to construct a tennis court and a swimming pool that will benefit all 10 of the homes equally. The tennis court and swimming pool will each cost \$250,000 to build (including the cost of the underlying land). The ownership of these improvements ultimately will be transferred upon completion to the home buyers. The following events occur:

	Number of Homes Sold	Amount Expended on Tennis Court During the Year	Amount Expended on Pool During the Year	Total Amount Expended on Common Improvements During the Year
Year 1	4	\$.....50,000	\$.....100,000	\$.....150,000
Year 2	4	\$.....175,000	\$.....100,000	\$.....275,000
Year 3	2	\$.....25,000	\$.....50,000	\$.....75,000

1-11 Federal Taxes Affecting Real Estate § 11.03

		0	0	0
10	\$.....	250,000	\$.....250,000	\$.....500,000

Pre-Section 461(h) Treatment. Before the enactment of Section 461(h), the developer would have applied a ratable share of the estimated cost of the anticipated common improvements (including estimated future costs) to the basis of each of the homes sold. As a result, the additional basis created in each year would have been as follows:

Year 1:	4 homes sold x (\$500,000/10) =	\$.....200,000
Year 2:	4 homes sold x (\$500,000/10) =	\$.....200,000
Year 3:	2 homes sold x (\$500,000/10) =	\$.....100,000
		\$.....500,000

Thus, the taxpayer would be able to increase its basis in the homes sold in Year 1 by \$200,000, even though it had only spent \$150,000 on the common improvements by the end of that year.

Treatment under Section 461(h). Under the general economic performance rules of Section 461(h), a developer can only take into account the costs of common improvements as those costs actually are incurred. Thus, Section 461(h) would prevent the developer in the example above from taking into account anything more than the \$150,000 of actual common improvement construction costs incurred in Year 1. This \$150,000 would be allocated among all 10 homes, rather than just those homes sold. This would increase the basis of each of the 10 homes by \$15,000. Thus, the developer could increase his basis by only \$60,000 (4 homes sold x \$15,000) even though the developer actually spent \$150,000 on the improvements. n35

If the taxpayer does not elect the alternative cost method, this is the tax treatment that applies. Since Section 461(h) treatment typically results in the developer's recognizing income earlier than under the alternative cost method, most taxpayers make the election described immediately below.

Treatment under the alternative cost method. If the taxpayer elects the alternative cost method, *Revenue Procedure 92-29* requires it to first determine each unit's allocable share of total estimated common improvement costs. This amount is the same cost allocation that would have been made under pre-Section 461(h) law (i.e., \$50,000 per unit as in the example above). *Revenue Procedure 92-29* then modifies this result by limiting the amount of cost taken into account in any particular year to the *total* cost for which economic performance has occurred (and which has not yet been allocated to property sold in a previous taxable year). n36 This limitation is referred to as "the alternative cost limitation."

Using the facts of the example above, *Revenue Procedure 92-29* would allow the following costs to be included in the basis of property sold: n37

1-11 Federal Taxes Affecting Real Estate § 11.03

	Allocable Share of Costs	Total Section 461(h) Costs	Costs Added to Bases of Homes Sold	
Year 1: 4 homes sold				
x (\$500,000/10) =	\$..... 200,000	\$.....150,0 00	x \$.....150,00 0	
Year 2: 4 homes sold				
x (\$500,000/10) =	\$..... 200,000	\$.....275,0 00	\$.....250,00 0	x
Year 3: 2 homes sold				
x(\$500,000/10) =	\$..... 100,000	\$.....100,0 00	\$.....100,00 0	**
	\$..... 500,000		\$.....500,00 0	
	_____		_____	
	_____		_____	
	_____		_____	
	_____		_____	

*Basis allocated to the 8 homes sold cannot exceed the pro rata share of the common costs (i.e., 8 x \$50,000 = \$400,000). Thus, even though a total of \$425,000 (\$150,000 + \$275,000) has been spent on common improvements by the end of Year 2, only \$250,000 of the \$275,000 in Year 2 costs may be allocated to the homes sold in Year 2.

**\$25,000 carryover of excess Section 461(h) costs from Year 2 plus \$75,000 of current cost from Year 3.

The Revenue Procedure 92-29 approach achieves a compromise result that is consistent with sound cost accounting principles and is within the parameters of the economic performance limitations. Any other result, such as assigning incurred costs ratably among all units, would result in mismatching income and expenses and, accordingly, would distort income.

[b] Definition of "Common Improvements"

Under the alternative cost method, a developer is allowed to include in the basis of property sold an "allocable share" of the "estimated cost of common improvements." n38 A "common improvement" is defined as any real property or real property improvement that benefits two or more properties that are separately held for sale by a developer. n39 Moreover, the developer must be contractually obligated or required by law to provide the common improvement, and the cost of the common improvement must not be properly recoverable through depreciation by the developer. *Revenue Procedure 92-29* specifically lists "streets, sidewalks, sewerlines, playgrounds, clubhouses, tennis courts, and swimming pools" as examples of common improvements. n40 A court has held that future period interest expense related to the construction of common improvements is not a common improvement and cannot be allocated under the alternative cost method. Instead, the statutory interest capitalization rule of *IRC § 263A(f)* applies and prevents allocation of that interest to a developer's costs bases in lots related to the common improvement. n40.1

In establishing the framework for accounting for future improvement costs, the Service faced the significant issue of applying the alternative cost limitation to separate common improvements. Thankfully, *Revenue Procedure 92-29* takes a workable and practical approach by applying the alternative cost limitation on a "project-by-project" basis without regard to the number of separate property improvements or the need to identify each common element separately. The

revenue procedure allows taxpayers to determine what constitutes a project by allowing them to "use any reasonable method to define a project in light of the common improvements to be provided." n41

[c] Requirements for Using the Alternative Cost Method

Revenue Procedure 92-29 set forth five requirements for using the alternative cost method: n42

(1) A developer must be required by contract or law n43 to provide the common improvement, and the cost of the improvement must not be recoverable by the developer through depreciation deductions. n44 It should be noted that if one other than the developer owns the improvement, the developer *may* use the alternative cost method. In one case, a court allowed a developer to use the alternative cost method with respect to the costs of constructing a golf course clubhouse, the costs of which were allocated to residential lots in the adjoining golf course residential community. Although the costs of the clubhouse improvements were admittedly depreciable, the developer had transferred its ownership interest in the clubhouse to a nonprofit membership corporation that would run the golf course. Thus, the costs were not depreciable by the developer. Accordingly, the Tax Court allowed the taxpayer to allocate a proportionate amount of the costs to each residential lot. n44.1

(2) A developer must consent to an extension of the statute of limitations on the assessment of a deficiency with respect to the use of the alternative cost method on a project-by-project basis. The statute of limitations extension is limited to the assessment of deficiencies attributable to the use of the alternative cost method and to the project covered by the consent. Additionally, with respect to a partnership that is subject to the unified audit and litigation provisions, the consent only needs to be filed by the tax matters partner on behalf of the partnership and not by each partner.

(3) To receive automatic consent n45 under *Revenue Procedure 92-29*, a developer must file a request, on a project-by-project basis, with the district director by the due date of the developer's timely filed tax return for the year in which the first benefited property is sold. n46 This request must contain a detailed description of the project and the types of improvements being made, as well as other related information. A copy of the request also must be included in the developer's timely filed tax return for that year. n47 The IRS may grant extensions of time to file requests under *Revenue Procedure 92-29*. n47.1

(4) An annual statement must be filed with the district director and attached to the taxpayer's tax return for each year during which the taxpayer is using the alternative cost method. The statement must contain the information enumerated in *Revenue Procedure 92-29*. n48 This information is similar to that required to be filed with the original request to use the alternative cost method.

(5) If the taxpayer wishes to continue to use the alternative cost method for a period that exceeds the extension of the statute of limitations, a supplemental request with a new extension of the statute of limitations must be filed for each project.

[d] Methods for Estimating Future Costs

The mechanics of *Revenue Procedure 92-29* first require a taxpayer to determine a property's allocable share of the estimated future costs of common improvements. The two methods available to estimate the amount of anticipated common improvement costs are discussed below.

[i] Ten-Taxable Years Method

Under the "ten-taxable years" method, the taxpayer can estimate the common improvement costs it will incur during the

ten succeeding taxable years. n49 Any costs expected to be incurred beyond this horizon are disregarded in computing total estimated costs of common improvements. This approach contemplates that the amount of anticipated costs may vary in each subsequent year due to revised estimates. A developer may not adjust the computation for any prior taxable years after filing the income tax return for that prior year, but may make the correction for the year in which the revised estimate is determined. n50

Example:

In the example in § 11.03[2][a], above, assume that in Year 2 the developer redetermines that the total cost to complete construction of both the tennis court and the swimming pool will be \$110,000 greater, in Year 3, than anticipated. Thus, the total cost of the project will be \$610,000 instead of \$500,000. The amount of the common improvement costs included in the basis of the units sold in Year 1 would not be recomputed. The developer would, instead, redetermine the allocable share of costs to those homes sold in Years 2 and 3 based on the revised projections.

[ii] Unlimited Taxable Years Method

A developer may request the Service to disregard the ten taxable year horizon in determining the anticipated future common improvement costs. To do so, the developer must file a ruling request with the IRS National Office within 30 days after the close of the tax year in which the first property benefited by the common improvements is sold. This procedure allows the developer of a very long-term project to match total revenue and expenses more accurately. *Revenue Procedure 92-29* contemplates that a developer ordinarily will be granted approval upon showing that the estimates are accurate and that the developer is likely to provide the improvements. n51

[iii] Improvements Not Completed by Time Required

In some instances a developer will not complete improvements within the period covered by the Service's consent. In these cases, the developer must submit a "supplemental request," substantiating:

- (1) that, for a valid reason, it was unable to complete all of the common improvements it is contractually obligated or required by law to provide within the period covered by the consent;
- (2) that it continues to be contractually obligated or required by law to provide the common improvements; and
- (3) that it has, to date, complied with the requirements of *Revenue Procedure 92-29*. n52

[e] Interaction with Interest Capitalization Regulations

Revenue Procedure 92-29 specifically states that the alternative cost method does not have any impact on the application of the general capitalization rules under *IRC Section 263A*: "Thus, common improvement costs incurred under section 461(h) of the Code are allocated among the benefitted properties and may provide the basis for additional computations (e.g., interest capitalization under section 263A(f))." n53 Applying this statute, a case has held that future period interest expense related to the construction of common improvements is not a common improvement and cannot be allocated under the alternative cost method to a developer's costs bases in lots related to the common improvement. n53.1

One situation considered in the regulations under Section 263A(f) involves the interaction of the capitalization rules and *Revenue Procedure 92-29* with respect to unsold units. The regulations state that the revenue procedure does not affect the determination of accumulated production expenditures of unsold units even if the costs of common improvements for those unsold units have been used to determine the alternative cost limitation for purposes of including common improvement costs in the basis of sold units. n54

[f] Taxpayers Who May Use Revenue Procedure 92-29

The application of *Revenue Procedure 92-29* appears to be limited strictly to "developers." (The revenue procedure uses this term to define those taxpayers who can avail themselves of the alternative cost method of accounting.) This may represent a change in the Service's view, since *Revenue Procedure 75-25* focused on a "subdivider of real estate" and Mimeographed Letter 4027 focused on the "vendor" or "taxpayer." The term "developer" may encompass a broader group of taxpayers than the term "subdivider of real estate."

The application of *Revenue Procedure 92-29* also is limited specifically to real property or real property improvements that benefit "two or more properties that are separately held for sale by a developer." n55 The two-property limitation is appropriate because *Revenue Procedure 92-29* is merely an allocation methodology. It does not allow any deductions in excess of what would otherwise be allowable under Section 461(h) principles; it merely establishes a framework for allocating those costs among various properties. Therefore, if there were only a single property, there would be no change in the amount of costs incurred with respect to that property even if *Revenue Procedure 92-29* did apply. However, this rule may prevent a taxpayer from classifying a single property as a "project" for purposes of applying the alternative cost method.

[g] Election Procedures**[i] Costs Determined Using the Ten-Taxable Year Horizon**

A developer willing to determine the estimated cost of common improvements using the ten-taxable year horizon uses an "automatic procedure" for the election. n56 The developer files a request with the District Director for the district in which is located the legal residence or principal place of business of the person required to make the return (assuming the developer is an individual, estate or trust), or the district in which is located the principal place of business or the principal office or agency (if the developer is a corporation or partnership). The request must be filed on or before the due date of the developer's original federal income tax return (determined with regard to extensions of time) for the taxable year in which the first benefited property in the project is sold.

The request must include information described in Section 6.04 of *Revenue Procedure 92-29* and a consent extending the period of limitation on the assessment of income tax. n57 The developer must also attach a copy of the request to its timely filed (determined with regard to extensions of time) original federal income tax return for the taxable year. No user fee is required.

The revenue procedure indicates that the Commissioner grants consent to a developer complying with this automatic procedure and the other applicable conditions of *Revenue Procedure 92-29*.

[iii] Costs Determined Without Regard to the Ten-Taxable Year Horizon

A developer interested in determining the estimated cost of future common improvements without regard to the ten-taxable year horizon must file a private letter ruling request. n58 The request must be filed within 30 days after the close of the taxable year in which the first benefited property in the project is sold. The request must include the same information and consent for extending the period of limitation as with the automatic application. In this case, however, a user fee is required for the request.

Revenue Procedure 92-29 indicates that a developer will ordinarily be granted consent to its ruling request if it can demonstrate that:

- (1) it is contractually obligated or required by law to provide the common improvements;

(2) its estimate of the cost of common improvements is accurate; and

(3) it is likely to provide the common improvements. n59

[h] Effective Date and Transition Rules

Revenue Procedure 92-29 generally is effective for sales of property after December 31, 1992. n60 However, generous transition rules allow taxpayers to adopt *Revenue Procedure 92-29* for taxable years including January 1, 1991, 1992, or 1993, regardless of whether benefited property from the project had been previously sold. In general, a taxpayer may use the alternative cost method under this transition rule by filing a request with the district director by the due date of its timely filed original tax return for the appropriate year and attaching a copy of the request to that year's tax return. A taxpayer adopting *Revenue Procedure 92-29* for a taxable year for which the tax return has already been filed must file a request with the district director on or before June 29, 1993, and attach a copy of the request to an amended tax return filed by June 29, 1993. The change to the alternative cost method of accounting must be implemented using the cut-off method. n61

Taxpayers who have received permission to use *Revenue Procedure 75-25* may continue to use *Revenue Procedure 75-25* for sales after December 31, 1992, that are covered by that consent. n62

[3] Off-Site Improvement Costs

The sales price of each subdivided parcel must bear a proportionate share of the cost of off-site improvements. These improvements (sometimes called off-tract improvements) are major expenditures that are made because they are required by state or local subdivision law or because the developer feels that the improvement will benefit the entire project and, therefore, enhance its marketability. For example, the developer may be required to build main roads, access roads, bridges and main utility lines (including electricity, water, sewage, storm drains and communications). To offer competitive housing projects, many developers also are providing parks, golf courses, country clubs, artificial lakes and a variety of other facilities.

Classifying an expenditure as an off-site improvement means that it will be allocated to the cost of all lots in the parcel instead of to only a portion of the lots or none at all. n63 Several standards are used to determine if an expenditure is an off-site improvement. n64 Often, an off-site improvement will constitute a capital expenditure whose cost is not recoverable through depreciation. n65 Because off-site improvements typically do not generate revenue, the only way of recovering the cost is to include proportionate amounts in the cost of sales of lots.

In one case, a developer was required to build a shelter on a park site to obtain approval of his subdivision plot. The improvement added no value to the remaining lots, so the developer treated the cost of the shelter as a current business expense. However, the Tax Court held that the construction of the shelter was a "capital outlay to be identified with the other costs of the subdivision project." Consequently, the classification of expenditures as off-site improvements depends on the manner in which their costs will be recovered rather than their effects on marketability. n66

If an off-site improvement is designed as a necessary part of the tract development but at the same time produces revenues, the legal title may affect the developer's right to include all or a portion of the cost as a current cost of sale. For example, occasionally a developer will construct and operate a utility system (e.g., a power plant or sewage treatment facility) which generates net income when the property is developed. If the developer permanently retains ownership of the system, the cost of this system must be depreciated rather than allocated to the cost of the lots sold. However, the retention of merely tenuous rights that have no practical value, such as a possibility of reverter, will not be interpreted as a retention of full ownership and control, and the cost of the utility can be allocated to the cost of the lots. n67

A developer can ensure a utility-cost allocation by divesting itself of ownership of the system. In a particular case, a developing corporation was unable to solicit the assistance of the local authorities, and the utility was built and transferred to an operating company which issued trust deeds granting to the homeowners rights and obligations over the system. The Tax Court held that the system's pro rata cost was includable in the basis of each house. n68

Occasionally, local authorities will agree to construct a utility and finance the construction by selling redeemable bonds to the developer as a condition of granting subdivision approval. If the purchase of the bonds is required and they are not marketable, their cost can be allocated as a cost of the development. n69

A developer may contract with a utility company to install a system where the developer finances construction by making unconditional payments. Even though the developer has the right to receive a percentage of the revenues in the form of either homeowner connection charges or a fraction of operating income, one case permitted the allocation of the system's cost to subdivided lots. n70 Two facts were important: first, the developer was not entitled to revenue in excess of his cost; second, the developer never had legal title to the utility.

Sometimes utility-refund payments will be guaranteed under local law and paid over a 15-to 25-year period. Since the risk element is sharply reduced or even eliminated in such a case, the Service is in a position to argue that none of the cost should be allocated. However, because the refunds will be received over an extended period of time, there is a strong argument to be made that the developer should be able to charge to lots sold at least the amount of the discount between face value and fair market value of the refund payments.

When a developer cannot include off-site improvement costs in the cost of sales, it should consider depreciating the improvements. Frequently, the Service will argue that the improvements merely enhance the value of the raw land, which is not depreciable. However, developers have been successful in depreciating private roads, landscaping, shrubbery, canals, waterways and lagoons. n71

The cost of off-site improvements may be allocated to the cost of land sales by the same method used to allocate land costs, although this practice could produce inaccurate results. The best method of allocation depends on the special circumstances confronting each developer. In addition to the methods of allocating land costs discussed above, other methods are particularly applicable to allocations of off-site improvement costs. Some of these methods are:

- (1) the unit allocation method;
- (2) the benefit allocation method; and
- (3) hybrid allocation methods.

[a] Unit Allocation Method

The unit allocation method is based on the economic desirability of the terrain. The development is divided into several zones, according to location and homogeneity. For example, a hilly area could make up one zone, a flat area another zone, and a lakeside area still another. Each zone is rated according to the average number of equivalent economic units that each acre with the zone will yield, such as the number of houses or lots that can be developed on each acre. The two most important factors in the rating are geology and slope.

The number of acres in each zone is then multiplied by the applicable rating. The unit allocation percentage is determined by dividing this result by the total rating of the development (i.e., the total number of houses or lots within the development.) Off-site improvements then are allocated according to the percentage components of each zone.

Example:

A developer spends \$2 million to construct a water plant system which improves a 445-acre parcel on which he will construct single-family homes. One zone in the parcel (Zone 1) consists of 120 relatively hilly acres, and it is expected that only one home will be constructed on each acre in Zone 1. A second zone (Zone 2) consists of 135 acres and two homes can be constructed on each acre in the zone. There are two other zones, the data for which is reflected in the following table. The table also indicates how much of the \$2 million water plant cost is allocated to each zone under the unit allocation method.

Unit Allocation

of Off-Site Improvements

Allocation of water plant system; total cost \$2,000,000.

Zone	Rating	Yield*	Acres	Total	Percent	Allocation
1	1		120	120	12%	\$.....240,000
2	2		135	270	27%	\$.....540,000
3	3		110	330	33%	\$.....660,000
4	3.5		80	280	28%	\$.....560,000
			445	1000	100%	\$.....2,000,000

*Based on number of houses or lots to be generated per acre.

[b] Benefit Allocation Method

The benefit allocation method can be used if the relative benefit of the off-site improvement to each land parcel can be specifically identified. This method can be illustrated by considering a golf course that will require an extensive supply of water (for maintaining the grass) but limited electricity and sewage facilities. The cost of a power plant should not be heavily allocated to the golf course since the acreage will receive little benefit as compared with that of a housing tract. On the other hand, the golf course will receive a significant allocation of the cost of a main water line. A proportionate allocation of the water system will increase the cost of the golf course as an off-site improvement which would, in turn, be allocated to the cost of subdivided lots.

[c] Hybrid Allocation Methods

Most acceptable systems of cost allocation will employ a hybrid method. For example, the cost of different off-site

improvements will be allocated differently. An access road could be allocated on a simple acreage basis, while a water main could be allocated on a benefit basis. Furthermore, one method of allocation might be used to allocate off-site costs to separate parcels, while another might be used to allocate the off-site costs of parcels to specific lots.

[d] Other Considerations

Several potential problems must be considered when an allocation of an off-site improvement is made. For example, although the relative value of land can be an appropriate method of allocating land costs, the relative value of raw land is not the same as the relative value of land plus improvements. Assume that two acres of land lie contiguous to a lake. One acre is planned for a restaurant overlooking the marina, and the other acre will only be used as a waterfront storage area. Which acre should receive a greater allocation of the cost of off-site improvement? The restaurant will probably receive a greater benefit, and thus should absorb the majority of the off-site improvement costs, even though the value of the raw acres alone is the same.

Here's another problem to consider: If two lots are the same size and contain the same type of house, except that one is a more valuable property with a much better view, the cost of basic utilities is no greater for the more valuable lot. But if greater costs of electricity, water, sewage systems, and main access roads are allocated to "view" properties, the early sales of the other houses will overstate financial and taxable income with unfavorable results. The gross profit ratio of the early sales would be overestimated since the cost of providing these lots with utilities will not have been adequately reported.

[e] Application of Off-Site Improvement Rationale to Commercial Property

The allocation of off-site improvement costs to individual lots usually occurs with the development of residential subdivisions. ^{n71.1} The same "basic purpose" allocation rationale could also apply in a commercial office building setting. Where a basic purpose of property is the enhancement of other properties to induce their sale, and the property does not have, in substance, an independent existence, the cost of that property could properly be allocated to the benefited properties. In one case, however, the Tax Court refused to allocate the cost of an atrium to adjoining office buildings because the basic purpose of constructing the atrium was not to induce sales of the adjoining properties. ^{n71.2}

[4] On-Site Improvement Costs

The distinction between on-site and off-site improvements may seem arbitrary, but identification is needed to allow the developer to organize the project and properly identify and control cost allocations. On-site improvements are expenditures that benefit only a particular parcel, tract or lot, whereas off-site improvements benefit the entire development.

For example, while the main access and arterial roads should be treated as off-site improvements and allocated to the entire project, roads that connect individual tracts to major access roads should be treated as on-site improvements and allocated only to the particular tracts that benefit from them. In this way, on-site improvements are an extension of the major off-site improvements.

The cost of utility hookups to the backbone of the system is another example of this type of on-site improvement. On-site improvements can also be special projects with limited scope, such as small parks or recreation centers which may benefit only a tract or a block within a tract. On-site costs of this nature are subject to allocation when they benefit more than one tract or project within a development.

Generally, the most significant on-site cost centers will be the construction costs of residential houses or commercial buildings which the developer markets in the ordinary course of its business. Included in this category would be all direct and indirect costs of material, labor, overhead and other costs incident to the construction of the housing or

commercial units. As the units are sold, these on-site construction costs, as well as a proportionate share of off-site improvement costs, would be charged to cost of sales so that gross profit can be determined on a unit-by-unit basis.

The allocation of on-site improvements requires that the developer make a factual evaluation of the improvements' benefit; that is, how many and which lots will the on-site improvements benefit?

After the scope of the benefits is determined, the cost should be allocated to the lots on the basis of an equitable method that matches costs with revenues. For example, a unit method could be used for allocating on-site utility hookups. The cost of on-site recreational facilities (e.g., a small park or recreation center) could be allocated on the basis of a relative-value method, since the proximity of the lot to the improvement may affect its value.

The location of a park, for example, can affect cost allocations in two ways. First, if a lot is located near the park, the relative value of the basic land may be greater than that of a more distant lot. Second, the nearby lot will receive a greater benefit and, thus, a greater allocation from the cost of the park. Conversely, if an undesirable improvement were erected instead of a park, the value of, and the cost allocations to, a nearby lot could be significantly decreased.

[5] Hybrid Improvement Costs

Some on-site improvements may also be classified as off-site improvements if they benefit the entire project in general as well as one tract in particular. Thus, an artificial lake may provide recreation and attractiveness to the whole project, while the lakeside property also becomes significantly more valuable. The developer must determine how much the lake improves the marketability of the adjoining lots.

Example:

Assume that an artificial lake costs \$200,000 for land and construction. The lake is surrounded by 80 lots which have an average relative cost of approximately \$15,000 each and which could have been marketed for \$25,000 before the lake addition. Having tested the market, the developer estimates that the addition of the lake will increase the average sales price per lot by 10 percent to \$27,500.

With these facts, the developer can rationally argue that the average lot cost has increased 10 percent to \$16,500 (\$1,500 per lot), or an aggregate of \$120,000 (80 x \$1,500) for all the lakeside properties. Therefore, the \$200,000 lake cost is allocated \$120,000 to the lots surrounding the lake as an on-site improvement, and \$80,000 to the entire project as an off-site improvement.

A further allocation problem arises when a developer constructs a hybrid improvement that it intends to operate as a business. Since the developer retains an interest in the improvement as a business activity, the cost is not properly allocable as an off-site or on-site improvement. A highly attractive country club and golf course illustrate this type of improvement. n71.3

A so-called "developer line of cases" addresses the issue of how to adjust the basis of property in the context of a common improvement that benefits lots in a residential subdivision. The cases focus on the common improvement and not directly on the lots held for sale. In order to properly allocate the cost of the improvement to the adjoining lots, two requirements must be met: n71.4

- the basic purpose of the taxpayer in constructing the common improvement must be to induce sales of the lots; and
- the taxpayer cannot retain too much ownership and control of the common improvement.

Under these tests, a developer who retains ownership of the common improvement, makes it a commercial venture in

and of itself (such as a golf course), and does not dedicate the improvement to the exclusive use of property owners cannot allocate the cost of the improvement to the adjoining lots. n71.5

Example:

Assume a land developer leases land for a 25-year period to construct golf course facilities. Instead of building a typical golfcourse and clubhouse facility, the developer decides to build and operate a championship course to expedite the promotion and sale of housing units within the tract. The cost of the facility is \$4.9 million.

Since the developer retains an interest in the facility as a business activity, the cost would not be properly allocable as an off-site or on-site improvement under the rationale of some cases. n72 However, a review of the future revenue projection of the course reveals that, as a business activity, a cost of no more than \$4.5 million could be justified for the golf course and clubhouse. This amount is not included in the basis of the housing tract. But, since the facility cost \$4.9 million, the developer obviously has spent an extra \$400,000 (\$4,900,000 - \$4,500,000) to promote the entire development.

The allocation of the \$400,000 would be either to on-site improvements or to off-site improvements, or a combination of both.

A recurring problem in land development tax law is the extent to which the retention of legal title to an improvement affects the developer's ability to allocate its cost to the remaining lots. If the developer retains ownership of an improvement to operate for nominal revenue, the Service may preclude the allocation of the major costs as off-site or on-site improvements.

A full cost allocation of the improvement can be achieved by transferring title to a neighborhood homeowners' association for no consideration. The transfer is usually made on the condition that the homeowners' association cannot subsequently dispose of the improvement. Even though this procedure has been sanctioned by the Service n73 and the Tax Court, n74 certain drawbacks must be considered.

Once the improvement has been transferred, the developer loses all future economic benefits. The appreciation will benefit the property owners, who are generally given voting rights over the use and control of the property. Therefore, the developer usually gives up its right to participate in future appreciation for the immediate benefit of allocating its cost basis to its current cost of sales.

If the developer does relinquish title in improvements to the homeowners, the developer, from a business standpoint, must have sufficient control to be guaranteed that the improvement is properly maintained. This can be done in a number of ways, such as:

- (1) a leaseback of the facility to the developer;
- (2) an agreement with the homeowners giving the developer operating responsibility for a given period of time;
- (3) the inclusion of maintenance standards in the agreement transferring title to the homeowners; or
- (4) retention of a reversionary interest under certain conditions.

The developer's retention of merely tenuous rights will not necessarily prevent the allocation of the improvement costs to the lots sold. n75

[6] Construction Costs and Allocations

All costs of construction must be capitalized as part of work in process and charged against income on a pro rata basis at the time of sale of each individual unit. Construction costs of a housing project or building include all architect's and contractor's fees and all direct costs of material, labor, supplies, services, etc. In addition, most overhead expenses must also be capitalized pursuant to the uniform capitalization (UNICAP) rules discussed in Chapter 3.

(n16)Footnote 41. Id at § 4.01.

(n17)Footnote 42. Id at § 5. See also § 6.

(n18)Footnote 43. The reference to obligations established by law is an expansion of *Revenue Procedure 75-25* , which only referred to contractual obligations.

(n19)Footnote 44. See TAM 9609006 , where a drafting error resulted in the taxpayer's obligations being unclear. The taxpayer, a partnership, was formed to develop a golf community. The agreement between the taxpayer and the

homeowners' association said the taxpayer was obligated to complete the common improvements listed in Article II of the Declarations. That Article did not list the improvements but, instead, said that the homeowners' association had the responsibility for maintaining the community's roads, parking lots, landscape areas, and "all other improvements" the taxpayer made. The District Director concluded that the taxpayer was not entitled to use the alternative cost method under *Rev Proc 92-29* because it was not contractually obligated to finish the common improvements. The National Office overturned the District Director, holding that the agreement, when read with the Declarations, required the taxpayer to complete the improvements. Thus, the taxpayer satisfied this first requirement and could use the alternative cost method. But see also *Rev Rul 76-247, 1976-1 CB 217*, and *Bryce's Mountain Resort, Inc v Commr, 50 TCM 164, TC Memo 1985-293 (1985)* for examples of developers who were held not to be contractually obligated to make a common improvement.

(n20)Footnote 44.1. *Hutchinson, et al v Commr, 116 TC 172 (2001)* .

(n21)Footnote 45. For a discussion of the procedures required when the developer is not entitled to automatic consent because the improvements are determined without regard to the 10-taxable-year horizon, see § 11.03[2][d][ii], below, and *Rev Proc 92-29* at § 6.02.

(n22)Footnote 46. *Rev Proc 92-29* at § 6.01. But see *Ltr Rul 9538010* , where the Service permitted a taxpayer to make a tardy election, pursuant to *Treas Reg § 301.9100-1(a)* and *Rev Proc 92-85, 1992-2 CB 490* .

(n23)Footnote 47. *Rev Proc 92-29* at § 6.01.

(n24)Footnote 47.1. *Ltr Rul 9853025* .

(n25)Footnote 48. *Id* at § 8.

(n26)Footnote 49. *Rev Proc 92-29* states that "the estimated cost of common improvements as of the end of any taxable year is equal to the amount of common improvement costs incurred under section 461(h) of the Code as of the end of the taxable year, plus the amount of common improvement costs the developer reasonably anticipates it will incur under section 461(h) during the ten succeeding taxable years". *Id* at § 2.02(1).

(n27)Footnote 50. *Id* at § 2.02(1).

(n28)Footnote 51. *Id* at § 6.02.

(n29)Footnote 52. For these and additional requirements, see *id* at § 9.

(n30)Footnote 53. *Id* at § 4.01

(n31)Footnote 53.1. *Hutchinson, et al v Commr, 116 TC 172 (2001)* .

(n32)Footnote 54. *Treas Reg §§ 1.263A-10(b)(5) and 1.263A-10(b)(6), Ex (6)*.

(n33)Footnote 55. *Id* at § 2.01. It is not clear why the term "held for sale" is used in this context. This term does not appear to be an otherwise defined term of art (compare "property held primarily for sale" in *IRC § 1031(a)(2)(A)* and "property held primarily for sale to customers in the ordinary course of [a] trade or business" in *IRC § 1221(a)(1)*), and that may lead to disputes regarding the scope of *Rev Proc 92-29* . For example, does *Rev Proc 92-29* apply to a taxpayer qualifying for treatment under *IRC § 1237* (allowing capital gain treatment for certain small subdividers)?

(n34)Footnote 56. *Rev Proc 92-29* at § 6.01.

(n35)Footnote 57. The consent is limited to the assessment of deficiencies attributable to the use of the alternative cost method with respect to the project covered by the consent. *Rev Proc 92-29* at § 7.01. The consent procedure is

described id at § 7.03.

(n36)Footnote 58. *Rev Proc* 92-29 at § 6.02.

(n37)Footnote 59. *Id.*

(n38)Footnote 60. *Rev Proc* 92-29 at § 12.

(n39)Footnote 61. *Id.* at § 6.03.

(n40)Footnote 62. *Id.* at §§ 3 and 11.02.

(n41)Footnote 63. *Dahling v Commr, TC Memo 1988-430, 56 TCM 131 (1988)* .

(n42)Footnote 64. Some tax authorities classify off-site improvements as those expenditures which make "more salable the lots in the remaining property." *Rev Rul 68-478, 1968-2 CB 330* ; *Montclair Dev Co v Commr, 25 TCM 1029, TC Memo 1966-200 (1966)* (the court considered that the project was undertaken primarily to further sale of lots or houses).

(n43)Footnote 65. But see the text accompanying note 73, below, for situations where a taxpayer was able to depreciate certain off-site improvements.

CHAPTER 11 Subdivision and Tract Development

1-11 Federal Taxes Affecting Real Estate § 11.04

§ 11.04 Gifts to Charities and Municipalities

Contributions of land offer valuable opportunities for combining philanthropy with tax savings. If the developer can establish investment status for property it has held for more than one year, it may deduct the fair market value of the property and not be taxed on the appreciation. n76 The problem is that the burden is placed on the developer to prove that the contributed property was, in fact, being held for investment. Advance planning and factual substantiation (board of directors' minutes, memoranda, documents and the like) will be necessary to establish the requisite intent.

A developer that grants an option on real property to a charitable organization is allowed a charitable deduction for the year in which the organization exercises the option. n77 The amount of the deduction is the difference between the fair market value of the property on the date the option was exercised and the exercise price. n78

A valid contribution must satisfy the general conditions for charitable gifts and cannot violate the rules specifically applicable to real estate developments. The contribution will be denied if it is made "under the ostensible compulsion of compliance with a colorable legal requirement." n79 Thus, if the developer is required by law to dedicate or set aside land for specific purposes, no deduction is allowed. If the developer attaches conditions to or expects favors as a result of the contribution, the deduction is likely to be disallowed. n80 If the developer derives a direct benefit from the contribution, as opposed to a mere incidental benefit such as a benefit available to any member of the community, a charitable deduction will not be permitted. n81

However, gaining a benefit does not, in and of itself, disqualify a contribution. For example, a charitable deduction was allowed where land and cash were donated to the state highway department for construction of a secondary roadway, even though the new road benefited the taxpayer-bank. The bank owned adjoining land on which it later built a new office building, but the road was donated out of a sense of public spirit. The court noted that to deny the deduction would bar many contributions that generate goodwill for the donor. n82

In a subsequent case, however, a real estate developer donated the streets and sewers of a new subdivision it had developed to the municipality, subsequently claiming a charitable deduction for the value of the transferred property. The Tax Court disallowed the deduction, holding that the developer's motive was not generosity but rather: (1) a desire to avoid responsibility for future maintenance of the streets and sewers; and (2) a desire to enhance the value of its interest in the remaining property. n83

This case indicates that the developer's motive is a relevant consideration and that, in connection with determining motive, an indirect economic benefit may be considered. This appears to be a more restrictive standard for when a developer may claim a charitable contribution deduction for such costs.

See Chapter 6 for a detailed discussion of charitable contributions.

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.01

§ 12.01 Introduction

The most common method of financing the acquisition of real property is by use of a mortgage to secure the unpaid balance of the purchase price. Although types of mortgages vary, they basically arise from a conveyance of property which allows the money lender (mortgagee) to reacquire the property if the borrower in possession (mortgagor) defaults in the payment or in some other material provision of the mortgage.

Numerous tax and business advantages exist in using a loan to acquire real property. A principal business advantage is that the property can be used and its income and possible appreciation realized when the owner has made only a modest cash outlay. A principal tax advantage is that the mortgage debt is usually included in the tax basis of the property acquired. This results in a basis for depreciation far in excess of the purchaser's cash outlay. n1

FOOTNOTES:

(n1)Footnote 1. In cases where the mortgage is non-recourse, the at-risk rules may limit the mortgagor's ability to take a current deduction for depreciation. The passive activity loss (PALs) rules may also defer the mortgagor's enjoyment of the depreciation deductions. These limitations are discussed in Chapter 13.

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.02

§ 12.02 "Nominee" or "Straw" Corporations

Many states impose usury restrictions on interest rates for individuals, but not for corporations. To avoid the individual interest rate limitations in time of high interest rates, the lender may require the use of a corporate borrower to accomplish funding of real estate projects. The individuals involved in the transaction may want to directly realize the tax and cash flow benefits associated with the real estate, either by holding the property individually or through a partnership. To meet the objectives of both the owner and the lender, there have been many instances in which a nominee or straw corporation has been used to hold the legal title to the real estate. In these situations, a corporation is formed to hold the legal title, but it is acknowledged to be a straw man for the benefit of noncorporate owners. The noncorporate owners then report the operations of the real estate project on their tax returns, either directly or as partners in the partnership owning the property.

Although taxpayers are generally able to achieve this objective when using a corporate straw man, it is possible, through carelessness, to have the corporation treated as a separate taxable entity. Then the income from the real estate is subject to taxation to the corporation, typically resulting in a significant added tax liability for the real estate investors. See Chapter 15 for a detailed explanation of the problems in this area.

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.03

§ 12.03 Alternatives to Conventional Fixed Term/Fixed Rate Mortgages

For many years lending institutions made long-term, fixed rate loans from sources that would qualify as short-term borrowings. Major swings in short-term interest rates caused these institutions to suffer losses. In response to this problem, lenders have developed a number of techniques, some of which are described below, to protect themselves from the potentially unfavorable effects of borrowing short and lending long.

[1] Adjustable-Rate Mortgages

One type of alternative financing is the adjustable-rate mortgage (ARM). During the term of the loan, the lender raises or lowers the applicable interest rate to track current market rates. Contractual provisions of the ARM limit the annual swing in the interest rate to several percentage points in any given year, while providing for a maximum limitation on changes in interest rates. Generally, the loan may not vary by more than five percentage points from the original rate.

Variable-rate mortgages (VRM) are an alternate form of adjustable-rate mortgage and are primarily issued by savings and loan institutions. Interest rates on a VRM bear a direct relationship to the rate the savings and loan must pay for current mortgage funds.

[2] Shared-Appreciation Mortgages

Shared-appreciation mortgages (SAMs) are yet another financing technique sometimes used in residential mortgage markets. Under this method, the buyer and lender share in the potential appreciation that would be realized upon sale. The lender, in exchange for its interest in the appreciation, offers a mortgage at a below-market rate. A dangerous pitfall with shared-appreciation mortgages is that lending institutions frequently require a provision in the agreement allowing the lender to collect its portion of the appreciation after a specified period of time, even if the house has not been sold!

The use of shared-appreciation mortgages can also produce an undesirable result because of the timing of certain interest deductions. Generally, a SAM involves two different interest components. First, the lender earns interest on the loan at an agreed rate. In addition, the lender earns interest composed of a percentage of the future appreciation. The deductibility of the second component depends, in part, on when and how it is paid. The Service has ruled that a cash-basis taxpayer is allowed to deduct the interest attributable to the appreciation when it is ultimately paid. n2

In the context of a personal residence, this means that the borrower can have a large interest expense in the year the

contingent amount is paid out. That amount will be deductible to the extent it constitutes qualified residence interest. However, the amount may exceed the borrower's taxable income in that year. If that occurs, the interest cannot be carried forward as a loss beyond that taxable year, since it is not an expense incurred in connection with a trade or business. n3

If a shared appreciation mortgage loan is refinanced with the same lender, the face amount of the new loan includes the appreciation due on the SAM. The contingent interest is deductible over the term of payment of the principal on the new mortgage. n4 Thus, it may be advantageous for the mortgagor to refinance the loan with another lender: Interest paid to one lender with funds borrowed from a second lender has been held to be deductible when the interest is paid to the first lender, not in the later year when the loan from the second lender is paid. n5

In addition, if a shared-appreciation mortgage is on property used in business, or the lender acquires rights other than repayment at a specified time, the lender may be treated as holding an equity investment rather than debt, so the payments would not represent interest.

[3] Graduated Payment Mortgages

This method of home financing is designed primarily for the first-time buyer. Initial monthly payments are much lower than the payments of a conventional mortgage, but payments are scheduled to increase, presumably with the buyer's income. Generally, payments increase at the rate of about 5 to 8 percent annually for the first five years, at which time normal amortization may begin.

In some situations, the initial payments may not be sufficient to cover the interest accruing on the mortgage, let alone principal. The Service has ruled, in an instance involving an FHA mortgage, that the initial payments, in these circumstances, are treated as interest and are deductible to the extent otherwise allowable. Moreover, subsequent payments are considered to consist entirely of interest, until such time as the back interest is fully paid up. n6

[4] Participating Mortgages

Many lenders use participating mortgages to finance large real estate projects. Under such an arrangement, the financing has a stated interest rate (normally lower than the market rate) and a contingent interest feature. The feature may take the form of participation in appreciation when the property is sold, participation in gross income of the borrower, participation in net income of the borrower, participation in cash flow, or some combination of these features. In some instances, the participation is structured as additional interest to the lending institution, while in other cases it is structured as capital participation. n7

[5] "Balloon" Mortgages

In some situations, a lender may be unwilling to grant a long-term mortgage. A short mortgage term requires substantial debt amortization payments. This has a negative effect on the cash flow from a real estate investment. The solution, in these situations, is sometimes the "balloon" mortgage.

A balloon mortgage provides for a large ("balloon") principal payment at the end of the mortgage term. To accomplish this, the monthly payments are based on a longer amortization period than the period of the mortgage. For example, a ten-year mortgage may be given with monthly payments based upon a 25-year amortization schedule. At the end of the ten years, the balance of the principal that would have been payable over the last 15 years would be due and payable.

The use of a "balloon-type" mortgage may increase cash flow during the term of the mortgage, while not materially reducing the interest deduction. Of course, it tends to limit any equity build-up in the real estate.

[6] Price-Level Adjusted Mortgages

To encourage home ownership, the Department of Housing and Urban Development introduced price-level adjusted mortgages (PLAMs). PLAMs were primarily designed to make home buying more affordable in an inflationary economy. PLAMs achieve this goal by having the borrower pay interest at a rate that reflects the "real" cost of money. As the rate of inflation increases, so do the borrower's monthly payments and so does the outstanding debt balance. The increase in the mortgage debt is deemed to be accrued interest. The theory behind a PLAM is that a borrower will spend a fixed percentage of his annual income on mortgage payments throughout the term of the mortgage. This theory assumes that wages will rise at the same rate that mortgages do. However, if this basic premise is not true, the borrower may have difficulty making the monthly payments. Also, because of the lower initial interest rates, lenders are more likely to require a larger downpayment with a PLAM than with a conventional mortgage.

Because a portion of the amount of interest that accrues on a PLAM is not paid when it accrues, but is added to the outstanding balance, the original issue discount provisions apply to this type of mortgage. When the Treasury issued temporary regulations in 1990, it provided a special, generally favorable, rule allowing PLAMs to be treated as variable-rate debt instruments (VRDIs).ⁿ⁸ Final regulations issued in 1994 removed this special rule.ⁿ⁹ PLAMs issued after February 2, 1994, are now governed by general rules concerning original issue discount and qualified residence interest.

[7] Tax-Exempt Financing

[a] In General

At one time, tax-exempt financing was a common way for real estate investors to develop projects. Legislation which Congress passed in 1986 changed the name of these tax-exempt bonds (from industrial development bonds to private activity bonds) and severely curtailed their use. In addition, the 1986 legislation significantly increased the complexity in this area. For these reasons, the following discussion presents just a brief overview of tax-exempt financing.ⁿ¹⁰

A qualified private activity bond includes, but is not limited to, qualified mortgage bonds, qualified veterans' mortgage bonds, and bonds for qualified residential rental projects.^{n10.1} If a real estate investor uses tax-exempt financing, it is most likely for the development of a "qualified residential rental project." A private-activity bond may qualify as tax exempt when the proceeds are used for this kind of a development.^{n10.2}

A qualified residential rental project is a multifamily residential rental project where the issuer irrevocably elects to set aside units for rental to low- or moderate-income families as follows:

- (1) 40 percent or more units for families having incomes of 60 percent or less of the area median income (the 40 percent/60 percent test), or
- (2) 20 percent or more units for families having incomes of 50 percent or less of the area median income (the 20 percent/50 percent test).ⁿ¹¹

The IRS has issued the following guidance for complying with the set-aside requirements:^{n11.1}

- The general rule for set-aside requirements is that beginning on the first day of the qualified project period (i.e., the later of the first day on which at least 10 percent of all of the residential units in the project are occupied, or the issue date of the bonds),^{n11.2} the set-aside requirements apply to the total number of available units.
- A special rule applies for certain existing projects. It applies to the acquisition of an existing residential rental project unless more than 90 percent of the residential units in the project are not

available units (for example, because residential units are not available for occupancy due to renovations) at any time within 60 days after the later of (1) the date the project is acquired, or (2) the issue date of the first bonds. Under the special rule, for a period of 12 months beginning on the issue date of the first bonds (the "transition period"), the failure to satisfy the set-aside requirements under the general rule will not cause the project to lose its qualified residential rental project status. Failure to satisfy the set-aside requirements on the last date of the transition period, however, will cause the project to not be a qualified residential rental project as of the issue date(s) of the bonds issued to finance the project unless all bonds issued to finance the project are redeemed as soon as possible, but in no event later than 18 months after the issue date of the first bonds.

A qualified tenant is deemed to remain eligible as long as his family's income does not increase to a level that is more than 140 percent of the area-income limit. n12 Qualified students may reside in a residential unit without violating the income tests, n12.1 and a residential unit may be a single-room occupancy unit. n12.2 If the income of a qualified tenant in a unit rises above certain levels, then his or her income will still be treated as meeting the 140-percent test, provided that the next available unit in the project (of a size comparable or smaller than that unit) is rented to a new tenant who satisfies the income and rent-restriction requirements (the "next-available-unit rule"). n12.3 In the case of a low-income building that is tax-exempt bond financed and eligible for the low-income housing credit, n12.4 the bond restrictions will be satisfied if the next available unit in the *building* (rather than in the project) is rented to a new tenant who satisfies the income and rent-restriction requirements. n12.5 This conforms the tax-exempt bond rule to the low-income housing credit rule. n12.6 Tenant eligibility generally must be determined annually on the basis of current income, but annual recertification is waived for any project for a year as long as no residential unit in the project is occupied by tenants who fail to satisfy the otherwise applicable income limits. n13

The rental housing generally must remain a qualified project until the latest of these three periods:

- (1) 15 years from the date on which 50 percent of the project's residential units are occupied;
- (2) the date on which the bonds are no longer outstanding; or
- (3) the date on which assistance under Section 8 of the U.S. Housing Act of 1937 terminates. n14

The operator of a qualified residential-rental project must file an annual certification that low- and moderate-income occupancy requirements have been met. n14.1 Failure to file subjects the operator to a \$100 per day penalty. n14.2 In a private letter ruling the IRS has approved dual ownership of a multi-family housing project, with one partnership owning the market-rate units, and another owning the low-income units. The ruling held that the dual ownership would not cause the project to fail to qualify as a qualified residential rental project under *IRC Section 142(d)*. n14.2.1

Tax-exempt interest on exempt facility bonds issued as part of an issue 95 percent or more of the net proceeds of which are used to provide qualified residential rental projects, n14.2.2 qualified mortgage bonds, n14.2.3 and qualified veterans' mortgage bonds n14.2.4 is not an item of tax preference for purposes of the alternative minimum tax. The same is true for interest on any refunding bond, but only if interest on the refunded bond (or in the case of a series of refundings, the original bond) was not an item of tax preference. n14.2.5 Also, this interest is not included in the corporate AMT adjustment based on current earnings. n14.2.6

[b] Qualified Green Bonds

Legislation enacted in 2004 created a new category of exempt-facility bond-the qualified green building and sustainable design project bond ("qualified green bond"). n14.3 A qualified green bond is one issued as part of an issue that finances a project designated by the IRS as a green building and sustainable design project that meets the following eligibility requirements: (1) at least 75 percent of the square footage of the commercial buildings that are part of the

project is registered for the U.S. Green Building Council's LEED certification and is reasonably expected (at the time of designation) to meet that certification; n14.4 (2) the project includes a brownfield site; (3) the project receives at least \$5 million in specific state or local resources; and (4) the project includes at least one million square feet of building or at least 20 acres of land. n14.5

Qualified green bonds are not subject to the state bond volume limitations. n14.6 Rather, there is a national limit of \$2 billion of qualified green bonds that may be allocated, in the aggregate, to qualified green building and sustainable design projects. n14.7 Qualified green bonds may be currently refunded if certain conditions are met, but cannot be advance refunded. n14.8 The authority to issue qualified green bonds terminates after September 30, 2012. n14.9

A detailed statutory application and designation process must be followed, n14.10 and cumbersome energy use, employment, and location eligibility, and accountability requirements must be met. n14.11

[c] Tax-Exempt Bonds for Sub-Prime Loan Refinancings

Legislation enacted in 2008 in response to the sub-prime mortgage crisis made several modifications to the tax treatment of tax-exempt bonds:

- It increases the volume cap for 2008 by \$11 billion for the purpose of issuing qualified mortgage bonds or private activity bonds for qualified residential rental projects. n14.11.1
- Qualified mortgage bonds issued with respect to the additional volume cap may be used to finance either new mortgages or refinance qualified subprime loans. n14.11.2 A qualified subprime loan as an adjustable rate residential mortgage loan originated after December 31, 2001, and before January 1, 2008, that the bond issuer determines would be reasonably likely to cause financial hardship to the borrower if not refinanced. n14.11.3 Qualified subprime loans cannot be refinanced by bonds issued after December 31, 2010. n14.11.4
- All proceeds of qualified mortgage bonds issued with respect to the additional volume cap must be used within 12 months of the date of issuance of the bonds. n14.11.5
- Additional volume cap that remains unused at the end of 2008 may be carried forward to 2009 and 2010, but solely for the purpose of issuing qualified mortgage bonds or private activity bonds for a qualified residential rental projects. n14.11.6

The IRS has issued a detailed notice providing guidance on allocations, carryforwards, information reporting, and uses of the additional bond volume cap enacted by the 2008 legislation, and guidance on the use of qualified mortgage revenue bonds to refinance certain subprime mortgage loans. n14.11.7

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.04

§ 12.04 "Wraparound" Mortgages

One financing arrangement which is most often used with installment sales is the "wraparound" or "all-inclusive" mortgage. A wraparound mortgage is similar to a purchase-money mortgage. The property remains encumbered by a previous first mortgage, and the wraparound becomes a form of second mortgage. The seller collects payments on the wraparound obligation and pays down the first mortgage remaining on his books. Normally, the wraparound mortgage bears a higher interest rate than the first mortgage, and the seller receives the economic advantage of this "spread" by preserving the underlying mortgage at its attractive low existing rate.

The following example shows how a wraparound mortgage can be used when selling property.

Example:

A seller owns property subject to a 7 percent, \$250,000 first mortgage on which he is personally liable. He offers to sell the property at its fair market value of \$500,000, with a \$50,000 cash down payment and a mortgage note for the balance. The purchaser wants to buy the property in a purchase money arrangement under which he has no personal liability. The seller does not want to pay off the existing mortgage debt with its attractive interest rate.

To accomplish these objectives, the seller transfers title to the purchaser, receives the \$50,000 initial payment, and takes a \$450,000 mortgage note (properly describing the existing indebtedness from the purchaser) bearing interest at 11 percent. The seller agrees to look only to the property in the event of default. The mortgage note of \$450,000 is then recorded by the seller as a lien against the property and "wraps around" the prior existing \$250,000 lien.

Typically, under this arrangement, the seller receives the monthly or other periodic payments called for under the \$450,000 mortgage and uses part of these proceeds to make his payments under his continuing obligation on the \$250,000 mortgage. He retains the financial advantage of the low 7 percent interest on the \$250,000 mortgage: In effect, funds which he has borrowed at 7 percent he has lent at 11 percent. The purchaser holds title subject both to the original debt of \$250,000 and the new lien of \$450,000. Therefore, he must be certain that the seller makes the mortgage payments due to the holder of the \$250,000 mortgage.

The use of a wraparound mortgage generally permits reporting of gain from a sale under the installment method. See Chapter 7 for a further discussion of this subject.

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.05

§ 12.05 Effect on Basis of Acquired Property

The tax basis of real property acquired by use of debt is not limited to a purchaser's cash investment. It is equal to the full consideration paid for the property, including the amount of any mortgage or other debt incurred incident to the purchase. Similarly, the tax basis of property acquired already encumbered by a mortgage includes the outstanding mortgage debt, whether the buyer assumes the mortgage or acquires the property subject to the debt. n15 In addition, to the extent the property is depreciable, the taxpayer's basis for depreciation will include the mortgage.

Example:

A buyer purchases real estate for \$2,500,000, paying \$500,000 in cash and giving a \$2,000,000 mortgage secured by the property. The buyer's tax basis in the property is \$2,500,000. Whether the buyer assumes personal liability for an already existing mortgage debt of \$2,000,000 or takes the property subject to it, his basis is still \$2,500,000. If the entire property is depreciable, the buyer's depreciation deductions will be based on \$2,500,000.

Simply incurring a liability by mortgaging the property (or paying off the mortgage) will not affect the basis of property securing the mortgage debt when the proceeds are used for a purpose other than the purchase or improvement of the property--e.g., a home equity loan used to finance a child's college education, purchase or start up a business, or pay for an expensive vacation. Mortgage proceeds or any other funds used to construct depreciable improvements will increase the taxpayer's basis for depreciation and the basis for determining gain or loss, but only to the extent of the cost of construction (see Chapter 5).

These general rules are subject to a number of exceptions and conditions. During the period when tax-shelters were prevalent, the courts typically found that inflated non-recourse debt--when coupled with an inflated purchase price--did not constitute valid indebtedness. This resulted in the denial of depreciation and interest expense deductions. n16

Even in cases where the nonrecourse debt is reasonable, the at-risk rules and passive activity loss rules may limit the taxpayer's deduction. (See Chapter 13.)

Commr, 748 F2d 908 , 84-2 USTC P 9963 (4th Cir 1984), cert den 105 S Ct 2688 (1985); *Narver v Commr*, 670 F2d 855 , 82-1 USTC P 9265 (9th Cir 1982); *Bergstrom v US*, 97-1 USTC P 50,143 (Ct Fed Cl 1997); *Corbin West Limited Partnership v Commr*, TC Memo 1999-7 . For a variation on this theme, see *Bromwell and Assoc, Inc v Commr*, TC Memo 1993-438, 66 TCM 799 (1993) . Although most courts take the *Franklin* approach, allowing none of the mortgage to be included in the "mortgagor's" basis, some courts have allowed the mortgage to be included in basis up to the fair market value of the property. See, eg, *Regents Park Partners v Commr*, 63 TCM 3131, TC Memo 1992-336 (1992) ; *Levy v Commr*, TC Memo 1991-646, 62 TCM 1636 (1991) ; *Pleasant Summit Land Corp v Commr*, 863 F2d 263 , 88-2 USTC P 9601 (1989). This subject is discussed in further detail in Cowan, "Is Any Part of a Nonrecourse Mortgage Greatly Exceeding FMV Includable in Basis?," 77 J Tax'n 260 (1992).

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.06

§ 12.06 Costs of Obtaining a Mortgage Loan

There are several types of costs that may be incurred when a mortgage loan is made. Some of these costs are borne by the mortgagor and some by the mortgagee. The net economic cost to the mortgagor and mortgagee depends on the tax treatment accorded to the various costs.

The mortgagor may incur costs incident to obtaining a loan, such as attorneys' and appraisers' fees, title and survey costs required to obtain the mortgage, and transfers and commissions. Loan origination fees, sometimes as a percentage of the loaned amount, may also be charged. If the loan is obtained for business purposes or for acquisition of investment property, the mortgagor ordinarily amortizes the costs on a straight-line basis over the term of the loan. n17 For purposes of determining the term of a loan with a call option, a lender's option to call the loan is presumed to be exercised if exercise of the call would produce a higher yield to maturity for the lender. n18

In addition to the above costs, it may be necessary to pay a commitment fee to obtain financing. A commitment fee is viewed as a charge for making funds available and not as interest. n19 The Service ruled, in 1981, that if a taxpayer exercises the taxpayer's right under the commitment agreement, the commitment fee becomes a cost of acquiring the loan and, if the acquired property is held for business or production of income purposes, the taxpayer may deduct the fee ratably over the term of the loan. n20

Example:

A cash-basis taxpayer pays commissions of \$7,500 to obtain a 15-year loan. The taxpayer uses the loan to purchase land and an existing building for investment purposes, and the property will secure the mortgage. The commissions are deductible only at the rate of \$500 per year (i.e., \$7,500/15 years).

If loan costs are incurred in connection with construction financing, the borrower must capitalize some or all of the costs and add them to the basis of the constructed property. n21

Other fees incurred incident to a taxpayer's acquisition of property may also be capitalized and added to the property's basis. These can include fees for the following: n21.1

- arranging for options to acquire property;

- evaluating zoning requirements and ensuring compliance;
- arranging and evaluating environmental reports relating to property; and
- establishing guidelines for compliance with low-income housing tax credit requirements.

Fees not associated with an acquisition of property, n21.2 or for which no authority permits capitalization or deduction, cannot be added to basis. Falling in this category have been so-called "tax credit guarantee fees" (fee for guaranteeing that a property will be operated to ensure entitlement to the low-income housing credit) and "no negative cash flow guarantee fees" (fee for agreement to make loans to cover operating deficits). n21.3

A borrower who incurs costs to renew or extend an existing mortgage should amortize the costs over the life of the new loan. n22 On the other hand, a borrower who terminates a mortgage before its original maturity date may deduct the entire unamortized mortgage costs remaining and any prepayment penalty in the year in which he entirely prepays the mortgage or sells the property. n23 This is true even if the mortgage is prepaid from the cash obtained from a new mortgage loan with a different mortgagee. n24 Assuming the mortgage relates to business or investment property, these unamortized costs and penalties are ordinary *IRC Section 162* or *212* deductions and not reductions of the gain upon sale. Prepayment penalties are treated as interest on the indebtedness. n25 If the property is sold on the installment method and the property is not sold subject to the mortgage, nor is the mortgage assumed, the mortgagor may not take a deduction for the unamortized mortgage costs. n26

[1] Interest Expense--When Deductible

[a] General Rules

The time when interest is deductible depends on the mortgagor's tax accounting method. An accrual-basis mortgagor's interest deduction does not depend on the time of payment but is spread over the term of the debt as such interest accrues. n27 A cash-basis mortgagor deducts interest only when he pays the interest in cash or its equivalent; giving a note does not constitute payment under the cash method. n28 And, except in the case of certain points, cash-basis taxpayers may only deduct interest payments in the period to which they relate under the accrual method of accounting (see *Section 12.06[2]*, below). Thus, a cash-basis taxpayer who prepays mortgage interest properly attributable to a subsequent year cannot deduct the interest in the current year. n29

What constitutes "payment" for a cash-basis taxpayer is not always clear. n30 The general rule is that the borrower cannot deduct an interest payment if the lender lends the money so the borrower can make the interest payment. n31 In *Burgess v Commissioner*, n32 however, the Tax Court allowed an interest deduction when the lender advanced funds so the borrower could make the required interest payment. In this case, though, there was a special consideration: The borrower commingled the advance with the borrower's own funds, and the interest check which the borrower gave the bank was from these commingled funds. The Court, in effect, allowed the commingled funds to be treated as if they were provided by a third party.

While not rejecting the commingling theory, several subsequent cases have limited its application to cases where the borrower has significant control over the advance before the borrower uses it to make the payment. Unless the taxpayer has this control, an interest deduction is unlikely to be allowed. n33

The Internal Revenue Code imposes a further limitation on the deductibility of interest on investment indebtedness. n34 See Chapter 4 for a more detailed discussion of this limitation. Additionally, the original issue discount (OID) rules sometimes override the general rules discussed above. See Chapter 7 for further discussion of the OID rules. n35

[b] Interest Overcharges on Adjustable Rate Mortgages

In the early 1990's, several lenders acknowledged that they had overcharged interest on some of their adjustable rate mortgages. This motivated the Service to adopt a policy concerning the tax treatment of the borrowers' interest overpayments, as well as the treatment of the refunds. n36 The policy is enunciated in a 1992 revenue ruling, which states that an interest overcharge on an adjustable mortgage that a homeowner has paid as a result of the mortgagee's miscalculation is deductible by the homeowner in the year paid. However, recovery of the overcharge in a subsequent year can lead to income to the homeowner. Income recognition is limited to the tax benefit received. n37

[2] "Points" and "Discounts" as Deductible Interest

[a] General Rules

At the time of making a loan, a lending institution may charge a borrower an amount that is termed "points." A point is equal to one percent of the loan. These points are in addition to the stated interest rate and are usually in addition to normal service fees. They may be paid from a borrower's separate funds or deducted from the loan proceeds. n38 For tax purposes, points are generally treated as prepaid interest. n39

IRC Section 461(g) provides a general rule under which points paid by a cash-basis taxpayer must be capitalized and deducted in the periods to which they are allocable, i.e., over the life of the loan. n40 The Code also provides an exception to this general rule for loan points paid to purchase or improve a principal residence. n41 These points are deductible when paid if:

- (1) they relate to indebtedness secured by this residence;
- (2) the payment of points is an "established business practice" where the debt is incurred; and
- (3) the amount of the points does not exceed "the amount generally charged in such area." n42

This special treatment is limited to points that constitute additional interest, as contrasted with a service charge, for the loan. n43 Homeowners cannot deduct loan service charges or amortize the charges over the term of the loan. Instead, service charges are a capital cost of acquiring the loan, which is a personal expense. n44

[b] "Fresh Funds" and Seller-Paid Points

For a number of years, the Service generally took the position that residential home points are deductible in the year of payment under *IRC § 461(g)(2)* only if the buyer paid the points with "fresh funds." n45 Fresh funds are funds which the buyer provides from a source other than the mortgage loan. If a lender disburses loan proceeds after first deducting the points, the points would, therefore, not be treated as paid with fresh funds.

This seemingly technical requirement prejudiced taxpayers who were stretched to the limit after their downpayment and could not find fresh funds to pay their points. In 1994, the Service issued a revenue procedure which permits most taxpayers to deduct points, even if not paid from fresh funds--and even if the points are paid by the seller of the residence. n46 To qualify for this treatment, these five requirements must be satisfied:

- (1) The Uniform Settlement Statement (i.e., Form HUD-1) clearly designates the amount as points (e.g., by describing the amount as "loan origination fees," "loan discount," "discount points," or "points"). For this purpose, amounts designated as loan origination fees on Veterans Affairs (VA) and Federal Housing Administration (FHA) loans are considered points. The amounts designated as points on the Form

HUD-1 may be shown as paid from either the borrower's or the seller's funds at settlement.

(2) The points are computed as a percentage of the mortgage loan.

(3) The amount paid is in keeping with an established business practice of charging points for residential mortgages in the area, and the amount does not exceed the amount generally charged in the area. Appraisal fees, inspection fees, title fees, attorney fees, property taxes, and mortgage insurance premiums do not satisfy this requirement.

(4) The amount is paid in connection with the acquisition of the taxpayer's principal residence, and the residence secures the loan.

(5) The taxpayer pays the amount "directly." An amount is considered as paid directly if: "the taxpayer provides, from funds that have not been borrowed for this purpose as part of the overall transaction, an amount at least equal to the amount required to be applied as points at the closing. The amount provided may include down payments, escrow deposits, earnest money applied at the closing, and other funds actually paid over at closing. In addition, for purposes of [determining whether the taxpayer directly paid the points], points paid by the seller (including points charged to the seller) in connection with the loan to the taxpayer will be treated as paid directly by the taxpayer from funds that have not been borrowed for this purpose, provided the taxpayer subtracts the amount of any seller-paid points from the purchase price of the residence in computing the basis of the residence."

Because of the test in Paragraph (5), a taxpayer can avoid the "fresh funds" requirement if he can show that the cash he contributed to purchase the residence equals or exceeds the points charged.

Example:

National Bank agrees to provide John with a \$300,000 mortgage so he can buy a \$350,000 principal residence. The bank charges 3 points (i.e., \$9,000) for the mortgage and disburses the mortgage after subtracting the points (i.e., \$291,000). John's downpayment is \$59,000, which is the amount which the bank does not finance (i.e., \$350,000 - \$291,000). While John has not given fresh funds to cover the points, he is treated as having paid the points and may deduct them in the year paid. This is so because he has provided "from funds that have not been borrowed for this purpose as part of the overall transaction, an amount at least equal to the amount required to be applied as points at the closing." ⁿ⁴⁷ Here, John's downpayment more than meets this requirement, because the \$59,000 downpayment exceeds the \$9,000 of points.

The Revenue Procedure 94-27 states that it is not applicable:

(1) if the points are attributable to principal exceeding the amount that can be acquisition indebtedness under *IRC Section 163(h)(3)(B)(ii)* (usually \$1 million);

(2) if the points are paid for a loan to improve, instead of acquire, a principal residence;

(3) if the points are paid for a loan to purchase or improve a residence other than the taxpayer's principal residence; or

(4) if the points are paid for a refinancing or home equity loan, even though the indebtedness is secured by a principal residence.

Three of the four restrictions (Items 1, 3 and 4) make sense because they track the requirements of *IRC Section 163(h)(3)* (regarding qualified residence interest) or *IRC Section 461(g)(2)*. In these cases, the taxpayer would either be denied an interest deduction or, at least, prohibited from fully deducting the interest in the year paid.

The other restriction (in Item 2) does not seem to make sense, since *IRC Section 461(g)(2)* allows points to be deducted if they are for a loan which the taxpayer uses to improve a principal residence. Despite this, taxpayers who pay points for home improvement loans must demonstrate that the points were paid from fresh funds, because of this restriction.

[c] Points Paid in Connection with a Refinancing

IRC Section 461(g)(2) permits a current deduction for loan points paid "in connection with the purchase or improvement of" a principal residence. The Service has interpreted this as denying a current deduction for points paid to refinance an existing home mortgage.ⁿ⁴⁸ The Service's rationale is that the points are connected with refinancing an existing debt rather than connected with the purchase or improvement of the home.

A somewhat limited inroad has been made in this rule. In *Huntsman v Commissioner*,ⁿ⁴⁹ the Eighth Circuit permitted a current deduction for points the taxpayers paid to refinance two short-term loans. The taxpayers used one of the loans, a three-year balloon mortgage for \$122,000, to purchase their home. About one and one-half years later, they took out a second mortgage for \$22,000 to improve their home. Slightly less than three years after the purchase of the home, they refinanced both mortgages with a 30-year variable rate mortgage. The refinancing required the taxpayers to pay \$4,440 in points, which they wanted to deduct in the year of payment under Section 461(g)(2).

The Service denied the deduction on the ground that the Section does not apply to refinancing. The Court, however, concluded that *IRC Section 461(g)(2)* did not require the new debt to be "directly related" to the actual acquisition or improvement of the principal residence. The new debt merely had to be incurred "in connection with" the acquisition or improvement, which the Court treated as requiring a slightly more attenuated relationship.

In finding for the taxpayers, the Eighth Circuit stated:

"Thus, where taxpayers purchase a principal residence with a short-term three-year loan secured by a mortgage on the residence, and replace the loan with permanent financing within the time period involved, the permanent mortgage obtained is sufficiently in connection with the purchase of the home to fall within the exception provided for by section 461(g)(2)."

The amount of solace which *Huntsman* provides is somewhat limited. First, the Service has announced that it will not follow the decision outside of the Eighth Circuit.ⁿ⁵⁰ Second, it applies only to the somewhat unusual situation where the taxpayer purchases a home using short-term, temporary financing (here, a three-year balloon mortgage). In the more typical situation--for example, taxpayers with a 30-year mortgage who refinance after five years to take advantage of lower interest rates--*Huntsman* provides no assistance. These taxpayers must amortize their points over the term the loan.

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.07

§ 12.07 Effect of Mortgages on Transfer of Property

Mortgages also must be considered when determining the taxable gain or loss upon the disposition of real estate. The general rule is that the seller treats the principal amount of the mortgage indebtedness which the purchaser assumes or takes subject to as an amount received. Therefore, if mortgage debt is transferred, it becomes part of the proceeds of sale. The result is the same whether the seller is personally liable on the mortgage or whether the purchaser becomes personally liable on the mortgage. n51

Example:

X buys land for \$500,000 cash and assumes a mortgage debt of \$2,000,000. His tax basis is \$2,500,000. He later sells the land for \$1,500,000 cash subject to the then-outstanding mortgage debt of \$1,500,000. The proceeds of sale are \$3,000,000, represented by cash of \$1,500,000 and the mortgage of \$1,500,000 taken on by the purchaser. X's gain is \$500,000, computed by taking the proceeds of \$3,000,000 and subtracting the \$2,500,000 basis of the property.

A seller interested in using the installment method of reporting gain should be aware of the effect of a mortgage on the selling price and the payments received in the year of sale. When property is sold subject to a mortgage or where a buyer assumes the mortgage, the amount by which the debt exceeds the seller's basis is treated as a payment received in the year of sale. n52 As discussed in Chapter 7, a wraparound mortgage can often be used to solve this problem.

As pointed out in Chapter 8, the owner of real property held for investment or for use in a trade or business may exchange such property for property of a like kind without incurring a tax. However, the amount of the mortgages, if any, involved in such a transaction could affect the computation of the basis of the property received, the basis of the property transferred, and the amount of gain recognized on the exchange. There can be partial recognition of taxable gain to the extent that "boot" (defined as cash or other property) is involved. A mortgage which the transferee assumes in connection with the exchange is treated, for these purposes, as cash boot. n53

Example:

An investor owns real estate that has a fair market value of \$4,000,000, and is encumbered with a \$1 million nonrecourse mortgage. The investor's adjusted basis in the property is \$2,000,000. She exchanges this real estate for \$500,000 cash and unencumbered like-kind property worth \$2,500,000, which she will

hold for investment. There is no express agreement as to whether the exchanging party will assume the mortgage on the property she transfers in the exchange. The exchanging party is treated as having assumed the nonrecourse liability on the property received in the exchange. [See *IRC §§ 357(d)(1)(B); 1031(d).*] The investor realizes a \$2,000,000 gain, of which \$1,500,000 will be recognized (i.e., be taxable), computed as follows:

Value of land received	\$.....2,500,000
Cash received	\$.....500,000
Mortgage treated as assumed by other party	\$.....1,000,000
Amount realized	\$.....4,000,000
Less--Basis of property exchanged	\$.....2,000,000
Gain realized	\$.....2,000,000
Gain recognized (i.e., boot is cash and mortgage treated as assumed by other party)	\$.....1,500,000

The basis of the property received is equal to the basis of the property transferred, decreased by any money received and by the mortgages assumed on the property transferred, and increased by the gain recognized in the exchange. n54 In the above example, the investor's basis in the property received is \$2,000,000. This is computed by subtracting the \$500,000 cash received and the \$1,000,000 mortgage assumed by the other party in the exchange from the \$2,000,000 tax basis and adding the \$1,500,000 gain recognized.

As previously discussed in Chapter 8, mortgage indebtedness assumed on property received offsets a mortgage assumed on property that is transferred so that a net decrease in mortgage liability is treated as cash for the purpose of computing gain and the basis of the property received in the transfer. However, in the converse situation, where the acquired property is more heavily mortgaged than the property transferred, the excess of liability which the transferor assumes over the liability transferred is not considered "boot." n55

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.08

§ 12.08 Consequences of Mortgages in Excess of Tax Basis

At times, property may be mortgaged in excess of the mortgagor's tax basis in the property. Mortgaging in excess of tax basis does not result in any gain or loss. A situation such as this may result if debt is refinanced at a time when there is substantial appreciation in the value of the property or when depreciation has reduced the mortgagor's basis.

There are several situations in which the existence of mortgage indebtedness in excess of the tax basis of the mortgaged property may give rise to taxable gain. One is the transfer of mortgaged property. The transfer of mortgaged property to the mortgagee and release from liability (i.e., a foreclosure and repossession) will, in certain circumstances, produce a gain, as discussed in *Section 12.09*, below. Another situation involves the mortgagor's transfer of encumbered property to a corporation he controls. Usually, no tax is incurred when property is transferred to a corporation solely in exchange for such corporation's stock if, immediately after the exchange, the transferors are in control of the corporation (i.e., own at least 80 percent of the voting power of the voting stock and 80 percent of all other stock).ⁿ⁵⁶ Sometimes, however, the transferred property is subject to a mortgage which the corporation assumes and the mortgage exceeds the transferor's adjusted basis in the transferred property. This excess is taxed as gain at the time of the exchange; the gain may be ordinary or capital, depending on the nature of the property and its status in the mortgagor's hands.ⁿ⁵⁷

One case has indicated that gain recognition may be avoided by transferring a note in addition to the encumbered real property. In the case, a taxpayer transferred to a corporation real property on which the mortgage exceeded his adjusted basis. To avoid the trap of *IRC Section 357(c)(1)*, he also transferred an unsecured promissory note to the corporation along with the real property. The Ninth Circuit held that the note had a basis equal to its face amount, thereby making the taxpayer's total basis in the property contributed (including the note) greater than the total liabilities. Therefore, there was no gain recognized on the transfer of the real property.^{n57.1} Another case reached a similar result for the same reason when a loan receivable owed by the taxpayer equal in amount of the excess of liabilities transferred over assets was recorded on the corporate books of the transferee corporation.^{n57.2}

The transfer of mortgaged property by gift results in recognition of gain to the donor if the property is encumbered by a mortgage which exceeds the donor's adjusted basis. The gain recognized equals the amount by which the mortgage exceeds the donor's adjusted basis.ⁿ⁵⁸ Moreover, this result applies regardless of whether the mortgage is recourse or nonrecourse.ⁿ⁵⁹

Taxable gain can be recognized if property subject to a mortgage is transferred by a partner to his partnership in

exchange for a partnership interest or as a contribution to capital. This transfer subjects the partner to a taxable gain when the portion of the mortgage allocable to the other partners after the transfer exceeds the tax basis of the transferor-partner in the partnership after the transfer. n60

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.09

§ 12.09 Foreclosure and Repossession of Mortgaged Property

If a mortgagor defaults on the payment of the mortgage debt, the mortgagee may either foreclose or mitigate the debt. Many factors, not the least of which are the tax consequences of foreclosure versus mitigation, should be considered by the mortgagee before a final decision is made as to what action is appropriate when faced with a defaulting mortgagor. The tax consequences of a mitigation to the mortgagor are discussed in *Section 12.09[1]*, below. The tax consequences for the mortgagee are discussed in *Section 12.09[4]*, below.

A foreclosure generally takes one of four forms:

- (1) involuntary sale to the mortgagee;
- (2) voluntary conveyance to the mortgagee;
- (3) sale to a third party; and
- (4) sale to the mortgagee.

All foreclosure transactions have important tax consequences to both the mortgagor and the mortgagee. These consequences, such as determining taxable gain or loss, tax basis of the property, amount and timing of any bad debt deductions, etc., are discussed later in this chapter. In reviewing the tax consequences of a foreclosure, it is important to remember that all foreclosures result in two separate events for tax purposes: (1) sale of the property; and (2) satisfaction of the mortgage.

Because the mortgagor's tax treatment on foreclosure depends, in part, on whether the mortgagor is personally liable on the debt (i.e., a recourse mortgage) or not personally liable (i.e., a nonrecourse mortgage), these two situations are discussed separately below in *Section 12.09[2]* (recourse mortgages) and *Section 12.09[3]* (nonrecourse mortgages), below. n61

[1] Tax Consequences to the Mortgagor on Mitigation of the Debt

In lieu of foreclosing on a defaulted mortgage, the mortgagee may agree to reduce the amount outstanding. This is not

treated as a sale or exchange of the mortgaged property. It will, however, result in cancellation of indebtedness income (COD income) for the mortgagor n62 unless the taxpayer qualifies for one of the exemptions described in *IRC Section 108*. n63 These exemptions may affect the taxpayer's "tax attributes" or may require a reduction in the basis of depreciable real property. n63.1

Even if *IRC § 108* does not apply, the timing of the discharge may be in issue. In one case, the taxpayers received a discharge of an outstanding FmHA mortgage on their farm. In exchange they agreed to pay the FmHA a lower net recovery buyout amount, and also agreed to pay to the FmHA the amount discharged if they disposed of the farm within a 10-year period. The taxpayers conceded they had received discharge of indebtedness income, but insisted that it was not includable in income until they conveyed the land or upon the passing of 10 years. They claimed that their potential obligation to repay some part or all of the amount discharged precluded a finding that the debt had been forgiven. The Tax Court disagreed and found that the taxpayers received discharge of indebtedness income at the time the net buyout agreement was entered into, because at that time, the taxpayers controlled whether they would ever be required to make any further payments to FmHA. The taxpayers' potential obligation to repay the amounts discharged was too contingent to be considered a substitute for the original obligation. n63.2

[2] Tax Consequences to the Mortgagor on Foreclosure of Recourse Mortgage

[a] Transaction Viewed as Sale of the Property

The mortgagee's foreclosure of property used to secure a debt is treated as the taxable sale of the property to the mortgagee. n64 If the mortgagor voluntarily issues his deed in favor of the mortgagee in satisfaction of the debt (a transfer in lieu of foreclosure), the transaction is also viewed as a sale or exchange. n65

[b] Computation of Gain or Loss

The general rule for determining gain or loss in each type of foreclosure transaction is the same as the rule for a voluntary sale: Gain or loss is the difference between the adjusted tax basis of the property and the amount realized (gross proceeds less expenses) from the foreclosure transaction. n66

If the property is sold at a foreclosure sale, the amount realized is generally the sale price, and this is used to determine the mortgagor's gain or loss. This is so even if the mortgage exceeds the sale price. n67 If the mortgagor pays that excess (the "deficiency"), the payment will have no independent tax significance. If the mortgagee releases the mortgagor from this obligation, the mortgagor may have COD income, as discussed in *Section 12.10*, below.

The amount realized on a foreclosure sale or other transfer of property in consideration of the discharge or reduction of indebtedness depends on whether the debt is recourse or nonrecourse in nature. If the debt is nonrecourse, the amount realized includes the full amount of debt canceled. n67.1 If the debt is recourse debt, the amount realized generally cannot exceed the fair market value of the mortgaged property. n68 This limitation applies even if the amount bid at the foreclosure sale exceeds the property's fair market value. n68.1

PRACTICE TIP:

It should be noted that, absent clear and convincing proof to the contrary, the sale price of property at a foreclosure sale is presumed to be its fair market value. n68.2 Unless a taxpayer rebuts this presumption, the amount bid will be deemed to be the property's fair market value. Lenders not uncommonly bid an amount higher than the property's fair market value. A taxpayer in an appropriate case should obtain appraisal evidence at the time of sale if the value of property is less than the amount bid at foreclosure. Doing so will reduce the amount realized, and hence the gain from the sale. n68.3

If the amount realized is less than the mortgagor's adjusted basis in the property, the loss incurred is deductible only if

the mortgage indebtedness was incurred in connection with property either held for investment or used in the mortgagor's trade or business. ⁿ⁶⁹ For this reason, a foreclosure on a personal residence will typically produce a nondeductible capital loss. This result may be particularly unappealing if, as discussed in *Section 12.10*, below, the mortgage is recourse and the transaction results in COD income for the mortgagor.

Example:

Assume that individual A purchases a small rental property for \$200,000, consisting of \$10,000 cash and \$190,000 borrowed from Bank X on a recourse note. Later, when the fair market value of the property has decreased to \$160,000, A walks away from the property, and Bank X releases A from any liability remaining after the foreclosure sale. The foreclosure sale produces proceeds of \$160,000. A realizes a \$40,000 capital loss (\$200,000 basis less \$160,000 proceeds), but also must recognize \$30,000 COD income (\$190,000 debt less \$160,000 FMV). The recognition of the COD income may be avoided if A qualifies for one of the exclusions from recognition of income from the discharge of indebtedness. ^{n69.1} See § 12.10, below, for a discussion of these rules.

[c] Timing of the Mortgagor's Loss

If a mortgagor has a statutory right of redemption from a purchaser (i.e., a right to reacquire the property following the foreclosure), the mortgagor's ability to deduct a loss is postponed until the right of redemption expires. ⁿ⁷⁰ If the mortgagor exercises his right to redeem and recovers possession of the property, no gain or loss is realized. ⁿ⁷¹ When state law provides for redemption rights, a mortgagor may avoid postponement of any foreclosure gain or loss by quitclaiming his redemption rights. ⁿ⁷²

Regardless of whether the mortgagor is an accrual-basis or cash basis taxpayer, the sale or exchange loss resulting from the foreclosure is treated as occurring when the foreclosure (or transfer in lieu of foreclosure) takes place, ⁿ⁷³ or, if later, when the right of redemption expires. If the fair market value of the foreclosed property is less than the outstanding mortgage and the mortgagee releases the mortgagor from his obligation to pay the deficiency, any COD income which the mortgagor realizes is reported in the year the mortgagee provides the release.

[3] Tax Consequences to the Mortgagor on Foreclosure of Nonrecourse Mortgage

[a] Transaction Viewed as Sale of the Property

As with a recourse mortgage, the mortgagee's foreclosure of property used to secure a debt is treated as the taxable sale of the property to the mortgagee. ⁿ⁷⁴ If the mortgagor voluntarily issues his deed in favor of the mortgagee in satisfaction of the debt (a transfer in lieu of foreclosure), the transaction is also viewed as a sale or exchange, even if the market value of the property is less than the outstanding mortgage balance. ⁿ⁷⁵

[b] Computation of Gain or Loss

The general rule for determining gain or loss in each type of foreclosure transaction is the same as the rule for a voluntary sale: Gain or loss is the difference between the adjusted tax basis of the property and the amount realized (gross proceeds less expenses) from the foreclosure transaction. ⁿ⁷⁶ The amount realized, however, cannot be less than the nonrecourse debt. ⁿ⁷⁷

If the mortgagor simply transfers the property to the mortgagee, the amount which the mortgagor has realized is not obvious. The rule is that the amount realized is the amount of the debt canceled, even if this exceeds the fair market value of the mortgaged property. ⁿ⁷⁸

One significant difference between nonrecourse and recourse mortgages is that, with a nonrecourse mortgage, the

amount realized on foreclosure, or a transfer in lieu of foreclosure, is never less than the outstanding debt. ⁿ⁷⁹ Thus, the debt is not treated as "canceled" and the mortgagor does not have to worry about COD income. This is, however, not necessarily unmitigated good news for the nonrecourse mortgagor. Unlike the recourse mortgagor--who only includes in the amount realized the fair market value of the property--the nonrecourse mortgagor includes the full amount of the debt in the amount realized. ^{n79.1} This typically reduces the mortgagor's loss (or increases his gain) when the mortgage exceeds the fair market value of the property. The amount realized may also include interest that had accrued as of the date of the foreclosure. ^{n79.2}

Planning Note:

The inclusion of interest in the amount realized may result in the taxpayer being deemed to have paid the interest in the foreclosure. Therefore, the taxpayer may be entitled to deduct the portion of mortgage interest deemed to be paid in the foreclosure. ^{n79.3}

If the amount realized is less than the mortgagor's adjusted basis in the property, the loss incurred is deductible only if the mortgage indebtedness was incurred in connection with property either held for investment or used in the mortgagor's trade or business. ⁿ⁸⁰

Example:

Assume that individual A purchases his personal residence for \$100,000, consisting of \$5,000 cash and a \$95,000 nonrecourse note payable to the seller (i.e., a purchase-money mortgage). Subsequently, when the fair market value (FMV) of the residence decreases to \$80,000, A walks away from the home. Because A is not personally liable on the note, the mortgagee has no further recourse against A. The foreclosure proceeds would be treated as equal to the nonrecourse debt, i.e., \$95,000, and A would realize a \$5,000 nondeductible capital loss (\$100,000 purchase price minus \$95,000 "proceeds"). A would not have any COD income as a result of this transaction.

[c] Timing of the Mortgagor's Loss

With a nonrecourse mortgage, the primary factor affecting the period in which a foreclosure loss is reported for tax purposes is the mortgagor's right of redemption. If a mortgagor has a statutory right of redemption from a purchaser (i.e., a right to reacquire the property following the foreclosure), the mortgagor's ability to deduct a loss is postponed until the right of redemption expires. ⁿ⁸¹ If the mortgagor exercises his right to redeem and recovers possession of the property, no gain or loss is realized. ⁿ⁸² When state law provides for redemption rights, a mortgagor may avoid postponement of any foreclosure gain or loss by quitclaiming his redemption rights. ⁿ⁸³

Additionally, it should be noted that under the laws of some states or under the terms of some debt instruments, accrued interest may be recourse even though the obligation to repay the principal is nonrecourse. In that situation, different results may be obtained.

[4] Tax Consequences to the Mortgagee on Foreclosure and Mitigation

There generally are two possible taxable transactions affecting the mortgagee that can occur when property is foreclosed. First, on a foreclosure, the mortgagee may have a bad debt deduction in the year of foreclosure on the outstanding portion of the mortgage. ⁿ⁸⁴ Second, the mortgagee may recognize gain or loss on the final disposition of the property, as explained below. ⁿ⁸⁵

To the extent that amounts received from a foreclosure sale of mortgaged property to a third party exceed the total claim of the mortgagee (including all costs associated with the foreclosure), the excess is normally paid to the mortgagor. Therefore, it is unusual for a mortgagee to realize a gain from a foreclosure sale. However, if a mortgagee originally

purchased a mortgage debt at a discount or if the mortgagee had previously taken a partial bad debt deduction (generally available only with respect to business loans) which reduced the mortgagee's basis in the loan, gain could occur.

In the case of a nonrecourse mortgage where the mortgagee purchases the mortgaged property in a foreclosure sale, the mortgagee has a taxable gain or loss to the extent of the difference between the bid price and the mortgagee's basis in the mortgage. n86 The result is the same with a recourse mortgage, if the bid price equals or exceeds the outstanding debt.

If, however, there is a deficiency and the mortgage is recourse, the mortgagee has the right to try to recover the deficiency from the mortgagor. Since recovery on a deficiency judgment would make the mortgagee whole, any loss which the mortgagee might have can only be taken in the foreclosure year if it can be shown in that year that the deficiency is uncollectible. n87 Otherwise, the mortgagee subtracts the foreclosure recovery from its original debt basis to determine its basis in the deficiency. It then defers reporting gain or loss until the collectibility (or uncollectibility) of the deficiency is determined. n87.1 Accrued interest may be included as part of the deduction allowable with respect to a mortgage foreclosure, but only if the interest has been reported as income on a federal tax return. n87.2

A loss may be recognized for tax purposes in the year of foreclosure, even though the mortgagor has a right of redemption. n88

The bid price usually is presumed to be the fair market value of the property. This presumption was upheld in a case in which the Service contended that the bid price was less than the fair market value. n89 If the bid price is not the fair market value of the property, the difference will result in a separately reported gain or loss. Supporting a fair market value which is different from the bid price can be a difficult task because the Treasury regulations on the sale of mortgaged property define fair market value as follows:

"The fair market value of the property for this purpose shall, in the absence of clear and convincing proof to the contrary, be presumed to be the amount for which it is bid by the taxpayer." n90

If the Service asserts an additional gain due to a fair market value in excess of the bid price, the Service has the burden of overcoming the presumption. n91

The foregoing rules do not apply when the mortgagee is the seller and is also the one foreclosing on the property. *IRC Section 1038* provides that, when the seller-mortgagee repossesses property in satisfaction of the indebtedness, no loss is recognized, and, under certain circumstances, gain may be recognized. See Chapter 7 for further discussion of this topic. n92

[5] Expenses of Foreclosures and Repossessions

Court costs, legal fees and other foreclosure costs related to property acquired by a third party reduce the proceeds received by the mortgagee in a foreclosure sale. When the mortgagee acquires the property, expenses and liens paid by the mortgagee to protect the mortgaged property will be added either to the mortgagee's basis for the loan or to its basis for the acquired property, depending upon when they are paid. Outlays by the mortgagee prior to foreclosure are added to its loan basis, while outlays during the foreclosure proceedings are added to its property basis or to its deficiency judgment if it does not acquire the property. n93

[6] Foreclosure by Prior Lien Holder

A foreclosure by a prior lien holder generally eliminates a mortgagee as a secured creditor. A bad debt loss is not deductible by the mortgagee, however, until the junior note (previously secured by the foreclosed property) is proven to be worthless. n94

[7] Alternatives to Foreclosure

In an effort to circumvent the potentially adverse tax effects arising out of a foreclosure, mortgagors have attempted to use various alternatives to avoid or defer the adverse tax consequences that can arise from "phantom gain" that can attend a foreclosure. n95

[a] Restructuring the Debt

Mortgagees may be willing to cooperate with mortgagors in restructuring the debt to accomplish mutual business and tax objectives. The actual substitution of a new debt instrument in satisfaction of outstanding indebtedness, however, is treated as satisfaction of the outstanding indebtedness for an amount equal to the issue price of the new debt instrument. n96 As a result, a borrower may recognize COD income equal to the difference between the new debt instrument's issue price and the adjusted issue price of the old debt instrument. If there is an actual cancellation of indebtedness--rather than replacement with a new debt instrument--the debtor may realize ordinary income to the extent of the discharge. n97 Taxpayers who have discharge of indebtedness income from the reacquisition of certain debt instruments, however, may elect to defer that gain to future years. n97.1 See § 12.09[8], *below*, for a discussion.

Adjustments such as extending the mortgage term, waiver of current debt service payments, addition of unpaid interest to the principal balance of the mortgage, etc., are other alternatives to foreclosure. If the modification is not material, these types of adjustments have historically been treated as nonrecognition events, and no current tax liabilities have resulted. n98

The tax treatment of these modifications, however, was complicated by a Supreme Court decision, *Cottage Savings Association v Commissioner*. n99 In that case, the Court ruled that thrift institutions can deduct losses claimed from exchanges of groups of residential mortgage loan receivables (or participation interests in two portfolios) with other thrifts or with the Federal National Mortgage Association, even though the mortgages, viewed individually and in groups, possessed many identical financial terms. The tax issue arose in *Cottage Savings* and other thrift "loan swaps" because no nonrecognition provisions of the Code apply specifically to exchanges of debt obligations of different individual obligors. (The like-kind nonrecognition rule of *IRC Section 1031*, relating to exchanges of property held for productive use in a trade or business or for investment, specifically does not apply to exchanges of bonds, notes, other securities, or evidences of indebtedness or interest.) Since the Service could find no statute providing nonrecognition of the losses claimed in *Cottage Savings*, it retreated to realization concepts and claimed that the losses were not "realized."

The Supreme Court held that the losses were realized and deductible because the different obligors and real estate collateral underlying each and every loan involved on both sides of the exchanges made the groups of mortgages materially different from each other within the meaning of the "material difference" test of *Regulations Section 1.1001-1(a)*. The Court also held that the wash sale rule of *IRC Section 1091* did not disallow the loss because the different obligors and collateral on each mortgage made each loan not "substantially identical" to any other loan in the trade. The Court then held broadly that properties are materially different as long as each party to the exchange owns afterward "legally distinct entitlements," apparently meaning property rights and powers that are "not identical" to those held before the exchange. The Court rejected any notion that the mortgages were not materially different merely because the regulatory accounting rule permitted thrifts not to report a loss for financial statement purposes.

The decision had potentially broader application to tax questions across diverse types of transactions, particularly regarding debt restructurings and workouts. The Supreme Court seemed to create a very low threshold in determining whether a modification of terms of an outstanding debt obligation is material enough to be treated as a deemed exchange of old debt for new debt with tax consequences for the lender and borrower following such an exchange.

To clarify the rulings in *Cottage Savings* as well as other debt modification transactions, the IRS issued regulations.

n100 The general approach of the regulations is that there is a realization event if there is a "modification" in the debt instrument which is a "significant modification." For these purposes, a modification is:

"any alteration, including any deletion or addition, in whole or in part, of a legal right or obligation of the issuer or a holder of a debt instrument, whether the alteration is evidenced by an express agreement (oral or written), conduct of the parties, or otherwise." n101

Most temporary forbearances of a mortgagor's failure to perform are not considered modifications and, therefore, do not result in a realization event. n102

The regulations provide, generally, that a modification is significant only if:

"based on all facts and circumstances, the legal rights or obligations that are altered and the degree to which they are altered are economically significant." n103

The regulations then provide specific rules for some common situations. In particular, a yield change is not considered a significant modification unless it varies from the annual yield on the original mortgage by more than the greater of--(1) 1/4 of one percent (25 basis points); or (2) 5 percent of the annual yield of the original mortgage (.05 x annual yield). n104

The regulations provide a general rule that a modification that changes the timing of payments is a significant modification if it results in the material deferral of scheduled payments. The deferral may occur either through an extension of the final maturity date of an instrument or through a deferral of payments due prior to maturity. n105 The regulations then provide a safe-harbor, which treats a deferral as not significant if the deferred payments are unconditionally payable no later than five years after the original due date (or, if sooner, 50 percent of the original term of the instrument). n106

A change which releases, substitutes, adds or otherwise alters the collateral for a recourse mortgage is a significant modification if the modification results in a change in payment expectations. n107 In the case of a nonrecourse mortgage, a modification that releases, substitutes, adds or otherwise alters a substantial amount of the collateral for a mortgage is a significant modification. A substitution of collateral is not, however, a significant modification if the collateral is fungible or otherwise of a type where the particular units pledged are unimportant (for example, government securities or financial instruments of a particular type and rating). n108

As the foregoing discussion indicates, the restructuring of an existing loan by entering into a loan modification agreement may cause the lender to be treated as having disposed of the original mortgage, and the borrower may have COD income if the principal amount of the old loan exceeds the principal amount of the new one. The modification may also trigger the original issue discount rules that would treat a portion of the new debt principal as imputed interest. If the principal of the old debt is greater than the imputed principal of the new debt, a solvent borrower generally realizes COD income. n109

Example:

B issues a ten-year note to A for \$3 million. The note provides for 12 percent annual interest. Three years later, when B is solvent, A and B agree to reduce the interest rate to 3 percent. This is a significant modification under *Regulation Section 1.1001-3*. Assuming the 3 percent interest rate is below the applicable federal rate, the original issue discount rules would apply and a portion of the \$3 million principal of the note would be treated as interest. As a result, B could have forgiveness of indebtedness income equal to the amount of principal recharacterized as interest.

[b] Installment Sales

Installment sale reporting has been used to defer recognition of a part of the gain until the installment payments are collected in the future. As previously discussed in *Section 12.04*, above, the major limitation is that any excess of the mortgage balance over the adjusted basis of the property is treated as payment received in the year of sale.

[c] Like-kind Exchanges

Like-kind exchanges have been employed as viable alternatives to contemplated foreclosures. A problem that frequently arises is the difficulty of finding a property suitable for exchange. This problem is aggravated by the fact that the taxpayer's property typically has a relatively high outstanding mortgage balance, along with a low equity value. A solution for this problem is for the taxpayer, if possible, to include some cash along with his property in the trade and to trade up to a higher-value property. This can defer recognition of any phantom gain.

[d] Constructive Receipt Issues in Debt Restructurings

Constructive receipt of income may occur when a mortgage or other debt is extended or restructured. Constructive receipt of income occurs when the taxpayer has an unrestricted right to receive the income, is able to collect it, and the failure to do so results from the exercise of the taxpayer's own choice. n110 If the debtor is unable to pay a mortgage note when due, no constructive receipt will occur. If, however, a note is extended or restructured as an accommodation to an obligor who is otherwise able to pay, constructive receipt of the entire principal due may occur on the due date of the note. This type of situation is likely to occur when real property is sold to related parties, to controlled entities, or to parties who are well-known to the seller. To avoid constructive receipt in this situation, any extension or superseding agreement with respect to the loan must be agreed to before the existing mortgage note or loan becomes due. n111

[8] Election to Defer Cancellation of Indebtedness Income from Reacquisition of a Debt Instrument

[a] In General

A taxpayer may elect to defer cancellation of indebtedness income arising from a "reacquisition" of "an applicable debt instrument" after December 31, 2008, and before January 1, 2011. n111.1 Income deferred pursuant to the election must be included in the gross income of the taxpayer ratably in the five taxable years beginning with (1) for repurchases in 2009, the fifth taxable year following the taxable year in which the repurchase occurs or (2) for repurchases in 2010, the fourth taxable year following the taxable year in which the repurchase occurs. n111.2

An "applicable debt instrument" is any debt instrument issued by (1) a C corporation or (2) any other person in connection with the conduct of a trade or business by that person. n111.3 For purposes of the provision, a "debt instrument" is broadly defined to include any bond, debenture, note, certificate or any other instrument or contractual arrangement constituting indebtedness. n111.4

A "reacquisition" is any "acquisition" of an applicable debt instrument by (1) the debtor that issued (or is otherwise the obligor under) that debt instrument or (2) any person related to the debtor. n111.5 An "acquisition" includes, without limitation, any of the following: n111.6

- An acquisition of a debt instrument for cash;
- The exchange of a debt instrument for another debt instrument (including an exchange resulting from a modification of a debt instrument);
- The exchange of the debt instrument for corporate stock or a partnership interest;
- The contribution of a debt instrument to the capital of the issuer; or

- The complete forgiveness of a debt instrument by a holder of the instrument.

NOTE:

Conspicuously absent from the above list are exchanges of a debt instrument for property, including transfers of real estate in mortgage foreclosures. The IRS, however, has clarified that the term "acquisition" includes an acquisition of a debt instrument for cash or other property, so these exchanges do fall within the ambit of *IRC Section 108(i)*. n111.6.1 In addition, the IRS has clarified that the term "acquisition" also includes an indirect acquisition n111.6.2 if a direct acquisition of the debt instrument would qualify for an election under *IRC Section 108(i)*. For example, if a corporation acquires debt of a partnership that the partnership issued in connection with its trade or business, and the partnership and corporation become related within six months of the corporation's acquisition of the debt, the indirect acquisition is an acquisition for which an election under *IRC Section 108(i)* may be made. n111.6.3

[b] Deferral of Deduction for Original Issue Discount in Debt-for-Debt Exchanges

If a taxpayer makes the election for a debt-for-debt exchange in which the newly issued debt instrument that is issued (or deemed issued, under regulations) n111.7 in satisfaction of an outstanding debt instrument of the debtor has original issue discount (OID), then the deduction for OID must be deferred. Any otherwise allowable deduction for OID with respect to the newly issued debt instrument that (1) accrues before the first year of the five-taxable-year period in which the related, deferred discharge of indebtedness income is included in the gross income of the taxpayer and (2) does not exceed that related, deferred discharge of indebtedness income, must be deferred. n111.8 Instead of an immediate deduction, the OID is allowed as a deduction ratably over the same five-taxable-year period in which the deferred discharge of indebtedness income is included in gross income. If the amount of the OID accruing before the first year exceeds the income from the discharge of indebtedness with respect to the reacquired debt instrument, the deductions must be disallowed in the order in which the OID is accrued. n111.9

NOTE:

The above rule can also apply in certain cases when a debtor reacquires its debt for cash. If the taxpayer issues a debt instrument and uses the proceeds to reacquire one of its existing debt instruments, the newly issued debt instrument is treated as if it were issued in satisfaction of the retired debt instrument. If the newly issued debt instrument has OID, the rule described above applies. Thus, all or a portion of the interest deductions with respect to OID on the newly issued debt instrument is deferred into the five-taxable-year period in which the discharge of indebtedness income is recognized. Where only a portion of the proceeds of a new issuance is used by a taxpayer to satisfy outstanding debt, then the deferral rule applies to the portion of the OID on the newly issued debt instrument that is equal to the portion of the proceeds of the newly issued instrument that is used to retire outstanding debt of the taxpayer. n111.10

[c] Acceleration of Deferred Items

Cancellation of indebtedness income and any related deduction for OID that is deferred by an electing taxpayer (and which has not previously been taken into account) generally are accelerated and taken into income in the taxable year in which the taxpayer: (1) dies, (2) liquidates or sells substantially all of its assets (including in a Title 11 or similar case), (3) ceases to do business, or (4) or is in similar circumstances. In a case under Title 11 or a similar case, any deferred items are taken into income as of the day before the petition is filed. n111.11 In the case of a partnership, LLC or other pass-thru entity, this acceleration rule also applies to the sale, exchange, or redemption of an interest in the entity by a holder of an ownership interest in the entity. n111.12 The Secretary may adopt regulations extending the acceleration provisions to other circumstances. n111.13

NOTE:

Deferred items are accelerated in a case under Title 11 where the taxpayer liquidates, sells substantially all of its assets, or ceases to do business, but not where a taxpayer reorganizes and emerges from the Title 11 case.

[d] Special Rule for Partnerships

In the case of partnership, any income deferred as a result of the election is allocated to the partners in the partnership immediately before the discharge of indebtedness in the manner those amounts would have been included in the distributive shares of the partners under *IRC Section 704* if that income were recognized at the time of the discharge. Any decrease in a partner's share of liabilities as a result of the discharge is not taken into account for purposes of *IRC Section 752* at the time of the discharge to the extent the deemed distribution under *IRC Section 752* would cause the partner to recognize gain under 38-45Q. Thus, the deemed distribution under *IRC Section 752* is deferred with respect to a partner to the extent it exceeds that partner's basis. Amounts so deferred are taken into account at the same time, and to the extent remaining in the same amount, as income deferred as a result of the election is recognized by the partner. n111.14

[e] Coordination with the Statutory Exclusions from COD Income

Where a taxpayer makes the election to defer income under *IRC Section 108(i)*, the statutory exclusions for Title 11 cases, insolvency, qualified farm indebtedness, and qualified real property business indebtedness n111.15 do not apply to the income from the discharge of indebtedness for the year in which the taxpayer makes the election or any subsequent year. n111.16

PLANNING GUIDE:

The inapplicability of the cancellation of indebtedness exclusions when the deferral election is made provides a planning opportunity. For example, an insolvent taxpayer may elect under *IRC Section 108(i)* to defer income from the discharge of indebtedness, rather than exclude that income under *IRC Section 108(a)(1)(B)*. By making this election and not taking advantage of the exclusion, the taxpayer will thereby avoid having to reduce its tax attributes by a corresponding amount. This can be a good decision if the taxpayer expects to be in a more profitable position in later years when larger carryovers of NOLs, the general business credit, and capital losses will provide a larger tax benefit. n111.17

[f] Procedures for Making the Election

The election is made on an instrument-by-instrument basis. A taxpayer makes an election with respect to a debt instrument by including with its return for the taxable year in which the reacquisition of the debt instrument occurs a statement that (1) clearly identifies the debt instrument and (2) includes the amount of deferred income to which the provision applies and such other information as may be prescribed by the Secretary. n111.18 Once made, the election is irrevocable. n111.19 In the case of a partnership, LLC, S corporation or other pass-thru entity, the election is made by the entity. n111.20 The Secretary is authorized to require reporting of the election (and other information with respect to the reacquisition) for years subsequent to the year of the reacquisition. n111.21

Guidance in making the election and information that must be provided is set forth in *Revenue Procedure 2009-37*. n111.22 Partial elections may be made with respect to any portion of COD income realized from the reacquisition of any applicable debt instrument. n111.23

PLANNING GUIDE:

The ability to make partial elections is especially valuable for partnerships because of the different treatment that can be afforded to different partners. A partnership that elects to defer less than all of the COD income realized from the reacquisition of an applicable debt instrument may determine, in any

manner, the portion, if any, of a partner's COD income amount that is the partner's deferred amount. Some partners may have no deferred amount, while others may have a deferred amount that equals their entire COD income amount. A partner with no deferred amount may use the exclusions for COD income under *IRC Section 108(a)(1)(A), (B), (C), or (D)*. n111.24 The situation is different for S corporations. An S corporation's COD income deferred under *IRC Section 108(i)* must be shared pro rata among those shareholders that are shareholders of the S corporation immediately before the reacquisition transaction. n111.25

Protective elections are also permitted--this could be valuable for taxpayers who take a position that the reacquisition of a debt instrument does not result in the realization of COD income, but who have concerns that the IRS may challenge that position. n111.26 In addition, a taxpayer may specify for each applicable debt instrument an amount greater than the identified amount the taxpayer is electing to defer, in the event the IRS subsequently concludes that the taxpayer understated the amount of COD income that could be deferred. This additional amount of COD income the taxpayer elects to defer may be described as the entire additional COD income, or as a percentage of any additional COD income. If the taxpayer is a partnership, the partnership must specify each partner's share of the partnership's additional COD income that would be deferred (the partner's additional deferred amount), which the partnership may describe for each partner as the partner's entire share of the partnership's additional COD income or as a percentage of the partner's share of the partnership's additional COD income. If the taxpayer is an S corporation, the S corporation must specify each shareholder's share of the S corporation's additional COD income that would be deferred. The S corporation may describe this amount for each shareholder as the shareholder's entire share of the S corporation's additional COD income or as a percentage of the shareholder's share of the S corporation's additional COD income. n111.27

Under its authorization to do so, n111.28 the IRS requires reporting of specified information with respect to the reacquisition for years subsequent to the year of the reacquisition. n111.29

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.10

§ 12.10 Income from the Discharge of Indebtedness

[1] General Rules

Generally, income from discharge of indebtedness is currently included in gross income n112 unless it is excludable under *IRC Section 108*. Under *IRC Section 108*, five exclusions are provided: n113

- (1) a debt discharge in a Title 11 bankruptcy case, if the discharge is granted or approved by the court;
- (2) a discharge when the taxpayer is insolvent outside of bankruptcy; n114
- (3) a discharge of qualified farm indebtedness;
- (4) a discharge of qualified real property business indebtedness for taxpayers other than C corporations;
or
- (5) a discharge of indebtedness that is qualified principal residence indebtedness. n115

NOTE:

The exclusions for insolvency discharges, qualified farm indebtedness discharges, qualified real property business indebtedness discharges, and discharges of qualified principal residence indebtedness do not apply to a taxpayer in a Title 11 case. n116 In the case of an insolvent taxpayer not in a Title 11 case, statutory ordering rules apply under which (1) the insolvency exclusion takes precedence over the qualified farm indebtedness and qualified real property business exclusions, n117 and (2) the principal residence exclusion takes precedence over the insolvency exclusion unless the taxpayer elects otherwise. n118

The insolvency exclusion n119 is limited to the amount by which the taxpayer is insolvent. n120 Insolvency is measured by the amount by which liabilities exceed the fair market value of assets immediately before the debt discharge. n121 The IRS takes the position that assets which are exempt from creditors' claims under state law, including real property held as tenants by the entirety, or a taxpayer's personal residence, must be counted in the taxpayer's assets for purposes of determining if the taxpayer is insolvent. Courts, however, have ruled that property

exempt from the claims of creditors is not included in determining the fair market value of the taxpayer's assets in determining insolvency because the cancellation of indebtedness does not release them from the creditors' claims. n122

The amount by which a nonrecourse debt exceeds the fair market value of the property securing the debt is taken into account in determining whether, and to what extent, a taxpayer is insolvent under *IRC Section 108(d)(3)* of the Code, but only to the extent that the excess nonrecourse debt is discharged. If the nonrecourse debt is not discharged, it is not treated as a liability. n123

For bankrupt taxpayers, any amount of debt discharge that is left after the reduction of tax attributes is disregarded and does not result in income or have other tax consequences.

In a partnership, the eligibility for discharge of indebtedness exclusions is determined at the partner level. n124 Any partner guarantees made in connection with partnership activities may also be entitled to the above exclusions. n125

[2] Discharge of Qualified Farm Indebtedness

Gross income does not include income from the discharge of qualified farm indebtedness. n126 The amount excluded from gross income, however, cannot exceed the sum of the taxpayer's adjusted tax attributes and the aggregate adjusted bases of qualified property held by the taxpayer at the beginning of the taxable year following the taxable year in which the discharge occurs. n127 The "adjusted tax attributes" n128 are determined by (1) first adding the sum of the basis adjustments under *IRC Section 108(b)(2)* other than the basis reduction adjustment; n129 (2) taking \$3 for each \$1 of the general business credit, minimum tax credit, and foreign tax credit carryover attributes; and (3) taking the passive activity carryover attribute only to the extent attributable to any passive activity credit carryover. n130 "Qualified property" includes any property used in a trade or business, or held for the production of income. n131

The qualified farm indebtedness exclusion is available only to discharges made by qualified persons. n132 "Qualified persons" include persons actively and regularly engaged in the lending business who are not any of the following: n133

- related to the taxpayer;
- a person from which the taxpayer acquired the property (or a person related to that person); or
- a person who receives a fee with respect to the taxpayer's investment in the property (or a person related to that person).

Qualified persons also include federal, state, or local governments and their agencies and instrumentalities. n134

For purposes of the exclusion, indebtedness is "qualified farm indebtedness" only if it meets the following requirements: n135

- it was incurred direction in connection with the operation by the taxpayer of a farming business; and
- at least 50 percent of the taxpayer's aggregate gross receipts for the three taxable years before the year the indebtedness is discharged is attributable to the trade or business of farming.

[3] Income from Discharge of Qualified Real Property Business Indebtedness

Taxpayers (other than C corporations) may *elect* to exclude income attributable to the discharge of "qualified real property business indebtedness" from gross income. n136 The election must be made on a timely filed (including extensions) federal income tax return for the taxable year in which the taxpayer has discharge of indebtedness income

that is excludable under *IRC Section 108(a)*. The election is made on completed Form 982. n137 A taxpayer that fails to make the election on that return must request the Commissioner's consent to file a late election under *Regulation 301.9100-3*.

Qualified real property business indebtedness is indebtedness incurred or assumed in connection with real property used in a trade or business and secured by that real property. (Qualified farm indebtedness is not included in the above definition.) n138 The IRS has privately ruled that indebtedness collateralized by an ownership interest in an entity owning real property is secured by that property, and can therefore be treated as qualified real property business indebtedness if other statutory requirements are satisfied. n138.1

NOTE:

In a private letter ruling, the IRS has ruled that if a loan is incurred "in connection with" a taxpayer's business real property because it is secured by that real property at the time the debt was incurred, it is unnecessary to trace the use of the loan proceeds to determine if the "in connection with" requirement is met. Thus, a loan the proceeds of which are used for non-real estate-related purposes should be able to qualify as qualified real property business indebtedness and therefore be eligible for the exclusion. n139

In addition, the indebtedness must either have been incurred or assumed before 1993 or be "qualified acquisition indebtedness." Qualified acquisition indebtedness is debt that is used to acquire, construct or substantially improve real property used in a trade or business and secured by that real property. n140 It also includes debt incurred to refinance qualified real property business debt incurred before 1993; but on refinancing, any debt incurred in excess of the debt being refinanced does not qualify. n141

The exclusion from income may not exceed the aggregate bases of all the taxpayer's depreciable real property. n142 A reduction in the basis of the taxpayer's depreciable real property under *IRC Section 1017* is required, but this basis reduction is limited to the income excluded. n143

In addition to this overall basis limitation, the amount of income excluded because of the discharge of any qualified real property business indebtedness may not exceed the excess of: (1) the outstanding principal amount of the debt (immediately before the discharge), over (2) the fair market value (immediately before the discharge) of the business real property which is security for the debt. n144

PRACTICE TIP:

The statutory provision limiting relief to the amount by which the debt exceeds the value of the security n144.1 reflects the legislative intent for the exclusion to apply when debt secured by real property becomes undersecured due to a decline in the property's value. Under these circumstances, rather than requiring a taxpayer to report discharge of indebtedness income when the debt is modified, the taxpayer may reduce the basis of depreciable property (and take smaller depreciation deductions). n144.2

For this purpose only, the outstanding principal amount means the principal amount of an indebtedness and all additional amounts owed that, immediately before the discharge, are equivalent to principal, in that interest on those amounts would accrue and compound in the future. Amounts subject to *IRC Section 108(e)(2)* (dealing with income not realized to the extent of lost deductions) are excluded from the definition of principal amount. In addition, principal amount must be adjusted to account for unamortized premium and discount consistent with *IRC Section 108(e)(3)*. n145 For this purpose, the fair market value of the property is reduced by the outstanding principal amount of any other qualified real property business indebtedness secured by the property immediately before the discharge.

Example:

Jack (who is not insolvent) owns a building now valued at \$150,000 which he uses in his insurance business. The building is subject to two third-party mortgages: the first secures a debt of \$110,000 and the second secures a debt of \$90,000. Jack agrees with the second mortgagee to reduce that debt to \$30,000, resulting in discharge of indebtedness income of \$60,000. Jack can elect to exclude \$50,000 of that amount from gross income, provided he has enough basis in business real property to absorb it. The \$50,000 equals the excess of the discharged debt immediately before its discharge (\$90,000) over the net fair market value of the property that secures it (this equals \$40,000, i.e., \$150,000 less the \$110,000 of other qualified business real property debt). The remaining \$10,000 of income attributable to the debt discharge is included in gross income unless some other exception applied.

Special rules apply when applying the exclusion to partnerships and S corporations. For partnerships that have a discharge of indebtedness, the determination of whether debt is qualified real property business indebtedness (and the application of the fair market value limitation) is made at the partnership level. However, the election to apply this provision is made at the partner level on a partner-by-partner basis. n146 An interest of a partner in a partnership that owns depreciable real property is treated as depreciable real property to the extent of the partner's proportionate interest in the depreciable real property held by the partnership. The partnership's basis in depreciable real property with respect to such partner is correspondingly reduced.

For S corporations, the election to apply this provision to income from the discharge of indebtedness is made by the S corporation, and the exclusion and basis reduction are both made at the S corporation level. n147

When depreciable real property, the basis of which was reduced under this provision, is disposed of, the amount of depreciation recapture under *IRC Section 1250* is increased as follows: (1) any basis reduction attributable to this rule is treated as a deduction allowed for depreciation, and (2) the determination of what would have been the depreciation adjustment under the straight line method is made as if there had been no such reduction. Thus, the amount of the basis reduction that is recaptured as ordinary income is reduced over the time the taxpayer continues to hold the property, as the taxpayer forgoes depreciation deductions due to the basis reduction. n148

[4] Discharge of Qualified Principal Residence Indebtedness Excluded from Gross Income

In response in part to the sub-prime mortgage crisis in 2007, Congress enacted a new provision excluding from gross income any discharge of indebtedness income resulting from a discharge (in whole or in part) of qualified principal residence indebtedness. n149 The provision is effective for discharges of indebtedness on or after January 1, 2007 and before January 1, 2013. n150 The main reason for the legislation was a sense that where taxpayers restructure their acquisition debt on a principal residence or lose their principal residence in a foreclosure, it is inappropriate to treat discharges of acquisition indebtedness as income.

For purposes of the exclusion, "qualified principal residence indebtedness" means acquisition indebtedness with respect to the taxpayer's principal residence. n151 The term "principal residence" has the same meaning as under *IRC Section 121*. n152

Acquisition indebtedness with respect to a principal residence generally means indebtedness that is incurred in the acquisition, construction, or substantial improvement of the principal residence of the individual and is secured by that residence. It also includes refinancing of that indebtedness to the extent the amount of the refinancing does not exceed the amount of the refinanced indebtedness. n153

NOTE:

The exclusion for qualified principal residence indebtedness generally incorporates the definition of

"acquisition indebtedness" that is used for purposes of the interest deduction. n154 One important difference, however, is that the \$1 million limit that applies with respect to acquisition indebtedness for purposes of deducting interest n155 does not apply for purposes of the discharge of indebtedness exclusion. Therefore, debt forgiveness in excess of \$1 million is eligible for the exclusion. n156

If, immediately before the discharge, only a portion of a discharged indebtedness is qualified principal residence indebtedness, the exclusion applies only to so much of the amount discharged as exceeds the portion of the debt that is not qualified principal residence indebtedness. n157

Example:

Jim's principal residence is secured by an indebtedness of \$1 million, of which \$800,000 is qualified principal residence indebtedness. If the residence is sold for \$700,000 and \$300,000 debt is discharged, then only \$100,000 of the amount discharged may be excluded from gross income. n158

The basis of the individual's principal residence is reduced (but not below zero) by the amount excluded from income. n159

The exclusion for discharges of qualified principal residence indebtedness does not apply to a taxpayer in a Title 11 case; the Title 11 exclusion takes precedence in that case. n160 In the case of an insolvent taxpayer who is not in a Title 11 case, the exclusion for discharges of qualified principal residence indebtedness applies unless the taxpayer elects to have the insolvency exception apply. n161

The exclusion for discharges of qualified principal residence indebtedness does not apply to the discharge of a loan if the discharge is on account of services performed for the lender. n162

[5] Reduction of Purchase Money Debt of an Insolvent Debtor

IRC Section 108 treats any reduction of purchase-money debt of a solvent debtor as a purchase price adjustment, rather than a discharge of indebtedness. n163 Thus, when a seller of property reduces the purchase money obligation of a solvent buyer, the reduction is treated as an adjustment to the cost of the property. n164

Example:

B purchases raw land from S for \$100,000, paying \$20,000 in cash and taking a purchase money mortgage for the balance. B is delinquent on payments, but S does not wish to foreclose. Further, B is solvent and does not file a petition in bankruptcy.

If S agrees to reduce the amount of debt to \$65,000, B will not recognize income from the discharge of indebtedness. Instead, he must adjust his basis in the property to \$85,000 (\$100,000 original basis less \$15,000 of debt discharged).

[6] Impact on Tax Attributes

[a] In General

Whenever a taxpayer is able to exclude income from a discharge in indebtedness from gross income under *IRC Section 108(a)*, a corresponding reduction must be made to one or more of the taxpayer's tax attributes. The particular attributes affected and the manner in which the reductions are applied to them depend upon the particular type of exclusion from gross income that was involved.

In the case of excluded income resulting from discharges of indebtedness in Title 11 or insolvency cases, or discharges of qualified farm indebtedness, the amount excluded from gross income must be applied to reduce several of the taxpayer's tax attributes. n165 Unless a taxpayer makes an election discussed below, n166 the attributes must be reduced in the following order: n167

- (1) net operating losses and carryovers;
- (2) general business credit;
- (3) minimum tax credit;
- (4) capital loss carryovers;
- (5) basis of the taxpayer's depreciable and nondepreciable assets;
- (6) passive activity loss and credit carryovers; and
- (7) foreign tax credit carryovers.

[b] Election to Apply Reductions First Against Depreciable Property

A taxpayer with amounts excluded from gross income in Title 11 bankruptcy or insolvency cases, or in discharges of qualified farm indebtedness may elect to alter the above default statutory ordering of the reduction of tax attributes. If the election is made, a taxpayer may apply all or a portion of the debt discharge amount to first reduce basis (but not below zero) in depreciable property or real property held primarily for sale to customers in the ordinary course of a trade or business. n168 The election is limited to the aggregate adjusted bases of depreciable property held by the taxpayer at the beginning of the taxable year following the taxable year in which the discharge occurs. n169

The election must be made on a timely-filed (including extensions) federal income tax return for the taxable year in which the taxpayer has COD income that is excluded under *IRC Section 108(a)*. The appropriate information must be entered on Form 982, and the form attached to the tax return. An election may be revoked only with the consent of the Commissioner. n170

A taxpayer who makes an election under *IRC Section 108(b)(5)* may pick and choose the depreciable property for which bases will be reduced and avoid the general ordering rules on basis reduction. n171

If the election is made, a taxpayer first reduces the adjusted bases of depreciable property (real and personal) to the extent of the excluded discharge of indebtedness income. n172 If the adjusted bases of depreciable property are insufficient to offset the entire amount of excluded income, the taxpayer must reduce any remaining tax attributes in the order specified in *IRC Section 108(b)(2)*. n173

PLANNING GUIDE:

The election to first reduce basis in depreciable property, rather than reduce tax attributes under the default ordering rule, provides a taxpayer with the opportunity to account for the discharge of indebtedness in a manner most favorable to the taxpayer's tax situation. A bankrupt or insolvent taxpayer who wishes to retain net operating losses or any of the other carryovers n174 should often make the basis-reduction election. In contrast, a taxpayer having an expiring net operating loss would want to reduce the carryovers rather than make the election. n175

[c] Rules for Discharges of Qualified Real Property Business Indebtedness

Only one tax attribute is affected when a taxpayer excludes gross income from discharges of qualified real property indebtedness--the basis of the taxpayer's depreciable property. n176 In this case, the basis of a taxpayer's depreciable real property must be reduced by the amount excluded from gross income. The reduction is done in accordance with *IRC Section 1017* and accompanying regulations n177 and is applied to the basis of depreciable real property held by the taxpayer at the beginning of the tax year following the tax year in which the discharge occurs. n178 There are no other reductions of tax attributes applied for this type of indebtedness discharge. n179 See § 12.10[7][c], below, for a discussion of *IRC Section 1017* basis reduction rules that apply to discharges of qualified real property indebtedness.

[d] Rules for Discharges of Qualified Principal Residence Indebtedness

Only one tax attribute must be reduced when a taxpayer excludes income from the discharge of qualified principal residence indebtedness. n180 In these cases, the basis of the individual's principal residence must be reduced (but not below zero) by the amount excluded from gross income. n181 There are no other reductions of tax attributes applied for this type of indebtedness discharge. n182 See § 12.10[4], above, for a detailed discussion of this exclusion.

[7] Reductions of Basis under *IRC Section 1017***[a] In General**

IRC Section 1017 is used to apply the required basis reduction in property when a taxpayer has discharge of indebtedness income in a Title 11 bankruptcy case, an insolvency case, or has discharge of qualified farm indebtedness or (for taxpayers other than C corporations) discharge of qualified real property indebtedness. n183

When a taxpayer has discharge of indebtedness income and a basis reduction under *IRC Section 1017* is required, the amount is applied to reduce the basis of property held by the taxpayer at the beginning of the tax year following the tax year in which the discharge of indebtedness occurs. n184 Final regulations detail the manner of making the reductions. n185

[b] General Basis Reduction Ordering Rules

If the discharge of indebtedness involves a Title 11 bankruptcy case, an insolvency case, or is a discharge of qualified farm indebtedness, the general ordering rules on basis reduction will apply unless the taxpayer has made a *IRC Section 108(b)(5)* election. n186

These rules require a taxpayer to reduce the adjusted basis of the property that secured the discharged indebtedness before reducing the adjusted bases of other property. The adjusted bases of properties must be reduced in the following order: n187

- (1) real property used in the taxpayer's trade or business or held for the production of income that secured the discharged indebtedness immediately before discharge, other than real property that is inventory or held primarily for sale to customers in the ordinary course of business;
- (2) personal property used in the taxpayer's trade or business or held for investment that secured the discharged indebtedness immediately before discharge, other than inventory, accounts receivable and notes receivable;
- (3) remaining property used in a trade or business or held for investment, other than inventory, accounts receivable, notes receivable and real property held as inventory or primarily for sale to customers in the ordinary course of business;

(4) inventory, accounts receivable, notes receivable and real property held as inventory or primarily for sale to customers in the ordinary course of business;

(5) property not used in a trade or business nor held for investment.

The basis reductions within each of the above categories are made in proportion to the adjusted bases of all properties within each category. n188 The amount of excluded income used to reduce basis does not include any income that has already reduced other tax attributes of the taxpayer or which has been used to reduce the basis of depreciable property pursuant to an *IRC Section 108(b)(5)* election. n189

[c] Ordering Rules for Basis Reductions Relating to Discharges Qualified Real Property Business Indebtedness or When *IRC Section 108(b)(5)* Election is Made

The general basis reduction ordering rules n190 are modified when the reduction is made under *IRC Section 108(c)(1)* (i.e., when there has been a discharge of qualified real property business indebtedness for a taxpayer other than a C corporation) or when the taxpayer has made an election under *IRC Section 108(b)(5)* to apply the reduction of tax attributes first against depreciable property. In either of these situations, the basis reduction is applied only to reduce the basis of the taxpayer's depreciable property in the various ordering categories. n192

If basis reductions made to depreciable property under a *IRC Section 108(b)(5)* election are less than the amount of excluded income, the remaining amounts must be applied to reduce tax attributes following the general ordering rules. n193

Basis reductions made under *IRC Section 108(c)(1)* can be applied only to depreciable real property. n194 In addition, the taxpayer must first reduce the adjusted basis of the qualifying real property to the extent of the discharged qualified real property business indebtedness before reducing the adjusted bases of other depreciable real property. n195

For these basis reduction purposes, "depreciable property" includes any property that is subject to depreciation, but only if a basis reduction will reduce the amount of depreciation or amortization that otherwise would be allowable for the period immediately following the reduction. n196

When an election has been made under *IRC Section 108(b)(5)*, and for basis reductions relating to qualified farm indebtedness, a taxpayer may also elect to treat any real property that is inventory as depreciable property. n197 This election is not available for basis reductions with respect to discharged qualified real property business indebtedness. n198 The election is made on Form 982, and the form must be attached to a timely-filed (including extensions) federal income tax return for the tax year in which the taxpayer has discharge of indebtedness income that is excluded from gross income under *IRC Section 108*. Once made, the election can be revoked only with the consent of the Commissioner. n199 If an election is not timely filed, a taxpayer may nevertheless request Commissioner's consent to file a late election under Treasury Regulation Section 301.9100.

[d] Limitation in Title 11 Bankruptcy or Insolvency Cases

In the case of a Title 11 bankruptcy or the taxpayer's insolvency, basis reductions are limited to: (1) the excess of the aggregate of the adjusted bases of property and the amount of money held by the taxpayer immediately after the discharge; over (2) the aggregate of the liabilities of the taxpayer immediately after the discharge. n200 This limitation does not apply to reductions in basis to depreciable property by reason of an election under *IRC Section 108(b)(5)*. n201

[e] Special Rules for Qualified Farm Indebtedness

Any basis reductions attributable to qualified farm indebtedness n202 may be applied only to reduce the basis of "qualified property" held by the taxpayer. Furthermore, they must be applied to reduce the basis of that property in the following order: n203

- (1) first, the basis of depreciable property;
- (2) second, the basis of land that is used or held for use in a farming trade or business; and
- (3) third, the basis of other qualified property.

"Qualified property" is any property used or held for use in a trade or business or for the production of income. n204 Partnership interests, affiliated corporation stock, and real property that is inventory may also be "qualified property." n205

[f] Partnership Interests as Depreciable Property

For purpose of the basis reduction rules, any interest of a partner in a partnership is treated as depreciable property to the extent of the partner's interest in the depreciable property held by the partnership. This characterization applies, however, only if there is a corresponding reduction in the partnership's basis in depreciable property with respect to that partner. n206

A partner may (but does not have to) request the partnership to reduce that partner's share of the inside basis of the partnership's depreciable property (or depreciable real property) with respect to that partner; doing so will permit that partner to treat the partnership interest as depreciable property (or depreciable real property). The partnership may grant or deny the request, in its sole discretion. n207

To prevent avoidance of the general ordering rules through the use of partnerships, however, a partner must request the above consent in either of the following circumstances: n208

- the partner owns more than 50 percent of the capital and profits interest of the partnership; or
- reductions to the basis of the partner's depreciable property (or depreciable real property) are being made with respect to the partner's distributive share of cancellation of indebtedness income of the partnership.

A partnership must grant its consent to reduce its partners' shares of the partnership's depreciable basis in depreciable property (or depreciable real property) if consent is requested with respect to that indebtedness by either of the following: n209

- partners owning an aggregate of more than 80 percent of the capital and profits interests of the partnership; or
- five or fewer partners owning an aggregate of more than 50 percent of the capital and profits interest of the partnership.

A partner making the request must do so before the due date (including extensions) of the partner's federal income tax return for the tax year in which the partner as cancellation of indebtedness income that is excluded from gross income under *IRC Section 108(a)*. n210

A partnership that consents to a basis reduction must file a consent statement containing specified information with its

partnership information return for the tax year following the year that ends with or within the tax year the partner excludes cancellation of indebtedness income from gross income under *IRC Section 108(a)*. The partnership must also provide a copy of that statement to the affected partner before the due date (including extensions) of the partner's return for the tax year in which the partner excludes cancellation of indebtedness income from gross income under *IRC Section 108(a)*. n211

[g] Affiliated Group Stock as Depreciable Property

For purposes of the *IRC Section 1017* basis reduction rules, a corporation that holds stock of a subsidiary must treat that stock as depreciable property to the extent that the subsidiary consents to a corresponding reduction in the basis of its depreciable property. This rule applies only if both corporations are members of the same affiliated group, and if the group files a consolidated return for the tax year in which the discharge occurs. n212

CHAPTER 12 Mortgages in Real Estate Transactions

1-12 Federal Taxes Affecting Real Estate § 12.11

§ 12.11 Reporting Mortgage Interest Received

[1] General Rules

Any person who, in the course of a trade or business, receives interest from an individual in excess of \$600 per year on any mortgage must report it to the IRS. n213 For this purpose, a mortgage is "any obligation secured by real property." n214 The lender reports the interest on IRS Form 1098 (Mortgage Interest Statement). n215

This requirement is applied to each mortgage obligation, and not to the particular payor. For example, if interest is received on two different mortgages from the same payor, the recipient does not have to report the interest from each obligation if the interest on each individual obligation does not exceed \$600, even though the total interest from both obligations may exceed \$600. Moreover, only interest received from individuals must be reported, not interest received from trusts, estates, partnerships, or corporations. n216

The Secretary is also authorized to prescribe return filing requirements for businesses that receive mortgage insurance premiums of at least \$600 in a calendar year from any individual. A return may be required for each such individual. n217 Any person required to file a return must also furnish to each individual with respect to whom a return is made a written statement showing information as the Secretary may prescribe. That statement must be furnished on or before January 31 of the year following the calendar year for which the return was required to be made. n218

[2] Treatment of Points

For information reporting purposes, points are treated as interest. Thus, when "regular" interest plus points come to \$600 or more, income reporting is required. n219 For this purpose, "points" are an amount that:

- (1) is clearly designated on the Uniform Settlement Statement prescribed under the Real Estate Settlement Procedures Act of 1974 n220 as points incurred in connection with the indebtedness, for example as loan origination fees, n221 loan discount, discount points, or points;
- (2) is computed as a percentage of the indebtedness' stated principal amount incurred by the payor of record;
- (3) conforms to an established practice of charging points in the area in which the loan is issued and does

not exceed the amount generally charged in the area;

(4) is paid in connection with the acquisition by the payor of record of his principal residence and that secures the loan. For this purpose, the lender of record may rely on the payer's signed written statement stating whether the loan proceeds are for the purchase of his principal residence; and

(5) is paid directly by the payor of record. n222

The regulations n223 indicate that for information reporting purposes, the term "points" does not include points:

- Paid on indebtedness incurred to *improve* a principal residence; n224
- Paid on indebtedness incurred to purchase or improve a second home, vacation property, investment property, or trade or business property;
- Paid on a home equity loan;
- Paid in connection with a refinancing loan (except for certain construction loans);
- Paid instead of amounts that are usually separately stated on Form HUD-1, such as appraisal fees, inspection fees, title fees, attorney fees, and property taxes; or
- Paid in connection with the acquisition of a principal residence, to the extent that the amount is allocable to indebtedness exceeding the total amount that is treated as acquisition indebtedness under Section 163(h)(3)(B)(ii).
- The purchaser of a principal residence can deduct points that the seller pays on his behalf (i.e., seller-paid points). n225 Thus, the regulations require information reporting for these points, which are treated as paid by the seller to the payor of record and then paid directly by the payor of record to the lender. n226

[3] Information Reporting for Refunds of Interest Erroneously Collected

In the early 1990's, several lenders acknowledged that they had overcharged interest on some of their adjustable rate mortgages. This motivated the Service to adopt a policy concerning information reporting when the lender refunds this excess interest. n227

Generally, the lender must report the amount of the refund on Form 1098, if (1) the refund is \$600 or more; or (2) the refund is less than \$600, but the lender receives \$600 or more of interest on the mortgage in the refund year. n228 The lender does not have to indicate the year the refund relates to. n229

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate 13.syn

§ 13.syn Synopsis to Chapter 13: Limitations on Losses From Real Estate *

§ 13.01 Overview of Passive Activity Limitations

- [1] Excess Passive Deductions and Credits Cannot Be Used to Offset Non-Passive Income
- [2] Passive Activity Losses and Credits under the Alternative Minimum Tax
- [3] Coordination of Passive Activity Limitations with Other Statutory Limitations
 - [a] Interaction of *IRC Section 469* With Other Code Provisions
 - [b] Basis Rules
 - [c] At-Risk Limitations
 - [d] Capital Loss Limitations
 - [e] Limitation on Investment Interest
 - [f] Qualified Residence Interest Deduction Limitations
 - [g] Rental of Taxpayer's Personal Residence
 - [h] Corporate Interest Deductions on Excess Indebtedness
 - [i] Casualty Loss Deductions
 - [j] Net Operating Loss Deduction
 - [k] Limitation on Percentage Depletion Deductions for Oil and Gas Wells

[1] Subchapter J (*IRC Sections 641-692*)

§ 13.02 Taxpayers Subject to the Passive Activity Limitations

[1] Individuals, Estates, Trusts, and Certain Small Corporations Are Subject to the Passive Activity Limitations

[2] Closely Held C Corporations Are Subject to Passive Activity Limitations

[3] Personal Service Corporations

[a] Certain Personal Service Corporations Are Subject to Passive Activity Limitations

[b] "Employee-Owner" of a Personal Service Corporation for Passive Activity Purposes Includes Any Employee Who Owns Any Stock During the Year

[4] Members of Affiliated Groups Filing a Consolidated Return Are Treated as One Corporation for Passive Activity Limitations

[5] Partners, LLC Members, Beneficiaries of Grantor Trusts, and S Corporation Shareholders Are Subject to Passive Activity Limitations on Passed-Through Items

[6] Passive Activity Limitations are Applied Separately to Items from Each Publicly Traded Partnership

[7] Effect of Change in Corporate Status

§ 13.03 Grouping Activities under Passive Activity Rules

[1] How Separate "Activity" Information Is Used

[2] "Activity" Is Defined Using Facts and Circumstances Test

[3] Any Reasonable Method Generally May Be Used to Group Activities

[4] Limitation on Grouping Rental Activities with Other Trade or Business Activities

[5] Limitation on Grouping Real Property Rentals and Personal Property Rentals

[6] Limitation on Grouping Activities of Limited Partners and Limited Entrepreneurs

[7] IRS May Identify Activities That Cannot Be Grouped

[8] Activities Conducted by C Corporations, S Corporations, and Partnerships

[9] Grouping by IRS to Prevent Tax Avoidance

[10] Consistency and Disclosure Requirements for Groupings

[a] In General

[b] Statement Required for New Groupings

[c] Statement Required for Addition of New Activities to Existing Groupings

[d] Statement Required for Regroupings

[e] Special Rules for Groupings by Partnerships and S Corporations

[f] Disclosure With Respect to Pre-Existing Groupings

[g] Effect of Failure to Report

§ 13.04 What Constitutes a "Passive Activity"

[1] Passive Activities Include the Conduct of Trades or Businesses in Which the Taxpayer Does Not Materially Participate

[2] Trade or Business Requirement

[3] Rental Activities Are Generally Passive

[a] Rental Activities Are Generally Passive Without Regard to Material Participation

[b] Rental Activity Is One Where Payments Are Principally for Use of Tangible Property

[4] Exceptions Under Which Use of Property Is Not a Rental Activity

[a] Regulations Exclude Certain Uses from "Rental Activity"

[b] Rentals Where Average Rental Is Seven Days or Less is Not Rental Activity

[c] Rentals Where Average Period of Customer Use Is 30 Days or Less and Significant Personal Services Are Provided Are Not Treated as Rental Activity

[d] Providing Extraordinary Personal Services Prevents Classification as Rental Activity

[e] Rental Activities Incidental to Nonrental Activities Are Not Treated as Rental Activities

[f] Nonexclusive Use Exception

[g] Provision of Property to Certain Passthrough Entities In Which the Taxpayer Owns an Interest is Not A Rental Activity

[5] Rental Real Estate Activities for Taxpayers in Real Property Trade or Business May Be Treated as Non-Passive

[a] Rental Real Estate Activities May Be Treated as Non-Passive If Personal Service and Other Requirements Are Met

[b] Definitions of Rental Real Estate and Real Property Trade or Business

[c] Each Real Estate Interest Is Treated as a Separate Real Estate Activity Unless Taxpayer Elects Otherwise

[d] Personal Service Eligibility Requirements Must Be Met to Qualify for the Exception

[e] Grouping of Rental Real Estate Activities with Other Activities Is Generally Prohibited in Applying the Exception

[f] Special Treatment of Limited Partnership Interests in Rental Real Estate

[6] Working Interest in Oil and Gas Property Is Not a Passive Activity

§ 13.05 Taxpayers Subject to the Passive Activity Limitations

[1] Material Participation Can Avoid Classification as Passive Activity

[2] Alternative Tests for Material Participation by Individuals

[a] Satisfaction of One of The Alternative Tests Will Qualify as Material Participation

[b] More Than 500 Hours Test

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.01

§ 13.01 Overview of Passive Activity Limitations

[1] Excess Passive Deductions and Credits Cannot Be Used to Offset Non-Passive Income

Losses and certain tax credits n1 arising from passive activities are subject to the passive activity limitations. n2 The purpose of the passive activity limitations is to prevent certain taxpayers from artificially reducing taxable income or tax liability. Under the passive activity loss limitations, deductions from a passive activity may not be claimed in excess of the income from that activity for the taxable year. n3 Income and loss within each passive activity can be netted, but any aggregate net loss from passive activities cannot be used to offset net income from other sources. n4

Under passive activity credit limitations, specified credits arising from a passive activity may not be taken in excess of the regular tax liability attributable to that activity for the taxable year. n5 Furthermore, tax credits arising from passive activities can be used only to reduce the regular tax (not alternative minimum tax) attributable to passive activity income. n6

Note:

The passive activity limitations were initially enacted to prevent individuals and certain corporations from using tax shelters to reduce their tax liabilities, but they go far beyond any traditional tax shelter limitation. When they apply, the passive activity limits not only deny deductions for noncash items such as depreciation and accrued expenses, but also limit deductions for out-of-pocket cash expenses. Thus, they prevent recognition real cash losses, and not just "paper" losses. n7

Disallowed passive losses and credits may be carried forward indefinitely to later years, n8 and are allowed in their entirety in the year the taxpayer disposes of the interest in the passive activity. n9 The passive activity limitations are not applied to a passive activity unless current and carried-over passive deductions exceed current income (that is, there would be a cumulative net loss), or currently available and carried-over passive credits exceed current tax liability from that activity. n10

Note:

Notwithstanding their conceptual simplicity, the implementation of the passive activity rules is highly subjective and quite complex. The record keeping required to track disallowed losses and credits, and the

relationship of the passive activity provisions to other tax provisions create a mechanical complexity that may be impossible for many taxpayers to manage. Finally, the adjustments to the regular tax limitations necessary to determine alternative minimum tax liability create an overlay of difficult calculations. n11

[2] Passive Activity Losses and Credits under the Alternative Minimum Tax

The passive activity limitations, with certain adjustments, also apply to the calculation of alternative minimum tax (AMT). Therefore, passive activity losses and credits are disallowed for AMT purposes. n12 The usual AMT adjustments and items of tax preference n13 apply in computing the passive losses and credits for AMT purposes. n14

Note:

The difference in the tax treatment of particular items for regular tax and AMT purposes (such as depreciation n15) can result in different passive activity losses or credits for each in a given year. There may even be a passive gain for AMT purposes and a passive loss for regular tax purposes, or a passive loss for AMT purposes and a passive gain for regular tax purposes. n16 As a result, suspended losses and credits that are carried over to later years may differ for regular tax and AMT purposes. It is imperative to track carried forward items separately for both AMT and regular tax purposes. n17

A special rule applies for insolvent taxpayers subject to the AMT. Any AMT passive activity losses are reduced by the amount (if any) by which the taxpayer is insolvent as of the close of the year. n18 For this purpose, the term "insolvent" refers to the excess of liabilities over the fair market value of assets. n19

Two other differences for the passive activity limitations should be noted for the AMT. First, for AMT purposes, a taxpayer's passive activity loss is computed without regard to "qualified housing interest." n20 For regular tax purposes, in contrast, a taxpayer's passive activity loss is computed without regard to "qualified residence interest." n21 While similar, the definition of these terms differs slightly, and this can cause the amount of interest deductible under each to be different. This difference, in turn, can affect the amount of the passive activity loss. The main difference is that interest paid for certain mobile homes used on a transient basis and for boats may be deductible for regular tax purposes as qualified residence interest, but cannot qualify as "qualified housing interest" for AMT purposes. n22 The amount of interest deductible for AMT and regular tax purposes may also differ as a result of grandfather provisions in 1986 legislation regarding pre-July 30, 1982 loans. n23

A final difference, now only of historical interest, deals with transition rules related to 1986 legislation. For AMT purposes, the passive activity limitations became fully effective for years beginning after 1986; the phase-in rules of the passive activity limitations in 1986-1990 for regular tax purposes did not apply. n24

[3] Coordination of Passive Activity Limitations with Other Statutory Limitations

[a] Interaction of IRC Section 469 With Other Code Provisions

IRC Section 469, dealing with passive activity losses, is only one of several provisions that limit losses and deductions. Even if a taxpayer has sufficient passive income to offset the losses, or has disposed of an entire interest in an activity so as to trigger the losses under *IRC Section 469(g)*, other Code section limitations must be considered. An understanding of the interaction among different statutory provisions and the timing of their application is necessary in order to properly apply the passive activity provisions.

[b] Basis Rules

Passive activity losses are subject to basis rules before application of the passive loss rules. n25 A taxpayer must have adequate basis in order to support any distributive loss from an entity n26 or a loss from a disposition. n27

These basis requirements often arise in partnerships and S corporations. A partner's distributive share of partnership loss cannot exceed the partner's adjusted basis in the partner's interest in the partnership at the end of the partnership year in which the loss occurs. n28 Similarly, a partner's loss on a sale or exchange of a partnership interest cannot exceed his or her adjusted basis of the partnership interest. n29

An S corporation shareholder's distributive loss cannot exceed the shareholder's basis in stock and loans to the corporation. n30 Loans in the corporate name but guaranteed by the shareholder are not basis until the taxpayer must actually pay the amounts. n31

Even passive losses that are triggered by a disposition of a taxpayer's entire interest in a passive activity, n32 are subject to basis requirements, and a taxpayer must have a basis in the activity order to claim a loss. If the taxpayer has inadequate basis, losses are not deductible under any circumstances, and the passive loss limitations do not come into play. n33

[c] At-Risk Limitations

Passive activity losses are subject to the at-risk limitations n34 before application of the passive activity limitations. n35 If a taxpayer does not have sufficient amounts at risk with respect to an activity, losses from that activity are not deductible under any circumstance. n36 If a loss is disallowed under the at-risk limitation with respect to an activity, a ratable portion of each item of deduction or loss from the activity is disallowed for the taxable year. n37

Taxpayers are at-risk for amounts they contributed to a passive activity. n38 They are also at risk with respect to borrowed amounts used in a passive activity if they are personally liable for repayment of those amounts or if they pledge property (other than property used in the activity) as security for the loan. n39 See Part II of this chapter for a discussion of the at-risk limitations.

[d] Capital Loss Limitations

Capital losses that are otherwise allowable under the passive activity limitations may be limited under *IRC Section 1211*. n40 *IRC Section 1211* is applied after the passive activity loss rules. n41 That provision limits corporate losses from sales and exchanges of capital assets to the extent of gains from those sales and exchanges during the year. n42 It also limits annual losses from sales or exchanges of capital assets from other taxpayers to the extent of capital gains, plus up to \$3,000 (or \$1,500 for married individuals who file a separate return). n43

Example (1):

Paul derives \$10,000 of ordinary income from a catering business, which for Paul is a passive activity. In the same year, he has \$12,000 in capital losses from an investment in an apartment building, which is a separate passive activity. He has no other income, gain, deductions or losses from any other passive activities, and no gains from the sale or exchange of capital assets or assets used in a trade or business. Paul's capital loss from the apartment passive activity is a passive activity deduction. Under the passive activity loss rules, Paul may deduct only \$10,000 of the \$12,000 passive activity deduction, and has a passive activity loss of \$2,000 for the tax year. n44 Because the \$10,000 passive activity deduction allowed under *IRC Section 469* is a capital loss, however, Paul may deduct the loss only to the extent provided by *IRC Section 1211*. Therefore, Paul is allowed only \$3,000 of the \$10,000 passive loss, and has a \$7,000 capital loss carryover to the next taxable year. n45

Example (2):

Ed's only income and loss from passive activities for the year are a \$10,000 capital gain from an investment in an apartment building (a passive activity) and a \$12,000 ordinary loss from a restaurant business (a separate passive activity). Ed also has a \$7,000 capital loss for the year from the sale of

stocks held in his investment portfolio. The capital loss from the sale of stocks is not derived from a passive activity. The only effect of the passive loss rules is that Ed cannot deduct the \$2,000 (\$12,000-\$10,000) passive activity loss for the year, but must carry the loss over to the succeeding taxable year. Ed may deduct his \$7,000 capital loss from his sale of stocks in full because the \$10,000 capital gain from the apartment building investment may be used to offset the loss on the sale of stocks. This rule applies even though the capital gain occurs in a passive activity. n46

[e] Limitation on Investment Interest

Noncorporate taxpayers who borrow money for investment can deduct interest on a loan only up to the amount of net investment income. n47 Disallowed interest deductions may be carried forward to the succeeding taxable year. n48

"Investment interest," however, does not include any interest expense from a passive activity. n49 As a result, interest expense related to passive activities from a limited partnership, rental real estate, and any other activity in which the taxpayer does not materially participate are not taken into account in applying the statutory limitation on investment interest. n50 Investment income for purposes of the *IRC Section 163(d)* limitation generally does not include passive income. n51

[f] Qualified Residence Interest Deduction Limitations

Passive activity losses are computed without regard to qualified residence interest. n52 A "qualified residence" is either a principal residence or a second residence chosen by the taxpayer. n53 Deductions for qualified residence interest are subject to detailed restrictions, including a \$1 million maximum acquisition indebtedness limitation and a \$100,000 limit for home equity loans. n54 Note that qualified residence interest deductions can only be taken as an itemized deduction; therefore, taxpayers who claim a standard deduction cannot claim the deduction. n55 See Chapter 9 for a detailed discussion of qualified residence interest.

[g] Rental of Taxpayer's Personal Residence

The rental of a dwelling unit that the taxpayer uses as a residence during the year is not a passive activity, and gains and losses from that rental are not taken into account in determining passive activity gains and losses. n56 For a dwelling to qualify as the taxpayer's "residence" for this purpose, the taxpayer must personally use the residence for more than the greater of 14 days or 10 percent of the number of days during the year that the home was rented for fair market value. n57

Although losses from these rentals are not subject to the passive activity limitations, *IRC Section 280A* applies to limit losses from the rental to net income reported. Disallowed amounts may be carried forward to the succeeding taxable year. n58 See Chapter 9 for a discussion of *IRC Section 280A*.

[h] Corporate Interest Deductions on Excess Indebtedness

Corporations are subject to *IRC Section 163(j)*, which limits deductions for excess interest paid on certain corporate indebtedness. *IRC Section 163(j)* comes into play before the passive activity limitations. A deduction or loss that is allowable is still subject to the passive loss limitations. n59

[i] Casualty Loss Deductions

A deduction from a casualty loss (losses from fire, storm, shipwreck, theft, or other casualty) is generally not a passive activity deduction. n60 Casualty loss deductions are governed by limitations in *IRC Section 165*. Subject to the limits of that provision, a casualty loss deduction is allowed in the year sustained (or in a prior year, if an appropriate election is made). n61

There is an exception. Casualty losses that are similar in cause and severity, and which occur regularly in the conduct of a passive activity are subject to the passive activity loss limitations. n62 For example, a loss resulting from a natural disaster is not limited by the passive activity loss rules. On the other hand, shoplifting losses at a retail store or accident losses sustained by an automobile rental activity--if those activities were passive for the taxpayer--would be passive because they occur regularly in the conduct of those activities. n63

There are special rules for insurance reimbursements. If the casualty loss was not a passive activity deduction, n64 any insurance reimbursement received in a subsequent year (and includible in income in that year), n65 will be considered non-passive. In contrast, if the casualty loss did not meet the exception to the passive loss rules, and was a passive activity deduction, any gross income from insurance reimbursements would be passive income in the year the reimbursement is received. n66

[j] Net Operating Loss Deduction

A regular net operating loss (NOL) generally can be carried back 2 years and forward 20 years. n67 Most taxpayers n67.1 may elect a 3-, 4-, or 5-year carryback for NOLs incurred in 2008 or 2009 (but not both). n67.2 For elections made after November 5, 2009, any loss carryback to the 5th taxable year preceding the taxable year of the loss cannot exceed 50 percent of the taxpayer's taxable income for that preceding taxable year. n67.3

Passive losses that are allowed in excess of passive income due to the special \$25,000 rental real estate allowance n68 or due to a disposition of the taxpayer's entire interest in a passive activity n69 can become part of the taxpayer's NOL for the year. As part of the taxpayer's NOL, those losses can then be carried back and forward under *IRC Section 172*, without regard to the passive activity loss restrictions.

A loss from a passive activity which cannot be used due to the passive activity loss limitations cannot be part of a taxpayer's NOL, and therefore cannot be carried back to a prior year. Rather, it must be carried forward indefinitely until there is passive income or a full disposition of the passive activity in a fully taxable transaction. n70 In the event that both a regular NOL and a suspended loss from a passive activity are carried forward into the same succeeding year, the IRS takes the position that the passive activity carryforward must be applied first against passive income before the regular NOL is applied.

[k] Limitation on Percentage Depletion Deductions for Oil and Gas Wells

Percentage depletion deductions for oil and gas wells that are allowable under the passive loss rules may be limited under a separate statutory provision. n71 The percentage depletion restrictions are applied after the passive activity loss rules. n72 Under *IRC Section 613A(d)*, the percentage depletion deduction cannot exceed 65 percent of the taxpayer's taxable income for the year, as determined under that section.

[l] Subchapter J (*IRC Sections 641-692*)

The interaction between *IRC Section 469* and Subchapter J of the Code, which deals with taxation of estates, trusts, beneficiaries, and decedents, n73 is unclear. There are no regulations or other IRS guidance explaining how the passive activity rules interact with the Subchapter J provisions. n74

For trusts (other than grantor trusts), the IRS takes the position that material participation must be determined by looking to the activities performed by the trustee or fiduciary in that capacity. n75 The only court addressing this issue, however, has n76 rejected this position and has held that the proper focus is on the activities of the entire trust, taking into account all activities of the trust fiduciaries, agents, and trustees. For estates, the IRS also takes the position that material participation by the executor or administrator determines the character of the income and deductions of the

estate for purposes of computing the estate's taxable income. n77 The application of other aspects of *IRC Section 469* within the context of Subchapter J is not clarified by any authoritative guidance, other than a rather obvious private IRS position that for grantor trusts, losses and credits attributable to the trust assets are subject to the passive activity loss and credit limitations on the individual level of the person treated as the owner, rather than to the trust itself. n78

(n67)Footnote 67. *IRC § 172(b)(1)(A)*.

(n68)Footnote 67.1. Taxpayers who received federal financial assistance under the federal Troubled Assets Relief Program (TARP program) under 2008 legislation, taxpayers who are members of the same affiliated group as those recipients, and The Federal National Mortgage Association and the Federal Home Loan Mortgage Corporation cannot make the election [Pub Law No 111-92, § 13(f)(1), (2), (3)].

(n69)Footnote 67.2. *IRC § 172(b)(1)(H)*. See Rev Proc 2009-52, 2009-49 IRB 744 for details of making the election. The provision allowing most taxpayers to claim a 3-, 4-, or 5-year carryback and extending it to 2009 losses expands an earlier provision--which allowed the carryback election only for 2008 NOLs of eligible small businesses [*IRC § 172(b)(1)(H)*, before amendment by Pub Law No 111-92]. Eligible small businesses that elected before November 6, 2009 to carry back 2008 NOLs under the originally enacted provision may also elect to carry back 2009 NOLs, but no other taxpayers may make the election for both 2008 and 2009 NOLs [*IRC § 172(b)(1)(H)(v)(I)*]. An eligible small business is generally one with \$15 million or less average annual gross receipts for the 3-taxable-year period before the taxable year of the NOL being carried back [*IRC §§ 172(b)(1)(F)(iii), (H)(v)(II), 448(c)*].

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.02

§ 13.02 Taxpayers Subject to the Passive Activity Limitations

[1] Individuals, Estates, Trusts, and Certain Small Corporations Are Subject to the Passive Activity Limitations

Only the following taxpayers are subject to the passive activity limitations: n79

- individuals, estates, and non-grantor trusts (including pooled income funds); n80
- closely held C corporations; n81 and
- personal service corporations. n82

Partnerships, LLCs treated as partnerships, and S corporations are not subject to the passive activity limitations because they are passthrough entities. The passive activity limitations come into play with respect to allocations and distributions from them, however, and apply at the individual partner, LLC member, or S corporation shareholder level. n83

[2] Closely Held C Corporations Are Subject to Passive Activity Limitations

Closely held C corporations are subject to the passive activity limitations. n84 A C corporation is closely held if, at any time during the last half of the taxable year, more than 50 percent in value of its outstanding stock is owned (directly or indirectly) by five or fewer individuals. n85

Note:

Closely held C corporations that are not also personal service corporations n86 are subject to a less restrictive version of the passive activity limitations in that their passive losses and credits can offset active income. n87 A closely held C corporation that is also a personal service corporation will be treated as a personal service corporation for purposes of the passive activity limitations. n88

[3] Personal Service Corporations

[a] Certain Personal Service Corporations Are Subject to Passive Activity Limitations

Personal service corporations are subject to the passive activity limitations. n89 The definition of personal service corporation for purposes of the passive activity limitations modifies the definition of the term as defined in *IRC Section 269A*. A corporation is a personal service corporation under *IRC Section 469* only if the following three conditions are met: n90

- its principal activity is the performance of "personal services";
- those personal services are "substantially" performed by "employee-owners"; n91 and
- "employee-owners," in the aggregate, own more than 10 percent of the stock of the corporation.

"Personal services" include only the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, and consulting. n92 A corporation's principal activity is the performance of personal services if the cost of compensation for those services during the testing period exceeds 50 percent of the corporation's total compensation cost for that testing period. n93 These services are "substantially" performed by employee-owners if the corporation's compensation cost for personal services performed by employee-owners is more than 20 percent of the corporation's total compensation cost for personal services. n94

NOTE:

Regulations under *IRC Section 469* incorporate the definition of "personal service corporation" that is used in regulations under *IRC Section 441*. n95 Under the *IRC Section 441* regulations, the requirements that the corporation's principal activity be personal services and that those services be substantially performed by employee-owners must be met during the "testing period." The stock ownership requirement for employee-owners must be met on the last day of the "testing period." n96 The "testing period" is generally the immediately preceding taxable year. n97 For a new corporation, the testing period begins on the first day of the corporation's taxable year and ends on the earlier of the last day of that taxable year or the last day of the calendar year in which that taxable year begins. n98

[b] "Employee-Owner" of a Personal Service Corporation for Passive Activity Purposes Includes Any Employee Who Owns Any Stock During the Year

For purposes of the passive activity limitations, the definition of an "employee-owner" is quite broad. An employee who owns any stock on any day during the taxable year is an employee-owner for that year. n99 In contrast, for purposes of *IRC Section 269A*, an employee must own at least 10 percent of the outstanding stock to be an employee-owner. n100

NOTE:

Regulations under *IRC Section 469* incorporate the definition of "personal service corporation" that is used in regulations under *IRC Section 441*. n101 Under the *IRC Section 441* regulations, whether an employee is an employee-owner is determined for the "testing period," which is generally the immediately preceding taxable year. n102 A person is an employee-owner for a "testing period" if (1) the person is an employee of the corporation on any day of the testing period, and (2) the person owns any outstanding stock of the corporation on any day of the testing period. These two days need not be the same days. n103 Persons who would otherwise be treated as independent contractors can be treated as employee-owners if they own any stock of the personal service corporation during the testing period. n104

Broad attribution rules apply in determining stock ownership in a personal service corporation for purposes of the passive activity limitations. n105 Generally *IRC Section 318* applies to impose constructive ownership of stock. For

purposes of the passive activity limitations, however, ownership is attributed from a corporation if any of the stock is owned, directly or indirectly, by or for any person. Therefore, if an employee owns any stock in a corporation that also owns stock in another corporation, the employee is treated as owning stock in that other corporation. n106 Employees are also treated as owning the following stock: n106.1

- stock owned by their spouses, children, grandchildren, or parents; and
- stock owned by partnerships in which they are partners or S corporations in which they are shareholders; and
- stock owned by trusts or estates in which they are beneficiaries.

An employee who has an option to acquire stock (or an option to acquire an option) is treated as owning the stock subject to the option. n106.2

[4] Members of Affiliated Groups Filing a Consolidated Return Are Treated as One Corporation for Passive Activity Limitations

For purposes of the passive activity limitations, all members of an affiliated group that files a consolidated return are generally treated as one corporation. n107 This rule applies for purposes of determining whether a consolidated group is a closely held corporation or a personal service corporation for purposes of the passive activity limitations, and in determining whether the consolidated group materially or significantly participates in an activity conducted by member(s) of the group. n108 The following rules also apply in determining status and participation of a consolidated group: n109

- the members of the consolidated group are treated as one corporation;
- only the outstanding stock of the common parent is treated as outstanding stock of the corporation;
- an employee of any member of the group is treated as an employee of the corporation; and
- an activity is treated as the principal activity of the corporation only if it is the principal activity of the consolidated group.

A member of a consolidated group is treated as a closely held corporation or personal service corporation only if the consolidated group is treated as a closely held corporation or personal service corporation. The determination of whether an activity conducted by members of the consolidated group is passive is made by reference to the consolidated group's participation in the activity. n110

[5] Partners, LLC Members, Beneficiaries of Grantor Trusts, and S Corporation Shareholders Are Subject to Passive Activity Limitations on Passed-Through Items

Passthrough entities, such as partnerships, LLCs treated as partnerships, grantor trusts, and S corporations, are not subject to the passive activity limitations at the entity level. n111 Passive losses and credits from those entities that are allocated to partners, LLC members, and S corporation shareholders who are otherwise subject to the passive activity limitations, however, are subject to the passive activity limitations at the partner, member, or shareholder level. Any passive activity computations with respect to passed-through items are determined separately with respect to each partner, member, or shareholder. n112

[6] Passive Activity Limitations are Applied Separately to Items from Each Publicly Traded Partnership

The passive activity limitations generally are applied separately with respect to items attributable to each publicly traded partnership. Therefore, a taxpayer's net passive income from a publicly traded partnership generally cannot be offset by losses from other passive activities, including losses from passive activities in other publicly traded partnerships in which the taxpayer is a partner. Losses from passive activities of a publicly traded partnership may be offset only by income or gain from passive activities of the same publicly traded partnership. n113

Similarly, credits arising from a passive activity of a publicly traded partnership may not be taken in excess of the regular tax liability attributable to that activity for the taxable year. Credits from passive activities of a publicly traded partnership may be offset only against the tax on the net passive income of the same publicly traded partnership. n114 In addition, the \$25,000 offset for rental real estate activities n115 does not generally apply with respect to items attributable to a publicly traded partnership. n116

The above rules do not apply, however, with respect to any low-income housing credit or rehabilitation credit n117 attributable to a publicly traded partnership, to the extent that the amount of those credits exceeds the regular tax liability attributable to any income from the partnership. n118

For purposes of the above rules, a publicly traded partnership is one whose interests are traded on an established securities market or are readily tradable on a secondary market or the substantial equivalent of one. n119

The separate treatment required for passive losses and credits of a publicly traded partnership also applies to regulated investment companies holding an interest in a "qualified publicly traded partnership" with respect to items attributable to that interest. n120 A "qualified publicly traded partnership" generally is the same as a "publicly traded partnership" as defined in *IRC Section 469(k)(2)*, except that it does not include a publicly traded partnership if 90 percent of its gross income consists of dividends, interest, payments with respect to securities loans, and gains from the sale or disposition of stock or securities, foreign currencies, or other income derived with respect to its business of investing in stock, securities, or currencies. n121

[7] Effect of Change in Corporate Status

The passive loss limitations do not apply to C corporations that are not closely held or not personal service corporations. Changes in ownership may cause a corporation to lose its closely held status or its status as a personal service corporation. Similarly, a personal service corporation may change its activities so that it no longer qualifies as a personal service corporation. n122 When a change in corporate status occurs, the passive activity loss and credit carryover rules will continue to apply as if the corporation were still a closely held C corporation or a personal service corporation. Therefore, any suspended losses of a former closely-held corporation may offset only net active income of that entity, not portfolio income, and any suspended losses of a former personal service corporation may offset only passive income in future years. n123 Passive activity limitations will no longer apply to future activity losses of the entity. n124

NOTE:

A change in corporate status does not constitute a disposition that will trigger suspended losses. n125

One private letter ruling involved a closely held corporation that was subject to the passive activity loss rules in Years 1 through 3, but then underwent a change of ownership and ceased to be closely held C corporation thereafter. The IRS ruled that the passive loss rules did not prevent the taxpayer from carrying back net operating losses that accrued in years after Year 3 to offset portfolio income earned in prior years in which it was a closely held C corporation. n125.1

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.03

§ 13.03 Grouping Activities under Passive Activity Rules

[1] How Separate "Activity" Information Is Used

The cornerstone for the proper application of the passive activity rules is the determination of what constitutes an "activity." The determination of an "activity" is critical because virtually every passive activity rule is applied on an activity-by-activity basis:

- material, active, and significant participation by a taxpayer is based upon the degree of involvement in the activity; n126
- passive income or loss is measured with respect to the specific activity; n127
- disposition of the activity may trigger suspended losses; n128 and
- the passive activity limitations are applied separately with respect to each passive activity in which a taxpayer owns an interest. n129

[2] "Activity" Is Defined Using Facts and Circumstances Test

IRC Section 469 does not define the term "activity" for purposes of the passive activity limitations, but authorizes the Treasury to do so in regulations. n130 Regulations do not define the term directly either, n131 but set forth a facts and circumstances approach for defining an activity. n132 The general rule is that one or more activities may be treated as a single activity if they constitute an appropriate economic unit for the measurement of gain or loss for purposes of *IRC Section 469*. n133 Whether activities constitute a single economic unit depends on all the relevant facts and circumstances. n134 The facts and circumstances inquiry comes into play primarily in grouping multiple activities. n135 In practical application, the regulations lack clarity and certainty.

In one case, a partnership in which the taxpayer was a partner rented an entire building to two corporations that were the sole tenants. The taxpayer was also a shareholder in each corporation. The court ruled that the two rentals were properly considered as one economic unit under the regulations and could therefore be treated as a single activity. n136

[3] Any Reasonable Method Generally May Be Used to Group Activities

Taxpayers may group multiple activities to constitute a single economic unit for the measurement of gain or loss for purposes of *Treas Reg § 1.479-7*. By doing so, activities within the single economic unit can be treated as a single activity under *IRC Section 469*. Taxpayers have significant leeway in making groupings, and may use "any reasonable method" of applying relevant facts and circumstances in grouping activities to do so. The following factors, however, are given the greatest weight in determining whether activities are an appropriate economic unit: n137

- similarities and differences in the types of business;
- the extent of common control;
- the extent of common ownership;
- geographical location; and
- interdependencies between the activities (for example, the extent to which the activities purchase or sell goods between themselves, involve products or services that are normally provided together, have the same customers, have the same employees, or are accounted for with a single set of books and records).

Not all of the above factors need to point to treating more than one activity as a single activity. n138 Furthermore, apart from these factors, n139 several grouping rules and limitations may apply to restrict particular groupings. n140 Regulations provide examples that indicate the discretion that taxpayers may use in grouping different activities. n141

Example:

Steve has a significant ownership interest in a bakery and a movie theater in a shopping mall in Baltimore, and in a bakery and a movie theater in Philadelphia. Relevant facts and circumstances could indicate more than one reasonable method for grouping Steve's activities. For instance, depending on relevant facts and circumstances, four possible groupings are possible:

- (1) one activity encompassing all four businesses;
- (2) two activities: a bakery activity and a movie theater activity;
- (3) two activities: a Baltimore activity and a Philadelphia activity; or
- (4) four separate activities.

Once Steve groups the activities into appropriate economic units, however, he must continue to use that grouping in later tax years unless a change in the facts and circumstances makes it clearly inappropriate. n142

Practice Tip:

Large non-passive losses from passthrough entities on a Schedule E may be a red flag of an improper grouping. The IRS will view the grouping closely, to ascertain whether many activities have been grouped into a single activity, so that the taxpayer can meet the material participation standards and bypass the passive loss limitations altogether. The IRS will regroup the activities if the grouping does not

reflect an appropriate economic unit.

Another possible audit trigger based on groupings occurs when a return deducts losses as non-passive and reports gains as passive. This can indicate that the taxpayer is treating an activity with gains as passive when it should be part of a non-passive activity. If so, the IRS may reclassify these into different groupings. n143

[4] Limitation on Grouping Rental Activities with Other Trade or Business Activities

Notwithstanding the general discretion allowed to taxpayers in grouping activities under the facts and circumstances test, n144 special rules restrict the grouping of rental activities with nonrental trade or business activities. Under these rules, a rental activity may not be grouped with a trade or business activity unless the activities being grouped constitute an appropriate economic activity, and one of the following conditions is met: n145

- the rental activity is insubstantial in relation to the trade or business activity;
- the trade or business activity is insubstantial in relation to the rental activity; or
- each owner of the trade or business activity has the same proportionate ownership interest in the rental activity, in which case the portion of the rental activity that involves the rental of items of property for use in the trade or business activity may be grouped with the trade or business activity.

Example:

John and his wife Mary file a joint return. John is the sole shareholder of Goodfood Corporation, an S Corporation that conducts a grocery store business. Mary is the sole shareholder of Rentout Corporation, an S corporation that owns and rents out a building to John's grocery store. The rental to John's grocery store business and the grocery store are not insubstantial in relation to each other.

Because John and Mary file jointly for purposes of *IRC Section 469*, they each are treated as the sole owner of the grocery store. Therefore, each owner of the business activity has the same proportionate ownership interest in the rental activity. Accordingly, the rental and the grocery store business activity may be grouped together into a single activity if the grouping is an appropriate economic unit. n146

Note:

Neither the Code nor regulations define "insubstantial" for purposes of the above tests. n147 A preamble to final regulations, however, indicates that the term "insubstantial" refers to factors other than gross income. This reference has been interpreted to mean that although gross income may be used in analyzing insubstantiality, it is not alone conclusive. n148 Thus, both qualitative and quantitative factors may be considered in evaluating whether the "insubstantial" test is met. Qualitative factors can include the purpose for which the rental activity and/or trade or business activity is formed initially and the role of each in relation to the other. They can also include whether the closeness of the operating relationship between the two shows that they are two parts of a single economic enterprise and obtain economies of scale from that connectedness. Whether the activities use an integrated accounting system, similar employees, and whether they are economically dependent upon one another are relevant. Even if one activity plays an essential role relative to the other, however, the insubstantiality test may still be met. n149

Quantitative factors can include comparisons of gross income and/or fair market values between the two

activities. The "80/20" gross income test in temporary regulations can be a good starting point for gauging whether a rental activity is insubstantial in relation to trade or business activity or vice versa. Under that test, nonrental and rental operations can be grouped together if less than 20 percent of the combined undertaking's gross income is attributable to either the nonrental or rental operations. n150 Any resulting figures, however, must be viewed in context. For example, although a rental activity may appear to be insubstantial under the gross income test, the rental activity actually may require a far greater capital investment and have greater value than the business activity. Or, a rental activity might appear insubstantial when compared to a business activity that has high gross income, but little net income. In either case, the rental activity may be found not to be insubstantial with respect to the business activity with which it is being compared. n151 An 80/20 framework has also been used to evaluate insubstantiality when comparing market values of rental and trade or business activities. n152

[5] Limitation on Grouping Real Property Rentals and Personal Property Rentals

Notwithstanding the general discretion allowed to taxpayers in grouping activities under the facts and circumstances test, n153 real property rentals and personal property rentals generally cannot be grouped. Grouping is allowed, however, if the provision of one category of property is merely in connection with the rental of the other category of property. n154

[6] Limitation on Grouping Activities of Limited Partners and Limited Entrepreneurs

A taxpayer who is a limited partner or limited entrepreneur in one of the following activities may generally not group that activity with any other activity: n155

- holding, producing, or distributing motion picture films or video tapes;
- farming; n156
- leasing personal property; n157
- exploring for or exploiting oil and gas resources; or
- exploring for or exploiting geothermal deposits. n158

A limited partner or limited entrepreneur may, however, group that activity with another activity in the same type of business if the grouping is an appropriate economic unit. n159 A limited entrepreneur is a person who is not a limited partner and does not actively participate in management. n160

[7] IRS May Identify Activities That Cannot Be Grouped

The IRS has the power to identify activities that cannot be grouped with other activities or may be grouped with other activities only as provided in guidance by the IRS. A taxpayer that owns an interest in such an activity may group that activity only as provided in IRS guidance. n161 The IRS has yet to restrict groupings under this authority; presumably any pronouncement in this regard would be made in a revenue ruling or revenue procedure.

[8] Activities Conducted by C Corporations, S Corporations, and Partnerships

Real estate activities conducted through a C corporation subject to *IRC Section 469*, partnership, or S corporation must be grouped according to the rules described above, at the partnership or corporation level. A partner or shareholder may then group those activities with activities conducted directly by the taxpayer or conducted through other C corporations subject to *IRC Section 469*, partnerships, and S corporations, according to the rules described above. n162 A

shareholder or partner, however, may not treat activities grouped together by a closely held C corporation or personal service corporation as a separate activity. n163

One grouping limitation applies only with respect to C corporations. Any passive activity that a taxpayer conducts through a C corporation may be grouped with another activity of the taxpayer, but only for purposes of determining whether the taxpayer materially or significantly participates in the other activity. n163.1 The Tax Court has applied this regulation to prohibit taxpayers from offsetting passive losses from their LLC's rental activity against non-passive wages they received from their C corporation. The taxpayers contended that their activities in the two entities could be treated as a single activity for purposes of *IRC Section 469*, but the Tax Court held that the regulation limited this activity grouping to the purposes of evaluating the taxpayers' participation in the LLC's activities. The grouping could not be used to offset the LLC's losses. In addition, the court found that the taxpayers' activities in the LLC were passive even if the taxpayers did materially participate in them (because they were rental activities). n163.2

[9] Grouping by IRS to Prevent Tax Avoidance

The IRS may regroup a taxpayer's activities if any of the activities resulting from the taxpayer's grouping is not an appropriate economic unit, and a principal purpose of the taxpayer's grouping (or a failure to regroup) is to circumvent the passive activity limitations. n164

[10] Consistency and Disclosure Requirements for Groupings

[a] In General

A taxpayer who has grouped activities generally may not regroup them in later taxable years. n165 In the event of a material change in relevant facts and circumstances, or if it is later determined that the original grouping was clearly inappropriate, the taxpayer not only may, but must, regroup the affected activities and comply with any disclosure requirement prescribed by the IRS. n166 (The IRS, however, always has power to regroup activities in order to prevent tax avoidance. n167)

Taxpayers must report to the IRS their groupings and regroupings of activities and the addition of specific activities within their existing groupings of activities under *IRC Section 469*. The required disclosures must be made with the return for the tax year in which the changes occur. n168 The disclosure requirements vary, depending on the type of change, as discussed in [b] through [f], below. Special rules apply for groupings by partnerships and S corporations, as discussed in [e], below. n168.1 Failure to make a proper disclosure may result in each trade or business activity or rental activity being treated as a separate activity for purposes of applying the passive activity loss and credit limitation rules. n168.2

Practice Tip:

If a taxpayer's activities are fluctuating back and forth between passive and non-passive categorization from year to year, an audit is likely. On audit, an IRS examiner will probably do a 3-year or longer comparison of passive and non-passive income and losses on an entity-by-entity basis to look for inconsistencies in treatment. Fluctuation between active and passive categorization may be acceptable, if due to the annual test for material participation in each activity. n169 For the IRS, however, it can also indicate inconsistent regroupings that seek to deduct the greatest amount of losses each year. If the taxpayer has not been consistent or has used inappropriate groupings, the examiner will regroup the activities and apply material participation standards to the regroupings, in order to determine the proper amount of passive losses. n170

[b] Statement Required for New Groupings

If there is a new grouping of activities, the taxpayer must file a written statement with its original income tax return for the first taxable year in which two or more trade or business activities or rental activities are originally grouped as a single activity. The statement must identify the names, addresses, and employer identification numbers, if applicable, for the trade or business activities or rental activities that are being grouped as a single activity. In addition, any statement reporting a new grouping of two or more trade or business activities or rental activities as a single activity must contain a declaration that the grouped activities constitute an appropriate economic unit for the measurement of gain or loss for purposes of *IRC Section 469*. n170.1

NOTE:

No disclosure or statement needs to be filed if an activity within a particular grouping is disposed of. Although a prior notice indicated that disclosure might be required in this circumstance, *Revenue Procedure 2010-13* dropped the requirement. n170.2

[c] Statement Required for Addition of New Activities to Existing Groupings

A taxpayer who adds a new trade or business activity or a rental activity to an existing grouping for a taxable year must file a written statement with the taxpayer's original income tax return for that taxable year. The statement must identify the names, addresses, and employer identification numbers, if applicable, for the new trade or business activity or rental activity that is being added to the existing grouping, as well as the names, addresses, and employer identification numbers, if applicable, for the activity or activities within the existing grouping. In addition, the statement reporting an addition to an existing grouping must contain a declaration that the activities constitute an appropriate economic unit for the measurement of gain or loss for purposes of *IRC Section 469*. n170.3

[d] Statement Required for Regroupings

If it is determined that the taxpayer's original grouping was clearly inappropriate or a material change in the facts and circumstances has occurred that makes the original grouping clearly inappropriate, the taxpayer must regroup the activities. n170.4 If such a determination and regrouping is made, the taxpayer must file a written statement with the taxpayer's original income tax return for the taxable year in which the trade or business activities or rental activities are regrouped. The statement must identify the names, addresses, and employer identification numbers, if applicable, for the trade or business or rental activities that are being regrouped. If two or more activities are regrouped into a single activity, the statement reporting a regrouping must also contain a declaration that the regrouped activities constitute an appropriate economic unit for the measurement of gain or loss for purposes of *IRC Section 469*. Furthermore, the statement reporting a regrouping must contain an explanation of why the taxpayer's original grouping was determined to be clearly inappropriate or the nature of the material change in the facts and circumstances that makes the original grouping clearly inappropriate. n170.5

[e] Special Rules for Groupings by Partnerships and S Corporations

Partnerships and S corporations are not subject to the disclosure requirements in [b]-[d], above. Instead, they must comply with the disclosure instructions for grouping activities provided for on Form 1065, U.S. Return of Partnership Income and Form 1120S, U.S. Income Tax Return for an S Corporation, respectively. Generally, compliance with the applicable form requires disclosing the entity's groupings to the partner or shareholder by separately stating the amounts of income and loss for each grouping conducted by the entity on attachments to the entity's annual Schedule K-1. A partner or shareholder who does any of the following, however, is required to make a separate disclosure of the groupings disclosed by the entity as described in [b]-[d], above: n170.6

- Groups together any of the activities that the entity does not group together;
- Groups the entity's activities with activities conducted directly by the partner or shareholder; or

- Groups the entity's activities with activities conducted through other entities.

NOTE:

A shareholder or partner may not treat activities grouped together by a C corporation, S corporation, or partnership as separate activities. n170.7

[f] Disclosure With Respect to Pre-Existing Groupings

A taxpayer is not required to file a written statement reporting the grouping of the trade or business activities and rental activities that have been made for tax years beginning before January 25, 2010 (pre-existing groupings) until the taxpayer makes a change to the grouping as described in [c] or [d], above. n170.8

[g] Effect of Failure to Report

If a taxpayer is engaged in two or more trade or business activities or rental activities and fails to report whether the activities have been grouped as a single activity in accordance with *Revenue Procedure 2010-13*, then each trade or business activity or rental activity will be treated as a separate activity for purposes of applying the passive activity loss and credit limitation rules. Notwithstanding the previous sentence, a timely disclosure will be deemed made by a taxpayer who has filed all affected income tax returns consistent with the claimed grouping of activities and makes the required disclosure on the income tax return for the year in which the failure to disclose is first discovered by the taxpayer. If the failure to disclose is first discovered by the IRS, however, the taxpayer must also have reasonable cause for not making the required disclosures. n170.9

NOTE:

Although the above "default" rule will generally result in unreported activities being treated as separate activities, the IRS may still regroup a taxpayer's activities to prevent tax avoidance. n170.10
Furthermore, because *Revenue Procedure 2010-13* provides alternative relief for untimely filing of the required disclosures, administrative extensions for relief for untimely disclosures are not available. n170.11

Practice Tip:

If a taxpayer's activities are fluctuating back and forth between passive and non-passive categorization from year to year, an audit is likely. On audit, an IRS examiner will probably do a 3-year or longer comparison of passive and non-passive income and losses on an entity-by-entity basis to look for inconsistencies in treatment. Fluctuation between active and passive categorization may be acceptable, if due to the annual test for material participation in each activity. n170.12 For the IRS, however, it can also indicate inconsistent regroupings that seek to deduct the greatest amount of losses each year. If the taxpayer has not been consistent or has used inappropriate groupings, the examiner will regroup the activities and apply material participation standards to the regroupings, in order to determine the proper amount of passive losses. n170.13

Federal Taxes Affecting Real Estate

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.04

§ 13.04 What Constitutes a "Passive Activity"

[1] Passive Activities Include the Conduct of Trades or Businesses in Which the Taxpayer Does Not Materially Participate

The statutory description of a passive activity is deceptively simple. An activity is a passive activity for a tax year if the activity n171 is a trade or business n172 in which the taxpayer does not materially participate, n173 or is a rental activity, regardless of whether the taxpayer materially participates or not.

The *per se* classification of rental activities as passive is subject to an exception for real estate professionals. n174

[2] Trade or Business Requirement

To the extent provided by regulations, trade or business activities for purposes of the passive activity rules include those in connection with a trade or business and any activity with respect to which expenses are deductible under *IRC Section 212*. n175 Trade or business activities for purposes of the passive activity rules also include any activity involving research or experimentation within the meaning of *IRC Section 174*. n176

Regulations clarify that trade or business activities are those (other than rental activities or activities treated as incidental to the holding of property for investment) that involve any of the following: n177

- the conduct of a trade or business (within the meaning of *IRC Section 162*);
- activities conducted in anticipation of the commencement of a trade or business; and
- activities that involve research or experimental expenditures that are deductible under *IRC Section 174* (or would be if the taxpayer adopted the method described in *IRC Section 174*).

Activities incidental to the holding of property for investment are not treated as trade or business activities. n178 In addition, although authorized by statute to do so, regulations do not extend the definition of trade or business activities for passive activity purposes to include other investment activities and other activities engaged in for the production or collection of income that would generate expenses deductible under *IRC Section 212*. n179

[3] Rental Activities Are Generally Passive

[a] Rental Activities Are Generally Passive Without Regard to Material Participation

Passive activities generally include any rental activity, regardless of whether the taxpayer materially participates or not. n180 Numerous activities are excluded from the definition of "rental activity," however, and are thereby not treated as passive activities. n181 In addition, there is one statutory exception to this rule, for professional taxpayers in a real property trade or business. n182

[b] Rental Activity Is One Where Payments Are Principally for Use of Tangible Property

A "rental activity" is defined as any activity where payments are principally for the use of tangible property. Tangible property includes real estate, so typical real property rental leases are included. n183 Regulations clarify that to qualify as rental activity during a tax year, two conditions must be met. First, the tangible property held in connection with the activity must be used by customers or held for use by customers. Second, the gross income from the conduct of the activity must be from amounts paid principally for the use of the property. In the case of property being held for use by customers (whether or not the property is ever in fact used by customers), this second condition is met if the expected gross income from the conduct of the activity will represent amounts paid principally for the use of the property. In either case, the second condition is met whether the use of the property is pursuant to a lease, service contract, or other arrangement that is not dominated a lease. n184

[4] Exceptions Under Which Use of Property Is Not a Rental Activity

[a] Regulations Exclude Certain Uses from "Rental Activity"

Of primary interest (especially for owners of real estate), are several regulatory exceptions to the definition of rental activity. An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) for a taxable year if for that year, any of the following occurs: n185

- the average period of customer use for the property is seven days or less; n186
- the average period of customer use for the property is 30 days or less, and significant personal services are provided by or on behalf of the owner of the property in connection with making the property available for use by customers; n187
- extraordinary personal services are provided by or on behalf of the owner of the property in connection with making the property available for use by customers (without regard to the average period of customer use); n188
- the rental of the property is treated as incidental to a nonrental activity of the taxpayer; n189
- the taxpayer customarily makes the property available during defined business hours for non-exclusive use by various customers; n190 or
- the property is provided for use in an activity conducted by a partnership, S corporation, or joint venture in which the taxpayer owns an interest. n191

[b] Rentals Where Average Rental Is Seven Days or Less is Not Rental Activity

An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) for a taxable year if for that year the average period of customer use for the property is seven days or less. n192 Regulations provide detailed

rules on how to compute an activity's average period of customer use. The average period of customer use for an activity is the sum of the average use factors for each class of property held in connection with the activity. n193

NOTE:

If the average period of customer use for a taxpayer's property is seven days or less, the taxpayer will not be considered engaged in a rental activity. n193.1 Therefore, the activity of renting the property will not constitute a "rental real estate activity" for purposes of *IRC Section 469(i)*. This will prevent a taxpayer from using the \$25,000 offset provided in that provision. Although the activity will not be a rental activity, however, the activity may still avoid being considered a passive activity if the taxpayer can establish that he or she materially participated in the activity. n193.2

The "average use factor" for a class of property is the average period of customer use times that class of property's gross rental income, divided by the activity's gross rental income. n194 Use is determined by dividing the aggregate number of days in all periods of customer use for the year by the number of periods of customer use. n195 This formula takes into account the amount of income from each item of property and prevents property with insignificant income from affecting the average period of customer use. n196 Taxpayers may organize property into classes using any method that places into different classes items of property for which the amount of daily rent differs significantly. n197

Example:

Gene is engaged in the single activity of renting Property X and Property Y. Assume that Property X and Property Y are in different classes. Property X has an average period of customer use of four days and generates annual gross rental income of \$100,000. Property Y has an average period of customer use of ten days and generates gross rental income of \$300,000. Property X and Property Y are in different classes of property. The average use factor of the class for Property X is one day $[(100,000/400,000) \times 4 \text{ days}]$. The average use factor of the class for Property Y is 7.5 days $[(300,000/400,000) \times 10 \text{ days}]$. The average period of customer use for Gene's activity is 8.5 days $(1 + 7.5)$. Because this is more than 7 days, the exception does not apply, and the activity is treated as a rental activity for passive activity purposes. n198

Regulations contain several rules relating to determining the average period of customer use. Any period of customer use that ends during the tax year includes days in that period that were in the prior tax year. Similarly, a period of customer use that includes the last day of the taxable year includes days in that period that are in the subsequent tax year. n199 Each period during which a customer has a continuous or recurring right to use an item of property is treated as a separate period of customer use. This rule applies whether the customer uses the property for the entire period, or whether the right to use the property is pursuant to a single agreement or to renewals of it. The duration of a period of customer use that includes the last day of a tax year may be determined on the basis of reasonable estimates. n200

Practice Tip:

Taxpayers engaged in short term rental activity may be able to affect the average period of customer use by manipulating contract terms with customers. Terms that provide a continuous or recurring right to use an item or terms that allow renewals will extend the average period of customer use, thereby making it more likely that the activity will not qualify for the exception, but will be treated as a rental activity subject to the passive activity limitations. Taxpayers who wish to qualify for the exception should, to the extent possible, provide for express rental periods of a short duration without a right of renewal. n201

[c] Rentals Where Average Period of Customer Use Is 30 Days or Less and Significant Personal Services Are Provided Are Not Treated as Rental Activity

An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) for a taxable year if

for that year the average period of customer use for the property is 30 days or less, and significant personal services are provided by or on behalf of the owner of the property in connection with making the property available for use by customers. n202

The determination of the average period of customer use is determined in the same manner as for the seven-day exception, n203 "Personal services" under this exception include only services performed by individuals, and do not include the following "excluded services": n204

- Services necessary to permit the lawful use of the property;
- Services performed in connection with the construction of improvements to the property or in connection with repairs that extend the property's useful life beyond the average period of customer use; or
- Services provided in connection with improved real property that are similar to those commonly provided in connection with long-term rentals of high-grade commercial or residential property. These services include cleaning and maintenance of common areas, routine repairs, trash collection, elevator service, and security at entrances or perimeters.

Regulations do not clearly define when personal services are "significant"; they provide only that all the relevant facts and circumstances are taken into consideration in making this determination. Relevant facts and circumstances could include the frequency with which the services are provided and the type and amount of labor required to perform the services relative to the amount charged for the use of the property. n205

Example:

William is engaged in an activity of owning and operating a residential apartment hotel. For the taxable year, the average period of customer use for apartments exceeds seven days but does not exceed 30 days. In addition to cleaning public entrances, exits, stairways, and lobbies, and collecting and removing trash, William provides a daily maid and linen service at no additional charge. All the services other than maid and linen services are "excluded services" because they are similar to those commonly provided in connection with long-term rentals of high-grade residential real property. The value of the maid and linen service (measured by the cost to William of employees performing those services) is less than 10 percent of the amount charged to tenants for occupancy of apartments. Because of the relatively small value of the maid and linen service to the amount charged to customers for rental, the services are not "significant." Accordingly, because significant personal services are not provided in connection with making apartments available for use by customers, the exception does not apply, and the activity is a rental activity, and is subject to the passive activity limitations. n206

[d] Providing Extraordinary Personal Services Prevents Classification as Rental Activity

An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) if extraordinary personal services are provided by or on behalf of the owner of the property in connection with making the property available for use by customers. n207 To qualify as "extraordinary personal services," the services must be performed by individuals, and the use of the property by the customers must be incidental to the receipt of services. The regulations mention hospital boarding facilities and boarding school dormitories as possible examples falling within this exception. n208 Extensive recreational, meal, laundry, and transportation services provided in connection with the management of a retirement center can also constitute extraordinary personal services that fall within the exception. This could occur if the residents' monthly payments far exceeded the cost of luxury apartments in the vicinity, largely because of those services. n209

Example:

Happy Homes, an LLC, is engaged in an activity of running a retirement home. The average stay for a resident exceeds 30 days. Nurses and other individuals employed by Happy Homes provide personalized care, social activities, and services to each resident for no additional charge. The primary purpose of this facility is to provide housing for the elderly and not to provide medical services. The value of the services provided (measured by the cost to Happy Homes of employees performing these services) is less than 50 percent of the amount charged to each resident. Under these facts, services performed by individuals are provided in connection with the rental of the rooms, but the rental is not merely incidental to the receipt of the services. Therefore, extraordinary personal services are not provided in connection with renting the rooms, and the activity is a rental activity. If the average period of customer use by a resident exceeded seven days but did not exceed 30 days, then the services would be considered significant personal services, and the activity would not be considered a rental activity. n210

A rare case involving the extraordinary personal services exception n211 as it pertains to real estate involved real estate leasing activities in conjunction with legal support services. The taxpayers, husband and wife, were sole shareholders of an LLC, which owned an office building. The LLC's main activity was providing extensive legal support services, including legal research, to attorneys to whom it leased office space in the building. The Tax Court concluded that the attorney-tenants leased from the LLC primarily to obtain its legal support services and not to lease its office space. While the space leased may have factored into the attorney-tenants' determination, it was incidental to the support services they received. The Tax Court concluded that the leasing activity was not rental activity, and that the passive loss rules therefore did not preclude the taxpayers from deducting leasing activity losses incurred by the LLC. n212

[e] Rental Activities Incidental to Nonrental Activities Are Not Treated as Rental Activities

An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) if the rental of the property is treated as incidental to a nonrental activity of the taxpayer. n213 Regulations specify several situations when rental is treated as incidental to a nonrental activity. n214 First, the rental of property is incidental to the activity of holding the property for investment if (1) the principal purpose of holding the property is to realize gain from the appreciation of the property, and (2) the gross rental income from the property is less than two percent of the lesser of the unadjusted basis or fair market value of the property. n215 This exception can come into play for unproductive real estate held for investment that is rented out for nominal amounts to defray carrying costs. Land may be leased to farmers, for example, or signs may be placed on the property for a small payment. This nominal rental activity does not ordinarily convert a real estate holding into a passive activity. n216

Example (1):

Ted owns 1,000 acres of unimproved land with a fair market value of \$350,000 and an unadjusted basis of \$210,000. Ted holds the land for the principal purpose of realizing gain from appreciation. To defray the cost of carrying the land, Ted leases the land to a rancher, who uses it to graze cattle for a rent of \$4,000 per year. The gross rental income is less than 2 percent of the lesser of the fair market value or the unadjusted basis of the land ($.02 \times \$210,000 = \$4,200$). Accordingly the rental is not a rental activity because it is incidental to the activity of holding the property for investment. n217

Example (2):

In Year 1, Richard acquires vacant land for the purpose of constructing a shopping mall. Before commencing construction, Richard leases the land under a one-year lease to an automobile dealer, who uses the land to park cars held in its inventory. Richard begins construction of the mall in Year 2. Because Richard acquired the land for the principal purpose of constructing a mall, and not for realizing gain from its appreciation, the rental of the property in Year 1 is not treated as incidental to an activity of holding the property. Rather, it is treated as a rental activity. n218

Second, the rental of property is incidental to trade or business activity during a tax year if all of the following requirements are met: n219

- the taxpayer owns an interest in the trade or business activity during that year;
- the property was predominantly used in the trade or business activity during that year or during at least two of the five preceding tax years; and
- the gross rental income from the property for the tax year is property is less than two percent of the lesser of the unadjusted basis or fair market value of the property.

NOTE:

In determining whether a taxpayer qualifies for the incidental activity exception, activity conducted through a closely held C corporation can be classified as an activity of the taxpayer. Therefore, a rental activity conducted by a taxpayer can be treated as a nonrental activity (and therefore nonpassive) if it is incidental to a nonrental activity conducted by the taxpayer through a closely-held C corporation. n219.1

Finally, the provision of lodging to an employee or an employee's spouse or dependents is treated as incidental to the activity (or activities) of the taxpayer for which the employee performs services (i.e. a nonrental activity) if that lodging is furnished for the convenience of the employer. n220

[f] Nonexclusive Use Exception

An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) if the taxpayer customarily makes the property available during defined business hours for non-exclusive use by various customers. n221 This could occur, for example, with a golf course that is open for play to customers at specified times for daily, weekly, monthly, or annual fees. The activity of running the golf course would not be treated as a rental activity, regardless of the average period of customer use for the course. n222

[g] Provision of Property to Certain Passthrough Entities In Which the Taxpayer Owns an Interest is Not A Rental Activity

An activity is not a "rental activity" (and is therefore not subject to the passive activity limitations) if property is provided for use in a nonrental activity conducted by a partnership, S corporation, or joint venture in which the taxpayer owns an interest. n223 For this exception to apply, the taxpayer must provide the property in the taxpayer's capacity as an owner of an interest in the entity. Whether property is provided in that capacity is determined on the basis of all facts and circumstances. n224

Example:

Sally makes farmland available to a tenant farmer, Mark, pursuant to an arrangement designated a "crop-share lease." Under the arrangement, Mark is required to use his best efforts to farm the land and produce marketable crops. Sally is obligated to pay 50 percent of the costs incurred in the activity (without regard to whether any crops are successfully produced or marketed), and is entitled to 50 percent of the crops produced, or 50 percent of the proceeds from marketing the crops. Despite their characterization of the arrangement as a "crop-share lease," Sally and Mark have actually entered into a joint venture. Therefore, Sally will not be treated as participating in a rental activity. n225

[5] Rental Real Estate Activities for Taxpayers in Real Property Trade or Business May Be Treated as Non-Passive

[a] Rental Real Estate Activities May Be Treated as Non-Passive If Personal Service and Other Requirements Are Met

Normally, any rental activity is treated as a passive activity. n226 This general rule does not apply, however, with respect to any rental real estate activity of a taxpayer in a real property trade or business if certain requirements are met. n227 If this exception applies, the taxpayer avoids the automatic characterization of the rental activities as passive, and may thereby use rental losses to offset other non-passive income. It is critical to note that if the exception applies, the activity is not automatically non-passive. Rather, the exception merely allows the taxpayer to show that the rental activity is non-passive by showing that he or she materially participates in the activity. Thus, a taxpayer may determine the nature (passive versus active) of the rental real estate activity by reference to his or her participation in the activity. n228

NOTE:

A taxpayer who does not satisfy the real estate professional exception n228.1 cannot deduct real estate losses in excess of the statutory \$25,000 offset. n228.2 The amount of any losses or credits allowed under the \$25,000 offset for rental real estate activities n229 is determined after the exception for real estate professionals discussed here is applied. Accordingly, the \$25,000 offset will be applied only against passive losses from rental real estate activities, and not against losses that are allowable as a result of *IRC Section 469(c)(7)*. n230

[b] Definitions of Rental Real Estate and Real Property Trade or Business

For purposes of the exception, n231 rental real estate is any real property used by customers or held for customers in a rental activity. Any rental real estate that the taxpayer has grouped with a trade or business activity as an appropriate economic unit, and which is insubstantial in relation to the trade or business activity, however, is not treated as an interest in rental real estate. Nor is rental real estate that has been grouped with a trade or business activity as an appropriate economic unit by virtue of being rented for use in that trade or business, when there is proportionate ownership of the trade or business activity and the rental activity. n232

For purposes of the exception, a real property trade or business includes any real property development, redevelopment, construction, reconstruction, acquisition, conversion, rental, operation, management, leasing, or brokerage trade or business. n233 The determination of a taxpayer's real property trades or businesses is based on all relevant facts and circumstances. Taxpayers may use any reasonable method of applying facts and circumstances in making this determination for businesses in which they provide personal services. n234 Once made, however, the determination cannot be changed in later years unless it was clearly inappropriate or there has been a material change in the facts and circumstances that makes the original determination clearly inappropriate. n235

[c] Each Real Estate Interest Is Treated as a Separate Real Estate Activity Unless Taxpayer Elects Otherwise

In applying the exception for taxpayers in a real property business, n236 each interest in real estate of a qualifying taxpayer is treated as a separate rental real estate activity, unless the taxpayer elects to treat all interests in rental real estate as a single rental real estate activity. n237 The election to treat all interests in rental real estate as a single rental real estate activity is made by filing a statement to that effect with the taxpayer's original income tax return for the taxable year. The statement must contain a declaration that the taxpayer is a qualifying taxpayer for that year, and is making the election pursuant to *IRC Section 469(c)(7)(A)*. n238 The IRS may grant extensions of time for filing the election. n239

The election may be revoked if there is a material change in the taxpayer's facts and circumstances. There is not bright-line test for determining when there is a material change for this purpose. Rather, the determination is intended to

be a broad factual inquiry. n240

NOTE:

An election to treat all interests in rental real estate as a single rental real estate activity will have no effect in any year that the taxpayer is not a qualifying taxpayer. For those years, the taxpayer's activities will be determined under the "activity" definition and grouping rules. n241

[d] Personal Service Eligibility Requirements Must Be Met to Qualify for the Exception

To be eligible for the exception for taxpayers in a real property business for a taxable year, a taxpayer must meet two tests: n242

- more than one-half of the personal services performed in trades or businesses by the taxpayer during the year must be performed in real property trades or businesses in which the taxpayer materially participates; n243 and
- the taxpayer must perform more than 750 hours of services during the taxable year in real property trades or businesses in which the taxpayer materially participates. n244

If a joint return is filed, the above tests are met if and only if either spouse separately satisfies the participation requirements. Thus, the tests are not met if one spouse satisfies the 50-percent test, while the other spouse satisfies the 750-hour test. Similarly, the 750-hour test cannot be met by combining hours of services performed by both spouses. n245 As with material participation generally, n245.1 proof of an individual's participation sufficient to satisfy the above tests may be established by any reasonable means. Contemporaneous daily time reports, logs, or similar documents are not required if the necessary extent of participation may be established by other reasonable means. Reasonable means may include, but are not limited to, the identification of services performed over a period of time and the approximate number of hours spent performing those services during the period, based on appointment books, calendars, or narrative summaries. Post-event "ballpark guesstimates" will not suffice. n245.2

If the taxpayer does not make an election to treat all interests in rental real estate as a single rental real estate activity, n246 the above personal service requirements, as well as the material participation requirement, must be met with respect to each separate interest in real estate. n247

Personal services, for purposes of the above tests, include any work performed by an individual in connection with a trade or business, other than in that individual's capacity as an investor. n248 Personal services as an employee, however, are taken into account only if the employee is a 5-percent owner of the employer. n249 If an employee is not a 5-percent owner at all times during the tax year, only the personal services performed by the employee during the period the employee is a 5-percent owner are treated as performed in a real property trade or business. n250 This 5-percent rule has been upheld. n251

In the case of a closely held C corporation, the eligibility tests n252 are met for any taxable year in which more than 50 percent of the corporation's gross receipts are derived from real property trades or businesses in which the corporation materially participates. n253 For this purpose, gross receipts do not include items of portfolio income. n254

[e] Grouping of Rental Real Estate Activities with Other Activities Is Generally Prohibited in Applying the Exception

For purposes of applying the exception for rental real estate activities of real estate professionals, n255 a taxpayer may not group a rental real estate activity with any other activity. For example, if a taxpayer develops real property, constructs buildings, and owns an interest in rental real estate, the taxpayer's interest in rental real estate may not be

grouped with the taxpayer's development activity or construction activity. Thus, only the participation of the taxpayer with respect to the rental real estate may be used to determine if the taxpayer materially participates in the rental real estate activity. n256

A special rule applies for certain management activities. A taxpayer may participate in a rental real estate activity through participation n257 in an activity involving the management of rental real estate, even if this management activity is conducted through a separate entity. In determining whether the taxpayer materially participates in the rental real estate activity, however, work the taxpayer performs in the management activity is taken into account only to the extent it is performed in managing the taxpayer's own rental real estate interests. n258

Interests in rental real estate held by certain passthrough entities (partnerships or S corporations) are generally treated as a single interest in rental real estate if the passthrough entity grouped its rental real estate as one rental activity. If the passthrough entity grouped its rental real estate into separate rental activities, each rental real estate activity of the passthrough entity is treated as a separate interest in rental real estate of the qualifying taxpayer. n259 If the qualifying taxpayer holds at least a 50-percent interest in the passthrough entity, however, each interest in rental real estate held by the passthrough entity is treated as a separate interest in rental real estate of the taxpayer regardless of the entity's grouping. The taxpayer may, however, elect to treat all interests in rental real estate, including those interest held through passthrough entities, as a single rental real estate activity. n260 For interests held in tiered passthrough entities in which the upper-tier passthrough entity owns at least a 50 percent interest, each interest in rental real estate held by the lower-tier entity is treated as a separate interest in the rental real estate of the upper tier entity, regardless of the lower-tier entity's grouping of activities. n261

[f] Special Treatment of Limited Partnership Interests in Rental Real Estate

Nothing in the exception for rental real estate professionals affects the determination of whether a taxpayer materially participates with respect to any interest in a limited partnership as a limited partner. n262 Regulations clarify the effect of owning limited partnership interests in rental real estate for purposes of the exception. If a taxpayer elects to treat all interests in rental real estate as a single rental real estate activity, and at least one interest in rental real estate is held as a limited partnership interest, then the combined rental real estate activity will be treated as a limited partnership interest for purposes of determining material participation. The taxpayer will therefore have to meet the material participation tests of a limited partner. n263

There is a de minimis exception. If a taxpayer elects to treat all interests in rental real estate as a single rental real estate activity, and the taxpayer's share of gross rental income from all the taxpayer's limited partnership interests in rental real estate is less than 10 percent of the taxpayer's share of gross rental income from all interests in rental real estate for the taxable year, then the taxpayer may determine material participation under any of the material participation tests that apply to rental real estate activities. n264

[6] Working Interest in Oil and Gas Property Is Not a Passive Activity

A working interest in oil or gas property is not a passive activity if the taxpayer holds the interest directly or through an entity that does not limit the taxpayer's liability with respect to that interest. n265 This rule applies whether or not the taxpayer materially participates in the activity. n266 A working interest for this purpose is a working or operating mineral interest in any tract or parcel of land. n267 The working interest in any oil or gas property is limited to a working interest in natural deposits of oil and gas. n267.1 The production and sale of landfill gas (or other non-oil or non-gas substances) does not qualify. n267.2 Deductions for which economic performance occurs during a period in the year in which the taxpayer's liability was limited, however, will be treated as passive. Similarly, a ratable portion of the taxpayer's gross income from an interest in oil or gas property will be treated as passive during any time the taxpayer's liability was limited. n268

If a taxpayer has any loss from a working interest in oil or gas property that is treated as non-passive under this rule (rather than treated as non-passive because of the taxpayer's limited participation in the activity), any net income in subsequent years from that property will be treated as non-passive also. So will net income from property with a basis determined in whole or in part by reference to the basis of that property (such as property acquired in a *IRC Section 1031* like-kind exchange). Furthermore, certain credits that are attributable to that property in subsequent years with net income from that property will be treated as credits from a non-passive activity to the extent that they do not exceed the regular tax liability allocable to that net income for the year. n269 The property to which this income recharacterization applies includes both the well and any other item of property (such as additional wells) the value of which is enhanced by drilling or other activities the costs of which were taken into account in determining the amount of the taxpayer's income or loss from the well. n270

These rules for working interests in oil and gas wells are applied by treating spouses as separate taxpayers, whether or not they file a joint return. n271

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.05

§ 13.05 Taxpayers Subject to the Passive Activity Limitations

[1] Material Participation Can Avoid Classification as Passive Activity

An activity is generally not a passive activity if the taxpayer materially participates in it. n272 Therefore, if a taxpayer materially participates in an activity, income from the activity is nonpassive and cannot be used to trigger passive losses. On the other hand, if the taxpayer does not materially participate, losses are not deductible unless the taxpayer has passive income from another activity. n273 Whether a taxpayer materially participates is therefore a critical inquiry in nonrental real estate activities and the few rental real estate activities that are not automatically passive activities. Whether a taxpayer materially participates in a particular activity is determined anew each year. n274

There are two exceptions, under which an activity may be passive even if the taxpayer materially participates in the activity. First, rental activities are generally treated as passive whether or not the taxpayer materially participates. n275 Second, certain working interests in oil and gas property are treated as passive whether or not the taxpayer materially participates in the activity. n276

Generally, a taxpayer can be treated as materially participating in an activity only if the taxpayer is involved in the operations of the activity on a regular, continuous, and substantial basis. n277 In making this determination, the participation of the taxpayer's spouse is taken into account, n278 without regard to whether the spouse owns an interest in the activity or whether the spouses file a joint return. n279

Regulations set forth seven alternative tests for determining material participation by individuals. A taxpayer can be treated as materially participating in an activity for a tax year only by meeting one of the tests. n280 Special rules apply with respect to material participation by limited partners in limited partnerships, n281 material participation by closely held C corporations and personal service corporations, n282 material participation by trusts and estates, n283 material participation by passthrough entities, n284 and material participation in farming activity by retired individuals and surviving spouses, n285 The work that is taken into account in evaluating material participation is described in [8], below.

[2] Alternative Tests for Material Participation by Individuals

[a] Satisfaction of One of The Alternative Tests Will Qualify as Material Participation

An individual is treated as materially participating in an activity for a taxable year if and only if the individual satisfies any one of seven alternative tests. n286 Whether an individual materially participates in an activity must be determined each year. Meeting any one of the tests will satisfy the material participation standard for that year, even if the test met is a different one from the one met in a prior year. n287

NOTE:

A red flag to the IRS indicating that material participation in an activity may not be present is out-of-state employer identification numbers (EIN) on flow through losses that have been deducted in full in the non-passive loss column on Schedule E. Another audit trigger can be a Schedule C or F with out-of-state EINs and wages or labor indicating an on-site manager. For partnerships or S corporations, the IRS reviews Forms 1120-S and 1065 for listings of investors with out-of-state EINs or small percentages of ownership, both of which can indicate a lack of material participation.

[b] More Than 500 Hours Test

An individual is treated as materially participating in an activity for a taxable year if the individual participates in the activity for more than 500 hours during the year. n288

Practice Tip:

This test is a simple, numeric one. Proving the hours of participation, however, is more problematic. n289 Even with supporting evidence, IRS examiners will determine whether the quantity of time documented is reasonable in light of the taxpayer's other obligations. For example, it would be difficult for a surgeon who is on call to materially participate in an activity operating in an out-of-town location. Similarly, large W-2 wages from an employer could indicate that the taxpayer might have difficulty applying 500 hours to another activity, particularly if it is located a significant distance from his or her personal residence or place of employment. n290 In addition, the IRS may determine that the work done is that of an investor or that it otherwise cannot be taken into account in determining material participation. This can eliminate many hours from the 500-hour goal. n291

[c] Substantially All Participation Test

An individual is treated as materially participating in an activity for a taxable year if the individual's participation in the activity for the taxable year constitutes substantially all of the participation in the activity for the year of all individuals, including those who do not own interests in the activity. n292 Meeting this test does not require a minimum number of hours of participation by the taxpayer, but does require a comparison of the activities performed by the taxpayer with those performed by others. Work by a single employee or non-owner could cause the taxpayer to fail this test. n293 The term "substantially all" is not defined or clarified by the regulations. n294

[d] 100-500 Hours and More than Anyone Else Test

An individual is treated as materially participating in an activity for a taxable year if the individual participates in the activity for more than 100 hours during the taxable year, and the individual's participation in the activity for the year is not less than that of any other individual. n295

[e] Significant Participation Activity Test

An individual is treated as materially participating in an activity for a taxable year if the activity is a "significant participation activity" (SPA) for the taxable year, and the individual's aggregate participation in all significant participation activities during the year exceeds 500 hours. n296

NOTE:

A taxpayer with more than one SPA, but whose aggregate hours participating in all SPAs is not more than 500, does not materially participate in any of the SPAs. n297

A "significant participation activity" is one in which the taxpayer participates for more than 100 hours, but which fails to constitute material participation under one of the other six tests. Thus, in order for an activity to be considered a significant participation activity, the taxpayer (a) must have more than 100 hours of participation; (b) must have less than 500 hours of participation, as participation in excess of 500 hours would satisfy the first alternative material participation test; n298 and (c) must not be the individual with the most hours of participation in the activity, as a person with the greatest amount of participation in the activity, if in excess of 100 hours, satisfies the third alternative material participation test. n299 To meet this test, the taxpayer must also have at least one other significant participation activity besides the one being tested. n300 A rental activity cannot be included in the significant participation. n301

Example:

Cynthia has the following activities and income/losses during the tax year:

Activity A	220 hours	\$4,000 loss
Activity B	250 hours	\$6,500 loss
Activity C	220 hours	\$6,000 income
	690 hours	\$4,500 loss

Cynthia has treated all these activities as non-passive on her return and deducted a net Schedule C loss of \$4,500. In Activities A and C, Cynthia has a part-time employee who does not participate more than Cynthia. In Activity B, Cynthia has a full-time employee who runs the business during the day

Activities A and C are non-passive since Cynthia materially participates under the "100-500 Hours and More Than Anyone Else" test. n302 Accordingly, Cynthia has net non-passive income of \$2,000 from Activities A and C. Activity B, in contrast, is passive, because the employee spends more time in the activity than Cynthia does. Activity B generates a passive loss of \$6,500. n303

NOTE:

The IRS sometimes uses this test to recharacterize the income of taxpayers who have more than one business activity reporting passive income, especially if it appears that gains from these activities are being used to offset rental losses. The IRS will use this SPA test to find material participation and recharacterize those gains as non-passive. n304

[f] Any Five of Ten Past Years Test

An individual is treated as materially participating in an activity for a taxable year if the individual materially participated in the activity for any five taxable years (whether or not consecutive) during the ten taxable years that immediately preceded the taxable year in question. n305 Material participation for the prior years must be determined under one of the other alternative tests. n306

NOTE:

This test can be a two-edged sword. On one hand, it may enable a taxpayer to deduct current year losses in full as non-passive. On the other hand, a taxpayer who has materially participated in any 5 of the prior 10 years must thereby treat income from the activity in the current year as non-passive, even if the activity would otherwise be considered passive in the current year. This will preclude the use of income from the activity to offset other passive losses. Income issues arise on audit with respect to this test more

frequently than loss issues. n307

[g] Any Three Years in Personal Service Activity Test

An individual is treated as materially participating in an activity for a taxable year if the activity is a personal service activity, and the individual materially participated in the activity for any three taxable years (whether or not consecutive) preceding the taxable year in question. n308 A personal service activity for this purpose includes activity performed in any trade or business in which capital is not a material income-producing factor. It also specifically includes activity performed in the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting. n309

[h] Facts and Circumstances Test

An individual is treated as materially participating in an activity for a taxable year if, based on all of the facts and circumstances, the individual participates in the activity on a regular, continuous, and substantial basis during the year. n310 Regulations clarify that this test can be met only if the taxpayer materially participates in the activity for at least 100 hours during the taxable year. n311 Services performed in the management of an activity cannot be taken into account unless: (a) no other person receives compensation for performing management services, and (b) no other person spends more hours than the taxpayer managing the activity. n312

NOTE:

Taxpayers typically argue the facts and circumstances test when they fail the others. As a practical matter, however, the stringent limitations prevent most taxpayers from meeting the facts and circumstances standard. n313

[3] Material Participation by Limited Partners

Generally, limited partners cannot be treated as materially participating in any activity of a limited partnership in which they hold an interest. n314 This restriction applies with respect to applying the passive activity restrictions to the individual's share of income, gain, loss, deduction or credit from activity that is attributable to the limited partnership interest in the partnership, and to any gain or loss from that activity that is recognized upon a sale or exchange of the interest. n315

The only exceptions to this rule are if: n316

- the limited partner participates in the activity for more than 500 hours during the year;
- the limited partner materially participated in the activity for any five taxable years (whether or not consecutive) during the ten taxable years that immediately precede the taxable year in question; or
- the activity is a personal service activity, and the limited partner materially participated in the activity for any three taxable years (whether or not consecutive) preceding the taxable year in question. n317

A limited partnership interest is one that is designated as such by the entity documents, without regard to whether the liability of the limited partner is limited under state law, or one under which the liability of the holder of the interest is limited under state law to a determinable fixed amount (such as the capital contributions to the partnership and contractual obligations to make additional capital contributions to the partnership). n318 An individual's interest in a partnership cannot be treated as a limited partnership interest if the individual is a general partner at all times during the partnership's tax year ending with or within the individual's tax year. n319

NOTE:

The IRS has made several attempts to treat member interests in LLCs as limited partnership interests for purposes of applying the passive activity rules. It has also tried to treat limited liability partnerships (LLPs) as limited partnerships for purposes of applying the passive activity rules. Courts have so far refused to treat ownership interests in these entities as limited partnership interests for purposes of *IRC Section 469(h)(2)*. Instead, LLP and LLC members are treated as general partners for purposes of *IRC Section 469(h)(2)*, and are therefore not subject to that provision. These court decisions allow LLPs and LLCs to avoid the statutory presumption which applies to limited partnerships--i.e. that losses from those entities are passive. n319.1 Furthermore, a member whose interest in an LLC is not a limited partnership interest may be able to establish material participation in the LLC, so that losses from the LLC will not be passive. n319.2 In light of these losses before courts, the IRS has added material participation under *IRC Section 469* to its guidance business plan, but it is unclear what the focus of the future guidance will be. The above cases leave open the application of the self-employment tax for taxpayers with interests in LLCs and LLPs. Because those interests are not treated as limited partnership interests by the cases, the IRS has a stronger position in claiming that distributive shares of income from those entities are net earnings from self-employment and subject to the self-employment tax. Taxpayers will likely be less successful in arguing that the exception for distributive shares of income of limited partners n319.3 applies. This aspect is discussed in numerous articles. n319.4

[4] Material Participation by Closely Held C Corporations and Personal Service Corporations

For personal service corporations and closely held C corporations, material participation is generally determined with reference to the participation of shareholders with aggregate ownership of more than 50 percent in value of the corporation's outstanding stock. n320 For this purpose, all activities of the corporation are treated as activities that the individual holds an interest in. n321 In addition, an individual's participation in all noncorporate activities is disregarded. n322

Closely held C corporations that are not personal service corporations also have an important alternative means of meeting the material participation requirement that does not require active involvement in an activity by shareholders owning more than a majority of the stock. The alternative test is applied to each activity of the corporation for which the material participation test would be relevant. The corporation is considered to have materially participated in any activity that is a "qualifying business" for purposes of the at-risk rules, n323 without regard to whether the activity is an "excluded business" for purposes of the at-risk rules. Under this alternative test, a closely held C corporation is treated as materially participating in an activity if the following three requirements are met with respect to that activity: n324

- During the entire taxable year, the corporation had at least 1 full-time employee substantially all of whose services were in the management of the activity;
- During the entire taxable year, the corporation had at least 3 full-time, non-owner employees. A "non-owner employee" is one who does not own more than 5 percent in value of the corporation's outstanding stock at any time during the taxable year, n325 and substantially all of whose services were directly related to that activity; and
- Allowable trade or business deductions n326 and deductions for employer contributions to deferred payment employee trusts and annuity plans n327 attributable to the activity for the taxable year exceed 15 percent of the gross income from the activity for that year.

[5] Material Participation by Trusts and Estates

When an entity rather than an individual is the taxpayer, the material participation rules are modified. In general,

entities potentially subject to the passive activity limitations are treated as materially participating in an activity if the appropriate related individuals are considered to be material participants.

For trusts (other than grantor trusts), the IRS takes the position that material participation must be determined by looking to the activities performed by the trustee or fiduciary in that capacity. Thus, the IRS takes the position that the sole means by which a trust may establish material participation is by having its fiduciary being involved in the operations of the activity on a regular, continuous, and substantial basis. n328 A court, however, has rejected this position and has held that the proper focus is on the activities of the entire trust, taking into account all activities of the trust fiduciaries, agents, and trustees. n329 For estates, the IRS also takes the position that material participation by the executor or administrator determines the character of the income and deductions of the estate for purposes of computing the estate's taxable income. n330

[6] Material Participation by Passthrough Entities

Material participation by partnerships, S corporations, and LLCs taxed as partnerships is determined with respect to each partner, shareholder, or LLC member. The participation is determined with reference to the taxable year of the entity, rather than the taxable year of the taxpayer. n331 This material participation is also treated as material participation in applying two of the alternative tests for material participation--the 5-of-past-10 years test n332 and the 3-year personal service activity test. n333

[7] Material Participation by Retirees and Surviving Spouses in Farming Activities

A special rule recognizes material participation in farming activities by disabled and retired farmers and surviving spouses of deceased farmers. n334 Material participation for these taxpayers is determined by reference to estate tax special use valuation rules for farm property. The material participation requirement for decedents under the estate tax rules is met if a decedent materially participates in the operation of a farm or other business for 5 of the 8 years ending on the decedent's death. n335 A decedent is treated as meeting this requirement, however, if he or she meets that requirement for 5 of the 8 years ending on the date he or she began receiving old-age Social Security benefits or became continuously disabled, but had materially participated in that farming activity until that time. Therefore, disabled and retired farmers meet the material participation requirement if they materially participate in farming activity in 5 of 8 years before the began receiving old-age Social Security benefits or became continuously disabled. n336

A surviving spouse of a farmer is treated as materially participating in a farming activity if the real property used in the activity meets the estate tax rules for special valuation of farm property passed from a qualifying decedent, and the surviving spouse continues to actively manage the farm. n337 This active management by the surviving spouse is treated for passive activity purposes as material participation in the operation of the farm. n338

[8] Work That Is Included in Material Participation

In determining whether any of the above material participation tests is met, n339 participation by a taxpayer's spouse is treated as participation by the taxpayer in the activity. n340

For purposes of determining material participation, all work done in connection with an activity by an individual is taken into account as participation by the individual in the activity, without regard to the capacity in which the individual does the work. Thus, work performed by an individual as an employee is taken into account as participation by that individual in the activity. The individual must own an interest in the activity at the time the work is done, however, in order for the work to be treated as participation in meeting any of the alternative tests. n341

There are three exceptions to this general rule:

(1) Work that is not customarily done by an owner is not taken into account if a principal purpose for the performance of the work is to avoid the disallowance of a passive activity loss or credit. n342

(2) Work done in the individual's capacity as an investor in the activity is not taken into account unless the individual is directly involved in the day-to-day management or operations of the activity. n343 Regulations treat the following activities as those of an investor: (a) studying and reviewing financial statements or reports on operations of the activity; (b) preparing or compiling summaries or analyses of the finances or operations of the activity for the individual's own use; and (c) monitoring the finances or operations of the activity in a non-managerial capacity. n344 Participation on a condominium board, however, has been held to go beyond mere investor participation, and can be taken into account in satisfying material participation requirements. n345

(3) For the facts-and-circumstances test only (but not the other alternative tests), n346 services performed in the management of an activity cannot be taken into account, unless: (a) no other management person receives compensation for performing the services, and (b) no other management person devotes more management hours to the activity. n347 This rule has been applied to prevent services performed on a condo association board from being taken into account for purposes of material participation when others receive compensation for management services in connection with the operation of the condominium association. n348

[9] Material Participation May Be Established by Any Reasonable Means

Material participation may be established by any reasonable means. Contemporaneous daily time reports, logs, or similar documents are not required. The regulations indicate that reasonable means may include identification of services performed over a period of time and the approximate number of hours spent performing services during that period, based on appointment books, calendars, or narrative summaries. n349

Practice Tip:

Even though the regulations impose no specific record-keeping requirements to establish material participation, n350 most of the alternative tests require a minimum number of hours of participation. n351 Therefore, although not required to do so, taxpayers wishing to avoid the passive activity limitations with respect to an activity should keep contemporaneous logs detailing the hours of their participation and the particular activities performed. Ballpark "guesstimates" will not suffice. n352 In addition, courts routinely reject testimony about participation that is not corroborated by other contemporaneously-produced evidence. They also give little credibility to time logs, summary reports, or other records that are produced several years after the alleged participation took place, or after an audit has begun. n353 The necessity of keeping track of participation in activities can also arise when taxpayers wish to show that they did not materially participate in an activity, in order to show that an activity was passive. In one case, the taxpayers wanted to offset undisputed passive losses against income from another activity, but they failed to show that they did not materially participate in that activity. n354 If contemporaneously made records are lost or destroyed, a taxpayer should attempt to reconstruct them at the time the loss or destruction is discovered. A taxpayer who fails to do so or who attempts to reconstruct records years later on audit or in preparation for trial will almost never be able to credibly establish material participation. n354.1

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.06

§ 13.06 Passive Activity Income

[1] Passive Activity Gross Income Includes Income from Passive Activities

A passive activity loss occurs when the aggregate passive activity losses from all passive activities for the tax year exceed the aggregate income from passive activities for that year. n355 Unless otherwise provided by regulations, in determining the income or loss from a passive activity, passive activity gross income for a tax year includes only gross income that is from a passive activity. n356

NOTE:

IRC Section 469 was intended to prevent taxpayers from using losses from rental activities and passive business activities to shelter personal service income, active business income, and portfolio investment income. Congress recognized the difficulty of writing statutes that would clearly distinguish these different types of income. Congress also anticipated the need for additional provisions on transactions structured to maximize the amount of rental or passive income. Therefore, the Secretary was given express authority to prescribe regulations that recharacterize certain items of gross income and net income from certain activities as income not from a passive activity. n357 Numerous items discussed in the subsections below detail rules in the regulations that recharacterize items of income. It is critical to note that these rules recharacterize only income, not losses. If any of the activities result in a net loss, the loss will be treated as passive and subject to the passive loss limitations. n358

[2] Income from Portfolio Activities Generally Is Not Passive Activity Income

Portfolio activities are those typically considered to be investments. They are not treated as a passive activities, and are not subject to the passive activity rules. Income from portfolio activities is therefore not included in passive activity gross income. n359 The following items of portfolio income are specifically excluded from passive activity gross income: n360

- interest, dividends (after reduction by any dividends-received deduction n361), annuities, or royalties that are not derived in the ordinary course of a trade or business;
- expenses (other than interest) which are clearly and directly allocable to that gross income; and

- interest expense properly allocable to that gross income.

Also excluded from passive activity gross income is gain or loss not derived in the ordinary course of a trade or business which is attributable to the disposition of property held for investment, or property producing interest, dividends, annuities, royalties and other income not derived in the ordinary course of a trade or business. For this purpose, any interest in a passive activity is not treated as property held for investment. n362

For purposes of determining portfolio income, any income, gain, or loss that is attributable to an investment of working capital is treated as not derived in the ordinary course of a trade or business. n363

Regulations amplify the statutory list of items that are treated as portfolio income, and which therefore are not passive activity gross income. The following items are included: n364

- interest, annuities, royalties, dividends on C corporation stock, real estate investment trust (REIT) income, regulated investment company income, real estate mortgage investment conduit (REMIC) income, common trust fund income, income from a controlled foreign corporation, income from a qualified electing fund, and income from a cooperative;
- income from the disposition of property that produces the above type of income;
- dividends on S corporation stock; and
- income from the disposition of property held for investment

Income that is described above and that is derived in the ordinary course of a trade or business is not automatically classified as portfolio income. Rather, the character of the income is determined under the general passive activity rules (i.e., whether there was material participation in the business activity by the taxpayer). Under the regulations, however, portfolio-type income is treated as derived in the ordinary course of a trade or business only if it falls in one of the following categories: n365

- interest on loans or investments made in the ordinary course of the business of lending money;
- interest on accounts receivable arising from the performance of services or the sale of property in the ordinary course of business, but only if credit is customarily offered to customers in the business;
- income from investments made in the ordinary course of an insurance business;
- income or gain derived in the ordinary course of business of trading or dealing in property;
- certain royalties and cooperative income; or
- any other income identified by the Commissioner as income derived in the ordinary course of business.

Income derived from working capital--i.e., amounts set aside for the reasonable needs of a trade or business--is typically treated as portfolio income. Although setting aside those amounts may be necessary to the trade or business, the income earned on those set-aside amounts is investment-related and not a part of the trade or business itself. Thus, interest earned on funds set aside by a business for expansion, construction, or payment of licensing fees will usually be treated as portfolio income. n365.1

Regulations also contain a special rule for dealers in property that can have a substantial impact on real estate developers and homebuilders. Any gain or income received by a dealer in property that would otherwise be classified as income from the trade or business will be recharacterized as portfolio income if the dealer held the property for investment at any time before its disposition. Similar business losses are not subject to this recharacterization. n366 This rule has the effect of significantly reducing the passive income against which passive losses can be offset.

Example:

Tom holds unimproved land for investment for 10 years. Because of growth in the area where the land is located, Tom subdivides the land and sells the lots. Normally, the income from those sales would be treated as income derived in the business of selling the lots, and the characterization of the income as active or passive would be based on Tom's participation in the activity. However, under the special rule, The income from the sales of the lots is characterized as portfolio income because of Tom's prior investment intent with respect to the land. n367

[3] Gain from Certain Dispositions of Property Used in a Passive Activity

[a] Character of Gain as Passive or Non-passive Depends on Use of Property in Year of Disposition

Whether gain recognized from the sale, exchange or other disposition of property is passive or non-passive generally depends on the nature of the activity the property is used in at the time of disposition. The same rule applies with respect to gain from the disposition of an interest in an activity held through a partnership or S corporation. If the activity is passive for the tax year of disposition, then the gain will be treated as passive gross income. If the activity is not a passive activity for the tax year of disposition, then the gain will be treated as not from a passive activity. n368 If a portion of the property was used in any activity, while another portion was not (such as seven floors of a 10-story building being used in a trade or business activity and three floors being used in a passive rental activity), then each portion is treated as a separate interest in property. n369 The amount realized from the disposition and the adjusted basis of the property must be allocated to those separate interests in a reasonable manner. n370 Several clarifications and exceptions to these rules are discussed in [b]-[e], below.

[b] Gain Recharacterization When Property Is Used in More Than One Activity in the 12 Months Preceding Disposition

If property (or any interest in property) is used in more than one activity during the 12-month period before its disposition, the amount realized from the disposition and the adjusted basis of the property must be allocated among those different activities in a manner that reasonably reflects the use of the property during that 12-month period. n371 This recharacterization rule prevents taxpayers from changing the use of property shortly before sale in order to create a non-passive loss or a passive gain from the disposition. If the property was acquired by the taxpayer in a fully taxable transaction, any use of the property before that transaction is ignored in determining the use of property for purposes of characterizing the gain as passive or non-passive on any later disposition of the property by the taxpayer. n372

There need not be an allocation among activities under this rule, however, if the fair market value of the property being disposed of does not exceed the lesser of (1) \$10,000, or (2) 10 percent of the sum of the fair market value of that property and the fair market value of all other property used in that activity immediately before the disposition. In that case, the entire amount realized and adjusted basis of the property may be allocated solely to the activity in which the property is predominantly used during the 12-month period prior to disposition. n373

[c] Gain From Disposition of Substantially Appreciated Property Formerly Used in a Non-Passive Activity May Be Recharacterized

A special gain recharacterization rule applies when substantially appreciated property (or an interest in substantially

appreciated property) is disposed of. Substantially appreciated property for this purpose includes property with a fair market value that exceeds 120 percent of its adjusted basis. n374 Any gain from the disposition of substantially appreciated property is treated as not from a passive activity unless the property was used in a passive activity for one of the following periods: n375

- 20 percent of the period during which the taxpayer held the property; or
- the entire 24-month period ending on the date of disposition.

The "date of disposition" for this purpose is the date that the interest in property becomes subject to an oral or written agreement that either requires the owner or gives the owner an option to transfer the interest in property for consideration that is fixed or otherwise determinable on that date. n376

The regulations clarify that for purposes of this disposition rule, property is treated used in a non-passive activity and as property held for investment for any period it is held through a C corporation or similar entity. n377 If property was acquired by the taxpayer in a fully taxable transaction, any use of the property before that transaction is ignored in applying this recharacterization rule to any later disposition of the property by the taxpayer. n378

The gain that is not treated as passive activity income under this rule will be classified as portfolio income only if the property was held for investment for more than 50 percent of the time during which the owner held the property in a non-passive activity. Otherwise, it will be treated as active income. n379

Example (1):

Carla acquires a building on January 1, Year 1, and uses the building in a business activity in which she materially participates until March 31, Year 12. On April 1, Year 12, she rents the building to Rose. On December 31, Year 13, Carla sells the building for a gain of \$150,000. At that time, the fair market value of the building was \$450,000 and Carla's adjusted basis was \$300,000. Although the building was used in a passive activity at the time of disposition, Carla's gain would not be treated as passive. The property is considered substantially appreciated because its fair market value (\$450,000) is in excess of \$360,000, which is 120 percent of the \$300,000 adjusted basis. In addition, the building was not used in a passive activity for 20 percent of Carla's 13-year holding period ($13 \text{ year holding period} \times 20 \text{ percent} = 2.6$ years, and the building was not rented for that length of time before sale). In addition, the building was not used in a passive activity (in this case rented) for the 2 years prior to the sale because it was rented only 21 months before the date of sale. Since the building was not rented the entire 2 years prior to the sale and was not rented for 20 percent of the holding period, Carla's gain on disposition is recharacterized as non-passive. n380

Exmample (2)

Matt is a shareholder of Rebar Corporation. Rebar Corporation is a C corporation until December 31, Year 1, and is an S corporation thereafter. Rebar acquires a building on January 1, Year 1, and sells the building on March 1, Year 2. At the time of sale, Matt's only interest in the building is through his shares of Rebar Corporation, and the building is substantially appreciated. The building is leased to various tenants at all times, and the leasing constitutes a rental activity. Example (2): Matt is a shareholder of Rebar Corporation. Rebar Corporation is a C corporation until December 31, Year 1, and is an S corporation thereafter. Rebar acquires a building on January 1, Year 1, and sells the building on March 1, Year 2. At the time of sale, Matt's only interest in the building is through his shares of Rebar Corporation, and the building is substantially appreciated. The building is leased to various tenants at all times, and the leasing constitutes a rental activity.

Matt's interest in the building throughout Year 1 is treated as being held for investment because during

that period his interest was held through a C Corporation. Matt's interest in the building in Year 2 is treated as an interest in property used in a passive activity because for that period Rebar Corporation is an S corporation. Matt's interest in the building throughout Year 1 is treated as being held for investment because during that period his interest was held through a C Corporation. Matt's interest in the building in Year 2 is treated as an interest in property used in a passive activity because for that period Rebar Corporation is an S corporation.

The gain on the sale of the building is treated as being not from a passive activity. This is because (1) the building was not used in a passive activity for the entire 24-month period ending on the date of sale, and because the 2 months in Year 2 that the building was treated as used in a passive activity is less than 20 percent of the period during which Matt held an interest in the building ($.20 \times 14 \text{ months} = 2.8 \text{ months}$).

In addition, Matt's gain from the sale of the building is also treated portfolio income. This is because the building was held for investment for more than 50 percent of the period during which Matt held an interest in activities other than passive activities (i.e. the 12 months in Year 1). n381

[d] Gain from Disposition of Property Held for Sale to Customers May Be Recharacterized if Previously Held for Another Purpose

Special recharacterization rules (so-called "dealer rules") apply with respect to gain from the disposition of property that was held for sale to customers in the ordinary course of a trade or business (called a "dealing activity" in the regulations), but which was acquired and held by the taxpayer for some other principal purpose (called a "nondealing activity" in the regulations). For the rules to apply, the taxpayer must be engaged in nondealing activities, and the property must have been used in nondealing activities for more than 80 percent of the period during which the taxpayer held the property. n382

If the above conditions are met, holding of the property in the dealing activity is ignored. Instead, for purposes of characterizing gain as passive or non-passive, the property is treated as being used in the last nondealing activity of the taxpayer in which the property was used before its disposition. n383

In contrast, if the above conditions are not met, and the property is used in a nondealing activity that is merely incidental to its sale, then the use of the property in the nondealing activity is ignored, and for purposes of characterizing the gain as passive or non-passive, the property is treated as being used in the dealing activity. n384

The regulations provide a rebuttable presumption as to the principal purpose for which property is acquired and held. A taxpayer is presumed to have acquired and held an interest in property principally for the purpose of selling it to customers in the ordinary course of business if either of the following is met n385

- The taxpayer used the property in nondealing activities for the lesser of 24 months or 20 percent of the property's recovery period; or
- The taxpayer simultaneously offered the property for sale to customers and used it in a nondealing activity for more than 25 percent of the period during which the property was used in nondealing activities. The grant to a lessee of an option to purchase the property is not treated as an offer of property for sale to customers for this purpose.

Example (1):

Terry acquires a residential apartment building on January 1 of Year 1 and uses it in a rental activity. On January 1, Year 4, Terry converts the apartments into condominium units. After the conversion, Terry

holds the units for sale to customers in the ordinary course of business. In addition, Terry continues to use the units in the rental activity until they are sold. The units are first held for sale on January 1, Year 4 and the last unit is sold on December 31, Year 4.

The apartments were used in a rental activity for the entire period Terry held them. Therefore they were used in a nondealing activity for more than 80 percent of Terry's holding period in the property, and the marketing of the property satisfies the holding period requirement. In addition, the apartments were used in rental activity for 36 to 48 months (i.e. from January 1, Year 1 through the date of sale in the period from January through December, Year 4). They were therefore used in nondealing activity for more than 24 months, so the first rebuttable presumption above does not apply. Because the apartments were offered for sale only for 12 months, no apartment was offered for sale to customers during more than 25 percent of the period during which the property was used in nondealing activities. Therefore, the second rebuttable presumption does not apply.

Terry is therefore not treated as having a dealer purpose unless other facts and circumstances establish that he acquired and held the apartments for the principal purpose of selling them to customers in the ordinary course of business. Assuming this is not the case, Terry's holding the apartments in his dealing activity is treated as the use of the apartments in his nondealing activity. This nondealing activity was rental activity. Therefore, the apartments are treated as having been used in rental activity for the entire period Terry held interests in them, and all gain from the sale of the apartments is treated as passive activity gross income. n386

Example (2):

Assume the same facts as in Example (1), except that Terry converts the apartments into condominium units on July 1 of Year 1 and the first unit is sold on January 1 of Year 2 and the final unit is sold on December 31 of Year 3. Because all the apartments are simultaneously offered for sale to customers and used in a nondealing activity for more than 25 percent of the period during which they were used in dealing activity, Terry is rebuttably presumed to have acquired the apartments (including those used in rental activity for at least 24 months) for the principal purpose of selling them to customers in the ordinary course of a trade or business. If the facts and circumstances do not rebut this presumption, Terry has a dealing purpose and the rental of the apartment is treated as part of that dealing activity. Gain from the sale of the apartments is treated as income from Terry's dealing activity. n387

[e] Gain From Dispositions of Partnership Interests and S Corporation Stock is Allocated Among Different Activities of the Entity

For purposes of characterizing gain or loss for purposes of the passive activity limitations, the gain or loss from a disposition of a partnership interest, S corporation stock, or an interest in an other passthrough entity is treated as gain or loss from the disposition of interests in the various activities in which the partnership, S corporation, or other passthrough entity has an interest. n388 Thus, if a holder of an interest in a passthrough entity disposes of the interest, a ratable portion of any gain or loss from the disposition is treated as gain or loss from the disposition of an interest in each trade or business, rental, or investment activity in which the passthrough entity owns an interest. n389

When there is a gain on the disposition, the ratable portion of gain that is allocated to an activity is determined by dividing (1) the net gain that would have been allocated to the holder of the interest had the entity sold its entire interest in the activity for its fair market value on the applicable valuation date, by (2) the total net gain that would have been allocated to the holder of the interest had the entity sold its entire interest in each appreciated activity for its fair market value on the applicable valuation date. n390

When there is a loss on the disposition, the ratable portion of loss that is allocated to an activity is determined by

dividing (1) the net loss that would have been allocated to the holder of the interest had the entity sold its entire interest in the activity for its fair market value on the applicable valuation date, by (2) the total net loss that would have been allocated to the holder of the interest had the entity sold its entire interest in each depreciated activity for its fair market value on the applicable valuation date. n391

If an allocation cannot be done under one of the above rules, a default rule applies, under which gain or loss is allocated to activities in proportion to their respective fair market values of the entity's interest in them on the applicable valuation date. The gain or loss allocated to each activity is treated as gain or loss from the disposition of an interest in that activity. n392

The gain from a holder's disposition of an interest in a passthrough entity that is allocated to a passive activity may be treated as gain that is not from a passive activity under certain circumstances. This rule is designed to prevent taxpayers from using passthrough entities to structure dispositions of property to generate passive income, when the income would not otherwise be from a passive activity. n393 If the amount of gain from the disposition that would have been treated as non-passive under one of the recharacterization rules n394 exceeds 10 percent of the total amount of the gain that is allocated to the passive activity, n395 then the gain recognized from the disposition of the interest is treated as gain that is non-passive. n396

A special disposition rule applies for interests in publicly traded partnerships. A taxpayer is not treated as having disposed of an entire interest in an activity of a publicly traded partnership until the taxpayer completely disposes of his or her entire interest in the partnership. n397

For purposes of the above rules, the "applicable valuation date" is, at the choice of the entity, either the beginning of the tax year of the entity in which the disposition occurs, or the date of the disposition. n398 The valuation date is the date before the date of the disposition, however, if any of the following occur after the beginning of the entity's tax year and before the date of the disposition: n399

- the entity disposes of more than 10 percent of its interest by value in any activity;
- more than 10 percent of the property by value used in any activity by the entity is disposed of; or
- the holder of the interest disposed of contributes to the entity substantially appreciated or depreciated property with a total fair market value or adjusted basis, respectively, which exceeds 10 percent of the total fair market value of the holder's interest in the entity as of the beginning of the tax year.

[4] Compensation for Personal Services Is Not Passive Activity Income

Earned income and other compensation for personal services is excluded from passive activity gross income. n400 Earned income from personal services includes wages, fees, salaries, and commissions. n401 Other compensation for this purpose includes property transferred in connection with the performance of services, n402 distributions from employee retirement and pension plans and employee annuities, Social Security benefits, and other compensation for personal services. n403 The rule is unambiguous and its application is clear for most taxpayers. Its purpose is to emphasize that even if personal service income is received in connection with a passive activity, it must be treated as a separate activity. n404

Regulations point out, however, that no portion of a partner's distributive share of partnership income or a shareholder's pro rata share of income from an S corporation is treated as compensation for personal services. n405 Unexpected results can follow from this treatment. For example, assume the sole shareholder in an S corporation engaged in a passive activity receives a salary of \$5,000 for services and that the deduction at the corporate level will result in a \$5,000 loss. The individual will have \$5,000 in earned income and a \$5,000 passive activity loss passed through from

the S corporation. The passive loss cannot be used to offset the income, and the taxpayer will have \$5,000 in taxable income. n406

[5] Cancellation of Indebtedness Income May Be Treated as Passive Activity Income

The IRS has ruled that cancellation of indebtedness income (COD income) is properly characterized as income from a passive activity if, at the time the indebtedness is discharged, the debt is allocated to passive activity expenditures in a manner consistent with interest tracing rules in temporary regulations. n407 To the extent the debt being discharged cannot be allocated to passive activity expenditures, the IRS takes the position that the resulting COD income must be characterized as income from a non-passive activity. n408

[6] Recharacterization of Income from Significant Participation Passive Activities

The regulations distinguish between a significant participation activity (SPA) and a significant participation passive activity (SPPA). For an activity to be an SPA or SPPA, an individual must significantly participate in the activity for a taxable year, i.e. participate for more than 100 hours during the year. n409

An activity is an SPA of an individual only if it is a trade or business activity in which the individual "significantly" participates, but does not "materially" participate for the taxable year (i.e. participates between 100 and 500 hours during the year). Because the trade or business requirement, an SPA cannot be a rental activity. n410 For this purpose, material participation is determined by disregarding the aggregation rule discussed below under which all SPAs of an individual are aggregated. n411

An SPPA is essentially the same as an SPA. The only difference between an SPA and an SPPA is that, in determining whether an activity is an SPPA, the special aggregation rule (discussed immediately below) is taken into account. n412

Once all of an individual's SPAs have been identified, an aggregation rule is applied to determine whether the individual will be deemed to have materially participated in them. An individual materially participates in each SPA if his or her aggregate participation in all SPAs exceeds 500 hours. If the application of the aggregation rule causes the individual to be treated as having materially participated in the SPAs, the SPAs cannot be treated as SPPAs. However, this aggregation rule cannot cause a limited partner to be a material participant. n413

The results of being classified as an SPA or SPPA are twofold: n414

- (1) if an individual has more than one SPA, the special aggregation rule can have the effect of reclassifying into a non-passive activity what would otherwise be a passive activity; and
- (2) if an SPA is also an SPPA, a portion of its gross income may be recharacterized from passive activity gross income to non-passive activity gross income.

A taxpayer must aggregate all passive activity gross income and passive activity deductions from all SPPAs for the taxable year. If the aggregate passive activity gross income exceeds the aggregate passive activity deductions, an amount of the gross income from each SPPA, equal to a ratable portion of the taxpayer's net passive income from the activity, is treated as non-passive activity gross income. Moreover, if the taxpayer's aggregate passive activity gross income from all SPPAs exceeds aggregate passive activity deductions from all SPPAs, all SPPAs are treated as a single passive activity that does not have a loss for the taxable year. n415

The recharacterization rule for SPPAs produces the following three results: n416

- (1) If the taxpayer's aggregate SPPAs generate passive activity gross income for a taxable year in excess

of their passive activity deductions, the excess cannot be used to offset passive activity deductions from other non-SPPA passive activities of the taxpayer. Instead, the excess is recharacterized as gross income from a non-passive activity. The recharacterization has the impact of increasing the amount of any non-SPPA passive activity loss for the year. This means that any passive activity loss for the year is apportioned only among the taxpayer's non-SPPA passive activities;

(2) If a taxpayer's aggregate SPPAs have passive activity deductions in excess of passive activity gross income for a taxable year, the recharacterization rule does not apply, and the income and deductions from the taxpayer's SPPAs for the taxable year are combined with the income and deductions from the taxpayer's other passive activities for the year; or

(3) If a taxpayer's only passive activity income and deductions for the taxable year come from SPPAs, the recharacterization rule has no impact.

The amount that may be recharacterized under this rule is subject to an overall limitation, discussed in [13], below. n417

[7] Recharacterization of Rents from Nondepreciable Property

A recharacterization rule applies if the unadjusted basis of the depreciable property used or held for use by customers in a rental activity is less than 30 percent of the unadjusted basis of all property used in that activity. In that case, the taxpayer's net passive income from the activity is recharacterized as non-passive. The net income that can be recharacterized includes any gain on disposition. n418 The amount that may be recharacterized under this rule is subject to an overall limitation, discussed in [13], below. n419

Example:

Robert purchases land for \$300,000 and constructs a building for \$100,000. The building was used in a rental activity for several years and then was sold for \$600,000. Since the unadjusted basis of improvements (\$100,000/\$400,000) is 25 percent of the unadjusted basis of all property, the net gain is treated as nonpassive. In addition, if Robert had net income from the rental activity, that income would also be recharacterized as non-passive. n420

Practice Tip:

This rule has the effect of treating income from leasing any undeveloped land as nonpassive. Income from mobile home parks, parking lots, or other ground rents are typically recharacterized as non-passive. n421 Farmers are sometimes audited on this issue to determine if income reported is from leasing agricultural property. n422

[8] Recharacterization of Net Rental Income from Property Rented Incidental to Taxpayer's Development Activity

As discussed elsewhere, an activity involving the rental of property is generally a passive activity. n423 In addition, any gain or loss from the disposition of property used in a passive activity generally is treated as passive activity income or loss. n424 In certain situations, however, an amount equal to the taxpayer's "net rental activity income" from an item of property for the year may be treated as income not from a passive activity. In general, this rule applies if three criteria are met: n425

- Gain from the sale, exchange, or other disposition of the property is included in the taxpayer's income for the taxable year;

- The taxpayer's use of the property in an activity involving its rental began less than 12 months before the date of the property's disposition. The date of disposition is the date the property becomes subject to an oral or written agreement that either requires the owner or gives the owner an option to transfer the property for consideration that is fixed or otherwise determinable on that date; n426 and
- During any taxable year, the taxpayer materially or significantly participated in a trade or business activity involving the performance of services for the purpose of enhancing the value of the property.

If the criteria are met, an amount equal to the net passive income from the rental and disposition of the property during the year of disposition is recharacterized as non-passive income. n427

[9] Recharacterization of Income from Self-Rented Property

If property is rented for use in a trade or business (other than a business conducted by a C corporation) in which the taxpayer materially participates for the taxable year, and the property is not subject to the rule for rental income incidental to the development of property by the taxpayer, n428 the taxpayer's gross income from renting the property may be treated as income not from a passive activity. n429 If this rule applies, part or all of the taxpayer's rental expense may be treated as a self-charged item.

Under the self-rented property rule, the net rental income from self-rented property is treated as non-passive income and the net rental losses are treated as passive losses, even though the rental activities are passive activities. The self-rented property rule explicitly recharacterizes net rental activity income as being from an "item of property" rather than as being net income from the entire rental "activity." Both *IRC Section 469* and the regulations thereunder clearly distinguish between net income from an "item of property" and net income from the entire "activity," which might include rental income from multiple items of property. n430

Example:

Katie is the 100-percent shareholder in a Dineout Corporation, which runs a restaurant in which she materially participates. Katie also owns a building, which she rents to Dineout Corporation, and her Schedule E reflects the net income from the rental of \$45,000. Katie also has losses of \$20,000 from a limited partnership in which she does not materially participate. Because Katie materially participates in Dineout's restaurant activity, her net rental income of \$45,000 is treated as nonpassive. If Katie has no other passive income for the tax year, the \$20,000 losses from the limited partnership would not be deductible in the current year. n431

The self-rented property regulation has been upheld when applied to recharacterize rental income received from a taxpayer's personal service corporation as non-passive income. In each case, the taxpayer had hoped to offset other passive losses against the rental income. n432 The regulation has also been cited in characterizing as non-passive the rental income from a building leased by one spouse to a personal service corporation in which the other spouse was the president and a shareholder. The taxpayers had filed a joint return. n433 In another case, the taxpayer rented an office building to her law practice, in which she materially participated. The court determined that the rental income from her law practice was non-passive, and ruled that she could not offset the office rental income with losses from other passive residential rental activities. Rather, she had to suspend those losses until she either had other passive income against which to offset them or disposed of her interest in those activities. n433.1

The Tax Court has also held that a grouping of rental properties as a single activity does not preclude recharacterization of income from one of the properties under the self-rental rule. n434 In the case, the taxpayers had properly grouped two commercial rental properties together as a single passive activity, and then netted the income and loss from the two properties. Each of the lessees was an S corporation owned entirely by the taxpayers, and the taxpayers were actively

engaged in the conduct of each corporation's business. The taxpayers reported the net rental income as non-passive, and didn't report any passive activity loss. The Tax Court held that the income and loss items could not be netted. It also concluded that the income from renting the profitable property was non-passive, and that the loss from renting the unprofitable property was passive. The court rejected the taxpayers' argument that the computation of a passive activity loss required the netting of income and loss from all items of rental property grouped within the single passive activity, and that only after that computation did the self-rental rule apply to recharacterize passive income as non-passive. It held instead that the self-rental rule required the removal of self-rental income from the passive activity loss computation altogether. Therefore, the income from the profitable rental property had to be withdrawn from the passive activity loss computation. This, in turn, left the taxpayers with no passive income with which to offset against the passive loss from the unprofitable property. n435

[10] Recharacterization of Self-Charged Interest Income

Under self-charged interest regulations, partners and S corporation shareholders may offset non-passive interest income and passive interest deductions from the same loans. n436 The self-charged interest provisions apply to the following transactions:

- loans from partners or shareholders to a partnership or S corporation; n437
- loans from an S corporation or partnership to its shareholders or partners; n438
- lending transactions between identically owned passthrough entities (i.e., where each owner of the borrowing entity has the same proportionate ownership interest in the lending entity); n439 and
- lending transactions involving guaranteed payments for the use of capital under *IRC Section 707(c)*. n440

The regulations do three things: n441

- recharacterize non-passive interest income from the loan as passive income to the extent of the taxpayer's allocation of passive interest expense from the same transaction;
- recharacterize certain interest expense that is allocable to the interest income as a passive activity deduction; and
- allocate the passive activity gross income and passive activity deductions resulting the recharacterizations among the taxpayer's activities.

Taxpayers may avoid application of the self-charged interest rules if the passthrough entity makes an election for its taxable year to do so. n442 The election is made by for a tax year by attaching to the passthrough entity's return or amended return a written statement that includes the name, address, and taxpayer identification number of the passthrough entity and a declaration that the election is being made. n443 Once made, the election applies to the tax year for which the return is filed and all later tax years that end before the date on which the election is revoked. n444 The election may be revoked only with the consent of the Commissioner. n445

There are several limitations to the self-charged interest provisions: n446

- they apply only to self-charged items of interest income and interest expense that are recognized in the same taxable year; n447

- they do not contain any special rules for capitalized items;
- they do not apply to non-loan transactions involving rental real estate activities, such as the payment of management fees and salaries; and
- they do not apply to transactions between entities other than S corporations and partnerships, such as trusts, estates, REMICs, or housing cooperatives. n448

Notwithstanding the express limitation of the regulation's scope to self-charged interest, n449 taxpayers have tried unsuccessfully to extend its application to other self-charged items. In one case, the court rejected the taxpayer's attempt to offset self-charged non-passive management fee income with passive management fee expenses. n450

[11] Recharacterization of Interest Income from Passive Equity-Financed Lending Activities

An equity-financed lending activity is an activity in the trade or business of lending money. The regulations treat as non-passive income an amount of the taxpayer's gross income from an equity-financed lending activity. The amount treated as non-passive is equal to the lesser of the taxpayer's equity-financed interest income from the activity for the year or the taxpayer's net passive income from the activity for the year. n451

This recharacterization rule applies to lending activities in which the average balance of debt incurred in the activity does not exceed 80 percent of the average balance of interest-bearing assets held in the activity. A taxpayer's equity-financed interest income from the activity is equal to the taxpayer's interest income from the activity multiplied by the activity's ratio of equity to interest-bearing assets. This rule is designed to treat as non-passive income only that portion of the taxpayer's income from the activity that approximates the product of the average interest rate of the activity's interest-bearing assets and the taxpayer's equity contribution to the activity. n452 The amount that may be recharacterized under this rule is subject to an overall limitation, discussed in [13], below. n453

[12] Recharacterization of Net Royalty Income from Acquired Passthrough Entities

If a taxpayer acquires an interest in a development entity (which is a passthrough entity), after the development entity has created an item of intangible property or performed substantial services or incurred substantial costs in developing or marketing the property, the taxpayer's net royalty income for the year from the item of property is recharacterized as portfolio income, and therefore is treated as income from a non-passive activity. n454

[13] Limitation on Recharacterized Income

The total amount of income from an activity that is recharacterized as non-passive under the above rules for significant participation, n455 rental of nondepreciable property, n456 and net interest income from passive equity-financed lending activity n457 cannot exceed the greatest amount that would be recharacterized under any one of those rules. n458

[14] Treatment of Income From *IRC Section 481* Adjustments Related to Change of Accounting Method

A taxpayer who changes accounting methods may have to adjust various income and deduction items under *IRC Section 481*. If there is a positive *IRC Section 481* adjustment with respect to income from an activity, a ratable portion of that amount is treated as gross income from the activity for the taxable year. Gross income is treated as passive activity gross income if the activity from which it is derived is a passive activity for the year of change. n459 The ratable portion taken into account is determined with respect to an activity by dividing the positive *IRC Section 481* adjustment with respect to the activity by the sum of positive *IRC Section 481* adjustments with respect to all activities of the taxpayer. n460

[15] Miscellaneous Exclusions from Passive Activity Gross Income

Regulations specifically exclude a number of items from passive activity gross income. The following items are excluded: n461

- gross income of an individual from intangible property, such as a patent, copyright, or literary, musical, or artistic composition, if the taxpayer's personal efforts significantly contributed to the creation of the property;
- gross income attributable to a refund of state, local, or foreign income, war profits, or excess profits tax;
- gross income of an individual from a covenant not to compete;
- gross income that is treated as not from a passive activity under any provision of the regulations under *IRC Section 469*, including those related to inter-company transactions of members of an affiliated group of corporations filing a consolidated return, n462 and recharacterized passive income; n463
- gross income attributable to certain reimbursements from casualty or theft losses that were deducted in a prior year, if the deduction for the loss was not a passive activity deduction; n464
- gross income or gain allocable to business or rental use of a dwelling unit for a tax year in which deductions are limited by the statutory gross income limitation; n465 and
- gross income from certain low-income housing projects placed in service before 1989 during a specified relief period; this item is now primarily of historical interest. n466

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.07

§ 13.07 Passive Activity Deductions

[1] Deductions from Passive Activities

In determining the amount of passive activity gain or loss, a deduction must be a passive activity deduction in order to be taken into account. In general, a deduction is treated as a passive activity deduction for a taxable year if and only if it arises in connection with an activity that is a passive activity during the tax year or is allowed as a carryover of a disallowed deduction from a prior year. n467

[2] Miscellaneous Deductions That Are Treated as Not from Passive Activities

The following deductions are not passive activity deductions: n468

- deductions for an item of expense (other than interest) that are allocable to portfolio income;
- dividends-received deductions n469 with respect to any dividend that is not included in passive activity gross income;
- interest expense (other than certain interest expense allocated to a passive activity expenditure); n470
- losses on the disposition of portfolio property;
- losses on the disposition of certain interests in passive activities that are treated as a deduction that is not a passive activity deduction; n471
- deductions for state, local, or foreign income, war profits, or excess profits tax;
- miscellaneous itemized deductions that are subject to disallowance in whole or in part under *IRC Section 67(a)* (without regard to whether any amount of the deduction is actually disallowed);
- charitable contribution deductions; n472
- net operating losses and capital loss carrybacks and carryforwards; n473

- certain deductions that were disallowed n474 and certain pre-1987 losses; and
- casualty loss deductions if similar losses do not recur regularly in the conduct of the activity. n475

[3] Interest Expense Is Generally a Passive Deduction Only if Traced to a Passive Activity Expenditure

Interest expense is taken into account as a passive activity deduction only if it is allocated under interest tracing and allocation regulations to a passive activity expenditure. n476 Qualified residence interest or interest that is capitalized pursuant to a capitalization provision, however, cannot be taken into account as a passive activity deduction. n477 Interest expense that is properly allocable to portfolio income is not taken into account in determining gain or loss from a passive activity. n478

When debt repayments involving interest are allocated to more than one expenditure, ordering rules in temporary regulations are used to determine the extent to which a repayment and the interest component of it are allocated to a passive activity. n479

[4] Recharacterization of Self-Charged Interest Expense Deductions

Under self-charged interest regulations, partners and S corporation shareholders may offset non-passive interest income and passive interest deductions from the same loans. n480 The self-charged interest provisions apply to the following transactions:

- loans from partners or shareholders to a partnership or S corporation; n481
- loans from an S corporation or partnership to its shareholders or partners; n482
- lending transactions between identically owned passthrough entities (i.e., where each owner of the borrowing entity has the same proportionate ownership interest in the lending entity); n483 and
- lending transactions involving guaranteed payments for the use of capital under *IRC Section 707(c)*. n484

The regulations do three things: n485

- (1) recharacterize non-passive interest income from the loan as passive income to the extent of the taxpayer's allocation of passive interest expense from the same transaction;
- (2) recharacterize certain interest expense that is allocable to the interest income as a passive activity deduction; and
- (3) allocate the passive activity gross income and passive activity deductions resulting the recharacterizations among the taxpayer's activities.

Taxpayers may avoid application of the self-charged interest rules if the passthrough entity makes an election for its taxable year to do so. n486 The election is made by for a tax year by attaching to the passthrough entity's return or amended return a written statement that includes the name, address, and taxpayer identification number of the passthrough entity and a declaration that the election is being made. n487 Once made, the election applies to the tax year for which the return is filed and all later tax years that end before the date on which the election is revoked. n488 The election may be revoked only with the consent of the Commissioner. n489

There are several limitations to the self-charged interest provisions: n490

- they apply only to self-charged items of interest income and interest expense that are recognized in the same taxable year; n491
- they do not contain any special rules for capitalized items;
- they do not apply to non-loan transactions involving rental real estate activities, such as the payment of management fees and salaries; and
- they do not apply to transactions between entities other than S corporations and partnerships, such as trusts, estates, REMICs, or housing cooperatives. n492

Notwithstanding the express limitation of the regulation's scope to self-charged interest, n493 taxpayers have tried unsuccessfully to extend its application to other self-charged items. In one case, the court rejected the taxpayer's attempt to offset self-charged non-passive management fee income with passive management fee expenses. n494

[5] Losses from Certain Dispositions of Property Used in a Passive Activity

Any loss from a disposition of an interest in property used in an activity at the time of the disposition (or of an interest in an activity held through a partnership or S corporation) is treated as a deduction from that activity. So is any deduction allowed on account of the abandonment or worthlessness of such an interest. n495 Any such deduction is a passive activity deduction if the activity is a passive activity of the taxpayer for the taxable year of the disposition or other event giving rise to the deduction. n496

[6] Deductions from *IRC Section 481* Adjustments Related to Change of Accounting Method

A taxpayer who changes accounting methods may have to adjust various income and deduction items under *IRC Section 481*. If there is a net negative *IRC Section 481* adjustment with respect to an activity, a ratable portion of that amount is treated as a deduction from the activity for the taxable year. The deduction is treated as a passive activity deduction if the activity to which it relates is a passive activity for the year of change. n497

The ratable portion taken into account for a tax year is determined with respect to an activity by multiplying that amount by a fraction. The numerator of the fraction is the negative *IRC Section 481* adjustment with respect to the activity, and the denominator is the sum of the negative *IRC Section 481* adjustments with respect to all of the taxpayer's activities. n498

[7] Deductions Relating to Rental of Taxpayer's Residence

The rental of a taxpayer's residence is not a passive activity. Therefore, passive losses and deductions do not include any deduction or loss allocable to business or rental use of a dwelling unit that is used by the taxpayer during the taxable year as a residence. n499

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.08

§ 13.08 Taxpayers Subject to the Passive Activity Limitations

[1] Passive Activity Credits Are Disallowed

The passive activity rules limit the use of certain tax credits that arise from passive activities. Any passive activity credit for the tax year is disallowed. n500 A passive activity credit is the amount by which the sum of certain credits from all passive activities allowable for the taxable year exceeds the regular tax liability for that year allocable to all passive activities. n501 Thus, if the taxpayer has an aggregate passive activity loss for the year, no tax credits from passive activities can be used currently, even though the taxpayer has a net regular tax liability for the year.

[2] Credits Subject to the Passive Activity Limitations

A credit is subject to the passive activity limitations only if it is used in connection with a passive activity. n502 Even then, only certain credits are subject to the passive activity limitations. The credits taken into account for this purpose that will most likely come into play for real estate and other passive activities are the low-income housing credit and components of the general business credit that deal with real estate, such as the rehabilitation credit. n503 The current year general business credit includes the following credits: n504

- investment credit, n505 which is the sum of the rehabilitation credit, n506 the energy credit, n507 the qualifying advanced coal project credit, n508 the qualifying gasification project credit, n509 the qualifying advanced energy project credit, n509.1 and the qualifying therapeutic discovery project credit; n509.2
- work opportunity credit; n510
- alcohol and other fuels credit; n511
- research credit; n512
- low-income housing credit; n513
- enhanced oil recovery credit; n514

- disabled access credit (for small businesses); n515
- renewable electricity production credit; n516
- Indian employment credit; n517
- employer social security credit for certain tips; n518
- orphan drug credit; n519
- new markets credit; n520
- credit for small employer pension plan startup costs; n521
- employer-provided child care credit; n522
- railroad track maintenance credit; n523
- biodiesel and renewable diesel credit; n524
- low sulfur diesel fuel production credit; n525
- marginal Oil and gas well production credit; n526
- distilled spirits credit; n527
- advanced nuclear power facility production credit; n528
- nonconventional source production credit; n529
- new energy efficient home credit; n530
- energy efficient appliance credit; n531
- a portion of the alternative motor vehicle credit, to the extent it is available for depreciable property; n532
- a portion of the alternative fuel vehicle refueling property credit, to the extent it is available for depreciable property; n533
- the Hurricane Katrina housing credit; n534
- the Hurricane Katrina employee retention credit; n535
- the Hurricane Rita employee retention credit; n536
- the Hurricane Wilma employee retention credit; n537
- the mine rescue team training credit; n537.1

- the agricultural chemicals security credit; n537.2
- the differential wage payment credit; n537.3
- the carbon dioxide sequestration credit; n537.4
- the new qualified plug-in electric drive motor vehicle credit, to the extent connected with depreciable business property; n537.5
- the retained worker credit; n537.6 and
- the small employer health insurance credit. n537.7

Other credits arising from passive activities that are potentially subject to the passive activity credit limitations are the following:

- Puerto Rico and possession tax credit; n538
- credit for certain plug-in electric vehicles; n539
- Puerto Rico economic activity credit; n540
- alternative motor vehicle credit, to the extent it is not part of the general business credit, as noted above; n541
- alternative fuel vehicle refueling property credit, to the extent it is not part of the general business credit, as noted above; n542 and
- a portion of the new qualified plug-in electric drive motor vehicle credit, to the extent it is not part of the general business credit, as noted above. n542.1

[3] Allocation of Disallowed Credits

If a taxpayer has a disallowed passive activity credit, a ratable portion of each credit from each passive activity of the taxpayer is disallowed. This ratable portion is computed by multiplying the portion of the taxpayer's passive activity credit that is disallowed by a fraction. The numerator of the fraction is the amount of that credit. The denominator of the fraction is the sum of all the taxpayer's credits from passive activities for the tax year. n543

Not all credits are taken into account for purposes of identifying disallowed credits. The following credits are treated as not being from a passive activity for this purpose: n544

- any credit allowed with respect to rental real estate activities to which the \$25,000 offset applies; n545 and
- any credit remaining unused upon the disposition of passive activity property for which an election is made to increase the basis of property. n546

Furthermore, in identifying disallowed credits, only those credits that if separately taken into account would affect the taxpayer's income tax liability for the year are taken into account. n547

[4] Carryover of Disallowed Passive Activity Credits

As with disallowed passive activity losses, n548 disallowed passive activity credits can be carried forward indefinitely. Any carried over passive activity credits are held in suspense until there is adequate regular tax liability from passive activities to trigger their use. n549 Any disallowed credit must be allocated among the taxpayer's activities for the succeeding year in a manner that reasonably reflects the extent to which each activity continues the loss activity. Disallowed credits may not be carried back to a prior tax year. n550

[5] Passive Credits May Offset Active Income of Certain Closely Held C Corporations

Closely held C corporations other than personal-service corporations may use their passive activity credits to offset their net active income for the year. n551 "Net active income" includes the corporation's taxable income for the tax year, determined without regard to income or losses from a passive activity or items of gross income, expense, gain, or loss that are related to portfolio income, and therefore treated as not being from a passive activity. n552 Personal service corporations, even if closely held, cannot take advantage of this offset. n553

[6] Treatment of Passive Activity Credits on Disposition of Passive Activity

Unlike the situation with passive activity losses, there is no statutory provision allowing the use of suspended credits upon a taxpayer's disposition of an entire interest in a passive activity. n554 A taxpayer may, however, elect to add the amount of the unused credit to the basis of the property disposed of, thereby increasing the amount of loss or decreasing the amount of gain that may be recognized from the disposition of the passive activity. Under the election, the taxpayer's basis in the passive activity is increased by the amount that the unused credit reduced the basis of the property for the year in which the credit arose. n555 The election is made by completing Part VI of Form 8582-CR (for noncorporate taxpayers) or Part III of Form 8810 (for corporations).

Practice Tip:

A taxpayer who makes the election gives up whatever amount of the credit remains in exchange for the basis increase. This can be a good trade-off if the taxpayer has no other passive income against which the credit can be used. Otherwise, the taxpayer may be better off to apply the credit against that other passive income. n556

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.09

§ 13.09 Applying the Passive Activity Loss Limitations

[1] Passive Losses Are Not Deductible

If a taxpayer has activities that are subject to the passive activity limits, it must be determined whether there is a net gain or loss from those activities. To determine if there is a passive activity loss for a year, the total losses from all passive activities (including disallowed losses that are carried over from prior years) are netted against total income from passive activities for the year. n557

If the aggregate passive activity income exceeds losses from passive activities for the year, the disallowance rule for passive activity losses does not come into play, and all losses, including those from prior years, are allowed. n558 If the aggregate passive losses exceed the aggregate income from passive activities, however, the excess is disallowed as a passive activity loss. n559

[2] Disallowed Passive Activity Losses Must Be Allocated Among Passive Loss Activities

[a] Losses Are Allocated Only to Passive Activities with Net Losses

When a taxpayer has multiple passive activities and there is an overall disallowed passive activity loss, a ratable portion of the loss (if any) from each loss activity is disallowed. n560 No amount of the loss is allocated to any passive activity that has a net gain for the tax year. The ratable portion of a loss that is disallowed with respect to each loss activity is computed by multiplying the passive loss that is disallowed for the taxable year by a fraction. The numerator is the loss from the passive activity, and the denominator is the sum of losses from all passive activities. n561 In computing the amount of loss for this purpose, the amount of loss is reduced by any part of the \$25,000 offset that may apply. n562

[b] Disallowed Losses Must Be Allocated Among Deductions Within Each Passive Loss Activity

Any disallowed loss must be allocated among deductions of each passive loss activity, so that a ratable portion of each passive activity deduction from the activity is disallowed. n563 The amount of each passive activity deduction that is disallowed is determined by multiplying that deduction by a fraction. The numerator of the fraction is the amount of the deduction, and the denominator is the sum of all passive activity deductions of the taxpayer from the activity for the tax year. n564

Special rules apply to two categories of deductions for purposes of the proration. The first category is "excluded deductions", which include deductions related to certain income that is not treated as from a passive activity. Excluded deductions are ignored for purposes of the prorated disallowance. n565 Items in this category include certain deductions related to the following: n566

- oil and gas property;
- property rented incidental to development activity;
- property rented to a non-passive activity; and
- interests in passthrough entities engaged in licensing intangible property.

A separate rule applies for a second category, "separately identified deductions." In identifying disallowed deductions, a taxpayer need not account separately for a deduction unless it would otherwise change the taxpayer's tax liability if separately taken into account separately. n567 Deductions that must be accounted for separately under this rule include (but are not limited to) those that:

- arise in a real estate rental activity, whether or not the taxpayer actively participates during the year;
- or
- are taken into account under *IRC Section 1211* (dealing with limitations on capital losses) or *IRC Section 1231* (relating to property used in a trade or business and involuntarily converted property).

[c] Significant Participation Passive Activities May Be Treated as a Single Non-Loss Activity for Passive Loss Allocation Purposes

A special aggregation rule applies if a taxpayer has significant participation passive activities (SPPAs), and has gross income from them that exceeds deductions from them. If that is the case, all of the SPPAs are treated for the tax year as a single activity that does not have a loss for the year. This aggregation rule applies only for purposes of identifying and allocating disallowed passive activity deductions. If this rule applies, no passive activity loss is allocated to any SPPA during the year, even one with a loss. n568

[3] Carryover of Disallowed Losses

[a] Indefinite Carryforward of Losses Is Allowed

To the extent a passive activity loss is disallowed a given tax year, the amount disallowed is carried forward to the next tax year as a passive activity loss deduction for that year. Disallowed losses may be carried forward indefinitely. n569 Disallowed passive losses may not be carried back to prior years. n570 The carried over disallowed deductions must be allocated among the taxpayer's activities for the succeeding year in a manner that reasonably reflects the extent to which each activity continues the loss activity. n571

If a taxpayer continues part or all of a loss activity through a C corporation (or similar entity from which the owners derive only portfolio income from their interests), the taxpayer's interest in that entity is treated for purposes of allocating the carryover loss among activities as an interest in a passive activity that continues the loss activity. n572 If the activity for which a loss is carried over is no longer a passive activity, the activity is a former passive activity, and special loss carryover rules apply. n573

When a taxpayer has multiple passive activities, the amount of loss that is carried over from each activity must be

determined on a pro rata basis. n574

Example:

Doug has four passive activities with the income and expense items indicated. He has no tax credits. Doug's disallowed passive activity losses total \$200, allocated to the two loss activities as follows:

Application of Passive Activity Loss Limits

Activity	Gross Income	Deductions	New Gain or (Loss)	Carryover
1	\$500	\$900	(\$400)	(\$107)**
2	900	450	450	-----
3	650	1,000	(350)	(93)***
4	100	-----	100	-----
Totals	\$2,150	\$2,350	(\$200)*	(\$200)

* The Total amount of Doug's disallowed passive activity losses is \$200.

** The amount carried over from Activity 1 is \$107 ($\$400/\$750 \times \$200$).

*** The amount carried over from Activity 3 is \$93 ($\$350/\$750 \times \$200$).

[b] Carryover of Passive Losses from C Corporation to S Corporation Years

The Tenth Circuit has held that an S corporation may carry forward from its C corporation years any passive activity losses that were suspended from its C corporation years. When the S corporation sells the properties used in passive activities, S corporation shareholders may take advantage of the losses at that time. n575

The Tenth Circuit's decision noted that two carryover provisions--*IRC Section 469(b)* and *IRC Section 1371(b)(1)*--are in conflict. *IRC Section 469(b)* provides that except as otherwise provided in that section, a disallowed passive activity loss or credit must be treated as a deduction or credit allocable to that activity in the next taxable year. *IRC Section 1371(b)(1)*, in contrast, provides that no carryforward arising for a taxable year in which a corporation is a C corporation may be carried to a taxable year for which the corporation is an S corporation. The Tenth Circuit held that the plain language of *IRC Section 469* precluded application of *IRC Section 1371* to the suspended passive activity losses of a C corporation after it elected S corporation status. For the Tenth Circuit, the matter was one of simple statutory construction. The key focus was the "except as otherwise provided in this section" language of *IRC Section 469(b)*. The court interpreted this language to require that any exceptions to the general rule had to be enumerated in *IRC Section 469* and not in any other Code provision. The court held that because *IRC Section 1371*'s restrictions on carryforwards from a C year to an S year were not enumerated in *IRC Section 469*, they had no effect on the operation of *IRC Section 469(b)*. Accordingly, the court held that the taxpayer's suspended passive activity losses from C corporation years were deductible after the taxpayer elected S corporation status, subject only to restrictions that might exist in *IRC Section 469* itself. The court also found support for its interpretation in *IRC Section 469(f)(2)*, which provides that if a taxpayer ceases to be a closely held C corporation or personal service for any taxable year, *IRC Section 469* applies as if that corporation continued its prior status. The court found that the provision applied to the situation here, where a C corporation later became an S corporation. n576

Note:

The Tenth Circuit's decision n577 is by no means the last word. The IRS has not acquiesced in the decision, other circuits have not yet ruled on the issue, and even the Tax Court is not required to follow the Tenth Circuit's decision in cases that are appealed to other circuits. n578

[c] Carryover of Passive Losses and Credits to Bankruptcy Estate of an Individual

The bankruptcy estate of an individual in either a Chapter 7 or Chapter 11 case succeeds to and takes into account the debtor's unused passive activity losses and credits. The credits and losses are determined as of the first day of the debtor's taxable year in which the case commences. n579 Any transfers by the bankruptcy estate of an interest in a passive activity or former passive activity to the debtor (other than by sale or exchange) is not treated as a disposition for tax purposes. n580 If, before the termination of the bankruptcy estate, it transfers an interest in a passive activity or former passive activity to the debtor (other than by sale or exchange), the estate must allocate to the transferred interest a proportional part of the estate's unused passive activity loss and credit. The debtor then succeeds to and takes those items into account, beginning with the debtor's tax year in which the transfer occurs. n581 Upon termination of the estate the debtor succeeds to and takes into account any passive activity losses and credits that are disallowed under *IRC Section 469* for the estate's last taxable year. n582

[4] Passive Losses May Offset Active Income of Certain Closely Held C Corporations

Closely held C corporations other than personal-service corporations are allowed greater flexibility in the use of their passive activity losses. While they are not permitted to use passive losses to reduce portfolio income, they may use those losses to offset their net active income for the year. n583 Net active income" includes the corporation's taxable income for the tax year, determined without regard to income or losses from a passive activity or items of gross income, expense, gain, or loss that are related to portfolio income, and therefore treated as not being from a passive activity. n584

Personal service corporations, even if closely held, cannot take advantage of this offset. n585

[5] \$25,000 Offset for Rental Real Estate Activities

[a] Certain Losses from Rental Real Estate Activities May Offset Non-Passive Income

There is an offset of up to \$25,000 for individuals and estates for rental real estate activities. Under the offset, if the taxpayer's adjusted gross income does not exceed \$100,000, n586 up to \$25,000 of passive activity losses may be used to offset non-passive income for that year. n587 For a married person who lives apart from his or her spouse the entire taxable year and files separately, the maximum offset amount is \$12,500. n588 Alternatively, an equivalence deduction may be claimed to cover an unusable credit. n589

[b] Adjusted Gross Income Eligibility Requirements for the \$25,000 Offset

The \$25,000 offset is available only if the taxpayer's adjusted gross income for the tax year does not exceed \$100,000. n590 Adjusted gross income for this purpose is computed without regard to the following: n591

- inclusion in income of Social Security and Tier 1 Railroad retirement benefits; n592
- the income exclusions for income from U.S. savings bonds used to pay higher education costs and amounts received under adoption assistance programs; n593
- deductions based on income attributable to domestic production activities n594 and deductions for IRA contributions, interest on education loans, and qualified tuition and related costs; n595 and

- any passive activity loss or loss deductible by certain real estate professionals with respect to rental real estate activity. n596

[c] Phase-Out of \$25,000 Offset

If a taxpayer's adjusted gross income exceeds \$150,000, the \$25,000 offset is generally not available. n597 If a taxpayer files a joint return, the income of both the taxpayer and the spouse must be included in computing AGI for this purpose. n598

For adjusted gross income between \$100,000 and \$150,000, the offset amount is reduced by 50 percent of the excess of adjusted gross income over \$100,000 (for instance, at adjusted gross income of \$130,000, the offset amount is \$10,000 (\$25,000-\$15,000). n599 For a married person who lives apart from his or her spouse the entire taxable year and files separately, the maximum offset amount is \$12,500 and the adjusted gross income floor for the phase-out is \$50,000. n600

To the extent that the taxpayer has an unusable rehabilitation credit, n601 whether current or carried over from a prior year, the adjusted gross income floor for purposes of the phase-out is \$200,000 instead of \$100,000. n602 To the extent that the taxpayer has an unusable low-income housing credit n603 whether current or carried over from a prior year, there is no phase-out of the \$25,000 offset in calculating an equivalence deduction. n604 The phase-out also does not apply to any portion of the passive activity loss for the year that is attributable to the commercial revitalization deduction. n605

[d] Ordering Rules Apply to Determine Application of the Phase-Out

Ordering rules provide how the phase-out and the exceptions to it are applied. The phaseout of the offset applies in the following order: n606

- first, to the portion of the passive activity loss to which the exception for commercial revitalization deduction does not apply; n607
- second, to the portion of the passive activity loss to which the exception for commercial revitalization deduction does apply; n608
- third, to the portion of the passive activity credit to which the special phase-out rule for the rehabilitation credit or the exception for the low-income housing credit does not apply; n609
- fourth, to the portion of the passive activity credit to which the special phase-out rule for the rehabilitation credit applies; n610 and
- fifth, to the portion of the passive activity credit to which the exception for the low-income housing credit applies. n611

[e] Active Participation Requirement Must Be Met to Be Eligible for Offset

In order to be eligible for the \$25,000 offset, the taxpayer must meet an "active participation" requirement. n612 Meeting this requirement is easier than meeting the "material participation" requirement for classifying an activity as not passive, n613 because active participation can be satisfied without the regular, continuous, and substantial involvement in operations that is required for "material participation." Legislative history states that the standard can be met if the taxpayer participates in a significant, bona fide sense. Legislative history indicates that this can be done by making management decisions or arranging for others to provide services. n614

The joint committee report accompanying the legislation indicates that approval of tenants, setting rental terms, and approving repairs and capital expenditures are the types of activities that can qualify as active participation. The use of a rental agent and hired management services is permissible. On the other hand, the committee report states that a taxpayer probably cannot actively participate with respect to a property subject to a net lease. n615

The basic premise appears to be that in order to meet the active participation requirement, a taxpayer must make important management decisions and exercise independent judgment in doing so. If a management firm is used, the IRS may inspect a copy of the taxpayer's contract to determine the responsibilities of the management firm, as well as the rights and responsibilities of the taxpayer. If a taxpayer has no more involvement than deciding whether to continue to use a management firm and does not otherwise participate in management decisions in a way that requires the exercise of independent discretion and judgment, then the active participation requirement will not be met. n616

Although "active participation" is not defined by statute or regulations, the statute does clarify that the active participation requirement requires ownership (by the taxpayer or the taxpayer's spouse or both of them), at all times during the taxable year, of at least 10 percent, by value, of all interests in the activity. n617 In determining whether a taxpayer actively participates, any participation by the taxpayer's spouse is taken into account. n618

There are some exceptions and qualifications regarding the active participation requirement:

- to the extent that the taxpayer has an unusable low-income housing credit, n619 an unusable rehabilitation credit, n620 or a commercial revitalization deduction, n621 the \$25,000 offset is available without regard to the active participation requirement; n622
- until otherwise provided by regulations, an interest as a limited partner in a limited partnership can never be considered as an interest with respect to which the taxpayer actively participates; n623 and
- if the taxpayer has any carried-over deductions or credits because of application of the passive activity limitations in past taxable years, the \$25,000 offset is not available as to any of those amounts carried over from a taxable year in which the taxpayer did not meet the active participation requirement.

[f] Application of the Offset to Credits

In lieu of applying the \$25,000 offset for rental real estate activities to deductions, the offset may be applied to credits through a deduction equivalent. n624 The deduction equivalent is the amount which (if allowed as a deduction) would reduce regular tax liability by the amount of the credits. n625 Assuming a 35-percent marginal tax rate, n626 the \$25,000 special real estate rental deduction is equivalent to an \$8,750 credit. n627

The range of adjusted gross income, over which the offset is phased out, is higher when the rehabilitation credit n628 is involved. For this credit, the phaseout range is between \$200,000 and \$250,000 of AGI. n629 There is no phase-out to the extent any portion of the passive activity credit for the year is attributable to the low-income housing credit. n630

[g] Application of Offset for Estates

A decedent's estate is entitled to the \$25,000 offset for taxable years ending less than two years after the date of death, with respect to any rental real estate activity in which the decedent actively participated. n631 If there is a surviving spouse, the estate's maximum offset is \$25,000 minus whatever offset amount is allowable to the surviving spouse for his or her taxable year ending with or within the estate's taxable year. n632

[h] Application of Offset for Publicly Traded Partnerships

The \$25,000 offset generally may not be used with respect to items attributable to any publicly traded partnership. n633 However, to the extent that the taxpayer has a low-income housing credit, n634 or rehabilitation credit n635 in excess of regular tax liability n636 attributable to the income from that partnership, the taxpayer may use the \$25,000 offset. n637

[6] Treatment of Former Passive Activities

Any activity that was a passive activity for the taxpayer for a past taxable year, but is not a passive activity for the current taxable year, is called a former passive activity. n638 Any unused deduction allocable to a former passive activity and carried over to the current taxable year must be set off against income from the activity for the current taxable year. n639 If any deduction remains unused after the setoff, it is carried over and must be set off against income from the activity in a later taxable year. n640

Any unused credit allocable to a former passive activity and carried over to the current taxable year must be set off against the regular tax liability n641 for the current taxable year that is allocable to the former passive activity (computed after application of the preceding rule regarding setoff of unused deductions). n642 If any credit remains unused after the setoff, it is carried over and must be set off against regular tax liability, under this rule, in a later taxable year. n643

NOTE:

The transition from a passive activity into a non-passive one is not treated as a disposition that otherwise triggers the allowance of losses. n644 As noted above, disallowed deductions from the activity continue to be carried over, but they only be used against income from the activity, and not against other non-passive income of the taxpayer. n645

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.10

§ 13.10 Treatment of Passive Losses on Disposition of Passive Activity

[1] Passive Losses are Generally Allowed in the Year the Taxpayer Disposes of a Passive Activity

The tax treatment of suspended passive losses upon a taxpayer's disposition of an entire interest in a passive activity depends on the type of disposition (sale or exchange, transfer by death, gift), whether the disposition involves a related party, and whether the disposition is fully taxable. n646 For passive activity losses to be allowed, a disposition of a passive activity must meet three tests:

- the taxpayer's entire interest in the activity must be disposed of; n647
- the disposition must be fully taxable; n648 and
- the disposition must not be to a related party. n649

The requirements that the disposition be of the taxpayer's entire interest and be fully taxable are consistent with the concept of the passive activity limitations. The disposition ensures that the taxpayer will not recognize additional income from the passive activity. As a result, there is no justification for continuing to suspend the losses from that activity. The disposition of the taxpayer's entire interest guarantees there will be no future income produced, and a fully taxable transaction ensures that any inherent taxable gain is recognized currently.

The following are not fully taxable transactions and will not trigger recognition of losses: n650

- like-kind or involuntary exchanges; n651
- conversions to personal use;
- gifts; n652
- transfer to a corporation, partnership or LLC; n653
- transfers to an ex-spouse on divorce; n654 and

- installment sales. n655

If a taxpayer disposes of his entire interest in a passive activity in a fully taxable transaction, the loss attributable to that activity for the current year, which includes any carryover of disallowed losses from prior years, is allowed against other passive or active income without regard to the passive activity limitations. n656

The order in which the losses are allowed against various types of income is controlled by special rules. The effect of these rules is that net income or loss from the particular passive activity being disposed of is determined separately from other passive activities for the year. Any gain from the disposition is treated as passive income and any loss is treated as passive loss. Any losses relating to the passive activity in the year of sale (including suspended losses relating to the activity carried forward into the year of sale) are used to offset gain from the disposition of the passive activity. n656.1 Any net loss remaining is then used against any passive income from other activities. The balance is treated as a loss that is not from a passive activity. It is therefore fully deductible against non-passive income. n657

If property sold has been used in more than one activity during the 12-month period before the date of its disposition, the amount realized must be allocated among those different activities on a basis that reasonably reflects the use of that interest in the property during that period. n658

NOTE:

Other Code provisions, such as those limiting capital losses, n659 may limit whether a loss on the disposition of a passive activity may be recognized. n660

Practice Tip:

When the accumulated losses from a passive activity exceed the potential gain from its sale, or where a major portion of the gain will have to be recognized in any event, taxpayers should make certain that they meet the criteria for a complete and fully taxable disposition, so that they will be able to make full and immediate use of the suspended passive losses. n661 Otherwise, those losses may continue to be suspended and result in no current or subsequent tax benefit. For example, conveying a residential rental property with suspended passive losses to a related party who intends to use the property as a residence is generally not advisable. Any suspended passive losses will be deductible only when the related party sells the residence in a fully taxable transaction. n662 Given the mandatory application of *IRC Section 121* this may never occur, and the suspended losses will never become deductible. n663

Practice Tip:

The recognition of suspended passive losses is triggered only when the taxpayer's entire interest in the activity is disposed of. This disposition rule should be considered in deciding how to first group passive activities. A narrower grouping of activities will make disposition of an entire activity easier, and may thereby speed the recognition of losses. n664

[2] Partial Dispositions

Generally, a partial disposition of a taxpayer's interest in a passive activity does not allow the taxpayer to use any of the suspended passive losses from that activity. n665 A taxpayer may, however, elect to treat certain partial dispositions as a disposition of an entire passive activity. This is done by treating the part disposed of as a separate activity for the year of the disposition. To qualify for this treatment, the taxpayer must dispose of "substantially all" the activity in that year, however, and must establish the following with reasonable certainty: n666

- the amount of disallowed passive activity deductions and credits from prior years that are carried

over and allocable to the part of the passive activity that the taxpayer is treating as a separate activity; n667 and

- the amount of gross income and of any other deductions and credits allocable to that part of the passive activity for the taxable year.

[3] Dispositions to a Related Party

A taxpayer who disposes of an entire interest in a passive activity to a related party n668 cannot treat the suspended passive losses as non-passive until the taxable year in which the entire interest in the passive activity is acquired in a fully taxable transaction by an unrelated party. n669 Related parties for purposes of this rule include the following: n670

- members of a family (including brothers and sisters of whole or half blood), spouse, ancestors and lineal descendants); n671
- an individual and a corporation more than 50 percent in value of the outstanding stock of which is owned, directly or indirectly, by or for that individual;
- two corporations that are members of the same controlled group (applied with a 50-percent ownership test); n672
- a grantor and a fiduciary of any trust;
- a fiduciary of a trust and a fiduciary of another trust, if the same person is a grantor of both trusts;
- a fiduciary of a trust and a beneficiary of that trust;
- a fiduciary of a trust and a beneficiary of another trust, if the same person is a grantor of both trusts;
- a fiduciary of a trust and a corporation more than 50 percent in value of the outstanding stock of which is owned, directly or indirectly, by or for the trust or by or for a person who is a grantor of the trust;
- a person and certain exempt organizations n673 controlled directly or indirectly by that person or (if the person is an individual) by members of the family of that individual;
- a corporation and a partnership if the same persons own (1) more than 50 percent in value of the outstanding stock of the corporation, and (2) more than 50 percent of the capital interest, or the profits interest, in the partnership;
- an S corporation and another S corporation if the same persons own more than 50 percent in value of the outstanding stock of each corporation;
- an S corporation and a C corporation, if the same persons own more than 50 percent in value of the outstanding stock of each corporation;
- except in the case of a sale or exchange in satisfaction of a pecuniary bequest, an executor of an estate and a beneficiary of that estate;

- a partnership and a person owning directly or indirectly more than 50 percent of the capital or profits interest in the partnership; and

- two partnerships in which the same persons own, directly or indirectly, more than 50 percent of the capital.

[4] Installment Sales

The normal rule--that accumulated passive losses are deductible in the year a passive activity is disposed of, without regard to the passive activity limitations--is modified when a taxpayer sells the entire interest in the passive activity in an installment sale. In that case, only a portion of the accumulated losses from the activity may be deducted in the year of sale without regard to the passive activity limitations. The portion of passive losses eligible is that which bears the same ratio that the gain recognized during the year bears to the gross profit on the installment sale that will be realized when payment is complete. n674 For example, if the gain recognized in the year of the sale is 10 percent of the gross profit that will be realized on the entire sale, 10 percent of the accumulated passive activity losses would be deductible in that year without regard to the passive activity limitations. The same rule would apply to each year of the installment period. n675

Example (1):

Cheryl disposes of a rental property in an installment sale. Her total gain of \$10,000 is to be reported over 5 years (\$2,000 each year). Her current and suspended passive losses attributable to this rental were \$30,000. The losses deductible are as follows: n676

Year 1 $(\$2,000/\$10,000 \times \$30,000) = \$6,000$

Year 2 $(\$2,000/\$8,000 \times \$24,000) = \$6,000$

Year 3 $(\$2,000/\$6,000 \times \$18,000) = \$6,000$

Year 4 $(\$2,000/\$4,000 \times \$12,000) = \$6,000$

Year 5 $(\$2,000/\$2,000 \times \$6,000) = \$6,000$

Example (2):

Paul disposes of a rental property in an installment sale. His total gain of \$50,000 is to be reported over 5 years (\$10,000 each year). His current and suspended losses attributable to this rental were \$30,000. The losses deductible are as follows n677

Year 1 \$10,000

Year 2 \$10,000

Year 3 \$10,000

Paul can further deduct losses from other passive activities to the extent of income recognized from the installment sale in years 4 and 5. When the gain recognized in the current year exceeds all of Paul's

current and carryforward losses, all of those losses would be deductible in that current year. n678

In applying this disposition rule to installment sales, several things must be kept in mind:

- Installment reporting may be used only to report gains, not losses. n679 Therefore, if the passive activity is disposed of at a loss, the installment sale rule does not apply, even though the selling price may not be received until a later year; n680
- Any gain attributable to depreciation recapture amounts on real or personal property must be recognized in the year of disposition. n681 This gain must be disregarded in computing the gross profit ratio for purposes of the above installment sale rule; n682 and
- The imputed-interest rules applicable to deferred-payment transactions may cause a recharacterization of selling price into interest income. This can dramatically reduce the gross profit on the installment sale, thereby changing the gross profit ratio. n683

Example:

Ellen Smith, an individual, sells her entire interest in a passive activity to an unrelated party for \$500, to be paid \$100 down and the balance 13 months later. The contract bears adequate stated interest. Ellen's adjusted basis in the activity is \$300, and the accumulated passive losses just before the sale are \$700. The effect on the tax treatment of the passive activity losses in the year of sale between reporting on the installment method and electing out are shown in the chart below. Ellen has available a much larger loss deduction in the year of sale by choosing to elect out of installment method n684 because the installment sale passive loss restriction will not apply, n685 and all of the suspended passive losses can be used to offset other income. n686 Using the installment method defers Ellen's recognition of the major portion of the gain on the sale until the following year, and also has the effect of postponing her deduction for most of the suspended passive activity losses. Which choice is more beneficial depends on the taxpayer's circumstances. n687

Reporting Choice	Gain	Percentage of Gain Recognized	Gain Recognized	Passive Loss Allowed	Net
Installment Method	\$200	20%	\$40	(\$140)	(\$100)
Election out	\$200	100%	\$200	(\$700)	(\$500)

[5] Dispositions by Passthrough Entities

Partnerships and S corporations engaged in a passive activity can accomplish a complete disposition under rules identical to those above; that is, by selling all interests and assets held by the entity that are associated with the passive activity. If a partnership or S corporation engages in more than one activity, it can dispose of those activities separately. n688 Whether the disposition of a passive activity by a passthrough entity allows the partners or shareholders to deduct suspended passive activity losses generally depends on whether the partner or shareholder holds any interest or assets in the same activity outside the entity. If so, then a complete disposition would not have occurred as to that partner or shareholder. n689

In this regard, an S corporation may carry forward from its C corporation years any passive activity losses that were suspended from its C corporation years. When the S corporation sells the properties used in passive activities, S corporation shareholders may take advantage of the losses at that time. n690

[6] Dispositions of Interest in a Passthrough Entity

In general, the disposition of an interest in a partnership or S corporation is treated as a disposition of an interest in each of the entity's activities. A holder's gain or loss from each activity in the passthrough entity must be aggregated. The net gain or loss is then allocated among the activities of the passthrough entity. The allocation is made in proportion to the amounts of gain or loss that would have been allocated to the holder by the passthrough entity, if the entity had sold its interests in each of its activities on the valuation date. Generally, the passthrough entity may select as the valuation date the beginning of the taxable year in which the holder's disposition occurs or the date of the disposition. n691

The gain from a holder's disposition of an interest in a passthrough entity that is allocated to a passive activity may be treated as gain that is not from a passive activity, under certain circumstances. The rule is designed to prevent taxpayers from using passthrough entities to structure dispositions of property to generate passive income, when the income would not be from a passive activity otherwise. n692

A special disposition rule applies for interests in publicly traded partnerships. A taxpayer is not treated as having disposed of an entire interest in an activity of a publicly traded partnership until the taxpayer completely disposes of his or her entire interest in the partnership. n693

[7] Dispositions by Gift

Taxpayers who dispose of an entire interest in a passive activity by gift cannot deduct any of the accumulated passive losses on the portion of the activity given away. n694 Instead, any accumulated losses are added to the basis of the property immediately before the transfer. This allows the donee to benefit from the increased basis in the transferred activity. n695 For the donor, any losses added to the donee's basis are permanently extinguished. When only a portion of the passive activity's assets is given away, an allocable portion of the accumulated losses is added to the basis of that property and is extinguished for the donor. n696

Note:

Although this rule sounds simple, in practice it can become very complex. For one thing, it theoretically requires a portion of the suspended passive activity loss allocated to the passive activity to be further allocated in even greater detail to the specific assets of that activity. There are no rules for accomplishing this allocation. Furthermore, the statutory rule that a taxpayer must dispose of all of an activity's assets to claim the accumulated passive activity losses now must be embellished with the additional rule that disposition by gift will have somewhat unpredictable and probably undesirable results regarding the disallowance of those losses. n697

Any gift of a passive activity's assets is subject to the extinguishment rule, n698 regardless of whether there is an intent to completely dispose of the activity. There is neither a de minimis exception nor an exception for cash gifts. Therefore, gifts to charities, for example, might create a charitable contribution deduction but also extinguish part or all of the accumulated losses by the amount allocable to the gift, which might significantly exceed the charitable contribution deduction. n699 If a taxpayer makes a partial gift of passive activity assets and retains the balance, the accumulated passive activity losses allocable to the retained portion continue to be suspended. The taxpayer's ability to deduct those losses in the future is based on the general rule that losses can be used to offset passive activity income and are fully allowed if the activity, or all the remaining assets from a discontinued activity, are disposed of in a fully taxable transaction. n700

For the donee, the basis of the gift property is increased by the amount of any suspended losses attributable to the property. n701 The donee recovers the basis of that property under the normal rules for basis recovery, such as depreciation. n702 Any deductions attributable to the increased basis do not have a passive activity taint, unless the

donee uses the property in a passive activity. As a result, the basis of gift property that the donee uses in an active business produces deductions that are not subject to the passive activity limitations. n703 If the donee uses the property in a passive activity, it produces passive activity deductions. In any event, however, the donee could benefit, within the limits of the tax basis rules, from the increased basis if the property is disposed of in a taxable transaction such as a sale. n704

[8] Disposition by Death

If a taxpayer engaged in a passive activity dies, that event is treated as a complete disposition of the activity. However, the passive activity taint to the suspended passive activity losses is not necessarily eliminated. n705 Under the tax rules governing estates, the basis of property passing through an estate is generally stepped up to its fair market value at the date of death. n706 This step-up in basis does not create taxable income. However, for purposes of the passive activity loss rules, any step-up in the basis of passive activity property results in a dollar-for-dollar reduction in the amount of any suspended losses attributable to that activity. As a result, that portion of any suspended losses is extinguished and is not available to the decedent, the estate, or the heirs. n707 The net effect is similar to taxing part of the step-up in basis. Any suspended passive activity losses in excess of the amount of the basis step-up are allowed without limitation on the decedent's final return. n708 The decedent's suspended passive losses are allowed only to the extent they exceed the amount by which the transferee's basis in the passive activity has been increased. If the increase in basis exceeds unused passive losses, no passive activity losses are deductible on the decedent's return. n709

Passive losses that are suspended during the period in which the estate holds the activity increase the basis of the property when the estate distributes the property. Those losses are not allowed as a deduction at any time. n710 This step-up/loss-extinguishment rule applies at the individual activity level rather than to the aggregate of the passive activities of the decedent. The result of this approach is that a decedent's passive activity losses may not be reduced by the full amount of the basis step-up. n711

Example:

Mike dies having four passive activities at the time of death, as follows:

Activity	Passive Activity Loss	Tax Basis	Fair Market Value	Step-up At Death	Passive Activity Loss Allowed By Reason of Death
1	(\$69)	(\$10)*	\$20	\$30	\$39
2	(\$81)	(\$15)*	\$10	\$25	(\$56)
3	-----	\$25	\$300	\$275	-----
4	-----	\$35	\$200	\$165	-----
Totals	(\$150)	\$35	\$530	\$495	(\$95)

* The negative tax basis for activities 1 and 2 results from the excess of Mike's share of partnership debt over the tax basis of the share of partnership assets.

The total amount of the basis step-up at Mike's death (\$495) far exceeds the suspended passive activity losses present at death (\$150). However, because the step-up/loss-extinguishment rule applies to each activity separately, \$95 of the \$150 passive losses are nevertheless allowed in the year of Mike's death. The balance is extinguished by the basis step-up on those activities. n712

[9] Distributions of Interests in Passive Activities by Estates or Trusts

If an estate or trust distributes an interest in a passive activity, no deduction is allowed for any passive activity losses allocable to that interest. Instead, the basis of the interest immediately before the distribution must be increased by the amount of any passive activity losses allocable to that interest. n713

[10] Transfer Pursuant to Divorce

The transfer of passive activities incident to a divorce is not considered a fully taxable transaction, and therefore, any suspended losses are not triggered on the transfer. n714 The reason is that any transfer of property incident to a divorce is treated as a gift for purposes of Subtitle A of the Code. n715 Because Treas Reg § 1.7701-2 is part of Subtitle A, the transfer of passive activities incident to a divorce would be treated as a gift, and the suspended losses of the "donor" spouse are added to the property's basis immediately before the transfer. n716

[11] Other Nonrecognition Dispositions

When a taxpayer disposes of passive activity property in a tax-free transaction other than by gift or death (such as a like-kind exchange, conversion to personal use, or tax-free transfer to an entity), the suspended losses of that activity are not affected, even if all the assets of the activity are transferred. Those losses continue to be treated as passive activity losses of the taxpayer and can be used to offset any passive activity income. n717 In all cases, the taxpayer will have received some asset or ownership interest in exchange for the passive activity property. When that asset or interest is subsequently completely disposed of in a fully taxable transaction, the original property is treated as completely disposed of, and any suspended losses for that property are allowed in full. n718

[12] Worthlessness of Stock as Disposition

If a taxpayer's investment in a passive activity is through ownership of stock, the entire interest in that activity is disposed of for purposes of *IRC Section 469(g)* whenever that stock becomes worthless. This occurs because under *IRC Section 165(g)*, the loss from the stock's worthlessness is treated as a loss from a sale or exchange. n718.1

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.11

§ 13.11 At-Risk Limitation on the Deductibility of Losses

The at-risk rules present an additional limitation on the ability to currently use losses from most investments. The statutory at-risk rules limit the deductibility of losses to the amount a taxpayer has at risk in the activity at the close of a taxable year n719

[1] Taxpayers Subject to the At-Risk Limitation

Individuals and certain closely held C corporations are subject to the at-risk limitation. n720 Partnerships engaged in activities subject to the at-risk limitations apply the limitations at the partner level rather than the partnership level. Additionally, the at-risk rules apply to losses at the shareholder level rather than at the corporate level for S corporations. Corporations, unless they are an S corporation or a closely held company, are not subject to the at-risk limitation. This is true even when the corporation is a partner in a partnership that conducts an activity that is subject to the at-risk limitation.

Taxpayers subject to the at-risk limitation, may deduct losses from certain enumerated activities only to the extent they are at risk with respect to the activity at the end of their taxable year. n721 If the investor's taxable year differs from that of the partnership or S corporation, the at-risk limitation is applied at the end of the entity's taxable year.

[2] Activities Subject to the At-Risk Limitation

For real property acquired after 1986, the at-risk rules of *IRC Section 465* apply. Losses generated by property acquired before 1987 can be deducted without regard to the at-risk limitation. For partnerships, any partnership interest acquisition after 1986 subjects the partner's share of the partnership debt to the at-risk limitation, even if the partnership property was acquired before 1987.

Although TRA 1986 caused all real estate activities to be subject to the at-risk rules, it did grant the real estate industry a more liberal definition of the "at-risk amount" than is applicable to other industries. (See § 13.02[5][c], below.)

[3] Closely Held C Corporations

[a] Overview

Activities engaged in by closely held C corporations are subject to the at-risk limitation. n722 A closely held C corporation is one in which five or fewer individuals own, directly or indirectly (i.e., by attribution), more than 50 percent of the corporation's stock. However, for this purpose, there is no attribution of stock ownership from one partner to another. n723

[b] Actively Engaged in Leasing Activities

An exception to the at-risk limitation is provided for closely held C corporations that actively engage in equipment leasing. n724 The income from the leasing of Section 1245 equipment must constitute 50 percent or more of the corporation's gross receipts for the corporation to be considered actively engaged in equipment leasing. n725 In the case of a parent-subsidiary or brother-sister controlled group of corporations, the controlled group is to be considered as one corporation, for purposes of determining whether 50 percent or more of the group's combined gross receipts are attributable to equipment leasing. n726

[c] Engaged in a Qualified Business

Certain active, closely held C corporations are also exempt from the at-risk limitation. For tax years beginning after 1983, a closely held qualified C corporation will be exempt if it engages in a qualifying business. n727 For the corporation to be qualified it cannot be:

- (1) a personal holding company;
- (2) a foreign personal holding company; or
- (3) a personal-service corporation. n728

A "qualifying business" is an active business that satisfies three requirements. During the entire 12-month period, ending on the last day of the tax year, the corporation must have had:

- (1) substantially all the services of at least one full-time employee directed toward the active management of the business;
- (2) substantially all of the services of at least three full-time non-owner employees directly related to the business; and
- (3) deductions for business expenses attributable to the business allowable to the corporation for the tax year, and for contributions to certain employee benefit plans, exceeding 15 percent of the business' gross income.

In addition, the business must not be an excluded business (defined as (1) equipment leasing, or (2) any business involving the use, exploitation, sale, lease, or other disposition of master sound recordings, motion picture films, video tapes, or tangible or intangible assets associated with literary, artistic, musical, or similar properties). n729

In determining whether the deductions for business expenses exceed 15 percent of business income, the compensation deduction for personal services rendered by owner-employees (i.e., those who own more than 5 percent of the stock) or any member of the employee's family, is disregarded.

[4] Separation and Aggregation of Activities

The at-risk limitation is applied separately to each of the following activities: n730

- (1) film and video;
- (2) equipment leasing;
- (3) farming;
- (4) oil and gas;
- (5) geothermal; and
- (6) each other activity engaged in by the taxpayer in carrying on a trade or business, or for the production of income. n731

The definition of "activity" as it applies to real estate depends upon the type of real estate involved and the manner in which the taxpayer uses it. The Conference Report to TRA 1986 states that all real estate holdings that would have been exempt from the at-risk rules before TRA 1986 will be considered "the activity of holding real property." That would appear to mean that holding real estate will generally be considered to be a single activity of the taxpayer, and the at-risk limitation can be applied based on the aggregate of the taxpayer's equity interests in real property, including personal property used in hotel and rental apartment operations.

The clearest exception to that general rule would occur in the case of mineral property, since there is a specific exclusion provision in TRA 1986. Other exceptions would include any real property used by the taxpayer in any of the activities listed in (1) through (5), above, including real estate used in farming and in oil and gas production. Real property used in those specific categories is not considered part of the activity of holding real property because it was not exempt from the at-risk limitation under prior law. Real property not included within the scope of the activity of holding real property will be part of the specific activity in which it is used, i.e., farming, oil and gas, mineral, etc.

It is likely that real property, other than that described in the preceding paragraph, that is used by the taxpayer in a non-real estate trade or business will nonetheless be treated as part of the activity of holding real property. Thus, for at risk purposes, it would normally be a separate activity from the activity or activities constituting the trade or business in which it is used. However, the statute provides that separate activities may be aggregated and treated as one activity for at-risk purposes, if the activities are combined in a single trade or business of the taxpayer. The statutory aggregation rules do not apply to investment (as distinguished from trade or business) activities, nor do they apply to activities that are not combined in a single trade or business. Aggregation of activities that are not a single trade or business will be permitted only under future regulations.

For the activities that constitute a trade or business to be aggregated, the taxpayer must either: (1) actively participate in the management of the trade or business, or (2) the trade or business must be carried on by a partnership or S corporation that allocates 65 percent or more of its losses to the people who actively participate in the management of the business. n732 Active participation depends upon the facts and circumstances of each situation. Lack of active participation will be indicated if the taxpayer has authority only to discharge the manager of the business, or if the manager is an independent contractor rather than an employee.

Treasury has issued temporary regulations that allow a partner or an S corporation shareholder to aggregate similar activities conducted by the partnership or S corporation and treat them as a single activity, for purposes of applying the at-risk limitation.

Example:

A partnership (or S corporation) owns ten oil and gas properties on which it explores for or exploits oil and gas resources. The partnership (or S corporation) also owns two farms where it engages in farming activities. The partner (or shareholder) may aggregate the ten oil properties and treat them as one activity. The partner (or shareholder) can aggregate the two farms and treat them as one activity. However, the partner (or shareholder) cannot aggregate the farming activity with the oil and gas exploration activity. n733

The temporary regulations only to apply to those specific activities that would otherwise be treated on a property-by-property basis, namely those listed in categories (1) through (5), above. The temporary regulations, therefore, do not apply to real property except to the extent it is used in those specific activities. However, as discussed above, real estate holdings that are not in those specific categories, with the exception of mineral property, would be considered a single activity, without regard to any aggregation rules. As a result, even in the absence of regulations, all of the real property owned by a partnership or S corporation, that is not covered in categories (1) through (5) and is not mineral property, should be treated as a single activity.

Treasury has the authority to prescribe additional regulations regarding when activities are to be aggregated or separated. These regulations will most likely allow for aggregation of activities that are not tax shelters and separation of activities that have tax shelter characteristics. The tax shelter characteristics that Treasury may consider include:

The presence of accelerated deductions, mismatching of income and deductions, substantial non-recourse financing, novel financing techniques which do not conform to standard commercial practices, and the marketing of the activity to prospective investors as a tax shelter.

Until regulations are issued, different activities will be treated separately, unless (1) the activities are to be aggregated because the taxpayer actively participates in their management directly or on behalf of a partnership or S corporation, or (2) because they are similar activities that are conducted by a partnership or an S corporation.

[5] Amounts Considered At-Risk

[a] Overview

A taxpayer is generally considered at risk in an activity to the extent of cash and the adjusted basis of property contributed by the taxpayer to the activity. n734 In general, a taxpayer's amount at risk also includes any amounts borrowed for use in the activity if the taxpayer is personally liable for repayment or if property other than property used in the activity is pledged as security. n735 Amounts borrowed for use in an activity subject to *IRC Section 465* will not increase the borrower's amount at risk in the activity if the lender has an interest other than that of a creditor in the activity (a disqualifying interest) or if the lender is related to a person (other than the borrower) who has a disqualifying interest in the activity. n736 This rule applies even if the borrower is personally liable for the repayment of the loan or the loan is secured by property not used in the activity. The rule generally applies only to activities listed in the statute—generally those connected with motion pictures and video tapes, farming, leasing of *IRC Section 1245* property (generally non-real estate assets), and exploring for or exploiting oil, gas, and geothermal deposits. n737 The rule also applies to other activities, but only to the extent provided in regulations. n738

Regulations expand the rule of *IRC Section 465(b)(3)* to all new post-1978 activities, not just those described in *IRC Section 465(c)(1)*. n739 Thus, for all activities, amounts borrowed with respect to the activity will not increase the borrower's amount at risk in the activity if the lender has an interest in the activity other than that of a creditor, or if the lender is related to a person (other than the borrower) who has an interest in the activity other than that of a creditor. This rule applies even if the borrower is personally liable for the repayment of the loan or the loan is secured by property not used in the activity. n740

These amounts are treated in the same manner as borrowed amounts for which the taxpayer has no personal liability and for which no security is pledged. n741 Any amounts that are protected against loss, whether borrowed or not, are also treated in the same manner as borrowed amounts for which the taxpayer has no personal liability and for which no security is pledged. n742

For purposes of determining a corporation's amount at risk, an interest in the corporation as a shareholder is not an interest in any activity of the corporation. Thus, amounts borrowed by a corporation from a shareholder may increase the corporation's amount at risk. n743

Regulations clarify the treatment under the at-risk rules of financing connected with the holding of real property. For purposes of determining a taxpayer's amount at risk in an activity of holding real property, a taxpayer is treated at risk with respect to financing that is secured by real property used in the activity and is either (1) qualified nonrecourse financing, n744 or (2) financing that, if it were nonrecourse, would be qualified nonrecourse financing. n745

Regulations also clarify when a borrower that is personally liable for a loan is considered to have a non-creditor interest in an activity for purposes of apply the at-risk rule. A borrower that is personally liable for the repayment of a loan for use in an activity is considered to have an interest in the activity other than that of a creditor only if the borrower has either a capital interest in the activity or an interest in the net profits of the activity. n746 A capital interest in an activity is an interest in the assets of the activity that is distributable to the owner of the capital interest upon the liquidation of the activity. For example, the partners of a partnership and the shareholders of an S corporation are considered to have capital interests in the activities conducted by the partnership or S corporation. n747

An employee or independent contractor any part of whose compensation is determined with reference to the net profits of the activity is considered to have an interest in the net profits of the activity. It is not necessary for a person to have any incidents of ownership in the activity in order to have an interest in the net profits of the activity. n748 Compensation related to gross receipts from an activity, however, is not an interest in the net profits of an activity. n749

Final regulations also clarify when a person has a non-creditor interest in an activity when a non-recourse loan is made. The rules for nonrecourse loans vary, depending on whether or not the loan is secured by assets with a readily ascertainable fair market value. In the case of a nonrecourse loan for use in an activity where the loan is secured by property that has a readily ascertainable fair market value, a person is considered to have an interest in the activity other than that of a creditor only if the person has either a capital interest in the activity or an interest in the net profits of the activity, as described above. n750

In the case of a nonrecourse loan for use in an activity where the loan is secured by property which does not have a readily ascertainable fair market value, a person is considered to have an interest in the activity other than that of a creditor if the person stands to receive financial gain (other than interest) from the activity or from the sale of interests in the activity. Financial gain includes compensation for services rendered in connection with the organization or operation of the activity, or amounts received from the sale of interests in the activity. Generally, a promoter of an activity who organizes the activity or solicits potential investors will be deemed to receive financial gain and will have an interest in the activity other than that of a creditor. n751

Notwithstanding any other rule, a taxpayer is not considered to be at risk for any amount that is protected against loss through nonrecourse financing, stop-loss agreements, guarantees, or other similar arrangements. n752

The investor's at-risk investment is increased by additional contributions to the activity and by his share of taxable income generated by the activity. The at-risk amount is decreased by any subsequent withdrawals from the activity and by the investor's share of losses generated by the activity. n753

Example:

P purchases property for \$200,000, making a \$40,000 cash down payment and financing the balance of the purchase price through a nonrecourse loan, payable interest only for the first year. During the first year that *P* owns the property it is leased to an unrelated party, and the leasing activity generates a tax loss of \$15,000 and a \$2,000 cash flow (excess of rental income over operating expenses and interest payments on the \$160,000 loan). This investment is subject to the at-risk limitation. Initially, *P*'s amount at risk is equal to the down payment of \$40,000. At the end of the first year, *P*'s at-risk amount is reduced to \$23,000 (\$40,000 less losses of \$15,000 and cash distribution of \$2,000).

[b] Application of the At-Risk Limitations to Partners, LLC Members, and S Corporation Shareholders

Partnerships, LLCs, and S corporations are not subject to the at-risk limitation. However, the at-risk limitation does apply to the partners of the partnership, members of an LLC, or the shareholders of the S corporation. Computation of the at-risk limitation is generally the same for partners, LLC members, and shareholders of S corporations. Partners, LLC members, and S corporation shareholders compute their at-risk limitation based on their capital contribution to the partnership, LLC, or S corporation. The limitation is then adjusted according to the rules stated above. The amount that the partnership, LLC, or S corporation has at-risk in the activity is irrelevant for determining the individual investor's at-risk amount.

Some additional rules apply in determining a partner's or LLC member's amount at-risk that do not apply to S corporation shareholders. Although a guarantee of partnership debt does not increase a partner's at-risk amount, a partner increases his at-risk amount for his share of liabilities incurred by the partnership. A partner's at-risk amount increases only for those liabilities for which the partner may be held personally liable under an agreement or state law, and only to the extent that the partner is not protected against loss. ⁿ⁷⁵⁴ Relying on partnership law, the IRS has ruled that LLC members who guarantee lease payment liabilities of the LLC are also at risk only to the extent they have no right of reimbursement against any other LLC members. ⁿ⁷⁵⁵ In the case of a loan by a partner to a partnership, the lending partner increases his at-risk amount to the extent that his basis is increased under the partnership rules, but the amount at-risk of any other partners is not increased as a result of the loan. ⁿ⁷⁵⁶ Under the partnership regulations, a partner may get basis to the extent that he bears the ultimate economic responsibility for the repayment of the debt. ⁿ⁷⁵⁷

Several recent cases have attempted to clarify the rules in this area. *Pritchett v. Commissioner* ⁿ⁷⁵⁸ was the first case to address the effect of partnership borrowings on a limited partner's amount at-risk. The taxpayers in *Pritchett* were limited partners in similar oil and gas exploration partnerships. Each partnership was indebted to a drilling company as evidenced by non-interest-bearing recourse promissory notes with 15-year maturities. The principal of each note was payable from the net cash available to the partnership as a result of drilling operations. Only the general partners of each partnership were directly liable on the notes. However, the limited partners, by executing the partnership agreements, obligated themselves to make additional capital contributions if the notes were not paid in full by maturity.

The taxpayers' argument for including their future capital contribution commitment in their at-risk amount was that they were personally liable to the drilling companies through liability to the respective partnerships.

The majority of the Tax Court judges ruled against the taxpayers, finding that the limited partners' obligations were contingent upon:

- (1) whether the partnership would have sufficient funds to pay the notes when due; and
- (2) whether the general partners would exercise their discretion in favor of making the call for additional limited partner capital contributions. The majority cited the common law contract principle that a contingent debt does not reflect a present liability.

The Tax Court then went a step further and found that even if the drilling company could force the general partners to call upon the limited partners or could move directly against the limited partners without the general partner contribution calls, the limited partners would still not be at-risk for the years in question because the drilling contractor had no recourse against the limited partners at the end of the taxable year at issue. The Tax Court interpreted Section 465(b)(2)(A) to require fixed personal liability at the close of the taxable year.

On the other hand, in *Abramson v. Commissioner*, n759 the Tax Court held that the limited partners were at-risk since they had a direct contractual liability to a third-party seller of goods. The Tax Court differentiated its opinion from *Pritchett* by stating that the limited partners in *Pritchett* were not directly liable and had not borrowed any amount within the meaning of Section 465(b)(2).

In the appeal of *Pritchett*, the Ninth Circuit agreed with the Tax Court's reasoning in *Abramson* and stated that, if the limited partnership agreements created only contingent liabilities, it would affirm the lower court's decision to disallow the taxpayers' deductions. The Ninth Circuit concluded, however, that in *Pritchett*, the liability of the limited partners was unavoidable and thus *not* contingent. The Ninth Circuit cited *Melvin v. Commissioner*, n760 in which the Tax Court stated that, even though the partnership or other partners remain in the chain of liability, the at-risk amount of the parties who have *ultimate liability* will not be affected. The question is, according to the Ninth Circuit, who is the obligor of last resort? Using this line of reasoning, the court held that the limited partners, by virtue of their contractual obligations, have ultimate responsibility for the debt and therefore are at-risk for their pro-rata shares.

The Ninth Circuit dismissed the Tax Court's reasoning that it was not known at the end of each taxable year whether there would be enough partnership revenues to satisfy the notes before maturity. The Ninth Circuit stated that, if the notes required payments upon maturity, the limited partners' obligations to contribute additional funds would be certain and not contingent.

The Ninth Circuit also dismissed the fact that cash calls were contingent upon the general partners' election. Citing *Durkin v. Commissioner*, n761 the Ninth Circuit held that economic reality ensures that the general partners would exercise the calls.

The agreement of the taxpayers in *Pritchett* provided that the creditor would receive 20 percent of the gross sales if the partnership achieved certain profit levels. The Ninth Circuit remanded the issue of whether or not this interest would constitute "other than a financial interest" under Section 465(b)(3).

At the appellate level, the Service raised for the first time the issue of whether at-risk amounts should be allowed only for the present value of the note. The Ninth Circuit believed this issue had merit, but the court did not consider it because, as a general rule, issues raised for the first time on appeal are not considered.

The fact that a loan may be recourse in nature does not determine conclusively that an investor is at risk. In *Thornock v. Commissioner*, n762 a case involving a sequence of computer equipment sales and leasebacks, a limited partner was held to have no economic liability on the acquisition debt although the debt was recourse in nature. The court reasoned that due to the guarantees made by other participants in the transaction, the partner would never be required to pay off the debt. In addition, the underlying debt from the original purchase was nonrecourse. For these reasons, the partner was held not to be at risk.

A general conclusion can be drawn from these cases that, to determine if a limited partnership's borrowings affect a limited partner's amount at-risk, the following questions must be answered:

- (1) Can the partnership(s) creditors look to the limited partner for repayment of any portion of the loan in the case of partnership default?

(2) If the limited partner pays all or any portion of the partnership's loan, does the limited partner have any recourse against other parties for repayment?

If the answer to the first question is affirmative and the answer to the second question is negative, the limited partner should increase his amount at risk for the portion of the debt for which he is personally liable and not protected against loss by another party.

[c] Qualified Nonrecourse Financing

A taxpayer is generally not considered at-risk with respect to any amount protected against loss through nonrecourse financing, guarantees, stop loss agreements, or similar arrangements. n763 A taxpayer engaging in the activity of holding real property, however, is considered at-risk with respect to "qualified nonrecourse financing" secured by real property used in that activity, even though the taxpayer is not personally liable for repayment of the financing. n764 "Qualified nonrecourse financing" is any financing that meets all of the following requirements: n765

- it is borrowed by the taxpayer with respect to the activity of holding real property;
- it is borrowed by the taxpayer from a qualified person, or represents a loan from a government or government instrumentality, or is guaranteed by any federal, state, or local government;
- except to the extent provided by regulations, no person is personally liable for repayment; n766 and
- it is not convertible debt.

In general, only real property used in the activity of holding real property may secure qualified nonrecourse financing. For this purpose, however, the following property is disregarded: n767 (1) property that is incidental to the activity of holding real property; and (2) other property that is not real property or incidental to the activity of holding real property, provided that the aggregate gross fair market value of that property is less than 10 percent of the aggregate gross fair market value of all property securing the financing.

With respect to partnerships, a look-through rule applies regarding the property that may be used as security for qualified nonrecourse financing. A borrower is treated as owning directly its proportional share of the assets in a partnership in which the borrower owns (directly or indirectly through a chain of partnerships) an equity interest. n768

As noted above, no person may be personally liable for repayment of qualified nonrecourse financing, except to the extent provided in regulations. n769 Regulations provide a special rule with respect to partnership or tiered partnership nonrecourse financing. The rule also applies to LLCs and other entities that are disregarded for federal tax purposes. The personal liability of any partnership (or other disregarded entity) will be disregarded and, provided other requirements are satisfied, the financing will be treated as qualified nonrecourse financing secured by real property if the following requirements are met: n770

- the only persons personally liable to repay the financing are partnerships;
- each partnership with personal liability holds only property that is permitted as security for qualified nonrecourse financing (applying a look-through rule for lower-tier partnerships); and
- in exercising its remedies to collect on the financing in a default or default-like situation, the lender may proceed only against property that is permitted as security for qualified nonrecourse financing and that is held by the partnership(s) (applying a look-through rule for lower-tier partnerships).

the activity of holding real property includes the holding of personal property and providing services that are incidental to making real property available as living accommodations. n771 The activity of holding real property does not, however, include the holding of mineral property. n772

A *qualified lender* is any person who is actively and regularly engaged in the business of lending money so long as that person is not: n773

- (1) the person from whom the property was acquired;
- (2) any person who receives a fee on the taxpayer's investment in the property (e.g., a promoter, or a person related to the promoter); or
- (3) a person related to the taxpayer, unless the financing from the related person is commercially reasonable and on substantially the same terms as a loan from an unrelated person. n774

Whether parties are related for this purpose is determined in accordance with *IRC Sections 267(b), 707(b)(1), and 52(a) and (b)*. However, these tests are modified so that a shareholder and a corporation will be related parties if the shareholder owns directly or indirectly more than 10 percent of the corporation's stock. n775

Nonrecourse financing between related parties will be deemed to be commercially reasonable if the financing is a written unconditional promise to pay on demand, or on a specified date, a specified sum, and the interest rate is a reasonable market rate of interest (taking into account the maturity of the obligation). Generally, an interest rate would not be considered commercially reasonable if it is significantly below the market rate on comparable loans between unrelated parties. On the other hand, an interest rate would not be considered commercially reasonable if it significantly exceeds the market rate on comparable loans by unrelated qualified persons. Nor would an interest rate be considered commercially reasonable if it were contingent. However, a variable interest rate will be commercially reasonable, provided that the interest is calculated on the basis of a market interest index such as the prime rate charged by a major commercial bank, LIBOR, the rate on government securities, or the applicable federal rate. The terms of the financing would also not be considered commercially reasonable if, for example, the term of the loan exceeds the useful life of the property, or if the right to foreclosure or collection on the debt is limited, except to the extent provided under applicable state law. n776

For non-real-estate activities, even a loan with full recourse is not generally treated as an at-risk amount if the lender has an interest in the activity other than as a creditor. However, for qualified nonrecourse real estate loans, the loan will not be disqualified solely because the lender has a noncreditor interest in the activity. n777

In real estate financing, the most common situation in which lenders will have an equity interest occurs when a partner makes a loan to his partnership. Although it is possible for the loan to meet the requirements of qualified nonrecourse financing, the existing partnership allocation regulations under *IRC Section 704(b)* may make the loan undesirable. (See Chapter 14 on partnerships.) In addition, a partner's at-risk amount with respect to the loan will be the same as his share of the debt determined under the general rules that govern the allocation of partnership debt for basis purposes. n778 Current regulations generally prevent the other partners from sharing in any nonrecourse partnership debt owed to a partner. n779

[d] Seller Financing

Although many typical real estate financing techniques will be considered as qualified nonrecourse financing, several common financing arrangements will not. Perhaps the most important of the nonqualified techniques is seller financing. As mentioned above, qualified nonrecourse financing cannot be obtained from the seller of the acquired property. n780

The prohibition on seller financing can create problems when debt obligations on distressed properties are being restructured, that is, in workout situations. Lenders frequently acquire title to the property (e.g., by foreclosure) in these situations before transferring it to a new owner. That chain of events causes the loan to become "seller" financing, even if the original loan was for cash and the owner assumes the old debt. On the other hand, the seller-financing taint can be avoided if the property is transferred directly from the prior owner to the new owner. In this regard, lenders and buyers have to be alert to the significance of the form as well as the substance of their transactions.

[e] Wrap-Around Financing

Wrap-around financing exists when the purchaser of a property issues a note payable to the seller in an amount at least equal to the seller's current underlying debt on the property. The seller remains liable on the underlying debt, and the purchaser does not assume liability for it. n781

When the purchaser issues a nonrecourse purchase money mortgage which wraps around a nonrecourse underlying debt, a question arises about whether the purchaser has any qualified nonrecourse financing. If the purchaser's purchase money mortgage is viewed as one note, qualified nonrecourse financing will not exist, since the loan was obtained from the seller. However, if the purchase-money-mortgage transaction is viewed, in substance, as taking the property subject to the seller's underlying indebtedness and a second mortgage loan from the seller for the remaining amount of the total debt, then, if the other qualifications are met, the purchase money mortgage should constitute qualified nonrecourse debt in an amount equal to the seller's first mortgage. A final determination on which alternative is the proper way to treat wrap-around financing will have to await further guidance from Treasury and the courts.

[6] Carryover of Disallowed Losses

[a] Overview

Losses disallowed under the at-risk limitation in a given tax year may be carried forward indefinitely. The loss may then be deducted to the extent the taxpayer has a sufficient at-risk amount at the end of a subsequent taxable year. n782 Except for the passive activity loss limitations, the at-risk provisions apply after all other loss limitation provisions; for example, the basis limitations on deducting partner losses.

[b] Characterization of Suspended Losses

The proposed regulations n783 require that allowable deductions be classified into four categories and charged against income in order of priority. Those classes, and their order of priority, are:

- (1) capital losses;
- (2) Section 1231 losses;
- (3) all other items of deduction except items of tax preference under *IRC Section 57*; and
- (4) items of tax preference under *IRC Section 57*.

Any deductions that are disallowed because of the application of the above rules are suspended and carried over to subsequent taxable years. The proposed regulations provide that the deductions retain their identity under the four classifications above when they are allowed in a subsequent tax year. It should also be noted that the at-risk limitations apply before the passive activity loss rules. Therefore, a loss that is limited by the at-risk provisions does not enter into the computation of the taxpayer's passive activity loss for that year. n784

Example:

A taxpayer has \$6,000 of income from an activity during the taxable year, and \$30,000 of deductions allocable to the activity. Of the \$30,000 of deductions, \$4,000 represent capital losses; there are no Section 1231 losses, all other deductions (except tax preferences) equal \$20,000, and items of tax preference equal \$6,000. The taxpayer's at-risk amount is \$20,000, at the beginning of the taxable year. Assuming no other events have occurred to effect the taxpayer's at-risk amount, the taxpayer is allowed \$26,000 of deductions, that is, the sum of the \$6,000 of income and the \$20,000 at-risk amount. The deductions allowed, in order of priority, are the capital losses deduction, the other items of deductions, and \$2,000 of tax preference items. The remaining \$4,000 of tax preference items are suspended and carried to the subsequent taxable year, in which they retain their character as tax preference items.

These rules present planning opportunities for a taxpayer who wishes to shift losses to a subsequent taxable year. The failure to satisfy the at-risk requirements automatically defers the loss.

Example:

Taxpayer *B* anticipates having losses from a nonrental activity in 1990 and 1991. *B* will not materially participate in the activity in 1990, but he expects to materially participate in 1991. If *B* is not at risk with respect to the activity in 1990, the losses will be deferred to 1991. If *B* is at risk in 1991, the 1990 passive losses will be "converted" to nonpassive losses in 1991.

The purpose of the ordering rules proposed is to retain the different character of the four classifications. Therefore, as a general rule, capital losses can be charged against ordinary income only to a limited extent. Section 1231 losses must first be netted against Section 1231 gains; and the computation of the minimum tax requires identification of tax preference items.

[7] Dispositions and Recapture of At-Risk Amounts

[a] Dispositions of At-Risk Investment

When a taxpayer invests in a real estate activity, either directly as a partner in a partnership or as a shareholder in an S corporation, his *tax basis* in the investment includes any related nonrecourse financing. To the extent losses are attributable to nonqualified nonrecourse financing, they are not currently deductible because the at-risk amount is not increased by nonqualified nonrecourse debt. However, these losses will reduce the tax basis of the investment. On the disposition of the real estate, the taxpayer's amount realized will not be less than the amount of any nonrecourse debt from which he is relieved. Any gain that is realized on the disposition will increase the taxpayer's at-risk basis and allow him to deduct the losses that were previously limited because of nonqualified financing. The net effect is that prior years' suspended losses are available to offset any gain that is attributable to nonqualified nonrecourse financing in the year of sale or other disposition of the real estate investment.

Example:

P acquires a partnership interest in exchange for a nonrecourse note of \$20,000. *P*'s allocable share of losses in the taxable year is \$20,000, but such losses are not allowable under the at-risk rules because the taxpayer has no amount at risk. *P*'s basis in his partnership interest is, however, reduced to zero since the at-risk rule does not affect basis. In the subsequent year, there is a foreclosure on the partnership interest by the lender. *P* realizes \$20,000 through discharge of the debt; thus, there is a gain of \$20,000. Recognition of the gain adds \$20,000 to the taxpayer's amount at risk which is offset by the suspended deduction of \$20,000 attributable to the amount disallowed in the previous year.

[b] Recapture of At-Risk Losses

A taxpayer must recapture previously allowed losses from an activity when the at-risk amount for that activity is reduced below zero. n785 This is accomplished by recognizing income to the extent that the at-risk amount is reduced below zero. n786 This recapture income is recognized at the end of the tax year in such a way that the at-risk amount as of the start of the next year is brought back to zero. The recapture income becomes a carryover at-risk deduction in the next tax year, and the taxpayer is allowed to deduct this recaptured amount in subsequent years to the extent his at-risk amount increases above zero. A taxpayer's at-risk basis cannot be reduced below zero because of deductions, but can be by any of the following:

- (1) distributions in excess of net income; or
- (2) reductions of qualified debt, which in the case of real estate would include qualified nonrecourse financing.

For activities other than the holding of real property, recapture of at-risk losses applies only to losses allowed in taxable years beginning after December 31, 1978. Thus, a taxpayer would only have to recapture losses incurred in 1979 and later years.

However, in the case of the activity of holding real property, the at-risk limitation is effective only for tax years beginning after 1986. As a result, recapture of real estate losses under the at-risk provision would only be required for losses allowed after the effective date, that is for tax years beginning on or after January 1, 1987. n787

CHAPTER 13 Limitations on Losses From Real Estate *

1-13 Federal Taxes Affecting Real Estate § 13.12

§ 13.12 Limitation on Tax-Exempt Use Losses

[1] In General

An overall statutory limitation applies to limit deductions allocable to property used by governments or other tax-exempt entities. n788 Under the provision, a taxpayer who leases property to a tax-exempt entity (called "tax-exempt use property") cannot claim deductions for a taxable year from the lease transaction in excess of the taxpayer's gross income from the lease for that year. n789 The provision does not apply to certain transactions involving property with respect to which the low-income housing credit or the rehabilitation credit is allowable. n790

The limitation applies to deductions or losses related to a lease to a tax-exempt entity and the leased property. Any disallowed deductions are carried forward and treated as deductions related to the lease in the following taxable year, subject to the same limitations. n791 Under rules similar to those applicable to passive activity losses (including the treatment of dispositions of property in which less than all of the gain or loss from the disposition is recognized) n792 a taxpayer generally is permitted to deduct previously disallowed deductions and losses when the taxpayer completely disposes of its interest in the property. n793

[2] Tax-Exempt Use Property Defined

IRC Section 470 applies to losses from tax-exempt use property. n794 For this purpose, and subject to several modifications, "tax-exempt use property" has the same meaning as under *IRC Section 168(h)*. n795 With respect to real estate, it includes both nonresidential real property and residential rental property that is leased to a tax-exempt entity in a disqualified lease. n796 If only a portion of a property is leased to tax-exempt entities, the property is tax-exempt use property only if more than 35 percent of the property is leased to tax-exempt entities. n797

A disqualified lease is a lease to a tax-exempt entity, if any of the following is true: n798

- part or all of the property was financed with tax-exempt financing in which the tax-exempt entity or related entity participated;
- the lease contains a fixed or determinable price purchase or sale option (or an equivalent of one) that involves the tax-exempt entity or related entity;

- the lease has a term in excess of 20 years; or
- the lease occurs after a sale or other transfer of the property by, or the lease of the property from, the entity or related entity, and the property has been used by the entity or related entity before the sale or other transfer before that sale or other transfer or lease.

For purposes of *IRC Section 470*, there is no exception for tax-exempt use property for short-term leases. n799

Tax-exempt use property does not include any property that would be tax-exempt use property solely by reason of *IRC Section 168(h)(6)*. n799.1 Under that provision, if any property that is not otherwise tax-exempt use property is owned by a partnership that has both a tax-exempt entity and a person who is not a tax-exempt entity as partners, and any allocation to the tax-exempt entity of partnership items is not a qualified allocation, an amount equal to the tax-exempt entity's proportionate share of that property is treated as tax-exempt use property. n800 An allocation to a tax-exempt entity is a qualified allocation if the allocation: (1) is consistent with the allocation to the entity of the same distributive share of each item of income, gain, loss, deduction, credit and basis throughout the entire period that the entity is a partner in the partnership and (2) has substantial economic effect. n801 Similar rules apply for other pass-thru entities. n802 Tax-exempt use property does not include property otherwise subject to *IRC Section 168(h)(6)* if a low-income housing credit or rehabilitation credit is allowable with respect to the property. n803

Loss deferral under *IRC Section 470* may also be required if a partnership is recharacterized as a lease. Thus, if a partnership is recharacterized as a lease pursuant to *IRC Section 7701(e)*, and a provision of *IRC Section 168(h)* (other than *IRC Section 168(h)(6)*) applies to cause the property characterized as leased to be treated as tax-exempt use property, then the loss deferral rules of *IRC Section 470* apply. n803.1 In determining whether a partnership is treated as a lease, all relevant factors are taken into account, including whether or not: n803.2

- a tax-exempt partner maintains physical possession or control or holds the benefits and burdens of ownership with respect to the property;
- there is insignificant equity investment by any taxable partner;
- the transfer of the property to the partnership does not result in a change in use of that property;
- the property is necessary for the provision of government services;
- a disproportionately large portion of the deductions for depreciation with respect to the property are allocated to one or more taxable partners relative to that partner's risk of loss with respect to the property or to that partner's allocation of other partnership items; and
- amounts payable on behalf of the tax-exempt partner relating to the property are defeased or funded by set-asides or expected set-asides.

NOTE:

The provision relating to treating partnerships as leases for purposes of *IRC Section 470* n803.3 is effective generally for leases entered into after March 12, 2004. n803.4 The IRS has announced, however, that for partnership tax years beginning before 2007, it will not apply *IRC Section 470* to disallow losses associated with property that is treated as tax-exempt use property solely as a result of the application of *IRC Section 168(h)(6)*. Abusive transactions involving partnerships and other pass-through entities, however, remain subject to IRS challenge under other provisions of the tax law for partnership taxable years beginning in 2004, 2005, and 2006. n804

[3] Tax-Exempt Leases Not Subject to the Limitation

[a] In General

A lease of property to a tax-exempt party is not subject to the deduction limitations of *IRC Section 470* if the lease satisfies all of the following requirements:

- the tax-exempt lessee does not monetize its lease obligations; n805
- the taxpayer makes and maintains a substantial equity investment in the leased property; n806
- the tax-exempt lessee does not bear more than a minimal risk of loss; n807 and
- the tax-exempt lessee generally does not have an option to purchase the leased property for any stated purchase price other than the fair market value of the property. n808

[b] Lessee Cannot Monetize Its Lease Obligations

In order for a lease of property to a tax-exempt party to avoid the deduction limits of *IRC Section 470*, the tax-exempt lessee cannot monetize its lease obligations beyond a specified amount. n809 The tax-exempt lessee may not monetize its lease obligations (including any purchase option) in an amount that exceeds 20 percent of the taxpayer's adjusted basis in the leased property at the time the lease is entered into. n810 Specifically, a lease does not satisfy this requirement if the tax-exempt lessee monetizes that excess amount pursuant to an arrangement, set-aside, or expected set-aside, that is to or for the benefit of the taxpayer or any lender, or is to or for the benefit of the tax-exempt lessee, in order to satisfy the lessee's obligations or options under the lease. n811

The Conference Report clarifies that this determination is made at all times during the lease term n811.1 and includes the amount of any interest or other income or gain earned on any amount set aside or subject to an arrangement described in this provision. For purposes of determining whether amounts have been set aside or are expected to be set aside, amounts are treated as set aside or expected to be set aside only if a reasonable person would conclude that the facts and circumstances indicate that those amounts are set aside or expected to be set aside. n812

The IRS may provide by regulations that a higher percentage is permitted in certain cases in which the creditworthiness of the tax-exempt lessee would not otherwise satisfy the taxpayer's customary underwriting standards. In no event, however, can the lessee's obligations be allowed to be monetized in excess of 50 percent of the taxpayer's adjusted basis in the property. n813

In addition, if the lease provides the tax-exempt lessee an option to purchase the property for a fixed purchase price (or for other than the fair market value of the property determined at the time of exercise of the option), any credit support at the time that the option may be exercised would not be permitted to exceed 50 percent of the purchase option price. n814

Certain lease arrangements that involve circular cash flows or insulation of the taxpayer's equity investment from the risk of loss fail this requirement without regard to the amount in which the tax-exempt lessee monetizes its lease obligations or options. n815 Thus, a lease does not satisfy this requirement if the tax-exempt lessee enters into an arrangement to monetize in any amount its lease obligations or options if the arrangement involves (1) a loan (other than an amount treated as a loan under *IRC Section 467* with respect to an *IRC Section 467* rental agreement) from the tax-exempt lessee to the taxpayer or a lender; (2) a deposit that is received, a letter of credit that is issued, or a payment undertaking agreement that is entered into by a lender otherwise involved in the transaction; or (3) in the case of a transaction that involves a lender, any credit support made available to the taxpayer in which the lender does not have a

claim that is senior to the taxpayer. n816

[c] Requirement of Substantial Equity Investment in Leased Property

In order for a lease of property to a tax-exempt party to avoid the deduction limits of *IRC Section 470*, the taxpayer/lessor must make and maintain a substantial equity investment in the leased property. n817 To meet this requirement, a taxpayer must generally meet the following requirements: n818

- At the time the lease is entered into, the taxpayer must initially make an unconditional at-risk equity investment in the property of at least 20 percent of the taxpayer's adjusted basis in the leased property at that time;
- The taxpayer must maintain that equity investment throughout the lease term; and
- At all times during the lease term, the fair market value of the property at the end of the lease term must be reasonably expected to be equal to at least 20 percent of that basis. For this purpose, the fair market value of the property at the end of the lease term is reduced to the extent that a person other than the taxpayer bears a risk of loss in the value of the property. n819

The above requirements do not apply to leases with lease terms of 5 years or less. n820

[d] Tax-Exempt Lessee Can Bear No More than Minimal Risk of Loss

In order for a lease of property to a tax-exempt party to avoid the deduction limits of *IRC Section 470*, the tax-exempt lessee generally may not assume or retain more than a minimal risk of loss, other than the obligation to pay rent and insurance premiums, to maintain the property, or other similar conventional obligations of a net lease. n821 This requirement is met if there is no arrangement under which the lessee bears (1) any portion of the loss that would occur if the fair market value of the leased property were 25 percent less than the leased property's reasonably expected fair market value at the time the lease is terminated; or (2) an aggregate loss that is greater than 50 percent of the loss that would occur if the fair market value of the leased property were zero at lease termination. n822

The IRS may provide by regulations that this requirement is not satisfied where the tax-exempt lessee otherwise retains or assumes more than a minimal risk of loss. n823

The provision regarding minimal risk for tax-exempt lessees does not apply to leases with lease terms of 5 years or less. n824

[e] Restriction on Tax-Exempt Lessee's Purchase Option Price

In order for a lease of property to a tax-exempt party to avoid the deduction limits of *IRC Section 470*, the tax-exempt lessee may not have an option to purchase the leased property for any stated purchase price other than the fair market value of the property (as determined at the time of exercise of the option). This requirement applies to all real estate. n825

[f] Coordination with Like-Kind Exchange and Involuntary Conversion Rules

Neither the like-kind exchange rules n826 nor the involuntary conversion rules n827 apply under *IRC Section 470* if either (1) the exchanged or converted property is tax-exempt use property subject to a lease that was entered into before March 13, 2004 and the lease would not have been able to avoid the *IRC Section 470* limitations n828 had they been in effect when the lease was entered into; or (2) the replacement property is tax-exempt use property subject to a lease that does not meet the requirements to avoid the *IRC Section 470* limitations. n829

[g] Other Rules

The limits of *IRC Section 470* apply throughout a lease term to property that initially was tax-exempt use property, even if the property ceases to be tax-exempt use property during the lease term. n830

IRC Section 470 is applied before the application of the passive activity loss rules under *IRC Section 469*. n831

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.01

§ 14.01 Overview

Over the past several decades, the partnership has probably been the most prevalent form of business organization used in the real estate industry. Ventures in which a developer raised funds from a group of passive investors were usually organized as limited partnerships; ventures in which all the members expected to be active in the business were frequently organized as general partnerships.

More recently, a new type of entity called a "limited liability company" (LLC) has become a popular alternative to the traditional partnership, and new ventures in which all, or most, of the members expect to be active in the business now are almost invariably organized as LLCs. Both partnerships and LLCs can be organized in a manner that enables them to avoid being taxable entities for federal income tax purposes. Instead, they are reporting vehicles that report items of income and deduction, and the members of the partnership or LLC individually include their respective distributive shares of these items on their income tax returns. Partnerships and LLCs are generally reporting vehicles for state, local and foreign income tax purposes as well, and the partners or members generally must report their shares of the entity's items of income and deduction for purposes of state, local and foreign income taxes, although in some cases a tax is also imposed by these jurisdictions on the entity itself.

The term "partnership" is defined in the Code to include a "syndicate, group, pool, joint venture or other unincorporated organization through or by means of which any business, financial operation, or venture is carried on, and which is not ... a corporation or a trust or estate." n1 The statutory definition is broader in scope than the common-law meaning of the term. Federal tax law, rather than local law, prescribes the test to be applied in determining the classification of a business organization for federal income tax purposes. n2

Regulations provide a regulatory framework in which unincorporated organizations can generally elect whether they will be treated as partnerships or as some other form of organization for federal income tax purposes. n3 Qualifying spouses may also elect to have a family joint venture not be treated as a partnership for tax purposes, and instead treat their interests in the venture as if they were sole proprietors. n4-6

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.02

§ 14.02 Federal Entity Classification Rules

[1] In General

Entity classification regulations n7 allow eligible entities with more than one owner to elect their tax classification for federal purposes either as an association (taxable as a corporation) or as a partnership. Entities with only a single owner may elect either to be classified as a corporation or to be disregarded as an entity separate from their owner. n8 These "check-the-box" regulations replace former regulations that classified business organizations either as associations or partnerships, based on the presence or absence of the four corporate characteristics of: continuity of life, centralization of management, limited liability for debts of the enterprise, and free transferability of interests. n9-12

Courts have unanimously upheld the check the box regulations. n13 In one case, the taxpayer was the sole owner of several LLCs, and he had failed to elect under the regulations to have the LLCs treated as corporations. As a result, the LLCs were disregarded and treated as sole proprietorships for tax purposes, and the taxpayer was held personally liable for their unpaid employment taxes. n14 The other cases involved the same situation, but with just a single LLC. n14.1

[2] Determining Whether a Separate Entity Exists

The first step in the federal entity classification process is to determine whether there is an entity separate from its owners. This determination is a matter of federal law, not local law, and generally focuses on whether the participants jointly carry on a trade, business, financial operation or venture and divide the resulting profits. n15 For example, a separate entity exists for federal tax purposes if co-owners of an apartment building lease space and, in addition, provide services to the occupants directly or through an agent. n16 However, mere co-ownership of property that is maintained, kept in repair, or rented or leased, however, does not constitute a separate entity for federal tax purposes. For example, if an individual owner, or tenants in common, of farm property lease it to a farmer for cash rental or a share of the crops, they do not necessarily create a separate entity for tax purposes. n17 Similarly, a joint undertaking merely to share expenses does not create a separate entity for federal tax purposes. n18

Because the determination of whether an entity exists is a matter of federal law, not local law, certain joint undertakings that are not entities under local law may be entities for federal tax purposes and, conversely, not all entities formed under local law will be recognized as separate entities for federal tax purposes. For example, if an LLC with a single individual owner elects to be disregarded as an entity separate from its owner under *Regulation Section 301.7701-3*, its individual owner is subject to federal tax as if the LLC's business were operated as a sole proprietorship. n19 However,

the LLC will still be treated as an entity for local law purposes, including the limitations on the liability of the owner for debts and liabilities of the entity.

[3] Classification of Separate Entities as Trusts or Business Entities

An organization that is recognized as a separate entity for federal tax purposes is classified as either a trustⁿ²⁰ or a business entity,ⁿ²¹ unless a separate provision of the Internal Revenue Code provides for special treatment, as it does for REMICs.ⁿ²² An organization is generally classified as a trust if the purpose of the arrangement is to vest in trustees the responsibility for the protection and conservation of property for beneficiaries and, therefore, it does not have associates or an objective to carry on a business for profit.ⁿ²³ An additional requirement, in the case of investment trusts, is that there be no power under the trust agreement to vary the investment of the certificateholders and that the trust not have multiple classes of ownership interests.ⁿ²⁴

[4] Automatic Classification of Certain Business Entities as Corporations

Certain business entities are automatically classified as corporations for federal tax purposes. An entity that is automatically classified as a corporation is sometimes referred to as a "per se" corporation. These entities are, therefore, ineligible to elect a different federal tax entity classification status pursuant to the entity classification regulations. The entities that are automatically classified as corporations include corporations denominated as such under applicable law, associations, joint-stock companies, insurance companies, organizations that conduct certain banking activities, organizations wholly owned by a State, organizations that are taxable as corporations under a provision of the Internal Revenue Code other than Section 7701(a)(3), and certain organizations formed under the laws of specified foreign jurisdictions (including a US possession, territory, or commonwealth).ⁿ²⁵ Note that this is an unusual instance in which local law, rather than federal tax law, will be determinative of classification for federal income tax purposes.

A special grandfathering rule applies for specific listed foreign entities. Under the rule, a foreign entity described in the list of foreign entities treated as per se corporationsⁿ²⁶ will nevertheless be classified as something other than a corporation if certain conditions are met. These conditions generally require that the entity had been consistently treated as something other than a corporation for federal income tax purposes prior to the May 8, 1996, grandfathering date. The grandfathering rule also lists certain situations in which a grandfathered foreign business entity will lose its grandfathered status.ⁿ²⁷

Apart from the above rules, a single-owner eligible entity that is disregarded as an entity separate from its owner for any purpose, but regarded as a separate entity for certain excise tax purposes, is treated as a corporation for tax administration purposes related to those excise taxes.^{n27.1} A corresponding rule also applies with respect to the entity for employment taxes.^{n27.2}

[5] Eligible Entities May Choose Their Classification for Federal Tax Purposes

[a] In General

Any business entity that is not required to be treated as a corporation for federal tax purposesⁿ²⁸ is an "eligible entity."ⁿ²⁹ An eligible entity may choose its tax classification under rules set forth in the regulations. An eligible entity with at least two members may choose to be classified as either a partnership or an association (taxable as a corporation). An eligible entity with a single member may choose either to be disregarded as an entity separate from its owner, or to be classified as an association (taxable as a corporation).ⁿ³⁰ However, if the single owner of a business entity is a bank,ⁿ³¹ then the special rules applicable to banks will continue to apply to the single owner as if the wholly-owned entity were a separate entity.ⁿ³²

The IRS has ruled that if an eligible entity has two owners under local law, but one of the owners is, for federal tax purposes, disregarded as an entity separate from the other owner, then the eligible entity cannot be classified as a

partnership. Rather, it must either be disregarded as an entity separate from its owner or be treated as an association taxable as a corporation. n32.1

NOTE:

The IRS has issued a revenue procedure in which it specifies the conditions under which it will consider a request for a ruling that an undivided fractional interest in rental real property (other than a mineral property) is not an interest in a business entity for tax purposes. n32.2 The procedure details the guidelines for submitting ruling requests, the information to be submitted, and conditions for obtaining rulings. n32.3 The procedure applies to co-ownership of rental real property in an arrangement classified under local law as a tenancy-in-common. It should be noted that the guidelines provided are only issued for the purpose of assisting taxpayers in preparing ruling requests; they are not intended to be substantive rules, and are not to be used for audit purposes. n32.4

[b] Classification of Entity Owned as Community Property

The IRS has issued a revenue procedure regarding the classification of an entity that is owned solely by a husband and wife as community property. The procedure applies only if the following requirements are met: n32.5

- The business entity is owned by a husband and wife as community property under the laws of a state, foreign country, or possession of the U.S.;
- No person other than one or both of the spouses would be considered an owner for federal tax purposes; and
- The business is not treated as a corporation for federal tax purposes. n32.6

If the above requirements are met, the IRS will respect a taxpayer's treatment of the entity as either a disregarded entity or a partnership. If the entity and the husband and wife as community property owners treat the entity as a disregarded entity for federal tax purposes, the IRS will accept the position that the entity is a disregarded entity for federal tax purposes. n32.7 If the entity is disregarded, its activities are treated in the same manner as a sole proprietorship, branch, or division of the owner. n32.8 A change in reporting position will be treated for federal tax purposes as a conversion of the entity. n32.9

If the entity and the husband and wife as community property owners treat the entity as a partnership for federal tax purposes and file the appropriate partnership returns, the IRS will accept the position that the entity is a partnership for federal tax purposes. n32.10 A change in reporting position will be treated for federal tax purposes as a conversion of the entity. n32.11

[6] Default Classification Rules

In order to provide most eligible entities with the classification they would choose without requiring them to file an election, the entity classification regulations provide default classification rules that are intended to match taxpayers' expectations, and thus reduce the number of instances in which taxpayers will actually have to file elections. n33

The default classification for an entity existing on January 1, 1997, is the classification that the entity claimed immediately prior to January 1, 1997. An entity's default classification continues until the entity elects to change its classification by means of an affirmative election. n34 A change in classification is a potentially taxable event—it will be treated either as the liquidation of a corporation, generally taxable to the corporation and its shareholders, and the subsequent formation of a partnership or a sole proprietorship, or as the liquidation of a partnership (or termination of a

sole proprietorship) and the formation of a corporation. For domestic entities, a newly-formed eligible entity will be classified as a partnership under the default rules if it has at least two members, or it will be disregarded as an entity separate from its owner if it has a single owner. n35

For foreign entities, the default classification is determined by the extent to which the members are liable for debts or liabilities of the entity. A foreign eligible entity will be classified as an association (and taxable as a corporation) if none of the members has any liability for debts or obligations of entity. A foreign eligible entity will be classified as a partnership if it has two or more members and at least one member does not have limited liability; the entity will be disregarded as an entity separate from its owner if it has a single owner and that owner does not have limited liability. n36 A member is treated as not having limited liability for purposes of this rule if the member, by virtue of its membership in the foreign entity, has personal liability for all or any portion of the debts of the entity. n37 This determination is based *solely* on the provisions of the law under which the entity is organized (unless that law allows the entity to specify in its organizational documents whether or not the members will have limited liability), and it does not appear that the Service intends to impose any minimum net worth test for purposes of determining whether unlimited liability exists. n38

[7] How to Elect Entity Classification

[a] In General

An eligible entity n39 may affirmatively elect its classification (or may change its classification) on Form 8832, Entity Classification Election. n40 An affirmative election would ordinarily be necessary only for entities that are not satisfied with their default classification. The election must be signed by any officer, manager, or member of the entity who is authorized to make the election and who represents that it has that authorization under penalties of perjury, or must be consented to and signed by each person who is an owner of the entity at the time the election is made. The determination whether a person is authorized to make an election is based on local law. n41 If an election is made to change the classification of an entity, then each person who was an owner on the date that any of the deemed transactions resulting from an elective classification change occur must also sign the election. n41.1 The election will generally be effective on the date specified by the entity in making the election, but if an election is to be effective for any period prior to the date on which the election is made, each person who was an owner between the date on which the election is to be effective and the date the election is filed, and who is not an owner on the date the election is filed must also consent to the election. n42 An election will not be accepted unless it includes all of the required information, including the entity's taxpayer identifying number (TIN). n43

Taxpayers (including indirect owners of an entity) are required to attach a copy of the classification election to their tax returns. Failure to attach a copy of the classification election will not invalidate an otherwise valid election. However, since all members of an entity are required to file tax returns that are consistent with the entity's election, if a member that is itself a pass-through entity fails to attach the election form to its federal tax or information return, this failure may give rise to penalties against any of its members who file federal tax or information returns inconsistent with the lower-tier entity's election. n44

[b] S Corporation Election as Election to Be Taxed as Association

An entity that makes a timely election to be classified as an S corporation is deemed to have elected to be classified as an association taxable as a corporation for federal entity classification purposes. n44.1 If the eligible entity's election is not timely and valid, however, the default classification rules will apply to the entity unless the IRS provides late S corporation election relief or inadvertent invalid election relief. If the late or invalid election is not perfected, the default rules will maintain the passthrough taxation treatment by classifying the entity as a partnership or a disregarded entity. n44.2

If both the entity's S corporation election (Form 2553) and its entity classification election (Form 8832) are filed late, the above deemed election rule does not come into play. In that case, a taxpayer must generally apply for relief through a letter ruling. However, there are two revenue procedures that provide a simplified method for taxpayers to request relief for a late S corporation election and a late corporate classification election intended to be effective on the same date that the S corporation election was intended to be effective. Either procedure is in lieu of the letter ruling process ordinarily used, and avoids the user fees that ordinarily apply for letter rulings.

The first alternative is *Revenue Procedure 2007-62*. n44.3 To be eligible for relief under that revenue procedure, the following requirements must be met: n44.4

- it must be an eligible entity; n44.5
- the entity must have intended to be classified as a corporation as of the intended effective date of the S corporation status;
- the entity must fail to qualify as a corporation solely because Form 8832 was not timely filed n44.6 or was not deemed to have been filed; n44.7
- the entity must fail to qualify as an S corporation on the intended effective date of the S corporation status solely because the S corporation election was not timely filed; n44.8
- the entity must have reasonable cause for its failure to file a timely Form 2553 and a timely Form 8832;
- the entity must not have filed a tax return for the first taxable year in which the election was intended;
- the entity must file an application for relief under *Revenue Procedure 2007-62* no later than six months after the due date of the S corporation return (excluding extensions) of the entity seeking to make the election for the first taxable year in which the election was intended; and
- no taxpayer whose tax liability or tax return would be affected by the S corporation election (including all shareholders of the S corporation) has reported inconsistently with the S corporation election, on any affected return for the year the S corporation election was intended.

An entity that meets the above requirements may request relief for a late S corporation election and a late corporate classification election by filing a properly completed Form 2553, along with a Form 1120S, for the first taxable year the entity intended to be an S corporation. A properly completed Form 2553 includes a statement explaining the reason for the failure to file the S corporation election timely and a statement explaining the reason for the failure to file the entity classification election timely. The forms must be filed together no later than six months after the due date of the tax return (excluding extensions) of the entity for the first taxable year in which the S corporation election was intended. These items constitute the application requesting relief. n44.9 If the conditions are met and the forms properly filed, the entity will be treated as having made an election to be classified as an association taxable as a corporation n44.10 as of the effective date of the S corporation election. n44.11

An entity that does not qualify for relief under *Revenue Procedure 2007-62* may request relief under *Revenue Procedure 2004-48*. n44.12

To be eligible for relief, under *Revenue Procedure 2004-48* the entity must meet the following requirements: n44.13

- the entity must be an "eligible entity"; n44.14
- the entity must have intended to be classified as a corporation as of the intended effective date of the S corporation status;
- the entity must have failed to qualify as a corporation solely because Form 8832 was not timely filed or was not deemed to have been filed; n44.15
- the entity must have failed to qualify as an S corporation on the intended effective date of the S corporation status solely because the S corporation election was not filed timely; n44.16 and
- the entity must have reasonable cause for its failure to file timely the S corporation election and the entity classification election.

The revenue procedure sets out specific procedural requirements that must be complied with in order to obtain relief. Within 6 months after the due date for the tax return, excluding extensions, for the first year the entity intended to be an S corporation, the corporation must file a properly completed Form 2553 with the applicable service center. The Form 2553 must state at the top of the document " FILED PURSUANT TO REV. PROC. 2004-48 ." Attached to the Form 2553 must be a statement explaining the reason for the failure to file timely the S corporation election and a statement explaining the reason for the failure to file timely the entity classification election. n44.17

Upon receipt of a completed application requesting relief under the revenue procedure, the IRS will determine whether the requirements for granting additional time to file the elections have been satisfied and will notify the entity of the result of this determination. An entity receiving relief under this revenue procedure is treated as having made an election to be classified as an association taxable as a corporation under the regulations n44.18 as of the effective date of the S corporation election. n44.19

[8] Time for Making Election and Effective Date of Election

[a] In General

An entity classification election must generally be made at the beginning of the entity's taxable year. A special filing date applies to REITs. See *Section 14.01[12]*. The entity may specify the date on which an election will be effective, but an election cannot be effective more than 75 days prior to, or more than 12 months after, the date on which the election is filed. If no effective date is specified in the election, the effective date is the date of filing. If a purchasing corporation makes an election under *IRC Section 338* regarding an acquired subsidiary, an election for the acquired subsidiary can be effective no earlier than the day after the acquisition date. n45

[b] Late Classification Elections

Under a special revenue procedure, eligible entities may file a request for a late classification election within 3 years and 75 days of the requested effective date of the eligible entity's classification election. n45.1 The late entity classification relief is available both for initial classification elections and elections to change a classification. For eligible entities, relief under *Revenue Procedure 2009-41* is the exclusive means for obtaining relief for a late entity classification election; relief is not available under the regulatory letter ruling procedure under *Treasury Regulations Sections 301.9100-1 and 301.9100-3*. User fees do not apply in seeking relief under *Revenue Procedure 2009-14* . n45.2

An entity is eligible for relief under *Revenue Procedure 2009-41* only if the following requirements are met: n45.3

- The entity failed to obtain its requested classification (or requested change in classification) solely

because Form 8832 was not filed timely; n45.4

- The entity either (1) has not filed a federal tax or information return for the first year in which the election was intended because the due date has not passed for that year's return, or (2) the entity timely filed all required federal tax returns and information returns consistent with its requested classification for all of the years the entity intended the requested election to be effective and no inconsistent tax or information returns have been filed by or with respect to the entity during any of the taxable years;
- The entity has reasonable cause for its failure to timely make the entity classification election; and
- 3 years and 75 days from the requested effective date of the eligible entity's classification election have not passed.

To take advantage of *Revenue Procedure 2009-41*, the taxpayer must, within 3 years and 75 days from the requested effective date of the entity's classification election, file with the proper IRS service center a completed and signed Form 8832. The Form 8832 must indicate that it is being filed pursuant to *Revenue Procedure 2009-41*, state that the elements of that procedure have been satisfied, include a reasonable cause statement explaining the reason for the failure to file a timely entity classification election, and include a signed declaration set forth in the procedure. n45.5 If the requirements are met and Form 8832 properly filed, the entity will be treated as having made a timely entity classification election as of the requested effective date of the election. n45.6

An entity that does not meet the requirements for obtaining relief under *Revenue Procedure 2009-41* may request an extension of time for making an entity classification election or change by letter ruling. The letter ruling request must include an affirmative representation regarding the timely filing of past tax returns or an explanation why the entity cannot make that affirmative representation. n45.7

[9] Multiple Classification Elections Restricted

Not more than one election to change an entity's classification may be made during any 60-month period. The Commissioner may waive this rule by letter ruling, but only if there has been more than a 50-percent ownership change in the entity. The 60-month limitation applies only to a change in classification by election; apparently, it does not apply if the organization's business is actually transferred to another entity, which as a separate entity would be entitled to make its own election. An election by a newly-formed eligible entity that is effective on the date of formation is not considered a change for purposes of the election restrictions. n46

[10] Entity Classification Rules Following Partnership Terminations and Divisions

A partnership is considered terminated if, within a 12-month period, there is a sale or exchange of at least 50 percent of the total interests in partnership capital and profits. n47 When a partnership is divided into two or more partnerships, the resulting partnerships (other than any resulting partnership the members of which had an interest of 50 percent or less in the capital and profits interest of the prior partnership) are, for purposes of determining whether the prior partnership has terminated, all considered a continuation of the prior partnership. n48

For purposes of the entity classification rules, a partnership resulting from one of the above terminations or divisions is a partnership. n49 However, this rule does not apply for certain foreign entities whose entity status as a partnership was grandfathered under special rules. n50

[11] Changes in Number of Members of an Entity

The classification of an eligible entity as an association is not affected by any change in the number of members of the

entity. n50.1 An eligible entity classified as a partnership becomes disregarded as an entity separate from its owner when the entity's membership is reduced to one member. A single-member entity disregarded as an entity separate from its owner is classified as a partnership when the entity has more than one member. If an elective classification change is effective at the same time as a membership change, certain deemed transactions resulting from the elective change n50.2 pre-empt the transactions that would result from the change in membership. n50.3 Any change in the number of members of an entity does not result in the creation of a new entity for purposes of the 60-month limitation on elections. n50.4

The IRS has issued rulings describing the federal income tax consequences if one person purchases all of the ownership interests in an LLC that is treated as a partnership n50.5 or if a single-member LLC that is disregarded as an entity separate from its owner becomes an entity with more than one owner that is classified as a partnership for federal income tax purposes. n50.6

[12] Deemed Transactions Resulting From Elective Classification Change

[a] In General

Several different transactions are deemed to occur when an elective change in entity takes place. The particular deemed transactions vary, depending on the type of entity change involved. n50.7 The tax treatment of a change in classification of an entity is determined under all relevant tax provisions, including the step transaction doctrine. n50.8 For purposes of satisfying the statutory requirement of adopting a plan of liquidation, n50.9 a plan of liquidation is deemed adopted immediately before the deemed liquidation incident to an elective change in entity classification, unless a formal plan of liquidation that contemplates the filing of the elective change in entity classification is adopted on an earlier date. n50.10

If an entity that is treated as a partnership elects to be classified as an association, the partnership is deemed to contribute all of its assets and liabilities to the association in exchange for stock in the association; immediately thereafter, the partnership liquidates by distributing the stock of the association to its partners. n50.10.1 If an entity that is treated as an association elects to be classified as a partnership, the association is deemed to distribute all of its assets and liabilities to its shareholders in liquidation of the association, and, immediately thereafter, the shareholders contribute all of the distributed assets and liabilities to a newly-formed partnership. n50.10.2

If an entity that is classified as an association elects to be disregarded as an entity separate from its owner, the association is deemed to distribute all of its assets and liabilities to its single owner in liquidation of the association. n50.11

If an eligible entity that is disregarded as an entity separate from its owner elects to be classified as an association, the owner of the eligible entity is deemed to contribute all of the assets and liabilities of the entity to the association in exchange for the stock of the association. n50.12

[b] Timing of Election

An election changing the classification of an entity is treated as occurring at the start of the day for which the election is effective. Any transactions that are deemed to occur as a result of the election n50.13 are treated as occurring immediately before the close of the day before the election is effective. n50.14 A special rule allows a purchasing corporation that makes a qualified stock purchase of a corporation to make an *IRC Section 338* election with respect to the purchase and also to make an election to change the classification of the target corporation. The transactions that are deemed to occur as a result of the election to change the classification of the target corporation n50.15 are treated as occurring immediately after the deemed asset purchase by the new target corporation under *IRC Section 338*. n50.16

If elections to change entity classifications for a series of tiered entities are effective on the same date, the eligible entities may specify the order of the election on Form 8832. If no order is specified for the elections, any transactions that are deemed to occur as a result of the change of entity classification will be treated as occurring first for the highest tier entity's classification, then for the next highest tier entity's change, and so forth down the chain of entities until all the transactions are deemed to have occurred. n50.17

[13] Special REIT Classification Election Rules

A special rule applies for real estate investment trusts (REITs). Although the entity classification election must generally be made at the beginning of the entity's tax year, because the election to be treated as a REIT must be made with the REIT's first tax return, to simplify filing requirements and to avoid timing problems, an election by an eligible entity to be a REIT will be treated as a deemed election to be classified as an association (taxable as a corporation), effective for the entire period during which REIT status is claimed. n51

[14] Transition Rule for Pre-1997 Periods for Entities in Existence Prior to January 1, 1997

A special transition rule applies for entities that were in existence prior to January 1, 1997. The Service will not challenge the prior classification of an existing eligible entity or an existing foreign entity described on the per se list n52 for periods prior to 1997 if the following conditions are met: n53

- (1) The entity had a reasonable basis (within the meaning of *IRC Section 6662*) for its claimed classification.
- (2) The entity and all members of the entity recognized the federal tax consequences of any change in the entity's classification within the 60 months prior to January 1, 1997.
- (3) Neither the entity nor any member had been notified in writing on or before May 8, 1996, that the federal income tax classification of the entity was under examination.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.03

§ 14.03 The Partnership Agreement

[1] Reasons for Having a Partnership Agreement

The importance of having a partnership agreement that sets forth the relationship among the partners cannot be over-emphasized. Even though, as a matter of local law, a partnership agreement can be an oral understanding, an informal handwritten document, or a formal typed contract, and even though an oral agreement may be as binding on the partners as a written agreement, many a dispute will be avoided by the simple expedient of having a written partnership agreement. A written agreement, signed by all partners, can prevent serious future misunderstandings among the parties. Moreover, a written agreement may be essential in proving the intent of the partners with respect to a partnership transaction should the tax return of the partnership be examined by the Service. n54

[2] Issues to be Addressed in a Partnership Agreement

The partnership agreement should cover all aspects of the formation, operation and dissolution of the partnership. The following is a list of some of the more important areas that should be covered in the partnership agreement:

- (1) purpose of the partnership;
- (2) term of the partnership;
- (3) management of the partnership;
- (4) capital contributions required;
- (5) allocation of profits and losses;
- (6) distribution of cash flow;
- (7) admission of new partners;
- (8) transfers of partnership interests;

- (9) consequences of retirement of a partner;
- (10) events causing a termination of the partnership;
- (11) liquidation rights and obligations;
- (12) method of determining value of partnership interest;
- (13) designation of tax matters partner (in the case of entities taxed as partnerships that are subject to the entity level partnership audit rules); n55 and
- (14) selection of entity status for federal tax purposes (presumably as a partnership). n56

[3] Tax Implications of the Partnership Agreement

The section of the agreement dealing with the purpose of the partnership can have substantial tax implications. For example, a partnership agreement that states that the purpose of the venture is to acquire property and hold it for resale could forfeit its right to capital gain treatment on the sale of the property, because such property would be deemed to be inventory. n57

The agreement may specify which tax elections, in addition to the entity classification election, are to be made by the partnership from time to time (such as an election to capitalize taxes and carrying charges, n58 or an election to adjust the basis of the partnership's assets upon the transfer of an interest in the partnership) n59 and identify the party who has the authority to determine when and which elections should be made. Additionally, the partnership agreement should contain provisions dealing with such concepts as the maintenance of the partners' capital accounts, the manner in which liquidating distributions are to be made, and whether or not partners have any obligation to restore deficit balances in their capital accounts. These requirements are discussed in greater detail in Section 14.11.

A partnership agreement can be as simple or as complex as the partners and the enterprise require. However, each partner should understand the tax and nontax aspects of all the provisions to which he or she has agreed.

FOOTNOTES:

(n1)Footnote 54. Note, however, that even if the parties execute a written partnership agreement, the terms of the agreement will not necessarily be determinative for federal income tax purposes. Allocations of income and loss set forth in the partnership agreement will be accepted by the Service only if the allocations have substantial economic effect or otherwise comply with the Regulations. *Treas Reg § 1.704-1(b)(1)*. In addition, *Treas Reg § 1.701-2*, is an anti-abuse rule that gives the IRS the power to recast a transaction involving the use of a partnership to reflect the underlying economic arrangement under subchapter K of the Code, or to prevent the use of a partnership to circumvent the intended purposes of any provision of the Code. This regulation appears to give the Service an enormous amount of authority to modify or even ignore the terms of a written partnership agreement in certain situations.

(n2)Footnote 55. "Small" partnerships are not subject to these rules. *IRC § 6231(a)(1)(B)*.

(n3)Footnote 56. *Treas Reg § 301.7701-3(a)*; see § 14.02, for a discussion of federal entity classification rules.

(n4)Footnote 57. *IRC § 1221(a)(1)*.

(n5)Footnote 58. *IRC § 266*.

(n6)Footnote 59. *IRC § 754*.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.04

§ 14.04 Formation of a Partnership

Entities taxed as partnerships are very flexible business vehicles from the perspective of tax constraints on business transactions. As a general rule, assets can be transferred into and out of partnerships, and interests in partnerships can be shifted with much less of a concern about adverse federal income tax consequences than is the case with respect to any other form of business entity. Generally, no gain or loss is recognized on a contribution of property to a partnership made in exchange for an interest in the partnership. This rule applies whether the contribution is made to a partnership as part of the original formation or is made to a partnership that is already formed and operating, and does not depend on the contributor's holding a controlling interest in the partnership. n60 However, the difference, if any, between the fair market value and the tax basis of the assets contributed (i.e., built-in gains or losses) that are deferred at the time of contribution must generally be specially allocated to the contributing partner under *IRC Section 704(c)(1)(A)*. (The principles of this section are discussed in greater detail in Section 14.04[7].) The Taxpayer Relief Act of 1997 authorizes the Service to promulgate regulations providing that the non-recognition rule will not apply if the gain, if recognized, would be includible in the gross income of a foreign person, and also providing that intangibles transferred to a partnership may be treated as sold. n61

A contribution of property will not qualify for nonrecognition treatment if the partnership constitutes an "investment company." n62 For purposes of this provision, which generally will not be applicable to partnerships investing in real estate, the term "investment company" is defined by reference to *IRC Section 351(e)*, which imposes a similar limitation on the tax-free formation of a corporation. n63

For a contribution to qualify for nonrecognition of gain, the partner must be acting in its capacity as a partner, and not in a different capacity, such as that of a seller of property to the partnership. If the transfer of property by a partner to a partnership is followed shortly thereafter by a transfer to the contributing partner of money or other consideration, including a promissory obligation fixed in amount and time of payment, or if it is followed shortly by a transfer of money or other property by the partnership to another partner, the transaction will likely be treated as a sale or an exchange of the property, by the partner, to the partnership rather than as a contribution, and gain will, and loss may, be recognized. n64 A similar rule applies if a partner contributes property to a partnership and, within seven years of the contribution, the property is distributed to another partner: the transaction may be treated as an exchange of property and the nonrecognition provisions for the contribution of property may not apply. n65

The time elapsed between the transfers of property is an important factor in determining whether a valid contribution

and partnership distribution, rather than a sale or exchange of property, has occurred. Under *IRC Section 707(a)(2)(B)*, transfers between a partnership and a partner that are made within two years of each other are presumed to be part of a disguised sale or exchange of property, whereas transfers made more than two years apart are presumed to constitute a valid contribution and distribution. n66 These presumptions can only be rebutted by facts and circumstances that clearly establish the contrary. n67 A principal underlying issue in this facts and circumstances determination is the extent to which the capital represented by the transferred property has been subjected to the risks of the partnership between the time of its contribution and the associated distribution. A more rigorous standard is applied under *IRC Sections 704(c)(1)(B)* and 737; the time period prescribed by those provisions is five years and, effective with respect to property contributed to a partnership after June 8, 1997, is increased by the Taxpayer Relief Act of 1997 to seven years.

If a liability is incurred by a partner in anticipation of a transfer of property to a partnership, the portion of the liability shifted away from the transferor-partner to the partnership or other partners may be treated as consideration for the sale of such property. n68 The regulations establish a presumption that any liability incurred within two years prior to the transfer of the subject property will be considered to be made in anticipation of the transfer unless the facts and circumstances clearly establish otherwise. n69 However, acquisition and improvement debt and trade payables related to the transferred property are excluded from this treatment. n70

The nonrecognition provisions for property contributed to a partnership also cover transferred property that is subject to depreciation recapture. Thus, no gain is recognized on a contribution to a partnership of property having depreciation recapture potential. n71 However, if one of the exceptions applies to the general rule of nonrecognition of gain on a contribution to a partnership and gain is recognized, the depreciation recapture will be taken into account.

A contribution of property by a partner to a partnership may trigger investment credit recapture to the contributing partner. The regulations n72 provide that a contribution of property to a partnership is a "disposition" that triggers investment credit recapture, unless the following conditions are met:

- (1) The transfer constitutes merely a change in the form of conducting a trade or business.
- (2) The property continues to be eligible investment credit property in the trade or business.
- (3) Substantially all of the assets necessary to operate such trade or business are transferred to the partnership. n73
- (4) The basis of the assets in the hands of the partner is carried over to the partnership.
- (5) The partner retains a substantial interest in the trade or business.

[1] Transfer of Property Subject to a Liability

The assumption by a partnership of a partner's personal liabilities, or a decrease in a partner's share of liabilities is deemed to be a distribution of money by the partnership, to the partner. n74 For example, if a partner owns property subject to a liability and transfers that property to a partnership in which it has a 50 percent interest, the contributing partner may be deemed to have received a distribution of money equal to 50 percent of the liability of which it is relieved. To the extent the amount of this deemed distribution exceeds the basis of the partner's interest in the partnership immediately prior to the distribution, gain must be recognized by the partner. (This problem frequently arises with real estate partnerships because property transferred to partnerships is often subject to liabilities.) However, where the liabilities in question are nonrecourse liabilities, as is typically the case in a real estate partnership, this problem has been substantially ameliorated by the regulations that establish the rules for allocating liabilities among partners. These regulations provide that as a general rule, the contributing partner's share of nonrecourse liabilities will include the amount of any built-in gain that would be allocated to the contributing partner under *IRC Section 704(c)*.

n75 The liability to which the property is subject is treated as a liability of the partnership only to the extent of the fair market value of the property. n76

[2] Partnership Interest for Services

Another area in which the greater flexibility of a partnership can be demonstrated is in the context of the acquisition of a partnership interest in exchange for past or future services. A partner who receives an interest in partnership capital for services realizes income to the extent of the fair market value of that interest. n77 The partners of the partnership to which the services are provided may be entitled to a compensation deduction in respect of the transfer, but will also recognize gain to the extent that the partnership's tax basis for the deemed interest in partnership assets transferred is less than its fair market value. The tax treatment of a transfer of a capital interest in a partnership as compensation for services is thus similar to the treatment of a service provider to a corporation under similar circumstances. The corporation, however, has no gain recognition in respect of a transfer of its stock to a service provider as compensation for services. n78 The fair market value of the partnership interest may include the value of a pro rata share of appreciated property, even if the partnership itself has not yet realized the appreciation as gain for tax purposes.

The flexibility of the partnership demonstrates itself when the interest transferred to the service provider is merely an interest in future profits, not a current interest in the existing value of the assets of the partnership. As is set forth in the discussion of *Revenue Procedure 93-27* at the end of this section, the transfer of an interest in partnership profits will generally not be treated as a compensatory transfer to the service provider-recipient, and on the basis of the same analysis, should not result in either a current compensation deduction or a taxable asset disposition to the partnership. The tax analysis of the receipt of an interest in partnership profits in exchange for services has, thus, come full circle. For many years, it was thought that the receipt of an interest in a partnership's profits and losses in consideration of past or future services to the partnership was a nontaxable event. n79 This school of thought was given a rude awakening in 1971, when the Tax Court decided the fate of a taxpayer who had arranged financing for a real estate project and in return received a profits-only interest in the partnership. He sold the interest within four months. The Tax Court held that the taxpayer had to recognize ordinary income at the time he received the interest. n80 The case had an unusual fact pattern and was severely criticized by various commentators. n81 In fact, the court itself indicated that its ruling may not apply to other factual situations, particularly if the recipient of the profits interest was to provide future services.

In spite of the doubts that the Tax Court had expressed in the *Diamond* case, it did not back away from its compensation conclusions in subsequent cases. In *Campbell v. Commissioner*, n82 the Tax Court reaffirmed the principles established in *Diamond* in the context of *IRC Section 83* (pertaining to property transferred in connection with the performance of services.) In *Campbell*, the taxpayer organized hotel syndications; the court specifically held that *IRC Section 83* applies to the receipt of a profits interest in a partnership in connection with the performance of services. As a result, the court found that the new partner/service provider had to include in income an amount equal to the excess of the fair market value of the profits interest once it became substantially vested, over the amount, if any, contributed to capital.

In *Campbell*, the Tax Court determined the value of the service partner's interest in partnership profits largely by discounting the cash flows projected by the syndicator. The court included projected tax benefits in its calculation of total cash flow, even though most of the tax benefits were subsequently disallowed upon examination by the Service. Earlier court decisions had used a "liquidation approach" to value a partnership profits interest instead of *Campbell's* "valuation approach." The liquidation approach focuses on the amount the partner would receive on the recognition date if the partnership disposed of its assets at that time, paid its debts, and distributed the remaining proceeds (if any) to its partners in liquidation. n83

The Eighth Circuit Court of Appeals subsequently overturned the Tax Court's decision in *Campbell*. The appellate court discussed several grounds upon which it could have based its decision; however, it ultimately based its decision on its conclusion that the projections relied on by the Tax Court in valuing the profits interest were too speculative. Additional factors that the appellate court took into account in reaching this decision were the absence of an established "track

record" for the partnership, the restrictions on the transferability of the interest, and the taxpayer's lack of control over management of the partnership. n84

Since the Eighth Circuit's holding in this decision was based primarily on factual issues unique to the case, the door remained open for the Service to assert that similar but slightly different arrangements, nevertheless, resulted in current compensation income to the service provider. However, in a reversal of position, the Service announced in *Revenue Procedure 93-27* n85 that the receipt of a partnership profits interest in exchange for services rendered to, or for the benefit of, a partnership will generally not be treated as a taxable event for either the partnership or the receiving partner. However, this general rule will not apply in certain situations in which the value of the interest may be readily determinable, the services are rendered to certain entities other than the partnership in question, or the services are not rendered in the taxpayer's capacity as a partner.

Revenue Procedure 93-27 was clarified in *Revenue Procedure 2001-43* . n85.1 *Revenue Procedure 2001-43* provides that the determination of whether an interest granted to a service provider is a profits interest is under certain circumstances tested at the time the interest is granted, even if, at that time, the interest is substantially nonvested. Where a partnership grants a profits interest to a service provider in a transaction meeting the requirements of *Revenue Procedure 93-27* , the IRS will not treat the grant of the interest or the event that causes the interest to become substantially vested n85.2 as a taxable event for the partner or the partnership. For purposes of *Revenue Procedure 93-27* , where a partnership grants a partnership profits interest that is substantially nonvested to a service provider, the service provider will be treated as receiving the interest on the date of its grant provided that: n85.3

- (1) the partnership and the service provider treat the service provider as the owner of the partnership interest from the date of its grant and the service provider takes into account the distributive share of partnership income, gain, loss, deduction, and credit associated with that interest in computing the service provider's income tax liability for the entire period during which the service provider has the interest;
- (2) upon the grant of the interest or at the time the interest becomes substantially vested, neither the partnership nor any of the partners deducts any amount (as wages, compensation, or otherwise) for the fair market value of the interest; and
- (3) all other conditions of *Revenue Procedure 93-27* are satisfied.

An alternative basis on which a service provider can receive a partnership interest in respect of its services without any current income or gain recognition is to defer its admission to the partnership until it has created "property" that can be transferred to the partnership in exchange for an interest in capital, profits and losses without gain recognition. This technique will apply to some service providers but not to others. For example, in situations where intangible assets resulting from the performance of services are contributed to a partnership (eg, goodwill), the rules of *IRC Section 721* generally apply. Thus, for example, the contribution of a letter of intent by a partner in exchange for a partnership interest has been held to represent a nontaxable event. n86 However, in another case, a partner was unable to prove that "goodwill" purportedly transferred to a partnership represented a nontaxable contribution of property under *IRC Section 721(a)*. n87 Accordingly, a prospective partner whose service contribution may or may not result in the creation of "property" for purposes of *IRC Section 721* must choose whether to accept merely an interest in partnership profits and rely on *Revenue Procedure 93-27* , or receive an interest in partnership capital, as well, and attempt to rely on *Stafford* and avoid *Mark IV Pictures*.

[3] Basis of Contributed Property

The tax basis of property contributed to a partnership through a tax-free contribution by a partner is generally the same as the adjusted basis of the property in the hands of the partner immediately prior to the contribution. n88 When a

partner contributes nonbusiness property to a partnership that uses the property in its trade or business (e.g., a vacation home formerly used by a partner for personal use), the Tax Court has held that the basis of the property in the hands of the partnership is equal to the lower of the adjusted basis in the partner's hands or the fair market value at the date of contribution. n89

A special rule applies to built-in loss property that is contributed to a partnership. n89.1 The built-in loss may be taken into account only by the contributing partner and not by other partners. n89.2 Except as provided in regulations, in determining the amount of items allocated to partners other than the contributing partner, the basis of the contributed property is treated as the fair market value at the time of contribution. Thus, if the contributing partner's partnership interest is transferred or liquidated, the partnership's adjusted basis in the property is based on its fair market value at the time of contribution, and the built-in loss is eliminated. n89.3 The "built-in loss" is the excess of the adjusted basis of the property over its fair market value at the time of contribution. n89.4

[4] Holding Period of Contributed Property

The holding period of contributed property in the hands of the partnership includes the holding period of the property in the hands of the contributing partner. n90 When a partnership acquires property in a transaction that is found to be a sale or taxable exchange, the partnership has a cost basis for the property, and the partnership's holding period for the property begins with the date of the sale or exchange.

[5] Character of Contributed Property

Generally, the character of income or loss from the disposition of property by a partnership is determined at the partnership level. Thus, the manner in which the property is used by the partnership generally governs its character, without regard to the character which it would have in the hands of the partners.

To prevent what was perceived to be an abuse that permitted a partner holding ordinary income property to contribute it to a partnership, which in turn would claim capital asset status for the contributed property, Congress enacted rules that cause certain property contributed to a partnership by a partner to retain the character that it possessed in the hands of the contributing partner for a specified period. If within five years of contribution, a partnership disposes of property that was inventory in the hands of the partner immediately before the contribution, any gain or loss recognized by the partnership is treated as ordinary gain or loss. n91 Gain or loss on the sale of unrealized receivables contributed by a partner is treated as ordinary gain or loss regardless of the disposition date. n92 The term "unrealized receivables" is defined by cross reference to *IRC Section 751(c)*, and has a far broader scope than the dictionary definition of that term. See *Section 14.13[2]* below. Similarly, built-in losses on capital assets retain their character as capital losses for five years after contribution, to the extent of precontribution unrealized losses.

[6] Distributions of Property Contributed to a Partnership

The value of property contributed to a partnership frequently differs from the contributing partner's adjusted basis. If that property is distributed by the partnership (other than to the contributing partner) within seven years of being contributed, precontribution appreciation or depreciation must be allocated solely to the contributing partner. n93

The above seven-year rule for distributed property applies only to the extent that a transaction is a distribution under *IRC Section 731*, i.e., a distribution to a partner acting in the capacity of a partner. n94 Thus, it should not apply to a transaction in which the property is transferred by the partnership in a like-kind exchange to a partner within the seven-year period. The amount of gain or loss resulting from a distribution of partnership property is determined as if the distributed property had been sold by the partnership to the distributee-partner. n95 As a result, if built-in loss property is distributed to a partner that holds a greater than 50-percent interest in partnership capital or profits, the built-in loss that otherwise would be recognized is disallowed. n96

If a partnership terminates as a result of a sale or exchange of at least 50 percent of the total interest in partnership capital and profits within a 12-month period, n97 property that was previously contributed by a partner to the partnership is subject to a new seven-year period under *IRC Section 704(c)(1)(B)*, n98 but only to the extent of any pre-termination gain or loss that would not have been allocated to a contributing partner under *IRC Section 704(c)(1)(A)* on a sale of contributed property immediately before the termination. n99

There are several exceptions to the statutory seven-year rule in the regulations. *IRC Section 704(c)(1)(B)* does not apply to any of the following:

- (1) property contributed to a partnership on or before October 3, 1989; n100
- (2) a distribution of an interest in *IRC Section 704(c)* property to a partner other than the contributing partner in a liquidation of the partnership if: (a) the contributing partner receives an interest in the *Section 704(c)* property contributed by that partner (and no other property), and (b) the built-in gain or loss in the interest distributed to the contributing partner, determined immediately after the distribution, is equal to or greater than the built-in gain or loss on the property that would have been allocated to that partner on a sale of the contributed property to an unrelated party immediately before the distribution; n101
- (3) a deemed distribution of property caused by a termination under *IRC Section 708(b)(1)(B)*; n102
- (4) a nontaxable transfer by a partnership of all of its assets and liabilities to a second partnership pursuant to *IRC Section 721(a)* in exchange for a partnership interest, followed by a distribution of the interest in the transferee partnership in liquidation of the transferor partnership as part of the same plan; n103
- (5) an incorporation of the partnership by any means (other than by a method involving an actual distribution of partnership property to the partners followed by a contribution of that property to a corporation), provided that the partnership is liquidated as part of the incorporation transaction; n104 and
- (6) a distribution of an undivided interest in property to the extent that the distributed interest does not exceed the undivided interest contributed by the distributee partner. n105 The portion of the undivided interest in the property, if any, retained by the partnership after the distribution that is treated as having been contributed by the distributee partner is reduced to the extent of the undivided interest distributed to that partner.

There are several special rules under *IRC Section 704(c)*. First, property received by a partnership in a non-recognition transaction in exchange for *Section 704(c)* property is also treated as the *Section 704(c)* property for purposes of the seven-year rule. n106 Second, the transferee of all or a portion of the partnership interest of a contributing partner is treated as the contributing partner for purposes of the seven-year rule to the extent of the share of built-in gain or loss allocated to the transferee partner. n107 Finally, a special rule applies with respect to distributions of like-kind property. If *IRC Section 704(c)* property is distributed to a partner other than the contributing partner, and like-kind property is distributed to the contributing partner no later than the earlier of (a) 180 days following the date of the distribution to the non-contributing partner, or (b) the due date (with extensions) of the contributing partner's return for the tax year of the distribution to the non-contributing partner, then the amount of gain or loss that otherwise would have been recognized on the distribution of the contributed property is reduced by the amount of the contributing partner's built-in gain or loss in the distributed like-kind property. n108 This rule is intended to treat the contributing partner as if the partner had exchanged the contributed property for like-kind property in a tax-free exchange outside of the partnership. This allows the contributing partner to avoid recognition of gain or loss under *IRC Section 704(c)(1)(B)* on the

distribution of the contributed property to another partner because the contributing partner is treated as having contributed the like-kind property and not the property that is actually distributed to the other partner. This like-kind exception applies only to the extent that the built-in gain or loss in the contributed property is preserved in the like-kind property distributed to the contributing partner. n109

There is a substantial degree of overlap in the tax policy behind *IRC Section 704(c)(1)(B)* and that behind *IRC Section 737*. The *IRC Section 704(c)* provisions deal with contributed property that is either retained by the partnership or distributed to another partner. The *IRC Section 737* provisions apply to distributions to a partner who has contributed property to the partnership. *IRC Section 737(a)* provides that, in the case of any distribution by a partnership to a partner, the partner is treated as recognizing gain in an amount equal to the lesser of (1) the excess (if any) of (A) the fair market value of property (other than money) received in the distribution over (B) the adjusted basis of the partner's interest in the partnership immediately before the distribution reduced (but not below zero) by the amount of money received in the distribution, or (2) the net pre-contribution gain of the partner. *IRC Section 737(b)* defines the term "net pre-contribution gain." Both *IRC Sections 704(c)* and *737* require an allocation to the contributing partner of gain or loss attributable to the contributed property and regulations under both *IRC Sections 704* and *737* contain similar rules regarding distributions. n109.1

The IRS has issued a detailed ruling applying *IRC Sections 704(c)* and *737* in the context of an assets-over partnership merger with another partnership. The ruling determines a partner's distributive share of pre-contribution gain on property that was transferred to the partnership before the merger. The ruling holds that *IRC Section 704(c)(1)(B)* applies to newly created *IRC Section 704(c)* gain or loss in property contributed by a transferor partnership to the continuing partnership in an assets-over partnership merger, but does not apply to newly created reverse *IRC Section 704(c)* gain or loss resulting from a revaluation of property in the continuing partnership when the merger takes place. The ruling also holds that for purposes of *IRC Section 737(b)*, net pre-contribution gain includes newly created *IRC Section 704(c)* gain or loss in property contributed by the transferor partnership to the continuing partnership in an assets-over partnership merger, but does not include newly created reverse *IRC Section 704(c)* gain or loss resulting from a revaluation of property in the continuing partnership. n109.2

[7] Allocations Relating to Property Contributed to a Partnership

IRC Section 704(c)(1)(A) provides that income, gain, loss and deductions with respect to property contributed by a partner to a partnership must be allocated in a manner that takes into account any variations between the tax basis of the contributed property and its fair market value. These provisions are complemented by the provisions of *704(c)(1)(B)* and *737* discussed above. The regulations adopted under *IRC Section 704(c)(1)(A)* establish several alternative methods pursuant to which allocations may be made when a partnership has income, gain, loss, or deductions attributable to *Section 704(c)* property. Under the traditional method of allocation, the partnership must make appropriate allocations to partners to avoid shifting the tax consequences of the built-in gain or loss to non-contributing partners. A "ceiling rule" exists under the traditional method, pursuant to which the total income, gain, loss or deduction allocated to the partners for the taxable year with respect to a particular property cannot exceed the total partnership income, gain, loss or deduction with respect to that property for the taxable year. n110

To eliminate distortions caused by the ceiling rule, a partnership may either adopt the traditional method with curative allocations, or adopt the remedial allocation method for making allocations for *Section 704(c)* property. Under the traditional method with curative allocations, a partnership using the traditional method may make reasonable additional curative allocations to reduce or eliminate disparities between book and tax items of non-contributing partners. For example, if a non-contributing partner is allocated less tax depreciation than book depreciation with respect to an item of *IRC Section 704(c)* property, the partnership may make a curative allocation to that partner of depreciation from another item of partnership property to make up the difference. n111 Under the remedial allocation method, the partnership makes remedial allocations of income, gain, loss or deduction to the non-contributing partners equal to the full amount of the limitation caused by the ceiling rule, and offsets those allocations with remedial allocations of

deduction, loss, gain or income to the contributing partner. n112 The remedial allocation method can involve the creation of notional tax items by the partnership and is not dependent upon the actual tax items recognized by the partnership. The remedial items do not affect the partnership's computation of its taxable income and do not affect the partnership's adjusted tax basis in partnership property. Furthermore, the remedial items are created by the partnership solely for tax purposes, and do not affect the partnership's computation of its taxable income, its adjusted basis for its property, or the partners' book capital accounts. n113

NOTE:

Even if a partnership uses one of the above allocation methods, the IRS may recast any contribution of property or other transaction in order to avoid tax results that are inconsistent with the partnership tax provisions in the Code. One factor that may be considered by the IRS is the use of the remedial allocation method by related partners in which allocations of remedial items of income, gain, loss or deduction are made to one partner and the allocations of offsetting remedial items are made to a related partner. n113.01 In applying its transaction recasting authority, the IRS may do the following, among other things: n113.02

- disregard purported partnerships, in whole or part, so that partnership assets are treated as owned by the partner;
- disregard one or more contributions; or
- disregard one or more purported partners.

An additional allocation rule comes into play for built-in loss property that is contributed to a partnership. n113.1 The built-in loss may be taken into account only by the contributing partner and not by other partners. n113.2 Except as provided in regulations, in determining the amount of items allocated to partners other than the contributing partner, the basis of the contributed property is treated as the fair market value at the time of contribution. Thus, if the contributing partner's partnership interest is transferred or liquidated, the partnership's adjusted basis in the property is based on its fair market value at the time of contribution, and the built-in loss is eliminated. n113.3 The "built-in loss" is the excess of the adjusted basis of the property over its fair market value at the time of contribution. n113.4

[8] Relevance of Basis of a Partner's Interest

A partner's basis in its partnership interest must be known in order to determine:

- (1) gain or loss on the sale, exchange, or liquidation of the interest;
- (2) the extent to which the partner may deduct losses in a particular year (since the basis may not fall below zero); n114
- (3) the amount of basis the partner may offset against distributed property; and
- (4) gain or loss, if any, in the case of certain cash and property distributions to the partner.

The determination of a partner's basis in its partnership interest is covered in *Sections 14.05 and 14.06 below*.

[9] Organization and Syndication Fees

At formation, the partnership may incur costs for organization expenses and syndication fees. These costs must be

capitalized, and cannot be deducted currently. n115 Capitalized organization fees, at the election of the partnership, may be amortized over a period of not less than 60 months. n116 Syndication costs are not amortizable or deductible. n117

Organization expenses are defined in *IRC Section 709(b)(2)* as expenses that are:

- (1) incident to the creation of the partnership;
- (2) chargeable to capital account; and
- (3) of a character which, if expended incident to the creation of a partnership having an ascertainable life, would be amortized over such life.

Examples of organization expenses are legal fees for negotiating and preparing the partnership agreement, accounting fees for establishing a partnership accounting system, and necessary filing fees. n118

The Service has issued regulations that provide that the election must include a list of all expenses over ten dollars, a description of each item, the date incurred, the month the partnership began operations, and the number of months over which each item will be amortized. The election must be made with the original partnership return and filed no later than the extended due date. The election must be an affirmative statement attached to the return and contain the information noted above. n119

Syndication expenses are expenses connected with the issuing and marketing of interests in the partnership. For example, brokerage fees, registration fees, legal fees of the underwriter and the issuer, SEC costs, and legal fees incident to the preparation of the partnership prospectus are syndication fees. See *Section 3.01[1][c]* for further discussion.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.05

§ 14.05 Basis of Partner's Interest: Initial Determination

When a partner acquires an interest in a real estate partnership by contributing money or property, the initial basis of the partnership interest is the sum of:

- (1) the money contributed;
- (2) the adjusted basis to the partner of the property contributed;
- (3) the partner's share of partnership liabilities; and
- (4) the amount (if any) of gain recognized by the contributing partner with respect to the transfer. n120
The determination of the partner's pro rata share of partnership liabilities is discussed in *Section 14.06* below.

If the partnership interest is acquired by purchase, the basis of the partnership interest is the cost to the buying partner. n121 If the interest is acquired by gift, there is generally a carryover basis from donor to donee. n122 In each case, the basis also includes the partner's pro rata share of partnership liabilities.

After the initial acquisition of a partnership interest, adjustment must be made to the basis of the interest to reflect the activity of the partner and the partnership. First, additional contributions of money or property by the partner increase the basis of the partnership interest. n122.1 Also, the following adjustments, which are generally made annually, increase the basis of the partner's partnership interest:

- (1) the partner's share of partnership taxable income; n123
- (2) the partner's share of partnership tax-exempt income; n124 and
- (3) the partner's share of any increase in partnership liabilities. n125

Adjustments must also be made to *decrease* the basis of a partner's interest. Partnership distributions of money and property will reduce the basis of the partner's interest in the partnership. The amount of the reduction is, in the case of a

distribution that is not in liquidation of the partner's interest, measured by the amount of money distributed and the basis of the property to the distributee partner. The partner's basis for its partnership interest will not be reduced below zero. The other decreasing adjustments are:

(1) the partner's share of a decrease in partnership liabilities and the amount of any liabilities of the partner that are assumed by the partnership (which are considered to be distributions of money to the partner); n126

(2) the partner's share of partnership losses; n127 and

(3) the partner's share of expenditures of the partnership which are not deductible in computing taxable income and which are not chargeable to capital. n128

Regulations provide basis adjustments when a partnership owns the stock of a corporate partner. The adjustments coordinate *IRC Sections 705* and *1032*, and prevent inappropriate increases or decreases in the adjusted basis of a corporate partner's interest in a partnership resulting from the partnership's disposition of the corporate partner's stock. n128.1

FOOTNOTES:

(n1)Footnote 120. *IRC §§ 752; 722.*

(n2)Footnote 121. *IRC § 1012(a).*

(n3)Footnote 122. *IRC § 1015(a).* Note, however, that the share of liabilities allocable to a transferee or donee will not necessarily be the same as the share of liabilities allocable to the transferor or donor. For example, if the transferor or donor were a guarantor of a nonrecourse liability of the partnership, but the transferee/donee did not also guarantee the debt, its share of the partnership's liabilities would be smaller than the share of the transferor/donor.

(n4)Footnote 122.1. *IRC § 722.*

(n5)Footnote 123. *IRC §§ 703; 705.*

(n6)Footnote 124. *IRC § 705(a)(1)(B).*

(n7)Footnote 125. *IRC § 752(a).*

(n8)Footnote 126. *IRC § 752(b).*

(n9)Footnote 127. A partner's allocable share of partnership losses must be adjusted where the loss-producing transaction is with a related party. *Rev Rul 96-10, 1996-1 CB 138*, provides detailed rules for determining the basis of partnership interests held by the partners of two related partnerships following the sale of property between the partnerships. The ruling deals with the interplay between the loss disallowance rules of *IRC §§ 267* and *707* and the basis determination rules of *IRC § 705*.

(n10)Footnote 128. *IRC § 705(a)(2).* A separate decrease (but not below zero) is made for the partner's deduction for depletion for any partnership oil and gas property to the extent it does not exceed the proportionate share of the adjusted basis of that property allocated to the partner (*IRC § 705(a)(3)*).

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.06

§ 14.06 Basis of Partner's Interest: Effect of Partnership Debt

A partner's share of partnership liabilities is included in the partner's basis for its partnership interest. n129 This result follows from the so-called "aggregate" approach to partnership taxation (under which each partner is treated as the owner of an undivided interest in the partnership's assets). Since each partner would generally be able to include the amount of such liabilities in the basis of the assets if such assets were owned directly by the partners, rather than by the partnership, their shares of liabilities are included in the basis of their interests in the partnership.

However, a partner can generally include only liabilities that create basis in a capitalizable asset, give rise to a current deduction, or result in a current nondeductible expense in the computation of the basis of its interest in the partnership. For example, accrued interest payable by a *cash-method* partnership would generally not give rise to additional basis, n130 nor would a contingent liability incurred by an accrual-method partnership.

Example:

Partner A contributes land encumbered by a \$50,000 mortgage to the AB Partnership. Before the contribution, Partner A was liable for \$50,000. After the contribution, Partner B assumed liability for half the debt. Since Partner A was economically relieved of \$25,000 of the liability, the tax law requires that his basis in the partnership interest be reduced by \$25,000. Thus, if his tax basis in the land was \$100,000 prior to the contribution, that basis would carry over as the basis of his partnership interest (reduced by the \$25,000 liability of which he was relieved), and his final basis would be \$75,000. Note: Partner B's basis in the partnership is increased by the \$25,000 for which she became liable as a result of Partner A's mortgage on the property.

Both recourse and nonrecourse liabilities must be taken into account in determining a partner's basis for its partnership interest. Because no partner bears the economic risk of loss with respect to "nonrecourse" liabilities, a partner may increase its basis in the partnership without affecting the extent of its personal liability by using nonrecourse debt.

In late 1988, responding to a Congressional directive contained in the 1984 Tax Legislation, n131 the Treasury released temporary regulations under *IRC Section 752* on the treatment of partnership liabilities. They dealt specifically with guarantees, assumptions, indemnity agreements, and similar arrangements, as well as loans from partners and parties related to partners. Final regulations were adopted in late 1991.

The Treasury simultaneously released regulations under *IRC Section 704(b)* that revise and expand the existing regulations dealing with the allocation of deductions attributable to nonrecourse debt. As there is significant interplay between these two sets of regulations, tax-planning decisions should not be made with respect to either set of rules without fully understanding the effect of the other. They contain some anomalies, and are not completely consistent.

[1] Recourse Liabilities

[a] General Rules

Under the final regulations, a partnership liability is considered to be "recourse" *to the extent* that any partner bears the economic risk of loss for repayment of that liability. n132 A partner is considered to bear economic risk of loss for a liability if that partner (or a person related to the partner) n132.1 could ultimately be required to make a "net payment" to a creditor or to make a contribution to the partnership in order to discharge the partnership liability. n133 This net-payment analysis takes into account any rights of reimbursement a partner may have from another partner, or from a person related to another partner. Nonrecourse debt owed to a partner or a party related to a partner generally represents a "recourse liability" for these purposes (except to the extent of any nonrecourse debt from an unrelated party that is "wrapped" by the nonrecourse debt from the partner or party related to the partner). n134

The regulations use a hypothetical "constructive liquidation" of the partnership to determine whether a net payment or contribution would be required. In a constructive liquidation, the following events are deemed to occur: n135

- The partnership's liabilities become due and payable in full.
- With the exception of property contributed to the partnership solely to secure a partnership liability, all the partnership's assets, including cash, have a value of zero;
- The partnership disposes of all its property in a fully taxable transaction for no consideration (except relief from liabilities for which the creditor's right to repayment is limited solely to one or more assets of the partnership).
- The partnership allocates its items of income, loss, etc., for the year among the partners and then liquidates.
- The partnership liquidates.

If this analysis results in a partner having a negative book capital account that the partner is obligated to restore to the partnership, or being otherwise required to make a net payment to the creditor or a contribution to the partnership, either by agreement or operation of law, then that partner has an economic risk of loss with respect to the liability and would thus be allocated the liability for tax basis determination purposes. n136

The regulations also include an "anti-abuse rule." This rule provides that an obligation of a partner or related person to make a payment may be disregarded or treated as an obligation of another person if the facts and circumstances indicate that a principal purpose of an arrangement between the parties is: (1) to eliminate the partner's economic risk of loss with respect to that obligation; or (2) to create the appearance of the partner or related person bearing the economic risk of loss when, in fact, the substance of the arrangement is otherwise. n137

[b] Guarantees and Nonrecourse Loans From Partners; Use of Partner's Assets as Collateral

The regulations also include special rules providing that a partner bears the economic risk of loss for a partnership liability to the extent of:

- (1) the value of a partner's assets put up as security for a partnership liability; (i.e. direct and indirect pledges of property). n138
- (2) a partner's contractual obligation that is tantamount to a guarantee; n139
- (3) a partner's direct or indirect guarantee of the payment of interest on an otherwise nonrecourse liability; n140
- (4) a partner's (or a related person's) nonrecourse loan to the partnership. n141 and
- (5) loss for a partnership liability based upon an obligation of a disregarded entity. n141.1

Notwithstanding these general rules, a partner is not considered to bear the economic risk of loss for any qualified nonrecourse financing loans that the partner makes to the partnership (as defined in *IRC Section 465(b)(6)*) if the lending partner's interest (including the interest of any person related to that partner) in *each* item of partnership income, gain, loss, deduction or credit is 10 percent or less. n142 The regulations expand this rule to include certain guarantees by partners or related persons. n143 Note, however, that although the basis rules will allow a partner to include in the calculation of its basis its pro rata share of a loan made by a partner or a partner's affiliate, if the lending partners in the partnership satisfy this *de minimis* test, there is no corresponding *de minimis* test in *Regulations Section 1.704-2*, dealing with the definitions of nonrecourse liabilities and partner nonrecourse debt. n144

[2] Nonrecourse Liabilities

A liability is considered nonrecourse to the extent that *no* partner (and *no* person related to a partner) bears the economic risk of loss for that liability. n145

Under the regulations, a three-tiered system applies for allocating nonrecourse liabilities. The three-tier system applies sequentially. n146

Under the first tier, a partner is allocated an amount of the liability equal to that partner's share of partnership minimum gain under *IRC Section 704(b)* and regulations. n147

Under the second tier, to the extent the entire liability has not been allocated under the first tier, a partner is allocated an amount of liability equal to the gain the partner would be allocated under *IRC Section 704(c)* if the partnership disposed of all partnership property in a taxable transaction subject to one or more nonrecourse liabilities in full satisfaction of the liabilities (*IRC Section 704(c)* minimum gain). n148 If a partnership has multiple properties subject to a single liability, for purposes of determining the amount of *IRC Section 704(c)* minimum gain in applying the second tier, the partnership may allocate to each property an amount of the liability that, when combined with any other liabilities allocated to the property, does not exceed the property's fair market value The portion of the liability allocated to each property is treated as a separate loan in determining the *IRC Section 704(c)* minimum gain attributable to the property. n149 Any reduction in the outstanding principal of a partnership liability must be allocated among multiple properties in the same proportion that the partnership liability was originally allocated to the properties. n149.1

Under the third tier, a partner is allocated any excess nonrecourse liabilities (i.e. nonrecourse liabilities in excess of the portion allocable under the first and second tiers) based on several methods that the partnership may choose. n150 Allowable methods of allocation include allocations according to the following: n150.1

- (1) a partner's share of profits;

(2) reasonably expected deductions attributable to nonrecourse liabilities; or

(3) excess *IRC Section 704(c)* gain or excess reverse *IRC Section 704(c)* gain (i.e. the excess of the amount of reverse *IRC Section 704(c)* gain attributable to an item of property over the *IRC Section 704(c)* minimum gain on that property) with respect to property that is subject to a nonrecourse liability.
n150.2

Example:

The AB partnership purchases depreciable property for a \$1,000 purchase money note that is a nonrecourse liability. Assume that this is the only nonrecourse liability of the partnership, and that no principal payments are due on the purchase money note for a year. The partnership agreement provides that all items of income, gain, loss, and deduction are allocated equally. Immediately after purchasing the depreciable property, the partners share the nonrecourse liability equally because they have equal interests in partnership profits. A and B are each treated as if they contributed \$500 to the partnership to reflect each partner's increase in his or her share of partnership liabilities (from \$0 to \$500). The minimum gain with respect to an item of partnership property subject to a nonrecourse liability equals the amount of gain that would be recognized if the partnership disposed of the property in full satisfaction of the nonrecourse liability and for no other consideration. Therefore, if the partnership claims the depreciation deduction of \$200 for the depreciable property for the year it acquires that property, partnership minimum gain for the year will increase by \$200 (the excess of the \$1,000 nonrecourse liability over the \$800 adjusted tax basis of the property). A and B each have a \$100 share of partnership minimum gain at the end of that year because depreciation is allocated equally among them. Accordingly, at the end of that year, A and B are allocated \$100 each of the nonrecourse liability to match their share as a partnership minimum gain. The remaining \$800 of the nonrecourse liability will be allocated equally between A and B (\$400 each). n150.3

Special rules are provided for tiered partnerships and for debt that is part recourse and part nonrecourse. n151

CHAPTER 14 Partnerships and Limited Liability Companies *

*1-14 Federal Taxes Affecting Real Estate § 14.07***§ 14.07 Basis of a Partner's Interest: Illustration**

The following example illustrates the foregoing rules regarding basis, liabilities and adjustments and shows how the computation of a partner's basis in a partnership interest is made.

Example:

Partner A acquires a 50 percent interest in the AB General Partnership by contributing cash of \$25,000 and land with a value and an adjusted basis to A of \$25,000. The land is subject to a \$20,000 mortgage which is assumed by the partnership. Thereafter, A contributed additional cash and property (with no attendant liabilities) having a value and basis of \$30,000 and has received distributions of cash from the partnership in the amount of \$20,000. The partnership has ordinary income in the amount of \$50,000 in year one, and has an ordinary loss of \$30,000 in the second year. At the beginning of the third year, the partnership obtains a recourse loan of \$5,000, secured by the partnership property, to improve the properties. Partner A's basis is determined as follows:

Initial contribution:

Cash		\$25,000
Land	\$ 25,000	
Less--(1/2 of \$20,000 liability relieved)	(10,000)	15,000
		40,000

Adjustments:

Subsequent contribution	\$ 30,000	
Distributions	(20,000)	
Profit (1/2 of \$50,000)	25,000	
Loss (1/2 of \$30,000)	(15,000)	
Recourse debt (1/2 of \$5,000)	2,500	22,500
Adjusted Basis		\$62,500

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.08

§ 14.08 Taxable Year

The Code imposes some limits on the ability of a partnership to choose its fiscal year--unlike a "C" corporation, a newly organized partnership cannot simply adopt any taxable year it chooses. Generally, a partnership may not have a tax year other than the tax year of the partners owning a majority interest in the capital and profits of the partnership. Such a taxable year is known as the "majority interest taxable year." n152 If there is no taxable year that is shared by partners owning a majority of the partnership's capital and profits, the partnership must adopt the same tax year as all of its principal partners. n153 A "principal partner" is a partner having a 5 percent or greater interest in partnership profits **OR** capital. n153.1 If there is no majority interest taxable year and the principal partners do not have the same year, the partnership must adopt a calendar year, unless regulations provide for another period. n154 The regulations generally require the adoption of the taxable year that results in the least amount of tax deferral to the partners. n155

A partnership may have a taxable year other than the one required above if it establishes, to the satisfaction of the Treasury, a business purpose for the different taxable year. Not surprisingly, deferral of income to partners is not treated as a business purpose. n156 Despite the forgoing limitations on the ability of a partnership to select its taxable year, under *IRC Section 444*, partnerships, under certain circumstances, may elect to have a taxable year other than the taxable year required by *IRC Section 706*. n157 (See Chapter 4 for further discussion.)

[1] Year in Which Partnership Income Is Included

In determining its taxable income for any taxable year, a partner is required to include its distributive share of income or loss for any partnership year ending with or within that taxable year. n158

Example:

If a calendar-year taxpayer is a member of a partnership with a taxable year-end of May 31, the partner would include its share of partnership items for the partnership year ended May 31, 1997, in its calendar year 1997 income tax return. Thus, the partner would not include its share of partnership income and deductions for the period beginning June 1 and ending December 31, 1997, until 1998. The result would be the same whether or not cash flow attributable to the post-May 31, 1997 period was distributed to the partner during calendar-year 1997.

[2] Closing of a Partnership Year

As a general rule, the taxable year of a partnership will not terminate before its normal taxable year-end, except upon termination of the partnership. Likewise, the death of a partner, the entry of a new partner, the liquidation of a partner's interest in the partnership, or the sale or exchange of a partner's interest in the partnership will not close the taxable year of the partnership. n159

However, the sale or exchange of 50 percent or more of the total interest in partnership capital and profits within a 12-month period will cause the partnership to terminate for tax purposes, thereby closing the partnership's year. n160 If a partnership is terminated, its taxable year closes with respect to all of its partners on the termination date. This is either the date of final winding up of business, or the date on which the critical sale or exchange occurs. n160.1

A partnership that terminates under *IRC Section 708(b)(1)(B)* must file a short-year final return for the taxable year ending with the date of its termination. If a new partnership (for tax purposes) is formed to continue the business it is required to file a return for its taxable year beginning after the date of termination of the terminated partnership. n160.2

No special problems exist in terminating a partnership that has actually quit doing business, but a constructive termination requires a complementary constructive formation. If a partnership is constructively liquidated because of the sale or exchange of interests, the following is deemed to occur: (1) the partnership contributes all of its assets and liabilities to a new partnership in exchange for an interest in the new partnership; and (2) immediately thereafter, the terminated partnership distributes interests in the new partnership to the purchasing partner and the other remaining partners in proportion to their respective interests in the terminated partnership in liquidation of the terminated partnership, either for the continuation of the business by the new partnership or for its dissolution and winding up. n160.3 Thus, the exact consequences of a constructive termination will differ in every case. A constructive termination should be avoided if at all possible, for the accounting expense alone. Sometimes it will be possible to defer sales of partnership interests to avoid the triggering number of sales within a 12-month period. n160.4

In addition, the taxable year of the partnership will close with respect to the partner involved if the partner's entire interest in the partnership terminates (whether by death, liquidation or otherwise). n161 The closing of the taxable year of a partnership for a particular partner who sells or exchanges its entire interest in the partnership or whose interest is liquidated will not cause the partnership year to close for all partners. n162

Example:

The *DEF* Partnership has a taxable year ending March 31st. Partner *D*, who reports on a calendar-year basis, sells its entire interest in *DEF* Partnership on November 30, 1995. *D* must include its pro rata share of the income of *DEF* Partnership for the period from April 1, 1995, through November 30, 1995, on its 1995 income tax return. The rules for determining the partner's pro rata share under these circumstances are set forth in *IRC Section 706(d)* and the regulations thereunder. This bunching of income can be avoided if Partner *D* sells less than its entire interest in *DEF* Partnership, because the partnership year will not close for a partner who disposes of less than its entire interest in the partnership.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.09

§ 14.09 Transactions Between the Partnership and a Partner

As a general rule, the Code provides that "if a partner engages in a transaction with a partnership other than in his capacity as a member of such partnership, the transaction shall, except as otherwise provided ... be considered as occurring between the partnership and one who is not a partner." n163 For example, if an accountant who is a partner in a real estate partnership is hired to prepare the partnership's tax return, the partnership's payment to the accountant will be treated by both the partner and the partnership as a payment for accounting services, not a partnership allocation and distribution. This rule recognizes that the partnership is an entity separate and distinct from its owners. Of the two most common types of transaction between a partner and a real estate partnership, namely, the transfer of property by a partner to the partnership and the rendering of services by a partner to a partnership, the latter transactions are, by far, the most difficult to evaluate in the context of whether or not the transaction is in the partner's capacity as a member of the partnership. The principal issue with respect to transfers of property, on the other hand, is generally not whether the transfer is by a partner in its capacity as a partner, but rather, whether the transfer is a contribution eligible for non-recognition treatment, or is a disguised sale.

[1] Transfers of Property

IRC Section 707(a)(2) authorizes the Secretary to prescribe regulations for purposes of determining whether transfers of property by a partner to a partnership should more properly be characterized as a transaction occurring between the partnership and a partner acting other than in its capacity as a member of the partnership, and/or as a sale or exchange of the property. The Secretary has exercised this authority. n164

The regulations provide that a transfer of property by a partner to a partnership will be characterized as a sale of property if there is a related transfer of money or other consideration (including the assumption of, or taking subject to, a liability) by the partnership and if, based on all the facts and circumstances, the transfer of money or other consideration would not have been made but for the transfer of the property and, in cases in which the transfers are not made simultaneously, the subsequent transfer is not dependent on the entrepreneurial risks of partnership operations. n165 The facts and circumstances include:

- (1) whether the timing and amount of a subsequent transfer are determinable with reasonable certainty;
- (2) whether the transferor has a legally enforceable right to the subsequent transfer;

- (3) whether that right is secured in any manner;
- (4) whether any person has made, or is obligated to make, contributions or loans to the partnership or whether the partnership is obligated to borrow, in order to make the subsequent payment;
- (5) whether the partnership has sufficient liquid assets to make the subsequent payment; and
- (6) whether the partnership distribution provisions are designed to result in a transfer of the benefits and burdens of ownership away from the transferring partner. n166

The regulations provide that if the two transfers occur within a two-year period, the transfers are presumed to be a sale of the property to the partnership unless the facts and circumstances clearly establish that the transfers do not constitute a sale. n167

The regulations also require that partners and partnerships make disclosures to the Internal Revenue Service of transfers made within a two-year period that are not treated as a sale for federal income tax purposes. n168 Transfers that are more than two years apart are correspondingly presumed not to be a sale, unless the facts and circumstances clearly establish that the transfers do, in fact, constitute a sale. n169

An alternative manner in which to structure a transfer of property by a partner to a partnership would be to provide the transferor partner with a "guaranteed payment" or preferred return with respect to the transferred property. Treasury Regulations set forth the circumstances in which such a transaction will and will not be treated as a disguised sale. n170 The regulations provide that, notwithstanding the presumption set forth in *Regulations Section 1.707-3(c)* (relating to transfers made within two years of each other), a guaranteed payment that is determined without regard to the income of the partnership and is reasonable will not be treated as a sale unless the facts and circumstances clearly establish that the transaction should be treated as a sale. A similar rule applies to reasonable preferred returns. n171 Whether or not the amount of a guaranteed payment or preferred return is reasonable is determined by reference to a safe harbor interest rate equal to 150 percent of the highest applicable federal rate in effect at the time that the right to the preferred return or guaranteed payment is first established pursuant to a binding written agreement among the partners. n172

Once a transaction has been determined to be a sale or exchange between the partnership and a partner, additional rules come into play in determining the character and allowability of any gain or loss recognized on the sale. If the transaction is between the partnership and its controlling partner, between two partnerships under common control, or between the partnership and a party related to its controlling partner, any loss on the sale of property will not be recognized for tax purposes. For this purpose, control is defined as the ownership of more than 50 percent of the capital interests or profits interests in the partnership. n173 If the property is subsequently resold by the transferee at a gain, the gain will be taxable only to the extent that it exceeds the disallowed loss. n174

Example:

A owns a 60 percent interest in the capital and profits of both the AB No. 1 and AB No. 2 Partnerships. AB No. 1 sells a piece of land with an adjusted basis of \$15,000 to AB No. 2 for \$10,000. AB No. 1 will not be allowed to recognize the \$5,000 loss on this sale for tax purposes, since A owns more than 50 percent of the capital or profits of both partnerships. However, if AB No. 2 subsequently sells the property to an unrelated third party for \$16,000, it will only recognize a \$1,000 gain (\$6,000 gain realized, less the previously disallowed \$5,000 loss). The loss would also have been disallowed if A had owned 11 percent of AB No. 1 and 49 percent of AB No. 2, and B had owned 49 percent of AB No. 1 and 11 percent of AB No. 2.

The character of income or gain realized on a sale of property by a partner to a partnership is also affected by the

partner's degree of ownership of the partnership. Gain on the sale or exchange of property between a partner and a controlled partnership (i.e., where the partner owns, directly or indirectly, more than 50 percent of the capital interest or profits interest in the partnership) or between two controlled partnerships, is treated as ordinary income if the property: (1) is not a capital asset in the hands of the transferee; or (2) is depreciable in the hands of the transferee. n175 The ordinary income characterization of gain realized on the transfer of depreciable property is *not* limited to depreciation recapture in the hands of the transferor partner.

Example:

X, who has an 85 percent capital and 50 percent profit-and-loss interest in the XY Partnership, sells a building constructed on a 50-year ground lease to the XY Partnership at a gain of \$15,000. Since X has more than a 50 percent interest in the capital of XY and the partnership intends to hold the building as rental property, X's gain will be taxable as ordinary income.

Planning Note:

The special rules are applicable only if the partner or partners involved have a greater than 50 percent interest in capital or profits. Accordingly, the capital and profits interest of the partners should be determined accurately. The accounting records of the partnership, as well as the partnership agreement, should be carefully reviewed before a major sale or exchange between "related persons." A guaranteed payment does not constitute an interest in partnership profits for purposes of *IRC Section 707(b)*. n176 However, a partner's right to receive a preferred or priority return may cause that partner to have a greater interest in the partnership's profits than its residual percentage interest in partnership profits, and a partner who is also a lender to a partnership may have a greater than anticipated interest in partnership capital if the loan is recharacterized as an equity investment under traditional "debt versus equity" principles.

[2] Payments to Partners for Services

Amounts received by a partner who is also rendering services to the partnership can similarly be characterized either as:

- (1) payments to a partner in a capacity other than as a partner;
- (2) guaranteed payments to a partner for services rendered as a partner; or
- (3) a distribution of partnership cash and a corresponding allocation of profits.

The determination of the category into which the amount received by a partner providing services to the partnership fits will affect the timing and character of the partner's income recognition as well as the timing and character of the partnership's tax accounting for the item. A partner who receives a payment for services rendered to the partnership in a non-partner capacity realizes ordinary income, and accounts for that ordinary income on the basis of its own accounting method. n177 Accordingly, a cash method partner does not include such amounts in income until actually or constructively received. Conversely, a partner rendering services to a partnership in its capacity as a partner that receives a guaranteed payment for those services must include the payment as ordinary income for its taxable year within or with which ends the partnership taxable year in which the partnership deducted (or capitalized) such payments as paid or accrued under its method of accounting. n178

Guaranteed payments made to a partner, and direct payments made to a partner who engages in a transaction with the partnership in a capacity other than as a partner, are similarly treated as payments made to a nonpartner (that is, the payments are capitalized, amortized or deducted by the partnership). n179 The timing of the partnership's deduction or accrual is affected both by its accounting method and by the rules relating to deferred payments for the use of property

or services. n180 On the other hand, *allocations* of income to a partner are generally not susceptible to capitalization, and the character of the amount allocated to the partner is determined by the character of the amounts received by the partnership. Accordingly, if a partner is providing services to a partnership in its capacity as a partner, and receives an allocation of partnership income and gain, the partner will recognize its pro rata share (based on the allocation) of the partnership's ordinary income, tax-exempt income, or capital gain. This provides a substantial tax incentive for the general partner of a partnership investing in real estate that expects to receive a substantial portion of its economic return in the form of long-term capital gains on the ultimate disposition of its real estate, to structure its share of the partnership's economic profits as an allocation, rather than as a guaranteed payment.

However, if a partner performs services for, or transfers property to, a partnership and receives a "related direct or indirect" allocation and distribution, the transaction may be treated as a transaction between the partnership and someone who is not a partner. n181 Therefore, if a direct payment for the property or services would be a capital expenditure by the partnership, it receives the same treatment even though the payment is in the form of an allocation of partnership income and distribution of partnership cash flow. The purported allocation to the partner performing the services or transferring property is also disregarded in determining the partner's share of partnership taxable income or loss.

Guaranteed payments are payments to a partner for services or for the use of capital which are determined without regard to the income of the partnership. In *Pratt v United States*, n182 the Court of Appeals held that payments based on a percentage of *gross* income were made *with* regard to partnership income and, therefore, were not guaranteed payments. However, the Service has since ruled that payments based on a percentage of gross income, as were involved in *Pratt*, **do** constitute guaranteed payments. n183 A guaranteed payment would be ordinary income to the partner receiving the payment, even if the partnership's only income was long term capital gains. Guaranteed payments are treated as payments made to a third party for purposes of determining the partner recipient's gross income and the partnership's trade or business expenses. n184 For all other purposes, guaranteed payments are treated as a partner's distributive share of ordinary income of the partnership. Thus, guaranteed payments for services are not subject to wage withholding, are not eligible for exclusion on the basis of the disability provisions of the Code, are not treated as wages for purposes of the deferred compensation provisions of the Code, etc. n185

Example:

Assume X is a 1 percent general partner in a limited partnership. X syndicates the partnership and provides certain services that normally would have resulted in considerable syndication costs. The partnership agreement provides that X is allocated the first \$200,000 of partnership gross income and is to be distributed \$200,000 of cash. In 1995, the partnership has \$600,000 of gross income and \$1 million of deductions, including depreciation, resulting in a net loss of \$400,000. If the allocation of \$200,000 of gross income to X is treated as such, the loss available to the limited partners would be increased by \$200,000.

	X	Limited Partners	X and Limited Partners
Gross income--	\$200,000	\$.....	\$.....
.....specially		--	..200,000
.....allocated			
Gross income--	4,000	396,000	400,000
.... remaining			
Deductions	(10,000)	(990,000)	(1,000,000)
	\$194,000	\$ (594,000)	\$.....
			..(400,000)

Therefore, although the net loss of the partnership is still \$400,000, by allocating \$200,000 of gross income to *X*, the loss allocated among the limited partners is increased to \$594,000. This is the same result that would have been reached if the \$200,000 could have been deducted by the partnership, although no such deduction is allowable because the payment is for nondeductible expenses. n186

However, because of the relationship of the \$200,000 allocation and the \$200,000 distribution to the services performed by *X*, the \$200,000 gross income allocation to *X* is treated in the same way as a direct payment to *X*. Therefore, the partners are allocated a net loss of only \$400,000, and the partnership is treated as having made a \$200,000 nondeductible payment for syndication.

A transfer of partnership property in satisfaction of a partnership's obligation to make a guaranteed payment is treated as a sale or exchange, n186.1 rather than a partnership distribution to the partner under *IRC Section 731*. Accordingly, the partnership must recognize gain or loss on the transfer, and the nonrecognition rule for partnership distributions n186.2 does not apply to the transfer. n186.3

Example:

X Partnership purchased Blackacre for \$500x. *A*, a partner in *X* Partnership, is entitled to a guaranteed payment of \$800x. Subsequently, when the fair market value of Blackacre is \$800x and *X* Partnership's adjusted basis in Blackacre is \$500x, the partnership transfers Blackacre to *A* in satisfaction of the guaranteed payment. *X* Partnership realizes a \$300x gain on the transfer, the difference between its adjusted basis in the property (\$500x) and the property's fair market value (\$800x). n186.4

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.10

§ 14.10 Computation of Partnership Income, Reporting of Partnership Items by Partners, and Filing of Return

The partnership itself is not a taxable entity for federal income tax purposes; however, it does file an informational tax return on which it must account for various categories of income, gain, loss, deduction or credit, and must compute taxable income or loss exclusive of those items that must be accounted for separately. n187

Income of a partnership is computed in the same manner as that for an individual, n188 except that certain deductions allowed to individuals are excluded from the computation of partnership taxable income. Additionally, *IRC Section 448* restricts the use of the cash method of accounting for partnerships. Partnerships that have a C corporation partner (other than qualified service corporations, such as medical, legal, engineering and accounting firms) must use the accrual method of accounting. Exceptions are made for partnerships that have average annual gross receipts for all prior taxable years of not more than \$5 million. n189 The following deductions available to individuals are not allowed in the computation of partnership income: n190

- deduction for personal exemptions;
- deduction for taxes paid to foreign countries and possessions of the United States;
- deduction for charitable contributions;
- net operating loss deduction;
- deduction for medical expenses, expenses for production of income, alimony payments, etc.; and
- depletion deduction.

Although the above deductions are not allowed in the computation of partnership taxable income, the deduction for foreign taxes and charitable contributions n190.1 are taken into account separately, and each partner reports his distributive share of each item on his individual income tax return. The following items are also to be taken into account separately by the partners when computing their taxable incomes: n191

- short-term capital gains and losses;

- long-term capital gains and losses;
- gains and losses from sales of property used in a trade or business or involved in an involuntary conversion;
- dividends that are eligible for capital gains treatment under *IRC Section 1(h)(11)*, or dividends to which the statutory dividends-received deduction provisions apply; n191.1 and
- other items that are specially allocated or must be taken into account separately by the partners. n192

Each partner reports his distributive share of the above items as if they were paid or earned individually; therefore, each item retains the same character in the hands of the partner as that item had in the hands of the partnership. These rules prevent a taxpayer from using the partnership to claim a deduction in excess of the amount allowable on his individual return. n193 Partners are taxable on their distributive share of partnership income whether or not that income is distributed to them. n193.1 Partners are also taxable on their distributive shares of partnership income when realized by the partnership, despite a dispute among the partners as to their respective distributive shares. n193.2

Since the character of income and deductions is determined at the partnership level, if a real estate dealer invests in a partnership with several other partners to purchase land as an investment and hold it for capital appreciation, the gain on the sale of the land is determined at the partnership level and is capital gain to the partner. Accordingly, using partnerships allows an individual with several different types of business activities to segregate them so as to maximize its ability to claim appropriate tax benefits. Likewise, interest paid on debts incurred by the partnership to carry on this investment would be characterized as investment interest expense instead of interest incurred in an active trade or business. n194

The partnership must file an informational return of income within three and one-half months after the close of its taxable year, unless it is granted an extension of time to file. n195 No federal income tax is payable with a partnership return. If a partnership fails to file a timely return (with regard to extensions) or files a return that fails to show required information, n195.1 in addition to any other penalties under *IRC Section 7203* (relating to willful failure to file a return), the partnership is liable for a monthly penalty for each month (not exceeding 12 months) that the failure continues, unless that failure is due to reasonable cause. n195.2 The monthly penalty is \$195 multiplied by the number of persons who were partners in the partnership during any part of the taxable year. n195.3 The penalty is imposed against the partnership, n196 but as a partnership liability will be a personal liability of any partners who are personally liable for debts of the partnership. Partnerships with ten or fewer partners will not be subject to this penalty where each partner files a detailed statement of his or her share of partnership income and deductions with his or her own return. This exception will only be available if the partnership can establish that all partners have fully reported their shares of the income, deductions and credits of the partnership on their timely filed income tax returns. n197

Procedures for the audit of partnerships and partners are set forth in *IRC Sections 6221-6233*. Generally, these rules require that a partner must file a tax return that is in agreement with the information furnished on Form K-1. n198 Further, the procedures provide for a single proceeding at the partnership level to determine the correct tax characterization of partnership items. Certain large partnerships are not subject to these requirements. n199

Individuals, closely-held corporations, personal service corporations and certain other taxpayers engaged in a trade or business in which they do not materially participate, in rental activity, or in some other passive activity, are subject to the passive loss limitation rules of *IRC Section 469*. In essence, passive activity losses generally cannot offset nonpassive income; rather, such losses offset passive activity income instead. For a discussion of the passive activity loss rules, see Chapter 13.

Due to the pass-through nature of partnerships, partners are generally subject to the passive loss rules. The holder of a limited partnership interest generally is deemed not to materially participate in the limited partnership activities. n200 In the case of publicly-traded partnerships that are not treated as corporations under *IRC Section 7704*, the passive loss rules are applied separately for the items attributable to each publicly-traded partnership. n201

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.11

§ 14.11 Allocations of Partnership Income and Deductions

One of the principal advantages of the partnership form of organization is the flexibility that the partners enjoy in sharing the profits, losses, cash flow and ultimate gains from the sale of the partnership property. For example, the partnership agreement may provide for certain otherwise equal partners to receive a greater share of current cash distributions in return for a smaller share in the ultimate appreciation of the partnership property, or for other otherwise equal partners to bear a greater risk of economic loss from partnership operations while enjoying a greater share of the economic profits.

The general rule is that partners can allocate income or loss, including certain specific items of income, gain or loss, in whatever manner they wish, as long as the allocation has "substantial economic effect." n201.1 What is substantial economic effect? Under the Treasury regulations, taxable income or loss of a partnership must be allocated in the same manner in which the partners have agreed to share the corresponding economic benefits and burdens. As a general matter, partners cannot agree to make an allocation for tax purposes only, n202 although in the case of certain credits, such as low income housing tax credits, such an allocation is, in effect, permitted. n203 As a general rule, the economic effect of an allocation (or allocations) is substantial if there is a reasonable possibility that the allocation (or allocations) will affect substantially the dollar amounts to be received, independent of tax consequences. n203.1 Even if the allocation affects substantially the dollar amounts, the economic effect of the allocation (or allocations) is not substantial if, at the time the allocation (or allocations) becomes part of the partnership agreement, (1) the after-tax economic consequences of at least one partner may, in present value terms, be enhanced compared to those consequences if the allocation (or allocations) were not contained in the partnership agreement, and (2) there is a strong likelihood that the after-tax economic consequences of no partner will, in present value terms, be substantially diminished compared to those consequences if the allocation (or allocations) were not contained in the partnership agreement. n203.2

For example, assume that Partner A and Partner B each contribute \$50,000 to partnership AB for it to use as a down payment for the purchase of a building. The balance of the purchase price will be borrowed on a nonrecourse basis. Although AB is intended to be essentially a 50-50 partnership, assume that Partner A wants to be allocated all the depreciation on the property for the first four years, which will be \$100,000. As long as the burden of the first \$100,000 of economic depreciation is charged to that partner, the special allocation would generally be respected. At the end of four years, the capital accounts of the partnership will appear as follows (assuming no other activity):

A	B	Total

1-14 Federal Taxes Affecting Real Estate § 14.11

Original contribution			
	.	.	\$100,000
	\$50,000	\$50,000	
Depreciation	(100,000)	--	(100,000)
Balance	[50,000)	\$50,000	--

If the partnership then sold the building at its net book value of \$50,000, there would be no gain to be allocated to the partners and no cash to be distributed to them (the cash proceeds from the sale would be paid over to the lender). In order for the special allocation of the depreciation to have substantial economic effect, Partner A would have to have an obligation to contribute \$50,000 to the partnership in satisfaction of its negative capital account. The proceeds of this contribution, in turn, would be distributed to Partner B *in respect of its positive capital account balance*. Accordingly, the final capital accounts of the partnership will be:

	A	B	Total
Prior balance	(\$50,000)	\$50,000	\$.....
			--
Contribution	50,000	\$.....	50,000
		--	
Distribution		(50,000)	(50,000)
	..--		
Final balance	--	--	--

In summary, A bears the economic burden for the entire \$100,000 of depreciation deduction that was incurred by the partnership and specially allocated to A.

Partner A may be willing to undertake an obligation to contribute to the partnership to satisfy its negative capital account because, it is hoped, that the property will appreciate in value. If it does, Partner A can be allocated the first sufficient portion of the gain from the sale of the property in order to recoup the depreciation losses and eliminate the capital account disparity. If the gain is capital in nature, A has successfully converted an ordinary loss to a capital gain. This is often the motivation for agreeing to accept the risk of claiming the depreciation expense. Assume that the partnership does realize a \$200,000 gain on the sale of the property; the capital accounts may be summarized as follows:

	A	B	Total
Balance before sale	(\$50,000)	50,000	\$.....
			--
Special allocation of gain to Partner A	100,000	--	100,000
Remaining gain	50,000	50,000	100,000
Cash distribution	(100,000)	(100,000)	(200,000)
Final balance	--	--	--

If an allocation does not have substantial economic effect (or if the partnership agreement makes no provision for

allocating the items in question), it will be shared in accordance with the partners' respective interests in the partnership, which are determined by taking into account all "facts and circumstances." n204 Relevant facts and circumstances include a partner's interest in cash flow and its right to distribution of capital upon liquidation.

The Service has issued regulations under *IRC Section 704(b)*, defining "substantial economic effect." n205 Generally, these rules require that a partner's capital account reflect the economic realities of transactions; that deficits be made up; and that liquidation and distribution rights follow the capital accounts. The Service has also provided specific rules for allocations of losses funded by nonrecourse debt. n206 These rules are complex and require an annual comparison of the principal balance of the nonrecourse debt with the adjusted basis of the property, in order to confirm that the allocations remain within the amount of gain that would be recognized by the partnership if it sold the assets encumbered by the nonrecourse liability for no consideration (other than the deemed consideration attributable to the liability).

The Service has also issued regulations providing guidance as to the proper method of allocating depreciation recapture among partners. n207 The new regulations seek to insure, to the extent possible, that a partner recognizes recapture on the disposition of depreciable property in an amount equal to the depreciation or amortization deductions from the property previously taken by that partner.

[1] Retroactive Allocations

Partnership income, gains, losses, deductions, and credits for a year must be prorated among partners according to the length of time during the year for which they held their partnership interests. n208 This rule prevents partnerships from admitting a new partner toward the end of the taxable year and then allocating a full share of the partnership losses to the partner for the entire year.

The Code provides rules pursuant to which the partnership items of income shall be allocated pursuant to the "varying interest" rule. These rules require that, in general, cash basis items such as interest, taxes and payments for services or for the use of property must be apportioned over the days in the partnership's taxable year to which they are attributable, with the portion attributable to each day then being allocated among the partners in proportion to their interests in the partnership at the close of that day. n209 The Code also applies rules for the allocation of cash basis items attributable to periods not within the taxable year, including items attributable to prior periods and provides that, in general, a partner in an upper tier partnership shall receive allocations of items generated by a lower tier partnership by first allocating the items of the lower tier partnership to the upper tier partnership in accordance with the upper tier partnership's varying interest in the lower tier partnership and then reallocating those items to the partners in the upper tier partnership using similar principles. n210

This "varying interest" rule applies only if a shift occurs in the capital interests of the partners. Such a shift may occur, for example, after a new partner is admitted to the partnership. If there is no shift in the capital interests during the year, the partnership agreement may be amended at the end of the year and profits and losses may be reallocated, at least in the case of partners who have been members of the partnership for the entire taxable year. The amendment must be made on or before the due date (unextended) of the partnership's tax return for the year. n211

However, where a change occurs in a partner's capital interest in a partnership, the distributive shares of the partners are determined by either: (1) prorating partnership items over the year as if they were earned or incurred ratably; or (2) allocating such items through an interim closing of the partnership's books, in which the items of income and deduction are allocated to different segments of the year under the partnership's regular method of accounting. n212

When a partnership interest is owned by another partnership, a "tiered" arrangement exists. A tiered arrangement is frequently used in a real estate partnership either to create an entity through which several general partners will hold their interests, so that reallocations and decisions involving the general partner interests can be made without involving

the limited partners, or to form a vehicle pursuant to which a group of investors can invest in a larger real estate fund, again to provide them with a mechanism through which they can make decisions about their partnership interests without needing to obtain the agreement of the larger entity. This arrangement could easily lend itself to abuse. For example, if a change occurred in the ownership of the upper-tier partnership, the ownership of the lower-tier partnership would be unaffected, and the change would not be subject to *IRC Section 706(d)*. To prevent this type of abuse from occurring, the Code provides that when a change occurs in a partner's interest in an upper-tier partnership, the distributive shares of the partners in the upper-tier partnership attributable to a lower-tier partnership must be determined on a per-partner, per-day basis. n213

[2] COD Income Allocations

A problem frequently encountered by an unsuccessful real estate venture is the need to restructure the partnership's ownership, indebtedness and operations in a way that enables the venture to remain viable, provides equitable allocations of values as between lenders and owners, and yet still allows the partners in the owning partnership to avoid the severe tax burdens that would result from an actual disposition of the partnership's property through a foreclosure or deed-in-lieu-of-foreclosure. One way in which this problem is sometimes addressed is for there to be an agreement between the partnership borrower and its lenders pursuant to which a portion of the partnership's indebtedness is canceled, generally in connection with the lender's acquiring an equity interest in the partnership. The cancellation of indebtedness may result in taxable cancellation of indebtedness (COD) income to the partnership and its partners. n214 The exceptions to the COD income rules for debt cancellation that occurs when a taxpayer is bankrupt or insolvent are applied at the partner level, not the partnership level. n215 Accordingly, the manner in which the COD income realized by the partnership is allocated among the partners may have a material effect on the overall amount of tax that will be paid by the partners with respect to the debt cancellation. Accordingly, if the partner's desire is to allocate COD income in a manner that varies from the partner's allocable shares of overall partnership profits (i.e., an allocation to a partner of a share of the partnership's COD income that differs from the partner's share of canceled debt under *IRC Section 752(b)*), it is necessary to determine whether such an allocation will be respected as having "substantial economic effect."

Example:

Assume that *A* contributes \$100 and *B* contributes \$900 to form *AB*, a general partnership. The partners' shares of the partnership's losses are 10 percent and 90 percent, respectively, and their shares of the partnership's income are 50 percent each. The partnership maintains capital accounts in accordance with the rules under the *IRC Section 704(b)* regulations, and the partners agree to liquidate partnership assets according to positive capital account balances. *A* and *B* do not agree to an unconditional deficit restoration obligation. However, both partners agree to a qualified income offset and are treated as having a limited obligation to restore their deficit capital accounts by reason of their liability to the partnership's creditors.

AB purchases property for \$10,000 from an unrelated seller, paying \$1,000 in cash and borrowing \$9,000 from an unrelated bank. The note is a recourse obligation of the partnership, the principal of which is due and payable in six years. The property generates \$2,000 of depreciation each year for five years. All other partnership deductions equal partnership income so that at the end of five years, the partnership has cumulative losses of \$10,000, allocated \$1,000 to partner *A* and \$9,000 to partner *B*. The losses reduce *A*'s capital account to negative \$900 and *B*'s capital account to negative \$8,100. At the beginning of year 6, after the fair market value of *AB*'s property has substantially decreased, the creditor cancels the debt and takes the building in exchange as part of a workout arrangement. Because the debt has been canceled, *A* and *B* are no longer treated as being obligated to restore their negative capital accounts.

The allocation of COD income of \$9,000 in a 50/50 ratio would result in *A*'s having a capital account of

\$3,600 and B's having a negative capital account of \$3,600 (allocation of \$4,500 to each partner). This allocation of income cannot have substantial economic effect even though the partners maintain capital accounts and liquidate according to positive capital accounts. This is because the cancellation of indebtedness eliminates justification for treating the partners as being obligated to restore their negative capital accounts and creates a situation in which neither partner has an independent deficit restoration obligation that can require a cash contribution to satisfy the other partner's positive capital account. Because of the lack of an independent deficit restoration obligation, A cannot enjoy the economic benefit of an allocation of COD income exceeding its negative capital account of \$900. Absent a deficit restoration obligation that can be invoked to satisfy another partner's positive capital account, the above allocation will not have economic effect unless COD income is allocated \$900 to A and \$8,100 to B; the same as the losses were originally allocated. n216

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.12

§ 14.12 Partnership Distributions

Distributions from a partnership are characterized for tax purposes either as "current" or "liquidating" distributions. These two different types of distributions can have different tax consequences; therefore, before attempting to determine the tax consequences of a distribution, it is necessary to determine the type of distribution involved. A liquidating distribution is one distribution, or a series of distributions, that terminates a partner's interest in a partnership. A current distribution includes any distribution other than a liquidating distribution. n217

Generally, current and liquidating distributions of partnership property, other than money, do not result in taxable gain to the receiving partner. Therefore, the partner will not recognize any gain with respect to the distributed property until the property is sold by him. However, to the extent that distributions of money exceed a partner's basis in the partnership, the partner will realize a gain. n218 Distributions of marketable securities, and liabilities of the partnership of which the partner is relieved are treated as distributions of money for this purpose. n219 Marketable securities are taken into account at their fair market value on the date of the distribution. n219.1 For example, if a partner has a tax basis in its partnership interest of \$10,000 and receives a cash distribution of \$9,000, together with property (not consisting of marketable securities) having a fair market value of \$6,000, no gain is recognized by the partner, since the cash did not exceed the basis of its partnership interest. If \$13,000 in cash had been distributed, the partner would recognize a gain of \$3,000 (\$13,000 cash received, less \$10,000 basis in the partnership interest). n219.2 When property is distributed, its basis to the receiving partner will normally be adjusted. The basis of the distributed property is also affected by the determination whether the distribution is a distribution in liquidation of a partner's interest, or is a non-liquidating distribution. n219.3 (See *Section 14.12[1]*, below, for a discussion of the basis of property received.)

A partner recognizes loss on a distribution only when the distribution is in liquidation of the partner's entire interest in the partnership, and then only in certain instances. Generally, no loss will be recognized on a current distribution. A loss can be recognized only when money, unrealized receivables, and appreciated inventory are the only properties distributed and the distribution is in complete liquidation of a partner's interest in the partnership. In such case, the loss is equal to the amount by which the basis of the partner's interest in the partnership exceeds the amount of money distributed, plus the basis to the partner of unrealized receivables and appreciated inventory distributed. n220

Example:

Partnership A distributes \$5,000 in cash, unrealized receivables and appreciated inventory to X in complete liquidation of its partnership interest. The unrealized receivables and appreciated inventory

have a basis to X of \$7,000. X's basis in the partnership is \$20,000 before the distribution. X's loss is computed as follows:

Basis in Partnership		\$20,000
A		
Cash received	\$5,000	
Basis in unrealized receivables and appreciated inventory	7,000	(12,000)
X's recognized loss		\$8,000

If a partner receives property other than money, unrealized receivables, or inventory items in a distribution, no loss is recognized even in a distribution in complete liquidation of a partnership interest. n221

Distributions made by a partnership in complete liquidation of a partner's interest can be made in a series of distributions. n222 When such a series of distributions is made, however, it is often difficult to distinguish between a current distribution, upon which no loss could be recognized, and one of a series of distributions in liquidation of the partner's entire interest. As a practical matter, making a distinction between the two will often be aided by the execution of a written agreement among the partners, setting forth the nature (and amounts) of the distributions to be made.

As a general rule, the partnership will not recognize any gain or loss on distributions of money or other property to the partners. n223 However, exceptions to this rule operate when the partnership makes certain payments to a retiring partner or a deceased partner's successor in interest, or, in some cases, when the partnership has unrealized receivables or substantially appreciated inventory. n224 In addition, a transfer of partnership property in satisfaction of a partnership's obligation to make a guaranteed payment under *IRC Section 707(c)* is a sale or exchange, n224.1 rather than a distribution within the meaning of *IRC Section 731*. Accordingly, the partnership must recognize gain or loss on the transfer, and the nonrecognition rule for partnership distributions n224.2 does not apply to the transfer. n224.3

[1] Basis of Property Distributed Other Than Money

[a] In General

The basis of property received by a partner in a distribution by a partnership is determined according to the type of distribution involved (i.e., current or liquidating). In a current distribution, the basis of the property received will be the adjusted basis of the property in the hands of the partnership. The total basis of all property received by a partner is limited, however, to the partner's adjusted basis in his partnership interest, reduced by any money received in the transaction. n225

Example:

Assume that a partner has an adjusted basis of \$10,000 for its partnership interest. The partner receives a current distribution of property with an adjusted basis to the partnership of \$8,000 and cash of \$4,000. The basis of the distributed property to the partner would be \$6,000 (\$10,000 basis in its partnership interest, less \$4,000 cash received). If the partner's adjusted basis in its partnership interest was \$20,000 immediately before the distribution, his adjusted basis for the property would be \$8,000 (the adjusted basis of the property in the hands of the partnership). n225.1

The basis of the property received by a partner in liquidation of its entire interest in a partnership is equal to the adjusted

basis of its interest in the partnership, reduced by the amount of money received by the partner in the same transaction. n226 When more than one item of property is distributed in liquidation of a partner's entire interest in the partnership, the partner's adjusted basis in its partnership interest must be allocated among the various items of property. Basis is allocated first to any unrealized receivables (as defined in *IRC Section 751(c)*) and inventory property, and then to any other property distributed by the partnership. To the extent that the basis to be allocated is less than the sum of the adjusted bases of the unrealized receivables and inventory items, then the required decrease in basis is allocated first to assets with unrealized depreciation in proportion to their respective amounts of unrealized depreciation, and then in proportion to the adjusted basis of those properties. n226.1 To the extent that the basis remaining after the allocation of basis required with respect to unrealized receivables and inventory requires an increase in the basis of the partnership's properties, the increase is allocated first to properties with unrealized appreciation, in proportion to the respective amounts of unrealized depreciation, and thereafter to the properties in accordance with their fair market values. n227

Example:

Assume that Partnership A distributes to X \$2,000 in cash, unrealized receivables with a basis to the partnership of \$8,000 and a fair market value of \$10,000, a parcel of undeveloped land with a basis to the partnership of \$12,000 (and a fair market value of \$9,000), and marketable securities with a basis to the partnership of \$6,000 (and a fair market value of \$3,000), in complete liquidation of X's partnership interest. Before the distribution, X had a \$22,000 tax basis in its partnership interest. X's basis in the items distributed is computed as follows: n227.1

X's basis in Partnership A	\$22,000
Less--Money received	(2,000)
Basis to be allocated	20,000
Less--Basis of unrealized receivables	(8,000)
Basis to be allocated between undeveloped land and marketable securities	\$12,000

Basis of Land and Marketable Securities

Partner's Basis for Partnership Interest	Partnership Basis for Assets	Unrealized Depre- ciation	Allocated Decrease	Partners's Basis for Assets
	Land.....	\$3,000	\$3,000	\$9,000
	\$12,000			
	Secur- ity.....\$6, 000	\$3,000	\$3,000	\$3,000
\$12,000	\$18,000	\$6,000	\$6,000	\$12,000

A partner who acquires a partnership interest with respect to which an *IRC Section 754* election is not in effect, and to whom a distribution of property (other than money) is made with respect to the transferred interest within two years, may elect to treat as the adjusted partnership basis of that property the adjusted basis the property would have if the optional adjustment to partnership property under *IRC Section 743(b)* were in effect with respect to partnership property. n227.2 An adjustment under this special basis rule is required for a distribution to a partner if, at the time of the partner's acquisition of the transferred interest, all of the following are met: n227.3

- the fair market value of all partnership property (other than money) exceeded 110 percent of its adjusted basis to the partnership;
- an allocation of basis under *IRC Section 732(c)* upon a liquidation of the partner's interest immediately after the transfer of the interest would have resulted in a shift of basis from property not subject to an allowance for depreciation, depletion or amortization, to property subject to such an allowance; and
- a basis adjustment under *IRC Section 743(b)* (relating to optional adjustments to the basis of partnership property upon the transfer of an interest in the partnership) would change the basis to the transferee partner of the property actually distributed.

The partnership must provide transferees with information necessary for them to compute basis adjustments under *IRC Section 732(d)*. The information must be provided if a transferee notifies the partnership that it plans to make the election under *IRC Section 732(d)* or if the partnership makes a distribution requiring mandatory application of *IRC Section 732(d)*. n227.4

[b] Distributions by a Partnership to a Corporate Partner of Stock in Another Corporation

If a partnership distributes to a corporate partner the stock of another corporation as part of a distribution, the corporate partner may have to reduce the basis in the assets of the corporation whose stock it received. The basis reduction is specified by statute and is required if, after the distribution, the corporate partner controls the distributed corporation, and the partnership's adjusted basis in the stock immediately before the distribution exceeded the corporate partner's adjusted basis in the stock after the distribution. n227.5 The determination of whether a corporate partner has control of a distributed corporation for this purpose is made by applying the consolidated group aggregate stock ownership rules. n227.5.1

The amount of the reduction in basis of property of the distributed corporation generally equals the amount of the excess of: (1) the partnership's adjusted basis in the stock of the distributed corporation immediately before the distribution, over (2) the corporate partner's basis in that stock immediately after the distribution. n227.6 The amount of the basis reduction is limited in two respects. First, the amount of the basis reduction may not exceed the amount by which: (1) the sum of the aggregate adjusted bases of the property and the amount of money of the distributed corporation exceeds (2) the corporate partner's adjusted basis in the stock of the distributed corporation. n227.7

Example:

The stock of corporation D is distributed to corporate partner C. D has cash of \$300 and other property with a basis of \$600, and C's basis in the stock of the D is \$400. The basis reduction cannot exceed \$500 (i.e., [\$300 + \$600] - \$400). n227.8

Second, the amount of the basis reduction may not exceed the adjusted basis of the property of the distributed corporation. Thus, the basis of property (other than money) of the distributed corporation cannot be reduced below zero under the provision, even though the total amount of the basis reduction would otherwise be greater. n227.9

The basis reduction is allocated among assets of the controlled corporation in accordance with the rules provided under *IRC Section 732(c)*. n227.10 The reduction in basis is applied to any property held by the distributed corporation immediately after the distribution, or, if the corporate partner does not control the distributed corporation at that time, then at the time the corporate partner first has that control. n227.11 The basis reduction is not made to any distribution in which the corporate partner does not have control of the distributed corporation immediately after the distribution and establishes that the distribution was not part of a plan or arrangement to acquire control. n227.12

If a corporation acquires (other than in a distribution from a partnership) stock, the basis of which is determined (by reason of being distributed from a partnership) in whole or in part by reference to *IRC Sections 732(a)(2)* or *732(b)*, then the corporation is treated as receiving a distribution of stock from a partnership. n227.13

Example (1):

P, a partnership, distributes real estate to a corporate partner C. C contributes the real estate to another corporation, D, in an *IRC Section 351* transaction. The stock which C receives in the *IRC Section 351* transaction is not treated as distributed by P, and the basis reduction under *IRC Section 732(f)* is not done. n227.14

Example (2):

P, a partnership, distributes stock of corporation C to two corporate partners, R and S, neither of which has control of C. R and S merge, and the survivor obtains control of C. The stock of C, which is acquired as a result of the merger, is treated as received in a partnership distribution; the basis reduction rule of the *IRC Section 732(f)* therefore applies. n227.15

In the case of tiered corporations, a special rule applies. If the property held by a distributed corporation is stock in a corporation that the distributed corporation controls, then the basis of the property of that controlled corporation is reduced. The provision is also reapplied to any property of any controlled corporation that is stock in a corporation that it controls. n227.16

In addition, the corporate partner receiving the stock in the distribution must recognize long-term capital gain to the extent that the amount of the basis reduction exceeds the basis of the property (other than money) of the distributed corporation. The corporate partner's adjusted basis in the stock distributed is increased in the same amount. n227.17 As used here, the term "control" means ownership of stock meeting the requirements of *Internal Revenue Code Section 1504(a)(2)* (generally, an 80-percent vote and value requirement). n227.18

[2] Gain or Loss on Disposition of Distributed Property

The nature of gain or loss (capital vs. ordinary) on a partner's disposition of distributed property is generally determined by reference to the character of the property in the hands of the distributee partner. The holding period to be used in determining the gain or loss includes the partnership's holding period with respect to that property. n228 Thus, a partner with a short-term holding period for its partnership interest will recognize a long-term capital gain on the sale of a capital asset distributed by the partnership to the partner, if the partnership has a long-term holding period for that asset.

A sale by a partner of inventory items (as defined in *IRC Section 751(d)*) acquired in a distribution from a partnership results in ordinary gain or loss if sold or exchanged by the distributee partner within five years from the date of the

distribution, regardless of the character of the property in such partner's hands. n229 After the inventory items have been held by the partner for a period of five years, gain on the sale of the items is determined by the character of the items in the hands of the partner. Thus, if a real estate partnership engaged in a condominium conversion distributes condominium units to its partners, the sale of the condominium unit by the distributee partner within five years after the date of distribution would produce ordinary income to the distributee partner, even if it held the condominium as a capital asset, because the condominium unit constituted inventory in the hands of the partnership. However, if the distributee partner uses the condominium as his or her principal residence, gain on a subsequent sale of the condominium within the five-year period might be eligible for the exclusion provided in *IRC Section 121*.

When a partner disposes of property in a nonrecognition transaction, if his basis carries over to the new owner (e.g., in a gift situation), the income or loss character of the property also carries over to the new owner. Additionally, the character of any property received by the partner in a nonrecognition transaction, except for stock in a regular corporation, carries over. n230

[3] Distributions of Marketable Securities

Non-pro rata distributions of marketable securities are generally treated as distributions of cash. n231 As a result, such distributions generally result in the recognition of taxable gain to the distributee to the extent that the fair market value of such distributions exceeds the basis of such partner's interest in the partnership. This provision was enacted to prevent partners from being able to convert an illiquid, high value but low basis interest in a partnership into liquid marketable securities without recognizing the built-in gain.

CHAPTER 14 Partnerships and Limited Liability Companies *

*1-14 Federal Taxes Affecting Real Estate § 14.13***§ 14.13 Sale or Exchange of a Partnership Interest****[1] In General**

The measure of gain or loss on the sale of a partnership interest is the difference between the amount realized by the partner and the partner's adjusted basis in the partnership. n232 The character of the gain or loss is generally capital. The exception to this rule occurs when the partnership holds "Section 751 assets," such as unrealized receivables and substantially appreciated inventory. Money or other property received for these items are considered to be amounts realized from the sale or exchange of property other than a capital asset. n232.1 The income or loss realized by a partner on the sale or exchange of its interest in Section 751 property is the amount of income or loss from Section 751 property (including any remedial allocations) n232.2 that would have been allocated to the partner (to the extent attributable to the partnership interest sold or exchanged) if the partnership had sold all of its property in a fully taxable transaction for cash in an amount equal to the fair market value of that property. This fair market value, however, cannot be less than the amount of any nonrecourse indebtedness to which the property is subject. n232.3 The difference between the amount of capital gain or loss that the partner would realize in the absence of *IRC Section 751* and the amount of ordinary income or loss determined under this rule is the transferor's capital gain or loss on the sale of its partnership interest. n232.4

Example:

A buys Y's interest in personal service partnership XY for \$17,000 when the balance sheet of the partnership (which uses the cash receipts and disbursements method of accounting) is as follows:

Assets	Adjusted Basis	Fair Market Value
Cash	\$5,000	\$5,000
Loans receivable	10,000	10,000
Other noninventory assets	7,000	11,000
Unrealized receivables	--	10,000
	--	--

1-14 Federal Taxes Affecting Real Estate § 14.13

	\$22,000_	\$36,000_
	_____	_____
	_____	_____
	_____	_____
	_____	_____
	_____	_____
	_____	_____
Liabilities and capital--		
Liabilities	\$2,000	\$2,000
Capital--		
Partner X	10,000	17,000
Partner Y	10,000_____	17,000_____
	_____	_____
	\$22,000_____	\$36,000_____
	_____	_____
	_____	_____
	_____	_____

The total amount realized by Partner Y is \$18,000, consisting of the purchase price (\$17,000) plus \$1,000, Partner Y's share of the partnership liabilities assumed by A. Partner Y's basis in his partnership interest is \$11,000 (\$10,000 capital account, plus \$1,000, Y's share of partnership liabilities). Therefore, Y has realized a \$7,000 gain (\$18,000 received, less \$11,000 basis) on the sale of his partnership interest.

The character of this gain will be determined under *IRC Section 751* because the partnership holds unrealized receivables. *IRC Section 751* states that the amount of money (or property) received in exchange for a partnership interest and attributable to unrealized receivables must be treated as ordinary income instead of capital gain. In this example, a portion of the purchase price was paid in exchange for Y's one-half interest in the unrealized receivables. Therefore, \$5,000 (one-half of the \$10,000 of unrealized receivables) of Y's gain will be ordinary income, and \$2,000 will be capital gain.

Several types of distributions of partnership property to a partner can be treated as a sale or exchange of the distributed property between the partner and the partnership. First, a sale occurs when a distributee partner receives "*IRC Section 751* property" (e.g., unrealized receivables and substantially appreciated inventory) in "exchange" for the partner's interest in the partnership. Similarly, a deemed sale occurs when a distributee partner receives cash, capital assets or property used in the trade or business in "exchange" for the partner's interest in "*IRC Section 751* property." n233 The distribution by a partnership of a lower tier partnership interest constitutes an exchange of that partnership interest for purposes of determining whether there has been a termination of the low tier partnership. See *Section 14.08[2]* above.

These rules do not apply if there are no *IRC Section 751* assets or if the distributee partner receives only its pro rata share of each category of assets of the partnership. The character of the gain or loss, as between the distributee partner and the partnership, depends on the nature of the assets distributed. Partnerships must file a separate information return for each *IRC Section 751(a)* exchange of an interest in that partnership. n234

Under certain circumstances, if a partnership distribution has the effect of reducing or eliminating built-in gain (i.e., the property had a fair market value that was greater than its tax basis in the hands of the contributing partner) associated with property contributed to the partnership, or causes a shifting of the built-in gain to partners other than the

contributing partner or to assets other than the contributed property, some or all of such built-in gain may become taxable at the time of the distribution. These rules most commonly apply to so-called "mixing-bowl transactions," where economic ownership of one asset is, in substance, exchanged for another asset through a series of partner/partnership transactions. One example of a mixing-bowl transaction would be a situation where low-basis, built-in gain property is contributed by one partner and cash is contributed by another partner. The low-basis property is subsequently distributed by the partnership to the partner who contributed cash, or the partnership distributes cash to the partner who contributed the property. Because of the general nonrecognition rules governing partnership contributions and distributions, this exchange of property rights through a series of partner/partnership transactions could generally occur tax-free. Accordingly, Congress enacted *IRC Section 704(c)(1)(B)* and *IRC Section 737* to prevent such perceived abuses of the partnership rules.

Under *IRC Section 704(c)(1)(B)*, if property is contributed to a partnership by one partner and distributed to another partner within seven years of the contribution, any built-in gain associated with such property is recognized at the time of the distribution (but only to the extent the gain would have been recognized under *IRC Section 704(c)* if the partnership had sold the property for its fair market value at the time of distribution).

In 1992, Congress recognized that *IRC Section 704(c)(1)(B)* could be subverted by simply structuring a transaction so that low-basis property would remain in the partnership and high-basis property would be distributed to the partner contributing low-basis property (accomplishing the same economic exchange of property rights). As a result, Congress enacted *IRC Section 737*, which provides that a distribution of property (other than a distribution of the property that was contributed by the distributee) within seven years of the contribution will trigger the recognition of built-in gain on the property contributed by the distributee partner to the extent of the lesser of:

- (1) the amount that would have been recognized under *IRC Section 704(c)(1)(B)* if the property that was contributed by the distributee partner had been distributed to another partner; or
- (2) the excess of the value of the distributed property (other than cash) over the tax basis of the distributee partner's interest in the partnership at the time of the distribution.

IRC Section 737 does not apply to constructive distributions caused by the technical termination of a partnership under *IRC Section 708(b)(1)(B)*.ⁿ²³⁵ In addition, neither *IRC Section 704(c)(1)(B)* nor *737* applies to an incorporation of a partnership by any method of incorporation (other than pursuant to a method involving an actual distribution of partnership property to the partners followed by a contribution of that property to a corporation), provided that the partnership is liquidated as part of the incorporation transaction.ⁿ²³⁶ Consequently, care should be exercised in structuring the incorporation of a partnership in situations where property has been contributed to the partnership within the preceding seven years, to ensure that an improper incorporation method does not prevent the achievement of the nonrecognition goals.

IRC Section 737 applies only to the extent that a transaction is a distribution under *IRC Section 731*. It does not apply, however, to the extent that the distribution is treated as a sale or exchange under *IRC Section 751(b)*.ⁿ²³⁷ The regulations also set forth additional transactions to which *IRC Section 737* does not apply;ⁿ²³⁸ clarify the manner of determining the amount of the excess distribution,ⁿ²³⁹ the amount of the net pre-contribution gain,ⁿ²⁴⁰ and the character of the gain recognized by the distributee partner under *IRC Section 737*,ⁿ²⁴¹ and specify the basis adjustments that must be made when *IRC Section 737* applies to a distribution.ⁿ²⁴²

There are many similarities between the types of situations where *IRC Section 704(c)(1)(B)* or *IRC Section 737* apply and situations where the disguised-sale rules apply, because both types of transactions involve transfers of property to a partnership that are linked in some manner to transfers of property from a partnership. In determining which set of rules applies to a particular transaction, all of the relevant facts and circumstances must be analyzed. As discussed above, if the transfers are so inextricably linked that they lack the economic substance of bona fide partner/partnership

transactions, the disguised-sale rules of *IRC Section 707(a)(2)(B)*, rather than *IRC Section 704(c)(1)(B)* or *IRC Section 737*, would apply. This result presumably would occur regardless of the amount of time that passes between the transactions. If instead, the contributing partner bears significant entrepreneurial risks of ownership during the period of time between the "contribution" and "distribution," and the transfers occur within a seven-year time period, the disguised sale rules would probably *not* apply, but *IRC Section 704(c)(1)(B)* or *IRC Section 737* would potentially apply.

The effect of being subject to the disguised-sale rules rather than *IRC Section 704(c)(1)(B)* or *IRC Section 737* can be significant. Under *IRC Section 707(a)(2)(B)*, no deferral in the recognition of the built-in gain associated with the "contributed" property is generally permitted because the sale is considered to occur at the time of the purported contribution of the property to the partnership (unless the transaction, when viewed as a whole, resembles an installment sale and qualifies for installment sale treatment). Under *IRC Section 704(c)(1)(B)* and *IRC Section 737*, on the other hand, some deferral may occur because the built-in gain is not recognized until the "triggering distribution event" occurs. Moreover, if the value of the contributed property declines below the *IRC Section 704(b)* book value of the asset during the intervening period, the amount of the built-in gain triggered under *IRC Section 704(c)(1)(B)* or *IRC Section 737* would generally be reduced or eliminated accordingly.

However, it should also be noted that *IRC Section 704(c)(1)(B)* and *IRC Section 737* are somewhat less forgiving than *IRC Section 707(a)(2)(B)* in certain situations. For example, if a partner contributes built-in gain property to a partnership, and the partnership is subsequently incorporated by distributing the partnership's assets in liquidation of the partners' interests therein followed by a contribution of such assets to a corporation in exchange for stock in an *IRC Section 351* transaction within seven years of the original property contribution, *IRC Section 737* automatically treats the transaction as a taxable event. A different result would be obtained under the disguised-sale rules because *IRC Section 707(a)(2)(B)* merely disregards the form of the purported partner/partnership transactions and reconstitutes the transaction based on its economic substance, whether it be a sale, exchange or tax-free contribution (i.e., in this case, the transaction may have merely been recharacterized as a "disguised *IRC Section 351* exchange" rather than a taxable event if only *IRC Section 707* applied to the transaction).

[2] Section 751 Assets

Judicial decisions before the enactment of the 1954 Internal Revenue Code allowed capital gains treatment on the sale or exchange of a partnership interest, regardless of the presence or absence of assets that, if sold by the partnership, would yield ordinary income. This position led to a concern that "collapsible partnerships" would rival "collapsible corporations" as tax avoidance devices. Congress responded in 1954 by enacting *IRC Section 751*. The basic goal underlying this section is the prevention of the conversion of ordinary income into capital gain.

A typical example of a collapsible entity is a partnership created to develop a tract of houses. The completed houses represent the partnership's inventory. However, before the houses are sold, the partners could sell their partnership interests and attempt to obtain capital gain treatment on the sale. In essence, the partners would receive capital gain treatment for selling inventory which, when otherwise sold, would have resulted in ordinary income. This technique was effectively eliminated by the enactment of *IRC Section 751*.

The terms "unrealized receivables" and "inventory" or "substantially appreciated inventory," as used throughout this chapter, are used with reference to *IRC Section 751* assets. Under *IRC Section 751*, these terms generally include all assets that have ordinary income potential. As such, the words are terms of art and include many items not generally associated with the normal meanings of receivables and inventory.

"Unrealized receivables" are amounts receivable for goods delivered or services performed, to the extent that they have not been previously included in income by the partnership. A typical example is the accounts receivable of a cash-basis partnership. However, the term "unrealized receivables" also includes potential depreciation recapture on real and

personal property (*IRC Sections 1250 and 1245*) computed as if the assets were sold by the partnership at their fair market value. There are also several other items described as "unrealized receivables," but they will not be discussed in this chapter since they are not generally applicable to real estate partnerships. n243

The term "inventory items" means: (1) property of the partnership of the kind described in *IRC Section 1221(a)(1)*, any other property of the partnership that is not a capital asset or an asset used in a trade or business within the meaning of *IRC Section 1231* and any other property held by the partnership which, if held by the selling or distributee partner, would be considered property of the type described in the three preceding provisions. n244

Basically, "substantially appreciated inventory" is inventory items of the partnership (as described above) with a fair market value that exceeds 120 percent of the partnership's basis in the inventory. This mathematical test can be easily made once the "substantially appreciated inventory" items have been identified. n245

In determining whether partnership property is inventory, property that is not inventory to the partnership, but would be inventory in the hands of the selling or distributee partner, will be considered inventory of the partnership. n246

Under *IRC Section 751(a)*, the amount of money, or the fair market value of any property received by a transferor partner in exchange for all or part of its interest in a partnership, that is attributable to *IRC Section 751* assets produces ordinary income. Similarly, *IRC Section 751(b)* provides that if a partner receives a non-pro rata distribution of unrealized receivables or substantially appreciated inventory or receives a non-pro rata distribution of other property, such that the economic effect of the transaction as between the distributee partner and the partnership is an exchange of an interest in the other property for an interest in the unrealized receivables and substantially appreciated inventory, the transaction is treated as a taxable sale or exchange and produces ordinary income.

[3] Look-Through Capital Gain Under *IRC Section 1(h)*

IRC § 1(h) can come into play when a partnership interest is sold. That section provides maximum capital gains rates in three categories. For tax years ending on or after May 6, 2003, and before January 1, 2009, n246.1 the lowest capital gains tax rate is 15 percent (5 percent for taxpayers in the 15-percent regular income tax bracket). n246.2 For tax years beginning after December 31, 2007 and before January 1, 2009, a 0 percent capital gains rate applies for taxpayers in the 15 percent regular income tax bracket (*IRC Section 1(h)(1)(B)*). For taxable years that include May 6, 2003, the 15-percent (or 5-percent) rate applies only to amounts properly taken into account for the portion of the year on or after that date. This generally has the effect of applying the lower rates to sales or exchanges of a partnership interest (and installment payments received) on or after May 6, 2003. n246.3 For tax years ending before May 6, 2003 and beginning after December 31, 2008, the lowest capital gains tax rate is 20 percent, or 10 percent for taxpayers in the 15-percent regular tax bracket. n246.4

If one of the above lowest capital gains rates does not apply, a 25-percent n246.5 or 28-percent rate n246.6 applies.

Capital gain attributable to the sale or exchange of an interest in a pass-thru entity held for more than one year generally is in the 15-percent rate category. There can be a look-through capital gain from the sale of a partnership interest. Look through capital gain includes the share of *IRC Section 1250* capital gain that is allocable to an interest in a partnership. n246.7 *IRC Section 1250* capital gain for this purpose means the capital gain (not otherwise treated as ordinary income) that would be treated as ordinary income if *IRC Section 1250(b)(1)* included all depreciation and the applicable percentage under *IRC Section 1250(a)* were 100 percent. n246.8 In determining whether a partnership has *IRC Section 1250* capital gain, the partnership is treated as owning its proportionate share of the *IRC Section 1250* property of any partnership in which it owns an interest, either directly or indirectly through a chain of partnerships. n246.9

When an interest in a partnership held for more than one year is sold or exchanged in a transaction in which all realized gain is recognized, there is taken into account in determining the partner's unrecaptured *IRC Section 1250* gain n246.10

the amount of *IRC Section 1250* capital gain that would be allocated, taking into account any remedial allocation n246.11 to that partner (to the extent attributable to the portion of the partnership interest transferred that was held for more than one year) if the partnership transferred all of its *IRC Section 1250* property in a fully taxable transaction for cash equal to the fair market value of the assets immediately before the transfer of the interest in the partnership. If less than all of the realized gain is recognized upon the sale or exchange of an interest in a partnership, the same methodology applies to determine the *IRC Section 1250* capital gain recognized by the transferor, except that the partnership is treated as transferring only a proportionate amount of each *IRC Section 1250* property determined as a fraction. The fraction is the amount of gain recognized in the sale or exchange over the amount of gain realized in the sale or exchange. n246.12

[4] Limitation With Respect to Net *IRC Section 1231* Gain

In determining a transferor partner's net *IRC Section 1231* gain n246.13 for purposes of *IRC Section 1(h)(6)(B)*, the transferor partner's allocable share of *IRC Section 1250* capital gain in partnership property is not treated as *IRC Section 1231* gain, regardless of whether the partnership property is used in the trade or business. *IRC Section 1(h)(6)(B)* limits the amount of unrecaptured *IRC Section 1250* gain recognized as a consequence of sales, exchanges, and conversions described in *IRC Section 1231(a)(3)(A)* to the taxpayer's net *IRC Section 1231* gain n246.13.1 for the taxable year.

Treasury believes that because the transfer of an interest in a partnership is not described in *IRC Section 1231(a)(3)(A)*, the limitation provided in *IRC Section 1(h)(6)(B)* regarding *IRC Section 1231* property is not applicable with respect to those transfers. Accordingly, regulations require that where a partner sells an interest in a partnership, the partner must take into account the entire allocable share of *IRC Section 1250* capital gain in determining the unrecaptured *IRC Section 1250* gain under *IRC Section 1(h)(6)(A)*, without regard to the limitation set forth in *IRC Section 1(h)(6)(B)*. n246.13.2

[5] Residual Long-Term Capital Gain or Loss

The amount of residual long-term capital gain or loss recognized by a partner on account of the sale or exchange of an interest in a partnership equals the amount of long-term capital gain or loss that the partner would recognize under *IRC Section 741* (pre-look-through long-term capital gain or loss) minus the amount of look-through capital gain determined as discussed above. n246.14

[6] Sale of Partnership Interest With Divided Holding Period

If a partner sells or exchanges the partner's entire interest in a partnership, any capital gain or loss recognized is divided between long-term and short-term capital gain or loss in the same proportions as the holding period of the interest in the partnership is divided between the portion of the interest held for more than one year and the portion of the interest held for one year or less. n246.15

A selling partner is permitted to identify the portion of a partnership interest sold with its holding period if the following requirements are met: n246.16

- The partnership is a publicly traded partnership; n246.17
- The partnership interest is divided into identifiable units with ascertainable holding periods;
- The selling partner can identify the portion of the interest transferred; and
- The selling partner elects to use the identification method for all sales and exchanges of interests in the partnership after September 21, 2000. The election is made by the selling partner's using the actual

holding period of the portion of the partner's interest in the partnership first transferred after September 21, 2000 in reporting the transaction for federal income tax purposes.

If a partner has a divided holding period in a partnership interest, and sells a portion of it, and the above provision regarding publicly traded partnerships does not apply, then the holding period of the transferred interest is divided between long-term and short-term capital gain or loss in the same proportions as the long-term and short-term capital gain or loss that the transferor partner would realize if the entire interest in the partnership were transferred in a fully taxable transaction immediately before the actual transfer. n246.18

[7] Holding Period for Partnership Interests

A gain or loss on the sale or exchange of a partnership interest is generally capital in nature. Whether the gain or loss is short-term or long-term depends on whether the partnership interest has been held by the transferor for at least one year. n246.19 The holding period of a partnership interest is measured from the date of acquisition of the partnership interest itself, and not from the dates of acquisition by the partnership of specific partnership properties. n246.20 There may be a divided holding period with respect to an interest in a partnership. The holding period of a partnership interest will be divided if a partner acquires portions of an interest at different times or if an interest is acquired in a single transaction that gives rise to different holding periods. n246.21 The holding period of a portion of a partnership interest generally is determined based on a fraction. The numerator is the fair market value of the portion of the partnership interest received in the transaction to which the holding period relates, and the denominator is the fair market value of the entire partnership interest (determined immediately after the acquisition). n246.22 Special rules apply to determine the holding period when a partner has made cash contributions to the partnership and receives cash contributions from the partnership. n246.23 Adjustments are also made with respect to contributed *IRC Section 751* assets (unrealized receivables and inventory items). n246.24

[8] Admission of New Partners

In Revenue Ruling 84-102, n246.25 the Service concluded that, upon the admission of a new partner into an existing partnership having unrealized receivables and outstanding liabilities, the original partners were required to recognize ordinary income to the extent that their interests in partnership liabilities were correspondingly reduced. The ruling was based on the fact that the new partner received a pro rata interest in the partnership's receivables and liabilities. Since there was a decrease in the existing partners' shares of liabilities of the partnership, this decrease was treated as a constructive cash distribution to them under *IRC Section 752* which, when considered along with their decrease in receivables, made the transaction subject to *IRC Section 751*. This provision may create some surprising results for cash basis partnerships.

[9] Transfer of Partnership Interest to Satisfy Partnership Debt

When a debtor partnership transfers a capital or profits interest in the partnership to a creditor in satisfaction of partnership debt, the partnership generally must recognize cancellation of indebtedness income in the amount that would be recognized if the debt were satisfied with money equal to the fair market value of the partnership interest. Recognition is required without regard to whether the cancelled debt is recourse or nonrecourse indebtedness. Any cancellation of indebtedness income recognized is allocated solely among the partners who held interests in the partnership immediately prior to the satisfaction of the debt. n246.26

A partner who is allocated cancellation of indebtedness income is entitled to exclude it if the partner qualifies for one of the various exceptions to recognition of that income, including the exception for insolvent taxpayers or that for qualified real property indebtedness of taxpayers other than subchapter C corporations. n247 The availability of each of these exceptions is determined at the partner, rather than the partnership level.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.13A

§ 14.13A Partnership Terminations

[1] In General

A partnership is treated as continuing for tax purposes if it is not terminated. n247.1 A partnership is treated as terminated only if one of the following takes place: n247.2

- (1) no part of any business, financial operation, or venture of the partnership continues to be carried on by any of its partners in a partnership; or
- (2) within a 12-month period there is a sale or exchange of 50 percent or more of the total interest in partnership capital and profits. n247.3

It should be noted that sales to other members of the partnership as well as sales to third persons may trigger a termination, but gifts, bequests, or liquidations do not. A sale of both 50 percent of capital and 50 percent of profits must occur. Thus, a sale of 30 percent of capital and 60 percent of profits does not trigger termination. n247.4 Different sales over a given twelve-month period are aggregated, but repeated sales of the same interests are ignored. For example, if within 12 months A sells a 30 percent interest to D and B sells a 30 percent interest to E, a termination has occurred. If the second sale had been from D to E, there would be no termination. n247.5

If a partnership is terminated, its taxable year closes with respect to all of its partners on the termination date. This is either the date of final winding up of business, or the date on which the critical sale or exchange occurs. n247.6 A partnership that terminates under *IRC Section 708(b)(1)(B)* must file a short-year final return for the taxable year ending with the date of its termination. The new partnership is required to file a return for its taxable year beginning after the date of termination of the terminated partnership. n247.7

No special problems exist in terminating a partnership that has actually quit doing business, but a constructive termination requires a complementary constructive formation. If a partnership is constructively liquidated because of the sale or exchange of interests, the following is deemed to occur: (1) the partnership contributes all of its assets and liabilities to a new partnership in exchange for an interest in the new partnership; and (2) immediately thereafter, the terminated partnership distributes interests in the new partnership to the purchasing partner and the other remaining partners in proportion to their respective interests in the terminated partnership in liquidation of the terminated

partnership, either for the continuation of the business by the new partnership or for its dissolution and winding up. n247.8

The exact consequences of a constructive termination will differ in nearly every case. A constructive termination should be avoided if at all possible, for the accounting expense alone. Sometimes it will be possible to defer sales of partnership interests to avoid the triggering number of sales within a 12-month period. n247.9

[2] Mergers and Divisions

When two or more partnerships merge or consolidate into one partnership, either (1) one of the partnerships is deemed continued and the others terminated, or (2) all are deemed terminated and a new partnership is created. Whether any of the merging partnerships are treated as continuing depends on whether the members of that partnership hold more than a 50 percent interest in profits and capital of the resulting partnership. If more than one merging partnership so qualifies, the partnership that is credited with the contribution of assets having the greatest fair market value (net of liabilities) to the resulting partnership is the sole continuing one. Any other merging or consolidating partnerships are considered terminated. n247.10

If there is a merger or consolidation of partnerships, increases and decreases in partnership liabilities associated with the merger or consolidation are netted by the partners in the terminating partnership and the resulting partnership to determine the effect of the merger under *IRC Section 752*. n247.11 If the members of none of the merging or consolidating partnerships have an interest of more than 50 percent in the capital and profits of the resulting partnership, all of the merged or consolidated partnerships are terminated, and a new partnership results. n247.12

In the case of the division of a partnership into separate partnerships, each resulting partnership is treated as a continuation of the prior partnership if the members of the resulting partnership had more than a 50 percent interest in profits and capital of the prior partnership. Resulting partnerships that do not pass this test are treated as new partnerships. If none of the resulting partnerships pass the test, the prior partnership is deemed terminated. n247.13 Where partners in a partnership that has been divided into two or more partnerships do not become members of a partnership that is a continuation of the prior partnership, their interests are considered liquidated as of the date of the division. n247.14

Regulations also address continuity of partnership issues with respect to upper-tier/lower-tier partnerships. If the sale or exchange of an interest in an upper-tier partnership that holds an interest in a lower-tier partnership results in a termination of the upper-tier partnership, the upper-tier partnership is treated as exchanging its entire interest in the capital and profits of the lower-tier partnership. If the sale or exchange of an interest in an upper-tier partnership does not terminate the upper-tier partnership, the sale or exchange of an interest in the upper-tier partnership is not treated as a sale or exchange of a proportionate share of the upper-tier partnership's interest in the capital and profits of the lower-tier partnership. n247.15

CHAPTER 14 Partnerships and Limited Liability Companies *

*1-14 Federal Taxes Affecting Real Estate § 14.14***§ 14.14 Optional Basis Adjustments**

When a person purchases an interest in a partnership from a partner, the purchaser typically pays fair market value for the interest. Often, however, the assets in the partnership have a tax basis that differs from their fair market value. If the partnership sells some assets shortly after a new partner's purchase of an interest, the new partner would have to recognize a proportionate share of the gain or loss even though the new partner has paid fair market value for the assets and has, therefore, not realized any such gain or loss. n247.16

Example:

Assume that A purchases X's interest in the XY partnership for \$10,000 on January 1.

XY Balance

Sheet_____	Tax Basis_____	Fair Market Value_____
Noninventory assets	\$10,000_____	\$20,000_
	_____	_____
	_____	_____
	_____	_____
	_____	_____
	_____	_____
	_____	_____
	_____	_____
Partners, Capital		
Partner X	\$5,000	\$10,000
Partner Y	\$5,000_____	\$10,000_
	_____	_____
	_____	_____
	\$10,000_____	\$20,000_

1-14 Federal Taxes Affecting Real Estate § 14.14

A has paid fair market value for a one-half interest in this partnership. However, if, on January 2, the partnership sells its assets for \$20,000, both A and Y would realize a \$5,000 gain (when, in fact, A is selling his one-half interest in the assets for exactly what he paid for them (\$10,000)). n247.17

A similar situation exists when the partnership makes distributions to a partner that do not constitute simply the partner's pro rata share of all the assets of the partnership. In effect, the remaining partners are buying the distributee partner's interest in some of the partnership's assets (i.e., the non-distributed assets) and although they are paying fair market value, the basis of the partnership assets does not reflect their "purchase price."

To overcome these inequities, the partnership may elect to make an optional adjustment to the basis of partnership property following certain distributions or the sale or exchange of a partnership interest. n248 The elections cover two distinct situations: (1) when the partnership distributes property to a partner in exchange for its partnership interest; n249 and (2) when a partner sells or exchanges its partnership interest in a transaction with another person. n250 In the case of a transfer of a partnership interest by sale or exchange, regulations implementing the optional basis adjustment rules detail the manner of determining the transferee's basis in the transferred partnership interest n250.1 as well as the transferee's share of the adjusted basis to the partnership of the partnership's property. n250.2

The adjustments following a sale or exchange (or transfer of an interest at death) attempt to adjust the basis of a portion of the partnership property to the amount of the purchase price (or fair market value) of the interest. This adjustment is effective only for the partner who purchased the interest. n251 Adjustments made following certain property distributions are effective for all the partners remaining in the partnership. n252

This election must be made by the partnership as an entity. Also, if the partnership initially elects to make an adjustment following either a sale or an exchange of interest or a distribution because the adjustment is favorable, it must continue to make both favorable and unfavorable adjustments on all similar future transactions. This means that, although in the year of the election, the partnership or individual partner may benefit by having a basis increase; in succeeding years, similar transactions may require adjustments that decrease the basis of the assets. n252.1

Any increase or decrease in the adjusted basis of partnership property under *IRC Section 734(b)* or *IRC Section 743(b)* must be allocated in a manner that has the effect of reducing the difference between the fair market value and the adjusted basis of the partnership properties, or in any other manner permitted by regulations. n252.2 These increases or decreases arising from a distribution of, or transfer of an interest attributable to, capital assets, Section 1231 property, or any other partnership property must be allocated to partnership property of a like character. The basis of any property, however, cannot be reduced below zero. In the case of distributions of property, if a basis adjustment is prevented by the absence of property or by insufficient basis for that property, then the adjustment must be applied to later-acquired property of a like character, in accordance with regulations. n252.3 Regulations contain special basis allocation rules where one or more assets represent income in respect of a decedent n252.4 and for transferred basis exchanges. n252.5

In applying the basis allocation rules to a distribution in liquidation of a partner's interest, a partnership is precluded from decreasing the basis of corporate stock of a partner or a related person. n252.6 Any decrease in basis that, absent this provision, would have been allocated to the stock is allocated to other partnership assets. n252.7 If the decrease in

basis exceeds the basis of the other partnership assets, then gain must be recognized by the partnership in the amount of the excess. n252.8

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.14A

§ 14.14A Required Basis Adjustments When There Is a Substantial Built-In Loss

[1] Distributions of Partnership Property

A basis adjustment must be made to undistributed partnership property under *IRC Section 734(b)* in the case of a distribution with respect to which there is a substantial basis reduction. n252.9 A substantial basis reduction means a downward adjustment of more than \$250,000 that would be made to the basis of partnership assets if an *IRC Section 754* election were in effect. n252.10

Example:

Assume that A and B each contributed \$2.5 million to a newly formed partnership and C contributed \$5 million, and that the partnership purchased LMN stock for \$3 million and XYZ stock for \$7 million. Assume that the value of each stock declined to \$1 million. Assume LMN stock is distributed to C in liquidation of its partnership interest. There is a substantial basis adjustment because the \$2 million increase in the adjusted basis of LMN stock (described in *IRC Section 734(b)(2)(B)*) is greater than \$250,000. Thus, the partnership is required to decrease the basis of XYZ stock (under *IRC Section 734(b)(2)*) by \$2 million (the amount by which the basis of LMN stock was increased), leaving a basis of \$5 million. If the XYZ stock were then sold by the partnership for \$1 million, A and B would each recognize a loss of \$2 million. n252.11

[2] Transfers of Partnership Interests

[a] In General

A basis adjustment must be made to partnership property whenever there is a transfer of a partnership interest with respect to which there is a substantial built-in loss. The basis adjustment is mandatory, and not elective. n252.12 For this purpose, a substantial built-in loss exists if the partnership's adjusted basis in its property exceeds by more than \$250,000 the fair market value of the partnership property. n252.13

[b] Special Rule for Electing Investment Partnerships

An electing investment partnership is not treated as having a substantial built-in loss, and thus is not required to make basis adjustments to partnership property, in the case of a transfer of a partnership interest. n252.14 In lieu of the

partnership basis adjustments, a partner-level loss limitation rule applies. Under this rule, the transferee partner's distributive share of losses (determined without regard to gains) from the sale or exchange of partnership property is not allowed, except to the extent it is established that the partner's share of those losses exceeds the loss recognized by the transferor partner. n252.15 An electing investment partnership must furnish to any transferee partner the information necessary to enable the partner to compute the amount of losses disallowed under this rule. n252.16

In the event of successive transfers, the transferee partner's distributive share of those losses is not allowed, except to the extent that it is established that they exceed the loss recognized by the transferor (or any prior transferor to the extent not fully offset by a prior disallowance under this rule). Losses disallowed under this rule do not decrease the transferee partner's basis in its partnership interest. n252.17 Thus, on subsequent disposition of its partnership interest, the partner's gain is reduced (or loss increased) because the basis of the partnership interest has not been reduced by those losses. This provision is applied without regard to any termination of a partnership. n252.18 In the case of a basis reduction to property distributed to the transferee partner in a nonliquidating distribution, the amount of the transferor's loss taken into account under this rule is reduced by the amount of the basis reduction. n252.19

An electing investment partnership is a partnership that satisfies the following requirements: n252.20

- it makes an election under the provision that is irrevocable except with the consent of the Secretary;
- it would be an investment company under section 3(a)(1)(A) of the Investment Company Act of 1940 but for certain exemptions under that Act;
- it has never been engaged in a trade or business;
- substantially all of its assets are held for investment;
- at least 95 percent of the assets contributed to it consist of money;
- no assets contributed to it had an adjusted basis in excess of fair market value at the time of contribution;
- all partnership interests are issued by the partnership pursuant to a private offering prior to the date that is 24 months after the date of the first capital contribution to the partnership;
- the partnership agreement has substantive restrictions on each partner's ability to cause a redemption of the partner's interest, and
- the partnership agreement provides for a term that is not in excess of 15 years.

[3] Exception for Securitization Partnerships

An exception to the rules requiring partnership basis adjustments in the case of transfers of partnership interests and distributions of property to a partner applies for securitization partnerships. n252.21 The exception provides that a securitization partnership is not treated as having a substantial built-in loss in the case of a transfer of a partnership interest, n252.22 or as having a substantial basis reduction in the case of a partnership distribution. n252.23 It is therefore not required to make basis adjustments to partnership property. Partnership basis adjustments remain elective for securitization partnerships. n252.24 Unlike in the case of an electing investment partnership, n252.25 the partner-level loss limitation rule does not apply in the case of a securitization partnership. n252.26

For this purpose, a securitization partnership is any partnership the sole business activity of which is to issue securities

that provide for a fixed principal (or similar) amount and that are primarily serviced by the cash flows of a discrete pool (either fixed or revolving) of receivables or other financial assets that by their terms convert into cash in a finite period, but only if the sponsor of the pool reasonably believes that the receivables and other financial assets comprising the pool are not acquired so as to be disposed of. n252.27

The Conference Report to the legislation n252.28 states that the rules requiring partnership basis adjustments on transfers or distributions are not to be avoided through dispositions of pool assets. It is intended that an electing investment partnership or securitization partnership that subsequently fails to meet the definition will be subject to the partnership basis adjustment rules of the provision with respect to the first transfer of a partnership interest (and, in the case of a securitization partnership, the first distribution) that occurs after the partnership ceases to meet the applicable definition and to each subsequent transfer (and distribution, in the case of a securitization partnership). The Conference Report also states that none of the new partnership loss transfer provisions can be avoided through the use of tiered partnerships.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.15

§ 14.15 Tiered Partnerships

Tiered partnerships occur when a partnership is a partner in another partnership. This arrangement is used for a variety of business, legal and tax reasons. Tiered partnerships may be used to provide anonymity for investors, ease of investment decisions, or as a tool to raise capital without changing the record ownership of the property.

Tiered partnerships were not dealt with by the drafters of the Internal Revenue Code of 1986; therefore, many questions concerning their tax treatment remain unanswered. However, the Service rulings in this area have generally been in accord with accepted tax theory. For example, the Service has ruled that the liabilities of the lower-tier partnership will be allocated to the partners of the upper-tier partnership for purposes of determining a partner's basis. n253

The Service has also ruled that the basis of the lower-tier partnership's property can be adjusted when an upper-tier partner sells or exchanges his interest, assuming both partnerships make the optional election. n254 Regulations have been issued which address continuity of partnership issues with respect to upper-tier/lower-tier partnerships. These are discussed in § 14.13A, above. n254.1

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.16

§ 14.16 Publicly-Traded Partnerships

A publicly-traded partnership (PTP) is simply a limited partnership whose interests are traded on securities exchanges, a secondary market, or the substantial equivalent thereof. Generally, PTPs are characterized by large numbers of limited partners and very large trading volumes. As with other partnerships, a PTP is not a tax-paying entity. The limited partners report their share of the PTP's income or loss directly on their individual tax returns. The Tax Reform Act of 1986 generally prevented the formation of new publicly-traded partnerships to engage in active trades or businesses by providing that they would be taxed as corporations, and by allowing a ten-year transition period for such existing entities. The Taxpayer Relief Act of 1997 provides the transitioned entities with an election to continue their publicly-traded partnership status after the end of 1997 by electing to remain as partnerships, but subjecting themselves to a 3.5 percent tax on their gross income. n255

There are several benefits to the formation of a PTP. In some circumstances, assets will have a higher value when held in partnership form than when held through a taxable corporation, because profits can be realized by the owners of those assets with only a single layer of taxation when they are held in partnership form, in contrast to the double layer of taxation that is imposed when the assets are held through a taxable corporation. Therefore, the value of individual partnership interests is enhanced.

In other circumstances, however, assets can be more valuable when held through other vehicles, such as REITs, because the owner does not have to deal with the tax return complexities of receiving a form K-1 with respect to the investment. However, for those investments that are suitable for PTP status, the benefits of consolidation of ownership and operation of properties and entities can also be substantial. The PTP provides a source of equity-type financing without a dilution of the sponsoring corporation's equity or control. Another benefit of the PTP is the availability of funds for acquisitions. The PTP may issue units in exchange for assets on a tax-free basis or acquire assets for cash and fund the acquisition cost through the sale of new PTP units. The PTP also provides several attractive features to investors. The most important feature appears to be cash yield. Other significant benefits are market liquidity, flow-through of tax benefits, risk diversification, and the ability to participate as an investor in a business or a fund without any minimum investment size requirements. Despite the apparent attractiveness of PTPs, in the current economic environment, the real estate public entity sector is dominated by REITs, which can provide flow-through tax benefits for entities that are managed and viewed by Wall Street as financial corporations, and which can make acquisitions either by using traditional partnership techniques and operating partnerships or by using traditional corporate finance techniques.

Although there are exceptions for entities eligible for the transition provisions of the 1986 legislation, as a general rule *IRC Section 7704* taxes publicly-traded partnerships (PTPs) as corporations. If an existing partnership becomes publicly traded, as of the first day that a partnership is treated as a corporation, the partnership is deemed to transfer all of its assets to a newly-formed corporation and to distribute stock in the corporation to its partners in acquisition of their interests in the partnership. n256

PTPs that meet certain qualified gross income requirements (e.g., relating to home building income and most real estate rental income) are not taxed as corporations. n257 However, this exception is not available to partnerships which come within the Code definition of "regulated investment company," even if they do not qualify for the special tax treatment available to those entities. n258

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.17

§ 14.17 Withholding with Respect to Foreign Partners

Under prior law, U.S. partnerships engaged in a U.S. trade or business had to withhold tax with respect to foreign partners only when the partnership sold a U.S. real property interest or when passive U.S. noneffectively connected income was earned. n259 Since the U.S. trade or business income of U.S. or foreign partnerships was imputed to foreign partners, the foreign partners were required to file U.S. tax returns and pay U.S. tax on their share of the partnership's other income. n260

To improve compliance with respect to the "effectively connected" income of foreign partners, withholding is now required on "effectively connected taxable income" allocated to foreign partners, whether or not any amounts are actually distributed to the foreign partners. The withholding rate is the highest rate of tax applicable to corporations and individuals, currently 35 percent for corporations and 39.6 percent for individuals. n261 When the foreign partner files its U.S. federal income tax return, the amount withheld is credited against the U.S. income tax liability of the foreign partner or refunded as an overpayment. For widely-held partnerships held through one or more nominees, the last U.S. person in the chain of ownership is required to withhold. n262 Exceptions to the withholding requirements may be provided by regulations. This change creates additional burdens for U.S. partnerships with foreign partners as well as for foreign partnerships engaged in a U.S. trade or business. It also results in reduced cash flow to foreign partners caused by delays in receiving a refund from the Service, and in effect causes partnerships with foreign partners to make distributions to foreign partners, through the withholding payment to the federal government, whether or not the partnership's business plan would otherwise have required a distribution at that time. Publicly-traded partnerships are given some relief from this provision, and are required only to withhold from distributions, subject to an election to withhold from effectively connected income. n263

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.18

§ 14.18 Tax-Exempt Organization Partners

Before 1987, if certain requirements were met, certain tax-exempt entities could become a partner in a partnership owning debt-financed rental real property without the income from that partnership being treated as unrelated business taxable income. This rule applied even if the partnership agreement contained special allocation provisions that allocated deductions to taxable partners and income to tax-exempt partners.

In response to the abuses in this area, therefore, Congress imposed new limitations on the ability of tax-exempt partners to realize tax-exempt income from debt-financed real property. These restrictions provide that income from debt-financed real property will be treated as unrelated business taxable income to tax-exempt partners unless all partnership allocations are "qualified allocations." n264

Qualified organizations that invest in debt-financed real property through a partnership in which one or more (but not all) of the partners are qualified organizations, however, are eligible for the *IRC Section 514(c)(9)* exception only if the partnership satisfies an additional requirement. Either each allocation to a partner that is a qualified organization must be a "qualified allocation" n265 or the partnership must satisfy the requirements of *IRC Section 514(c)(9)(E)*.

To satisfy the first prong, the partner must first be a qualified organization. Qualified organizations include the following:

- Qualified pension and retirement plans qualified under *IRC Section 401*;
- Certain educational organizations; n266
- Certain title-holding corporations and trusts organized for the exclusive purpose of acquiring, holding title to, and collecting income from real property, and turning over the entire amount less expenses to certain exempt member organizations; n267 and
- Retirement income accounts of a churches (or certain other organizations). n267.1

To satisfy the "qualified allocation" test of the first prong, (1) the allocation must be consistent with that entity's being allocated the same distributive share of each item of income, gain, loss, deduction, credit and basis, and that share must

be the same during the entire period the entity is a partner in the partnership; and (2) the allocation must have substantial economic effect. Distributions made to a partner with respect to property contributed by that partner to the partnership are not taken into account for this purpose. n267.2

As for the second prong, two requirements must be met to comply with *IRC Section 514(c)(9)(E)*. First, the "fractions" rule must be met. Under this rule, the allocation of items to a partner that is a qualified organization cannot result in that partner having a percentage share of overall partnership income for any partnership taxable year greater than that partner's fractions rule percentage, as described in *Regulations Section 1.514(c)-2(c)(2)*. Second, each partnership allocation must have substantial economic effect.

FOOTNOTES:

(n1)Footnote 264. *Treas Reg § 1.514(c)-2* sets forth the requirements that a qualified organization must meet in order to qualify for the exception, under *IRC § 514(c)(9)(E)*, allowing a qualified organization to exclude income from debt-financed real property from unrelated business taxable income (UBTI).

(n2)Footnote 265. *IRC § 168(h)(6)*.

(n3)Footnote 266. See *IRC §§ 170(b)(1)(A)(ii), 509(a)(3)*.

(n4)Footnote 267. See *IRC § 501(c)(25)*.

(n5)Footnote 267.1. *IRC § 403(b)(9)*; this exception is effective for tax years beginning on or after 8/17/06.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.19

§ 14.19 Limited Liability Companies

[1] Introduction

All 50 states and the District of Columbia have adopted limited liability company statutes. Therefore, it is becoming increasingly common for an entity owning, developing or managing real estate to be in the limited liability company form. Because the limited liability company is still a relatively new form of ownership, this area of the law has seen many new developments in recent years.

[2] Tax Status of Limited Liability Companies

Beginning in 1997, an LLC may elect its tax status for federal purposes under the federal entity classification rules. n268 Under those rules, an LLC with at least two members may choose to be classified for federal tax purposes as either a partnership or an association (taxable as a corporation) n269 and an LLC with a single member may choose to be classified as an association (taxable as a corporation) or may choose to be disregarded as an entity separate from its owner. Many states, including Delaware, California and New York, allow LLCs to be organized with only a single member.

A single-member LLC may not elect partnership classification for federal tax purposes. n269.1 The IRS has issued two revenue rulings that explain the tax consequences of the following:

- converting from a partnership to a single-member LLC that is disregarded for tax purposes; n269.2 and
- converting from a single-member LLC that is disregarded for tax purposes to a partnership. n269.3

The conversion of a partnership into a single-member LLC terminates the partnership under *IRC Section 708(b)(1)(A)*, whether one partner sells a partnership interest to the other partner or whether multiple partners sell out to a single third party. When one partner (SP) sells a partnership interest to the other, the partnership is deemed to make a liquidating distribution of all of its assets to the two partners; following that distribution, the buying partner (BP) is treated as acquiring the assets that are deemed to have been distributed to the other partner in liquidation of his or her partnership interest. BP's basis in the assets attributable to SP's one-half interest in the partnership is the amount paid, and BP's holding period for those assets begins on the day following the day of sale. Upon termination of the partnership, BP is

considered to receive a distribution of those assets attributable to his former interest in the partnership. BP must recognize gain or loss on the deemed distribution of assets to the extent required by *IRC Section 731(a)*. BP's basis in the assets received is determined under *IRC Section 732(b)*, and BP's holding period generally includes the partnership's holding period for those assets under *IRC Section 735(b)*. n269.4

In a sale of a partnership interests by both partners to a single third party, the partnership is deemed to make a liquidating distribution of its assets to the two partners. Immediately thereafter, the purchaser is deemed to acquire, by purchase, all the former partnership's assets. The purchaser's basis in the assets is the amount paid for the partnership interests, allocated among the assets. n269.5 The purchaser's holding period in the assets begins on the day following the date of sale. n269.6

Converting to a partnership from a single-member LLC that is disregarded as a separate entity from its owner for federal tax purposes has different tax consequences, depending on whether the purchaser (P) merely purchases a 50-percent ownership interest in the LLC from the sole member (S), with S not contributing any part of the money to the LLC, or whether P contributes cash to the LLC in exchange for a 50-percent interest in the LLC. In the direct purchase from S, S must recognize gain or loss from the deemed sale to P of a 50-percent interest in each asset of the LLC. S and P are then treated as contributing their respective interests in those assets to a partnership in exchange for partnership interests. This is a tax-free event under *IRC Section 721(a)*, and the partnership's basis in the property is S's and P's adjusted bases immediately before the contribution. S's holding period for the partnership interest will include the holding period in the capital assets and Section 1231 property held by the LLC when it was converted into a partnership. P's holding period in the partnership interest will begin the day after the date of P's purchase of the LLC interest from S. n269.7

If P contributes money to the LLC in exchange for a 50-percent interest, P is treated as making a tax-free contribution to a partnership in exchange for a partnership interest under *IRC Section 721(a)*. Similarly, S is treated as contributing all the assets of the LLC to the partnership in exchange for a partnership interest. This, too, will not result in a taxable event under *IRC Section 721(a)*. P's basis in the partnership interest is the amount of money contributed, and S's basis is equal to his or her basis in the assets of the LLC which S is treated as contributing to the partnership. The partnership also takes S's adjusted basis as its own basis in the property. S's holding period for the partnership interest includes the holding period in the capital and Section 1231 assets deemed contributed to the partnership, and the partnership's holding period in the assets includes S's holding period. P's holding period for the partnership interest begins on the day following the date of P's contribution of money to the LLC. n269.8

[3] State Tax Considerations

Although the rules relating to the classification of the limited liability company as a partnership for federal income tax purposes are now greatly simplified, the rules relating to state taxation of limited liability companies, and limited partnerships that do not meet the traditional federal income tax tests for partnership status, are not as clear, and several states do not simply follow the federal lead and treat the limited liability company as a partnership. For example, in Texas, the limited liability company is subject to corporate taxes on its capital and income. n270 Likewise, Florida also does not respect the limited liability company as a partnership and subjects it to corporate tax. n271 Pennsylvania also taxes LLCs as corporations in certain circumstances. California initially announced that it would continue to apply the historic federal "four factors" test in determining whether an entity would be taxed as a partnership for California tax purposes. Tax practitioners must always check the appropriate state law to determine the state tax treatment of LLCs as well as partnerships that rely on the federal entity classification rules. When organizing an entity that may be doing business in several different states, such as a large real estate partnership that intends to acquire a geographically diversified portfolio of properties, the conservative drafting approach is to organize a limited partnership, and insure that the entity will have at least two of the traditional partnership characteristics, to avoid unnecessary state entity level taxes.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.20

§ 14.20 Electing Large Partnerships

Large partnerships and their partners may elect to be excluded from certain provisions of Subchapter K and instead be subject to the "simplified" rules of *IRC Sections 771 through 777*. n271.1 The simplified flow-through rules allow large partnerships to make at the partnership level a substantial number of the computations that would otherwise be required to be made at the partner level. n271.2 A "large partnership" is a partnership with 100 or more partners. n271.3 An electing large partnership will also not be subject to the TEFRA audit procedures. The usefulness of these new procedures will be determined over time.

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.21

§ 14.21 Self-Employment Taxes of Limited Partners and LLC Members

On January 13, 1997, the Service issued proposed regulations regarding the self-employment tax treatment of limited partners, including members of LLCs that are treated as partnerships. n272 The proposed regulations replace earlier proposed regulations dealing specifically with the self-employment tax treatment of members of LLCs. The earlier proposed regulations have been withdrawn. n273

The new proposed regulations would establish rules for determining which partners of an entity treated as a partnership for federal income tax purposes are considered limited partners for purposes of *IRC Section 1402(a)(13)*. Under that statutory provision, a limited partner's distributive share of income (other than guaranteed payments for services actually rendered to or on behalf of the partnership) is excluded from "net earnings from self-employment". The proposed regulations apply to all entities classified as a partnership for federal tax purposes, regardless of state law characterization of the entity. Thus, the same standards apply when determining the status of an individual owning an interest in a state law limited partnership or the status of an individual owning an interest in an LLC. Generally, an individual is treated as a limited partner under the proposed regulations unless the individual:

- (1) has personal liability for the debts of or claims against the partnership by reason of being a partner;
 - (2) has authority to contract on behalf of the partnership under the statute or law pursuant to which the partnership is organized; or
 - (3) participates in the partnership's trade or business for more than 500 hours during the taxable year.
- n274

If, however, substantially all of the activities of a partnership involve the performance of services in the fields of health, law, architecture, accounting, actuarial science or consulting, any individual who provides services as part of that trade or business will not be considered a limited partner. n275

Under *IRC Section 1402(a)(13)*, an individual's net earnings from self-employment do not include that individual's distributive share of income or loss as a limited partner. Guaranteed payments made to the individual for services actually rendered to or on behalf of the partnership engaged in a trade or business, however, are included in the individual's net earnings from self-employment. n276

The proposed regulations allow an individual who is not a limited partner to exclude from net earnings from self-employment a portion of that individual's distributive share if that individual holds more than one class of interest in the partnership. Similarly, an individual who participates in the trade or business of the partnership may bifurcate his or her distributive share by disregarding guaranteed payments for services. n277

In each case, however, the bifurcation of interests is permitted only to the extent the individual's distributive share is identical to the distributive share of partners who qualify as limited partners (without regard to the bifurcation rule) and who own a substantial interest in the partnership. The effect of these rules is to exclude from an individual's net earnings from self-employment amounts that are demonstrably returns on capital invested in the partnership. n278

CHAPTER 14 Partnerships and Limited Liability Companies *

1-14 Federal Taxes Affecting Real Estate § 14.22

§ 14.22 Avoidance of Partnership Tax Provisions By Family Joint Ventures

Spouses engaged in a qualifying family joint venture may elect to have their business not be treated as a partnership for tax purposes, and instead treat their interests in the venture as if they were sole proprietors. n279

Comment:

Small family businesses not infrequently are categorized as partnerships by default. n280 As such, they are subject to the complex partnership income tax provisions discussed in this chapter dealing with determination of tax liability, n281 contributions, n282 distributions, n283 transfers of partnership interests and basis computations. n284 Informational partnership returns are also required. This elective provision excludes a "qualified joint venture" from the partnership provisions, and specifies how income, gain, loss, deductions and credits are to be allocated reported. n285 It is intended to free husband-wife business operations from the complexity of the Internal Revenue Code partnership provisions.

The provision is available only to qualified joint ventures conducted by a husband and wife who file a joint return for the taxable year. If those conditions are satisfied, the following tax treatments apply: n286

- The joint venture will not be treated as a partnership;
- All items of income, gain, loss, deduction, and credit must be divided between the spouses in accordance with their respective interests in the venture; and
- Each spouse must take into account his or her respective share of those items as if they were attributable to a trade or business conducted by that spouse as a sole proprietor.

To be a "qualified joint venture," an undertaking must meet the following requirements: n287

- It must be a joint venture involving the conduct of a trade or business;
- The only members of the joint venture are a husband and wife;

- Both spouses materially participate in the trade or business; and
- Both spouses must elect to have the joint venture not be treated as a partnership under *IRC Section 761(f)*.

Whether the spouses "materially participate" is generally determined under the passive activity loss material participation standard, n288 except that in determining whether one spouse materially participates, the participation of the other spouse cannot be taken into account. n289

Each spouse's share of income or loss from a qualified joint venture must also be taken into account as provided in *IRC Section 761(f)* in determining the net earnings from self-employment of that spouse. n290

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.01

§ 15.01 Introduction

The choice of the form used to accomplish the business and investment goals of entrepreneurs and investors is vitally important when bringing a business idea to profitable reality. In the previous chapter, partnerships and certain other unincorporated associations were discussed. This chapter concentrates on corporations.

Since each form of organization has its own relative advantages and disadvantages, the objectives of the individual investor must be evaluated and adapted to the appropriate business form. Both non-tax and tax considerations must be taken into account in deciding whether to use a corporation as a real estate holding entity. See *Section 15.01A* for a discussion of non-tax considerations and *Section 15.02* for a discussion of tax considerations. Also, if corporate form is desired, either a C corporation or S corporationⁿ¹ may be used, each with dramatically different tax consequences. Details of the S corporation election and the advantages and disadvantages of using an S corporation to hold property are discussed in *Section 15.04*.

The corporation is an organization separate and apart from its owners. It is a legal entity created under authority of the state and is limited in the scope of its activity by an approved charter. It pays an income tax on its earnings (at least in the case of C corporations); may be solely responsible for its debts; operates under authority of a board of directors elected by the shareholders; and continues in existence, unaffected by any transfer of ownership or by the death, retirement, or bankruptcy of its shareholders.

Rights of ownership are evidenced by shares of stock issued by the corporation in accordance with its charter. Most corporations have only one class of stock outstanding (common stock) so that each share has the same voting rights, claims to dividends, and status upon liquidation. The rights of ownership can, however, be varied by the issuance of separate classes of stock having different voting power, preferred dividend treatment, or preferred status upon liquidation. Thus, the degree of risk desired by each investor may be accommodated.

The nature of the stock certificate (i.e., its claim to potential dividends and net assets upon liquidation) gives it intrinsic value which may be used by the corporation and shareholder alike. A corporation may issue its stock to acquire the stock or assets of another business, to compensate its officers, to provide additional incentives to key employees, or to raise additional funds for expansion. Corporation stock may be used by shareholders to secure loans, to establish trusts for their children, to effect charitable contributions, to exchange for other property, or merely to serve as a convenient form of investment.

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.01A

§ 15.01A Nontax Advantages and Disadvantages to C Corporations

[1] In General

Although the choice of entity for holding real estate may be primarily dependent on tax considerations, nontax considerations must also be weighed. The weight to be given to any factor will vary in each case, based on the facts and circumstances of the venture, as well as the objectives and concerns of the parties.

Nontax considerations include the following:

- ease of raising capital; n2
- limitation of liability; n3
- continuity of existence; n4
- transferability of interest and equity; n5
- management and control; n6 and
- compliance with statutory and regulatory requirements. n7

[2] Ease of Raising Capital

The corporate form of ownership can provide a versatile vehicle for attracting equity capital. Investors can limit their liability to the amount of capital contributed. In addition, the C corporation can issue different classes of stock to provide flexibility among different investors with respect to voting power, preferred dividend treatment, or preferred status upon liquidation.

Rights of corporate ownership are evidenced by shares of stock issued by the corporation in accordance with its charter and state law. The nature of a stock certificate (i.e., its claim to potential dividends and net assets upon liquidation) gives it intrinsic value that can be used by the corporation and by the shareholders. A corporation may issue its stock to acquire the stock or assets of another business, to compensate its officers, to provide additional incentives to key

employees, or to raise additional funds. Shareholders may use corporate stock to secure loans, establish trusts, make charitable contributions, or pay for other property.

A practitioner must review any issuance of shares with a view to requirements of securities laws. If an issuance of stock is not exempt, all applicable federal registration requirements must be complied with. If an issue is exempt, the practitioner must assure that all necessary state and federal disclosure statements and reports are filed, and that any necessary legends are placed on share certificates.

[3] Limitation of Liability

The use of a C corporation can shield shareholders from liabilities of the business, if the corporation is validly formed, complies with necessary formalities, and is adequately capitalized. This advantage is especially important for principals with substantial income or assets outside of the corporation.

Planning Note:

The limited liability afforded by incorporation is of less practical value than might be expected, especially for closely-held corporations. Limited liability is available with other entities as well, such as a limited partnership, LLC, or trust. In addition, insurance is often available to cover many anticipated liabilities, regardless of the entity used. Moreover, shareholders of closely-held corporations are often required by lenders and creditors to personally guarantee loans made to the corporation. State law may prevent an individual from avoiding liability for his or her own tortious conduct by transacting business through a corporation. Finally, personal liability may also be imposed under the *alter ego* doctrine if the corporate entity is disregarded.

[4] Continuity of Existence

A corporation may have unlimited duration. The death of a shareholder does not terminate the existence of the corporation. Unless specific actions are taken to dissolve the corporation in accordance with state law, either voluntarily or involuntarily, the corporation will continue to exist. Use of the C corporation entity can, therefore, avoid inadvertent entity termination problems faced by LLCs, S corporations, and partnerships when members, shareholders, or partners die or dispose of their interests to third parties.

The advantage of perpetual existence, however, is likely to be of little importance if a key individual shareholder responsible for the success of the corporation dies. This attribute may be of more importance in a larger C corporation with a degree of economic strength, as lending institutions may then take into consideration favorably the corporate feature of perpetual existence.

[5] Transferability of Interest and Equity

A sale of an interest in real estate held by a corporation may take place through a sale of either the real estate itself by the corporation or by a sale of shares of the corporation's stock by the shareholders. Transfers of ownership in the form of shares is relatively uncomplicated, both for the corporation and for the shareholders. In addition, unlike S corporations, which are limited to 100 shareholders, n8 C corporations are not restricted in the number or type of shareholders they may have. This allows C corporations to issue multiple classes of stock with different rights that can approximate a partnership's ability to make special allocations.

This relative ease of transferability is probably illusory for most closely-held corporations, however. Although publicly-traded stock is readily transferable, shares of stock in a closely-held corporation are usually no more readily transferable than interests in other closely-held business entities. This is primarily due to the restricted market for shares of stock in closely-held corporations and because of the significant restrictions that may have been (and often should be)

placed on the ability to dispose of those shares in buy-sell agreements.

Although perhaps less so for real estate holding entities than for closely-held corporations conducting other businesses, valuation of the shares itself may also be problematic and thus restrict marketability, especially if fractional or minority interest discounts are involved.

[6] Management and Control

An advantage of using a corporation to hold real estate is the centralized management that a corporation can provide. The management and control of a corporation is delegated by shareholder election to a board of directors. The board of directors, in turn, appoints officers, who are responsible for implementing the policies of the board of directors. Therefore, unless special voting or other rights are given to minority shareholders by the corporate articles of incorporation or bylaws, majority shareholders may control the management of a corporation even if there is dissent from minority shareholders.

[7] Compliance With Statutory and Regulatory Requirements

Compliance with state and federal laws, including state corporate laws and federal and state securities laws, is likely to be more complex and costly for corporations than for other entities. Statutory procedures for incorporating and maintaining corporate status must be followed, and all significant corporate actions undertaken by the board of directors must be documented. Shareholder meetings must also be properly noticed and regularly held, in compliance with state law. This may require more detailed recordkeeping than for other entities.

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.02

§ 15.02 Tax Advantages and Disadvantages to C Corporations

[1] Tax Advantages

The use of a C corporation as a real estate holding entity can have several tax advantages:

- C corporations (other than closely-held C corporations and personal service corporations) are not subject to passive activity loss restrictions. Thus, C corporations may offset active income, portfolio income, and passive income with passive losses generated within the corporation. n9 For this purpose, a closely-held C corporation is one in which, at any time during the last half of the tax year, more than 50 percent in value of its outstanding stock is owned, directly or indirectly, by or for not more than five individuals. n10 In contrast, partners and LLC members are subject to the passive activity losses for items passed through from partnerships and LLCs. n11
- A C corporation may be able to time the flow of income to shareholders more effectively than a partnership because the payment of corporate dividends is at the discretion of the officers or board of directors. This allows a corporation to give shareholders a more even flow of income over several years. In contrast, a partner's share of a partnership's income is taxable in the year it is earned, whether it is distributed or not. This can be a disadvantage, especially if income fluctuates widely from year to year. n12
- If the corporation can qualify as a small business corporation, an individual who incurs a loss on the sale of the stock may treat the loss as ordinary, rather than capital, in nature, up to \$50,000 per year (\$100,000 for spouses filing a joint return). n13

[2] Tax Disadvantages

The key tax disadvantage to the C corporation form is the double taxation caused by the corporate-level tax imposed on the C corporation. After-tax income of the C corporation is taxed again in the hands of the shareholders when dividends are paid to them, yet the corporation is not allowed a deduction for the dividends paid. n14 This can be a significant disadvantage with respect to income produced by real estate, and especially when gain is recognized upon the sale or liquidation of real property owned by the C corporation. n15 Double taxation of dividends is less of a concern during years in which dividends are taxable at lower capital gains rates (generally tax years beginning after December 31,

2002, and before January 1, 2009), but it is still a disadvantage to the C corporation form of business entity. n15.1

Planning Note:

For smaller, closely-held corporations with shareholders who actively participate in the business, double taxation may be less of a problem because the corporation can deduct reasonable compensation, and the compensation will thus be deducted by the corporation and taxed only once, as income received by the recipient. n16 What constitutes "reasonable" compensation in a given case, however, can be a hotly-contested issue, and the IRS frequently challenges salary deductions paid to corporate officers or shareholders as excessive. An error in what is considered to be "reasonable" in a given situation can result in increased tax, as well as significant penalties and interest. n17

Yet another disadvantage to C corporations is that property may be transferred tax-free to C corporations (and S corporations) in exchange for stock only if the transferors have "control" of the corporation immediately thereafter. n18 In contrast, transfers of property to partnerships, limited partnerships and LLCs are tax-free without regard to any control requirement. n19

A further disadvantage is that C corporations are not eligible for the low maximum capital gains rates that are available for individuals. Therefore, an individual or pass-through entity anticipating a sizable capital gain might wish to postpone any incorporation until the gain has been recognized. n20

An additional disadvantage is that losses and deductions sustained by a C corporation do not pass through directly to the shareholders, but can only be carried forward or back by the corporation, to be applied against corporate profits in those years. n21 Shareholders of a C corporation are thus unable to take advantage of the pass-through of losses and deductions that is available for partnerships, LLCs, and S corporations. This inability of a C corporation to pass through items directly to shareholders can be especially important with respect to passive income or losses. If a pass-through entity is used, the individual investors may be able to shelter passive items of the entity against other passive income and losses from other sources. n22 In contrast, C corporation capital and ordinary losses may only be carried back and forward to offset corporate profits in other years. n23 Furthermore, losses from sales or exchanges of capital assets by a corporation are allowed only to the extent of gains from those sales or exchanges. n24

Another key disadvantage to using a C corporation is that corporations, unlike LLCs, partnerships, or S corporations, are subject to both the accumulated earnings tax n25 and the tax on personal holding companies. n26 Noncorporate entities are not subject to these taxes. n27

A final tax disadvantage to C corporation status for years in which the collapsible corporation rules are in effect is that a C corporation may be characterized as a collapsible corporation under *IRC Section 341*. Collapsible status causes income from a sale or exchange of the corporation's stock, or a distribution, that would otherwise be capital gain to be converted into ordinary income. n28 The collapsible corporation rules, however, have been temporarily repealed and do not apply effective for tax years beginning after December 31, 2002, and before January 1, 2009. n28.1

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.03

§ 15.03 Use in Tax Planning

[1] Incorporation Issues

[a] In General

Incorporating a real estate operation sometimes expands the market for the real estate involved. Stock in a corporation owning real estate is more readily transferable than the real estate itself. A stockholder can transfer partial ownership to others and still retain control of the operation of the real estate as majority owner of a corporation's stock.

Owners of real estate usually can incorporate tax free by transferring properties and related mortgages to a corporation solely in exchange for the corporation's stock, provided that the transferors, as a group, are in control of the corporation immediately after the transfer. n29 Control, for this purpose, means ownership of at least 80 percent of the total combined voting power of all classes of voting stock and at least 80 percent of the total number of shares of all other classes of stock. n30 The basis of property to the corporation is generally the same as the tax basis to the transferors. n31

Real estate entrepreneurs, however, sometimes face special problems on incorporation. Because of high leverage and accelerated deductions which are characteristic of real estate projects, the adjusted basis of the transferred property may be less than the amount of the mortgage note on the property. This situation frequently arises in the case of real estate rental projects for which depreciation charges exceed mortgage principal amortization. n32 In that case, if incorporation is contemplated, it would be more advisable to have the corporation purchase the property to avoid this problem: When there is an excess of liabilities over the tax basis of the property transferred, that excess results in taxable gain to the transferor at the date of transfer to the corporation. n33 Gain must be recognized even if a transferor remains personally liable for, or guarantees, the liabilities transferred to the corporation. n33.1

One way around this, however, may be by having the corporation record a loan receivable for the excess, as was done in the *Lessinger* case. n34 The Court held there that gain was not recognized because the taxpayer's note had value to the corporation, and it incurred a cost to acquire that note. The corporation had basis in the note equal to the face amount, and, therefore, liabilities did not exceed the tax basis of assets. Similarly, the taxpayer might simultaneously transfer a promissory note to the corporation with a basis that exceeds the amount of gain that would otherwise have to be recognized. Provided the note represents genuine indebtedness, the aggregate basis of the transferred property would exceed the transferred liabilities, and therefore gain recognition under *IRC Section 357(c)* would not be triggered. n34.1

In unusual situations, a tax-free incorporation may be disadvantageous. For example, a step-up in basis may be desired. This may be accomplished by having the corporation transfer cash and/or short-term notes to the transferor, in addition to stocks and securities. This boot will cause gain to be recognized to the extent of the money and the fair market value of the other boot received, and the step-up in basis will be equal to the gain recognized. To avoid a tax-free incorporation, the transfer must evidence all the elements of a bona fide sale or else the notes run the risk of being reclassified as equity. n35

Another way to have a taxable incorporation is simply to ensure that the transferors to the corporation own less than 80 percent of the stock of the corporation immediately after the transfer, thereby violating the control requirement of *IRC Section 351(a)*.

The IRS has issued a ruling explaining that *IRC Section 357(c)* (regarding the assumption of liabilities) does not apply to transactions that qualify as acquisitive D reorganizations, i.e. those that meet the acquisition and distribution requirements of *IRC Section 354(b)*. These transfers may also be transfers to which *IRC Section 351* applies. The ruling extends to other acquisitive reorganizations--to A, C, and G reorganizations that meet the acquisition and distribution requirements of *IRC Section 354(b)*. The rationale of the ruling is that the transferor ceases to exist in the reorganization, and therefore cannot be enriched by the assumption of liabilities. n35.1

Example 1:

A, an individual, owned all of the stock of corporation X and corporation Y. Y acquired all of the assets of X in exchange for an amount of Y stock constituting control n35.2 and the assumption by Y of X's liabilities. Pursuant to the plan, X liquidated and distributed the Y stock to A. At the time of the acquisition, the sum of the X liabilities assumed by Y exceeded X's total adjusted basis in the property transferred to Y. Further, the value of X's assets transferred to Y exceeded the amount of X's liabilities assumed by Y, and, immediately after the exchange, the value of Y's assets exceeded the amount of Y's liabilities. The transaction qualified as a D reorganization n35.3 and also as an exchange to which *IRC Section 351* applied. In the transaction, X ceases to exist and, therefore, cannot be enriched as a result of the assumption of its liabilities. Therefore, *IRC Section 357(c)(1)* does not apply to X's transfer of assets to Y in exchange for Y stock and assumption of X's liabilities notwithstanding the fact that the transfers were also exchanges to which *IRC Section 351* applied. n35.4

Example 2:

A, an individual, owned all of the stock of corporation X. B, an individual unrelated to A, owned all of the stock of corporation Y. Y acquired all of the assets of X in exchange for Y voting stock and the assumption by Y of X's liabilities. Pursuant to the plan, X liquidated and distributed the Y voting stock to A. At the time of the acquisition, the sum of the X liabilities assumed by Y exceeded X's total adjusted basis in the property transferred to Y. Further, the value of X's assets transferred to Y exceeded the amount of X's liabilities assumed by Y, and, immediately after the exchange, the value of Y's assets exceeded the amount of Y's liabilities. Simultaneously, and as part of the overall plan, B contributed property to Y in exchange for additional Y stock so that immediately after the transaction, B held more than 50 percent of the vote and of the value of all the stock of Y. The Y stock issued to X along with the Y stock issued to and held by B immediately after the transaction constituted control of Y. n35.5 The transfer by X of all of its assets to Y in exchange for Y voting stock and assumption of liabilities, followed by the liquidation of X, qualified as a C reorganization n35.6 Further, X's transfer of assets to Y in exchange for Y voting stock along with B's transfer of property to Y in exchange for additional Y stock was an exchange to which *IRC Section 351* applied. As a result of the transaction, X ceases to exist and, therefore, cannot be enriched as a result of the assumption of its liabilities. Therefore, *IRC Section*

357(c)(1) does not apply to X's transfer of assets to Y in exchange for Y stock and assumption of X's liabilities notwithstanding the fact that the transfers were also exchanges to which *IRC Section 351* applied. n35.7

[b] Assumptions of Liability

A transfer of property to a corporation in which the corporation assumes liabilities of the transferring taxpayer in a tax-free incorporation transaction generally is not subject to tax, unless the amount of liabilities assumed exceeds the basis in the property (as mentioned in [a], above). n36 However, an exception to this general rule arises when the principal purpose in the assumption of liabilities by the corporation is to avoid federal income taxes or when the business purpose is not bona fide. If the court determines that there is a tax avoidance purpose or a lack of a bona fide business purpose for the assumption of the liabilities by the corporation, the shareholder is treated as having received cash in the transaction equal to the amount of liabilities assumed, and this will most likely result in the recognition of gain on the transaction. This provision might be invoked, for example, when a taxpayer borrows against property, retains the borrowed cash for personal purposes, and then contributes the property to the corporation. n37

Except as may be provided in regulations, a recourse liability is treated as having been assumed if, based on all facts and circumstances, the transferee has agreed and is expected to satisfy the liability, whether or not the transferor has been relieved of the liability. n38 A nonrecourse liability is generally treated as having been assumed by the transferee of any asset subject to that liability, except as may be provided by regulations. n39 The amount of the nonrecourse liability so treated, however, is reduced by the lesser of the following: n40

- (1) the amount of such liability which an owner of other assets not transferred to the transferee and also subject to that liability has agreed with the transferee to, and is expected to, satisfy; or
- (2) the fair market value of those other nontransferred assets, determined without regard to *IRC Section 7701(g)* (which treats the fair market value as being not less than the amount of any nonrecourse indebtedness to which the property is subject).

Planning Note:

For transfers occurring before October 19, 1998, both the assumption of a liability and the acquisition from the taxpayer of property subject to a liability were not treated as boot under *IRC Section 357(a)*. n41 For transfers after October 18, 1998, the *IRC Section 357(d)* boot rules, at first glance, apply only to assumptions of a taxpayer's liabilities, and not to acquisitions of property that are subject to a liability. n42 The statutory clarification of when liability is assumed, however, as discussed above, has the effect of including under *IRC Section 357(d)* specified recourse and nonrecourse liabilities when property subject to those liabilities is transferred as part of the transaction. n43

[2] "Straw" Corporations

The use of the corporate form to avoid usury laws has developed as a result of occasional periods of high interest rates. In many states, usury laws are not applicable to corporations. Therefore, it has become necessary, in some cases, to arrange financing through a "straw" corporation, even though the real estate transaction, for all other purposes, is carried out in some other organizational form, such as a limited partnership. The tax problem involved is having the corporation recognized as the legal borrower and mortgagor, but in such a way that the tax law "ignores" the corporation for purposes of income, deductions, gain and loss. A misstep in this situation will likely have the Service asserting that the corporation is a viable taxable entity fully subject to taxation.

The Supreme Court provided guidance on this subject in *Bollinger v. Commissioner*. n44 The issue in that case was

what standard should be used in determining whether a corporation is the mere agent of its owners and, therefore, not taxable on the income it receives as a separate tax-paying entity.

The Court held that if the corporation conducts itself in essentially the same manner as an independent agent would, a principal-agent relationship is established. If, therefore, a corporation receives income which really belongs to its owners, it should not be taxed on it, regardless of whether the corporation is compensated for its services in the same manner as an independent agent.

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.04

§ 15.04 Election to be Treated as an S Corporation

If statutory requirements are met, n45 an entity may elect to be taxed as an S corporation. Use of an S corporation may avoid the double taxation problems of the C corporation but still retain advantages of the corporate form. n45.1

For federal tax purposes, an S corporation is generally not subject to taxes at the entity level. Instead, income and losses from the S corporation flow directly through to the shareholders, rather than being taxed at the corporate level. n45.2

[1] Advantages and Disadvantages to S Corporations

[a] Advantages

The S corporation, as a choice of entity for owning real estate, has several advantages. Tax advantages include the following:

- No corporate-level federal taxation of income, n45.3 other than taxation of certain built-in gains, n45.4 and a special tax imposed when passive investment income of the corporation exceeds 25 percent of gross receipts and the corporation has accumulated earnings and profits. n45.5 The ability to avoid this second level of taxation is usually enough of a benefit to warrant an S election, even though there is a relative parity between the highest individual tax rate, 35 percent, n45.6 and the 34 percent rate that applies to most corporate income between \$75,000 and \$10 million. n45.7 Note that an additional 5 percent tax is imposed on corporate taxable income exceeding \$100,000, with a cap of \$11,750 on this additional tax liability. The result is an effective tax rate of 39 percent on corporate taxable income between \$100,000 and \$335,000. A 35 percent tax rate applies on corporate taxable income in excess of \$10 million. An additional 3 percent tax is imposed on corporate taxable income exceeding \$15 million, with a cap of \$100,000 on this additional tax liability. The result is an effective tax rate of 38 percent on corporate taxable income between \$15 million and \$18,333,333. n45.8 Any advantage that may exist from a rate spread differential will usually be offset by the avoidance of a second level of tax, which usually will favor an S corporation election. Future tax rate changes may always occur of course, and corporate and individual state tax rates must also be considered in weighing the tax advantage or disadvantage from an S corporation election.
- Pass-through of corporate income, deductions and losses to the shareholders. n45.9 Subject to

passive loss limitations, n45.10 shareholders may use these pass-through losses to offset other taxable income, to the extent of their basis in the stock and debt of the corporation. n45.11 S corporation losses and deductions that exceed basis may be carried over indefinitely and may be deducted in future years to the extent that the shareholders' basis in the stock and debt of the corporation increases. n45.12 Furthermore, if a shareholder's stock in an S corporation is transferred to a spouse, or to a former spouse incident to a divorce, any suspended loss or deduction with respect to that stock is treated as incurred by the corporation with respect to the transferee in the subsequent taxable year. n45.13 It should be noted, however, that an individual S corporation shareholder's filing for bankruptcy will prevent any allocation of S corporation items to that shareholder. All of an S corporation's items for the year are allocated to the bankruptcy estate if the shareholder's bankruptcy filing occurs before the corporation's year end. The reason is that the income or loss of the S corporation is determined as of the last day of the corporation's taxable year, and, therefore, an individual shareholder does not receive or accrue any items from the S corporation before filing for bankruptcy. n45.14

- S corporation shareholders are not subject to the self-employment tax on pass-through items from the S corporation. n45.15

- Stock in an S corporation may qualify as Section 1244 stock. If so, a loss on the disposition of the stock of up to \$50,000 (\$100,000 for spouses filing a joint return) may be treated as an ordinary loss, rather than a capital loss. n45.16

- S corporations are not subject to the corporate alternative minimum tax, n45.17 the corporate-level environmental tax, n45.18 the personal holding company penalty tax, n45.19 or the tax on accumulated earnings. n45.20

- S corporations are not subject to the mandatory rules that apply to partnerships regarding allocations of pre-contribution gain or loss to the contributor of the property. In some cases, this can be an advantage because it allows an allocation of deductions and of gain to other shareholders if the property is distributed to a shareholder based on stock ownership. n45.21

- The statutory tax framework that applies to S corporations, although restrictive, is relatively simple and straightforward, especially when compared to the complex partnership tax provisions. n45.22

Several non-tax advantages to using an S corporation to hold real estate should also be noted:

- S corporations insulate their shareholders from liability. As with C corporations, this advantage may be somewhat illusory due to the availability of insurance for all entities and the likelihood that principal shareholders will be required to personally guarantee corporate obligations. n45.23

- S corporations have perpetual existence, although, as with C corporations, this advantage is likely to be of little importance if a key individual shareholder who is responsible for the success of the corporation dies. This attribute may be of more importance in a larger S corporation with a degree of economic strength, as lending institutions may then take into consideration favorably the corporate feature of perpetual existence.

- Unlike limited partners in a limited partnership, S corporation shareholders have rights to full participation in the management of the S corporation's business.

- The availability of qualified subchapter S subsidiaries (QSSSs) allows an S corporation to insulate different projects from the liabilities of other projects. The availability of QSSSs also enhances

segregation of businesses in a manner that can facilitate an ultimate split-off of a business. The availability of QSSSs may also permit a single group of investors to create multiple QSSSs to satisfy lenders that require bankruptcy-remote entities of ownership of separate properties. n45.24

- If an eventual public offering of stock (and C corporation status) is anticipated, the S corporation can be a good initial choice because initial losses may be passed through to shareholders, n45.25 and yet the conversion to C status will not require a liquidation of the entity or re-filing of corporation status documents with the state. This is not true if the initial entity converting to a C corporation is a partnership or LLC.

[b] Disadvantages

Several disadvantages to using an S corporation to hold real estate should be noted:

- Pass-through losses from an S corporation may be deducted only to the extent of a shareholder's adjusted basis in the S corporation stock and the adjusted basis of any loans the shareholder has made directly to the S corporation. n45.26 A shareholder's basis in S corporation stock and debt does not include any corporate-level debt owed to third parties, even if the shareholder guarantees the debt. n45.27 This, in turn, can limit the shareholder's ability to take advantage of the S corporation's deductions and losses that are passed through. n45.28 In contrast, the basis of a partner's investment in a partnership can include partnership debts, such as mortgage obligations, for which the partnership (but not the individual partner) is liable. The same is true of LLCs that are treated as partnerships. n45.29 Thus, an S corporation shareholder may be less able to deduct entity-level losses than a similarly situated partner in a partnership or a member in an LLC. n45.30

Planning Note:

Because of the above limitation, if real estate owned by an entity is subject to a large outside mortgage, the S corporation may be an unwise choice of entity. If the investment in real estate is made in cash or with a small mortgage, the S corporation choice may be more appropriate.

- S corporations cannot provide for special allocations of income, deductions, and loss inconsistent with a shareholder's *pro rata* ownership of stock. n45.31 This limitation is a significant contrast to partnerships, which may provide special allocations of partnership items, as long as they have substantial economic effect. n45.32

- S corporations are restricted in the number and types of eligible shareholders, as noted in [2], below; this disadvantage may be fatal with a large real estate development, since developers and other participants (often partnerships or other entities) are frequently compensated with an ownership interest in the project. n45.33

- S corporations may have only one class of stock; this prevents S corporations from issuing a mere profits interest in the entity that differs from the rights of other shareholders. n45.34

- The optional basis adjustment election that is available for assets owned by a partnership or LLC when a partnership interest or interest in the LLC is sold is not available for an S corporation. n45.35

- Inadvertent termination of S corporation status for failing to comply with S corporation requirements. Although some inadvertent S corporation and qualified subchapter S subsidiary

terminations may be cured and S corporation status (or qualified subchapter S subsidiary status) retroactively reinstated, n45.36 termination of S corporation status will cause the entity to be treated as a C corporation, resulting in undesired tax consequences. Inadvertent termination can occur if the corporation ceases to be a small business corporation, n45.37 as where ineligible persons become shareholders, or where there are more than 100 shareholders, n45.38 or the one-class-of-stock requirement is violated. n45.39 It can also occur if the "passive investment income" of the corporation exceeds 25 percent of gross receipts for three consecutive taxable years and the corporation has accumulated earnings and profits at the close of each of those years. n45.40 Although passive investment income includes rents, n45.41 other than those derived in an active trade or business of renting property, n45.42 this potential termination should not be worrisome to a real estate holding entity because of the ease of eliminating accumulated earnings and profits during any year.

- Like C corporations, S corporations may be costlier to implement than partnerships or LLCs because of the necessity of observing all of the corporate formalities, such as preparing and filing various documents, adopting bylaws, and holding regular meetings.

- Converting a C corporation to an S corporation may result in the imposition of an entity-level tax on unrealized built-in gains that exist at the time of conversion. The tax is imposed if the S corporation disposes of the property within ten years of the date on which the S corporation begins. n45.43 The recognition period is temporarily reduced from 10 years to 7 years, effective for any taxable year beginning in 2009 and 2010. Thus, with respect to gain that arose prior to the conversion of a C corporation to an S corporation, no tax will be imposed under *IRC Section 1374* after the seventh taxable year the S corporation election is in effect. n45.43.1

- Conversion from an S corporation into an LLC or partnership can entail great expense if the S corporation holds appreciated property because the corporation must first be liquidated, with resulting gain. n45.44

- Similarly, if appreciated property is to be distributed by an S corporation to a shareholder, the corporation may recognize gain, n45.45 which, in turn, must be passed through to, and recognized by, the shareholders. n45.46 In this situation, a partnership or LLC can be a preferable entity choice, because there will be no entity-level gain recognized on the distribution. n45.47 Rather, the partner will generally take the partnership's adjusted basis in the property distributed, and recognize gain or loss accordingly when the property is later sold or disposed of. n45.48 A partner who contributes property with a built-in gain to a partnership may, however, recognize gain if that property is distributed to another partner within seven years of the contribution, n45.49 or if the partnership distributes other property to the contributing partner within seven years of the contribution. n45.50

[2] Requirements for S Corporation Status

In order to qualify as an S corporation, the following requirements must be met:

- The corporation must have 100 or fewer shareholders. n45.51 For this purpose, a husband and wife (and their estates) are treated as one shareholder. n45.52 In addition, all members of a family (and their estates) are treated as one shareholder. n45.53 Detailed regulations set forth rules regarding ownership of stock by family members. n45.53.1

- Each shareholder must be an individual, an estate, a qualifying trust, or a specified exempt organization. n45.54 If an electing small business trust is a shareholder, n45.55 the total number of current beneficiaries (that is, the number of beneficiaries to whom the trustee may "spray" trust property)

is generally included in determining whether the corporation has 100 or fewer shareholders. n45.56 An ESBT, however, is treated as the shareholder during any period in which there is no potential current beneficiary of the trust. n45.56.1 An IRA or Roth IRA may be a shareholder of a bank or a depository institution holding company that is an S corporation, but only to the extent of bank or holding company stock held by the IRA on October 22, 2004; n45.57 the individual for whose benefit the trust was created is treated as the shareholder. n45.58 IRAs and Roth IRAs are not otherwise eligible S corporation shareholders. n45.58.1

- No nonresident aliens may be shareholders. n45.59
- The corporation may have only one class of stock (but qualified "straight debt" obligations, discussed below, will not be treated as a second class of stock). n45.60

For this purpose, however, differences in common stock voting rights are disregarded. Therefore, an S corporation can have voting and nonvoting stock, as long as all other stock rights are equal. n45.61 In general, the regulations treat an S corporation as having only one class of stock if all outstanding shares of the corporation have identical rights as to distributions and liquidation proceeds. n45.62

The two-classes-of-stock prohibition can create problems when an S corporation issues debt. If the debt is not carefully structured, the Service may recharacterize it as equity. n45.63 The likely result is that the S corporation will be considered as having two classes of stock.

Most S corporations are able to avoid this problem by making sure that their debt qualifies for the "straight debt safe harbor." n45.64 The Code provides that straight debt cannot be treated as a second class of stock. To be straight debt, the debt must be a written unconditional promise to pay a fixed sum of money on demand or on a specified date. The interest rate and payment dates cannot depend on the corporation's profits, the corporation's discretion, or similar factors. The debt cannot be convertible into stock and the creditor must be an individual (other than a nonresident alien), an estate, a trust which could be an S corporation shareholder, or "a person which is actively and regularly engaged in the business of lending money."

[3] Making the Election

To qualify as an S corporation, the corporation must file a completed Form 2553 with the IRS. n45.65

Taxpayers may request relief from a variety of late S corporation elections, under either of two revenue procedures. The first is *Revenue Procedure 2007-62*. n45.65.1 Under this procedure, an entity may request relief if the following requirements are met: n45.65.2

- the entity fails to qualify for its intended status as an S corporation on the first day that status was desired solely because of the failure to file a timely Form 2553 with the applicable campus;
- the entity has reasonable cause for its failure to file a timely Form 2553;
- the entity seeking to make the S corporation election has not filed a tax return for the first taxable year in which the election was intended;
- the application for relief is filed under this *Revenue Procedure 2007-66* no later than six months after the due date of the tax return (excluding extensions) of the entity seeking to make the election for the first taxable year in which the election was intended; and

- no taxpayer whose tax liability or tax return would be affected by the S corporation election (including all shareholders of the S corporation) has reported inconsistently with the S corporation election, on any affected return for the year the S corporation election was intended.

To request relief for a late S corporation election under *Revenue Procedure 2007-62*, the entity must file a properly completed Form 2553 with a Form 1120S for the first taxable year the entity intended to be an S corporation. A properly completed Form 2553 includes a statement establishing reasonable cause for the failure to file the S corporation election timely. The forms must be filed together no later than six months after the due date of the tax return (excluding extensions) of the entity for the first taxable year in which the S corporation election was intended. These items constitute the application requesting relief. n45.65.3 If the requirements are satisfied and the forms properly filed, the IRS will determine whether the requirements for granting relief for the late S corporation election have been satisfied. n45.65.4 An entity that does not meet the requirements for relief under *Revenue Procedure 2007-62* may request relief for a late S corporation election following *Revenue Procedure 2003-43*. n45.65.5 Relief under *Revenue Procedure 2003-43* is available only if the request for relief is filed within 24 months of the due date of the election. n45.65.6

An entity that makes a timely election to be classified as an S corporation is deemed to have elected to be classified as an association taxable as a corporation for federal entity classification purposes. n45.66 A separate election to be classified as an association by filing a Form 8832 n45.67 is not necessary. If both the entity's S corporation election (Form 2553) and its entity classification election (Form 8832) are filed late, the above deemed election rule does not apply. In that case, a taxpayer must generally apply for relief through a letter ruling. However, there are two revenue procedures-- *Revenue Procedure 2007-62* n45.68 and *Revenue Procedure 2004-48*, n45.68.1 that provide a simplified method for taxpayers to request relief for a late S corporation election and a late corporate classification election intended to be effective on the same date that the S corporation election was intended to be effective. Either procedure is in lieu of the letter ruling process ordinarily used, and avoids the user fees that ordinarily apply for letter rulings. Both revenue procedures as they relate to late S corporation elections and late corporate classification elections are discussed in Chapter 14.

A partnership that has converted to corporation tax status either under entity selection regulations n45.68.2 or under a state law formless conversion statute is allowed to make an S election effective for the corporation's first taxable year. If it does so, the corporation will not be deemed to have an intervening short taxable year in which it was a C corporation. n45.68.3

Example:

On January 1 of Year 1, X, a calendar year taxpayer, is organized in State as an unincorporated entity that is classified as a partnership for federal tax purposes. X elects under regulations n45.68.4 to be treated as an association (corporation) for federal tax purposes, effective January 1 of Year 2. On February 1 of Year 2, X files an S corporation election effective January 1 of Year 2. There is no person who held stock in X on January 1 of Year 2 who does not hold stock at the time the election is made.

Upon making the election to be treated as an association for federal tax purposes, X is deemed to contribute all of its assets and liabilities to the association in exchange for stock in the association. Immediately thereafter X is deemed to liquidate by distributing the stock of the association to its partners. These deemed steps are treated as occurring immediately before the close of the day before the election is effective. n45.68.5 Thus, the partnership's taxable year ends on December 31 of Year 1, and the association's first taxable year begins on January 1 of Year 2. Therefore, the partnership will not be deemed to own the stock of the association during any portion of the association's first taxable year beginning January 1 of Year 2. Thus, X is eligible to elect to be an S corporation effective January 1 of Year 2. Because the partnership's taxable year ends immediately before the close of the day on December 31 of Year 1, and the association's first taxable year begins at the start of the day on January 1 Year 2, the

deemed steps will not cause X to have an intervening short taxable year in which it was a C corporation. n45.68.6

All shareholders must consent to the S corporation election. n45.69 The IRS allows automatic relief from the late filing of shareholder consents for spouses of S corporation shareholders in community property states if certain conditions are met. n45.70

As a general rule, a corporation needs special IRS consent to make an S election if its S election was terminated within the prior five years. n45.71

The IRS may grant relief in certain situations where a small business corporation inadvertently fails to make the S corporation or qualified subchapter S subsidiary election or inadvertently makes an invalid election. n45.72 The IRS may also consider a late or non-existent election to be timely in certain circumstances. n45.73

[4] Termination or Revocation of S Corporation Status

[a] In General

Voluntary revocation of the S election requires the consent of persons owning more than one-half of the issued and outstanding stock (including nonvoting stock) of the corporation. Violation of the principles of a small business corporation will also terminate the election. n45.74

The Service is allowed to undo an inadvertent termination, provided that the termination was, in fact, inadvertent, and the taxpayers take steps to rectify the problem. n45.75 The Service may also waive inadvertent qualified subchapter S subsidiary terminations. n45.76 For example, the fact that the "terminating event" was not reasonably within the control of the corporation and was not part of a plan to terminate the election, or the fact that the event took place without the knowledge of the corporation, notwithstanding its due diligence to safeguard itself against such an event, tends to establish that the termination was inadvertent. n45.77 The corporation and each shareholder must agree to make such adjustments as the Commissioner may require. n45.78 In general, the adjustments required should be consistent with the treatment of the corporation as an S corporation (or QSub) during the period specified by the Commissioner. In the case of stock held by an ineligible shareholder that causes an inadvertent termination, the Commissioner may require the ineligible shareholder to be treated as a shareholder of the S corporation during the period the ineligible shareholder actually held stock in the corporation. Moreover, the Commissioner may require protective adjustments that prevent the loss of any revenue due to the holding of stock by an ineligible shareholder (for example, a nonresident alien). n45.79

As noted above, once an S corporation election is terminated, a new election may not be made for five years without the consent of the Secretary of the Treasury. n45.80 Therefore, any decision to terminate existing S corporation status should consider not only the current tax and non-tax ramifications of that revocation, but also an expectation of the situation several years into the future.

[b] Termination Based on Excessive Passive Investment Income

An S corporation that has no accumulated C corporation earnings has no limitation on the amount of passive income that it may earn. However, if an S corporation was previously a C corporation and has earnings and profits from the period it was a C corporation, its S election will be automatically terminated if its "passive investment income" exceeds 25 percent of its gross receipts for three consecutive tax years. n45.81 For this purpose, "passive investment income" does not mean passive income under the passive activity rules. There is a special definition. "Passive investment income," for the above purposes, includes rents, subject to an important exception, set out in the regulations as follows:

Rents does not include rents derived in the active trade or business of renting property. Rents received by a corporation are derived in an active trade or business of renting property only if, based on

all the facts and circumstances, the corporation provides significant services or incurs substantial costs in the rental business. Generally, significant services are not rendered and substantial costs are not incurred in connection with net leases. n45.82

Factors to consider under this test include the number of employees and other parties who provide services, the extent and significance of those services, and the type and amount of expenditures, excluding depreciation. The IRS has made extensive rulings in this area, almost always in response to taxpayers who have made, or anticipate making, an S corporation election, and who wish to assure that income they receive will not be passive investment income. The rulings detail at length various the managerial, maintenance, leasing, and administrative duties performed, and the expenses incurred in connection with rental properties. The rulings almost always conclude that the services and expenses are sufficient to prevent the rental income from being passive investment income. n45.83

An extremely rare exception involved a taxpayer who owned a parcel of commercial real property consisting of land and a single-tenant industrial warehouse. The taxpayer participated in negotiating the tenant's lease terms, lease extensions, and did limited repair and maintenance of the building exterior and interior. It received income for and incurred various expenses in performing these activities. The IRS ruled that the rental income the taxpayer received was passive investment income, and determined that the taxpayer's S corporation election terminated on the date that the taxpayer first failed the passive income/accumulated earnings and profits test. n45.84 The ruling does not state exactly how much time the taxpayer spent on services, or the dollar amounts it spent or received in performing those services, so as to cause the IRS to rule as it did. The ruling gives two clues, however. First, the taxpayer held only a single property, with only a single tenant. Most of the rulings involve one or more large commercial, or residential buildings, with many tenants. Second, the tenant operated only a warehouse, which required relatively simple maintenance oversight by the taxpayer, and the lease negotiations the taxpayer was involved with were only those involving the tenant. Other rulings often involve a taxpayer's negotiations between tenants or between tenants and third parties. Even though the ruling was unfavorable, the IRS found that the termination of the taxpayer's S corporation election was inadvertent and ruled that the taxpayer's S corporation election could continue in effect if the taxpayer made a distribution of its retained subchapter C earnings and profits no later than 30 days from the date of the ruling, and the taxpayer sent a payment to the IRS in a stated amount as an adjustment under *IRC Section 1362(f)(4)*. n45.85

The IRS has privately ruled that certain coal royalties are not passive investment income for purposes of determining whether S corporation status has terminated. n45.86

In determining the S corporation's gross receipts, an S corporation that is a partner in a partnership cannot merely look at its share of the net partnership income or loss. n45.87 The S corporation's distributive share of each item of partnership gross receipts must be taken into account, n45.88 even though the partnership experienced a net loss for the year.

[c] S Corporation Post-Termination Transition Period

Shareholders of an S corporation whose status as an S corporation terminates are allowed a period of time after the termination (the post-termination transition period ("PTTP")) to use certain of the benefits of S corporation status. The shareholders may claim losses and deductions previously suspended due to lack of stock or debt basis up to the amount of the stock basis as of the last day of the PTTP. n45.89 Also, shareholders may receive cash distributions from the corporation during the PTTP that are treated as returns of capital to the extent of any balance in the S corporation's accumulated adjustments account ("AAA"). n45.90 The PTTP generally begins on the day after the last day of the corporation's last tax year as an S corporation and ends on the later of the day which is one year after that last day or the due date for filing the return for that last year as an S corporation (including extensions). n45.91 There is also a 120-day PTTP following an audit of the corporation that adjusts an S corporation item of income, loss, or deduction arising during the most recent period while the corporation was an S corporation. This provision allows the tax-free distribution of any additional income determined in the audit. n45.92 The 120-day PTTP does not apply for purposes of allowing

suspended losses to be deducted (since the increased income determined in the audit can be offset with the losses).
 n45.93 Tax-free distributions of money by the corporation are allowed during the 120-day period only to the extent of any increase in the AAA n45.94 by reason of adjustments from the audit. n45.95

[5] Other Operative Rules

[a] Loss Limitations

A very important consideration in the use of an S corporation is the limitation on the amount of the corporation's losses which a particular shareholder may offset against other income. In addition to the effect of the passive activity loss limitation on the shareholder's ability to deduct losses from an S corporation (see Chapter 13), the shareholder's current deduction is also limited to his tax basis in his stock plus any amounts owed to him by the corporation. n45.96 Unlike the situation with partnerships, an S corporation shareholder is not permitted to include the entity's debt in his basis. n45.97 This is often enough to make a partnership or LLC a better choice of entity.

The basis limitation for deductions and losses does not apply to a charitable contribution of appreciated property to the extent the shareholder's pro rata share of the contribution exceeds the shareholder's pro rata share of the adjusted basis of the property. Thus, the basis limitation does not apply to the amount of deductible appreciation in the contributed property. n45.97.1 This exception, however, applies only for charitable contributions made in taxable years beginning after December 31, 2005, and before January 1, 2008. n45.98

Losses limited by the passive activity rules and losses in excess of the shareholder's basis can be carried forward indefinitely and used if passive income is subsequently generated or if basis is restored by future profits or additional investment. n45.99 Moreover, such losses may even be carried to a period after termination of S corporation status. n45.100

[b] Tax Year

The taxable year of an S corporation must be a "permitted year." n45.101 A permitted year is a taxable year ending December 31, or any other accounting period for which the corporation establishes a business purpose to the satisfaction of the Secretary. (Not surprisingly, deferral of income to shareholders is not considered a business purpose.) n45.102 An S corporation may, however, elect a fiscal year under *IRC Section 444*, even without an acceptable business purpose, if the corporation makes the payments required by *IRC Section 7519*. The effect of these payments is to offset any deferral benefits. n46

[c] Application of C Corporation Rules

Except for the provisions of Subchapter S, an electing corporation is treated as a normal corporation under other sections of the Code, such as those relating to organization, reorganization, and liquidation. An S corporation is not a partnership, and potential investors should not rely on partnership taxation principles in evaluating an S corporation election.

Further, it should be noted that many states consider S corporations to be regular corporations and tax them accordingly.

[6] Taxation of S Corporations That Once Were C Corporations

[a] Tax on Passive Investment Income

As noted in § 15.04[4][b], above, an S corporation's election can be terminated if an S corporation was previously a C corporation and has earnings and profits from the period it was a C corporation: Its S election will be automatically terminated if its "passive investment income" exceeds 25 percent of its gross receipts for three consecutive tax years.

Even if a corporation is able to avoid termination (for example, because its passive investment income is excessive in two, but not three, consecutive years), it will be subject to a tax under *IRC Section 1375*. The tax, at the maximum corporate rate, is imposed on "excess net passive income" in taxable years when an S corporation has both passive income in excess of 25 percent of gross receipts and accumulated earnings and profits. n47

[b] Taxation of Distributions

If an S corporation has accumulated earnings and profits from the period it was a C corporation, distributions may result in dividend income if they exceed the "accumulated adjustments account." n48 The purpose of this rule is to prevent C corporations with accumulated earnings and profits from electing S corporation status and distributing the earnings and profits as either capital gains or tax-free returns of capital. n49

[c] Capital Gains

Capital gains realized by an S corporation, like other income, generally are not taxable to the corporation but are passed through to the shareholders. Like all other items of income and expense, capital gains retain their character in the shareholder's hands. Each shareholder is taxed at capital gains rates on his share of the corporation's income which constitutes capital gains.

The rules can be somewhat different when an S corporation was previously a C corporation. Special rules apply in this situation to reflect the theory and intent underlying the repeal of the *General Utilities* doctrine and to prevent the avoidance of those provisions through the conversion of a C corporation to an S corporation. The tax is imposed on the resulting S corporation when it has "net recognized built-in gains" during the ten-year period beginning with the first day of the first taxable year for which the corporation was an S corporation. n50 The recognition period is temporarily reduced from 10 years to 7 years, effective for any taxable year beginning in 2009 and 2010. Thus, with respect to gain that arose prior to the conversion of a C corporation to an S corporation, no tax will be imposed under *IRC Section 1374* after the seventh taxable year the S corporation election is in effect. n50.1

"Net unrealized built-in gain" is defined as the excess of the fair market value of the S corporation's assets when the S election became effective over the aggregate adjusted basis of these assets at that time. "Net recognized built-in gain" is the lesser of: (1) the sum of recognized built-in gains less recognized built-in losses; or (2) the taxable income of the corporation for the taxable year. n51

"Recognized built-in gain" generally means any gain recognized on the disposition of any asset during the ten-year (or temporary 7-year) period noted above. n51.1 However, it does not include gain from the disposition of an asset if it is established that: (1) the asset was not held by the S corporation when its S election became effective; or (2) the gain is attributable to appreciation that occurred after the S election became effective. n52 Taxpayers may request private letter rulings as to whether particular items will be subject to the built-in gains tax. n52.1

"Recognized built-in losses" include losses recognized during the recognition period on the disposition of assets for which the fair market value is less than the tax basis on the first day the S corporation election is effective. Additionally, the term encompasses amounts that are allowed as deductions during an S year, but that are attributable to periods before the first S year. n53

The tax imposed is the tax computed by applying the highest rate of tax specified in *IRC Section 11(b)* (currently 35 percent) to the net recognized built-in gain of the S corporation for the taxable year. n54 In computing its *IRC Section 1374* tax, however, the corporation may use the net operating loss carryovers and capital loss carryovers that were available to it as a C corporation. n55

IRC Section 1374(d)(2)(B) provides for a carryover of net recognized built-in gains when the amount taxed is limited to

the S corporation's taxable income.

Example:

Assume an electing S corporation had a total built-in gain on its first S day of \$1,000. During its first S year, it recognizes the net built-in gain of \$1,000 but also realizes and recognizes other operating losses of \$1,000, netting to zero taxable income. The \$1,000 net recognized built-in gain carries over and is treated as recognized in the next S year when it is again subject to the previously described taxable income limit.

Recognized built-in gains and losses of an S Corporation are not included in the computation of passive investment income for purposes of applying the tax on excess net passive income. n56

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.05

§ 15.05 Special Corporate Tax Problems

The corporate form of organization invites potential taxation through sections of the Internal Revenue Code not applicable to other types of business entities. A complete discussion of these principles is beyond the scope of this book. However, comments regarding "thin" capitalization, the accumulated earnings tax, the personal holding company tax, liquidations, and collapsible corporations are made in subsequent sections.

[1] "Thin" Capitalization

"Thin" capitalization refers to the situation in which the equity capital of a corporation is so small, relative to its debt, that the purported interest or principal payments on corporate indebtedness to shareholders may be considered to be distributions of corporate earnings. In other words, the purported debt of the corporation may be recast as equity for tax purposes. The Service may then also redesignate the distributions and tax them as dividends, rather than as deductible interest payments.

Because of uncertainty in this area, Congress enacted *IRC Section 385*, which gives the Service authority under several broad guidelines to determine whether a particular instrument is debt or equity. Although the Treasury issued final regulations pertaining to debt versus equity securities, the regulations were formally withdrawn and never became effective. n57

The factors used by the Service in making a distinction between debt and equity securities range from the instrument's characteristics to the financial position of the issuing corporation. Some of the more pertinent factors which the Service uses to classify securities as either debt or equity include: n57.1

- (1) Whether there is a written, unconditional promise to pay on demand or on a specified date a sum certain in return for adequate consideration, and to pay a fixed rate of interest, and the reasonableness of that interest rate.
- (2) Whether there is subordination to, or preference over, any other indebtedness of the corporation.
- (3) Whether the ratio of debt to equity is excessive.

- (4) Whether certain debt is convertible into stock.
- (5) Whether the stock and debt in question are held pro rata or "substantially" proportionate.
- (6) The ability of the issuing corporation to make principal and interest payments by the due date.

The U.S. Supreme court has noted that the distinction between debt and equity is basically factual, n57.2 but the judicial criteria used in distinguishing debt and equity securities vary somewhat from circuit to circuit. The Ninth Circuit considers the following factors: n57.3

- (1) The name of the instrument--whether it is referred to as a note or a debenture or as stock;
- (2) The maturity date--whether there is a fixed maturity date that is reasonable in length;
- (3) The source of the payments--whether the payment must be made from the general funds of the corporation or from its profits. If repayment is possible or expected to be made only out of corporate earnings, the instrument is likely to be treated as equity, but if repayment does not hinge on earnings, the instrument reflects a debt or loan;
- (4) The right to enforce payment--whether there is a definite right to enforce payment upon default or at maturity. If a fixed obligation to repay the advance exists, the instrument is indicative of debt or a loan;
- (5) Participation in management--whether the holders of the debt, in their capacity as holders of debt, have any right to participate in management of the corporation;
- (6) The relationship of the would-be creditors to general creditors--whether the rights of the debt holders are equal to those of the general creditors or are they in a subordinate position to general creditors. Subordination of a putative loan to that of other creditors indicates equity, or a contribution to capital;
- (7) The intention of the parties--whether the form of the instrument itself, as well as the corporate minutes authorizing it, clearly indicates that both the corporation and the lender intended to create an unconditional and legally enforceable obligation for the payment of money. This factor weighs heavily, but self-serving statements of intent to create debt are accorded little weight by the courts; circumstances surrounding the transaction are scrutinized to reveal the intent of the parties; if a corporation does not make required payments or a shareholder does not enforce a right to receive payments, an instrument is likely to be characterized as equity rather than debt;
- (8) The adequacy of capitalization--the ratio of the corporation's debt to its equity. An instrument is likely to be treated as equity if the corporation is thinly capitalized;
- (9) The relationship, if any, between the creditors and the shareholders--whether the creditors and the shareholders are one and the same and, if so, is the debt ownership proportionate or disproportionate to the equity ownership;
- (10) The source of the interest payments--whether the interest is payable out of general corporate funds or is it payable out of profits; and
- (11) The ability of the corporation to obtain loans elsewhere--whether the corporation is able to obtain the necessary loans from banks or third parties or are the shareholders the only source of the needed capital.

Note:

The number of factors varies from circuit to circuit. As noted from the above list, the Ninth Circuit analyzes 11 factors. n57.4 The Fifth and Eleventh Circuits have 13, n57.5 The Third Circuit uses 16. n57.6

[2] Accumulated Earnings Tax

When a C corporation accumulates its earnings beyond the reasonable needs of the business and it can be shown that the accumulation is used to avoid the tax on shareholders' dividend distributions, a special penalty tax applies. The tax is imposed on accumulated taxable income. The rate of tax imposed is a flat 15 percent. n58 Accumulated taxable income generally is computed as taxable income, reduced by federal income taxes, dividends paid, and various other items. n59

A corporation, other than a mere holding or investment company, may retain, after dividends, an amount equal to the reasonable needs of its business. A minimum accumulation, generally \$250,000 and referred to as the accumulated earnings credit, is not subject to the surcharge. n60

A corporation can establish reasonable need by showing that it is providing for the expansion of its business, the replacement of its assets, the acquisition of another business, the retirement of indebtedness, or necessary working capital. The ultimate question in every accumulated earnings tax case, however, is whether corporate earnings and profits have been accumulated for the purpose of avoiding income taxes with respect to the shareholders.

Example:

A corporation has accumulated earnings and profits of \$200,000 at December 31 of year 1. It has earnings and profits for the year ended December 31 of year 2, of \$175,000 and has a dividends-paid deduction of \$20,000, so that the earnings and profits retained for the taxable year are \$155,000. The reasonable needs of the business amount to \$30,000. Accumulated earnings subject to the tax on that accumulation are:

Accumulated earnings	\$ 355,000
Less: Greater of \$ 250,000 credit or reasonable needs of business	\$ 250,000
Accumulated earnings subject to surcharge	\$ 105,000
Accumulated earnings tax @ 15% n60.1	\$ 15,750

Indications of accumulation beyond reasonable needs include loans to shareholders or payments for their benefit, loans to others having no reasonable relation to the conduct of the corporate business, investments in properties or securities unrelated to the business of the corporation, loans to another corporation owned by the corporation's stockholders, and retention of earnings to provide against unrealistic hazards.

A well-managed real estate company should not have unreasonable accumulation problems. Should the problem of excess funds arise, other real estate may be acquired or the funds may be used to reduce existing mortgage debt. Note that the accumulated earnings tax cannot apply in any year in which the corporation is a personal holding company. n61

[3] Personal Holding Company Tax

Apart from the accumulated earnings tax, a penalty tax is imposed on the undistributed personal holding company

income of a personal holding company (PHC). The tax is imposed only on personal holding companies. n62 The rate of the tax is a flat 15 percent. n62.1 A personal holding company is any C corporation that for the tax year meets both a stock ownership test and an income test. n63 The stock ownership test is met if at any time during the last half of the taxable year more than 50 percent in value of the corporation's outstanding stock is owned by or for not more than five individuals. n64 For this purpose, certain employee pension trusts, trusts paying unemployment compensation benefits, private foundations, and a portion of a trust set aside for charitable purposes are treated as an individual. n65

The income test is met if at least 60 percent of the corporation's adjusted ordinary gross income for the tax year is "personal holding company income". n66 Subject to several exceptions and limitations, personal holding company income includes that portion of adjusted ordinary gross income that consists of income from a variety of passive investments, including dividends, interest, and royalties. n67 Personal holding company income can also include amounts received for the use of corporate property by a 25-percent shareholder, n68 and certain amounts received under a contract under which the corporation must furnish personal services, if the person performing those services is a 25-percent shareholder at some time during the tax year. n68.1

Major exceptions important to real estate investment and operation concern capital gains and rental income. Capital gains are not included in personal holding company income. n68.2 Nor is gain from the sale or disposition of property used in the taxpayer's trade or business. n68.2.1 Further, adjusted rental income (i.e., gross rents less depreciation, amortization, property taxes, interest, and rent allocable thereto) n68.3 is not personal holding company income if: (1) the adjusted rental income is at least 50 percent of the adjusted ordinary gross income, and (2) the corporation distributes a specified portion of its non-rent PHC income. This portion must equal or exceed the amount (if any) by which the corporation's non-rent PHC income exceeds 10 percent of its ordinary gross income. n68.4 The rationale for this rule is that corporations actively engaged in a real estate business should not be subject to the PHC penalty tax on their rental income.

The term "rents" includes any compensation, however designated, for the use of real property. It also includes interest on debts owed to the corporation, to the extent they represent the price for which real property held primarily for sale to customers in the ordinary course of its business was sold or exchanged. n68.5

Although rental income is not included in the calculation of personal holding company income, a real estate corporation holding rental real estate must carefully monitor the amounts of other passive-type income received. Because gross rents are reduced by expenses before being compared with personal holding company income, the 50 percent test might be failed in a situation of falling rents or rising costs. Moreover, the corporation could easily fail the 10 percent test if either rental income or other personal holding company income change unexpectedly. n68.6 Even if a corporation is in fact engaged in an active real estate business, the mathematical rules are applied automatically, and can be a trap for the unwary with harsh and unfair results. n68.7 Concerns regarding the personal holding company tax can be avoided entirely if a business operates as an S corporation, limited liability company or other entity not subject to the personal holding company tax. n68.8

Example:

A domestic corporation receives \$95,000 in rents from real estate, incurs \$85,500 in depreciation, taxes, interest, and other related expenses, and receives \$5,000 in dividends and \$10,000 in long-term capital gains for its taxable year. The corporation pays out \$5,000 in dividends during the year. The shareholders are four unrelated individuals, and no dividends are distributed during the year. The stock ownership test is met since all the stock is owned by fewer than five individuals.

The income test is not met, however, so the corporation is not a personal holding company and is not subject to a personal holding company tax for the year. Because capital gains are excluded, the corporation's "ordinary gross income" is \$100,000 (\$95,000 rents + \$5,000 dividends). n68.9 "Adjusted ordinary gross income" is \$14,500 (\$100,000 less \$85,500 expenses). n68.10 Personal holding company

income is \$5,000, the amount of dividends. Capital gains are excluded. The "adjusted income from rents" (\$14,500) is also excluded because: (1) it is at least 50 percent of the adjusted ordinary gross income, and (2) the dividends paid during the year (\$5,000) are at least equal to the amount by which the non-rent personal holding company income for the year (\$5,000) exceeds 10 percent of the ordinary gross income for the year (\$10,000 [10% x \$100,000]). The personal holding company income (\$5,000) does not exceed \$8,700 (60 percent of \$14,500), so the income test is not met. The corporation is therefore not a personal holding company. n68.11

Additionally, the passive activity rules of *IRC Section 469* may make a corporation more susceptible to being cast as a personal holding company, since passive activity losses can only offset active income, and not portfolio income (i.e., dividends, interest and royalties). Although not always the same, portfolio income may also constitute personal holding company income. This could result in a corporation with undistributed personal holding company income and nondeductible passive activity losses. Net-operating-loss carryovers may be of little help, since only a net operating loss from the immediately preceding year may be taken into account in computing undistributed personal holding company income, and net operating carrybacks are not allowable at all. n68.12

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.06

§ 15.06 Liquidations and Other Property Distributions

Often, the sale of the assets of a corporation will be accomplished in a manner other than the outright sale of capital stock. There are various reasons for selecting an alternate method, important among which are the fear of undisclosed liabilities or a lack of interest in some of the assets.

[1] Liquidations

Normally, the complete liquidation of a corporation generates capital gains or losses to be reported by the individual shareholders. n68.13 Gain or loss is measured by the difference between the basis of the stock transferred and the amount of cash and fair market value of the property received. n68.13.1 The basis to the transferee shareholder is the fair market value of the property received. n68.14

As a general rule, the liquidating corporation also recognizes gain or loss on distribution of its assets in complete liquidation. The corporation's gain or loss is computed by treating the distribution as if it were a sale of the property to the shareholder at its fair market value. n68.15

An exception applies to liquidations of 80 percent-or-more domestically owned corporate subsidiaries. In these situations, the subsidiary does not recognize gain or loss on distributions to the "80-percent distributee" (i.e. the parent corporation). n68.15.1 Gain or loss must be recognized on certain distributions if the parent corporation is an exempt organization. n68.15.2 In addition, a liquidating subsidiary recognizes gain, but not loss, on any property distributed to minority shareholders. n68.16

A special rule also applies to an S corporation's distribution of an installment obligation as part of a complete liquidation under *IRC Section 331*. n69 If the corporation distributes an installment obligation it acquired from a sale or exchange during a 12-month period beginning on the date a plan of complete liquidation is adopted, and the liquidation is completed during that 12-month period, the shareholder's receipt of that installment obligation is not treated as payment received in exchange for his stock, except to the extent that the corporation has built-in gains subject to *IRC Section 1374*. Instead, the payments that the shareholder receives under the installment obligation are treated as the liquidating payment. This effectively allows him to recognize this part of the gain on his stock over the installment period.

[2] Other Property Distributions

Corporations frequently distribute property to their shareholders other than in a complete liquidation. For example, a corporation may wish to distribute some of its assets in a "partial liquidation" n69.1 or in a "redemption" n69.2 of the stock of one or more of its shareholders. Although an in-depth discussion of the relevant rules governing the effects of a partial liquidation or a redemption is beyond the scope of this section, the basic rules can be summarized as follows:

1. *Effects on shareholders.* Generally, if the redemption or partial liquidation meets certain special criteria, the effect on the shareholder is the same as if the corporation had fully liquidated; that is, the shareholder recognizes capital gain or loss equal to the difference between the fair market value of the property received and his tax basis in the stock transferred. n70 If, on the other hand, the special criteria are not met, the property received in the transaction is treated as a dividend distribution to the shareholder, and is, therefore, governed by the rules on the treatment of dividends. n71
2. *Effect on the distributing corporation.* A corporation generally recognizes no gain or loss on a distribution in redemption or in partial liquidation. n72 The corporation must recognize gain, however, if the distribution is of appreciated property. n72.1

In determining whether a distribution by a corporation is taxable to the shareholders as a dividend, the corporation's current and accumulated earnings and profits (E&P) must be determined. The shareholder's distribution is a dividend to the extent the corporation has current or accumulated E[P] the balance of the distribution is capital gain (or is considered a nontaxable return of basis). n73 Traditionally, avoiding dividend treatment has been important because dividends have been taxed as ordinary income. n73.1 This is no longer a concern, at least for years in which qualifying dividends are taxable at lower capital gains rates (generally tax years beginning after December 31, 2002, and before January 1, 2009). n73.2 Any "capital gain" from dividend income, however, cannot be used to offset capital losses. n73.3

Many real estate corporations have sales that are reported on the installment sales method for federal income tax purposes. Therefore, it is important to note that in computing a corporation's earnings and profits, the installment sale treatment is not taken into account: that is, for earnings and profits purposes, the full amount of the gain is recognized in the year of the sale and is not deferred. n74 Additionally, the use of longer depreciable lives and the straight-line method of accounting is often required in computing depreciation for earnings and profits purposes. n75 The general effect of these rules is to increase the amount of a property distribution.that is treated as a dividend. n75.1

CHAPTER 15 Corporate Ownership of Real Estate

1-15 Federal Taxes Affecting Real Estate § 15.07

§ 15.07 Collapsible Corporations

NOTE:

The collapsible corporation rules are repealed and do not apply effective for tax years beginning after December 31, 2002, and before January 1, 2009. n75.2 The following discussion applies only for tax years in which the collapsible corporation rules are in effect.

The collapsible corporation provisions of the tax law were specifically designed to deter a prevalent practice of real estate developers as well as several other types of business. Typically, a corporation was formed to construct a building or subdivide a tract of land under circumstances in which the income produced would have been ordinary income if received by the individuals themselves. The stock of the corporation was, however, a capital asset and could produce a substantial capital gain when sold before the realization of the ordinary income by the corporation.

To dissuade individual taxpayers from using corporations to alter the character of the taxpayers' gain, Congress enacted *IRC Section 341*. n76 Essentially, the "collapsible" corporation provisions under this section require that the gain from the sale, exchange, or redemption of stock of a "collapsible" corporation be considered gain from the sale or exchange of property which is not a capital asset. Therefore, the gain is taxable at ordinary income tax rates. n77

Even before their repeal, n78 statutory changes that repealed the *General Utilities* doctrine rendered the collapsible corporation provisions somewhat obsolete. Under current law, a corporation must recognize gain on liquidating distributions of appreciated property to shareholders, and this gain is taxable at ordinary income rates. n79 Thus, the collapsible corporation rules applicable to corporate liquidating distributions to shareholders are now unnecessary. However, collapsible corporation rules could have some effect in situations that did not involve corporate liquidations, such as when the shareholder sold his or her stock before the corporation recognized gain on its appreciated assets. Then, the collapsible corporation recharacterization rules could affect shareholders who had capital losses that they wanted to offset against capital gains. n79.1

[1] Definition of a Collapsible Corporation

A collapsible corporation is one formed or used principally for the manufacture, construction, or production of property or for the purchase of "Section 341" assets. In addition, the corporation's shareholders must have, as an objective, "the sale or exchange of stock by its shareholders (whether in liquidation or otherwise)," or a distribution of corporate

property before the corporation has realized two-thirds of the taxable income to be derived from such property. n80 The reason for this is that shareholders, rather than the corporation, wish to realize the gain attributable to the property.

Several of the forbidden objectives that trigger application of the collapsible corporation rules can never in fact occur because statutory recognition provisions outside the collapsible corporation statute require a the corporation to recognize all, and not just two-thirds, of gain attributable to the property. n80.1 For example, although the Code includes liquidation as one of the forbidden objectives, n80.2 the triggering intent to liquidate before the corporation realizes the two-thirds of its taxable income from property n80.3 can never occur because a corporation must fully recognize all gain when it distributes property in a complete liquidation. n80.4 The same is true with respect to the triggering intent regarding distributions to shareholders before the corporation realizes the two-thirds of its taxable income from property n81 because corporations must fully recognize gains on distributions of appreciated property to shareholders. n82

Thus, Section 341's provisions are most likely to come into play when a shareholder sells stock in a corporation before the corporation has realized the required amount of income from the property described in Section 341(b)(1).

Example:

A taxpayer forms a corporation, the only activity of which is the construction of a building. More than one year later, when construction is nearly completed, he sells or exchanges his capital stock at a gain. If it were not for *IRC Section 341*, the taxpayer would realize long-term capital gain. Instead, he realizes ordinary income.

Section 341 assets are generally assets held for less than three years which, if sold by the corporation, would produce ordinary income. n83

It should be noted that *IRC Section 341* has no effect until the shareholder has realized a gain through the sale or exchange of collapsible corporation stock or a corporate distribution. Only when one of these events takes place do the collapsible corporation rules come into play. n83.1

As indicated by the collapsible corporation definition, a corporation is collapsible if it is formed or used for the prohibited purposes. n84 Thus, it makes no difference whether the shareholders form the corporation or acquire the stock of one already in existence.

[2] Relief Provisions

[a] Section 341(d) Relief

Although a corporation may fit the collapsible definition, there are relief provisions which may, nevertheless, allow a stockholder to realize capital gain on the disposition of his stock. n85 Ordinary income treatment will not apply:

- (1) To any stockholder who owns 5 percent, or less, in value of the corporation's outstanding stock at all times after construction of the property has commenced or, in the case of purchased Section 341 assets, at all times on or after such purchase. For purposes of determining ownership, the shareholder is considered to own stock actually owned by certain members of his family and by certain organizations in which he has an interest.
- (2) To transactions when more than 30 percent of the gain on the transaction is attributable to nontainted assets.
- (3) To gain realized after the expiration of three years following the completion of any construction,

purchase, etc., of the property.

The second of these three "escape hatches" (sometimes referred to as the "70/30" rule) warrants further discussion. Under this rule, none of a shareholder's recognized gain is treated as ordinary income if 30 percent or more of his gain is attributable to noncollapsible assets held by the corporation; if more than 70 percent of his gain is attributable to collapsible assets, all of his gain is ordinary income.

If the taxpayer can show that the collapsible corporation has more than one property, this may increase his chances of using the 70/30 rule. This will be the case if 30 percent or more of the taxpayer's gain results from property where the corporation has realized at least two-thirds of the taxable income to be derived from the property. This is so, even though the larger part of the taxpayer's gain is due to collapsible assets. n86

Example (1):

A taxpayer owns all the stock of a collapsible corporation and sells his stock at a gain. Forty percent of the taxpayer's gain is attributable to appreciated securities held by the corporation since its formation, and the remaining 60 percent is attributable to property the corporation constructed (including any land on which the property is constructed). The taxpayer realizes capital gain because not more than 70 percent of his gain is attributable to the constructed property.

Example (2):

A corporation's assets consist of two buildings which it constructed on separate tracts of land. Building A was completed in 1994 and Building B was completed in 1997. In 1999, the taxpayer sells his stock at a gain, 40 percent of which is attributable to Building A and the remaining 60 percent of which is attributable to Building B. The taxpayer does not qualify under exception (2) above because more than 70 percent of his gain is attributable to property which the corporation constructed (actually, 100 percent of the gain is attributable to such property). However, the taxpayer may treat 40 percent of the gain as capital gain under exception (3) above since Building A has been completed for more than three years. The remaining 60 percent of the gain is ordinary income.

For purposes of applying the three-year exception, the determination of when construction, etc., is completed is crucial. An apartment house was held not to be completed until all construction, including landscaping, had been completed and final inspection had been made by the FHA. n87 Another case held that construction was complete when the property was ready to begin earning a substantial part of its net income. n88 In this case, the construction of the property was considered complete when the building was fully occupied, despite the fact that landscaping and certain corrections were due under the contract.

A question also arises when improvements are made to the property after its original completion. If these improvements change the character of the construction or appreciably increase either the value of the property or the amount of income to be realized from it, the improvement may constitute new construction, starting a new three-year waiting period. n89

[b] The Section 341(f) Election

An election under Section 341(f) allows shareholders to recognize capital gain on the sale of their stock in a collapsible corporation if the corporation consents to recognize income on the following types of transactions which normally permit recognition to be deferred: *IRC Section 721* transfers to partnerships, Section 1031 exchanges, abandonment, retirement and gifts. n90 The election is not available to a shareholder, however, if the shareholder (or certain persons related to the shareholder) sold stock of another consenting corporation within the preceding five years. n91

[c] Corporations Not Considered as Collapsible

As originally enacted, *IRC Section 341* did more than was intended. It not only prevented taxpayers from converting ordinary income into capital gain, but it sometimes served to convert what would have been a capital gain into ordinary income. For example, suppose that an investor's corporation purchases rental property. Two years later, the investor sells his stock at a gain. Absent a special exception, the taxpayer gain would be considered ordinary, even though a capital gain would have resulted if he had owned and disposed of the property personally, or if the corporation had sold it directly. To avoid this, and similar unintended results, *IRC Section 341(e)* allows for relief in certain circumstances.

IRC Section 341(e) contains a corporate-level test and a shareholder-level test. Both tests must be met before a shareholder can obtain relief from the collapsible corporation provisions. The corporate-level test is applied to determine if the corporation's assets are primarily of a nature that would produce capital gains if sold by the corporation. If the corporation fails to meet this test, none of its shareholders may take advantage of *IRC Section 341(e)*. If the corporation passes this test, the shareholder-level test is applied on a shareholder-by-shareholder basis. Since this second test is applied to each shareholder individually, some of the corporation's shareholders may qualify for capital gains treatment while others do not.

In applying the test to the corporation, the shareholder must first determine the amount of the unrealized appreciation of the corporation's Section 341(e) assets. Essentially, Section 341(e) assets are those assets which would produce ordinary income if sold by a shareholder who owns more than 20 percent in value of the corporation's stock.

Example:

Corporation A is not a dealer in real estate but has certain real property which it uses in its business. The real estate would produce a capital gain to the corporation under *IRC Section 1231* if sold at a profit and, therefore, is not a Section 341(e) asset. However, if a shareholder owning more than 20 percent of the corporation's stock is a real estate dealer, the real property in the corporation would become a Section 341(e) asset of the corporation. Thus the business of one shareholder adversely affects all other shareholders for this purpose.

Once it is determined which of the corporation's assets are subsection (e) assets, it is necessary to determine the net unrealized appreciation in value of these assets. If the total of net unrealized appreciation is more than 15 percent of the corporation's net worth, the corporation fails the test and none of its shareholders is entitled to capital gains treatment under *IRC Section 341(e)*. For this purpose, net worth is defined as the excess of the total fair market value of the corporation's assets (plus the amount of any distribution the corporation has made in complete liquidation) over its total liabilities. n92

[3] Planning Considerations

If a shareholder cannot escape the collapsible provisions under any of the statutory exceptions discussed above, other avenues of escape may be explored. These are usually highly sophisticated, individualized plans which are beyond the scope of this discussion. However, one approach is the use of a tax-free transaction. Stock in a collapsible corporation can be exchanged tax free in a corporate reorganization, such as a statutory merger, for stock in another corporation. If, in the merger, the stockholders who exchange their stock in the collapsible corporation receive stock in a corporation that is not collapsible, a sale of this stock in the future should result in capital gain. n93

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.01

§ 16.01 Introduction

There are various forms of business entities that resemble corporations and partnerships, yet provide distinct tax and investment advantages for businesses that own real estate. This chapter addresses several of these special business entities, including real estate investment trusts, real estate mortgage investment conduits, condominiums, cooperatives, employee benefit trusts, and financial asset securitization investment trusts. Master limited partnerships are discussed in Chapter 14.

* By Thomas R. Popplewell, Esq., and Muriel C. Brown, Esq., of Andrews & Kurth L.L.P., Dallas, Texas.

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.02

§ 16.02 Real Estate Investment Trusts (REITs)

[1] Introduction

The REIT is a special form of business entity created for the specific purpose of encouraging widespread ownership of real estate by small investors. n1 REITs provide the average investor with an opportunity to pool capital with others for investment in managed real estate, to spread risks through diversified holdings and to acquire properties which might otherwise be beyond the means of the individual investor. Additionally, a REIT is an investment vehicle that affords its shareholders the ability to easily sell or transfer their ownership interests.

A REIT has certain federal income tax advantages over a conventional corporation. The principal advantage is that a REIT is allowed a tax deduction for dividends paid to its shareholders, thereby avoiding the tax normally assessed at the corporate level on distributions. n2 Additionally, unlike a corporation, a REIT may elect to pass through long-term capital gains to its shareholders. n3 To obtain these tax advantages, an entity must first elect to be taxed as a REIT, and further, the entity must satisfy certain technical requirements. n4 Failure to satisfy these requirements or failure to elect REIT status may result in the entity being treated as a corporation, or, in the case of a failure to ascertain ownership, result in a fine. n5

One disadvantage of a REIT is that tax losses are trapped inside the REIT, while other investment vehicles, such as limited partnerships, permit losses to be passed directly to the investors.

[2] Qualification as a REIT

The Internal Revenue Code (Code) imposes stringent qualifying requirements for an entity to receive favorable REIT tax status. The requirements, which must be satisfied throughout the life of the entity, relate to the organization of the REIT, the nature of its income and assets, its dividend distributions, its reporting and recordkeeping and the management of properties owned by the REIT. If all statutory requirements are met, the REIT is permitted a deduction for all earnings distributed to shareholders; thus, the earnings distributed to the shareholders are taxed only once, at the shareholder level. n6

[a] Organizational Requirements

An entity must satisfy certain organizational requirements to be eligible to elect REIT status. The organizational

requirements are summarized as follows:

- A REIT must be formed as a corporation, trust or association. n7 Two major considerations in deciding which type of entity is to be used are: (1) whether and to what degree the trustees or directors are liable for the REIT's contracts under state law; and (2) the effect of the type of entity on state income and franchise taxes. n8
- A REIT must be managed by one or more directors or trustees. The trustees must have continuing exclusive authority over the management of the trust, the conduct of its affairs and the management and disposition of its property. n9 Trustees must have such rights and powers as will satisfy the corporate characteristic of "centralization of management." n10
- A REIT must have beneficial ownership evidenced by transferable shares or by transferable certificates of beneficial interest. n11 The regulations provide that provisions in the trust instrument, corporate charter or bylaws which permit the trustees or directors to redeem shares or to refuse to transfer shares in any case where the trustees or directors, in good faith, believe that a failure to redeem shares or that a transfer of shares would result in the loss of status as a REIT will not render the shares "nontransferable." n12
- A REIT (but for its election to be taxed as a REIT) must otherwise be taxable as a domestic corporation. n13 This determination is made in accordance with the normal entity classification rules found in Section 7701(a)(3) and (4) of the Code. n14
- A REIT must not be a financial institution or an insurance company. n15
- A REIT must have its beneficial ownership held by at least 100 or more persons during at least 335 days of a full taxable year or a proportionate part of a short taxable year. n16 There is no attribution of ownership in determining the 100 shareholders. n17 Because newly-formed REITs could have difficulties meeting the "100 shareholder rule," this requirement is waived during the first tax year for which a REIT election is made. n18
- During the last half of the taxable year, no more than 50 percent of the value of the outstanding shares can be owned by five or fewer individuals (*i.e.*, the REIT cannot be a "personal holding company"). n19 This test is referred to in this chapter as the "50 percent shareholder test". The personal holding company attribution rules apply to determine the number of individual shareholders for this purpose. n20 However, an individual is not deemed to own equity interests if such interests are actually owned by a person with whom the individual participates in a partnership. n21 Special rules apply to domestic pension or profit-sharing trusts. Generally, beneficiaries of a pension or profit-sharing trust will be treated as holding the stock of the REIT in proportion to their actuarial interests in the pension trust. n22 In order to avoid circumvention of the unrelated business taxable income rules, a pension or profit-sharing trust holding shares in a REIT will be subject to unrelated business income tax under some circumstances. n23 The requirement that a REIT cannot be closely held does not apply during the first tax year for which a REIT election is made. n24 It should also be noted that a REIT that complies with regulations for ascertaining its ownership, n25 and which did not know, or have reason to know, that it was so closely held as to be classified as a personal holding company, is treated as meeting the requirement that it not be a personal holding company. n26

These organizational criteria must be carefully observed, because the failure to comply with any requirement will result in the entity's failure to qualify as a REIT.

Additionally, newly-formed REITs must adopt a calendar year. n27 A newly-electing REIT is permitted to change its annual accounting period to a calendar year without approval from the Internal Revenue Service (Service) if the entity has not previously engaged in an active trade or business. n28 Further, an electing entity must either have been treated as a REIT for all taxable years beginning after February 28, 1986, or, by the end of its first year as a REIT, have distributed to its shareholders all earnings and profits attributable to any tax years during which the entity was not a REIT. n29 In effect, this rule requires existing C corporations that wish to elect REIT status to eliminate their accumulated earnings and profits accounts. The IRS has ruled that a taxpayer may offset its surplus in accumulated E & P by its REIT predecessor's cumulative deficit in E & P for purposes of satisfying the requirement that it have no E & P accumulated in any non-REIT year. n30

Two sets of regulations have been issued regarding the net built-in gain of assets of C corporations that are converted to REITs. n30.1 One set of regulations, *Regulation Section 1.337(d)-6* (the -6 regulations), applied to conversion transactions occurring on or after June 10, 1987 and before January 2, 2002. n30.2 Another set of regulations, *Regulation Section 1.337(d)-7* (the -7 regulations), applies to conversion transactions occurring on or after January 2, 2002. n30.3 Both the -6 and -7 regulations apply to certain transactions or events that result in a REIT or a regulated investment company (RIC) owning property that has a basis determined by reference to a C corporation's basis in the property.

Under the -7 regulations, if property owned by a C corporation becomes the property of a RIC or REIT (the converted property) in a conversion transaction, then *IRC Section 1374* becomes the default treatment unless the C corporation elects deemed sale treatment with respect to the conversion transaction. n30.4 Accordingly, the RIC or REIT will be subject to tax on the net built-in gain in the converted property under the rules of *IRC Section 1374* (as modified) as if the RIC or REIT were an S corporation. n30.5

If a RIC or REIT succeeds to property in a continuation transaction that was subject to *IRC Section 1374* in the hands of a predecessor RIC, REIT, or S corporation, the rules of *IRC Section 1374* apply to the successor to the same extent that the predecessor was subject to the rules of *IRC Section 1374* with respect to the property. In addition, the 10-year recognition period of the successor with respect to the property n30.6 is reduced by the portion of the 10-year recognition period of the predecessor that expired before the date of the continuation transaction. (Note that 10-year recognition period is temporarily reduced to 7 years, effective for any taxable year beginning in 2009 or 2010.) n30.7 For this purpose, a continuation transaction means the qualification of the predecessor as a RIC or REIT or the transfer of property from the predecessor to the successor in a transaction in which the successor's basis in the transferred property is determined, in whole or in part, by reference to the predecessor's basis in that property. n30.8

In determining the RIC's or REIT's net recognized built-in gain, several modifications to the *IRC Section 1374* rules are made. First, the pre-limitation amount n30.9 is reduced by the portion of that amount, if any, that is subject to tax under *IRC Section 857(b)(4), (5), (6), or (7)*. n30.10 Those provisions impose a tax on a REIT's capital gains, income from foreclosure property, the income of certain REITs that fail to meet the 75-percent or 95-percent gross income tests, n30.11 and a 100 percent penalty tax on income from prohibited transactions and income from redetermined rents, redetermined deductions, and excess interest. n30.12 Second, the taxable income limitation n30.13 is reduced by an amount equal to the tax imposed under *IRC Section 857(b)(5), (6), and (7)*. n30.14

The -7 regulations generally allow RICs and REITs to use loss carryforwards and credits and credit carryforwards arising in taxable years for which the corporation that generated the attribute was a C corporation (and not a RIC or REIT) to reduce net recognized built-in gain and the tax on it, subject to limits imposed by *IRC Section 1374(b)(2) and (b)(3)* (dealing with NOL and credit carryforwards from C years to S years). n30.15 In addition, the -7 regulations provide an ordering rule for applying loss carryforwards, credits, and credit carryforwards to reduce net recognized built-in gain (and the tax thereon) and RIC or REIT taxable income (and the tax thereon). The ordering rule requires that loss carryforwards of a RIC or REIT be used to reduce net recognized built-in gain for a taxable year to the greatest extent possible before those losses can be used to reduce investment company taxable income or REIT taxable income

under *IRC Section 857(b)* for that taxable year. Similarly, credits and credit carryforwards of a RIC or REIT must be used to reduce the tax on net recognized built-in gain imposed under the -7 regulations to the greatest extent possible before those credits and credit carryforwards can be used to reduce the tax, if any, on investment company taxable income or on REIT taxable income for purposes of *IRC Section 857(b)* for that taxable year. n30.16

Recognized built-in gains and losses of a RIC or REIT are taken into account for purposes of Subchapter M (*IRC Sections 851-860L*). Thus, they are included in computing investment company taxable income, n30.17 REIT taxable income n30.18 capital gains for purposes of *IRC Sections 852(b)(3)* and *857(b)(3)*, gross income derived from sources within any foreign country or possession of the United States for purposes of *IRC Section 853*, and the dividends paid deduction for various RIC and REIT purposes. n30.19 In computing those income and deduction items, capital loss carryforwards and net operating loss carryforwards that are used by the RIC or REIT to reduce recognized built-in gains are allowed as a deduction, but only to the extent that they are otherwise allowable as a deduction under the Internal Revenue Code (including *IRC Section 852(b)(2)(B)*). n30.20

The entity-level tax imposed on net recognized built-in gain is treated as a loss that reduces the RIC's or REIT's taxable income and earnings and profits. The character of the loss attributable to the tax on net recognized built-in gain is determined by allocating the tax proportionately (based on recognized built-in gain) among the items of recognized built-in gain included in net recognized built-in gain. n30.21 An example in the -7 regulations clarifies that earnings and profits attributable to built-in gain recognized by a REIT or RIC are subchapter M (*IRC Sections 851-860L*) earnings and profits. n30.22

If the C corporation that qualifies as a RIC or REIT or transfers property to a RIC or REIT makes a deemed sale election, it will recognize gain and loss as if it had sold the converted property to an unrelated party at fair market value on the deemed sale date. The deemed sale treatment does not apply, however, if its application would result in the recognition of a net loss. For this purpose, "net loss" is the excess of aggregate losses over aggregate gains (including items of income), without regard to character. n30.23 If a corporation recognizes a net gain under the deemed sale, the converted property has a basis in the hands of the RIC or REIT equal to the fair market value of the property on the deemed sale date. n30.24

If the conversion transaction is a qualification of a C corporation as a RIC or REIT, then the deemed sale date is the end of the last day of the C corporation's last taxable year before the first taxable year in which it qualifies to be taxed as a RIC or REIT. If the conversion transaction is a transfer of property owned by a C corporation to a RIC or REIT, then the deemed sale date is the end of the day before the day of the transfer. n30.25

The -7 regulations also contain an anti-stuffing rule for taxpayers electing deemed sale treatment, which prevents those taxpayers from decreasing net gains on conversion transactions by stuffing loss property into a C corporation prior to a conversion transaction. n30.26 Under the -7 regulations, aggregate principles apply to partnership transactions. Accordingly, the -7 regulations apply to property transferred by a partnership to a RIC or REIT to the extent of any C corporation partner's proportionate share of the transferred property. n30.27

A C corporation (or a partnership to which the regulations apply) n30.28 makes the deemed sale election with the following statement: "[Insert name and employer identification number of electing corporation or partnership] elects deemed sale treatment under § 1.337(d)-7(c) with respect to its property that was converted to property of, or transferred to, a RIC or REIT, [insert name and employer identification number of the RIC or REIT, if different from the name and employer identification number of the C corporation or partnership]." The statement must be attached to the federal income tax return of the C corporation or partnership for the taxable year in which the deemed sale occurs. The election is irrevocable. n30.29

The default treatment provided by the -7 regulations n30.30 does not apply to any conversion transaction to the extent that gain or loss otherwise is recognized on such conversion transaction. n30.31 In addition, subject to exceptions

discussed below, the default treatment provided by the -7 regulations n30.32 does not apply to any corporation that: n30.33

- immediately prior to qualifying to be taxed as a RIC or REIT was subject to tax as a C corporation for a period not exceeding two taxable years; and
- immediately prior to being subject to tax as a C corporation was subject to tax as a RIC or REIT for a period of at least one taxable year.

The -7 regulations default treatment does apply, however, to property acquired by the corporation while it was subject to tax as a C corporation from any person in a transaction that results in the acquirer's basis in the property being determined by reference to a C corporation's basis in the property. n30.34 The -7 regulations default treatment also applies if the RIC or REIT was previously subject to *IRC Section 1374* before it became subject to tax as a C corporation. In this case, the default *IRC Section 1374* treatment applies to the RIC or REIT upon its requalification as a RIC or REIT, except that the 10-year recognition period with respect to the property is reduced by the portion of the 10-year recognition period that expired before the RIC or REIT became subject to tax as a C corporation and by the period of time that the corporation was subject to tax as a C corporation. n30.35

The -6 regulations, in effect for transaction before January 2, 2002, n30.36 impose a reverse default treatment from the -7 regulations, and provide that, if property of a C corporation that is not a RIC or REIT becomes the property of a RIC or REIT in a conversion transaction, then the C corporation is subject to deemed sale treatment, unless the RIC or REIT elects to be subject to *IRC Section 1374* [the tax on S corporation built-in gains]. Thus, the C corporation generally recognizes gain and loss as if it sold the property converted to RIC or REIT property or transferred to the RIC or REIT (the converted property) to an unrelated party at fair market value immediately before the conversion transaction. n30.37 If the C corporation recognizes net gain on the deemed sale, then the basis of the converted property in the hands of the RIC or REIT is adjusted to its fair market value immediately before the conversion transaction. n30.38 The -6 regulations do not permit a C corporation to recognize a net loss on the deemed sale. For this purpose, net loss is defined as the excess of aggregate losses over aggregate gains (including items of income), without regard to character. Where there is a net loss, the C corporation recognizes no gain or loss on the deemed sale, and the C corporation's basis in the converted property carries over to the RIC or REIT. n30.39

The -6 regulations in most other respects are the same as the -7 regulations, although there is no equivalent anti-stuffing rule. n39.40 In lieu of the -6 regulations, taxpayers may apply a modified version of rules that were included in prior temporary regulations to determine the tax consequences of conversion transactions occurring on or after June 10, 1987, and before January 2, 2002. n31

[b] Source of Income Requirements

Entities electing REIT status must also satisfy certain requirements as to the sources of annual income. These requirements are similar to those imposed on regulated investment companies (mutual funds), but with some modifications designed to ensure that a REIT's income is derived primarily from passive investment in real estate. n31.1

For purposes of the various REIT gross income tests, "gross income" generally has the same meaning under *IRC Section 61* and the regulations thereunder. n31.2 Any discharge of indebtedness income, however, is not taken into account in determining whether an entity meets the REIT gross income tests. n31.3 Private letter rulings are frequently requested as to whether particular items are included in a REIT's "gross income." For example, the IRS has ruled that an *IRC Section 481* adjustment resulting in gross income as a result of a mandatory statutory provision is not taken into account in applying REIT gross income tests and does not otherwise influence the taxpayer's REIT status. n31.4

Most ruling requests regarding a REIT's gross income involve reimbursements received by the REIT, a taxable REIT

subsidiary, or a pass-through entity owned by a REIT or a taxable REIT subsidiary. Whether a particular reimbursement is includable in gross income sometimes depends on whether the reimbursements are for services that are integrally related to the services being performed by the entity. If the entity is generally in the business of receiving compensation for services of the type that are being reimbursed, the reimbursements will ordinarily be included in the entity's gross income. n31.5 If this is not the case, however, and the reimbursements relate to services not typically performed by the REIT or the REIT subsidiary, then the reimbursements will not be included in gross income. n31.5.1

Thus, in one ruling, the taxpayer, an umbrella partnership REIT, conducted its operations through a subsidiary operating partnership (OP). OP engaged in property management and leasing activities for wholly-owned properties and for properties that are owned by third parties. The taxpayer planned to restructure its leasing and management activities, after which neither it nor OP would be in the business of providing leasing or property management services to third parties. OP would contribute all of its third party leasing and property management contracts (including those with its joint venture partners) to either Corporation A or a wholly-owned subsidiary of Corporation A (collectively, "TRS"). TRS would become a taxable REIT subsidiary of the taxpayer. The employees performing the leasing and property management services on behalf of TRS for joint venture property owners would remain employees of OP for administrative purposes. OP and TRS would enter into an employee sharing agreement under which those employees would be treated as loaned or advanced to TRS. Under the agreement, TRS would reimburse OP for TRS's allocable share of the employee costs including salaries, benefits, and other compensation, costs associated with payroll administration, and allocable overhead costs. The reimbursements would be solely for costs, both direct and indirect, and OP will not charge for profit. The IRS ruled that the amounts paid to OP by TRS as reimbursement for TRS's allocable share of employee costs and other shared expenses would not be treated as gross income received by either OP or the taxpayer, largely because neither OP nor the taxpayer would engage in the business of providing property management and leasing services. n31.5.2

In another ruling, with a different result, reimbursements received for employee expenses and other costs incurred by a taxpayer in providing residential property development and management services to lower-tiered entities were includable in the taxpayer's gross income because the taxpayer was generally in the business of receiving compensation for services of that type. In contrast, reimbursements the taxpayer for general liability and property and casualty insurance the taxpayer obtained for the lower-tiered entities were not includable in gross income because the taxpayer was not in the insurance business. n31.6 Funds collected by a REIT that must be used to pay expenses of the lower-tier entity and over which the REIT has no control also are not included in the REIT's gross income. n31.7 Similarly, reimbursements of REIT salaries and other costs of its employees by entities in which the REIT has an interest in order to compensate their time spent performing services for those entities are not treated as gross income in applying the REIT gross income requirements. n31.8

A guarantee substitution payment received in exchange for agreeing to relinquish rights to pursue legal remedies against guarantor in connection with various leases has also been held not to be gross income for purposes of the REIT gross income tests. n31.9 The IRS has also ruled that taxable income associated with the receipt of State tax credits can be ignored in determining whether a REIT satisfies the REIT gross income tests. The credits were intended to promote the remediation and development of contaminated real estate, and the furtherance of this public policy did not interfere with or impede the policy objectives behind the REIT gross income tests. n31.10 In contrast, the IRS has ruled that amounts received as abatements or refunds of real property taxes connected with a development in which a REIT had an interest through a partnership may be included for purposes of satisfying the REIT gross income test of *IRC Section 856(c)(2)*. n31.11

The IRS has also issued a notice providing guidance as to when foreign currency gain under *IRC Section 987* will be qualifying income under the REIT income tests. n31.12 The notice is directed to REITs that have invested in real estate assets outside the United States through entities or partnerships that qualify as qualified business units (QBUs). n31.13 The notice applies to foreign currency gains that result from investing in real property or other assets through a QBU with a functional currency other than the US dollar. Absent a ruling to the contrary, a REIT automatically has the US

dollar as its functional currency. A REIT may have a QBU, however, that is subject to *IRC Section 987* and that has a functional currency other than the US dollar. n31.14 In that case, the REIT may recognize currency gain under *IRC Section 987* when the QBU remits property to the REIT. n31.15 *Notice 2007-42* provides that, until further guidance, REITs should use rules set forth in proposed regulations under *IRC Section 987* to determine if that gain qualifies under the REIT income tests. n31.16 Under those proposed regulations, n31.17 the owner of a QBU must generally determine the character of a *IRC Section 987* gain or loss in the year of remittance using a modified asset method. n31.18 The modified gross income method n31.19 cannot be used. The IRS intends to amend the proposed regulations under *IRC Section 987* to include guidance concerning the proper characterization under the REIT income tests of the foreign currency gain recognized by a REIT on a remittance from a QBU of the REIT. n31.20

[i] 75 Percent Income Test

At least 75 percent of a REIT's gross income (excluding gross income from prohibited transactions, as described below) for the year must be derived from passive real estate or real estate mortgage investments. n32 Permissible sources of income for this 75 percent income test include:

- rents from real property;
- interest on obligations secured by mortgages on real property or on interests in real property n32.1 (as discussed in § 16.02[2][c][ii][E], below, the IRS has also provided a safe harbor under which interest on a loan from a REIT that is secured by an interest in a partnership or by the sole membership interest in a disregarded entity will be treated as interest on an obligation secured by a mortgage on real property or on an interest in real property for purposes of the 75-percent REIT gross income test); n32.2
- gains from the sale or other disposition of real property which is not inventory or property held primarily for sale to customers in the ordinary course of business (including interests in real property and interests in mortgages on real property); n33
- dividends and other distributions on, and gains from the sale of, shares of other qualified REITs;
- abatements and refunds of real property taxes;
- income and gains derived from foreclosure property;
- commitment fees; and
- qualified temporary investment income. n34

Interest on a second mortgage loan is treated as secured by real property, even if personal property also secures the loan, where the fair market value of the real property securing the loan is equal to or exceeds the loan amount. n35

The Treasury Department is authorized to issue guidance that would allow other items of income to be excluded for purposes of the computation of qualifying gross income under the 75-percent test, or to be included as qualifying income for that test, in appropriate cases consistent with the purposes of the REIT provisions. Treasury regulatory authority applies solely for purposes of applying the percentage test for REIT qualification, and does not affect the substantive characterization of an item as income for purposes of computing the REIT's taxable income. n36

[ii] 95 Percent Income Test

In addition to the 75 percent income test, at least 95 percent of a REIT's gross income (excluding gross income from

prohibited transactions, as described below) for the year must be derived from the following items: n37

- dividends;
- interest;
- rents from real property;
- gain from the sale or other disposition of stock, securities, and real property that is not inventory;
- abatements and refunds of real property taxes;
- income and gain from foreclosure property; n38
- amounts for entering into agreements to: (1) make loans secured by mortgages on or interests in real property; or (2) purchase or lease real property (including interests in real property and interests in mortgages on real property);
- gain from the sale or disposition of a real estate asset that is not a prohibited transaction; and
- mineral royalty income earned in the first taxable year beginning after May 22, 2008 from real property owned by a timber REIT and held, or once held, in connection with the trade or business of producing timber by that REIT.

The Treasury Department is authorized to issue guidance that would allow other items of income to be excluded for purposes of the computation of qualifying gross income under the 95-percent test, or to be included as qualifying income for that test, in appropriate cases consistent with the purposes of the REIT provisions. Treasury regulatory authority applies solely for purposes of applying the percentage test for REIT qualification, and does not affect the substantive characterization of an item as income for purposes of computing the REIT's taxable income. n39

[iii] 30 Percent Income Limitation

The 30-percent gross income requirement applicable to REITs is repealed, effective for tax years beginning after August 5, 1997. n40 For tax years beginning before August 6, 1997, less than 30 percent of a REIT's gross annual income must be derived from the sale or disposition of the following:

- stock or securities that have been held for less than 1 year;
- inventory-type property (prohibited transactions); and
- real property that has been held for less than four years. n41

Gains from real property which has been involuntarily converted--for example, by casualty or condemnation--and gains from the sale of foreclosure property are specifically excluded from this limitation. n42

[iv] Shared Appreciation Provisions

Income received from a shared appreciation provision in a debt instrument secured by real property is treated as gain recognized from the sale of the underlying secured property. n43 For purposes of the income test and the prohibited transaction provisions, the REIT is treated as having held the secured property for the period during which it held the

shared appreciation provision (or if shorter, for the period during which the borrower held the secured property).ⁿ⁴⁴ If the underlying secured property is an inventory-type asset held primarily for sale to customers in the ordinary course of business in the hands of the borrower, the shared appreciation provision will be treated as such property.ⁿ⁴⁵ Interest received on a shared appreciation mortgage is not subject to the tax on prohibited transactions where the property subject to the mortgage is sold within four years of the REIT's acquisition of the mortgage pursuant to a bankruptcy plan of the mortgagor, unless the REIT acquiring the mortgage knew or had reason to know that the property subject to the mortgage would be sold in a bankruptcy proceeding.ⁿ⁴⁶ The purpose of the shared appreciation provisions is to clarify the treatment of shared appreciation provisions for income test purposes. As written, however, they are not particularly beneficial to REITs. First, the definition of a "shared appreciation provision" is so narrow as to preclude its applicability to many shared appreciation mortgages.ⁿ⁴⁷ Second, notwithstanding the bankruptcy safe harbor,ⁿ⁴⁸ the fact that a REIT could have a prohibited transaction or nonqualifying income based on the actions of a borrower is quite worrisome.

[v] Prohibited Transactions

A "prohibited transaction" is a sale or other disposition of property which is not "foreclosure property" (as described in Section 16.02 [c] [iii], below) and which is either inventory or property held primarily for sale to customers in the ordinary course of business.ⁿ⁴⁹ Examples of prohibited transactions include subdividing land and selling the resulting lots, and developing and selling condominiums. Any net income derived from prohibited transactions is taxed at a rate of 100 percent.ⁿ⁵⁰ Net income from prohibited transactions includes the excess of the gain from prohibited transactions over deductions that are directly connected with them. Foreign currency gains and losses^{n50.1} that are attributable to any prohibited transaction are taken into account in determining the amount of prohibited transaction net income subject to the 100-percent tax.^{n50.2} Losses from prohibited transactions cannot be used to offset gains from other prohibited transactions.ⁿ⁵¹

[vi] Rents from Real Property

The definition of "rents from real property" is critical to most REITs because it is typically the principal source of income qualifying for the 75 percent income test. Rents from real property include amounts denominated as "rents" and "charges for services customarily furnished or rendered in connection with the rental of real property, whether or not such charges are separately stated."ⁿ⁵² Services rendered to tenants of a particular building are considered customary if, in the geographic area in which the building is located, tenants in similar buildings are customarily provided with the service.^{n52.1}

When rent is received on property consisting of both real and personal property, such as a furnished apartment building, an apportionment of the rent may be required to determine the (nonqualifying) rent attributable to personalty. If 15 percent or less of the rent is attributable to the personal property, determined based on the ratio of the average fair market values of the personal property to the average fair market values of both the real property and personal property, all of the rent is includable as "rents from real property."ⁿ⁵³ If more than 15 percent of the rent is attributable to personal property, that portion will be nonqualifying income.ⁿ⁵⁴ Certain income from taxable REIT subsidiaries is also included in rents from real property.ⁿ⁵⁵

The definition of "rents from real property" excludes certain other types of rents. First, rent will be nonqualifying if the amount of rent depends on the profits or income of any person;ⁿ⁵⁶ however, rents based on a fixed percentage or percentages of gross receipts are allowable.^{n56.1} Amounts received under a naming agreement have been held not to constitute "rents from real property."^{n56.2}

Second, except for certain amounts received from taxable REIT subsidiaries,ⁿ⁵⁷ nonqualifying rental income includes amounts received from a tenant in which the REIT holds, directly or indirectly, a 10 percent or greater interest.ⁿ⁵⁸ Complex attribution rules apply in determining whether a REIT is deemed to own an interest in a tenant.ⁿ⁵⁹ The IRS

has ruled in several rulings that a REIT's momentary ownership of corporate stock of a tenant that exceeds the permissible percentage limit will not cause amounts to be excluded as "rents from real property." This situation usually arises with respect to temporary transfers of property as a component part of a larger transaction or corporate restructuring. n60

Third, effective for tax years beginning after August 5, 1997, the term "rents from real property" does not include any impermissible tenant service income. n61 "Impermissible tenant service income" means amounts received by a REIT for: (1) services furnished or rendered by the REIT to the tenants of rental property; or (2) managing or operating that property. n62 Certain amounts received for services rendered by independent contractors and incidental amounts received for the rental of personal property are not included in impermissible tenant service income. n63 Applying this provision, the IRS ruled that a REIT's supervision and coordination of construction build-outs performed by independent contractors for REIT tenants would not cause amounts received from tenants to be impermissible tenant service income. Its rationale was that under the various build-out arrangements, only independent contractors would perform the construction work, the taxpayer would not receive or derive income from the independent contractors, and the taxpayer would not bear any of the costs of the work. n63.1

Income from a taxable REIT subsidiary is also not treated as impermissible tenant service income. n64 Therefore, a taxable REIT subsidiary or a partnership in which it is a partner may provide non-customary services to tenants of a REIT without adverse tax consequences; the rents paid by those tenants to the REIT will not thereby fail to qualify as rents from real property under *IRC Section 856(d)*. n64.1

A REIT may render a *de minimis* amount of impermissible services to tenants, or in connection with the management of property, and still treat amounts received with respect to that property as rents from real property. The value of the impermissible services may not exceed 1 percent of the gross income from the property. For these purposes, the services may not be valued at less than 150 percent of the REIT's direct cost of the services. If a REIT provides more than the above *de minimis* amount of services, all amounts received for those services are treated as impermissible tenant service income and are not treated as rents from real property. n65 The IRS has clarified how a REIT's receipt of impermissible tenant service income will affect the qualification of other amounts as rents from real property. n66

Example 1:

Y, a REIT that files its returns on a calendar year basis, owns a high-rise apartment building, Building P. P has 100 apartments, of which 95 are standard unfurnished apartments rented on an annual basis. The remaining five apartments are furnished guest apartments available for short-term leases to guests of tenants. Employees of Y render maid service in connection with the lease of guest apartments. Y also provides heat and light to all tenants in P. Y does not render other services to tenants of P or engage in any other activity at P that could give rise to impermissible tenant service income.

Y derives a total of \$1,000x from all tenants of P for the year, including \$90x from visitors who rent guest apartments. Of the \$90x received from tenants of guest apartments, the amount received with respect to maid service is \$9x, which is greater than 150 percent of the direct costs of Y in rendering the service. Of the \$1,000x received from all the tenants, the amount paid to Y for heat and light is \$100x (\$1x for each unit, including the guest units), which is also greater than 150 percent of the direct costs of Y for providing heat and light. The amount of rent attributable to personal property leased in connection with the rental of each guest apartment in P does not exceed 15 percent of the total rent for the apartment attributable to both the real property and the personal property.

Only \$9x attributable to the impermissible tenant services rendered to tenants of the guest apartments fails to qualify as rents from real property. Because the provision of heat and light is a permissible tenant service, no amount attributable to that service (including amounts paid by tenants of the guest

apartments) is treated as impermissible tenant service income in applying the one percent *de minimis* rule. The \$9x of impermissible tenant service income does not exceed one percent of the \$1,000x received or accrued directly or indirectly by Y with respect to P. Therefore, the rendering of impermissible tenant services to tenants of the guest apartments does not prevent otherwise qualifying amounts received by Y from tenants of P (including tenants of the guest apartments) from qualifying as rents from real property. n67

Example 2:

Assume the same facts as in Example 1, except that Y derives \$110x from visitors who rent guest apartments. Of the \$110x received from those visitors, the amount received with respect to maid service is \$11x, which is greater than 150 percent of the direct costs of Y in rendering the service.

In this situation, the \$11x attributable to the impermissible tenant services rendered to tenants of the guest apartments is impermissible tenant service income. n68 The \$11x of impermissible tenant service income also exceeds one percent of the \$1,000x received or accrued directly or indirectly by Y with respect to Building P. Therefore, **all** of the \$1,000x derived by Y from P is impermissible tenant service income, and the entire \$1,000x fails to qualify as rents from real property. n69

For tax years beginning before August 6, 1997, the term "rents from real property" excludes amounts received when the REIT furnishes services to its tenants or manages or operates the property other than through an independent contractor from whom the REIT receives no income, unless the services are those that, if performed by a tax-exempt entity, would not produce "unrelated business income." n70

For a more detailed discussion of the issues related to the effect of self-management on qualifying income, see *Section 16.02[2][f]*, below. These exclusions are meant to ensure that the majority of the REIT's income is from passive income sources and not from the active conduct of a trade or business. n71

A REIT may participate in the net income of its tenants in certain limited situations. If a REIT receives amounts from a tenant that receives substantially all of its income with respect to such property from the subleasing of substantially all of such property, and a portion of the amount the tenant receives would be qualified rental income if received by the REIT, then the amounts the REIT receives will constitute "rents from real property" to the extent such amounts are attributable to the qualified rents received by the tenant. n72 In other words, the REIT can receive contingent rent or interest based on net income as long as a tenant does not include such terms in its lease agreements.

Planning Tip:

Shifting of Nonqualified Income Between Years. Prohibitions on the shifting of nonqualified income between years are far-reaching, and careful planning of each transaction within the REIT framework is required. Because the income tests are performed on a taxable year basis, n72.1 the timing of income recognition is important. The shifting of nonqualified income between years could adversely or beneficially affect REIT status.

Example:

A REIT sells a large portion of its real estate portfolio on December 20 of Year 1 as part of a management decision to change the geographic distribution of its properties. The cash proceeds are invested in high-yield interest-bearing instruments that do not qualify for the 75 percent income test. Reinvestment of the proceeds in real estate takes longer than originally planned. The REIT's gross income for Year 2 is as follows

1-16 Federal Taxes Affecting Real Estate § 16.02

Rents	\$25,000
Interest on mortgage loans	5,000
Interest on non-mortgage loans	12,000
Total	\$42,000

The REIT fails the 75 percent income test because it only has 71 percent of its income from qualifying sources $((25,000 + 5,000) / 42,000)$. The REIT should have invested some of the cash proceeds from its real estate sales in a real estate asset. For example, the REIT could have invested in pass-through certificates issued by the Government National Mortgage Association. Such certificates produce qualifying income and are liquid investments.

Note:

Another aspect of rents from real property can come into play for REITS. Solely by virtue of its functions with respect to rental activity that produces income qualifying as rents from real property, a REIT can be engaged in the active conduct of a trade or business under *IRC Section 355*. This can allow *IRC Section 355* treatment for distributions of stock by a C corporation that converts to a REIT. n72.2

[vii] Certain Income From Taxable REIT Subsidiaries**[A] In General**

In general, rents paid to a REIT cannot qualify as "rents from real property" if the REIT owns more than 10 percent of the value and voting power of a corporation paying the rents. n73

Effective for tax years beginning after 2000, an exception to this general rule applies for income from certain business activities conducted by a taxable REIT subsidiary. The subsidiary can provide services to tenants of REIT property (even if those services are not considered services customarily furnished in connection with the rental of real property), and the subsidiary can manage or operate properties, generally for third parties, without causing amounts received or accrued directly or indirectly by the REIT for those activities to fail to be treated as rents from real property. n74 This exception can come into play if either of two requirements is met. The first requirement relates to a limited rental situation. It is met when at least 90 percent of the leased space of the property is rented to unrelated third persons at rents that are substantially comparable to those paid by other of the REIT's tenants for comparable space. n75

Specific safe-harbor timing rules apply for testing rent comparability for this purpose. The substantial comparability requirement is met with respect to a lease to a taxable REIT subsidiary of a REIT if the requirement is met under the terms of the lease at the following times: n75.1

- At the time the lease is entered into;
- At the time of each extension of the lease, including a failure to exercise a right to terminate; and
- At the time of any modification of the lease between the trust and the taxable REIT subsidiary if the rent under that lease is effectively increased pursuant to the modification. With respect to this item, if the REIT owns more than 50 percent of the taxable REIT subsidiary n75.2 rents from real property do not include rent under the lease to the extent of the increase in that rent on account of that modification.

If the rent comparability requirements are met during the safe harbor testing times, they will continue to be treated as

met so long as there is no increase in the space leased to any taxable REIT subsidiary of the REIT or to certain related parties in which the REIT holds a 10-percent or greater interest. n75.3 If there is an increase in the space leased during any calendar quarter with respect to any property, the substantial rent comparability requirements are treated as met during the quarter and the succeeding quarter if they are met at the close of such succeeding quarter. n75.4

The second requirement is for certain lodging facilities or qualified health care property. n75.5 It is met if the REIT's interest in real property is a qualified lodging facility or qualified health care property that is leased by the REIT to a taxable REIT subsidiary of the REIT, provided that the property is operated on behalf of that subsidiary by a person who is an eligible independent contractor. n76 A qualified lodging facility is any lodging facility provided that no wagering activities are conducted on the premises. n77 A "lodging facility" is a hotel or motel, or other establishment more than one-half of the dwelling units in which are used on a transient basis. n77.1 Qualified health care property is any real property (including interests in it) and any personal property incident to it which is a health care facility or is necessary or incidental to the use of a health care facility. n77.2 Under the lodging facility or qualified health care property exception, the rents paid are treated as rents from real property, so long as the lodging facility or qualified health care property is operated by an independent contractor for a fee. The subsidiary can bear all expenses of operating the facility or qualified health care property and receive all the net revenues, minus the independent contractor's fee. n78 For purposes of the exception, a taxable REIT subsidiary is not considered to be operating or managing a qualified health care property or qualified lodging facility solely because it (1) directly or indirectly possesses a license, permit, or similar instrument enabling it to do so, or (2) employs individuals working at the facility or property located outside the United States; an eligible independent contractor, however, must be responsible for the daily supervision and direction of those individuals on behalf of the taxable REIT subsidiary pursuant to a management agreement or similar service contract. n78.1

For purposes of the rule that an independent contractor may operate a qualified lodging facility or qualified health care property, an independent contractor will qualify so long as, at the time it enters into the management agreement with the taxable REIT subsidiary, it is actively engaged in the trade or business of operating qualified lodging facilities or qualified health care properties for any person who is not related to the REIT or the taxable REIT subsidiary. n79 The REIT may receive income from such an independent contractor with respect to certain pre-existing leases without jeopardizing the independent contractor's status under the lodging facilities and qualified health care property exception. n80

NOTE:

It should be noted that interest paid by a taxable REIT subsidiary to the related REIT is subject to the earnings stripping rules of *IRC Section 163(j)*. This rule prevents a taxable REIT subsidiary from deducting interest in any year that would exceed 50 percent of the subsidiary's adjusted gross income. n81

Taxable REIT subsidiaries sometimes form a joint venture with one or more third parties to provide services to tenants of the parent REIT. To facilitate the services that are provided to tenants, the joint venture may lease space at the property where it is providing services to tenants. The IRS has issued a detailed revenue procedure that details the conditions that must be met for the joint venture's rental payments to the REIT to be treated as rents from real property for purposes of meeting the REIT gross income tests. n81.1 The revenue procedure applies to a REIT that leases space to a joint venture between its taxable REIT subsidiary and a third party that is unrelated to either the taxable REIT subsidiary or the REIT, and which is treated as a partnership for federal income tax purposes. The revenue procedure applies only if the REIT would be treated as having at least a 10 percent or more interest in the assets or net profits of the joint venture. n81.2

For a joint venture that qualifies, the IRS will treat rents paid by it to the REIT as rents from real property if the amounts paid are substantially comparable to rents paid by the other tenants of the REIT's property for comparable space, and at least 90 percent of the REIT's property is rented to persons other than (1) its taxable REIT subsidiaries and

(2) related parties, n81.3 including joint ventures that qualify under the revenue procedure. n81.4

[B] Taxable REIT Subsidiary Defined

In general, a taxable REIT subsidiary is a corporation in which a REIT directly or indirectly owns stock. To qualify as a taxable REIT subsidiary, both the REIT and the subsidiary corporation must join in an election to treat the corporation as a taxable REIT subsidiary. The election is irrevocable unless both the REIT and the corporation consent to a revocation. The consent of the Secretary is not required for either the election or the revocation. n82 The election is made on Form 8875, "Taxable REIT Subsidiary Election." The election may be filed at any time, but the effective date of the election cannot be more than 2 months and 15 days prior to the date of filing, or twelve months after the date of filing. n82.1 The IRS may, however, grant extensions of time for filing an election. n82.2 Extensions are also granted to retroactively correct defective elections. n82.3

In addition, a taxable REIT subsidiary generally includes, with respect to any REIT, any corporation (other than a REIT or a qualified REIT subsidiary under *IRC Section 856(i)*) that does not properly elect with the REIT to be a taxable REIT subsidiary) with respect to which a taxable REIT subsidiary of that REIT owns, directly or indirectly, outstanding securities totalling more than 35 percent of the vote or value of that corporation. n83 For purposes of applying the 35-percent ownership-by-value alternative, n83.1 straight debt securities n83.2 are not taken into account. n83.3

Several additional restrictions should be noted. A corporation that, directly or indirectly, operates or manages a lodging facility or health care facility cannot be a taxable REIT subsidiary, n84 nor can a corporation that provides to any person (under a franchise, license or otherwise) rights to any brand name under which hotels or healthcare facilities are operated. n85 An exception applies to rights provided to an independent contractor to operate or manage a lodging facility or health care facility if the rights are held by the subsidiary as licensee or franchisee, and the lodging facility or health care facility is owned by the subsidiary or leased to it by the REIT. n86

[viii] Hedging Transactions

Except to the extent determined by the Secretary of the Treasury, certain income from hedging transactions, n86.1 including gain from the sale or disposition of a hedging transaction, is excluded from and is not treated as gross income under either the 75-percent or the 95-percent REIT income test. n86.2 The exclusion applies only to the extent that the transaction hedges any indebtedness incurred or to be incurred by the REIT to acquire or carry real estate assets. The exclusion also applies only if the transaction is clearly identified as a hedging transaction before the close of the day on which it was acquired, originated, or entered into (or such other time as the Secretary may prescribe). n86.3

[ix] Foreign Currency Matters

A REIT may hold foreign real estate or other foreign-based assets, provided it meets the 75-percent and 95-percent income tests and the other requirements for REIT qualification. n86.4 A REIT that holds foreign real estate or other foreign-based assets may have foreign currency exchange gain under foreign currency transaction rules of the Code. n86.5

Certain foreign currency gain recognized under *IRC Section 987* or *IRC Section 988* is excluded from the computation of qualifying income for purposes of the 75-percent income test or the 95-percent income test, respectively. The exclusion is solely for purposes of the computations under these tests. n86.6

There are two categories of income for purposes of the REIT foreign currency gain exclusion rules: "real estate foreign exchange gain" and "passive foreign exchange gain." n86.7 Real estate foreign exchange gain is excluded from gross income for purposes of both the 75-percent and 95-percent income tests. n86.8 Passive foreign exchange gain is excluded for purposes of the 95-percent income test but is included in gross income and treated as non-qualifying

income to the extent that it is not real estate foreign exchange gain, for purposes of the 75-percent income test. n86.9

Real estate foreign exchange gain includes foreign currency gain n86.10 which is attributable to any of the following:

- Any item of income or gain described in the 75-percent income test; n86.11
- The acquisition or ownership of obligations secured by mortgages on real property or interests in real property; or
- Becoming or being the obligor under obligations secured by mortgages on real property or on interests in real property. n86.12

Real estate foreign exchange gain also includes *IRC Section 987* gain attributable to a qualified business unit ("QBU") of the REIT if the QBU itself meets the 75-percent income test for the taxable year, and meets the 75-percent asset test at the close of each quarter of the REIT that has directly or indirectly held the QBU. The QBU is not required to meet the 95-percent income test in order for this *IRC Section 987* gain exclusion to apply. n86.13 Real estate foreign exchange gain also includes any other foreign currency gain as determined by the Secretary of the Treasury. n86.14

Passive foreign exchange gain includes all real estate foreign exchange gain, and in addition includes foreign currency gain which is attributable to the following: n86.15

- Any item of income or gain described in the 95-percent REIT income test; n86.16
- The acquisition or ownership of obligations;
- Becoming or being the obligor under obligations; and
- Any other foreign currency gain as determined by the Secretary of the Treasury.

Notwithstanding the foregoing rules, however--except in the case of certain income that is excluded under the hedging rules of *IRC Section 856(c)(5)(G)*--any *IRC Section 988* gain derived from engaging in dealing, or substantial and regular trading, in securities n86.17 is gross income that does not qualify under either the 75-percent or 95-percent income test. n86.18

In the case of a *IRC Section 988* transaction, the exclusion under *IRC Section 856(n)* is intended to apply only to foreign currency gain that is directly attributable to income items that otherwise are treated as qualifying income for purposes of the 75-percent and 95-percent income tests, n86.19 respectively, (or directly attributable to the acquisition or ownership of, or to becoming the obligor under, obligations secured by mortgages on real property or on interests on real property). n86.20 For example, foreign currency gain attributable to exchange rate fluctuations between the time of the accrual of interest income on a foreign-currency denominated obligation secured by a mortgage on real property and the time of payment, would constitute excluded income for purposes of both the 75-percent and 95-percent income tests. However, any additional foreign currency gain arising from subsequent disposition of the foreign currency received upon payment of the accrued interest would be attributable to holding the foreign currency after its receipt and would not constitute excluded income under either test; rather it would be non-qualifying income. n86.21

Similarly, in the case of *IRC Section 987* foreign currency gain on remittances, only *IRC Section 987* gain as of the time of, and resulting from, the remittance is attributable to the QBU and is excluded income. Any currency gain arising from holding currency after remittance is not attributable to the QBU. Therefore, that gain is not excluded income for purposes of the 75-percent or 95-percent REIT income tests and is not qualifying income for purposes of those tests. n86.22

The following examples demonstrate the operation of the distinction between "real estate foreign exchange gain", which is excluded for purposes of both the 75-percent and 95-percent REIT income tests, and "passive foreign exchange gain," which is excluded only for purposes of the 95-percent REIT income test and which is non-qualifying income for purposes of the 75-percent REIT income test: n86.23

Example 1.

Assume that a REIT whose functional currency is the U.S. dollar holds an obligation that is secured by a mortgage on real property, and the instrument pays interest at a date later than the date the interest is accrued by the REIT. The obligation is denominated in a foreign currency. The REIT's interest income accrued on the mortgage obligation is qualified income for purposes of the 75-percent and 95-percent REIT income tests. Any *IRC Section 988* gain attributable to currency fluctuations between the time the interest is accrued by the REIT and the time the interest is paid to the REIT is real estate foreign exchange gain because it is directly attributable to the qualified interest income, and thus that *IRC Section 988* gain is excluded for purposes of the 75-percent and 95-percent income tests. n86.24

Example 2.

Assume the same facts as in Example 1, except that the instrument held by the REIT is a debt instrument that is not an obligation secured by a mortgage on real property or an interest in real property. Interest income accrued by the REIT is qualified income for purposes of the 95-percent REIT income test but is not qualified income for purposes of the 75-percent REIT income test. Any *IRC Section 988* gain attributable to currency fluctuations between the time the interest is accrued and the time the interest is paid is passive foreign exchange gain because it is directly attributable to the interest income that is qualified for purposes of the 95-percent income test. That passive foreign exchange gain is excluded for purposes of the 95-percent REIT income test but is not excluded (and is not qualified income) for purposes of the 75-percent REIT income test. n86.25

Example 3.

Assume the same facts as in Example 1, and further assume that the REIT receives a repayment of the principal on the obligation. Any *IRC Section 988* gain attributable to the receipt of principal is real estate foreign exchange gain because it is attributable to the acquisition or ownership of an obligation secured by a mortgage on real property. Therefore, that gain is excluded for purposes of both the 75-percent and 95-percent REIT income tests. n86.26

Example 4.

Assume the same facts as in Example 2, and further assume that the REIT receives a repayment of the principal on the obligation. Any *IRC Section 988* gain attributable to the receipt of principal is passive foreign exchange gain because it is attributable to the acquisition or ownership of an obligation not secured by a mortgage on real property or an interest in real property. Therefore, that gain is excluded for purposes of the 95-percent REIT income test but is not excluded, and is not qualified income, for purposes of the 75-percent REIT income test. n86.27

Note:

Prior to the enactment of the above statutory rules, foreign currency exchange gain was not explicitly included in the statutory definitions of qualifying income for purposes of the 75-percent and 95-percent income tests. The IRS had issued guidance that allowed foreign currency gain to be treated as qualified

income in certain circumstances. n86.28 The above statutory rules change the result given in the prior IRS guidance in the case of foreign currency gain attributable to an item of REIT income that qualifies under the 95-percent or 75-percent income tests n86.29 because under those rules, that foreign currency gain is *excluded* (solely for purposes of the relevant income test) rather than treated as qualified income for purposes of those tests. n86.30 The IRS had also issued guidance as to when foreign currency gain under *IRC § 987* would be qualifying income under the REIT income tests. n86.31 The above statutory rules also supersede that guidance in the case of remittances from a QBU that uses a functional currency other than the U.S. dollar. This is because *IRC Section 856(n)* excludes *IRC Section 987* gain on a remittance from such a QBU to the REIT from the computation of both the 75-percent and the 95-percent income tests of the REIT, provided the QBU itself both meets the 75-percent income test for the taxable year and meets the 75-percent asset test at the close of each quarter of the taxable year. n86.32 If the QBU meets these requirements, the *IRC Section 987* gain is excluded entirely for purposes of the REIT gross income tests; therefore, and tracing-type rules set forth in *Notice 2007-42* no longer apply. For this purpose, the QBU is tested as if it were a separate entity that is independently required to meet the 75-percent income test and the 75-percent asset test applicable to REIT qualification. However, the QBU need not meet any of the other REIT requirements, nor itself be treated as a REIT. It is expected that the Treasury Department will use its regulatory authority n86.33 to provide appropriate rules with respect to the treatment of *IRC Section 987* currency gain for purposes of the REIT gross income tests if a QBU does not meet the requirements of *IRC Section 856(n)*.

An additional statutory rule applies for hedging transactions entered into by REITs to manage currency fluctuations. Except to the extent determined by the Secretary of the Treasury, income of a REIT from a transaction entered into by the REIT primarily to manage risk of currency fluctuations with respect to any item of income or gain that would be qualified income under the 75-percent or 95-percent income tests, (or any property which generates that income or gain) is excluded from gross income for purposes of both the 75-percent and 95-percent income tests. The exclusion applies only if the transaction is clearly identified as a hedging transaction before the close of the day on which it was acquired, originated, or entered into (or such other time as the Secretary may prescribe). n86.34

[x] Failure to Meet REIT Income Tests

If an entity fails to meet either the 75- or 95-percent REIT income test, n86.35 or both, for a taxable year, it will generally be disqualified as a REIT for that year. n86.35.1 An entity that fails to meet those tests, however, may nevertheless be considered to have met them if the following requirements are met: n86.35.2

- Following the REIT's identification of the failure to meet the relevant income test(s) for a taxable year, a description of each item and its gross income described in those tests is set forth in a schedule for the taxable year filed in accordance with regulations; and
- The failure to meet the 75- or 95-percent test, n86.36 or both, is due to reasonable cause and not to willful neglect.

If the above conditions are met, the REIT does not lose its REIT status, but it must pay a tax. The tax is imposed on the greater of (1) the excess of 95 percent n86.37 of the REIT's gross income (not counting gross income from prohibited transactions) over the amount of gross income from sources permitted under the 95-percent income test; or (2) the amount by which the REIT failed the 75-percent income test. The amount of the tax is equal to 100 percent of the greater amount, multiplied by a fraction. The numerator of the fraction is REIT taxable income (before the dividends paid deduction and this 100-percent tax, and before any net operating loss and any net capital gain); the denominator of the fraction is gross income (adjusted for certain gains). n86.38

[c] Asset Requirements

[i] Overview

In addition to limitations on the source of a REIT's income, a REIT is also restricted as to the nature of its assets. To qualify and to maintain its status as a REIT, an entity must satisfy several asset diversification tests. n87 These asset tests must be satisfied at the close of each quarter of each fiscal year for which a REIT election is made. n88

These quarterly tests are designed to ensure passive real estate investment throughout the year and to minimize the extent to which a REIT can invest in a nonqualifying asset. Failure to meet the quarterly tests cannot occur merely because of changes in the market value of assets, but must result from an acquisition of a security or other property. n89 As a relief measure, the REIT is given 30 days after the close of a quarter in which an acquisition is made to eliminate the discrepancy and meet the asset tests for that quarter. n90 A REIT that fails to meet the REIT asset tests n90.1 must dispose of non-complying assets and, if the failure exceeds a de minimis amount, pay a specified tax. n90.2

Some assets may be ignored in determining whether the asset tests are met. In one case, a REIT was allowed to exclude from the tests a state franchise tax refund attributable to the state tax credits received by the REIT for cleaning up contaminated property. The IRS ruled that the refund would not be considered to be an "asset" for purposes of applying the REIT asset tests. Its rationale was that the state tax credits were intended to promote the remediation and development of contaminated real estate and the furtherance of this public policy did not interfere with or impede the policy objectives of Congress in enacting the REIT qualification tests. n90.3

[ii] The 75 Percent Asset Test

At the close of each quarter of the taxable year a REIT must have at least 75 percent of the value of its total assets represented by real estate assets, cash and cash items (including receivables) and government securities. n91 Certificates of deposit are treated as "cash" for this purpose, n91.1 and the ABA Tax Section has made a strong appeal for treating interests in money market mutual funds as "cash" for this purpose as well. n91.2 The term "cash" for purposes of the REIT asset qualification rules includes foreign currency, if the REIT or its QBU uses that currency as its functional currency. Foreign currency qualifies as cash, however, only to the extent that it is held for use in the normal course of the activities of the REIT or the QBU giving rise to income or gain that is included in the REIT income tests n91.3 or directly related to acquiring or holding real estate or other assets that qualify under the REIT asset tests. n91.4 Foreign currency that is held in connection with a trade or business of trading or dealing in securities n91.5 cannot be treated as "cash." n91.6 "Value" means, with respect to securities for which market quotations are readily available, the market value of such securities and, with respect to other securities and assets, fair value as determined in good faith by the trustees of the REIT. n92 "Total Assets" means the gross assets of the REIT determined in accordance with generally accepted accounting principles. n93

[A] Real Estate Assets

The term "real estate assets" means real property (land and improvements, including undivided interests in real property), interests in mortgages on real property (including interests in mortgages on leaseholds of land and improvements) and shares of other qualified REITs. n94 Interests in real property include fee ownership and co-ownership of land or improvements on it, leaseholds of land or improvements on it, options to acquire land, or improvements on it, and options to acquire leasehold of land or improvements on it. n94.1 The IRS has ruled that this includes fee, leasehold, easement, and license interests in rooftop sites which the taxpayer leased to wireless telecommunication services providers. n94.2 Airspace rights also qualify as interests in real property. n94.3 Standing timber and timberlands are also included within the term. n94.4 The IRS has ruled that voting rights in condominium associations n95 and voting interests in property owner associations acquired indirectly through the acquisition of other real estate constitute real estate assets. n96 The term also includes any property attributable to the temporary investment of equity or public debt offering proceeds in portfolio assets. n97 The term "real property" includes improvements, such as buildings and other inherently permanent structures. n98 Cold storage warehouses and central refrigeration systems

may also constitute real property and real estate assets under the REIT provisions. n99 Loans secured by manufactured homes and loans to purchasers of interests in timeshare residential dwelling units are also treated as real estate assets. n99.1

Loans to a partnership (or an LLC that is treated as partnership for federal tax purposes) that are secured by interests in the borrowing partnership also qualify as "real estate assets," but only to the extent that the fair value of the pledged partnership interests' share of the real property owned by the partnership equals the amount of the loans secured by the real property. n99.2 The same is true for loans to pass-through entities that are secured by interests in other pass through-entities that own real estate. n99.3 As discussed in § 16.02[2][c][ii][E], below, the IRS has also provided a safe harbor under which a loan from a REIT that is secured by an interest in a partnership or by the sole membership interest in a disregarded entity will also be treated as a real estate asset for purposes of the REIT asset limitation requirements. n99.4

A building's wiring, plumbing systems and central heating or air conditioning are considered real property; however, accessory assets, such as office equipment, individual air conditioning units, counters, furnishings and the like do not qualify, even though these items may be termed fixtures under local law. n99.5 Thus, when a REIT invests in both realty and personalty (or a mortgage secured by both realty and personalty), an allocation between the realty and the personalty, based on the relative fair market values, will be required, because the investment attributable to the personalty will not qualify as a "real estate asset." When applying the methodology to second mortgages, the loan value of the real property must be reduced by the amount of all senior encumbrances on the real property. n100 Mineral, oil or gas royalty interests are also excluded from the definition of real estate assets. n101

A regular or residual interest in a REMIC is generally treated as a real estate asset, and any amount includable in gross income with respect to that interest is treated as interest on an obligation secured by a mortgage on real property. If less than 95 percent of the REMIC's assets are real estate assets, however, the REIT is then treated as holding and receiving directly its proportionate share of the assets and income of the REMIC. n102

In a series of rulings, the Service has held that if a REIT owns mortgage pass-through certificates and mortgage participation certificates issued by or guaranteed by the Government National Mortgage Association, Federal National Mortgage Association or Federal Home Loan Mortgage Corporation, it is considered to own real estate assets for REIT purposes. n103 The interest income received with respect to such certificates constitutes interest on obligations secured by mortgages on real property for REIT purposes. The Service has ruled similarly with respect to privately-issued mortgage-backed certificates. n104

Otherwise-qualifying assets may be foreign. Neither the code nor the regulations thereunder restrict the term "real estate assets" to those located within the United States. n104.1 Accordingly, real property for purposes of meeting the REIT asset requirements includes land or improvements thereon located outside the United States. Similarly, the term "mortgages on real property" includes a security interest which, under the laws of the jurisdiction in which the property is located, is the legal equivalent of a mortgage or deed of trust in the United States. n104.2 Thus, foreign situs of a REIT's assets also does not necessarily prevent the REIT from satisfying the REIT income and asset tests n104.3

[B] Repurchase Agreements

The Service has ruled that a repurchase obligation between a bank and a REIT is properly a loan from the REIT to the bank and not a receivable, cash, cash item or Government security. n105 In a repurchase obligation transaction, the REIT "purchases" United States Treasury obligations from a bank agreeing to "resell" them to the bank on a fixed date at the "purchase price" plus an agreed upon amount of interest, while assuming no benefits and risking no losses from changes in the market value or interest rate of the obligations. Although repurchase agreements outstanding at the end of a fiscal quarter cannot be used to satisfy the 75 percent asset test, if the REIT owns a mortgage loan, which is a real estate asset, it can finance the loan by entering into a repurchase obligation with a bank or other lender. In this instance,

the "sale" and "repurchase" are ignored for income tax purposes, the REIT is treated as continuing to own the mortgage loan, and the asset can be used to satisfy the 75 percent asset test.

[C] Government Securities

Although the Code does not define "Government securities," it provides that terms not defined in the REIT provisions have the same meanings as when used in the *Investment Company Act of 1940*. n106 The *Investment Company Act of 1940* defines "Government securities" as:

any security issued or guaranteed as to principal or interest by the United States, or by a person controlled or supervised by and acting as an instrumentality of the Government of the United States pursuant to the authority granted by the Congress of the United States; or any certificate of deposit for any of the foregoing. n107

The Service has ruled that securities of the following agencies constitute "Government securities" for REIT purposes: Federal Housing Administration, Federal National Mortgage Association, Federal Home Loan Bank, Federal Land Bank, Federal Intermediate Credit Banks, Banks for Cooperatives, Public Housing Administration, United States Postal Service and Small Business Administration. n108 The Service has also ruled, pursuant to Section 851(b)(3) of the Code dealing with regulated investment companies, that certain enumerated types of securities constitute "Government securities" when issued by the following agencies: Student Loan Marketing Association, Commodity Credit Corporation, Federal Agricultural Mortgage Corporation, Farm Credit System Financial Assistance Corporation and Federal Home Loan Mortgage Corporation. n109 Because the term "Government securities" under Section 851(b)(3) of the Code depends upon the *Investment Company Act of 1940* for its definition, n110 these rulings related to regulated investment companies should also apply to REITs.

[D] Qualified REIT Subsidiaries

Many business trusts and corporations prefer to hold separate parcels of real estate in separate companies to limit liability. For REITs, however, the stock of a corporation other than another REIT is generally a nonqualifying asset for REIT qualification purposes. The "qualified REIT subsidiary" was created to address this concern. A qualified REIT subsidiary is any corporation whose stock is 100 percent owned by the REIT. The term does not, however, include any taxable REIT subsidiary. n111 For tax years beginning before August 6, 1997, the stock ownership requirement generally had to be met at all times during the subsidiary's existence. n112

If the statutory ownership requirement is met, the subsidiary will not be treated as a separate corporation for most tax purposes, and all of the subsidiary's income, deductions, credits, assets and liabilities will be treated as those of the REIT. n113

A qualified REIT subsidiary, even though it is otherwise not treated as a corporation separate from the REIT, is treated as a separate corporation for the following purposes: n113.1

- Federal tax liabilities of the qualified REIT subsidiary with respect to any taxable period for which the qualified REIT subsidiary was treated as a separate corporation.
- Federal tax liabilities of any other entity for which the qualified REIT subsidiary is liable.
- Refunds or credits of Federal tax.

This "separate corporation" status can affect the subsidiary's liability for taxes, and also affect who must sign a consent to extend the statute of limitations. n113.1.1

Example:

X, a calendar year taxpayer, is a domestic corporation 100 percent of the stock of which is acquired by Y, a REIT, in Year 2. X was not a member of a consolidated group at any time during its taxable year ending in December of Year 1. Consequently, X is treated as a qualified REIT subsidiary for Year 2 and later periods. n113.2 In Year 4, the IRS seeks to extend the period of limitations on assessment for X's Year 1 taxable year. Because X was treated as a separate corporation for its Year 1 taxable year, X is the proper party to sign the consent to extend the period of limitations.

Assume instead that upon Y's acquisition of X in Year 2, Y and X jointly elect to treat X as a taxable REIT subsidiary of Y. n113.3 In Year 3, Y and X jointly revoke that election. Consequently, X is treated as a qualified REIT subsidiary for Year 3 and later periods. In Year 4, the IRS determines that X miscalculated and underreported its income tax liability for Year 1. Because X was treated as a separate corporation for its Year 1 taxable year, the deficiency may be assessed against X and, in the event that X fails to pay the liability after notice and demand, a general tax lien will arise against all of X's property and rights to property. n113.4

If a REIT sells all of the stock of a qualified REIT subsidiary to any purchaser, then the subsidiary is treated as a new corporation that is formed and receive its properties in exchange for its stock, immediately after which the subsidiary corporation is owned by the purchaser. n114 Because the stock is deemed transferred immediately after the exchange, such transfer will not qualify as a tax-free exchange under Code Section 351. n115

Although for tax years beginning before August 6, 1997, the REIT is required to own 100 percent of the stock of a qualified REIT subsidiary at all times during the subsidiary's existence, the legislative history describes a limited exception. If a REIT purchases all of the stock of the subsidiary and makes an election under Code Section 338 with respect to the purchased stock, then the subsidiary is deemed to be a newly-formed corporation pursuant to the Section 338 election and will qualify as a qualified REIT subsidiary as of the time that the newly-formed corporation is deemed to come into existence under Code Section 338. n116

In several private rulings involving law applicable to tax years beginning before August 6, 1997, the IRS also allowed existing parent corporation to elect REIT status when it has wholly-owned direct and indirect subsidiaries, even if before the election the parent corporation had not always owned 100 percent of the outstanding stock of the subsidiaries. n117 The Service has held that the parent in this situation will be viewed as having completely liquidated each of the subsidiaries into itself under Code Section 332. n118 These deemed liquidations will occur immediately before the effective date of the parent's REIT election. The Service reasoned that if the existing subsidiaries could not be treated as qualified REIT subsidiaries following the effective date of the REIT election, then the parent would be required to actually liquidate its subsidiaries so that it could satisfy the REIT asset tests under Code Section 856(c)(5) concerning the asset requirements described under this Section 16.02[2][c]. This approach would force the parent to forego the business advantages associated with the ownership of properties through wholly-owned subsidiaries. The Service concluded that this approach would be contrary to the legislative purpose underlying the enactment of Code Section 856(i) concerning qualified REIT subsidiaries. n119

[E] Safe Harbor for Loans Secured by Interest in Partnership or Disregarded Entity

Many REITs invest in real estate by making loans that are secured by real property. In certain cases because of financing arrangements and restrictive loan covenants, REITs make loans to the owners of entities that hold real property instead of making loans that are secured directly by real property. These loans are secured by a pledge of the borrowers' ownership interests in the property-owning entities. The IRS has issued a revenue procedure that sets forth a safe harbor under which (1) these loans will qualify as "real estate assets" n119.1 and (2) the interest on them will qualify as interest on obligations secured by mortgages on real property or on an interest in real property. n119.2

A loan by a REIT qualifies under the safe harbor only if it meets the following requirements: n119.3

- The borrower is either a partner in a partnership or the sole member of an eligible entity (such as an LLC) that has not elected to be treated as a corporation for federal tax purposes and is therefore disregarded as an entity separate from its owner. n119.4
- The loan is nonrecourse, secured only by the partner's interest in the partnership, or the member's interest in the disregarded entity; thus, in the event of default, the sole recourse is against the pledged ownership interest.
- The lender is granted a first priority security interest in the pledged ownership interest. This security interest will place the lender's claim as lender ahead of the claims of other creditors of the partner or LLC member. The pledged ownership interest cannot be further encumbered unless the security interest created is subordinate to the lender's security interest.
- Upon default and foreclosure on the secured loan, the lender will replace the borrower as a partner in the partnership or as the sole member of the disregarded entity. In the case of a loan secured by a partnership interest, the other partners in the partnership must have agreed that upon default and foreclosure they will not unreasonably oppose the admission of the lender as a partner.
- On the date the commitment by the lender to make the loan becomes binding on the lender, the partnership or disregarded entity must hold real property within the meaning of *Regulation Section 1.856-3(d)*. (Under that regulation real property includes land or improvements on it, such as buildings. The term also includes interests in real property. If all or part of this real property is subsequently sold or otherwise transferred, the loan will become due and payable upon the sale or transfer of the real property.)
- On each testing date, the value of the real property held by the partnership or disregarded entity must be at least 85 percent of the value of all of the assets of the partnership or disregarded entity. For this purpose, a testing date means the close of the first quarter of the lender's taxable year following the date on which the commitment by the lender to make the loan becomes binding on the lender, and the close of each subsequent quarter in which the partnership or disregarded entity acquires any assets other than real estate assets, cash and cash items (including receivables), or government securities, n119.5 or reasonable quantities of equipment and materials customarily used for the maintenance and repair of real property. For this purpose, asset acquisitions by a partnership or disregarded entity include additional partnership or member contributions.
- The loan value of the real property owned by the partnership or disregarded entity must equal or exceed the amount of the loan. The loan value of the real property is the fair market value of the property, determined on the date the commitment by the trust to make the loan becomes binding on the trust. n119.6 For this purpose, the loan value is reduced by any liens encumbering the real property, as well as by any other liabilities of the partnership or disregarded entity on the date the commitment by the lender to make the loan becomes binding on the lender. If the real property is owned by a partnership, only the proportionate share of the loan value attributable to the interest that secures the lender's loan is taken into account. n119.7
- Interest on the loan must include only an amount that constitutes compensation for the use or forbearance of money, and, subject to the exception for interest based on a fixed percentage of receipts or sales of the debtor, n119.8 the determination of the amount of interest cannot depend in whole or in part

on the income or profits of any person. n119.9

[iii] The 25 Percent Asset Test

At the close of each quarter of the taxable year of a REIT, not more than 25 percent of the value of its total assets may be represented by securities (other than those includable under [the 75 percent asset test]). This test will always be satisfied if the 75-percent test is satisfied. n120

[iv] The 5 Percent Asset Test

An entity can qualify as a REIT for a tax year only if, at the close of each quarter of the taxable year, not more than 5 percent of the value of its total assets is represented by securities of any one issuer. n121 This test is applied without regard to a taxable REIT subsidiary and securities includable under the 75 percent test. n122 Securities are defined by reference to the *Investment Company Act of 1940*. n123

Example:

R, a calendar-year REIT, sells a parcel of real estate for \$100,000 on March 16. R invests the proceeds in commercial paper issued by B. As of March 31 of the year, the value of R's assets are as follows: real estate--\$500,000; cash--\$50,000; B's commercial paper--\$100,000.

R fails the 5 percent asset test for the year and will lose its REIT status, because B's commercial paper at the end of the calendar quarter constitutes over 5 percent of the value of R's total assets ($100,000/650,000 = 15.38$ percent). n124

To continue to qualify as a REIT, R must, by April 30 of the year, either acquire additional real estate and other assets *or* reduce its investment in B's commercial paper so that B's commercial paper comprises no more than 5 percent of R's total assets. n125

[v] The 10 Percent Voting Securities Test

An entity can qualify as a REIT for a tax year only if, at the close of each quarter of the tax year, it does not hold securities possessing more than 10 percent of the total voting power of the outstanding securities of a single corporate issuer. n126

The term "voting securities" is defined by reference to the *Investment Company Act of 1940*. n127 The term includes any security presently entitling the owner or holder thereof to vote for the election of directors of a company pursuant to the *Investment Company Act of 1940*. n128

Voting rights in condominium associations n129 or homeowners' associations n130 that are acquired by a REIT through acquisition of real property are generally treated as real estate assets and are not considered "voting securities."

The 10 percent voting securities test is applied without regard to a taxable REIT subsidiary and securities includable under the 75 percent test. n131 For example, a REIT may form a separate finance entity subsidiary to issue securities and raise capital for the REIT's operations. The REIT's interest in that entity may be treated as not violating the requirement that a REIT not own more than 10 percent of the voting securities of a single issuer. If the finance entity's securities represent the REIT's interest in its own obligations, the securities are not treated as assets that must be diversified for investor benefit. n132

The terms "value" and "total assets" are defined in the Regulations as discussed above in *Section 16.02[2][c][ii]*.

[vi] The 10 Percent Value of Securities of a Single Issuer Test

Effective generally for tax years beginning after December 31, 2000, n133 a REIT, at the close of each quarter of the tax year, generally cannot own more than 10 percent of the total value of securities of a single issuer. n134 This test is applied without regard to a taxable REIT subsidiary and securities includable under the 75 percent test. n135

For purposes of the 10-percent test, n136 there is a safe harbor for straight debt. n137 "Straight-debt" includes any written unconditional promise to pay on demand or on a specified date a sum certain in money if: n138

- the interest rate and interest payment dates are not contingent on profits, the borrower's discretion, or similar factors; and
- there is no convertibility, directly or indirectly, into stock.

The general rule that interest rate and interest payment dates cannot be contingent has several exceptions under the REIT provisions, provided that one of several factors applies. n139 The first type of contingency that is permitted is one that does not have the effect of changing the effective yield to maturity, as determined under *IRC Section 1272*, other than a change in the annual yield to maturity, but only if (1) any such contingency does not exceed the greater of 1/4 of one percent, or five percent of the annual yield to maturity, or (2) neither the aggregate issue price nor the aggregate face amount of the debt instruments held by the REIT exceeds \$1 million and not more than 12 months of unaccrued interest can be required to be prepaid under those instruments. n140

The second permitted contingency is that the time or amount of any payment is permitted to be subject to a contingency upon a default or the exercise of a prepayment right by the issuer of the debt, provided that the contingency is consistent with customary commercial practice. n141

"Look-through" rules are used to determine a REIT partner's share of partnership securities, generally treating debt to the REIT as part of the REIT's partnership interest for this purpose, except in the case of otherwise qualifying debt of the partnership. n142 The following partnership debt instruments are not treated as securities in applying the 10-percent test: n142.1

- any debt instrument issued by a partnership and not otherwise treated as a security n142.2 to the extent of the REIT's interest as a partner in the partnership; and
- any debt instrument issued by a partnership and not otherwise treated as a security n142.3

if at least 75 percent of the partnership's gross income (excluding gross income from prohibited transactions) is derived from sources of income that can satisfy the statutory 75 percent income test. n142.4

Certain corporate or partnership issues that otherwise would be permitted to be held without limitation under the special straight debt rules described above will not be permitted if the REIT holding those securities, and any of its taxable REIT subsidiaries, holds any securities of the issuer that are not permitted securities (prior to the application of this rule) and have an aggregate value greater than one percent of the issuer's outstanding securities. n142.5

A transition rule, however, allows certain securities owned by a REIT on October 22, 2004 to be treated as not held by the REIT for purposes of the requirement that a REIT cannot own more than 10 percent of the value of the outstanding securities of a single issuer. n142.6 The transition rule applies if the REIT owns the securities continuously, the securities were issued by a partnership and they wouldn't be taken into account under the prior-law straight debt safe harbor that applied if the REIT had a 20 percent profits interest in the issuing partnership. n142.7 The transition rule applies only until the maturity date of the security. n142.8 Certain successors of the REIT may also take advantage of

the transition rule. n142.9

Except as provided in the regulations, the following also are not considered "securities" for purposes of the rule that a REIT cannot own more than 10 percent of the value of the outstanding securities of a single issuer: n142.10

- any loan to an individual or an estate;
- any *IRC Section 467* rental agreement (as defined in *IRC Section 467(d)*), other than with an entity in which the REIT holds at least a qualifying 10-percent interest; n143
- any obligation to pay rents from real property;
- any security issued by a state or any political subdivision thereof, the District of Columbia, a foreign government, or any political subdivision thereof, or the Commonwealth of Puerto Rico, but only if the determination of any payment received or accrued under that security does not depend in whole or in part on the profits of any entity not described in this category, or payments on any obligation issued by such an entity;
- any security issued by a REIT; and
- any other arrangement that the IRS determines is not a security.

[vii] The 25 Percent Asset Test for REIT Subsidiaries

An entity can qualify as a REIT for a tax year only if, at the close of each quarter of the taxable year, not more than 25 percent of the value of its total assets is represented by securities of one or more taxable REIT subsidiaries. n143.1

[viii] Failure to Meet REIT Asset Tests

A REIT that fails to meet the REIT asset tests n144 may avoid disqualification in some cases. n144.1 First, a REIT that has met the asset tests as of the close of any quarter will not fail them solely because of a discrepancy due to variations in value that are not attributable to the acquisition of investments (including a discrepancy caused solely by the change in the foreign currency exchange rate used to value a foreign asset). n144.2 In addition, a REIT that fails to meet the asset tests for a quarter (other than certain de minimis failures, discussed below) is deemed to satisfy the tests for that quarter if the following requirements are met: n144.3

- Following the REIT's identification of the failure to satisfy the asset requirements for a particular quarter, a description of each asset that causes the failure to satisfy those requirements is set forth in a schedule for the quarter, and is filed in accordance with regulations;
- The failure to meet the asset requirements for the particular quarter is due to reasonable cause and not due to willful neglect; and
- The REIT either (1) disposes of the assets set forth on the schedule within 6 months after the last day of the quarter in which the REIT identified its failure to meet the asset test, or (2) meets the asset tests within that period. The Treasury may prescribe another time period for the disposal, and may also prescribe the manner in which the property must be disposed of.

In any year in which a REIT fails to meet the REIT asset tests (other than a de minimis failure, discussed below), it must also pay a tax. The tax must be paid even if the REIT takes the above steps and avoids disqualification as a REIT.

The tax is the greater of (1) \$50,000, or (2) an amount determined under regulations by multiplying the highest rate for corporate income tax n144.4 by the net income generated by the assets that caused the REIT to fail the REIT asset tests for a prescribed period. n144.5 The prescribed period begins on the date that the REIT first fails to meet the asset test and ends on the earlier of the date the REIT disposes of the assets or the end of the first quarter when it no longer fails to meet the REIT asset tests. n144.6 Any REIT penalty tax is treated as an excise tax to which the deficiency procedures of the Code apply. n144.7

If there is a de minimis failure of the 5-percent or 10-percent asset tests during a quarter, n144.8 a REIT will not lose its REIT status if the failure is due to the ownership of assets the total value of which does not exceed the lesser of (1) one percent of the total value of the REIT's assets at the end of the quarter for which the measurement is done, or (2) \$10 million; provided in either case that the REIT either disposes of the assets within six months after the last day of the quarter in which the REIT identifies the failure (or such other time period prescribed by the Treasury), or otherwise meets the requirements of those rules by the end of that time period. n144.9

[d] Classification of Certain Assets and Related Income

[i] Partnership Interests

If a REIT owns an ownership interest (i.e., a partnership interest) in an entity taxable for federal income tax purposes as a partnership, the REIT will be deemed to own its proportionate share of each of the assets of the partnership and will be deemed to be entitled to the income of the partnership attributable to each such share. n145 The regulations provide that for purposes of Code section 856 (dealing with the income and asset qualification tests for a REIT), a REIT's interest in a partnership is determined in accordance with its capital interest in the partnership. n146 Also, for purposes of the REIT qualification tests, the character of the assets in the hands of the partnership and the items of gross income of the partnership will retain the same character in the hands of the REIT partner. n147 Therefore, a REIT that is a partner in a partnership must consider its proportionate share of the partnership's assets and income in determining if it satisfies the REIT qualification tests. IRS letter rulings sometimes rule on how to determine a REIT's capital interest in partnerships and other related entities for purposes of the REIT gross income and asset tests. n147.1 However, for purposes of determining REIT taxable income, as described below in *Section 16.02 [3]*, the partnership income taxable to the REIT should be determined pursuant to Code Section 704 and the other provisions of subchapter K. This distinction could be relevant where, under the applicable partnership agreement, there is a special allocation of income to the partners, including the REIT. A special allocation of income could also be required under Code Section 704(c) if property having "built-in gain or built-in loss" has been contributed by a partner. If a partnership sells real property or if a REIT sells an interest in a partnership, gross income realized from the sale and attributable to the real property is considered gross income from the sale of real property held for either the period that the partnership held the real property or the period that the REIT was a member of the partnership, whichever period is shorter. n148 See also *Section 16.02[6]*, below, for a discussion of "umbrella partnership REITs" (also known as "UPREITs").

[ii] Qualified Temporary Investment Income and Assets

As discussed above in *Sections 16.02[2][b]* and *16.02[2][c][ii]*, at least 75 percent of the value of a REIT's assets and at least 75 percent of a REIT's income must come from real estate investments. Whenever a new or existing REIT raises capital, it may take a significant amount of time to invest the proceeds in qualifying investments. In the interim, qualification under the income and asset tests may be jeopardized. To avoid this problem, for a period of one year the qualified temporary investment rules treat the proceeds of stock offerings (other than dividend reinvestment plans) and certain public offerings of debt securities that are invested in portfolio assets as real estate assets for purposes of the assets requirements. n149 Similarly, the income from such qualified temporary investments will be treated as qualifying income for purposes of the 75 percent income test for the one-year period beginning on the date on which the new capital is received. n150

[iii] Foreclosure Property

In response to real estate failures that occurred in the 1970s, Congress added provisions to the Code which are designed to alleviate a REIT's problem with holding property which the REIT has obtained by foreclosure. Property that is acquired through foreclosure or similar means may be held for sale or operated by the REIT, in certain circumstances and for a limited period of time, without jeopardizing REIT status. n151 Further, the income derived from foreclosed property will be considered "qualified" for both the 75 percent and the 95 percent income tests, and any gain on the sale of such property will not be taxed as a prohibited transaction. n152

Foreclosure property is any real property or personal property incident to such real property acquired by a REIT as a result of the default or imminent default on the mortgage loan secured by the property. n153 This definition is subject to a limitation stated in the regulations. Under the limitation, property does not qualify as foreclosure property if the loan with respect to which the default occurs was acquired by the REIT with an intent to foreclose, or if the REIT knew or had reason to know that default would occur. n154 A REIT may own and operate a health care facility for at least two years and treat it as foreclosure property if the facility is acquired by the termination or expiration of a lease of the property (other than a termination by reason of a default, or the imminence of a default, on the lease). n155 Extensions of the two-year period may be granted, n156 but not beyond the sixth year after the tax year in which the REIT acquired the property. n157

In exchange for this favorable treatment, a REIT must pay taxes on its net income from foreclosure property at the highest corporate tax rate. n158 "Net income from foreclosure property" is the excess of (1) gain (including any foreign currency gain) from the sale or disposition of foreclosure property and the gross income derived from that property, over (2) deductions directly connected with the production of that income. Gross income from foreclosure property is included, however, only to the extent that it is not included in income under the REIT 75-percent income test in a category other than income or gain derived from foreclosure property. Foreign currency gains are included only to the extent they are not attributable to income under the REIT 75-percent income test in a category other than income or gain derived from foreclosure property. n158.1

To be eligible for this treatment, the REIT must elect to treat the property as "foreclosure property" in the year of the acquisition. n159 A REIT may revoke an election to treat property as foreclosure property for any tax year by filing a revocation on or before the due date for filing its tax return for that year. If a revocation is filed, no election may be made by the REIT with respect to the property for any later year. n160

Property for which such an election is made will retain its foreclosure property status until the close of the third taxable year following the taxable year in which the REIT acquired the property. n161 The grace period may be extended for an additional three years by filing a request with the IRS. n162

Property for which an election is made will immediately lose its status as foreclosure property, however, if:

- the property is leased and the income would not otherwise qualify under the 75 percent income test (but for the special rule that states the income from foreclosure property qualifies for the 75 percent income test); n163

- any construction occurs on the property, other than completion of structures that were more than 10 percent completed before default became imminent; n164 or

- the property is operated by the REIT as a trade or business other than through an independent contractor more than 90 days after the foreclosure has occurred. n165 Property is not treated as used in a trade or business by the REIT to the extent the REIT's activities do not result in amounts received with respect to the property being treated as other than rents from real property. n166

[iv] Prohibited Transaction Tax Imposed on Property Held for Sale in the Ordinary Course of Business

REITs must pay a tax of 100 percent of the gain from the sale of any property held for sale in the ordinary course of business. n167 However, the law contains a "safe harbor" rule that permits a REIT to modify its portfolio position without paying the 100 percent tax, if certain conditions are met. n168

If the following conditions are satisfied, the sale of a real estate asset does not constitute a prohibited transaction:

- (1) the REIT has held the property for at least two years; n169
- (2) capitalized expenditures by the REIT or any of its partners during the preceding two years do not exceed 30 percent of the net selling price; n170
- (3) either (a) during the taxable year the REIT does not make more than seven sales of non-foreclosure property (excluding property that was involuntarily converted), (b) the adjusted bases of non-foreclosure property sold during the year does not exceed ten percent of the bases of the REIT's assets at the beginning of the year, or (c) the fair market value of the property (other than sales of foreclosure property or involuntary conversions) sold during the taxable year does not exceed 10 percent of the fair market value of the REIT's assets as of the beginning of the year; n171

NOTE:

Because the effective date of the fair market value exception n171.1 is expressed in terms of sales made after a particular date, the IRS has issued a revenue procedure explaining how to interpret it in terms of sales during a taxable year that begins on or before July 30, 2008, and ends on or after July 31, 2008. The exception is satisfied for that taxable year if: n171.2

- the REIT satisfies the 7-sales test (for the entire taxable year);
 - the REIT satisfies the 10-percent adjusted bases test (for the entire taxable year); or
 - the REIT satisfies both (1) the 10-percent adjusted bases test as if the portion of the taxable year ending on July 30, 2008, were an entire taxable year; n171.3 and (2) the 10-percent fair market value test (for the entire taxable year).
- (4) in the case of land or improvements not acquired by foreclosure or lease termination, the REIT has held the property for at least two years for production of rents; n172 and
 - (5) if clause (3)(a), above, is not satisfied, substantially all of the marketing and development expenditures for the property were made through an independent contractor. n173

The failure of a sale of property to qualify under one of the above safe harbors does not necessarily make the sale a prohibited transaction. n173.1 Taxpayers may request a ruling that particular sales are not prohibited transactions subject to the tax. In two private rulings, the IRS has ruled that a REIT's sale of investment property due to "extreme economic conditions" is not subject to the tax. In one, the taxpayer used most of the proceeds of the sale to repay debt, establish a cash reserve for other maturing mortgage debt, and increase its working capital position, and some to repurchase its stock. n173.1.0.1 In the other, the taxpayer needed liquidity, had made no affirmative efforts to sell the property, and had made minimal property sales in prior years. n173.1.0.2

There is also a prohibited transaction safe harbor for timber REITs. n173.1.1 Under the safe harbor, a sale of a real estate asset by a REIT will not be a prohibited transaction if the following requirements are met: n173.2

- the asset must have been held for at least two years in the trade or business of producing timber;
- the aggregate expenditures made by the REIT (or a partner of the REIT) during the two-year period preceding the date of sale that are includible in the basis of the property (other than timberland acquisition expenditures) and that are directly related to the operation of the property for the production of timber or for the preservation of the property for use as timberland must not exceed 30 percent of the net selling price of the property;
- the aggregate expenditures made by the REIT (or a partner of the REIT) during the two-year period preceding the date of sale that are includible in the basis of the property and that are not directly related to the operation of the property for the production of timber or the preservation of the property for use as timberland must not exceed five percent of the net selling price of the property;
- the REIT either (a) does not make more than seven sales of property (other than sales of foreclosure property or sales which *IRC Section 1033* applies), (b) the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property sold during the year (other than sales of foreclosure property or sales to which *IRC Section 1033* applies) does not exceed 10 percent of the aggregate bases (as determined for purposes of computing earnings and profits) of property of all assets of the REIT as of the beginning of the year, or (c) the fair market value of the property (other than sales of foreclosure property or involuntary conversions) sold during the taxable year does not exceed 10 percent of the fair market value of the REIT's assets as of the beginning of the year;

NOTE:

Because the effective date of the fair market value exception n173.2.1 is expressed in terms of sales made after a particular date, the IRS has issued a revenue procedure explaining how to interpret it in terms of sales during a taxable year that begins on or before July 30, 2008, and ends on or after July 31, 2008. The exception is satisfied for that taxable year if either: n173.2.2

- the REIT satisfies the 7-sales test (for the entire taxable year);
- the REIT satisfies the 10-percent adjusted bases test (for the entire taxable year); or

Both--

- the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property (other than sales of foreclosure property or sales to which *IRC Section 1033* applies) sold during the portion of the taxable year ending on July 30, 2008, did not exceed 10 percent of the aggregate bases (as so determined) of all of the assets of the REIT as of the beginning of the taxable year (that is, the REIT satisfies the 10-percent adjusted bases test as if the portion of the taxable year ending on July 30, 2008, were an entire taxable year); and

- the REIT satisfies the 10-percent fair market value test (for the entire taxable year).

- if the REIT makes more than seven sales of property during the taxable year (see the clause immediately above), substantially all of the marketing expenditures with respect to the property are made through independent contractors

n173.3 from whom the REIT does not derive any income under a temporary provision, this safe harbor is also met when the marketing is done by a taxable REIT subsidiary of the REIT; n173.4 and

- the sales price on the sale of the property cannot be based in whole or in part on income or profits of any person, including income or profits derived from the sale or operation of those properties.

NOTE:

Any gain that is eligible for the timber property safe harbor is considered for all tax purposes as not being from the sale of stock in trade, inventory, or property held by the REIT primarily for sale to customers in the ordinary course of the REITs trade or business. n173.5

[e] Election, Reporting, and Recordkeeping Requirements

In order to be treated as a REIT for a taxable year, a taxpayer must file an election to be a REIT with its return for that year. n173.6 No election need be filed if an election has been made for a previous taxable year, and that election has not been terminated or revoked. n173.7 A taxpayer makes the "election" simply by computing taxable income as a REIT in its return for the first taxable year for which it desires the election to apply. n173.8 The IRS may treat a late-filed request for an extension for filing a return and a resulting late-filed return as timely made for purposes of having a valid REIT election. n173.9

A REIT is required to comply with regulations that are prescribed for the purposes of ascertaining the actual ownership of the outstanding shares or certificates of beneficial interest in the REIT. n174 For tax years beginning before August 6, 1997, a REIT was disqualified in any year in which it failed to issue a shareholder demand letter to determine ownership of its shares. n175 For tax years beginning after August 5, 1997, a REIT's failure to ascertain its ownership does not result in disqualification. Instead, a penalty of \$25,000 (\$50,000 for intentional violations) is imposed on the REIT for any year in which the REIT does not comply with the ownership regulations. n176 No penalty is imposed if the failure to ascertain ownership is due to reasonable cause and not to willful neglect. n177 A REIT is also required to take any other curative actions to ascertain ownership of its shares when requested by the IRS. n178

Planning Note:

A REIT that complies with regulations for ascertaining its ownership, n179 and which did not know, or have reason to know, that it was so closely held as to be classified as a personal holding company, is treated as meeting the requirement that it not be a personal holding company. n180

If the REIT elects to distribute any or all of its long-term capital gains, it must designate, in writing, the portion of any distribution that is capital gain within 30 days after the close of the tax year in which the distribution takes place. n181 The REIT's federal income tax returns must also include data on any rent received directly or indirectly from a lessee in which the REIT has an ownership interest. n182 Also required with the return is information about any independent contractor and any REIT shares owned by any person having an interest in the independent contractor. n183 Form 1120-REIT is used by a REIT for reporting its federal taxable income.

The REIT may revoke its status if an election is made on or before the 90th day of the taxable year for which the revocation is to be effective. n184 If this election is made, the entity may not make a new REIT election until five years after the termination of its REIT status. n185

[f] Issues Related to Self-Management

A REIT's activities are limited such that the majority of the REIT's income is from passive income sources and not from active participation in a trade or business. To insure that this criteria is satisfied, Congress set specific standards as to the sources of income permitted to be included in the definition of "rents from real property" for purposes of the various

income tests discussed in *Section 16.02[2] [b]*, above. Generally, if a REIT intends to include 100 percent of the income from its properties as "rents from real property," the REIT cannot actively manage the properties. n186 The REIT may perform passive management activities, but it must employ an independent contractor to perform any duties related to the active management of real estate. The extent of management activities that will be considered passive when performed by a REIT has been discussed extensively in numerous private letter rulings, a limited number of revenue rulings and statutory history.

[i] "Rents From Real Property" Defined

The definition of "rents from real property" includes:

- (1) rents from interests in real property;
- (2) charges for services customarily furnished or rendered in connection with the rental of real property, whether or not such charges are separately stated; and
- (3) rent attributable to personal property which is leased under, or in connection with, a lease of real property, but only if the rent attributable to such personal property for the taxable year does not exceed 15 percent of the total rent for the taxable year attributable to both the real and personal property leased under, or in connection with, such lease. n187

The definition of "rents from real property" is, however, restricted by Section 856(d)(2) of the Code, which specifically excludes certain items from the definition of rents from real property, including any impermissible tenant service income. n188 "Impermissible tenant service income" means amounts received by a REIT for: (1) services furnished or rendered by the REIT to the tenants of rental property; or (2) managing or operating that property. n189 In one ruling, a REIT received minimal amounts of income from an approved company program, in which it publicly awarded a seal of approval to designated businesses. The IRS ruled that this income would be impermissible tenant service income. n189.1 A REIT may render a *de minimis* amount of impermissible services to tenants, or in connection with the management of property, and still treat amounts received with respect to that property as rents from real property. The value of the impermissible services may not exceed 1 percent of the gross income from the property. For these purposes, the services may not be valued at less than 150 percent of the REIT's direct cost of the services. If a REIT provides more than the above *de minimis* amount of services, all amounts received for those services are treated as impermissible tenant service income and are not treated as rents from real property. n190

Certain items are not included in impermissible tenant service income, including the following: n191

- (1) amounts received for services rendered by independent contractors; See § 16.02[2][f][iii][J], below, for a discussion of independent contractors.
- (2) amounts that would be excluded from unrelated business taxable income under *IRC Section 512(b)(3)* if received by a tax-exempt entity (generally rents from real property and incidental amounts received for the rental of personal property, as discussed below); and
- (3) income from a taxable REIT subsidiary. n192-195

Section 512(b)(3) of the Code identifies those revenues that are specifically excluded from the definition of unrelated business taxable income, including any rents from real property. For purposes of this Code section, the regulations state that rents from real property do not include "payments for the use or occupancy of rooms and other space where services are also rendered to the occupant." n196 Services are considered to be rendered to the occupant if such services are primarily for the convenience of the occupant and are services other than those usually or customarily rendered. For

example, maid service is a service rendered primarily for the convenience of the occupant, whereas providing heat and light, cleaning public entrances, exits, stairways, and lobbies, and collecting trash, are not considered services rendered to the occupant. Applying these rules, payments for the use or occupancy of hotel rooms, boarding houses, tourist camps, tourist homes, motor courts, motels, parking lots, warehouses and storage garages do not constitute rent from real property. Alternatively, payments for the use or occupancy of private residences or living quarters in duplexes or multiple housing units and offices in any office building are generally rent from real property.

Thus, the Code and the related regulations establish a two-point analysis with respect to services rendered by a REIT. First, for rental income to qualify as rents from real property, services rendered to the tenants must be "services customarily furnished or rendered in connection with the rental of real property." n197 Services furnished to tenants are considered customary if "in the geographic market in which the building is located, tenants in buildings which are of a similar class ... are customarily provided with the service." n198 To the extent a REIT furnishes services which are not considered customary to its tenants, it must use an independent contractor or taxable REIT subsidiary, or render only a *de minimis* amount of impermissible services to tenants. n199 Any independent contractor used must:

- (1) bear the cost of the services;
- (2) bill the tenants directly; and
- (3) directly receive and retain the revenues generated from such services. n200

The second step in the analysis entails a determination as to whether the REIT itself may perform the services or if the REIT must use an independent contractor to perform the services. As discussed above, a REIT may perform a *de minimis* amount of impermissible services to tenants. n201 It may also perform services that are not specifically "rendered to the occupant." However, for other than *de minimis* services, the REIT must hire an independent contractor to perform any services that are considered to be "rendered to the occupant."

[iii] Revenue Rulings

In Revenue Ruling 69-178 , the Service held that revenue derived from the occasional rental of a meeting hall by an exempt organization to outside individuals and groups qualifies as rent from real property within the meaning of section 512(b)(3) of the Code. n202 The Service based this ruling on the fact that the revenues collected were specifically for the use and occupancy of space and that the only services provided to the renters by the organization were utilities and janitorial services. Thus, by analogy, a REIT would be permitted to lease facilities such as a meeting hall on an occasional basis provided the only services furnished are utilities and janitorial services.

Revenue Ruling 80-297 also addressed the issue of defining rents from real property. This Revenue Ruling considered two situations: (1) School 1 used its tennis facilities to operate a tennis club during the summer months, with the school itself providing services, including tennis lessons and administrative functions for the tennis club; and (2) School 2 leased its tennis facilities to an unrelated individual during the summer months for use as a tennis club. The Service held in the first case that School 1's income was not considered rents from real property because, in addition to furnishing the tennis facilities, School 1 furnished services for the convenience of the tennis facility users. Whereas, in the second case, the Service found that School 2's income was considered rents from real property because the school furnished no personal services to the users of the tennis facilities; rather, the revenues were generated solely from the use of the tennis facilities. n203

The Service has also held that a university's rental income from the leasing of its stadium to a professional football team for several months of the year did not constitute rents from real property because the university provided substantial services to the football team for its convenience. Under the lease agreement with the football team, the university was responsible for providing extensive grounds maintenance, including maintaining the playing surface and providing

dressings rooms, linens and stadium security services. The security services included "crowd and traffic control, guarding the stadium and maintaining the privacy of practice session." n204 In its holding, the Service stated that the university was "furnishing substantial services for the convenience of the lessee that go beyond those usually rendered in connection with the rental of space for occupancy only." n205 Accordingly, the rental income was not considered rents from real property.

[iii] Private Letter Rulings

The Service has issued numerous private letter rulings in connection with determining what activities a REIT is permitted to undertake and still fall within the passive income guidelines. While a private letter ruling is addressed only to the taxpayer requesting it and should not, therefore, be relied upon as general authority, private letter rulings do provide guidance as to the position of the Service on the subjects addressed therein.

[A] Parking

The position of the Service as to when and to what extent REITs are permitted to provide parking facilities and services to tenants is not clear. Regulation 1.512(1)-1(c)(5) specifically excludes payments "for the use or occupancy of space in parking lots" from the definition of "rent from real property." n206

The IRS has over the years issued numerous private letter rulings to taxpayers regarding whether a REIT's income from providing parking facilities can qualify as rents from real property under *IRC Section 856*. The critical inquiry in nearly all the rulings is the extent of services the REIT can provide without having income from the parking being treated as impermissible tenant service income. n207

The extent of permitted services is not completely clear. In an effort to clarify its position in a broader context than in private letter rulings, the IRS has issued a revenue ruling on that matter. The ruling provides the statutory framework for resolving the issue and details a 1986 conference report on the legislative intent in this area. n208

The conference report states that a REIT may provide customary services in connection with the operation of parking facilities for the convenience of tenants of an office, apartment building, or shopping center, provided that the parking facilities are made available on an unreserved basis without charge to the tenants and their guests or customers. Any income derived from the rental of parking spaces on a reserved basis to tenants, or income derived from the rental of parking spaces to the general public, cannot qualify as rents from real property unless all services are performed by an independent contractor. If services are performed by an independent contractor, however, then the income from the rental of parking facilities is considered to be rents from real property (and not merely income from services). n209 The statutory framework and regulations are in accordance with this intent.

Revenue Ruling 2004-24 analyzes three situations and clarifies the following: n210

- A REIT may provide unattended parking facilities for the use of tenants, guests, and customers of its real properties and provide basic maintenance, repair, and lighting services with respect to the parking facilities. It may also deal with taxes and insurance for the parking areas in conjunction with its managerial and fiduciary functions. Provided the parking facility is proximate to the tenants and appropriate in size for the number of tenants, guests, customers, or subtenants who were expected to use the facility, the activities performed by the REIT will not give rise to impermissible tenant service income. Therefore, amounts received by the REIT for furnishing these services would qualify as rents from real property.
- In addition to the above activities, a REIT may also provide reserved parking spaces for particular tenants and assign and mark the reserved spaces in connection with leasing activities. Doing so is

considered a customary service and will not cause amounts received by the REIT for furnishing these services to be other than rents from real property. Any recurring functions unique to the reserved spaces (such as enforcement), however, would have to be provided by an independent contractor from whom the REIT did not derive any income. n211

- A REIT may make parking facilities with attendants available to the general public in addition to tenants and customers without causing amounts it receives to be other than rents from real property. An independent contractor, however, and not the REIT, must provide the attendants and must manage and operate the parking facility. In the ruling, the independent contractor was a separate corporation that remitted the parking fees from the lots to the REIT and received arms-length compensation under the terms of its management contract. The REIT did not derive or receive any income from the independent contractor. n212 Finally, the corporation employed all of the individuals who managed and operated the attended parking facilities and was directly responsible for providing all their salary, wages, benefits, administration, and supervision.

Revenue Ruling 2004-14 comports with past private letter rulings that have gradually expanded the type of services a REIT may provide in conjunction with parking facilities, particularly in the area of reserved parking, n213 and general maintenance, repair, cleaning, lighting, and security services. n214

An independent contractor or taxable REIT subsidiary, n215 however, must be used to provide towing or other enforcement services, n216 parking attendants, n217 valet parking services, n218 and the operation of public parking garages. n219-220

[B] Marketing, Leasing and Accounting

Employees of REITs may provide marketing and promotional activities, including advertising campaigns, special promotional events, shows and displays, sponsoring and distributing promotional literature and collecting fees for and providing services in conjunction with merchants' associations. n221 Such marketing services are not considered to be rendered for the convenience of the tenants, but presumably for the benefit of the REIT itself.

Administrative duties such as soliciting tenants, negotiating leases, billing, bookkeeping, collecting and depositing rents are also considered passive activities and may be performed by REIT employees. n222

[C] Repair and Maintenance

The Service has consistently recognized that the customary repair and maintenance of common areas, including pest control, landscaping, lighting, painting, background music, snow and trash removal and general janitorial services may be performed by REIT employees. n223 Additionally, the repair and replacement of heating, ventilation and air conditioning units, fire protection systems, security alarms, storm and sanitary drainage and other utility systems is customary and consistent with the concept of passive income. n224

In addition to repair and maintenance in common areas, repair and maintenance with respect to individual units is also recognized as passive activity to a certain extent. For example, minor remodeling of individual units in order to lease or renew existing leases is considered passive activity, n225 as is installing new carpeting in an individual unit, at the tenant's request, in exchange for a higher rent. n226

[D] Utility Service

The Service has recognized as passive activity the providing of utility services, such as electricity, gas, water, sewer, and garbage collection by REITs to their tenants. Accordingly, the furnishing of these services will not cause income to

be treated as other than "rents from real property," and any amounts derived from the furnishing of those services may qualify as "rents from real property." n227 The provision of utility services may include either the use of a master meter or individual meters, and payment for utility services may be billed separately or may be included in the rent, but such services are typically billed to the tenant at cost. n228 Certain telecommunication services, including purchasing local and long-distance telephone line access on a wholesale basis and reselling such services to tenants at a profit, but at a cost less than that for which the tenants could otherwise contract, have also been deemed a passive activity by the Service. n229 Other telecommunication services specifically approved as passive activity by the Service include a common switch box and a switchboard operator to take messages for tenants and announce guests, n230 and telephone/internet access, computer networking, electronic and voice mail, teleconferencing, business news and electronic clipping, security and safety alarms, and access to environmental control systems. n230.1 REITs are also permitted to collect and remit charges for cable television, but the cable television service must be provided by an independent contractor. n231

[E] Security

The Service has provided minimal discussion of security in the context of what is considered a passive activity; however, on-site security through a security guard employee has been specifically recognized as passive activity in geographic areas where vandalism or other crime is a concern. n232 In other private letter rulings, security and guard services have been briefly mentioned along with a litany of other services, all of which were deemed passive activities. n233

[F] Pay Telephones and Vending Machines

By subletting particular areas of a property, a REIT may be able to provide certain services to its tenants while still collecting only passive income. In particular, the Service has consistently permitted vending machines and pay telephones to be available to tenants of REIT-owned properties when the service is structured as a lease of space and any actual services provided to the tenants are actually supplied by independent contractors. n234 Typically, the REIT provides space and furnishes utilities to third party suppliers who are solely responsible for installing, maintaining, repairing, stocking and collecting money from the machines, in exchange for a rental or licensing fee. Additionally, since the pay telephones and vending machines are usually located in a common area, the REIT is permitted to provide general janitorial services in the surrounding areas. In one private letter ruling the Service did not disallow as rents from real property the revenues generated by the lease of space for pay telephones and vending machines even though the REIT's employees maintained and repaired the pay telephones and vending machines on at least some of the properties owned by the REIT. n235

[G] Laundry Machines

REITs may provide coin-operated laundry facilities, or an independent contractor can lease space for laundry equipment at properties owned by a REIT. n236 If an independent contractor provides the laundry machines, the REIT may provide any utility services necessary for the operation of the equipment. n237

In addition, a REIT may provide washing machines and dryers in individual apartments and collect a higher rent for apartments with such machines than for comparable units without such machines. n238

[H] Recreational Facilities

The operation of exercise facilities by a REIT may be considered a passive activity, but the REIT is limited in the services it may provide with respect to such facilities. In one private letter ruling, a REIT provided exercise rooms, which included exercise equipment, a pool, a sauna and showers, for the use of its tenants. n239 The REIT did not collect any additional revenues directly attributable to the exercise rooms, and the Service held that the revenues collected with respect to the property satisfied the criteria for rents from real property. n240 In other private letter

rulings, the Service has permitted REITs to provide swimming pools with lifeguards, tennis courts, basketball courts, playgrounds and exercise equipment, when such amenities are made available at no additional charge. n241

Another ruling allowed a REIT to provide to its manufactured home communities golf courses, boat docks/ramps, exercise rooms, whirlpools, libraries and car wash areas. All these facilities were free and available only to tenants and their guests. The only services provided in connection with the facilities were ordinary maintenance. n241.1

Other services included trash collection, utilities (sometimes purchased separately and sold to tenants, and sometimes provided by the taxpayer's own water and sewage treatment facilities), provision of ATMs operated by independent third-party lessees, and a variety of telecommunications systems provided by third-party providers. The taxpayer would derive income from the telecommunications services in one of several ways--by a flat fee paid by the operator expressed as a specific amount, or a percentage of gross receipts, or some combination of the two, or a fee paid by tenants to the taxpayer or LP, or through the taxpayer's or LP's proportionate ownership in an entity providing those services.

However, if an additional fee is collected with respect to the property, such income is not considered rents from real property. In a recent private letter ruling, a REIT provided a gymnasium for use by its tenants for a nominal annual charge. n242 The gymnasium consisted of exercise equipment, locker rooms with saunas, steam rooms, locker facilities and racquetball courts. There were no attendants present in the gym, and no significant services, other than lighting, heating, air conditioning, cleaning and maintenance, were performed in connection with the gymnasium. The Service ruled that while providing the exercise facilities did not taint the tenant rents, the nominal annual charge collected with respect to the use of the exercise room did not constitute qualifying income. n243 Similarly, fees collected for the use of a swimming pool by guests are not considered rents from real property. n244

A REIT may furnish clubhouse facilities to its tenants, provided the clubhouse is available on a first-come, first-served basis, and no more than a nominal fee to defray utility, security and janitorial expenses is charged. n245 Additionally, a REIT may hold seasonal parties in or around the clubhouse or pool area, if there is no charge to the tenants for such parties. n246

[I] Miscellaneous Services

Rulings can present novel situations involving miscellaneous services. In one, a REIT's tenants were able to use photocopy and fax machines in the REIT's executive offices for an additional fee. Provision of some office equipment to tenants was usual in the market place where the property was located, and the rent attributable to the use of the equipment was minimal. No services were provided to the tenants with the office equipment, and all maintenance and repairs on the equipment were performed by independent contractors. The IRS ruled that the use of the machines was not made available primarily for the convenience of the tenants, n247 and that income from them was therefore not impermissible tenant service income. n248 The IRS made similar rulings with respect to the following:

- A REIT's contracting out with an LLC in which it held an interest to provide internet access, telephone, cable television, and security services to tenants that were typically provided in similar residential rental buildings. n248.1
- A REIT's contracting with independent contractors to provide various telecommunication services to tenants, including the following: Installation, servicing, repair, and upgrade of, and access to, communication lines to obtain telecommunication services, Internet access, high-speed data services, computer networking, electronic mail, voice mail, teleconferencing, business news and electronic clipping, security and safety alarms, and access to environmental control systems. The taxpayer would derive income by either charging a flat fee to tenants and paying an agreed upon charge to the provider, or collecting from the provider a flat fee or percentage fee based on the provider's gross revenues from the services. n248.2

- Administrative and marketing functions with respect to multi-family properties and tenant leases, repair and maintenance of the apartments, provision of laundry machines, and--through third-party operators who leased space--vending machines, and public telephones. Utilities were also provided, sometimes as part of the overall rent, and sometimes separately metered. Third parties provided a range of telecommunications services to tenants, either directly to tenants in exchange for a flat fee, or a fee based on gross revenues generated by the provider from the tenants. The taxpayer also planned to equip certain of its properties with high-speed data and phone lines, cable television service, Internet access services, and home theater surround sound. None of the telecommunications services would be customized to fit the specific needs of particular tenants. Party rooms were also provided to tenants for a minimal clean-up fee. n248.3

- A REIT anticipated charging a lower per-square-foot rental to food service providers in its suburban office parks than to other tenants. The food service providers would operate independently from the taxpayer, and the tenants of the buildings would not be given preference in terms of the food services provided. The IRS ruled that charging a lower rental to these tenants would not cause otherwise qualifying amounts received from other tenants to be other than rents from real property. n249

[J] Services Requiring an Independent Contractor

It is important to note that income from certain services, even if customary in the area, may not qualify as "rents from real property" if such services are rendered by a REIT primarily for the benefit of the tenants. n249.1 This income may qualify as rents from real property, however, if the services are furnished or rendered through an independent contractor from whom the REIT itself does not derive or receive any income. n249.2 The relationship between the independent contractor and the REIT must be arm's-length, and the independent contractor must be adequately compensated for any services rendered to the REIT. The prohibition against the REIT deriving or receiving any income from the independent contractor generally applies regardless of the source from which the income was derived by the independent contractor. n249.3 The prohibition, however, does not prevent a REIT from renting office space to an independent contractor at a fair market rental where the independent contractor's presence in an office on the REIT's premises is conducive to better management of the REIT's property. n249.4

Maid service is an example of the type of services that must be provided by an independent contractor in order for income from the service to qualify as rents from real property. Because providing maid service is considered a service rendered primarily for the benefit of the occupant, n250 a REIT wishing to provide maid service must do so through an independent contractor. Other, less obvious, examples can be found in various private letter rulings where the REITs requesting such private letter rulings have identified several specific services that will be performed by an independent contractor, presumably because such services would be deemed services rendered for the benefit of the tenants and, as such, would cause rental income to fail the "rents from real property" criteria if performed by the REIT itself. Thus, it is assumed that an independent contractor is necessary if a REIT is providing the following services to its tenants:

- scheduling and supervising the maintenance of a teleconference center, a board room or an art gallery in an office building; n251
- providing food services for receptions, parties and executive dining rooms; n252
- operating a health club or providing aerobics instruction; n253
- providing linen service in relation to recreational facilities; n254
- providing dry cleaning services; n255

- providing day care facilities; n256
- maintaining and repairing pay telephones and vending machines; n257
- remodeling and other construction activities; n258
- operating a shuttle bus between the property and public transportation; n259
- providing parking attendants or public access garages; n260 or
- operating a restaurant in a building owned by a REIT; n261
- providing private shuttle service for tenants; n261.1 and
- providing a variety of services connected with the taxpayer's operation of a self-storage facility, including transportation services for picking up and delivering stored items, and conducting truck-leasing operations for customers and the facility. n261.2

In exchange for a fee, a REIT may supervise work provided by independent contractors for tenants. If the supervisory services are customary, doing so will not cause otherwise qualifying amounts received from tenants to be excluded from the definition of "rents from real property." In addition, any amounts received by the taxpayer from tenants for tenant improvement work that is paid to independent contractors performing the work will constitute rents from real property. n262

Only a person who meets both of the following requirements qualifies as an "independent contractor": n263

- the person does not own, directly or indirectly, more than 35 percent of the shares or certificates of beneficial interest in the REIT; and
- if the person is a corporation, not more than 35 percent of its voting power or total shares of all classes of its stock is owned by one or more persons owning at least 35 percent of the REIT. If the person is not a corporation, then not more than 35 percent of the interests in its assets or net profits is owned by one or more persons owning at least 35 percent of the REIT.

If any class of stock of the REIT or the person being tested as an independent contractor is traded on an established securities market, only persons who directly or indirectly own at least 5 percent of such class of stock are counted in determining whether the 35 percent ownership limitations have been exceeded. n264

[K] Services Performed by REIT Tenants

Letter rulings sometimes involve services provided by entities unrelated to a REIT that lease space in REIT properties. The services are typically provided to other tenants of the REIT properties, and often to non-tenants as well. The issue that arises is whether the REIT, because of its lease with the entity providing the services, is thereby deemed to be providing the services to the other tenants. The resolution in any particular ruling depends on several factors--whether the lease with the service-providing entity is unrelated to the rental of space to other tenants, whether the service-providing entity's agreements with other tenants are unrelated to the REIT's leases with those tenants, and the particular services provided. n264.1

In one ruling, the IRS held that a REIT would not be treated as providing certain services to tenants because one of its

tenants provided those services. One of the services involved providing background music in the common areas of malls. Tenant leases did not require the REIT to provide the background music, and the music was not considered a service rendered primarily for the convenience of the tenants. Other services included cleaning and maintenance of common areas of a shopping center, repair and maintenance of HVAC systems, and landscaping. The common-area charges were allocated among the tenants, and charges were negotiated directly with the service provider and not the REIT. These services were also not considered to be rendered to the tenants. Thus, the IRS ruled that the services performed for other tenants were not treated as services provided directly or indirectly by the REIT. n264.2

[iv] Consequences of Rendering Impermissible Services

If a REIT offers a non-customary service, through an independent contractor, any revenues collected by the REIT in connection with such services do not qualify as rents from real property. If a REIT directly provides services (customary or non-customary) that should be performed by an independent contractor, all income from the property for which such services are provided becomes tainted, and none of the revenue is considered rents from real property. n265

[g] Termination of REIT Election

A taxpayer's election to be treated as a REIT generally terminates if the taxpayer fails to qualify as a REIT for the tax year in which the election is made or for a later tax year. The termination is effective for the tax year the entity fails to qualify as a REIT and for all succeeding tax years. n266 There is a reasonable cause exception to this loss of REIT status for failure to satisfy statutory requirements. n267 If a REIT fails to satisfy one or more requirements for REIT qualification, other than the 95-percent and 75-percent gross income tests and other than the rules provided for failures of the asset tests, n268 the REIT may retain its REIT qualification if the failures are due to reasonable cause and not willful neglect, and if the REIT pays a penalty of \$50,000 for each failure. n269

A REIT also may revoke its status if an election is made on or before the 90th day of the taxable year for which the revocation is to be effective. n270 If this election is made, the entity may not make a new REIT election until five years after the termination of its REIT status. n271

[3] Taxation of a REIT

[a] Taxation of REIT Taxable Income

A qualified REIT is taxed in much the same manner as any corporation, but there are a few exceptions. n272 If an entity fails to qualify as a REIT in a particular taxable year, the entity is taxable as a regular corporation for that year. If an otherwise qualified REIT distributes at least 90 percent (95 percent for tax years beginning before 2001) of "REIT taxable income" as dividends, it is allowed a deduction for these dividends. The remaining REIT taxable income is taxed at regular corporate rates. n273 To the extent that long-term capital gains in excess of short-term capital losses are not distributed, they may be taxed to the REIT as capital gains. n274

REITs are subject to the corporate alternative minimum tax (AMT). n275 REITs are not, however, subject to the "adjusted current earnings" adjustment for AMT. n276 Items that are treated differently for AMT purposes must be apportioned between the REIT and its shareholders or beneficiaries. n277 However, regulations which are to describe this apportionment have not yet been issued.

Certain adjustments are made to corporate "taxable income" to arrive at "REIT taxable income" to which the 95 percent test is applied: n278

- No dividends-received deduction is allowed. n279
- The deduction for dividends paid n279.1 is allowed, but is computed without regard to that portion

of the deduction that is attributable to net income from foreclosure property. n279.2

- *IRC Section 443(b)* is disregarded. Thus, the taxable income for a period of less than 12 months is not placed on an annual basis, even though the short taxable year results from a change in accounting method. n279.3

- Net income from foreclosure property is excluded. n279.4

- Net income from prohibited transactions is excluded. n279.5 Regulations clarify that a net loss from prohibited transactions, is included. Because the amount of the net loss derived from prohibited transactions is taken into account in computing taxable income before the adjustments required by *IRC Section 857(b)(2)*, however, the effect of including an amount to the amount of the loss is to disallow a deduction for the loss. n279.6

- A deduction is allowed for the tax imposed upon the REIT for failure to meet the income source tests. n279.7

- A deduction is allowed for the 100-percent excise tax imposed for amounts improperly allocated between a REIT and a taxable REIT subsidiary. n279.8

- A deduction is allowed for the tax imposed if a REIT fails to meet any of the asset test requirements for a particular quarter and the failure exceeds the *de minimis* threshold. n279.9

- A deduction is allowed for the tax imposed in order to avoid termination of REIT status when a taxpayer meets the reasonable cause exception for its failure to satisfy statutory REIT requirements. n279.10

A REIT may carry over a net capital loss to each of the five taxable years following the loss year, regardless of whether the corporation qualifies as a REIT in the year of the capital loss or the year to which the capital loss is carried. n280 However, a corporation that is not a REIT may not carry back a net capital loss to a taxable year for which it was a REIT. n281

In summary, a REIT may be subject to the following taxes:

- A tax at the regular corporate rates on its REIT taxable income. n282

- An alternative tax on net undistributed capital gains, if that tax is lower than the regular tax on such gains determined by including them in REIT taxable income. n283

- A tax on income from prohibited transactions. n284 See *Section 16.02[2][b]*, above.

- A 100 percent tax on certain income if the REIT fails to meet the income source tests. n285 See *Section 16.02[2][b]*, above.

- A 100 percent excise tax imposed with respect to amounts improperly allocated between a REIT and a taxable REIT subsidiary. n286 See *Section 16.02[3][d]*, below, for a discussion.

- A tax on net income from foreclosure property. n287 See *Section 16.02[2][d][iii]*, above.

- A four percent excise tax for failure to distribute sufficient income in the year in which it is earned.

n288 See *Section 16.02[3][c]*, below.

- The alternative minimum tax. n289

[b] REIT Capital Gain Designations

Treasury has issued *Notice 97-64*, regarding the application of *IRC Section 1(h)* to long-term gains from sales or exchanges by (or of interests in) pass-through entities, including REITs. The Notice describes temporary regulations to be issued under *IRC Section 1(h)*. REITs and their shareholders must use the guidance set forth in *Notice 97-64* until further guidance is issued n290 in regulations. *Notice 97-64* was augmented by *Notice 2004-39*. n290.1 *Notice 2004-39* provides guidance to REITs and their shareholders in applying *IRC Section 1(h)* to REIT capital gain dividends in light of changes made to that provision by 2003 legislation. n290.2 *Notice 2004-39* applies to REIT capital gain dividends paid (or accounted for as if paid) in taxable years that end on or after May 6, 2003. *Notice 2004-39* also contains a detailed transition rule explaining how the mid-year reduction in tax resulting from 2003 legislation applies to capital gain dividends of REITs for taxable years that include May 6, 2003. n290.3

For individuals, estates, and trusts, differing rates of tax apply for various transactions depending on the types of transactions giving rise to net capital gains. n290.4 For transactions taken into account during taxable years ending before May 6, 2003, a taxpayer's long-term capital gains and losses generally were separated into three tax-rate groups: a 20-percent group, a 25-percent group, and a 28-percent group. n290.5 For certain taxpayers, transactions in the 20-percent group could be taxed at a 10-percent rate, or at an 8-percent rate if the gain was qualified 5-year gain. n290.6

For transactions taken into account during taxable years ending on or after May 6, 2003, and beginning before January 1, 2009, the 20-percent rate is reduced to 15 percent, the 10-percent rate is reduced to 5 percent (0 percent for taxable years beginning after 2007), and the rules dealing with qualified 5-year gain are repealed. n290.7 For a taxable year that includes May 6, 2003, the reduction in rates and the repeal of the rules dealing with qualified 5-year gain apply to gain or loss properly taken into account for the portion of the taxable year on or after May 6, 2003. Because this effective date generally occurs sometime during a taxpayer's taxable year, the amount of capital gain that benefits from the reduced 15-percent (or 5-percent) rate is generally the lesser of the net capital gain for the entire taxable year or the net capital gain determined using only gain and loss properly taken into account for the portion of the taxable year on or after May 6, 2003. n290.8 In applying this 2003 transition rule with respect to a pass-through entity, the determination of when gains and losses are properly taken into account is made at the entity level. n290.9

To the extent that a REIT has net capital gain for a taxable year, it may designate as capital gain dividends the dividends that it pays during the year, the dividends it is deemed to pay during the year, n290.10 or deficiency dividends that it pays for that year. n290.11

Notice 2004-39 describes how the reduction in rates made by 2003 legislation and the transition rule (for taxable years that include May 6, 2003), apply to capital gain dividends of REITs. The same rules described in *Notice 97-64* continue to apply to a REIT's capital gain dividends, with appropriate modifications to take into account the post-1997 amendments to *IRC Section 1(h)*. Thus, if a REIT designates a dividend as a capital gain dividend, it may make an additional designation of the dividend as a 15-percent rate gain distribution, subject to the limitations set forth below in *Notice 97-64*, including the limitation that the additional designation of a class of capital gain dividend not exceed the maximum distributable amount in that class. In general, a REIT determines the maximum distributable amounts that may be designated in each class of capital gains dividends by performing the computation required by *IRC Section 1(h)* as if the REIT were an individual whose ordinary income is subject to a marginal tax rate of at least 28 percent. The maximum distributable gain in each class of capital gain dividends is equal to the amount that, in the computation under *IRC Section 1(h)*, is multiplied by the corresponding rate gain percentage. The computation under *Section 1(h)*, however, is modified in the following ways: n290.12

- The REIT disregards qualified dividend income. That is, net capital gain is not increased by qualified dividend income, and qualified dividend income is disregarded in determining the amount of gain properly taken into account for the portion of a taxable year on or after May 6, 2003. (Qualified dividend income received by the RIC or REIT may contribute to a separate designation of other RIC or REIT dividends). n290.13

- The REIT makes the deferral adjustment or bifurcation adjustment described in *Notice 97-64*. n290.14

- The computation takes into account, if applicable, the transition rule for taxable years that contain May 6, 2003. This rule, however, interacts with the deferral adjustment in a way that differs from the interaction between that adjustment and the transition rule for the 1997 reductions in capital gains rates. That is, for purposes of the 2003 transition rule, the deferral adjustment is applied in determining whether a gain or loss is taken into account before May 6, 2003, or after May 5, 2003.

The 2003 transition rule applies at both the entity level in determining how capital gain dividends may be designated and at the shareholder level in determining the tax rate that applies to the dividends. In taxable years beginning on or after May 6, 2003, some taxpayers may receive a REIT distribution amount that is designated as a 20-percent rate gain distribution and that includes a portion constituting 5-year gain. As a result of the repeal of the separate rules for 5-year gains, the 5-year gain portion of that 20-percent rate gain distribution is not subject to the prior law 8-percent rate for 5-year gain. Rather, the 5-year gain portion will be treated the same as any other 20-percent rate gain distribution that is received in a taxable year beginning on or after May 6, 2003, and therefore will be taxed at a rate no higher than 15 percent (5 percent for certain taxpayers). *Notice 2004-39* gives detailed examples of the transitional rule and the application of tax rates on dividends including a 5-year gain portion. n290.15

For taxable years ending before May 6, 2003, the guidance set forth in *Notice 97-64* applies, subject to the legislative changes made by post-1997 legislation. Under *Notice 97-64*, to the extent that a REIT has a net capital gain for a tax year, dividends that it pays or is deemed to pay during the year may be designated by it as capital gain dividends. Subject to limitations discussed below, if a REIT designates a dividend as a capital gain dividend for a tax year ending after May 6, 1997, before May 6, 2003, it may also designate the dividend as a 20 percent rate gain distribution, an unrecaptured *IRC Section 1250* gain distribution, or a 28 percent rate gain distribution. If no additional designation is made regarding a capital gain dividend, it is a 28 percent rate gain distribution. n291

If any capital gain dividend is received on or after May 7, 1997, before May 6, 2003, but is treated as paid during a tax year that ends on or before that date, the dividend is a 28 percent rate gain distribution. For purposes of *Notice 97-64*, a designation of undistributed capital gains under *IRC Section 857(b)(3)(D)* is considered to be the designation of a dividend as a capital gain dividend. n292

Additional designations of capital gain dividends for a tax year are effective only to the extent that they do not exceed the limits below, and only to the extent that they comply with principles of *Revenue Ruling 89-81*, n293 which requires that distributions made to different classes of shares must not be composed disproportionately of dividends of a particular type. Designations of capital gain dividends for a REIT must also comply with *IRC Section 857(b)(3)(C)*, which makes designations ineffective to the extent they exceed the net capital gain for the year. n294

Subject to a deferral adjustment or bifurcation adjustment (discussed below), a REIT determines the maximum amounts that may be designated in each class of capital gains dividends by performing the computation required by *IRC Section 1(h)* as if the REIT were an individual whose ordinary income was subject to a marginal tax rate of at least 28 percent. Then, the maximum distributable 20 percent rate gain is equal to the amount multiplied by 20 percent in performing that computation, and the maximum distributable unrecaptured Section 1250 gain is equal to the amount multiplied by 25 percent in performing that computation. The maximum distributable 28 percent rate gain is the net capital gain minus

the amount of unrecaptured Section 1250 gain distributions and 20 percent rate gain distributions that have been properly designated. n295

Example:

A REIT has a net capital gain in the tax year of \$100, of which \$60 would be multiplied by 20 percent and \$5 would be multiplied by 25 percent in performing the computations required by *IRC Section 1(h)*. The maximum distributable 20 percent rate gain is \$60, and the maximum unrecaptured Section 1250 gain is \$5. If the REIT properly designates the maximum permissible unrecaptured Section 1250 gain distribution and 20 percent rate gain distribution, then its maximum distributable 28 percent rate gain is \$35; i.e., the net capital of \$100 less the properly designated unrecaptured Section 1250 gain distribution of \$5 and 20 percent rate gain distribution of \$60. n296

The deferral adjustment required by *IRC Section 857(b)(3)(C)* for a fiscal year REIT with post-December capital losses must be made before calculating the limitations on the various classes of capital gain dividends for the REIT's tax year. n297

A REIT must make the bifurcation adjustment described below if: (1) its tax year is not the period used to determine capital gain net income for purposes of the excise tax imposed by *IRC Section 4981* (i.e., its taxable year is not the calendar year); (2) it has a net capital gain during the pre-January portion of its taxable year; and (3) it is not required to make the deferral adjustment. n298

If a REIT is required to make a bifurcation adjustment, it must calculate the maximum distributable 20 percent rate gain and the maximum distributable unrecaptured Section 1250 gain separately for the pre-January portion of the year and for the post-December portion of the year, as if the two portions of the year were separate taxable years. Then, the maximum distributable 20 percent rate gain and the maximum distributable unrecaptured Section 1250 gain for the taxable year equals the sum of the maximum distributable amounts for gains in that group determined for each portion of the year. The Notice provides examples of deferral and bifurcation adjustments. n299

[c] Deduction for Dividends Paid and Related Issues

[i] In General

In addition to the organizational requirements and reporting and recordkeeping requirements, in order for a corporation to be taxable as a REIT it must make certain minimum distributions. Each year its deduction for dividends paid (determined without regard to capital gain dividends) must be at least equal to:

(1) the sum of--

(a) 90 percent (95 percent for tax years beginning before 2001) of the REIT taxable income determined without regard to distributions and net capital gain, and

(b) 90 percent (95 percent for tax years beginning before 2001) of the excess of net income from foreclosure property over the tax on such income,

(2) minus any excess noncash income as described in the following paragraph. n300

A number of provisions of the tax law require taxpayers to recognize income before it is received. Because a REIT must distribute its income currently in cash, the recognition of noncash income can put the REIT in a cash bind. A REIT may reduce its distribution requirement by a portion of the amount of certain noncash income consisting of:

- (1) rent or interest income from deferred rent agreements includable in gross income under *IRC Section 467*;
- (2) original issue discount and coupon interest imputed under the deferred payment for property rules; n301
- (3) gain required to be recognized because of an inadvertent failure of a transaction to qualify as a tax-deferred exchange; n302 and
- (4) effective for tax years beginning after August 5, 1997, cancellation of indebtedness income.

To the extent that such noncash income exceeds five percent of REIT taxable income before the deduction for dividends paid, it will reduce the distribution requirement below 90 percent (95 percent for tax years beginning before 2001) of taxable income. n303 This provision only reduces the amount required to be distributed. It does not reduce REIT taxable income for other purposes. Therefore, the REIT must pay tax on the reduction amount as if it were retained income.

Distributions by a REIT are only included in the deduction for dividends paid to the extent they constitute "dividends" for tax purposes. n304 A "dividend" means a distribution out of current or accumulated earnings and profits. n305 However, three special rules apply. The earnings and profits of a REIT for any taxable year (but not its accumulated earnings) are not reduced by any amount which is not deductible in arriving at its taxable income for the taxable year. n306 Also, a REIT is treated as having sufficient earnings and profits to treat as a dividend any distribution which is treated as a dividend by the REIT, but only to the extent of the distribution required to avoid the excise tax on the REIT for noncurrent distributions. n307 Finally, for purposes of the requirement that newly-electing REITs distribute earnings and profits accumulated in non-REIT years, distributions are treated as made first from earnings and profits which, but for the distribution, would result in a failure to meet those requirements (and allocated to such earnings on a first-in, first-out basis). n308 For distributions before 2001, distributions are treated as made first from the entity's earliest accumulated earnings and profits accumulated in any tax year in which the entity was not a REIT rather than from the most recently accumulated earnings and profits. n309 In addition, these distributions are not treated as distributions for purposes of calculating the dividends paid deduction, n310 or, effective for distributions after 2000, for purposes of distributions made by a REIT after the close of the tax year to meet qualification requirements. n311

The amount of a dividend paid in property is not entirely clear. The regulations provide that the deduction is equal to the adjusted basis of the property in the hands of the REIT at the time of the distribution. n312 However, all distributions by corporations of appreciated property trigger gain to the corporation as if the property were sold for its fair market value. n313 Therefore, either the above referenced regulation should be declared obsolete by the Treasury Department or the adjusted basis should be increased by the gain recognized. n314

A REIT may not deduct a "preferential dividend." A dividend must be pro rata, with no preference to any share of stock as compared with other shares of the same class and must have no preference to one class of stock compared with another class except to the extent the former is entitled (without reference to waivers of their rights by shareholders) to that preference. n315 A corporation treated as a REIT (i.e. a publicly traded REIT) may avoid having certain distributions treated as a preferential dividend if specified requirements are met. If some shareholders receive a combination of stock and money that differs from the combination received by other shareholders, and if the fair market value of the stock on the date of distribution differs from the amount of money which could have been received instead, those differences do not cause the distribution to be a preferential dividend. n315.1 Only distributions that meet all of the following requirements are eligible for this remedial characterization: n315.2

- (1) The distribution is made by the corporation to its shareholders with respect to its stock.

- (2) Stock of the corporation is publicly traded on an established securities market in the United States.
- (3) The distribution is declared on or before December 31, 2012, with respect to a taxable year ending on or before December 31, 2011.
- (4) Pursuant to the declaration, each shareholder may elect to receive its entire entitlement under the declaration in either money or stock of the distributing corporation of equivalent value subject to a limitation on the amount of money to be distributed in the aggregate to all shareholders (the "cash limitation"), provided that (a) the cash limitation is not less than 10% of the aggregate declared distribution, and (b) if too many shareholders elect to receive money, each shareholder electing to receive money will receive a *pro rata* amount of money corresponding to the shareholder's respective entitlement under the declaration, but in no event will any shareholder electing to receive money receive less than 10% of the shareholder's entire entitlement under the declaration in money. The value of the shares to be distributed shall be determined by using the formula described in described in (5), below.
- (5) The calculation of the number of shares to be received by any shareholder will be determined, over a period of up to two weeks ending as close as practicable to the payment date, based upon a formula utilizing market prices that is designed to equate in value the number of shares to be received with the amount of money that could be received instead. and
- (6) With respect to any shareholder participating in a dividend reinvestment plan ("DRIP"), the DRIP applies only to the extent that, in the absence of the DRIP, the shareholder would have received the distribution in money.

If a REIT recognizes net capital gain in a taxable year, it may elect to designate a portion of its dividends as a capital gain dividend, thus allowing its shareholders to obtain the benefit of any preferential treatment of net capital gain. The election is made by designating the amount in a written notice mailed to its shareholders within 30 days after the end of the REIT's taxable year (or mailed with its annual report for such year). n316 If a REIT has two classes of stock, presumably in order to avoid a preferential dividend, a capital gain dividend should be allocated *pro rata* to the amount of the dividends paid on each class. A REIT may also elect to retain and pay income tax on net long-term capital gains it receives during the year. n317

For purposes of determining the time a dividend is paid for the dividends paid deduction, special rules apply. As a general rule, a dividend is considered paid when it is received by the shareholder. n318 However, any dividend declared by a REIT in October, November or December, payable to shareholders of record on a specified date in such a month and actually paid in the following January, is treated as: (1) having been received by each shareholder on December 31 of the year the dividend is declared; and (2) having been paid by the REIT on December 31 in the same year. n319

In addition, if a REIT (1) declares a dividend before the due date of its tax return (including extensions) for a taxable year, and (2) distributes the dividend to shareholders in the year following that taxable year and not later than the first regular dividend payment made after that declaration, the amount of that dividend will, to the extent and dollar amount the REIT elects in its tax return, be considered as having been paid during that prior taxable year. n320 Making the election can allow a REIT to meet the statutory distribution requirements n320.1 and reduce its taxable income for the prior taxable year. However, the REIT's shareholders are treated as receiving the dividend in the year in which it is paid. n321 No "special" dividend must be declared and paid. If a REIT makes regularly scheduled monthly or quarterly dividends, the election will be made for the first dividends paid. The "first regular dividend payment" is merely the first dividend for which the election is not made. n322

As described in the previous paragraph, a REIT may pay out a dividend a year after it receives the effective benefit of

the dividends paid deduction even though the shareholders report the income in the year received. As a result, there is a mismatching of income and deductions. To encourage REITs to pay dividends in the same year as the income is earned, the Service has imposed a four percent excise tax on certain income that is not distributed in the year earned. The tax is four percent of the excess of the "required distribution" over the "distributed amount." n323 The required distribution is equal to the sum of:

- (1) 85 percent of the REIT ordinary income for the year;
- (2) 95 percent of the REIT capital gain net income; and
- (3) the "grossed up required distribution," which is the taxable income of the prior years that has been treated as not distributed. n324

The distributed amount is equal to:

- (1) the deduction for dividends paid for such year (other than that portion allocable to foreclosure income);
- (2) the REIT taxable income for such year; and
- (3) any "over distribution" for the prior year. n325

The dividends paid deduction is determined without regard to dividends declared and paid after year end. n326

[ii] Deficiency Dividends

A REIT may take a deduction for deficiency dividends in computing its dividends-paid deduction n327 if there is a determination that results in an adjustment for any taxable year. n327.1 A deficiency dividend may be an ordinary dividend or a capital gain dividend. It is a distribution of property made on or after the date of a determination which would have been includable in the dividends-paid deduction for the year with respect to which the determination was made if it had been distributed in that year. n328

Planning Tip:

Paying a deficiency dividend can allow the REIT to avoid losing its REIT status and also secure a deduction for the dividends paid, but the REIT is liable for interest and additions to tax determined with respect to the amount of the deficiency dividend deduction that is allowed. n328.1

A REIT is allowed a deduction for a deficiency dividend only if, among other things, there is a "determination" that results in an "adjustment" n328.2 for the taxable year for which the deficiency dividend is paid. The "determination" may be in the form of a decision of the Tax Court, a closing agreement, n328.3 or an agreement signed by the Secretary of the Treasury. n328.4

In addition, a REIT may declare a deficiency dividend on its own if it has identified a failure to pay the relevant amount. n328.5 To do so, it must file a Form 9927, *Determination Under Section 860(e)(4) by a Qualified Investment Entity*, with its amendment or supplement to a return for the relevant year. The statement serves as the necessary "determination" under *IRC Section 860*. n328.6

An "adjustment" is any of the following: n328.7

- Any increase in the sum of the REIT's taxable income (determined without regard to the

dividends-paid deduction and excluding capital gains) and the excess of net income from foreclosure property over the tax on that income;

- Any increase in the amount of the excess of net capital gain over the deduction for capital gains dividends paid; n328.8 or
- Any decrease in the dividends-paid deduction determined without regard to capital gains dividends.

A "deficiency dividend" is a distribution of property that meets the following requirements: n328.9

- It is made by a REIT (or a RIC);
- It is made on or after the date of the determination and before the filing of a claim; n328.10 and
- It would have been includible in the computation of the dividends-paid deduction n328.11 for the taxable year with respect to which the liability for tax resulting from the determination exists, if that distribution had been made during that taxable year.

A deficiency dividend, however, cannot exceed the net adjustment to ordinary income or capital gain resulting from the determination. n328.12

Several timing requirements apply with respect to the distributions. To qualify as a deficiency dividend, the distribution of property must be made within 90 days of the date of the determination. n328.13 In addition, a deduction for the deficiency dividend is allowed only if the taxpayer files a claim for the deduction within 120 days after the date of the determination. n328.14 The claim is made by filing Form 976, *Claim for Deficiency Dividends Deductions by a Personal Holding Company, Regulated Investment Company, or Real Estate Investment Trust*. n328.15

The "date of the determination" when a taxpayer files a Form 8927 is determined by the manner of mailing. If the form is sent by U.S. mail or by proper use of a PDS, the date of the determination is generally the postmark date. n328.16 If sent by other means, the date of determination is the date the Form 8927 is received by the IRS. n329

[iii] Treatment of Stock Dividends

In response to the financial and credit market crisis beginning in 2008, the IRS has issued guidance that enables REITs to temporarily satisfy statutory distribution requirements n329.1 with distributions of REIT stock in lieu of cash, provided that cash makes up at least 10 percent of the distribution. Compliance with requirements will also allow the distributions to avoid being treated as a preferential dividend. The same guidance applies for regulated investment companies (RICs). n329.2 Under the guidance, a distribution of stock by a REIT will be treated as a dividend, and the amount of that distribution of stock will be considered to equal the amount of the money the REIT or RIC shareholder could have received instead, if the following requirements are met: n329.3

- (1) the distribution is made by the corporation to its shareholders with respect to its stock;
- (2) stock of the corporation is publicly traded on an established securities market in the United States;
- (3) the distribution is declared on or before December 31, 2012, with respect to a taxable year ending on or before December 31, 2011
- (4) pursuant to the declaration, each shareholder may elect to receive its entire entitlement under the declaration in either money or stock of the distributing corporation of equivalent value subject to a

limitation on the amount of money to be distributed in the aggregate to all shareholders (the "cash limitation"), provided that (a) the cash limitation is not less than 10% of the aggregate declared distribution, and (b) if too many shareholders elect to receive money, each shareholder electing to receive money will receive a pro rata amount of money corresponding to their respective entitlement under the declaration, but in no event will any shareholders electing to receive money receive less than 10% of their entire entitlement under the declaration in money; the value of the shares to be distributed must be determined in accordance with the formula in item (5), *below*;

(5) the calculation of the number of shares to be received by any shareholder will be determined, as close as practicable to the payment date, based upon a formula using market prices that is designed to equate in value the number of shares to be received with the amount of money that could be received instead; and

(6) with respect to any shareholder participating in a dividend reinvestment plan (DRIP), the DRIP applies only to the extent that, in the absence of the DRIP, the shareholder would have received the distribution in money under item (4), above.

NOTE:

The IRS guidance allows REITs (and RICs) to keep up to 90 percent of their income for the payment of mortgage and other obligations incurred in their operations. The guidance amounts to a temporary nullification of the statutory REIT/RIC distribution requirements, and is likely to disgruntle REIT and RIC shareholders who were expecting cash dividends. n329.4

[d] 100 Percent Tax on Improperly Allocated Amounts

Effective generally for tax years beginning after 2000, n330 certain amounts that are improperly allocated between a REIT and a REIT subsidiary are subject to a 100 percent excise tax. The tax is imposed on the REIT and is equal to 100 percent of re-determined rents, re-determined deductions, and excess interest. n331 If any amount of interest, rent, or other deductions of a taxable REIT subsidiary for amounts paid to the REIT is determined to be other than at arms' length, the tax is imposed on the portion that is excessive. n332

"Redetermined rents" means rents from real property n332.1 to the extent the amount of the rents would, but for *IRC Section 857(b)(7)(E)* [which imposes the 100 percent tax in lieu of *IRC § 482* adjustments], be reduced in distribution, apportionment, or allocation under *IRC Section 482* to clearly reflect income as a result of services furnished by a taxable REIT subsidiary of the REIT to a tenant of the REIT. n332.2 Safe harbors are provided for the following items:

- de minimis rental payments; n333
- charges for services rendered by a taxable REIT subsidiary to a tenant of the trust for which there is specified evidence that charges to unrelated parties are substantially comparable; n334
- certain charges for services from the taxable REIT subsidiary to a tenant of the trust that are separately stated; n335 or
- any service performed by a taxable REIT subsidiary if its gross income from the service is not less than 150 percent of its direct cost in furnishing the service. n336

For tax years beginning before October 23, 2004, there was also a safe harbor allowing rents received by a REIT to be exempt from the 100 percent excise tax if the rents were for customary services performed by a taxable REIT subsidiary or were from a taxable REIT subsidiary and would be treated as unrelated business taxable income if received by a

charitable organization. n336.1 Those payments are now free only if they satisfy the safe harbor that applies if the REIT pays the taxable REIT subsidiary at least 150 percent of the cost to the taxable REIT subsidiary providing any services. n336.2 "Redetermined deductions" means deductions (other than redetermined rents) of a taxable REIT subsidiary of a REIT to the extent the amount of those deductions would, but for *IRC Section 857(b)(7)(E)* [which imposes the 100 percent tax in lieu of *IRC Section 482* adjustments], be decreased on distribution, apportionment, or allocation under *IRC Section 482* to clearly reflect income as between the REIT subsidiary and the REIT. n336.3 "Excess interest" means any deductions for interest payments by a taxable REIT subsidiary of a REIT to that REIT to the extent that the interest payments exceed a commercially reasonable rate. n336.4

The IRS is authorized to waive the 100 percent excise tax if the REIT establishes that rents charged to tenants were established on an arms'-length basis, even though a taxable REIT subsidiary of the trust provided services to the tenants. n337 In determining whether rents are arms' length rents, the failure of the rents to meet the above safe harbors is not taken into account. In addition, rent received by a REIT does not fail to qualify as rents from real property n338 simply because all or any portion of that rent is subject to the 100 percent excise tax. n339

The IRS has issued a ruling providing guidance regarding the treatment under *IRC Sections 856* and *857(b)(7)* of *non* customary services provided by a taxable REIT subsidiary to tenants of a REIT, when no service charges are separately stated from the rents paid by the tenants to the REIT. n339.1 The ruling poses two fact situations. In one, a REIT owned residential apartment buildings and formed a taxable REIT subsidiary to provide housekeeping services to tenants. The services did not qualify as customary under the regulations. n339.2 Employees of the subsidiary performed all of the housekeeping services rendered. The subsidiary paid all costs connected with the services. To carry out operations, the subsidiary also rented space in the REIT's apartment building in accordance with *IRC Section 856(d)(8)(A)*. The subsidiary made no payments to the REIT other than its rental payments. The annual value of the housekeeping services provided exceeded one percent of the total annual amount received by the REIT from the property. Charges to the tenants for the housekeeping services were not separately stated from the rents that tenant paid to REIT for the use of the apartments. The subsidiary did not enter into contracts with the tenants for the services, and the REIT compensated subsidiary for providing the services by paying the subsidiary an amount that was 160 percent of the subsidiary's direct cost of providing the services. The subsidiary reported the full amount of the REIT's payment as gross income. n339.3

For this situation, the IRS ruled that the housekeeping services were considered to be rendered by the subsidiary rather than by the REIT. n339.4 Accordingly, the services did not give rise to impermissible tenant service income and did not cause any portion of the rents received by the REIT to fail to qualify as rents from real property. n339.5 The IRS ruled that the safe harbor of *IRC Section 857(b)(7)(B)(vi)* protected the REIT from the imposition of the 100 percent tax on redetermined rents n339.6 because the gross income of the subsidiary from the service exceeded 150 percent of the subsidiary's direct cost of furnishing the service. n339.7 The IRS noted, however, that if the amount paid by the REIT to the subsidiary represented less than an *IRC Section 482* arm's length charge for the services, income could be allocated from the REIT to the subsidiary. Income so allocated would be deductible by the REIT and would reduce the REIT's taxable income, but not its gross income. The allocation would not cause any portion of the rents received by the REIT to fail to qualify as rents from real property. n339.8

The second fact situation in the ruling was the same as the first, except that the REIT compensated the subsidiary by paying the subsidiary an amount that was 125 percent of the subsidiary's direct cost of providing the services. This payment was less than the arm's length charge under *IRC Section 482* for providing the services. For this situation, the IRS ruled that the housekeeping services would still be considered to be rendered by the subsidiary rather than by the REIT. n339.9 Accordingly, as in the first situation, the services did not give rise to impermissible tenant service income and did not cause any portion of the rents received by the REIT to fail to qualify as rents from real property. n339.10 Here, however, the statutory safe harbor was not met because the gross income of the subsidiary from the service was less than 150 percent of the subsidiary's direct cost of furnishing the service. n339.11 The REIT was therefore subject to the 100 percent tax on redetermined rents. n339.12 The IRS ruled that imposition of that tax was in lieu of allocation of that amount from the REIT to the subsidiary under *IRC Section 482* and did not cause any portion of the rents received

by the REIT to fail to qualify as rents from real property under *IRC Section 856(d)*. n339.13

[e] Taxable Year

A REIT must use the calendar year as its taxable year. n340

[f] REIT Classification Under Entity Classification Rules

Under the federal entity classification rules, an election by an eligible entity to be a REIT is treated as a deemed election to be classified as an association (taxable as a corporation). The election is effective for the entire period during which REIT status is claimed. n341-343

[g] State Taxation

There is no uniformity among the states regarding the taxation of REITs. Therefore, careful attention should be paid to the tax rules in every state or local jurisdiction where the REIT owns property or has property securing its mortgages. Additionally, some states do not change their laws to conform to amendments to the federal REIT provisions, thus increasing the need for careful attention.

[4] Taxation of Shareholders

[a] Distributions in General

The taxability of distributions to shareholders is dependent on whether the distributions are made out of current and accumulated earnings and profits (E&P) of the REIT. Distributions from E&P will be taxable to the shareholders, and any excess thereof is considered a return of capital. The return of capital will reduce the shareholder's basis in his shares. Once the basis has been reduced to zero, the shareholder will recognize capital gain. n344 Dividends of a REIT, other than those identified by the REIT as capital gain dividends, are taxable to the shareholders as ordinary income, provided there is sufficient E&P.

[b] Capital Gain Dividends

Long-term capital gains of the REIT that are distributed are taxable to the beneficiaries as long-term capital gains, if the REIT has designated such distribution as a capital gain dividend. n345 If a REIT mistakenly designates an amount greater than its net capital gain for the year as a capital gain dividend, the actual capital gain distribution must be proportionately reduced. n346 A capital gain dividend also can only be declared from a REIT's current year net capital gain and not from any net capital gain accumulated in prior years.

An exception to capital gains dividends treatment applies to certain dividends paid to foreign investors. Capital gains dividends paid to a foreign investor are treated as a REIT dividend to that investor, and taxed as a REIT dividend that is not a capital gain, provided that (1) the distribution is received with respect to a class of stock that is regularly traded on an established securities market located in the United States, and (2) the foreign investor does not own more than five percent of the class of stock at any time during the taxable year within which the distribution is received. n346.1

The tax rate that applies to a REIT capital gain dividend received by a taxpayer depends on the tax year in which it was paid and the designation of the gain given to the dividend by the REIT. n346.2 A capital gain dividend received from a REIT in a tax year of the shareholder ending after May 7, 1997, and before May 6, 2003, is treated as follows: n347

- (1) a 20 percent rate gain distribution is an amount of long-term capital gain in the 20-percent group;
- (2) an unrecaptured Section 1250 gain distribution is an amount of long-term capital gain in the

25-percent group; and

(3) a 28 percent rate gain distribution is an amount of long-term capital gain in the 28 percent group.

For certain taxpayers, transactions in the 20-percent group could be taxed at a 10-percent rate, or at an 8-percent rate if the gain was qualified 5-year gain. n347.1

Notice 2004-39 explains the various tax rates and groupings that can apply to REIT capital gain dividends paid (or accounted for as if paid) in taxable years that end on or after May 6, 2003. *Notice 2004-39* also contains a detailed transition rule explaining how the mid-year reduction in tax made by 2003 legislation applies to capital gain dividends of REITs for taxable years that include May 6, 2003. n347.2

For REIT capital gain dividends received in tax years beginning on or after May 6, 2003, and beginning before January 1, 2009, the 20-percent rate is reduced to 15 percent, the 10-percent rate is reduced to 5 percent (0 percent for taxable years beginning after 2007), and the rules dealing with qualified 5-year gain are repealed. n347.3

Notice 2004-39 describes how the reduction in rates made by 2003 legislation and the transition rule (for taxable years that include May 6, 2003), apply to capital gain dividends of REITs. The same rules described in *Notice 97-64* continue to apply to a REIT's capital gain dividends, with appropriate modifications to take into account the post-1997 amendments to *IRC Section 1(h)*. For example, some taxpayers may receive a REIT distribution amount that is designated as a 20-percent rate gain distribution and that includes a portion constituting 5-year gain. As a result of the repeal of the separate rules for 5-year gains, the 5-year gain portion of that 20-percent rate gain distribution is not subject to the prior law 8-percent rate for 5-year gain. Rather, the 5-year gain portion will be treated the same as any other 20-percent rate gain distribution that is received in a taxable year beginning on or after May 6, 2003, and therefore will be taxed at a rate no higher than 15 percent (5 percent for certain taxpayers). *Notice 2004-39* gives detailed examples of the transitional rule and the application of tax rates on dividends including a 5-year gain portion. n347.4

Any loss on the sale of REIT stock, the holding period of which begins after July 18, 1984, and is six months or less, is required to be classified as long-term to the extent that the shareholder received a prior long-term capital gain distribution on the stock. n348 This rule does not apply to losses incurred pursuant to a plan that provides for periodic liquidations. n349

[c] Credit for Tax Paid by REIT on Retained Capital Gains

A REIT may elect to retain and pay income tax on net long-term capital gains it receives during the year. If a REIT makes this election, the REIT shareholders must include in their income, as long-term capital gains, their proportionate share of the undistributed long-term capital gains as designated by the REIT. n350 Each shareholder is deemed to have paid his or her share of the tax on that amount, and a proper credit or refund of that amount must be made to each shareholder. n351 The basis of each shareholder's shares is also increased by the amount of the undistributed long-term capital gains (less the amount of capital gains tax paid by the REIT) included in the shareholder's long-term capital gains. n352

For foreign investors, the amount that they would otherwise treat as long-term capital gains under this rule must be treated as a REIT dividend, and not treated a long-term capital gain, provided that (1) the class of stock with respect to which the undistributed capital gains occur is regularly traded on an established securities market located in the United States, and (2) the foreign investor does not own more than five percent of the class of stock at any time during the taxable year within which the capital gains occur. n352.1 The REIT must designate the amounts it will retain in a written notice mailed to its shareholders at some time before the 60 days following the close of its taxable year (or mailed to its shareholders or holders of beneficial interests with its annual report for the taxable year). n353 The tax imposed on the retained capital gains n354 must actually be paid by the REIT within 30 days after the close of its

taxable year. n355

[d] Estimated Tax Rules for Dividends from Closely Held REITs

In the case of a REIT that is closely held, any person owning at least 10 percent of the vote or value of the REIT is required to accelerate the recognition of year-end dividends attributable to the closely-held REIT for purposes of that person's estimated tax payments. The computation of the annualized income installments is determined in a manner similar to that in which partnership income installments are taken into account. n356 A closely-held REIT is one in which at least 50 percent of the vote or value is owned by five or fewer persons. Attribution rules apply to determine ownership. n357

[e] No Dividends-Received Deduction for REIT Dividends

Dividends from REITs are not eligible for the dividends-received deduction. n358

[f] Limitation on Capital Gain Treatment for REIT Dividends

Qualified dividends received by an individual shareholder are taxed at the same rates that apply to net capital gain. n359 Qualified dividend income that is eligible for capital gains tax rates include dividends received during the taxable year from domestic corporations or qualified foreign corporations. n359.1 A special distribution rule limits the amount of REIT dividends that are treated as qualified dividend income and that thereby qualifies for taxation at capital gains rates under *IRC Section 1(h)(11)*. n359.2 For any dividend (other than a capital gain dividend) received from a REIT that met the requirements as a REIT n359.3 for the taxable year during which it paid that dividend, qualified dividend income includes only that portion of the dividend that is designated by the REIT as qualified dividend income. n359.4

The amount a REIT may designate as qualified dividend income is limited. The aggregate amount designated as qualified dividend income cannot exceed the sum of the following: n359.5

- the REIT's qualified dividend income for the taxable year; plus;
- the excess of the sum of the REIT's taxable income for the preceding taxable year n359.6 and the income subject to tax by reason of the application of the regulations under *IRC Section 337(d)* for that preceding taxable year, over the sum of the taxes imposed on the REIT for that preceding taxable year under *IRC Section 857(b)(1)* and by reason of the application of those regulations; n359.7 plus;
- the amount of any earnings and profits that were distributed by the REIT for that taxable year and accumulated in a taxable year with respect to which the taxpayer was not a REIT.

NOTE:

The final item allows all distributions by a REIT of earnings and profits from its C corporation years to be treated as qualifying dividends eligible for the lower capital gains rate. n359.8

One further limitation applies. The amount of any distribution by a REIT that may be taken into account as qualified dividend income cannot exceed the amount designated by the REIT in a written notice to its shareholders. The notice must be mailed not later than 60 days after the close of the REIT's taxable year. n359.9

[g] Apportionment of Items Treated Differently for AMT Purposes

For purposes of the alternative minimum tax, a REIT must apportion tax preference items and other items it treats differently for alternative minimum tax purposes than for regular tax purposes. The items are to be apportioned between

the REIT and REIT shareholders in accordance with regulations prescribed by the IRS. n359.10 No regulations, however, have yet been issued.

[5] Special Taxpayers

[a] Pension Plans and Other Tax-Exempt Shareholders

In general, a tax-exempt entity that is a shareholder of a REIT will not be subject to tax on distributions from the REIT or gain realized on the sale of shares of stock. The Service has specifically confirmed that a REIT's distributions to a tax-exempt employees' pension trust did not constitute unrelated business taxable income. n360 A tax-exempt entity may be subject to tax, however, to the extent that it has financed the acquisition of its shares of REIT stock with "acquisition indebtedness" within the meaning of Section 514(c) of the Code. The *Revenue Reconciliation Act of 1993* modified the rules for tax exempt employees' pension and profit-sharing trusts which qualify under Code Section 401(a) and are exempt from tax under Code Section 501(a) (qualified trusts) for taxable years beginning after December 31, 1993. n361 Under the new rules, in determining the number of shareholders a REIT has for purposes of satisfying the 50 percent shareholder test set forth above under Section 16.02[2][a], generally, any stock held by a qualified trust will be treated as held directly by its beneficiaries in proportion to their actuarial interests in such trust and will not be treated as held by such trust. This general rule will not apply if certain persons related to the qualified trust (disqualified persons) hold in the aggregate more than 5 percent of the value of the REIT and the REIT has accumulated earnings and profits attributable to any period for which it did not qualify as a REIT.

A qualified trust owning more than 10 percent of a REIT must treat a percentage of dividends from the REIT as unrelated business taxable income. n362 The percentage is determined by dividing the REIT's gross income (less direct expenses related thereto) derived from an unrelated trade or business for the year by the gross income of the REIT for the year in which the dividends were paid; however, if this percentage is less than 5 percent, dividends are not treated as unrelated business taxable income. n363 These unrelated business taxable income rules apply only if the REIT qualifies as a REIT because of the change in the 50 percent shareholder test discussed above and if the trust is "predominantly held" by a qualified trust. n364 A real estate investment trust is predominantly held by a qualified trust if at least one pension trust owns more than 25 percent of the value of the REIT, or a group of pension trusts individually holding more than 10 percent of the value of the REIT collectively own more than 50 percent of the value of the REIT. n365

For social clubs, voluntary employee benefit associations, supplemental unemployment benefit trusts and qualified group legal service plans exempt from Federal income taxation under Sections 501(c)(7), (9), (17) and (20) of the Code, respectively, income from an investment in a REIT will constitute unrelated business taxable income unless the organization is able to deduct an amount properly set aside or placed in reserve for certain purposes so as to offset the unrelated business taxable income generated by the investment in the REIT. n366

[b] Foreign Shareholders

[i] Foreign Investment in Real Property Tax Act of 1980 (FIRPTA)

FIRPTA was enacted to tax foreign investors on the gain from the disposition of a United States real property interest (USRPI). In general, a USRPI is any interest in real property located in the United States or the Virgin Islands or any equity interest in a domestic corporation whose United States real property interests equal or exceed 50 percent of its total interests in real property and any other of its assets which are used in a trade or business, determined based on fair market value. n367 The tax is imposed by treating gains from disposition of USRPIs as "effectively connected" with the conduct of a United States trade or business engaged in by the foreign investor. n368 This income is taxable at regular federal tax rates as if the foreign investor was a United States person or entity. n369 The effect of the application of FIRPTA on dividends from, and gain from the sale of, REIT stock owned by foreign investors is discussed below.

[ii] Dividend Distributions

Dividends that are not attributable to gain from sales or exchanges by a REIT of USRPIs and cannot be designated by the REIT as capital gain dividends will be treated as dividends of ordinary income to the extent that they are made out of current or accumulated earnings and profits of the REIT. Such dividends ordinarily will be subject to a withholding tax equal to 30 percent of the gross amount of the dividend unless an applicable tax treaty reduces or eliminates that tax. n370 However, if income from the investment in the shares of REIT stock is treated as effectively connected with the foreign investor's conduct of a United States trade or business, the foreign investor generally will not be subject to federal withholding tax n371 but will be subject to a tax at graduated rates, in the same manner as United States shareholders are taxed with respect to such dividends n372 (and may also be subject to the 30 percent branch profits tax in the case of a foreign investor that is a foreign corporation). n373 As with United States shareholders, dividends in excess of current and accumulated earnings and profits of the REIT will not be taxable to a shareholder to the extent that they do not exceed the adjusted basis of the shareholder's shares of stock, but rather will reduce the adjusted basis of such shares. To the extent that such dividends exceed the adjusted basis of a foreign investor's shares of the REIT's stock, the dividends will give rise to a tax liability if the foreign investor would otherwise be subject to tax on any gain from the sale or disposition of his shares, as described below. Apparently, withholding is required even though a portion of a distribution by a REIT may be treated as a return of basis or capital gain because it is in excess of current and accumulated earnings and profits; n374 however, the foreign investor may seek a return from the Service of excess withholdings.

Certain capital gains dividends that are paid by a REIT to a nonresident alien individual or a foreign corporation are treated--not as capital gain--but as dividends that are not effectively connected with a US trade or business. These distributions instead are treated as dividend distributions and are subject to 30 percent (or lower treaty rate) dividend withholding. n375 The dividends would not be subject to the branch profits tax. n376 Distributions qualify for this treatment only if made with respect to any class of stock that is regularly traded on an established securities market located in the US, and only if that individual or corporation did not own more than 5 percent of that class of stock at any time during the 1-year period ending of the date of the distribution. n377

Withholding is required on REIT distributions to foreign persons that are attributable to the sale of US real property interests. The required withholding rate is 35 percent or, to the extent provided by regulations, 15 percent (or 20 percent in tax years beginning after December 31, 2010). n378 No withholding is required, however, with respect to a disposition that is treated as a disposition of a US real property interest solely because of the FIRPTA wash sale rule. n378.1

The regulations include a special rule, which provides that if a REIT makes an actual designation of a prior distribution, in whole or in part, as a capital gain dividend, such prior distribution will not be subject to the 35 percent withholding. Instead, the REIT must characterize and treat as a capital distribution (solely for purposes of 35 percent withholding) each distribution made on or after such distribution as a capital gain dividend until the recharacterized amounts equal the amount of the prior designated capital gain. n379 This rule is necessary because a REIT often does not designate capital gain dividends until after the fact or even after the year end in which the dividend was paid. The amount withheld may be credited against the foreign investor's FIRPTA tax liability. n380

[iii] Gains on Sale of REIT Shares

A REIT is a "qualified investment entity" under the FIRPTA provisions. n381 Any gain from the sale of shares of a domestically controlled qualified investment entity is not subject to tax under FIRPTA because a US real property interest does not include any interest in a domestically controlled qualified investment entity. n382 A domestically controlled qualified investment entity is one in which at all times during the testing period less than 50 percent in value of the stock was held directly or indirectly by foreign persons. n382.1 The testing period is the 5-year period ending on the date of the distribution or disposition, or, if shorter, the period during which the qualified investment entity was in existence. n382.2

Gain from the sale of stock in a REIT or other qualified investment entity that is not domestically controlled is treated as effectively connected income n382.3 and the foreign investor will be subject to the same treatment as United States shareholders with respect to such gain n382.4 (subject to applicable alternative minimum tax and a special alternative minimum tax in the case of nonresident alien individuals, n382.5 and subject to the 30 percent branch profits tax in the case of a shareholder that is a foreign corporation). n383

[6] Umbrella Partnership REITs

[a] Overview

A relatively new structure which has generated considerable interest is the "Umbrella Partnership REIT" (UPREIT). n384 This structure combines partnership ownership with REIT ownership. As described more fully below, the advantages of the UPREIT structure include the ability to provide liquidity to existing investors in real estate partnerships and to allow a transfer of real property without the recognition of gain. The ability of the existing partners to time the conversion of their partnership interests to REIT shares at the most tax-efficient point provides significant individual flexibility. The UPREIT concept also has disadvantages, including the complexity of the structure and the potential for a conflict of interest between the partnership and the UPREIT. n385

One of the historical problems for investors in real estate has been trying to raise capital and obtain liquidity of their real estate assets without incurring an income tax liability. Unfortunately, in the case of a REIT, the general rule providing for nonrecognition of gain upon transfer of real estate to a corporation usually does not apply. Assets can generally be transferred tax-free to a controlled corporation in exchange for the corporation's stock; n386 however, if the corporation is an "investment company" and the transfer results in diversification of the transferor's interest, n387 gain or loss is recognized by the transferors. For this purpose, an investment company means either (1) a REIT, (2) a regulated investment company or (3) a corporation more than 80 percent of the value of whose assets (excluding cash and nonconvertible debt obligations from consideration) are held for investment and are readily marketable stocks or securities, or interests in regulated investment companies or REITs. n388 Generally, if there are two or more transferors of nonidentical assets, the transfer is considered to result in diversification. n389

Effective for tax years ending after March 26, 1998, n390 a REIT or stapled entity that owns an UPREIT partnership interest is treated as holding all of the real property interests, mortgages, activities and gross income of that UPREIT partnership. n391 This rule applies, however, only if: (1) an exempt REIT or stapled entity owned directly or indirectly at least a 60-percent interest in the partnership as of March 26, 1998; and (2) 90 percent or more of the interests in the partnership (other than those held by the exempt REIT or stapled entity) are or will be redeemable or exchangeable for consideration with a value determined with reference to the stock of the REIT or stapled entity, or both. n392 The above rule also applies to an otherwise qualifying interest in an UPREIT partnership formed after March 26, 1998, where the partnership was formed to mirror the stapling of an exempt REIT and a stapled entity in connection with an acquisition agreed to or announced on or before March 26, 1998. n393 If, as of January 1, 1999, more than one partnership owned by a REIT or stapled entity meets the requirements of the above provision, only the largest such partnership (determined by aggregate asset bases) is treated as meeting those requirements. n394

[b] Structure

The UPREIT structure generally allows investors in real estate partnerships to effectively have many of the benefits of a direct REIT incorporation while deferring most or all of any gain in their investment in the partnership. n395 Usually multiple partnerships will be combined to obtain a larger, more diversified portfolio and one more appropriate for a publicly-traded REIT. The partners in the existing partnerships contribute their partnership's interests in exchange for interests in a new partnership, the umbrella partnership. Under *IRC Section 721*, the partners generally do not recognize gain or loss on the exchange. n396 Alternatively, real estate may be contributed to the umbrella partnership or an

existing partnership may be used in which the REIT becomes a partner. Note that in the case of a contribution of partnership interests, any partner can avoid participation in the umbrella partnership by not contributing his partnership interest.

The REIT becomes a partner in the umbrella partnership by contributing cash typically received from a public offering. This cash is used either to pay down outstanding debt of the existing partnerships or to acquire new properties. The original partners obtain liquidity by converting their partnership interests in the umbrella partnership to shares in the REIT. Often this conversion is limited by contract to conversions only after a specified period following the REIT's public offering. The conversion is a taxable transaction and consequently a conversion is often postponed until an ultimate sale of the REIT stock for cash is desired. The REIT usually has a qualified REIT subsidiary n397 that owns an interest in the umbrella partnership. This structure avoids dissolution of the partnership if all the original non-REIT partners convert their interests to REIT shares. n398 The IRS has issued several Technical Advice Memoranda detailing the tax effect of contributions of property by partnerships to UPREITs in exchange for UPREIT interests, the distribution by the partnerships of the UPREIT interests to partners, and the refinancing of debt securing the contributed properties. n398.1

[c] Reduction of Liabilities

When the existing owners of real estate or partnership interests have their interests in the real estate diluted by the REIT's contribution of cash, the contributing partners may recognize gain because of the reduction of their share of liabilities secured by the real estate. A reduction in a partner's share of liabilities is treated as a distribution of cash to him and will result in gain recognized to the extent the deemed distribution exceeds his basis in the partnership interest. n399

This problem is partially ameliorated in the case of appreciated property secured by nonrecourse debt. Under the regulations dealing with allocation of liabilities, nonrecourse liabilities are allocated first to partners who contributed appreciated property to the extent of the built-in gain. n400

Example:

Existing owners of real estate having a basis of \$40 million, a fair market value of \$120 million and subject to nonrecourse liabilities of \$90 million form a 50-50 umbrella partnership with a REIT that contributes \$120 million of cash. The existing owners are first allocated \$80 million of liabilities (the built-in gain of \$120 million less \$40 million) plus 50 percent of the excess or \$5 million for a total of \$85 million. The existing owners are treated as receiving a cash distribution of \$5 million (\$90 million original liabilities less an \$85 million share after formation of the umbrella partnership). This distribution reduces their basis from \$40 million to \$35 million. Without the special allocation of liabilities, the existing owners would have had a reduction in liabilities to 50 percent of \$90 million or a reduction of \$45 million. This would have reduced their basis to zero and created a \$5 million gain.

If the cash contributed by the REIT is used to pay down any of the debt, this would also result in a reduction of the share of liabilities of the original partners.

[d] Reduction in Minimum Gain

When a partnership has nonrecourse debt, deductions attributable to the nonrecourse debt increase "minimum gain." Minimum gain is the amount of debt that would be recognized if the real property were sold for an amount equal to the related nonrecourse debt. n401 This minimum gain must be allocated to the partners in accordance with the regulations, n402 and if there is any net decrease in a partnership's minimum gain, items of income or gain must be allocated to each partner to the extent of that partner's share of the net decrease in partnership minimum gain (a "minimum gain

chargeback"). n403 Upon formation of the umbrella partnership or repayment of nonrecourse debt, a partner's share of minimum gain might be decreased. To prevent or minimize a minimum gain chargeback, the assets of the existing partnership are revalued and a corresponding increase is made in the partner's capital accounts. n404

[e] Deemed Sale

If cash or other property is distributed to a partner upon his contribution of property to a partnership, the partner is treated as having sold part or all of the property. n405 As described above, a decrease in a partner's share of liability is treated as a cash distribution. In general, if the liability was incurred within two years before the earlier of the date the partner agrees in writing to contribute the property or the date the partner transfers such property, there is a rebuttable presumption that there has been a deemed sale to the partnership. n406 However, generally, if the liability was incurred more than two years before such period, a sale is deemed to occur only if actual cash or other property is distributed to the partner and the consideration is subject to a limitation set forth in the regulations. n407

[f] Allocation of Built-In Gain

Special rules apply to the extent the fair market value of the assets exceeds their adjusted basis (built-in gain) in the hands of the transferors to the umbrella partnership. n408 First, this gain must be allocated to and taxed to the original partners when and as the property is sold. In addition, to reduce the difference between the value for book purposes and the related tax basis of the properties, the umbrella partnership will typically disproportionately allocate deductions or tax losses to the REIT.

[7] Stapled REITS

In a stapled REIT structure, both the shares of a REIT and a C corporation may be traded, but are subject to the rule that they may not be sold separately. n409 Thus, they have identical ownership at all times. In 1984, Congress eliminated tax benefits of the stapled or "paired share" REIT structure and provided that stapled entities were generally treated as a single entity for purposes of applying the REIT provisions. n410 The 1984 legislation, however, provided grandfathered relief to the small number of stapled REITs that were then in existence. n411 As of 1998, five stapled REITs continued to exist. The grandfathered relief provided by the 1984 Act is terminated for these stapled REITs, effective generally for interests in real property acquired after March 26, 1998, by the exempt REIT or any stapled entity. n412 Special rules also govern the treatment of leases and property improvements by these stapled entities, n413 transfers of property among the stapled entities, n414 certain mortgages acquired by these entities after March 26, 1998, n415 and property held by 10-percent subsidiaries of exempt REITs or stapled entities. n416

[8] Temporary Timber REIT Provisions

[a] Timber REITs Generally

Some REITs have been formed to hold land on which trees are grown. Upon maturity of the trees, the standing trees are sold by the REIT. Although no statute specifically addresses the matter, the IRS has traditionally taken the position in private letter rulings that the income from the sale of the trees held for more than one year under *IRC Section 631(b)* can qualify as REIT real property income because the uncut timber and the timberland on which the timber grows is considered real property, and the sale of uncut trees can qualify as capital gain derived from the sale of real property. The IRS has also ruled that timber income under *IRC Section 631(b)* is qualified real estate income even if the one-year holding period is not met. n416.1

Legislation enacted in 2008 provides several rules, discussed in [b]-[d], *immediately below*, that affect the treatment of timber gains realized by REITs. Other provisions affect only "timber REITs" as defined. n416.2 All the provisions apply only for the first taxable year of the REIT that begins after May 22, 2008, and before May 22, 2009. The provisions terminate after that time. n416.3

[b] Temporary Classification of Timber Gain as REIT Income

For purposes of meeting the REIT gross income tests, n416.4 timber gain under *IRC Section 631(a)* is treated as qualifying income from a real estate asset, provided that the cutting is provided by a taxable REIT subsidiary. n416.5 Gain from the disposal of timber that is recognized under *IRC Section 631(b)* is also treated as qualifying income from a real estate asset under the REIT gross income tests. n416.6 For either gain, the income is qualifying income even if the REIT has not held the property for at least one year. n416.7

Comment:

The removal of the one-year holding period allows a REIT to acquire timber property and harvest the timber on the property within one year of the acquisition without jeopardizing its REIT status. n416.8 The resulting income will be qualified real estate income under the REIT gross income tests, n416.9 even though that income is not eligible for long-term capital gain treatment under *IRC Section 631(a)* or *(b)*. For all tax purposes, however, the income is not considered to be gain from the sale of stock in trade, inventory, or property held by the REIT primarily for sale to customers in the ordinary course of the REIT's trade or business. n416.10

For purposes of determining the REIT's income, if the cutting is done by a taxable REIT subsidiary, the cut timber is deemed sold on the first day of the taxable year to the taxable REIT subsidiary (with subsequent gain, if any, attributable to the taxable REIT subsidiary). n416.11

The above treatment of timber gains applies only for dispositions in taxable years beginning after May 22, 2008 n416.12 and before May 22, 2009. n416.13

[c] REIT Prohibited Transaction Safe Harbor for Timber Property

A 100-percent excise tax is imposed on income from certain prohibited transactions by a REIT. n416.14 A safe harbor applies for certain sales of property held in connection with the trade or business of producing timber, provided that the REIT held the property for at least two years before the sale. n416.15 Among other limitations, expenditures by the REIT on the property in the two years preceding the date of sale are also restricted. n416.16 In addition, if the REIT makes more than seven sales of property during the year, any marketing must generally be done by an independent contractor. n416.17

Any gain that is eligible for the timber property safe harbor is considered for all tax purposes as not being from the sale of stock in trade, inventory, or property held by the REIT primarily for sale to customers in the ordinary course of the REIT's trade or business. n416.18

The above safe harbor rules apply only for dispositions in taxable years beginning after May 22, 2008 n416.19 and before May 22, 2009. n416.20

[d] Other Special Rules for Timber REITs

Several temporary provisions apply only to "timber REITs." A "timber REIT" is a REIT in which more than 50 percent of the value of the REIT's total assets consists of real property held in connection with the trade or business of producing timber. n416.21

First, mineral royalty income from real property owned by a timber REIT and held, or once held, in connection with the trade or business of producing timber by a timber REIT, is included as qualifying real estate income for purposes of the REIT gross income tests. This rule applies only to income earned in the first taxable year of the REIT beginning after May 22, 2008. n416.22

Second, a timber REIT is permitted to hold taxable REIT subsidiary securities with a value up to 25 percent, (rather than 20 percent) of the value of the total assets of the REIT. n416.23 Except for the effective date of this provision for timber REITs, this difference has no significance, because all REITs are allowed to hold taxable REIT subsidiary securities with a value up to 25 percent of the value of the total assets of the REIT for tax years beginning after July 30, 2008. n416.24

(n174)Footnote 83.3. *IRC § 856(l)(2)*.

(n175)Footnote 84. *IRC § 856(l)(3)(A)*. The IRS has ruled that a taxable REIT subsidiary can own and operate RV parks without violating this restriction (*Ltr Rul 200320018*). See also *Ltr Rul 201016014* (a ruling involving complex interlocking relationships between a REIT and multiple corporations. The REIT and its TRS would provide loans or financial assistance to the corporations or affiliates of a manager or operator of the REIT's lodging or health care facilities. The REIT or its TRS could also receive income from an equity investment in the parent corporation or an affiliate of a company operating or managing the facilities. Finally, a TRS could receive rental income from a parent corporation or affiliate of a company that was a manager or operator of the TRS's facilities. In each situation, the income received by the REIT or its TRS would not be derived from or dependent upon its relationship with the company operating or managing the facilities. All of the agreements entered into by the REIT or its TRS for the management or operation of the facilities were at arm's length and reflecting market terms. The ruling, involving several issues, concluded that neither the REIT nor its TRS would be treated as directly or indirectly operating or managing the facilities within the meaning of *IRC § 856(l)(3)(A)*, and that the various transactions would not cause amounts received by the REIT from the TRS under the lease of the facilities to be treated as other than rents from real property).

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.03

§ 16.03 Real Estate Mortgage Investment Conduits (REMICs)

[1] Introduction

Real estate mortgage loans, and in particular residential mortgage loans, are extensively traded on secondary markets. Frequently, the mortgage loans are packaged for "resale" by forming a "pool" of mortgage loans held by a trust, partnership or corporation. If a trust is used, certificates of beneficial interest are sold. If a partnership is used, limited partnership interests are sold. If a corporation is used, it generally issues corporate bonds backed by the mortgage loans and their proceeds. Before 1986, there was uncertainty about the income tax treatment of certain types of these mortgage-backed securities. n417

The *Tax Reform Act of 1986* authorized the creation of a new type of entity--real estate mortgage investment conduits (REMIC)--as the exclusive vehicle for holding fixed pools of mortgages and for issuing regular and residual classes of interests to investors. The REMIC vehicle is a very flexible and sophisticated one. The election to be treated as a REMIC n418 is solely for tax purposes. Consequently, for financial accounting purposes, a sponsor can obtain sale treatment or financing treatment for the assets included in the REMIC. For tax purposes, a sale by the sponsor of the REMIC of any interests in the REMIC is effectively treated as a sale of the assets represented by those interests. n419

A REMIC election may be made with respect to a corporation, association, partnership, trust or even a segregated pool of assets. n420 A REMIC must satisfy the following six statutory requirements.

[a] Election to be a REMIC

An election must be made to treat the entity as a REMIC for its first taxable year. n421 The election is made on the REMIC's first tax return filed on Form 1066. n422 The tax return must be filed timely, but the Service is authorized (but not required) to grant an extension of time to file if the return is late. Extensions for making a REMIC election are requested through private letter rulings. n423

[b] Only Regular Interests or Residual Interests

All of the interests in the REMIC must be "regular interests" or "residual interests." n424 A "regular interest" is any interest in a REMIC which is issued on the startup day (the REMIC's first day or any other day within its first ten days of existence designated by the REMIC) n425 with fixed terms and which is designated as a regular interest if--

(1) the interest unconditionally entitles the holder to receive a specified principal amount (or other similar amount); and

(2) interest payments (or other similar amounts), if any, with respect to that interest at or before maturity--

(a) are payable based on a fixed rate (or, to the extent provided in Treasury regulations, at a variable rate), n426

(b) consist of a specified portion of the interest payments on qualified mortgages, and such portion does not vary during the period such interest is outstanding. n427

The interest does not fail to meet the requirements of subparagraph (1) merely because the timing (but not the amount) of the principal payments (or other similar amounts) may be contingent on the extent of prepayments on "qualified mortgages" and the amount of income from "permitted investments." n428 In addition, an interest in a REMIC does not fail to qualify as a regular interest solely because the specified principal amount of that interest or the amount of interest accrued on it could be reduced as a result of the nonoccurrence of one or more contingent payments with respect to one or more reverse mortgages loans that are held by the REMIC. This holds true, however, only if on the startup day for the REMIC, the REMIC sponsor reasonably believes that all principal and interest due under the interest will be paid at or prior to the liquidation of the REMIC. n428.1 For this purpose, a reasonable belief is presumed to exist if, as of the startup day, the REMIC interest receives an investment grade rating from at least one nationally recognized statistical rating agency.

The regular interests of a REMIC must be designated as such on the REMIC's first tax return. n429 Generally, variable interest rates may take the form of an index-based rate or a weighted average of the interest rates on some or all of the qualified mortgages held by the REMIC. n430 A variable rate may consist of a combination of rates, including fixed rates, in effect during different interest accrual periods n431 and may be subject to variable adjustments, maximum rates or minimum rates. n432

A residual interest is an interest in a REMIC which is issued on the REMIC's startup day, is not a regular interest and is designated as a residual interest. n433 A residual interest is not required to be entitled to any cash distributions from the REMIC.

[c] Single Class of Residual Interest

The REMIC must have one and only one class of residual interest, and distributions, if any, must be pro rata on residual interests. n434 An independently-formed partnership could be used to allocate distributions from a residual interest.

[d] Restrictions on Asset Types

As of the close of the third month beginning after the startup day and at all times thereafter, substantially all of the assets of the REMIC must be "qualified mortgages" and "permitted investments." n435 A "qualified mortgage" means--

(1) any obligation (including any participation or certificate of beneficial ownership therein) which is principally secured by an interest in real property n435.1 and which

(a) is transferred to the REMIC on the startup day in exchange for regular or residual interests in the REMIC;

(b) is purchased by the REMIC within the 3-month period beginning on the startup day if, except as provided in the regulations, such purchase is pursuant to a fixed price contract in effect on the startup day; or

(c) represents an increase in the principal amount under the original terms of an obligation, provided that increase (i) is attributable to an advance made to the obligor pursuant to the original terms of a reverse mortgage loan or other obligation; (ii) occurs after the REMIC startup day; and (iii) is purchased by the REMIC pursuant to a fixed price contract in effect on the startup day. n435.2

For purposes of the above obligations, any obligation originated by the United States or any State (or any of their political subdivisions, agencies, or instrumentalities) is treated as principally secured by an interest in real property if more than 50 percent of those obligations which are transferred to, or purchased by, the REMIC are principally secured by an interest in real property (determined without regard to this sentence). n435.3 Regulations provide that an obligation is "principally secured" by an interest in real property only if it satisfies either an 80-percent test or an alternative test. n435.3.1 Under the 80-percent test, an obligation is principally secured by an interest in real property if the fair market value of the interest in real property securing the obligation was at least equal to 80 percent of the adjusted issue price of the obligation at the time the obligation was originated (or was significantly modified), or is at least equal to 80 percent of the adjusted issue price of the obligation at the time the sponsor contributes the obligation to the REMIC. n435.3.2 Under the alternative test, an obligation is principally secured by an interest in real property if substantially all of the proceeds of the obligation were used to acquire or to improve or protect an interest in real property that, at the origination date, is the only security for the obligation. n435.3.3

(2) Reverse mortgage loans and the periodic advances made to obligors on them; n435.4 For this purpose, a "reverse mortgage loan" is a loan that (1) is secured by an interest in real property; (2) provides for one or more advances of principal to the obligor (each such advance giving rise to a "balance increase"), provided those advances are principally secured by an interest in the same real property as that which secures the loan; (3) may provide for a contingent payment at maturity based upon the value or appreciation in value of the real property securing the loan; (4) provides for an amount due at maturity that cannot exceed the value, or a specified fraction of the value, of the real property securing the loan; (5) provides that all payments under the loan are due only upon the maturity of the loan; and (6) matures after a fixed term or at the time the obligor ceases to use as a personal residence the real property securing the loan. n435.5

(3) any qualified replacement mortgage.

(4) any regular interest (but not a residual interest) in another REMIC transferred to the REMIC on the startup day in exchange for regular or residual interests in the REMIC. n436

(5) Prior to 2005, a qualified mortgage also included any regular interest (but not an ownership interest) in a FASIT, if 95 percent or more of the value of the FASIT's assets consisted, at all times, of real estate mortgages that were transferred to, or purchased by, the REMIC. n436.1 The statutory provisions related to FASITs were repealed effective January 1, 2005. n436.2 A transition period for existing FASITs is provided, pursuant to which the repeal generally does not apply to any FASIT in existence on October 22, 2004 to the extent that regular interests issued by the FASIT prior to that date continue to remain outstanding in accordance with their original terms. n436.3

A "qualified replacement mortgage" means an obligation which would have been a qualified mortgage if transferred to the REMIC on the startup day and which is transferred to the REMIC within three months of the startup day or within two years if such obligation is replacing a defective mortgage loan. n437 Defective mortgage loans include defaulted or

nearly defaulted mortgage loans and mortgage loans that breach a representation or warranty of the transferor. n438

"Permitted Investments" are--

(1) cash flow investments (temporary investments of cash collected on mortgage loans until the next distribution date on the regular REMIC interests); n438.1

(2) qualified reserve assets (assets held in a reserve fund to pay expenses or to pay regular interests if there is a default on mortgage loans or lower than expected returns on cash-flow investments, or to provide a source of funds for the purchase of obligations that qualify as a "qualified mortgage") n438.2
or

(3) foreclosure property (property obtained through a foreclosure and held for up to two years (unless the Service grants an extension). n439

This asset requirement does not apply during a liquidation of up to 90 days. n440

[e] Calendar Year

The REMIC must use a calendar year as its taxable year. n441

[f] Restrictions on Ownership of Residual Interests by Disqualified Organizations

There must be reasonable arrangements designed to prevent "disqualified organizations" from acquiring a residual interest and for providing certain information necessary for computing a tax on transferors who transfer a residual interest to a disqualified organization. n442 A "disqualified organization" means a governmental entity, certain cooperatives and other organizations exempt from the tax on unrelated business taxable income. n443 Generally, the residual interest must be in registered form and must have a restrictive legend. The applicable organizational document must expressly include these two requirements. n444 There is a tax imposed on the transferor of any residual interest to a disqualified organization. The tax is equal to the highest corporate tax rate applied to the present value of all anticipated excess inclusions (as described below). n445

[g] Significant Modification of REMIC Assets

An entity that initially qualifies as a REMIC may cease to qualify, if a sufficiently large portion of its qualified mortgages are significantly modified and the modified obligations are not qualified mortgages. n445.1 For this purpose, a qualified mortgage is generally treated as having been significantly modified if the change in terms would be treated as an exchange of obligations under *IRC Section 1001* and the related regulations. n445.2 The following changes in the terms of an obligation, however, are not considered to be significant modifications for this purpose: n445.3

- changes in the terms of an obligation occasioned by default or a reasonably foreseeable default;
- assumption of the obligation;
- waiver of a due-on-sale clause or a due-on-encumbrance clause;
- conversion of an interest rate by a mortgagor pursuant to the terms of a convertible mortgage;
- a modification that releases, substitutes, adds, or otherwise alters a substantial amount of the collateral for, a guarantee on, or other form of credit enhancement for, a recourse or nonrecourse

obligation, so long as the obligation continues to be principally secured by an interest in real property following the release, substitution, addition, or other alteration; n445.3.1 and

- a change in the nature of the obligation from recourse (or substantially all recourse) to nonrecourse (or substantially all nonrecourse), or from nonrecourse (or substantially all nonrecourse) to recourse (or substantially all recourse), so long as the obligation continues to be principally secured by an interest in real property following the change. n445.3.2 substitution, addition, or other alteration; n445.3.3

The IRS has issued several revenue procedures describing circumstances under it will allow modifications to certain mortgage loans without challenging the tax status of securitization vehicles (in particular, REMICs and investment trusts) that hold the loans or asserting that those modifications give rise to prohibited transactions. *Revenue Procedure 2009-45*, n445.3.4 was issued in response to the crisis in the commercial lending market, largely due to the difficulty in refinancing existing loans. It also is acknowledgement of the ability of professionals to recognize when there may be a substantial risk of foreclosure on a loan—even though the loan may not currently be in default, and even though there may be a substantial time before the loan's maturity date. Under the revenue procedure, if a modification of a loan meets the requirements set forth below, the IRS: n445.3.5

- Will not challenge a securitization vehicle's qualification as a REMIC on the grounds that the modifications are not among the exceptions in the regulations as to what constitutes a significant modification; n445.3.6.
- Will not contend that a modification is a REMIC prohibited transaction by virtue of being an impermissible disposition of qualified mortgage, even though the modification is not listed as a statutory exception to a prohibited transaction; n445.3.7.
- Will not challenge a securitization vehicle's classification as an investment trust n445.3.8 on the ground that the modifications manifest a power to vary the investment of the certificate holders; and
- Will not challenge a securitization vehicle's qualification as a REMIC on the ground that the modifications result in a deemed reissuance of the REMIC regular interests.

The safe-harbor treatment described above applies to a modification (including an actual exchange) n445.3.9 of a mortgage loan (the "pre-modification loan") that is held by a REMIC, or by an investment trust, only if all of the following conditions are satisfied: n445.3.10

- The pre-modification loan is not secured by a residence that contains fewer than five dwelling units and that is the principal residence of the issuer of the loan.
- Either (1) If a REMIC holds the pre-modification loan, then as of the end of the 3-month period beginning on the startup day, no more than 10 percent of the stated principal of the total assets of the REMIC was represented by loans fitting the following description: At the time of contribution to the REMIC, the payments on the loan were then overdue by at least 30 days or a default on the loan was reasonably foreseeable; or (2) If an investment trust holds the pre-modification loan, then as of all dates when assets were contributed to the trust, no more than 10 percent of the stated principal of all the debt instruments then held by the trust was represented by instruments the payments on which were then overdue by 30 days or more or for which default was reasonably foreseeable.
- Based on all the facts and circumstances, the holder or servicer reasonably believes that there is a significant risk of default of the pre-modification loan upon maturity of the loan or at an earlier date. The belief must be based on a diligent contemporaneous determination of that risk, which may take into

account credible written factual representations made by the issuer of the loan if the holder or servicer neither knows nor has reason to know that those representations are false. In a determination of the significance of the risk of a default, one relevant factor is how far in the future the possible default may be. There is no maximum period, however, after which default is *per se* not foreseeable. For example, in appropriate circumstances, a holder or servicer may reasonably believe that there is a significant risk of default even though the foreseen default is more than one year in the future. Similarly, although past performance is another relevant factor for assessing default risk, in appropriate circumstances, a holder or servicer may reasonably believe that there is a significant risk of default even if the loan is performing.

- Based on all the facts and circumstances, the holder or servicer reasonably believes that the modified loan presents a substantially reduced risk of default, as compared with the pre-modification loan.

Note:

Although it mentions a one-year benchmark, *Revenue Procedure 2009-45* does not set out a maximum period before a loan maturity date in which a holder or servicer may determine that a loan presents a substantial risk of forfeiture. It seems likely that a longer period would be permitted, provided there is concrete evidence to support a determination of substantial risk. n445.3.11

Previously, in response to the sub-prime mortgage crisis in 2007, the IRS issued a revenue procedure that describes the conditions under which changes to certain subprime mortgage loans will not cause the IRS to challenge the REMIC status of certain entities holding the loans. The purpose of the revenue procedure is to provide certainty in the current economic environment with respect to certain potential tax issues that may be implicated by various "fast track" loan modifications. n445.4 The revenue procedure was issued in response to a document entitled, "Statement of Principles, Recommendations and Guidelines for a Streamlined Foreclosure and Loss Avoidance Framework for Securitized Subprime Adjustable Rate Mortgage Loans" (the "Framework"), which was issued by the American Securitization Forum ("ASF") in December 2007. An executive summary of the Framework is attached as an Appendix in *Revenue Procedure 2007-72*.

Revenue Procedure 2007-72 applies to the following transactions occurring on or before July 31, 2010: n445.5

- a fast track modification of a loan pursuant to the Framework; and
- a second-lien holder's action of subordinating its lien to any new lien that may arise under a loan as the result of a fast track modification.

However, if the Framework is materially modified after December 6, 2007, the revenue procedure does not necessarily apply to fast track modifications under the revised Framework or to second-lien subordinations to accommodate those modifications. n445.6

If a transaction falls within the ambit of the revenue procedure, the following will apply: n445.7

- the IRS will not challenge a securitization vehicle's qualification as a REMIC on the grounds that the transactions are not among the exceptions listed in the regulations; n445.8
- the IRS will not contend that the transactions are prohibited transactions n445.9 on the grounds that the transactions are not among the statutory exceptions under which qualified mortgages may be disposed of without being subject to the 100-percent penalty tax; n445.10

- the IRS will not challenge a securitization vehicle's classification as a trust on the grounds that the transactions manifest a power to vary the investment of the certificate holders; and
- the IRS will not challenge a securitization vehicle's qualification as a REMIC on the grounds that the transactions resulted in a deemed reissuance of the REMIC regular interests.

In July 2008, the ASF released an updated Framework, which covers additional fast-track loan modifications. The IRS issued another revenue procedure-- *Revenue Procedure 2008-47*, n445.11 --which extends the above provisions of *Revenue Procedure 2007-72* to these additional loan modifications. *Revenue Procedure 2008-47* applies to the following transactions occurring on or before July 31, 2010: n445.12

- a fast track modification of a loan pursuant to the July 2008 Framework; and
- a second-lien holder's action of subordinating its lien to any new lien that may arise under a loan as the result of such a fast track modification.

If the July 2008 Framework is materially modified after July 8, 2008, however, *Revenue Procedure 2008-47* does not necessarily apply to fast track modifications under the modified Framework or to second-lien subordinations to accommodate those modifications. n445.13

The IRS has also issued two additional revenue procedures regarding the treatment of mortgage loans modified pursuant to certain foreclosure prevention programs. n445.14 One describes conditions under which modifications of certain mortgage loans will not cause the IRS either to challenge the tax status of the REMIC or other securitization vehicle that holds the loans or to assert that those modifications create a liability for tax on a prohibited transaction. n445.15

The procedure applies to a modification of a mortgage loan if the following conditions are satisfied: n445.16

- The real property securing the mortgage loan is a residence that contains fewer than five dwelling units.
- The real property securing the mortgage loan is owner-occupied.
- If a REMIC holds the mortgage loan, then as of either the startup day or the end of the 3-month period beginning on the startup day, no more than ten percent of the stated principal of the total assets of the REMIC was represented by loans the payments on which were then overdue by 30 days or more. If an investment trust holds the mortgage loan, then as of all dates when assets were contributed to the trust, no more than ten percent of the stated principal of all the debt instruments then held by the trust was represented by instruments the payments on which were then overdue by 30 days or more.
- The holder or servicer reasonably believes that there is a significant risk of foreclosure of the original loan. This reasonable belief may be based on guidelines developed as part of a foreclosure prevention program similar to that described in the revenue procedure or may be based on any other credible systematic determination.
- The terms of the modified loan are less favorable to the holder than were the unmodified terms of the original mortgage loan.
- The holder or servicer reasonably believes that the modified loan presents a substantially reduced risk of foreclosure, as compared with the original loan.

A second revenue procedure addresses potential tax issues that may be implicated by loan modifications made pursuant to the Home Affordable Modification Program ("HAMP"). n445.16.01 The HAMP applies both to loans that investors hold directly and to those that are held through securitization vehicles such as REMICs. The revenue procedure describes the conditions under which modifications to certain mortgage loans made pursuant to the HAMP of a mortgage that is held by a REMIC or investment trust will not cause the IRS to challenge the tax status of certain securitization vehicles that hold the loans or to assert that those modifications give rise to prohibited transactions: n445.16.02

- The IRS will not challenge a securitization vehicle's qualification as a REMIC on the grounds that the modifications are not among the exceptions listed in *Treasury Regulation Section 1.860G-2(b)(3)*; the most critical aspect of the regulation for the HAMP purposes is that if a change in the terms of an obligation is "occasioned by default or a reasonably foreseeable default," the change is not a significant modification. Thus, under *Revenue Procedure 2009-23*, a modification may be treated as not significant even if there isn't a risk of default.

- The IRS will not contend that the modifications are prohibited transactions under *IRC Section 860F(a)(2)* for purposes of imposing the 100 percent tax n445.16.03 on the grounds that the modifications result in one or more dispositions of qualified mortgages and that the dispositions are not among the exceptions listed in *IRC Section 860F(a)(2)(A)(i)-(iv)*. This rule allows dispositions of a qualified mortgage to avoid the tax even if, among other things, the disposition is not incident to the foreclosure, default, or imminent default of the mortgage.

- The IRS will not challenge a securitization vehicle's classification as a trust on the grounds that the modifications manifest a power to vary the investment of the certificate holders. n445.16.04

- The IRS will not challenge a securitization vehicle's qualification as a REMIC on the grounds that the modifications result in a deemed reissuance of the REMIC regular interests.

[h] When an Obligation Continues to be Principally Secured by an Interest in Real Property Following a Loan Modification

Regulations clarify when an interest in real property continues to be principally secured by an interest in real property following certain loan modifications n445.16.1 or a REMIC release of its lien on an interest in real property that secures a qualified mortgage. n445.16.2 An obligation continues to be principally secured by an interest in real property following the modification only if, as of the date of the modification, the obligation satisfies one of the following alternatives: n445.16.3

- (1) The fair market value of the interest in real property securing the obligation, determined as of the date of the modification, is at least 80 percent of the adjusted issue price of the modified obligation, determined as of the date of the modification. This criterion is met if, as of the date of the modification, the servicer reasonably believes that the obligation satisfies it, and belief is based on at least one of the following: (a) a current appraisal performed by an independent appraiser; (b) an appraisal that was obtained in connection with the origination of the obligation and, if appropriate, that has been updated for the passage of time and for any other changes that might affect the value of the interest in real property; (c) the sales price of the interest in real property in the case of a substantially contemporary sale in which the buyer assumes the seller's obligations under the mortgage; or (d) some other commercially reasonable valuation method.

- (2) The fair market value of the interest in real property that secures the obligation immediately after the modification equals or exceeds the fair market value of the interest in real property that secured the

obligation immediately before the modification. This criterion must be established by a current appraisal, an original (and updated) appraisal, or some other commercially reasonable valuation method; and the servicer must not actually know, or have reason to know, that the criterion in the preceding sentence is not satisfied.

[2] Taxation of REMICs

[a] Overview

Generally, a REMIC is not subject to taxation and is not treated as a corporation, partnership or trust for purposes of income taxation. n446 However, solely for purposes of the administrative and audit provisions under Subtitle F of the Code, a REMIC is treated as a partnership, and any holder of a residual interest is treated as a partner. n447 Generally, a REMIC must file an income tax return annually with the Service. The REMIC income is taxable to the interest holders of the REMIC. n448

[b] Prohibited Transactions

A REMIC is subject to a 100 percent tax on income derived from certain prohibited transactions. n449 Disposition of a qualified mortgage is prohibited unless it is done:

- (1) to substitute a qualified mortgage for a defective mortgage (or the defective mortgage is sold);
- (2) incident to foreclosure, default or imminent default;
- (3) upon the REMIC's bankruptcy; or
- (4) upon the REMIC's liquidation. n450

The following are also prohibited transactions upon which the tax is imposed: n451

- the receipt of any income attributable to assets other than qualified mortgages or permitted investments;
- the receipt by the REMIC of any amount that is a fee or other compensation for services; or
- gain from the disposition of any cash flow investment other than pursuant to a qualified liquidation.

[c] Liquidations

A REMIC may liquidate without recognizing any gain or loss on the sale of its qualified mortgages and permitted assets; however, to do so, the REMIC must adopt a plan, liquidate within 90 days and, within the same period, distribute the proceeds of its assets to holders of its regular or residual interests. n452

[3] Taxation of Investors in the REMIC

A REMIC may only issue regular interest securities and residual interest securities. Holders of each of these classes of securities are subject to special tax rules, as are transferors of the mortgage loans to the REMIC.

[a] Regular-Interest Holders

The holders of a regular interest have an unconditional right to receive a specified principal amount and payments of

interest at a fixed rate (although regulations may prescribe a variable rate). n453 A regular interest is treated as a debt instrument n454 with two exceptions. First, all holders must report their interest income amounts on the accrual basis. n455 Second, gain on the disposition of a regular interest is treated as ordinary income to the extent such gain does not exceed the excess of the amount that would have been includible in gross income if the yield was 110 percent of the "applicable Federal rate," n456 over the amount actually includible in the holder's gross income. n457 If the holders receive their regular interest in exchange for property, the issue price of the regular interest is equal to the fair market value of the property at the time of the exchange. n458

[b] Residual-Interest Holders Generally

A residual interest in a REMIC is, in effect, an equity interest in the residual assets of the REMIC. Residual holders include in income the daily portion of the taxable income or net loss of the REMIC. n459 Thus, a residual interest holder generally is taxable currently on the taxable income or net loss of the REMIC without regard to whether or when the REMIC makes distributions. n459.1 There is an exception to this rule for certain foreign investors. For purposes of the tax on nonresident alien individuals and foreign corporations and the withholding provisions that apply to those taxes, n459.2 if amounts are includible in the income of a holder of a REMIC residual interest that is a nonresident alien individual or a foreign corporation, the amounts are taken into account only when paid or distributed to the foreign holder, or when the interest is disposed of. n459.3

Under its statutory authority to do so, n459.4 Treasury has issued regulations regarding noneconomic REMIC residual interests, i.e. residual interests that entitle the holder to little or no distributions. The regulations accelerate when foreign partners of domestic partnerships are required to account for REMIC net income. They generally require a foreign partner in a partnership holding one or more REMIC residual interests to take into account REMIC net income inclusions at the end of its taxable year (or on the last date of the taxable year of a partnership that allocates REMIC net income to the foreign partner). n459.5 The regulations require a foreign shareholder in a REIT or regulated investment company, a foreign participant in a common trust fund, or a foreign patron of a subchapter T cooperative organization to take into account excess inclusion income at the same time as other income from the entity. n459.6 The above regulations are applicable to REMIC net income (including excess inclusions) of a foreign person with respect to a REMIC residual interest if the first net income allocation to the foreign person with respect to that interest occurs on or after August 1, 2006. n459.7

An excess inclusion is treated as income from sources within the United States. To the extent excess inclusions are taken into account with respect to a residual interest, net losses with respect to the residual interest are allocated and apportioned to the class and grouping(s) of gross income to which the excess inclusions were assigned. n459.7.1

With respect to REMIC residual interests, withholding is required on excess inclusions, n459.7.2 and on the portion of amounts allocated to foreign partners in partnerships holding REMIC residual interests n459.7.3 that is an excess inclusion. n459.7.4 The exemption available under certain circumstances to certain withholding agents that do not have custody or control of money or property from which to satisfy a withholding obligation n459.8 does not apply to partnership allocations for foreign partners of REMIC net income with respect to a REMIC residual interest. n459.8.1

Some or all of a residual holder's allocable share of a REMIC's taxable income may be an excess inclusion, and this amount is fully taxed--the taxable income of any holder of a residual interest in a REMIC for any tax year cannot be less than the excess inclusion (generally an amount equal to the REMIC's phantom income) for that year. n459.9 This prevents the application of NOLs to offset the excess inclusion income. NOL coordinating rules apply that govern excess inclusions with NOL provisions. n459.10 These rules have the effect of creating a separate basket for taxing excess inclusion income, so that the amount calculated as an NOL for a year is not reduced by excess inclusion income, and NOL carryovers are not absorbed by excess inclusion income. n459.11 The IRS has issued a ruling illustrating the interaction between the REMIC excess inclusion rules and the NOL rules. n459.12 The basis of a residual interest is increased by the amount of taxable income recognized by the interest holder. n460 Distributions to residual interest

holders are not taxable to the extent they do not exceed the adjusted basis of the interest. Distributions in excess of the adjusted basis of the interest are treated as gain from the sale of the interest. n461

Special rules apply to "excess inclusions." Excess inclusion is the income from a residual interest in excess of income, accrued at the rate of 120 percent of a specified Federal interest rate on the residual interest's adjusted issue price. The adjusted issue price is the original issue price increased by the residual interest's taxable income and reduced by distributions. n462 Excess inclusion income generally cannot be offset by net operating losses n463 and is treated as unrelated business taxable income by tax-exempt entities. n464

The Service has determined that the use of inventories would undermine the Congressional intent to tax currently a REMIC residual holder's excess inclusion. Therefore, it has ruled that taxpayers who hold residual interests in a REMIC may not use an inventory method under *IRC Section 471* to account for those interests, including any residual interest. Taxpayers using an inventory method to account for REMIC interests must change their method of accounting in accordance with the ruling. n465

Regulations clarify the treatment of transfers of noneconomic residual interests in REMICs. n465.1 In general, a transfer of a noneconomic residual interest in a REMIC is disregarded for all tax purposes if a significant purpose of the transfer is to enable the transferor to impede the assessment or collection of tax. A purpose to impede the assessment or collection of tax (a wrongful purpose) exists if the transferor, at the time of the transfer, either knew or should have known that the transferee would be unwilling or unable to pay taxes due on its share of the REMIC's taxable income. n465.2 Under a regulatory safe harbor, the transferor of a REMIC noneconomic residual interest is presumed not to have a wrongful purpose if four requirements are satisfied:

- (1) the transferor conducts a reasonable investigation of the transferee's financial condition (the investigation requirement); n465.3
- (2) the transferor secures a representation from the transferee to the effect that the transferee understands the tax obligations associated with holding a residual interest and intends to pay those taxes (the representation requirement); n465.4
- (3) the transferee must represent that it will not cause income from the noneconomic residual interest to be attributable to a foreign permanent establishment or fixed base of the transferee or another US taxpayer; n465.5 and
- (4) the transferor of a REMIC noneconomic residual interest must also satisfy either the "asset test" or the "formula test." n465.6

A transfer meets the "asset test" if the following requirements are met: n465.7

- At the time of the transfer and at the close of each of the transferee's two fiscal years preceding the fiscal year of the transfer, the transferee's gross assets for financial reporting purposes exceed \$100 million and its net assets for financial reporting purposes exceed \$10 million. The regulation clarifies that obligations of related persons and assets acquired solely to satisfy the asset test are not taken into account in determining gross or net assets. n465.8

- The transferee must be an "eligible corporation." An eligible corporation includes any domestic C corporation other than (1) a corporation exempt from, or not subject to federal income tax; (2) a regulated investment company or REIT; (3) a REMIC; or (4) a cooperative.

- The transferee must agree in writing that any subsequent transfer of the interest will be to another

eligible corporation in a transaction that satisfies the investigation and representation requirements and the asset test. A transfer to a foreign permanent establishment cannot meet this requirement, nor can a transfer if the transferor has reason to know the transferee will not honor the restrictions on subsequent transfers of the residual interest.

- A reasonable person would not conclude from facts known to the transferor on or before the time of the transfer that the taxes associated with the residual interest will not be paid. The regulation briefly details how various factors are considered in this regard. n465.9

A transfer satisfies the "formula test" if the present value of the anticipated tax liabilities associated with holding the residual interest must not exceed the sum of the following: n465.10

- the present value of any consideration given to the transferee to acquire the interest;
- the present value of the expected future distributions on the interest; and
- the present value of the anticipated tax savings associated with holding the interest as the REMIC generates losses.

In applying the "formula test," a transferee is generally presumed to pay tax at a rate equal to the highest corporate tax rate in *IRC Section 11(b)*. Transferees that have been subject to the alternative minimum tax for the preceding two years and will be subject to the AMT for the year of the transfer, however, may use the alternative minimum tax rate applicable to corporations. n465.11 A direct or indirect transfer of the residual interest to a foreign permanent establishment or fixed base of a domestic transferee is not eligible for the formula test. n465.12 In applying the formula test, present values are computed using a discount rate equal to the Federal short-term rate prescribed by *IRC Section 1274(d)* for the month of the transfer and the compounding period used by the taxpayer. n465.13

Prospective transferees are sometimes paid a fee to induce them to become holders of residual interests in a REMIC. Regulations govern the proper timing and source of income from that fee. n465.14 The fee must generally be included in income over a period that is reasonably related to the period during which the applicable REMIC is expected to generate taxable income or net loss allocable to the holder of the non-economic residual interest. n465.15 An inducement fee generally may not be taken into account in a single tax year. The general rule is that all taxpayers, regardless of their overall method of accounting, must recognize an inducement fee over the remaining expected life of the applicable REMIC in a manner that reasonably reflects the after-tax costs and benefits of holding that non-economic residual interest. n465.16

Regulations provide two safe harbor methods of accounting for inducement fees that will be deemed to meet the general rule—a book method and a modified REMIC regulatory method. n465.17 Under the book method, an inducement fee is recognized in accordance with the method of accounting, and over the same period, used by the taxpayer for financial reporting purposes (including consolidated financial statements to shareholders, partners, beneficiaries, and other proprietors and for credit purposes), provided that the inducement fee is included in income for financial reporting purposes over a period that is not shorter than the period during which the applicable REMIC is expected to generate taxable income. n465.18 Under the modified REMIC regulatory method, the inducement fee is recognized ratably over the remaining anticipated weighted average life of the applicable REMIC as if the inducement fee were unrecognized gain being included in gross income under applicable regulations. n465.19

A special rule that applies when a taxpayer disposes of a residual interest in a REMIC before recognizing the inducement fee in gross income. If any portion of the inducement fee has not been recognized in full by the holder as of the time the holder transfers, or otherwise ceases to be the holder of that residual interest, then the holder must include the unrecognized portion of the inducement fee in income at that time. This rule does not apply to with respect to

carryovers in certain corporate acquisitions under *IRC Section 381*. n465.20

The treatment of inducement fees is a method of accounting to which the statutory method of accounting rules apply. n465.21 A taxpayer is generally permitted to adopt a method of accounting for inducement fees that satisfies the general rule. Once adopted, that method must be applied consistently to all inducement fees received, and may be changed only with the consent of the Commissioner. n465.22 For purposes of applying the sourcing rules, n465.23 inducement fees are treated as income from sources within the United States. n465.24

[c] Residual Interests Held By REITs, RICs, and Other Pass-Thru Entities

The REMIC provisions seek to ensure that excess inclusion income does not escape current taxation. Some of these provisions are designed to prevent certain tax-exempt entities (disqualified organizations) from being holders of a REMIC residual interest through a REIT or similar pass-thru entity. A tax is imposed on certain pass-thru entities that have excess inclusion income allocable to a record owner that is a disqualified organization. n465.25 For this purpose, pass-thru entities include REITs, RICs, and nominees n465.26 and disqualified organizations include tax exempt entities that are not subject to unrelated business income tax under *IRC Section 511*. n465.27 For example, a REIT that owns REMIC residual interests must pay the tax imposed with respect to excess inclusion income allocable to a shareholder that is a disqualified organization. n465.28

IRC Section 860E(d) addresses the tax consequences to a REIT's shareholders when the REIT holds a REMIC residual interest. If a REIT holds one or more REMIC residual interests, then, under regulations prescribed by the Secretary, the excess of the aggregate excess inclusions determined with respect to those interests over the REIT's taxable income must be allocated among the shareholders of the REIT in proportion to the dividends received from the REIT. n465.29 Any such amounts allocated to a shareholder must be treated as an excess inclusion with respect to a residual interest held by the shareholder. n465.30 Similar rules apply to RICs, common trust funds, and certain cooperative organizations. Regulations have not yet been issued under this provision.

In response to growing numbers of REITs generating excess inclusion income by engaging in mortgage securitization transactions that cause the REIT to be a taxable mortgage pool (TMP) n465.31 or have a qualified REIT subsidiary that is a TMP, the IRS has issued interim guidance that applies to excess inclusion income both from REMIC residual interests and from REIT TMPs, whether received directly or allocated from another pass-thru entity. n465.32 Pending the issuance of further guidance, the IRS follows the following principles in administering the statutory rules that apply to excess inclusion income, whether from TMPs or from REMIC residual interests: n465.33 A REIT must do the following:

- Determine whether it or its qualified REIT subsidiary (or a portion of either) is a TMP, and if so, calculate the excess inclusion income of the TMP under a reasonable method.
- Allocate its excess inclusion income to its shareholders in proportion to dividends paid (determined without regard to any special allocation of the expense for any tax paid under *IRC Section 860E(e)(6)*) and inform the shareholders that are not disqualified organizations of the amount and character of the excess inclusion income allocated to them.
- Pay the tax imposed on the excess inclusion income n465.34 that is allocable to its shareholders that are disqualified organizations.
- Apply the withholding tax provisions with respect to the excess inclusion portion of dividends paid to foreign persons without regard to any treaty exception or reduction in tax rate. n465.35

With respect to its excess inclusion income, a pass-through entity, other than a REIT, RIC, or nominee, must do the

following: n465.36

- Allocate its excess inclusion income to its partners, participants, beneficiaries, or patrons (collectively, "owners") in accordance with applicable statutory provisions; n465.37 and inform any owners that are not disqualified organizations of the amount and character of the excess inclusion income that has been allocated to them.
- Pay the tax imposed on excess inclusion income n465.38 that is allocable to disqualified organizations.
- Apply the withholding tax provisions with respect to the excess inclusion portion of the payments made to foreign persons without regard to any treaty exception or reduction in tax rate. n465.39

With respect to excess inclusion income, a nominee must do the following: n465.40

- Inform the beneficial owners that are not disqualified organizations of the amount and character of their excess inclusion income.
- Pay the tax on the excess inclusion income of beneficial owners that are disqualified organizations. n465.41
- Apply the withholding tax provisions to the excess inclusion portion of the payments made to foreign persons without regard to any treaty exemption or reduction in tax rate. n465.42

With respect to its excess inclusion income, a RIC must do the following: n465.43

- Allocate its excess inclusion income to its shareholders in proportion to dividends paid (determined without regard to any special allocation of the expense for any tax paid). n465.44
- Inform shareholders who are nominees of the amount and character of the excess inclusion income that has been allocated to them.
- Pay the tax on excess inclusion income that is allocable to record shareholders that are disqualified organizations. n465.45
- Apply the withholding tax provisions to the excess inclusion portion of dividends paid to foreign shareholders without regard to any exemption or reduction in tax rate. n465.46

Pending the issuance of further guidance, except as provided in this paragraph, a RIC is not required to report the amount and character of the excess inclusion income allocated to its shareholders who are not nominees. For RIC taxable years beginning on or after January 1, 2007, the following requirements apply: n465.47

- A RIC must inform all of its shareholders that are not nominees regarding the amount and character of the excess inclusion income allocated to them if the excess inclusion income received by the RIC from all sources (including investments in REMIC residual interests) exceeds one percent of the gross income of the RIC.
- A RIC that is not subject to the reporting requirement in the preceding bullet must inform all of its shareholders that are not nominees regarding the amount and character of excess inclusion income allocated to them, taking into account only excess inclusion income allocated to the RIC from REITs

described in the following sentence. A REIT is described in this sentence if it reported to its shareholders for the most recent REIT taxable year ending not later than nine months before the first day of the RIC's taxable year that (1) a portion of the REIT's dividends for the year was excess inclusion income, and (2) this excess inclusion income exceeded three percent of the REIT's total dividends for the year. As an example, the reporting obligation described in this bullet applies to a fiscal year RIC for its taxable year beginning February 1, 2007, with respect to excess inclusion income allocated to the RIC by that REIT for the REIT's taxable year ending December 31, 2007, if the REIT had reported for its taxable year ending December 31, 2005, that its excess inclusion income exceeded three percent of its total dividends for that year.

[d] Transferors of Qualified Mortgages to a REMIC

If mortgages are transferred to a REMIC in exchange for a regular or residual interest, no gain or loss is recognized. n466 The adjusted basis of a regular or residual interest received by the transferor is equal to the adjusted basis of the mortgages transferred. n467

[4] Other features of REMICs

Other features characteristic of REMICs include:

- A REIT owning regular or residual interests in a REMIC is generally treated as holding real estate assets. n468
- A savings and loan institution owning regular or residual REMIC interests is generally treated as having made a qualifying real property loan. n469
- The original interest discount (OID) rules apply to interests in REMICs.
- The same withholding rules that apply for mortgage pass-through securities apply to interest paid to foreign holders of regular interests in a REMIC. For foreign holders of a residual REMIC interest, withholding is imposed at the statutory rate or lower treaty rate if the distributions are includable in gross income. n470

[5] Reporting Requirements for REMICs

A REMIC is generally required to file an income tax return with the Service annually. The Service has developed Form 1066, "U. S. Real Estate Mortgage Investment Conduit Income Tax Return," for this purpose. REMIC returns are due on the 15th day of the 4th month following the end of the REMIC's taxable year, n471 but an automatic 3-month filing extension is available if the REMIC timely files a proper application for an extension on Form 8736. n472

At the close of each calendar quarter, a REMIC is required to provide certain information outlined on Schedule Q (Form 1066) and in *Regulations Section 1.860F-4(e)(1)(i)(A)-(D)* to each person who held a residual interest in the REMIC during that quarter. Schedule Q generally must be mailed or otherwise delivered to each holder of a residual interest during a calendar quarter no later than the last day of the month following the close of the calendar quarter.

In addition, a REMIC and every issuer of a collateralized debt obligation must file Form 8811, "Information Return for Real Estate Mortgage Investment Conduits (REMICs) and Issuers of Collateralized Debt Obligations," unless all of the then-regular interests in the REMIC are owned by another REMIC. Form 8811 must be filed within 30 days after the start-up day (as defined by *IRC Section 860G(a)(9)*). Further, a REMIC must file a new Form 8811 within 30 days after a change of any information previously reported on Form 8811.

Other reporting requirements include those concerning the 95-percent asset test (outlined by *Regulations Section 1.860F-4(e)(1)(ii)*), and requirements for issuing Forms 1099 (described by *Regulations Section 1.6049-7(b)(2)*).

[6] Taxable Mortgage Pool (TMP)

Congress intended REMICS to be the only arrangement capable of issuing multiple-class real estate mortgage-backed securities without the *issuer* incurring a double layer of tax. Any arrangement that functions like a REMIC but fails to qualify as one is classified as a taxable mortgage pool (TMP). A TMP is generally any entity (other than a REMIC) that meets the following requirements: n473

- (1) substantially all of its assets consist of debt obligations (or interests in them), more than 50 percent of which consist of real estate mortgages or interests in them;
- (2) the entity has issued its own debt obligations with two or more maturities; and
- (3) under the terms of the debt obligations (or underlying arrangement), payments on the debt obligations bear a relationship to payments on the debt obligations or interests in them.

Any portion of an entity that meets the above definition is treated as a TMP. n474

The asset composition test (see item (1) in the above definition) is applied using the entity's tax bases in its assets. n475 Seriously impaired real estate mortgages are not treated as debt obligations for purposes of the asset composition test. Whether a real estate mortgage is seriously impaired generally depends on all facts and circumstances, n476 but two safe harbors are available. Under the safe harbors, whether a mortgage is seriously impaired depends only on the number of days that payments on the mortgage are delinquent (more than 89 days for single-family residential real estate mortgages, and more than 59 days for multi-family residential and commercial real estate mortgages). n477 The safe harbors are not available, however, if an entity is receiving or anticipates receiving certain payments on the mortgage. n478 If an entity makes reasonable efforts to resolve a mortgage and fails to do so within 180 days after the designated testing day, then the entity is treated as not having anticipated receiving payments on the mortgage. n479

Certain entities that liquidate within three years of acquiring their first asset n479.1 and certain governmental entities n479.2 are not treated as TMPs. If specified conditions are met, certain entities and funds, or portions of them, that are created in connection with the Public-Private Investment Program will also not be treated as being TMPs. n479.3

Real estate mortgages and interests in them include all obligations that are principally secured by an interest in real property, as well as regular and residual interests in a REMIC, and certain stripped bonds and coupons. n480 An obligation is "principally secured" by an interest in real property only if it meets one of the following tests: n481

- (1) the fair market value of the interest in real property securing the obligation was at least equal to 80 percent of the adjusted issue price of the obligation on the issue date; or
- (2) substantially all the proceeds of obligation were used to acquire, improve or protect an interest in real property that, at the origination date, was the only security for the obligation.

An obligation secured by a real estate mortgage is treated as an obligation secured by an interest in real property. That obligation, therefore, may itself qualify as a real estate mortgage. n482 An obligation secured both by real estate mortgages (or interests in them) and other assets is treated as secured by real property, but only to the extent of the combined value of the real estate mortgages and any real property that secures the obligation. n483-485

A TMP will be treated as a corporation. n486 Accordingly, the packaging of mortgages for resale in the secondary market through a TMP results in two tiers of taxation, once at the entity level and again at the "stockholder" level. However, a REIT may issue a TMP and be subject to only one level of tax. n487

In private letter rulings predating the issuance of final regulations, the Service ruled that certain corporate entities created to dispose of poorly-performing mortgages were not TMPs, but were partnerships. The Service's apparent rationale was that the entities intended to dispose of loans and distribute the proceeds of sale. Because a REMIC is created to *hold* a fixed pool of mortgages (and not quickly dispose of them), the entities were not functioning as REMICs, and therefore would not have to be classified as TMPs. n488

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.04

§ 16.04 Condominiums

[1] Overview

Condominiums are building complexes with common facilities, such as, stairways, hallways, ground-floor facilities and recreational areas. Each unit within the complex is owned individually, and common areas are owned either by a common owners' management association or by all the individual unit owners as tenants in common.

The Service has ruled that a condominium unit will be treated as any other real property for federal income tax purposes. n489 All the tax advantages of a homeowner also belong to the condominium owner. Interest on mortgages, real estate taxes, casualty losses and profit from the sale of a unit are all reportable items of the taxpayer. The deductibility of real estate taxes is subject to one restriction. In cases where condominiums are built on land leased by the unit owner, the real estate tax deduction may be lost to those unit owners, because the lessor is entitled to the deduction.

Unlike the cooperative residence (discussed in *Section 16.05*, below), each condominium owner takes title to his or her own unit and obtains a separate mortgage. If any individual owner cannot meet mortgage and tax payments on a unit, the other owners do not become responsible for the payments.

It should be noted that costs incurred by a homeowner in litigation against a homeowners' association are not probably not deductible under *IRC Section 212*. Although the production or collection of income might be a consequence of a successful claim, the origin of the claim--at least with respect to a homeowner's personal residence--is personal in nature. Therefore, the Tax Court and the Fifth Circuit have held that legal and other expenses connected with the claim are not deductible because they are not related to a trade or business or an income-producing activity. n489.1

[2] Tax-Exempt Homeowners' Association Status

Condominiums are usually managed by condominium management associations owned by the unit owners or developers of the condominium. Condominium management associations are considered homeowners' associations and are given favorable tax treatment if they satisfy the criteria set forth in the Code. n490

Five tests must be satisfied by the condominium management association before it will qualify as a tax-exempt homeowners' association. First, substantially all of the units of the condominium must be used by individuals for

residential purposes. n491 Second, the association must be organized and operated for the "acquisition, construction, management, maintenance, and care of association property." n492 Third, 60 percent or more of the gross income of the association must be derived from membership dues, fees or assessments from owners of the residential property. n493 Fourth, 90 percent or more of the association's expenditures must constitute expenditures for the "acquisition, construction, management, maintenance and care of 'association property' ." n494 Finally, no part of the association's net earnings may inure to the benefit of any private shareholder or individual. n495

A condominium management association must elect tax-exempt status. n496 The effect of such an election is to tax the association only on its net income from investments and business with nonmembers. n497 Note that the election prohibits the association from deriving benefits from any excess allowable deductions connected with its membership income and any operating losses carried over from other years. As a result, if the association's allowable deductions related to membership income, plus any operating losses carried over from other years, exceed the association's membership income, the association could possibly pay more tax with the election than without it. Qualified associations of holders of timeshare interests may also elect to be taxed like other homeowners associations. n498 An election to be treated as a homeowners association is made by filing a Form 1120-H for each tax year. n499 The election generally must be made no later than the time, including extensions, for filing an income tax return for the year in which the election is to apply, n500 but the IRS can grant extensions of time for making the election. n501 The IRS has also allowed taxpayers to revoke an election to be treated as a homeowners' association. n501.1

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.05

§ 16.05 Cooperative Housing Corporations

Another form of ownership that combines some of the nontax advantages of renting with the tax benefits of ownership is the housing cooperative. Unlike condominiums, the land and buildings of a housing cooperative are owned by a cooperative corporation which is responsible for the taxes and mortgage on the property. Each resident buys shares in the corporation, which, in turn, gives the resident the right to lease a particular unit. Because this arrangement confers more elements of ownership on the resident than a conventional lease, the term "proprietary lease" is usually used to describe the lease. Although each owner is not individually liable on the mortgage, each owner must pay a pro rata share of the mortgage and attendant interest.

If the corporation meets certain requirements, the tenant-stockholder is entitled to a deduction of a proportionate share of both the taxes on the property and the interest on the indebtedness incurred by the corporation in acquiring the buildings and land. n502 A tenant-stockholder who uses a housing unit in a trade or business or for the production of income is also entitled to a deduction for depreciation. n503 Corporations, trusts, estates, partnerships, or other entities may qualify as tenant-stockholders of cooperative housing corporations. n504

NOTE:

Although tenant-stockholders may deduct their proportionate share of the co-op's real estate taxes for regular tax purposes, n504.1 the Tax Court, affirmed by the Second Circuit, has ruled that those taxes cannot be taken into account in computing alternative minimum taxable income for purposes of the AMT. n504.2

A corporation must meet the following requirements before the tenant-stockholder will qualify for the above deductions:

- (1) With very minor exceptions, only one class of stock may be outstanding. n505
- (2) Each stockholder must be entitled, solely by reason of his stock ownership, to occupy a housing unit owned or leased by the corporation. n506
- (3) No stockholder may be entitled to receive distributions other than from earnings and profits, except upon partial or complete liquidation of the corporation. n507

(4) At least one of the following three alternative tests: (a) At least 80 percent of the corporation's gross income during the taxable year must be derived from the tenant-stockholders; (b) At all times during the taxable year, at least 80 percent of the total square footage of the corporation's property is used or available for use by the tenant-stockholders for residential purposes or purposes ancillary to that residential use; or (c) At least 90 percent of the expenditures of the corporation paid or incurred during the taxable year are paid or incurred for the acquisition, construction, management, maintenance, or care of the corporation's property for the benefit of the tenant-stockholders. n507.1 For tax years ending before December 21, 2007, at least 80 percent of the corporation's gross income during the year had to be derived from the tenant-stockholders. The other two alternatives were not available. n507.2

NOTE:

The reason for the addition of two non-income-based alternatives to the 80-percent gross income test was Congress' concern that some cooperative housing corporations were forced into renting space to commercial tenants at below-market rates in order to satisfy the 80-percent rule. It is hoped that the availability of the new alternatives will discourage any incentive to charge below-market-rate rents. n508 Rulings occasionally address whether particular items qualify as income derived from tenant-stockholders for purposes of the 80-percent test. n508.1

Failure of the corporation to meet these requirements in a given tax year may result in the tenant-stockholder being denied all homeowner tax benefits for that year. The determination of cooperative housing corporation status must be made each year and independently of other years. A taxpayer's status can therefore change from year to year. A taxpayer's failure to qualify for cooperative housing corporation status in one year does not affect its qualification for other years. n508.2

The IRS occasionally issues letter rulings with respect to whether the issuance of stock to *non-residential* units in a cooperative housing corporation satisfies the requirements of *IRC Section 216(b)(1)*. Almost always, the ruling is favorable, because the nonresidential unit qualifies as an "apartment in a building" which the taxpayer is entitled to occupy by reason of stock ownership in the cooperative corporation. n509 A unit qualifies as an apartment if: (1) the stockholder is entitled to convert the unit to an apartment; (2) the conversion of the unit would be reasonable under all facts and circumstances, including structural feasibility and costs; and (3) applicable local zoning, building, and fire codes permit both the conversion and the residential use of the unit as a matter of right. n510 The IRS has also ruled that a person who purchases stock attributable to a nonresidential unit for the commercial use of that space qualifies as "tenant-stockholder" for purposes of *IRC Section 216(b)(2)*, provided that stock is fully paid up in an amount that bears a reasonable relationship to the portion of the value of the taxpayer's equity in the building and land that was attributable to the unit. n510.1

The IRS also made a ruling involving a cooperative which, in connection with below-market private financing and subsidized governmental financing, was required to include low income and moderate income units and impose income eligibility requirements, limitations on purchase prices, and restrictions on resale with respect to certain residential units in the building. The IRS ruled that these requirements would not cause any person to fail to qualify as a tenant-stockholder or prevent the cooperative from qualifying as a "cooperative housing corporation." The ruling was conditioned on the stock being fully paid up in an amount that bore a reasonable relationship to the portion of the value of cooperative's equity in the building and land that was attributable to the unit that the purchaser was entitled to occupy. It also was conditioned on the cooperative's representation that it could issue only one class of stock and that all outstanding shares conferred identical rights to distribution and liquidation proceeds to the tenant-stockholders. n510.1.1

The fact that the tenant-stockholders are entitled to these deductions for regular tax purposes does not change the tax

status of the corporation. The corporation must report its rental income and may deduct taxes, interest, depreciation, and other operating expenses in the same manner as it would if it was not a cooperative. n510.2

Several rulings have dealt with whether a cooperative housing corporation is entitled to deduct real estate taxes paid with respect to a building or land it leases from a landlord. Ordinarily, taxes paid by a tenant to or for a landlord for business property constitute additional rents deductible by the tenant as an ordinary and necessary business expense only in connection with the carrying on of a trade or business. n510.3 The additional rent is taxable income to the landlord, and the only the landlord is entitled to deduct real estate taxes. n510.4 This general rule has been applied to prevent a lessee cooperative housing corporation from deducting real estate taxes it was required to pay on a building it leased from a landlord. Although the useful life of the building was less than the term of the lease, the lessor was treated as the owner of the building for purposes of *IRC Section 164* because the lessor received rental income attributable to the building. The building was pre-existing and was not constructed by the lessee. Accordingly, the lessee was not treated as the owner of the building for purposes of *IRC Section 164*, and the tenant-stockholders of the lessee were not allowed a *IRC Section 216(a)* deduction for amounts paid to the lessee representing their proportionate shares of the taxes paid. n510.5 A lessee cooperative housing corporation can be entitled to a deduction for real estate taxes, however, if it is treated as owner of the building for purposes of *IRC Section 164*. This can happen when the lessee constructs the building with its own funds on leased land, and the building has a substantially shorter useful life than the term of the ground lease. In that case, no portion of the rent received by the landlord is attributable to the building, so the lessee is allowed a deduction for real estate taxes paid on the building (but not the underlying land). This deduction passes through to the tenant-stockholders of the lessee, who are allowed an *IRC Section 216(a)* deduction for their proportionate shares of the real estate taxes paid with respect to the building. n510.6 A deduction is allowed only to the extent the taxes are attributable to the portion of the building containing the tenant-stockholders' dwelling units, and are not attributable to the remainder of the building or the land.

In *Ltr Rul 200324024* the taxpayer proposed to distribute to its current tenant-stockholders shares of stock that would be allocated to the nonresidential spaces. The tenant-stockholders then planned, but would not be required, to contribute the shares of stock allocated to the nonresidential spaces to an LLC in exchange for a stated percentage of the membership interests in the LLC. The LLC would perform certain activities in connection with its ownership of the shares of stock allocated to the nonresidential spaces. IRS ruled that income the taxpayer received from the LLC, or from any tenant-stockholders who chose not to transfer their shares to the LLC, would be income derived from tenant-stockholders, provided that the stock of all the tenant-stockholders (including the LLC) was fully-paid up, as required by *IRC § 216(b)(2)*.

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.06

§ 16.06 Employee Benefit Trusts

[1] Real Estate Investments in General

In 1969, legislation was enacted which severely limited the ability of a retirement or employees' trust to leverage investments through the use of debt. n511 This legislation provided that income received by a tax-exempt organization from debt-financed property would be subject to tax in the proportion of the average debt to average adjusted tax basis. n511.1 Because real estate is typically acquired through debt financing, the effect of this provision was to render real estate a largely taxable means of investment to otherwise tax-exempt employees' trusts. As a result, real estate became economically undesirable to such organizations.

The intent of the 1969 legislation was to prevent tax-exempt organizations from abusing their status; however, an unintended consequence was that of preventing tax-exempt organizations from making wise and prudent investments in real property. As a result, several exemptions have been added over the years that specifically exclude income from real property from the debt-financing UBIT rules for specified qualified organizations. n512 Qualified organizations include the following:

- qualified pension and retirement plans qualified under *IRC Section 401*;
- certain educational organizations; n512.1
- certain title-holding corporations and trusts organized for the exclusive purpose of acquiring, holding title to, and collecting income from real property, and turning over the entire amount less expenses to certain exempt member organizations; n512.2 and
- retirement income accounts of a churches (or certain other organizations). n513

To eliminate the most egregious abuses addressed in the 1969 legislation, specific limitations are included in the statute. In general these limitations are as follows:

- (1) The acquisition price must be fixed at the date of acquisition.

- (2) The amount of indebtedness cannot be dependent upon future revenues or profits.
- (3) The property cannot be leased by the trust to the seller or a related party thereof.
- (4) The property cannot be acquired from a party related to the trust or educational entity or leased to such a party.
- (5) The seller, a person related to the seller or a person related to the trust or educational entity cannot provide financing.
- (6) The property cannot be held by a partnership, unless the partnership meets specified requirements, discussed in § 16.06[2], below. n514

Thus, subject to the above limitations, real property has become a viable investment for employees' trusts; however, special rules apply if the investment is made through a partnership as described in the following *Section 16.06[2]*, below.

[2] Investments in Partnership With Tax-Exempt Entities

The rule that allows tax-exempt organizations to escape the unrelated business income tax on income from debt-financed real property is limited (by the *Revenue Act of 1987*) with respect to its use by tax-exempt entities that are in a partnership with taxable entities. For property acquired after October 13, 1987, or for partnership interests acquired after that date, tax-exempt organizations in a partnership with taxable entities have to treat income from debt-financed real property as unrelated business taxable income, unless the partnership allocations are *qualified allocations* or permissible *disproportionate allocations*. n515

An allocation to a tax-exempt entity is considered a *qualified allocation* if such entity is allocated the same distributive share of income, gain, loss, deduction, credit and basis during the entire period the entity is a partner, and the allocation has substantial economic effect. n516

A *disproportionate allocation* is permissible if:

- (1) a tax-exempt partner is not allocated net taxable income or gain in excess of its lowest share of losses or deductions for any taxable year; and
- (2) each partnership allocation has substantial economic effect. n517

For further discussion of this topic, see Chapter 14.

CHAPTER 16 Special Forms of Holding Real Estate *

1-16 Federal Taxes Affecting Real Estate § 16.07

§ 16.07 Financial Asset Securitization Investment Trusts (FASITs) (PRIOR LAW)

NOTE:

Public Law 108-357, enacted on October 22, 2004, repealed the special rules for FASITs, effective January 1, 2005. n517.1 A transition period for existing FASITs is provided, pursuant to which the repeal generally does not apply to any FASIT in existence on October 22, 2004 to the extent that regular interests issued by the FASIT prior to that date continue to remain outstanding in accordance with their original terms. n517.2

As noted in § 16.03[1][d], *above*, the definitions of REMIC regular interests, qualified mortgages, and permitted investments have been modified so that certain types of real estate loans and loan pools held by FASITs can be transferred to, or purchase.

The discussion that follows in this section is retained for historic purposes.

[1] In General

Effective September 1, 1997, a new statutory entity called a "financial asset securitization investment trust" (FASIT) is authorized. n518 FASITs are intended to facilitate the securitization of home equity loans and a variety of other debt obligations. A FASIT generally is not taxable, but is a pass-through entity. n519 A FASIT's taxable income or net loss flows through to the owner of the FASIT. n520 A FASIT may hold only specified assets and is subject to restrictions on its activities. n521 A FASIT may issue instruments that qualify as debt for federal income tax purposes. n522 Instruments issued by a FASIT bearing yields to maturity greater than 5 percentage points above the yield to maturity on specified US government obligations must be held, directly or indirectly, only by qualified holders. n523 Qualified holders generally include only domestic C corporations that are not exempt from income tax, and other FASITs. n524 The FASIT provisions are repealed, effective January 1, 2005. n524.1

[2] Qualification and Election as a FASIT

Any entity, including a corporation, partnership, trust or segregated pool of assets may qualify as a FASIT. n525 To qualify as a FASIT, an entity must: n526

- (1) make an election to be treated as a FASIT for the year of election and all subsequent years;
- (2) have assets substantially all of which are "permitted assets"; n527
- (3) have non-ownership interests which are certain specified types of debt instruments called "regular interests"; n528
- (4) have a single ownership interest which is held by an "eligible corporation"; n529 and
- (5) not qualify as a regulated investment company (RIC).

The election to be a FASIT applies from the date specified in the election and for all later years until the entity ceases to be a FASIT. The election may be revoked only with the consent of the Commissioner. n530

The manner of making the election is to be determined by the Secretary of the Treasury. If an election to be a FASIT is made after the initial year of an entity's existence, all of the assets in the entity at the time of the FASIT election generally are deemed contributed to the FASIT at that time, and, accordingly, any gain (but not loss) on the assets will be recognized. n531 A non-statutory transition rule, however, applies for entities that were in existence on September 1, 1997 (pre-effective date FASITs). Under the transition rule, certain gain is not recognized on property transferred to a FASIT until the property ceases to be properly allocable to a pre-FASIT interest. n532

[3] Permitted Assets of a FASIT

Substantially all of the assets of a FASIT must be permitted assets, as of the close of the third month beginning after the day of its formation. n533

Permitted assets include only the following: n534

- (1) cash or cash equivalents;
- (2) certain debt instruments under which interest payments, if any, at or before maturity are either payable based on a fixed rate (or, to the extent permitted by regulations, at a variable rate), or consist of a specified portion of the interest payments on qualified mortgages and that portion does not vary during the period the interest is outstanding; n535
- (3) certain foreclosure property; n536
- (4) certain instruments or contracts that represent a hedge or guarantee of debt held or issued by the FASIT;
- (5) contract rights to acquire permitted debt instruments or hedges; and
- (6) a regular interest in another FASIT.

Except for cash equivalents, permitted debt obligations cannot be obligations issued, directly or indirectly, by the owner of the FASIT or a related person. n537

Except as provided in regulations, an asset that was a permitted asset at the time it was acquired by a FASIT is not treated as an interest in the FASIT. n538

Foreclosure property generally includes the following: n539 (1) property that would be foreclosure property under the REIT provisions (without regard to the REIT election requirement or events that can terminate a REIT grace period for REIT foreclosure property); n540 and (2) property that is acquired in connection with the default or imminent default of a debt instrument held by the FASIT, unless the security interest in that property was created for the principal purpose of permitting the FASIT to invest in that property.

[4] "Regular Interests" of a FASIT

Regular interests of a FASIT are treated as debt for federal income tax purposes, regardless of whether instruments with similar terms issued by non-FASITs might be characterized as equity. n541 To be treated as a "regular interest," an instrument must be issued by the FASIT on or after its startup date, must have fixed terms, and must: n542

- (1) unconditionally entitle the holder to receive a specified principal amount;
- (2) pay interest that is based on:
 - (a) one or more rates that are fixed,
 - (b) rates that measure contemporaneous variations in the cost of newly-borrowed funds (such as variable interest rates described in *Treas Reg Section 1.860G-1(a)(3)*), or
 - (c) to the extent permitted by regulations, variable rates allowed to regular interests of a REMIC if the FASIT would otherwise qualify as a REMIC;
- (3) have a term to maturity of no more than 30 years (including options to renew), except as permitted by regulations;
- (4) be issued to the public with a premium of not more than 25 percent of its stated principal amount; and
- (5) have a yield to maturity determined on the date of issue of no more than five percentage points above the applicable Federal rate for the calendar month in which the instrument is issued.

The term "regular interest" also includes any high-yield interest. n543 A high-yield interest includes any debt instrument issued by a FASIT that meets the second and third conditions described above, so long as the interest is not held by a disqualified holder. n544 It also includes "interest-only instruments" (IOs) if the instrument makes payments that consist of a specified portion of the interest payments in permitted assets, and that portion does not vary throughout the life of that instrument. n545

A "disqualified holder" generally is any holder other than an eligible corporation or a FASIT. n546 An "eligible corporation" is a domestic C corporation other than a tax-exempt corporation, a RIC, REIT, REMIC, or cooperative. n547

[5] Ownership Interests in a FASIT

A FASIT may have only one ownership interest, and that interest must be held directly by an eligible corporation. n548 As noted above, an eligible corporation is a domestic C corporation other than a tax-exempt corporation, a RIC, REIT, REMIC or cooperative. n549

[6] Taxation of FASITs

A FASIT is a pass-through entity and is not subject to tax. n550 Instead, all of the FASIT's assets and liabilities and any income, gain, deduction or loss of the FASIT is allocable directly to its owner. n551 Accordingly, income tax rules applicable to a FASIT are to be applied in the same manner as they apply to the FASIT's owner. Any securities held by the FASIT that are treated as held by its owner are treated as held for investment. The taxable income of a FASIT is calculated using an accrual method of accounting. The constant yield method and principles that apply for purposes of determining OID accrual on debt obligations whose principal is subject to acceleration apply to all debt obligations held by a FASIT to calculate the FASIT's interest and discount income and premium deductions or adjustments. n552 For this purpose, a FASIT's income does not include any income subject to the 100-percent penalty excise tax on prohibited transactions. n553

[7] Taxation of Interests in a FASIT

[a] Taxation of Holders of Regular Interests

A holder of a regular interest in a FASIT, including a high-yield interest, is taxed in the same manner as a holder of any other debt instrument, except that the regular interest holder is required to account for income relating to the interest on an accrual method of accounting, regardless of the method of accounting otherwise used by the holder. n554 Several restrictions should be noted, however. Holders of high-yield interests are not allowed to use net operating losses to offset any income derived from the high-yield debt. n555 Any NOL carryover is computed by disregarding any income arising by reason of the disallowed loss. n556 In addition, the transfer of a high-yield interest to a disqualified holder is ineffective. Therefore, the transferor continues to be taxed on the income from the high-yield interest unless the transferee provides the transferor with an affidavit that the transferee is not a disqualified person, or the Secretary determines that the high-yield interest is no longer held by a disqualified person and a corporate tax has been paid on the income from the high-yield interest while it was held by a disqualified person. n557

High-yield interests may be held without a corporate tax being imposed on the income from the high-yield interest where the interest is held by a dealer in securities who acquired the high-yield interest for sale in the ordinary course of business (and not for investment). n558 A corporate tax is imposed on the dealer if the reason for holding the high-yield interest changes to investment, or if the dealer ceases to be a dealer. n559 A 31-day grace period is granted before ownership of an interest held by dealer generally is treated as held by the FASIT owner for investment purposes. n560

When a pass-through entity other than a FASIT issues either debt or equity instruments that are secured by regular interests in a FASIT and those instruments bear a yield to maturity greater than the yield on the regular interests or the applicable Federal rate plus five percentage points (determined on the date the pass-through entity acquires the regular interests in the FASIT), and the pass-through entity issued the debt or equity with a principal purpose of avoiding the rule that the high-yield interests be held by qualified holders, then an excise tax is imposed on the pass-through entity at a rate equal to the highest corporate rate on the income of any holder of the instrument attributable to the regular interests. n561

[b] Taxation of Holder of Ownership Interest

All of the FASIT's assets and liabilities are treated as the assets and liabilities of the holder of a FASIT ownership interest, and that owner takes into account all of the FASIT's income, gain, deduction or loss in computing its taxable income or net loss for the taxable year. n562 The character of the income to the owner is the same as its character to the FASIT, except tax-exempt interest is treated as ordinary income to the owner. n563

Losses on assets contributed to a FASIT are not allowed upon their contribution, n564 but may be allowed to the FASIT owner upon their disposition by the FASIT. n565 The holder of a FASIT ownership interest cannot offset income or gain from the FASIT ownership interest (including gains or losses from the sales and exchanges of those interests) with any other losses. n566 In addition, a FASIT owner cannot offset REMIC excess inclusion income against NOLs under

the FASIT provisions. n567 Any net operating loss carryover of the FASIT owner is computed by disregarding any income arising by reason of a disallowed loss. n568

For purposes of the alternative minimum tax, the owner's taxable income is determined without regard to the minimum FASIT income. n569 The alternative minimum taxable income of the FASIT owner cannot be less than the FASIT income for that year, n570 and the alternative minimum tax net operating loss deduction is computed without regard to the minimum FASIT income. n571

For purposes of the loss offset restrictions, n572 and their coordination with NOL provisions n573 and minimum tax provisions, n574 all members of an affiliated group filing a consolidated return are treated as one taxpayer. n575

[8] Tax on Income From Prohibited Transactions

The owner of a FASIT must pay a penalty excise tax equal to 100 percent of net income derived from prohibited transactions. n576 Subject to certain exceptions, prohibited transactions include the following: n577

- (1) the receipt of any income derived from an asset that is not a permitted asset; n578
- (2) any disposition (other than a permitted disposition) of a permitted asset other than foreclosure property;
- (3) the receipt of any income derived from any loan originated by the FASIT; and
- (4) the receipt of any compensation for services (other than fees for a waiver, amendment or consent under permitted assets not acquired through foreclosure).

A permitted disposition is any of the following dispositions of any permitted asset:

- (1) one arising from complete liquidation of a class of regular interests (i.e., a qualified liquidation); n579
- (2) one incident to the foreclosure, default or imminent default of the asset; n580
- (3) one incident to the bankruptcy or insolvency of the FASIT; n581
- (4) one necessary to avoid a default on any indebtedness of the FASIT attributable to a default (or imminent default) on an asset of the FASIT, if the FASIT were treated as a REMIC and permitted assets (other than cash or cash equivalents) were treated as qualified mortgages; n582
- (5) one necessary to facilitate a clean-up call, if the FASIT were treated as a REMIC and permitted assets (other than cash or cash equivalents) were treated as qualified mortgages; n583
- (6) one to substitute a permitted debt instrument for another such instrument; n584
- (7) one made in order to reduce over-collateralization where a principal purpose of the disposition was not to avoid recognition of gain arising from an increase in its market value after its acquisition by the FASIT; n585 or
- (8) one that disposes of an asset or a contract right to acquire an asset that was initially a hedge asset when acquired, but at the time of disposition was no longer a hedge asset. n586

Planning Tip:

Notwithstanding the above tax on income from prohibited transactions, the owner of a FASIT may currently deduct its losses incurred in prohibited transactions in computing its taxable income for the year of the loss. n587

[9] Transfers to FASITs

Gain generally is recognized immediately by the owner of a FASIT on the transfer of assets to a FASIT. n588 Assets that are acquired by the FASIT from someone other than its owner are treated as if they were acquired by the owner and then sold by the owner to the FASIT at their statutory valuation. n589 If any assets held by the holder of the ownership interest in a FASIT or a related person are used to support FASIT regular interests, the holder or related person must recognize gain on those assets in the same manner as if the assets had been sold to the FASIT at their statutory valuation n590 at the earliest date that the assets support any of the FASIT's regular interests. n591 The assets are then treated as held by the FASIT. n592 To the extent provided by regulations, gain recognition on contributed assets may be deferred until the assets support regular interests issued by the FASIT or any indebtedness of the owner or related persons. The regulations may also adjust other statutory FASIT provisions to the extent appropriate in the context of the above deferral. n593

[10] Valuation Rules of FASIT Assets

Except for debt instruments, the value of FASIT assets is their fair market value. n594 For debt instruments that are traded on an established securities market, their market price is used to determine gain realized upon their contribution to a FASIT. n595 For other debt instruments, their value is the sum of the present values of the reasonably-expected cash flows from the obligations discounted over the weighted average life of the assets. The discount rate is 120 percent of the applicable Federal rate, or such other discount rate specified in the regulations, compounded semiannually. n596 For purposes of determining the value of a pool of revolving loan accounts having substantially the same terms, each extension of credit (other than the accrual of interest) is treated as a separate debt instrument, and the maturity of the instruments is determined using the reasonably anticipated periodic payment rate at which principal payments will be made as a proportion of their aggregate outstanding principal balances assuming that payments are applied to the earliest credit extensions. n597

[11] Termination of FASIT

If an entity ceases to be a FASIT at any time during the taxable year, the entity is not treated as a FASIT after the date of the cessation. n598 If an entity inadvertently fails to qualify or remain qualified as a FASIT, however, it may nevertheless continue to qualify as a FASIT. To do so, it must, within a reasonable time after discovering that it fails to qualify as a FASIT, take whatever steps are necessary to qualify as a FASIT, and make whatever adjustments may be required by the Secretary. n599

Caution:

Loss of FASIT status is treated as if all of the regular interests of the FASIT were retired and then reissued without the application of the rule that deems regular interests of a FASIT to be debt. n600 This may result in the creation of cancellation of indebtedness income under *IRC Section 108* where the new instruments deemed to be issued are treated as stock. n601

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.00

§ 17.00 Introduction

Foreign interest in investing in U.S. real estate is at least as volatile as interest in most other investments. It is affected by the perceived attractiveness of U.S. real estate as a pure investment, which is, in turn, affected by supply and demand factors and by the state of the U.S. economy; by the value of the U.S. dollar *vis-a-vis* alternative foreign currency investments; by the attractiveness of real estate and other investments in other foreign jurisdictions; by political instability abroad (wherein an investment in U.S. real estate is seen as a "safe" investment and, possibly, an emergency entree to the U.S.); and by the relationship between the inflation rate in the U.S. and the inflation rates affecting alternative investments.

This chapter reviews the federal income tax provisions affecting real estate owned by individuals who are neither citizens nor residents of the U.S. and by business entities organized under the laws of jurisdictions other than the U.S., the 50 states and the District of Columbia. Planning for an investment in U.S. real estate requires careful scrutiny, on a property-by-property basis, of the residence of the foreign investor, the possible sources of capital for the investment, an analysis of U.S. federal and state and local income tax laws and U.S. federal estate and gift tax laws, and an analysis of local laws relating to property ownership by aliens. In addition, of course, it requires a review of relevant U.S. tax treaties and an analysis of applicable foreign tax and capital export laws.

During the remainder of this chapter, unless the context requires otherwise, the term "alien" will generally be used to refer to an individual who is neither a citizen nor a resident of the U.S. and to entities organized under the laws of jurisdictions other than the U.S., the 50 states and the District of Columbia. n1

FOOTNOTES:

(n1)Footnote 1. *IRC § 7701(a)(30)* defines the term "U.S. person" to mean a citizen or resident of the U.S., a domestic partnership, a domestic corporation, an estate other than a foreign estate, and a trust, if a court within the U.S. is able to exercise primary supervision over the administration of the trust and one or more U.S. persons have the authority to control all substantial decisions of the trust.

CHAPTER 17 Foreign Investment in U.S. Real Estate *

*1-17 Federal Taxes Affecting Real Estate § 17.01***§ 17.01 State Restrictions on Alien Property Ownership**

As land law is basically state law, legislation and legal precedents of the various states must be reviewed to identify any restriction or prohibition on alien ownership of real property.

It is beyond the scope of this chapter to discuss the legal issues relating to restrictions on alien property ownership. The status of each proposed investment must be reviewed on a state-by-state, property-by-property and investor-by-investor basis. Most states have restrictions on alien ownership, but the restrictions vary from state to state and changes occur frequently. Table I, below, is a broad outline of state legislation regulating the ownership of U.S. real estate by alien individuals and foreign corporations and other business entities:

TABLE I Summary of State Restrictions and Reporting Requirements

The most common form of state restriction is a general prohibition on alien ownership of land. In most instances, however, there are some exceptions. For example, many states that prohibit alien ownership permit resident aliens to own land. ⁿ² Other states permit land ownership by aliens who have declared their intention to become citizens. Certain states limit the amount of acreage an alien may own, and some states limit the time that an alien may own property. ⁿ³ These limitations were probably selected to allow an alien who had acquired land by inheritance a reasonable time for disposition.

Limitations on inheritance rights may be a substantial barrier to individual foreign investment. Forfeiture or forced sale upon the death of an investor can deter investment. In some instances, a foreign heir may inherit land only if a reciprocal right exists under the laws of the foreign jurisdiction. This requirement is sometimes set forth in the state's probate law.

Fewer states have specific statutory prohibitions on alien ownership of property through corporations, although some states have substantial restrictions on corporate ownership of farmland. These normally include prohibitions or restrictions on corporate farming. Some states restrict ownership by corporations incorporated in jurisdictions outside the United States. Other states prohibit ownership by a corporation that has more than a specified percentage of alien ownership or has alien directors.

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.02

§ 17.02 U.S. Taxation of Nonresident Aliens

The most significant tax levied on nonresident alien individuals and corporations investing in U.S. real estate is the federal income tax. Individual investors also may be subject to federal transfer taxes (estate, gift and generation-skipping transfer tax), and state inheritance and gift taxes.

Individual and corporate investors are also subject to real estate taxes and state and local income taxes. Although tax treaties may reduce or eliminate U.S. federal income and transfer taxes, state and local taxes will remain.

United States taxation of nonresident aliens generally is limited to income from U.S. activities or sources. n4 Federal taxation of nonresident aliens is based on the nature of the alien's ownership interest and the determination whether the alien is conducting a U.S. business. It is also affected by any tax treaty between the country in which the foreign investor (individual or corporation) is resident and the United States. These "conventions" for the avoidance of double taxation, or tax treaties as they are commonly referred to, generally extend more favorable tax treatment to those entitled to take advantage of the treaty provisions than does the Internal Revenue Code. The purpose of these treaties is to alleviate double taxation of income from transactions that cross national boundaries. An updated listing of current tax treaties in effect can be found in IRS Publication 901.

The general rules establishing the relationship between provisions of the Internal Revenue Code and provisions in tax treaties are found in *IRC Section 894* (which states that the provisions of the Internal Revenue Code shall be applied "with due regard" to any treaty obligation of the U.S.) and *IRC Section 7852(d)(1)* (which provides that, for purposes of determining the relationship between a provision of a treaty and any tax code provision, neither the treaty nor the tax code provision shall have preferential status by reason of its being a treaty or a tax code provision). Thus, in general, unless the treaty provision or the Internal Revenue Code provision provides specifically to the contrary, whichever provision is enacted later in time will prevail. n5

Generally, a nonresident alien not engaged in a U.S. business is taxed only on fixed or determinable annual or periodic (passive) income from U.S. sources. n6 Tax is imposed at a rate of 30 percent on gross income of these types unless a tax treaty provides for a lower rate. n7 The tax is imposed on a gross basis, and losses or other deductions cannot be offset against profits. The tax is generally imposed at its source through withholding. n8 Types of income normally subject to taxation and withholding pursuant to these provisions include dividends, interest, annuities, rental, or other fixed, determinable annual or periodic income. n9 No deduction or withholding is required for a number of specified

items, including interest on portfolio debt investments. n10 The term *portfolio interest* means any interest (including original issue discount) that is (1) paid on an obligation that is in registered form and for which the beneficial owner has provided to the U.S. withholding agent a statement certifying that the beneficial owner is not a U.S. person, or (2) for obligations issued before March 19, 2012, paid on an obligation that is not in registered form and that meets the foreign targeting requirements of *IRC Section 163(f)(2)(B)*. n10.01 The foreign targeting exception allowing the treatment of that interest as portfolio interest is repealed effective for debt obligations issued after March 18, 2012. n10.02 Portfolio interest, however, does not include interest received by a 10-percent shareholder, n10.03 certain contingent interest, n10.04 interest received by a controlled foreign corporation from a related person, n10.05 or interest received by a bank on an extension of credit made pursuant to a loan agreement entered into in the ordinary course of its trade or business. n10.06

In most instances, capital gains that are not effectively connected with the conduct of a trade or business within the U.S. are exempt from taxation under the withholding provisions (unless the alien is present in the United States for 183 days during the year). n10.1

A nonresident alien engaged in a U.S. business is subject to income tax at ordinary corporate or individual tax rates on the taxable income that is effectively connected with the conduct of a trade or business within the United States. n10.2 Profits from the disposition of U.S. real estate are generally treated as income that is effectively connected with the conduct of a trade or business within the U.S. n10.3

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.03

§ 17.03 Conduct of Business in the United States

In any real estate investment, it is necessary to determine if the alien is engaged in business in the United States. Neither the Internal Revenue Code nor the Regulations contains a comprehensive definition of the term "trade or business." n11 Surrounding circumstances, such as the nature of the business and physical facilities used to pursue the activity, must be considered in making the determination of whether business activities rise to the level of the conduct of a trade or business. n12

When analyzing the tax consequences of alien ownership of real property, each real estate investment must be separately analyzed to determine whether the activities are sufficient to cause the alien to be engaged in business in the United States. The result of this analysis will determine whether income from the property is subject to withholding tax on a gross basis or must be reported on a federal income tax return and taxed on a net basis.

If property is subject to a lease under which the owner or its U.S. agent merely collects rents from the property and the tenant pays all operating expenses, the owner may be considered to be engaged in a U.S. business, if the owner or his agent does not perform any substantial services relating to the property. In this regard, the separate ownership of each parcel of real estate by separate entities could strengthen the position that the owner is not engaged in business in the United States.

On the other hand, if the real estate is actually an operating property and the owner's or agent's activities extend beyond the mere collection of rents and include the negotiation of leases, making of repairs, paying of expenses and taxes, and the performance of other operating activities, the owner will probably be deemed to be engaged in business in the United States. n13 In many cases, it is desirable for the alien owner to be considered to be engaged in a U.S. business since its U.S. taxes may be lower if computed on a net basis rather than on a gross basis.

In *Lewenhaupt v Commissioner*, n14 the court held that the taxpayer's activities with respect to certain parcels of improved real estate constituted a U.S. business. It was demonstrated that the taxpayer employed an agent to manage the properties and empowered the agent to buy, sell, lease, and mortgage real estate for and in the name of the taxpayer. During the taxable year, the agent's activities included executing leases, renting properties, maintaining books, collecting rents, supervising property repairs, insuring properties, paying taxes and mortgage interest, and executing the sale of one of the properties, as well as notifying the taxpayer of available realty.

On the other hand, a strong argument could be made that the taxpayer is not engaged in U.S. business if the alien owner attends to these various activities from outside the United States, while a U.S. agent is entrusted only with the basic necessities and does not work exclusively for the owner. Sporadic decisions by the alien owner in the United States will not taint this conclusion. n15

Given the uncertainties of the definition of a U.S. business, the Foreign Investors Tax Act introduced a special tax election for nonresident aliens to pay taxes on income from real property on a net basis, as if the alien were engaged in a trade or business. n16 The election will result in the income from the property being subject to the normal individual or corporate tax rates on the basis of net taxable income rather than being subject to a withholding tax on gross income. n17 If the electing alien has other income or deductions that are effectively connected with the conduct of a U.S. trade or business, they must be combined with the income under the real property election in determining the alien's total taxable income. n18 If the deductions for the real property exceed the property's current income, such excess loss may be used to offset income from other U.S. trades or businesses, as well as income from other property subject to the election. n19 Any gain or loss on the disposition of U.S. real property will be treated as a gain or loss that is effectively connected with the conduct of a trade or business. n20 The election, once made, applies to all U.S. real estate owned and property that may be acquired in the future by a nonresident alien, and to rents or royalties from natural resources. It cannot be revoked without the prior consent of the Commissioner of the Internal Revenue Service. If revocation is approved, a new election cannot be made for five years. The election may be made at any time before the expiration of the statute of limitations for filing refund claims (including extensions thereof) and is made by filing a statement to the effect that the election is being made with the income tax return required for the year. The Regulation does not reconcile the timing conflicts inherent in these two statements. n21 Where property is held by a partnership, the election is made at the partner level. n22 An alien who is deciding whether to make the election must project the income and gain to be received with respect to the properties to which the election will apply, and compare the amount of tax payable under the FIRPTA n23 rules, pursuant to which dispositions of U.S. real property interests are subject to a withholding tax on gross receipts, and the withholding tax on rental income with the tax resulting from applying regular U.S. rates to net income after allowable deductions.

Various tax treaties permit a similar election to be made on an annual basis. n24 Aliens from countries that have no tax treaty or an unfavorable tax treaty with the United States will face difficulties in attempting to take advantage of treaty elections by acquiring U.S. real property through a corporation resident in treaty countries with favorable treaties because Congress has taken action to limit so-called "treaty shopping." For example, the Code provides that the branch profits tax, which was enacted by TRA 1986, is not to be overridden by a tax treaty in which treaty shopping is possible. n25 The Service has also issued regulations implementing *IRC Section 7701(l)*, authorizing the Secretary of the Treasury to prescribe regulations recharacterizing multiple-party financing transactions as conduit arrangements. n26

Under these regulations, the Service could attack back-to-back dividends or royalties, as well as certain "mixed" back-to-back payments (i.e., interest is paid from the United States to the treaty country corporation, which, in turn, pays a dividend or royalty of the same amount). Subject to certain "grandparent" rules, the regulations are effective for payments made on or after September 11, 1995.

The use of a treaty may be beneficial as it may permit an alien to elect annually whether to be taxed on rental income from real estate on a net taxable income basis or on a gross income basis.

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.04

§ 17.04 Income "Effectively Connected" with a U.S. Business

An alien that is not engaged in a U.S. business pursuant to the criteria discussed in § 17.03, above, will be subject to tax only on U.S.-source income, in the manner described in § 17.02.

An alien individual, partnership, or foreign corporation that is engaged in U.S. business will be taxed on the U.S. business on the same basis as any other U.S. taxpayer.

The alien engaged in a U.S. business must segregate its income into the following three categories:

- (1) U.S.-source and foreign-source income effectively connected with the conduct of the U.S. business;
- (2) U.S.-source income not effectively connected with the conduct of the U.S. business; and
- (3) foreign-source income not effectively connected with the conduct of the U.S. business.

United States and foreign-source income effectively connected with the U.S. business will be subject to U.S. tax at ordinary rates. n27 As a result, losses from such a business can be offset against profits, subject to the passive activity and various other limitations. See Chapter 13. To determine whether U.S.-source income that is either "fixed or determinable annual or periodic" or that arises from the sale or exchange of capital assets is "effectively connected" income, the following factors are taken into account:

- (1) whether the income, gain, or loss is derived from assets used or held for use in the conduct of such trade or business; or
- (2) whether the activities of such trade or business were a material factor in the realization of the income, gain, or loss. n28

Treasury regulations state that, generally, stock of a corporation, whether domestic or foreign, is not treated as an asset used, or held for use, in a U.S. trade or business. n29 However, an investment in the stock of a U.S. real property holding (USRPH) corporation is treated as an asset used in a trade or business within the United States and any gain or loss from the disposition of such stock will be treated as if such gain or loss were effectively connected with such trade

or business. n30 USRPH corporations are discussed in § 17.11[2], below.

All other types of U.S. source income are deemed to be effectively connected, regardless of how derived. n31

While an alien is subject to tax at normal rates on U.S.-source income effectively connected with the conduct of a U.S. business, he is not subject to U.S. tax at normal rates on U.S.-source income that is not effectively connected with his U.S. business. If the above tests relating to the derivation of income from assets used in a U.S. business, or closely related activities resulting from the U.S. business, are not met, the income is not considered to be effectively connected. In such a case, a withholding tax is assessed on that portion of gross income, while the remaining net taxable income from the U.S. business is taxed at ordinary rates. n32

Foreign-source income and economic equivalents of it generally can be subject to U.S. tax only if it is effectively connected with the conduct of a U.S. business. In this case, the U.S. office must be a material factor in producing the income and must regularly carry on activities of the type from which the income is derived. Only the amount that is properly allocable to the U.S. business will be treated as effectively connected foreign source income. n33

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.05

§ 17.05 Forms of Alien Ownership

[1] In General

Foreign investors may generally invest in U.S. real estate in the same manner as domestic investors. Alternative methods of ownership for foreign investors include:

- (1) Direct ownership by foreign individual investors.
- (2) Ownership by foreign individuals through a limited or general partnership or a limited liability company (LLC).
- (3) Ownership by a business trust, generally a real estate investment trust (REIT).
- (4) Ownership by a U.S. corporation.
- (5) Ownership by a foreign corporation.

The most direct form of investment is outright ownership by the alien individual. However, this form of ownership is generally undesirable from a U.S. gift and estate tax perspective. (See § 17.06.) The manner in which the alien acquires the property, such as by purchase, gift, inheritance, etc., may be relevant for purposes of state rules relating to alien ownership of real property.

Somewhat less direct ownership may be acquired through a trust or other arrangement for equitable ownership. Under a trust arrangement, an alien could designate a citizen or U.S. corporation to hold the property as trustee. The trustee would hold title and maintain control over the property with the alien reserving a beneficial interest. The trustee would be required to account to the alien for the financial results of the property. An alien that owns real property pursuant to such an arrangement would be subject to federal income tax in the same manner as if it owned the property directly.

Another ownership structure is for an alien to own real estate through a partnership organized under the Uniform Partnership Act or Uniform Limited Partnership Act in effect in most states, as an informal joint venture, or through a limited liability company that will be taxed as a partnership. While the partnership acts and their interpretations vary

from state to state, the laws tend to follow a general pattern. Similarly, a partnership could be created under foreign law to own U.S. real estate. (See Chapter 14.)

A REIT can also be used by aliens to own U.S. real estate. REITs are discussed below at § 17.11[3](6) and in greater detail in Chapter 16.

A more common form of ownership for an alien interested in investing in U.S. real estate is through a corporation that owns several parcels of property, or a corporation organized by an alien or group of aliens to own one parcel of property. The corporate organization, and particularly the limited liability inherent in the corporate form, make corporate ownership attractive. If the corporation is organized in the United States, the stock of the corporation will potentially be subject to U.S. gift and estate taxes in the hands of an individual alien. If the corporation is organized outside the United States, it will generally be subject to the branch profits tax. Accordingly, a common form of ownership for an individual alien is to organize a foreign corporation with a U.S. subsidiary corporation that invests in U.S. real estate, thus avoiding both U.S. estate and gift tax implications and the branch profits tax. For further analysis, see § 17.10.

The form of ownership that will be selected by an alien will be determined by the foreign investor's objectives. These may include limited liability, right of control, management participation, and transferability of ownership interest, as well as the U.S., local, state, and foreign tax treatment of income and losses from the real estate operations.

[2] Limited Liability Company

A new form of business entity that is rapidly gaining popularity is known as the "limited liability company," or LLC. An LLC combines favorable partnership and corporate characteristics more effectively than any other form of business organization.

The limited liability company is a "hybrid" entity that has both corporate business attributes and partnership tax attributes. It has the corporate attribute of limited liability and is a legal entity separate and distinct from its owners, but has the partnership federal income tax attribute of having its income taxed directly to its owners for federal income tax purposes. As a result, the limited liability company combines the most significant legal benefit of a corporation (i.e., limited liability) with the tax attributes of a partnership. A limited liability company can have an unlimited number of members, and the members can be virtually any type of entity (e.g., individual, corporation, trust, estate, partnership, foreign investor, etc.). There is no federal income tax prohibition against alien ownership of an LLC.

If the venture is structured as a partnership, the investor must choose between obtaining limited liability as a limited partner or participating in management as a general partner. If the venture is structured as a C corporation, the investor can obtain both limited liability and participation in management but must incur the cost of a double tax on the venture's income. A limited liability company allows limited liability, participation in management, *and* a single level of taxation, although the single level of tax may be compromised by the branch-profits tax provisions where the foreign owner is a corporation. (See § 17.10[1].)

Although almost all states recognize the existence of limited liability companies and almost all states will follow the federal tax treatment of LLCs, the few exceptions require that a specific statutory analysis be done with respect to each state in which an LLC may be doing business. See Chapter 14. The analysis must also include laws concerning the requirements for qualification of entities to do business.

If a state law requires that an entity meet specific legal formalities to be a corporation or a limited partnership, the foreign investor faces the risk that a limited liability company may be considered to do business as a general partnership in that state because the definition of a general partnership is generally so broad as to cover an unincorporated venture between two or more persons other than one that is organized as a limited partnership or other recognized form of

business under state law. n34

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.06

§ 17.06 Taxation of Investment by an Individual Alien

A nonresident alien individual may purchase property personally and appoint an agent in the United States to manage the property. As discussed above, the relative responsibilities of that agent will be a material factor in determining whether the owner is engaged in a U.S. business. If the alien is engaged in a U.S. business, his net income will be subject to U.S. tax at graduated rates. n35 Once taxed, the income can be repatriated by the owner without imposition of any U.S. withholding tax at the source, n36 and without the imposition of any branch-profits tax. Any capital gain resulting from sale of the property also may be treated as effectively connected with the conduct of a U.S. business and taxed as such. n37

If an owner is not engaged in a U.S. business, the gross rentals from the property will be subject to withholding tax at a flat 30 percent rate. n38 One significant disadvantage of direct ownership of U.S. real estate by an alien individual is that U.S. real estate is included in the gross estate of every nonresident alien decedent n39 and may be subject to estate tax as well as the generation-skipping transfer tax. n40 Furthermore, state inheritance and related probate and administrative costs may be incurred. United States transfer tax also is imposed on nonresident aliens upon transfer of U.S. real estate by gift. n41 Accordingly, it is generally undesirable for an individual alien to own real estate in the U.S. in his or her own name, or through a partnership or limited liability company in which he or she is a direct partner or member.

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.07

§ 17.07 Taxation of Investment Through a U.S. or Foreign Partnership or Limited Liability Company

The rules that apply to individual ownership also apply to individual ownership of an interest in a partnership. Just as in the case of a U.S. partnership having only U.S. partners, it is the partners that are taxed and not the partnership. n42 The foreign partners, whether corporate or individual, are subject to U.S. tax on their shares of partnership income from U.S. sources. If the partnership is engaged in a U.S. business, the partners will be considered to be engaged in a U.S. business and will be subject to tax accordingly. n43

A US person who contributes cash or real or personal property to a foreign partnership may be required to furnish information about the transfer to the IRS. n43.1 Penalties of up to \$100,000 may be imposed if the information is not reported. n43.2 In addition, the person will be required to recognize gain as if the contributed property had been sold for its fair market value at the time of the contribution. n43.3 Information must be furnished if either of the following requirements is met: n43.4

- immediately after the transfer, the US person owns at least a 10-percent interest in the partnership; or
- the value of the property transferred, when added to the value of any other property transferred in a Section 721 contribution by that person (or a related person) to the partnership within the 12-month period ending on the date of the transfer, exceeds \$100,000.

The information is reported on Form 8865, "Information Return of US Persons With Respect to Certain Foreign Partnerships." n43.5 The Form 8865 generally must be filed with the transferor's timely filed (including extensions) income tax return (including a partnership return of income) for the tax year that includes the date of the transfer. n43.6

Three potentially overlapping sets of withholding rules apply to U.S. partnerships having foreign partners. First, when a domestic partnership generates fixed or determinable annual or periodical income that is not effectively connected with the conduct of the trade or business within the United States, and is, therefore, subject to withholding, a 30 percent withholding is required at the time the income is included in the partner's distributive share of partnership income whether or not it is actually distributed. n44 The Treasury Regulations provide that the partnership should withhold from all distributions to the foreign partner, to the extent that the distribution includes items of fixed or determinable annual or periodical income, except that if the partnership withholds on a foreign partner's share of distributable income before the income is actually distributed to the partner, then withholding is not required when the income is

subsequently distributed. Second, a domestic partnership is also required to withhold 35 percent of each foreign partner's pro rata share of the partnership's gain from the disposition of a U.S. real property interest, n45 and 10 percent of the fair market value of any U.S. real property interest distributed to a foreign partner. n46 Finally, both foreign and domestic partnerships are required to withhold a specific percentage of the effectively connected taxable income allocable to foreign partners. For corporate partners, the withholding rate is 35 percent, and noncorporate. n47 Forms 8804, 8805, and 8813 are to be used by U.S. or foreign partnerships to pay and report the *IRC Section 1446* withholding tax.

The legal characteristics of a foreign entity must be reviewed to determine if it will be treated as a partnership for U.S. tax purposes. Treasury Regulations, commonly known as the "check-the-box" regulations, greatly simplify this analysis. n48

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.08

§ 17.08 Taxation of Investment by a Business Trust or Regulated Investment Company

[1] In General

A business trust, whether organized under the laws of the United States or a foreign jurisdiction, generally is subject to U.S. tax in the same manner as a corporation. Consequently, there is no federal income tax advantage in holding realty through a trust rather than a corporation. However, a U.S. business trust that qualifies as a Real Estate Investment Trust (REIT) is not subject to tax on ordinary income or capital gains that are distributed to its shareholders. ⁿ⁴⁹ Alien stockholders of a REIT are subject to U.S. dividend withholding tax on distributions from the REIT ^{n49.1} and are subject to tax under the FIRPTA rules on their shares of gain from sales or exchanges by the REIT of U.S. real property interests, ^{n49.2}

A special look-through rule applies to distributions from a qualified investment entity. ^{n49.3} A "qualified investment entity" is either a REIT or--before 2010 only--a regulated investment company (RIC) that is a US real property holding corporation. ^{n49.4} Under the look-through rule, any distribution by a qualified investment entity to a nonresident alien individual, foreign corporation, or other qualified investment entity is, to the extent attributable to gains from sales or exchanges of the qualified investment entity of US real property interests, treated as gain recognized by that nonresident alien individual, foreign corporation, or other qualified investment entity from the sale or exchange of a US real property interest. ^{n49.5}

There is an exception, however--any distribution by a qualified investment entity to a nonresident alien individual or a foreign corporation with respect to any class of stock that is regularly traded on an established securities market located in the US is not treated as gain recognized from the sale or exchange of US real property interest if that individual or corporation did not own more than 5 percent of that class of stock at any time during the 1-year period ending of the date of the distribution. These distributions instead are treated as dividend distributions and are subject to 30 percent (or lower treaty rate) dividend withholding. ^{n49.6}

Caution:

Although this exception applies when the distribution is made to a foreign shareholder of a RIC or REIT, it does not apply when the distribution is made to another RIC or a REIT. ^{n49.7} For those distributions, a look-through rule applies, and the character of the distribution as FIRPTA gain is retained and must be tracked by the recipient RIC or REIT; the distribution itself, however, does not become dividend income

in the hands of the recipient RIC or REIT. Therefore, the recipient RIC or REIT can in turn distribute amounts attributable to that distribution (attributable to the sale of USRPIs) to its US shareholders as capital gain. However, if any recipient RIC or REIT in turn distributes to a foreign shareholder amounts that are attributable to a sale by a lower tier RIC or REIT of USRPIs, any amounts distributed to a foreign shareholder are treated as FIRPTA gain or as dividend income, according to whether or not the distribution to that foreign shareholder qualifies for dividend treatment. n49.8

The gain from a sale of stock in a domestically controlled qualified investment entity is not subject to the above look-through rule and is not taxed under FIRPTA. n49.9 A domestically controlled qualified investment entity is one in which at all times during the testing period less than 50 percent in value of the stock was held directly or indirectly by foreign persons. n49.10 The testing period is the 5-year period ending on the date of the distribution or disposition, or, if shorter, the period during which the qualified investment entity was in existence. n49.11

[2] FIRPTA Wash Sale Rule

A FIRPTA wash sale rule prevents foreign persons from avoiding FIRPTA tax on a RIC or REIT distribution by disposing of the RIC or REIT stock shortly before the distribution and buying it back shortly thereafter. n50 The period within which the wash sale rule applies is 61 days. This period includes the 30 days before and the 30 days after the ex-dividend date, in addition to the ex-dividend date itself. n50.1

The wash sale rule comes into play only if the following events occur: n50.2

- A foreign person disposes of RIC or REIT stock during the 30-day period preceding a distribution on that stock;
- The distribution would have been treated as a disposition of a US real property interest
- The foreign person acquires a substantially identical interest, or enters into a contract or option to acquire one, during the 61-day wash sale period; and
- The foreign person does not in fact receive the distribution in a manner that subjects the person to tax under FIRPTA.

If the above events occur, the foreign person must pay FIRPTA tax on an amount equal to the amount of the distribution that avoided FIRPTA tax as a result of the disposition. n50.3

Attribution rules apply in determining if a foreign person has acquired an interest that falls within the wash sale provision. A foreign person is treated as having acquired any interest acquired (or which will be acquired under a contract or option entered into within the wash-sale period) by any person treated as related within the meaning of *IRC Sections 267(b) or 707(b)(1)*. n50.4 These rules generally apply a 50-percent relationship test. n50.5

The wash sale rule also applies to substitute dividend payments. n50.6 A substitute dividend payment is a payment, made to the transferor of a security in a securities lending transaction or a sale-repurchase transaction, of an amount equivalent to a dividend distribution which the owner of the transferred security is entitled to receive during the term of the transaction. n50.7 The wash sale rule applies if the substitute dividend payment would be properly treated by the foreign taxpayer as receipt of a distribution of FIRPTA gain if the distribution from the RIC or REIT had itself been received by the taxpayer, but was not treated in that manner because of the transaction giving rise to the substitute dividend payment. n50.8 The wash sale rule also applies to other similar arrangements to which Treasury may extend it. n50.9

The wash sale rule does not apply if the foreign person actually receives the distribution, either with respect to the disposed of or acquired stock. n50.10 It also does not apply to any transaction involving the disposition of any class of stock that is regularly traded on an established securities market located in the United States, provided the foreign person did not hold more than 5 percent of that class of stock within the one year period ending on the date of the distribution. n50.11

[3] Withholding on REIT or RIC Distributions Attributable to the Sale of a US Real Property Interest

Withholding is required on REIT or RIC distributions to foreign persons that are attributable to the sale of USRPIs. The required withholding rate is 35 percent or, to the extent provided by regulations, 15 percent (or 20 percent in tax years beginning after December 31, 2010). n50.12 No withholding is required, however, with respect to a disposition that is treated as a disposition of a US real property interest solely because of the wash sale rule. n50.13

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.09

§ 17.09 Taxation of Investment by a U.S. Corporation

[1] General Rules

In general, the tax consequences of a nonresident alien's using a U.S. corporation to acquire U.S. real estate are:

- (1) The corporation would be subject to U.S. income taxes at regular corporate rates on its worldwide income. State corporate income and franchise tax will generally apply.
- (2) Dividends paid to nonresident alien shareholders generally would be subject to the 30 percent withholding tax, unless otherwise modified by treaty. n51
- (3) Any tax loss arising from the operation of corporate-owned real estate cannot be passed on to the corporation's shareholders. (Aliens cannot be shareholders in an S corporation, which permits flow-through of tax losses to shareholders for federal tax purposes.) n51.1
- (4) Individual nonresident alien shareholders generally would be subject to U.S. estate, gift and generation-skipping transfer taxes and state inheritance taxes on the value of their shares in the U.S. corporation. n51.2
- (5) Gain or loss on disposition of the shares would be subject to U.S. tax if the corporation is a "U.S. real property holding corporation" n51.3 (see § 17.11, below).
- (6) The deductibility of interest paid or accrued by the corporation to a related party would be subject to various limitations. n52
- (7) The corporation may be subject to a personal holding company tax, in addition to regular income tax. n52.1 The characteristics of a "Personal Holding Company" are described in Chapter 15, above.

[2] Earnings Stripping: IRC Section 163(j)

IRC §§ 2422 limits the extent to which a U.S. corporation or a foreign corporation can reduce its U.S. tax liability by making interest payments to a related party that is not subject to U.S. tax with respect to those payments.

Before the enactment of *IRC Section 163(j)*, financing a U.S. trade or business with as much debt as possible was advantageous for the following reasons:

- the 30 percent statutory withholding rate could be reduced under many treaties and interest could be paid out to a related party with little or no U.S. withholding tax. Dividends, on the other hand, were subject to a 5 to 15 percent tax rate under most treaties; and
- the U.S. trade or business could get a deduction at the 34 percent tax rate for interest paid to a related party, whereas no deduction was allowed for dividends.

Therefore, when earnings were repatriated by a U.S. corporation to a foreign parent in the form of interest, there was a double benefit: little or no U.S. withholding tax and a reduction of U.S. taxable income.

IRC Section 163(j) disallows a portion of the interest expense paid to related parties when all of the following conditions are present:

- the corporation's debt to equity ratio exceeds 1.5 to 1;
- the total net interest expense of the corporation exceeds the sum of 50 percent of the company's adjusted taxable income ("ATI") plus any "excess limitation carry forward." ATI is taxable income computed without regard to any deduction for net interest expense, net operating loss carryovers, depreciation, amortization or depletion; excess limitation carry forward means the excess (if any) of 50 percent of the corporation's adjusted taxable income, over the corporation's net interest expense, which excess limitation carry forward may be carried to the first, second and third succeeding taxable years; and
- the corporation pays or accrues disqualified interest during the taxable year. "Disqualified interest" includes any of the following items:
 - any interest paid or accrued by the taxpayer (directly or indirectly) to a related person n53.1 if no federal income tax is imposed on the recipient.
 - any interest paid or accrued with respect to any indebtedness to unrelated parties if there is a disqualified guarantee of that indebtedness and no gross basis tax is imposed with respect to that interest; and
 - any interest paid or accrued (directly or indirectly) by a taxable REIT subsidiary n53.2 of a REIT to that REIT.

In applying the earnings stripping provision, a special rule applies to certain partnerships that receive interest payments. Interest that is paid to an otherwise related partnership is not treated as paid to a related person (and is therefore not "disqualified interest") if less than 10 percent of the profits and capital interests in the partnership are held by persons not subject to federal income tax on that interest. This rule, however, does not apply to interest allocable to any partner of the partnership who is related to the taxpayer. n54 If a treaty between the US and a foreign country reduces the tax on a partner's share of interest paid to the partnership, that partner's interest in the partnership is treated as held in part by a tax-exempt person and in part by a taxable person for purposes of applying the 10-percent rule. The amount of interest treated as tax-exempt is the same proportion as the rate of tax imposed without regard to the treaty, and reduced by the rate of tax imposed under the treaty, bears to the rate of tax imposed without regard to the treaty. n54.1

The interest disallowed under 163(j) is the lesser of the excess described in the second item above or the tax exempt interest paid to the related party. n55 Interest expense disallowed under 163(j) can be carried forward indefinitely and used in any year in which the taxpayer's ATI exceeds net interest expense. n56

In order to circumvent 163(j), many U.S. borrowers repaid their related party debt and subsequently borrowed funds from third-party lenders with the foreign parent guaranteeing the repayment of the debt. However, third-party loans *guaranteed* by tax exempt or foreign related parties are treated as related party loans for purposes of applying 163(j) if the interest paid on those loans is not subject to gross basis taxation. n56.1 A "gross basis" tax is a U.S. income tax imposed without regard to deductions, n56.2 such as the 30 percent gross withholding tax imposed on interest paid to a foreign person. n56.3 To the extent that a treaty reduces the 30 percent gross withholding tax, a ratable portion of the interest paid is treated as though it was not subject to a gross basis tax. n57

The term "guarantee" is defined broadly to include any arrangement in which a person directly or indirectly through an entity or otherwise assures payment of another's obligation under any indebtedness. n57.1 The U.S. Treasury has reserved comment on the treatment for purposes of the earnings stripping rules of back-to-back loans and guarantees of third-party debt by related parties. n58 To the extent provided in Regulations, the rules will not apply to guaranteed debt if the interest on the indebtedness would be subject to a net basis taxation if it was paid to the guarantor. n59

The earnings stripping rules apply to corporate partners. n59.1 Except to the extent provided by regulations, in the case of a corporation that owns, directly or indirectly, an interest in a partnership, the corporation's share of partnership liabilities must be treated as liabilities of the corporation for purposes of applying the earnings stripping rules to the corporation. n59.2 In addition, the corporation's distributive share of interest income or expense of the partnership is treated as interest income or interest expense of the corporation. n59.3 Treasury is authorized to reallocate shares of partnership debt, or distributive shares of the partnership's interest income or interest expense, as may be appropriate. n59.4 For example, it is not intended that the application of the earnings stripping rules to corporations with direct or indirect interests in partnerships be circumvented through the use of allocations of partnership interest income or expense (or partnership liabilities) to or away from partners. n59.5

The application of 163(j) has significantly increased the taxable income of affected companies and lowered the overall rate of return that foreign owners achieve on their U.S investments.

The provisions of *IRC Section 163(j)* are complemented by restrictions on the ability of foreign parties to receive tax exempt portfolio interest from related debtors. n60

[3] Informational Reporting Requirements

Certain domestic corporations and foreign corporations engaged in business within the United States must comply with certain informational reporting and record-keeping requirements. n61 A corporation subject to this requirement, referred to as a "reporting corporation," must file with the Service an annual information return containing information about its transactions with related parties, including identifying information about those parties. The return is submitted on Form 5472. Generally, the required statement includes:

- (1) the amounts paid or received on the purchase or sale of inventory or other property;
- (2) rent or royalties paid and received;
- (3) amounts paid or received for technical services;
- (4) commissions paid and received;

(5) amounts lent and borrowed, and interest paid or received with respect to loans; and

(6) premiums paid and received for insurance. n62

A "reporting corporation" is defined as a corporation in which a foreign person owns 25 percent or more of the combined voting power of all classes of stock of that corporation or 25 percent or more of the value of all classes of stock of the corporation. Broad stock attribution rules apply in determining whether the control requirement is met, and the term "related party" is also very broadly defined. n63 In general, transactions of a reporting corporation with a parent corporation, a major shareholder, a related trust or partnership, or a subsidiary corporation must be reported under the provisions of *IRC Section 6038A*. In addition to the reporting requirements, *IRC Section 6038A* imposes burdensome record-keeping requirements.

The penalty for noncompliance under either the reporting or record-keeping requirements is severe. The IRS may impose an initial penalty of \$10,000 per year for a failure to report related-party transactions, maintain adequate records, or comply with an IRS request for records. Additional penalties of \$10,000 per month per violation may be imposed for continued failure to comply after notification. n64 Lastly, if a reporting corporation fails to comply with a valid summons for information, the IRS may, in its sole discretion, adjust the cost of goods sold deduction and other allowable deductions for amounts paid to foreign related parties claimed on the U.S. tax return. The IRS will presumably not adjust such items upwards.

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.10

§ 17.10 Taxation of Investment by a Foreign Corporation

A foreign corporation that acquires real property in the United States will be subject to U.S. tax at 30 percent on its gross rental income, unless it is engaged in a U.S. business or makes the net taxable income election as discussed above. n65 Dividends paid by the corporation directly or indirectly to nonresident alien shareholders *may* be subject to a U.S. withholding tax of 30 percent (unless reduced by a tax treaty). United States withholding tax is applied to dividends of a foreign corporation only if 25 percent or more of the income of the corporation was derived from U.S. sources for the prior three years. n66 If the 25 percent threshold is passed, the 30 percent withholding is applied to the portion of the dividend that bears the same ratio to the dividend as the corporation's effectively connected income bears to its total income from all sources.

[1] Branch-Profits Tax

In addition to the normal corporate tax, foreign corporations that engage in a U.S. trade or business, or that elect to be treated as so engaged, are generally subject to a U.S. branch-profits tax. n67 Foreign corporations having only passive investments in the United States, which are not engaged in a U.S. trade or business, are not affected by this tax. Foreign corporations subject to the tax pay a tax of 30 percent on their "dividend equivalent amount," unless a treaty exempts the foreign corporation from the tax or reduces the tax. n67.1 Even then, however, the tax is imposed, notwithstanding a treaty provision to the contrary, unless the foreign corporation is a qualified resident of the treaty country. n67.2 For this purpose, a "qualified resident" is defined in a way that is intended to prevent foreign corporations from being organized in treaty jurisdictions and beneficially owned by nonresident aliens who are not residents of the treaty jurisdiction. n67.3

The "dividend equivalent amount" is the foreign corporation's effectively connected earnings and profits for the year, reduced for increases in the net U.S. equity of the foreign corporation and increased for decreases in the net U.S. equity of the foreign corporation. n67.4 The term "U.S. net equity" means, in general, the excess of the adjusted basis of assets used in a U.S. trade or business over the U.S. liabilities connected with the conduct of a trade or business in the United States. n67.5 An active real estate business owned by a foreign corporation that is not reinvesting its earnings in the United States will likely be affected by the branch-profits tax rules.

[a] Mechanics

The branch-profits tax is imposed on the foreign corporation's effectively connected earnings and profits for the tax

year, which are referred to as the "dividend equivalent amount" (DEA). n67.6 A corporation's DEA is determined according to the following steps: n67.7

(1) The corporation must first determine the amount of its earnings and profits effectively connected with its U.S. trade or business for the tax year; this amount is known as "effectively connected earnings and profits" (ECE&P). ECE&P does *not* include: certain specific categories of income, including earnings derived from the sale of any interest in a U.S. real property holding corporation, and the assets and liabilities of the foreign corporation that are treated as connected with such income are not taken into account in determining the U.S. assets or U.S. liabilities of the foreign corporation. n67.8 In computing ECE&P, current-year profits are reduced by the current-year U.S. corporate tax, but not by current-year distributions to shareholders. Prior-year deficits will not carry forward to reduce current-year ECE&P for purposes of determining the branch-profits tax. n67.9

(2) ECE&P is then *reduced* (but not below zero) by any "increase in U.S. net equity" over the prior year or *increased* by any "decrease in U.S. net equity" over the prior year (but only to the extent of the accumulated effectively connected earnings and profits as of the close of the preceding taxable year.) n67.10 United States net equity is defined to mean U.S. assets reduced (including below zero) by U.S. liabilities. n67.11 United States assets include the amount of any money and the aggregate adjusted basis (as used for computing earnings and profits) of any property of a foreign corporation treated as connected with a U.S. trade or business. n68 United States liabilities include any liabilities of a company treated as effectively connected with a U.S. trade or business as computed under *Regulations Section 1.882-5*. n69

The operation of the branch-profits tax can be illustrated by the following examples.

Example 1:

Assume a foreign corporation, X, organized in the Netherlands, is engaged in the active conduct of a real estate business in the United States. For Year 1, X has rental income of \$2 million, interest expense to unrelated parties of \$900,000, and other deductions of \$600,000. As a result, its ECE&P from its real estate operations is \$500,000 before U.S. tax. X *does not* reinvest these earnings in its real estate business. For Year 1, X's DEA would be \$330,000 (i.e., \$500,000 - \$170,000 (U.S. tax at 34 percent)). Assuming X is not entitled to treaty benefits (because of treaty shopping), X's total U.S. tax liability is \$269,000, computed as follows:

X's U.S. corporate tax (\$500,000 x 34%)	\$170,000
X's branch-profits tax ((\$500,000 - \$170,000) x 30%)	99,000
	\$269,000*

*Note that the tax burden is equal to the federal tax burden that would be imposed if the foreign corporation conducted the U.S. activities through a wholly-owned U.S. subsidiary, which paid a dividend of its entire after-tax earnings, with the dividend being subject to 30% withholding.

Example 2:

1-17 Federal Taxes Affecting Real Estate § 17.10

If *X* *does* reinvest its after-tax profits (\$330,000) in additional U.S. real property in Year 1, its DEA is zero (i.e., \$500,000 - (\$170,000 + \$330,000)), and it pays no branch-profits tax. *X*'s total tax liability is \$170,000.

Example 3:

Assume *X* reinvests all of its after-tax earnings in Year 1, but that in Year 2, *X* sells all its assets for a gain of \$2 million. This amount represents all of *X*'s ECE&P for the year. Assume also that *X*'s decrease in U.S. net equity as a result of the sale is \$500,000. *X*'s U.S. tax liability is \$1.75 million, determined as follows:

U.S. corporate tax (\$2,000,000 x 34%)	\$680,000
Branch-profits tax (((\$2,000,000 - \$680,000 + \$330,000*) x 30%)	495,000
	\$1,175,000

* Note that the decrease in net equity is added to the DEA, but only to the extent of the \$330,000 that was reinvested in additional assets and that reduced the DEA amount in Year 1.

If *X* disposes of all of its U.S. assets and withdraws from conducting a business in the United States, then, subject to an anti-abuse rule, the branch-profits tax will not apply. n71

Example 4:

Assume foreign corporation *Y* is organized in a country that does not have a tax treaty with the United States. *Y* operates a meat packing plant in the United States. *Y* had a net operating loss of \$200,000 attributable to its U.S. business operations in Year 1, its first taxable year. *Y* also had a deficit in earnings and profits for Year 1 of \$150,000. In Year 2, *Y* had a profit attributable to its U.S. operations of \$100,000. Assume *Y* does not reinvest its Year 2 profits in U.S. assets. *Y*'s total U.S. tax liability in Year 2 is \$30,000. Thus, even though *Y* had an accumulated deficit in earnings and profits and a net operating loss carryforward for corporate tax purposes, it is still subject to a branch-profits tax on its current year's effectively connected earnings and profits. The U.S. tax liability is computed as follows:

Y's U.S. corporate tax (\$100,000-\$100,000 NOL carryforward x 34%)	\$ --
Y's branch-profits tax (\$100,000 x 30%)	30,000
	\$30,000

Since the branch-profits tax is intended to equalize the tax on operations through U.S. subsidiaries and foreign branches, if a foreign corporation is subject to the branch-profits tax, there is no U.S. secondary withholding tax when dividends

are paid by the corporation to its shareholders. n72 A foreign country's taxes cannot be credited against the branch-profits tax.

[b] Interaction with Treaties

Some U.S. income tax treaties specifically provide that the U.S. may impose a branch-profits tax. The rate of tax that can be imposed is usually limited to the rate that may be imposed on dividends paid to a foreign parent. Most U.S. treaties, however, obligate the United States not to discriminate against corporations organized in the treaty partner. This means they cannot be subject to greater U.S. tax than similarly situated U.S. companies. Arguably, these nondiscrimination provisions preclude the United States from imposing a branch-profits tax, although the United States could override any treaty provision merely by enacting conflicting statutory language after the treaty is approved. Congress generally chose not to do so in this case. Therefore, *IRC Section 884(e)* provides that the branch-profits tax generally does not apply to a foreign corporation that is a qualified resident of a treaty country if precluded by a treaty. However, this provision has been modified several times, and future legislation could add additional restrictions to this rule.

Consequently, when a treaty allows the United States to impose a branch-profits tax, and assuming that the other requirements of *IRC Section 884(e)* are satisfied, that tax is imposed on the foreign corporation at the rate specified in the treaty. If no rate is specified in the treaty, the branch-profits tax is applied at the rate for dividends paid to a foreign company by its wholly-owned U.S. subsidiary. Under many treaties this calls for a reduced rate of 5 percent. If the treaty allows a branch-profits tax, but limits it to profits attributable to a permanent establishment or provides a different formula for determining the tax, the treaty prevails. If the treaty prohibits a branch-profits tax (i.e., because of a nondiscrimination provision), and assuming that the other requirements of *IRC Section 884(e)* are satisfied, then no branch-profits tax is imposed. However, a secondary withholding tax, if applicable and if allowed under the treaty, is imposed when dividends are paid to shareholders.

[c] Treaty-Shopping Exception

Treaty prohibitions of branch-profits tax and secondary withholding taxes will be overridden if the shareholders are deemed to be treaty shopping. "Treaty shopping" is deemed to occur in any case in which (1) more than 50 percent of the *value* of the stock of the foreign corporation is owned directly or indirectly by third parties, that is, by individuals who are not residents of the treaty country or who are not U.S. citizens or resident aliens, or (2) 50 percent or more of its income is used (directly or indirectly) to meet liabilities to persons who are not residents of the treaty country or who are not U.S. citizens or resident aliens. However, treaty shopping is *not* deemed to be involved when the stock of the foreign corporation is primarily and regularly traded on an established securities market in the country of its residence, or when the foreign corporation is wholly owned by a foreign corporation that is resident in the same country and with stock that is publicly traded on a stock exchange in that country. n73 Thus, a Dutch corporation with stock that is substantially owned by non-Dutch persons is exempt from the branch-profits tax if its stock is primarily and regularly traded on an international stock exchange located in The Netherlands or the Dutch corporation is owned by a publicly traded Dutch corporation. The Treasury has authority to carve out other exceptions to the treaty shopping rules.

[d] Impact

The imposition of a branch-profits tax increases the U.S. tax liability of foreign corporations that are engaged in a U.S. trade or business and do not have treaty protection. Although the U.S. branches of most foreign companies were always subject to U.S. tax on current earnings from a U.S. trade or business, under prior law, dividends paid by the company were frequently considered foreign-source income, so there was no U.S. withholding tax. The branch tax is a surrogate for that withholding tax. The new branch tax can also increase the U.S. tax on foreign corporations that were treaty protected under prior law but are now subject to the branch-profits tax under the treaty-shopping rules. Thus, for example, much foreign investment into the U.S. through Netherlands and Swiss corporations is adversely affected.

Foreign corporations organized in treaty countries that allow a U.S. branch-profits tax (for instance, Canada and France) are also adversely affected but do have the benefit of a lower tax rate under the treaty.

[2] Secondary Withholding Tax

The secondary withholding tax is a tax imposed on the payment of interest or dividends to a foreign lender/shareholder by a foreign

[Click here to view image.](#)

corporation engaged in U.S. trade or business. *IRC Sections 1441(a) and 1442(a)* impose withholding taxes on gross income from sources within the United States. *IRC Section 861(a)* sets forth the circumstances in which dividends from a foreign corporation can be U.S. source income, and *IRC Section 884(f)* provides the circumstances in which interest paid by a foreign corporation can be considered U.S. source income.

In general, dividends are treated as U.S.-source income unless less than 25 percent of the foreign corporation's gross income for the three preceding years was effectively connected with a U.S. trade or business. n73.1

Under the rule for interest, interest expense deductions allocable to the U.S. branch under the existing allocation rules (*Regulations Section 1.882-5*) in excess of the interest actually paid by it, is subject to withholding tax at the rate applicable to the home office, irrespective of where the home office borrowed the funds. n73.2 In effect, the U.S. branch is treated as a U.S. subsidiary with a "notional loan" from its home office. The "excess interest" is treated as paid on the last day of the corporation's taxable year and any U.S. tax due is payable when the U.S. tax return is required to be filed (not including extensions). n74 When the U.S. branch borrows directly from a third party, the rate of withholding applicable to the third party applies. The branch would be the U.S. withholding agent and is required to withhold tax on the date of payment. This rule can be illustrated by the following examples.

Example 1:

Assume a foreign company, organized in country X, has a U.S. branch and borrows \$10 million from a country X resident. Country X does not have an income tax treaty with the United States. Under the allocation rules (*Regulations Section 1.882-5*), \$500,000 of the interest expense of the foreign company is allocated to its U.S. branch. The U.S. branch pays no interest directly to third parties. Under the secondary withholding tax provision, a withholding tax of \$150,000 (i.e., 30 percent of \$500,000) is imposed. n74.1

Example 2:

The facts are the same as in Example 1, except that the foreign company is organized in a U.S. treaty partner. The rate of U.S. withholding tax on interest under the treaty is 10 percent. The home office borrows \$5 million from a resident of a second U.S. treaty partner, in which the treaty provides a zero rate of withholding on interest, and \$5 million from a resident of a country with no U.S. treaty. The U.S. branch pays no interest directly to third parties. Withholding tax of \$50,000 (i.e., \$500,000 x 10 percent) is imposed on the \$500,000 of interest that is allocable to the U.S. branch under *Regulations Section 1.882-5*. The issue is whether the home-office rate, the second-treaty-partner rate or the nontreaty rate applies. Under this example, the rate applicable under the treaty between the United States and the home office applies. If the interest were paid by the U.S. branch directly to the resident of the nontreaty country, the 30 percent statutory rate applies. If the interest were paid by the U.S. branch directly to the resident of the treaty country with zero rate, the zero rate applies. n74.2

[a] Election to Reduce U.S. Liabilities

The regulations under Section 884 permit a foreign corporation to make an annual election to reduce its U.S. liabilities (computed in accordance with *Regulations Section 1.882-5*) down to the amount of liabilities actually shown on the books and records of the U.S. branch at the end of its tax year. ⁿ⁷⁵ This annual election enables taxpayers to increase their net equity and therefore reduce their branch-profits tax.

By making the election, the foreign corporation must permanently forego the interest deduction calculated under *Regulations Section 1.882-5* attributable to the reduction in liabilities. ⁿ⁷⁶

This election is especially useful to foreign corporations whose U.S. trades or businesses produce effectively connected losses. Although a foreign corporation with effectively connected losses would generally not have a branch tax liability in that year, the corporation may have branch level interest tax to the extent the interest computed under *Regulations Section 1.882-5* exceeds actual interest paid by the branch. In this situation, the corporation may prefer to forego the interest deduction rather than pay the branch level interest tax.

[b] Interaction with Treaties

Many U.S. treaties contain articles that prohibit the United States from imposing a secondary withholding tax. Other treaties contain provisions reducing the rate of tax than can be imposed. The regulations, however, specifically limit the benefits of a treaty article prohibiting or reducing U.S. tax on interest paid by a foreign corporation. The foreign corporation will generally be entitled to a reduced treaty rate for the tax on excess interest under the interest article of the tax treaty. ⁿ⁷⁷

[c] Impact

The use of a branch to make investments into the U.S. through treaty shopping needs to be restructured due to the imposition of two taxes: (1) branch-profits tax on dividend-equivalent amounts, ^{n77.1} and (2) secondary withholding tax on interest paid to the investor. ^{n77.2} These provisions have a substantial impact on real estate operations through U.S. branches. In many cases, this causes foreign investors to incorporate their real estate investments in a U.S. company.

[3] Interaction of Branch-Profits and Secondary Withholding Taxes

The Service announced that the branch-profits tax is not imposed on foreign corporations that are qualified residents of certain countries (listed under Section 1, below) with which the United States has an income tax treaty. ⁿ⁷⁸ The income tax treaties in effect between the United States and the countries listed under Section 2, below, permit imposition of the branch-profits tax, subject to any limitations and rate reductions contained in the treaty with that country. ⁿ⁷⁹

Section 1--Countries whose qualified residents are not subject to the branch-profits tax:

Austria	Greece	Luxembourg
Belgium	Hungary	Morocco
People's Rep. of China	Iceland	Netherlands
Cyprus	Ireland	Norway
Denmark	Italy	Pakistan
Egypt	Jamaica	Philippines
Finland	Japan	Sweden
Germany	Korea	Switzerland

United Kingdom

Section 2--Treaties that permit imposition of the branch-profits tax:

Australia	Israel	Romania
Barbados	Kazakhstan	South Africa
Canada	New Zealand	Trinidad & Tobago
France	Poland	U.S.S.R.

[4] Earnings Stripping: *IRC Section 163(j)*

The rules under *IRC Section 163(j)* (detailed in § 17.09[2] above) that limit related party interest expense deductions apply to foreign corporations engaged in a U.S. trade or business as well as to U.S. corporations. n80 These rules apply only to foreign corporations whose debt to equity ratios exceed 1.5 to 1. n81

In determining the debt/equity ratio of a foreign corporation, the debt of the corporation equals the worldwide liabilities of the foreign corporation as calculated under *Regulations Section 1.882-5*. The equity of the foreign corporation is the amount of its worldwide assets (determined under *Regulations Section 1.882-5*) less worldwide liabilities. n82 It appears that the debt/equity ratio of a foreign corporation is determined by reference to the *value* of its assets, rather than the *adjusted basis* of its assets. n83

The foreign corporation determines the amount of related party interest by first applying the branch level interest rules under *IRC Section 884(f)*. Interest treated as actually paid by the U.S. branch under Section 884(f)(1)(A) is treated as paid to the recipient by a wholly owned U.S. subsidiary of the foreign corporation. n84 In addition, to the extent that the interest allocable to the branch (under the rules of *IRC Section 882*) exceeds the interest paid by the branch, the foreign corporation is subject to tax under *IRC Section 881(a)* in the same manner as if such excess were paid to it by a wholly-owned domestic subsidiary on the last day of its taxable year. n85 This interest deduction may be limited under *IRC 163(j)* if the recipient is a related tax-exempt party. For example, if the rate of tax on interest paid by the branch to a foreign party is reduced by treaty from 30 percent to 10 percent, two-thirds of the interest paid is treated as tax exempt related party interest.

Excess interest (the excess of the amount allowed as a deduction under *Regulations Section 1.882-5* over the amount paid by the branch) is treated as paid to the foreign corporation by its wholly owned domestic subsidiary. n86 Therefore, this amount is treated as paid to a related party for purposes of *IRC Section 163(j)*. If the tax on excess interest is reduced by treaty, interest will be treated as paid to a tax exempt related person to the extent of the reduction. Note that the above holds true even when the foreign corporation has borrowed only from unrelated third parties.

Foreign corporations calculate their disallowed interest under 163(j) generally in the same manner as do U.S. corporations. Proposed *Regulations Section 1.163(j)-8* provides rules for the application of Section 163(j) to foreign corporations. An outline of the basic rules under 163(j) is provided in § 17.09[2] above.

Federal Taxes Affecting Real Estate

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 17 Foreign Investment in U.S. Real Estate *

1-17 Federal Taxes Affecting Real Estate § 17.11

§ 17.11 Taxation of Aliens on Gains from U.S. Real Estate

The Foreign Investment in Real Property Tax Act of 1980 (FIRPTA) added Section 897 to the Code and totally revamped the law governing the *disposition* of U.S. real property by non-resident aliens and foreign corporations. n87 Before the enactment of FIRPTA (*IRC Section 897*), significant tax-planning opportunities were available for nonresident aliens investing in U.S. real property. Generally, a nonresident alien did not have any U.S. tax liability on the disposition of real estate if he (1) owned U.S. real estate that was not used in a U.S. trade or business and (2) was not present in the United States for 183 days or more during the taxable year. n88 This was so even though the disposition generated U.S. source income. n89 In addition, gain from the sale of stock of a U.S. corporation also was not taxable under the above rules *even though* the corporation held nothing but U.S. real estate.

FIRPTA was Congress's response to the perceived abuses resulting from the widespread avoidance of U.S. taxes with respect to the disposition of U.S. realty by aliens.

[1] General Rule

The basic thrust of *IRC Section 897* is that the gain or loss from the disposition of any investment in U.S. realty, known as "United States real property interests," by a nonresident alien individual or a foreign corporation must be taxed as if it were effectively connected with the conduct of a trade or business in the United States. n90 In essence, this has the effect of taxing the gain as if the alien were a U.S. resident.

To enforce the collection of this tax, information return requirements n91 and withholding requirements n92-93 are imposed.

[2] Definitions

Although the basic premise of *IRC Section 897* is fairly straightforward, the definition of the type of property subject to taxation is typically complex. The key terms are defined below.

- (1) *United States real property interest (USRPI)*--An interest in real property located in the United States or Virgin Islands, and any interest, other than an interest *solely* as a creditor, in any *domestic* corporation. n94 Stock of a domestic corporation is not treated as a USRPI, however, in the following instances:

(a) The taxpayer establishes that the corporation was not a U.S. real property holding corporation during the shorter of the period during which the taxpayer held the stock, or the five-year period ending on the date of the disposition of the interest. n95

(b) The corporation holds no USRPI on the date of the disposition of its stock and any USRPI held by it during the shorter of (i) the period during which the taxpayer held the stock, or (ii) the preceding five-year period, was disposed of in transactions in which any realized gain was fully recognized or ceased to be U.S. real property interests by reason of the application of the rules described in this paragraph to another corporation. n96

(c) The stock is of a class of stock of a corporation that is regularly traded on an established securities market but only if the taxpayer did not hold more than 5 percent of such class of stock at any time during the shorter of (i) the period after June 18, 1980, during which the taxpayer held the stock, or (ii) the preceding five-year period. n97 The attribution rules of *IRC Section 318*, subject to certain modifications, must be used in determining this 5 percent threshold. n98

(2) *Interest in real property*--This includes any of the following interests:

(a) An outright ownership interest or leaseholds of land and improvements and options to acquire such interests. n99 Improvements include inherently permanent structures and their structural components as well, for example, wiring, plumbing, and the like. n100 This category is defined primarily by reference to the investment tax credit regulations.

(b) Moveable walls, furnishings, and other personalty associated with the use of property. n101 However, personal property must be used as an ordinary and necessary corollary to the real property's use. Personal property is associated with the use of real property only in limited circumstances, and only when both the personal property and the USRPI with which it is associated are held by the same person or by related persons. n102 Local law definitions of realty and personalty are also not determinative. n103 Under certain circumstances, personalty will not be treated as a USRPI if it is disposed of separately from the realty. n104

(c) *Growing* crops and timber; mines and wells; and unextracted ores, minerals, and other natural deposits. n105

(3) *Interest other than that solely as a creditor*--An interest solely as a creditor either in real property or in a domestic corporation does not constitute a USRPI. n106 If a person has any interest in realty or an entity other than that solely as a creditor, and also holds an interest solely as a creditor, those interests will generally be treated as separate and distinct interests, although they will be aggregated, and treated as interests other than those solely as a creditor, if the interest solely as a creditor has been separated from or acquired separately from the interest other than that solely as a creditor for a principal purpose of avoiding FIRPTA. n107 Extensive attribution rules apply in determining a person's interests in the property or entity. An interest that includes a right to a payment from an entity, the amount of which is contingent on the appreciation in value of an interest in the entity, the value of the assets of the entity, or the general gross or net proceeds or profits of the entity is not an interest "solely as a creditor." Accordingly, a debt instrument containing a participation feature will not be treated as an interest solely as a creditor. n108

(a) *Real estate*: This category includes a life estate; remainder interest; reversionary

interest; time-sharing arrangement; *any* direct or indirect right to share in the appreciation in value of realty or in the gross or net proceeds or profits generated by realty, for example, shared appreciation mortgages; and option, contract, or right of first refusal to acquire any interest that is other than that solely as a creditor. n109

(b) *Corporations*: Any interest that is considered as stock for federal income tax purposes; any direct or indirect right to share in appreciation in value of an interest in the above entity or a direct or indirect right to share in the appreciation in the value of the assets, or gross or net proceeds or profits derived by the corporation, or any right to indirectly acquire such an interest. n110

(c) *Partnerships*: Any interest that is considered as a partnership interest for federal income tax purposes, any direct or indirect right to share in the appreciation in value of an interest in the above entity or a direct or indirect right to share in the appreciation in the value of the assets; or gross or net proceeds or profits derived by the partnership, or any right to directly or indirectly acquire such an interest. n111 This definition would include an interest in a limited liability company that is taxed as a partnership for federal income tax purposes.

(d) *Estates and trusts*: Any interest as an owner or beneficiary of a trust or estate for federal income tax purposes; any direct or indirect right to share in appreciation in value of an interest in the above entity or a direct or indirect right to share in the appreciation in the value of the assets; or gross or net proceeds or profits derived by the estate or trust, or any right to directly or indirectly acquire such an interest. n112

(4) *United States Real Property Holding Corporation (USRPHC)*--As discussed above, if a domestic corporation is a USRPHC, then the stock of the corporation is a USRPI and the disposition of the stock of the corporation would be taxable under the FIRPTA rules. Regulations n112.1 set forth requirements to establish that a corporation is not a U.S. real property holding corporation. Unless those requirements are satisfied, it is presumed that a domestic corporation is a U.S. real property holding corporation. n112.2 Generally, a corporation is a USRPHC if the fair market value of its USRPIs equals or exceeds 50 percent of the sum of the fair market value of its U.S. real property interests, and interests in foreign real property, plus any of its other assets used or held for use in a trade or business. n113 However, the fair market value of a corporation's U.S. real property interests will be presumed to be less than 50 percent of the fair market value of its assets if the *book value* of its USRPIs is 25 percent or less of the book value of its real estate assets, assets used or held for use in a trade or business and stock of certain foreign real estate corporations. n114

Although only an interest in a *domestic* corporation can be a USRPI and be subject to tax upon disposition, n115 *any* corporation, foreign or domestic, can be a USRPHC. n116 However, *solely* for purposes of determining whether a corporation is a USRPHC, an interest in a foreign corporation will be considered to be a USRPI. n117

Example 1:

A nonresident alien (NRA) owns 100 percent of the stock of X, a foreign corporation. X's only asset is a parcel of U.S. realty. The stock of X is not a USRPI because X is a foreign corporation. Therefore, the NRA is not subject to tax under *IRC Section 897* upon his disposition of the X stock. X, however, would be subject to *IRC Section 897* if it disposed of the U.S. realty. A buyer of X stock would not obtain a step-up in the basis of the X stock. This preserves the inherent untaxed gain in the stock.

Example 2:

An NRA owns 100 percent of the stock of Y, a U.S. corporation. Y's only asset is 20 percent of the stock of foreign corporation X. X's only asset is a parcel of U.S. realty. Solely for purposes of determining whether Y is USRPHC, the stock of X will be treated as a USRPI. As a result, Y is a USRPHC and its stock is a USRPI which is subject to *IRC Section 897* if disposed of by the NRA. However, the stock of X is not a USRPI.

Special "look-through" provisions also apply. Generally, these provisions provide that assets held by a partnership, trust, estate, or controlled corporation will be treated as being held proportionately by the partners, beneficiaries, and stockholders upward through the chain of ownership. ⁿ¹¹⁸ Therefore, if in example 2 above, Y had held at least 50 percent of the fair market value of X's stock, X's ownership of the U.S. realty would have been attributed directly to Y. As a result, Y would have been a USRPHC whether or not X met that test.

[3] Operative Provisions

Although the general rule of *IRC Section 897* appears merely to bring dispositions of USRPI under the U.S. taxing jurisdiction, a closer reading reveals that in many instances such transactions are given inherently different treatment than the treatment given similar transactions involving U.S. taxpayers.

(1) *Distributions by foreign corporations*--Any gain realized by a foreign corporation upon the distribution of a USRPI (including a disposition in liquidation or redemption to a controlling parent corporation) generally must be recognized unless the distributee of the property would be subject to taxation on a subsequent disposition of the property *and* the basis of the property in the hands of the distributee is no greater than the adjusted basis of the property before distribution, increased by the amount of gain (if any) recognized by the distributing corporation, except to the extent that non-recognition is provided for in Regulations. ⁿ¹¹⁹ The IRS has issued a Revenue Procedure pursuant to which certain foreign corporations that would otherwise be subject to gain recognition on the distribution of U.S. real property interests can obtain non-recognition on the distribution by entering into a closing agreement with the IRS. ⁿ¹²⁰

(2) *Nonrecognition provisions*--Generally, except as provided in regulations, any nonrecognition provision of the Internal Revenue Code will apply to a transaction involving a USRPI only if it is exchanged for a U.S. real property interest which would be subject to U.S. tax upon sale. ⁿ¹²¹

(3) *Partnerships, estates, and trusts*--The sale or exchange of an interest in a partnership, estate, or trust will be treated as a pro rata disposition of the USRPIs held by the entity. ⁿ¹²² An interest in a partnership in which 50 percent or more in value of the gross assets consist of U.S. real property interests, and 90 percent or more of the value of the gross assets consist of U.S. real property interests and cash or cash equivalents, is considered entirely a U.S. real property interest for purposes of withholding on dispositions of such interests. ⁿ¹²³

(4) *Contribution of capital to a foreign corporation*--Generally, gain must be recognized by a non-resident alien individual or foreign corporation upon the contribution to capital of a USRPI to a foreign corporation. ⁿ¹²⁴

(5) *Qualified Investment Entities*--A "qualified investment entity" is either a REIT or--before 2008 only--a regulated investment company (RIC) that is a US real property holding corporation. ⁿ¹²⁵ Any distribution by a qualified investment entity to a nonresident alien individual, foreign corporation, or

other qualified investment entity is, to the extent attributable to gains from sales or exchanges of the qualified investment entity of US real property interest, treated as gain recognized by that nonresident alien individual, foreign corporation, or other qualified investment entity from the sale or exchange of a US real property interest. n125.1 There is an exception, however--any distribution by a qualified investment entity to a nonresident alien individual or a foreign corporation with respect to any class of stock that is regularly traded on an established securities market located in the United States is not treated as gain recognized from the sale or exchange of US real property interest if that individual or corporation did not own more than 5 percent of that class of stock at any time during the 1-year period ending on the date of the distribution. These distributions instead are treated as dividend distributions and are subject to dividend withholding. n126 The distribution of a US real property interest by a domestically controlled qualified investment entity will generally be treated for purposes of the FIRPTA rules the same as distributions from a foreign corporation, to the extent of the foreign investors' interests. n127 The sale of stock in a domestically controlled qualified investment entity is not taxable under FIRPTA because stock in a domestically controlled investment entity is not a US real property interest. n127.1 A domestically controlled qualified investment entity is one in which at all times during the testing period less than 50 percent in value of the stock was held directly or indirectly by foreign persons. n128 The testing period is the 5-year period ending on the date of the distribution or disposition, or, if shorter, the period during which the qualified investment entity was in existence. n128.1

(6) *Election by a foreign corporation to be treated as a domestic corporation*--If, under a treaty obligation of the United States, a foreign corporation is entitled to nondiscriminatory treatment, that is, pursuant to a treaty the United States cannot treat a foreign taxpayer more unfavorably than a U.S. taxpayer, the foreign corporation may make an election to be treated as a domestic corporation for purposes of *IRC Section 897*. n129

Essentially, the effect of this election is to tax the corporation as if it were a U.S. corporation for dispositions of USRPI and to exempt it from the special rules discussed above. However, it also would mean that the stock of the foreign corporation could then be treated as a USRPI for all purposes. n130 Once the election is made, it is binding in all future taxable years unless the Service consents to a revocation. n131

[4] Withholding and Reporting Requirements

Special withholding requirements apply when a nonresident or foreign corporation disposes of an interest in US real property. In general, any person acquiring a USRPI from a foreign person to deduct and withhold a tax equal to the lesser of 10 percent of the total amount realized by the transferor on the disposition, or the transferor's maximum tax liability (as determined by the Service) if the transferor requested the Service to determine its maximum tax liability. n132 Alternatively, the transferor or transferee can lower the amount withheld, upon request to the IRS, if a lower amount will not jeopardize collection of the total tax due. n133 Transferees must generally report and pay over any tax withheld within 20 days after the date of transfer. n134 Reporting and payment may be delayed, however, when there is a pending application for a withholding certificate. n135

Special rules apply with regard to withholding on distributions and certain other transactions by corporations, partnerships, trusts and estates. n136 Special withholding requirements also apply to joint transferees of US real property interests n137 and for options to acquire a US real property interest. n138 No withholding is required on the initial grant of an option to acquire a US real property interest to a nonresident alien, but if the alien disposes of the option before exercising it, the transferee must deduct and withhold a tax equal to 10 percent of the amount realized by the transferor upon the disposition. n138.1

All transferees are required to withhold the amounts described above upon the acquisition of a USRPI from *anyone* unless one of the following exceptions is met: n139

(1) The transferor furnishes the transferee a U.S. taxpayer identification number and an affidavit stating that the transferor is not a foreign person. This exception does not apply if the transferee knows that the affidavit is false, or if the transferee fails to furnish a copy of the affidavit to the Secretary. n140 Alternatively, in lieu of furnishing a the non-foreign affidavit to the transferee, a transferor may furnish it to a "qualified substitute," who must then furnish a statement to the transferee stating, under penalties of perjury, that the qualified substitute has the affidavit in his or her possession. n140.1 A "qualified substitute" means (1) the person, including any attorney or title company, responsible for closing the transaction, other than the transferor's agent, and (2) the transferee's agent. n140.2 This exemption does not apply if the transferee or qualified substitute has actual knowledge that the affidavit or statement is false, if the transferee or qualified substitute receives a notice from a transferor's agent, transferee's agent, or qualified substitute that the affidavit or statement is false, or if the transferee or qualified substitute fails to meet a regulatory requirement that the transferee or qualified substitute furnish a copy of the affidavit or statement to the Secretary. n140.3

(2) In the case of a U.S. transferor corporation, the corporation time provides the transferee with an affidavit stating that the corporation is not, and has not been, a U.S. real property holding corporation or that, as of the date of the disposition, the interests in the corporation are not US real property interests by reason of *IRC Section 897(c)(1)(B)*. Again, this exception is inapplicable if the transferee knows that the statements are false. n141

(3) The transferee receives a "qualifying statement" regarding the transferor. A qualifying statement is a statement received from the Internal Revenue Service declaring that (1) the transferor has either reached an agreement with the Service to pay the tax or is exempt from tax on the gain recognized, and (2) any unpaid withholding tax has been satisfied by the transferor or transferee, or a security agreement has been provided. n142

(4) In the case of a personal residence in the hands of the transferee, the amount realized for the property does not exceed \$300,000. n143

(5) The disposition is of stock regularly traded on an established securities market. n144

(6) The disposition is treated as a disposition of a US real property interest solely by reason of the FIRPTA wash sale rule. n144.1

Final regulations have been issued on withholding required upon the disposition of a U.S. real property interest by a publicly traded partnership, publicly traded trust, or REIT. The regulations impose the withholding obligation on the transferee of a U.S. real property interest, with respect to each holder of an interest in the entity that is a foreign person. n145 Accordingly, it is now a standard practice to include a provision in a contract for the purchase of real estate or of an interest in a corporation requiring the transferor to certify whether or not it is a foreign person. n146

Any withheld tax must be reported on Forms 8288 and 8288-A and paid over by the 20th day after the date of the transfer. The Forms are required to be filed with the Internal Revenue Service Center in Philadelphia, Pennsylvania. n147 Extensions of time for filing the form may be granted by private letter ruling. n148 The Regulations contain specific rules regarding distributions by REITs. n149 The amount subject to withholding for a REIT is the amount of any distribution designated by a REIT as a capital dividend, determined on a per share basis, multiplied by the number of shares owned by the foreign person. The largest amount of any distribution by a REIT that could be designated as a capital gain dividend under *IRC Section 857(b)(3)(C)* is designated as a capital dividend. Thus, this type of distribution automatically is subject to withholding. n150

Although the primary responsibility to withhold is with the transferee, duties are also imposed upon the agents of the transferee and the transferor and on qualified substitutes. A transferor's agent, transferee's agent, or qualified substitute who has actual knowledge that the affidavit or statement is false must notify the transferee in the time and manner to be specified by regulations. n151 One who fails to do so has the same duty to deduct and withhold that the transferee would have had if notice had been properly given. n152 An agent's or qualified substitute's liability under these circumstances, however, is limited to the amount of the compensation that the agent or qualified substitute derives from the transaction. n152.1

To the extent required in Regulations, a return must be filed by all foreign persons holding "direct investments in United States real property interests" stating:

- (1) the person's name and address;
- (2) a description of the property held; and
- (3) such other information as regulations may prescribe. n153

No regulations have been proposed or adopted under *IRC Section 6039C*, however, so, at this time, no return is required.

A foreign person is treated as holding a "direct investment in United States real property interests" only if (1) he did not engage in a trade or business in the United States at any time during the calendar year, and (2) the fair market value of the USRPI held by the person is \$50,000 or more. n154

Taxpayers must report their reliance on a treaty that overrules or modifies any provisions in the Code. This reporting requirement includes reporting of reliance on treaty provisions that affect FIRPTA and the branch-profits tax rules. n155 These regulations require disclosure on tax returns when the taxpayer has a "treaty-based return position" that reduces the tax liability. Penalties are imposed for failure to comply with the regulations. For each material failure to disclose, a penalty of \$10,000 for C corporations and \$1,000 for individuals may be imposed. n156

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate Scope

Scope

SCOPE

The previous chapters of this book focus on how the federal income tax affects real estate. This chapter shifts gears and addresses the impact of the federal transfer taxes (estate, gift, and generation skipping) on real estate. This book's goal is "to describe the tax significance of owning, operating, and disposing of real property." This objective cannot be achieved without some consideration given to the transfer tax system. The entire chapter is a survey of the estate planning implications of ownership of real property, not a do-it-yourself estate planning guide.

The first part of this chapter provides an overview of the transfer tax system. The latter sections discuss some of the methods that can be employed to alleviate the impact of these taxes.

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.01

§ 18.01 Special Note Regarding Repeal of Federal Estate Tax and Generation-Skipping Tax

[1] In General

Legislation enacted in 2001 n1 repealed the federal estate tax and generation-skipping tax (GST), effective for decedents dying after 2009. n1.1 The repeal, however, lasts only for one year because the 2001 legislation contains a built-in sunset provision that reinstates the federal estate tax and GST for estates of decedents dying after 2010. n1.2 After 2010, the federal estate tax and GST law, *as in effect before the enactment of the 2001 legislation*, will apply. n1.3 Thus, absent new legislation, for decedents dying after 2010, the maximum estate tax rate is 55 percent (plus an additional 5 percent for estates over \$10 million), n1.4 and the estate tax exemption amount is only \$1 million. n1.5

[2] Repeal of IRC Section 1014 Stepped Up Basis Provisions

The "cost" for not having an estate tax--for decedents dying in 2010--is the loss of stepped-up basis in property acquired from a decedent. Instead, a modified carryover basis rule applies, under which those receiving property from a decedent will take as a basis in the property the lesser of its adjusted basis to the decedent or its fair market value on the date of the decedent's death. n1.6

There is a notable exception, however. An executor may choose to increase the basis in certain assets owned by the decedent and acquired by beneficiaries at death. Under this rule, each decedent's estate generally is permitted to increase the basis of assets transferred by up to a total of \$1.3 million. This \$1.3 million figure is increased by the amount of unused capital losses, net operating losses, and certain "built-in" losses of the decedent. n1.7 In addition, the basis of property transferred to a surviving spouse can be increased by an additional \$3 million. n1.8 Thus, the basis of property transferred to surviving spouses can be increased by a total of \$4.3 million. n1.9

Nonresidents who are not US citizens are allowed to increase the basis of property acquired from a decedent dying in 2010 only by \$60,000, and they may not increase that amount by any built-in losses or carryovers. n1.10

For decedents dying after 2010, absent new legislation, *IRC Section 1014* is re-instated and the pre-2010 stepped-up basis rules for property acquired from decedent apply. n1.11

[3] Gift Taxes

Unlike the federal estate tax and GST, there is no repeal of the gift tax for 2010. There is, however, a reduction in the maximum federal gift tax rate for taxable gifts made in 2010. The maximum marginal tax rate for 2010 is 35 percent, for aggregate taxable gifts over \$500,000. n1.12

The unified credit exemption amount for gift taxes for all years after 2001 is \$1 million. n1.13 For gifts made after 2010, the gift tax rate reverts to the same rate as for federal estate taxes, with a maximum marginal tax rate of 55 percent, imposed on aggregate taxable gifts over \$3 million. n1.14

[4] Congressional Response to Estate Tax Repeal

As of June 2010, Congress has not enacted new estate tax legislation. So the current state of the law is that decedents dying in 2010 will have to pay no federal estate taxes. n1.15 For decedents dying after 2010, the pre-2001 estate tax and generation-skipping tax provisions will apply. n1.15.1 Nobody is satisfied with this situation, and nearly everyone expects it to change. But what will happen is anyone's guess. One bill that has received substantial attention would re-instate the federal estate tax retroactively to January 1, 2010, and establish a permanent \$3.5 million exemption amount for estate taxes. n1.15.2 There does seem to be agreement that a permanent estate tax exemption amount--rather than one that changes from year to year--is likely. There also seems to be a consensus that the exemption should be in excess of the \$1 million exemption that will apply if there is no new estate tax legislation. n1.15.3

[5] Estate Planning After 2009

The uncertain state of the law after 2009 both as to the estate tax exemption amount and estate tax rates makes it impossible to estimate the likely amount of estate taxes for a client. Assuming that an estate tax is imposed after 2010, however, planning will involve the same issues as under pre-2010 law, regardless of the specific amount of the federal estate tax exemption amount or tax rates that may be enacted. The specifics will depend on the eventual content of estate tax legislation.

[6] Continued Compliance with Statutory Requirements Required for Estate Tax Benefits for Estates of Decedents Dying Before 2010

For decedents dying before 2010, various estate tax benefits are available (such as reduced valuation, deductions, or extended estate tax payment options) provided that statutory conditions are satisfied. Various compliance requirements extend for several years after the date of the decedent's death. The repeal of the estate tax does not eliminate these compliance requirements in order to avoid recapture of the estate tax (or acceleration of installment payments, when the estate tax is being paid in installments). Among the requirements that taxpayers must continue to meet are the following:

- not retaining a development right with respect to property for which a conservation easement deduction is claimed; n1.15.4
- continuing to use property for which a special-use valuation election is made in a qualifying use for 10 years after the decedent's death; n1.15.5
- materially participating in a qualified-family owned business interest for which the deduction under *IRC Section 2057* is claimed for at least 10 years following the decedent's death; n1.15.6 and
- complying with any payment conditions when estate taxes are paid in installments because the estate consists largely of an interest in a closely held business; n1.15.7
- Complying with various distribution restrictions relating to noncitizens; an estate tax will be imposed

on (1) any distribution prior to January 1, 2021, from a qualified domestic trust before the date of the death of the noncitizen surviving spouse and (2) the value of the property remaining in a qualified domestic trust on the date of death of the noncitizen surviving spouse if such surviving spouse dies before January 1, 2010. n1.16-1.20

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.01A

§ 18.01A Overview of Federal Transfer Taxes

[1] In General

[a] Tax Rates

Historically, the federal transfer tax system is made up of three separate taxes: the gift tax, the estate tax, and the generation-skipping tax. n1.21 Transfer taxes are also imposed on United States citizens or residents who receive gifts or bequests from expatriates. n1.22 Through equivalent tax rates, the gift tax and estate tax have historically worked in tandem to tax both lifetime gifts and testamentary bequests in an equivalent manner.

The estate and gift tax rate depends on the taxpayer's date of death or date of the gift. The maximum tax rate for both estate and gift taxes is 55 percent, for taxable gifts made or decedents dying before 2002, 50 percent for taxable gifts made or decedents dying in 2002, 49 percent for taxable gifts made or decedents dying in 2003, 48 percent for taxable gifts made or decedents dying in 2004, 47 percent for taxable gifts made or decedents dying in 2005, 46 percent for taxable gifts made or decedents dying in 2006, and 45 percent for taxable gifts made or decedents dying in 2007 through 2009. n2

For decedents dying in 2010, there is no estate tax due, because the estate tax has been repealed. n3 The repeal, however, lasts only for one year because the 2001 repealing legislation contains a built-in sunset provision that reinstates the federal estate tax and GST for estates of decedents dying after 2010. n3.1 After 2010, the federal estate tax law, *as in effect before the enactment of the 2001 legislation*, will apply. n3.2 Thus, absent new legislation, for decedents dying after 2010, the maximum estate tax rate is 55 percent (plus an additional 5 percent for estates over \$10 million). n3.3 In contrast, the gift tax is imposed on taxable gifts made in 2010; the maximum tax rate is 35 percent, on aggregate taxable gifts of over \$500,000. n3.4 For gifts made after 2010, absent new legislation, the gift tax rate reverts to the same rate as for federal estate taxes, with a maximum marginal tax rate of 55 percent, imposed on aggregate taxable gifts over \$3 million. n3.5

[b] Unified Credit

A unified credit is available to offset either the gift tax or the estate tax that would otherwise be paid. Any credit that an individual uses during life to offset the gift tax reduces the amount of credit remaining to offset any applicable estate tax due at death. The credit has the effect of an exemption for a transfer of property. The amount of the credit, and the

2-18 Federal Taxes Affecting Real Estate § 18.01A

amount of the effective exemption, depends on the year of the gift or the decedent's death, as follows: n4

Year of Death or Gift	Estate tax exemption amount	Gift tax exemption amount
Before 1998	\$600,000	\$600,000
1998	\$625,000	\$625,000
1999	\$650,000	\$650,000
2000 or 2001	\$675,000	\$675,000
2002 or 2003	\$1 million	\$1 million
2004 or 2005	\$1.5 million	\$1 million
2006-2008	\$2 million	\$1 million
2009	\$3.5 million	\$1 million
2010	N/A (estate tax repealed)	\$1 million
2011 and future years	\$1 million	\$1 million n4.1

[c] Generation-Skipping Tax

The generation-skipping tax (GST) is designed to tax certain multigenerational transfers that may have escaped taxation under the other two transfer tax provisions. The GST is separate from the other transfer taxes and is paid *in addition* to any other gift or estate taxes that are payable with respect to a transfer. *All* transfers to which the GST applies are taxed at the highest uniform transfer tax rate. This rate structure, in conjunction with the other transfer taxes, can result in situations in which the total transfer taxes paid could actually exceed the value of the asset transferred. n5 The generation-skipping tax is repealed, effective for generation-skipping transfers after December 31, 2009. n5.1 The repeal, however, lasts only for one year because the 2001 legislation contains a built-in sunset provision that reinstates the GST for estates of decedents dying after 2010. n6 After 2010, absent new legislation the GST law, *as in effect before the enactment of the 2001 legislation*, will apply. n7

[2] Estate Tax

[a] In General

NOTE:

The estate tax has been repealed, effective for decedents dying after 2009. n8 See § 18.01, above, for a detailed discussion.

The estate tax is imposed on the decedent's "taxable estate," which is determined by subtracting from the decedent's "gross estate" certain deductions authorized by statute. The gross estate consists of all property owned outright at death, as well as property in which the decedent has shared an interest or retained certain powers. n9

After determining the gross estate, certain deductions are allowed before computing the estate tax. A taxpayer is allowed to pass an unlimited amount of qualified marital-deduction property to his or her spouse (the "unlimited marital deduction"). n10 In addition, the estate is allowed a deduction for any charitable bequests, n11 for debts of the decedent and for expenses of administration that the estate incurs. n12 A deduction is allowed for an unpaid mortgage on property where the value of the decedent's interest in the property, undiminished by the mortgage, is included in the value of the gross estate. n12.1 Where only part of the security for a mortgage is included in a decedent's gross estate, the deduction cannot exceed the amount of the security included in the estate. n12.2 If the decedent was a co-obligor on an unpaid mortgage, a deduction is ordinarily allowed for the decedent's ratable portion of the loan. n12.3 The cost of maintaining a decedent's property during the pendency of estate tax proceedings and interest on funds borrowed for that

purposes may be deductible as administrative expenses. n12.4 The value of the gross estate (including taxable gifts made after December 31, 1976), less deductions, is called the "taxable estate" and it is upon that amount that the estate tax is levied. n13 The final step in determining the actual tax due is the application of the unified transfer tax rate schedule against the taxable estate to arrive at the tentative estate tax; from that amount is subtracted the unified transfer tax credit, plus the amount of gift taxes payable on gifts made after December 31, 1976, and credits for state and foreign death taxes. n14

The unified credit is available to offset either the gift tax or the estate tax that would otherwise be paid. The amount varies, depending on the year of the gift or date of death. n15-16 See § 18.01A[1][b], above, for the amount of the credit.

[b] Marital Deduction

The marital deduction applies to qualifying *inter vivos* and testamentary transfers to one's spouse. For estate tax purposes, the value of the transferred property interest can be considered in calculating the marital deduction "only to the extent that such interest is included in determining the value of the gross estate." n17 In addition, if the surviving spouse has only a "terminable" interest in the transferred property, no marital deduction generally may be available on the property. n18 The purpose behind this limitation is to ensure that property transfers afforded the marital deduction in the first estate will be eventually taxed in the second spouse's estate. One exception to this general rule applies to qualified terminable interest property (QTIP). Treatment of terminable property interests as QTIP interests is an elective provision made by the executor of the decedent's estate. n19 The decedent's will can either direct the executor to make the election or leave it to the executor's discretion.

Property eligible for the QTIP election must meet two conditions: (1) the property must pass from the decedent, n20 and (2) the surviving spouse must have a qualifying income interest in the property for life. n21 The principal attraction of the QTIP is that the decedent can obtain the benefit of the marital deduction in the estate of the first spouse, and yet can still predetermine the ultimate disposition of the property upon the death of the surviving spouse, and the executor can select the amount of qualifying QTIP property to which the election will apply.

The IRS has issued a revenue procedure that provides relief for surviving spouses and their estates in situations where a predeceased spouse's estate made an unnecessary QTIP election that did not reduce the estate tax liability of the estate. n21.1 The revenue procedure describes the circumstances in which these QTIP elections will be treated as a nullity for federal tax purposes, so that the property will not be subject to transfer tax with respect to the surviving spouse. n21.2

Revenue Procedure 2001-38 applies to QTIP elections where the election was not necessary to reduce the estate tax liability to zero, based on values as finally determined for federal estate tax purposes. This can occur when a QTIP election was made when the taxable estate (before allowance of the marital deduction) was less than the applicable exclusion amount. n21.3 It can also occur in the following situation--the decedent's will provided for a "credit shelter trust" to be funded with an amount equal to the applicable exclusion amount, with the balance of the estate passing to a marital trust intended to qualify as a QTIP trust. The estate made QTIP elections for both the credit shelter trust and the marital trust. The QTIP election for the credit shelter trust was not necessary because no estate tax would have been imposed whether or not the QTIP election was made for that trust. n21.4

Revenue Procedure 2001-38 does not apply in situations where a partial QTIP election was required with respect to a trust to reduce the estate tax liability and the executor made the election with respect to more trust property than was necessary to reduce the estate tax liability to zero. It also does not apply to elections that are stated in terms of a formula designed to reduce the estate tax to zero. n21.5 It also does not apply to protective elections. n21.6

For a QTIP election within the scope of *Revenue Procedure 2001-38*, the IRS will disregard the election and treat it as null and void. The property for which the election is disregarded will not be includable in the gross estate of the

surviving spouse under *Treas Reg* §§ 25.2702, and the surviving spouse will not be treated as making a gift under *IRC Section 2519* if he disposes of the income interest with respect to the property. Further, the surviving spouse will not be treated as the transferor of the property for generation-skipping transfer tax purposes. n21.7

To establish that an election within the scope of *Revenue Procedure 2001-38*, the taxpayer must provide sufficient evidence to that effect. This can be done by producing a copy of the estate tax return filed by the predeceased spouse's estate establishing that the election was not necessary to reduce the estate tax liability to zero, based on values as finally determined for federal estate tax purposes. This information, including an explanation of why the election should be treated as void under *Revenue Procedure 2001-38*, should be submitted either with the estate tax return filed for the surviving spouse's estate, or with a request for a private letter ruling submitted at any time prior to filing that return. n21.8

[3] Gift Tax

The "gross" gift tax is imposed on the sum of current taxable gifts and all prior taxable gifts; a reduction from the gross tax is then allowed for the taxes paid on the prior gifts. n22 The gift tax is structured in this manner to ensure that each year's gifts are taxed at the highest effective rate possible, taking into consideration the donor's prior gift history. A "gift" is any gratuitous transfer not made for full and adequate consideration. Thus, a gift can exist when an entire property is given away, when a life estate is given away, or even when property is sold for less than its fair market value (the difference between the sales price and the FMV is a gift).

To avoid taxing every conceivable gift, Congress has allowed a donor to give a certain amount to each donee annually without incurring a gift tax. This annual exclusion amount for gifts made before 2002 is \$10,000, or \$20,000 if a husband and wife make a gift jointly ("gift splitting"). n23 For gifts made after 1998, these amounts are subject to adjustment for inflation. n24 The annual exclusion amount for gifts made in 2002 through 2005 is \$11,000, or \$22,000 for spousal joint gifts. n24.1 The annual exclusion amount for gifts made in 2006, 2007, and 2008 is \$12,000, or \$24,000 for spousal joint gifts n24.2 The annual exclusion for gifts made in 2009 and 2010 is \$13,000, or \$26,000 for spousal joint gifts. n24.3 Exclusions from gift taxes are also permitted for gifts of tuition payments made directly to an educational institution and medical payments made directly to a person who provides medical care. n25 In addition, gift tax deductions for charitable donations and interspousal gifts are allowed for purposes of determining the taxable gift. n26 The tax is computed from the unified rate tables and the amount of unified credit available must be used to reduce the amount of tax currently payable. n27

A gift tax unified credit is also available which in effect gives an exemption for the gift. The amount of the credit and effective exemption depends on the year of the gift. For years after 2001, the exemption amount is \$1 million. n27.1

The donor is liable for any amount of tax that is currently payable; n28 however, the parties may agree that the donee will pay this tax. A gift transferred under such an agreement is called a "net gift."

[4] Generation-Skipping Transfer Tax

Note About Repeal of the Generation-Skipping Transfer Tax:

The generation-skipping tax has been repealed, effective for generation-skipping transfers after 2009. n28.1 See § 18.01, above, for a detailed discussion.

The generation-skipping transfer tax (GSTT) is an additional tax imposed on transfers for the benefit of a person at least two generations below the transferor. This tax is designed to prevent circumvention of the "normal" operation of the transfer tax system through the use of "multigeneration" or "skip-generational" gifts. n29 There is a lifetime exemption amount for every individual. Property to which the transferor allocates the exemption amount is not subject to the GST.

n29.1 The GST exemption amount depends upon the calendar year in which the generation-skipping transfer is made, as follows: n30

Calendar Year	GST Exemption
Before 2004	\$1 million n30.1
2004-2005	\$1.5 million
2006-2008	\$2 million
2009	\$3.5 million
2010	N/A (GST repealed)
2011 and later years	\$1 million, subject to cost-of-living adjustments n30.2

The following situation illustrates such a transfer.

Example:

A grantor sets up a trust giving his daughter a life estate, the remainder to be distributed to the daughter's children. At the death of the daughter, the trust property is not included in the daughter's estate since the daughter had only a life estate. The objective of the GST is to impose a transfer tax on the trust property at the time that the daughter's interest terminates (at her death). The tax is imposed even if the grantor were to make a transfer directly to her grandchildren ("direct skips"). If the GST exemption amount is less than the amount of GST transfers, the donor/transferee/trustee is liable for the tax, depending on the manner and type of generation-skipping transfer involved. n31

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.02

§ 18.02 Transfers to Reduce Taxable Estate

In this section, some of the more common methods for reducing the taxable estate are discussed. The premise for each of these is the same--i.e., *inter vivos* transfers will remove the property *and its future appreciation* from the donor's estate, at a tax cost (or a consumption of the unified credit) based on only the current fair market value. The following list is by no means exhaustive; however, it attempts to discuss those techniques most suited to real property.

[1] Transfer of a Fee Interest

A transfer of a fee interest is an outright transfer of the entire interest in the real property. The transferor parts with all present and future control, and the transferee can do what he or she wishes with the property.

[a] Gift of Fee Interest

One method that clearly reduces the taxable estate of an individual who owns real estate is simply giving away a fee interest in the real property, assuming that the transferor survives for at least three years. n32 A grantor may wish to transfer the property to heirs. A gift allows this easily, without heirs incurring costs associated with a sale/purchase arrangement. A transfer by gift also removes any future appreciation in the property from the donor's estate.

NOTE:

Planning related to lifetime gifts in excess of the amount of the gift tax unified credit involves a great degree of uncertainty, involving the amount by which the transferred gift is likely to appreciate and the unified credit and estate tax that will be in effect should the transferor die. In addition, the sunset provision that repeals all 2001 estate tax amendments for decedents dying after 2010 unless the amendments are later re-enacted adds uncertainty to any gift and estate tax planning. n32.1 A gift will shelter the transferred asset from further transfer taxes imposed on the transferor, but the uncertainty surrounding the estate tax repeal for decedents dying in 2010 (including the possibility of a re-imposition of the estate tax retroactive to January 1, 2010) and the uncertainty of the estate tax exemption amount for decedents dying after 2010 make evaluating the pros and cons of a gift difficult. The recent and continuing decline in most real estate values may in some cases make property basis considerations an important one in determining whether a gift should be made. If the donor's adjusted basis in the property is greater than the fair market value of the property at the time of the gift, then the donee takes the fair market value as a basis for purposes of determining loss. n32.2 n32.3- In contrast, if the donor were to

sell the property, the donor would be able to recognize a loss, and give the proceeds to the donee.

An inter vivos transfer of real estate to an irrevocable trust can be a useful tool to take advantage of multiple annual gift tax exclusions and thereby reduce a decedent's estate. In one case, a decedent, when living, transferred a commercial building to an irrevocable trust. The decedent's two children were the co-trustees and primary beneficiaries of the trust, each having a one-half interest in trust corpus and income. Each also had a power of appointment with respect to a one-half share of the trust. Under this power, 16 contingent remainder beneficiaries of the trust were designated. Each of the beneficiaries had a power to demand from the trust an immediate distribution to them of property up to the annual gift tax exclusion. n32.4 The power lapsed 30 days after the transfer of property to the trust. None of the beneficiaries demanded a distribution under this power. Nevertheless, the estate tax return of the decedent was allowed 16 annual gift tax exclusions with regard to the transfer of the building to the trust. The value of those exclusions was therefore excluded from the decedent's taxable estate. The unrestricted right of beneficiaries to demand immediate distributions of trust property was held to be a present interest that qualified for the annual gift tax exclusion. n32.5 This technique can be attacked by the IRS, however, if there is an underlying understanding among the parties that the rights to demand distributions will not be exercised, or if beneficiaries are not notified of those rights. n32.6

However, a gift of real property has numerous disadvantages, in addition to the above-described uncertainties relating to the increasing estate tax unified credit and repeal of the estate tax. n32.7 First, the grantor often incurs a gift tax (resulting either in the consumption of the unified credit or the actual payment of a tax). n33 The upfront costs are avoided by using the unified credit, although this limits the amount of credit available to be used against future gift tax or the estate tax. n34

Second, gifts receive a carryover basis in the hands of the donee, adjusted only for the amount of gift tax attributable to the appreciation element. n35 Thus, if the donee were to sell appreciated real property received through a gift for an amount equal to its fair market value at the time of the gift, the donee would have to pay tax on any built-in gain. n36 On the other hand, if this property were to pass through the estate (subjecting it to the estate tax), it would receive a substituted, often stepped-up, basis, and the taxable gain on the sale would be eliminated. n37

Third, if the property is gifted within three years of death, the gifted property and also the amount of gift tax paid are included in the decedent's gross estate. n38

In addition, the grantor must give up all dominion and control to achieve the desired estate planning benefits. If the grantor retains certain powers or economic interests in the transferred property, the entire value of the property is included in his or her estate. n39 A decedent's gross estate includes the value of property interests transferred by the decedent during his or her lifetime (other than a bona fide sale for full and adequate consideration) if the decedent retains for life the possession or enjoyment of the property or the right to income from the property. n39.1 Even a transfer of legal title to property during the decedent's lifetime will not remove property from a decedent's estate if there is an implied agreement that the transferor may continue to use or control the property after the transfer. n39.2

[b] Sale of Fee Interest

A sale of a fee interest has some of the same advantages as a gift in fee; it is a fairly simple procedure, and it removes the future appreciation from the estate. In addition, it provides a number of other advantages: first, the grantor is not subject to the gift tax; second, when the property is sold, the buyer receives a basis equal to his purchase price. These two advantages can be seen clearly with an example:

Example:

Suppose real property has a fair market value of \$100,000 and has been depreciated so that its basis

is \$10,000. If given away, the donor incurs a gift tax on \$23,800 (assuming the annual exclusion is not available and the taxpayer has already taken advantage of the maximum unified credit). The donee's depreciable basis is limited to \$31,420 (\$10,000 basis plus gift tax paid relating to net appreciation: $\$23,800 \times .9 = \$21,420$). If the property is acquired through a purchase, no gift tax is incurred and the buyer can depreciate the full \$100,000. n39.3

There are some disadvantages to sales of fee interests, however. First, the buyer must be able to come up with the purchase price. Often, the younger generation may not be able to provide the purchase price. Second, the seller is faced with income tax on his gain. Third, the sales proceeds are included in the estate of the decedent, unless they are disposed of. Finally, if the price is not adequate, the seller is deemed to have made a gift, subject to the gift tax, in an amount equal to the excess value.

[i] Sale and Leaseback Transactions

One problem inherent in the outright sale or gift of a fee interest is that the seller loses all control of the property. This problem can be mitigated through a sale and leaseback arrangement. The sale removes the asset from the estate, while the leaseback allows the seller to retain use or control over the property. Moreover, the rent that is paid to the buyer may be deductible by the seller, if there is a business purpose to the lease. The leaseback should be priced carefully to make sure that the rental is at arm's-length in order to avoid a possible recharacterization as a transfer with a retained interest, a recharacterization that could well cause the property to remain in the transferor's estate. The rent expense should be deductible if an arm's length rental is charged, but will not be deductible if the rent is excessive. n40

Example:

Assume that an individual has depreciable business property worth \$200,000 that he wants to remove from his estate. The sale of this property would trigger gain to him if the purchase price exceeds the individual's basis in the property--as with any sale--unless the lease has a term of 30 years or more and the transaction qualifies as a like-kind exchange under *IRC Section 1031*. n41 The seller could then agree to leaseback the property, paying a fair rental value for its use. Since this is business property, the rent should be deductible for income tax purposes. In addition, the buyer is receiving a steady cash flow from the rental income and would be able to depreciate the full \$200,000 cost of the property, subject only to the at-risk and passive activity loss provisions of the Code.

This technique works well for intrafamily sales where the property has appreciated or has been fully depreciated and the seller is in a higher tax bracket than the buyer, and the seller has net operating losses or capital losses (or loss carry forwards) to offset against the income or gain. The seller receives a rent deduction, which more than offsets the tax on the rental income to the buyer.

[ii] Sale of Building, Lease of Land

This method is also derived from the simple sale of the fee interest. The seller sells the building, but retains the land. The seller then leases the land to the buyer.

One advantage of this method is that the income tax on the sale is reduced, since only the building is sold. In addition, the lease provides a steady stream of income to the seller. Another benefit is that upon the death of the seller the building is not included in the estate, and the estate gets a step-up in basis for the land. This technique works best if an individual plans to sell the fully depreciated property but does not want to recognize the full gain, particularly when the majority of the appreciation is associated with the land.

[2] Bargain Sales

A bargain sale is partly a gift and partly a sale. It enables one to remove property from his estate with a lower gift tax than an outright gift and with lower cash requirements from the buyer than an outright sale. Gift tax will be due only on an amount equal to the excess of the value of the property over the amount paid. ^{n41.1} A simple example will demonstrate the dynamics of this technique.

Example:

Assume an older couple wishes to transfer real property to their daughter. The property is worth \$100,000 and has a basis of \$50,000. First, they consider making a gift. They can give \$20,000 without being subject to the gift tax, assuming they elect to gift-split. The remaining \$80,000 would be a taxable gift, which either results in gift tax of \$18,200, or a depletion of any remaining unified credit. Second, they consider an outright sale. If they sell the property to their daughter for its full value, they will have a gain of \$50,000. In addition, an outright sale will leave them with net cash in an amount equal to the \$100,000 (less income taxes on the \$50,000 of gain) in their estate and will require their daughter to fund the full \$100,000 purchase price. Finally, they consider selling the property for less than its fair market value--a "bargain sale." If they sell the property for \$50,000, they will have made a taxable gift of only \$30,000 (after their \$20,000 annual exclusions)--far less than the \$80,000 gift under the outright gift scenario. They will also recognize \$0 gain (since their sales price is exactly equal to their adjusted basis), whereas an outright sale results in \$50,000 gain. The bargain sale enables them to limit their taxable gain on sale and reduces their gift tax liability. Their daughter also benefits from the reduced amount of cash required from her to fund the purchase.

One advantage of the bargain sale is its flexibility. Computations can be made easily at a range of sales prices, determining the gift tax and income tax due under each, as well as the cash outlay required. In this manner, the transaction can be tailored to the client's needs. If a decedent transferor does not receive adequate and full consideration in a sale (and this will always occur in a bargain sale), the fair market value of the property at the time of death is included in the gross estate, offset by any consideration received. ⁿ⁴² In addition, since a bargain sale inherently contains a gift element, the estate tax risks associated with the transaction are higher. ⁿ⁴³ Thus, leasebacks of property sold in a bargain sale should normally be avoided; if they cannot, extreme care should be taken to ensure they are arm's-length in nature, as bargain rental may be viewed as a retained interest in the transferors which could cause the property to be included in their estate at death.

[3] Installment Sales/Gifts

One problem that is inherent in the methods discussed so far is the immediate tax faced by the seller. If an outright gift is made, a current gift tax may be due. If a sale is made, there is income tax to be paid. The latter may be alleviated by spreading out the transaction through the installment sale method, but the installment sale gain must ultimately be recognized, even if installment payments are received after the transferor's death. ⁿ⁴⁴ (See Chapter 7 for further discussion of installment sales.)

Example:

Assume that a piece of property has a fair market value of \$100,000 and a basis of \$40,000. Instead of selling the property for \$100,000, payable immediately, a seller might consider spreading out the gain by selling the property for a series of notes. These notes might be \$20,000 (plus interest) a year for five years. The seller recognizes the \$60,000 gain ratably over the five-year period--\$12,000 per year. In addition, the seller has interest income for each year's interest payment. (Note, however, that the benefits

of the installment method may be significantly reduced when property used in a trade or business is the subject of the installment sale. For example, all depreciation recapture income must be recognized in the year of the sale. *IRC Section 453(i)*. In addition, if the transferor disposes of the property before the installment payments are completed, the installment gain may be accelerated. n45

A second benefit of an installment sale (the first being the tax deferral for the seller) is that the buyer can pay for the property over time. The buyer may even be able to pay for the property with the cash flow that the property produces. The interest must be at a statutorily-prescribed adequate stated rate, n46 unless the size of the transaction is below certain de minimis amounts. However, there is some flexibility allowed in setting the interest rate to either minimize the seller's tax on interest income or maximize the buyer's interest deduction.

There are certain characteristics associated with installment sales which need to be pointed out. First, the buyer may be unable to deduct interest on the note because of investment interest limitations. n47 (See Chapter 7 for a discussion of investment interest limitations.) Second, the value of the tax deferral is limited, in the case of large transactions, through the imposition of additional interest on the deferred tax liability if installment receivables exceed \$5 million. n48 Third, if the sale is to a related party, and this buyer sells within two years of the purchase, taxation of the original seller's deferred gain is triggered. n49 This puts limits on the subsequent transferability of the installment-sale property. Fourth, if the seller dies before the note is fully paid off, income is recognized when payments are made to the decedent's estate or heirs. Fifth, the balance of the installment obligations, as of date of death, is included in the decedent's gross estate. n50 These provisions need to be examined carefully to determine if a contemplated installment sale will provide the benefits sought in each case.

[a] Self-Canceling Installment Notes (SCIN)

Self-cancelling installment notes (SCINs) are installment notes that automatically cancel or extinguish at the seller's death. Since the buyer need not continue making payments after the death of the seller, there is a chance that the buyer will be able to obtain the property without paying the full purchase price. On the other hand, if the seller lives longer than the term of the loan, future payments need not be made past the term of the notes. The buyer must pay a premium for this feature, which is expressly included in the sales agreement; the premium may be a higher purchase price or a higher interest rate than an ordinary installment sale. The major benefit to the seller is not the higher interest rate premium or the higher purchase price but the possibility that his or her estate will not include the value of any installment obligations outstanding at the time of his death.

This technique has been written on extensively since the Tax Court case of *Estate of Moss v. Commissioner*. n51 The Service clarified some of the uncertainties in this area with *Revenue Ruling 86-72* n52 and *GCM 39503*. n53 In these pronouncements, the Service recognized the "SCIN" and noted the differences between the SCIN and other arrangements, such as private annuities.

SCINs have other characteristics that should also be considered. Like other installment payments, the remaining deferred gain is recognized upon the death of the seller. n54 In a 1993 case, *Estate of Frane v. Commissioner*, n55 the court held that the remaining deferred gain is taxed in the decedent's estate. Additionally, there is still some uncertainty about whether the premium can be expressed as an increased interest rate or an increased purchase price. There is also uncertainty about how large this premium should be. Some commentators have suggested taking a weighted average of the risk inherent in each of the payments: the risk could be determined from the estate tax annuity tables. n56 Finally, the fact that this technique works best if the seller were to die shortly after entering the transaction, may make certain individuals and their estate planners very hesitant. Typically, an estate's position is that the estate tax value of a SCIN is zero because the note was cancelled on the decedent's death. The IRS can seek either (1) to increase the value of the estate, claiming that the SCIN was not a bona fide sale and because full and adequate consideration was not received, or (2) to assert that the sale transaction, if valid, was a bargain sale gift to the purchaser. The gift argument is likely to be

successful if payment terms of the SCIN are not complied with, because failure to enforce the payment provisions indicates that the parties intended a gift. n56.1 In addition, if a decedent-seller retains any power to revoke the transfer, the value of properties transferred under s SCIN may be included in the decedent's estate under *IRC* § 2038.

A special danger can arise in the SCIN installment sale area if the parent-seller transfers a personal residence to a child and stays in the house under a purported lease arrangement with the child. In that case, courts have sometimes found that, notwithstanding a written lease, there was an implied agreement among the parties that the parent actually retain a life estate in the home. n57 This finding will cause the fair market value of the home at the time of the parent's death to be included in his or her estate. n58 Thus, not only will the estate reduction intended at the time of the transfer be thwarted, but any increase in the fair market value of the property between the date of that transfer and the date of the decedent's death will be added to the estate. This kind of arrangement is especially suspect if the amount the child is paid in rent is nearly equal to the amount of the child's interest payments on the installment note. n59 The best way to avoid this problem is to have the parent transfer the home to a qualified personal residence trust. n60

[b] Sale and Debt Forgiveness

This technique is identical to the installment method, with one notable addition. When each payment becomes due, it is forgiven by the seller. In this manner the property can be transferred to the buyer free of charge. Of course, the seller has made a gift, but the amount is only the value of the forgiven note (not the entire property).

One advantage to the sale and debt forgiveness method is that the seller is able to use the annual exclusion every year. This technique works perfectly when a payment of \$10,000 (or \$20,000 if gift-splitting) is due each year. If the intent to cancel the debt is determined to be "prearranged," however, it is arguable that the *entire* transaction will be accelerated and treated as a gift up front.

Understandably, this technique has been litigated by the Service. However, in *Kelley v Commissioner*, n61 the Tax Court held these arrangements are valid as long as the indebtedness itself is valid. The sellers should have all the rights of ordinary creditors and interest should be charged and collected to support the position that these are valid notes. It is important to provide substantiation that the sale was a bona fide sale and the notes were valid evidences of indebtedness, because the Service may well take the position that there was a gift at the onset of the transaction. n62

With this technique, the seller will still have income to recognize when the notes become due. The forgiveness of an installment note is considered a "disposition" for installment sale purposes, and the seller will have to recognize gain as if he were paid. Therefore, this method is best suited when the fair market value of the property is not far in excess of its adjusted basis.

[c] Partnership Transfers

The benefit of giving property away piece-by-piece is demonstrated by the debt-forgiveness method discussed above. Thus, some taxpayers may wish to give away undivided interests in property each year to a younger family member over an extended period of years, in order to take advantage of the annual gift tax exclusion. n62.1 The problem is that, while gifts may be easily accomplished with stocks and bonds, they are far more difficult with parcels of real property. Every year, the donor would have to deal with the difficulties of transferring title to a portion of the property to the other family member. One way of avoiding these difficulties is through the use of a partnership.

Real property is contributed to a partnership in which the former owner and his family members are partners. The partnership would usually be organized as a limited partnership, with the donor (or an entity owned by the donor) as the general partner and the donor and the prospective donees as limited partners. There would be no gain recognized on the contribution of property to the partnership. n63 However, depending on whether the younger family members have personal assets to contribute to the partnership, there may be a gift to the other family members equal to the value of

their initial partnership interests. Every year, the partnership interests of the younger family members could be increased by gift, in an amount designed to use the annual exclusion. For example, property with a fair market value of \$100,000 is owned by an individual who wants to retain control of the property but eventually pass the property to his two daughters. He contributes the real property to a partnership and receives an 80 percent interest in the partnership. His two daughters receive a 10 percent interest worth \$10,000 or less each. The gifts of the partnership interests are not taxable, since they do not exceed the annual exclusion amount. In the second year, the value of the property has increased to \$120,000. The original owner transfers a portion of his interest in the partnership to each of his daughters--8.33 percent to each, or \$10,000. This leaves him with an interest of 63.33 percent, worth \$76,000. This technique is repeated every year; the only transfer of land title required was in the initial year when the property was contributed to the partnership.

The value of the limited partnership interests may be less than a pro rata portion of the value of the property because of discounts for lack of control and lack of marketability resulting from the status of the limited partnership interest as minority interests. n64

A word of caution--if the property is appreciating at a rapid pace it might be prudent to give a larger partnership interest each year, if not the entire fee interest. This may entail using up some or all of the available unified credit to avoid the payment of gift tax, though it is probably prudent to get the property out of the potential estate before it has appreciated even more. This can be especially useful after 2001, when the unified credit effective exemption amount for gift taxes is increased to \$1 million. n64.1

There are a number of requirements that must be met by family partnerships. First, capital must be a material income-producing factor. If it is not, the donor might continue to be taxed on the income generated by the partnership, pursuant to assignment of income-type principles. This should not prove to be a problem for real estate holdings. However, a partner who provides services to the partnership should be adequately compensated for those services. If services are provided without adequate compensation, it begins to look like capital is not the material income-producing factor. Second, the donee must be the real party in interest--she must have an interest in both the profits and losses *and* the capital of the partnership. The gist of these requirements is that the interest that the donee obtains must not be an illusory interest that can be recharacterized as an assignment of income. Therefore, the allocation of powers between the donor and donee partners should be scrutinized carefully. Be cautioned that there is some uncertainty in this area because of the unwillingness of the Service to issue rulings on the validity of a family partnership in which capital is not a material income-producing factor. n65 It should also be noted that a transfer of legal title to property to a family partnership will not remove that property from a decedent's estate if the transferor retains possession and enjoyment of the property or the right to income from the property, or if the transferor does not receive in exchange for the property full and adequate consideration in the form of partnership interests. For example, if there is an implied agreement among the parties that the transferor may continue to use or control the property after the transfer, the property will be included in the decedent's estate. n65.1

A pre-death partnership transfer will also be ignored if the formation of the partnership and the transfer of property to it does not alter the transferor's relationship to the property, if proper formalities are not observed in the establishment of the partnership, or if parties ignore the partnership. In that case *IRC Section 2036* will cause the full value of transferred property to be included in the decedent's gross estate. n65.2

IRC Sections 2701-2704 may limit the efficacy of such transfers also, depending on the type of partnership interests involved. These provisions impose special valuation rules to be used for purposes of determining the value of interests in partnerships and corporations created in transactions generally referred to as "estate freeze" transactions. See § 18.02[8], below, for further discussion.

[4] Transfer of a Remainder Interest

The current owner of real property may want to retain a current beneficial interest in the property, despite the estate tax advantages of transferring the property during his or her life. As mentioned in the preceding section, an annual gifting program or installment sale may not satisfy this desire. Another way to split up property is to separate the present from the future interest. The older generation may retain some control over the property by retaining a present interest (life estate), while the younger generation can hold a future interest (remainder) in the property. The principal estate planning drawback to the retention of a life estate and gift of a remainder interest is that at the death of the life tenant the property is included in his or her estate. n66 Thus, no long-term estate tax benefits are derived from this technique.

IRC Sections 2701 through 2704 also may require the value of the retained interest to be included in the value of the gift for gift tax purposes. See § 18.02[8], below, for further discussion.

[a] Joint Purchase

Some estate planners seek to avoid the adverse estate tax implications of a transfer with a retained life interest, and still separate the present and future interests by arranging a joint purchase of property from a third party, in which the older generation buys the life estate and the younger generation acquires the remainder.

Example:

A 65-year old widow wants to buy a vacation home for \$100,000. She wants her children to have it when she dies and does not want it to be included in her estate. She can purchase a life estate while her children can buy the remainder interest in the property. In this example, the actuarial tables indicate that her life estate would be worth \$67,970; the remainder interest would be worth \$32,030. n67 If the widow and her children pay these amounts, she will own the life estate, and her children will own the remainder. Upon her death, the vacation home will be owned completely by the children, and no amount of the home would be included in her estate.

The primary advantage of this type of purchase is that nothing is included in the estate of the life tenant, yet the life tenant has certain controls over, and beneficial interests in, the property. In the example, the widow can use the vacation home during her lifetime and is entitled to any income or deductions should the property be rented out. *IRC Section 167(e)* prohibits the holder of a term interest in property from taking any depreciation or amortization deductions where the remainder interest in the property is held by a related person. n68 In the example above, the widow and her children would be treated as related persons, n69 and the widow would therefore not be entitled to depreciation or amortization deductions on the property.

There are some disadvantages in this technique--it requires that the younger generation come up with all or part (if a mortgage is used) of the purchase price of the remainder interest, and, in addition, the life tenant has no power to dispose of the property at death. It is also possible that *IRC Section 2702(c)(2)* may recast these types of transactions in such a way that the older-generation individual is considered to have made a taxable transfer of the life estate to the younger-generation individual. See § 18.02 [8], below, for further discussion.

[b] Sale

An older-generation individual may consider selling a remainder interest in property to someone in a younger generation. As with the joint purchase, the value of the life estate is not included in the estate of the life tenant when he dies and yet control over the property is retained during his life. n70 Special valuation rules may come into play with an intergenerational sale of a remainder interest, however. n70.1 See § 18.02[8], below.

Valuation is a primary concern from the onset in a transaction of this sort. The annuity tables in *Regulations Section 25.2512-5* should be used in determining the allocation. Carrying over the prior example, if the widow wanted to sell a remainder interest to her children, she should charge them at least \$32,030. This valuation of the remainder interest

inherently assumes that the property itself has a value of \$100,000. In the context of a joint purchase, since the property is being acquired from a third party, the property valuation is readily determinable and supportable. When property has been held for some time, it is not always easy to determine its present fair market value. An appraisal may be required.

The concern about the value of the property is prompted by *IRC Section 2036(a)*. This section holds that the decedent's estate includes the value of all transferred property in which the decedent retained a life estate, unless "adequate and full consideration" has been paid. Therefore, if the remainder was sold to the younger generation for \$20,000 when the actuarial value was \$32,030, the full value of the property (\$100,000 *plus* any appreciation since the time of sale) would be included in the estate. The primary purpose for transferring the remainder interest is completely frustrated, as the property is included in the estate. n71

There is some uncertainty on what "adequate and full consideration" refers to. One interpretation is that the consideration must be equal to the entire value of the property, while another line of thought is that the consideration must only be equal to the value of the remainder interest itself. The latter reasoning is held by the vast majority of commentators and has been adopted by at least one circuit court. n72 To hold to the contrary would mean that one would have to sell a remainder interest for an amount far in excess of its present value, virtually eliminating the benefits associated with the sale of a remainder interest.

The sale of a remainder interest cannot be accomplished unless such a sale is allowed by local law. In addition, even if local law provides for sales of remainder interests, there are a number of practical problems inherent with joint ownership. How will the life tenant and the remainderman decide what work can be done on the property? Who will determine if and when the property can be sold? These are matters that should be set out clearly in the purchase agreement.

There are other drawbacks related to the sale of remainder interests. First, the remainderman must come up with the purchase price for the remainder. If the life tenant loans or gives the remainderman the money to make the purchase, the Service is likely to assert that the transactions should be collapsed and, thereafter, apply *IRC Section 2036(a)*. Second, the remainderman will have a very low basis in the property--equal only to the cost of the remainder interest. (At the death of the life tenant, the entire property transfers to the remainderman, yet his basis in the property is only the original cost of the remainder. This may cause a substantial gain to be recognized upon the sale of the property.) Third, as previously mentioned, it may be necessary for the parties to obtain an appraisal of the property, which may be quite costly. In addition, if the remainderman pays for the remainder other than by paying cash outright, there may be a need to appraise the value of the property or note received from the remainderman. Fourth, the life tenant will probably have some gain to recognize on any disposition of the remainder interest. Last, as indicated earlier, the life tenant has no choice in the disposition of the property at death--it automatically passes to the remainderman by operation of law.

An example of this technique may help put the aspects of this type of transaction into perspective.

Example:

A 70-year old widower wants to transfer a \$100,000 property to his daughter. At his age, the actuarial value of the life estate is worth \$60,522, and the value of the remainder is \$39,478. n73 Assume that the property has a basis of \$40,000; when the daughter pays the \$39,478, the father will have gain to recognize. The gain is calculated by allocating a portion of the basis to the remainder; n74 in this case the basis would be \$15,791 ($\$40,000 \times .39478$), and \$23,687 of gain would be recognized. After the transfer, the life tenant-widower cannot depreciate his basis in the property, even if it is used in a trade or business. n74.1 His basis is nevertheless reduced by any disallowed depreciation deduction. The basis of the remainder interests in the property is increased by the amount of disallowed deductions, however. n74.2 The widower-life tenant is entitled to all of the income that the property produces. At the death of the life tenant, the property is not included in his estate. The daughter obtains the property outright, though she has only the cost of her remainder interest (as increased by the depreciation deductions

disallowed to the life tenant) to depreciate. n74.3

One final note: except for personal residence trusts, discussed in § 18.02[8] [b], a *gift* of a remainder interest will not produce any benefits whatsoever. First, the annual exclusion is not available for gifts of future interests. n75 Second, and most important, the *gift* of a remainder interest triggers the operation of *IRC Section 2036(a)*, as there is a transfer of property with a retained life estate for less than "adequate and full consideration." Thus, the property would be included in the life tenant's estate--at its full value as of the date of death. n76

[5] Private Annuities

A private annuity is a transfer of property made in exchange for periodic payments that will continue for the remainder of the transferor's life. This can also be structured as a "joint and survivor" annuity whereby the payments continue until the seller or his spouse dies. Upon the death of the first spouse, the annuity can pass to the surviving spouse without tax--due to the unlimited marital deduction. Upon the death of the second spouse, there is no associated estate tax since the annuity obligation is automatically canceled. As with the other techniques discussed in this chapter, this removes the property from the estate of the transferor.

Historically, the IRS took the position that each annuity payment based on an unsecured promise to pay consisted of a nontaxable return of basis, capital gain, and an ordinary income component. n77 Thus, annuitants could postpone tax on the exchange of appreciated property for a private unsecured annuity. The rationale of the IRS position was originally based in part on the assumption that the value of a private annuity contract could not be determined for federal income tax purposes. n77.1 The IRS position also had its roots in authorities that applied the "open transaction doctrine," under which if an amount realized from a sale cannot be determined with certainty, the seller recovers the basis of the property sold before any income is realized on the sale. n77.2 A simplified example of this follows:

Example:

Property with a basis of \$40,000 and a fair market value of \$100,000 is sold for an annuity of \$15,000 per year. The seller has a life expectancy of 10 years. Of each \$15,000 payment, \$4,000 is a return of basis, \$6,000 is a capital gain, and \$5,000 is ordinary income (interest). At the end of 10 years, the seller would have received \$150,000, of which \$40,000 was a return of basis, \$60,000 was capital gain, and the balance would be ordinary income.

The above result applied only if the promise to pay was unsecured. For cases involving a secured annuity, the result is different. In one case, the taxpayers transferred stock in two closely held corporations in exchange for an annuity contract. The fair market value of the stock substantially exceeded the value of the annuity contract. The stock transferred was placed in escrow to secure the promise of the transferees. As further security, the annuity agreement provided for a cognovit judgment against the transferees in the event of default. Because of the secured nature of the annuity, the following tax results ensued: n77.3

- The difference between the value of the stock and the value of the annuity contract constituted a gift;
- The difference between the adjusted basis of the stock and the value of the annuity contract constituted gain that was taxable in the year of the transfer; and
- The investment in the annuity contract equaled the present value of the annuity.

In another case with a secured annuity, a court held that the entire amount of gain realized from the exchange of appreciated real property for an annuity contract was fully taxable in the year of the exchange because the annuity contract was secured by the following: n77.4

- An agreement that the annuity payments would be considered a charge against the rents from the property;
- An agreement not to mortgage or sell the property without written consent of the transferors; and
- The authorization of a confession of judgment against the transferee in the event of default.

In late 2006, the IRS unexpectedly reversed its longstanding historical position and issued proposed regulations that would declare *Revenue Ruling 69-74* and its treatment of unsecured annuities obsolete. The proposed regulations would apply the same rule to exchanges for both private annuities and commercial annuities. n77.5 (Charitable gift annuities would not be affected. n77.6 The change in the IRS position is partly triggered by the fact that some taxpayers are inappropriately avoiding or deferring gain on the exchange of highly appreciated property for the issuance of annuity contracts, even though numerous mechanisms are used secure the payment of amounts due under the annuity contracts. Many of the transactions involve typical family business transfers, where private annuity contracts are issued by family members or by business entities that are owned, directly or indirectly, by the annuitants themselves or by their family members. The IRS also no longer feels that the open transaction approach n77.7 or the ratable recognition approach n77.8 clearly reflects the income of the transferor of property in exchange for an annuity contract. Contrary to the premise underlying these authorities, the IRS now takes the position an annuity contract--whether secured or unsecured--may be valued at the time it is received in exchange for property. n77.9

Under proposed regulations, the IRS taxes the transferors in the same manner, whether they exchange property for an annuity or sell that property and use the proceeds to purchase an annuity. Thus, if an annuity contract is received in exchange for property (other than money), the following tax results ensue: n77.10

- The amount realized attributable to the annuity contract is the fair market value (as determined under *IRC Section 7520*) of the annuity contract at the time of the exchange;
- The entire amount of the gain or loss, if any, is recognized at the time of the exchange, regardless of the taxpayer's method of accounting; and
- For purposes of determining the initial investment in the annuity contract, n77.11 the aggregate amount of premiums or other consideration paid for the annuity contract equals the amount realized attributable to the annuity contract (the fair market value of the annuity contract). Thus, in situations where the fair market value of the property exchanged equals the fair market value of the annuity contract received, the investment in the annuity contract equals the fair market value of the property exchanged for the annuity contract.

In order to apply the proposed regulations to an exchange of property for an annuity contract, taxpayers will need to determine the fair market value of the annuity contract as determined under *IRC Section 7520*. In the case of an exchange of property for an annuity contract that is in part a sale and in part a gift, the proposed regulations apply the same rules that apply to any other such exchange, and the transferor will have a gain to the extent that the amount realized exceeds the transferor's adjusted basis in the property, but no loss if the amount realized is less than the adjusted basis. n77.12

For purposes of determining the investment in the annuity contract n77.13 the aggregate amount of premiums or other consideration paid for the annuity contract is the portion of the amount realized on the exchange that is attributable to the annuity contract (which is the fair market value of the annuity contract at the time of the exchange). n77.14 This rule is intended to ensure that no portion of the gain or loss on the exchange is duplicated or omitted by the application of *IRC Section 72* in the years after the exchange. The annuitant's investment in the contract would be reduced in subsequent years under *IRC Section 72(c)(1)(B)* for amounts already received under the contract subsequent to the

exchange and excluded from gross income when received as a return of the annuitant's investment in the contract.

The proposed effective date for Proposed *Treasury Regulation Section 1.1001-1(j)* is generally for exchanges of property for an annuity contract after October 18, 2006. Thus, the regulations would not apply to amounts received after October 18, 2006, under annuity contracts that were received in exchange for property before that date. n77.15 The proposed effective date for Proposed *Treasury Regulation Section 1.72-6(e)* is generally for annuity contracts received in exchanges after October 18, 2006. n77.16 For both regulations, the effective date is April 18, 2007 for transactions in which the following conditions are met: n77.17

- The issuer of the annuity contract is an individual;
- The obligations under the annuity contract are not secured, either directly or indirectly; and
- The property transferred in the exchange is not subsequently sold or otherwise disposed of by the transferee during the two-year period beginning on the date of the exchange.

Treasury and the IRS also propose to declare *Revenue Ruling 69-74* obsolete effective contemporaneously with the effective date of these regulations. Thus, the obsolescence would be effective April 18, 2007, for exchanges described in Proposed *Treasury Regulations Sections 1.1001-1(j)(2)(ii)* and *1.72-6(e)(2)(ii)*, and effective October 18, 2006, for all other exchanges of property for an annuity contract.

NOTE:

The proposed regulations do not distinguish between secured and unsecured annuity contracts, or between annuity contracts issued by an insurance company and those issued by individual taxpayers. Instead, the proposed regulations provide a single set of rules that leave the transferor and transferee in the same position before tax as if the transferor had sold the property for cash and used the proceeds to purchase an annuity contract. The same rules would apply whether the exchange produces a gain or loss. The regulations do not, however, prevent the application of other provisions, such as *IRC Section 267*, to limit deductible losses in the case of some exchanges. The proposed regulations apply to exchanges of property for an annuity contract, regardless of whether the property is exchanged for a newly issued annuity contract or whether the property is exchanged for an already existing annuity contract. n77.18

Treasury and the IRS are aware that property is sometimes exchanged for an annuity contract, including a private annuity contract, for valid, non-tax reasons related to estate planning and succession planning for closely held businesses. The proposed regulations are not intended to frustrate these transactions, but only to ensure that income from the transactions is accounted for in the appropriate periods. Installment sales provisions are still available for qualifying transactions to extend gain recognition over a period of years. n77.19 Indeed, the Treasury Department and IRS have requested comments as to the circumstances, if any, in which an exchange of property for an annuity contract should be treated as an installment sale, and as to any changes to the regulations under *IRC Section 453* that might be advisable with regard to those circumstances.

The advantage of a private annuity is that the members of the older generation have assurances (although unsecured) that they will receive income for as long as they might live. Under installment purchases, the payments stop after a predetermined period, and the seller no longer benefits from income that the property produces. The other advantages are similar to those associated with self-canceling installment notes (see discussion at § 18.02[3], above)--at the seller's death, the value of the property is not included in his estate. Death before the expiration of the seller's life expectancy should *not* trigger the recognition of the deferred gain. The proposed regulations do not change these advantages. n78

Because of the immediate recognition of the gain in a private annuity arrangement under the proposed regulations, n78.1 however, an installment sale is likely to be a more attractive option, since recognition of gain can be extended over the period during which installment payments are made. Annuity arrangements can offer payments for life of the annuitant, however, which some parties may prefer. Under annuity arrangements, as with installment sales or self-canceling installment notes, the value of the property transferred for the annuity is not includable in the estate of the annuitant.

A disadvantage of an unsecured annuity is, of course, the possibility that the seller may not get paid. In addition, the buyer is not allowed an interest deduction for the interest element implicit in the annuity payment. n79 Finally, having payments continue once the annuitant's life expectancy has been reached may be an economic disadvantage, from the perspective of the payor of the annuity, particularly when no current deduction for the interest element is allowed. The annuitant, on the other hand, is forced to recognize ordinary income on the entire payment, less the exclusion amount. If this is an intrafamily sale, this aspect of private annuities may be particularly problematic.

[6] "Partnership Freeze"

In previous years, the so-called "partnership freeze" was another way to get the appreciation from one's property out of one's estate. A partnership freeze is an extremely sophisticated and complex technique, and a series of amendments to the Code have sharply curtailed the benefits obtainable through the use of this planning technique. The goals of a partnership freeze would generally be to create a partnership between the older and younger generations, with the older generations being entitled to a fixed and preferred income stream and a fixed liquidation preference, and with the younger generations being entitled to all or substantially all of any growth in the income of the partnership, and to all or substantially all of any increase in the value of the assets of the partnership. The members of the older generation are economically in essentially the same position as preferred shareholders in a corporation, although it will normally also be the goal of the members of the older generation to retain a significant degree of control over the operations of the partnership.

The value of the preference serves to limit the value of the partnership interest that can be included in the decedent's estate. This liquidation preference should be equal at least to the value of the partner's original contribution.

The goals of this planning technique are to allow the members of the older generation to maintain control over the partnership and its assets, minimize any current gift taxes (or use of the unified credit), shift future appreciation and income growth to the members of the younger generation, and minimize the value of the interests in the partnership to be included in the estates of the members of the older generation. Because the assets are in a partnership, an *IRC Section 754* election following the deaths of the members of the older generation may allow a basis step-up with respect to the shares of assets attributable to the partnership interests included in the estate of the members of the older generation. (See Chapter 14).

The tax pitfalls in a transaction of this type are numerous, and include a challenge by the Service that the property was not transferred to the partnership in the first place, and a challenge by the Service to the valuation of the property. In addition, if this type of partnership is created through a restructuring of an existing partnership, a reduction in the share of partnership liabilities allocated to a current partner will be treated as a distribution of money. n80 If this is greater than the partner's basis in the partnership, he will recognize gain. n81

The effectiveness of the partnership freeze technique has all but been destroyed by the special valuation rules, n82 and many of the benefits formerly attributable are no longer available.

[7] Charitable Giving

The charitable deduction is a feature of the income, gift and estate tax systems. Charitable contributions made during

the donor's lifetime qualify for both the gift and income tax deductions. n83 This benefit of the income tax deduction makes a lifetime gifting program attractive.

The various techniques for making charitable gifts are too numerous to mention. n84 A donor can make an outright gift, a gift of a partial interest, or a deferred gift (i.e., split interest). A deferred (split interest) gift can be achieved through a gift to a "charitable remainder trust" (a trust which distributes income currently to a designated beneficiary, possibly the donor, with the remainder going to a charitable organization) or a "charitable lead trust" (a charitable organization receives the income from the trust and the remainder goes to a designated beneficiary). In addition, "private foundations" can be set up by individuals who wish to have more control over the ultimate disposition of their donations. These techniques, and a myriad of others, can all be tailored for gifts of real property. (See Chapter 6 for further discussion of gifts of real property generally, and Chapter 11 for a discussion of gifts by developers.)

[8] Impact of Sections 2701-2704

The Revenue Act of 1987 n85 added Section 2036(c) to reduce the tax benefits of "estate freezes." The provision, which has since been repealed, applied to persons who transferred a disproportionately large share of the potential appreciation in an interest in an enterprise but retained a disproportionately large share of income, voting, or other rights in the enterprise. This provision applied only if the transferor held a substantial interest in the enterprise. A substantial interest was considered to be 10 percent or more of the voting power or income stream in the enterprise. Interests owned by any member of the transferor's family were treated as owned by the transferor for purposes of making this determination.

IRC Section 2036(c) was retroactively repealed in 1990. n86 In place of that section was added a series of special valuation rules. n87 These rules were intended to assure a more accurate valuation of transferred property when an older generation member retained a preferred interest in transferred property. In essence, the value of the retained interest is subtracted from the entity's value to yield the value of the transferred interest. The transferred interest may be discounted to reflect a minority interest, if applicable. To value the retained interest, the law mandates a zero value for certain retained "discretionary" rights. The result generally is a decreased value for the retained interest and an increased value and gift tax burden at the time of an affected transfer. These rules, effective generally for transfers after October 8, 1990, apply to the valuation of corporate and partnership equity interests transferred to family members. n88 They also affect the valuation of certain gifts in trust and other life-estate/remainder-interest transactions. n89 Buy-sell agreements and stock options also are restricted in their impact on estate and gift valuation.

[a] Valuation Rules on Transfers of Certain Interests in Corporations or Partnerships

For purposes of determining whether the transfer of an interest in a corporation or partnership to (or for the benefit of) a "member of the transferor's family" is a gift, and the value of such a gift, the value of certain rights to receive distributions that are not qualified payment rights, and certain put, call, liquidation or conversion rights retained by the transferor or "applicable family member" is generally deemed to be zero. n90 In general, this has the impact of increasing the value of the gift.

A transfer for the purpose of these rules includes a contribution to capital or a redemption, recapitalization, or other change in the capital structure of a corporation or partnership if the transferor, or an "applicable family member," receives an "applicable retained interest" as a result of the transactions. n91 The regulations set forth additional circumstances in which changes in the capital structure of an entity are considered transfers, including transactions in which the transferor or "applicable family member" holding the "applicable retained interest" prior to the transaction receives property other than the "applicable retained interest" or the "applicable retained interest" increases in value. n92

Furthermore, the termination of an indirect holding in an entity can also constitute a transfer n93 if (1) the property is

held in a trust that the indirect holder is treated as owning, or (2) if the value of the holding would have been includable in the holder's gross estate if the holder had died immediately before the transfer. n94 The rules of *IRC Section 2701* do not apply when there are readily available market quotations on an established securities market for the value of either the transferred interest or the "applicable retained interest," n95 or if a retained interest is of the same class of equity as the transferred interest or if the retained interest is of a class that is proportionally the same as the class of the transferred interest. This determination is made without regard to non-lapsing differences in voting rights (or, for a partnership, nonlapsing differences with respect to management and limitations on liability). An interest in a partnership is not an interest in the same class as the transferred interest if the transferor or an "applicable family member," acting individually or in concert, has the right to alter the liability of the transferee. n96 These rules do not apply to a transfer of equity interests that results in a proportionate reduction of each class of equity interest held by the transferor and all "applicable family members" in the aggregate, immediately before the transfer. n97

Similarly, a transfer is not subject to these rules if the transferor, each "applicable family member," and each "member of the transferor's family" holds substantially the same interest after the transaction as they held before the transaction. For this purpose, common stock with non-lapsing voting rights and nonvoting stock are interests that are substantially the same. n98

Furthermore, a transfer does not include a qualified disclaimer or a shift of rights occurring upon the exercise of a power of appointment except to the extent that the exercise reduces the powerholder's interest in appointed property. n99

In general, if a transaction is not subject to these rules, any retained interest is valued at fair market value for gift tax purposes, rather than pursuant to the special valuation rules of *IRC Section 2701*.

The "members of the family" are the transferor's spouse, any lineal descendant of the transferor or the transferor's spouse, and the spouse of any such lineal descendant. An "applicable family member" may be the transferor's spouse, any ancestor of the transferor or the transferor's spouse, and any spouse of such ancestor. n100 An individual is considered to hold any interest held indirectly through a corporation, partnership, trust, or other entity. n101

An "applicable retained interest" includes certain distribution rights if the transferor and applicable family members "control" the corporation or partnership immediately before the transfer. n102 In general, a distribution right is the right to dividends or partnership distributions. n103 The term does not, however, include the following: n104 (1) a right to distributions with respect to any interest that is junior to the rights of the transferred interest; (2) any liquidation, put, call, or conversion right; or (3) any right to receive any guaranteed payment. An entity is "controlled" if the transferor, applicable family members, or any lineal descendants of the parents of the transferor or the transferor's spouse hold, either individually or in concert, (1) at least 50 percent (by vote or value) of the stock of a corporation, (2) at least 50 percent of the capital or profits interests in a partnership, or (3) any interest as a general partner in a limited partnership. n105

Planning Tip:

For purposes of determining whether an entity is controlled with respect to an applicable retained interest, an "applicable family member" includes any lineal descendant of any parent of the transferor or the transferor's spouse. n106 This definition of "applicable family member" is broader than the term "applicable family member" that applies for other rules in *IRC Section 2701*, n107 and includes siblings and nieces and nephews of the transferor and the transferor's spouse. n108

An "applicable retained interest" also includes extraordinary payment rights, including liquidation, put, call, or conversion rights, the exercise or nonexercise of which affects the value of the transferred interest. n109 However, a right that must be exercised at a specific time and at a specific amount is not an extraordinary payment right, and therefore is not an applicable retained interest. n110 Similarly, a nonlapsing right to convert into a fixed number (or a

fixed percentage) of shares of the same class of stock as the transferred stock (or which would be the same class but for nonlapsing differences in voting power) that is subject to adjustments for splits, other changes in capital stock, and accumulated but unpaid distributions is not an extraordinary payment right. (A similar provision applies to partnership interests). n111

An exception is provided from the valuation rules set forth above, for retained rights to "qualified payments." n112 As such, "qualified payments" are valued under general valuation principles. "Qualified payments" are dividends payable on a periodic basis under cumulative preferred stock (or comparable payments under a partnership interest) to the extent that such dividends (or comparable partnership payments) are determined at a fixed rate. n113 A variable rate payment is treated as having a fixed rate if it is determined at a rate that bears a fixed relationship to a specified market interest rate. n114

Payments under any interest held by a transferor that are otherwise qualified payments are treated as qualified payments unless the transferor elects not to treat them as qualified payments. In contrast, such payments held by an applicable family member are treated as qualified payments only if the member elects to treat them as such. n115 A transferor or applicable family member that holds a distribution right that is not a qualified payment may elect to treat that right as a qualified payment. The election may specify the amount of the payment and time it is to be made, provided that those terms are not inconsistent with the underlying legal instrument giving rise to the right. n116 Any of these elections, once made, is irrevocable. n117

If qualified payments are not made at the times and in the amounts used in valuing the retained right, the taxable estate or taxable gifts of the holder of the retained rights will be increased to reflect the value of the retained interest based on the actual distributions made. Any payment made within four years of its due date will be considered to have been made on its due date. This increase or adjustment is made upon (1) the irrevocable lapse or other termination of the holder's right to the qualified payments (including the sale or transfer of the retained interest and the death of the holder), or (2) upon the holder's election. n118

When a qualified payment right is held in conjunction with one or more extraordinary payment rights (i.e., liquidation, call, put, or conversion rights), the value of all such rights is determined as if each extraordinary payment right were exercised in the manner resulting in the lowest value being determined for all such rights. n119 If an applicable retained interest confers a right to receive a qualified payment that has no extraordinary payment rights, the value of the distribution right is determined without regard to *IRC Section 2701*. n120

To ensure that at least some minimum value will be assigned to an equity interest transferred to a family member, there is a minimum value rule. In general, if these rules apply to a transfer, all junior equity interests may not be valued, in aggregate, at less than 10 percent of the sum of the total value of all equity interests in the entity and the total amount of any indebtedness of the entity owed to the transferor or applicable family member. n121 A junior equity interest is common stock or a partnership interest under which the rights to income and capital (or, to the extent provided in regulations, the rights as to either income or capital) are junior to the rights of all other classes of partnership interests. n122 Short-term indebtedness incurred with respect to the current conduct of trade or business is not considered indebtedness of the entity for purposes of this rule. Furthermore, a lease is not considered indebtedness if the lease payments are made on a current basis and represent full and adequate consideration for use of the property. n123

[b] Valuation Rules for Certain Transfers of Interests in Trusts and Joint Purchases by Family Members

As a general rule, when an individual sets up a trust in which he or an "applicable family member" retains a partial interest, the valuation for gift tax purposes of any interest given to a "member of the family" is computed by subtracting the value of any trust interest that the transferor or any "applicable family member" has retained from the full value of the trust. n124 The same calculation is necessary when an individual transfers an interest in property to a "member of the family," in which the individual or an "applicable family member" retains a "term interest." n125 If the retained

interest does not constitute a "qualified interest," its value is considered to be zero. However, the retained interest constitutes a "qualified interest," its value is determined under the ordinary valuation rules. n126

A retained interest is considered a qualified interest if it:

- (1) consists of the right to receive fixed amounts payable not less frequently than annually (a grantor retained annuity trusts interest or GRANT);
- (2) consists of the right to receive amounts that are payable not less frequently than annually and are a fixed percentage of the fair market value of the property in the trust determined annually (a grantor retained unitrust interest or GRUNT); or
- (3) is a noncontingent remainder interest and all of the other interests in the trust consist of interests described in (1) and (2) above, GRANTS and GRUNTS. n127

A "member of the family" includes the transferor's spouse, any ancestor or lineal descendant of the transferor or the transferor's spouse, any spouse of such ancestor or lineal descendant, any brother or sister of the transferor, and any spouse of such brother or sister. n128 An "applicable family member" may be the transferor's spouse, any ancestor of the transferor or the transferor's spouse, and any spouse of such ancestor. n129

These rules apply to the following transactions:

- (1) A transfer of an interest if there are one or more term interests in the property, n130 including a transfer to a new or existing trust or the assignment of an interest in an existing trust.
- (2) Split or joint purchases occurring when members of the same family acquire interests in the same property, and at least one of these interests is a term interest. The individual who acquired the term interest is treated as if he acquired all of the interests in the property (those belonging to family members or the individual himself) and then transferred the nonterm or remainder interest to the other family members involved in exchange for consideration paid (the amounts these individuals actual paid for their interests). n131

The special valuation rules of *IRC Section 2702* for transfers to trusts do not apply to the following: n132 (1) any transfer that is an incomplete gift; (2) any transfer involving the transfer of an interest in certain trusts containing a personal residence; or (3) any transfer to the extent that regulations provide that the transfer is not inconsistent with statutory purposes.

As noted above, certain transfers involving "personal residences" are specifically excepted from these rules and are governed by the general valuation rules if the trust meets the requirements of *Regulations Section 25.2702-5*. n133 These trusts are referred to as qualified personal residence trusts, and are discussed in § 18.04[1][b]. n133.1 For this purpose, a personal residence is the principal residence of the term holder or one other residence (a vacation home) of the term holder, or an undivided fractional interest in either. n134 The "term holder" is the former owner of the residence, generally the member of the older generation. However, an individual may not be the term holder in more than two personal residence trusts at any one time. n135 The trusts may not contain any personal property (such as household furnishings), but they may hold cash up to the amount required:

- (1) for payment of trust expenses (including mortgage payments) already incurred or reasonably expected to be incurred within the next six months;
- (2) for improvements to the residence to be paid for within six months; and

(3) on creation of the trust, for purchase of the initial personal residence within the next three months, and at any other time, for the purchase of a replacement personal residence within the next three months provided the trustee has previously entered into a contract to purchase the personal residence. n136

The trustee may sell the residence and hold the sales proceeds (and any income thereon) in the trust if there is an intention to replace the residence within two years with another qualifying residence. A similar rule applies to insurance proceeds received by the trust due to damage or destruction of the residence. n137 If the residence ceases to qualify as a personal residence of the term holder, the trust corpus must be distributed to the term holder or the trust must convert to a qualified annuity trust (GRANT). n138

The special valuation rules do not apply to a transfer in trust of tangible property that would not qualify for depreciation depletion deductions if used in a trade or business and whose value to the remainderman would not be enhanced if the term holder failed to exercise any rights under their term interest. n139 Improvements that do not increase the fair market value of the property by more than 5 percent are ignored for purposes of the nondepreciable requirement mentioned above. n140 The value of a term interest in property meeting these requirements is what an unrelated third party would pay for such interest in an arm's-length transaction. n141

[c] Buy-Sell Agreements and Other Rights and Restrictions

Buy-sell agreements are used by closely held businesses to achieve various business objectives, such as controlling the transfer of ownership interests in a business, or allowing a small group of shareholders or a partnership to be assured that no "new" or "outside" entity will enter or participate in the business. Perhaps more importantly, buy-sell agreements provide a means by which control of a family business can be retained within the family.

However, buy-sell agreements were also often used to freeze the value of a business interest for estate tax purposes. Accordingly, Congress enacted rules to prevent abuses in this area. n142 These rules provide that any option, agreement, right to acquire or use property at a price below fair market value, or a restriction on the right to sell or use property will be disregarded when valuing such property for estate, gift, or generation-skipping transfer tax purposes unless each of the following requirements is satisfied:

- (1) It is a bona fide business arrangement.
- (2) It is not a device to transfer property to the decedent's family for less than full and adequate consideration.
- (3) Its terms are comparable to similar arrangements entered into by parties in an arm's-length transaction.

The regulations provide a safe harbor pursuant to which any option, agreement, right, etc., is deemed to satisfy these requirements if more than 50 percent by value of the property subject to the right or restriction is owned by parties who are not the natural objects of each other's bounty. n143

[d] Lapsing Rights and Restrictions

Prior to the enactment of the Revenue Reconciliation Act of 1990, a parent could transfer an interest in a partnership or corporation to his or her child but retain certain lapsing voting and/or liquidation rights to decrease the value of the taxable gift. If the retained right lapsed prior to or upon the parent's death, any interest in the business that they owned at the date of death might have a reduced value for estate tax purposes, as this interest no longer had voting and/or liquidation rights attached to it.

To combat perceived abuses in the use of this technique, Congress enacted rules that provide that the lapse of a voting or liquidation right pertaining to a family "controlled" partnership or corporation constitutes a transfer subject to either the gift or estate tax provisions. n144 This provision applies if the deemed transferor and the transferor's "family" hold a "controlling" interest in the partnership or corporation immediately before and after the deemed transfer. n145

A "member of the family" includes the transferor's spouse, any ancestor or lineal descendant of the transferor or the transferor's spouse, any spouse of such ancestor or lineal descendant, any brother or sister of the transferor, and any spouse of such brother or sister. n146

"Control" is defined by cross reference to *IRC Section 2701(b)(2)* as the holding of at least 50 percent (by vote or value) of the stock of a corporation, at least 50 percent of the capital or profits interests in a partnership, or any interest as a general partner in a limited partnership. n147 An individual is considered to hold any interest held indirectly through a corporation, partnership, trust, or other entity. n148

The value of the deemed transfer is equivalent to the decrease in value of all the interests in the partnership or corporation held by the deemed transferor due to the lapse. n149

Furthermore, when an individual transfers an interest in a partnership or corporation to a member of the family, any "applicable restriction" that limits the ability of the entity to liquidate is ignored for estate and gift tax purposes if:

- (1) the transferor and members of the transferor's family hold control of the entity immediately before the transfer; and
- (2) the restriction lapses after the transfer; or
- (3) the transferor or any family member, either alone or collectively, has the power to remove such restriction after the transfer. n150

There is an exception provided for any commercially reasonable restrictions that arise as part of a financing agreement with an unrelated third party. n151 An "applicable restriction" is defined as any limitation on the ability to liquidate the entity that is more restrictive than restrictions under state law. n152 For example, if a partnership agreement requires the consent of all interests to liquidate, but under state law only 70 percent is required, the requirement that all interests must consent is an applicable restriction and will not be considered in valuing an interest. Also, an applicable restriction with respect to preferred stock, such as a right to liquidate the corporation at some later date, will be disregarded in determining the amount of a transfer of common stock under *IRC Section 2701*. n153

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.03

§ 18.03 Valuation of Real Estate for Estate Tax Purposes

[1] In General

The estate tax is levied on the decedent's "gross estate" using the "value at the time of his death of all property, real or personal, tangible or intangible, wherever situated." n154 Thus, it is crucial to properly determine the value of the property. The general rule is that real property is valued at its highest and best use as of the date of death. Alternatively, at the election of the executor, the highest and best use can be determined at a time six months following the date of death n155-167 (see § 18.05[3][c], below). There are also other methods of valuation whereby the estate can actually value certain specific types of property at less than its full or best use value. This section will briefly examine the special-use valuation methods that can be used to reduce the estate's value and the related estate tax. Valuation of real property in general, as well as minority interest discounts, market absorption discounts, and other discounts that may come into play for valuing real property in an estate, are discussed in detail in Chapter 20, "Valuation of Real Property."

[2] Special-Use Valuation for Family Farms and Closely Held Businesses

IRC Section 2032A provides an election that may be used to value farms and real estate used in closely held businesses at their current operating values, rather than their "highest and best use" value. Thus, the estate can include the value of these properties as used in the family business, rather than their highest and best use. For example, real property may be worth only \$400,000 if used in the family bakery business, but \$1 million if converted to a condominium development. This provision is designed to prevent forcing families to sell their closely held businesses and farms to pay the associated estate taxes. The special-use valuation can reduce the estate tax value of the property by a maximum of \$750,000, n168 subject to an inflation adjustment for decedents dying after 1998. n169 For decedents dying in 1999, the figure is \$760,000. n169.1 For decedents dying in 2000, the figure is \$770,000. n169.2 For decedents dying in 2001, the figure is \$800,000. n169.3 For decedents dying in 2002, the figure is \$820,000. n169.4 For decedents dying in 2003, the figure is \$840,000. n169.5 For decedents dying in 2004, the figure is \$850,000. n169.6 For decedents dying in 2005, the figure is \$870,000. n169.7 For decedents dying in 2006, the figure is \$900,000. n169.8 For decedents dying in 2007, the figure is \$940,000. n169.9 For decedents dying in 2008, the amount is \$960,000. n169.9.1 For decedents dying in 2009 and 2010, the amount is \$1 million. n169.10

This special-use valuation provision contains certain limitations. First, the special rule applies only to estates of decedents who were, at the time of their death, citizens or residents of the United States. Second, the qualified real property must be used by the decedent or by a member of his family on the date of the decedent's death. If ownership is

in partnership form, 20 percent or more of the partnership's capital interest must be included in the decedent's gross estate or the partnership must have fewer than 15 partners. n170 Third, the property must have been used by the decedent or his family for at least five of the last eight years ending on the date of the decedent's death. n171 This usage must constitute "material participation." Fourth, the value of the business or farm must be worth 50 percent or more of the entire value of the estate, and the business real property must be worth at least 25 percent of the value of the entire estate. n172 Finally, the business or farm must pass to a "qualified heir," that is, another member of the family. n173 If these requirements are all met, the estate may elect to have the property valued so that it reflects the value as it is *used* in the family business. n173.1 Farms may be valued under a formula method or a five-factor valuation method. n173.2 Closely-held businesses and farms for which the formula method is not used must be valued using the five-factor valuation method. n173.3

As with almost all tax-savings devices, however, there are certain disadvantages associated with this election. The basis step-up is limited to the special-use value of the property reflected in the decedent's estate tax return. This is particularly detrimental if there would be no actual estate tax liability because of the use of the unified credit or the unlimited marital deduction. In an estate with little or no estate tax, it is better to include the property at its best-use value to get the full step-up in basis. Then, if the property is sold, the gain on the property would be substantially lower. n174 Furthermore, requirements for making the election are extremely technical and complex, and although statutory procedures for correcting defective special use valuation elections have been liberalized, n175 the IRS has generally taken a restrictive view, disallowing elections with even minor defects. n175.1 The IRS has granted extensions of time for making a special use valuation election, however. n175.2

Another drawback to using special-use valuation is the potential for recapture of the avoided estate tax if the property is sold. If the property is sold or otherwise disposed of (or if a qualified heir ceases to materially participate in its operation) at any time within 10 years from the date of death, there is a recapture of the estate tax savings. n176 Therefore, if a sale is likely to occur subsequent to death, or if no family members are willing to materially participate in the operation of the farm or business for the 10-year period, it may not be wise to elect Section 2032A.

Finally, it should be noted that a special estate tax lien comes into play for additional estate tax attributable to special use valuation. n176.1 The special lien applies for the pending additional estate tax attributable to the estate's election to use a "special use value" for certain qualified property for estate tax purposes. The lien attaches to certain farm real property and real property used in family businesses. The amount of the lien is generally equal to the difference between the estate tax calculated using the fair market value of the property and the estate tax calculated using the special use value of the property. n176.2 The special lien continues with respect to any interest in qualified real property until: n176.3

- the liability for tax under *IRC Section 2032A(c)* with respect to that interest has been satisfied;
- the liability for tax has become unenforceable by reason of lapse of time; or
- it is established that no further tax liability may arise under *IRC Section 2032A(c)* with respect to that interest.

Under *IRC Section 2032A(c)*, the liability for a recapture tax arises if the qualified heir disposes of any interest in the property or fails to use the property for a qualified purpose within 10 years from the decedent's date of death. n176.4 The recapture period also ceases if the qualified heir dies, and thus, can be less than 10 years. n176.5

Note:

Not every disposition related to specially valued property will trigger the recapture tax. For example, the development of subsurface oil and gas interests in farm property that is subject to a special use valuation election does not trigger the recapture tax because oil and gas interests are not includible as part of the

farmland that may be specially valued under *IRC § 2032A*. To the extent, however, that the specially valued farmland is subsequently used for well drilling and extraction, there is a cessation of use of specially valued farmland for purposes of the recapture provision in *IRC § 2032A(c)(1)(B)*. n176.6 Similarly, a conveyance of water rights and the granting of an easement on property that is specially valued to develop and remove the groundwater will not constitute a disposition or cessation of qualified use under *IRC § 2032A(c)(1)*, where the groundwater rights were not part of the property that was specially valued. Only to the extent the property is specifically used for removing the groundwater will there be a disposition or cessation of use of the properties that triggers the recapture tax. This result ensues because property specifically used for removing the groundwater cannot be used for the *IRC § 2032A* qualified purpose. n176.7

The IRS has ruled that the lien need not automatically be released after 10 years following the decedent's death. Rather, the 10-year period merely provides a measure of time during which the event triggering the recapture tax had to occur. n176.8

The IRS ruled that the "liability" for the tax may continue beyond that period. n176.9 The IRS noted that the due date for the recapture tax is 6 months after the triggering recapture event, n176.10 and that the statute of limitations for assessment of the recapture tax is generally three years from the date the IRS is notified of the disposition/cessation. n176.11

Thus, while the event that triggers the liability for the recapture tax must occur within 10 years of the decedent's death, collection of that liability may clearly continue beyond that 10-year period. The IRS has ruled that when this circumstance occurs the *IRC Section 6324B* special lien should not be released, as the recapture liability is still enforceable. n176.12

[3] Estate Tax Deduction for Family-Owned Business

[a] In General

Effective for estates of decedents dying after 1997 and before 2004, n176.13 an estate may deduct the adjusted value of the qualified family-owned business interests of the decedent for estate tax purposes if those interests comprise more than 50 percent of the decedent's estate and certain other requirements are met. n177 The maximum deduction that may be taken is \$675,000. n178 Taking the deduction will significantly reduce the decedent's gross estate, and, hence, her estate taxes. If the deduction is taken, however, the exclusion amount with respect to the unified credit is \$625,000, subject to an increase if the deduction taken is less than \$675,000. n179

Note:

The deduction is available only for estate tax purposes. It is not available under the generation-skipping transfer tax. n180

A "qualified family-owned business" is any interest in a trade or business (regardless of the form in which it is held) with a principal place of business in the United States, if ownership is held at least 50 percent by the decedent and members of the decedent's family, 70 percent by two families, or 90 percent by three families. The decedent's family must also own at least 30 percent of the trade or business. n181 For this purpose, a decedent is treated as engaged in a trade or business if any member of the decedent's family is engaged in that trade or business. n182

Specific rules apply for determining the percentage ownership of corporations, partnerships and tiered entities. n183 An interest in a trade or business does not qualify if the business's stock or securities were readily tradable on an established securities market or secondary market within three years of the decedent's death. n184 An interest in a trade or business

also does not qualify if more than 35 percent of the adjusted ordinary gross income of the business for the year of the decedent's death would qualify as personal holding company income if the business were a corporation. n185

The value of the qualifying trade or business does not include any passive assets (i.e., those producing certain dividends, rents, royalties, interest and similar income), or cash or marketable securities in excess of the working capital needs of the company. n186 Conference reports indicate that working capital needs are to be determined on a historical average, using an analysis set forth in the *Bardahl* case. n187 Certain property that was leased by the decedent on a net cash basis to a member of the decedent's family may be included as part of a qualified family-owned business interest. n188

[b] Qualifying Estates

The family-owned business estate tax deduction is available only if the decedent was a United States citizen or resident at the time of death and the aggregate value of the decedent's qualified family-owned business interests that are passed to qualified heirs exceeds 50 percent of the decedent's adjusted gross estate (the "50 percent liquidity test"). n189 The 50-percent liquidity test is applied by adding all transfers of qualified family-owned business interests made by the decedent to qualified heirs at the time of the decedent's death, plus certain lifetime gifts of qualified family-owned business interests made to members of the decedent's family, and comparing this total to the decedent's adjusted gross estate. n190 To the extent that a decedent held qualified family-owned business interests in more than one trade or business, all those interests are aggregated for purposes of applying the 50-percent liquidity test. n191 The deduction is available only for the estates of decedents dying before January 1, 2004. n191.1

[c] Participation Requirements

To be eligible for the deduction, the decedent (or a member of the decedent's family) must have owned and materially participated in the trade or business for at least five of the eight years preceding the decedent's death. n192 In addition, each qualified heir (or member of the qualified heir's family) is required to materially participate in the trade or business for at least five years of any eight-year period within 10 years following the decedent's death. n193

[d] Recapture Provisions

The benefit of the deduction is subject to recapture through the imposition of an additional estate tax if, within 10 years of the decedent's death and before the qualified heir's death, one of the following recapture events occurs: n194

- the qualified heir ceases to meet the material participation requirements;
- the qualified heir disposes of any portion of his or her interest in the family-owned business, other than by a disposition to a member of the qualified heir's family or through a conservation contribution;
- the principal place of business of the trade or business ceases to be located in the United States; or
- the qualified heir loses United States citizenship (unless the business assets are placed in a qualifying trust or other security arrangement).

[e] Manner of Making Election

The election to use *IRC Section 2057* is made by the executor on the decedent's estate tax return. n195 In addition to making the election, the executor must file a written recapture agreement signed by each person who has an interest in any property designated in the agreement. In the agreement, each person must consent to the application of additional estate tax if a recapture event occurs. n196 The IRS may grant an extension of time for making an election. n196.1 The IRS may also allow a taxpayer to correct simple errors and imperfect elections under *IRC Section 2057*, as where all required information or signatures are not included. n196.2

[4] Estate Tax Exclusion for Land Subject to Qualified Conservation Easement

An executor of an estate may elect to exclude from the taxable estate of a decedent 40 percent of the value of any land subject to a qualified conservation easement that meets the statutory requirements. n197 The conservation easement may be claimed with respect to any land that is located in the United States or its possessions. n197.1 The election must be made on or before the due date (including extensions) for filing the estate tax return. The election is made on the return. n198 The election is also available with respect to interests in a partnership, corporation or trust if at least 30 percent of the entity is owned (directly or indirectly) by the decedent. n199

The maximum exclusion for land subject to a qualified conservation easement is limited to \$100,000 in 1998, \$200,000 in 1999, \$300,000 in 2000, \$400,000 in 2001, and \$500,000 in 2002 and thereafter. n200 If the value of the conservation easement is less than 30 percent of the value of the land without the easement (reduced by the value of any retained development rights), n201 then the 40 percent exclusion percentage is reduced. The reduction in the exclusion percentage is equal to two percentage points for each point that the value of the conservation easement is less than 30 percent of the land's value. Thus, if the value of an easement is 25 percent of the value of the land before the easement less the value of the retained development rights, the exclusion percentage is 30 percent (40 percent less twice the difference between 30 percent and 25 percent). Under this calculation, if the value of the easement is 10 percent or less of the value of the land before the easement less the value of the retained development rights, the exclusion percentage is equal to zero. n202 The date for determining easement compliance is the date on which the donation was made. n202.1

The amount of the exclusion is reduced by the amount of any charitable contribution deduction taken with respect to the land. n203 Debt-financed property is eligible for the exclusion only to the extent of the net equity in the property. For example, if a \$1 million property is subject to an outstanding debt balance of \$100,000, it is treated in the same manner as a \$900,000 property that is not debt-financed. n204

A qualified conservation easement for purposes of the estate tax exclusion generally has the same meaning as for income tax charitable contribution deductions, except that preservation of a historically important land area or a certified historic structure does not qualify as a conservation easement for estate tax purposes. In addition, a *de minimis* commercial recreational activity that is consistent with the conservation purposes, such as the granting of hunting and fishing licenses, will not cause the property to fail to qualify for the estate tax exclusion. n205

It should be noted that the granting of a qualified conservation easement is not treated as a disposition that triggers the recapture provisions under *IRC Section 2032A*. n206 In addition, the existence of a qualified conservation easement does not prevent the property from later qualifying for special-use valuation treatment under *IRC Section 2032A*.

Special rules apply for qualified conservation easements that are granted after the decedent's death. For those post-mortem easements, the estate is allowed a charitable contribution deduction for estate tax purposes with respect to the easement, but only if no charitable deduction is claimed for income tax purposes by the estate or any other person with respect to the easement. n207

A charitable deduction is permitted (for income tax or estate tax purposes) to taxpayers making a contribution of a permanent conservation easement on property where a mineral interest has been retained and surface mining is possible, but so remote as to be negligible. The deduction may be taken regardless of when the mineral interests were separated. n208-210

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.04

§ 18.04 Estate Planning for Specific Types of Real Property

[1] The Family Home

[a] In General

In some ways, the family home is no different from any other type of real property; in other ways, substantial nontax and non-economic factors make decisions with respect to the family home singularly difficult and completely different than decisions with respect to any other type of real property. For example, a number of the estate planning techniques discussed in this chapter involve selling the property. Individuals, however, may be more than just a little hesitant to part with the family home, especially if they have lived there for most of their lives.

[b] Qualified Personal Residence Trust

The most efficient way to accomplish a transfer of the family home while retaining use is to transfer a home to a qualified personal residence trust. n211 As noted above, n212 under *IRC Section 2702*, special valuation rules apply in the case of transfers of property in trust for the benefit of family members. The general rule is that any interest retained by the transferor is valued at zero. n213 This rule has the effect of causing gift tax to be imposed on the full market value of the property at the time of the transfer. The zero valuation of the retained interest, however, does not apply if the transfer involves the transfer of an interest in trust, all the property in which is a residence to be used as a personal residence by persons holding term interests in the trust. n214 By falling within this personal residence trust exception, the remainder interest of the transferor remaining after the trust term can be valued under actuarial tables under *IRC Section 7520*. This has the effect of reducing the value of the gift on which gift tax is imposed.

The IRS has provided in a revenue procedure a sample declaration of trust for a qualified personal residence trust with one transferor for a term equal to the lesser of the life of the term holder or a term of years. The procedure also provides additional guidance in the form of annotations to the provisions of the sample trust, alternative provisions concerning additions to the trust to purchase a personal residence, and disposition of trust assets on cessation of its qualification as a qualified personal residence trust. n214.1

The IRS also has issued a substantial number of letter rulings, each with different trust terms, under which personal residences, vacation homes, and even interests in cooperative apartments can be transferred to a qualified personal residence trust. The issue is almost always whether the property transferred qualifies as a personal residence. n215

Community interests in residences may also be transferred to a qualified personal residence trust. n215.1 The main risk in establishing a qualified personal residence trust is that the grantor of the property to the trust will not outlive the term of the trust. The grantor may lease the property from the trust during the trust term, and also at the end of the trust term at a fair market rate without the property being included in the grantor's estate. n216 The IRS has ruled that in the case of a transfer of qualifying property to a qualified personal residence trust by a lawful permanent US resident who had obtained a green card, the later surrender of the green card (likely during the term of the trust), and return to their home country would not affect the trust's status as a qualified personal residence trust. n216.1 Another risk of establishing a QPRT, of course, is the possibility that the donor(s) may come to regret giving up control of the family home, and the possibility of family discord. n216.2

Several rulings have addressed modifications of an initial QPRT that upon the expiration of the trust term, and upon a direction of a majority of the remainder beneficiaries, allow the trustee to liquidate the trust or provide a gift to anyone the majority of the current remainder beneficiaries choose of a term interest in real property in the trust estate. The modification also requires the term interest holder(s) to occupy the property as their principal residence. The remaindermen of the initial QPRT--typically the initial grantor's children--create a new irrevocable trust, transfer the residence to it, and have the second trust convey a term of years interest to possess and occupy the residence to the initial grantor. In each ruling, the IRS has ruled that if specified conditions are met, the second trust will also be treated as a QPRT. This allows the remainder interest in the second trust to be valued under actuarial tables rather than being given a zero valuation. To qualify for this treatment, the second trust must contain specified trust provisions, n216.3 must be operated consistent with the terms of the trust instrument, and must be valid trust under local law. The residence in the trust must also qualify as a personal residence. n216.4

[c] Sale and Leaseback of Family Home

Another way to alleviate this problem is to combine the sale with a leaseback (see § 18.02[1][b][i], above). Typically, the present owners will sell their home to their children and then lease it back from them. The lease arrangement must be set at fair rental value, or the anticipated tax benefits may be lost. The leaseback transaction may provide the younger generation with depreciation and other income tax benefits, although the passive loss limitations may limit the usefulness of these income tax benefits. n217 In addition, the lease arrangement must be for a fair rental value, or these tax benefits may be permanently lost. Even with a fair rental, a court may still find an implied agreement among the parties that the parent actually retained a life estate in the home. n218 This finding will cause the fair market value of the home at the time of the parent's death to be included in his or her estate, including any increase in the fair market value of the property between the date of the gift and the date of the decedent's death. n219

[d] Gift of Family Home with Retention of Use

Another method that can be used is a gift with the retention of use. Typically, this arrangement involves a parent giving the residence to his children, but continuing to live in the home. This results in a rather large gift tax currently, *and* the Service will almost certainly attempt to include the home in the decedent's estate under *IRC Section 2036(a)* (retention of a life estate). n220 The courts are likely to uphold the Service on this issue. n221 To avoid inclusion in the parent's estate, the parent must be able to prove that an outright transfer occurred and that no agreement, express or implied, existed conditioning the transfer upon a right to continued use.

In one case in which the taxpayer prevailed, a mother gifted her home to her daughter who lived in the residence and assumed all the benefits and burdens of ownership, including the payment of property taxes. Although the mother was allowed to live with her daughter after the transfer, she scrupulously treated her daughter as sole owner, even asking her permission before inviting friends over. These facts allowed the taxpayer to overcome the presumption that the transfer was made subject to an implicit retained right to continued residence. n222

If this type of transfer is treated as a completed transfer, then, like all gifts of present interests, it will qualify for the

annual exclusion, n223 and there will be no step-up in basis. n224 One drawback to this type of transaction is that the gift leaves the transferee with a basis equal to the transferor's (presumably) low basis, and with no basis step-up at the death of the transferor, whereas the transferor might have been able to avoid, or defer and ultimately avoid at death, any tax on any gain on the sale of the residence pursuant to *IRC Section 121*. Up to \$250,000 (\$500,000 for married taxpayers filing a joint return) of the gain from the sale of a principal residence may be excluded from gross income. n225

[2] Vacation Homes

The restrictions on the deductibility of interest expense and passive activity losses affect the tax treatment of vacation homes. Individuals will have to determine whether it is in their best interest to personally use a second home to such an extent that it will be treated as a "residence" under *IRC Section 280A*. If treated as a residence, interest expense may be entirely deductible as "qualified residence interest" n226 (see Chapter 9). However, other losses generally will not be allowed if they exceed the income generated from the property. On the other hand, if the vacation home is treated as an "active" rental activity, up to \$25,000 of losses may be allowed currently (providing that the individual's income level does not exceed certain amounts) n227 (see Chapter 13).

For purposes of estate planning, the above evaluation may affect the desirability of potential transfers of such vacation home property to younger family members. For example, if a family vacation home qualifies as rental property, but the losses are deferred because of the adjusted gross income limitation, the transfer of the property to younger family members who can use the tax benefits may have positive estate and income tax results.

Most individuals would find it emotionally easier to transfer their interest in a vacation home, than to transfer their principal residence. The most efficient way to accomplish this is to transfer a home to a qualified personal residence trust in the same manner as discussed for family homes in § 18.04[1], above. n228 Another method of excluding this vacation property from an estate is to transfer the *entire* vacation home to children, retaining, however, the right to use the home for vacations. The transfer can be structured as either a gift or a sale. (See the discussion of the various advantages and disadvantages in § 18.02, above. See § 18.02[8], above, for a discussion on the implications that *IRC Section 2702* may have upon the valuation of the retained interest.)

A Word of Caution: As discussed in Chapter 13, losses related to passive activity property may only be used against passive activity income. n229 Unused passive activity losses may be accumulated and carried forward indefinitely. n230 Upon the sale of an entire interest in a passive activity (i.e., rental property or limited partnership), suspended passive activity losses can be deducted without limitation. n231 If the property is transferred via gift, the basis in the hands of the donee is increased by suspended losses accumulated before the transfer. n232 If passive activity property with accumulated suspended losses is transferred upon death, however, suspended losses can be used as a deduction for income tax purposes on the decedent's final tax return, but only to the extent that the suspended loss carryforward exceeds the normal step-up afforded the decedent's property for estate tax purposes. The balance of the unused suspended losses are permanently lost. n233

It is possible, therefore, that passive activity investments with suspended losses that are transferred through the gross estate may generate no benefit from the suspended passive activity losses. n234 Individuals holding passive investments with accumulating suspended passive activity losses may want to consider *inter vivos* sales and transfers to ensure maximum use of these tax benefits. If the passive activity is sold in a taxable transaction to a family member, the property is treated as if it were not disposed of for suspended-loss purposes. The passive losses remain with the acquiring individual and may be offset against his passive activity income. The suspended losses are triggered when the family member disposes of the property in a taxable transaction to an unrelated party. n235

[3] Limited Partnership Interests

Recently, real estate limited partnerships have assumed a larger share of real property ownership (see Chapter 14). It is important not to overlook these holdings. The tremendous variance between one limited partnership and another, however, makes it difficult to provide any general guidelines about planning. However, it is important to point out some of the major considerations in estate planning for limited partnership interests.

Upon death, the value of limited partnership interests owned by the decedent will be included in his or her estate. n236 The value of the interest may be reduced because of the concept of "minority discount." (See § 18.03[1].) Limited partnerships are, by definition, passive activity investments. n237 If the partnership is generating passive activity losses, the partner must have other passive activity gains to use those losses for income tax purposes. n238 As previously mentioned (§ 18.04[2], above), there are potential negative results when unused deferred losses from such investments have accumulated before death. n239 Individuals should reassess their limited partnership investment holdings in relationship to their estate planning goals, to maximize the use of associated tax benefits while minimizing the estate transfer taxes.

It should be noted that gifts of limited partnership interests may be treated as gifts of a future interest, especially if donees do not have the right to a substantial present economic benefit of the interest. As such, the donor will not be entitled to an annual gift tax exclusion for the gift. n240 If there are significant restrictions on distributions from the limited partnership to limited partners, the income flow from the limited partnership is likely to be treated as a future interest. Furthermore, if there are significant prohibitions on the transfer or assignment of the limited partnership interest or restrictions on withdrawal from the limited partnership, the limited partnership interests will lack the tangible and immediate economic benefit required for a present interest under *IRC Section 2503(b)*. n241

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.05

§ 18.05 Other Issues

This chapter has provided a basic overview of the major aspects involved in estate planning for real estate, concentrating on various techniques to reduce the taxable estate. There are, however, a number of other specific areas that deserve brief attention.

[1] Transfers Related to Divorce Settlements

When a couple divorces, they are faced with the challenge of dividing up their property. Under current law, no gain or loss is recognized on a transfer of property to a spouse or to a former spouse if the transfer is incident to a divorce. n242 A transfer of property is treated as incident to divorce if it: (1) occurs within one year after the date on which the marriage ceases; or (2) is related to the cessation of the marriage. n243 A transfer within six years of a divorce is related to the cessation of the marriage if it is "pursuant to a divorce or separation instrument, as defined in *IRC § 71(b)(2)*." n244 Under *IRC Section 71(b)(2)*, a divorce or separation instrument includes a written instrument incident to a divorce decree. n245

The transferee spouse (or former spouse) takes the transferor's adjusted basis in the property. n246 Gain or loss may be recognized on a transfer in trust for the benefit of a spouse or former spouse if the liabilities to which the property is subject exceed the adjusted basis of the transferred property. In that case, the basis of the property to the transferee is also adjusted to take into account any recognized gain. n247 A transfer to a third party on behalf of a spouse or former spouse may also qualify for nonrecognition under *IRC Section 1041* if:

- (1) the transfer is required by a divorce instrument or separation instrument; n248
- (2) the transfer is pursuant to the written request of the other spouse (or former spouse), or
- (3) the transferor receives from the other spouse (or former spouse) a written consent or ratification of the transfer to the third party containing specified information. n249

Though there is no current tax impact for transfers incident to a divorce, careful tax planning is required because of the carryover basis of property transferred pursuant to a divorce. n250 For example, a husband and wife are going to split up two properties. Each is worth \$100,000, yet one has a basis of \$90,000 and the other has a basis of \$20,000. If they

plan to sell these properties in the near future, one property will have a gain of \$10,000 while the other will have a gain of \$80,000. n251 The disparity of the economic burden of this tax should be considered when the marital estate is being divided.

[2] Property That Has Declined in Value

The assumption for most of this chapter is that real estate will appreciate and that efforts to remove this appreciation from the future estate should be made. Sometimes, however, real estate does not appreciate. How should estate planning take into account such property? The general rule is that property that has gone down in value should not be given away. The reason is that if the basis of gifted property is greater than the fair market value at the time of the gift, the donee's basis for determining the loss on sale is only the fair market value on the date of gift. n252 For example, property with a basis of \$100 is gifted when it has a fair market value of \$60. Subsequently, the donee sells the property for \$50. The donee can only take a loss of \$10, the amount of loss attributable to the time when he held the property. n253 On the other hand, if the original owner (donor) had sold the property for \$50, he or she would be able to recognize the full \$50 as loss. n254 As a result of the gift, the tax benefit of the decline in value while the property is held by the donor is lost forever.

If property has been reported on an estate tax return, lower values may not be later substituted for those reported on the return without cogent proof that the reported values were erroneous. n255 The mere selling of the property at a later time for less than the value reported in the estate tax return will not justify a reduction in the value on the return. But that sale, accompanied with evidence that the local market for real property did not decline between the valuation date and the date of sale, and expert testimony that the property was overvalued on the return might be sufficient to show that the initial value reported was erroneous. n254

[3] Postmortem Planning

This section discusses some of the planning techniques that can be used to reduce or mitigate the burden of paying estate taxes.

[a] Deferred Installment Payment of Estate Taxes

IRC Section 6166 allows an estate to pay its estate tax in installments, if a closely held business constitutes more than 35 percent of a decedent's estate. n255 The purpose of this provision is similar to that of *IRC Section 2032A*, in that Congress did not want to force the sale of closely held businesses to enable the estate to pay its taxes.

The deferral provision allows interest-only payments for the first five years; 10 additional years are allowed for the payment of the estate tax itself, plus interest. n256 The deferred estate tax liability attributable to the first \$1 million (adjusted for inflation, for decedents dying after 1998) n257 of value (\$345,800 of tax, reduced by the amount of the unified credit) bears only a 2 percent interest rate, effective for decedents dying after 1997. n258 The rate applied to the balance is determined under *IRC Section 6621*. n259

The 2-percent rate applies on the amount of deferred estate tax attributable to the first \$1 million in taxable value of the closely held business (i.e., the first \$1 million in value in excess of the effective exemption provided by the unified credit and any other exclusions). The interest rate imposed on the amount of the deferred estate tax attributable to the taxable value of the closely held business in excess of \$1 million is reduced to an amount equal to 45 percent of the rate applicable to underpayment of taxes. n260 It should be noted that deferred payments of estate tax on holding companies and non-readily-tradable business interests do not qualify for the 2-percent interest rate. They instead are subject to a rate of 45 percent of the regular deficiency rate. n261 Deferred installment payments on property held through holding companies must include both principal and interest and must be made over five years. n262

Any interest paid on estate taxes that are deferred under *IRC Section 6166* is not deductible for estate or income tax purposes. n263 Statutory provisions clarify the existence of a declaratory judgment remedy in case of a question for eligibility under *IRC Section 6166*. n264

An election to pay the estate tax in installments must be made within the time prescribed for filing an estate tax return, including extensions. n265 An election made on a return that is not timely filed is untimely and therefore invalid. n266-268 Two additional requirements must be met for a taxpayer to be able to pay estate taxes in installments. First, the business must meet an ownership requirement--20 percent of the business must be held by the decedent or his family *or*, depending on the business entity, there must be no more than 45 partners or shareholders, respectively. n269 Second, the business must be an active trade or business. n270 The Service focuses on three factors for this requirement: the level of activity and use of contract labor; whether these activities are in the same entity as the ownership; and the level of disruption that would be caused by a sale of the property. n271 The Service construes the active business requirement narrowly--more narrowly than the statute itself is worded. The District Director having jurisdiction over the estate has the authority to determine if *IRC Section 6166* applies in a particular instance. n272

Although the IRS does have authority to require a taxpayer to provide a bond n273 or a special lien under *IRC Section 6324A* as a condition of qualifying for the extension to pay the estate tax, the Tax Court has ruled that the IRS cannot require a bond or security in every case. Rather, it must exercise reasonable discretion in each case to determine if a bond or lien is necessary. The court remanded the case for further administrative proceedings. n274 In response to the case, the IRS has announced an interim program under which it will determine on a case-by-case basis whether security will be required when a qualifying estate elects under *IRC Section 6166* to pay all or a part of the estate tax in installments. Until final regulations are announced, the IRS will evaluate the following factors and all other relevant facts and circumstances to determine on a case-by-case basis whether a bond or special lien is necessary. The determination may be made at any time and from time to time during the deferral period. The factors include the following: n275

- Duration and stability of the business. This factor considers the nature of the closely held business, the assets of that business, the relevant market factors that will impact the business's future success, its recent financial history, and the experience of its management, in an effort to predict the likelihood of its success and survival through the deferred payment period.
- Ability to pay the installments of tax and interest timely. This factor considers how the estate expects to be able to make the annual payments of tax and interest as due, and the objective likelihood of realizing that expectation.
- Compliance history. This factor addresses the business's history regarding compliance with all federal tax payment and tax filing requirements, in an effort to determine whether the business and its management respect and comply with all tax requirements on a regular basis. This factor also addresses the estate's compliance history with respect to federal tax payment and filing requirements.

With respect to real estate, the Service has taken the position that mere management of real estate assets to obtain rents does not qualify as an interest in a closely-held business so as to qualify for installment payment of estate taxes under *IRC Section 6166*. n276 In one ruling, however, the Service found that the decedent's active day-to-day operation, management and maintenance of ten rental properties until shortly before his death were sufficient to treat his interest in the properties as an active trade or business for purposes of *IRC Section 6166*. n277 The same "active trade or business" finding was made in another ruling in which the decedent was actively involved in more than 100 rental units both as a proprietor and through partnership ownership at the time of his death. n278 In another ruling, a decedent's revocable trust was the sole shareholder of 2 corporations owning six commercial properties. The IRS evaluated the decedent's level of activity (as assisted by the employees of the companies) and ruled that the decedent's interest in five of the properties through his trust's ownership of the corporations constituted a closely held business for which estate taxes

could be paid in installments under *IRC Section 6166*. The IRS found that a sixth property was merely a passive asset within the meaning of *IRC Section 6166(b)(9)(B)(i)*. n279

An estate of a decedent dying after 2001 with an interest in a qualifying lending and financing business n280 is eligible for installment payment of the estate tax. The installment payments, however, must include both principal and interest and must be made over five years. n281

It is critical that installment payments be timely made. If there is likely to be any foreseeable problem in paying an installment, the executor should request an extension of time for paying it under *IRC Section 6161*, discussed in § 18.05[3][b], below. One circuit court has ruled that if an estate has not paid all disputed amounts or is not up to date with its installment payments, the court does not have jurisdiction to permit the estate to challenge any IRS determination of the amount due. n282

[b] Extension of Time to Pay Estate Taxes

Apart from the availability of deferred installment payment of estate taxes when a closely held business is a large part of the estate, n283 an estate may request an extension of time to pay estate taxes for a period not to exceed 10 years. n284 An extension may also be requested for any part of any installment under *IRC Section 6166*. n285 The executor must demonstrate reasonable cause in order to obtain an extension. n286 The regulations give the following circumstances that illustrate reasonable cause: n287

- Inability of the executor to readily marshal liquid assets to pay the estate tax because of their location in several jurisdictions.
- The estate is comprised in substantial part of assets consisting of rights to receive payments in the future (i.e., annuities, copyright royalties, contingent fees, or accounts receivable), but the estate cannot borrow against them except upon terms that would inflict loss upon the estate.
- The estate includes a claim to substantial assets that cannot be collected without litigation.
- Lack of sufficient funds in the estate.

NOTE:

Notably absent from the above list is a situation which would apply to most real estate after 2008, i.e., that the estate tax can only be paid by selling assets in the estate at a sacrifice price or in a depressed market. This circumstance was one that did qualify for an extension under a prior law "undue hardship" provision. n288

[c] Disclaimers

A disclaimer is a useful tool to ensure full use of the unified credit. If the surviving spouse disclaims a bequest, the property generally passes to the residual estate (unless expressly provided otherwise under the terms of the will) and will not qualify for the marital deduction. n289 If a qualified disclaimer is made with respect to the transfer, the Federal estate tax provisions apply with respect to the disclaimed property interest as if the interest had never been transferred to the person making the disclaimer. n290

Example:

Assume a decedent dies in 2002, with a taxable estate valued at \$2 million, consisting of his share of the family home worth \$400,000, other real property worth \$500,000, and marketable securities worth \$1.1 million. The decedent's will leaves his entire estate to his wife. The will provides that disclaimed property will pass to trust for his daughter. If the wife's estate at the death of her husband were \$1

million, she will have an estate worth \$3 million at her death. If she disclaims enough of her residual bequest so that the decedent will make use of his full \$1 million unified credit, the value of his taxable estate (after application of the marital deduction) will be \$1 million, but the unified credit will offset any estate tax due. Upon her death, her estate will be \$2 million rather than \$3 million, assuming no growth in her estate. If she survives until 2006, her estate tax unified credit will offset any estate tax owing on her taxable estate. n291

[d] Alternate Valuation

The executor of an estate has the option of valuing all the estate's property at a date six months after the date of death. n292 This election can be made only if the value of the gross estate *and* the estate tax are reduced. n293 The election applies to all of the estate; it cannot be made on a property-by-property basis. n294 Since the tax basis of the property is determined with reference to its estate tax value, the election may result in a reduction of the estate tax; when the property is sold, however, the income tax may be higher. n295 Therefore, an evaluation of the respective values of the assets and the likelihood that they will be sold, must be made before choosing this alternate valuation election.

The alternate valuation election must be made by the executor on the estate tax return. Once made, the election is irrevocable. n295.1 No election may be made, however, if the estate tax return is filed more than one year after the date it is due, including extensions. n295.2 The IRS may grant extensions of time for making the election, but no extension is granted unless the estate tax return is filed no later than one year after the due date of the return, including extensions. n295.3 If, based on the return of tax as filed, use of the alternate valuation method would not result in a decrease in both the value of the gross estate and the sum (reduced by allowable credits) of the estate tax and the generation-skipping transfer tax liability payable by reason of the decedent's death with respect to the property includible in the decedent's gross estate, a protective election may be made to use the alternate valuation method if it is subsequently determined that such a decrease would occur. The protective election is irrevocable as of the due date of the estate tax return, including extensions of time actually granted. The protective election becomes effective on the date on which it is determined that use of the alternate valuation method would result in a decrease in both the value of the gross estate and in the sum (reduced by allowable credits) of the estate tax and generation-skipping transfer tax liability payable by reason of the decedent's death with respect to the property includible in the decedent's gross estate. n295.4

[4] Unified Credit Trusts

One fundamental aspect of estate planning is in ensuring full use of the unified credit, particularly in the estate of the first spouse who dies. n296 A unified credit trust is simply a trust that is drafted in a manner to allow full use of the unified credit.

Example:

Suppose a married couple has an estate worth \$3 million. If the husband were to die in 2002 and leave everything to his wife, his estate would incur no estate tax liabilities. However, if the wife were to die shortly thereafter, she would have a taxable estate of \$3 million. If instead the husband diverts \$1 million of assets to a unified credit trust and away from the marital deduction bequest, his taxable estate (after application of the marital deduction) will be \$1 million, but his unified credit will offset any estate tax due. Upon the death of the wife, her estate will be \$2 million rather than \$3 million, assuming no growth in her estate. If she survives until 2006, her estate tax unified credit will offset any estate tax owing on her taxable estate. Thus, the use of the unified credit trust will allow their entire estate to pass to heirs tax-free. n297

[5] Buy/Sell Agreements

A buy/sell agreement can be used to ensure a smooth transition in ownership of a closely held business and to fix the value of the business interest for estate tax purposes. It is this latter benefit on which this brief section focuses.

The buy/sell agreement can exist either between one owner and the business (redemptive) or between the various owners of a business (cross-purchases). In a typical arrangement, someone in the younger generation has the right to purchase the older generation's interest for a fixed price. When this price is properly fixed, the buy-sell value represents strong evidence in establishing the valuation for estate tax purposes. In addition, the purchase provides cash that the estate can use to pay off its debts.

Further, the agreement must meet certain criteria if it is intended to establish the value of the ownership interest for estate tax purposes. First, the agreement must provide a fixed or determinable price. Second, the estate must be obligated to sell at that price. Third, the obligation must be binding on the decedent *during his lifetime* (as well as binding on his estate at death). If the decedent would, or could, have sold his interest during his life to anyone, at any price, the agreement has no substance for estate valuation purposes. n298 Finally, the agreement must be a result of a bona fide business arrangement and not merely a means to transfer property for less than full consideration. It is well established that maintaining family ownership and ensuring a smooth transition constitute valid business purposes. However, an agreement entered into briefly before the death of an owner might appear to be a device to transfer a decedent's interest for less than full consideration. Further, irrespective of whether these criteria are met, the Service tends to view with skepticism all intrafamily buy-sell arrangements and may seek to challenge them as essentially testamentary schemes for transferring property. In addition, *IRC Section 2703* may limit the effectiveness of buy-sell agreements for gift and estate tax valuation purposes. See § 18.02[8], above, for further discussion.

[6] Certain Transfers to Dependent Children

Certain transfers to dependent children, even in trust, are not an effective income reduction planning tool for two main reasons. First, under a so-called "kiddie tax," the unearned income of children is taxed at their parents' highest marginal rate if: n299

- The child has not attained the age of 19 before the close of the calendar year in which the taxable year of the taxpayer begins, or is a student who has not attained the age of 24 as of the close of that calendar year; and
- The child's earned income n300 for that taxable year does not exceed one-half of the amount of the individual's support. Amounts received as scholarships for study at educational organizations with a regular faculty and student body are not treated as support in making this determination.

The tax is paid on the child's tax return and the parents do *not* get a credit or deduction on their tax return for this payment. In addition, the income from the property cannot be used by the parents in the computation of their passive activity or investment income. This may result in passive loss or investment interest limitations being imposed upon the parents. n301

Second, a grantor is treated as the owner of any trust in which the trust property may revert back to the grantor. n302 This rule applies even if the property is to revert to the grantor's spouse (spousal remainder trust). If a parent were to transfer property to a trust for a period of 15 years with his daughter as the beneficiary, the income from the property would be taxed to the parent.

The estate tax advantages from transferring property to younger generation family members still exists if properly structured. However, income tax benefits no longer go hand in hand with the estate tax benefit.

[7] Real Property Taxes Paid by Estate

Real property taxes paid by an estate are deductible only if the taxes are an enforceable obligation of the decedent at the

time of the decedent's death. n303

CHAPTER 18 Estate Planning for Real Estate *

2-18 Federal Taxes Affecting Real Estate § 18.06

§ 18.06 Summary

This chapter demonstrates the importance of estate tax planning when an individual has real estate holdings. Real estate is simply a part of the entire estate planning process, albeit an important part. The form of ownership, transfers made during one's lifetime, and the testamentary dispositions, all need to be considered when putting together an estate plan.

There are many factors to consider in planning for real estate: the value of the property, whether it qualifies for certain special valuation methods, the expected appreciation of the property, the degree of control that the current owners seek to maintain, and the income or loss produced by the property, to name just a few. An estate plan needs to consider all those factors and be flexible enough to meet the objectives under today's law, as well as the law as it may be tomorrow.

CHAPTER 19 Financing Commercial Real Estate Transactions *

2-19 Federal Taxes Affecting Real Estate § 19.01

§ 19.01 Introduction

Anyone who is involved with a commercial real estate project quickly realizes that completing the project will require vision, creativity, tenacity and compliance with a complex set of rules and regulations. This is clearly true with respect to the physical aspect of the project, since the developer must identify a suitable site and project market demand, design an attractive building, and comply with a bewildering array of zoning and environmental regulations. However, it is also true with respect to the financial aspect of a real estate project.

Few if any real estate developers will be interested in financing a commercial real estate project with their own funds--to do so would limit the scope of their activity, greatly reduce the potential profitability of a project and increase their own personal economic risk. For these reasons, commercial real estate ventures have historically been financed with a combination of equity from the developer (including "sweat equity"), equity from partners of the developer, various levels of debt financing and various types of government subsidies.

The tax advisor involved in commercial real estate transactions must therefore be familiar with the tax issues applicable to the developer's own sweat equity, third-party equity, debt financing (including financing provided by domestic and foreign lenders and tax-exempt financing) and governmental subsidies (including low-income housing and historic tax credits). Advisors will also have to consider the sources of available funds since, for example, equity provided by funds, including tax-exempt investors, may be subject to unrelated business taxable incomeⁿ¹ and ERISA rules; equity available from exempt organizations and real estate investment trusts may require that a commercial rental project forego receiving additional rents based on its lessees' net income from the property,ⁿ² and providers of mortgage debt financing may be planning to securitize the loan in a REMIC.ⁿ³ This Chapter 19 provides a survey of the tax issues present in the types of real estate financing techniques that will frequently be encountered in the financing of a commercial real estate project. Readers will observe that the movement of real estate finance towards corporate finance requires real estate advisors to be familiar with issues and techniques previously of interest primarily to corporate finance advisors.

CHAPTER 19 Financing Commercial Real Estate Transactions *

2-19 Federal Taxes Affecting Real Estate § 19.02

§ 19.02 Equity Investment

[1] Developer's Equity

A commercial real estate project will generally be owned through a limited partnership or, most frequently today, a limited liability company. In either case, the entity will generally choose to be treated as a partnership for Federal income tax purposes pursuant to the entity classification regulations. n4 These ownership vehicles are used because they are flexible, are not taxable entities for Federal income tax purposes and provide a level of protection for the owner's assets from claims of creditors of the entity. n5 Developers will generally use a separate entity for each separate real estate project or property, both to provide liability insulation between its properties and because the originators of first mortgage loans may require that the property owner be a special purpose entity (sometimes referred to as a "SPE") to facilitate a securitization of the mortgage. n6

A real estate developer may wish to finance its real estate activities in part by contributing the land for the project to the partnership, hoping to be able to withdraw from the partnership an amount equal to the fair market value of the land once other partners have contributed capital or the partnership has arranged financing. The contribution of property may be treated as a disguised sale of the property to the partnership if the developer's distribution is funded by capital contributions by other partners. n7 If a cash distribution is funded with loan proceeds, however, the transaction will not necessarily be recast as a disguised sale if the receipt of the loan proceeds is subject to significant uncertainties. n8
