What's New

1 Federal Taxes Affecting Real Estate Scope

Scope

HIGHLIGHTS

Release 44 November 2010

Federal Taxes Affecting Real Estate fully explains and illustrates the most important federal tax principles applicable to real estate transactions. It includes thorough and complete coverage of the tax consequences of all types of real estate transactions.

Release 44 contains new legislation and other relevant material enacted since the last release. Highlights of the release include the following:

- Extension of the maximum \$250,000 *IRC* § 179 expensing through 2010. See *IRC* § 179(b), discussed in Chapter 5.
- Repeal of the foreign targeted obligation exception to the denial of a deduction for interest on bonds not issued in registered form, and repeal of the treatment as portfolio interest of interest paid on bonds that are not issued in registered form but meet the foreign targeting requirements of *IRC* § 163(f)(2)(B). See *IRC* §§ 163(f)(2), 871(h)(2), discussed in Chapter 19.
- A revenue procedure providing a safe harbor method of reporting gain or loss for certain taxpayers who initiate a like-kind exchange under *IRC* § 1031, but fail to complete it because a qualified intermediary defaults on its obligation to acquire and transfer replacement property to the taxpayer. See Revenue Procedure 2010-14, discussed in Chapter 8.
- Codification of the economic substance doctrine, effective for transactions entered into after March 30, 2010 [see *IRC* § 7701(o)], along with a strict liability penalty regime to enforce the standard [see *IRC* §§ 6662(b)(6), 6664(c)(2), (d)(2)]. See Chapter 1 at § 1.03[2] for a detailed discussion.

1 Federal Taxes Affecting Real Estate Scope

- A 3-month extension--to October 1, 2010--for taxpayers to close on home purchases and still qualify for the first-time homebuyer credit. The extension applies only for purchases for which there was a binding contract before May 1, 2010 [*IRC § 36(h)(2), amended by Pub Law 111-198*]. See Chapter 5 at § 5.09[1] for a discussion.

- A divided Tax Court case holding that taxpayers who demolished their old home (which they had used as a principal residence for more than two years) and constructed a new house on the property but never lived in it, could not exclude gain under *IRC § 121* upon selling the house and underlying property. The court's rationale was that the taxpayers failed to satisfy the use requirement with respect to the new house. See *Gates v Commissioner*, discussed in Chapter 9 at § 9.02[3][a].

- The release also contains new detailed coverage of the home office deduction. See Part Two of Chapter 9.

CHAPTER 1 Tax Advantages and Problem Areas in Real Estate

1-1 Federal Taxes Affecting Real Estate § 1.00

§ 1.00 Introduction

The inherent economics of real estate, including the inflation hedge provided and the tax advantages available, historically have sustained real estate as a leading industry in the United States.

Proper utilization of the tax benefits and advantages available in real estate will allow a greater return on capital and potential for capital growth than for most other forms of investment. Tax advantages are available to the investor incident to the construction, purchase, and holding of real estate, and many tax options and benefits are available when the investor disposes of real property.

In recent years the income tax laws have frequently been amended to hit hard at "artificial-loss" provisions. On each specific transaction, nevertheless, competent tax advice should be obtained to avoid turning a potentially favorable real estate investment into an unfavorable situation because of the unfavorable tax consequences it engenders.

In this book, the authors have attempted to explain the more important tax principles applicable to real estate transactions, together with the related tax advantages available to real estate developers, purchasers, and sellers, as well as a discussion of the problem areas to be avoided.

CHAPTER 1 Tax Advantages and Problem Areas in Real Estate

1-1 Federal Taxes Affecting Real Estate § 1.01

§ 1.01 Advantages Available to the Investor

[1] Depreciation

The purchaser of real estate (other than land) may recover a substantial portion of his cost through the depreciation deduction. n1 Depending upon the depreciation method involved, deductions equal to or greater than debt amortization are usually available. The amount subject to depreciation includes funds invested and may include funds borrowed to acquire the property. This allows an investor to purchase real estate through partial debt financing and to fund debt repayment, in part, with cash generated by the depreciation tax deduction. In many instances, the depreciation deduction has caused properties to sustain a loss position for tax purposes yet maintain a positive cash flow to the investors.

Limitations on methods of depreciation apply on certain types of real property and certain depreciation is subject to recapture as ordinary income upon sale. n2 A full discussion of depreciation is found in Chapters 5 and 6.

[2] Leverage of Investment--Equity Financing

Historically, few investments have offered as great an opportunity to use borrowed funds as real estate. Using borrowed funds allows an investor to benefit from the use of another's money and is commonly referred to as "leverage." This leverage can substantially increase the rate of return on invested capital. For instance, if an investor purchases a \$10,000 property with \$2,000 equity (his own money) and \$8,000 in borrowed funds, he stands to profit on the increase in value of the property attributable to both investment and borrowed funds. If the value of the property increases to \$11,000, he has earned 50 percent on his \$2,000 investment. In contrast, had the investor purchased the property with \$10,000 equity the \$1,000 gain would have produced only a 10 percent return on his equity. This illustration does not take into account the after-tax interest cost of the leverage, which naturally must be considered.

When interest rates become highly cyclical, long-term fixed-cost financing becomes more difficult to arrange. Many lenders require additional interest income in the form of participation in rentals or proceeds of sale or require interest rates that are variable or renegotiable at certain times during the debt term. It has also become more common for lenders to require an equity participation in the real estate. Despite these factors and the resultant tax considerations they create, real estate continues to be subject to greater leverage than most other forms of investment. Severe restrictions apply to the tax aspects of nonrecourse financing for investing in oil, farming, cattle, equipment leasing, and certain other forms of tax shelter. n3 However, as discussed in Chapter 13, real estate investments are afforded favorable treatment by this "at-risk" restriction.

[3] Interest, Taxes, and Carrying Charges

The major out-of-pocket costs to carry real estate, whether improved or unimproved, are deductible and help to create some of the tax benefits applicable to the holding of real estate for investment or for a trade or business. These costs include interest, n4 taxes, n5 insurance, management fees, and other carrying charges. n6 Certain interest paid on passive-investment real estate can be subject to a limited deduction.

Interest, real property taxes, and most overhead items incurred during construction are required to be capitalized to the basis of the property. n7 (See Chapter 3.)

[4] Expensing Repairs and Maintenance

The owner of investment or business real estate can deduct all costs for repairs, operations, and maintenance (properly classifiable as noncapital expenditures) to keep the property in sound condition. n8 An aggressive maintenance and repair policy can result in keeping the property at a sound value and maximizing capital appreciation to the owner (see Chapter 4).

[5] Tenant Improvements

Improvements made by the lessee of property do not constitute income to the owner of real estate unless the improvements are intended to disguise or reduce a normal and fair rental. n9 Thus, the owner of real estate is allowed another means of increasing the property's capital value when tenant improvements revert to the owner upon termination of a lease. In effect, by careful planning with lessees, a lessor may realize an increase in net worth at no tax cost. For further discussion, see Chapter 4.

[6] Election to Capitalize Certain Carrying Charges

Further flexibility is available to an owner of unimproved and unproductive real estate, or certain real estate during the construction period, in that an election is available to capitalize carrying costs, such as interest, taxes, and other charges. n10 A different election is available each year for certain types of property, and such elections may be used to the owner's advantage, depending upon his particular tax position. Thus, the owner can choose the method that will result in the greatest tax benefit, an option normally not available with other forms of investment. For further discussion, see Chapter 3.

[7] Flexibility of Title and Ownership

Investment in real estate offers an opportunity for a number of investors to pool their resources through the use of a syndicate, partnership, LLC, or some other form of joint ownership of property. Such capital pooling enables an investor to participate in the purchase of prime property that the investor alone could not afford and to obtain the assistance of experienced real estate management in the acquisition and operation of property. Title to real estate can be held in a number of different ways, depending upon the intent of the parties and their tax objectives. For further discussion of various entities that may own real estate, see Chapters 14 (partnerships and limited liability companies), 15 (corporations), 16 (REITs, REMICs and other special forms of holding property), and 17 (foreign investment in US real estate).

[8] Investment in Low-Income Housing and Old or Historic Structures

A low-income housing credit is available for investments in low-income housing. n11 For the rehabilitation of old or historic structures, a one-time credit is available in the year of the rehabilitation. n12 These matters are covered in detail in Chapter 5.

[9] Expenditures to Improve Access for Disabled and Elderly Persons

All taxpayers may elect to deduct, rather than capitalize, the cost of qualified architectural and transportation barrier removal expenses, subject to an annual limit of \$15,000. n13 See Chapter 4 for a discussion. Eligible small businesses are eligible for a credit equal to 50 percent of qualifying expenditures that are incurred to remove architectural, communication, physical or transportation barriers that prevent the business from being accessible to individuals with disabilities. n14 See Chapter 5 for a discussion.

[10] Deduction Related to US Construction, Engineering, and Architectural Services

The percentage deduction relating to income attributable to domestic production activities n15 applies to gross receipts from the following services related to real estate: n16

- For taxpayers engaged in the active conduct of a construction trade or business, the construction of real property performed in the United States by the taxpayer in the ordinary course of that trade or business, or
- For taxpayers engaged in the active conduct of an engineering or architectural services trade or business, engineering or architectural services performed in the United States by the taxpayer in the ordinary course of that trade or business with respect to the construction of real property in the United States.

Gross receipts from the lease, rental, license, sale, exchange, or other disposition of land are excluded in computing the deduction. n17

The deduction is equal to a specified percentage of the lesser of (1) the qualified production activities income of the taxpayer for the taxable year, or (2) taxable income (determined without regard to this deduction) for the taxable year. n18

The deduction percentages are as follows: n19

Taxable years beginning in 2005 and 2006	3 percent
Taxable years beginning in 2007, 2008, and 2009	6 percent
Taxable years beginning after 2009	9 percent

The deduction for a taxable year is limited to 50 percent of the W-2 wages paid by the taxpayer during the calendar year that ends in that taxable year. n20 The Service has issued detailed interim guidance in *Notice 2005-14*, upon which taxpayers may rely until the issuance of regulations. n21

The deduction is discussed in detail in Chapter 3.

CHAPTER 1 Tax Advantages and Problem Areas in Real Estate

1-1 Federal Taxes Affecting Real Estate § 1.02

§ 1.02 Advantages Available to a Seller

[1] Capital Gains

A primary advantage for noncorporate taxpayers in owning real estate is the comparatively favorable tax rate imposed on capital gains following the sale of such property. The maximum tax rate on net capital gains is generally 15 percent. n22 For taxpayers who are otherwise taxed at the lowest regular income tax rate, the maximum tax rate on net capital gains is 5 percent. n23 The maximum rate of tax attributable to gains from the sale of depreciable *IRC Section 1250* property is 25 percent. n24 In contrast, ordinary income is subject to a maximum tax rate of 35 percent after 2002. n25

When improved real property is sold, a bifurcation of tax rates will occur. The 25-percent maximum tax rate would apply to any long-term gain attributable to the depreciable improvements, but gain from the sale of the nondepreciable land would be subject only to the maximum 15-percent (or 5-percent) rate. n26

The 5-, 15-, and 25-percent capital gains rates are available only for property held for more than one year. n27

For all taxpayers, an advantage to the characterization of income as capital gain is that capital gains can be used to offset capital losses. For corporations, losses from sales or exchanges of capital assets are allowed only to the extent of capital gains. n28 For other taxpayers, capital losses are allowed only to the extent of capital gains, plus \$3,000 per year (\$1,500 for married individuals filing separate returns). n29

[2] Tax-Deferred Exchanges

One of the most important advantages to a real estate owner is the right to change an investment position by exchanging property held for investment or the production of income for other property of a like kind. As discussed in Chapter 8, an investor may trade equity for an equity in a more expensive property at no tax cost. Thus, the real estate investor can parlay his equity and appreciation with no dilution by income taxes. n30 On the other hand, the change of investment position by a stock investor normally offers no similar advantages but, rather, results in current tax on profits realized.

[3] Condemnation

Real estate may be condemned in whole or in part by a governmental authority. The purpose of the condemnation may be to provide for a school site, a new road, or for other public purposes. An owner of condemned appreciated property

has considerable flexibility and, as explained in Chapters 6 and 8, can treat the proceeds in one of three ways:

- (1) Realize a profit on the condemnation and pay the tax.
- (2) Use the proceeds to purchase other real estate within a specified period of time. By acquiring property of a like kind or property similar or related in use, the owner pays no current tax on the gain from the condemnation. Tax is paid only when the replacement property is sold. n31
- (3) Reinvest a part of the condemnation proceeds and in many situations defer the tax relating to the gain inherent in the portion so reinvested. n32

Further discussion appears in Chapter 8.

[4] Deferring Tax on Sale of Property

Real estate is often sold on a deferred payout basis. The seller may receive from the buyer a note secured by a mortgage or trust deed payable over a number of years. Taxpayers may use the installment method to report gain and match the payment of tax with the receipt of cash, n33 or may elect otherwise if that proves more beneficial. n34 These subjects are covered in Chapter 7.

FOOTNOTES:

(n1)Footnote 22. *IRC § 1(h)*, in effect for tax years ending after May 6, 1997. For prior years, the maximum tax rate for net capital gains is 28 percent (*IRC § 1(h)*, before amendment by Pub L No 105-34).

(n2)Footnote 23. *IRC § 1(h)(1)(B)*; a 0-percent rate replaces the 5-percent rate for taxable year beginning after Dec 31, 2007.

(n3)Footnote 24. *IRC § 1(h)(1)(D)*, eff for tax years ending after May 6, 1997.

CHAPTER 1 Tax Advantages and Problem Areas in Real Estate

1-1 Federal Taxes Affecting Real Estate § 1.03

§ 1.03 Problem Areas in Real Estate

[1] In General

While there are many tax advantages to real estate investment, a number of disadvantages and pitfalls may trap the unwary taxpayer. However, it is difficult to enumerate such problems because of the different tax positions of various taxpayers. A situation that may be disadvantageous to one taxpayer may have no effect on another taxpayer. Some of the more significant problem areas are:

- There may be an inadvertent crossing of the line which separates an investor in real estate from a dealer in real estate. When a taxpayer has more than a nominal number of real estate transactions or when his intent is to hold for sale a newly acquired piece of real estate, the proceeds may be taxed as ordinary income rather than as a capital gain. n35 Furthermore, a dealer is not entitled to the benefits of tax-deferred exchanges. n36 This problem is discussed more fully in Chapter 10.
- Any transaction involving real estate must have a business purpose or economic substance, in order for tax benefits from the transaction to be allowed. The codification of the economic substance doctrine in *IRC Section 7701(o)*, and the strict liability penalty that may be imposed if a transaction lacks economic substance must be kept in mind with respect to real estate investments. n36.1 Because reasonable cause and good faith exceptions are not available as a defense to the penalty, n36.2 even outside opinions or in-house analysis will not protect a taxpayer from imposition of a penalty if it is determined that the transaction lacks economic substance or fails to meet the requirements of any similar rule of law. The circumstances under which this new statutory regime will be applied to real estate transactions are uncertain, but circular sale-leaseback transactions will surely be likely targets. It is also uncertain how to guarantee that a taxpayer's evaluation of profit potential of a particular real estate transaction will pass IRS muster under the statutory economic substance standard. See § 1.03[2], below, for a discussion of the codified economic substance standard, and penalties that may apply.
- Corporations that primarily hold rental property together with other investments producing even relatively nominal amounts of dividends, interest, or royalties may inadvertently become personal holding companies. n37 Corporations that become personal holding companies will be subject to a penalty tax. n38 See Chapter 15 for further discussion.

■ A taxpayer who holds stock in a company engaged in real estate development may consider his stock a capital asset and assume that any profit on the sale will be treated as a capital gain. However, the profit may be considered ordinary income if the corporation comes under the "collapsible" corporation provisions discussed in Chapter 15. n39 The collapsible corporation rules, however, have been temporarily repealed and do not apply effective for tax years beginning after December 31, 2002, and before January 1, 2011. n40

■ Although under the elective entity classification rules, an entity's choice of entity classification will almost always be respected, n41 the determination of whether an entity exists separate and apart from its owners is a matter of federal, not state, law. n42 Accordingly, there may be occasions when an entity organized as a separate entity under state law will be unable to elect its entity classification for federal tax purposes because it is not considered an entity separate from its owners under federal law. For example, if an LLC with a single individual owner is disregarded as an entity separate from its owner under *Regulation Section 301.7701-3*, its individual owner is subject to federal tax as if the LLC's business were operated as a sole proprietorship, and the LLC will not be able to elect an entity classification for federal tax purposes. n43 The federal entity classification rules are discussed in detail in Chapter 14.

■ Another possible area of concern involving entity classification may arise when a taxpayer wishes to take the position that certain arrangements regarding the acquisition of undivided fractional interests in real property do not constitute separate entities for federal tax purposes and therefore the fractional interests may be the subject of tax--free exchanges under *IRC Section 1031*.

■ The IRS has issued a revenue procedure in which it specifies the conditions under which it will consider a request for a ruling that an undivided fractional interest in rental real property (other than a mineral property) is not an interest in a business entity for tax purposes. n44 The procedure details the guidelines for submitting ruling requests, the information to be submitted, and conditions for obtaining rulings. n45 The procedure applies to co-ownership of rental real property in an arrangement classified under local law as a tenancy-in-common. It should be noted that the guidelines provided are only issued for the purpose of assisting taxpayers in preparing ruling requests; they are not intended to be substantive rules, and are not to be used for audit purposes. n46

■ The depreciation recapture provisions applicable to both real and personal property can bunch significant amounts of ordinary income into one year unless proper tax planning steps are taken. n47 Chapters 5 and 6 contain a complete discussion of recapture problems.

■ Noncapital expenditures incurred by a newly formed entity during the construction, reconstruction, or rehabilitation phase may be limited as to current deductibility. n48 See Chapter 3.

■ Provisions of the tax law may reduce the desirability of certain taxpayers' owning real estate. These provisions primarily relate to the adverse effect on tax preferences, n49 passive loss limitations, n50 and the investment interest limitation n51 (see Chapters 4 and 13).

■ While one of the principal advantages of real estate investment is the use of leverage (see § 1.01[2], above), high interest rates during some years have demonstrated the possibility of reverse leverage to an investor; i.e., the interest on the debt obligation required to purchase the property may exceed the earnings and/or incremental increase in value of the property. This can seriously impair the value of the invested equity. Also, when property is sold, the seller may, of necessity, furnish mortgage financing to the buyer, thus allowing the buyer the use of the seller's equity for future profit potential. Such use may

be at an interest rate less than the rate which would be charged by a third-party mortgagor to facilitate the sale of the property.

- Real estate that has generated significant tax shelter in prior years often has debt outstanding that exceeds the tax basis of the property. A large built-in gain can be realized on the sale, foreclosure, or other disposition of such property, which could result in a tax that is disproportionate to the actual proceeds received (see Chapter 12).

These are some of the more significant tax problem areas for taxpayers who invest in real estate. Others are discussed throughout this book. All these problem areas, as well as areas of advantage, must be considered and correlated by the investor to minimize income tax costs and to maximize return on investment.

[2] Codification of Economic Substance Doctrine

[a] In General

Any transaction entered into must have economic substance separate and distinct from economic benefit achieved solely by tax reduction. If a transaction serves no economic purpose for the parties involved other than to generate tax savings, courts have traditionally refused claimed tax benefits resulting from the transaction. n51.1 For real estate, sale-leaseback transactions, and transactions involving inflated prices, nonrecourse financing, or related parties can be given especially close scrutiny.

Effective for transactions entered into after March 30, 2010, the economic substance doctrine has been codified as part of the Internal Revenue Code. n51.2 For purposes of the codified provision, the economic substance doctrine means the common law doctrine under which tax benefits with respect to a transaction are not allowable if the transaction does not have economic substance or lacks a business purpose. n51.3 In the case of any transaction (or series of transactions) to which the economic substance doctrine is relevant, the transaction is treated as having economic substance only if: n51.4

- the transaction changes in a meaningful way (apart from federal income tax effects) the taxpayer's economic position; and
- the taxpayer has a substantial purpose (apart from federal income tax effects) for entering into the transaction.

The determination of whether the economic substance doctrine is relevant to a transaction is made in the same manner as if *IRC Section 7701(o)* had never been enacted. Thus, the statute does not change existing standards in determining when to use an economic substance analysis. n51.5

Under the statute, the economic substance doctrine involves a conjunctive analysis: n51.6

- there must be an inquiry regarding the objective effects of the transaction on the taxpayer's economic position; and
- there must be an inquiry regarding the taxpayer's subjective motives for engaging in the transaction.

Any transaction subject to the economic substance doctrine must satisfy both tests--i.e., it must change in a meaningful way (apart from federal income tax effects) the taxpayer's economic position and the taxpayer must have a substantial non-federal-income-tax purpose for entering into it. Otherwise, it will not be treated as having economic substance, and claimed tax benefits from it may be denied. n51.7

Furthermore, a taxpayer's non-federal-income-tax purpose for entering into a transaction (the second prong in the analysis) must be "substantial." n51.8 For purposes of this analysis, any state or local income tax effect which is related to a federal income tax effect is treated in the same manner as a federal income tax effect. n51.9 Also, a purpose of achieving a favorable accounting treatment for financial reporting purposes is not taken into account as a non-federal-income-tax purpose if the origin of the financial accounting benefit is a reduction of federal income tax. n51.10

A taxpayer may rely on factors other than profit potential to demonstrate that a transaction results in a meaningful change in the taxpayer's economic position or that the taxpayer has a substantial non-federal-income-tax purpose for entering into the transaction. The statutory economic substance doctrine does not require or establish a minimum return that will satisfy the profit potential test. However, if a taxpayer relies on a profit potential, the present value of the reasonably expected *pre-tax* profit must be substantial in relation to the present value of the expected net tax benefits that would be allowed if the transaction were respected. n51.11 Fees and other transaction expenses are taken into account as expenses in determining pre-tax profit. The Secretary is to issue regulations requiring foreign taxes to be treated as expenses in determining pre-tax profit in appropriate cases. n51.12

For individuals, the statutory economic substance doctrine applies only to transactions entered into in connection with a trade or business or an activity engaged in for the production of income. It does not apply for personal transactions. n51.13 Beyond the purchase of a taxpayer's personal residence, it is not clear what, if any, transactions involving real estate might fall within the "personal transaction" category so as to avoid application of the doctrine.

COMMENT:

There are many unanswered questions in connection with the codification of the economic substance doctrine. Regarding the first prong of the test, there is no benchmark for determining whether a change in a taxpayer's position is "meaningful." n51.14 Also, in assessing profit potential, it is unclear when the present value of the "reasonably expected" pre-tax profit will be "substantial" in relation to the present value of the expected net tax benefits. n51.15 The uncertainty as to whether a particular transaction will meet the statutory economic substance test has caused some practitioners to urge Treasury to provide a safe harbor list of transactions that will do so, or other specific guidance. This guidance seems essential, in light of the strict liability penalties that can come into play if a transaction is found on audit not to have economic substance. n51.16 No such guidance has been forthcoming yet, however, and for now, requesting a private letter ruling is likely to be the safest course.

The explanation of the provision by the Joint Committee on Taxation indicates that the codification is not intended to alter the tax treatment of certain basic business transactions that, under longstanding judicial and administrative practice are respected, merely because the choice between meaningful economic alternatives is largely or entirely based on comparative tax advantages. These transactions include the following: n51.17

- the choice between capitalizing a business enterprise with debt or equity;
- a U.S. person's choice between utilizing a foreign corporation or a domestic corporation to make a foreign investment;
- the choice to enter a transaction or series of transactions that constitute a corporate organization or reorganization under subchapter C of the Code; n51.18 and
- the choice to utilize a related-party entity in a transaction, provided that the arm's length standard of *IRC Section 482* and other applicable concepts are satisfied.

[b] Strict Liability Penalty when Transaction Lacks Economic Substance

A strict liability penalty applies when there is an underpayment attributable to any disallowance of claimed tax benefits by reason of a transaction lacking economic substance, as defined in new *IRC Section 7701(o)*, or failing to meet the requirements of any similar rule of law. n51.19 The penalty rate is 20 percent of the underpayment. The penalty is increased to 40 percent if the taxpayer does not adequately disclose the relevant facts affecting the tax treatment in the return or a statement attached to the return. n51.20 If the 40-percent penalty is imposed, no accuracy related penalty under *IRC Section 6662A* will apply. n51.21

The reasonable cause and good faith exceptions are not available as a defense to the non-economic substance penalty. Thus, outside opinions or in-house analysis will not protect a taxpayer from imposition of a penalty if it is determined that the transaction lacks economic substance or fails to meet the requirements of any similar rule of law. n51.22

A claim for refund or credit that is excessive under *IRC Section 6676* due to a claim that is lacking in economic substance or failing to meet the requirements of any similar rule of law is also subject to the 20-percent penalty under that section, and the reasonable basis and good faith exceptions are not available. n51.23

CHAPTER 1 Tax Advantages and Problem Areas in Real Estate

1-1 Federal Taxes Affecting Real Estate § 1.04

§ 1.04 Tax-Related Benefits for Taxpayers Affected by 2005 Hurricanes

[1] In General

Congress enacted legislation in 2005 (the Katrina Emergency Tax Relief Act of 2005) n52 in response to Hurricane Katrina in order to provide special tax breaks to those affected. Many of the provisions in the Katrina legislation were later expanded by the Gulf Opportunity Zone Act of 2005 n53 to cover those affected by Hurricanes Rita and Wilma as well. Because of the unique nature of the legislation, its specific focus, and the limited time frame of the duration of some of the provisions, all aspects of the legislation that affect real estate are discussed here. The following subsections discuss the tax benefits provided the legislation that can affect real estate.

[2] Additional Exemption for Providing Housing Individuals Displaced by Hurricane Katrina

An exemption is allowed to individual taxpayers who provide free housing in their principal residence for certain persons displaced from their abode by Hurricane Katrina. n54 The exemption is allowed once per taxpayer for a specific individual in 2005 or 2006, but not in both years. n55 An exemption of \$500 is allowed for each displaced person for whom housing is provided, n56 but the maximum exemption that can be claimed for all displaced persons is \$2,000 (\$1,000 for a married taxpayer filing a separate return). n57 If two or more taxpayers share the same main home, only one taxpayer can claim the additional exemption amount for a specific displaced individual. A taxpayer must have a legal interest in the principal abode (i.e. must own or rent the home) in order to be able to claim the exemption. n58 Temporary regulations clarify various aspects of the legislative provision. n58.1

The exemption is allowed only if housing is provided for at least 60 consecutive days, ending in the tax year in which the exemption is claimed. The deduction is not available for housing provided to a spouse or dependent. n59 In addition, the exemption is allowed only if the taxpayer does not receive any rent or other amount from any source in connection with providing the housing. n60 A taxpayer claiming an exemption may, however, receive payments or reimbursements that do not relate to normal housing costs, such as food, clothing, or personal items used by the displaced individual, and reimbursements of phone or gasoline costs incurred by the displaced individual. n61

The exemption is claimed on Form 8914. To claim the exemption, the taxpayer must report the displaced person's social security number or individual taxpayer ID number. n62

[3] Exclusion of Certain Cancellation of Indebtedness Income by Reason of Hurricane Katrina

Certain cancellations of indebtedness incurred as a result of Hurricane Katrina are excluded from gross income. n63 The exclusion is available to an individual whose principal place of abode on August 25, 2005 was located in the Hurricane Katrina disaster area. If the abode was located outside the core disaster area, the exclusion is available only if the person also suffered economic loss by reason of Hurricane Katrina. n64 Examples of economic loss include, but are not limited to, the following n65

- loss, damage to, or destruction of real or personal property from fire, flooding, looting, vandalism, theft, wind, or other cause;
- loss related to displacement from the taxpayer's home; or
- loss of livelihood due to temporary or permanent layoffs.

The exclusion is available only for cancellations made on or after August 25, 2005, and before 2007, n66 and only for discharges made by specified governmental agencies or financial entities. n67 The exclusion is not available for cancellations of indebtedness incurred in connection with a trade or business, n68 or for any discharge of indebtedness to the extent that real property constituting security for the indebtedness is located outside of the Hurricane Katrina disaster area. n69

No double tax benefit may result from the exclusion. Therefore, a taxpayer may need to reduce tax attributes by the amount excluded. n70

[4] Special Rules for Mortgage Revenue Bonds Used to Provide Loans to Residences Affected by Hurricane Katrina

Interest on qualified mortgage revenue bonds is tax-exempt. n71 A bond the proceeds of which provides financing before 2011 n72 with respect to a qualified Hurricane Katrina recovery residence can be a qualified mortgage revenue bond if other statutory requirements are also met. n73 A "qualified Hurricane Katrina recovery residence" is any residence in the core disaster area. It also includes any other residence of a mortgagor if it (1) is located in the same State as the principal residence of that mortgagor, and (2) the mortgagor owned a principal residence on August 28, 2005, which was located in the Hurricane Katrina disaster area, and was rendered uninhabitable by reason of Hurricane Katrina. n74

[5] Special Rules for Recapture of Mortgage Subsidy

Subject to several exceptions, a taxpayer who refinances a home under a federally subsidized program (i.e. with a loan from a tax-exempt qualified mortgage bond or a loan with a mortgage credit certificate) must recapture all or part of the benefit received from the program when the home is disposed of. n75 Recapture does not apply, however, to qualified home improvement loans of not more than \$15,000. n76 The \$15,000 amount is increased to \$150,000 if the loan is provided before 2011 and is used to do one of the following: n77

- repair damage caused by Hurricane Katrina to a residence located in the Hurricane Katrina disaster area; or
- alter, repair, or improve an existing owner-occupied residence in the GO Zone, Rita GO Zone, or Wilma GO Zone.

[6] Extension of Involuntary Conversion Replacement Period for Property Located in Hurricane Katrina Disaster Area

A taxpayer generally does not have to recognize gain from an involuntary conversion if the involuntarily converted property is replaced within two years. n78 The replacement period is four years in the case of damage to a principal residence that is located in a disaster area and is compulsorily or involuntarily converted as a result of a federally declared disaster. n79 For property that was involuntarily converted after August 24, 2005 by reason of Hurricane Katrina, however, a taxpayer has 5 years to replace the property without recognition of gain. This extension of time applies only if substantially all of the use of the replacement property is in the Hurricane Katrina disaster area. n80

[7] Gulf Opportunity Zone Benefits

[a] In General

In response to hurricanes occurring in 2005, Congress designated a Gulf Opportunity Zone or "GO Zone," n81 and also a Rita GO Zone and Wilma GO Zone. n82 Any of the GO Zones include that portion of the disaster area determined by the President to warrant individual or individual and public assistance from the Federal Government under the Robert T. Stafford Disaster Relief and Emergency Assistance Act by reason of Hurricane Katrina, Rita, or Wilma. n83 A variety of tax benefits are available to taxpayers in the GO Zones. n84 The following subsections discuss benefits provided by the legislation that may relate to real estate.

[b] Tax-Exempt Bond Financing

Specified bonds issued by Alabama, Louisiana, or Mississippi, or their political subdivisions qualify as exempt facility bonds or qualified mortgage bonds, depending on the particular issue. n85 Provided that specified statutory requirements related to the issuance of the bonds are satisfied, n86 interest from the bonds will be tax-exempt. n87 Among the qualified project costs for which the proceeds of a bond may be used are the following: n88

- qualified residential rental projects n89 located in the GO Zone; and
- costs of acquisition, construction, reconstruction, and renovation of nonresidential real property (including fixed improvements associated with that property) located in the GO Zone, and public utility property n90 located in the GO Zone.

Numerous, detailed modifications are made to existing statutory provisions related to tax-exempt bond financing requirements in applying them to any qualified GO Zone bond. n91 One advance refunding of certain tax-exempt bonds before 2011 may be allowed. n92 The IRS has provided guidance with respect to the information reporting requirements applicable to the above bonds, and has also detailed the credit rate and arbitrage requirements applicable to Gulf Tax Credit Bonds and the treatment of the credit by holders of those bonds. n92.1

Several special rules come into play regarding revenue bond financing before 2011 n93 for owner-occupied residences affected by Hurricane Katrina, Rita, or Wilma:

- Owner-occupied residences in the GO Zone, the Rita GO Zone, or the Wilma GO Zone, are treated as targeted area residences. n94 This allows bond proceeds to finance residences without regard to ownership in the prior three years; n95
- All financing may be provided to mortgagors whose family income is 140 percent or less of the applicable median family income; n96

- Qualified home improvement loans of up to \$150,000 may be made; n97 and

- A qualified GO Zone repair or reconstruction is treated as a qualified rehabilitation under both *IRC Sections 143 and 1400N*. n97.1 This allows proceeds from the bonds to be used for repairs by individuals with an ownership interest in their home. A qualified GO Zone repair or reconstruction is any repair of damage caused by Hurricane Katrina, Hurricane Rita, or Hurricane Wilma to a building located in the GO Zone, the Rita GO Zone, or the Wilma GO Zone (or reconstruction of such a building in the case of damage constituting destruction). To qualify, the expenditures for the repair or reconstruction must be at least 25 percent or more of the mortgagor's adjusted basis in the residence. For this purpose, a mortgagor's adjusted basis is determined as of the completion of the repair or reconstruction or, if later, the date on which the mortgagor acquires the residence. n97.2

[c] Increase in Low-Income Housing Credit

For calendar years 2006-2008, the state low-income housing credit ceiling is increased by specified amount for each state located in the GO Zone. n98 The manner of making allocations for purpose of the credit carryover provisions is also specified. n99 For property located in the GO Zone and damaged by Hurricane Katrina, an extended period of time is allowed to restore qualified basis under *IRC Section 42(j)(4)(E)*, in order to avoid recapture. For property damaged by Hurricane Katrina and located in the GO Zone, the restoration period may be as long as 48 months after the end of calendar year 2005. n99.1

For purposes of *IRC Section 42*, for property placed in service from January 1, 2006 to December 31, 2010, the GO Zone, the Rita GO Zone, and the Wilma GO Zone are generally treated as difficult development areas; n100 therefore, buildings in those areas are eligible for an increase in eligible basis for which the credit is available. n100.1 They are not, however, taken into account for purposes of applying the 20 percent limitation regarding the designation of metropolitan statistical areas. n101 For property placed in service during 2006, 2007, or 2008 in the GO Zone, and in a non-metropolitan area, the 20-50 and 46-60 percent gross income tests are used with the national non-metropolitan median gross income, rather than area median gross income as a benchmark. n102

In addition, the usual requirement that an allocation to a building must be made not later than the close of the calendar year in which the building is placed in service n102.1 is eliminated. This modification is effective for allocations of housing credit dollar amounts to buildings located in the GO Zone, the Rita GO Zone, or the Wilma GO Zone. The modification applies only if the allocation is made in 2006, 2007, or 2008, and the building is placed in service before 2011. n102.2

Finally, in determining whether a building which is placed in service in the GO Zone, the Rita GO Zone, or the Wilma GO Zone from 2006 through 2010 is federally subsidized, certain community development block grants are not taken into account. Specifically, a loan is not treated as a below market Federal loan n102.3 solely by reason of any assistance provided under Section 106, 107, or 108 of the Housing and Community Development Act of 1974 by reason of section 122 of that Act or any provision of the Department of Defense Appropriations Act, 2006, or the Emergency Supplemental Appropriations Act for Defense, the Global War on Terror, and Hurricane Recovery, 2006. n102.4

[d] Special Depreciation Allowance for GO Zone Property

Taxpayers may take a special depreciation allowance for qualified GO Zone property placed in service after August 27, 2005. n103 The special depreciation is allowed in the tax year the property is placed in service, and is equal to 50 percent of the adjusted basis of the property. n104 The amount allowed as a deduction under this provision is determined after and *IRC Section 179* deduction and before computing the amount otherwise allowable as a depreciation deduction. The adjusted basis of the qualified GO Zone property must be reduced by the amount of the special depreciation before computing the amount of the depreciation deduction otherwise allowable for that year or any

later tax year. n105 The deduction is allowed both for regular tax and alternative minimum tax purposes. n106 *Notice 2008-25* , n106.1 *Notice 2006-77* , and *Notice 2007-36* provide detailed guidance regarding the deduction. n106.2

GO Zone property includes the following property: n107

- nonresidential real property and residential rental property;
- qualified leasehold improvement property; n108
- tangible property with a recovery period of 20 years or less;
- water utility property; and
- certain computer software.

Property is GO Zone property only if it also meets the following requirements: n109

- it must be acquired by the taxpayer by purchase after August 27, 2005, and no written binding contract for the acquisition can have been in effect before August 28, 2005;
- it must be placed in service by the taxpayer before 2008 (2009, in the case of nonresidential real property and residential rental property, or 2011 for "specified Gulf Opportunity Zone extension property"; n109.1
- substantially all of the use of the property must be in the GO Zone and in the active conduct of the taxpayer's trade or business in the GO Zone; and
- the original use of the property must begin with the taxpayer after August 27, 2005, in the GO Zone. *Notice 2007-36* provides guidance with respect to the original use requirement. n109.2

The following property cannot be GO Zone property under any circumstances: n110

- property that must be depreciated using the alternative depreciation system; n111
- property any portion of which is financed with the proceeds of a tax-exempt obligation; n112
- property for which the taxpayer claims a commercial revitalization deduction; n113
- property in the same class as that for which the taxpayer elected not to claim the special GO Zone depreciation allowance;
- any property used in connection with a private or commercial golf course, country club, massage parlor, hot tub facility, sun tan facility, or any store, the principal business of which is the sale of alcoholic beverages for consumption off premises; n114
- any gambling or animal racing property; n115
- property that is placed in service and disposed of during the same taxable year; n115.1 or
- property that is converted from business or income-producing use to personal use in the same taxable

year in which the property is placed in service by a taxpayer.

Gambling or animal racing property includes the portion of any real property (determined by square footage) that is dedicated to gambling, the racing of animals, or the on-site viewing of that animal racing, unless the portion is less than 100 square feet. It also includes any equipment, furniture, software, or other property used directly in connection with gambling, the racing of animals, or on-site viewing of animal racing. n116

Self-constructed property used by the taxpayer who manufactured, constructed, or produced it can qualify as GO Zone property, provided that the manufacture, construction, or production begins after August 27, 2005, and is placed in service by December 31, 2010. n117

A special rule applies in the case of certain leased property. In the case of any property that is originally placed in service after August 27, 2005 by a person and that is sold to the taxpayer and leased back to that person by the taxpayer within three months after the date that the property was placed in service, the property is treated as originally placed in service by the taxpayer not earlier than the date that the property is used under the leaseback. n118

A special rule allows "specified Gulf Opportunity Zone extension property" to qualify for the additional first-year depreciation deduction for an extended period. n118.1 "Specified Gulf Opportunity Zone extension property" is property substantially all the use of which is in one or more specified portions of the Gulf Opportunity Zone and which is either: (1) nonresidential real property or residential rental property which is placed in service by the taxpayer on or before December 31, 2010, or (2) in the case of a taxpayer who places in service a building described in (1), property described in *IRC § 168(k)(2)(A)(i)* if substantially all the use of that property is in that building and the property is placed in service within 90 days of the date the building is placed in service. n118.2 (Generally, property described in *IRC § 168(k)(2)(A)(i)* is (1) property to which the general MACRS depreciation applies with an applicable recovery period of 20 years or less, (2) computer software other than computer software covered by *IRC § 197*, (3) water utility property (as defined in *IRC § 168(e)(5)*), or (4) certain leasehold improvement property.) Although qualifying property placed in service before 2011 may qualify for this special rule, in the case of nonresidential real property or residential rental property, only the adjusted basis of that property attributable to manufacture, construction, or production before 2010 ("progress expenditures") is eligible for the additional first-year depreciation. n118.3

Separate rules apply to the syndication of a lease by the lessor. If property is originally placed in service after August 27, 2005 by a lessor (including by reason of self-construction of the property), n119 the property is sold within three months after the date that the property was placed in service, and the user of the property does not change, then the property is treated as originally placed in service by the taxpayer not earlier than the date of that sale. n120 For multiple units of property subject to the same lease, property is treated as placed in service on the date of sale for purposes of qualifying for the special depreciation allowance for GO Zone property if it is sold within three months after the final unit is placed in service, so long as the period between the time the first and last units are placed in service does not exceed 12 months. n121

Limitations apply for GO Zone property that was subject to prior contracts or was being constructed on or before August 27, 2005. GO Zone property qualifying for the special depreciation allowance does not include any property if the user or a related party to the user or owner of that property had a written binding contract in effect for the acquisition of the property at any time on or before August 27, 2005 (or, in the case of self-constructed property, the manufacture, construction, or production of the property began on or before August 27, 2005). For example, if a taxpayer sells to a related party property that was under construction on or prior to August 27, 2005, the property does not qualify for the special depreciation allowance. Similarly, if a taxpayer sells to a related party property that was subject to a binding written contract on or prior to August 27, 2005, the property does not qualify for the special depreciation allowance. Furthermore, if a taxpayer sells property and leases the property back in a sale-leaseback arrangement, and the lessee had a binding written contract in effect for the acquisition of that property on or prior to August 27, 2005, then the lessor is not entitled to the special depreciation allowance. n122

If, in any year after the year the special allowance is claimed, the property ceases to be qualified GO Zone property, the taxpayer may have to recapture as ordinary income any excess benefit received from claiming the special allowance. Regulations are to provide details regarding recapture. n123

NOTE:

Apart from this special depreciation allowance for GO Zone property, the IRS has also extended the placed-in-service-date for certain property that is eligible for additional first-year depreciation under *IRC Section 168(k)*. See § 1.04[7][k], below, for a discussion. n123.1

[e] Increased Expensing Under *IRC Section 179*

The otherwise applicable dollar limit on the *IRC Section 179* deduction (\$105,000 for 2005, n124 \$108,000 for 2006, n125 \$125,000 for 2007, n125.1 and \$250,000 for 2008 n125.2) is increased by the smaller of the following: n126

- \$100,000; or
- the cost of qualified *IRC Section 179* GO Zone property placed in service during the year (including GO Zone property placed in service by the taxpayer's spouse, even if the taxpayer files a separate return).

The amount for which a taxpayer may make a *IRC Section 179* election is reduced if the cost of all *IRC Section 179* property placed in service during the year exceeds \$420,000 for 2005, n127 \$430,000 for 2006, n128 \$500,000 for 2007, and \$800,000 for 2008. n128.1 For qualified *IRC Section 179* GO Zone property, this amount is increased by the smaller of the following: n129

- \$600,000; or
- the cost of qualified *IRC Section 179* GO Zone property placed in service during the year.

Qualified *IRC Section 179* GO Zone property generally is *IRC Section 179* property that is qualified GO Zone property. n130 Therefore, it must generally be placed in service before 2008. n130.1 Otherwise qualifying property placed in service before 2009, however, is eligible for the increased expensing, if substantially all the use of the property is in specified portions of the GO Zone. The extension of the placed in service date does not apply for Gulf Opportunity Zone extension property described *IRC Section 1400N(d)(6)*. n130.2 The specified portions of the GO Zone where the property must be used are counties or parishes listed in *Notice 2007-36*, § 3 or on page 2 of IRS Publication 4492, *Information for Taxpayers Affected by Hurricanes Katrina, Rita, and Wilma*.

For purposes of the empowerment zone and the renewal community expensing provisions n131 qualified *IRC Section 179* GO Zone property cannot be treated as qualified zone property or qualified renewal property, unless the taxpayer elects not to take that property into account for purposes of this increased expensing provision. n132

If, in any year after the year the increased expensing is claimed as a deduction special allowance is claimed, the qualified *IRC Section 179* GO Zone property ceases to be qualified *IRC Section 179* GO Zone property, the taxpayer may have to recapture as ordinary income any excess benefit received from claiming the expensing deduction. Regulations are to provide details regarding recapture. n133

[f] Expensing of Certain Demolition and Clean-up Costs

Taxpayers may elect to currently deduct, rather than capitalize, 50 percent of any qualified GO Zone clean-up cost in

the tax year in which the costs are paid or incurred. n134 Qualified GO Zone clean-up costs include any amounts paid or incurred during after August 27, 2005 and before 2008 for the removal of debris from, or the demolition of structures on, real property that is located in the Gulf Opportunity Zone and which is held by the taxpayer for use in a trade or business or for the production of income, or is inventory or other property held primarily for sale to customers in the ordinary course of the taxpayer's trade or business. n135

[g] Extension of Expensing for Environmental Remediation Costs

Environmental remediation expenditures n136 incurred after August 27, 2005 and before 2010 that are incurred in connection with a qualified contaminated site located in the GO Zone may be expensed rather than capitalized, in accordance with *IRC Section 198*. n137 Petroleum products may generally be treated as a hazardous substance for this purpose. n138

[H] Increase in Rehabilitation Credit and Extension of Time for Completing Rehabilitation

The rehabilitation credit n139 is increased for qualified rehabilitation expenditures paid or incurred after August 27, 2005 and before 2010 on qualifying buildings located in the GO Zone. For pre-1936 buildings other than certified historic structures, the credit percentage is increased from 10 percent to 13 percent. For certified historic structures, the percentage is increased from 20 percent to 26 percent. n140

The IRS has also announced relief from recapture of the rehabilitation credit by extending the time for making rehabilitations. Persons who have rehabilitation credit property in areas affected by Hurricanes Katrina, Rita, or Wilma have a safe harbor period of three years to repair rehabilitation credit property that was placed in service prior to the hurricanes and was damaged by the hurricanes. During that 3-year period, the property will not be subject to rehabilitation credit recapture, provided that the repairs to the property are actively ongoing. In addition, for property on which the rehabilitation had begun but was not yet placed in service on the date that the President declared a major disaster in the area in which the property is located, the running of the 24-month or 60-month period for making the rehabilitation n140.1 is tolled for a period of 12 months. n140.2

[i] Increase in Deduction of Reforestation Costs and 5-Year NOL Carryback for Small Timber Producers

Small timber producers may elect to deduct certain reforestation costs for each qualified timber property. The deduction for any tax year generally is limited to \$10,000 (\$5,000 if married filing separately, \$0 for a trust). n141 However, this limit is increased if the taxpayer pays or incurs reforestation costs after the applicable date below and any portion of the qualified timber property is located in one of the following areas: n142

- August 27, 2005, if any portion of the property is located in the GO Zone;
- September 22, 2005, if any portion of the property is located in the Rita GO Zone (but not in the GO Zone); or
- October 22, 2005, if any portion of the property is located in the Wilma GO Zone.

The limit for each qualified timber property is increased by the smaller of the following: n143

- \$10,000 (\$5,000 if married filing separately, \$0 for a trust), or
- the amount of reforestation costs paid or incurred by the taxpayer after the applicable date for the qualified timber property, any portion of which is located in the zone described above.

The increase in the limit applies only to costs paid or incurred before 2008. n144 However, these rules do not apply to any timber producer who (a) held more than 500 acres of qualified timber property at any time during the tax year, (b) is a corporation with stock publicly traded on an established securities market, or (c) is a real estate investment trust. n145

Certain timber losses incurred before 2007 n146 may be carried back for 5 years as a farming business NOL. n147 This rule applies only if a portion of the timber property is located in the GO Zone, Rita GO Zone, or Wilma GO Zone, and the income and deductions are allocable to the part of the taxpayer's tax year which is after the applicable date below: n148

- August 27, 2005, if any portion of the property is located in the GO Zone;
- September 22, 2005, if any portion of the property is located in the Rita GO Zone (but not in the GO Zone); or
- October 22, 2005, if any portion of the property is located in the Wilma GO Zone (but not in the GO Zone or Rita GO Zone).

The 5-year NOL carryback is available only to a timber producer who meets all the following requirements: n149

- held qualified timber on the applicable date (August 28, 2005, if any portion of the property is located in the GO Zone; September 23, 2005, if any portion of the property is located in the Rita GO Zone (but not in the GO Zone); and October 23, 2005, if any portion of the property is located in the Wilma GO Zone (but not in the GO Zone or Rita GO Zone);
- held no more than 500 acres of qualified timber property at any time during the tax year;
- is not a corporation with stock publicly traded on an established securities market; and
- is not a real estate investment trust.

[j] 5-Year NOL Carryback for Qualified GO Zone Losses

The portion of any NOL that is a qualified GO Zone loss may be carried back 5 years. n150 In addition, the 90 percent limit on the alternative minimum tax NOL deduction does not apply to that portion of the NOL. n151

A qualified GO Zone loss is the smaller of the following: n152

- the excess of the NOL for the year over the specified liability loss for the year to which a 10-year carryback applies; or
- the total of the following deductions (to the extent they are taken into account in computing the NOL for the tax year):
 - qualified GO Zone casualty loss (as defined below);
 - moving expenses paid or incurred after August 27, 2005, and before January 1, 2008, for the employment of an individual whose main home was in the GO Zone before August 28, 2005, who was unable to remain in that home because of Hurricane Katrina, and whose main job location (after the move) is in the GO Zone;

- temporary housing expenses paid or incurred after August 27, 2005, and before January 1, 2008, to house employees of the taxpayer whose main job location is in the GO Zone;
- depreciation or amortization allowable for any qualified GO Zone property (even if you elected not to claim the special GO Zone depreciation allowance for such property) for the year placed in service; and
- repair expenses (including expenses for the removal of debris) paid or incurred after August 27, 2005, and before January 1, 2008, for any damage from Hurricane Katrina to property located in the GO Zone.

A qualified GO Zone casualty loss is any deductible *IRC Section 1231* loss of property located in the GO Zone if the loss was caused by Hurricane Katrina. n153 For this purpose, the amount of the loss is reduced by any recognized gain from an involuntary conversion caused by Hurricane Katrina of property located in the GO Zone. n154 Any such loss taken into account in figuring the qualified GO Zone loss is not eligible for the election to be treated as having occurred in the previous tax year. n155

[k] Extension of Placed-in-Service Date for Certain Property Eligible for Special Depreciation Allowances under Prior *IRC Section 168(k)*

IRC Section 168(k), as in effect before amendment by Pub Law No 110-185, allows additional first-year depreciation deduction for qualified property and a 50-percent bonus depreciation for certain property. To be eligible for this depreciation, certain property must generally be placed in service by January 1, 2006. n155.1 This placed-in-service date applies for property with longer-production periods (property with a recovery period of at least 10 years, certain transportation property, and property that is subject to the uniform capitalization rules because it has an estimated production period exceeding 2 years or an estimated production period exceeding 1 year and a cost exceeding \$1 million), n155.2

The IRS has extended the placed-in-service date for the above property to January 1, 2007, for property that is either placed in service by the taxpayer or manufactured by a person in the GO Zone, the Rita GO Zone, or the Wilma GO Zone. The extension applies only if the taxpayer was unable to meet the prior placed-in-service deadline for the property as a result of Hurricane Katrina, Rita, or Wilma. To apply the extended date, the taxpayer must write "Extension under *Announcement 2006-29* " across the top of its Form 4562, Depreciation and Amortization, for the placed-in-service year of the property. n155.3

[8] Housing Tax Benefits Related to Hurricane Katrina

Qualified employees affected by Hurricane Katrina may exclude from gross income the value (up to \$600 per month) n156 of in-kind lodging furnished to them, their spouses, and dependents by qualified employers. n157 The exclusion applies only for lodging furnished from January 1, 2006 through June 30, 2006. n158

A qualified employer providing the lodging is entitled to the Hurricane Katrina housing credit, which is part of the general business credit. n159 The credit is equal to 30 percent of any amount which is excludable from the gross income of a qualified employee of the employer and not otherwise excludable under *IRC Section 119*. n160

A qualified employee is an individual who had a principal residence n161 in the GO Zone on August 28, 2005, and who performs substantially all employment services in the GO Zone for a qualified employer who furnishes lodging to the individual. n162 A qualified employer is any employer with a trade or business located in the GO Zone. n163 The exclusion and credit are not available for certain related taxpayers. n164

[9] Tax-Favored Qualified Hurricane Distributions from Retirement Plans

[a] In General

A new statutory provision provides new rules for tax-favored withdrawals, repayments and loans from certain retirement plans for taxpayers who suffered economic losses as a result of Hurricane Katrina, Wilma, or Rita, and whose principal place of abode was located in a designated disaster area related to one of those hurricanes. n165 Qualifying economic losses include, but are not limited to the following: n166

- loss, damage to, or destruction of real or personal property from fire, flooding, looting, vandalism, theft, wind, or other cause;
- loss related to displacement from the taxpayer's home; or
- loss of livelihood due to temporary or permanent layoffs.

A detailed discussion of the taxation of qualified hurricane distributions from retirement plans is beyond the scope of this publication. The primary aspect dealing with real estate involves the treatment of the repayment of certain distributions that were made for the purchase or construction of a principal residence. n167

[b] Repayment of Qualified Distributions for the Purchase or Construction of a Principal Residence

A taxpayer who received a qualified distribution to purchase or construct a principal residence in the Hurricane Katrina, Rita, or Wilma disaster area could repay that distribution before March 1, 2006, to an eligible retirement plan after August 24, 2005 (Katrina); after September 22, 2005 (Rita); or after October 22, 2005 (Wilma). n168 For this purpose, an eligible retirement plan is any plan, annuity, or IRA to which a qualified rollover can be made. n169

To be a qualified distribution, the distribution had to meet all of the following requirements: n170

- the distribution was a hardship distribution from a 401(k) plan, a hardship distribution from a tax-sheltered annuity contract, or a qualified first-time homebuyer distribution from an IRA;
- the distribution was received in 2005 after February 28 and before (a) August 29 for Hurricane Katrina, (b) September 24 for Hurricane Rita; or (c) October 24 for Hurricane Wilma; and
- the distribution was to be used to purchase or construct a main home in the Hurricane Katrina, Rita, or Wilma disaster area that was not purchased or constructed because of Hurricane Katrina, Rita, or Wilma.

Amounts that were repaid before March 1, 2006, are treated as a qualified rollover and are not included in gross income. Also, for purposes of the one-rollover-per-year limitation for IRAs, a repayment to an IRA is not considered a qualified rollover. n171

A qualified distribution not repaid before March 1, 2006, may be taxable for 2005 and subject to the additional 10% tax (or the additional 25% tax for certain SIMPLE IRAs) on early distributions. n172

Taxpayers who receive a qualified distribution that they repay, in whole or in part, before March 1, 2006 must file a Form 8915, Qualified Hurricane Retirement Plan Distributions and Repayments.

[10] Temporary Suspension of Limits on Charitable Contributions

[a] Individuals

Qualified charitable contributions are not subject to the overall limit on itemized deductions or the 50% adjusted gross income (AGI) limit. n173 A qualified contribution is a charitable contribution paid in cash or by check after August 27, 2005, and before 2006, to a 50% limit organization (other than certain private foundations) n174 if the taxpayer makes an election to have the 50% limit not apply to these contributions. n175 In the case of a partnership or S corporation, the election to have the appropriate limit not apply must be made separately by each partner or shareholder. n176

An individual taxpayer's deduction for qualified contributions is limited to AGI minus deductions for all other charitable contributions. n177 Any excess can be carried over to 2006. In 2006, the unused qualified contributions are treated as a carryover of contributions subject to the 50% limit. n178

Qualified contributions do not include a contribution to a segregated fund or account for which the taxpayer or any person the taxpayer appoints or designates has or expect to have advisory privileges with respect to distributions or investments based on the taxpayer's contribution. n179

NOTE:

Although the suspension of the charitable contribution limits was enacted in response to Hurricanes Katrina, Rita, and Wilma, there is no requirement that amounts contributed by individuals be used in connection with relief efforts for those hurricanes in order to be a qualified contribution that can avoid the charitable contribution limits. n180 In contrast, a contribution paid by a corporation must be for relief efforts related to Hurricane Katrina, Rita, or Wilma in order to be a qualified contribution. n181

[b] Corporations

A corporation may elect to deduct qualified cash contributions without regard to the 10% taxable income limit if the contributions were made after August 27, 2005, and before 2006, to a qualified charitable organization (other than certain private foundations). n182 In addition, the contributions must be for Hurricane Katrina, Rita, or Wilma relief efforts. n183 The corporation's deduction for these qualified contributions is limited to 100% of taxable income (as modified for the 10% limit) minus the corporation's deduction for all other charitable contributions. n184 Any qualified contributions over this limit can be carried over to the next 5 years, subject to the 10% limit. n185

[11] Special Rules for 2005 Hurricane Casualty Losses

The \$100 limitation and 10% of AGI limitation n186 do not apply to personal casualty losses attributable to Hurricanes Katrina, Rita, and Wilma, and located in their respective disaster areas. n187 In the case of any other losses, the 10% of AGI limitation n188 is applied without regard to the above hurricane losses. n189 This rule applies whether the hurricane losses are claimed in 2005 or in 2004 under the disaster loss election provision. n190

The IRS has issued a revenue procedure that provides three safe harbor methods that individuals may use to determine the decrease in fair market value of personal-use residential real property. The procedure also provides a safe harbor method that individuals may use to determine the fair market value of their personal belongings immediately before the 2005 Gulf hurricanes. n191 If one of the safe harbors is used, a taxpayer cannot use an appraisal or cost of repair method to determine a loss with respect to other items on the same parcel of property. n191.1

A taxpayer who claimed a casualty loss to a principal residence resulting from Hurricane Katrina, Hurricane Rita, or Hurricane Wilma and in a subsequent year receives a grant as reimbursement of that loss may elect to file an amended return for the taxable year to which that deduction was allowed. The casualty loss deduction is reduced, but not below zero, by the amount of the reimbursement. The time for filing the amended return is the later of three years after the

original due date for filing the tax return or November 30, 2008. Any underpayment of tax is subject to one year of interest, but no penalty or additional interest is imposed if that interest is paid not later than one year after the filing of the amended return. n192

[12] Benefits Extended to Kiowa County, Kansas

Uncodified legislation enacted in 2008 provides extensive temporary tax relief to taxpayers in Kiowa County, Kansas and the surrounding area, in response to tornado damage occurring in 2007. The relief provisions incorporate by reference many of the Gulf Opportunity Zone tax relief provisions, but with different effective dates and geographic coverage. n193

[13] Temporary Tax Relief for Midwestern Disaster Area and Hurricane Ike Disaster Area

Uncodified legislation provides extensive temporary tax relief to taxpayers in areas in the Midwest damaged by severe storms, tornados and flooding. n194 Covered areas include parts of Arkansas, Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, and Wisconsin. n195 The relief provisions incorporate by reference many of the Gulf Opportunity Zone tax relief provisions n196 and uncodified provisions of the Katrina Emergency Tax Relief Act of 2005, n197 but with different effective dates and geographic coverage.

Uncodified legislation also provides temporary tax-exempt bond financing and low-income housing tax relief for areas damaged by Hurricane Ike. n198

Federal Taxes Affecting Real Estate

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 1 Tax Advantages and Problem Areas in Real Estate

-1 Federal Taxes Affecting Real Estate § 1.05

§ 1.05 Special Rules for Losses in Connection with Federally Declared Disasters

[1] Overview of Special Disaster Loss Rules

Apart from the special provisions discussed above that were enacted to address specifically identified hurricanes and natural disasters, n199 a number of other disaster loss rules come into play more generally for losses from non-specified disasters. They cover both the timing and tax treatment of the loss deduction itself and the treatment of various expenses that may be incurred as a result of the loss.

The tax provisions sometimes refer to losses occurring in a disaster area and/or attributable to a federally declared disaster. A "federally declared disaster" is any disaster subsequently determined by the President of the United States to warrant assistance by the Federal Government under the Robert T. Stafford Disaster Relief and Emergency Assistance Act. n200 A "disaster area" is the area so determined to warrant that assistance. n201

The following provisions should be noted:

- Taxpayers may elect to claim a disaster loss in the year immediately before the year in which the loss occurred. n202
- Special loss deduction rules apply for losses related to federally declared disasters. n203 A taxpayer's standard deduction is increased by the amount of the disaster loss deduction, n204 and this portion of the standard deduction is also allowed for AMT purposes. n205
- Taxpayers may elect to carry back qualified disaster losses for 5 years as a net operating loss. n206 Carrybacks and carryovers of qualified disaster losses are also allowed for AMT purposes. n207
- A temporary provision allows a deduction for qualified disaster expenses. n208
- Certain mortgage bond revenue requirements are temporarily waived for principal residences that are destroyed in disasters. n209
- Additional 50-percent first-year depreciation for qualified disaster assistance property. n210

- Increased *IRC Section 179* expensing for qualified disaster assistance property. n211

[2] Special Election for Disaster Losses

A special rule applies for losses occurring in a disaster area n212 and attributable to a federally declared disaster. n213 Taxpayers may elect to deduct these losses for the tax year immediately preceding the tax year in which the disaster occurred. n214

PLANNING TIP:

In deciding whether to make the election, taxpayers should consider the advantage of obtaining the tax benefit in an earlier year. In addition, for years in which the 10-percent of AGI rule for deducting losses resulting from a federal disaster is not waived, n215 taxpayers must take into account the effect of the rule that, to be deductible, casualty losses must exceed 10 percent of adjusted gross income. n216

The election may be made in the return for the tax year immediately preceding the tax year of the disaster. The election is made by attaching a statement to the return that clearly shows that the election is being made. If a return for the preceding tax year has already been filed, the loss may be claimed by filing an amended return for that year or by filing a claim for a refund. n217 The election must be made by the later of: (1) the due date for filing the income tax return for the year in which the disaster occurred (determined without regard to extensions for filing); or (2) the due date for filing the income tax return for the year immediately preceding the tax year in which the disaster occurred (determined with regard to extensions for filing). n218 The Service may grant an extension of time for making the election by private letter ruling. n219 The amount of the disaster loss taken into account for the preceding tax year by virtue of the election cannot exceed the uncompensated amount (determined on the basis of facts existing at the date the taxpayer claims the loss). n220

[3] Loss Deduction Rules for Losses Due to Federally Declared Disasters

Several rules allow more extensive deduction of losses related to federally declared disasters than for other casualty losses. First, the 10-percent of AGI rule the generally applies for deducting casualty losses n221 is temporarily waived for certain losses resulting from a federal disaster. Any "net disaster loss" is deductible without regard to whether it exceeds 10 percent of a taxpayer's adjusted gross income. n222 A "net disaster loss" is the excess of the personal casualty losses (1) attributable to a federally declared disaster occurring before January 1, 2010, and (2) occurring in a disaster area, over personal casualty gains. n223

A taxpayer's standard deduction is increased by the amount of this net disaster loss deduction. n224 This portion of the standard deduction is also allowed for AMT purposes. n225 The disaster loss deduction is equal to the "net disaster loss." n226 The above provisions are effective for disasters declared in taxable years beginning after December 31, 2007. n227

[4] Five-Year NOL Carryback for Qualified Disaster Losses

Qualified disaster losses may be carried back for 5 years as a net operating loss (NOL). n228 Carrybacks and carryovers of these qualified disaster losses are also allowed for AMT purposes. n229 A "qualified disaster loss" is the lesser of (1) otherwise deductible losses for the taxable year attributable to federally declared disasters occurring in 2008 or 2009, plus the allowable deduction for qualified disaster expenses under *IRC Section 198A* (discussed in § 1.05[5], below), or (2) the net operating loss for the taxable year. n230 The provision does not apply to golf courses, hot tub and sun tan facilities, gambling or animal racing property, or certain property used primarily for sale of alcoholic beverages. n231 In addition, a "farming loss" cannot be a qualified disaster loss. n232

A taxpayer may elect not to take advantage of the 5-year carryback period. The election must be made in the manner

prescribed by the Secretary and must be made by the due date (including extensions of time) for filing the taxpayer's return for the taxable year of the net operating loss. Any election made for a taxable year is irrevocable. n233

[5] Deduction for Qualified Disaster Expenses

Taxpayers may elect to deduct qualified disaster expenses, effective for amounts paid or incurred after December 31, 2007 in connection with disasters declared after that date and occurring before 2010. n234 To be deductible the expenditure must meet the following requirements: n235

- it must be incurred in connection with a trade or business or with business-related property;
- it must be for (1) the abatement or control of hazardous substances that were released on account of a federally declared disaster; (2) the removal of debris from, or the demolition of structures on, real property which is business-related property damaged or destroyed as a result of a federally declared disaster; or (3) the repair of business-related property damaged as a result of a federally declared disaster; and
- it must otherwise chargeable to capital account.

Any deduction taken under *IRC Section 198A* is treated as a depreciation deduction which is recaptured in the case of a sale or other disposition of the property. n236 Other statutory provisions dealing with expensing of environmental remediation expenditures, n237 capitalization of demolition costs, n238 and certain mining and solid waste costs n239 do not apply to costs expensed under *IRC Section 198A*. n240

[6] Waiver of Certain Mortgage Revenue Bond Requirements for Principal Residences Destroyed in Disasters

A bond can qualify as a mortgage revenue bond only if at least 95 percent of its proceeds are used to finance residences of owners who did not own a home for three years before executing the mortgage. n241 Effective for disasters occurring after 2007, taxpayers may elect to waive this requirement if their principal residence is rendered unsafe as the result of a federally declared disaster occurring before January 1, 2010, or if the home is demolished or relocated as the result of an order of a state or local government in response to a federally declared disaster before that date. The waiver applies for the 2-year period beginning on the date of the disaster declaration. n242

Another requirement for mortgage revenue bonds is that the acquisition cost of each financed residence generally cannot exceed 90 percent of the average area purchase price applicable to that residence. n243 For residences destroyed as described in the above paragraph, this provision is applied using 110 percent, rather than 90 percent. n244 The increased percentage applies for the 2-year period beginning on the date of the disaster declaration. n245

In addition, at the election of the taxpayer, if the taxpayer's principal residence was damaged as the result of a federally declared disaster occurring before January 1, 2010, any owner-financing provided in connection with the repair or reconstruction of the residence--up to \$150,000--is treated as a qualified rehabilitation loan. n246

Any election under the above provisions cannot be revoked without IRS consent. n247 Taxpayers who make an election under the above provisions cannot also claim the benefits for residences in disaster areas provided by *IRC Section 143(k)(11)*. n248 Those benefits include a waiver of the 3-year prior ownership requirement n249 and the treatment of the home as a targeted area residence for purposes of applying the purchase price and income requirements n250 for two years after the date of the disaster declaration. n251

NOTE:

The citations given above to *IRC Section 143(k)(12)* are the citations added by Public Law 110-343. The provision added by Public Law 110-343, however, duplicates an existing *IRC Section 143(k)(12)*, which was not repealed. A future technical correction amendment to eliminate the unintended duplication is likely.

[7] 50-Percent First-Year Bonus Depreciation Allowed for Qualified Disaster Assistance Property

Additional 50-percent first-year bonus depreciation is allowed for qualified disaster assistance property in the year the property is placed in service. n252 The depreciation is available only for property that replaces or rehabilitates property that is destroyed or condemned in a disaster occurring in 2008 or 2009. n253 The deduction is allowed both for regular and AMT purposes. n254 The adjusted basis of the property is reduced by the amount of the deduction taken. n255 Details relating to the deduction can be found in Chapter 5, at § 5.02[12].

[8] Increased *IRC Section 179* Expensing Allowed for Qualified Disaster Assistance Property

The amount that can be expensed under *IRC Section 179* is increased by \$100,000 for qualified Section 179 disaster assistance property placed in service during a taxable year. n256 The phase-out threshold for reducing the amount that can be expensed with respect to qualified *IRC Section 179* disaster assistance property is increased by \$600,000. n257 Qualified *IRC Section 179* disaster assistance property is *IRC Section 179* property n258 that is also qualified disaster assistance property that is eligible for 50-percent additional first-year depreciation under *IRC Section 168(n)*. n259 Property for which this expensing is claimed cannot be treated as qualified zone property or qualified renewal property under *IRC Sections 1397A* and *1400J*. n260

CHAPTER 2 Acquisition of Real Estate *

1-2 Federal Taxes Affecting Real Estate § 2.01

§ 2.01 Tax Planning in Connection with the Acquisition of Real Property

Once the decision is made to acquire specific real property and consideration is given both to the future impact of the passive activity loss rules (if any) and the type of entity that will be used for holding the property, the prospective owner will need to consider the best method for arranging the acquisition so as to obtain maximum tax benefits. The prospective owner should first consider the three classes of costs relevant to the acquisition of real property:

- (1) costs that may be deducted as expenses in the year of expenditure; n1
- (2) costs that must be capitalized n2 and may be periodically deducted (e.g., via cost recovery n3 or amortization), n4 generally over an arbitrarily-predetermined period provided by the Code; and
- (3) costs that must be capitalized, may not be deducted periodically, but may later be used as an offset against amounts realized on the eventual disposition of the property, and which either increase the tax loss or decrease the taxable gain recognizable upon a taxable disposition of the property.

Costs that must be capitalized and are associated either with land or improvements to real property create what is called "basis." See § 2.02 for a discussion of basis and § 2.03 for a discussion of typical acquisition costs that must be capitalized and included in basis.

CHAPTER 2 Acquisition of Real Estate *

1-2 Federal Taxes Affecting Real Estate § 2.02

§ 2.02 Basis of Property upon Acquisition

"Basis" is the amount, expressed in dollars, used to represent the capital investment of a taxpayer in property for purposes of income taxation. n5 The determination of basis is a necessary first step in the determination of the tax consequences of a proposed real estate investment. Gain on the sale or other disposition of property is measured by the amount by which the amount realized *exceeds* basis, since it is fundamental principle of taxation that only income (i.e., an increase in wealth) is subject to Federal income tax; the return of capital is not. n6 Conversely, where the amount realized is less than basis, a loss is sustained. Similarly, depreciation deductions also are determined with reference to basis; only the basis of depreciable property may be recovered through depreciation deductions. n7

The basis of property at the time of acquisition is known as "unadjusted basis," and every item of property initially has its own unadjusted basis. The manner in which a taxpayer acquires property determines the unadjusted basis of that property. As discussed below, unadjusted basis is generally the original cost of the property, n8 but this rule varies where the owner acquires the property other than by purchase. n9 "Adjusted basis" is the unadjusted basis of property increased or decreased for certain adjustments made after acquisition, such as for depreciation, amortization, obsolescence, capital additions, etc. n10 These adjustments are discussed in Chapter 5. Following conventional terminology, when the term "basis" is used here, it will refer to unadjusted basis, and adjusted basis will be identified as such.

Planning Tip:

Real estate acquisitions frequently include the acquisition of ancillary personal property, such as machinery, furniture, office equipment and the like. Separate values must be assigned to such property in order to determine its initial basis in the hands of the purchaser for purposes of cost recovery deductions (when available) under *IRC Section 168*, and for calculation of gain or loss in the future. It is often easy to forget this important step since the bulk of the acquisition consists generally of the real property and improvements. n11

Specific rules are provided by the Code for determining basis when property is acquired by gift, n12 inheritance, n13 tax-free exchange n14 or involuntary conversion. n15 In order to determine basis, therefore, it is necessary to determine *how* the property was acquired. In addition, in certain circumstances, it also is important to determine *when* the property was acquired.

[1] Property Acquired by Purchase

The basis of property obtained by purchase is its cost, namely, the price paid in cash or other property (determined by reference to the fair market value of the other property), plus any acquisition expenses. However, the total amount paid at the time of purchase or closing is often not entirely included in the basis of the property, since certain items paid by or charged to the purchaser may be treated as deductible or nondeductible expenses and are not added to initial basis (e.g., real estate taxes treated as imposed on the purchaser).ⁿ¹⁶ In addition, certain costs may relate to acquisition loans necessary to buy the property; these costs are treated as related to amounts *borrowed* and are not included in the basis of the property. Instead of being added to basis, these amounts are amortized over the term of the loan.ⁿ¹⁷

It is generally necessary to prorate certain items, between the buyer and the seller as of the closing date. These items include, for example, real estate taxes, unexpired real property insurance, and prepaid fuel costs, none of which are included in the basis of the property purchased. The allocation of these items generally is set forth in a "closing" or "settlement" statement. Only the portion of deductible expenses allocated to each party is deductible by that party, even though one party may pay the entire expense for both. Any excess over the allocated amount is an adjustment to the purchase price. For example, if the seller has paid property taxes for a period that extends beyond the closing date, only the portion allocable to the period before the closing is deductible by the seller; the portion allocable to the period after the closing is allocable to and deductible by the purchaser. Conversely, if the purchase agreement requires the purchaser to pay tax applicable to the pre-sale period, this amount is treated as an increase to the amount realized by the seller (generally subject to an offsetting deduction for taxes paid), is included in the capitalized cost of the property to the purchaser, and is added to basis.ⁿ¹⁸⁻¹⁹ Typical acquisition costs that are included in the capitalized cost of real property are discussed in § 2.03, below.

[2] Effect of Debt Financing

Real estate in the United States is often acquired through the use of borrowed funds, typically resulting in the grant of a security interest to the lender in the form of a mortgage or deed of trust. Such financing may be obtained by the purchaser from a third party lender, may be taken back by the seller, or may already exist with respect to the property and may be assumed or taken subject to by the purchaser (e.g., financing obtained by the seller when it bought the property). Sometimes existing debt that encumbers the property is not assumed, but instead the new owner will acquire that property "subject to" the mortgage or deed of trust lien securing the antecedent debt. This simply means that if the existing secured debt is not repaid according to its terms, the lender may be able to exercise remedies of foreclosure granted in the security agreement. While the terminology pertaining to real estate loans varies among states, the term "mortgagee" is generally used here to describe the secured lender.

[a] Concept of "Leverage"

"Leverage," though a popular word among real estate buyers, is a concept often misunderstood and misapplied. Leverage is the increased purchasing power obtained by combining the purchaser's own funds (known as "equity") with borrowed funds. If the total return from the property acquired with borrowed funds (i.e., net income before interest, and any appreciation in the value of the property) is *greater* than the cost of the borrowed funds (i.e., the interest payments on the debt), then the leverage provided by the debt financing allows a greater return on the purchaser's capital than if the property were acquired solely with equity. Further, and equally important, the use of leverage enables purchasers to acquire properties costing more than the amount of their available equity. As is discussed below, however, leverage can also increase a property owner's loss, if the property declines in value.

Real estate offers an opportunity for greater use of borrowed funds than many other types of investment. For example, stock margin requirements may permit an investor to borrow only 50 percent of the funds required to purchase securities.ⁿ²⁰ By contrast, buyers of real estate have traditionally been able to borrow up to 80 or 90 percent of the purchase price using a combination of:

1-2 Federal Taxes Affecting Real Estate § 2.02

- (1) first mortgage financing from banks, savings and loans or other "institutional" lending sources;
- (2) additional "junior" (i.e., secondary) financing; or
- (3) purchase money financing provided by sellers.

While the opportunity to borrow this high a percentage of the purchase price has disappeared somewhat since the savings and loan crisis of the early 1990s, single family home purchasers are still able to utilize high degrees of leverage. The effect of leverage is illustrated by the following example comparing a purchase with only equity and one using "4 to 1" leverage, i.e., \$4 of borrowed funds for each \$1 of equity:

Example:

	Without Leverage	With Leverage
	_____	_____
Purchase price of land	\$100,000	\$100,000
Amount invested	100,000	\$ 20,000
Amount borrowed	--	\$ 80,000
Selling price after three years	\$140,000	\$140,000
Mortgage satisfied	--	(80,000)
Balance	\$140,000	\$ 60,000
Interest cost for three years at 10 per- cent	--	(\$24,000)
Net cash to investor	\$140,000	\$ 36,000
Original investment	\$100,000	\$ 20,000
Cash Profit	\$ 40,000	\$ 16,000
Return on equity		
investment before tax	40%	80%

In this scenario, the investor realizes a profit on both the \$20,000 it invested, and a profit created by the leverage on the \$80,000 that was borrowed.

The benefit of leverage on borrowed funds may be even greater because of tax benefits created by being able to deduct interest expense against income otherwise taxed at ordinary income rates. ⁿ²¹ To again use the example above, assume that an individual taxpayer in a 35-percent tax bracket ⁿ²² claims a tax deduction for the interest expense of \$24,000. Also assume that this interest is fully deductible and not limited by the passive activity loss ⁿ²³ or other rules. ⁿ²⁴ The calculated return on its investment (before calculating the tax on the profit) increases from 80 percent to 120 percent (!), computed as follows:

Selling price	\$.....140, 000
Mortgage satisfied	(80,000)

1-2 Federal Taxes Affecting Real Estate § 2.02

Balance	\$.....	60,000
Interest paid for three years	\$24,000	
Income tax savings by deducting interest at a 35% tax rate	\$8,400	
Net after tax carrying cost		(\$15,600)
Net to cash owner before tax on profit	\$.....	44,000
Original investment		20,000
Cash profit		\$
		24,000
Return on investment before tax on profit		120%

The example shows the power of leverage when property values increase, but what happens when this doesn't occur? As many real estate investors found out during the late 1980s and early 1990s, leverage creates problems, rather than profits, when property value growth does not surpass the costs of debt service and other carrying costs. If the cost to carry the debt (i.e., mortgage interest) plus property taxes, upkeep, etc., exceeds the increase in value and the income derived from the property, the owner loses money and realizes "reverse leverage." In the above example, if the property's rise in value to \$140,000 took nine years rather than three, the loan interest costs of \$72,000 eliminate any profit—even taking into account the tax savings from the interest expense. Stated differently, appreciation in value would have failed to exceed the cost to carry the loan. Rather than making a \$40,000 profit on a \$100,000 investment, the owner would suffer a complete loss of its \$20,000 equity investment, as shown below:

Selling price of land	\$.....	140,000
Purchase price		100,000

1-2 Federal Taxes Affecting Real Estate § 2.02

Gain		\$
		40,000
		0
Cost to carry the property--interest for nine years	\$72,000	
Less--Income tax savings from deducting interest cost at 35% tax rate	25,200	(\$46,800)
Net cash to owner		(\$6,800)

Additional factors that generally must be taken into account when considering the effect of leverage include: (1) rental income from the property; and (2) non-interest expenses of ownership and maintenance. For improved property, another element must be considered--depreciation. Under *IRC Section 168*, depreciation is deductible in computing taxable income. In claiming depreciation deductions, the purchaser of real estate is free to depreciate not only that portion of the property purchased with its own funds, but also the portion of the property obtained through mortgage lending. Through careful planning, the combination of leverage and the deduction of carrying costs and depreciation can make the rate of return on improved property an attractive investment from the standpoint of both rental-income realization and eventual disposition of the property. See Chapters 4 and 5 for further discussion of the tax aspects of these factors.

Where leverage is used, however, a careful review of the anticipated carrying costs must be made. The most important factors to be considered include:

- the down payment required by the lender;
- the rate of interest and other terms of the debt obligations;
- the anticipated rate of growth in the value of the property;
- the anticipated length of time the investment will be held; and
- the anticipated rental income from the property.

The significant difference between the 20 percent maximum capital gains tax rate generally applicable to non-corporate taxpayers n25 and the maximum tax rate on ordinary income of non-corporate taxpayers n26 should also be factored into the above example to determine the return on real estate ownership where the purchase is leveraged.

It should also be noted that the illustrations above, depicting the results of leverage, did not consider the effects of deduction limitations, such as the limitations on the interest expense deduction under Section 163 and the passive loss rules of Section 469. These two sections are discussed in Chapters 4 and 13, respectively. For some taxpayers, particularly those whose incomes are below the maximum income tax rates and who manage their own rental properties, these provisions will have no effect, while for others they may result in reduced tax benefits or even adverse tax consequences from leveraging of a real estate investment.

[b] Inclusion of Mortgages, Liens and Other Related Obligations in Basis

[i] General Rule

Leverage has an effect on basis. When real property is acquired with borrowed funds and the purchaser is *personally* liable to repay the loan, the purchaser's basis is the price of the property, which includes the amount of the debt. The liability for which the purchaser is personally liable is said to be "recourse." In the event of a default by the purchaser on the mortgage loan, the borrower's personal assets (in addition to the collateral) can generally be seized to cover the debt. n27

For example, if a purchaser agrees to pay \$50,000 for property, and utilizes \$10,000 in cash and the proceeds from a \$40,000 bank loan secured by a mortgage on the land, the basis of the land is \$50,000. If the purchaser assumes liability for an existing mortgage rather than obtaining new financing to replace the existing loan, the amount of debt assumed is included in the seller's amount realized, and logically should be included in the purchaser's cost basis. n28 This will also be true if the loan is made by the seller of property (i.e., a purchase money mortgage), and the buyer is personally liable to repay the debt regardless of the value of the property. *In short, the existence of personal liability justifies the inclusion of the full amount of the debt in the purchaser's cost basis.*

[ii] Non-Recourse Debt

If the purchaser is not personally liable to repay funds borrowed to acquire property, the situation is different. If the property declines in value below the amount of the debt, the borrower may refuse to repay the loan, and the lender's only remedy is to foreclose on the lender's security interest in the property. Questions may be raised about whether the full amount of such a "non recourse" debt should be included in basis, since the borrower will have an incentive to repay the loan only if it has an equity interest in the mortgaged property. If the property's value declines below the amount of the loan, the owner will have no equity; and unless future appreciation is expected or there is current net rental income, the owner has little incentive to repay the loan. As a result, a continuing dispute has developed over whether and under what circumstances non-recourse debt should be treated in the same manner as recourse debt and be included in a purchaser's basis.

A taxpayer who sells property encumbered by a nonrecourse mortgage may include that mortgage in the basis of property and must include the remaining amount of unpaid debt in the amount realized. This rule applies whether the mortgage is less than n29 or greater than n30 the value of the property and applies whether the seller acquired the property by purchase, by gift, from a decedent or otherwise.

Examples of this type of indebtedness include loans which are:

- (1) contractually non-recourse;
- (2) purchase money mortgages in certain states;
- (3) existing mortgages on acquired property that are not assumed by purchasers;
- (4) tax liens; and
- (5) contractors' liens.

In addition to the general rules for establishing basis discussed above, the at-risk rules also limit the deductibility of losses in connection with real estate. Under these provisions, certain non-recourse debt does not contribute toward "basis" for purposes of the at-risk rules, n31 but it does provide cost basis. See 12 CFR Part 220 for further information.

[iii] Contingent or Uncertain Debt

In certain rare situations, the purchaser of real estate is not allowed to include the amount of any lien or obligation in determining basis if it is so contingent or indefinite that either the amount or the very existence of the debt cannot be determined with certainty. Only when and if the contingency is eliminated will an adjustment be appropriate. n32

[iv] Effect of Debt that Exceeds Value on Acquisition

Debt may also be excluded from the basis of property when the debt is greater than the fair market value of the property at the time the property is acquired or when the debt-financed transaction is held to be a sham. n33 This prevents the abusive artificial inflating of basis on which depreciation and other deductions are based.

[v] Effect of Subsequent Financing on Basis

The mortgaging of property *after* acquisition has no effect on the tax basis of the property. n34 However, the amount of the subsequent mortgage will be taken into account in determining gain if the property is sold subject to that mortgage.

[c] Effect of Reduction of Indebtedness

Circumstances can arise in which indebtedness on real estate is satisfied at less than its full principal amount. For example, where a seller take back a purchase money mortgage, a dispute about the seller's representations and warranties may be settled by a reduction in the purchase money note due to the seller. Alternatively, a lender having a long term business relationship with a borrower may be willing to reduce its mortgage on a troubled property because of an expectation that over the long term, the relationship will remain profitable. Either event can have tax consequences.

[i] Subsequent Reduction of Purchase Money Debt

Sometimes a purchase money mortgage on property (i.e., a mortgage held by the seller) is reduced, or satisfied at less than the face value of the debt. When a purchase money mortgage of a solvent purchaser is reduced or satisfied at less than face value, no cancellation of indebtedness income or gain is recognized at that time by the purchaser. Rather, the debt reduction is treated as a purchase price adjustment. This has the effect of reducing the basis of the property in the hands of the purchaser by the amount of the debt reduction. n35 This result occurs only if the reduction in the purchase-money debt does not occur in a Title 11 case or when the purchaser is insolvent. n36

[ii] Adjustment for Debt Reductions of Non-Purchase Money Debt

Whenever a taxpayer is able to exclude income from a discharge in indebtedness from gross income under *IRC Section 108(a)*, a basis adjustment usually comes into play. The provisions that are used to apply the basis adjustment and the ordering in which the basis adjustment occurs vary, depending on the particular type of exclusion that is involved.

In the case of discharges of indebtedness in Title 11 or insolvency cases, or discharges of qualified farm indebtedness, a reduction of basis is one of several tax attributes that must be reduced. n37 Unless a taxpayer makes an election discussed below, n38 the reduction in tax attributes for these exclusions is done in a specified order. Under the default ordering of the statute, a reduction in the basis of the depreciable and non-depreciable property of the taxpayer occurs after a reduction in the taxpayer's NOLs, general business credit, minimum tax credit, and capital loss carryovers, and before a reduction in the taxpayer's passive activity loss and credit carryovers and foreign tax credit carryovers. n39

A taxpayer may, however, make an election in Title 11 or insolvency cases, or in discharges of qualified farm indebtedness, to alter the default statutory ordering of the reduction of tax attributes. If the election is made, a taxpayer may apply any portion of the reduction of tax attributes to first reduce the basis of the taxpayer's depreciable property. The election cannot be used to reduce the basis of non-depreciable property. n40 The election is made by filing a completed Form 982. The election must be attached to a timely-filed (including extensions) federal income tax return

1-2 Federal Taxes Affecting Real Estate § 2.02

for the year in which the taxpayer has discharge of indebtedness income that is excluded from gross income under *IRC Section 108*. Any election may be revoked only with IRS consent. n41 If an election is not timely filed, a taxpayer may nevertheless request IRS consent to file a late election under Treasury Regulation Section 301.9100. The reduction in the basis of depreciable property is applied to the basis of depreciable property held by the taxpayer at the beginning of the tax year following the tax year in which the discharge occurs, in accordance with *IRC Section 1017*. n42 See § 12.10[6][d], below, for a discussion of *IRC Section 1017* basis reductions.

Different rules apply when a taxpayer excludes gross income from discharges of qualified real property indebtedness. n43 In this case, the basis of a taxpayer's depreciable property must be reduced by the amount excluded from gross income. The reduction is done in accordance with *IRC Section 1017*, n44 and is applied to the basis of depreciable property held by the taxpayer at the beginning of the tax year following the tax year in which the discharge occurs. n45 There are no other reductions of tax attributes applied for this type of indebtedness discharge. n46 See § 12.10[7][c], below, for a discussion.

Separate rules also apply when a taxpayer excludes income from the discharge of qualified principal residence indebtedness. n47 In these cases, the basis of the individual's principal residence must be reduced (but not below zero) by the amount excluded from gross income. n47.1 There are no other reductions of tax attributes applied for this type of indebtedness discharge. n47.2

[3] Property Acquired by Gift

The donee (recipient) of property acquired by gift takes the donor's adjusted basis as its basis (this is known as "carryover" basis), although for purposes of determining loss on a subsequent disposition of the property by the donee, basis is limited to the fair market value of the property on the date of the transfer.

Example:

"Father" has property for which he originally paid \$100. Depreciation of \$20 has been deducted, leaving an adjusted basis of \$80. At that time, he gifts the property to "Son". Son's basis is \$80 (although there are potential exceptions to this rule). If the property is subsequently sold at a profit, Son's basis for determining gain is \$80. If the property is subsequently sold at a loss, Son's basis for purposes of computing the loss is the lesser of: (1) Father's basis; or (2) the fair market value at the time of the gift. n48 An example of this computation follows:

	Gain on Sale	Loss on Sale	Neither Gain nor Loss
Property at date of gift--basis to father (donor)	\$ 80	\$ 80	\$ 80
Fair market value	\$ 70	\$ 70	\$ 70
Computation of gain (loss)--			
Selling price	\$100	\$ 65	\$ 75
Basis	80	70	80-70

1-2 Federal Taxes Affecting Real Estate § 2.02

Taxable gain (loss) to Son (donee)	\$ 20	\$ (5)	\$ --

As the third column demonstrates, there is no gain or loss recognized to a donee who sells property acquired by gift if the selling price falls between the basis to the donor and the fair market value of the property at the date of the gift.

"Fair market value" is the value at which the property gifted is appraised for purposes of the federal gift tax or, if no federal gift tax is imposed, the appraisal value for state gift tax purposes. n49 If neither tax is imposed, the fair market value of the property generally may be difficult to determine. Unless an appraisal was obtained at the time of the gift, the value of the property must be determined well after acquisition and often with inadequate information.

Proving that an asserted fair market value is correct is generally the responsibility of the taxpayer, although, as a result of the *IRS Restructuring and Reform Act of 1998*, the burden of proof will be on the IRS if the taxpayer has complied with substantiation and record-keeping requirements, presents credible evidence, and cooperated with the IRS in any audit and, if applicable, meets the net worth requirements applicable to the awarding of attorneys fees. n50 This provision is applicable to audits (or if there is no audit, court proceedings) commencing after July 22, 1998. Credible evidence will likely include an independent appraisal of the property as of the date of the gift, or evidence of the selling prices of similar properties (known as "comparables") located in the general vicinity of the gifted property and occurring at or near the date of the gift. Although other probative means may be employed, these two methods are those generally used in determining fair market value for gift tax purposes. n51

The basis of property acquired by gift may be increased in whole or in part by the amount of federal gift tax paid with respect to such gift, but not to an amount in excess of fair market value at the time of the gift. For gifts made after 1976, the increase in a donee's basis is limited to the amount of gift tax attributable to the "net appreciation" on the gift. n52 Net appreciation is defined as the amount by which the fair market value immediately before the gift exceeds the donor's adjusted basis. n53 As a result, the increase in the donee's basis with respect to gift tax paid by the donor is equal to the ratio of the net appreciation in the gifted property to the total fair market value of the property, multiplied by the amount of tax paid.

Example:

If A gifts to B in 1995 undeveloped land with a fair market value of \$15,000 for which A paid \$10,000 many years ago, the net appreciation in the value of the property is \$5,000. Assume that A paid a gift tax of \$2,700 on the transfer. B's unadjusted basis in the property would be A's basis of \$10,000, plus the gift tax attributable to the net appreciation, computed as follows:

Net appreciation

_____ x gift tax = basis increase

Fair market value

\$5,000

_____ x \$2700 = \$900

\$15,000

Therefore, B's unadjusted basis would be \$10,900.

For gifts made prior to 1977, although the proration is not required, basis still cannot be increased to an amount in excess of fair market value at the time of the gift. n54

Thorough planning in making gifts is important. For example, a donor who is considering making a gift of one of two properties with comparable fair market values but significantly different adjusted bases must analyze the basis implications of the selection. Gifting the property that has undergone greater appreciation will allow the donee to increase its basis by a larger percentage of the gift tax paid, but retaining the other property (i.e., the higher basis property) will reduce the potential benefit of the basis increase at death that would otherwise be available. n55 In each case, the basis increase after the gift or after death will reduce taxable gain on a subsequent sale by the transferee. Stating this another way, a donor may achieve a greater immediate tax advantage for its donee by gifting low-basis, rather than high-basis, property if a gift tax is paid with respect to the gift, because the donee's basis for the gifted property will increase by a larger percentage of the gift tax paid.

A technique that is frequently used to transfer highly-appreciated real property is the "net gift". This type of transfer requires the donee/recipient to pay the gift tax that would have been paid by the donor. The donor does not realize income or a taxable gain when the donee pays the gift tax, unless the gift taxes paid by the donee exceed the donor's adjusted basis in the property. n56

Donors generally have many varying motives, other than taxes, for transferring property. These include, among others:

- (1) witnessing firsthand the satisfaction a loved one receives when enjoying a gift;
- (2) altruism;
- (3) a desire to reduce the confusion that may arise after death if property is then distributed;
- (4) a desire to manipulate the donor to act (or not act) in a certain fashion.

All of these factors, together with the tax ramifications, should be considered carefully before making any transfers of property.

[4] Bargain Sales

A special problem arises when a transfer of property is treated partly as a sale and partly as a gift. This situation usually occurs when there is a "bargain" sale between two parties who have a sufficient affiliation or relationship to suggest a donative intent in conjunction with a desire for a sale. In such cases, the transferee's unadjusted basis in the property is the greater of: (1) the amount paid; or (2) the transferor's adjusted basis at the time of the transfer. n57 As in the case of the "ordinary" gift discussed above (and subject to the same limitations), the transferee's basis may be increased for any federal gift tax attributable to net appreciation of the property. n58 A special rule applies to part sale/part gift transactions involving charitable transferees. n59

Example (1):

A sells property to B for \$30,000, a bargain price with a gift intended. Assume A's basis in the property

is \$90,000, and the fair market value is \$60,000. Assume that no gift tax is currently payable because A has not used up its unified credits. n60 B's unadjusted basis will be \$90,000 for all purposes except for determining a loss on a subsequent sale, in which case B's unadjusted basis will be \$60,000. n61

Example (2):

If A transfers property to his son in a bargain sale transaction for \$30,000, and at the time of the transfer, the property has an adjusted basis of \$30,000 in A's hands (and a fair market value of \$60,000). Assume that no gift tax is payable on the transfer. The unadjusted basis of the property in the hands of the son is \$30,000. n62

Example (3):

On the same assumption, A transfers property to his son for \$60,000, and the property at the time of the transfer has an adjusted basis of \$30,000 in A's hands (and a fair market value of \$90,000), the unadjusted basis of such property in the hands of the son is \$60,000. n63

Example (4):

On the same assumption, A transfers property to his son for \$30,000, and the property at the time of the transfer has an adjusted basis in A's hands of \$60,000 (and a fair market value of \$90,000), the unadjusted basis of such property in the hands of the son is \$60,000. n64

[5] Property Acquired on Transfer in Trust

The basis of property acquired by a transfer in trust (other than by a transfer in trust by gift, bequest or devise) is the same as it would be in the hands of the grantor. However, the transferee's basis is increased in the amount of any gain, or decreased in the amount of any loss, recognized by the grantor on the transfer. n65 (The basis of property acquired by a transfer in trust by gift is determined according to the rules described above relating to gifts; and the basis for property acquired in trust by bequest or devise is similarly determined according to the rules pertaining to the basis of property acquired from a decedent, as described below.) If a taxpayer acquires property by a transfer in trust, the basis is that of the grantor, adjusted for gain or loss, regardless of whether the property is in the hands of a trustee or a beneficiary of the trust, and regardless of whether the property is acquired before or after the termination of the trust and distribution of its property. n66

If property acquired by trust consists of an investment made by a fiduciary (such as a trustee), the cost or other basis in the hands of the fiduciary is used. n67 For example, assume Grantor transfers Property 1 to a trust, and the trustee sells the property for \$100,000. The trustee reinvests the proceeds in Property 2. The basis of Property 2 is its cost of \$100,000, and the basis of Property 1 in the hands of the Grantor is not relevant to the calculation of Property 2's basis.

[6] Property Acquired from a Decedent**[a] Generally****Note:**

For decedents dying after 2009, after repeal of the estate and generation-skipping transfer taxes, the existing rules providing for a fair market value (i.e., stepped-up) basis for property acquired from a decedent are repealed. n68

For decedents dying after 2009, a modified carryover basis regime generally applies, under which

recipients of property transferred at the decedent's death receive a basis equal to the lesser of the adjusted basis of the decedent in the property or the fair market value of the property on the date of the decedent's death. n69

For a decedent dying before 2010, the basis of property acquired from a decedent by bequest, devise or inheritance is the fair market value of the property at the time of the decedent's death n70 or at the alternate valuation date, if such date is properly elected for estate tax purposes. n71 The alternate valuation is the fair market value of the decedent's property six months after the date of death, or at the date of disposition of the property (if earlier). The election is intended to afford limited tax relief to estates that have experienced a decline in the value of assets during the six-month period. n72 Property acquired from a decedent includes, principally, property acquired by bequest, devise or inheritance, and property acquired by reason of death which is includible in determining the value of the decedent's gross estate, n73 whether or not an estate tax return is required. n74 Property acquired from a decedent that is specially valued under *IRC Section 2032A* (certain family farm property) must be valued at its special use value as determined under that section. n75 Property acquired from a decedent has a carryover basis to the extent of the applicability of the estate tax exclusion for property subject to a qualified conservation easement. n76

[b] Valuations

The value assigned to the property for purposes of the federal estate tax is the property's fair market value. n77 However, this value is only prima facie evidence in determining the basis of property acquired from a decedent. n78 If no federal estate tax return is required to be filed, the fair market value generally is considered to be the appraised value of the property at the date of death that was used for probate purposes or in filing the state inheritance tax return. No alternate valuation date is available. n79

[c] Community Property and Joint Tenancy

For a decedent dying before 2010, n80 if property was held by a decedent and surviving spouse as community property, then the *surviving spouse's* one-half share in the property is considered as having been acquired by the surviving spouse from the decedent. The basis of that one-half share is stepped up to fair market value at the time of the decedent's death), but only if at least one-half of the whole community interest in the property is includable in determining the value of the decedent's gross estate for federal estate tax purposes or, if no return is required, would be includible if a return were required. n81 Thus, if at least one-half of the value of the community property of a decedent and surviving spouse is includable in the decedent's gross estate, the basis of *both* the decedent's portion and the surviving spouse's portion is stepped up to the fair market value at the date of death (or alternate valuation date). n82

For this treatment to apply, the property must be held as community property at the time of the decedent-spouse's death. n83 Property once held as community property but later converted to separately-owned property prior to the death of the decedent-spouse is not considered community property for purposes of the rule. n84

The stepped-up basis rule does not apply where the decedent and surviving spouse held property as joint tenants with right of survivorship, or as tenants by the entirety. In such circumstances, only the basis of the *decedent's* one-half interest that is included in the decedent's estate tax return is stepped up. The basis of the surviving spouse's interest, which is not included in the decedent's estate, is not. n85

Whether or not property constitutes community property is determined in accordance with state law, and such characterization controls whether or not the decedent and surviving spouse treated the property as community property prior to the decedent's death. n86

Planning Tip:

The difference between basis adjustments applicable to community property, on the one hand, and joint tenancy property and tenancy by the entirety property, on the other, following the death of a spouse makes choosing between the two forms of ownership--in those jurisdictions in which a choice is possible--an important decision. n87

[d] Property Acquired Before Decedent's Death

Property is considered to be "acquired from a decedent" if, by reason of death, form of ownership or other conditions, the value of the property must be included in the decedent's gross estate for estate tax purposes. n88 Subject to certain exceptions, gifts made within three years of death are not included in the decedent's estate. The exceptions that will cause property transferred within three years of the decedent's death to be included in the gross estate include:

- the transferor retains a life estate in the transferred property;
- the transfer takes effect only upon the transferor's death;
- the transfer is revocable; or
- the transfer creates a power of appointment. n89

The basis of property acquired by a taxpayer prior to the decedent's death and that is deemed to be property "acquired from a decedent" must be adjusted for depreciation, obsolescence, amortization and depletion deductions actually allowed the taxpayer during the period before the decedent's death. Thus, the adjusted basis in the hands of the taxpayer is the property's fair market value at the decedent's death, or the applicable alternate valuation date, less the amount allowed to the taxpayer as deductions for the period the property is held by the taxpayer prior to the decedent's death. n90

[e] Multiple Interests Transferred at Death

The basis of property acquired from a decedent is the same whether the property is possessed by an executor, administrator, heir, trustee or trust beneficiary. n91 This is known as the "principle of uniform basis". The principle provides that the basis of property acquired from a decedent is its value at the date of death (or alternate valuation date), no matter when the subject property is eventually distributed. When more than one person has an interest in property acquired from a decedent (for example, a life tenant and a remainderman), the basis of the entire property must be determined without regard to the multiple interests. n92 The basis of the entire property is then allocated to the various interests in the manner provided in the Code and Regulations. The disposition by a life tenant or a remainderman of his interest will have no effect on the uniform basis of property in the hands of those who acquire the property from the decedent. n93

When an interest in property (such as a life estate) is acquired by gift or through a decedent's will, the taxpayers must use tables provided by the Service to determine the value of the gift, bequest or devise. The tables are based on mortality rates. n94 This subject is dealt with more fully in section 2.03[2].

[f] Basis Rules for Property Received From Decedents Dying After 2009

For decedents dying after 2009, a modified carryover basis regime generally applies, under which recipients of property transferred at the decedent's death receive a basis equal to the lesser of the adjusted basis of the decedent in the property or the fair market value of the property on the date of the decedent's death. n95 There is a generous exception to the carryover basis rules for certain property. Each decedent's estate generally is permitted to increase (i.e., step up) the basis of assets transferred by up to a total of \$1.3 million. n96 The \$1.3 million is increased by the amount of unused

capital losses, net operating losses, and certain "built-in" losses of the decedent. n97 In addition, the basis of property transferred to a surviving spouse can be increased by an additional \$3 million. Thus, the basis of property transferred to a surviving spouse can be increased by a total of \$4.3 million. n98 Nonresidents who are not U.S. citizens will be allowed to increase the basis of property by up to \$60,000, but may not increase that amount by any losses. n99 The \$60,000, \$1.3 million, and \$3 million amounts are adjusted annually for inflation after 2010. n100

In general, the basis of property may be increased above the decedent's adjusted basis in that property only if the property is owned, or is treated as owned, by the decedent at the time of the decedent's death. n101 In the case of property held as joint tenants or tenants by the entireties with the surviving spouse, one-half of the property is treated as having been owned by the decedent and is eligible for the basis increase. n102 In the case of property held jointly with a person other than the surviving spouse, the portion of the property attributable to the decedent's consideration furnished is treated as having been owned by the decedent and will be eligible for a basis increase. n103 The decedent also is treated as the owner of property (which will be eligible for a basis increase) if the property was transferred by the decedent before death to a revocable trust that pays all of its income during the decedent's life to the decedent or at the direction of the decedent. n104 The decedent is not, however, treated as owning any property solely by reason of holding a power of appointment with respect to that property. n105

The decedent also is treated as having owned the surviving spouse's one-half share of community property (which will be eligible for a basis increase) if at least one-half of the property was owned by, and acquired from, the decedent. n106 Thus, similar to the present law rule, n107 both the decedent's and the surviving spouse's share of community property could be eligible for a basis increase. n108

Property not eligible for a basis increase includes the following:

- Property that was acquired by the decedent by gift or inter vivos transfer (other than from his or her spouse) during the three-year period ending on the date of the decedent's death; n109
- Property that constitutes a right to receive income in respect of a decedent; n110
- Stock or securities of a foreign personal holding company death; n111
- Stock of a domestic international sales corporation (or former domestic international sales corporation) death; n112
- Stock of a foreign investment company; n113 and
- Stock of a passive foreign investment company (except for which a decedent shareholder had made a qualified electing fund election). n114

Basis increase is allocable on an asset-by-asset basis (e.g., basis increase can be allocated to a share of stock or a block of stock). However, in no case can the basis of an asset be adjusted above its fair market value in the decedent's hands as of the date of the decedent's death. n115 If the amount of basis increase is less than the fair market value of assets whose bases are eligible to be increased under these rules, the executor may determine which assets and to what extent each asset receives a basis increase. n116

Any liabilities in excess of the decedent's basis in property are disregarded in determining whether gain is recognized on the acquisition of that property from a decedent by a decedent's estate or a beneficiary other than a tax-exempt beneficiary. Similarly, no gain is recognized by the estate on the distribution of that property to a beneficiary who is not tax-exempt by reason of the liability. Liabilities in excess of basis are also disregarded in determining the adjusted basis of the property. n117

Information returns containing specified information must be filed for transfers at death of non-cash assets in excess of \$1.3 million (\$60,000 for noncitizen nonresident decedents) and for any appreciated property received by a decedent as a gift within three years of death. n118 Statements must also be furnished to each person whose name must be set forth in the return. n119

A variety of amendments are made to Code provisions in connection with the carryover basis rules n120 that apply for decedents dying after 2009:

- If appreciated property is transferred in satisfaction of a pecuniary bequest, gain is recognized only to the extent that the fair market value of the property at the time of the transfer exceeds the fair market value of the property on the date of the decedent's death (not the property's carryover basis). To the extent provided in regulations, a similar rule applies where by reason of a decedent's death, a person has a right to receive from a trust a specific dollar amount which is the equivalent of a pecuniary request, and the trustee satisfies that right with property. n121
- The required recognition of gain on transfers to certain foreign trusts and estates is extended to transfers (other than lifetime transfers) to nonresident aliens. n122
- The definition of "capital asset" is clarified to state that the determination of the basis of artwork and other property in the taxpayer's hands under *IRC § 1022* will not prevent the asset from being a capital asset; n123
- A definition of "executor" is added; the term means an executor or administrator of a decedent, or if none is appointed, qualified and acting in the United States, then it means any person in actual or constructive possession of any property of the decedent; n124
- Split interest trusts are made subject to certain restrictions that are applicable to private foundations if an income tax charitable deduction, including an income tax charitable deduction by an estate or trust, was allowed with respect to transfers to the trust; n125
- Existing rules relating to gain on foreign investment company stock are repealed. n126

[7] Property Acquired in Common Forms of Tax-Deferred Exchanges

[a] *IRC Section 1031* Like-Kind Exchanges

The basis of replacement property received in a like-kind exchange under *IRC Section 1031* is determined by reference to the basis of the relinquished property. If a taxpayer transfers property, receives only like-kind property in exchange, and no gain is recognized in the completely tax-deferred exchange, then the replacement property will have a basis which is the same as the basis of the relinquished property. n127 For example, if A exchanges an unencumbered farm used in a trade or business or held for investment, worth \$100,000 and with a basis of \$50,000, for another unencumbered farm worth \$100,000, A's basis in the new farm will be \$50,000--the basis of the farm relinquished.

Where the taxpayer pays additional consideration (e.g., cash) in order to acquire the replacement property, the basis of the replacement property will be increased by the amount of that additional consideration (if cash), or by the fair market value of the additional property given (if the consideration is something other than cash). n128 The basis of replacement property in a like-kind exchange is also increased by the amount of any liabilities of the other party to the exchange that are assumed by the taxpayer. n129

Frequently, like-kind exchanges are partially taxable because properties being exchanged have different values, and the taxpayers seeking like-kind exchange treatment receive "boot", that is, cash or the property (including debt relief) in addition to the like-kind property. If cash or other property is received, gain on the exchange is recognized and taxable to the extent of the cash received or the fair market value of the non-cash property received. n130 When gain is recognized, the basis of the replacement property is equal to the basis of the relinquished property, reduced by other property or cash received, and increased by the amount of gain recognized. n131

The basis of replacement property received in a like-kind exchange is its "cost," that is, an amount equal to the fair market value of the replacement property at the time of the exchange. It was specifically noted in one court decision that the basis of the property received in a fully taxable exchange is properly measured by the fair market value of the property acquired, not by the fair market value of the property transferred. n132 This conclusion is correct, since gain or loss is measured by the difference between the fair market value of the property received and the basis of the property given up.

If multiple properties are acquired in a like-kind exchange, the basis of the relinquished property (and the adjustments for boot paid and gain recognized) must be allocated among the replacement properties in proportion to their relative fair market values at the date or dates of acquisition. n133

Like-kind exchanges are discussed in greater detail in Chapter 8.

[b] Involuntary Conversion

Taxpayers may defer gain realized on an involuntary conversion under *IRC Section 1033*. The basis of the replacement property is the same as the basis of the property converted, decreased in the amount of any money received that is not expended for the qualifying replacement property, increased by the amount of any additional consideration paid for the replacement property, and increased again in the amount of gain (or decreased in the amount of any loss) recognized upon the conversion. n134

Involuntary conversions are discussed further in Chapter 8A.

[8] Property Acquired under Option

The basis of property acquired pursuant to the exercise of an option includes both the cost or other basis of the option and the cost of the property. n135 Thus, if A pays B \$1,000 for the right to purchase B's property for \$100,000 within 90 days, and A exercises his option within the option period and pays \$100,000, A's basis in the property is \$101,000.

It should be noted that the mere granting of an option to purchase is not, in general, a sale, exchange or other disposition of the property, in the absence of the exercise of the option. n136 The option itself constitutes personal property in which the option holder has a cost basis.

In one private letter ruling, a taxpayer had an option to purchase a house under the terms of a will at a specified price below its market value. After the decedent's death, the taxpayer exercised the option, but the estate allowed the option to be exercised for a lower price than was stated in the will. The IRS ruled that the basis of the property acquired by the taxpayer from the estate was the sum of the following: (1) the basis of the option under *IRC Section 1014(a)* computed at the fair market value of the option property at the date of the decedent's death, less the option price stated in the will; plus (2) the actual option price paid by the taxpayer. Upon exercise of the option, the taxpayer's basis in the property was the sum of the basis of the option and the actual option price paid. n136.1

[9] Property Acquired as Payment for Services

The fair market value of property acquired in exchange for services must be included as ordinary income by the party rendering the services and acquiring the property. The basis of the property is that fair market value. n137 For example, if a real estate broker receives a parcel of property or an interest in property as a commission, the fair market value of the property is taxable as ordinary income at the time of receipt, and the basis upon subsequent sale is the same fair market value at the time of receipt.

In certain cases where retention of property received as compensation is subject to a "substantial risk of forfeiture," there may be no current basis in the property because no income is recognized until the risk of forfeiture lapses. n138

[10] Property Acquired by "Dealers"

Although "dealers" in real property hold such property primarily for sale to customers in the ordinary course of their trade or business, n139 the special rules for determining basis of inventory items, n140 such as the LIFO method, do not apply to real property held by dealers. Taxpayers engaged in the real estate business are not permitted to inventory real estate held for sale to customers. n141 The basis of such property in the hands of "dealers" is therefore determined under the same rules applicable to property held by non-dealers.

[11] Property Acquired in Satisfaction of a Debt or Other Claim

The basis of property received in payment of a debt or in satisfaction of a claim is the fair market value of the property on the date of transfer. n141.1 This rule applies even where the amount of the debt (or claim) satisfied is greater or less than the fair market value of the property transferred. In these situations, however, the transferee realizes a gain or a loss (as the case may be) at the time of transfer. That gain or loss is measured by the difference between the fair market value of the property transferred and the amount or basis of the debt satisfied. If the property acquired has no ascertainable market value, its basis may be determined by the amount or basis of the debt satisfied by the transfer. n142

The foregoing is not to be confused with the situation where a seller repossesses real estate from the buyer on foreclosure of a purchase money debt. Specific rules apply to this circumstance. See *section 2.02[12][b]* for a further discussion.

[12] Property Acquired On Foreclosure

Determining the basis of property acquired through foreclosure is a two-part issue. The rules are different, depending on whether the foreclosing mortgagee was an "outside" lender (i.e., a bank, savings and loan, or similar lending institution), or whether the mortgagee (i.e., the lender) was the seller of the property, that is, a seller who holds a purchase money mortgage.

[a] Non-Seller Lender

In the case of a lender-mortgagee who is not a seller and holding a purchase money obligation of the debtor, the basis of property acquired in a foreclosure (or by taking a deed in lieu of foreclosure) is the fair market value of the property at that time. Any excess of the basis of the mortgagee's loan over the fair market value of the property repossessed is a bad debt sustained by the mortgagee. If the fair market value of the property is greater than the basis of the debt, the lender realizes taxable income equal to the excess value. n143

[b] Seller Holding Purchase Money Debt

When the mortgagee is the seller and the property is reacquired by repossession or foreclosure in satisfaction of the indebtedness, as a general rule no gain or loss is recognized by the foreclosing seller, and no worthless or partially worthless bad debt deduction is realized. The basis of the property reacquired is the adjusted basis of the indebtedness at the time of repossession, increased by the amount of any gain resulting from the reacquisition, plus costs incurred by the

1-2 Federal Taxes Affecting Real Estate § 2.02

mortgagee incident to the repossession. n144 In general, gain is recognized to the extent that the seller has received payment prior to the foreclosure in excess of the amount of gain on the sale taken into income prior to the foreclosure. The adjusted basis of the indebtedness is equal to the face value of the original debt, reduced by payments received and by the remaining unreported profit.

Example:

A taxpayer sells a building for \$50,000, resulting in a gain of \$10,000. The sale is reported on the installment method. After the purchaser pays \$30,000, he defaults and the seller repossesses the property, incurring \$500 in expenses. The seller realizes a \$3,500 gain on the repossession. The basis of the property is determined as follows:

Face value of debt at time of repossession (\$50,000 - \$30,000)	\$20,000
Less--Unreported profit (40% of \$10,000)	4,000
Seller's adjusted basis in buyer's obligation	\$16,000
Gain on repossession	3,500
Expenses of repossession	500
Basis of property	\$20,000

Chapter 7 discusses the method of determining gain on this and other types of repossessions.

[13] Personal Residences

The general rule for determining the basis of real property also applies to the principal residence of a taxpayer, namely, basis equals cost. The major exception to the general rule is the case where a principal residence was acquired as a "replacement residence" in a transaction subject to former IRC Section 1034. n145 A more unusual exception occurs when a principal residence is reacquired by foreclosure on a purchase money lien and then resold. n146

Under the now-repealed provisions of former IRC Section 1034(a), if a taxpayer disposed of his principal residence and within two years (either before or after the disposition) acquired and occupied another property as a principal residence, gain realized on the disposition of the first residence was recognized *only* to the extent that the adjusted sales price of the old residence exceeded the cost of acquiring the new one. n147

Where former IRC Section 1034 resulted in deferral of gain, the basis of the new residence was reduced by the amount of gain not recognized upon the disposition, which adjustment occurred following the disposition of the old residence. n148 Thus, the adjustment to basis could occur up to two years following actual purchase of the replacement residence.

Example:

A owns a home (home 1) which has an adjusted basis of \$50,000. In March, 1993, A bought a new home (home 2) for \$150,000. In February, 1995, A sold home 1 for \$125,000. Assuming A made no improvements or other additions to the basis of home 2, A's basis in home 2 is: \$150,000 from acquisition until February, 1995, and thereafter \$75,000 (\$150,000 less the \$75,000 gain realized, but not recognized, on the sale of home 1).

For further discussion of the consequences of personal residence sales and purchases, see Chapter 9.

[14] Property Acquired During Formation of a Corporation

[a] Basis of Property Transferred to Controlled Corporation

The basis of property transferred to a newly-formed corporation in exchange for capital stock is determined by reference to the basis of the property in the hands of the transferor if certain requirements are met. n149 The most important requirement is that the transferor(s) must own at least 80 percent or more of the voting stock, and at least 80 percent of the total number of all other outstanding shares immediately after the transfer. n150 If property is exchanged for stock upon incorporation in a transaction satisfying the above requirements, the basis of the property to the corporation is the transferor's basis in the property. n151

[b] Basis of Stock Received by Shareholder in Tax-Free Transfer of Property to Controlled Corporation

The basis of the stock received by the shareholder in a transfer of property to a newly-formed controlled corporation is the same as the shareholder's basis in the property transferred. n152 The shareholder's "substituted" basis in the stock is reduced by the sum of any money received, including relief of liabilities (whether recourse or nonrecourse) and the value of any other boot received. It is also increased by the amount of gain, if any, that the transferor recognizes in the transaction. n153

A statutory rule prevents duplication or acceleration of loss through the assumption of liabilities. n154 If the basis of the stock received by the transferor exceeds the fair market value of the stock, then the basis of the stock received is reduced (but not below the fair market value) by the amount of any liability that: n155

- is assumed by another person as part of the exchange; and
- did not otherwise reduce the transferor's basis of the stock by reason of the assumption.

Except as otherwise provided by the Secretary, this rule does not apply if the trade or business with which the liability is associated is transferred to the corporation as part of the exchange. n156 For exchanges occurring before May 9, 2008, n156.1 this rule also did not apply if substantially all the assets with which the liability is associated were transferred to the corporation as part of the exchange. n156.2 The Secretary has by regulation provided that *IRC Section 385(h)(2)(B)* does not apply to an exchange occurring on or after May 9, 2008. n156.3

For the above purposes, the term "liability" includes fixed or contingent obligations to make payments, without regard to whether those obligations are otherwise taken into account under provisions of the Internal Revenue Code n157 The determination of whether a liability has been assumed is made in accordance with *IRC Section 357(d)(1)*. Under that provision, a recourse liability is treated as assumed if, based on all facts and circumstances, the transferee has agreed to and is expected to satisfy that liability (or a portion of it), whether or not the transferor has been relieved of the liability. n158

For example, if a transferee corporation does not formally assume a recourse obligation or potential obligation of the transferor, but instead agrees and is expected to indemnify the transferor with respect to all or a portion of the obligation, then the amount that is agreed to be indemnified is treated as assumed, whether or not the transferor has been relieved of the liability. n159

Similarly, a nonrecourse liability is generally treated as assumed by the transferee of any asset subject to that liability. n160 The amount of nonrecourse liability treated as assumed by the transferee, however, is reduced by the lesser of the

following: n161

- the amount of that liability which an owner of other assets subject to that liability has agreed with the transferee, and is expected to satisfy to assume; or
- the fair market value of the assets.-fn- For this purpose, the value of the assets may be less than the amount of the nonrecourse indebtedness to which the property is subject (*IRC §§ 357(d)(2), 7701(g)*).

[c] Basis of Property Transferred to Newly-Formed Corporation When Requirements of *IRC Section 351* Are Not Met

If the requirements for a tax free transfer to a newly-formed corporation are not met (as when the control requirement of *IRC Section 351* is not met) and gain is recognized by the transferor, the basis of the property acquired by the corporation is equal to the transferor's basis in the stock received, plus the gain recognized. n162

[d] Basis of Stock Received by Shareholder in Transfer to Newly-Formed Corporation When Requirements of *IRC Section 351* Are Not Met

If the requirements for a tax-free transfer to a newly-formed corporation are not met (as when the control requirement of *IRC Section 351* is not met) and gain is recognized by the transferor of property to the corporation in exchange for stock, the transferor's basis in the stock is the same as his or her original basis in the property transferred, plus the gain recognized. n163

[e] Limitation on Corporation's Basis Attributable to Assumption of Liability

The basis of property received by the transferee-corporation in exchange for stock in the corporation or in connection with a reorganization cannot be increased above the fair market value of the property (determined without regard to *IRC Section 7701(g)*) by reason of gain recognized to the transferor as a result of the assumption of a liability. n163.1 *IRC Section 7701(g)* treats the fair market value of property as being not less than the amount of any nonrecourse indebtedness to which the property is subject.

An additional basis limitation applies if: (1) the transferor recognizes gain as a result of an assumption of a nonrecourse liability by a transferee that is also secured by assets not transferred to the transferee; and (2) no person is subject to tax on the gain. This restriction generally comes into play with respect to tax-exempt persons. In that case, for purposes of determining the transferee's basis, the amount of gain recognized by the transferee as a result of the assumption of the liability is determined as if the liability assumed by the transferee equaled the transferee's ratable portion of that liability determined on the basis of the relative fair market values (determined without regard to *IRC Section 7701(g)*) of all the assets subject to that liability. n163.2

[f] Gain Recognition When Liabilities Exceed Basis of Transferred Property

Whenever liabilities are assumed by a new corporation, the transfer of liabilities in excess of the basis of property transferred can result in the recognition of taxable income to the transferor shareholders. If the sum of the liabilities assumed exceeds the basis of the property transferred, the excess is recognized as a gain from the sale or exchange of an asset. n163.3 The character of the gain subject to recognition is determined by reference to the type of property transferred. If the property is a capital asset, then the gain will be a capital gain. n163.4 Even if a transferor remains personally liable for or guarantees the liabilities transferred to the corporation, the transferor must still recognize gain to the extent that the liabilities assumed by the corporation exceed the transferor's adjusted basis in the transferred assets. n163.4.1

Transferred liabilities, payment of which by the transferor would be deductible or would constitute distributive shares or

guaranteed payments made to retiring or deceased partners n163.5 are excluded from liabilities covered in *IRC Section 357*. n163.6 They are not considered in the determination of whether transferred liabilities exceed the basis of transferred assets. n163.7 However, if the liability has already been deducted by the transferor or if it has increased the transferor's basis in any property, then the liability is taken into account for purposes of *IRC Section 357(c)*. n163.8

[g] Limitation on Transfer of Built-In Losses in *IRC Section 351* Transactions

A special rule limits that transfer of built-in losses in *IRC Section 351* transactions. n163.9 If the aggregate adjusted bases of property contributed by a transferor (or by a control group of which the transferor is a member) to a corporation exceeds the aggregate fair market value of the property transferred in a tax-free incorporation, the transferee corporation's aggregate basis of the properties is limited to the aggregate fair market value of the transferred property. n163.10 This basis reduction rule applies regardless of the ownership percentage of the transferor in the stock of the transferee corporation. Any required basis reduction is allocated among the transferred properties in proportion to their built-in-loss immediately before the transaction. n163.11

The transferor and transferee may, however, elect not to have the above rule apply. If the election is made, the basis in the stock received by the transferor is limited to the aggregate fair market value of the transferred property, in lieu of limiting the basis in the assets transferred. n163.12 The election to do so must be included with the tax returns of the transferor and transferee for the taxable year in which the transaction occurs. Once made, the election is irrevocable. n163.13

[h] Basis Limits Relating to Importation of Built-In Losses

If a net built-in loss is imported into the United States in a tax-free organization or reorganization from persons not subject to U.S. tax, the basis of each property so transferred is its fair market value. n163.14 A similar rule applies in the case of the tax-free liquidation by a domestic corporation of its foreign subsidiary. n163.15 A net built-in loss is treated as imported into the United States if the aggregate adjusted bases of property received by a transferee corporation exceed the fair market value of the properties transferred. n163.16 Thus, for example, if in a tax-free incorporation, some properties are received by a corporation from U.S. persons subject to tax, and some properties are received from foreign persons not subject to U.S. tax, this provision applies to limit the adjusted basis of each property received from the foreign persons to the fair market value of the property. In the case of a transfer by a partnership (either domestic or foreign), this provision applies as if the properties had been transferred by each of the partners in proportion to their interests in the partnership. n163.17

The above rules apply to transactions after October 22, 2004. n163.18

[15] Basis of Property Distributed from a Corporation

[a] Prior to Corporate Liquidation

The basis of property, other than stock in the corporation making the distribution or rights to that stock, distributed by a corporation to a domestic shareholder with respect to its stock is equal to the fair market value of the property distributed. n163.19

[b] In Liquidation

If property is received by a distributee in complete liquidation of a corporation, and if gain or loss is recognized on the receipt of that property, the basis of the property in the hands of the distributee is the fair market value of the property at the time of the distribution. n163.20 A separate basis rule applies, however, to liquidations of controlled subsidiaries. If property is received by a corporate distributee in a distribution in complete liquidation of a subsidiary, n163.21 the basis of property in the hands of the distributee is the same as it was in the hands of the distributor. If the liquidating

corporation recognizes gain or loss with respect to the property, however, the distributee corporation's basis in the property is its fair market value at the time of the distribution. n163.22 The basis rule for liquidations of subsidiaries applies only if the distributee parent possesses at least 80 percent of the total voting power and at least 80 percent of the value of the stock of the subsidiary. n164

[16] Basis of Property Transferred to a Partnership

The basis of property contributed to a partnership in exchange for an interest in the partnership is the adjusted basis of the property to the contributing partner before the contribution. The basis of the interest in a partnership received by the contributing partner is equal to the amount of cash contributed, plus the adjusted basis of the contributed property before the contribution. In general, no gain or loss is recognized by a partnership or by any of the partners when property is contributed in exchange for an interest in a partnership. n165 However, when real estate subject to a mortgage is transferred to a partnership, the partners' bases for their partnership interests may be affected. The assumption of a mortgage by a partnership is considered a cash distribution to the transferor equal to the amount of his indebtedness effectively assumed by the other partners. n166 A distribution of money is a negative adjustment, that is, the distribution reduces the basis of a partner's interest. n167 If the negative adjustment exceeds basis, gain is recognized upon the transfer equal to the excess amount. n168 Similarly, the effective assumption of liabilities on property transferred by another partner increases the other partners' bases in their partnership interests. n169

[17] Basis of Property Distributed By a Partnership

The basis of property acquired in a distribution from a partnership depends first on the type of distribution (that is, whether it is a liquidating distribution or a nonliquidating distribution). n170 If the distribution is not in liquidation of the partner's entire interest, the partner's basis for the distributed property is the adjusted basis the partnership had in the property immediately before the distribution. This holds true as long as the basis of the property received does not exceed the basis of the partner's interest in the partnership. If the property's basis does exceed the basis of the partner's interest, then the basis of the property is determined by allocating the basis of the partnership interest among the properties received. n171 The Code provides special rules for the required allocation of basis. n172

If the distribution liquidates the partner's entire interest, then the partner's basis for the property received equals the adjusted basis of the partner's interest in the partnership, reduced by any money received in the distribution. n173 The allocation of basis among distributed partnership assets is specified by statute. n174

Special rules apply to distributions of property by a partnership to a partner who has previously contributed appreciated property to the partnership prior to recognition of "built-in gain" on the contributed property. n175 These rules are designed to keep partners from avoiding recognition of built-in gain by carrying out transactions through partnerships and relying on the general partnership tax principles affecting such transactions.

Special rules also apply if a partnership distributes to a corporate partner the stock of another corporation as part of the distribution. In such case, the corporate partner may have to reduce the basis in the assets of the corporation whose stock it received. The basis reduction is specified by statute and is required if, after the distribution, the corporate partner controls (generally speaking, an 80-percent vote and value requirement) n176 the distributed corporation, and the partnership's adjusted basis in the stock immediately before the distribution exceeded the corporate partner's adjusted basis in the stock after the distribution. n177

CHAPTER 2 Acquisition of Real Estate *

1-2 Federal Taxes Affecting Real Estate § 2.03

§ 2.03 Capital Expenditures

[1] Tax Treatment of Capital Expenditures

Costs incurred in the acquisition of real estate (or other capital assets) are capital expenditures. As such, they generally cannot be deducted currently, but must be capitalized n177.1 and added to the basis of asset acquired. n177.2 Capital expenditures are recovered for tax purposes either through depreciation or deductions n177.3 or through the reduction in capital gain (or increase in loss) when the asset is sold. n177.4

Certain costs incurred in acquiring real estate may be currently deducted, including certain interest payments n177.5 and real property taxes. n177.6

Costs incurred after the acquisition of an asset may be treated as capital expenditures incurred in connection with the purchase of the property. n177.7

Expenditures may be capitalized and added to the basis of a taxpayer's property even if the expenditures are made to other property not owned by the taxpayer. For example, taxpayers have been permitted to capitalize the cost of bulkheads, bluff reconstruction, jetties, and similar items on property they do not own in order to prevent erosion or other damage to their own property. n177.8

[2] Items Treated as Capital Expenditures

The types of acquisition costs that must be capitalized are not specified in detail in the Code or regulations. Regulations state only that capitalized costs include the costs of acquiring buildings and similar property having a useful life substantially beyond the taxable year. n177.9 Whether a cost is incurred in connection with the purchase of buildings or real property is determined by the origin of the cost. If the cost originates within the acquisition process, it is usually a capital expenditure. Under this reasoning, legal, brokerage, accounting, litigation expenses, and similar costs incurred in the acquisition of property have been held to be capital expenditures. n177.10 Even a taxpayer's overhead, management, and other seemingly deductible miscellaneous costs must be capitalized as part of the cost of real estate if those costs are directly related to the acquisition of that real estate. n177.11 The cost of a taxpayer's own labor, however, cannot be included in a property's adjusted basis. n177.11.1

Various rulings and court decisions have clarified that certain items are capital expenditures in specified property

acquisitions. The following items have been required to be capitalized:

- property evaluation expenditures; n177.12
- brokers' and real estate commissions; n177.13
- option payments;
- title charges and recording fees; n177.14
- architect fees; n177.15
- costs of acquiring outstanding leases;
- costs of defending or perfecting title to property; n177.16
- attorney fees for drafting documents; n177.17
- attorney and consulting fees incurred in a lawsuit against the seller of real estate related to misrepresentations about the property; n177.18
- survey fees; n177.19
- up-front condominium fees paid for membership in a corporation managing the condominium; n177.20
- costs of grading and paving a road in connection with the development of a subdivision of rental property; n177.21
- expenditures made to challenge zoning ordinances if the benefits resulting from the zoning change are indefinite and undeterminable in nature n177.22
- attorney and appraisal fees in connection with condemnation proceedings; n177.23
- attorney fees connected with the disposition of property; n177.24
- the value of property dedicated to public use as a condition for being permitted to develop other land; n177.25 and
- settlement costs, legal fees, and costs to acquire water rights and discharge units related to those rights. n177.26

[3] Treatment of Costs Incurred in Unsuccessful Acquisition

Costs incurred in connection with an unsuccessful acquisition may generally be deducted as a loss in the tax year the decision is made not to acquire the property or in the year a building project is abandoned, provided the expenses were directly related to a transaction entered into for profit. This rule has been applied to property evaluation expenditures n177.27 and architect's fees, n177.28 and would apply equally to other expenditures that would have to be capitalized if the acquisition were successful or the project completed.

[4] Equipment Used to Construct Capital Improvements

A taxpayer may not depreciate under usual MACRS rules the cost of equipment that it owns and uses in the construction of its own capital facilities. The cost of the equipment must be capitalized in the same manner as the capital facilities to which the cost corresponds. n177.29

CHAPTER 2 Acquisition of Real Estate *

1-2 Federal Taxes Affecting Real Estate § 2.04

§ 2.04 Allocation of Basis

Whenever improved real estate is acquired, it generally is necessary for the acquirer to allocate the total purchase price between the land and the improvements. This will be required, for example, because the various improvements are depreciable, while land itself is not. An allocation of basis will also be required among two or more separate parcels of real property where they are purchased for one price at one time and later sold separately. n178 Allocation must also be made when a portion of the property acquired is used for trade or business purposes, and the remaining part is not. A somewhat similar problem of allocation of basis arises when a transferor of property transfers a life estate to one individual and the remainder interest in the property is transferred to another. The allocation must be made in accordance with the relative fair market values of the properties acquired. n179

[1] Substantiation for Allocations

An allocation between depreciable and nondepreciable property must be made using a ratio comprised of the respective fair market values of the properties at the time of acquisition. The determination of the fair market values of the respective portions of a bulk purchase of realty is a question of fact. n180 Various factors will be considered by the courts and the Service, some of which are:

- (1) appraisals by qualified individuals or firms;
- (2) the assessed valuations placed upon the various properties by the local tax assessor; n181 and
- (3) in certain cases, the values set forth in the contract of sale itself, if the contract is between an arm's-length buyer and seller for adequate consideration. n182

As a practical matter, in allocating purchase price among several pieces of property, the evidence most acceptable to the Service is the value determined by independent sources, such as appraisers. Artificial values, which may result in unrealistic tax benefits for the buyer or the seller, or both, may be challenged, even though the dollar amounts are clearly identified in the sales contract.

The allocation will be important to the purchaser of improved real estate since a deduction for depreciation will be based upon this allocation, although in view of the cost recovery periods that were lengthened in the mid-1980s, this is

not as significant a factor as in the past. The allocation also will be important to the seller since the amount of depreciation recapture (subject to tax at ordinary income tax rates, or not eligible for the lowest capital gains tax rates) is dependent upon the allocation of sales price to buildings or other improvements. Therefore, specifying fair market values in the contract of sale of improved real estate is important because of the generally opposing interests of the buyer and seller.

The allocation of basis also may be important to both the buyer and seller in the sale of a going business. n183 Many items sold (such as inventory, depreciable assets subject to recapture, and accounts receivable) may produce ordinary income for the seller and deductions against ordinary income for the buyer. In addition, allocation to so-called "Section 197 intangibles" allows a buyer to amortize basis over a 15-year period, which is more rapid than the periods applicable to most real property improvements. n184 Section 197 intangibles include the following: n185

- (1) franchises;
- (2) trademarks;
- (3) trade names;
- (4) goodwill;
- (5) going concern value;
- (6) intangibles relating to workforce, information base, know-how, customers and suppliers;
- (7) licenses;
- (8) covenants not to compete;
- (9) government permits; etc.

These rules have had a dramatic impact upon the allocation of basis among various assets when a business is purchased that owns real estate.

Planning Tip:

Where possible, it may be advantageous to a buyer to allocate purchase price to *IRC Section 197* items, such as goodwill and going concern value, rather than to depreciable real estate since the rate of recovery from amortization of intangibles is almost twice as fast as the rate of cost recovery for residential property (15 vs. 27.5 years) and two and a half times the rate for non-residential property (15 vs. 39 years). n186 Conversely, it may be advantageous to a non-corporate seller to allocate consideration to such Section 197 assets if the seller is a dealer in real property, since the seller may be entitled to long term capital gain treatment on the sale of goodwill but will be subject to ordinary income treatment on the sale of property held for sale to customers.

[2] Allocations for Multiple Interests

For certain purposes, an allocation of basis is required where multiple interests in one property (e.g., a life estate and a remainder interest) are created. There is little problem where the respective interests are acquired by purchase. In such cases, basis to the life tenant and to the remainderman are obviously determined by the respective purchase prices of the interests.

Where a life estate is sold, or a remainder interest is sold before the termination of the life estate, it is necessary to utilize actuarial factors to determine the portion of the total basis applicable to the interest sold. These factors are set out in tables in regulations. n187 When life estates (or other term interests) originally acquired by gift or inheritance are subsequently disposed of, a basis of zero is utilized *for purposes of determining gain or loss on the transaction*. n188 This means that the entire amount received in the sale or other taxable transaction is taxed. This zero-basis rule does not apply, however, if the life tenant and the remainderman together, and in the same transaction, make a transfer to third person(s) of the entire interest in the property. n189

When there are multiple interests in property, the basis of the respective interests must be adjusted to take into account items of a capital nature affecting the property during the time it was held by the life tenant. This would include such items as deductions for depreciation, additions of permanent improvements, etc. For example, if A gifted to B a life estate in property having a basis of \$10,000, and A had held the property for five years, during which time she claimed \$1,000 of depreciation deductions, the basis of the property to B, the remainderman, would be \$9,000 (the basis of \$10,000 less the \$1,000 of depreciation claimed by A).

CHAPTER 2 Acquisition of Real Estate *

1-2 Federal Taxes Affecting Real Estate § 2.05

§ 2.05 Holding Period

The holding period of investment assets (such as raw land) and certain depreciable business assets that are treated as capital assets is important because it is one of the criteria that will determine whether the more advantageous tax rates applicable to long-term capital gains of non-corporate taxpayers will apply. The minimum holding period for long term capital gains treatment is more than one year. n190

The holding period is computed in months rather than in days. In determining the holding period, the date of purchase is excluded and the date of sale is included. n191 For example, if property is acquired on March 22, it will qualify for long-term capital gain treatment beginning on March 23 of the following year.

[1] Property Acquired by Purchase

In a purchase, the most common situation, the holding period commences at the time the buyer assumes the benefits and burdens of ownership. While this is normally the closing date (the day title passes), the rule is not inviolate. For example, if, pursuant to an unconditional contract of sale, possession--as well as the burdens and benefits of ownership--is acquired prior to the transfer of title, the holding period will commence at that earlier date. This rule normally follows state law. n192

[2] Property Acquired by Gift

In the case of property transferred by gift, if the basis of the donor carries over to the donee, the holding period of the donor will be included, that is, the donee's holding period will be "tacked onto" the donor's. However, if, under the rules regarding losses discussed earlier in this chapter, the basis is equal to the fair market value of the property at the date of the gift, the holding period will commence with the date of the gift. n193

[3] Property Acquired from a Decedent

In the case of a person acquiring property from a decedent, if the basis of the property in the hands of such person is "stepped up" to fair market value, and the property is sold or otherwise disposed of by that person within one year after the decedent's death, then the person is treated as having held the property for more than one year. n194

[4] Property Acquired in an Exchange

The holding period of replacement property acquired in a like-kind exchange includes the holding period of the relinquished property. n195 In other words, the holding period of the relinquished property is tacked onto the holding period of the replacement property. This rule applies only to property that is of a like-kind to that exchanged, and not to "boot" (see *section 2.02[7]*, above).

[5] Property Acquired under Option

When property is acquired through the exercise of an option, the holding period of the option itself is disregarded. The holding period commences when the option is exercised and the property is acquired. n196 The option is considered exercised when title passes or when there is delivery of possession, together with the assumption of the benefits and burdens of ownership by the purchaser. n197 In short, the option has a holding period of its own until it is exercised.

Planning Tip:

When property that can be acquired under an option is to be sold quickly, it may be better to sell the *option* than to acquire and sell the property, if the holding period of the option will allow long-term capital gain treatment on the profit realized from the sale.

[6] Property Acquired through Involuntary Conversion

For purposes of determining the holding period, property acquired as a result of an involuntary conversion is treated as property acquired in a tax-deferred exchange, as explained in *section 2.04[4]*, above. n198

[7] Improvements

The holding period of improvements made after the acquisition of real estate is computed separately from the holding period of the land itself. n199 While land may have a sufficient holding period to qualify for long-term capital gain or loss treatment, a building subsequently constructed on the land may have a different holding period which would not result in long-term status.

The "brick-by-brick" rule applies to the amount of construction completed on a building; that is, gain or loss must be allocated between the amount of construction completed more than one year before disposition of a building and the amount of construction completed less than one year before disposition of a building. n200

CHAPTER 2 Acquisition of Real Estate *

1-2 Federal Taxes Affecting Real Estate § 2.06

§ 2.06 Apportionment of Real Estate Taxes

[1] Between Buyers and Sellers

When real property is sold, real estate taxes for the year of sale must be apportioned between the buyer and the seller. n201 The apportionment is made on a daily basis over the period that the taxes cover. n202 The seller is entitled to a deduction for taxes covering the period from the first day of the tax year of the assessing authority to the day before the sale. The balance is deductible by the purchaser. This statutory apportionment rule applies whether or not the purchaser and seller apportion the tax. n202.1 This rule also applies regardless of whether the taxpayer uses the cash method of accounting for property taxes or has made the election under *IRC Section 461(c)* to accrue the taxes. Allocations specified in the sales contract do not govern the allocation of the deduction, although they may affect the economics of the transaction. n203 A purchaser who pays real property taxes that are allocated to the seller cannot deduct them, n203.1 but must capitalize them and add them to the basis of the acquired property. n203.2 It is immaterial whether or not the contract of sale specifies that the sale price has been reduced by, or is any way intended to reflect, real estate taxes allocable to the seller. n203.3 Proration of property taxes has also been applied when there is an involuntary seizure of property (as opposed to a voluntary purchase and sale), with allocation of items to periods before or after the date of seizure. n204

The period covered by a specific real estate tax levy varies with state law. n205 For example, a state's real property taxes may be assessed on a calendar-year basis; another state's, on the other hand, may cover the period from July 1 to June 30.

When property is purchased subject to delinquent real property taxes, the taxes may not be deducted by the purchaser and are, therefore, treated by the purchaser as an additional cost of the property to the purchaser that must be capitalized. n206

[2] On Non-Sale Transfers

The treatment of real estate tax allocations described above is limited to sales transactions. n207 Thus, the apportionment of real estate taxes in transactions such as contributions of real estate to a corporation or partnership and distribution of real estate in dissolution of such entities may not be covered by the rules of *IRC Section 164(d)*. In such situations, the availability and amount of any deduction will depend upon the method of accounting adopted by the taxpayer and other Code provisions governing allocations of tax items.

In transactions other than sales, it must be determined if the transferor and transferee are cash-basis taxpayers and are related entities within the meaning of the Code. If such a relationship exists, the taxpayer who holds the property when the real estate taxes accrue (i.e., the date on which the taxes become a lien against the property) will be entitled to the deduction in full. The Service, however, may attempt to cause an apportionment of the real estate taxes in order to reflect more clearly the income of the related parties. n208

In a non-sale transaction, if both the transferor and transferee have elected to accrue real estate taxes, each party will be entitled to a deduction for real estate taxes under the general rule. If, however, the transferor is a cash-basis taxpayer and the lien date for the taxes relating to the year of transfer does not fall within his period of ownership, the transferee will be entitled to the entire real estate tax deduction for the year of transfer. n209

CHAPTER 3 Development of Real Estate

1-3 Federal Taxes Affecting Real Estate Scope

Scope

The tax treatments of organizational expenditures, start-up expenditures, and construction period interest and taxes and other capitalizable costs incurred in connection with a real estate project are governed by *Internal Revenue Code Sections 248 and 709, 195 and 263A*, respectively. Every newly formed corporation or partnership incurs organizational expenditures in connection with the formation of the entity. Newly formed business entities or existing business entities incur start-up expenditures when creating or acquiring a new business. All costs incurred during the development stage of a real estate project, including interest, are subject to a comprehensive set of capitalization rules. This chapter reviews the tax treatment of these expenditures.

CHAPTER 3 Development of Real Estate

1-3 Federal Taxes Affecting Real Estate § 3.01

§ 3.01 Organizational and Start-Up Expenditures

[1] Organizational Expenditures

[a] Definition

Organizational expenditures are defined as the costs incident to the creation of a corporation or a partnership that are chargeable to a capital account and are of a character that, if the corporation or partnership had a limited life, would normally be amortizable over that limited life. n1 Organizational expenditures include fees for legal services incident to the organization of the corporation or partnership, such as fees for drafting the corporate charter, by-laws, minutes of organizational meetings, or the partnership agreement and certificates. These costs also include fees for necessary accounting services and fees paid to the state of incorporation or organization. n2

Only organizational costs of the corporation or partnership are subject to *IRC Section 248* or *IRC Section 709*. Expenses incurred by individual shareholders or partners are not. n3 The following items do not qualify as organizational expenses: n4

- (1) expenditures connected with issuing or selling shares of stock or other securities or partnership interests (syndication and issuance expenses);
- (2) expenses connected with the reorganization of a corporation, unless directly incident to the creation of a corporation (these costs generally must be capitalized and cannot be amortized);
- (3) expenses connected with the admission or removal of partners other than at the time the partnership is first organized (the costs of *admission* may be treated as syndication expenses; the tax treatment of the costs of *removal* of partners may depend on the reason for the removal);
- (4) expenses connected with transferring assets to a corporation or partnership, or expenses of acquiring assets for a partnership (these expenses may be capitalized as part of the cost of acquiring the asset); or
- (5) expenses connected with a contract relating to the operation of a partnership trade or business, even if the contract is between the partnership and one of its members (these expenses may be currently deductible).

[b] Election to Deduct Organizational Expenditures

Corporations and partnerships (including LLCs treated as partnerships for tax purposes) may elect to deduct up to \$5,000 of organizational expenditures in the taxable year in which the trade or business begins. However, the \$5,000 amount is reduced (but not below zero) by the amount by which the cumulative cost of organizational expenditures exceeds \$50,000. n5

If the election is made, organizational expenditures that are not deductible in the year in which the trade or business begins are amortized over a 15-year period beginning with the month in which the corporation or partnership begins an active trade or business. n6 If a partnership making the election is liquidated before the end of the 15-year amortization period, any deferred expenses attributable to the partnership that were not allowed as a deduction may be deducted as a loss. n7

For organizational expenditures incurred before October 23, 2004, a corporation or partnership could elect to amortize those expenditures over a period of not less than 60 months, beginning with the month in which the entity began an active trade or business. n8

For both the current election to deduct and the prior election to amortize, a determination of when business begins must be made for the commencement of amortization. n8.1 A corporation or partnership that does not make an election under Treas Reg §§ 1.248 must capitalize its organizational costs. The costs will therefore provide no tax benefit until the entity is dissolved. n8.2

[c] Syndication and Issuance Expenses

Expenditures connected with issuing or selling shares of stock or partnership interests and related costs such as commissions, professional fees, and printing costs must be capitalized and do not qualify as organization fees or start-up expenditures. n9 The restrictions in deducting syndication expenses cannot be avoided by paying those expenses indirectly, rather than directly. The courts have upheld the Service's position that a management fee paid to a general partner to reimburse him for organization and syndication costs paid on behalf of the partnership should not have been claimed as a deduction. n10 It might be logical to expect that the nondeductible partnership syndication costs are deductible by the partnership in the final year of the partnership. However, there is no authority for this position, and, indeed, the regulations and a ruling by the Service provide to the contrary. n11 Although the capitalized syndication expenses cannot be deducted, if there is a winding up and complete liquidation of the partnership prior to the end of the amortization period, the unamortized amount of organizational expenses can be deducted by the partnership in its final taxable year as a loss, to the extent provided under *IRC Section 165*. n11.1 However, since these costs are included in the partner's basis, the partner should receive a tax benefit (a capital loss) upon liquidation of the partnership. n12

[d] How to Elect to Deduct Organizational Expenses

The election to expense and amortize organizational expenditures must be made for a year by the due date of the return for that year, including extensions. The amortization period elected must be adhered to in computing the taxable income of the corporation for the year of election and for all later tax years. n12.1

No special election or statement must be filed in order to "elect" to deduct or amortize organizational expenditures under *IRC Section 248*. A corporation is deemed to have made an election to do so for the taxable year in which the corporation begins business. A corporation may choose to forgo the deemed election by clearly electing to capitalize its organizational expenditures on a timely filed federal income tax return (including extensions) for the taxable year in which the corporation begins business. The election either to amortize organizational expenditures or to capitalize them is irrevocable and applies to all organizational expenditures of the corporation. n13

Similarly, no special election or statement must be filed by a partnership in order to "elect" to deduct or amortize organizational expenditures under *IRC Section 709(b)*. A partnership is deemed to have made an election under *IRC Section 709(b)* to amortize organizational expenses for the taxable year in which it begins business. A partnership may choose to forgo the deemed election by clearly electing to capitalize its organizational expenses on a timely filed federal income tax return (including extensions) for the taxable year in which the partnership begins business. The election either to amortize or capitalize organizational expenses is irrevocable and applies to all organizational expenses of the partnership. n14

NOTE:

A change in the characterization of an item as an organizational expenditure is a change in method of accounting if the corporation or partnership treated the item consistently for two or more taxable years. A change in the determination of the taxable year in which the corporation or partnership begins business also is treated as a change in method of accounting if the entity amortized organizational expenditures for two or more taxable years. As a change in method of accounting, IRS permission must be obtained in order to make the change, and various statutory adjustments may be required. n15-18

Planning Note (1):

A corporation or partnership may be in a position of having to file a tax return for its first year before all organizational expenses have been identified or calculated. This can occur, for example, when invoices for organizational expenses are not received or paid before the return is due. The known, but unpaid, expenses may be included in the initial election. Later identified organizational expenses may be included on an amended return or statement for the entity's first tax year, or they may be added to the amortization computation for the next tax year. n19

Planning Note (2):

A C corporation should generally elect to deduct organizational costs to the extent possible, and amortize the remainder over 15 years. Doing so will reduce taxable income to the maximum extent during the corporation's early years, and any unused deductions can be carried forward as a net operating loss and reduce taxable income in future years. n20 Partnerships and S corporations should also make the election, because if it is not made, passed-through losses will not be deductible until the entity terminates. Even if the basis of the partners or shareholders is insufficient to deduct the passed-through deductions in the early years, it is likely there will be sufficient basis to take deductions during the 15-year amortization period. n21

[2] Start-Up Expenditures

[a] Definition

Start-up expenditures (also referred to as pre-opening expenditures) are amounts paid or incurred in connection with (1) investigating the creation or acquisition of an active trade or business, (2) creating an active trade or business, or (3) any activity engaged in for profit and for the production of income before the day on which the active trade or business begins, in anticipation of the activity becoming an active trade or business. n22

Note

The third item in the above list does not prevent the deduction of ordinary and necessary expenses incurred in a profit-making activity under *IRC Section 212*, regardless of whether that activity is later transformed into a trade or business. Provided that a taxpayer is in fact engaged in a profit-making

activity, *IRC Section 195* does not require expenses incurred in that activity to be treated as start-up expenditures. n22.1

An expenditure qualifies as a start-up expenditure only if it would have been currently deductible had it been paid or incurred in connection with the operation of an existing active trade or business. n23

Start-up expenditures include costs incurred for such items as advertising, employee training, lining up distributors, suppliers, or potential customers, professional services in setting up books and records, feasibility or marketing studies, and other noncapital expenses incurred before actual business operations. Management and certain advisory fees incurred while in the process of investigating or acquiring a trade or business are also considered start-up expenditures. n24 Expenses incurred with respect to rental real estate before the rental activity becomes an active trade or business are also start-up expenditures. This includes costs of renovating rental property to prepare it for rental. n24.1 Thus, virtually every newly formed entity has some type of start-up expenditures.

Amounts paid for the following items are specifically excluded from the definition of start-up expenditures: n25

- (1) interest on indebtedness; n26
- (2) taxes; n27 and
- (3) research and experimental expenditures. n28

Planning Note:

Start-up expenditures include only those expenditures that would be deductible by an existing business. n29 Capital expenditures n30 and items that would have to be capitalized under the uniform capitalization rules n31 do not qualify as start-up expenditures. A start-up "type" of expenditure that is incurred *after* the active trade or business begins is, by definition, currently deductible, n32 and is not a start-up expenditure. n33 Only expenditures that relate to a trade or business can qualify as start-up expenditures under *IRC Section 195*. In contrast, expenditures can qualify as organizational expenses under *IRC Section 248* once an entity has begun the business activities for which it was formed, whether or not they relate to an "active" trade or business. n34

The IRS has issued a revenue ruling that provides guidance on the types of expenditures that will qualify as investigatory costs eligible as start-up expenditures under *IRC Section 195*. The ruling states that expenditures incurred in a general search for, or an investigation of, an active trade or business--i.e., expenditures made in order to determine whether to enter a new business and, if so, which new business to enter--are investigatory costs that qualify as start-up expenditures under *IRC Section 195*, unless they are costs to acquire capital assets that are used in the search or investigation. In contrast, costs incurred in the attempt to acquire a specific business are capital in nature and, thus, are not start-up expenditures. The nature of any particular cost must be analyzed, based on all facts and circumstances of the transaction, to determine whether it is an investigatory cost incurred to facilitate the "whether" and "which" decisions, or an acquisition cost incurred to facilitate consummation of the acquisition. The label that the parties use to describe a cost and the point in time at which the cost is incurred do not necessarily determine the nature of that cost. n34.1

NOTE:

A change in the characterization of an item as a start-up expenditure is a change in method of accounting to which *IRC Sections 446* and *481(a)* apply if the taxpayer treated the item consistently for two or more taxable years. n34.2 For example, assume that Corporation X, a calendar year taxpayer, incurs \$41,000 of start-up expenditures that relate to an active trade or business that begins on July 1 of Year 1. It is

deemed to have elected to deduct start-up expenditures under *IRC Section 195(b)* in Year 1. Therefore, Corporation X deducts \$5,000 and the portion of the remaining \$36,000 that is amortizable in July through December of Year 1 ($\$36,000/180 \times 6 = \$1,200$) in Year 1 Corporation X determines in Year 3 that it incurred \$10,000 for an additional start-up expenditure erroneously deducted in Year 1 under *IRC Section 162* as a business expense. Corporation X is deemed to have elected to amortize start-up expenditures under *IRC Section 195(b)* in Year 1, including the additional \$10,000 of start-up expenditures. Corporation X is using an impermissible method of accounting for the additional \$10,000 of start-up expenditures and must change its method under regulations and general administrative procedures in effect in Year 3. n34.3

[b] Election to Deduct Start-Up Expenditures

Taxpayers may elect to deduct up to \$5,000 of start-up expenditures in the taxable year in which the trade or business begins. n35 However, the \$5,000 amount is reduced (but not below zero) by the amount by which the cumulative cost of start-up expenditures exceeds \$50,000. n35.1 Start-up expenditures that are not deductible in the year in which the trade or business begins are amortized over a 15-year period beginning with the month in which the active trade or business begins. n35.2 For start-up expenditures incurred before October 23, 2004, taxpayers may elect to amortize those expenditures over a period of not less than 60 months, beginning with the month in which the active trade or business begins. n35.3

If the election is not made, no current deduction is allowed for the start-up expenditures. n36 Instead, they must be capitalized and recovered, if ever, on the disposition or cessation of the business. n37

[c] How to Elect to Deduct Start-Up Expenditures

No special election or statement must be filed in order to "elect" to deduct or amortize start-up expenditures. A taxpayer is deemed to make an election to deduct them for the taxable year in which the active trade or business to which the expenditures relates begins. n38 A taxpayer may choose to forgo the deemed election by clearly electing to capitalize its start-up expenditures on a timely filed federal income tax return (including extensions) for the taxable year in which the active trade or business begins. The election to capitalize start-up expenditures is made in accordance with the forms and instructions used by the taxpayer to file its Federal income tax return. An election either to deduct start-up expenditures under *IRC Section 195(b)* or to capitalize them is irrevocable and applies to all start-up expenditures of the taxpayer that are related to the active trade or business. n39-44

[3] When Active Trade or Business Begins

[a] The Determination Date

The date when an active trade or business begins is important in determining whether organizational or start-up expenditures are currently deductible, or, if they are not currently deductible, when amortization may begin. n45 For purposes of deducting or amortizing organizational expenditures, ascertaining when business has begun is a question of fact subject to interpretation and challenge. The words "begins business," however, do not have the same meaning as "in existence." Ordinarily, a corporation begins business when it starts the business operations for which it was organized; a corporation comes into existence on the date of its incorporation. Mere organizational activities, such as the obtaining of the corporate charter, are not alone sufficient to show the beginning of business. If the activities of the corporation have advanced to the extent necessary to establish the nature of its business operations, however, it will be deemed to have begun business. For example, the acquisition of operating assets which are necessary to the type of business contemplated may constitute the beginning of business. n46-51

For start-up expenditures, an acquired trade or business is treated as beginning when the taxpayer acquires it. n52 Neither the statute nor the regulations specify when a newly created trade or business begins for purposes of *IRC*

Section 195. However, the legislative history of *IRC Section 195* anticipated that the definition of when a business begins for purposes of that section is to be made with reference to *IRC Sections 195* and *248*,ⁿ⁵³ with the focus being on whether the entity is conducting the business operations for which it was organized.ⁿ⁵⁴ In analyzing whether business has begun for purposes of *IRC Section 195*, however, the IRS applies the "going concern" standard used under *IRC Section 162*.ⁿ⁵⁵ The IRS rationalizes using this stricter standard on differences in statutory language. *IRC Section 195* refers to an "active trade or business." *IRC Sections 248* and *709*, in contrast, refer merely to the date the entity "begins business."ⁿ⁵⁶

The Service generally takes the position that mere commencement of construction is not sufficient to constitute the commencement of an active trade or business, and that until the business has begun to function as a going concern and perform the activities for which it was organized, it is still in the start-up phase. The courts, in several pre-*IRC Section 195* cases, have generally upheld the Service's position that commencement of construction, per se, is not the commencement of a trade or business.ⁿ⁵⁷ In one case, however, a district court permitted the deduction of normal operating expenses incurred before, but in the same taxable year as, completion of construction and commencement of use of the real estate.ⁿ⁵⁸ In a typical real estate venture, start-up expenses are usually incurred over more than one taxable year, and therefore this case does not appear to provide strong support for most start-up situations. The Court of Claims, has in *dicta* provided a significant pro-taxpayer analysis of this issue in a pre-*IRC Section 195* case. The court indicated that an entity formed for the specific purpose of constructing a real estate project was engaged in endeavors serving business and profit motives during the construction period, and the trade or business requirement was no barrier to the deductibility of normal operating expenses.ⁿ⁵⁹ The Service has stated in a private letter ruling that this case was wrongly decided, and in any event was legislatively overruled by Public Law No 98-369, the Deficit Reduction Act of 1984, and should not be followed.ⁿ⁶⁰

A real estate investment and rental business cannot begin until a taxpayer actually buys, remodels or rents property. Expenses incurred before that time, such as costs of looking for property, attending workshops on real estate investment, or buying a computer or software cannot be deducted under *IRC Section 162* as trade or business expenses. At best, they might be treated as start-up expenditures.^{n60.1}

[b] Expansion of Existing Business

An entity that has established its trade or business in the real estate industry through prior construction activities might appear relatively safe from a challenge by the Service that start-up types of expenditures incurred in expanding the business or starting a new project cannot be currently deducted.ⁿ⁶¹ Because the entity is already involved in an active trade or business, the expenses would be incurred in connection with the expansion of an existing trade or business. However, the Service could take the position that a new project must be segregated from the taxpayer's existing trade or business, and that a new "beginning of trade or business" determination must be made with respect to the new project, or that the costs relating to the new project provided significant long-term benefits and must be capitalized for that reason. Under this analysis, the Service might challenge deductions claimed by established businesses that construct a project that is significantly different from those previously constructed, or a project that is of such magnitude that it could be construed to be a separate trade or business.ⁿ⁶² Under pre-*Section 195* law, taxpayers appeared to have a great deal of latitude in this area, and the definition of an existing business was broadly defined,ⁿ⁶³ although the developments in the law relating to when expense capitalization is required may eventually restrict this definition.

[c] Entity Established for a Project

The determination of whether a real estate project is an expansion of an existing active trade or business or constitutes a new trade or business will be affected by whether the project is established within an existing entity or in a new, separate entity. If an entity is formed for the construction of a specific project, whether as a subsidiary of an established corporation engaged in a real estate trade or business, or as a partnership consisting of one or more partners with established real estate business activities, it is likely to come under Service challenge.ⁿ⁶⁴ Since most real estate

developments are formed as separate entities, either a partnership between established developers, or a partnership between an established developer and investors, or as a subsidiary of a corporate developer, careful analysis must be given to the status of start-up expenditures.

Planning Note:

In order to establish the earliest possible "beginning of an active trade or business" date for a new entity established to construct a new project, a taxpayer should take all steps possible to reflect an intent to commence business immediately. Intent can be proved by including in the partnership agreement or corporate charter the construction of the project as a specific purpose of the entity. n65 It would also be prudent from a tax perspective, as well as from an economic perspective, for taxpayers to accelerate the revenue cycle to the earliest possible date, through intensive leasing and marketing efforts, the actual procurement of leases, and the securing of forfeitable deposits. n66

[d] Change in Determination Date is Change in Method of Accounting

A change in the determination of the taxable year in which a taxpayer's active trade or business begins is treated as a change in method of accounting if the taxpayer amortized start-up expenditures for two or more taxable years. n66.1

Example:

Corporation X, a calendar year taxpayer, incurs \$41,000 of start-up expenditures that relate to an active trade or business that begins on July 1 of Year 1. The corporation is deemed to have elected to deduct start-up expenditures under section 195(b) in Year 1. It therefore deducts \$5,000 and the portion of the remaining \$36,000 that is amortizable in July through December of Year 1 ($\$36,000/180 \times 6 = \$1,200$) in Year 1. In Year 2, Corporation X deducts the start-up expenditures allocable to that year ($\$36,000/180 \times 12 = \$2,400$). In Year 3, it is determined that Corporation X actually began business in Year 2. Corporation X is deemed to have elected to deduct start-up expenditures under *IRC § 195(b)* in Year 2. Corporation X impermissibly deducted start-up expenditures in Year 1, and incorrectly determined the amount of start-up expenditures deducted in Year 2. Therefore, Corporation X is using an impermissible method of accounting for the start-up expenditures and must change its method under the regulations and general administrative procedures in effect in Year 2. n66.2

CHAPTER 3 Development of Real Estate

1-3 Federal Taxes Affecting Real Estate § 3.02

§ 3.02 Uniform Capitalization Rules

The uniform capitalization rules set forth in *IRC Section 263A* require the capitalization of certain costs relating to the production of property or the acquisition of property for resale. The uniform capitalization rules apply to all taxpayers and to all types of activities. n67

[1] Property to Which Uniform Capitalization Rules Apply

IRC Section 263A applies to real or tangible personal property produced by the taxpayer and real and certain tangible personal property acquired by the taxpayer for resale. Thus, it applies to real property produced by a taxpayer for use in its own trade or business or for sale to its customers. This chapter will generally discuss only the real property aspects of *IRC Section 263A*. It also applies to property produced for a taxpayer under a contract with another party. n68 The statute contains certain exceptions for the farming industry, but nevertheless applies to certain types of farming businesses and to certain products produced in farming businesses. n69

The uniform capitalization rules apply to all tangible property that the taxpayer produces or constructs, whether the property is used by the taxpayer or is held for sale to customers. n70 This includes property--such as real estate--that is held for sale in the ordinary course of business, but is not considered to be inventory. n71

The uniform capitalization rules also apply to real and personal (tangible and intangible) property that is acquired for resale (as distinguished from property produced or constructed by the taxpayer). n72

The uniform capitalization rules do not apply to property produced by a taxpayer for use by the taxpayer in other than a trade or business or an activity conducted for profit, such as personal use property. n73 They also do not apply to property that is produced by a taxpayer under a long-term contract. n74 The capitalization rules relating to long-term contracts are contained in *IRC Section 460*.

For purposes of the uniform capitalization rules, the word "produce" includes construct, build, install, manufacture, develop or improve. n75 Taxpayers are treated as producing any property produced for them under contract, except that only costs paid or incurred by the taxpayer (whether under such a contract or not) must be taken into account in applying the uniform capitalization rules. n76

1-3 Federal Taxes Affecting Real Estate § 3.02

Courts have broadly interpreted the word "produce" to encompass nearly all activities that are steps in the development of property, even ancillary activities that occur before any physical changes are made to the land and costs, such as real estate taxes, relating to property intended to be developed, even if no development activity ever takes place. n77 Therefore, real estate developers must capitalize under *IRC Section 263A* the costs of meeting with government officials, obtaining building permits and zoning variances, negotiating permit fees, performing engineering and feasibility studies and drafting architectural plans, as well as property taxes. The costs must be capitalized even for amounts that are paid to third-party independent contractors, who actually perform the services. The rationale for requiring capitalization is that all of the above activities fall within the definition of "produce" because they represent the first steps in the development of the property. n78

The IRS takes the position that impact fees incurred by a taxpayer in connection with the construction of a new building are capitalized costs allocable to the building under *IRC Section 263* and *IRC Section 263A*, and are subject to the uniform capitalization rules. Its rationale is that the fees result in permanent improvement or betterment to the taxpayer's development project n79 Impact fees are one-time charges that are imposed by state or local governments against new development or expansion of existing developments to finance specific offsite capital improvements for general public use that are necessitated by the new or expanded development. In general, impact fees are refundable (in full or in part) if the new or expanded development ultimately is not constructed as planned. n79.1

Note:

Any change in a taxpayer's treatment of impact fees incurred in connection with the new construction or expansion of a building to conform to *Revenue Ruling 2002-9* is a change in accounting method to which *IRC Sections 446* and *481* apply. A taxpayer wanting to change the method of accounting for impact fees to conform with *Revenue Ruling 2002-9* must follow the automatic change in method of accounting provisions in *Revenue Procedure 2002-9* [see *2002-1 CB 327* (or its successor), as modified and clarified by *Announcement 2002-17 (2002-1 CB 562)*], subject to two modifications:

- If a taxpayer changes its method of accounting for impact fees to conform to *Revenue Ruling 2002-9* for the first tax year ending on or after December 31, 2001, the scope limits in Section 4.02 of *Rev Proc 2002-9* do not apply; and

- *Rev Proc 2002-9*, Section 6.02(4)(a) is modified to require that a Form 3115 filed under *Revenue Ruling 2002-9* include the statement "Automatic Change Filed Under *Rev. Rul. 2002-9*". The statement should be legibly printed or typed on the appropriate line on the Form 3115.

If a taxpayer changes its method of accounting for impact fees to conform with *Revenue Ruling 2002-9*, the IRS will not raise the treatment of impact fees as an issue in any tax year before the year of change. If the change in method of accounting is made for the taxpayer's first tax year ending on or after December 31, 2001, and the treatment of impact fees has already been raised as an issue in a tax year before the taxpayer's first tax year ending on or after December 31, 2001, the IRS will not further pursue the treatment of impact fees. The IRS added that if the building is subject to depreciation, the taxpayer must depreciate the impact fees as residential rental property or nonresidential real property, as appropriate, beginning when the newly constructed building or expansion of the building is placed in service by the taxpayer. n79.2

[2] Costs that Must Be Capitalized

The statute itself provides no detail as to what costs are to be capitalized. It requires only that all direct costs, plus a "proper share" of indirect costs (including taxes) allocable to the property, be capitalized. n80 However, any cost that could not otherwise be taken into account in computing taxable income for any tax year (for example, the portion of a business meal deduction limited by *IRC Section 274(n)*) cannot be treated as an allocable cost under the uniform

capitalization rules. n81

Regulations provide that for producers, direct costs include materials that are consumed or become a part of property and labor that can be associated with the property. n82 For resellers, direct costs include acquisition costs of property acquired for resale. n83 Indirect costs include costs that directly benefit the asset or that are incurred because of the production or resale activity. n84 Taxpayers with indirect costs allocable to more than one activity must make a reasonable allocation of those costs between production, resale and other activities. n85

Regulations detail the following as examples of indirect costs that must be capitalized, to the extent they are properly allocable to property produced by the taxpayer or acquired for resale: n86

- (1) indirect labor costs;
- (2) officers' compensation
- (3) pension and related costs;
- (4) employee benefits;
- (5) indirect material costs;
- (6) purchasing, handling and storage costs;
- (7) depreciation, amortization and cost recovery allowances on equipment and facilities;
- (8) depletion;
- (9) rent;
- (10) taxes attributable to labor, materials, supplies, equipment, land or facilities used in production or resale activities;
- (11) insurance;
- (12) utilities;
- (13) repairs and maintenance;
- (14) engineering and design costs;
- (15) spoilage, including costs of rework labor, scrap and spoilage;
- (16) tools and equipment;
- (17) quality control costs;
- (18) bidding costs incurred in soliciting contracts that are ultimately awarded to the taxpayer, including contracts pertaining to property acquired for resale; (**Note:** bidding costs on contracts *not* awarded to the taxpayer are deductible in the year the contract is awarded to another party, the year the taxpayer is notified in writing that no contract will be awarded, or the year the taxpayer abandons its bid or proposal.

A taxpayer who is awarded only part of a bid may deduct costs related to the unsuccessful bid if the product for the unsuccessful bid is different from that of the successful bid. However, in the case of a multi-unit contract involving similar products, all bidding costs incurred on all the contracts must be capitalized and allocated to the subject matter of any contract that is awarded to the taxpayer.)

(19) licensing and franchise costs;

(20) interest; n87 and

(21) capitalizable service costs attributable to general and administrative support or service departments, such as accounting, data processing, legal and personal security departments. n88

[3] Costs Not Subject to Uniform Capitalization Rules

The following costs are not subject to the uniform capitalization rules:

(1) research and experimental expenses; n89

(2) development and other costs of oil and gas wells and other mineral property; n90

(3) costs incurred in producing property under long-term contracts; n91

(4) costs incurred in connection with the production of timber and certain ornamental trees; n92

(5) costs incurred by certain cash-basis taxpayers in a farming business to produce animals, or to produce any plant with a preproductive period of two years or less; n93 and

(6) qualified creative expenses incurred by freelance authors, photographers and writers. n94

Regulations also list a variety of additional indirect costs that are not required to be capitalized under the uniform capitalization rules: n95

(1) selling (including marketing and advertising) and distribution costs;

(2) otherwise depreciable costs for which an *IRC Section 179* election is made;

(3) losses deductible under *IRC Section 165*;

(4) cost recovery allowances on temporarily idle equipment;

(5) state, local and foreign income taxes and franchise taxes that are assessed on the basis of income;

(6) certain strike expenses;

(7) warranty and product liability costs;

(8) on-site storage or warehousing costs incurred at an on-site storage facility with respect to property produced or property acquired for resale;

(9) unsuccessful bidding expenses; and

(10) deductible service costs and mixed service costs. n96

[4] Application of Uniform Capitalization Rules to Farming Businesses

As in many other areas of the Code, special capitalization rules apply to farming businesses. The uniform capitalization rules do not apply to the production of animals or to the production of plants with a preproductive period of two years or less. n97 Nursery growers also qualify for this farming exception. n98 This exception does not apply, however, to any farming corporation, partnership or tax shelter that is required to use an accrual method of accounting under *IRC Section 447* or *448(a)(3)*. n99 The uniform capitalization rules also do not apply to replanting costs for plants that are destroyed as a result of frost, disease or other casualty. n100

Certain taxpayers who would otherwise be subject to uniform capitalization rules may elect not to have those rules apply to any plant produced in their farming business. n101 The election may be made only for the first taxable year during which the taxpayer engages in a farming business, and may be revoked only with the consent of the Secretary. n102

Taxpayers who must use an accrual method of accounting under *IRC Section 447* or *448(a)(3)* cannot make the election. n103 The election cannot apply to any item attributable to a citrus or almond grove which is incurred before the close of the fourth taxable year beginning with the year the trees were planted. n104

A plant for which otherwise capitalizable amounts are expensed by virtue of this election is treated as *IRC Section 1245* property, and the amount deductible by virtue of the election is treated as an amount that is subject to the recapture rules when the property is disposed of. n105 If the taxpayer or a related person makes the election, the alternative depreciation system n106 must be used with respect to all property of the taxpayer that is used predominantly in the farming business and is placed in service in any tax year during which the election is in effect. n107

[5] Interest Capitalization

[a] Property to Which Interest Capitalization Rules Apply

Interest is a cost that is subject to the uniform capitalization rules. In general, capitalization is required only for interest that is paid or incurred during the production period of certain designated property. n108 Designated property includes all real property produced by the taxpayer. n109

Designated property also includes tangible personal property that meets any of the following criteria: n110

- (1) property with a class life of at least 20 years that is not inventory in the hands of the taxpayer or a related person;
- (2) property with an estimated production period of over two years; n111 or
- (3) property with an estimated production period exceeding one year and an estimated cost of production exceeding \$1 million.

The various thresholds in items (1) through (3) above are determined for each "unit of property." n112

Designated property does not include the following: n113

- (1) timber or Christmas trees; or

(2) personal use property--property produced by the taxpayer for use by the taxpayer, other than in a trade or business or an activity conducted for profit.

A *de minimis* rule also applies. Any property with a production period of not more than 90 days and a total cost of production that does not exceed \$1 million, divided by the number of days in the production period, will not constitute designated property. n114

Example:

T owns a \$200,000 rental property and intends to take it out of service to make \$15,000 worth of repairs involving a kitchen remodel and plumbing improvements. The repair project is expected to take 60 days. Under the *de minimis* rule, if the project is completed within that time, the property improvements do not constitute designated property and the interest capitalization rules will not apply during the production period. This is because \$15,000, the cost of the project, is less than \$16,666 [$\$1 \text{ million} / 60 \text{ days}$ of the project]. If the project takes 70 days to complete, the improvements do qualify as designated property and the interest capitalization rules do apply during the production period. This is because \$15,000 is greater than \$14,285 [$\$1 \text{ million} / 70 \text{ days}$ of the project]. n114.1

[b] Real Property Defined

The uniform capitalization rules require capitalization of interest paid or incurred during the production period of real property produced by a taxpayer. n115 For this purpose, "real property" is broadly defined to include land, buildings and inherently permanent structures and unsevered natural products of land. Any interest in this type of property is included, whether it is a fee ownership, co-ownership, leasehold, option, or similar interest. Real property includes the structural components of both buildings and inherently permanent structures, such as walls, partitions, doors, wiring, plumbing, central air conditioning and heating systems, pipes and ducts, elevators and escalators, and other similar items. Tenant improvements to a building that are inherently permanent are also real property. Property that is produced for sale and is not real property in the hands of the taxpayer or a related person, but may be incorporated into real property by an unrelated buyer, is not treated as real property by the producing taxpayer (e.g., bricks, nails, paint and windowpanes), n116 although that property will nevertheless be subject to the uniform capitalization rules on the basis that it is tangible personal property produced by the taxpayer.

Inherently permanent structures include property that is affixed (whether by weight alone or other means) to real property and that will ordinarily remain affixed for an indefinite period of time. This includes items such as swimming pools, roads, bridges, tunnels, paved parking areas, and other pavements, special foundations, wharves and docks, fences, certain advertising displays, outdoor lighting facilities, railroad tracks and signals, telephone poles, power generation and transmission facilities, permanently installed telecommunications cables, broadcasting towers, oil and gas pipelines, derricks and storage equipment, grain storage bins and silos. n117 Property may be an inherently permanent structure even though it is not classified as a building for purposes of the former investment tax credit. n118

Machinery is not ordinarily an inherently permanent structure, and it is not real property, unless a building or inherently permanent structure includes property in the nature of machinery as a structural component. n119 It should be noted in this regard that a structure may be an inherently permanent structure and not in the nature of machinery, even if the structure is necessary to operate or use machinery, or if it supports or is otherwise associated with machinery. n120

Unsevered natural products include growing crops and plants, mines, wells and other natural deposits. Growing crops and plants, however, are real property only if their preproductive period exceeds two years. n121

[c] Avoided Cost Method

The amount of interest required to be capitalized must be determined using the avoided cost method. n122 Interest is an avoided cost if the taxpayer theoretically would have avoided the interest charge if it had used funds spent on production costs to, instead, pay down debt. Under the avoided cost method, interest on any indebtedness directly attributable to production expenditures for designated property (traced debt) is capitalized first. This requires the traced debt amount to be determined. n123 If production expenditures for designated property exceed the amount of traced debt, interest on any other debt must be capitalized to the extent the interest could have been reduced if production expenditures had not been incurred. n124 This is referred to as the excess expenditure amount. n125

The application of the avoided cost method does not depend on whether the taxpayer actually would have used the amounts expended for production to repay or reduce debt. Rather, the avoided cost method assumes that the debt would have been paid or reduced without regard to the taxpayer's subjective intent or any other restrictions (such as legal, regulatory or contractual restrictions) against repayment or use of the debt proceeds. n126

Planning Note:

In adopting the avoided cost method in final regulations, the Service rejected suggestions that taxpayers should simply be able to use "Statement of Financial Accounting Standards No 34" (SFAS 34) to capitalize interest. SFAS 34 establishes standards for capitalizing interest for financial statement purposes. Thus, taxpayers will have to keep separate records in this area for accounting and tax purposes.

The traced debt and excess expenditure amounts generally must be determined for each tax year or shorter production period for each unit of designated property. n127 A taxpayer must adopt a computation period and measurement dates (at least quarterly) to determine the amount of traced debt and excess expenditure amounts. n128 A taxpayer may, however, make an election not to trace debt to specific units of designated property. n129

[d] Traced Debt Amount

The interest attributable to the traced debt amount with respect to a unit of designated property must be capitalized. The interest on any debt traced to the accumulated production expenditures for a unit of designated property includes the interest on the traced debt for the entire measurement period for any measurement period in which production occurs. n130 The traced debt amount is determined by reference to outstanding eligible debt. n131 The eligible debt taken into account for a given unit of designated property is all outstanding debt except debt that the regulations specifically exclude. n132 Traced debt includes debt that is allocated under temporary regulations to accumulated production expenditures with respect to a unit of property. n133 Traced debt also includes unpaid interest that has been capitalized with respect to that unit and that is included in accumulated production expenditures on the measurement date. n134

Example:

Corporation X, a calendar year taxpayer, is engaged in the production of a single unit of real property during the year. X adopts a taxable year computation period and quarterly measurement dates. Production begins on January 14 and ends on June 16. On March 31 and June 30 of the year (the quarterly measurement dates), X has outstanding a \$1 million loan that is allocated to production expenditures with respect to the unit. During the period January 1 through June 30, X incurs \$50,000 of interest related to the loan. The interest must be capitalized as traced debt. n135

[e] Excess Expenditure Amount

If accumulated production expenditures exceed traced debt on a unit of designated property on a measurement date, a taxpayer must, for the computation period that includes the measurement date, capitalize the excess expenditure amount with respect to that unit of property. This rule, however, serves to allocate capitalizable interest away from other properties; it does not increase the amount of capitalizable interest. Accordingly, if the excess expenditure amount for all units of designated property exceeds the total interest required to be capitalized, only a pro-rata amount of that

interest must be capitalized with respect to each unit. n136

For each unit of designated property, the excess expenditure amount for a computation period equals the following: n137

- (1) the average excess expenditure for the unit of designated property for that period; and
- (2) the weighted average interest rate for that period.

In computing the excess expenditure amount, interest from the following sources must be capitalized, and in the following sequence: n138

- (1) interest incurred on nontraced debt; n138.1
- (2) interest incurred on certain borrowings from related persons; and
- (3) in the case of a partnership, guaranteed payments for the use of capital that would be deductible by the partnership but for the interest capitalization rule. n139

The amount of interest required to be capitalized, however, cannot exceed the excess expenditure amount for all units of designated property. n140 Special rules apply when interest is subject to a deferral provision. n141

The average excess expenditures for a unit of designated property for a computation period are computed by:

- (1) determining the amount (if any) by which accumulated production expenditures exceed traced debt each measurement date during the computation period; and
- (2) dividing the sum of those amounts by the number of measurement dates during the computation period. n142

The weighted average interest rate for a computation period is determined by dividing interest incurred on nontraced debt during the period by average nontraced debt for the period. n143

[f] Eligible Debt

The amount of interest required to be capitalized is made by reference to outstanding eligible debt. n144 Eligible debt generally includes all debt of the taxpayer on which interest is deductible in computing taxable income. n145 Accordingly, eligible debt does not include any of the following:

- (1) accounts payable and other non-interest bearing debt, unless it is traced debt;
- (2) debt bearing interest that is disallowed because it is (a) on an obligation not in registered form; n146 (b) incurred to purchase or carry a single premium life insurance, endowment or annuity contract; n147 (c) incurred to purchase life insurance or any endowment or annuity contract owned by the taxpayer in excess of \$50,000 on an individual; n148 (d) incurred to purchase or carry obligations on which interest is tax-exempt; n149 (e) incurred by a corporation to acquire stock or assets of another corporation; n150 and (f) disallowed under special rules for insurance companies; n151
- (3) debt borrowed from persons related to the taxpayer that bears a rate of interest lower than the applicable federal rate in effect on the date of issuance; n152

- (4) debt bearing personal or qualified residence interest; n153
- (5) certain debt incurred by tax-exempt entities;
- (6) reserves, deferred tax liabilities, and similar items that are not treated as debt for federal tax purposes; and
- (7) Federal, state, and local income tax liabilities, deferred tax liabilities, n154 and hypothetical tax liabilities under the look-back method n155 or similar method.

[g] Election Not to Trace Debt

A taxpayer may elect not to trace debt. n156 If the election is made, then the average excess expenditures and weighted average interest rate n157 are determined by treating all eligible debt as nontraced debt. For this purpose, accounts payable and other accrued non-interest bearing items may be included in eligible debt, provided that it would otherwise be treated as traced debt but for the election. n158

An election not to trace debt applies to all designated property of the taxpayer. The making or revocation of the election is considered a change in method of accounting, requiring the consent of the Commissioner. n159

[h] Unit of Property Defined

A unit of real property for purposes of the interest capitalization rules includes all functionally interdependent components of the property. n160 Thus, a unit of real property includes any components of the real property owned by the taxpayer or a related person that are functionally interdependent. It also includes an allocable share of any common feature owned by the taxpayer or a related person that is real property, even though the common feature does not meet the functional interdependence test. n161 The portion of land included in a unit of real property includes land on which real property (including a common feature) included in the unit is situated, land subject to setback restrictions with respect to the property, and any other contiguous portion of the tract of land, other than the land that the taxpayer holds for a purpose unrelated to the unit being produced. n162

Planning Note:

When the production period begins with respect to any functionally interdependent component or any common feature of the unit of real property, the production period generally is treated as having begun for the entire unit of real property. n163

Two special common feature rules apply. The first gives taxpayers an option with respect to land attributable to benefitted property. Land costs of benefitted property may be treated as not included in the accumulated production expenditures for the unit until a direct production activity begins on the benefitted property. n164 Thus, if no direct production activities have been undertaken on planned houses, such as clearing and grading activities on the land underlying the houses, the cost of that land may be treated as not included in the accumulated production expenditures for the unit. n164.1

The second is a suspension period rule that applies when clearing and grading have begun. If, after clearing and grading has been undertaken with respect to the land attributable to the benefitted property, there is no direct production activity taken with respect to that property for a period of at least 120 consecutive days, then the accumulated production expenditures attributable to that property are treated as not included in the accumulated production expenditures of the unit from the first measurement period after the beginning of the 120-day period until the measurement period in which

direct production activity resumes with respect to that property. n165

When benefitted property is sold or placed in service prior to the completion of a common feature allocable to a unit, the costs of the benefitted property and allocable common features no longer attract interest capitalization. n166

Planning Note:

Revenue Procedure 92-29 n167 allows a developer to include in the basis of properties sold their allocable share of the estimated cost of common improvements without regard to whether economic performance with respect to the costs has occurred despite the fact that the Code would otherwise generally require economic performance before costs are taken into account for tax purposes. n168 At the end of the tax year, however, the total amount of common improvement costs included in the basis of the properties cannot exceed the amount of common improvement costs that have been incurred under *IRC Section 461(h)* (the "alternative cost limitation"). Final regulations clarify that *Revenue Procedure 92-29* does not affect the determination of accumulated production expenditures of unsold units even if the costs of common improvements for those unsold units have been used to determine the alternative cost limitation for purposes of including common improvement costs in the basis of sold units. n169

[i] Accumulated Production Expenditures Defined

Accumulated production expenditures include the cumulative amount of direct and indirect costs n170 that must be capitalized with respect to a unit of property. Included in these expenditures are interest capitalized in prior computation periods and the adjusted bases of any assets used to produce the unit of property during the period of their use. Accumulated production expenditures may also include the basis of any property received by the taxpayer in a non-taxable transaction. n171

In general, costs are first taken into account in computing accumulated adjusted expenditures at the time they would otherwise be taken into account under the taxpayer's method of accounting. n172 Costs incurred and capitalized with respect to a unit of property before the beginning of the production period are taken into account as accumulated production expenditures beginning on the date on which the production period of the property begins. n173 Costs of raw materials are included in accumulated production expenditures when they are incurred and dedicated to production of a unit of property. n174 Special rules determine when costs are taken into account when a unit of property produced under a contract is designated property with respect to a customer or contractor. n175

Special rules apply for determining the accumulated production expenditures for an improvement to existing real property. n176 First, accumulated production expenditures for an improvement include all direct and indirect costs required to be capitalized with respect to the improvement, plus an allocable portion of the cost of associated land. Thus, land costs are included in the accumulated production expenditures for property during its production period, even if they are incurred before the production period. n177 In addition, the adjusted bases of an existing structure or common features that either are not already placed in service or must be taken out of service in order to complete the improvement and directly benefit or are incurred by reason of the improvement are included in the accumulated production expenditures. n178

Second, a *de minimis* rule applies for property taken out of service. n179 Under that rule, the aggregate costs of all property or common features taken out of service to complete an improvement ("associated property costs") are excluded from the accumulated production expenditures for the improvement unit during its production period if, on the date the production period of the unit begins, the taxpayer reasonably expects that on no date during the production period of the unit will the accumulated production expenditures for the unit, determined without regard to associated property costs, exceed 5 percent of the associated property costs. n180

[j] Production Period

A separate production period must be determined for each unit of property. The production period begins on the date that production of the unit of property begins. n181 A production period for a unit of real property generally begins on the first date that any physical production activity is performed with respect to that unit. n182 The production period does not end until all production activities reasonably expected to be undertaken by the taxpayer (or a related party) with respect to the unit are completed. n183

Planning Note:

In adopting final regulations, the Service rejected a suggestion that the production period should end when only *de minimis* customizing activities remain to be performed. The final regulations, however, do contain a rule that may provide relief when there are long periods of delay in the performance of customizing activities. When production activities related to the production of a unit of designated property cease for a period of at least 120 days, taxpayers may retroactively suspend interest capitalization as of the first measurement period following the measurement period in which production activities ceased. n184 Alternatively, if the cessation period spans more than one tax year, and a taxpayer does not want to file an amended return for the prior year, the taxpayer may suspend the capitalization of interest with respect to its units of designated property beginning with the first measurement period of the tax year in which the 120-day period is satisfied. n185

In connection with the shorter 120-day cessation period, several criteria are used for determining whether production activities are considered to have ceased. They are not considered to have ceased if they cease because of delays inherent in the asset production process, such as normal bad weather, scheduled plant shutdowns, delays due to design or construction flaws, obtaining of permits or licenses, or the settlement of groundfill to construct property. n186

[k] Oil and Gas Well Provisions

Special rules apply with respect to the capitalization of interest in developing oil and gas wells. n187 The rules require the inclusion of *IRC Section 614* costs in accumulated production expenditures, establish the beginning and ending of the production period for oil or gas wells, and provide for the allocation of capitalized interest to depreciable or depletable unit components. A special "definite plan" rule allows taxpayers to partition *IRC Section 614* costs among the number of wells to be drilled on the property if they can devise a "definite plan" up-front that identifies the number and location of the wells to be drilled. n188

CHAPTER 3 Development of Real Estate

1-3 Federal Taxes Affecting Real Estate § 3.03

§ 3.03 Voluntary Capitalization of Interest, Taxes, and Other Carrying Charges

Section 3.02, above, discusses the mandatory capitalization rules of *IRC Section 263A*. This section discusses the voluntary election to capitalize interest, taxes, and other carrying charges under *IRC Section 266*. The mandatory capitalization rules of *IRC Section 263A* apply only to property produced by the taxpayer and property acquired for resale; vacant land held for investment is not covered. Additionally, even as to projects subject to capitalization under *Section 263A*, interest expense before the start of construction and certain other costs may not need to be capitalized. n189 Under *IRC Section 266*, taxpayers may elect to capitalize many of the costs not required to be capitalized in those situations in which a current deduction would be less advantageous. Because the rules of the two sections are different, some taxpayers will prefer the treatment of one over the other, and no general rules will apply to all taxpayers.

The *Section 266* election could be beneficial if a taxpayer has more tax deductions than can be used to offset taxable income currently or during a net operating loss carryover period, if a noncorporate taxpayer has only long-term capital gains during the year, or if the taxpayer expects to be in significantly higher tax brackets in future years. In addition, a taxpayer may not have taxable income in the state where a particular real property is located, or the state where the property is located may not allow carryover or carryback of tax losses. In such situations, it may be advantageous to capitalize interest, tax costs, and other carrying charges for state income tax purposes only, if permissible; or for both federal and state purposes, if beneficial. Also, it appears that items that are capitalized to the basis of the property, rather than expensed, will qualify for the low-income housing credit, rehabilitation credit, and the investment tax credit (when still available under the *IRC* transitional rules).

IRC Section 266 establishes two different sets of rules relating to the types of expenses that may be capitalized and the operating rules relating to the election to capitalize. One set of rules applies to unimproved, unproductive property; the other applies to property in the process of construction or development.

[1] Unimproved, Unproductive Property

The expenses subject to capitalization with respect to unimproved and unproductive property are interest on a mortgage incurred to acquire the property, annual property taxes, and any other direct carrying charges, but not including items such as advertising expense, professional fees, and similar investment or operating expenses.

Separate elections are available for each property and for each type of expense with respect to each property. n190 An

election to capitalize annual taxes, mortgage interest and other carrying charges with respect to unimproved and unproductive real property in one year is not binding for any subsequent year. n191 Thus, for a property for which interest expense and property taxes are incurred: in the current year, either or both of them could be expensed or either or both of them could be capitalized, and in the succeeding year either or both of them also could be capitalized or deducted.

The regulations provide that an election under *IRC Section 266* is to be made by attaching a statement to the original tax return for which the election is made, indicating the items that the taxpayer elects to capitalize. n192 A corporation that had not made a valid election under *IRC Section 266* because it had failed to file a statement with the tax return identifying the items being capitalized, attempted to correct the method of accounting by filing amended returns within the time period prescribed by law. The regulations provide that the election must be made on the original return, and the Service has ruled that the taxpayer could not retroactively change an erroneous method of accounting to a permissible method merely by filing amended returns. n193 *Revenue Ruling 90-38* revoked or modified earlier rulings in which the Service permitted taxpayers to correct erroneous accounting methods by filing amended returns within the statute of limitations. In general, a method of accounting is adopted when an item of income or deduction is treated consistently for two years. n194 The two-year rule is waived for certain changes in depreciation or amortization. n194.1 An erroneous method of accounting can be changed, only on a prospective basis, by filing a Form 3115, "Application for Change in Accounting Method," and obtaining the consent of the Commissioner.

[2] Property Under Construction or Development

Property under construction or development includes property that was unimproved, improved, productive, or unproductive before the commencement of the construction or development.

Expenses subject to capitalization under *IRC Section 266* would be those expenses not required to be capitalized under *IRC Section 263A*, such as interest expense incurred before beginning construction, interest on debt to carry the underlying land (if it is determined that expense is not covered by Section 263A), and those other costs not required to be capitalized under Section 263A. The point in time at which property becomes subject to the rules applicable to property under construction or development may have been advanced by the *Reichel* case. n195

A separate election is available for each project under construction and for each type of expense within a project. n196 Thus, interest could be capitalized under *IRC Section 266* on one project, while all other types of expenses of that project and all expenses, including interest, of all other projects could be deducted (subject to the capitalization rules of Section 263A). However, once the election to capitalize is made under Section 266 for a type of expense for a project, the election is binding for that type of expense of that project for all subsequent years until that project is completed. n197 For example, when interest is capitalized under Section 266 on one project in the current year, interest must be capitalized on that project for all subsequent years until completion of construction.

The election to capitalize under Section 266 is first available when improvement of the property begins, or it can be made in any subsequent year during the period of improvement.

The regulations offer little assistance in the definition of what constitutes a project. IRS agents have generally been flexible and practical on this question. However, when a long-term development covering a number of phases is involved, caution should be exercised before making a capitalization election for an item of significant expense. If it were held that the entire development was one project, the binding nature of the capitalization election would eliminate future flexibility. In such a situation, zoning, construction licenses and permits, engineering plans, financial arrangements, and sales plans should be carefully analyzed to determine the relative degree of assurance that each phase could be sustained as a separate project.

[3] Election

When the taxpayer decides to capitalize expenses, it must file a statement with its original tax return indicating the item or items to be capitalized. n198 When the taxpayer is making an election for property under construction or development, care should be taken to specifically identify the project for which the election is applicable. In addition, the taxpayer should take care to include a specific statement in the return—not merely a schedule showing the capitalized expenses. If a specific statement is not made, the Service may hold that a valid election has not been made. Taxpayers may seek an extension of time for making an election to capitalize interest and taxes under *IRC Section 266* by filing a request for a private letter ruling. n199

CHAPTER 3 Development of Real Estate

1-3 Federal Taxes Affecting Real Estate § 3.04

§ 3.04 Deduction Relating to Income Attributable to U.S. Production Activities

[1] In General

Effective for taxable years beginning after December 31, 2004. n200 a deduction is allowed based on a percentage of income from domestic production activities. n201 Extensive regulations provide guidance regarding the deduction. n201.1 The deduction was crafted primarily to benefit U.S. manufacturers who face significant competition from foreign countries that provide subsidies for their manufacturers and exports through their indirect tax systems. Nevertheless, the deduction affects real estate activities significantly. This is because the deduction can be applied as a percentage of gross receipts from the following: n202

- for taxpayers engaged in the active conduct of a construction trade or business, the construction of real property performed in the United States by the taxpayer in the ordinary course of that trade or business; or
- for taxpayers engaged in the active conduct of an engineering or architectural services trade or business, engineering or architectural services performed in the United States by the taxpayer in the ordinary course of that trade or business with respect to the construction of real property in the United States.

NOTE:

A key limitation regarding the deduction as it relates to real estate is that gross receipts from the lease, rental, license, sale, exchange, or other disposition of land are excluded in computing the deduction. n202.1

The discussion following focuses on the deduction only as it pertains to those activities and not to non-real estate aspects of the deduction.

The deduction is phased in over several years and is based on a percentage of the lesser of (1) the qualified production activities income of the taxpayer for the taxable year, n203 or (2) taxable income (determined without regard to this deduction) for the taxable year. n204 In the case of an individual, the deduction is based on a percentage of the lesser of (1) the qualified production activities income of the taxpayer for the taxable year, or (2) adjusted gross income. n205

"Adjusted gross income" for this purpose is determined after taking into account taxable Social Security benefits, the exclusions for interest on U.S. savings bonds used to pay higher education costs and adoption assistance, taking into account deductions for IRA contributions, interest on education loans, and qualified tuition and related expenses, and after application of the passive activity loss and credit limitations. n206 Adjusted gross income is determined without regard to the deduction under *IRC Section 199* based on the taxpayer's qualified production activities. n207

The deduction percentages are as follows: n208

Taxable years beginning in 2005 and 2006	3 percent
Taxable years beginning in 2007, 2008, and 2009	6 percent
Taxable years beginning after 2009	9 percent

However, the deduction for a taxable year is limited to 50 percent of the W-2 wages paid by the taxpayer during the calendar year that ends in that taxable year. n209 Only W-2 wages that are properly allocable to domestic production gross receipts can be taken into account in applying this 50-percent wage limitation. n209.1 (See § 3.04[8], *below*, for a discussion of methods of allocating wages to domestic production gross receipts) W-2 wages do not include any amount that is not properly included in a return filed with the Social Security Administration on or before the 60th day after the due date (including extensions) for that return. n209.2

The deduction is also limited for taxpayers with oil related qualified production activities income. n209.3 Under the limitation, if a taxpayer has oil-related qualified production activities income in a tax year, the amount otherwise deductible under *IRC Section 199* is reduced by 3 percent of the least of the following: (1) the oil related qualified production activities income of the taxpayer for the taxable year; (2) the qualified production activities income of the taxpayer for the taxable year, or (3) taxable income (or adjusted gross income, in the case of individuals), without regard to the deduction under *IRC Section 199*. n209.4 Oil related qualified production activities income is qualified production activities income that is attributable to the production, refining, processing, transportation, or distribution of oil, gas, or any primary product thereof during a taxable year. n209.5

In the case of corporate taxpayers that are members of certain affiliated groups, the deduction is determined by treating all members of the group as a single taxpayer and the deduction is allocated among the members in proportion to each member's respective amount (if any) of qualified production activities income. n210

[2] Qualified Production Activities Income

In general, "qualified production activities income" is equal to domestic production gross receipts, reduced by the sum of: (1) the costs of goods sold that are allocable to those receipts; (2) other deductions, expenses, or losses (other than the deduction allowed *IRC Section 199*), that are properly allocable to those receipts. n211 Extensive regulations have been issued providing guidance on various aspects of the *IRC Section 199* deduction, n211.1 including allocation of various items in computing qualified production activities income. n211.2

[3] Domestic Production Gross Receipts

[a] In General

"Domestic production gross receipts" consists primarily of items that are unrelated to real estate. n214 Included, however, are two items relating to real estate: (1) gross receipts of a taxpayer that are derived from construction activities performed in the United States, and (2) engineering or architectural services performed in the United States for construction projects located in the United States. n215 Gross receipts from the lease, rental, license, sale, exchange, or other disposition of land are excluded in computing the deduction. n215.1

In addition, domestic production gross receipts do not include any gross receipts of the taxpayer derived from property that is leased, licensed, or rented by the taxpayer for use by any related person. n216 Related persons for this purpose include a variety of corporate and other entities which, by virtue of 50-percent common ownership n217 or membership in an affiliated service group, n218 are treated as a single employer. n219

Regulations detail at great length the definition of construction performed in the United States, n219.1 and what services qualify as engineering and architectural services for purposes of the *IRC Section 199* deduction. n219.2

[b] "Construction" for Purposes of *IRC Section 199*

Regulations detail at great length the definition of construction performed in the United States, n220 and provide numerous examples of what does and does not constitute construction activity. n220.1 The term generally means activities and services relating to the construction or erection of real property in the US that is constructed by a taxpayer that, at the time of the construction, is engaged in the trade or business of construction on a regular and ongoing basis. The business must be considered construction by the North American Industry Classification System (NAICS), as described in the regulations. n220.2 Tangible personal property (for example, appliances, furniture, and fixtures) that is sold as part of a construction project is not considered real property for purposes of the deduction. In determining whether property is real property, the fact that property is or is not real property under local law is not controlling. n220.3

A taxpayer is considered to be engaged in a construction trade or business on a regular and ongoing basis if the taxpayer derives gross receipts from an unrelated person by selling or exchanging the constructed real property within 60 months of the date on which construction is complete (for example, on the date a certificate of occupancy is issued for the property). n221 For a newly-formed trade or business or a taxpayer in its first taxable year, the taxpayer is considered to be engaged in a trade or business on a regular and ongoing basis if the taxpayer reasonably expects that it will engage in a trade or business on a regular and ongoing basis. n221.1

A de minimis exception applies. If less than 5 percent of the total gross receipts derived by a taxpayer from a construction project are derived from activities other than the construction of real property in the United States (for example, from non-construction activities or the sale of tangible personal property or land), then the total gross receipts derived by the taxpayer from the project may be treated as domestic product gross receipts (DPGR) from construction. n222 If a taxpayer applies the land safe harbor for a construction project (as described below), n222.1 then the gross receipts excluded under the land safe harbor are excluded in determining total gross receipts under this paragraph. If a taxpayer does not apply the land safe harbor and uses any reasonable method (for example, an appraisal of the land) to allocate gross receipts attributable to the land to non-DPGR, then a taxpayer may exclude those gross receipts derived from the sale, exchange, or other disposition of the land from total gross receipts under this de minimis exception. n222.2

In the case of gross receipts derived from construction that are received over a period of time (for example, an installment sale), the de minimis exception is applied by taking into account the total gross receipts for the entire period derived (and to be derived) from construction. For this purpose, a taxpayer who treats gross receipts as DPGR under this de minimis exception must treat the gross receipts recognized in each taxable year consistently as DPGR. n223

A similar de minimis exception applies for non-DPGR receipts. If less than 5 percent of the total gross receipts derived by a taxpayer from a construction project qualify as DPGR, then the total gross receipts derived by the taxpayer from the construction project may be treated as non-DPGR. In the case of gross receipts derived from construction that are received over a period of time (for example, an installment sale), this de minimis exception is applied by taking into account the total gross receipts for the entire period derived (and to be derived) from construction. For this purpose, a taxpayer who treats gross receipts as non-DPGR under this de minimis exception must treat the gross receipts

recognized in each taxable year consistently as non-DPGR. n224

Activities constituting "construction" are those performed in connection with a project to erect or substantially renovate real property, including activities performed by a general contractor or that constitute activities typically performed by a general contractor. These include activities relating to management and oversight of the construction process such as approvals, periodic inspection of the progress of the construction project, and required job modifications. n225 Construction activities do not include tangential services such as hauling trash and debris, and delivering materials, even if those services are essential for construction. However, if the taxpayer performing construction also, in connection with the construction project, provides tangential services such as delivering materials to the construction site and removing its construction debris, then the gross receipts derived from those tangential services are DPGR. n225.1

Improvements to land that are not capitalizable to the land (for example, landscaping) and painting are activities constituting construction only if they are performed in connection with other activities (whether or not by the same taxpayer) that constitute the erection or substantial renovation of real property and provided the taxpayer meets the other requirements that apply to construction. Services such as grading, demolition (including demolition of structures under *IRC § 280B*), clearing, excavating, and any other activities that physically transform the land are activities constituting construction only if they are performed in connection with other activities (whether or not by the same taxpayer) that constitute the erection or substantial renovation of real property and provided the taxpayer meets the other requirements under that apply to construction. A taxpayer engaged in these activities must make a reasonable inquiry or a reasonable determination as to whether the activity relates to the erection or substantial renovation of real property in the United States. Construction activities also include activities relating to drilling an oil or gas well and mining and include any activities the cost of which are intangible drilling and development costs n226 or development expenditures for a mine or natural deposit. n226.1

If the taxpayer performing construction activities also provides, in connection with the construction project, administrative support services (for example, billing and secretarial services) incidental and necessary to that construction project, then these administrative support services are considered construction activities. n227

Construction activity does not include the lease, license, or rental of equipment, for example, bulldozers, generators, or computers, for use in the construction of real property. It also does not include any activity that qualifies as engineering and architectural services. n227.1

For purposes of defining construction, the term "real property" means buildings (including structural components), inherently permanent structures (and their structural components) other than machinery, n227.2 inherently permanent land improvements, oil and gas wells, and infrastructure. An entire utility plant including both the shell and the interior is treated as an inherently permanent structure. Property produced by a taxpayer that is not real property in the hands of that taxpayer, but that may be incorporated into real property by another taxpayer, is not treated as real property by the producing taxpayer (for example, bricks, nails, paint, and windowpanes). Structural components of buildings and inherently permanent structures include property such as walls, partitions, doors, wiring, plumbing, central air conditioning and heating systems, pipes and ducts, elevators and escalators, and other similar property. n227.3

The term "infrastructure" includes roads, power lines, water systems, railroad spurs, communications facilities, sewers, sidewalks, cable, and wiring. The term also includes inherently permanent oil and gas platforms. n228 The term "substantial renovation" means the renovation of a major component or substantial structural part of real property that materially increases the value of the property, substantially prolongs its useful life, or adapts it to a new or different use. n228.1

Assuming all the above requirements are met, DPGR derived from the construction of real property performed in the US includes the proceeds from the sale, exchange, or other disposition of real property constructed by the taxpayer in the US (whether or not the property is sold immediately after construction is completed and whether or not the

construction project is completed). DPGR derived from the construction of real property includes compensation for the performance of construction services by the taxpayer in the US. DPGR derived from the construction of real property includes gross receipts derived from materials and supplies consumed in the construction project or that become part of the constructed real property, assuming all other requirements regarding construction are met. n228.2

DPGR derived from the construction of real property includes gross receipts from any qualified construction warranty, that is, a warranty that is provided in connection with the constructed real property if, in the normal course of the taxpayer's business, both of the following are met: n229

- the price for the construction warranty is not separately stated from the amount charged for the constructed real property; and
- the construction warranty is neither separately offered by the taxpayer nor separately bargained for with customers (that is, the customer cannot purchase the constructed real property without the construction warranty).

DPGR derived from the construction of real property performed in the United States does not include gross receipts derived from the sale, exchange, or other disposition of real property acquired by the taxpayer even if the taxpayer originally constructed the property. In addition, DPGR derived from the construction of real property does not include gross receipts from the lease or rental of real property constructed by the taxpayer or, except as provided in the de minimis exception, n229.1 gross receipts derived from the sale or other disposition of land (including zoning, planning, entitlement costs, and other costs capitalized to the land). n229.2

For purposes of determining the DPGR derived from the construction of real property performed in the US, a land safe harbor applies. Under it, a taxpayer may allocate gross receipts between the proceeds from the sale, exchange, or other disposition of real property constructed by the taxpayer and land by reducing its costs related to DPGR under the DPGR cost allocation regulations n229.3 by the cost of land and other costs capitalized to the land (land costs) and reducing its DPGR by those land costs plus a specified percentage. n229.4 A taxpayer that uses the land safe harbor to allocate gross receipts between real property constructed by the taxpayer and land does not take into account under the small business simplified overall method n229.5 the costs that have already been taken into account for purposes of *IRC Section 199* pursuant to the land safe harbor. n229.6

[c] Engineering and Architectural Services under *IRC Section 199*

Domestic production gross receipts includes gross receipts from engineering or architectural services performed in the U.S. for construction projects in the U.S. n230 Regulations detail at some length what services qualify as engineering and architectural services for purposes of the *IRC Section 199* deduction. n230.1 In general DPGR include gross receipts derived from engineering or architectural services performed in the United States for a construction project, provided that at the time the taxpayer performs those services, the taxpayer is engaged in engineering or architectural services on a regular and ongoing basis. The business must be considered engineering or architectural services by the North American Industry Classification System (NAICS), as described in the regulations. n230.2 In the case of a newly-formed trade or business or a taxpayer in its first taxable year, a taxpayer is considered to be engaged in a trade or business on a regular and ongoing basis if the taxpayer reasonably expects that it will engage in a trade or business on a regular and ongoing basis. DPGR include gross receipts derived from engineering or architectural services, including feasibility studies for a construction project in the US, even if the planned construction project is not undertaken or is not completed. n230.3

Engineering services in connection with any construction project include any professional services requiring engineering education, training, and experience and the application of special knowledge of the mathematical, physical, or engineering sciences to those professional services such as consultation, investigation, evaluation, planning, design,

or responsible supervision of construction (for the purpose of assuring compliance with plans, specifications, and design) or erection, in connection with any construction project. n231

Architectural services in connection with any construction project include the offering or furnishing of any professional services such as consultation, planning, aesthetic and structural design, drawings and specifications, or responsible supervision of construction (for the purpose of assuring compliance with plans, specifications, and design) or erection, in connection with any construction project. n231.1

Incidental and necessary administrative support services (such as billing and secretarial services) to engineering or architectural services provided by the same taxpayer are also included. n232

Engineering or architectural services do not include post-construction services such as annual audits and inspections. n232.1

A de minimis exception applies. If less than 5 percent of the total gross receipts derived by a taxpayer from engineering or architectural services performed in the United States for a construction project are derived from services not relating to a construction project (for example, the services are performed outside the US or in connection with property other than real property), then the total gross receipts derived by the taxpayer may be treated as DPGR from engineering or architectural services performed in the US for the construction project. In the case of gross receipts derived from engineering or architectural services that are received over a period of time (for example, an installment sale), this de minimis exception is applied by taking into account the total gross receipts for the entire period derived (and to be derived) from engineering or architectural services. For this purpose, a taxpayer who treats gross receipts as DPGR under this de minimis exception must treat the gross receipts recognized in each taxable year consistently as DPGR. n233

A similar de minimis exception applies for non-DPGR receipts. If less than 5 percent of the total gross receipts derived by a taxpayer from engineering or architectural services performed in the US for a construction project qualify as DPGR, then the total gross receipts derived by the taxpayer from engineering or architectural services performed in the US for the construction project may be treated as non-DPGR. In the case of gross receipts derived from engineering or architectural services that are received over a period of time (for example, an installment sale), this de minimis exception is applied by taking into account the total gross receipts for the entire period derived (and to be derived) from engineering or architectural services. For this purpose, a taxpayer who treats gross receipts as non-DPGR under this de minimis exception must treat the gross receipts recognized in each taxable year consistently as non-DPGR. n234

Example:

X is engaged in the trade or business of providing engineering services on a regular and ongoing basis. Y buys unimproved land and hires X to provide engineering services for roads, sewers, sidewalks, and power and water lines to be constructed on Y's land. These items qualify as infrastructure. X's gross receipts from engineering services for the infrastructure are DPGR. X's gross receipts from other engineering services relating to land do not qualify as DPGR because they are not derived from engineering services for a construction project. n235

[d] Puerto Rico Activities That Qualify for the *IRC Section 199* Deduction

For purposes of *IRC Section 199*, the United States generally does not include Puerto Rico or other US possessions. n235.1 nor are wages paid to bona fide residents of Puerto Rico generally included in the wage limitation amount. n235.2 For the first four taxable years of a taxpayer beginning after December 31, 2005, and before January 1, 2010, however, n235.3 Puerto Rico is included within the definition of the United States for purposes of determining the domestic production gross receipts of eligible taxpayers. A taxpayer may treat Puerto Rico as part of the United States

for purposes of *IRC Section 199* (and therefore take into account its Puerto Rico business activity for purposes of calculating its domestic production gross receipts and qualified production activities income) only if all of the taxpayer's gross receipts from sources within Puerto Rico are currently taxable for US Federal income tax purposes. n235.4 Consequently, a controlled foreign corporation cannot take advantage of the deduction made available by the provision. Any taxpayer eligible for the Puerto Rico-based deduction may take into account wages paid to bona fide residents of Puerto Rico for purposes of calculating the 50-percent wage limitation. n235.5

[4] Rules for Passthrough Entities (Other than Cooperatives)

For partnerships and S corporations, the deduction under *IRC Section 199* is applied at the partner or shareholder level, and each partner or shareholder must take into account his or her allocable share of each item used to determine the entity's qualified production activities income. n236 In addition, for purposes of applying the wage limitation, n237 a shareholder, partner, or similar person who is allocated components of qualified production activities income from a passthrough entity is treated as having been allocated wages from the entity in an amount that is equal to that person's allocable share of wages as determined under regulations prescribed by the Secretary. n238

A special rule applies for partnerships that are owned by expanded affiliated groups. If all of the interests in the capital and profits of a partnership are owned by members of a single expanded affiliated group at all times during the taxable year of the partnership, the partnership and all members of the expanded affiliated group are treated as a single taxpayer during that period. n239

For trusts and estates, each item used to determine the entity's qualified production activities income n240 and W-2 wages of the trust or estate for the taxable year must be apportioned between the beneficiaries and the fiduciary (and among the beneficiaries) under regulations prescribed by the Secretary. n241 The adjusted gross income of the trust to which the applicable percentage is applied to determine the deduction is determined in accordance with *IRC Section 67(e)*. n242

The IRS has issued a revenue procedure that specifies the conditions under which certain partnerships and S corporations may choose to calculate qualified production activities income W-2 wages at the entity level, as well as the manner for allocating and reporting those items to partners or shareholders, for purposes of determining the deduction under *IRC § 199*. n242.1

[5] Alternative Minimum Tax

The deduction under *IRC Section 199* is allowed for purposes of determining alternative minimum taxable income under the AMT. n243 Two modifications apply, however. First, in determining alternative minimum taxable income, a taxpayer's "qualified production activities income" n244 is determined without regard to any AMT adjustments under *IRC Sections 56 through 59*. n245

The second modification applies only to corporations. A corporation's alternative minimum taxable income, n246 rather than its taxable income, is used in computing the deduction. n247

[6] Qualified Production Activities Income of Agricultural and Horticultural Cooperatives

A person who receives a qualified payment n248 from a member-owned agricultural or horticultural cooperative n249 may deduct in the year the payment is received an amount equal to the portion of the deduction under *IRC Section 199* that is allowed with respect to the portion of the qualified production activities income to which the payment is attributable. The deduction is allowed only if it is identified by the cooperative in a written notice mailed to the patron during the payment period. n250 The cooperative is denied a deduction for the portion of the qualified payment to the extent of the deduction that may be claimed by the patron. n251 For purposes of computing the *IRC Section 199*

deduction allowed to the cooperative, no deduction is allowed for certain patronage dividends, per-unit retain allocations, and non-patronage distributions. n252

[7] Net Earnings From Self-Employment

The deduction under *IRC Section 199* is not permitted in determining an individual's net earnings from self-employment. n253

[8] Methods of Allocating Wages to Domestic Production Gross Receipts

[a] In General

Only wages described in regulations n254 (referred to as "paragraph (e)(1) wages") that are properly allocable to domestic production gross receipts (DPGR) may be taken into account in determining the deduction under *IRC Section 199*. n255 Regulations provide that a taxpayer may determine the amount of those wages that is properly allocable to DPGR using any reasonable method that is satisfactory to the Secretary based on all of the facts and circumstances. n256

The regulations provide safe harbors for determining the amount of paragraph (e)(1) wages that is properly allocable to DPGR. The safe harbor that applies depends on the cost allocation method used by the taxpayer. Under the wage expense safe harbor for taxpayers using either the *IRC Section 861* method of cost allocation n257 or the simplified deduction method n258 a taxpayer may determine the amount of paragraph (e)(1) wages that is properly allocable to DPGR by multiplying the amount of those wages by the ratio of the taxpayer's wage expense included in calculating qualified production activities income (QPAI) for the taxable year to the taxpayer's total wage expense used in calculating the taxpayer's taxable income (or AGI, if applicable) for the taxable year. n259 For purposes of determining the amount of wage expense in cost of goods sold (CGS) under this safe harbor, a taxpayer may determine its wage expense included in CGS using any reasonable method that is satisfactory to the Secretary based on all of the facts and circumstances. For example, a reasonable method would include a taxpayer using direct labor included in CGS as wage expense included in CGS. Additionally, a reasonable method would include a taxpayer using the *IRC Section 263A* labor costs used by the taxpayer in its simplified service cost method with labor-based allocation ratio regulations n260 as wage expense included in CGS. n261

A taxpayer that uses the small business simplified overall method of cost allocation n262 may use the small business simplified overall method safe harbor for determining the amount of wages that is properly allocable to DPGR. Under that safe harbor, the amount of paragraph (e)(1) wages that is properly allocable to DPGR is equal to the same proportion of wages that the amount of DPGR bears to the taxpayer's total gross receipts. n263

Detailed examples of computations are provided in the temporary regulations. n264

[b] Expanded Affiliated Groups

The *IRC Section 199* deduction for members of an expanded affiliated group (EAG) may be reduced if one member of an EAG uses employees of another member of the EAG to perform activities attributable to DPGR and does not have paragraph (e)(1) wages. As noted above, to qualify as W-2 wages n265 paragraph (e)(1) wages must be properly allocable to DPGR. n266 Because each member of an EAG separately calculates its own items before they are aggregated by the EAG, the member having the paragraph (e)(1) wages must itself have DPGR to which the wages are properly allocable in order to qualify those wages as W-2 wages. Paragraph (e)(1) wages that are not properly allocable to DPGR of the member having the paragraph (e)(1) wages do not qualify as W-2 wages, even if the paragraph (e)(1) wages were paid in connection with another member's DPGR activities. However, the result may differ if members of the EAG join in the filing of a consolidated Federal income tax return. In that case, the separate entity attributes of the members' intercompany items or corresponding items be redetermined to the extent necessary to produce the effect as if

they were divisions of a single corporation. Thus, wages incurred by one member may be treated as if incurred by another. n267 The regulations under *IRC Section 199* provide examples showing computations under various scenarios. n268

A special rule applies regarding net operating losses (NOLs) of an EAG. To the extent that an NOL was used in the year it was sustained in determining any EAG's taxable income for purposes of the taxable income limitation. n269 it is not treated as an NOL carryover or NOL carryback to any taxable year in determining the taxable income limitation. n270 This rule was adopted in order to prevent the same loss being used twice in determining the taxable income limitation under *IRC Section 199(a)(1)(B)*. Detailed examples illustrate the rule. n271

[c] Pass-Thru Entities

In general, a partnership or S corporation must allocate its paragraph (e)(1) wages (including any such wages from a lower-tier partnership of which the partnership or S corporation is a partner) among its partners or shareholders in the same manner that wage expense is allocated among those partners or shareholders. n272 The partner or shareholder must then add its share of the paragraph (e)(1) wages from the partnership or S corporation to the partner's or shareholder's paragraph (e)(1) wages from other sources, if any. The partner (other than a partner that itself is a partnership or S corporation) or shareholder then must calculate its W-2 wages n273 by determining the amount of its paragraph (e)(1) wages properly allocable to DPGR. n274 Examples showing allocations are provided in the temporary regulations. n275

[d] Trusts and Estates

A non-grantor trust or estate must calculate each beneficiary's share (as well as the trust's or estate's share, if any) of QPAI and W-2 wages from the trust or estate at the trust or estate level. n276 The QPAI of a trust or estate and W-2 wages of the trust or estate are allocated to each beneficiary and to the trust or estate based on the relative proportion of the trust's or estate's distributable net income (DNI) n277 for the taxable year that is distributed or required to be distributed to the beneficiary or is retained by the trust or estate. n278 An example showing allocations is provided in the regulations. n279

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate Scope

Scope

To state the obvious, the net cash flow of a real estate project can be materially affected by income taxes. This chapter discusses ways to select accounting methods and periods, maximize available deductions, and defer recognition of income to minimize the adverse impact of taxes on the net cash flow of a real estate project. In addition, while recognizing that the economic terms of a lease are generally the primary focus of lease negotiations (and the primary factors affecting net cash flows under a lease), this chapter discusses the ways in which the provisions of a lease can affect the timing of the taxes that will be paid by the lessor and the lessee, enabling the parties to draft lease terms that document the intended results.

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.01

§ 4.01 Selecting and Using Accounting Methods and Periods

The method of accounting adopted by a taxpayer determines when items of income and expense are reportable for federal income tax purposes. n1 Consequently, choosing the proper accounting method is an important decision, and one that must be made at the outset of the project. A taxpayer may use different accounting methods for different businesses. n2 In many cases the net cash flows expected from a real estate transaction are premised on the adoption of a certain method of accounting. Sometimes it may be tempting to adopt a particular accounting method for a real estate project to accomplish a short-range objective in the current year; however, since the adoption of a method is generally binding on subsequent years, n3 long-range tax planning must be considered.

The two most commonly used overall methods of accounting employed are the cash receipts and disbursements method (referred to as the "cash method") and the accrual method. The choice of the method to suit the taxpayer's needs depends on the form in which the business is conducted, the other business activities of the taxpayer, and the objectives and estimated profitability of the particular investment. Generally, a taxpayer using either the cash or accrual method of accounting may report certain sales under the installment method (see Chapter 7).

[1] The Cash Method

[a] In General

Under the cash method of accounting, gross income is reported in the year in which the cash or property is actually or constructively received, and deductions generally are allowed in the year paid. n4 "Constructive receipt" refers to income that taxpayers have a present right to receive, and that is available to them without qualification or restriction. n5 For example, if a landlord using the cash method of accounting refuses to accept rent that is due from a tenant when the rent is tendered, or fails to deposit a rent check received, in order to defer payment of the related income tax, the landlord is deemed to have "constructively received" the rent, and is required to recognize the income for tax purposes when it was available to him. n6

Although expenses are generally deductible when paid under the cash method of accounting, amounts that are paid for an asset with a useful life extending substantially beyond the close of the tax year are not necessarily deductible in full in the year paid. Instead they may be recoverable only through depreciation or amortization deductions. n7 However, in some cases a prepayment covering a relatively short period (less than one year) is deductible. n8 Amounts prepaid for periods longer than one year, however, cannot be deducted. n9

Furthermore, the delivery of a promissory note in payment of an expense does not entitle a cash-basis taxpayer to a deduction until the taxpayer pays the note. n9.1 Similarly, a cash-basis taxpayer is not entitled to an increase in basis for expenditures chargeable to capital account if payment is made by issuing a secured promissory note. Basis cannot be increased until the note is actually paid. n9.2

[b] Who May Use the Cash Method of Accounting

All taxpayers may use the cash method of accounting, unless either they are precluded from doing so by an express statutory limitation, or the cash method does not clearly reflect their income. n10

In addition, under a special small business exception set forth in *Revenue Procedure 2002-28*, the IRS allows certain taxpayers with average annual gross receipts of \$10 million or less to use the cash method of accounting. n10.1 This relatively liberal stance is intended to reduce the administrative and tax compliance burdens on small businesses who are otherwise required to use the accrual method of accounting to account for inventories under *IRC Section 471*. n10.2 The revenue procedure specifies the manner in which qualifying taxpayers may obtain automatic consent to change to the cash method and/or a method of accounting for inventoriable items as non-incidental materials and supplies. n10.3 *Revenue Procedure 2002-28* is effective for tax years ending on or after December 31, 2001, but the IRS will not challenge a taxpayer's use of the cash method or its failure to account for inventories under *IRC Section 471* for earlier years if the taxpayer would have otherwise qualified to use the cash method under *Revenue Procedure 2002-28* had it been applicable to that year. n10.4

To be eligible to use the cash method under *Revenue Procedure 2002-28*, the taxpayer must have average annual gross receipts of \$10 million or less. n10.5 This requirement is met if, for each prior taxable year ending on or after December 31, 2000, the taxpayer's average annual gross receipts for the three taxable-year period ending with the applicable prior taxable year do not exceed \$10 million. A taxpayer who has not been in existence for three prior taxable years must determine its average annual gross receipts for the number of years (including short taxable years) that it has been in existence. n10.6

A taxpayer meeting the above requirement may use the cash method for all of its trades and businesses if it satisfies any one of the following three tests and did not previously change (and was not previously required to have changed) from the cash method to an accrual method for any trade or business as a result of becoming ineligible to use the cash method under *Revenue Procedure 2002-28*: n10.7

- The taxpayer reasonably determines that its principal business activity is in an eligible North American Industry Classification System (NAICS) code. n10.8
- Notwithstanding that a taxpayer's principal business activity is described in one of the ineligible NAICS Codes, the taxpayer reasonably determines that its principal business activity is the provision of services, including the provision of property incident to those services.
- Notwithstanding that a taxpayer's principal business activity is described in one of the ineligible NAICS Codes, the taxpayer reasonably determines that its principal business activity is the fabrication or modification of tangible personal property upon demand in accordance with customer design or specifications. For purposes of this rule, this requirement is not met if a customer merely chooses among pre-selected options offered by the taxpayer or if the taxpayer must make only minor modifications to its basic design to meet the customer's specifications. In addition, a taxpayer that manufactures an item in quantities for a customer is not treated as fabricating or modifying tangible personal property in accordance with customer design or specifications.

1-4 Federal Taxes Affecting Real Estate § 4.01

A taxpayer with multiple trades or businesses may use the cash method with respect to any separate and distinct trade or business by applying the above tests to that separate and distinct trade or business. n10.9 The revenue procedure clarifies the definition of business activity, principal business activities, and gross receipts. n10.10

A taxpayer who satisfies one of the above tests and chooses not to use an overall accrual method with inventories being accounted for under *IRC Section 471* has the following three options for an eligible trade or business: n10.11

- (1) the taxpayer can use the overall cash method and account for inventories under *IRC Section 471*;
- (2) the taxpayer can use an overall accrual method and account for inventoriable items in the same manner as materials and supplies that are not incidental under regulations; n10.12 or
- (3) the taxpayer can use the overall cash method and account for inventoriable items in the same manner as materials and supplies that are not incidental under regulations. n10.13

Taxpayers that are permitted to use the cash method under *Revenue Procedure 2002-28* , and that do not want to account for inventories under *IRC Section 471* must treat all inventoriable items in the trade or business in the same manner as materials and supplies that are not incidental under regulations. n10.14 This means that these taxpayers need not apply the uniform capitalization rules of *IRC Section 263A* to inventoriable items that are treated as materials and supplies that are not incidental. Items that would be accounted for as incidental materials and supplies under regulations n10.15 may still be accounted for in that matter. Whether an item is purchased for resale or use (and thus accounted for as a non-incidental material and supply) or is purchased to provide to customers incident to services (and thus may be accounted for as either an incidental or a non-incidental material and supply depending on the facts and circumstances) must be determined under general tax principles. n10.16

Under regulations, materials and supplies that are not incidental are deductible only in the year in which they are actually consumed and used in the taxpayer's business. n10.17 For purposes of *Revenue Procedure 2002-28* , inventoriable items that are treated as materials and supplies that are not incidental are consumed and used in the year the qualifying small business taxpayer provides the items to a customer. Thus, the cost of those items is deductible only in that year, or in the year in which the taxpayer actually pays for the goods, whichever is later. n10.18 A qualifying small business taxpayer may determine the amount of the allowable deduction for non-incidental materials and supplies by using either a specific identification method, a FIFO method, or an average cost method, provided that method is used consistently. A taxpayer may not use the LIFO method to determine the amount of the allowable deduction for non-incidental materials or supplies. n10.19 The revenue procedure provides numerous examples to illustrate its application. n11

Apart from the \$10 million small business exception in *Revenue Procedure 2002-28* , the following taxpayers generally are prohibited by statute from using the cash method: n12

- (1) C corporations;
- (2) partnerships (including limited liability companies) that have a C corporation as a partner (or member); and
- (3) tax shelters within the meaning of *IRC Section 461(i)(3)*.

The prohibition against C corporations and partnerships with C corporation partners (items (1) and (2), above) has three statutory exceptions, in addition to the administrative exception in *Revenue Procedure 2002-28* . First, except as is provided in *IRC Section 447*, dealing with farming corporations, such entities engaged in the farming or timber business n13 may use the cash method, notwithstanding *IRC Section 448*. n14

Second, qualified personal service corporations may use the cash method. n15 A qualified personal service corporation is a corporation substantially all activities of which involve the performance of services in the fields of health, law, engineering, architecture, accounting, actuarial science, performing arts, or consulting, and in which substantially all (95 percent) of the stock is held directly or indirectly by employees performing those services, retired employees, estates of former employees or retired employees or (for a two-year period) anyone who acquired stock by reason of the death of such a person). n16

Third, corporations and partnerships with average annual gross receipts for the three preceding tax years or less than \$5 million may use the cash method. n17 It should be noted that this statutory exception will ordinarily be subsumed within the \$10 million small business exception in *Revenue Procedure 2002-28* . n17.1

Planning Note:

Even if a taxpayer meets the \$5 million gross receipts test, the Service may still claim that the cash method does not clearly reflect income, and that the taxpayer must therefore use some other method of accounting. To contest this claim, a taxpayer must be able to show that the Service has abused its discretion. Key factors that can weigh heavily in a taxpayer's favor are that the taxpayer: (1) has never maintained an inventory; (2) has consistently used the cash method since its inception; and (3) has never made an attempt to unreasonably pre-pay expenses or defer recognition of income. n18

Certain taxpayers engaged in farming may also not use the cash method. Corporations (other than S corporations) and partnerships with a partner that is a corporation ordinarily must use an accrual method of accounting to compute taxable income from farming. This prohibition does not apply, however, to nursery operations, sod farms, or the raising or harvesting of trees other than fruit and nut trees. These taxpayers may therefore use the cash method. n19

There is also a small taxpayer exception to the cash method prohibition for farming corporations. Notwithstanding the general prohibition, the cash method may be used by the following:

- (1) corporations that, for each tax year beginning after 1975, have not had gross receipts exceeding \$1 million; n20 and
- (2) family corporations that, for each tax year beginning after 1985, have not had gross receipts exceeding \$25 million. n21

Family corporations include corporations in which members of the same family n22 own at least 50 percent of the voting stock and at least 50 percent of all other classes of stock of the corporation. n23 Family corporations also include certain closely-held farming corporations that have met specified ownership requirements at all times since October 4, 1976. n24

Finally, the cash method of accounting cannot be used by any taxpayer to compute taxable income from long-term contracts. Instead, the percentage of completion method must be used. n25 Further, whether the taxpayer is using the cash method or the accrual method, construction costs on houses that are incomplete or unsold at the end of the taxable year cannot be deducted currently, but instead must be capitalized. n26 Generally, the cash method cannot be used for any business in which inventories are a material factor, but real estate assets are not inventory for this purpose. Therefore, the cash method should be available for real estate activities, even if real properties are held for sale to customers in the ordinary course of business. n27

[2] The Accrual Method

Under the accrual method of accounting, income is recognized in the year during which all the events occur to fix the right to receive the income and, correspondingly, deductions are allowed in the year during which all the events occur to fix a liability for the expense. In accruing either income or expense, the amount must be determinable with reasonable accuracy, and economic performance has occurred with respect to the liability. n28

For example, under the accrual method, rental income is recognized in the period to which it relates, even if the tenant has not actually paid the rent. Similarly, the accrual-basis taxpayer must deduct expenses in the year incurred even though they are not paid until a subsequent year. Assume, for example, that a plumber performs services and sends a bill in December. Although the invoice may not be payable until the subsequent year, under the accrual method, the expense is deducted in December.

Prepaid expenses for services or goods not yet provided are not deductible by the accrual-basis taxpayer. Prepaid rent or insurance is amortized over the period to which it relates. However, income actually received by an accrual-basis taxpayer before it is earned, such as prepaid rent, must generally be reported as income in the year received. n29 This differs from the accounting treatment of such amounts.

Tax deductions are not allowed for estimated future liabilities such as general warranty reserves or potential maintenance and repairs. n30 However, tax deductions have been allowed for a reserve for worker's compensation liability when the "all-events test" was met, and the determination of the amount of the reserve was reasonably accurate. In *Kaiser Steel Corporation v. United States*, n31 Kaiser deducted sums reserved for future payments of its worker's compensation liability on uncontested claims for injuries suffered during the tax year. The Court held that all events had occurred, thereby establishing the fact of liability, because the injury had occurred and Kaiser did not contest liability for the injury. Furthermore, the amount of liability becoming payable in future years was determined with reasonable accuracy, through application of Kaiser's medical and accounting practices. In *United States v. General Dynamics Corp.*, however, the Supreme Court restricted the deductibility of reserves for self-insurance. n32 Also, see § 4.03[6], below.

Generally, the accrual method is required when inventories are a material income-producing factor. n33 However, it is the position of the Service that real estate assets are not inventory. n34 This position was upheld in *W.C. & A.N. Miller Development Company v. Commissioner*. n35

Courts have also ruled that land developers cannot use the lower-of-cost-or-market method or other inventory method to claim deductions for the decrease in the fair market value of parcels of land held for development. n36 Subject to the restriction on using inventory accounting methods, and the required consistency with the basis on which books are kept, taxpayers engaging in real estate activities may use any method of accounting that clearly reflects income. n37

[3] Hybrid Accounting Method

Many businesses do not use a complete accrual method of accounting, but report some items on the cash method. However, adoption of such "hybrid" methods is at the discretion of the Commissioner. n38 If the hybrid method results in a distortion of taxable income, the taxpayer can be required to use another method of accounting. Taxpayers have been allowed to use the accrual method for reporting purchases and sales, and the cash method for reporting other items. However, as a general rule, if the cash method is used for reporting income, it must be used to report expenses, and if the accrual method is used to report expenses, it must be used to report income. n39

[4] Percentage of Completion Method

IRC Section 460 requires taxpayers to account for long-term contracts under the percentage-of-completion method. n40 Extensive regulations describe how income from a long-term contract must be accounted for under *IRC Section 460*. n40.1 A long-term contract is a contract for the manufacture, building, installation or construction of property that is not

completed within the taxable year in which the contract was executed. n41

There are several exceptions under *IRC Section 460*. The percentage of completion method need not be used in the following circumstances: n42

(1) in any home construction contract (generally a construction contract with respect to dwelling units in a building with four or fewer dwelling units, in which 80 percent of the costs incurred are construction costs);

(2) in any other construction contract expected to be completed within two years if the taxpayer's average annual gross receipts for the three taxable years before the year the contract is entered into do not exceed \$10 million.

Contracts that would otherwise fall within the home construction contract exception (item 1 above), but involve a building containing more than four units (e.g., large condominium buildings) may be accounted for by using a 70 percent percentage-of-completion/30 percent completed-contract method instead of the percentage-of-completion method. n43 The application of *IRC Section 460* and the percentage-of-completion method to residential homebuilders who do not meet the home-construction-contract exception may have a devastating effect on the homebuilders' cash flow. These homebuilders would be forced to pay tax on income that may not be received until the following taxable year, when the sale of the home is completed. n44

Under the percentage of completion method, a taxpayer estimates the total contract costs allocated to a contract, and at the close of each taxable year, determines the percentage of the contract that is completed and must include in income that percentage of the income from the contract. Upon completion of the contract, the taxpayer must pay (or is entitled to receive) interest computed under the look-back method. n45 The interest is paid or received on the amount of tax liability that is deferred or accelerated as a result of overestimating or underestimating the total contract price or contract costs. n46 Any amount of interest required to be paid is treated as an increase in the tax for the taxable year in which the contract is completed. n47 Any income under the contract that has not previously been included in gross income must be included in gross income for the taxable year following the taxable year in which the contract was completed. n48

Under the look-back method, interest is computed as follows: n49

(1) Income under the contract must be allocated among tax years before the year in which the contract is completed on the basis of the actual contract price and costs instead of the estimated contract price and costs.

(2) The overpayment or underpayment of tax that would result from the application of step (1) must be determined for each tax year before the year in which the contract is completed.

(3) The adjusted overpayment rate is applied to the overpayment or underpayment as determined under step (2). The adjusted overpayment rate for an interest accrual period is the overpayment rate in effect under *IRC Section 6621* for the calendar quarter in which the interest accrual period begins. n50

A simplified look-back method is used to make computations for pass-thru entities that are not closely held, pursuant to which the look-back rules are applied at the entity level. n51 Special rules are used for computations to reflect amounts properly taken into account after completion of the contract. n52 Costs are allocated to long-term contracts according to statutory provisions n53 and detailed regulations. n54

In determining taxable income from a long-term contract under the percentage-of-completion method, a taxpayer can

elect not to recognize any income or expenses from the contract for a tax year if less than 10 percent of the estimated costs of the contract have been incurred as of the end of the tax year. The election applies to all contracts entered into during the year of the election as well as to any later tax years. The election is not available if the taxpayer uses the simplified method of allocating contract costs. n55

A taxpayer may elect not to apply the look-back method with respect to a long-term contract if, for each prior contract year, the cumulative taxable income (or loss) under the contract--as determined using the estimated contract price and costs--is within 10 percent of the cumulative taxable income (or loss) as determined using actual contract price and costs. n56 In addition, a taxpayer may elect not to reapply the look-back method with respect to a contract if, as of the close of any taxable year after the year the contract is completed, the cumulative taxable income (or loss) under the contract is within 10 percent of the cumulative look-back income (or loss) as of the close of the most recent year in which the look-back method was applied (or would have applied but for the above *de minimis* exception). n57 The election is made by attaching a statement containing specified information to the taxpayer's timely-filed federal income tax return (including extensions) for the tax year for which the election is effective. The statement must have the legend "NOTIFICATION OF ELECTION UNDER SECTION 460(b)(6)." The election, once made, applies to all long-term contracts completed during and after the year of election, unless the Commissioner consents to the revocation of the election. n58

[5] Comparison of Methods

The accrual method tends to avoid distortion of taxable income, because income items are more evenly matched with related expenses. However, the accrual method is more complicated than the cash method, and requires more sophisticated accounting techniques and may require taxpayers to pay tax on amounts that they have not yet received in cash.

Under the cash method the taxpayer has more flexibility in controlling the payment of expenses and the receipt of income.

In summary, the taxpayer should carefully consider the adoption of an accounting method. Because real estate taxation is complex, it may be prudent for a taxpayer to seek professional tax guidance on the most advantageous method of accounting.

[6] Establishment of Method

The establishment of a method of accounting is made with the first tax return for each trade or business. Generally, the Internal Revenue Code requires that taxable income be computed under the method of accounting that a taxpayer regularly uses to compute income in keeping its books. n59 This requirement of conformity, however, conflicts with the requirement of consistency n60 (i.e., the taxpayer must report its taxable income on a consistent basis from year to year) when the taxpayer changes the accounting method it uses in keeping its books. Some taxpayers have changed to the accrual method of accounting on their books of account or financial statements for management or regulatory reporting purposes, but have continued on the cash method for tax reporting. Whether this leaves the taxpayer's tax accounting method subject to challenge by the Service depends on the supporting records that the taxpayer keeps for converting its accrual-method book figures to cash-method figures for the tax return reporting. If these records are the equivalent of "books," the taxpayer has met the requirement of conformity, which should permit the continued filing of tax returns using the cash method. n61 In one case, a court held that a clear set of reconciling work papers was sufficient to meet the conformity requirement. n62 In a subsequent ruling, however, the Service took the position that the conformity requirement is met only if the adjustments from the accrual to the cash method must be readily verifiable from the taxpayer's permanent books and records. n63

Once a method of tax accounting is adopted, it generally cannot be changed without the consent of the Service. n64 (A

limited number of circumstances exist where Service consent is not required or is deemed to have been received, including changes from the cash to the accrual method of accounting.) n65 Furthermore, a taxpayer may not change its accounting method or its treatment of a particular item without IRS consent, even if its current method or treatment of the item is legally improper. n65.1 Permission is required to change not only the overall method of accounting but also the method of accounting for a single item. Permission must generally be requested within the first 180 days of the taxable year. n66 The IRS issued *Revenue Ruling 90-38* n67 in which it clarified its position with respect to when a taxpayer is deemed to have established an accounting method. The ruling also holds that a taxpayer may not change an accounting method by amending a return.

The Service, however, may require a change if an inappropriate method has been used or if the method used does not clearly reflect income. n68 The rules relating to the adjustments required as a result of changes in accounting methods are set forth in *IRC Section 481*. Different rules apply to changes initiated by the taxpayer than apply to changes initiated by the Service. If a taxpayer has to change from the cash to accrual method by reason of *IRC Section 448*, the change is deemed to be initiated by the taxpayer with the consent of the Service. n69

Regulations clarify when particular changes in treating various items constitute a change in the method of accounting. n69.1 They also clarify when changes in depreciation or amortization are and are not a change in method of accounting. n69.2

A taxpayer may use different methods of accounting for different business activities that are distinct and separate in character. n70 Therefore, real estate investments may be separated from other activities as long as complete and separate books are maintained for each business, and the separate accounting methods have not resulted in a distortion of the taxpayer's income. n71

[7] The Accounting Period

[a] In General

In certain circumstances, selection of an accounting period can also create tax planning alternatives. However, a taxable entity can only have one accounting period. n72 Thus, an individual directly holding real estate must account for it on his taxable period (usually, the calendar year). n73 A newly created trust, estate, or corporation (not filing a consolidated return) is generally free to adopt the end of any month as its fiscal year-end, but this initial period cannot exceed 12 months. n74 Trusts must generally adopt a calendar year. n75 Finally, there are restrictions on the year-end that can be elected by a partnership, personal service corporation, or S corporation.

Personal service corporations and S corporations must use a calendar year as their tax year unless they establish a business purpose for another accounting period. n76 A personal service corporation is defined as a corporation whose principal activity is the performance of personal services, and whose services are substantially performed by employee/owners. n77 An employee/owner is defined as any employee of the corporation who owns, directly or by attribution, on any day during the tax year, any of the outstanding stock of the corporation. n78

A partnership must generally have the same tax year as the tax year of the partners owning a majority interest in the partnership. If there is no such "majority interest taxable year" (as when multiple partners owning a majority do not have the same taxable year), the partnership must adopt the same tax year as all of its principal partners (partners owning 5 percent or more of partnership capital or profits). If there is no majority of partners having the same tax year and the principal partners do not have the same year, the partnership may adopt the calendar year without securing approval of the Commissioner. In every other case (unless an *IRC Section 444* election is made), a partnership must obtain approval from the Commissioner before adopting a taxable year. n79

A partnership, S corporation, or personal service corporation may adopt a fiscal tax year if it can convince the Service

that a business purpose exists for that year. n80 The intent of an entity to make its tax year coincide with its natural business cycle constitutes a valid business purpose. n81 If a business has a nonpeak and peak period, the natural business year usually ends at, or soon after, the close of the peak period. The IRS has issued a revenue procedure which provides the manner for establishing a business purpose and obtaining the approval of the Commissioner to adopted, change or retain an annual accounting period. n81.1

[b] IRC Section 444 Election

Partnerships, S corporations and personal service corporations generally may elect under *IRC Section 444* to have a taxable year different from their otherwise required taxable year. n82 Entities that are electing their first taxable year may elect any taxable year, but the deferral period provided by the taxable year that is elected cannot be longer than three months. n83 For entities that are changing their taxable year, the election cannot create a deferral period that is longer than the shorter of the following: n84

- (1) three months; or
- (2) the deferral period of the taxable year that is being changed.

For any taxable year of an entity, the deferral period refers to the months between the beginning of that taxable year and the close of the first required taxable year ending within that year. n85 For example, an entity with a required tax year ending December 31 that elected a tax year beginning on December 1 would have a one-month deferral period; if the elected year began November 1, the deferral period would be two months, etc.

An *IRC Section 444* election remains in effect until the entity changes its taxable year or otherwise terminates the election. An entity may change to its otherwise required taxable year without the consent of the Commissioner. n86 If an *IRC Section 444* election is terminated, no other *IRC Section 444* election may be made. n87

A partnership or S corporation that makes an *IRC Section 444* election must make annual payments to the Service under *IRC Section 7519* that are intended to compensate for the benefit of the tax deferral. n88 A personal service corporation that makes an *IRC Section 444* election is subject to statutory deduction limitations with respect to certain amounts paid to employee-owners. n89

Some general conclusions that can be reached about the cost/benefit of making a Section 444 election are:

- The greater the portion of annual income earned in the deferral period, the greater the tax benefit of retaining a fiscal year. Entities with seasonal losses in the deferral period may be better off changing to a calendar year.
- Because the computation of the "required payment" uses the prior fiscal year's income, a growing company will continue to have a deferral benefit.
- In many states the election of a tax year under *IRC § 444* for federal tax purposes also results in a state tax deferral, without having to make any compensating required payments to the state. Each situation must be considered individually, but the benefits of retaining a fiscal year, even with the required-payment provisions, in many cases, will justify a retention of a fiscal year. Other business considerations include the natural business cycle, the industry standard, and contracts with government agencies.

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.02

§ 4.02 Recognition of Income

[1] Rent

Rental income includes all payments received or accrued for the occupancy of real estate, n90 including payments made by lessees to satisfy lessor obligations for items such as taxes, repairs and maintenance, and interest on indebtedness.

n91 An item intended by the parties to serve as a substitute for rent is also taxable as rental income, such as the value of carpeting installed by a tenant for which a rent credit is given. n92

[2] Advance Rent

To protect himself in case of default by the tenant during the term of the lease, the lessor may require some portion of the rent to be paid in advance. The lease may require advance rental payments to be applied against the last few months' rent or against rent over the term of the lease. Advance rentals paid by the tenant on the execution of the lease, whether or not mentioned in the lease, are considered to be taxable income to the lessor in the year of receipt, regardless of his method of tax accounting. n93

Taxpayers have tried various techniques to avoid reporting advance rentals in the year received. The Tax Court has held that rental income received by the sellers of property, attributable to the period after title has passed to the purchaser, is rental income of the purchasers because it relates to the occupancy of real estate owned by the purchaser, and, therefore, is an adjustment to the purchase price. n94 In another case, the lessee refrained from paying rent for five years; instead, the lessee granted the taxpayer a credit on the purchase price of real estate the lessee was selling. The court required the taxpayer to report the credit as ordinary income rather than treating it as a purchase price adjustment. n95 Several other attempts were made to treat advance rentals as proceeds of a loan from lessee to lessor to be repaid from annual rent. These attempts have been unsuccessful primarily because the taxpayers failed to demonstrate that a valid indebtedness was created. n96

Occasionally a lessor may receive a "sign up" bonus in consideration of the granting of the lease. An accrual-basis lessor is required to report bonus rights receivable as taxable income in the year the lease is executed, even though payment may not be received for several years. n97 Generally, a cash-basis landlord is not required to recognize income from advance rents or bonus rents until the amount is received in cash or other property.

The lessee is not entitled to a current deduction for advance rental or bonus payments. Instead, advance rental payments

are deductible in the period to which they relate. n98 The Ninth Circuit, however, has applied the "one year rule" in a land rental situation and allowed a deduction for rent paid by a cash-basis taxpayer in December, even though the lease period extended into 11 months of the next tax year. n99 Lease bonus payments made by the lessee are capitalized and amortized over the term of the lease. n100

The lessor may require a lease bonus payment from the lessee to finance the leasing commission to be paid to the broker. These commissions are capitalized by the lessor to the cost of the lease, and amortized over the lease period. n101 To avoid reporting ordinary income from the bonus without achieving a corresponding deduction, some commentators have suggested that the obligation for the commission be passed over to the lessee. However, this technique will be unsuccessful if the lessee is deemed to have paid an obligation of the lessor.

Another technique for the lessor to avoid bonus income is to shift the obligation of constructing leasehold improvements to the lessee. Because this is an obligation that is created only by the lease agreement itself, shifting the cost of the tenant improvements to the lessee does not relieve the lessor of a prior legal commitment. In most cases, this should not constitute an improvement in lieu of rent. See § 4.07[4], below.

[3] Rents Received Under *IRC Section 467* Rental Agreements

[a] Statutory Framework of *IRC Section 467*

Special statutory rules dictate the manner of tax accounting under any lease that qualifies as a Section 467 rental agreement. n102 If a lease is a Section 467 rental agreement, both the landlord and tenant must take into account for any taxable year the sum of the rent that accrues during the year under the *IRC Section 467* rules and the interest for the year on the unpaid amounts that were taken into account under *IRC Section 467* for prior taxable years. n103

If the lease is a Section 467 rental agreement, one of two sets of rules applies to determine the landlord's accrued rental income. If the agreement is one in which deferred rent is to be paid after the year to which the payment relates, rent must be accrued under the economic rent accrual rules. n103.1 If the agreement is one in which there are rent increases over the term of the lease and a principal purpose for providing increasing rents under the agreement is the avoidance of income tax, then rent must be accrued under the constant rent accrual rules. n103.2

The primary purpose of *IRC Section 467* is to ensure a matching in the reporting of income and expenses by landlords and tenants in order to curb timing abuses that can otherwise occur when a landlord is on the cash method of accounting and a tenant is on the accrual method and to prevent an acceleration or deferral of rental income and expense when one party to the lease is tax sensitive and the other is not (for example, because it has substantial net operating losses). Another purpose is to prevent a building owner from effectively converting ordinary income into capital gain (which is taxed at a lower maximum rate). n104 This could occur if low rents are permitted in the earlier years of a lease, followed by higher rents in later years that in part represent deferred rents attributable to the earlier years. These higher deferred rents would likely be taken into account by a prospective purchaser of a building and result in an increase in the selling price of the building. This scheme would, in effect, convert what would have been rental income into an increase in the selling price. The increased gain from the increased selling price could be taxed at the more favorable capital gains rate.

[b] *IRC Section 467* Rental Agreement Defined

A Section 467 rental agreement is a rental agreement for the use of tangible property (including real estate) under which: (1) there is at least one amount allocable to the use of the property during a calendar year which is to be paid after the close of the calendar year following the year in which such use occurs; or (2) there are increases or decreases in the amount of rent to be paid under the agreement. n105 A Section 467 rental agreement does not, however, include any lease involving total payments of \$250,000 or less. n106

[c] Increasing or Decreasing Rents

Regulations provide several rules regarding increasing and decreasing rents. A rental agreement has increasing or decreasing rent if the annualized fixed rent n106.1 allocated to any rental period exceeds the annualized fixed rent allocated to any other rental period in the lease term. n106.2 In determining whether a rental agreement has increasing or decreasing rent, however, a rent holiday of three months or less at the beginning of the lease term is disregarded. n106.3

The amount of fixed rent allocated to a rental period is the amount specifically allocated to that period by the rental agreement or, if there is no specific allocation, the amount of fixed rent payable during that period. n106.4

Example:

A and B enter into a rental agreement that provides for the lease of property to begin on January 1 of Year 1, and end on December 31 of Year 4. The rental agreement provides that rent of \$100,000 accrues during each year of the lease term. Under the rental agreement, no rent is payable during Year 1, a payment of \$100,000 is to be made on December 31 of Year 2 and Year 3, and a payment of \$200,000 is to be made on December 31 of Year 4. A and B both select the calendar year as their rental period. Thus, the amount of rent allocated to each rental period is \$100,000. Therefore, the rental agreement does not have increasing or decreasing rent. n106.5

A rental agreement has increasing or decreasing rent if it requires (or may require) the payment of contingent rent, other than contingent rent that is contingent due to specified reasons. The existence of rent that is contingent as the result of one or more of the following provisions is disregarded in determining if a rental agreement has increasing or decreasing rent: n106.6

- (1) A qualified percentage rents provision under which rent is based on the lessee's receipts or sales; n107
- (2) An adjustment based on a reasonable price index; n108
- (3) A provision requiring the lessee to pay third-party costs such as real estate taxes, insurance premiums, and maintenance costs; n109
- (4) A provision requiring the payment of late payment charges; n110
- (5) A loss payment provision for damaged or destroyed property; n111
- (6) A qualified terminal rental adjustment clause (TRAC) provision; n112
- (7) A residual condition provision requiring payments based on the condition of the property at the end of the lease term; n113
- (8) A tax indemnity provision; n113.1
- (9) A variable interest rate provision based on changes in interest rates on the lessor's indebtedness; n113.2 or
- (10) Any other provision provided in regulations or other published guidance issued by the Commissioner, but only if the provision is designated as contingent rent to be disregarded for purposes

of this regulation.

Note:

At present, Treasury has not provided guidance on the tax treatment of contingent rent under *IRC Section 467*. Treatment of contingent rent will eventually be covered under *Regulations Section 1.467-6*, which is now reserved.

[d] Deferred and Prepaid Rent

A rental agreement has deferred rent if the cumulative amount of rent allocated as of the close of a calendar year exceeds the cumulative amount of rent payable as of the close of the succeeding calendar year. n113.3 A rental agreement has prepaid rent if the cumulative amount of rent payable as of the close of a calendar year exceeds the cumulative amount of rent allocated as of the close of the succeeding calendar year. n113.4

Example:

A and B enter into a rental agreement that provides for the lease of property to begin on January 1 of Year 1, and end on December 31 of Year 4. The rental agreement provides that rent of \$100,000 accrues during each year of the lease term. Under the rental agreement, no rent is payable during Year 1, a payment of \$100,000 is to be made on December 31 of Year 2 and Year 3, and a payment of \$200,000 is to be made on December 31 of Year 4. A and B both select the calendar year as their rental period.

In this example, there is no deferred rent. The rent allocated to Year 1 (\$100,000) does not exceed the cumulative rent payable as of December 31 of Year 2 (\$100,000); the rent allocated to Year 2 and preceding years (\$200,000) does not exceed the cumulative rent payable as of December 31 of Year 3 (\$200,000); the rent allocated to Year 3 and preceding years (\$300,000) does not exceed the cumulative rent payable as of December 31 of Year 4 (\$400,000); and the rent allocated to Year 4 and preceding years (\$400,000) does not exceed the cumulative rent payable as of December 31 of Year 5 (\$400,000). Therefore, because the rental agreement does not have increasing or decreasing rent (see § 4.02[3][c], above) and does not have deferred or prepaid rent, it is not a Section 467 rental agreement. n113.5

[e] Substantial Modification of Rental Agreement

If a substantial modification of a rental agreement occurs after June 3, 1996, the post-modification agreement is generally treated as a new agreement for purposes of determining whether the agreement is a Section 467 rental agreement or a disqualified leaseback or long-term agreement and for purposes of applying the effective date provisions of the final regulations. n113.6 In the case of a transfer of leased property by a lessor or a substitution of a lessee, the transfer or substitution will be treated as a substantial modification only if a principal purpose of the transaction is the avoidance of federal income tax. n113.7 In making this determination, the safe harbors and other principles that generally apply in tax avoidance determinations are taken into account and the Commissioner may treat the post-modification agreement as a new agreement or treat the entire agreement (as modified) as a single agreement. n113.8

In determining whether a modified agreement is a Section 467 rental agreement, or a disqualified leaseback or long-term agreement, the modified agreement is considered to consist only of the terms that relate to the post-modification items. n113.9 However, if the principal purpose of the modification is to avoid the purpose or intent of *IRC Section 467* or regulations thereunder, the Commissioner may treat the entire agreement (as modified) as a single agreement for purposes of *IRC Section 467*. The post-modification agreement, notwithstanding its treatment as a new agreement, will be characterized, in certain cases, in the same manner as the agreement in effect before the modification. For example, if an agreement was a leaseback or was subject to constant rental accrual before its

modification, the post-modification agreement will generally be treated as a leaseback or as subject to constant rental accrual. Similarly, if the agreement was a long-term agreement before its modification and the entire agreement (as modified) is a long-term agreement, the post-modification agreement will be treated as a long-term agreement. n113.10

In accounting for the effects of a substantial modification, the lessor and lessee must take pre-modification items into account under the method of accounting used before the modification. Pre-modification items generally include rent for periods before the modification, interest thereon, and payments allocable thereto, whether made before or after the modification. n113.11 In computing Section 467 rent, Section 467 interest, and the amount of a Section 467 loan with respect to post-modification items, only post-modification items are taken into account. In addition, the parties to the agreement are required to take into account adjustments necessary to prevent duplications and omissions resulting from the modification. n113.12

In the case of a modification that is not substantial, Section 467 rent and interest for periods affected by the modification are determined under the terms of the entire agreement, as modified. In addition, the parties to the agreement are required to recompute the balance of the Section 467 loan under the new terms and to take into account (as either additional rent or a reduction in rent previously taken into account) the change in the loan balance resulting from the modification. They are also required to take into account any amount necessary to prevent duplications or omissions resulting from the modification. n113.13

In determining whether a substantial modification of a lease has occurred, principles applicable to modifications of debt instruments n113.14 are applied. All facts and circumstances are examined to determine whether a substantial modification has occurred. n113.15 Specific criteria for making this determination are not provided in the regulations, but to ensure that relatively insubstantial changes to the terms of a lease agreement and changes that do not implicate the policies of *IRC Section 467* are not treated as substantial modifications under this rule, safe harbors have been added. n113.16

In general, the modifications that are likely to affect the character of a rental agreement for purposes of Section 467 are those that change the amount of timing of rent allocated or rent payable for the use of the property, or the identity of the property taking those amounts into account. Thus, a substantial modification will not result from changes in any provision for the payment of third-party costs or any other provision that is ignored for purposes of determining whether the agreement provides for contingent rents. n113.17 In addition, the refinancing of a lessor's indebtedness on a leveraged lease will generally not be treated as a substantial modification of the lease, subject to compliance with certain conditions and limitations. These conditions and limitations are intended to permit refinancing to avoid classification as a substantial modification in circumstances where the primary objective of the lessee is to take advantage of favorable changes in interest rates. n113.18

A *de minimis* safe harbor also applies. A modification of a rental agreement is not substantial if it is a change in the amount of fixed rent allocated to a rental period that, when combined with all previous changes in the amount of fixed rent allocated to the rental period, does not exceed one percent of the fixed rent allocated to that rental period prior to the modification. n113.19

In the case of a transfer of leased property by a lessor or a substitution of a lessee, the transfer or substitution will be treated as a substantial modification only if a principal purpose of the transaction is the avoidance of federal income tax. n113.20 In making this determination, the safe harbors and other principles that generally apply in tax avoidance determinations are taken into account and the Commissioner may treat the post-modification agreement as a new agreement or treat the entire agreement (as modified) as a single agreement. n113.21

[f] Section 467 Rent

The Section 467 rent for a taxable year is the sum of the following: n113.22

- (1) The fixed rent for any rental periods that begin and end in the tax year;
- (2) A ratable portion of the fixed rent for other rental periods beginning or ending in the tax year; and
- (3) Any contingent rent that accrues in the tax year.

The amount of fixed rent for a rental period depends on the terms of the rental agreement and is either the amount of fixed rent allocated to the period under the agreement, the constant rental amount, or the proportional rental amount. n113.23

[g] Economic Rent Accrual

When a Section 467 rental agreement is one in which deferred rent is to be paid after the year to which the payment relates (and one that does not involve increasing rents over the term of the lease with a tax avoidance purpose), economic accrual rules are used to determine the amount of rent that accrues during the year. Both the landlord and the tenant must use the economic accrual rules. n114

In general, rent accrues in accordance with the allocation of rents set forth in the provisions of the lease agreement. n115 Any rent for a period that is to be paid after the close of that period must be accrued by both the landlord and the tenant, based on the present value of the deferred payments. n116 Finally, interest for the year must be taken into account on amounts that were taken into account under Section 467 for prior taxable years and that are unpaid. n117

For purposes of computing present value and interest, the interest rate to be used is equal to 110 percent of the applicable Federal rate, compounded semiannually. The applicable Federal rate is the rate in effect at the time the agreement is entered into with respect to debt instruments having a maturity equal to the term of the agreement. n118 Regulations set forth rules for determining the amount of interest allocable to a taxable year, n119 as well as computation rules for rental agreements that provide for variable interest rates. n120

[h] Constant Rental Accrual Rules Generally

When a lease is characterized as a Section 467 rental agreement because it involves increasing rents over the term of the lease and has a tax avoidance purpose, constant rental accrual rules are used to determine the amount of rent that accrues during the year. Both the landlord and the tenant must use the accrual rules. n121 Rules comparable to those for increasing rents are also to be used when a rental agreement calls for decreasing payments over the term of the lease. n122 Regulations describe the circumstances in which a rental agreement is deemed to have increasing or decreasing rents that may bring it within the ambit of the constant rental accrual rules. n123

Under the constant rental accrual rules, rental income is deemed to accrue to the landlord in equal amounts for each lease period. This "constant rental amount" is determined by computing the present value of the stream of payments required under the lease and converting this present value to a level payment stream over the lease term. n124

Calculation of rent under the constant-rental accrual method is demonstrated in the following example.

Example:

A five-year lease agreement provides for rent of \$500,000, payable at the end of the fifth year. Assume that 110% of the applicable federal rate compounded semiannually is 8.82%. The constant-rental amount, therefore, is the amount the lessee would have to deposit at the end of each year into an account bearing interest at an effective annual rate of 8.82% to have \$500,000 at the end of the fifth year. Under

1-4 Federal Taxes Affecting Real Estate § 4.02

these conditions, the following amounts result:

Year	Rent	Interest	Total
1	\$ 83,846	\$ --	\$ 83,846
2	83,846	7,395	91,241
3	83,846	15,441	99,288

Absent the rules under *IRC Section 467*, an accrual-basis lessee might accrue and deduct \$100,000 rental expense each year, while a cash-basis lessor would not recognize rental income until the \$500,000 was paid in the fifth year. Now, however, under *IRC Section 467*, the lessor and the lessee must annually take the constant-rental amount and the imputed interest into account in determining taxable income, regardless of their overall tax accounting methods. n124.1 Regulations provide rules for determining whether there is adequate interest on fixed rent when a rental agreement has both deferred and prepaid rent. n124.2

[i] Rental Agreements to Which Constant Rental Accrual Rules Apply

The constant rental accrual rules apply only if: (1) the Section 467 rental agreement does not provide for the allocation of rents to specific periods; or (2) the agreement constitutes a "disqualified leaseback or long-term agreement." n125 Constant rental accrual may not be used in the absence of a determination by the Commissioner that the rental agreement is disqualified. The Commissioner, rather than parties to the rental agreement, must make that determination. The determination may be made either on a case-by-case basis or in regulations or other guidance published by the Commissioner providing that a certain type or class of leaseback or long-term agreement will be treated as disqualified and subject to constant rental accrual. n125.1

Planning Note:

Although constant rental accrual may be used only if the Commissioner determines that a rental agreement is disqualified, n125.2 taxpayers wishing to accrue rent in accordance with a constant rental accrual method may in effect do so by providing for an allocation schedule in their rental agreement with tax consequences that approximate the use of the constant rental accrual method. n125.3

It is not always clear whether a payment schedule in a lease constitutes an allocation of rents. Regulations clarify that a rental agreement specifically allocates rent to a specific period if: (1) it unambiguously specifies, for periods no longer than a year, a fixed amount of rent for which the lessee becomes liable on account of using the premises during that period; and (2) the total amount of fixed rent specified is equal to the total amount of fixed rent payable under the lease. A rental agreement stating only when rent is payable does not specifically allocate rent. n126

Beyond this, however, there is little guidance on what constitutes a valid allocation for purposes of *IRC Section 467*. A provision in a lease providing that rent is due in a fixed amount on certain dates has been found sufficient to constitute an allocation of rents, n127 as has a lease provision merely specifying the amount of escalating rents due during the

various years of a 20-year lease. n128

A disqualified leaseback or long-term agreement is any Section 467 rental agreement if: (1) the agreement is part of a leaseback transaction n128.1 or provides for a lease term in excess of 75 percent of the statutory recovery period for the property (not including extensions solely at the option of the lessee); n128.2 and (2) a principal purpose for providing increasing or decreasing rents under the agreement is the avoidance of federal income tax. n129

A "leaseback transaction" is a leaseback to a person who had an interest in the property at any time within the two-year period before the leaseback, or a person related to a person who had such an interest. n131 For purposes of the above 75-percent test, the statutory recovery period for residential rental property and nonresidential real property is 19 years, even if the property is not depreciable under *IRC Section 168*. n132 Therefore, any lease of real property with a term of over 14 years and three months (75 percent of 19 years) may be a disqualified leaseback or long-term agreement if a principal purpose for increasing rents under the agreement is tax avoidance. n133 An agreement entered into after July 18, 1999 may be a disqualified leaseback or long-term agreement regardless of the amount of rental payments and other consideration it requires. n133.1 For leases entered into before July 19, 1999, however, a rental agreement cannot be treated as a disqualified leaseback or long-term agreement unless it requires more than \$2 million in rental payments and other consideration. n133.2

The "lease term" refers to the period during which the lessee has use of the property subject to the rental agreement, including any option of the lessor to renew or extend the term of the agreement. An option of the lessee to renew or extend the term of the agreement is included in the lease term only if it is expected, as of the agreement date, that the option will be exercised. For this purpose, a lessee is generally expected to exercise an option if, for example, as of the agreement date the rent for the option period is less than the expected fair market value rental for that period. The lessor's or lessee's determination that an option period is either included in or excluded from the lease term is not binding on the Commissioner. If the lessee (or a related person) agrees that one or both of them will or could be obligated to make payments in the nature of rent n133.3 for a period when another lessee (the substitute lessee) or the lessor will have use of the property subject to the rental agreement, the Commissioner may, in appropriate cases, treat the period when the substitute lessee or lessor will have use of the property as part of the lease term. n133.4

A combination of substantive guidance of tax avoidance and safe harbors are provided in regulations to permit taxpayers to determine more readily whether their leasebacks or long-term agreements will be determined to be disqualified by the Commissioner. n133.5 All relevant facts and circumstances are taken into account in determining whether a principal purpose for providing increasing or decreasing rent is the avoidance of Federal income tax. n133.6

The substantive guidance focuses on the tax rates of the lessor and lessee. If a significant difference between the marginal federal income tax rates of the lessor and lessee can reasonably be expected at some time during the lease term, the agreement will be closely scrutinized, and clear and convincing evidence will be required to establish that tax avoidance is not a principal purpose for providing increasing or decreasing rent. n133.7

In determining whether there is a significant difference in marginal tax rates of the lessor and lessee, the marginal tax rates are determined not only by reference to the federal income tax status of the taxpayer (i.e., as a corporation, partnership, or individual), but also to the specific circumstances of the taxpayer. n133.8 Thus, if a corporation either is subject to the alternative minimum tax (AMT) or has available net operating losses (NOLs) or credits to carry forward from an earlier tax year, its marginal tax rate will differ from other corporations not subject to the AMT and not having available NOLs or credits. Further, in the case of S corporations or partnerships, the marginal tax rate is determined by taking into account the amounts of income or deduction allocable to their shareholders or partners, and the marginal tax rates of the shareholders or partners. n133.9

Pursuant to statutory directive, n133.10 regulations include several safe harbors under which agreements will not be treated as disqualified leaseback or long-term agreements. n133.11 The failure to meet one of the safe harbors, however,

does not alone cause an agreement to be treated as one in which tax avoidance was a principal purpose for providing increasing or decreasing rent, and therefore a disqualified leaseback or long-term agreement. n133.12 Tax avoidance is not considered a principal purpose for providing increasing or decreasing rent, and a rental agreement will not be treated as a disqualified leaseback or long-term agreement if either of two safe harbors is met: n133.13

- (1) The uneven rent test is met (see *Regulations Section 1.467-3(c)(4)*); or
- (2) The increase or decrease in rent is wholly attributable to one or more of the following provisions:
 - (a) A permissible contingent rent provision; n133.14 or
 - (b) A single rent holiday provision allowing reduced rent (or no rent) for one consecutive period during the lease term, but only if: (1) the rent holiday is for a period of no more than 3 months at the beginning of the lease term and for no other period; or (2) the duration of the rent holiday is reasonable, as determined by local commercial practice as of the agreement date, and does not exceed the lesser of 24 months or 10 percent of the lease term. Rent holidays of up to a year have been considered reasonable under local commercial practice. n133.15

The "uneven rent test" referred to in the first safe harbor above is met if the rents allocable to each calendar year of the lease do not vary from the average annual rents over the entire lease term by more than 10 percent. n133.16 For long-term leases of real estate, a 15-percent variance is permitted. n133.17 A number of "operating rules" apply in determining whether the uneven rent test has been met: n133.18

- (1) Contingent rent attributable to permissible contingent rent provisions is disregarded, as discussed below;
- (2) If the lease term includes one or more partial calendar years, the average rent allocated to each calendar year is the total rent allocated under the rental agreement, divided by the actual length (in years) of the lease term. The rent allocated to a partial calendar year must be annualized;
- (3) For non-real estate rental agreements, an initial rent holiday period and rent allocated to it are disregarded under the uneven rent test if taking that period and rent into account would cause the agreement to fail the uneven rent test;
- (4) For real estate rental agreements, one qualified rent holiday period and any rent allocated to it are disregarded if taking that period and rent into account would cause the agreement to fail the uneven rent test. For this purpose, a qualified rent holiday period is a consecutive period that is an initial rent holiday period or that meets the following requirements:
 - (a) It does not exceed the lesser of 24 months or 10 percent of the lease term,
 - (b) Annualized fixed rent during the period is less than the average rent allocated to all calendar years, and
 - (c) Providing less than average rent for the period is reasonable under local commercial practice; and
- (5) If the rental agreement contains a variable interest rate provision, the uneven rent test is applied by treating the rent as having been fixed under the terms of the rental agreement for the entire lease term

using fixed rate substitutes for the variable rates of interest provided under the terms of the lessor's indebtedness.

Under the second safe harbor above, permissible contingent rent provisions that are allowed to increase or decrease rent without disqualifying the rental agreement include the following: n133.19

- (1) A qualified percentage rents provision under which rent is based on the lessee's receipts or sales; n133.20
- (2) An adjustment based on a reasonable price index; n133.21
- (3) A provision requiring the lessee to pay third-party costs such as real estate taxes, insurance premiums, and maintenance costs; n133.22
- (4) A provision requiring the payment of late payment charges; n133.23
- (5) A loss payment provision for damaged or destroyed property; n133.24
- (6) A qualified terminal rental adjustment clause (TRAC) provision; n134
- (7) A residual condition provision requiring payments based on the condition of the property at the end of the lease term; n135
- (8) A tax indemnity provision; n136
- (9) A variable interest rate provision based on changes in interest rates on the lessor's indebtedness; n137 or
- (10) Any other provision provided in regulations or other published guidance issued by the Commissioner, but only if the provision is designated as contingent rent to be disregarded for purposes of this regulation.

[j] Recapture Rule

If a Section 467 rental agreement is governed by the economic rental accrual rules n138 and not the constant rental accrual rules applicable to disqualified leaseback or long-term agreements, n139 a recapture rule applies if the lessor disposes of the property during the term of the agreement. Under the recapture rule, the "recapture amount" is treated as ordinary income. n140 This treatment reflects a tax policy conclusion that a portion of the sales proceeds is paid for cash flow from rent that is attributable to pre-sale periods but will be collected in post-sale periods.

The recapture amount is the amount of taxable gain (not treated as ordinary income under other recapture provisions), but not in excess of the "prior understated inclusions." n141 The prior understated inclusions are the excess (if any) of the amount that would have been reported as rental income under the constant rental accrual rule for the periods before the disposition over the amounts actually reported. n142 Regulations detail the computation of the recapture amount, provide exceptions to the recapture rule for dispositions by gift, transfers at death, and certain tax-free transactions, and set forth additional disposition rules. n143

[4] Security Deposits

[a] In General

Many leases require the lessee to provide a security deposit to the lessor to guarantee faithful performance of the terms of the lease. A security deposit is property, usually a sum of money or a letter of credit, deposited by a tenant with a landlord to secure the tenant's performance of obligations under a lease. It may be made to secure the tenant's rental payments, maintenance and repairs required of the tenant, the improvement or restoration of the leased premises, or any of the tenant's other obligations under the lease. The landlord is required to repay the deposited security to the tenant at some future time if the tenant meets all the obligations secured, although the landlord may generally use without restriction any money deposited. Alternatively, a lease may require a tenant to make advance payment of rent, which may serve the same function as a security deposit. Security deposits and payments of advance rent are treated quite differently for tax purposes. n144

A security deposit is not included in the landlord's gross income when received; n145 instead, it is included in gross income only if and when the landlord's obligation to return the deposit to the tenant is terminated. n146 A landlord may not offset its income from the tenant's forfeiture of a security deposit after the cancellation of a lease against a "loss" from future rents that it will not collect as a result of the termination of the lease. n147

If the tenant agrees to forfeit the security in exchange for an early lease cancellation, the security is included in the landlord's gross income at the time of the cancellation. The amount includable in gross income may depend on whether the landlord was required to pay interest on the security deposit during the lease term. If interest is paid, the amount included is the amount of security received, or the face amount of the obligation to repay that amount at the end of the lease term. n148 However, if no interest on the security deposit is paid during the lease term, two cases indicate that the amount included in gross income is the present value of the obligation to repay the amount of the security deposit. This would obviously be less than the actual amount of security initially received. n149 The IRS does not acquiesce in this result, and would hold that the entire amount of the security initially received is included in the landlord's gross income at the time of cancellation. n150

Landlords should be certain to document and account for security deposits properly, to avoid recognition of income on receipt. n151 Landlords are also frequently required by local landlord-tenant laws to account carefully for security deposits.

Prepaid rent, of course, is includable in a cash basis lessor's gross income upon receipt. n152 This is true even if, under some circumstances, a refund of the amount may be required. If, however, the sum received is deposited to secure the lessee's performance under a lease and is to be returned at the expiration of the lease, it is not includable in gross income even though the fund is deposited with the lessor and the lessor has temporary use of the money. n153

It is also important from a tenant's perspective to distinguish between a security deposit and a payment of rent (including advance rent). A security deposit may be deducted only in the tax year in which the amount is treated as rent. This occurs when the deposit is forfeited or becomes nonrefundable. n154 The rationale is that contributions to a reserve for contingent future liabilities are not deductible. n155

[b] Security Deposit Distinguished From Advance Rental

The determination whether a payment is a nontaxable security deposit or a taxable advance rental depends on how provisions of the lease treat the payment. n156 The mere labeling of a payment as a security deposit in the lease is relevant, but not dispositive. More important are the terms and conditions in the lease that attach to the payment and the intent of the parties with respect to the payment, as reflected in the lease terms. n157

If the landlord is under no obligation to return a payment to a tenant, the payment will be treated as advance rent. n158 Moreover, if there is a repayment obligation, but the conditions under which the amount is to be repaid to the tenant are limited, unlikely to occur, or under the control of the landlord, the payment is also likely to be characterized as an

advance rent. n159 In contrast, if the lease sets forth reasonable conditions and terms that the payment is to secure, and provides that the payment will be returned to the tenant absent default on those conditions, the payment is more likely to be treated as a security deposit. These conditions can include requirements to stay for the entire lease term and to properly maintain and care for leased property. n160

In some instances, a payment serves dual functions, both as security for a tenant's performance under a lease, and with any amount remaining during the final period of the lease to be applied to rent. The characterization of such a bifurcated payment depends on whether the payment is primarily intended as a security deposit or is primarily intended as an advance payment of rent. The primary purpose of the payment is a question of fact determined by reference to the intentions and acts of the parties as ascertained from the lease agreement and related circumstances. n161 A payment that is intended primarily to secure only payment of rent is normally considered to be advance rent, and not a security deposit. n162 In contrast, a payment made primarily to secure the performance of other lease covenants by a tenant n163 or to secure a property interest n164 is a security deposit. The mere possibility that a payment will be applied to the tenant's last year's rent does not preclude that payment from being a security deposit. n165

The more recent and frequently stated rule is that a landlord's ability to freely use a payment until such time as it must be repaid does not influence whether that payment is a security deposit or advance rent. In this situation, the acknowledged liability of the landlord to account for the deposited sum on the tenant's performance of lease conditions prevents the payment from being treated as advance rent. n166 This rule supersedes earlier cases that somewhat rigidly applied the "claim of right" doctrine and held that a landlord's temporary unrestricted use of a deposit rendered the payment taxable as advance rent. n167 A landlord's obligation to segregate a payment or hold it in trust or escrow is of little, if any, weight in determining whether the payment is a security deposit. n168 An obligation by a landlord to pay interest on a payment may be an indication that a payment is a security deposit rather than advance rent. n169 Yet, if the payment's primary characteristic is that of an advance rent, the landlord's obligation to pay interest on that payment will not convert that payment into a security deposit. n170

[5] Option Proceeds

In a tight real estate market, a tenant may make a payment to its landlord for the right to extend a lease or to expand the area covered by the lease. Such a right should be characterized as an option granted by the landlord to the tenant, and the payment should be characterized as a payment for that option. Option proceeds are not taxable when received by either a cash-or accrual-basis taxpayer. Instead, taxation is deferred until the option either is exercised or lapses. n171 (See Chapter 6 for a more detailed discussion.)

[6] Lease Termination Proceeds

Any amount received by a landlord from a tenant for canceling a lease is ordinary income for the year in which it is received, since it is essentially a substitute for rental payments. n172 If the cancellation payment includes property, the amount includable in gross income is the fair market value of the property at the time of the cancellation. n173 Unavoidable expenses incurred by the landlord that are occasioned by the tenant's forfeiture of the lease--such as title abstract fees or attorney's fees--may be deducted from the amount received. n174

A taxpayer may not offset the value of the payments that would have been received under the cancelled lease against the consideration received for the cancellation of the lease, and thereby assert a capital gain or loss. n175 In addition to any direct payment by the tenant in cancellation of the lease, the landlord may also be allowed to retain any deposit held as security. If the forfeiture of the security is agreed to in exchange for an early lease cancellation, the security is included in the landlord's gross income as ordinary income at the time of the cancellation. (See § 4.02[4][a], *supra*.)

Payments made or obligations incurred by a tenant to its landlord to induce it to modify, extend or renew a lease are treated as advance rentals or bonus payments. n176 Similarly, an amount received by a landlord from a tenant for the

breach of a covenant in the lease is also taxable as ordinary income. n177 However, the value of any tenant improvements remaining on the leased property on termination of the lease is not treated as a lease cancellation payment, and is not includable in the landlord's gross income. n178

A tenant's payment for the release of its liability under the lease to make repairs to damaged property may be treated as a payment in exchange for property rather than as a lease cancellation payment. As such, the payment may be a tax-free recovery of capital to the landlord n179 or (to the extent the amount exceeds the basis of the property) a capital gain. n180

If the lessor sells the leased property to the lessee, thereby effectively canceling the lease, the proceeds are taxed as a sale and not as lease cancellation proceeds, even when the lessee assumes the lessor's mortgage and makes past-due payments. n181

[7] Debt Forgiveness and Cancellation

Quite often in the real estate industry, a creditor may cancel a portion of a debt relating to a troubled real estate project. The business reason for the cancellation will generally be the fact that it will induce the debtor to turn control of the real estate over to the lender voluntarily, thus avoiding a time consuming and expensive foreclosure.

The discharge or cancellation of a debt generally results in gross income to the debtor, n182 unless, for example, the forgiveness occurs in a donative transaction, in which case it is treated as a gift. Income from the discharge of indebtedness is excluded from gross income in the following circumstances: n183

- (1) the discharge occurs in a Title 11 bankruptcy case;
- (2) the discharge occurs when the taxpayer is insolvent;
- (3) the indebtedness discharged is qualified farm indebtedness; n184
- (4) for taxpayers other than C corporations, the indebtedness discharged is qualified real property business indebtedness; n185 or
- (5) the indebtedness discharged is qualified principal residence indebtedness. n186

In a partnership, the eligibility for discharge of indebtedness exclusions is determined at the partner level. n187 Partner guarantees made in connection with partnership activities may also be entitled to the above exclusions. n188 If the debt that is forgiven is owed to a seller of the property by the purchaser, and the debt arose from the purchase transaction, (and assuming that the cancellation does not occur in a Title 11 or insolvency situation), then the cancellation is not included in gross income, but instead is treated as an adjustment to the purchase price. n189 Therefore, in this situation, the buyer-debtor may be able to reduce the basis of an asset that is not depreciable, such as land, and if the property is later sold at a gain, and does not yield ordinary income on the sale. However, this "purchase price" rule only applies to the original purchasers; it is not available if the property has been subsequently transferred.

Notwithstanding the narrow scope of *IRC Section 108(e)(5)*, some older cases hold that if a nonrecourse loan incurred to acquire a specific property is forgiven, and if the amount of the loan is greater than the fair market value of the property, the forgiveness is excluded from income and the basis of the property is correspondingly reduced, whether or not the owner is the original purchaser. n190 (See Chapter 12.) However, the Service rejects this analysis and contends that the older cases have implicitly been overruled. n191 The Service has issued a ruling setting forth its disagreement with the older cases. n192 The ruling addresses the tax consequences to a debtor upon the reduction of the principal on an undersecured nonrecourse debt held by a non-purchase-money creditor (the creditor was not the seller of the property

secured by the debt). The ruling holds that the debtor may not simply reduce his basis in the property but must realize discharge of indebtedness income under *IRC Section 61(a)(12)*. n193

Revenue Ruling 91-31 does not address the treatment of nonrecourse indebtedness in applying the insolvency exclusion in *IRC Section 108*. In a separate ruling, the IRS has ruled that the amount by which a nonrecourse debt exceeds the fair market value of the property securing the debt is taken into account in determining whether, and to what extent, a taxpayer is insolvent under *IRC Section 108(d)(3)*, but only to the extent that the excess nonrecourse debt is discharged. n194 n195-197

Example:

In Year 1, A borrows \$1 million from C and signs a note payable to C for that amount. The note bears interest at a fixed market rate payable annually. The note is secured by an office building valued in excess of \$1 million that A acquires from B with the proceeds of the note. A is not personally liable on the note. In Year 2, when the value of the building is \$800,000 and the outstanding principal on the note is still \$1 million, C agrees to modify the terms of the note by reducing the note's principal amount to \$825,000. The modified note bears adequate stated interest within the meaning of *IRC Section 1274(c)(2)*. At the time of the modification, A's only other assets have an aggregate fair market value of \$100,000, and A is personally liable to D on other indebtedness in the amount of \$50,000.

In this situation, \$175,000 of A's \$200,000 excess nonrecourse debt is discharged and, therefore, that portion of the excess nonrecourse debt is taken into account in determining whether, and to what extent, A is insolvent under *IRC Section 108(d)(3)*. Thus, A has liabilities of \$1,025,000, consisting of the \$50,000 for which A is personally liable, plus the portion of the nonrecourse debt equal to the sum of the \$800,000 fair market value of the property securing the nonrecourse debt and the \$175,000 of excess nonrecourse debt that is discharged. Because A's \$1,025,000 of liabilities exceed the \$900,000 of A's assets (\$800,000 plus \$100,000) by \$125,000 immediately before the indebtedness is discharged, A is insolvent to the extent of \$125,000. Accordingly, under *IRC Section 108(a)(1)(B)* and *108(a)(3)*, A must include on \$50,000 of the \$175,000 of discharged indebtedness (\$175,000 - \$125,000) in income under *IRC Section 61(a)(12)*.

[8] Recharacterizations and Constructive Receipt of Rents

The Service may recharacterize amounts designated as "rents" if it finds that the underlying transaction is a sale of property rather than a lease. This is likely to occur if the tenant is acquiring an equity or ownership interest in the leased property. n198 It can also occur in a lease with a later option to purchase, especially if the "rents" called for are inflated, and the option purchase price is unreasonably low. In that case, the Service may collapse the entire lease-option contract and treat the entire transaction as a sale. Amounts designated as rents may be recharacterized as installment payments on the sale of the property and taxed accordingly. n199

Other recharacterizations of "rent" are also possible, usually when a lease is between related parties or involves a rent that is unreasonably high or low. Excessive rents paid by a controlled corporation to a shareholder-landlord, for example, may be recharacterized as constructive dividends n200 or, if the shareholder is also an employee, as compensation. n201

Similarly, if a corporation rents out property to shareholders rent-free or at a below-market rent, the excess of the fair rental value over the amount of rent paid may be treated as a corporate distribution, taxable as a dividend to the shareholder. n202

Excessive rents paid by a shareholder to a controlled corporation may be recharacterized by the Service as a

contribution to capital. n203

Rents also may be reallocated among parties to reflect the true substance of a transaction. When there is a reservation-of-rents clause connected with a sale of rental property, for example, rents purportedly reserved to a seller of property may be reallocated as rental income to the purchaser. This reallocation occurs if the amounts reserved are, in substance, part of the consideration paid for the acquisition of property. The rent is treated as income to the purchaser that is then paid over to the seller as part of the purchase price. n204

The Service may also find a taxpayer in constructive receipt of rent even if no rent is actually paid. Any income, including rental income, is constructively received if it is credited to a taxpayer's account, set apart, or otherwise made available to the taxpayer without restriction. n205 In a close corporation context, constructive receipt of rental income has been found when a corporation fails to pay rent to a controlling shareholder. Rental income is considered "otherwise made available" if a controlling shareholder has both the right and power to obtain the rent, and there are sufficient funds to pay the rent. n206 Even the lack of ready cash to pay rent does not prevent constructive receipt if the corporation has the ability to borrow funds necessary for payment. n207 The accrual of a rental expense on the books of an accrual basis closely-held corporation is considered evidence of constructive receipt of rental income by a shareholder-landlord of the corporation. n208

[9] Self-Employment Tax and Rentals From Real Estate

Rentals from real estate and deductions attributable to them are not generally included in a taxpayer's net earnings from self employment unless they are received in the course of a trade or business as a real estate dealer. n208.1 Payments received under the Conservation Reserve Program n208.2 have been held not to be excludable as rentals from real estate for this purpose and, therefore, are subject to the self-employment tax. n208.3

Rentals from real estate may be included in net earnings from self employment that are subject to the self-employment tax if the following two requirements are met: n208.4

(1) The rentals are derived under an arrangement between the owner or tenant and another individual under which the individual is to produce agricultural or horticultural commodities, and the owner or tenant is to materially participate in the production or management of those commodities.

(2) There is, in fact, material participation by the owner or tenant in the production or management of those commodities.

Under this standard, the Eighth Circuit in a consolidated appeal has reversed three Tax Court decisions, n208.5 and held that the mere existence of an arrangement requiring material participation in agricultural production does not automatically make rents under that arrangement subject to the self-employment tax. It therefore held that cash rent from the rental of farmland between spouses or from a husband and wife to the husband's corporation was not subject to the self-employment tax if market rates of rent were paid. The Eighth Circuit held that there had to be a nexus between the rents received by the taxpayers and the "arrangement" that required the landlords' material participation for the rents to be treated as "derived under" those arrangements, as required by *IRC Section 1402(a)(1)*. In other words, the mere existence of an arrangement requiring and resulting in material participation in agricultural production did not automatically transform rents received into self-employment income. Rather, it was only where the payment of those rents comprised part of such an arrangement that those rents could be said to "derive" from the arrangement. The Eighth Circuit stated that market-rate rents strongly suggested that a rental arrangement stood on its own as an independent transaction, and that it was not part of an "arrangement" for participation in agricultural production. n208.6

The Tax Court reached the same result in a later case, based on its finding that rent paid by a corporation to the taxpayer was a fair market rent; the court also found there was no nexus between that rent and employment arrangement with the

corporation, largely because of the obligation of the corporation to pay rent in any event, without regard to whether the taxpayers performed any activities. n208.6.1

In another case, however, the taxpayers weren't so lucky. The Tax Court held that rent received by the taxpayers from their corporation for use of a large hog barn was subject to the self-employment tax under *IRC § 1402(a)(1)*, primarily because there was no evidence that the rent paid was a fair market rent or that the taxpayers received compensation from their activities connected with the barn other than the rent. The rent the taxpayers received depended entirely on the number of hogs that were processed through the barn, and this depended on their performance of activities in connection with the barn. n208.6.2

[10] Payments Under Certain Cost-Sharing Conservation Programs

Unless a taxpayer elects not to have the exclusion apply, n208.6.3 the excludable portion of payments received under federal conservation programs set forth in *IRC Sections 126(a)(1) through (8)* is not included in gross income. n208.6.4 The excludable portion of payments received under a small watershed program administered by the Secretary of Agriculture may also be excluded from gross income if a determination is made that the program is substantially similar to the type of programs described in *IRC Sections 126(a)(1) through (8)*. n208.6.5 The excludable portion of State and local payments made to individuals primarily for the purpose of conserving soil, protecting or restoring the environment, improving forests, or providing a habitat for wildlife may also be excluded from gross income. n208.6.6 Any payment excluded from gross income cannot be added to the basis of the property, n208.6.7 and no deduction or credit is allowed with respect to any expenditure that is properly associated with an amount excluded from gross income. n208.6.8

The excludable portion of a payment is limited to the portion that (1) is determined by the Secretary of Agriculture to be made primarily for the purpose of conserving soil and water resources, protecting or restoring the environment, improving forests, or providing a habitat for wildlife, (2) does not substantially increase the income derived from the property, and (3) is not properly associated with a deductible expense. Payments in the nature of rent or compensation for services do not qualify for the exclusion. n208.6.9

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.03

§ 4.03 Deductibility of Expenses

Depreciation is covered separately in Chapter 5. This section focuses on expenses that are generally paid in cash. Expenses may be deducted only with respect to real property held in a trade or business or for the production of income. Deductions for otherwise deductible expenses will be denied if, for example, property held for rental purposes is occupied on a rent-free basis. n208.7

[1] Repairs and Maintenance Versus Capital Additions

[a] In General

Repairs and maintenance are expenditures that are intended to maintain the operating efficiency of an asset over its useful life. n209 Capital additions, however, are intended to add to the asset's value, extend its useful life, or adapt it to a different use. n210 The difference between maintenance and repairs (a difference that is of academic interest only) is that maintenance generally is continuing and designed to prevent disruption in service, whereas repairs usually occur in connection with a disruption in service. For example, the cost of lubricating the circulator pump in a hot water heating system is maintenance; the cost of fixing the unlubricated pump that has failed is repairs.

The distinction between repairs/maintenance, on the one hand, and capital expenditures, on the other hand, is much more significant. The Tax Court has described the test for distinguishing between deductible repair expenses and improvements that must be capitalized as the difference between "keeping" and "putting" a capital asset in good condition. n211 The Tax Court has also used a test (the *Plainfield-Union* test) for determining whether an expenditure is capital by comparing the value, use, life expectancy, strength or capacity of the property after the expenditure with the status of the property before the condition necessitating the expenditure. n211.1 A merely incidental expense is currently deductible, but if the repair is an improvement or replacement, or if it increases the property's value or substantially prolongs its useful life, it is capital in nature and is not deductible. n211.2 A repair in the nature of a replacement, to the extent that it arrests deterioration and appreciably prolongs the life of the property, must either be capitalized and depreciated or charged against a depreciation reserve. n211.3

Repair and maintenance expenses are deductible in the year paid or incurred, depending on the taxpayer's accounting method; capital expenditures, however, are additions to basis and, if the asset is depreciable, are recovered through depreciation deductions. Like other deductible expenses, repairs and maintenance must represent ordinary and necessary business expenses and must be incurred in connection with a trade or business n212 or in connection with property held

1-4 Federal Taxes Affecting Real Estate § 4.03

for the production of income. n213 In addition, any repair expenses must be substantiated. Failure to substantiate expenditures can result in a denial of the deduction altogether, or in a court's estimating the amount of the deduction (almost always to the taxpayer's detriment) under the *Cohan* rule. n214

Because it is often difficult to distinguish between a repair and a capital addition, taxpayers and the Service often disagree on the proper classification of the expenditures. Whether an expenditure may be deducted or must be capitalized is a question of fact. n214.1 The determination in any given case focuses less on harmonizing prior cases than on analyzing given facts and then engaging in a judicial line-drawing exercise. n214.2 The following tabulation shows how some general types of expenditures may be treated for tax purposes:

Type of Expenditure	 Repair	 Capital Addition
Roofing	Patching leaks and replacing a limited number of shingles	Adding new roof or replacing major portion of existing roof n214.3
Wiring	Mending or temporary replacements	New installations or general replacements
Plumbing	Mending and minor part replacements (washer, etc.)	Major replacements (pump) and rearrangements
Plastering and cementing	Filling cracks and holes	Installation, renovating, remodeling, earthquake retrofitting n214.4
Paving and resurfacing	Minor resurfacing; e.g., problems resulting from ice and cold weather damage	Initial installation and major resurfacing
Fire damage	Cleanup, removal, and temporary replacement	Modernization incident to restoration of former facilities
Mold remediation	Sealing off affected areas, removing dry wall, doors and fixtures, removing mold, installing new drywall, replacing electrical and plumbing fixtures, painting n214.5	Renovation of air conditioning and plumbing systems; roof replacement
Land clearing	Ordinary maintenance, brush clearing	Expenditures in preparation for farming

If repairs and capital additions are made simultaneously to the same item, it is important to keep records that properly distinguish between the two categories of expenditures. If the charges cannot be segregated, the Service may take the position that the entire expenditure is presumed to be a capital outlay. n215

The already unclear distinction between repairs and capital expenditures is made even murkier by the "general plan of rehabilitation" doctrine, which overlays the entire area. Under that doctrine, an expense that is incurred as part of a plan of rehabilitation, improvement or modernization must be capitalized and added to basis, even though the same expense, standing alone, would be currently deductible as a repair. Thus, to discern the proper tax treatment for an item, one needs to know both the nature of the particular expenditure and the overall framework (i.e., alone, or in conjunction with other items) in which it is made. n216 If, however, the renovation involves no substantial structural improvements, expenditures for repairs may still be currently deductible. n217 Whether a plan of rehabilitation exists and whether an item is a part of it are usually questions of fact to be determined by evaluating all surrounding facts and circumstances,

including the purpose, nature, extent and value of the work done. n218

[b] Environmental Cleanup Costs

[i] Expensing of Certain Environmental Remediation Costs Under *IRC Section 198*

Taxpayers may elect to currently deduct, rather than capitalize, qualifying environmental remediation expenditures incurred after August 5, 1997, in tax years ending after that date, n219 and before January 1, 2010. n220 The manner for making the election is specified in *Revenue Procedure 98-47*. n221 The deduction applies for purposes of both the regular tax and the alternative minimum tax. To qualify for the deduction, the expenditure must be incurred in connection with the abatement or control of hazardous substances at a qualified contaminated site. n222 In general, any expenditure for the acquisition of depreciable property used in connection with the abatement or control of hazardous substances at a qualified contaminated site does not constitute a qualified environmental remediation expenditure. However, depreciation deductions allowable for such property that would otherwise be allocated to the site under the principles set forth in *Commissioner v. Idaho Power Company* and *IRC Section 263A* are treated as qualified environmental expenditures. n223

For purposes of the expensing provision, hazardous substances generally are defined by reference to sections 101(14) and 102 of CERCLA, subject to additional limitations applicable to asbestos and similar substances within buildings, certain naturally occurring substances such as radon, and certain other substances released into drinking water supplies due to deterioration through ordinary use. n224 Effective for expenditures paid or incurred after 2005, n225 hazardous substances also include petroleum products. Petroleum products are defined by reference to *IRC Section 4612(a)(3)*, and thus include crude oil, crude oil condensates, and natural gasoline. n226

With respect to expenditures paid or incurred after December 21, 2000, n227 a qualified contaminated site means any area (1) that is held by the taxpayer for use in a trade or business or for the production of income, or which is property held as inventory or for sale to customers in the ordinary course of the taxpayer's trade or business; and (2) at or on which there has been a release (or threat of release) or disposal of any hazardous substance. n228 A qualified contaminated site does not include any site that is on, or proposed for, the national priorities list as in effect on December 21, 2000. n229 An area is treated as a qualified contaminated site with respect to expenditures paid or incurred during a tax year only if the taxpayer receives a statement from the appropriate State Agency of the State where the area is located that there has been a release (or threat of release) or disposal of hazardous waste substances. n230

Note:

Legislation enacted in 2000 eliminates the targeted area requirement for expenditures paid or incurred after December 21, 2000 and thereby expands eligible sites to include any site containing (or potentially containing) a hazardous substance that is certified by the appropriate State environmental agency. Nevertheless, general tax law principles regarding expensing versus capitalization of expenditures continue to apply to environmental remediation efforts not specifically covered under *IRC Section 198*. n231

With respect to expenditures paid or incurred before December 22, 2000, n232 a qualified contaminated site generally is any property that:

- (1) is held for use in a trade or business, for the production of income, or as inventory;
- (2) is certified by the appropriate state agency to be located within a targeted area; and

(3) contains (or potentially contains) a hazardous substance (so-called "brownfields"). n233

For purposes of pre-December 22, 2000 expenditures, n234 targeted areas generally include the following: n235
n236-238

- (1) empowerment zones and enterprise communities as designated under present law (including supplemental sites designated on December 21, 1994);
- (2) EPA sites announced before February 1, 1997, as subject to one of the 76 EPA Brownfields Pilots;
- (3) any population census tract with a poverty rate of 20 percent or more; and
- (4) certain industrial and commercial sites adjacent to the census tracts described in (3).

[ii] Environmental Cleanup Costs Not Subject to IRC Section 198

Editor's Note:

A current deduction is available in narrow circumstances for qualifying environmental remediation costs under IRC Section 198 paid or incurred before 2010. n239

IRC Section 198 does not apply to the vast majority of environmental cleanup costs. Furthermore, the availability of the deduction under IRC Section 198 does not create any inference about the proper tax treatment of remediation expenditures not covered by that provision. The proper tax treatment of most remediation expenditures is governed by statutes other than IRC Section 198--primarily IRC Sections 162, 165 and 263. Cases, rulings, and other IRS pronouncements regarding environmental remediation costs under those statutes continue to apply. These rules are discussed below.

The proper tax treatment of asbestos removal and other environmental cleanup costs that are not subject to *IRC Section 198* is somewhat unsettled. Whether a particular expense must be capitalized or may be currently expensed depends both on the particular expense involved and the overall context in which it is done--i.e., as part of a larger rehabilitation project. n239.1 The IRS takes a more restrictive view for environmental remediation costs incurred in connection with the production of inventory, and requires these costs to be capitalized as part of inventory costs under *IRC Section 263A*. n239.2

A lively debate over the treatment of environmental cleanup costs ensued from the release of controversial technical advice memoranda in 1992 and 1993 that held that most costs incurred in removing asbestos and remediating soil contaminated by polychlorinated biphenyls (PCBs) must be capitalized. n240 A 1994 ruling provides a more favorable result. In Technical Advice Memorandum 9411002, the taxpayer held a warehouse and related facilities for rental. The related facility included a boiler house containing equipment that was originally used to heat the warehouse. In order to secure a bank loan for expansion of its facility, the taxpayer was required by its lender to abate asbestos in the warehouse and boiler house. The taxpayer was further required to remove all asbestos-containing materials located within its boiler house. To that end, the taxpayer removed boilers and tanks that were contaminated by asbestos and completely cleared the boiler house of all additional asbestos-containing materials. Thereafter, the taxpayer converted the boiler room into a garage and office space, and leased it out.

The lender also required the taxpayer to abate the problem of exposed and damaged asbestos-containing pipe insulation located within its warehouse. Accordingly, the taxpayer retained an asbestos contractor to rewrap and encapsulate the damaged or punctured areas of asbestos-containing pipe insulation and to discard insulation that was too damaged to be rewrapped. Less than 25 percent of the total pipes in the warehouse required encapsulation. The encapsulation process

involved covering the areas of exposed or damaged insulation with a canvas and/or plastic wrapping and applying stainless steel belts and buckles to keep the wrapping in place. In addition, the contractor sealed damaged pipe ends and elbows with a plaster-like material. Upon completion of these procedures, the contractor performed air monitoring to check and certify that asbestos concentrations were at safe levels.

The taxpayer deducted the costs incurred in connection with its asbestos abatement activities in its warehouse and boiler house as an ordinary and necessary business expense. In Technical Advice Memorandum 9411002, the Service observed that the asbestos removal costs enabled the taxpayer to convert its boiler house into a garage and office space. Thus, it found that the expenditures adapted the property to a new or different use and were therefore required to be capitalized. However, the Service also held that the expenditures incurred to encapsulate the damaged insulation in the warehouse neither increased the value of the taxpayer's property nor prolonged its useful life. The wrappings of the damaged pipe insulation reduced, but did not eliminate, the threat of exposure to airborne asbestos fibers. Finally, the expenditures did not enable the taxpayer to operate on a changed, more efficient or larger scale. Accordingly, the encapsulation expenditures were deductible as incidental repair costs.

Courts have followed the IRS position that asbestos removal and other environmental cleanup costs that adapt a property to a new or different use must be capitalized rather than deducted. n240.1 In *Dominion*, the court found that the cost of removing asbestos-containing materials, sludge, and assorted contaminants from a power plant should be capitalized. The expenses in that case were incurred to convert a power plant into property suitable for an entirely new use, as a real estate development. Focusing on the nature of the improvements, the court held that the costs had to be capitalized because they substantially altered the character of the property and permitted it to be used in a different way. The court in *Dominion* also noted that the remediation was unrelated to any deterioration of the asbestos and that the cleanup costs of \$2.2 million "dwarfed the value of the property," which was acquired for less than \$900,000. n240.2 Courts have allowed taxpayers to deduct the cost of removing and encapsulating asbestos, however, if the improvements don't adapt the building for a different use or are relatively minor when compared to the overall value of the property. n240.3

The IRS also has privately ruled that asbestos removal costs that are incurred as part of a larger repair project must also be capitalized and cannot be currently deducted, at least where the asbestos insulation was not treated as a separately depreciable asset. n240.4

Guidance was also issued in 1994 concerning the tax treatment of soil remediation costs. n241 The taxpayer was a manufacturer who, in order to comply with federal, state, and local environmental requirements, remediated the soil and groundwater contaminated by self-produced hazardous waste. The taxpayer also constructed groundwater treatment facilities to extract, treat, and monitor contaminated groundwater. The ruling held that the taxpayer's soil remediating expenditures merely restored its soil and groundwater to their appropriate condition before they were contaminated by the manufacturing operations. The expenditures neither prolonged the useful life of the land nor adapted the land to a new or different use. Accordingly, taxpayer was able to deduct the soil remediation costs as ordinary and necessary business expenses. However, the costs allocable to the construction of the groundwater treatment facilities were required to be capitalized, and depreciated accordingly.

The Service has employed the rationale used in *Revenue Ruling 94-38* to allow a deduction for certain environmental pre-cleanup costs. n242 The deductible costs included the following:

- (1) costs paid to assess and investigate the extent of environmental contamination and remediation alternatives;
- (2) legal fees paid in connection with drafting and negotiating a consulting contract and consent order with the Environmental Protection Agency; and

(3) consulting fees for:

(a) meetings with state politicians, US senators, and the media;

(b) analysis and review of legal work with respect to site conditions and cleanup strategy;
and

(c) developing a strategy for remediation alternatives.

The Service also ruled that the costs of environmental impact studies were deductible because they were not chargeable to a capital account. n243 The Service also noted in the TAM that the costs incurred to clean up land and treat ground water were deductible because they would not increase the value of the property, but would merely restore it to its condition before the taxpayer contaminated it. The Service's rationale for ruling that the various legal fees were deductible was that they did not create or enhance an asset or produce a long-term benefit. n244

The IRS has also ruled that the costs of replacing underground storage tanks containing waste by-products are deductible when the tanks are filled only once and then sealed indefinitely. n244.1

The IRS has also allowed a taxpayer to currently expense environmental cleanup costs resulting from the discharge of waste byproducts from business operations to the extent that they were allocable to contamination occurring during the taxpayer's ownership of the property. The costs included amounts paid or incurred for site investigations and reports, preparation and implementation of remediation action plans, site remediation, and associated legal fees. The IRS ruled that the cleanup costs were allocable to the contamination that occurred during the taxpayer's ownership of the property, which were similar to those found deductible in *Revenue Ruling 94-38*. n244.2 As in that revenue ruling, the costs of cleaning up the hazardous wastes did not increase the value of the site or prolong its useful life. They merely restored it to its condition when the taxpayer acquired it. Significantly, the IRS ruled that the taxpayer's intent to build a new building on the site would not change this conclusion, because the costs allocable to the contamination that occurred during the taxpayer's ownership of the property were merely restorative. For the same reason, the IRS also ruled that those cleanup costs did not need to be capitalized as land preparation costs. The cleanup operations did not improve or substantially change the site, but merely restored it to the condition that existed when the taxpayer acquired it. n244.3

The IRS ruled differently, however, with respect to the cleanup costs that were allocable to contamination that resulted from the discharge of waste byproducts from the operations of the prior owner, before the taxpayer acquired the property. It ruled that these costs had to be capitalized under *IRC Sections 263 and 263A*. n244.4 The IRS has also ruled that soil remediation costs to clean up unknown contamination that existed when the taxpayers purchased the property had to be capitalized. n244.5 Applying a similar rationale, the Sixth Circuit has affirmed a district court holding that soil remediation costs to correct unknown contamination that was present when the taxpayer purchased the property had to be capitalized. The court distinguished environmental remediation costs for property that was contaminated when the taxpayer acquired it (which had to be capitalized) from the same costs incurred by taxpayers to correct environmental damage they have caused (which can be deducted). n244.6

The US Court of Federal Claims, however, has distinguished the *United Dairy Farmers* case rationale n244.7 and allowed a taxpayer to deduct the cost of removing and encapsulating asbestos for an office building. n244.8 The asbestos was in fireproofing material that had been used in constructing an addition to the building in 1972. When the fireproofing material was originally sprayed on the structure, it was stiff and encased the asbestos. By the late 1980s, however, the fireproofing material was deteriorating, and asbestos was flaking off and would crumble if bumped or disturbed. The court allowed the deduction because the asbestos work did not extend the useful life of the building or create a new or different use for the building. Rather, the improvements were made only to keep the office in effective operating condition. The court also found that the expenditures did not appreciably increase the value of the building, but only restored value to the building that existed before the asbestos started flaking and crumbling. The court

distinguished the *United Dairy Farmers* case on the ground that the need for removing and encapsulating the asbestos arose here not from contamination that existed at the time the building was constructed, but because the asbestos became friable over time during the ordinary operation of the office building. Thus, this was not a case where a taxpayer improved property defects that were present when it acquired the property. Rather, it was one where the contamination occurred over time, causing a problem that was not anticipated at the time of construction. It therefore held that the remediation costs were currently deductible. n244.9

NOTE:

The *Cinergy* case may signal a more expansive allowance by courts of asbestos removal costs. Indeed, the court expressly criticized the general focus of the Service's position--which was that if a company acquires property with a seemingly minor flaw or frailty that, over time, deteriorates into a full-blown problem, the cost of remediation must be capitalized. The court's decision implies that costs of addressing asbestos and related problems that are not anticipated by the taxpayer in the original design of a building, and that are not remedied as part of a generalized plan of rehabilitation and renovation may be currently deductible as an ordinary and necessary expense. n244.10

A post-Cinergy Field Service Advice memorandum offers a good view of the IRS position regarding the deduction of certain costs related to environmental remediation liabilities. The memorandum involved an accrual basis manufacturer who had contaminated property in connection with its trade or business. A prior owner had also contaminated the property. The US sued-under CERCLA, and the parties signed a Consent Decree setting forth-remediation liabilities and responsibilities. The taxpayer purchased an exit strategy that consisted of hiring a remediation contractor, and entering into a funding "insurance" contract to cover the costs of the remediation over many years. The contract included a pollution cost cap policy, which covered actual expenses of environmental remediation, and an environmental site liability policy, which covered liabilities arising out of personal injury or property damage resulting from the contamination. Although the taxpayer claimed the contract was an insurance policy, the memorandum stated the cost cap policy was a pre-paid services contract for services to clean up the site. (In doing so, it set forth in great detail the IRS' position on when premiums are and are not for insurance.) It therefore ruled that deductions could be taken only when economic performance occurred--i.e. when the remediation services required under the contract were performed. n244.11 This conclusion agrees with an IRS ruling providing guidance on when an accrual basis taxpayer incurs a liability for services or insurance. The ruling makes clear that the mere execution of a contract, without more, does not establish the fact of liability for services. No deduction can be taken until the services are performed or payment is due. n244.12

The memorandum acknowledged that the site liability policy might constitute insurance. Because the contract covered many years, however, and the premiums were prepaid, the taxpayer had to capitalize premium expenses over the life of the contract. n244.13 For the same reason, fees paid to an agent to service the remediation program to completion also had to be capitalized as fees under a pre-paid services contract. Amounts paid would be deductible as administration services were provided. n244.14

Planning Guide:

Citing the *United Dairy Farmers* case discussed above, the memorandum ruled that the taxpayer could deduct only costs of contamination that was directly attributable to the taxpayer's trade or business, and which did not exist when the taxpayer acquired the property. n244.15 The memorandum offers guidance obtaining information regarding the extent to which any property is contaminated when-purchased by a taxpayer. Closing documents and court filings and decrees may describe the extent of the pre-purchase contamination. For property owned for a long period of time by a taxpayer and used in the taxpayer's trade or business, the memorandum acknowledges the difficulty of obtaining reliable information in this regard. If a taxpayer cannot obtain any evidence of this nature, the memorandum states that the IRS may

consider as reasonable a fractional allocation based on the number of years the taxpayer has owned the property over the total number of years the property has been contaminated. The memorandum also stresses that any deduction under *IRC Section 162* must be decreased by the amount of any insurance proceeds received. n244.16

The IRS has ruled that a corporation may deduct otherwise deductible environmental cleanup costs even though the costs are subject to indemnification under a prior agreement which sold the corporation's stock. The costs are not disallowed as deductions either because they relate back to the sale of the corporation's stock or because they are subject to reimbursement. n244.17

Notwithstanding the authorities allowing a deduction for environmental cleanup costs in certain circumstances, such costs incurred as part of a larger renovation or rehabilitation must be capitalized because of the application of the "general plan of rehabilitation" doctrine. n245 Under that doctrine, expenses incurred as part of a plan of rehabilitation or improvement--including unanticipated expenses, such as costs of removing asbestos, that are discovered to be necessary after renovation has begun--must be capitalized, even if the same expenses might be currently deductible if incurred separately. n246 Capitalization of such costs is required even if the expenditures do not increase the life or value of the building or other asset for which they are incurred. n247

One ruling has made an important distinction with respect to the "plan of rehabilitation" doctrine by allowing contamination cleanup costs incurred on the taxpayer's land to be deducted, even though a building was to be constructed on the property after contamination was removed. The IRS found the situation distinguishable from *Norwest* and other cases applying the plan of rehabilitation doctrine. Unlike the asbestos removal in *Norwest*, which was directly related to the renovation of the building, the taxpayer's environmental cleanup costs in the ruling were not directly related to the construction of the new building. Rather, they related solely to the restoration of the land, an asset separate and apart from the new building. Therefore, the IRS ruled that the costs could not be considered to be a part of a plan of rehabilitation or improvements to its building. n247.1 Similarly, the IRS ruled that, although the cleanup arguably was undertaken to permit or at least to facilitate the construction of the new building, the cleanup costs did not represent a cost of the new building. And since they were also not properly characterized as land preparation costs, they did not need to be capitalized. The IRS made special note that *IRC Section 263A* did not require capitalization of the costs either. Its rationale was that, to the extent the costs were allocable to contamination that occurred during the taxpayer's ownership of the property, they were not allocable to the production of real or tangible personal property, and *IRC Section 263A* applies only when real or tangible personal property is being produced. n247.2

In *Private Letter Ruling 9814030*, the Service made several rulings regarding a taxpayer's involvement in cleanup of chemical groundwater contamination that resulted from seepage of contamination from adjoining land by other companies. The taxpayer entered into an agreement with the companies under which they would fund construction of water treatment facilities to remove contaminants from water drilled on the taxpayer's land. The agreement provided that ownership of the facilities could, in certain circumstances, be transferred to the taxpayer. The companies also were required to reimburse the taxpayer for costs associated with owning and operating the facilities. The taxpayer requested several rulings with respect to the cleanup. The IRS ruled as follows:

- The taxpayer would not recognize any gross income as a consequence of the construction and operation of any treatment facility, as long as ownership of the facility did not pass to the taxpayer.
- The taxpayer could deduct certain costs and expenses incurred in operating any cleanup facility in the tax year in which they were incurred, provided that the taxpayer was not, in fact, reimbursed and had no right or expectation of reimbursement from the participating companies. In addition, to the extent any expenses incurred by the taxpayer were treated as nondeductible because they were reimbursed by or were subject to reimbursement by the participating companies, the reimbursements would not be includable in the taxpayer's gross income (citing to *Revenue Ruling 80-348*). n248

- To the extent that the participating companies made reimbursements to the taxpayer, other than capital expenditures, they would be deductible in the year in which they were made.
- The participating companies could depreciate their unrecovered construction costs with respect to any operating treatment facility not transferred to the taxpayer at the end of a tax year. n249

One case denied a deduction for \$2.2 million in expenditures incurred to clean up environmental contamination at an abandoned electric power station. The cleanup involved removing and disposing of asbestos-containing materials, contaminated sludge, and other materials. The court ruled that although the property had long since been abandoned, the expenditures adapted the power plant to a new use by making it capable of being developed. The court also held that *Revenue Ruling 94-38* applied only when cleanup costs were incurred in connection with the ongoing operations of a business. The court held that *Revenue Ruling 94-38* did not apply to a situation, as here, involving the cleanup of an abandoned property that was not used in ongoing operations. Another factor in the court's decision was evidence that the cleanup substantially increased the value of the property. n249.1

Environmental remediation trusts may be used to fund environmental cleanup costs. Regulations classify an environmental remediation trust as a trust for tax purposes. A trust is an environmental remediation trust if the following requirements are met: n250

- It is formed as a trust under state law.
- The primary purpose of the trust is collecting and disbursing amounts for environmental remediation of an existing waste site (including costs of remedying and removing environmental contamination).
- Contributors to the trust have actual or potential liability for clean-up costs.
- The trust is not a qualified settlement fund within the meaning of *IRC Section 468B*. n251

The final regulations deal only with the classification of an environmental remediation trust as a trust for tax purposes. They do not address or affect the timing or amount of a deduction for environmental remediation costs. n252 The IRS has ruled in one case that insurance proceeds received by a taxpayer for environmental costs and claims reduced the taxpayer's basis in the property resulted in gross income only to the extent those proceeds exceeded the taxpayer's basis in the property. n252.1

Any amounts paid to remediate environmental contamination occurring in prior years do not qualify for relief under *IRC Section 1341* claim of right rules. n252.2

[iii] Environmental Remediation Costs Incurred in Connection with Producing Inventory

The IRS takes a restrictive view regarding the proper tax treatment of environmental remediation costs incurred in connection with the production of inventory. Its position is that costs incurred to clean up land that a taxpayer has contaminated in operating a manufacturing plant cannot be deducted currently but must be capitalized as part of inventory costs under *IRC Section 263A*. Similarly, the IRS takes the position that costs a taxpayer incurs to replace underground storage tanks and depreciation cost recoveries of the groundwater treatment facility must be included in inventory costs to the extent properly allocable to inventory. n252.3

The ruling involved a taxpayer who owned a plant that manufactured property that was inventory in its hands. The manufacturing operations discharged hazardous waste that the taxpayer had buried on previously uncontaminated property. The taxpayer, a C corporation, used an accrual method of accounting. To comply with current applicable

federal, state, and local environmental requirements, the taxpayer incurred costs to remediate the soil and groundwater, and to establish an appropriate system for the continued monitoring of the groundwater to ensure that the remediation removed all hazardous waste. The soil remediation and groundwater treatment restored the land to essentially the same physical condition that existed prior to the contamination. During and after the remediation and treatment, the taxpayer continued to use the land and operate the plant in the same manner as it did prior to the cleanup except that it disposed of any hazardous waste in compliance with environmental requirements. n252.4

The IRS distinguished the environmental remediation costs in *Revenue Ruling 2004-18* from those addressed in past rulings. It noted that *Revenue Ruling 94-38* n252.5 had allowed costs of cleaning up contaminated land and treating groundwater to be deducted as a current expense because those costs did not prolong the useful life of the land or adapt it to a new or different use. That ruling had required the cost of constructing groundwater treatment facilities to be capitalized because they were capital expenditures. The IRS also acknowledged that another ruling had also allowed the costs of replacing underground storage tanks containing waste byproducts to be expensed. n252.6 The IRS distinguished both of the above rulings because they dealt with the capital expenditure/deductible repair issue. Neither ruling discussed the possible inclusion of the cleanup costs as inventory costs under *IRC Section 263A*.

The IRS takes the position that regardless of how the capital expenditure/deductible expense issue is resolved in a given case, a taxpayer with inventories still must apply the rules of *IRC Section 263A* to determine whether deductible repair costs (or repair costs that otherwise had to be capitalized to a depreciable asset) must be included in inventory costs. n252.7

The key fact in the ruling was that the taxpayer incurred the environmental remediation costs to clean up land that it contaminated as part of its ordinary business operations of manufacturing inventory. As a result, those costs were incurred by reason of the taxpayer's production activities, and were allocable to and includable in the taxpayer's inventory costs. n252.8 For the same reason, costs incurred to replace underground storage tanks and depreciation cost recoveries of the groundwater treatment facility had to be included in inventory costs to the extent properly allocable to inventory. n252.9

The above position with respect to environmental contamination costs incurred in manufacturing inventory represents a change in the IRS position. Therefore, a transition rule applies for tax years ending on or before February 6, 2004 under which the IRS it will allow qualifying environmental remediation costs to be deducted. n252.10

Consistent with *Revenue Procedure 2004-18* , a later ruling has held that environmental remediation costs that are incurred to clean up land that a taxpayer contaminated with hazardous waste by the operation of its manufacturing activities are incurred by reason of production activities and are properly allocable under *IRC Section 263A* to the inventory produced during the taxable year the remediation costs are incurred. n252.10.1 The ruling makes clear that this allocation to inventory applies in a variety of situations, including any of the following variations: n252.10.2

- the taxpayer is producing a different product in the year of the remediation than the one whose manufacture caused the contamination, and the taxpayer has none of the prior inventory on hand;
- the taxpayer temporarily ceases its manufacturing activities while it remediates the contamination;
- the taxpayer still produces the inventory whose manufacture caused the contamination, but at another site; or
- the taxpayer initially contaminates a remote dump site that it did not own or otherwise use in its manufacturing activities. The taxpayer is not obligated to clean up the site when it buries the waste, but becomes responsible for the cleanup under later federal, state, and local environmental requirements. The remediation does nothing more than restore the site to its physical condition prior to the contamination.

During and after the remediation, the taxpayer continues to manufacture the same product at the same location, but has permanently stopped using the remote dump site to bury waste.

Note:

Any taxpayer using a method of accounting that does not comply with *Revenue Ruling 2004-18* or *Revenue Ruling 2005-42* will be treated as using an impermissible method of accounting. Any change in a taxpayer's treatment of environmental remediation costs to conform with either ruling is a change in method of accounting to which the provisions of *IRC Sections 446* and *481* and the regulations thereunder apply. A taxpayer changing its method of accounting to comply with either revenue ruling must file a Form 3115 in accordance with the automatic change in method of accounting provisions stated in revenue procedures, subject to specified modifications. n252.11

[c] Mold Remediation Costs

In a private ruling of first impression, the IRS has allowed a taxpayer to currently deduct, rather than capitalize, mold remediation costs. The taxpayer owned a nursing facility, and discovered mold in the building that was not present when it purchased the building. The mold had developed from roof leaks and condensation from heating, ventilation, and air conditioning lines. The mold removal project consisted of (1) sealing off and containing the wing of the building where the mold was present; (2) removing approximately 70% of the wall and ceiling drywall and 13 doors; (3) removing all of the faucets, sinks, and most of the electrical fixtures; (4) removing the mold; (5) testing in the affected area to ensure that the mold was completely removed; (6) installing new drywall and replacing a portion of the electrical and plumbing fixtures; and (7) painting. In conducting the project, the taxpayer reused all of the old doors and sinks and most of the electrical fixtures. The IRS employed a straightforward historical repair vs. capital expenditure rationale in its ruling. n252.12 It allowed a current deduction because the effect of the mold remediation project was simply to restore the building to the same physical condition that existed prior to the onset of mold. The new materials used were of substantially similar quality as the materials that were replaced. The existing floor plan was not altered, and no structural components were repaired or replaced. The project did not substantially prolong the useful life of the building, add to its value, or adapt it to a new use. Instead, the project kept the building in efficient operating condition. In addition to the mold remediation, the taxpayer also renovated air conditioning and plumbing systems in the wing and replaced the roof of the entire building, but it capitalized those costs. n252.13

[d] 10-Year NOL Carryback for Certain Environmental Remediation Costs

Generally, a taxpayer may carry back any net operating loss (NOL) to the previous two taxable years. n253 Specified liability losses, however, may be carried back 10 years. n253.1 The purpose of the extended carry back provision is to allow, to the extent possible, the matching of expenses with the period in which the event causing the loss occurred.

A "specified liability loss" includes several items, to the extent they are taken into account in computing the NOL for the taxable year. Among the items included is any amount which meets the following requirements: n253.2

- It is allowable as a deduction for federal income tax purposes under an income tax provision other than *IRC Section 468(a)* (dealing with mining and solid waste reclamation and closing costs) or *IRC Section 468A(a)* (dealing with nuclear decommissioning costs);
- It is in satisfaction of a liability under a federal or State law requiring the remediation of environmental contamination;
- The act (or failure to act) giving rise to the liability occurs at least 3 years before the beginning of the taxable year; and

- The taxpayer used an accrual method of accounting throughout the period(s) during which the act or failure to act occurred.

The IRS Chief Counsel's Office has issued a memorandum concluding that environmental remediation costs that are allocated to inventory under *IRC Section 263A* and recovered through cost of goods sold constitute specified liability losses to the extent they are taken into account in computing an NOL for the taxable year. The memorandum clarifies that the statutory requirement that a specified liability loss item be "allowable as a deduction" n253.2.1 was not intended to distinguish "deductions" from "cost of goods sold." n253.2.2

Example:

In Year 1, T, a manufacturer, has gross receipts of \$20x and cost of goods sold (CGS) of \$15x. T incurs \$10x of environmental remediation costs, \$2x of which is properly allocable to CGS (and is included in the \$15x CGS amount) and the remaining \$8x of which is properly allocable to ending inventory. In addition, T incurs \$25x of deductible business expenses, none of which constitute a specified liability loss. T's NOL is \$20x, and T's specified liability loss is \$2x, computed as follows:

NOL Computation for Year 1:

Gross receipts	\$20x
CGS	(15x) (including \$2x attributable to remediation costs)
Gross income	5x
IRC § 162(a)	
Deductions	(25x)
NOL	[20x]

Specified Liability Loss Computation for Year 1:

NOL	\$20x
Environmental Remediation Costs Included in CGS	2x
Specified Liability Loss (Lesser of NOL or IRC § 172(f) Amounts)	\$2x

The \$8x of environmental remediation costs that is included in ending inventory for Year 1 will be included in T's Year 2 beginning inventory. This \$8x will generate a specified liability loss in the taxable year in which the cost of that inventory is included in T's cost of goods sold, provided that T has an NOL in that taxable year. n253.2.3

The amount of any specified liability loss for a taxable year cannot exceed the net operating loss for that year. n253.3 For purposes of determining the amount of the carryback or carryover, n253.4 a specified liability loss for any taxable year must be treated as a separate NOL for that year, to be taken into account after the remaining portion of the NOL for that year. n253.5 A taxpayer may make an irrevocable election not to have the 10-year carryback apply. n253.6

NOTE:

The 10-year carryback is available only for costs that are otherwise deductible. If an outlay for

environmental remediation is a capital expenditure, n253.7 it cannot be a specified liability loss. n253.8

An IRS Field Attorney Advice Memorandum discusses specified liability losses at some length. The memorandum ruled that premiums paid for a contract that provided a taxpayer with an exit strategy by limiting its liability for environmental remediation costs did not qualify for *IRC Section 172(f)* treatment. The memorandum rejected the taxpayer's characterization of its costs as insurance premiums, but ruled that even if they were so characterized, they did not qualify for the specified liability loss provisions because they were not paid on account of an environmental liability. Rather, the premium costs were incurred for insurance to limit the amount spent to remedy the taxpayer's environmental liabilities. The liability giving rise to the obligation to pay arose under the contract. It was not paid in satisfaction of a liability under a Federal or State law requiring remediation of environmental contamination, as required by the statute. n253.9 The memorandum also ruled that a service fee paid to compensate an agent's handling of the remediation program also did not qualify because it was not paid to satisfy a federal or State liability. n253.10

The memorandum gives useful clarification on claiming the 10-year carryback for qualifying environmental remedial costs, and what constitutes a qualifying "specified liability loss." For all outlays, taxpayers should obtain substantiation of the amounts sufficient to show that they were incurred for a deductible expense, with a breakdown of the costs and activities covered by them. Taxpayers should ensure that none of the items represent non-deductible expenses such as fines and penalties. The memorandum notes that the following costs are eligible for the 10-year carryback as a specified liability loss: n253.11

- Environmental site investigatory costs, including preparation of an investigation report, and preparation of a response action plan;
- Site preparation for clean up;
- EPA or state agency reimbursements for investigatory or remediation costs incurred;
- Excavation and disposal of regulated substances found at the site;
- Containment or encapsulation costs not subject to capitalization under *IRC Section 263(a)*;
- Excavating, stockpiling, or transporting waste;
- Treatment of contaminated soil or water;
- Future monitoring costs to assure success; and
- Remediation costs allocated to inventory under *IRC Section 263A* and in the year recovered through cost of goods sold, but only to the extent they are included in the current year NOL. n253.11.1

The memorandum notes that the following costs do not qualify as a specified liability loss: n253.12

- Remediation costs for contamination that occurred less than three years before the beginning of the taxable year the deduction is claimed;
- Environmental remediation costs allocated to inventory that remains on hand at the end of the taxable year (ending inventory); n253.12.01
- Current compliance costs;

- Fines or penalties;
- Any capital expenditure, including construction of ground water treatment facilities, wells, pipes, pumps, or other equipment; and
- Any legal costs not specifically incurred in determining the amount of the remediation liability, including, but not limited to the following:
 - Negotiating consent decrees;
 - Defending against civil or criminal charges;
 - Defending against third party claims; or
 - Any capital expenditure subject to *IRC Section 263(a)*, including construction of ground water treatment facilities, wells, pipes, pumps or other equipment put in place to monitor or treat the soil or water. n253.12.02

[e] Deduction for Certain Hazardous Substance Costs Related to Disasters

Taxpayers may elect to deduct qualified disaster expenses, effective for amounts paid or incurred after December 31, 2007 in connection with disasters declared after that date and occurring before 2010. n253.12.1 Although *IRC Section 198A* can apply to expenditures other than environmental costs, it also allows the deduction of certain costs relating to hazardous substances. To be deductible under *IRC Section 198A*, the expenditure must meet the following requirements: n253.12.2

- it must be incurred in connection with a trade or business or with business-related property;
- it must be for (1) the abatement or control of hazardous substances that were released on account of a federally declared disaster; (2) the removal of debris from, or the demolition of structures on, real property which is business-related property damaged or destroyed as a result of a federally declared disaster; or (3) the repair of business-related property damaged as a result of a federally declared disaster; and
- it must otherwise chargeable to capital account.

Any deduction taken under *IRC Section 198A* is treated as a depreciation deduction which is recaptured in the case of a sale or other disposition of the property. n253.12.3 Other statutory provisions dealing with expensing of environmental remediation expenditures, n253.12.4 capitalization of demolition costs, n253.12.5 and certain mining and solid waste costs n253.12.6 do not apply to costs expensed under *IRC Section 198A*. n253.12.7

[2] Interest Expense

[a] Definition

Interest is a payment made for the use or forbearance of money. n253.13 Taxpayers may generally deduct only interest paid on their own indebtedness. n253.14 Legal or equitable ownership in property, however, may allow a taxpayer to deduct interest on a mortgage connected with that property even if the taxpayer is not directly liable upon the bond or note secured by that mortgage. In that case, the interest is treated as paid on the taxpayer's own indebtedness. n254 The common situation that arises is where a relative of a taxpayer takes title to property or acquires a mortgage on the

taxpayer's behalf because the taxpayer cannot qualify for a loan. n254.1 Taxpayers have also been permitted to claim mortgage interest deductions even though legal title to the property to which the mortgage relates has been transferred to a trust. n254.2

In determining whether a taxpayer's equitable interest in property is sufficient to support a mortgage interest deduction, courts look to state law to determine the nature of the taxpayer's property rights. n254.3 Courts also consider the following factors to determine whether a taxpayer is an equitable or beneficial owner of the property, including whether the taxpayer: n254.4

- has a right to possess the property and to enjoy its use, rents, or profits;
- has a duty to maintain the property;
- is responsible for insuring the property;
- bears the property's risk of loss;
- is obligated to pay the property's taxes, assessments, or charges;
- has the right to improve the property without the owner's consent; and
- has the right to obtain legal title at any time by paying the balance of the purchase price.

Interest is different from loan fees paid to a lender or loan broker as compensation for services rendered in making the loan available. Furthermore, interest must be distinguished from standby commitment fees that constitute a payment to ensure that financing will be available at some future date.

Frequently, lenders will charge "points" when a loan is first funded. This is a vague term for tax purposes, and the taxpayer should clarify with the lender whether the points are charged as an adjustment to the interest rate or for lending services. Front-end points charged as an adjustment to the interest rate may be deductible as interest, subject to the prepaid interest rules discussed below. Loan servicing fees are amortizable over the term of the loan. n255

Prepayment penalties for mortgages are considered payments for the use or forbearance of money. Thus, they are deductible as interest. n256

As previously mentioned, a taxpayer can only deduct interest incurred on his or her own indebtedness. If property is acquired subject to a liability on which past-due interest is unpaid, the purchaser is not entitled to a deduction for payments made on interest accruing before the date of purchase. n257 Accrual-basis taxpayers should also note that the Service issued an internal memorandum that might be interpreted to mean that accrued and unpaid interest attributable to nonrecourse debt is not deductible by an accrual-basis taxpayer. n258 The Service reasoned that, until the liability is paid, it is not fixed.

If more than one person is liable on a loan, a deduction is not denied to the obligor who makes the interest payment simply because another person is also liable on the debt. n259 However, the interest deduction will not be allowed to a party that is not primarily obligated on the debt. This distinction was of critical importance in disallowing the deduction for interest on payments made by a guarantor of an obligation. n260 Similarly, if property is jointly owned and is subject to indebtedness, either owner may make the payment for interest and claim the deduction. n261

[b] Timing of Deduction for Interest

Taxpayers cannot deduct interest that has been prepaid for periods beyond the current taxable year. Such interest must be capitalized and then deducted in the period to which it relates. n262

When a cash-basis taxpayer pays front-end "points" that represent an adjustment to the interest rate, the "points" represent prepaid interest. n263 Consequently, the "points" must be amortized over the term of the loan. n264

The only exception to this rule is that "points" paid as interest in connection with a mortgage loan for the purchase or improvement of the taxpayer's principal residence can be deducted when paid by the cash-basis taxpayer. n265 Taxpayers eligible to deduct points may, however, amortize them over the term of the loan. n265.1 To ensure the deductibility of points a taxpayer pays, *Revenue Procedure 94-27* n266 specifies that the points must be:

- (1) designated as points on the Uniform Settlement Statement;
- (2) computed as a percentage of the amount borrowed;
- (3) charged under established business practice;
- (4) paid in connection with the acquisition of the taxpayer's principal residence, which acts as security for the loan; and
- (5) paid directly by the taxpayer.

Under the revenue procedure, a taxpayer is not required to pay the points *separately*, as long as the taxpayer pays an amount of cash at closing that is at least equal to the points. The cash paid at closing includes the down payment, escrow deposits, earnest money, etc. The revenue procedure has a number of limitations, including that it does not apply to points allocable to the portion of a mortgage that exceeds the \$1 million limitation of *IRC Section 163(h)(3)(B)(ii)*; to points paid on a loan for home improvement, rather than home acquisition; to points paid on a loan to purchase a residence that is not the taxpayer's principal residence; or to points paid on a refinancing. The statutory rule disallowing a deduction for prepaid interest n266.1 does not prevent a cash-basis taxpayer from deducting prepayments of interest that are in arrears at the time of prepayment. n266.2 *IRC Section 461(g)* denies a deduction for the payment, by a cash-basis taxpayer, of any interest properly allocable to a period after the close of the tax year in which it is paid. Advance payments of accrued interest that are in arrears at the time of payment, however, is deductible, even though not yet due, because it represents a charge for the use or forbearance of borrowed money during the year in which interest was accruing. That the interest is not required to be paid until a later year does not render payment of that interest prohibited as a pre-payment of interest. Rather, the payment is a deductible advance payment of interest. n266.3

Cash-basis taxpayers must be sure they have "paid" interest, as required under Treas Reg § 301.7704-4(e)(1) in order to obtain a current deduction. Generally, interest must be paid with cash or its equivalent. It has been consistently held that interest that is withheld from funds advanced by a lender has not been "paid" within the meaning of *IRC Section 163* until the loan is paid by the borrower. n267 However, in situations when interest has been withheld from loan advances, the original issue discount (OID) rules may override the cash-basis method and require a yield-to-maturity accrual on the difference between the funds advanced and the cash ultimately to be paid. This restriction should not apply, and interest deductions should be allowed, if the interest is paid with funds advanced by a different lender. n268 However, the taxpayer must be able to display the ability to exercise unrestricted control over the funds if he attempts to secure a deduction for interest when that interest is paid with funds advanced by the lender. n269

[c] Investment Interest

The amount of investment interest that noncorporate taxpayers may deduct is limited for any tax year to their net investment income for that year. n270 Any amount disallowed as a deduction under this limitation may be carried

forward indefinitely and deducted in later tax years. Any disallowed deduction may not be carried back to prior years. n271

Planning Tip:

The aggregate disallowed amount (including amounts carried over from prior years) is determined each year. That aggregate figure is treated as investment interest incurred in the following tax year. n272 The amount carried over is not limited by the taxpayer's taxable income for the taxable year in which the interest is paid or accrued. n273

The term "investment interest" generally refers to any interest otherwise allowable as a deduction that is paid or accrued on indebtedness properly allocable to property held for investment. n274 Investment interest also includes any amount allowable as a deduction in connection with personal property used in a short sale. n275 It also includes interest incurred by an individual in connection with the purchase of stock in a C corporation. n276 The term does not include qualified residence interest, as defined in *IRC Section 163(h)(3)*, or interest that is taken into account under *IRC Section 469* in computing income or loss from a passive activity of the taxpayer.

Planning Tip:

Temporary regulations provide rules for allocating interest expense among personal, investment and business activities. They require that any disbursement of debt proceeds and the interest accrued on that debt be traced to a specific personal, passive activity, portfolio, or business expenditure. n277 The tracing rules provide taxpayers with substantial flexibility but require careful planning when receiving and spending loan proceeds.

Net investment income is defined as the excess of investment income over investment expenses. n278 Investment income includes the sum of the following items: first, gross income from property held for investment; second, the excess of net gain from the disposition of property held for investment over the net capital gain determined by only taking into account gains and losses from dispositions of property held for investment; third, so much of the net capital gain from the disposition of property held for investment (or if less, the net gain from disposition of property held for investment) that the taxpayer elects to take into account as investment income; n279 and fourth, the amount of qualified dividend income (i.e. dividends that qualify for capital gains treatment) n279.1 that the taxpayer elects to treat as investment income. n279.2

A taxpayer who makes the election referred to above regarding net capital gain from the disposition of property must forego the favorable capital gains rates on those capital gains. n280 Therefore, it is advantageous to make the election only if the taxpayer expects to be unable to deduct excess investment interest expense within a reasonable time or, possibly, if the taxpayer expects to be subject to the alternative minimum tax. The election must be made on or before the due date (including extensions) of the income tax return for the taxable year in which the net capital gain is recognized. The election must be made on Form 4592, Investment Interest Expense Deduction, in accordance with the form and instructions. n281 The election is revocable with the consent of the Commissioner. n282

Investment income that is allowed to be taken into account for purposes of the investment interest limitation does not include interest income taken into account in computing income from passive activities. n283 Although the Congressional Committee reports accompanying the enactment of *IRC Section 163(d)* state that income from rental real estate activities in which a taxpayer actively participates is not investment income, this was presumably because all rental real estate activities were then subject to the passive activity loss limitations. n284 *IRC Section 469(c)(7)* now provides that certain rental real estate activities may not be passive activities. Income from activities described in *IRC Section 469(c)(7)* as to which the taxpayer materially participates should nevertheless remain excluded from "investment income" for purposes of *IRC Section 163(d)*. n285

Investment expenses include deductions (other than interest) that are directly connected with the production of investment income. n286 Investment expenses do not include any expenses taken into account in determining income or loss from a passive activity. n287

Property held for investment includes the following: n288 first, any property that produces portfolio income under the passive activity loss rules; n289 and second, any interest in an activity involving the conduct of a trade or business that is not a passive activity and with respect to which the taxpayer does not materially participate. Property held for investment does not include property from which a taxpayer intends to earn an income from operating. In one case, the Tax Court allowed the taxpayer to deduct interest paid for loans to purchase, renovate, and operate two nursing homes because the nursing homes were not held for investment, but were purchased to provide self-employment income to the taxpayer and his former spouse. Although the taxpayer hoped to sell the properties at a profit when he retired, the Tax Court found that any investment motive at the time of purchase was remote or nonexistent, and therefore the limit imposed by *IRC § 163(d)* did not apply. n289.1

The terms "activity," "passive activity" and "materially participate" have the same meanings under the investment interest limitations as under the passive activity rules. n290

Income such as interest, dividends or royalty income is not always classified as investment income. If that income is considered to be derived in the ordinary course of a trade or business, the activity that produced the income is a business activity rather than an investment. Examples of investment-type income excluded from the scope of the interest limitation include: interest and dividends from the inventory of a dealer in stocks or bonds, and interest on installment obligations arising from the sale of business property.

In general, all noncorporate taxpayers are subject to the investment-interest limitation. Therefore, the rules apply to both individuals and trusts and include allocations and distributions to them from passthrough entities such as partnerships and S corporations. n291 Although the actual application of the limitation on investment-interest deductions occurs only on the tax return of the individual or trust, the determination of whether a particular item of interest expense is subject to the limitation is often made at the partnership or S corporation level.

Because corporate taxpayers are not subject to the limitation, a determination that a partnership's investments are covered by the investment-interest rules affects only the allocations to the noncorporate partners. n292

Once the activities subject to the limitation are identified, the calculation of net investment income (NII) is generally straightforward. However, because NII is net of all deductible expenses other than interest, significant issues can arise in allocating nonspecific expenses among the taxpayer's investment and business activities. Because NII establishes a ceiling on currently deductible investment interest, the taxpayer often fares better as more income is allocated to investment activities and more deductible expenses are allocated to business. n293 This could be true even if the business produces passive losses, because the rules for deducting previously disallowed amounts vary under the two limitations. Suspended interest deductions are only allowed if there is adequate NII, whereas suspended passive-activity losses are allowed, without regard to income, upon a complete taxable disposition of an activity.

The statutory definition that investment expenses used in calculating NII *means* those definitions "directly connected with the production of investment income" n294 suggests strongly that expenditures having a dual purpose, or which have only an indirect relationship to investment income, cannot be characterized as an investment expense. However, the importance of the allocation almost guarantees that the Service and taxpayers will disagree on this issue, especially when a single entity or taxpayer engages in both types of activities. n295 Although expense-allocation issues may be exacerbated, determining the amount of the investment expense is otherwise relatively easy. The expense items used to calculate NII are the items otherwise deductible in computing taxable income. This means that normally deductible expenses that are either disallowed or deferred under other tax provisions are not considered in calculating NII for the

year (e.g., only those investment expenses that are allowed after application of the 2 percent adjusted gross income floor for miscellaneous expenses are considered). n296

[d] Imputed Interest

Interest may be imputed when property is sold on a deferred payment contract and no interest factor is provided or the stated interest is too low. In such a case, a portion of each payment under the contract is treated as interest. n297

Imputed interest may be treated as investment interest if it is attributable to an investment activity. (See § 4.03[2][c], above, and Chapter 7.)

[e] Interest Versus Principal

Taxpayers may agree on how payments by the debtor are to be applied towards interest and principal. For example, the parties can agree that the entire principal balance be repaid before any payments of interest are made. n298 However, this principle does not override the original issue discount rules. n299

Most loan documents denote the portions of each payment that constitute interest and principal. Occasionally, payments or partial payments are made without a prior existing agreement. Generally, in these cases, the debtor can specify the manner in which the payments should be accounted. n300 However, if the debtor does not account for the payment, the creditor's accounting will override. n301 Proper documentation will reward the debtor in these situations. n302 If neither party properly accounts for the payment, the general rule is that accrued unpaid interest will be deemed to be paid first, then principal, subject to the application of local law. n303 The use of the "Rule of 78" to front-load interest expense deductions is routinely disallowed. n304

[f] Interest to Carry Tax-Exempt Bonds

Through successful investing or financing, a taxpayer may hold substantial equity in real estate. This equity may be refinanced with the proceeds used to purchase other investments. Frequently, tax-exempt securities are attractive investments for high-bracket taxpayers. However, the unwary investor may be caught in a potential tax trap, because the interest on indebtedness incurred to purchase or carry securities producing tax-exempt interest income is not deductible. n305 This rule could apply even to indebtedness secured by real estate. Any time a portfolio of investments includes tax-exempt securities and there are liabilities that are not directly traceable to personal or business activities, the Service may seek to establish that a portion of the taxpayer's interest expense is not deductible. n306

Taxpayers have successfully argued that interest on purchase money financing for real estate should not generally be disallowed even if the taxpayer also carries tax-exempt securities. This has been true because purchase money financing is the customary method of acquiring real estate. n307

[g] Allocation of Interest Expense From Pass-Through Entities

The IRS has provided guidance concerning the tax treatment under the various deduction limitations applicable to interest, of interest expense relating to debt incurred by pass-through entities (S corporations and partnerships). n308 Generally, the interest should be allocated among the assets of the entity using any reasonable method (e.g., pro rata based on fair market value, adjusted basis, etc.) and take its tax characterization from the tax characteristics of those entities. To the extent that debt is incurred for a contribution to the capital of a pass-through entity, the taxpayer has the additional option of tracing the debt proceeds to the expenditures of the entity under the interest tracing rules. Therefore, the character of the interest expense as passive or investment interest will be determined by the character of the assets to which it is allocated.

Interest expense on debt-financed distributions by pass-through entities will be allocated in accordance with the owner's use of the distributed proceeds. The partner or S corporation shareholder receiving such a distribution is essentially

treated as receiving the loan proceeds from the entity's debt. Therefore, the character of the interest expense allocated to that partner or shareholder is determined by his use of the proceeds distributed.

Example:

ABC Partnership borrows \$300,000 at 10 percent interest and distributes debt proceeds of \$100,000 to partner A. A then uses \$60,000 to purchase an interest in a real estate limited partnership and \$40,000 to purchase a new car. In accordance with the general rule, \$6,000 (60 percent of the \$10,000 in pass-through interest expense from ABC) will be deemed from a passive activity and \$4,000 (40 percent of the \$10,000 in pass-through interest) will be treated as personal interest.

In addition to the general rule, a pass-through entity may allocate distributed debt proceeds and interest expense to other expenditures of the entity for the taxable year in which the distribution was made, with any excess allocated under the general rule above.

[h] Self-Charged Interest Provisions

If a partnership or S corporation uses funds borrowed from its partners or shareholders to make passive activity expenditures (for example, to purchase rental real estate), the entity's interest expense and each owner's share of the interest expense generally must be treated as a passive activity deduction. n308.1 Yet, income from interest, dividends, annuities, and royalties not derived in the ordinary course of a trade or business does not qualify as passive income, but is instead portfolio income. n308.2 Because passive activity deductions cannot offset portfolio income, absent any specific relief, the owner cannot deduct the passive interest expense from the portfolio income earned from the loan. In substance, however, the owner has simply paid interest to itself.

The regulations provide relief for such loans and allow partners and S corporation shareholders to offset nonpassive interest income and passive interest deductions from the same loans. n309 This is accomplished by allowing the lending partner or shareholder to recharacterize nonpassive interest income from the loan as passive income to the extent of the taxpayer's allocation of passive interest expense from the same transaction. The recharacterized amounts of interest income are determined under formulas designed to prevent them from exceeding the taxpayer's interest income or passive interest deductions from the self-charged lending transaction. n309.1 Regulations also clarify that lending transactions to which the self-charged rules apply include guaranteed payments for the use of capital under *IRC* § 707(c). n309.2

The self-charged interest provisions also apply to transactions other than loans from partners or shareholders to a partnership or S corporation. The self-charged rules apply to loans *from* an S corporation or partnership *to* its shareholders or partners. n309.3 They also apply to lending transactions between identically owned passthrough entities (i.e. where each owner of the borrowing entity has the same proportionate ownership interest in the lending entity). n309.4

Taxpayers may avoid application of the self-charged interest rules if the passthrough entity makes an election for its taxable year to do so. The manner and timing of the election are specified in the regulations. The election may be revoked only with the consent of the Commissioner. n309.5

There are several limitations to the self-charged interest provisions: n309.6

- they apply only to self-charged items recognized in the same taxable year; n309.7
- they do not contain any special rules for capitalized items;

- they do not apply to non-loan transactions involving rental real estate activities, such as the payment of management fees and salaries; and
- they do not apply to transactions between entities other than S corporations and partnerships, such as trusts, estates, REMICs, or housing cooperatives.

[i] Other Limitations on Interest Expense

Other limitations on the interest deduction are discussed elsewhere in this volume. These include construction period interest, Chapter 3; interest paid from loan proceeds, Chapter 12; interest paid to carry property, Chapter 10; and qualified residence interest, Chapter 9.

[3] Real Property Taxes

[a] In General

A deduction is allowed for state, local and foreign real property taxes and for state and local (but not foreign) personal property taxes. The deduction is allowed in the tax year in which the taxes are paid or accrued. The deduction is allowed whether or not the tax is incurred in connection with a trade or business or income-producing activity. n310

A cash-basis taxpayer deducts property taxes, other than those incurred during a construction period, when paid whether the liability is prepaid or represents a significant amount of past-due taxes. A cash-basis taxpayer may deduct prepaid real property taxes only by establishing that the prepayment represents assessed, rather than estimated, taxes, and that the taxes are due in the year they are paid. n310.1 However, significant deductions based on prepaid property taxes generally cannot be generated because, to be deductible, the payment must be for either an actual personal liability of the taxpayer or a lien on the property at the time of the payment, n311 whereas real property taxes are generally not a personal liability of the property owner and such taxes are generally not a lien on the property until assessed or due.

If the property is purchased during the year, the property taxes must be allocated between the buyer and the seller. n311.1 This statutory apportionment rule applies whether or not the purchaser and seller apportion the tax. n311.2 A purchaser who pays real property taxes that are allocated to the seller cannot deduct them, n311.3 but must capitalize them and add them to the basis of the acquired property. n311.4 It is immaterial whether or not the contract of sale specifies that the sale price has been reduced by, or is any way intended to reflect, real estate taxes allocable to the seller. n312 Similarly, if a lender pays property taxes that accrued before it forecloses and takes title, those payments become an additional cost of the property. n313

Apparently, either a tenant-in-common or a co-owner of an undivided interest in real property can pay the entire property tax expense and claim the deduction. n313.1 This is a sensible rule even when the property taxes do not become a personal liability of the owners because a co-owner may need to pay the entire taxes on a parcel of property in order to protect a partial interest in that property when the other co-owners are insolvent or simply refuse to pay taxes.

Real property taxes may be deducted only by the taxpayer upon whom they are imposed, n314 or by a beneficial or equitable owner of the property, when legal title is held by another person. n314.1 Thus, a taxpayer who is not a legal or equitable owner, cannot deduct real property taxes. n314.2 Real property taxes that are not deductible under *IRC Section 164* because they are paid by a non-owner may, nevertheless, be deductible under *IRC Section 162* if the payment is an ordinary and necessary expense of the taxpayer's trade or business. This could occur if nonpayment of the taxes would have a direct and proximate adverse consequence to the taxpayer's own business. n314.3 Using this rationale, the Tax Court in one case reluctantly allowed a taxpayer to deduct its payment of real property taxes owed by a partnership in which he held an interest through an S corporation. n314.4 In another, the court allowed a real estate professional who held a mortgage and deed of trust in a parcel of land owned by the borrower to deduct property taxes he paid on the

parcel. The borrower had filed for bankruptcy and payments on the mortgage had stopped. The taxpayer paid the tax to forestall seizure of the property in satisfaction of the borrower's tax liability. n314.5

In order to prevent a default in the payment of property taxes, lenders sometimes require use of an impound account. The owner's monthly payment for debt service will also include a pro rata payment for property taxes, which the lender accumulates to pay for the taxes when due. A cash-basis owner is entitled to a deduction only when payment is made by the lender to the taxing authority. n315

An accrual-basis taxpayer can use either of two methods to deduct property taxes: the lien date method or a ratable method pursuant to a Section 461(c) election. Under the lien date approach, the taxes can be deducted when the tax becomes either a personal liability or a lien on the property. n316 Because the lien date often precedes the payment date by several months, this is a good way to accelerate the deduction. Under the ratable method, if a Section 461(c) election is properly made, the accrual-basis taxpayer may deduct the property taxes ratably over the period to which they relate. n317

A Section 461(c) election may be made without the consent of the Commissioner for the first taxable year in which the taxpayer incurs real property taxes. n318 A separate election may be made for each separate trade or business (or each separate non-business activity, if accounted for separately). To make an election for any other period, or to revoke an election, the taxpayer must obtain the consent of the Commissioner by submitting a request for permission to make an election to the IRS within 180 days after the beginning of the taxable year to which the election is first applicable. n319 However, the Service first announced that a Section 461(c) election, or revocation of such an election, for the 1991 taxable year could be made without the consent of the Commissioner n320 as long as the procedures set out in *Revenue Procedure 92-28* were followed. n321 Thereafter, these procedures were extended to apply to accrual method taxpayers that wish to make such an election for their first taxable years beginning after December 31, 1992. n322

A taxpayer that prepays its taxes in response to a prepayment discount from the local government is entitled to deduct the entire amount of taxes, i.e., prepayment discount plus cash prepayment; however, the discount must be included in taxable income. n323

Only property taxes must benefit the general public welfare and be levied at a uniform rate against all property over which the taxing authority has jurisdiction will be deductible. Assessments for local benefits such as streets, sidewalks, sewers, and similar improvements are not deductible even if an incidental benefit may inure to the general public. n323.1 Nondeductible assessments generally are capitalized and treated as part of the property's costs and may be taken into account in determining gain or loss on the sale of the property.

Legal fees connected with real property taxes are also deductible. In one case, the Tax Court allowed a deduction for fees paid for the preparation and filing of an abatement request with the assessor regarding non-business real property taxes. The fees were deductible under *IRC Section 212(3)* because they were incurred in the connection with the determination, collection or refund of a tax. They were deductible, however, only as a miscellaneous itemized deduction, subject to the 2-percent floor applicable to those deductions. n324

[b] Temporary Additional Standard Deduction for Real Property Taxes

A temporary provision which applies only to taxable years beginning in 2008 or 2009 allows an additional standard deduction for state and local property taxes for taxpayers who do not itemize deductions. n324.1 The provision increases an individual taxpayer's standard deduction for a taxable year beginning in 2008 or 2009 by the lesser of (1) the amount allowable to the taxpayer as a deduction for State and local real property taxes, or (2) \$500 (\$1,000 in the case of a joint return). n324.2 No taxes deductible in computing adjusted gross income are taken into account in computing the increased standard deduction. n324.3

[4] Operating Expenses

Operating expenses such as utilities, repairs and maintenance, management, rent, accounting, clerical, advertising, and general and administrative expenses are normally deducted when paid by a cash-basis taxpayer or when incurred by an accrual-basis taxpayer. These expenses are deductible whether the property is held for use in a trade or business or held for investment. Any amount deducted must be ordinary and necessary. n324.4 For example, rent payments paid in excess of the fair market of the property may not be nondeductible, if they are in fact something else, such as a disguised dividend. Rental agreements between related parties are subject to close scrutiny. n324.5

A frequent question is how far in advance can a cash-basis taxpayer pay operating expenses and still claim a deduction when paid. One appellate court adopted a test that asks whether the benefit of the expenditure extends substantially beyond the close of the taxable year. The court apparently measured "substantially beyond" as one year from the time the payment was made. Thus, a cash-basis taxpayer was allowed to deduct a one-year rental payment that extended 11 months beyond the close of the taxpayer's year-end. n325 However, this rule may not be accepted in other courts or by the Service.

[5] Payments to Related Parties

Special rules apply to limit or defer deductions for payments to related parties. One set of rules applies to related taxpayers with different accounting methods. Thus, expenses otherwise deductible under an accrual method payable to a related party on a cash method may only be deducted as of the day the amount is included in income of the person to whom the payment is made. n326 A frequent situation is one where an accrual-basis corporation accrues interest on a debt to a cash-basis shareholder holding more than 50 percent of the corporate stock. If the debtor-corporation has a calendar year-end, the interest accrued to the shareholder but unpaid at December 31 will not be deductible currently unless paid by that date; if not paid currently, deductibility will be deferred until the subsequent year during which payment is made. Rules detailing what constitutes a related party, which are set forth in *IRC Sections 267(b) and (c)*, are complex and should be reviewed each time real estate transactions occur within a closely controlled group.

The Service also has a very broad power to reallocate items of income and expense between controlled organizations, trades, or businesses if necessary in order to clearly reflect the income of the entities. n327 Payments to related parties should always approximate similar arm's-length transactions, or the Service can argue that the true economic substance of the transaction is disguised, and then recast the transaction. For example, if a father rents property from his son and pays him an extraordinarily high rate of rent, the Service may assert that a portion of the rent is a disguised nondeductible gift.

[6] Economic Performance

For accrual method taxpayers, liabilities are incurred and taken into account for tax purposes only when the following conditions are met: n328

- (1) all events have occurred that establish the fact of liability;
- (2) the amount can be determined with reasonable accuracy; and
- (3) economic performance has occurred with respect to the liability.

Economic performance generally occurs when the activities giving rise to the taxpayer's obligation are actually performed. n329 If a taxpayer's liability arises out of the providing of services or property to the taxpayer by another, economic performance occurs as the services or property are provided. n330 If a taxpayer's liability arises out of the use of property provided to the taxpayer, economic performance occurs ratably over the period of time the taxpayer is

entitled to use the property, unless the taxpayer's liability is more appropriately determined by reference to the frequency or volume of use of the property or the income from the property. n331 See also Chapter 11 for a detailed discussion of economic performance. For example, in the case of rent, economic performance is deemed to occur as the property is used by the taxpayer; in the case of merchandise, salaries or payments to contractors, economic performance is deemed to occur when the merchandise or service is provided.

[7] Rental Expenses as Offset to Self-Employment Income

A taxpayer cannot offset losses from a real estate rental business against other self-employment income when computing income subject to the self-employment tax unless the taxpayer is in the trade or business of being a real estate dealer. n332 In computing self-employment income, any deductions attributable to rentals from real estate must, therefore, be excluded unless the rentals are received in the course of a trade or business as a real estate dealer. n333

[8] Rental Expenses When Taxpayer Has Title or Equity in Property

Rent paid by a taxpayer is deductible as a business expense only with respect to property to which the taxpayer has not taken and is not taking title, or in which the taxpayer has no equity. n334 This rule prevents a taxpayer from deducting rent paid for property that is actually being purchased. The rule has been applied to disallow a deduction to a sole proprietor for one-half of the rent paid on property he owned with his wife as tenants by the entirety. n335

[9] Expenditures to Remove Architectural and Transportation Barriers

A taxpayer may elect to expense, rather than capitalize, qualified architectural and transportation barrier removal expenditures of up to \$15,000 per year. n335.1 A current deduction is allowed for the expenditures for which the election is made. n335.2 Qualified expenditures include those for the purpose of making any facility or public transportation vehicle owned or leased by the taxpayer for use in connection with the taxpayer's trade or business more accessible to, and usable by, handicapped and elderly individuals. n335.3 Handicapped individuals include those with physical or mental disabilities (including blindness or deafness) that are a functional limitation to employment or which substantially limit one or more major life activities. n335.4 Barrier removal expenditures are deductible only if the taxpayer establishes that the resulting removal of the barrier(s) meets the standards promulgated by the Secretary with the concurrence of the Architectural and Transportation Barriers Compliance Board and set forth in regulations. n335.5

The election is made by claiming the deduction as a separate item identified as such on the taxpayer's timely filed (including extensions) income tax return for the taxable year for which the election is to apply. n335.6 The election applies to all qualifying expenditures made and is irrevocable after the date by which the election must have been made. n335.7 The taxpayer must keep supporting records and documentation, including any adjustments to basis made for expenditures in excess of the amount deductible. n335.8

COMMENT:

A separate credit is available for certain expenditures by small businesses to provide access to disabled individuals. n335.9 See Chapter 5 for a discussion.

[10] Energy Efficient Commercial Building Property Deduction

[a] In General

A current deduction is allowed for the cost of "energy efficient commercial building property" placed in service during the taxable year. n335.10 The maximum deduction allowed with respect to any building for a tax year is the excess (if

any) of the product of \$1.80 times the square footage of the building, over the aggregate amount of the deductions under *IRC Section 179D(a)* with respect to the building for all prior taxable years. n335.11

Usually, the owner of the building who places the qualified property in service will be the taxpayer entitled to the deduction. n335.12 For qualifying property installed on or in property owned by a federal, state, or local government or a political subdivision thereof, however, the Secretary is ordered to promulgate a regulation to allow the allocation of the deduction to the person primarily responsible for designing the property in lieu of the owner of the property. That person will be treated as the taxpayer for purposes of the deduction. n335.13

If a deduction is allowed under *IRC Section 179D* with respect to any energy efficient commercial building property, the basis of that property must be reduced by the amount of the deduction so allowed. n335.14

[b] "Energy Efficient Commercial Building Property" Defined

Only the cost of "energy efficient commercial building property" is eligible for the deduction. n335.15 This includes property installed in connection with a building's interior lighting, heating, cooling, ventilation, or hot water systems, and property installed as part of a building envelope. n335.16 The property must be depreciable or amortizable and must be installed on or in a building located in the U.S. n335.17 It must also fall within a specified engineering standard of property. n335.18

Finally, the property must generally be certified as being installed as part of a plan designed to reduce the total annual energy and power costs with respect to the interior lighting, heating, cooling, ventilation, and hot water systems of the building by 50 percent or more in comparison to a reference building which meets certain minimum requirements. n335.19 Certification procedures are to be established by the Secretary. n335.20 An alternative certification requirement may apply for property installed in systems that meet energy-savings targets to be established by the Secretary in regulations. Only a partial deduction is permitted, however, if this alternative certification is used. n335.21

The IRS has set forth in *Notice 2006-52* a process that allows a taxpayer who owns a commercial building and installs property as part of the commercial building's interior lighting systems, heating, cooling, ventilation, and hot water systems, or building envelope to obtain a certification that the property satisfies the statutory energy efficiency requirements. n335.22 The notice also provides for a public list of software programs that may be used in calculating energy and power consumption for purposes of *IRC Section 179D*. n335.23

[c] Availability of Partial Deduction

A partial deduction under *IRC Section 179D* may be available for property that is not certified in accordance with *IRC Section 179D(c)(1)(D)* and *IRC Section 179D(d)(6)*, but which is certified as complying with energy-savings targets established by the Secretary for interior lighting, heating, cooling, ventilation, and hot water systems. n335.24 The maximum deduction allowed with respect to any building for a tax year when this alternative certification is used is the excess (if any) of the product of \$.60 times the square footage of the building, over the aggregate amount of the deductions under *IRC Section 179D(a)* with respect to the building for all prior taxable years. n335.25

[11] Soil and Water Conservation Expenditures, and Endangered Species Recovery Expenditures

Farmers may deduct, rather than capitalize, expenditures for soil and water conservation of farmland, or for the prevention of erosion of farmland. n335.26 The amount deductible cannot exceed 25 percent of the gross income derived from farming during the year. Any excess may be carried forward to future years. n335.27 Farmers may also deduct qualified expenditures for endangered species recovery. n335.28

Farmers may also elect to deduct costs of fertilizers and similar items used to enrich, neutralize, or condition land used

in farming, and costs of applying those materials to land. n335.29

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.04

§ 4.04 Leasing: A Financing Tool

Leasing is a tax-oriented method of financing the use of real estate. Numerous business, economic, capital availability, and tax reasons often make leasing a method of financing the use of real property that is more appropriate than purchasing. The source of this type of financing is usually financial institutions and individuals in high tax brackets who desire sound real estate investments. The remaining portion of this chapter focuses on the income tax ramifications of real estate leasing transactions.

[1] Advantages to Lessors

When significant residual values are anticipated, financial institutions are finding that leasing can result in a higher rate of return than traditional lending. In an inflationary economy, many assets have a higher residual dollar value than originally anticipated. Since the residual value of the real estate may substantially increase the profit on an owner-lessor's investment, the effect of residual value should not be overlooked in leasing negotiations.

A primary motive for investing in real estate may be as an inflation hedge. The lease terms are critical to the accomplishment of this objective. For example, if property is subject to a non-escalating 50-year lease, the value of the lease to the lessor will decrease if the rate of inflation increases and the usefulness of the investment in real estate as an inflation hedge will be reduced.

[2] Advantages to Lessees

Conservation of working capital is generally important to the lessee. The lessee may not have the cash available to buy property or may have exhausted normal financing sources, particularly during periods of tight money. Although the lessee may be unable to borrow, it may be able to lease property or may find that leasing has less burdensome cash flow requirements than equity financing. The tax benefits to the lessor and to the lessee depend on the relationship between the depreciation stream and any other tax incentives flowing from the real estate, and the principal amortization required by long-term lenders. If the tax benefits from ownership are substantial, a real estate user that is not able to utilize all of the current tax benefits from direct ownership may trade the tax benefits and the potential residual value in return for a lower carrying cost. Conversely, a high tax bracket real estate user may be willing to forego residual value and pay an even higher periodic rental in exchange for the right to deduct 100 percent of the periodic payment. Finally, a lessee may deduct ordinary and necessary rental payments as a trade or business expense, so long as:

1-4 Federal Taxes Affecting Real Estate § 4.04

- (1) the amount is reasonable;
- (2) the lessee has not taken and is not taking title to the property; and
- (3) the lessee has no equity in the property. n336

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.05

§ 4.05 Sale-Leaseback Transactions

The importance of leasing as a financing tool is illustrated in the context of sale-leaseback transactions.

As a special device, a sale-leaseback transaction has a number of tax characteristics of which the prospective seller-lessee and purchaser-lessor should be aware. If properly executed, such a transaction can be used to both tax and financial advantage.

[1] Advantages to a Seller--Lessee

Ordinarily, the sale of real property used in a business or held for the production of income will result in a capital gain, or an ordinary loss, unless the "sale" is consummated as part of a like-kind exchange under *IRC Section 1031*. (See § 8.01, *infra*.) (The gain may be "recaptured" as ordinary income when accelerated depreciation has been claimed.) n337 A leaseback results in rental payments that are deductible from ordinary income by the seller/lessee. The capital gain/ordinary income tax rate differential provides increased incentives for the seller to consummate sale-leaseback transactions. n338

An advantage to the seller is the generation of working capital (namely, the sale proceeds) that is, perhaps, not otherwise available. The seller may obtain the full market value of the property, or even a premium, depending upon the terms of the accompanying lease. Naturally, these proceeds are offset by the applicable income tax liability on any gain recognized on the sale that is not sheltered by other losses or credits.

Because the rent will generally be established at a rate that takes into account the full value of the property, including the land, the seller may, through rental payments, obtain a tax deduction for the value of the land. In contrast, no similar deduction would be available if the property were retained and only the buildings were depreciated. This results because the rental payments under the accompanying lease are fully deductible by the lessee, even though the rentals include amounts attributable to the value of the land.

A seller/lessee that desires to retain the right to use the property upon termination of the lease may wish to negotiate for a purchase option in the lease agreement. The buyer-lessor may be willing to grant such an option if its yield will be satisfactory on an overall basis even if the option is exercised. Such an option, however, depending upon its terms and other facts and circumstances, may cause the Service to disregard the sale and leaseback form of the transaction and

consider it a loan. n338.1 Fundamentally, a sale-leaseback converts present equity to cash, for which the seller has more profitable uses in mind than a continuing investment in real estate.

[2] Advantages to a Buyer--Lessor

Aside from pure investment considerations, a major advantage to the buyer sometimes lies in the tax aspects. If the depreciation deduction is in excess of the principal payment, then the buyer has an opportunity to shelter the rental income and possibly other sources of passive activity income. n339 However, current depreciation rates for real estate, particularly non-residential real estate, make this an unlikely tax benefit scenario. However, from an economic perspective, at the termination of the initial lease, the buyer may have recovered its initial investment in the property, and may lease the property again, sell it, or engage in a sale/leaseback of the property. The particular decision will depend on the market conditions and the buyer's capital needs, among other factors.

[3] Limitations on Tax Benefits

The Code contains a restriction that may prevent the parties to a sale-leaseback transaction from concocting a rent schedule that maximizes their tax benefits. *IRC Section 467* contains rules that prohibit the front loading of rent in certain specific transactions, including a "disqualified leaseback." This term is defined as a leaseback transaction in which tax avoidance is a principal purpose of an increasing rent schedule. n340

[4] Sale-Leaseback Between Related Parties

Some special problems may arise when the parties to a sale-leaseback transaction are related. Any gain on the sale of real property subject to depreciation between a partnership and its controlling partner or two partnerships under common control would be ordinary income, not capital gain. n341 Similarly, a loss on a sale between related parties (including, but not limited to, the controlled partnerships described above) will be disallowed to the seller/lessee and, although the related buyer-lessor may be entitled to benefit from the disallowed loss, that benefit is available to the buyer-lessor when the property is eventually sold to an unrelated party. n342

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.06

§ 4.06 Evaluating the Validity of Sale-Leaseback and Other Leasing Transactions

[1] Sale-Leaseback Transactions

A basic tax issue in a sale-leaseback arrangement is whether the transaction will be treated as a sale-leaseback, with the buyer being treated as the owner-lessor of the property and the seller being treated as the lessee, or instead will be treated as a financing arrangement for tax purposes, with the "buyer" being treated as a lender. If the transaction is held to be a financing arrangement, payments between the parties will be treated as loan payments, rather than as rent. In such a situation, the buyer/lessor would treat the lease payments as loan amortization and interest income and would not be allowed to claim depreciation. The seller/lessee would not have a gain on the purported sale, and would allocate only a portion of the lease payments to interest expense, and would retain the right to depreciation.

The courts have consistently looked to various factors to determine the validity of sale-leaseback transactions: n342.1

- economic substance n343 and tax-independent motives;
- a purchase price that approximates fair market value;
- a third-party loan transaction;
- either no purchase option in favor of the "lessee," or only an option to purchase at arm's-length terms that would prevent the lessee-optioner from building up significant equity in the property during the lease term (a purchase option price that is geared to the unamortized principal advanced by the "lessor" indicates that a transaction is a financing arrangement rather than a sale-lease-back); n343.1
- rent that approximates fair market value, including whether renewal rentals at the end of the lease term are set at fair market value (the inclusion of an interest component is indicative of a financing arrangement, and not a sale-leaseback transaction); n343.2
- the existence of useful life of property in excess of the lease term;
- the reasonable possibility that the purported owner of the property can recoup its investment in the

property from the income and residual value of the property;

- who bears the risks and responsibilities of ownership during the lease period;
- the tax and accounting treatment of the transaction; n343.3 and
- the intent of the parties.

Any transaction purporting to be a transfer or sale-leaseback transaction must be carefully structured. Failure to do so may result in the entire transaction being ignored for tax purposes, n344 or treated as a financing arrangement. n344.1

It is the position of the Service that a sale-leaseback transaction with the leaseback term (including renewal options) exceeding 30 years represents a like-kind exchange for tax purposes. n344.2 Accordingly, any loss on the sale would be deferred under the rules for tax-free exchanges. n345 Similarly, a sale-leaseback transaction with a lease term of less than 30 years would allow a loss to be recognized. n345.1 There is some judicial support for the Service's position. n346 However, the Second and Third Circuits and the Tax Court have held that a taxable sale takes place when the purchaser pays fair value for the property and receives a fair rent on the leaseback. n347 Given the mixed positions of the courts, care should be taken in structuring sale-leasebacks that result in a realized loss.

The following are suggested elements to be included to preserve a valid sale-leaseback transaction: n347.1

- The property should be sold at fair market value and supported by an independent appraisal.
- Rent should be at fair market value and also supported by an independent appraisal. Level or increasing rental payments are desirable.
- It is preferable, although not mandatory, to have a sufficient number of other factors that are favorable, e.g., three parties in the sale-leaseback arrangement: the seller-lessee, the purchaser-lessor and the institutional lender.
- The lease term should be less than the economic life of the property. Renewal options should only provide for a fair market rental value at the time the option is exercisable.
- Refrain from including repurchase options. If one is necessary, it should either approximate the expected fair market value of the property at its exercise date, or the repurchase price should be established at fair market value pursuant to an independent appraisal to determine value at that time.
- All condemnation and insurance payments in excess of liabilities of the property should be awarded to the purchaser-lessor.
- Record the "business purpose" for the transaction and follow the formalities and document language of a sale-leaseback. Avoid loan structure or language.
- Evaluate the economics of the transaction from the perspective of the buyer-lessor as an owner of the subject property in order to avoid having the transaction viewed as being created solely for tax purposes.
- If other factors do not strongly support the desired sale-leaseback treatment, consider structuring the lease as one that is not a pure net lease by keeping the purchaser-lessor responsible for some expenses.

In a field service advice memorandum, the IRS has outlined in detail several of the legal theories that may be applied in

analyzing the economic substance of a sale-leaseback transaction. It indicated three lines of attack: n347.2

- As indicated above, determining whether the transaction is more akin to a secured financing than a sale.
- *Sham Doctrine*. Under this theory, the economic substance of the transaction is considered in determining whether the transaction's form is other than its purported characterization; the ruling cites to factors from a US Supreme Court case which, if present, will allow the form of a sale-leaseback transaction to be respected. n347.3
- *Step-Transaction Doctrine*. This doctrine may also result in the disallowance of the tax consequences of a sale-leaseback transaction through the application of the "end-result test" of the step-transaction analysis. Under this test, an inquiry is made as to whether the sale-leaseback transaction at issue, as well as any related transactions that are concomitant to it, are a series of formally separate steps that are really pre-arranged parts of a single transaction that was intended at the outset. If so, the steps of the transaction are collapsed so that tax effect is given only to the end result.

In summary, the existence of a valid lease or sale-leaseback depends on the true substance of the transaction. If the purported lessor in a leasing transaction gives up the equity rights to the lessee, it may be considered to be a sale. n348 If the purported seller-lessee in a sale-leaseback transaction retains its equity in the property, this may be a financing transaction. n348.1

[2] Off Balance Sheet Financing or "Synthetic Leases"

The other side of the "sale-leaseback" coin is often a financing arrangement, and a taxpayer may in a given situation wish to have a series of transactions categorized as a financing arrangement rather than a lease arrangement. A "synthetic lease" or "synthetic real estate financing" is a method used to provide off-balance sheet financing to a corporation for the acquisition and development of a commercial facility or site, with substantial credit support for debt issued by or through an investor or capital source, usually a financial institution. Although nominally secured by real estate assets, a synthetic lease is underwritten on the basis of a guaranteed minimum revenue stream and the financial strength and credit rating of the lessee or guarantor. A synthetic lease is treated as an operating lease for financial accounting purposes, but, if properly structured, may be treated as a financial arrangement for tax purposes. The lessee/corporate user retains the tax benefits and operating control associated with ownership and debt, but for financial accounting purposes does not have to book the lease obligation as a liability or the leased property as an asset. The off-balance sheet financing from a synthetic lease substantially enhances the financial ratios of the lessee/corporate user because neither the real estate asset nor any financing liability or equity ownership appears on the balance sheet. Synthetic leases are used primarily by large, publicly-traded businesses. n348.2

The same factors used in analyzing the validity of a sale-leaseback arrangement are used to analyze a synthetic lease. Whether the transaction is a sale or a lease is a question of fact that must be ascertained from the intent of the parties as evidenced by the contract read in light of all facts and circumstances. n348.3 If the arrangement is treated as a financing arrangement, the transferee of the property (the nominal lessee) cannot deduct its payments as rent, but can, as the owner, claim depreciation and also claim interest deductions on borrowings associated with the financing agreement. n348.4

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.07

§ 4.07 Tax Considerations in Negotiating a Lease

In negotiating the lease agreement, the parties should be aware of the tax consequences of the various provisions as well as the business and legal points.

[1] Lease Acquisition Costs

[a] In General

Costs incurred by a landlord to acquire a lease or secure a particular tenant are not currently deductible, but ordinarily must be amortized over the term of the lease. This rule applies to nearly all costs related to securing a lease or obtaining tenants, including attorney's fees, n349 brokerage commissions for negotiating or securing a lease, n350 title charges, n351 "rent up" fees paid to management companies to obtain tenants, n352 and costs of other management services pertaining to acquiring a lease or obtaining tenants. n353 Amounts paid at the inception of a lease for future management or other services must also be capitalized and amortized over the lease term. n354 Costs of litigation involving a lease must also be amortized over the life of the lease. n355

Lease acquisition costs must generally be capitalized and amortized regardless of the length of the lease term, n356 or whether the landlord is a cash basis or accrual basis taxpayer. n357 Some taxpayers in the real estate rental business amortize the costs over an average lease term regardless of the actual terms of the leases to which particular acquisition costs relate. n357.1

The rationale for capitalizing lease acquisition costs is that they are connected with the acquisition of an asset (the lease) that has a benefit beyond the year of the expenditure. n358

In determining the period over which lease acquisition costs must be amortized, the term of the lease would generally not include renewal options for periods for which the parties reasonably expect the lease to be renewed. n359 However, if the parties are economically compelled to exercise an option to renew, then the renewal period may have to be considered. n360 Although the rule that the commission must be amortized ratably over the term of the lease is fairly well settled, it does not reflect the economic fact that the calculation of the amount of the commission may be based primarily upon the rental income to be received by the landlord during the earlier years of the lease, because fixed rental payments received toward the end of a long-term lease have considerably less value than the initial payments.

Attorneys fees should be carefully reviewed to be certain that only the fees applicable to a successful lease agreement are capitalized. For example, legal services rendered for general business, operating, and income tax advice are, generally, currently deductible. Fees paid to an attorney in connection with an unsuccessful effort to secure a lease are currently deductible. n361 However, if the attorney subsequently successfully negotiates a lease with another party and does not allocate his bill or his services between the successful and unsuccessful leases or itemize any other deductible portion of his fees, then the entire fee may be capitalizable to the cost of the executed lease. n362

Costs incurred to modify an existing lease must also be capitalized over the term of the modified lease. The rationale for capitalizing, rather than deducting, the costs is that the modified lease is a capital asset to the taxpayer, and expenses incurred to modify it are therefore treated as capital expenditures. n362.1

If the property is sold, unamortized leasehold costs become a part of the landlord's adjusted basis in the property and are applied against the sales proceeds to determine gain or loss on the transaction. n363

Expenses incurred by a tenant in acquiring a lease must be capitalized and amortized over the term of the lease. When a lease is terminated prior to its stated term, any unamortized expenses are deductible in the year of termination. n364 If the tenant purchases the property prior to the termination of the lease, any unamortized expenses are to be added to the tenant's costs of the property. n365

[b] Treatment of Lease Acquisition Costs on Early Termination of Lease

If a lease terminates before the end of the lease term, any remaining unamortized lease acquisition costs are generally deductible as a loss in the year of the termination. n366 If the landlord disposes of the property, however, no deduction for the remaining unamortized lease acquisition costs is allowed. If the property is sold, the unamortized costs are added to the landlord's basis in the property and are taken into account for purposes of determining any gain or loss on the disposition, or become part of the basis of the property received if the disposition is a non-recognition exchange. n367 If the property is disposed of in a nontaxable liquidation, such as the liquidation of a partnership, and distributed to the partners, they may continue amortizing the lease acquisition costs over the remaining lease term. n368

[2] Lessee's Improvements

[a] In General

The value of improvements made by a lessee that revert to the lessor upon termination of the lease, generally are not taxable to the lessor and do not increase its depreciable basis in the property. n369 Note that this is generally a favorable result to the landlord, because any initial tax cost would otherwise significantly outweigh the present value of the tax benefit from the additional depreciation. Lessee improvements that are made in lieu of rent are taxable to the lessor as ordinary income. n369.1 Furthermore, lessee improvements may be treated as constructive dividends to a shareholder-lessor if the lease is a sham or the shareholder is the primary beneficiary of the improvements. n369.2

If the lessor sells leased land after the improvements have been constructed by the tenant, the new owner may not begin to depreciate the portion of its cost allocable to the improvements until the end of the lease term. No current depreciation is allowable because the new landlord only has a reversionary interest in the improvements. The basis of the improvements is the amount paid for the property less the amount the property would have been worth without the improvements. n370

The cost of improvements made to leased property by the lessee is recovered under the modified ACRS rules, without regard to the lease term. (See Chapter 5.) The cost of the improvement is thus recovered over the applicable recovery period, even if the lease term is significantly shorter. If the lessee does not retain the improvement upon termination of the lease, the lessee's loss is computed by reference to the adjusted basis of the improvements at the time of the lease

termination. n371

Planning Tip:

Frequently, the lessee will be in a higher tax bracket than the lessor, because lessors often generate significant shelter from their overall real estate activities. Under these circumstances, there may be an overall net tax savings if the lessor constructs the improvements, and if the lessee bears the additional cost thereof through an increased rent, which will be deductible in full as paid or accrued over the term of the lease.

If a lease requires a tenant to restore the premises to their original condition, the tenant may deduct such costs, when incurred, if the costs are incurred in the last year of the lease. Otherwise, the costs must be amortized over the remaining term of the lease. A rigorous restoration provision requiring the tenant to restore the premises completely to their original condition could possibly cause a lessor to lose its right to depreciate the premises. Such a provision would, of course, be quite burdensome to the lessee. To avoid these problems, a lease could state that, "except for ordinary wear and tear," the tenant is required to restore the premises to their original condition upon the termination of the lease.

[b] Treatment of Construction Allowance Provided to Lessee

Construction allowances provided by a lessor to a lessee may be excluded from the lessee's gross income if statutory requirements are met. n372

Allowances provided either in cash or as a rent reduction can qualify for the exclusion. n372.1 The following requirements must be met for the exclusion to apply:

- The lease must be a short-term lease (15 years or less) of retail space; n372.2
- The allowance must be for the purpose of the lessee's constructing or improving qualified long-term real property used in the lessee's trade or business; and
- The lessee's trade or business must be located at the retail space. n372.3

The exclusion applies only to the extent that the allowance does not exceed the amount expended by the lessee on the construction or improvement. n372.4 The term "qualified long-term real property" means non-residential real property that is a part of and is located at the retail space and which reverts to the lessor at the termination of the lease. n372.5

Regulations clarify the exclusion in several ways. n372.6 First, the statutory definition of "retail space" is amplified. "Retail space" means real property leased, occupied, or otherwise used by a lessee in its trade or business of selling tangible personal property or services to the general public. n372.7 Regulations clarify that retail space includes not only the space where the retail sales are made, but also space where activities supporting retail activities are performed (such as administrative offices, storage areas, and employee lounges). This can include offices for a wide variety of tradespeople, salespeople, and professions. n372.8 In addition, products and services are treated as being made available to the general public (as required by *IRC § 110(c)(3)*) even if only specialized customers or clients are targeted. n372.9

Regulations also amplify the construction allowance requirement of the statute. A qualified lessee construction allowance is any amount received in cash or treated as a rent reduction, provided the purpose and expenditure requirements are met. n372.10

Regarding the purpose requirement, the lease agreement for the retail space must "expressly provide" that the construction allowance is for the purpose of those improvements or construction. Otherwise the exclusion from gross

income is not available. The required construction allowance provisions may be contained in either the lease agreement or in another document executed contemporaneously with the lease or during the term of the lease. n372.11 In a revenue ruling, the IRS has clarified that the purpose requirement does not require a lease agreement to provide that an *entire* construction allowance is for the purpose of constructing or improving qualified long-term real property. Only the portion of the construction allowance actually expended on qualified long-term real property for use in the lessee's trade or business at the retail space, however, may qualify as a qualified lessee construction allowance. n372.12

Planning Guide:

This interpretation by the IRS gives approval to lease provisions that provide a construction allowance and add a clarification, "To the extent the construction allowance is spent on qualified long-term real property, it is for the purpose of constructing or improving qualified long-term real property for use in [the lessee's] business at the retail space." The above lease provision will permit the allowance used for the qualifying purpose to fall within the exclusion of *IRC § 110(a)*, even if the lessee may retain any excess over the amount it actually spends constructing or improving the retail space. That excess, however, must be included in the lessee's gross income. n372.13

Regarding the expenditure requirement, the construction allowance must be expended by the lessee in the year received, subject to an "8-1/2 month rule," under which the lessee has 8-1/2 months after the close of the taxable year in which the construction allowance is received to spend the allowance. n372.14 Provided the lessee has not depreciated the expenditures, reimbursements received in a tax year after the year in which the expenditures are made by the lessee are considered timely for purposes of the expenditure requirement. n372.15

The lessor must treat the amounts expended on the construction allowance as non-residential real property owned by the lessor for all purposes, including the provision that allows lessors to take losses with respect to certain leasehold improvements abandoned at the end of the term of the lease. n373 However, the exclusion provided for the lessee is not conditioned on the lessor's complying with this requirement. n373.1

Both the lessor and lessee must furnish specified information to the IRS by attaching a statement containing specified information with a timely filed (including extensions) tax return for the taxable year in which the construction allowance was paid by the lessor or received by the lessee. n373.2 Failure to do so may result in penalties being imposed under *IRC § 6721* for failure to file correct information returns. n373.3

The Conference Committee report relating to the *Taxpayer Relief Act of 1997* states that no inference is intended as to the treatment of amounts that are not subject to *IRC Section 110*, and that present law, including case law and the IRS issue paper on the tax treatment of such amounts, will continue to apply where applicable. Under this authority, reimbursements paid to a lessee for capital expenditures made to buildings owned by the landlord are not gross income to the lessee. n374

[3] Improvements in Lieu of Rent

Many leases, particularly leases of raw land, will require a lessee to make improvements to the property. Such a requirement may, as an economic matter, require the lessee to make expenditures for the improvements that take the place of rent they would otherwise be required to pay. Improvements of this type made by a lessee are generally not included in the lessor's gross income, either at the time the improvements are made n374.1 or at the end of the lease. n375 However, if the improvements are in fact "in lieu of rent," the landlord will recognize ordinary income for the amount of the improvements that are "in liquidation in kind of lease rentals," and the tenant will be entitled to a corresponding deduction for rent. n376 Whether the lessee's improvements are in lieu of rent income depends on the intent of the parties, which may be indicated by the terms of the agreement or by the surrounding circumstances. n377 How the parties to the lease treat the improvements on their books and tax returns is also relevant. n377.1

Case law gives some indication of when a tenant's improvements are considered a substitute for rent, and therefore includable in the landlord's gross income. In any given case, however, the ultimate determination depends on the parties' intent. n378 The most obvious circumstances where rent is intended occur when a lease provides for a specific dollar amount of credit against otherwise payable rent in consideration of improvements made or to be made by the lessee, n379 or when a lease provides that the cost of improvements is to be credited against rent. n380

If the improvements to be made are uncertain as to time and amount, and no specific dollar amount of rental credit is provided, it is unlikely that they will be intended by the parties to be rent. n381 That a particular improvement is of a specialized nature or special type of construction in order to meet the particular needs of the tenant is also an indication that the improvement is not rent. n382 On the other hand, if the improvement merely enhances the value of the property, it is more likely that the improvement was made in lieu of rent.

The lessor will acquire a depreciable interest in an improvement made by the tenant in lieu of rent. n383 The lessee will have a depreciable interest in improvements made by it that are not in lieu of rent. n384

Planning Tip:

Since this is an issue on which the intent of the parties is of great weight, if not determinative, the lease should specifically state the intention of the parties as to the rent/non-rent status of any improvements required to be made by the lessee.

[4] Security Deposits

As discussed in § 4.02[4], above, security deposits constitute another point of negotiation. If the tenant agrees to post a security deposit, the landlord may have received the equivalent of a nontaxable and interest-free loan but the tenant will have made a payment that is neither currently deductible nor amortizable. n385 These advantages may be lost if the tenant requires the funds to be maintained in a separate trust with interest credited to his account. If payments are treated as prepaid rent (e.g., prepayment of the last month's or last year's rent), the lessor must include the payment in income when received. n386 The lessee, however, will generally be precluded from taking a deduction for a security deposit until the deposit is forfeited. n387

[5] Lease Inducements

The amount and character of the lease inducements that a landlord will be willing to provide vary widely, depending on such factors as the strength or weakness of the leasing market, the landlord's belief as to the direction of the market trend, the need of a developer to pre-lease a certain amount of office space in order to obtain financing for a proposed project or to achieve a positive cash flow on an existing property that must remain in compliance with existing financing covenants, and the degree to which the property is leveraged and the landlord has sufficient resources to carry a partially vacant property through a slow rental market. Five common types of lease inducements sometimes offered in the commercial marketplace are:

- (1) rent holidays;
- (2) cash payments;
- (3) landlord-funded improvements to the tenant's space;
- (4) leases that also give the tenant an equity interest in the leased property; and

(5) compensating tenants for existing lease obligations.

Each of these leasing arrangements may have different tax consequences to the lessor and the lessee, and these consequences will have a significant effect on the cost or benefit of choosing one type of arrangement over another.

[a] Rent Holiday

The most commonly used lease inducement is a rent holiday. A rent holiday is a period at the beginning of the lease during which either no rent is required to be paid, or the rent is substantially reduced. From the landlord's perspective, rent holidays are preferable to lowering the rent by an economically equivalent amount over the entire term of the lease, because the lower annual rent may be perceived as an indication that the property is of a lesser value. In general, no rent will be includable in the landlord's gross income and no rent will be deductible by the tenant during the rent holiday. Leases providing for rent holidays are subject to the rules of *IRC Section 467*, because the rent increases over the term of the lease as a result of the rent holiday. However, a reasonable rent holiday will not trigger the application of the *IRC Section 467* rent leveling rules, and thus income and expenses under the lease may be taken into account in accordance with the terms of the lease, unless the constant rent accrual provisions apply. n388 The maximum permitted length of a rent holiday is uncertain, but the term must be reasonable. Reasonableness of the rent-free term depends on local rental practices. Rental holidays of almost one year have been permitted. n389 (See § 4.02[3].)

[b] Cash Payments

In a slow rental market, a lessor may pay a cash bonus to a potential tenant or to a third party to induce the tenant to sign a lease. For example, cash payments may be made to relieve the tenant of remaining obligations on an old lease, to help defray the lessee's moving expenses, or to simply induce the tenant to sign the lease.

A cash payment by a lessor must be capitalized and amortized over the term of the tenant's lease. n390 The payment will be current ordinary taxable income for the lessee, n391 unless the payment qualifies as an excludable construction allowance under *IRC Section 110*. n392

If the prospective tenant is currently leasing space elsewhere, the lessor might pay the tenant's old lessor a lump sum to release the tenant from the lease. In such an instance, the tenant should have imputed ordinary income from the payment, which relieved the tenant of its obligation under the lease. The income, in turn, should be offset by an imputed deduction to the tenant in the same amount. These results are identical to the tenant receiving the payment directly from the lessor and using it to pay the old lessor to be released from the old lease. In either instance, the lessor's payment is treated as a lease inducement payment which is capitalized and amortized over the term of the tenant's new lease.

Alternatively, a landlord may agree to pay the tenant's existing rental obligations as they come due (or the tenant may assign its current lease to the new landlord). The Service would probably take the position that the landlord's assumption of the tenant's rental payments is nevertheless a lease acquisition cost that must be amortized over the term of the new lease. At least one court, however, has rejected this view and has allowed a current deduction for payments made by a landlord who assumed a prospective tenant's lease obligations. The landlord paid rents due under the tenant's old lease and was permitted a deduction, to the extent that the rents paid exceeded the rents received from subleasing the property. The court characterized the payments not as acquisition costs of securing a tenant, but as payments made by the landlord *vis-a-vis* its status as a sublessee of the tenant's old lease. The court found the amounts were paid only as an obligation under the assigned lease, and therefore were deductible as rent. n393

[c] Tenant Improvements

The lessor may either provide a construction allowance or "work letter" against which the tenant can draw in making improvements to its space, or make the improvements directly for the lessee. The tenant improvements would then

belong to the lessor for tax purposes. If the lease does not make clear that this is the intent of the parties (or if this is not the result under local law), the advances under the work letter could be viewed as an indirect cash payment to the tenant, which the tenant would have to take into income. To achieve the desired tax result the lease should spell out the parties' intent. Assuming the lessor is the owner of the improvements, depreciation on such assets would be determined under the normal MACRS method regardless of the term of the lease. n394 If leasehold improvements made by the lessor are irrevocably disposed of or abandoned by the lessor at the end of the lease term, however, the lessor may treat the abandonment as a disposition of the improvements and claim a loss with respect to any remaining adjusted basis of the improvements at that time. This provision allows lessors to write off the costs of abandoned improvements at the time the lease is terminated, rather than requiring the lessor to continue to write off the abandoned improvements over their remaining recovery period. n395

Improvements made by a tenant are generally not income to the owner unless they are made in lieu of rent. See [3], above, for a discussion of when tenant improvements are treated as a substitute for rent.

[d] Equity Leases

Another inducement that landlords may offer to tenants in a slow rental market is an ownership or quasi-ownership interest in the underlying leased property. The tenant can become a partial owner of the property by various means (e.g., through the acquisition of a limited partnership interest, or through a mere contractual arrangement to share in the property's future appreciation). The tenant may share in any tax benefits that stem from the property (if it owns an *actual* ownership interest in the property, or in a pass-through entity that owns the property), or may share only in distributions of cash flow and the proceeds from a sale or a refinancing of the property (if it holds only a "quasi-ownership" interest).

One of the primary issues in the context of an equity lease in which a tenant acquires a capital and profits interest in the partnership or limited liability company that owns the property is whether the tenant has transferred "property" in exchange for its partnership interest. No gain or loss is generally recognized to a partnership or any of its partners if property is contributed to a partnership in exchange for a partnership interest. However, property is generally not transferred to the partnership by the tenant in an equity lease. A tenant that acquires a capital interest in a partnership may have to recognize income on its receipt of the partnership interest if it does not contribute property with a fair market value equal to the equity represented by the partnership interest received. The partnership might also recognize income with respect to the same transaction, on a deemed disposition of a pro rata portion of its assets at their fair market value, and would then be able to amortize the value of the partnership interest conveyed to the tenant over the term of the lease as a lease acquisition cost.

An alternative method, which may avoid the recognition of income to the landlord and tenant, would be to give the tenant a partnership interest with no current value. For example, if a developer transfers a partnership interest to the tenant and the tenant-partner only receives a share of the net cash flow in excess of what the property is currently generating and only receives sales proceeds in excess of the property's current fair market value, the interest may not have any current value for income tax purposes and the receipt of that interest should not result in current income recognition. n396

As an alternative to an actual ownership interest in the property or in the entity that owns the property, the parties may agree to give the tenant a contractual right to share only in the property's future appreciation. Under this type of arrangement, the tenant generally does not receive any current interest in the property other than a nontransferrable contractual right to share in the proceeds of a future sale or refinancing. n397 The parties may agree on a future valuation of the property for this purpose based on an appraisal or formula clause if no actual sale takes place.

[e] Compensating Tenants for Existing Lease Obligations

In competitive commercial leasing markets, lessors must become even more creative in structuring lease inducements. Often a prospective tenant may be contractually obligated for an existing lease that does not expire for several years. In order to induce the prospective tenant into leaving the old office, the landlord may agree to assume and take an assignment of the existing lease from the tenant to the new landlord or to structure a sublease from the tenant to the new landlord.

When it assigns the existing lease to the new landlord, the tenant may be able to deduct its remaining adjusted basis in the tenant-owned leasehold improvements. n398 However, the Internal Revenue Service may view the value of the leasehold improvements as a cost to the tenant of acquiring the new lease. The landlord may be able to currently deduct rent and other expenses of the assigned lease in excess of income earned, although the Service might assert that the assignee-landlord's net loss incurred with respect to the old space must be amortized over the term of the new lease. n399

Alternatively, the new landlord could sublease the old leasehold from the new tenant, which results in the tenant remaining obligated for the balance of the existing (old) lease. Accordingly, the tenant would recognize rental income equal to the new landlord-sublessor's payments and rent expense in the amount specified in the existing lease agreement. If this approach is taken, the tenant would continue to amortize its basis in tenant improvements with respect to the existing lease over their original depreciable lives.

Lease inducements can be a major factor in obtaining tenants in a slow marketplace. However, not all lease inducements have the same effect, and the differences can have significant tax consequences to the parties. Determining which lease inducement is most beneficial requires an in-depth review of the tax position of both the lessor and the lessee.

CHAPTER 4 Operating and Leasing Real Estate

1-4 Federal Taxes Affecting Real Estate § 4.08

§ 4.08 Payments on Sale or Cancellation of Leases and Subleases

[1] Payments to Cancel a Lease

An amount paid by a landlord to a tenant to induce it to cancel a lease is a capital expenditure and not a currently deductible expense. n400 The general rule is that a lease cancellation payment made by a landlord must be amortized over the remaining term of the old lease. This general rule applies when the purpose of cancelling the old lease is to enter into a new lease. n401 There are several exceptions to the general rule, however. The first exception arises when a landlord cancels the old lease in order to construct a new building or make extensive improvements to an existing building. In that case, the cost of cancellation is treated as a cost of acquiring a new asset and is amortizable over the recovery period of the new building n402 or the term of the new lease. n403 Similarly, where the landlord makes the lease cancellation payment in order to sell the property unencumbered by the lease, the amount of the payment is added to the landlord's basis for purposes of determining the amount of gain or loss on the sale. n404

Notwithstanding the general rule described above, in a case with an unusual fact pattern, the Ninth Circuit held that a lease cancellation payment was amortizable over the term of the new lease, even though the cancellation payment was made solely to obtain a new lease with a different party. n405 Due to its unusual facts, however, the *Wells Fargo* case appears to be of limited precedential value. A critical fact in that case was that the lease cancellation payments were to be paid only from rentals paid by the new tenant, and not otherwise. In effect, the result was a wash--the landlord was able to write off the cancellation payments over the new lease term as they were paid by the new tenant. Given the unusual facts, the court found that amortizing the cancellation payment over the new lease term (which was less than one year) provided a true reflection of the taxpayer's income. n406

The Ninth Circuit has distinguished *Wells Fargo* and recognized it as an exception to the general rule based on its unusual facts. n407 In the usual case, even the Ninth Circuit would amortize a lease cancellation payment over the unexpired term of the old lease, rather than the term of the new lease. That result will usually provide a truer reflection of income. n408

To the lessee, the transaction will be considered a sale of the lease. If the lease is on business or income-producing real property and has been held by the lessee for more than one year, any resulting gain or loss is considered to be from an asset used in a trade or business. n409 If the lease is on a personal residence, an amount received for cancellation is considered received from the sale of a capital asset.

When the lessee makes a payment to the lessor to induce the lessor to cancel a lease on business property, the payment will ordinarily be deductible as an ordinary and necessary business expense. Furthermore, the lessee will be entitled to deduct any unamortized leasehold improvement costs when the improvements are not physically recoverable. However, if the cancellation was made to enable the lessee to enter into a new lease on the same premises, the payment will be amortizable over the life of the new lease. In either case, the receipt of the payment by the lessor is generally treated as additional rental income. n410

When the lessee purchases outright ownership from the lessor, so that the leasehold and fee interests merge, no part of the purchase price can be allocated as the cost of canceling the lease. Thus, the entire amount paid is capitalized as part of the cost of the property.

[2] Sale of a Lease

When the lessee sells its entire leasehold interest to a third party, the transaction is treated as a sale or exchange, and it is subject to capital gain or *IRC Section 1231* treatment, except when the lessee is in the business of selling leases.

On the other hand, if only a portion of the full term of the leasehold is assigned, the transaction is considered to be a sublease and the payments are reportable as rental income.

A question arises as to whether there is a sale or a sublease when the lessee assigns a portion of the leased premises for the full term of the lease. If a sale classification is desired, the lessee should obtain the lessor's agreement to a release from the portion of that lease so assigned, with a corresponding reduction in rent, and have the assignee pay the rent directly to the lessor.

When the lessor sells its rights as landlord under a lease, but retains ownership of the leased property, the transaction probably will be viewed as an anticipatory assignment of income (i.e., the rental payments due from the tenant, the right to which was assigned by the lessor to the purchaser), and the payment received will be subject to tax treatment as ordinary income.

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.01

§ 5.01 Depreciation Rules: A Historical Background

The Economic Recovery Tax Act of 1981 (ERTA) completely revised the rules pursuant to which owners of depreciable assets could "recover" the cost of those assets for Federal income tax purposes. n1 Under ERTA, old depreciation rules were virtually discarded and replaced by a new "Accelerated Cost Recovery System" (ACRS) for property placed in service after December 31, 1980. The ACRS rules were, in turn, revised by two subsequent Congressional acts--the Tax Equity and Fiscal Responsibility Act of 1982 and the Tax Reform Act of 1984 n2--and essentially replaced by a third, the Tax Reform Act of 1986, which is discussed later in this chapter in Section 5.02. n3 The Revenue Reconciliation Act of 1993 and the Small Business Job Protection Act of 1996 introduced even more changes to cost recovery for depreciable assets. n4

ACRS applies only to property placed in service on or after January 1, 1981. Taxpayers owning depreciable property that they placed in service before January 1, 1981, will apply pre-ERTA depreciation methods to that property. As a result, taxpayers that were in business before 1981 may find that they need to deal with the old law, the new law, or both old and new laws. Furthermore, under an anti-churning rule, property placed in service before 1981 that is transferred thereafter to another taxpayer in certain carryover or nonrecognition transactions must continue to be depreciated by the transferee under the pre-ACRS rules. n4.1 For this reason, and because much of the conceptual framework of the old depreciation rules still apply, a discussion of the old depreciation rules precedes the explanation of ACRS.

From an economic perspective, depreciation is the periodic reduction in value of an asset over its useful life. The tax deduction allowed for depreciation is intended to recognize the exhaustion of the property due to wear and tear (including normal obsolescence) and to provide a method for matching the expense of this exhaustion with the income produced from the property. Under the pre-ERTA rules, the tax system generally attempted to match the tax deductions for depreciation with the actual economic exhaustion of the asset. This matching is no longer required in the post-ERTA world, and, accordingly, the tax benefit from the deduction for depreciation is a significant factor to consider in evaluating the economics of an investment in depreciable real estate. The tax provision that permits accelerated depreciation is one of the major factors to which many investors look when evaluating the tax and economic aspects of a potential real estate investment.

[1] Who May Deduct Depreciation

Depreciation is intended to provide an expense deduction that recognizes the "wasting of an asset." Therefore, the entity subject to the economic loss arising from the wasting process is the entity that is entitled to the deduction for depreciation. n5 Ordinarily, the person who owns or has capital invested in the property is entitled to the depreciation deduction. However, mere ownership or possession of bare legal title will not necessarily enable a holder to claim a depreciation deduction for tax purposes. n6 The converse is also true, and several methods exist for structuring a real estate venture so that someone other than the holder of legal title can claim a tax deduction for depreciation.

The first is to use a "straw" or "dummy" corporation to hold bare title to property for various non-tax reasons, such as limiting exposure to potential civil liability, or facilitating a financing of the property. Under limited circumstances, the Service recognizes the "straw" corporation for what it is and allows the true owner to claim the depreciation deduction. n7

The second method is to structure purchase and financing of real property as a capital lease. In a capital lease, the lease payments generally cover the cost of the property and interest costs, and the lessee has an option to purchase the property at the end of the lease at a nominal purchase price. The Service generally views a transaction of this type as a purchase of the property by the lessee, and a sale by the lessor rather than as a lease. n8 Thus, the *lessee* would be entitled to the depreciation deductions on the property. The present value of the aggregate minimum rental payments on the leased property becomes the depreciable basis of the property.

A third method involves leasehold improvements made by a lessee of real property. In most states, title to improvements to real property vests immediately in the lessor. However, when a lessee makes improvements to the property, it is entitled to tax deductions that recognize the loss of the value of the leasehold improvements over time. Leasehold improvements made by a lessee are recovered over the usual MACRS recovery period of the improvements, without regard to the term of the lease. n9-10

[2] What Property is Depreciable

A tax deduction for depreciation is allowed only for property "used in a trade or business" or "held for the production of income." n11 Depreciation is allowed on property, or a part thereof, that is subject to a decrease in value caused by physical wasting and wear and tear. Calculation of depreciation should begin at the point in time when the asset is placed in service. n12 Depreciable real property is usually considered to be placed in service when it has been completed and is ready for occupancy. n13 It is *not* necessary that the property actually be used or occupied. n14

In order to be depreciable, property must be used primarily for business purposes. For example, in one case, the Tax Court did not allow a depreciation deduction for capital improvements that were found to have been made primarily for the benefit of a shareholder, not the corporation. n15 In another case, the Service held that temporary business use of property held for sale is not enough to entitle the business to depreciation deductions on the property. n16 Thus, model homes that were used temporarily to assist sales, but were to eventually be sold, were not depreciable. The rationale behind the Service's ruling is that the taxpayer primarily held the property *for sale* to customers in the ordinary course of the taxpayer's business, rather than as property *used in* a trade or business.

Types of realty that can qualify for depreciation deductions include buildings and their structural components, towers, paved parking lots, certain leasehold improvements, certain landscaping, mobile homes, and any other real property that can be shown to have a bona fide business purpose and a limited useful life. However, land, by nature of its perpetuity, cannot be depreciated. n17 This is true even if the fertility of the land is deteriorating, or even if construction costs on an adjoining parcel are required to be allocated to the empty parcel. n18 Although golf course improvements have historically been held to constitute land and, as such, have not been subject to depreciation, n18.1 the IRS has issued a revenue ruling that allows depreciation of certain golf course greens land preparation costs. n18.2

The ruling distinguishes between traditional natural soil greens and "modern" greens. Push-up or natural soil greens are

essentially landscaping that involves some reshaping or regarding of the land. The IRS has ruled that the costs of land preparation undertaken in the original construction or reconstruction of push-up or natural soil golf course greens are not depreciable. Rather, these costs are inextricably associated with the land and must be added to the taxpayer's cost basis in the land. In contrast, "modern" greens make use of technological changes in green design and construction, and contain sophisticated integrated drainage systems. The greens are constructed with a network of subsurface drainage tiles or interconnected pipes, one or more layers of gravel and/or sand particles, a rootzone layer, and a variety of turfgrass. The IRS has ruled that the costs of land preparation undertaken in the original construction or reconstruction of modern golf course greens that is closely associated with depreciable assets are depreciable. This would include items such as a network of underground drainage tiles or pipes, so that the land preparation will be retired, abandoned, or replaced contemporaneously with those depreciable assets. n18.3

The recovery period of the land preparation costs is the same recovery period of the depreciable assets with which the land preparation is associated. For purposes of *IRC Section 168(a)*, the modern green improvements have a recovery period of 15 years, and for purposes of *IRC Section 168(g)* (the alternative depreciation system), they have a recovery period of 20 years. n18.4 The IRS noted, however, that not all improvement costs associated with modern greens are depreciable. The general earthmoving, grading, and initial shaping of the area surrounding and underneath the modern greens that occur before the construction are treated as general land preparation and must be added to the taxpayer's cost basis in the land. n18.5

Even for property other than golf courses, some costs associated with land are depreciable. The Tax Court has held that the air space above land used as a dump site is eligible for depreciation when it is "used up" as debris piles up on the property. n19 It has also been held that a leasehold interest in land for a fixed term of years may be amortized over that term. n20 Furthermore, because natural resources, such as oil wells and rock quarries, are subject to exhaustion in a way most land is not, they are eligible for tax deductions under special rules for depletion. n21

Certain land preparation costs are also depreciable if the land is used in a trade or business or for the production of income. In general, land preparation costs consisting of shrubbery and other elements of landscaping may be depreciable, depending on location. If the landscaping is immediately adjacent to a building, it is depreciable, but if it is situated around the perimeter of a tract of land, it must be capitalized as a part of the land costs and cannot be depreciated. n22 The cost of constructing roads, sewers, utility systems and other infrastructure items may be eligible for depreciation deductions, but only if they have a determinable useful life to the taxpayer. n23 If these improvements are transferred to a municipality or other local governmental body, after which the transferee became responsible for maintenance, repair and reconstruction of the improvements, the infrastructure items are usually considered to be intangible property to the taxpayer. In that case, the improvements are not depreciable. n23.1 Costs of obtaining a zoning variance that are allocable to a particular building and not to the land may be included in the depreciable basis of the underlying building. Costs of obtaining a zoning variance that provides benefits of an indefinite duration, however, cannot be depreciated. n23.2

Depreciation on machinery and equipment used by the taxpayer during the construction of its own building must be treated as an indirect cost, and capitalized as part of the cost of the building (i.e., no current depreciation deduction is allowed). n24

[3] Determination of Useful Life

Under prior law, the useful life over which depreciation was computed was generally determined based upon the reasonably expected use of an asset in the taxpayer's particular trade or business. Four factors were considered: n25

- (1) wear and tear and decay or decline from natural causes;
- (2) the normal progress of the art, economic changes, inventions, and current developments within the

industry and the taxpayer's trade or business;

(3) the climatic and other local conditions peculiar to the taxpayer's trade or business; n26 and

(4) the taxpayer's policy on repairs, renewals, and replacements.

In the past, many taxpayers attempted to use innovative approaches to support a useful life for realty as something shorter than its physical life. Generally, these efforts were not successful. n27 The Service vigorously contested any method that was not based on physical deterioration.

[4] Class Life Asset Depreciation Range ("CLADR")

This subsection briefly covers the depreciation rules that applied to property placed in service before 1981, when the new ERTA depreciation rules took effect. The depreciation rules before ERTA were designed to allocate depreciation deductions over the period the asset was used in business. This method was used so that deductions for the cost of an asset were matched with income produced by the asset. However, this method of depreciation often led to expensive and lengthy controversies between taxpayers and the Service over the proper useful life of an asset.

In an effort to minimize this controversy, the Class Life Asset Depreciation Range (CLADR) system was adopted. This system provided taxpayers with a relatively wide latitude in determining the useful lives of assets. It allowed taxpayers to select a life within a range of 20 percent above or below the CLADR "guiding life" for that asset. n28 If the election was made, it applied to all eligible property acquired during the taxable year to which the election related and for which a class life had been established. n29 The CLADR system applied to all additions of land improvements and personal property made during the year of election. n30 The CLADR asset categories and lives are specifically set forth in various revenue procedures, and are periodically revised. n31

[5] Salvage Value

Before depreciation could be calculated under the CLADR system, the asset's estimated residual value to the taxpayer at the end of the asset's useful life had to be determined. This value is referred to as the "salvage value." Under ACRS, it is no longer necessary to determine salvage value in calculating depreciation.

Salvage value is an estimate of the amount that will be realized from the sale or other disposition of an asset when it is no longer useful to the taxpayer and is to be retired from service. The salvage value may be a large percentage of the original cost if it is the taxpayer's practice to dispose of its depreciable assets while they are still in good operating condition. However, if it is the taxpayer's practice to retain its depreciable assets until their economic useful life is substantially exhausted, salvage value may represent no more than the estimated scrap value. n32 Also, the value was to be estimated at the time the property was acquired and could not be revised thereafter, unless there was a change in the asset's estimated life. n33

[6] Methods of Computing Depreciation Under CLADR

There are three basic methods of computing depreciation under CLADR, namely: straight line; double declining balance (at a rate not greater than twice the straight-line rate); and sum-of-the-years'-digits. n34 Also permitted, with certain restrictions, are any other consistent methods that will not result in accumulated depreciation during the first two-thirds of the asset's useful life that is greater than the amount that would have resulted from using the double declining balance method. n35

The following is a brief discussion of the five most common methods of depreciating real estate under the CLADR method:

1. *Straight-line.* Under this method, the basis of the property (less estimated salvage value) is written off ratably over the property's estimated useful life to the taxpayer. n36

Example:

An asset costs \$10,000 and has a useful life to the taxpayer of ten years. Assuming that the asset has no salvage value, the annual depreciation is equal to 10 percent of the cost, or \$1,000. This method may be applied to any new or used property, regardless of its useful life.

2. *Double declining balance.* Under this method, up to twice the straight-line rate could be applied to the unrecovered cost remaining at the end of each year, without regard to salvage value. This method could be applied only to certain new residential rental property or tangible personal property that has a useful life of three years or more. n37 Residential rental property was defined here as property from which 80 percent or more of the gross income is derived from dwelling units other than transient units (such as motels or nursing homes). n38

3. *150-percent declining balance.* Under this method, 150 percent of the straight-line rate could be applied to the unrecovered cost at the beginning of each year, without regard to salvage value. This method could be applied to any used personal property or new nonresidential real property with a life of three years or more. n39

Example:

An asset costs \$10,000 and has a useful life to the taxpayer of five years. The straight-line rate is 20 percent and the 150-percent declining balance rate is 30 percent. Depreciation under the 150-percent declining balance method is computed as follows:

	Unrecovered Cost	Current Depreciation Rate	Amount
.....			
1st year	\$10,000	30%	\$3,000
2nd year	7,000	30	2,100
3rd year	4,900	30	1,470
4th year	3,430	30	1,029
5th year	2,401	30	720
Total depreciation claimed			\$8,319
Unrecovered cost at end of estimated life			1,681
			\$10,000

4. *125-percent declining balance.* This is the maximum depreciation rate available for used real estate and was available only for used residential rental property with a useful life of 20 years or more. n40 All other used real estate was limited to straight-line depreciation. n41

5. *Sum-of-the-years'-digits.* Under this method, a decreasing fraction was applied to the original basis less the salvage value. The denominator of the fraction that is used remains constant and is represented by the sum of all the years' digits corresponding to the estimated useful life of the asset. The numerator of the fraction is the number of years of useful life remaining at the beginning of the year of computation. n42 For real estate, this method was available only for new residential housing having a useful life of three years or more. It is also available to certain personal property, such as rugs, furniture and similar items.

Example:

Assume that an asset has a four-year life.

Denominator-- $4 + 3 + 2 + 1 = 10$.

The denominator is $4 + 3 + 2 + 1 = 10$.

The depreciable fraction in:	the 1st year = $4/10$
	the 2nd year = $3/10$
	the 3rd year = $2/10$
	the 4th year = $1/10$

Partnership property may normally be depreciated using one of the accelerated methods. However, if the tax basis of partnership property is changed (increased) as a result of a change in ownership of a partnership interest, the additional tax basis in partnership property may only be depreciated using the straight-line method, even though the original basis in the property is still depreciated using an accelerated method. n43

It may be advantageous for the taxpayer to switch depreciation methods during the asset's useful life. The taxpayer may switch from any declining balance or sum-of-the-years'-digits method of depreciation to the straight-line method without prior approval from the Service. n44 It is necessary, however, that certain information be disclosed on the tax return for the year of the change. n45 In contrast, taxpayers may switch to accelerated methods only upon proper and timely application to the Commissioner of the Internal Revenue Service. Special rules apply if the CLADR system is used. n46

[7] Changing Method of Depreciation

In order to change a depreciation method that constitutes a change in method of accounting, a taxpayer must first obtain consent by the IRS to do so. n47 Consent may be obtained under one of two procedures. The first and cheapest (because it avoids user fees) is the automatic consent procedures set forth in *Revenue Procedure 2002-9*. n48 This automatic consent procedure allows a taxpayer who has claimed less than the depreciation allowable to change its method of accounting to claim allowable depreciation. The omitted depreciation from years prior to the year of change is taken into account through an *IRC § 481* adjustment. n49 A taxpayer that files and complies with an automatic change request procedure is granted consent to change its accounting method, subject to review by the IRS National Office and operating division director. Specified changes in depreciation that qualify for the automatic consent procedure are set forth in detail in the List of Automatic Accounting Method Changes in the Instructions to Form 3115. n49.1

The second procedure under which a taxpayer may request a change in accounting method is through the advance consent request procedure, as updated annually in the Internal Revenue Bulletin. n50 A user fee must be paid to request

a change in accounting method using the advance consent request procedure.

Regardless of which procedure is used, the taxpayer must file a Form 3115, Application for Change in Accounting Method in accordance with the instructions to that form. For changes in depreciation, a Schedule E of Form 3115 must also be completed.

[8] Change in Depreciation as Change in Accounting Method

[a] In General

Courts have not been consistent in resolving whether a change in depreciation method constitutes a change in method of accounting that requires consent of the IRS under *IRC Section 446(e)*. n50.1 As a result of the inconsistencies in treatment of the issue by courts, Treasury and the IRS issued regulations in an attempt to clarify the matter. n50.2

Note:

The regulations generally apply on or after December 30, 2003. n50.3 For prior periods, however, the IRS has announced a change in its litigating position as to whether a change in method of depreciation is a change in accounting method. The changed position reflects the Service's losses in the Brookshire and O'Shaughnessy cases, above. n50.4 Under its new position, the IRS will not assert that a change in computing depreciation or amortization under *IRC Sections 167, 168, 197, 1400I, 1400L(b), or 1400L(c)*, or former *IRC Section 168* (ACRS) is a change in method of accounting that requires the IRS consent under *IRC Section 446(e)*. This forbearance applies only for depreciable or amortizable property that is treated as a capital asset under the taxpayer's present and proposed methods of accounting. n50.5

[b] Changes in Depreciation That Are Changes in Method of Accounting

Regulations specify which changes in depreciation are and are not changes in a method of accounting. n50.6 In general, a change in the treatment of an asset from nondepreciable or nonamortizable to depreciable or amortizable, or vice versa, is a change in method of accounting. Additionally, a correction to require depreciation or amortization in lieu of a deduction for the cost of depreciable or amortizable assets that had been consistently treated as an expense in the year of purchase, or vice versa, is a change in method of accounting. A change in the depreciation method, period of recovery, or convention of a depreciable or amortizable asset is also a change in method of accounting. n50.7 This change may be the result of, for example, a change in the classification of property under *IRC Section 168(e)* or a change in computing depreciation from the general depreciation system under *IRC Section 168(a)* to the alternative depreciation system of *IRC Section 168(g)*. Further, a change to or from claiming the additional first-year depreciation deduction provided by *IRC Section 168(k)* or *IRC Section 1400L(b)* is a change in method of accounting under certain circumstances. n50.8

Subject to a "useful life" exception, under which certain adjustments to useful lives that are not specified by the Code or other authority are not treated as a change in method of accounting, n50.9 a change to or from a useful life (or recovery period or amortization period) that is specifically assigned by the Code, n50.10 the regulations under the Code, or other guidance published in the Internal Revenue Bulletin is a change in method of accounting. n50.11

The regulations also provide that a change in salvage value to zero for a depreciable or amortizable asset for which the salvage value is expressly treated as zero by the Code, applicable regulations, or other guidance published in the Internal Revenue Bulletin, is treated as a change in method of accounting. Any other change in salvage value is not treated as a change in method of accounting. n50.12

[c] Changes in Depreciation That Are Not Changes in Method of Accounting

The regulations provide that a change in computing depreciation allowances in the taxable year in which the use of property changes in the hands of the same taxpayer is not a change in method of accounting. n50.13 In addition, the making of a late depreciation election or the revocation of a timely valid depreciation election generally is not a change in method of accounting. To make a late depreciation election or to revoke a timely valid depreciation election, a taxpayer must submit a request for a private letter ruling. n50.14 Finally, except as otherwise provided, any change in the placed-in-service date of a depreciable or amortizable asset is not treated as a change in method of accounting. n50.15

Under a so-called "useful life" exception, an adjustment in the useful life of a depreciable or amortizable asset for which depreciation is determined under *IRC Section 167* (other than under *IRC Sections 168, 1400I, 1400L(c)*, the pre-1986 version of *IRC Section 168*, or an additional first-year depreciation deduction provision n50.16) is not a change in method of accounting. This exception is not available when the length of the useful life is specified by the Code, regulation, or other authority. n50.16.1

[d] Special Rules

The regulations provide special rules regarding the accounting method change treatment for the following items: n50.17

- a change from a declining balance method under *IRC Section 168(b)(1)* or (2) to the straight line method;
- changes in certain depreciation methods under *IRC Section 167* (other than under *IRC Sections 168, 1400I, 1400L(c)*, the pre-1986 version of *IRC Section 168*, or an additional first year depreciation deduction provision of the Internal Revenue Code; n50.17.1 or
- *IRC Section 481* adjustments.

These rules primarily affect non-real estate items, but *IRC Section 481* adjustments can come into play for real estate. The regulations give an example of a taxpayer that purchases a building and its components for use in manufacturing and initially depreciates it as 39-year nonresidential real property. If the taxpayer later completes a cost segregation study and reclassifies certain items as *IRC Section 1245* property, any change in the depreciation method, recovery period, and convention for those items will be a change in method of accounting that will result in an *IRC Section 481* adjustment. The useful life exception would not apply because the assets are depreciated under *IRC Section 168*. n50.18

[e] Application of the "Allowed or Allowable" Rule to Changes in Method of Accounting

IRC Section 1016(a)(2) provides that the basis of property is adjusted for amounts allowed as depreciation and amortization, but not less than the amount allowable. The regulations provide that *IRC Section 1016(a)(2)* does not permanently affect a taxpayer's lifetime income for purposes of determining whether a change in depreciation is a change in method of accounting under *IRC Section 446(e)* and the related regulations. n50.19 This change is consistent with *Revenue Procedure 2007-16*. Under *Revenue Procedure 2007-16*, a taxpayer may change its method of determining depreciation for a depreciable or amortizable asset after its disposition if the taxpayer did not take into account any depreciation allowance, or did take into account some depreciation but less than the depreciation allowable, for the asset in computing taxable income in the year of disposition or in prior taxable years. Because the taxpayer is permitted to claim the allowable depreciation not taken into account for this asset, the taxpayer's lifetime income is not permanently affected by the "allowed or allowable" rule. n50.20

The regulation regarding the application of the "allowed or allowable" rule to changes in method of accounting applies to changes in depreciation or amortization for property for tax years ending on or after December 30, 2003. n50.21

[9] Election to Expense Depreciable Business Assets

Taxpayers other than trusts, estates, and certain non-corporate lessors n51 may elect to expense the cost of *IRC Section 179* property that is used in the active conduct of a trade or business. n52 Section 179 property is new or used tangible depreciable property that is acquired by purchase and used in the active conduct of a trade or business, other than air conditioning or heating units. n53 Off-the-shelf computer software placed in service in taxable years beginning in 2003 and before 2011 is also *IRC Section 179* property. n53.1 The availability of *IRC Section 179* treatment with respect to real property is quite limited. The maximum amount that may be expensed in a taxable year varies according to the year the property is placed in service, as follows: n54

Tax Year Beginning	Maximum Amount
Before 1993	\$10,000
1993-1996	\$17,500
1997	\$18,000
1998	\$18,500
1999	\$19,000
2000	\$20,000
2001-2002	\$24,000
2003	\$100,000
2004	\$102,000 n54.1
2005	\$105,000 n54.2
2006	\$108,000 n54.3
2007	\$125,000
2008-2010	\$250,000
2011 and thereafter	\$25,000

NOTE:

If the maximum *IRC Section 179* deduction is reduced to \$25,000 after 2010, which will occur unless new legislation is enacted, n54.4 special rules will apply for the 2010/2011 taxable year for passthrough entities that have a taxable year other than a calendar year. A partnership (or LLC treated as one) or S corporation (passthrough entity) with a taxable year beginning in 2010 and ending in 2011 is subject to the \$250,000 limit for property it places in service during that taxable year. A partner, member, or shareholder of that entity that is a calendar year taxpayer is subject to the \$250,000 limit for (1) qualifying property placed in service by the partner, member, or shareholder apart from the passthrough entity during 2010, and (2) its allocable share of the *IRC Section 179* deduction from any passthrough entity with a taxable year ending in 2010. For 2011, that partner, member, or shareholder is subject to the \$25,000 maximum for (1) qualifying property placed in service by the partner, member, or shareholder apart from the entity during 2011, and (2) its allocable share of the *IRC Section 179* deduction from any passthrough entity with a taxable year ending in 2011. Thus, a single shareholder S corporation might elect to expense a \$250,000 cost under *IRC Section 179* for property placed in service during its April 1, 2010-March 31, 2011 fiscal year, but the S corporation shareholder would be subject to the 2011 \$25,000 limitation in claiming the items on his or her return. This is because the S corporation's 2010 taxable year ends within the shareholder 2011 taxable year. n54.5

The maximum amount is reduced (but not below zero) by the amount by which the cost of qualifying property placed in service during the taxable year exceeds specified amounts. The phase-out thresholds are as follows: n55

Tax Year Beginning	Phase-out Threshold
1997-2002	\$200,000
2003	\$400,000
2004	\$410,000 n55.1
2005	\$420,000 n55.2
2006	\$430,000 n55.3-55.4
2007	\$500,000
2008-2010	\$800,000
2011 and thereafter	\$200,000

NOTE:

The amount that can be expensed under *IRC Section 179* is increased by \$100,000 for qualified section 179 disaster assistance property placed in service during a taxable year. n55.5 The phase-out threshold for reducing the amount that can be expensed with respect to qualified *IRC Section 179* disaster assistance property is increased by \$600,000. n55.6 Qualified *IRC Section 179* disaster assistance property is *IRC Section 179* property n55.7 that is also qualified disaster assistance property that is eligible for 50-percen additional first-year depreciation under *IRC Section 168(n)* . n55.8 Property for which this expensing is claimed cannot be treated as qualified zone property or qualified renewal property under *IRC Sections 1397A* and *1400J*. n55.9

A taxpayer who elects to expense under *IRC Section 179* must reduce the depreciable basis of the Section 179 property by the amount of the deduction. n56

Married individuals filing separately are treated as a single taxpayer for purposes of the dollar limitation and the reduction attributable to placing excess *IRC Section 179* property in service. n56.1

In addition, the amount treated as an expense cannot exceed the taxable income from the active trade or business of the taxpayer. n57 This limitation is applied *after* the limitations referred to in the previous paragraphs. A carryover is provided so that deductions disallowed under the taxable income limitation can be carried forward to the succeeding tax year. n58 When an amount is carried over to a succeeding year, the amount allowable as a deduction in the succeeding year is increased by the lesser of the following: n59

- (1) the aggregate amount disallowed by the taxable income limitation for all prior tax years (to the extent not previously allowed as a deduction in a carryover year), or
- (2) the amount of any unused Section 179 expense allowance for the taxable year.

The unused *IRC Section 179* expense allowance for a taxable year equals the excess (if any) of: (1) the maximum cost of Section 179 property that the taxpayer may deduct after applying the statutory limitations of *IRC Section 179(b)*, over (2) the amount of Section 179 property that the taxpayer actually elected to expense under *IRC Section 179*. n60

Example:

T, a calendar year taxpayer, has a \$30,000 carryover of a disallowed deduction for Section 179 property purchased in 2003. In 2004, T purchases and places in service Section 179 property costing \$125,000. T's taxable income from the trade or business in 2004 is \$110,000. T elects to expense \$90,000

of the Section 179 property purchased in 2004. T may deduct in 2004 \$10,000 of the \$30,000 carryover from 2003. This \$10,000 amount is the lesser of T's total outstanding carryover of disallowed deductions (\$30,000), or the amount of any unused Section 179 expense allowance for 2004 (\$100,000 limit less \$90,000 elected to be expensed, or \$10,000). For 2005, T has a \$20,000 carryover of disallowed deduction for the Section 179 property purchased in 2003. n61

Additional limits restrict the deduction under *Treas Reg § 1.446-1(e)(2)(ii)(b)*. The deductible cost of property that is only partially used in a trade or business is limited to the percentage that the property is used for trade or business purposes. Thus, for a \$10,000 item of Section 179 property that is used only 70 percent of the time in a trade or business, only \$7,000 could be expensed under *IRC Section 179*. For this partial business use rule to apply, however, more than 50 percent of the property's use must be for trade or business purposes. n62

If Section 179 property ceases to be used predominantly in the taxpayer's trade or business before the end of the property's recovery period, the taxpayer must generally recapture as ordinary income any amounts previously expensed to the extent the amount of those expenses exceeds the total amount that would have been allowable as depreciation deductions for prior tax years. n63

For partnerships, the limits of *IRC Section 179(b)* apply both at the partnership and partner level. A similar rule applies for S corporations and their shareholders. n64 The practical effect of this limitation is that in partnerships with any significant number of partners, *IRC Section 179* benefits are virtually unavailable to the partners with respect to property purchased by the partnership.

The election to expense under *IRC Section 179* is made on the tax return for the taxable year in which the eligible property is placed in service. The election must specify the items of property to which the election applies and the portion of the cost of those items that the taxpayer is electing to deduct. n64.1 The election may also be made on an amended return. n64.2 It cannot be made in any other manner, such as by a request for a change in accounting method. n64.3 The election generally may be revoked only with the consent of the Commissioner. n64.4 With respect to taxable years beginning after 2002 and before 2011, however, taxpayers may revoke expensing elections on amended returns without the consent of the Commissioner. Any revocation is irrevocable. n64.5

A revocation may be made for an entire election, for a specific item, or for a portion of the selected dollar amount of a specification. The amended return must include the adjustment to taxable income for the *IRC Section 179* revocation and any collateral adjustments to taxable income or to the tax liability (for example, allowable depreciation in that taxable year for the item of *IRC Section 179* property to which the revocation pertains). Those adjustments must also be made on amended tax returns for any affected succeeding taxable years. n64.6 Revocations cannot be made in any other manner, such as by a request for a change in accounting method. n64.7 Examples of the effect of a revocation are set forth in regulations. n64.8

(n81)Footnote 50.21. *Treas Reg* § 1.1016-3(j)(2).

(n82)Footnote 51. *IRC* § 179(d)(4), (5).

(n83)Footnote 52. *IRC* § 179(a).

(n84)Footnote 53. *IRC* § 179(d)(1); *Hart v Commr*, *TC Memo* 1999-236 (tobacco barn not Section 179 property).

(n85)Footnote 53.1. *IRC* § 179(d)(1).

(n86)Footnote 54. *IRC* §§ 179(b)(1); 179(d)(1); 1245(a)(3); *Tibbs v Commr*, *TC Memo* 1987-515 . A 2003 statutory base amount of \$100,000 was subject to inflation adjustments in 2003 through 2006 [*IRC* § 179(b)(1), (5)(A), *before amendment* by Pub Law 110-28]. Effective for taxable years beginning in 2007, the statutory base amount was \$125,000 [*IRC* § 179(b)(1), *before amendment* by Pub L No 111-147]. Temporary patches increased the base amount for 2008 and 2009, and legislation enacted in 2010 established a \$250,000 limit effective for tax years beginning after 2007 and before 2011. The legislation incorporated into the statute the inflation-adjusted amounts for 2008 and 2009.

(n87)Footnote 54.1. *Rev Proc* 2003-85, 2003-2 *CB* 1184.

(n88)Footnote 54.2. *Rev Proc* 2004-71, 2004-2 *CB* 974.

(n89)Footnote 54.3. *Rev Proc* 2005-70, 2005-2 *CB* 979.

(n90)Footnote 54.4. See *IRC* § 179(b)(1).

(n91)Footnote 54.5. See *Rev Proc* 2008-54, 2008-38 *IRB* 722 ; the revenue procedure was initially directed to 2008/2009 years, and became unnecessary because of continued extension of the \$250,000 maximum deduction. Its rationale applies, however for any consecutive years in which the maximum *IRC* § 179 deduction is changed. See also *IRC* § 179(d)(8).

(n92)Footnote 55. *IRC* § 179(b)(2). A 2003 statutory base amount of \$400,000 was subject to inflation adjustments in 2003 through 2006 [*IRC* § 179(b)(2), (5)(A), *before amendment* by Pub Law 110-28]. Effective for taxable years

beginning in 2007, the statutory base amount was \$500,000 [IRC § 179(b)(2), *before amendment by Pub L No 111-147*]. Temporary patches increased the phase-out threshold for 2008 and 2009. Legislation enacted in 2010 established an \$800,000 limit effective for tax years beginning after 2007 and before 2011. The legislation incorporated into the statute the inflation-adjusted amounts for 2008 and 2009.

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.02

§ 5.02 Cost Recovery and Depreciation

[1] Depreciation and ACRS Deductions--Generally

The depreciation provisions discussed above have taken on diminishing importance because of the introduction of the accelerated cost recovery system (ACRS) by ERTA, and the modified accelerated cost recovery system (MACRS) introduced by the Tax Reform Act of 1986.

Under the ACRS, n65 the cost of "recovery property" placed in service after 1980 is deducted over a pre-established period of time, rather than during the taxpayer's actual estimated useful life of the property. "Recovery property" is placed into one of several general categories or classes, with the depreciable life of the property being determined under the guideline class to which the property is assigned by the Service. Deductions allowed for the property are taken in accordance with statutorily-prescribed methods and are written off each year. Salvage value is not considered, and thus at the completion of the specified period--e.g., 27.5 years for residential rental property and 39 years for nonresidential real property under a straight-line method--the deductions will have totaled the original basis of the depreciable property. n66

As under the pre-ACRS depreciation rules, a taxpayer must establish the cost or other basis of any property upon which cost recovery deductions are based. Failure to do so may result in a denial of the deduction or an estimate of the deduction under the *Cohan* rule. n67

[2] Modified Accelerated Cost Recovery of Real Property: 1987 and Thereafter

[a] Recovery Method and Periods

Under the MACRS, the cost recovery allowance for tangible property, including depreciable real estate, is determined by using the applicable depreciation method, the applicable recovery period and the applicable convention. n68 Most depreciable real property will fall within the categories of residential rental property or nonresidential real property. The applicable appreciation method for both of these types of property is the straight-line method, not an accelerated method. n69 The applicable recovery periods for these types of property are as follows: n70

Real Property	Recovery Period
Residential rental property	27.5 years

Nonresidential real property 39 years

The applicable convention for both residential rental property and nonresidential real property is the mid-month convention. Under the mid-month convention, the real property placed in service or disposed of by a taxpayer at any time during a month is treated as having been placed in service or disposed of in the middle of the month. ⁿ⁷¹ Under an alternative depreciation system, the taxpayer can elect, on a building-by-building basis, a longer 40-year straight-line recovery period for residential rental property or nonresidential real property. ⁿ⁷² The election to use the alternative depreciation system must be made in the year in which the building is placed in service. ^{n72.1} Once made, the election is irrevocable. ^{n72.2} This election is frequently made by a partnership that owns property eligible for the low income housing tax credit. Qualified nonresidential real property located on Indian reservations and placed in service before 2010 has a recovery period of 22 years. ^{n72.3}

[b] Real Property in Recovery Property Classes

A building or structure is residential rental property for the tax year if 80 percent or more of the gross rental income from the property for the year is rental income from dwelling units. A dwelling unit is a house or apartment used to provide living accommodations in a building or structure, but does not include a unit in a hotel, motel, inn, or other establishment more than one half of the units in which are used on a transient basis. The rental value of the portion of the building or structure occupied by the taxpayer is included in the gross rental income to determine if the 80 percent test is met. ⁿ⁷³

Example (1):

Martin constructs a six-story building in Year 1. When it is placed in service in Year 2, the first floor is rented to a retail store at \$15,000 rent for the year. The dwelling units are rented and generate rental income of \$60,000 for the tax year. Since 80 percent ($\$60,000/\$75,000$) of the gross rental income is from the dwelling units, the building qualifies as residential rental property in Year 2.

Example (2):

Martin operates the retail store in the building in Example (1) in Year 3, and he also occupies one of the apartment units. If the fair rental value of the store and the apartment are the same as in Year 2, the building would qualify as residential rental property since the rental value of the store and the apartment occupied by Martin are treated as rental income from the building.

Example (3):

The building in Example (1) produces \$18,000 rent from the store in Year 3 and \$64,000 of gross rental income from the apartments. Since only 78.05 percent ($\$64,000/\$82,000$) of the gross rental income comes from the dwelling units, the building does not qualify as residential rental property in Year 3.

Nonresidential real property is *IRC Section 1250* property, i.e., depreciable real property which is not residential rental property or property with a class life of less than 27.5 years. ⁿ⁷⁴ Where two or more buildings or structures on a single tract or parcel (or contiguous tracts or parcels) of land are operated as an integrated unit (as evidenced by their actual operation, management, financing, and accounting), they may be treated as a single building for purposes of determining whether the building or structure is residential rental property or nonresidential real property. ^{n74.1}

Property with an assigned class life of less than 27.5 years avoids classification as nonresidential property. For example, nonresidential real property would not include real property with a class life of less than 27.5 years, such as a theme or

amusement park (12.5-year class life), recreational facilities, including theaters, bowling alleys, and miniature golf courses (10-year class life), farm buildings (25-year class life), certain waste processing facilities (7-year class life), n75 certain gas utility grading costs (15-year property), n75.1 certain electric utility clearing and grading costs (20-year property), n75.2 motorsports entertainment complexes (7-year property), n75.3 or a certain Alaska natural gas pipeline (7-year property). n75.4 Retail motor fuel outlets may be depreciated over 15 years, whether or not food or other convenience items are sold at the outlet, n76 and whether or not the taxpayer-owner is the operator of the outlet. n77 Certain qualified leasehold improvement property placed in service after October 22, 2004 and before 2010 is treated as 15-year property, n77.1 as is certain qualified restaurant property placed in service after October 22, 2004 and before 2010. n77.2 Qualified retail improvement property placed in service after December 31, 2008, and before January 1, 2010 is also depreciable over 15 years. n77.3

[c] Depreciation of Improvements to Property and Component Depreciation

The cost recovery allowance for any addition to or improvement of property is computed in the same manner as the deduction for the underlying property would be computed if the underlying property were placed in service at the same time as the addition or improvement. n78

The recovery period of any addition or improvement to property begins on the later of: (1) the date on which the addition or improvement is placed in service; or (2) the date on which the property on which the addition or improvement was made is placed in service. n79

Notwithstanding the general statutory prohibition against component depreciation, n80 the Tax Court has held that, for purposes of assigning appropriate recovery periods to properties, tests developed under pre-ACRS law for purposes of the investment tax credit n81 may apply in determining whether properties are tangible personal property or structural components. n82 Thus, an improvement to property that qualifies as tangible personal property may be treated as tangible personal property for purposes of MACRS and may be depreciated over a shorter life. n83 Under this rule, a variety of electrical distribution or wiring systems, carpeting, n84 partitions, and other miscellaneous equipment and improvements have been permitted to be depreciated over a shorter period than the property to which they have been added. n85 A hotel's magnetic stripe keycard door locking system, however, has been treated as nonresidential real property with a recovery period of 39 years. n86 The IRS has taken the position that open-air parking structures are also nonresidential real property, and therefore have a recovery period of 39 years. n86.1

The IRS has issued a ruling that clarifies its examining approach with respect to depreciation of structural components. n87 The ruling reviews case authority and regulations n88 and notes that the focus in determining whether an item is a structural component is on the ultimate use of the item. This finding requires a facts and circumstances approach. The ruling states that pre-1981 case law and factors set forth in *Whiteco* n89 are relevant in making that determination. The factors used in *Whiteco* in determining whether property is inherently permanent and therefore not tangible personal property are the following: n90

- Is the property capable of being moved, and has it in fact been moved?
- Is the property designed or constructed to remain permanently in place?
- Are there circumstances that tend to show the expected or intended length of affixation, i.e., that the property may or will have to be moved?
- How substantial a job is removal of the property and how time consuming is it?
- How much damage will the property sustain upon removal?

● What is the manner of affixation of the property to the land?

The ruling states that no single factor set forth in *Whiteco* is the sole determinant of whether a particular item is tangible property, and, in view of the factual nature of the inquiry, no bright line test exists. The ruling makes special mention of the importance and use of cost segregation studies and further states that those studies must be specifically applied by the taxpayer and closely scrutinized by examiners. The ruling offers guidelines with respect to these studies. An accurate cost segregation study cannot be based on non-contemporaneous records, reconstructed data, or the taxpayer's estimates or assumptions that have no supporting records. n91

Several rulings have applied these factors in categorizing and analyzing raised floors that are installed to facilitate installation of various items. Although the term "structural component" can include parts of a building such as floors, n91.1 the IRS has ruled that a false raised floor that was built to permit wiring, air conditioning ducts, and other services for a computer to be installed was tangible personal property and not a structural component. n91.2

The IRS has indicated a similar result might hold with respect to a raised floor installed during the initial construction of a building in order to facilitate the installation of wiring, plumbing, and ventilation for computers and other equipment. The floor included removable panels providing access between the raised floor and the sub-floor. Removal of the raised floor, while possible, would necessitate a major renovation of the building's interior. The IRS hedged making an absolute position, however, and indicated that, depending on facts of any given case, a good argument could be made that the raised floor was a structural component and not tangible personal property with a recovery period of 5 years. n91.3

Another ruling details the IRS position regarding the recovery periods for various components of an elaborate hotel/casino complex. The ruling discusses the recovery periods for tangible personal property, which depend on the property's class life under *IRC Section 167(m)*, n91.4 and the recovery periods for exterior building facades, decorative ceilings, electrical outlets, door locks, wall coverings, millwork, decorative lighting fixtures, kitchen equipment, power generators, and a variety of other items. The ruling is instructive as the IRS analysis and approach to component depreciation. n91.5

In another ruling applying the *Whiteco* factors, n91.6 the IRS determined that gasoline pump canopies were tangible personal property for depreciation purposes with a 5-year recovery period, but that their supporting concrete footings were land improvements for depreciation purposes with a 15-year recovery period. n91.7 In a separate ruling dealing with the proper asset class for parking lots, the IRS determined that a parking lot connected to a steam production plant producing electricity was depreciable over a recovery period of 20 years, but a parking lot adjacent to the taxpayer's corporate headquarters was in a different class and was depreciable over a recovery period of 15 years. n91.8

In determining whether an item is a permanent land improvement or is depreciable as personal property over a shorter recovery period based on its class life, n91.9 courts first look to the asset guideline class into which the item is classified in *Revenue Procedure 87-56*. n91.10 If an item isn't clearly classified in that procedure, courts, like the IRS, apply the *Whiteco* factors to determine the proper characterization of the item. n91.11 In one case the court held that drip irrigation systems and wells used in connection with grapevines were permanent improvements, but trellising was properly classified as 10-year class life farm machinery or equipment. The trellising could therefore be depreciated over a 5-year recovery period. n91.12

Note:

Any change in the method of computing the depreciation allowances with respect to a particular account, or any change in depreciation method, is a change in method of accounting, for which IRS consent must be obtained. n92 Any reclassification of assets from Section 1250 property to Section 1245 property would, therefore, require prior IRS approval. A change in recovery period or convention in computing

depreciation is also a change of accounting method because it affects the timing of deductions, and IRS approval for the change must also be obtained. n93 A cost segregation study to properly categorize various assets should be undertaken with respect to rehabilitations, new construction, and acquisitions involving mixed assets. If a Form 3115 is filed to request a change in accounting method in order to claim larger depreciation allowances for prior years, any unclaimed depreciation for those years may be claimed in the year of the change as a *IRC Section 481* adjustment. n93.1

[d] Leasehold Improvements

In general, a lessee who makes improvements on property it leases may claim depreciation deductions on that property. n93.2 The cost of leasehold improvements made by a lessee, including the erection of a building on leased premises, is ordinarily recovered by the lessee under the cost recovery rules without regard to the lease term. The lessee is entitled to the deduction even if the lessor owns the constructed property. n93.3 On termination of the lease, a lessee who does not retain the improvement computes gain or loss by reference to the adjusted basis of the improvement at that time. n94 Although a lessee cannot generally deduct the cost of capital improvements to a lessor's property, n94.1 a current deduction is permitted if the capital expenditure is made in lieu of rent. n94.2 In order for a current deduction to be permitted, the lessor and lessee must intend that some or all of the lessee's capital expenditures are rent, and this intent must be plainly disclosed by the terms of the lease or the surrounding circumstances. n94.3

A separate depreciation rule comes into play for leasehold improvements that are made by the lessor. If the leasehold improvements made by the lessor are irrevocably disposed of or abandoned by the lessor at the end of the lease term, the lessor may treat the abandonment as a disposition of the improvements and use the adjusted basis of the improvements at that time to determine gain or loss. This provision allows lessors to write off the costs of abandoned improvements at the time the lease is terminated, rather than requiring the lessor to continue to write off the improvements over their remaining recovery period. n95

A lessee is also entitled to amortize its cost of acquiring its leasehold interest. In determining the amortization period for the lessee's cost of acquiring a lease (rather than leasehold improvements made by the lessee) the lease term is treated as including all renewal options, and any other period for which the parties reasonably expect the lease to be renewed, if less than 75 percent of the lease acquisition cost is attributable to the period of the term of the lease remaining on the date of its acquisition. In determining the period remaining on the term of the lease under this 75 percent test, periods of renewal, extension or continuation under an option exercisable by the lessee are not taken into account. n96

Qualified leasehold improvement property that is placed in service after October 22, 2004 and before 2010 is treated as 15-year recovery property, n96.1 and must be recovered using the straight-line method over that recovery period. n96.2 Qualified leasehold improvement property for this purpose includes any improvement to an interior portion of a building that is nonresidential real property, provided certain requirements are met. The improvement must be made under or pursuant to a lease either by the lessee (or sublessee), or by the lessor, of that portion of the building to be occupied exclusively by the lessee (or sublessee). The improvement must be placed in service more than three years after the date the building was first placed in service. Qualified leasehold improvement property does not include any improvement for which the expenditure is attributable to the enlargement of the building, any elevator or escalator, any structural component benefiting a common area, or the internal structural framework of the building. n96.3

If a lessor makes an improvement that qualifies as qualified leasehold improvement property, the improvement does not qualify as qualified leasehold improvement property to any subsequent owner of the improvement. n96.4 An exception to this rule applies in the case of death, mere changes in the form of business, and certain transfers of property that qualify for non-recognition treatment. n96.5

Under the alternative depreciation system, qualified leasehold improvement property has a class life of 39 years. n96.6

[e] Qualified Restaurant Property

Qualified restaurant property that is placed in service after October 22, 2004 and before 2010 is treated as 15-year recovery property, n96.7 and must be recovered using the straight-line method over that recovery period. n96.8 For property placed in service before January 1, 2009, qualified restaurant property means any improvement to a building if (1) that improvement is placed in service more than three years after the date the building was first placed in service; and (2) more than 50 percent of the building's square footage is devoted to the preparation of, and seating for, on-premises consumption of prepared meals. n96.9 Qualified restaurant property placed in service before January 1, 2009 also becomes eligible for the additional first-year depreciation deduction under *IRC Section 168(k)* by virtue of its assigned 15-year recovery period, provided it is placed in service within the required time period specified by that provision. n96.10 Under the alternative depreciation system, qualified restaurant property has a class life of 39 years. n96.11

For property placed in service after 2008, qualified restaurant property includes new construction of any building placed in service during calendar year 2009. It also includes improvements to a building (without regard to when the building was first placed in service). In either case, however, more than 50 percent of the building's square footage must be devoted to preparation of, and seating for on-premises consumption of, prepared meals. n96.11.1 Qualified property placed in service after 2008 is not eligible for bonus depreciation under *IRC Section 168(k)*. n96.11.2

Restaurant property that does not qualify as 15-year recovery property under the above provision is generally depreciated under the regular MACRS rules for nonresidential property-using the straight-line method of depreciation and a recovery period of 39 years. n96.12

[f] Qualified Retail Improvement Property

Qualified retail improvement property placed in service after December 31, 2008, and before January 1, 2010 is depreciable over 15 years using straight-line depreciation. n96.13 "Qualified retail improvement property" includes any improvement to an interior portion of a nonresidential building if the portion is open to the general public and is used in the retail trade or business of selling tangible personal property, and the improvement is placed in service more than three years after the building was first placed in service. n96.14 In the case of owner-owned improvements, the improvement is eligible for 15-year recovery only so long as the improvement is held by the owner that made the improvement. n96.15 The accelerated recovery is not available for enlargements of a building, an elevator or escalator, improvements to any structural component benefitting a common area, or improvements to the internal structural framework of a building. n96.16 Qualifying property is not eligible for bonus depreciation under *IRC Section 168(k)*. n96.17 Under the alternative depreciation method, qualified retail improvement property has a class life of 39 years. n96.18

[3] Accelerated Cost Recovery of Real Property: 1981-1986

The accelerated cost recovery system required the capital cost of qualified real (or personal) property, placed in service by the taxpayer during 1981 through 1986, to be recovered by an accelerated or straight-line method (without regard to salvage) over predetermined periods generally unrelated to, but shorter than, the property's useful life. n97 The ACRS applied to "recovery property," which was defined as depreciable tangible property used in a trade or business or held for the production of income. n98 Depreciation under *IRC Section 167* remains in effect for property placed in service before 1981. n99

[a] Recovery Property; Recovery Period

Several classes of recovery property were distinguished by the number of years over which cost recovery deductions could be taken with respect to the property in each class. n100 At the completion of the specified period, the deductions

should total the original basis of the property. Salvage value is not taken into account in determining the allowable deductions. n101

Most real property fell into a class which described its recovery period. This was initially "15-year real property," later extended to "18-year real property," and then "19-year real property." Other classes for which real property could qualify included "10-year property" and "low-income housing," the latter remaining with a 15-year recovery period. n102 The recovery periods and methods still apply to taxpayers who placed that property in service during the applicable periods.

A taxpayer could have elected to recover the cost of recovery property over a period longer than that described above, using the straight-line method. Thus, for ten-year property the electable recovery periods were ten, 25 or 35 years; for 15, 18 or 19-year real property, the electable periods were 15, 18, 19 (respectively), 35 or 45 years. n103 The election could be made on a property-by-property basis with respect to 15, 18 or 19-year real property or low-income housing. n104 Longer periods were required for property used predominantly outside the United States. n105

Under special "anti-churning rules," the ACRS provisions excluded (and still exclude) property obtained in certain transactions from qualifying as recovery property even if acquired by the taxpayer after 1980 (or 1986). These rules, which apply to both real and personal property, were (and are) designed to prevent taxpayers from turning their depreciable property placed in service before 1981 (or 1986) into ACRS property available for the newer writeoffs. n106

[b] Recovery Methods; Cost Recovery Deductions

The accelerated cost recovery allowance for 15, 18 or 19-year real property were based on the 15, 18 or 19-year recovery periods using a method similar to 175 percent declining balance (200 percent in the case of low-income housing property), and switching to a straight-line method in later years to maximize the allowable deduction. n107 Recovery of property, other than 19-year real property, was subject to a half-year convention. n108

The recovery allowance for 15, 18 or 19-year real property for the year it was placed in service or for the year of disposition was based on the number of months it was in service during the year, regardless of the duration of the taxpayer's taxable year, the property's recovery period or the recovery method used. n109

The recovery method for a building which is *IRC Section 1250* class property, generally real property, applies to any component of the building. The recovery period for a building component begins on the later of the date such component, or the building, is placed in service. n110 For practical purposes, this provision eliminates the former practice of "component depreciation," under which separate depreciation methods based on various useful lines were used for the building and individual components.

The cost of making a substantial improvement to a building, however, was eligible for a cost-recovery method other than the one used for the cost of the building being improved, i.e., the improvement is treated as a separate building. n111 The improvement was substantial only if:

- (1) it was made more than three years after the building was placed in service; and
- (2) it added to the capital account of the building within a 24-month period an amount equal to or in excess of 25 percent of the building's adjusted basis as of the first day of the 24-month period. n112

[c] Disposition of Recovery Property

If 1981-1986 ACRS property is sold or otherwise disposed of in a transaction where gain or loss is recognized, the gain

or loss is usually recognized on an asset-by-asset basis. An ACRS deduction may not be claimed for the property in the year of disposition unless it is transferred in a tax-free exchange where the transferee is treated as the transferor (and required to use the transferor's depreciation method and depreciation period) to the extent of carryover basis, n113 or it is 15, 18 or 19-year real property. n114 However, that to the extent ACRS deductions in excess of straight line have been claimed for the property, there may be ordinary income recapture under *IRC Sections 1245 and 1250*. (Rules governing recapture of cost recovery are discussed in the next chapter.) n115

[4] Additional 30-Percent First-Year Depreciation (for Property Acquired Before 2005)

An additional first-year depreciation deduction is available for qualified property acquired after September 10, 2001 and before January 1, 2005. n115.1 The additional deduction is equal to 30 percent of the property's adjusted basis. n115.2 The additional depreciation deduction is allowed for both regular tax and alternative minimum tax purposes for the taxable year in which the property is placed in service. n115.3 The basis of the property and the depreciation allowances in the year of purchase and later years are appropriately adjusted to reflect the additional first-year depreciation deduction. n115.4 A taxpayer may elect not to have the additional first-year depreciation apply with respect to any class of property for any taxable year. n115.5 If a taxpayer elects not to deduct any additional first year depreciation for a class of property, the AMT depreciation adjustments n115.5.1 apply to that property for purposes of computing the taxpayer's alternative minimum taxable income. n115.5.2 Property for which the bonus 50-percent first-year depreciation deduction is claimed n115.5.3 is not eligible for the 30-percent additional first year depreciation deduction. n115.5.4

To qualify for the additional first-year depreciation deduction, several requirements (discussed in detail below) must be met:

- (1) the depreciable property must be of a specified type;
- (2) the original use of the depreciable property must commence with the taxpayer after a specified date;
- (3) the depreciable property must be acquired by the taxpayer within a specified time period; and
- (4) the depreciable property must be placed in service by a specified date. n115.5.5

To be eligible for the deduction, the property must meet all of these requirements in the first taxable year in which the property is subject to depreciation by the taxpayer, whether or not depreciation deductions are allowable. n115.5.6

Property otherwise depreciable under MACRS qualifies for the additional first-year depreciation deduction only if the property is one of the following: n115.6

- property with a recovery period of 20 years or less;
- water utility property; n115.6.1
- computer software other than computer software covered by *IRC Section 197*; or
- qualified leasehold improvement property.

Qualifying property also includes certain property that is subject to the capitalization rules n115.6.2 and is described in the provisions requiring an estimated production period exceeding 2 years or an estimated production period exceeding 1 year and a cost exceeding \$1 million. n115.7

Regulations provide that the following property is not eligible for the 30-percent additional first-year depreciation: n115.7.1

- certain property not subject to depreciation under *IRC Section 168*; n115.7.2
- property that is required to be depreciated under the alternative depreciation system (ADS) n115.7.3 or other provisions--this exception could apply to tax-exempt use property or tax-exempt bond financed property;
- certain property used in a farming business; n115.7.4
- qualified New York Liberty Zone leasehold improvement property; n115.7.5 or
- property for which the taxpayer elects not to deduct 30-percent additional first-year depreciation.

MACRS property for which the taxpayer makes an election to depreciate the property under the ADS system, in contrast, is eligible for the additional first year depreciation deduction (assuming all other requirements are met). n115.7.6

As a practical matter, except for qualified leasehold improvement property, the deduction comes into play primarily for personal property. n115.8

When qualified leasehold improvement property is involved, however, the additional first-year depreciation deduction can affect real estate. n115.9 Qualified leasehold improvement property includes an improvement to an interior portion of a building that is nonresidential real property if the following requirements are met: n115.10

- the improvement is made under or pursuant to a lease between unrelated persons by either the lessee or the lessor;
- that portion is to be occupied exclusively by the lessee (or sublessee) of that portion; and
- the improvement is placed in service more than 3 years after the date the building was first placed in service.

Certain improvements cannot qualify as qualified leasehold improvement property, including expenditures attributable to the enlargement of a building, any elevator or escalator, any structural component benefitting a common area, or the internal structural framework of the building. n115.11 Regulations clarify what improvements constitute qualified leasehold property. n115.11.1

In order to be qualified property, the original use of the property generally must commence with the taxpayer on or after September 11, 2001 and before January 1, 2005. n115.12 An extension of the placed-in-service date (to January 1, 2006) is provided for certain property with a longer production period (i.e., property with a recovery period of at least 10 years, certain transportation property, and property that is subject to the uniform capitalization rules because it has an estimated production period exceeding 2 years, or an estimated production period exceeding 1 year and a cost exceeding \$1 million). n115.12.1 For certain property placed in service by taxpayers affected by Hurricanes Katrina, Rita, and Wilma the Secretary of the Treasury was authorized to extend the required date of the placement in service of that property by up to one year on an individual taxpayer basis, the Secretary of the Treasury. n115.12.2 but the IRS later announced an extended placed-in-service date to January 1, 2007 for all taxpayers, for property that is either placed in service by the taxpayer or manufactured by a person in the GO Zone, the Rita GO Zone, or the Wilma GO Zone. The extension applies only if the taxpayer was unable to meet the prior placed-in-service deadline for the property as a result

of Hurricane Katrina, Rita, or Wilma. n115.12.3 Original use generally means the first use to which the property is put, whether or not that use corresponds to the use of the property by the taxpayer. Thus, new property initially used by a taxpayer for personal use and then subsequently converted by the taxpayer for use in its trade or business satisfies the original use requirement. However, new property acquired by a taxpayer for personal use and then subsequently acquired by a different taxpayer for use in its trade or business does not. n115.12.4

In addition, property qualifies for the additional deduction only if the taxpayer purchases (or begins construction of) the property (1) after September 10, 2001 and before January 1, 2005, and no binding written contract for the acquisition is in effect before September 11, 2001 or (2) pursuant to a binding written contract which was entered into after September 10, 2001, and before January 1, 2005. n115.13

A special rule applies in the case of certain leased property. In the case of any property that is originally placed in service by a person and that is sold to the taxpayer and leased back to that person by the taxpayer within three months after the date that the property was placed in service, said property is treated as originally placed in service by the taxpayer not earlier than the date that the property is used under the leaseback. n115.13.1

Separate rules apply to the syndication of a lease by the lessor. If property is originally placed in service by a lessor (including by reason of self-construction of the property), n115.13.2 the property is sold within three months after the date that the property was placed in service, and the user of the property does not change, then the property is treated as originally placed in service by the taxpayer not earlier than the date of that sale.- n115.13.3 For multiple units of property subject to the same lease, property is treated as placed in service on the date of sale for purposes of qualifying for additional first-year depreciation if it is sold within three months after the final unit is placed in service, so long as the period between the time the first and last units are placed in service does not exceed 12 months. n115.13.4

Limitations apply regarding qualified property that was subject to prior contracts or was being constructed on or before September 10, 2001. Property qualifying for additional first-year depreciation does not include any property if the user or a related party to the user or owner of that property had a written binding contract in effect for the acquisition of the property at any time on or before September 10, 2001 (or, in the case of self-constructed property, the manufacture, construction, or production of the property began on or before September 10, 2001). For example, if a taxpayer sells to a related party property that was under construction on or prior to September 10, 2001, the property does not qualify for the additional first-year depreciation deduction. Similarly, if a taxpayer sells to a related party property that was subject to a binding written contract on or prior to September 10, 2001, the property does not qualify for the additional first year depreciation deduction. Furthermore, if a taxpayer sells property and leases the property back in a sale-leaseback arrangement, and the lessee had a binding written contract in effect for the acquisition of such property on or prior to September 10, 2001, then the lessor is not entitled to the additional first-year depreciation deduction. n115.14

[5] Additional Bonus 50-Percent First-Year Depreciation (for Property Acquired Before 2005)

An additional bonus first-year depreciation deduction may be taken equal to 50 percent of the adjusted basis of qualified property. n115.14.1 Qualified property is defined in the same manner as for purposes of the additional 30-percent first-year depreciation deduction, n115.14.2 except that the applicable time period for acquisition (or self construction) of the property is modified. n115.14.3 Property for which the bonus 50-percent first-year depreciation deduction is claimed is not eligible for the additional 30-percent first year depreciation deduction. n115.14.4 The bonus 50-percent first-year depreciation is allowed for both regular tax and alternative minimum tax purposes for the tax year in which the property is placed in service. n115.14.5 A taxpayer may elect not to have the bonus 50-percent depreciation apply to any class of property for any tax year. n115.14.6 If a taxpayer makes this election out, the AMT depreciation adjustments n115.14.7 apply to that property for purposes of computing the taxpayer's alternative minimum taxable income. n115.14.8 A taxpayer may request permission to revoke its election not to deduct the 50-percent depreciation through a private letter ruling. n115.14.9 An automatic 6-month extension from the due date of the taxpayer's federal tax return (excluding extensions) to revoke an election out is also available, provided the taxpayer filed a timely return

for the placed-in-service year of the class of property and, within this 6-month extension period, the taxpayer (and all taxpayers whose tax liability would be affected by the election) files an amended return for the placed-in-service year of the class of property in a manner that is consistent with the revocation of the election. n115.14.10

Two election options are available. First, for any class of 50-percent bonus depreciation property placed in service during the taxable year, a taxpayer may make an election to deduct the 30-percent, instead of the 50-percent, additional first-year depreciation. If this election is made, the allowable additional first-year depreciation deduction is determined as though the class of property is qualified property for purposes of 30-percent additional first-year depreciation. n115.14.11 Alternatively, the taxpayer may elect not to deduct both the 30-percent and the 50-percent additional first year depreciation. If this election is made, no additional first year depreciation deduction is allowable for the class of property. n115.14.12

In order to qualify for the bonus 50-percent depreciation deduction, the original use of the property must commence with the taxpayer after May 5, 2003. n115.14.13 The property must also be either (1) acquired by the taxpayer after May 5, 2003, and before January 1, 2005, but only if no written binding contract for the acquisition was in effect before May 6, 2003; or (2) acquired by the taxpayer pursuant to a written binding contract which was entered into after May 5, 2003, and before January 1, 2005 n115.14.14 With respect to property that is manufactured, constructed, or produced by the taxpayer for use by the taxpayer, the taxpayer must begin the manufacture, construction, or production of the property after May 5, 2003. n115.14.15

Property generally must be placed in service before January 1, 2005 to qualify for the bonus 50-percent depreciation deduction, but certain property with longer production periods (i.e., property with a recovery period of at least 10 years, certain transportation property, and property that is subject to the uniform capitalization rules because it has an estimated production period exceeding 2 years or an estimated production period exceeding 1 year and a cost exceeding \$1 million) will qualify if placed in service prior to January 1, 2006. n115.14.16 For property with a longer production period that is eligible for the extended placed-in-service date, however, only costs incurred before January 1, 2005 are eligible for the bonus 50-percent depreciation deduction. n115.14.17 The adjusted basis of qualified property acquired by a taxpayer in a like-kind exchange or an involuntary conversion is eligible for the bonus 50-percent bonus first-year depreciation deduction. n115.14.18

[6] Special Depreciation Allowance for Certain Property in New York Liberty Zone

[a] In General

Apart from the pre-2005 additional 30-percent first-year depreciation deduction n115.14.19 and the pre-2005 additional 50-percent bonus first-year depreciation deduction, n115.14.20 (which are allowed whether or not the property is located in the New York Liberty Zone), n115.15 an additional first-year depreciation deduction is allowed for certain property in the New York Liberty Zone. The amount of the deduction is 30 percent of the adjusted basis of qualified New York Liberty Zone property. n115.16 This additional first-year depreciation deduction is allowed for both regular tax and alternative minimum tax purposes for the taxable year in which the property is placed in service. n115.17 The basis of the property and the depreciation allowances in the year of purchase and later years are appropriately adjusted to reflect the additional first-year depreciation deduction. n115.18 In addition, no adjustment to the allowable amount of depreciation is made for purposes of computing a taxpayer's alternative minimum taxable income with respect to property to which the additional depreciation deduction applies. n115.19 Property eligible for either the additional 30-percent first-year depreciation deduction or the additional 50-percent bonus first-year depreciation deduction under *IRC Section 168(k)* n115.20 is not eligible for the New York Liberty Zone additional first-year depreciation. n115.21 A taxpayer may elect out of the additional first-year depreciation for any class of property for any taxable year. n115.22 If a taxpayer makes this election out, the AMT depreciation adjustments n115.22.1 apply to that property for purposes of computing the taxpayer's alternative minimum taxable income. n115.22.2 A taxpayer may seek to revoke an election out by requesting a private letter ruling from the Commissioner. n115.22.3 An automatic 6-month extension from the

due date of the taxpayer's federal tax return (excluding extensions) to revoke an election out is also available, provided the taxpayer filed a timely return for the placed-in-service year of the class of property and, within this 6-month extension period, the taxpayer (and all taxpayers whose tax liability would be affected by the election) files an amended return for the placed-in-service year of the class of property in a manner that is consistent with the revocation of the election [Reg § 1.1400L(b)-1(e)(7)(ii)].

In order for property to qualify for the additional first-year New York Liberty Zone depreciation deduction, it generally must meet all of the following requirements. First, the property must be property to which the general rules of MACRS apply. The property must also be (1) property with an applicable recovery period of 20 years or less, (2) water utility property, (3) certain nonresidential real property and residential rental property, or (4) computer software other than computer software covered by *IRC Section 197*. n115.23 A special rule precludes the additional first year depreciation under this provision for qualified New York Liberty Zone leasehold improvement property. n115.24

Second, substantially all of the use of the qualifying property must be in the New York Liberty Zone. n115.25 "New York Liberty Zone" means the area located on or south of Canal Street, East Broadway (east of its intersection with Canal Street), or Grand Street (east of its intersection with East Broadway) in the Borough of Manhattan in the City of New York, New York. n115.26

Third, the original use of the property in the New York Liberty Zone must commence with the taxpayer on or after September 11, 2001 (except for certain leased property). Finally, the property must be purchased by the taxpayer after September 10, 2001, and placed in service before January 1, 2007. For qualifying nonresidential real property and residential rental property, the property must be placed in service on or before December 31, 2009. Property will not qualify if a binding written contract for the acquisition of the property is in effect before September 11, 2001. n115.27

Nonresidential real property and residential rental property is eligible for the New York Liberty Zone additional first-year depreciation only to the extent that the property rehabilitates real property damaged, or replaces real property destroyed or condemned as a result of the terrorist attacks of September 11, 2001. Property is treated as replacing destroyed property if, as part of an integrated plan, it replaces real property which is included in a continuous area which includes real property destroyed or condemned. For purposes of the provision, it is intended that real property destroyed or condemned only include circumstances in which an entire building or structure was destroyed or condemned as a result of the terrorist attacks. Otherwise, the property is considered damaged real property. n115.28 Real property is a building or its structural components, or other tangible real property. n115.28.1

Special rules apply for New York Liberty Property that are similar to those regarding lease syndication and related user and party rules for additional 30-percent first-year depreciation provided under prior law. n115.28.2 Thus, property qualifying for the additional New York Liberty Zone depreciation does not include any property if the user or a related party to the user or owner of that property had a written binding contract in effect for the acquisition of the property at any time before September 11, 2001 (or in the case of self-constructed property the manufacture, construction, or production of the property began before September 11, 2001). n115.28.3 In addition, if (1) property is originally placed in service by a lessor (including by virtue of self-construction, n115.28.4 (2) the property is sold within three months after the date that the property was placed in service, and (3) the user of that property does not change, then the property is treated as originally placed in service by the taxpayer not earlier than the date of that sale. n115.28.5

[b] Qualified New York Liberty Zone Leasehold Improvement Property

For purposes of MACRS depreciation rules, 5-year property includes qualified New York Liberty Zone leasehold improvement property. n115.29 The term New York Liberty Zone leasehold improvement property means property defined in *IRC Section 168(k)(3)* that is placed in service after September 10, 2001 and before January 1, 2007 (and not subject to a binding contract on September 10, 2001) in the New York Liberty Zone. n115.30 Property described in *IRC Section 168(k)(3)* generally includes any improvement to an interior portion of a nonresidential building if the following

requirements are met: n115.31

- the improvement is made under or pursuant to a lease between unrelated persons by either the lessee or the lessor;
- that portion is to be occupied exclusively by the lessee (or sublessee) of that portion; and
- the improvement is placed in service more than 3 years after the date the building was first placed in service.

Certain improvements are not included in *IRC Section 168(k)(3)*, however, including expenditures attributable to the enlargement of a building, any elevator or escalator, any structural component benefitting a common area, or the internal structural framework of the building. n115.32

The straight-line method must be used with respect to qualified New York Liberty Zone leasehold improvement property unless the taxpayer elects out of the 5-year recovery period for that property. n115.33 A 9-year period is specified as the class life of qualified New York Liberty Zone leasehold improvement property for purposes of the alternative depreciation system. n115.34

Taxpayers may elect not to have otherwise qualifying leasehold improvement property treated as 5-year property. If made, the election applies to all qualifying leasehold improvement property placed in service during the taxable year. n115.34.1

[7] Commercial Revitalization Deduction

[a] In General

A taxpayer may elect to recover the cost of a qualified revitalization building using a more accelerated method than is otherwise allowable under *IRC Section 168*. n115.35 A taxpayer may elect to do either of the following: n115.36

- deduct one-half of any qualified revitalization expenditures chargeable to a capital account with respect to any qualified revitalization building for the taxable year in which the building is placed in service; or
- amortize all qualified revitalization expenditures ratably over the 120-month period beginning with the month in which the building is placed in service.

If the taxpayer makes a commercial revitalization deduction election, n115.37 a depreciation deduction is not allowable for the amounts deducted or amortized under *IRC § 1400I(a)*. n115.38 The commercial revitalization deduction is allowed for both regular tax and alternative minimum tax purposes. n115.39

With respect to any qualified revitalization building, the aggregate amount that can be treated as qualified revitalization expenditures is the lesser of (1) \$10 million, or (2) the commercial revitalization expenditure amount allocated to the building by the state commercial revitalization agency where the building is located. n115.40

[b] Buildings and Expenditures Qualifying for the Deduction

Only buildings placed in service before 2010 n115.41 and located in a "renewal community" are eligible for the commercial revitalization deduction. n115.42 A "renewal community" is an area designated as such by the Secretary of HUD based on specified standards of poverty, unemployment, general distress, and other factors. n115.43 To qualify

for the deduction, either of the following placed in service requirements must be met: n115.44

- the building must be placed in service by the taxpayer and the original use of the building must begin with the taxpayer; or
- the building must be substantially rehabilitated n115.45 by the taxpayer and must be placed in service by the taxpayer after the rehabilitation.

An expenditure is eligible for the commercial revitalization deduction only if it is properly chargeable to capital account for depreciable property. n115.46 In addition, the property must be nonresidential real property n115.47 or must be Section 1250 property n115.48 that is functionally related and subordinate to nonresidential real property. n115.49

In the case of a building that is substantially rehabilitated by the taxpayer, n115.50 the acquisition cost of the building can be treated as a qualified revitalization expenditure only to the extent that it does not exceed 30 percent of the other qualified revitalization expenditures with respect to the building. n115.51 No expenditure that the taxpayer takes into account in computing any credit can be included as a qualified revitalization expenditure unless the taxpayer elects to take the expenditure into account only for purposes of the commercial revitalization deduction. n115.52

[c] State Agency Allocation of Commercial Revitalization Expenditure Amounts

The commercial revitalization agency for each state is permitted to allocate up to \$12 million of commercial revitalization expenditure amounts with respect to each renewal community located within the state for each calendar year after 2001 and before 2010. n115.53 The allocation must be made pursuant to a qualified allocation plan that is approved by the governmental unit of which the commercial revitalization agency is a part. n115.54 Further, the commercial revitalization agency for the state n115.55 must notify the chief executive officer (or its equivalent) of the local jurisdiction in which the qualified revitalization building is located of the allocation and provide that individual a reasonable opportunity to comment on the allocation. n115.56 Generally, the allocation under *IRC Section 1400I* is made at the same time and in the same manner as under the low-income housing credit provisions--ordinarily in the calendar year in which the building is placed in service. n115.57

The IRS has issued a detail revenue procedure which provides general rules under which commercial revitalization expenditures may be allocated and specifies the manner of making carryover allocations. n115.58 The procedure also details special rules for the 2002 or 2003 commercial revitalization expenditure ceiling, for certain carryover allocations made in 2002, and for allocation documents made in 2002. n115.59

[d] Manner of Making the Election

The manner of making the commercial revitalization deduction election is set forth in *Revenue Procedure 2003-38*. n115.60 The election is made by each person owning the qualified revitalization building (for example, by the member of a consolidated group, the partnership, or the S corporation that owns the building). The election must be made for the taxable year in which the building is placed in service. The election only applies to the extent that qualified commercial revitalization expenditure amounts are allocated to the building by the commercial revitalization agency of the state in which the building is located. n115.61 If the amount of that allocation exceeds the amount properly chargeable to a capital account for the building, the qualified revitalization expenditures eligible for the commercial revitalization deduction election are limited to the amount properly chargeable to a capital account for the building. n115.62

The election must be made by the due date (including extensions) of the federal tax return for the taxable year in which the qualified revitalization building is placed in service by the taxpayer. The election must be made in the manner prescribed in the instructions for Form 4562, *Depreciation and Amortization*. n115.63 An automatic extension of 6 months from the due date of the federal tax return (excluding extensions) for the placed-in-service year of the qualified

revitalization building is granted to make the election, provided the taxpayer timely filed its federal tax return for the placed-in-service year and the taxpayer satisfies the requirements in the regulations for receiving an extension. n115.64 A taxpayer that fails to make the commercial revitalization deduction election for the qualified revitalization building, but wants to do so, must file a request for an extension of time to make the election. n115.65

A taxpayer that places in service more than one qualified revitalization building during a taxable year may make the commercial revitalization deduction election for the placed-in-service year separately for each building. For example, a taxpayer that places in service in a single year three qualified revitalization buildings for which commercial revitalization expenditure amounts are allocated, may elect to deduct one-half of the qualified revitalization expenditures for one building and elect to amortize the qualified revitalization expenditures for the other two buildings ratably over a 120-month period. n115.66

The commercial revitalization deduction election is revocable only with the prior written consent of the Commissioner, which may be obtained by filing a request for a private letter ruling. n115.67

If a taxpayer does not properly make a timely commercial revitalization deduction election for a qualified revitalization building, the amount of depreciation allowable for that property must be determined under *Treas Reg* § 1.167(j)-3(b)(1)(ii) for the placed-in-service year and for all subsequent years. Thus, the commercial revitalization deduction election cannot be made by the taxpayer in any manner other than as set forth in the revenue procedures (for example, through a request under *IRC Section 446(e)* to change the taxpayer's method of accounting). n115.68

[8] AMT Depreciation of Real Property

For real property placed in service after 1998, AMT and regular tax depreciation deductions are the same, computed using the straight-line depreciation method over the property's MACRS recovery period. n115.69 For real property placed in service after 1986 and before 1999, the straight-line method of depreciation is used in computing the depreciation deduction for AMT purposes. n115.70 The recovery period for AMT purposes, however, is 40 years, n115.71 whereas the recovery period for regular tax purposes is 27.5 years (for residential rental property) or 39 years (for nonresidential real property). n115.72

[9] Special First-Year Depreciation Allowance for Cellulosic Biofuel

Taxpayers may take an additional first-year depreciation deduction equal to 50 percent of the adjusted basis of qualified cellulosic biomass biofuel, effective for property placed in service after October 3, 2008, in taxable years ending after that date. n115.72.01 For prior years, the additional depreciation was available only for qualified cellulosic biomass ethanol plant property. n115.72.1 "Cellulosic biofuel" is any liquid fuel which is produced from any lignocellulosic or hemicellulosic matter that is available on a renewable or recurring basis. n115.72.2 In order to qualify, the property generally must be placed in service before January 1, 2013. n115.72.3 The additional first-year depreciation deduction is allowed for both regular tax and alternative minimum tax purposes for the taxable year in which the property is placed in service. n115.72.4

The additional first-year depreciation deduction is subject to the general rules regarding whether an item is deductible under *IRC Section 162* or subject to capitalization under *IRC Section 263* or *IRC Section 263A*. n115.72.5 The basis of the property and the depreciation allowances in the year of purchase and later years are appropriately adjusted to reflect the additional first-year depreciation deduction. n115.72.6 In addition, there is no adjustment to the allowable amount of depreciation for purposes of computing a taxpayer's alternative minimum taxable income with respect to property to which the provision applies. n115.72.7 A taxpayer is allowed to elect out of the additional first-year depreciation for any class of property for any taxable year. n115.72.8

In order for property to qualify for the additional first-year depreciation deduction, it must meet the following

requirements: n115.72.9

- The original use of the property must commence with the taxpayer on or after December 20, 2006.
- The property must be acquired by purchase (as defined under *IRC Section 179(d)*) by the taxpayer after December 20, 2006 and placed in service before January 1, 2013. Property does not qualify if a binding written contract for its acquisition was in effect on or before December 20, 2006.
- Property that is manufactured, constructed, or produced by the taxpayer for use by the taxpayer qualifies if the taxpayer begins the manufacture, construction, or production of the property after December 20, 2006, and the property is placed in service before January 1, 2013 (and all other requirements are met). Property that is manufactured, constructed, or produced for the taxpayer by another person under a contract that is entered into prior to the manufacture, construction, or production of the property is considered to be manufactured, constructed, or produced by the taxpayer.

Property any portion of which is financed with the proceeds of a tax-exempt obligation under *IRC Section 103* is not eligible for the additional first-year depreciation deduction. n115.72.10 Recapture rules apply under the provision if the property ceases to be qualified cellulosic biofuel. n115.72.11 Property with respect to which the taxpayer has elected 50-percent expensing under *IRC Section 179C* is not eligible for the additional first-year depreciation deduction. n115.72.12

[10] Additional 50-Percent First-Year Depreciation for Property Acquired During 2008 or 2009

[a] In General

An additional first-year depreciation deduction equal to 50 percent of the adjusted basis of qualified property is allowed for qualifying property that is acquired during calendar year 2008 or 2009. n115.72.13 The additional first-year depreciation deduction is allowed for the taxable year in which the property is placed in service. n115.72.14 The deduction is allowed for both regular tax and alternative minimum tax purposes. n115.72.15 It is not, however, allowed for purposes of computing earnings and profits. n115.72.16

A taxpayer may elect out of additional first-year depreciation for any class of property. n115.72.17 Rules for making the election out with respect to the prior accelerated depreciation provisions. n115.72.18 and clarification of what constituted a "class of property" for purposes of those elections out are contained in regulations. n115.72.19 A six-month extension of time was also available to revoke an election out under the prior accelerated depreciation provisions if various conditions were met. n115.72.20 These matters have not yet addressed by the new legislation or IRS guidance, but the IRS has announced that until it provides further guidance, taxpayers may rely on those regulations with respect to the 2008 and 2009 additional first-year depreciation provision. n115.72.20.1

Qualified property eligible for the 50-percent depreciation deduction must meet several requirements. First, it must be one of the following: n115.72.21

- property to which MACRS applies with an applicable recovery period of 20 years or less;
- computer software other than computer software covered by *IRC Section 197*;
- water utility property; n115.72.22 or
- qualified leasehold improvement property. n115.72.23

NOTE:

Because of the above requirement, except for qualified leasehold improvement property, the deduction comes into play primarily for personal property and not real estate. n115.72.24

Second, the original use of the property must commence with the taxpayer after December 31, 2007. n115.72.25 The term "original use" means the first use to which the property is put, whether or not that use corresponds to the use of that property by the taxpayer. A special rule applies in the case of certain leased property. In the case of any property that is originally placed in service by a person and that is sold to the taxpayer and leased back to that person by the taxpayer within three months after the date that the property was placed in service, the property would be treated as originally placed in service by the taxpayer not earlier than the date that the property is used under the leaseback.

n115.72.26 If property is originally placed in service by a lessor (including by reason of self construction of the property, n115.72.27 the property is sold within three months after the date that the property was placed in service, and the user of the property does not change, then the property is treated as originally placed in service by the taxpayer not earlier than the date of the sale. n115.72.28

Third, the taxpayer must purchase the property within the applicable time period. The applicable time period for acquired property is (1) after December 31, 2007, and before January 1, 2010, but only if no binding written contract for the acquisition is in effect before January 1, 2008, or (2) pursuant to a binding written contract which was entered into after December 31, 2007, and before January 1, 2010. n115.72.29 (Property does not fail to qualify for the additional first-year depreciation merely because a binding written contract to acquire a component of the property is in effect prior to January 1, 2008.)

With respect to property that is manufactured, constructed, or produced by the taxpayer for use by the taxpayer, the taxpayer must begin the manufacture, construction, or production of the property after December 31, 2007, and before January 1, 2010. n115.72.30 Property that is manufactured, constructed, or produced for the taxpayer by another person under a contract that is entered into prior to the manufacture, construction, or production of the property is considered to be manufactured, constructed, or produced by the taxpayer. For property eligible for the extended placed in service date, a special rule limits the amount of costs eligible for the additional first year depreciation. With respect to that property, only the portion of the basis that is properly attributable to the costs incurred before January 1, 2010 ("progress expenditures") is eligible for the additional first-year depreciation. n115.72.31

NOTE:

Committee reports state that for purposes of determining the amount of eligible progress expenditures, it is intended that rules similar to *IRC Section 46(d)(3)* as in effect prior to the Tax Reform Act of 1986 apply. Under those rules, qualified progress expenditures for self-constructed property include amounts properly chargeable during the tax year to capital account with respect to property. For non-self constructed property, qualified progress expenditures include the lesser of (1) the amount paid during the tax year to another person for the construction of the property, or (2) the amount that represents that proportion of the overall cost to the taxpayer of the construction by the other person that is properly attributable to that portion of the construction that is completed during the tax year.

The fourth and final requirement for qualified property is that the property must be placed in service after December 31, 2007, and before January 1, 2010. n115.72.32 An extension of the placed in service date of one year (i.e., to January 1, 2011) is provided for certain property with a recovery period of ten years or longer, and for certain transportation property and aircraft. n115.72.33 In order for property to qualify for the extended placed-in-service date, the property is required to have an estimated production period exceeding one year and a cost exceeding \$1 million. n115.72.34

Property does not qualify for the additional first-year depreciation deduction when the user of that property (or a related

party) would not have been eligible for the additional first-year depreciation deduction if the user (or a related party) were treated as the owner. For example, if a taxpayer sells to a related party property that was under construction prior to January 1, 2008, the property does not qualify for the additional first-year depreciation deduction. n115.72.35 Similarly, if a taxpayer sells to a related party property that was subject to a binding written contract prior to January 1, 2008, the property does not qualify for the additional first-year depreciation deduction. Thus, if a taxpayer (the lessee) sells property in a sale-leaseback arrangement, and the property otherwise would not have qualified for the additional first-year depreciation deduction if it were owned by the taxpayer-lessee, then the lessor is not entitled to the additional first-year depreciation deduction. n115.72.36

The additional first-year depreciation deduction is not allowed for any property that is required to be depreciated under the alternative depreciation system of MACRS in *IRC Section 168(g)*. n115.72.37

The basis of the property and the depreciation allowances in the year the property is placed in service and later years must be appropriately adjusted to reflect the additional 50-percent first-year depreciation deduction. n115.72.38

[b] Election to Accelerate AMT and Research Credits in Lieu of Bonus Depreciation

Corporations otherwise eligible for additional first-year depreciation under *IRC Section 168(k)* n115.72.39 may elect to claim additional research or minimum tax credits from past years in lieu of claiming that bonus depreciation. n115.72.40 A corporation making the election forgoes the additional first-year depreciation deductions and instead increases the limitation under *IRC Section 38(c)* on the use of research credits or *IRC Section 53(c)* on the use of minimum tax credits. n115.72.41 The increases in the allowable credits are treated as refundable. n115.72.42 The depreciation for qualified property for which the election is made is calculated for both regular tax and AMT purposes using the straight-line method in place of the method that would otherwise be used absent the election. n115.72.43

The research credit or minimum tax credit limitation is increased by an amount equal to 20 percent of the bonus depreciation amount for qualified property that would be claimed absent an election. n115.72.44 The AMT credit increase amount means the portion of the minimum tax credit under *IRC Section 53(b)* for the first taxable year ending after March 31, 2008, determined by taking into account only the adjusted net minimum tax for taxable years beginning before January 1, 2006. The minimum tax credits are treated as allowed on a first-in, first-out basis. n115.72.44.1

Generally, eligible qualified property included in the calculation is bonus depreciation property that meets the following requirements: (1) the original use of the property must commence with the taxpayer after March 31, 2008; (2) the taxpayer must purchase the property either (a) after March 31, 2008, and before January 1, 2010, but only if no binding written contract for the acquisition is in effect before April 1, 2008, or (b) pursuant to a binding written contract which was entered into after March 31, 2008, and before January 1, 2010; and (3) the property must be placed in service after March 31, 2008, and before January 1, 2010 (January 1, 2011 for certain longer-lived and transportation property). n115.72.45

In general, the amount by which the *IRC Section 168(k)(4)* election increases the business credit limitation n115.72.45.1 and the AMT credit limitation n115.72.45.2 is the bonus depreciation amount. n115.72.45.3 The bonus depreciation amount is limited to the lesser of: (1) \$30 million, or (2) six percent of the sum of research credit carryforwards from taxable years beginning before January 1, 2006 and minimum tax credits allocable to the adjusted minimum tax imposed for taxable years beginning before January 1, 2006. n115.72.46 For any taxable year, the bonus depreciation amount allocated to either the business credit limitation or AMT credit limitation cannot exceed the amount of unexpired and unused pre-2006 (1) business credit carryforwards allocable to the research credit or (2) AMT credit carryforwards, less bonus depreciation amounts allocated to each limitation, respectively, for all prior taxable years. n115.72.46.1 To the extent that the business credit or AMT credit allowable to a taxpayer is due to an increase in the business credit limitation or AMT credit limitation that results from the *IRC Section 168(k)(4)* election, those amount(s) are treated as overpayments that are refundable to the taxpayer. n115.72.46.2

All corporations treated as a single employer under *IRC Section 52(a)* (generally controlled corporations with more than 50 percent common ownership) are treated as one taxpayer for purposes of the limitation, as well as for making the election. n115.72.47

In several revenue procedures, the IRS has provided detailed guidance regarding the time and manner for making the *IRC Section 168(k)(4)* election both for eligible qualified property and for extension property. The particulars vary, depending on the identity of the taxpayer, the type of property involved, when the taxpayer's first taxable year ending after March 31, 2008 ends, and whether taxpayer's succeeding taxable year is a short taxable year. The procedures also explain the property eligible for the election, the time and manner of allocation of the credit limitation increases allowed by the election among members of a controlled group, the effect of the election on partnerships with corporate partners that make the election, and the application of the election to S corporations. n115.72.48

NOTE:

It must be noted that there are two elections under *IRC Section 168(k)*: the election not to claim the additional first year depreciation for all property in a particular class of property n115.72.49 and the election to apply *IRC Section 168(k)(4)* for all eligible qualified property or for extension property. A taxpayer who makes both elections applies the election not to claim the additional depreciation for a class of property first. Any class of property n115.72.49.1 for which the class-of-property election has been made is not qualified property, n115.72.49.2 eligible qualified property, or extension property. n115.72.49.3 For example, if a calendar-year taxpayer for its taxable year ending December 31, 2008, makes the election to accelerate the credits in lieu of depreciation and also elects not to claim the additional first year depreciation deduction for 7-year property, the taxpayer first applies the election not to claim the additional first-year depreciation to all of its 7-year property acquired and placed in service in 2008. All eligible qualified property (excluding the 7-year property) will then be included in the taxpayer's election to accelerate the credits in lieu of depreciation. n115.72.49.4

Any election may be revoked only with the consent of the IRS, which must be requested through a private letter ruling. n115.72.49.5 At the time the election is made, the taxpayer must also specify the portion of the additional first-year depreciation that is allocated to the *IRC Section 38(c)* or *IRC Section 53(c)* limitations. n115.72.49.6

Corporations may increase the research credit or minimum tax credit limitation by the bonus depreciation amount with respect to certain property placed in service in 2009 (2010 in the case of certain longer-lived and transportation property). n115.72.49.7 The increase is available only for "extension property," n115.72.49.8 which is property acquired in 2009 that is eligible for the additional 50-percent first year depreciation only because of legislation enacted in 2009 that extended that deduction for an additional year. n115.72.49.9

A taxpayer that has made an election to increase the research credit or minimum tax credit limitation for eligible qualified property for its first taxable year ending after March 31, 2008, may choose not to make this election for extension property. n115.72.49.10 Further, a taxpayer that has not made an election for eligible qualified property for its first taxable year ending after March 31, 2008 may make the election for extension property for its first taxable year ending after December 31, 2008, and for each subsequent year. n115.72.49.11

NOTE:

A taxpayer who elects to increase the research or minimum tax credit both for eligible qualified property and extension property must compute a separate bonus depreciation amount, maximum amount, and maximum increase amount, and apply those amounts to each group of property. In computing the maximum amount, the maximum increase amount for extension property is reduced by bonus depreciation amounts for preceding taxable years only with respect to extension property. n115.72.49.12

[11] Special Amortization Rules for Pollution Control Facilities

Taxpayers may elect to amortize certified pollution control facilities over 60 months, for facilities used in connection with plants first placed in service before 1976. n115.72.50 Certain atmospheric pollution control facilities placed in service after April 11, 2005 and used in connection with an electric generation plant or other property that is primarily coal fired may be amortized over 84 months, without regard to when the plant was first placed in service. n115.72.51

[12] 50-Percent First-Year Bonus Depreciation Allowed for Qualified Disaster Assistance Property

Additional 50-percent first-year bonus depreciation is allowed for qualified disaster assistance property in the year the property is placed in service. n115.72.52 The depreciation is available only for property that replaces or rehabilitates property that is destroyed or condemned in a disaster occurring in 2008 or 2009. n115.72.53 The deduction is allowed both for regular and AMT purposes. n115.72.54 The adjusted basis of the property is reduced by the amount of the deduction taken. n115.72.55

"Qualified disaster assistance property" includes the following property: n115.72.56

- property to which MACRS applies with an applicable recovery period of 20 years or less;
- computer software other than computer software covered by *IRC Section 197*;
- water utility property;
- qualified leasehold improvement property; n115.72.57
- nonresidential real property; and
- residential rental property.

Property qualifies for the bonus depreciation only if the following requirements are also met:

- substantially all of the property must be used in a trade or business in an disaster area with respect to a federally declared disaster occurring before January 1, 2010; n115.72.58
- the property must generally rehabilitate or replace property destroyed or condemned in the disaster (property is treated as replacing property destroyed or condemned if, as part of an integrated plan, it replaces property which is included in a continuous area which includes real property destroyed or condemned); n115.72.59
- the property must also be similar in nature to, and located in the same county as, the property being rehabilitated or replaced; n115.72.60
- the original use of the property in the disaster area must begin with an eligible taxpayer on or after the date of the disaster; n115.72.61
- the property must be purchased by the taxpayer after the date of the disaster (and no binding contract for its acquisition can have been in effect before that date); n115.72.62 and
- the property must be placed in service by the end of the third calendar year following the date of the disaster (fourth calendar year, in the case of nonresidential real property and residential rental property).

n115.72.63

The bonus depreciation is available for self-constructed property and also for sale-leasebacks and syndicated property.
n115.72.64

The following property is not eligible for the bonus depreciation:

- property for which bonus depreciation is taken under other provisions; n115.72.65
- property for which the alternative depreciation system n115.72.66 must be used; n115.72.67
- tax-exempt bond financed property; n115.72.68 and
- qualified revitalization building with respect to which the taxpayer has elected the commercial revitalization deduction. n115.72.69

A taxpayer may elect not to take the deduction with respect to any class of property placed in service during a taxable year. n115.72.70 Recapture can apply for any property that ceases to be qualified disaster assistance property.
n115.72.71

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.03

§ 5.03 Rehabilitation Tax Credit

[1] Introduction

A 20-percent tax credit is allowed for qualified rehabilitation expenditures with respect to any certified historic structure and a 10 percent tax credit for qualified rehabilitation expenditures with respect to any qualified rehabilitation buildings other than certified historic structures. n116

[2] Qualified Rehabilitation Expenditures

[a] In General

The term "qualified rehabilitation expenditure" includes any amount properly charged to a capital account for which depreciation is allowed and which is:

- nonresidential real property;
- residential rental property; or
- real property with a class life of more than 12.5 years.

Only expenditures made in connection with the rehabilitation of a qualified rehabilitated building will be considered a qualified rehabilitation expenditure. n117 An expenditure made in connection with other buildings, such as a taxpayer's personal residence, is not eligible for the credit. n118 For purposes of the rehabilitation tax credit, the date that qualified rehabilitation expenditures are considered incurred by the taxpayer is determined under an accrual method of accounting. The date is determined in this way regardless of the accounting method used by the taxpayer with respect to other items of income or expense. n119 Conditional or contingent costs are therefore not eligible for the credit. n120 A taxpayer may claim the rehabilitation credit for expenditures made by a prior owner, to the extent the prior owner does not place in service the portion of the building to which the expenditures are allocable. n120.1

The term "rehabilitation" includes renovation, restoration, or reconstruction of a building, but does not include enlargement or new construction. n121 An "enlargement" is defined as an increase in the total volume of a building. However, an increase in floor space resulting solely from interior remodeling is not considered an enlargement. n122

The same is not true of a remodeling that increases exterior dimensions. In one ruling, the IRS refused to allow a rehabilitation credit for amounts spent to replace an exterior stairway with a stairway tower that slightly expanded the volume of the building. That the larger stairway was necessary in order to comply with the local building code did not change the fact that the volume of the building was enlarged. Therefore, the new stairway tower could not qualify as a "rehabilitation" eligible for the credit. n122.1

If a rehabilitation includes an enlargement, the costs of the project must be apportioned between the eligible rehabilitation and the ineligible enlargement. n123 Amounts spent on such rehabilitation are chargeable to a capital account only if they are properly includable in computing the basis of real property. Accordingly, amounts treated as expenses and deducted in the year they are paid or incurred do not qualify for the rehabilitation tax credit. n124

Architectural and engineering fees, site survey fees, legal expenses, insurance premiums, development fees, and other construction fees qualify as rehabilitation expenditures. n125 Any fees that are conditional or contingent, however, do not. Therefore, a developer's fee that was payable only if there was available cash was found to be ineligible for the credit. n126 Construction period interest and taxes do not qualify as rehabilitation expenditures unless they are capitalized under *IRC Section 263A*. n127

In addition, qualified rehabilitation expenditures do not include the following: n128

- (1) any expenditure with respect to which the taxpayer does not use the straight line recovery method, unless the property is tax-exempt bond-financed property or certain imported property; n129
- (2) cost of acquisition;
- (3) expenditures attributable to certified historic structures (unless the rehabilitation is a certified rehabilitation); n130
- (4) tax-exempt use property;

NOTE:

Tax-exempt use property for purposes of the rehabilitation credit is generally defined by cross reference to the definition in *IRC Section 168(h)*. n130.1 Under that definition, in the case of nonresidential real property, tax-exempt use property generally means the portion of the property leased in a disqualified lease to tax-exempt entities. n130.2 A safe harbor provides, however, that in the case of nonresidential real property, the property is treated as tax-exempt use property only if the portion of the property leased to tax-exempt entities in disqualified leases is more than 35 percent of the property. n130.3 For determining rehabilitation expenditures eligible for the rehabilitation credit, however, nonresidential real property is treated as tax-exempt use property only if the portion of the property leased to tax-exempt entities in disqualified leases is more than 50 percent (rather than 35 percent) of the property. n130.4

- (5) expenditures by lessees, if upon completion of rehabilitation, the remaining term of the lease is less than the recovery period as determined under *IRC Section 168(c)*. n131

NOTE:

Property that qualifies for additional 30-percent first year depreciation n131.1 or 50-percent bonus depreciation under prior law, n131.2 special Liberty Zone depreciation, n131.3 or the 50-percent additional depreciation for qualifying property acquired during 2008 n131.3.1 may also qualify for the rehabilitation credit under *IRC Section 47*. A taxpayer may claim the additional first year depreciation

deduction for the unadjusted depreciable basis of the qualified rehabilitation expenditures and may claim the rehabilitation credit (provided the requirements of *IRC Section 47* are met) for the remaining basis of the qualified rehabilitation expenditures (unadjusted depreciable basis less the additional first year depreciation deduction allowed or allowable, whichever is greater). In order to claim the credit, the taxpayer must depreciate the remaining adjusted depreciable basis of those expenditures using the straight line method over the regular MACRS or alternative depreciation system recovery period. n131.4 A taxpayer may also claim the rehabilitation credit for the portion of the basis of the qualified rehabilitated building that is attributable to the qualified rehabilitation expenditures if the taxpayer elects not to deduct the additional first year depreciation for the class of property that includes the qualified rehabilitated expenditures. n131.5

[b] At-Risk Rules Apply

At-risk rules may apply to reduce the credit base eligible for the rehabilitation credit if non-recourse financing is used. n131.6 The amount of the qualified rehabilitation expenditures eligible for the rehabilitation credit is reduced by the nonqualified nonrecourse financing with respect to them. n131.7 This restriction applies only for property placed in service by (1) an individual, or (2) a C corporation if at any time during the last half of the taxable year more than 50 percent in value of its outstanding stock is owned, directly or indirectly, by or for not more than five individuals. n131.8 It also applies only if the property is used in connection with an activity with respect to which any loss is subject to the statutory at-risk limitations. n131.9 This includes, among other things, any trade or business activity or activity engaged in for the production of income. n131.10

"Nonqualified nonrecourse financing" for this purpose is any nonrecourse financing that is not qualified commercial financing. n131.11 "Qualified commercial financing" is any financing with respect to property (other than convertible debt) if the following requirements are met: n131.12

- the property is acquired from an unrelated person; n131.13
- the amount of nonrecourse financing with respect to the property does not exceed 80 percent of the property's credit base; and
- the financing is from a qualified person, or is from or guaranteed by certain governmental entities.

"Nonrecourse financing" for this purpose includes any amount with respect to which the taxpayer is protected against loss through guarantees, stop-loss agreements, or similar arrangements, and (except as provided by regulations) any amount borrowed from a person who has an interest (other than as a creditor) in the activity in which the property is used, or from a related person to a person (other than the taxpayer) having such an interest. n131.14 Decreases in the nonqualified nonrecourse financing after the year the property is placed in service can increase the credit base in the taxable year of the decrease. n131.15 Similarly, increases in nonqualified nonrecourse financing can increase the tax in an amount that takes into effect the resulting decrease in the credit base for all prior years. n131.16

[3] Qualified Rehabilitated Building

[a] In General

The term "qualified rehabilitated building" means any building (and its structural components) that:

- (1) has been substantially rehabilitated;
- (2) was placed in service before the beginning of the rehabilitation period;

(3) meets the external wall and internal structural framework retention test; and

(4) is depreciable. n132

The credit is not available, however, for improvements to property used outside the U.S., n133 for property used for lodging, n134 for property used by certain tax-exempt organizations, n135 or for property used by government units for foreign persons or entities. n136

The prohibition of the credit with respect to property that is used predominantly to furnish lodging or in connection with the furnishing of lodging n137 does not apply to the following: n138

(1) nonlodging commercial facilities that are available to persons not using the lodging facilities on the same basis as they are available to persons using the lodging facilities (such as restaurants, drug stores, and grocery stores); n139

(2) a hotel or motel where more than half of the accommodation is used on a transient basis (generally, rental periods of less than 30 days). n140

Residential homes that are rented on a long-term basis are deemed to be lodging and, therefore, will not qualify for the credit unless they are certified historic structures. n141

[b] Placed in Service

A building other than a certified historic structure will not be treated as a qualified rehabilitated building unless it was originally placed in service before 1936. n142 Further, such a building is not considered a qualified rehabilitated building unless it has been in the same location since before 1936. n143 A certified historic structure may be placed in service at any time before the beginning of rehabilitation. n143.1

[c] Substantial Rehabilitation

A building is treated as having been substantially rehabilitated only if the qualified rehabilitation expenditures during the 24-month period selected by the taxpayer and ending with or within the taxable year exceed the greater of: (1) the adjusted basis of the building and its structural components; or (2) \$5,000. n144 A 60-month, rather than 24-month, measuring period may be elected in some cases. n145 An extension of time is also available for rehabilitations affected by Hurricane Katrina, Wilma, or Rita. n145.1

In determining the adjusted basis of the building for this purpose, the basis of all parties having an interest in the building must be taken into account. n146 In the case of rental property, the basis to both the landlord and tenant are taken into account. n147

Rehabilitation expenditures occurring outside the 24-month period selected by the taxpayer may still qualify as part of a qualified rehabilitation expenditure and, thus, may be taken into account in determining the amount of the credit. Qualified rehabilitation expenditures occurring prior to the measuring period in the taxable year in which the measuring period begins, and expenditures occurring after the measuring period during the year in which the measuring period ends, qualify. n148

Example:

In Year 1, a calendar year taxpayer purchases a building for \$200,000. The taxpayer begins the rehabilitation of the building in March of Year 1. From March 1 through June 30 of Year 1, the taxpayer

incurs \$12,000 of qualified rehabilitation expenditures. From July 1 of Year 1 through June 30 of Year 3, the taxpayer incurs an additional \$220,000 in expenses. From July 1 of Year 3 through October 1 of Year 3, the taxpayer incurs an additional \$20,000 of expenditures.

The taxpayer selects the period of July 1 of Year 1 through June 30 of Year 3 as the 24-month period for determining whether the rehabilitation is substantial. Under the facts given here, the building will be deemed substantially rehabilitated. In addition, the \$12,000 of expenses incurred from March 1 through June 30 of Year 1 and the \$20,000 of expenses incurred from July 1 of Year 3 through October 1 of Year 3 also qualify as qualified rehabilitation expenditures. The adjusted basis of the building is determined as of July 1 of Year 1. n149

[d] Determination of Basis

The adjusted basis of the building is determined as of the first day of the 24-month period selected by the taxpayer or the beginning of the holding period, whichever is later. Determination of the beginning of the holding period is made without regard to any reconstruction done by the taxpayer in connection with the rehabilitation. n150

The increase in the basis of the rehabilitated property that would otherwise result from the qualified rehabilitation expenditures must be reduced by 100 percent of the amount of the rehabilitation credit allowed. n151

[e] Wall Retention Test

[i] In General

To be considered a "qualified rehabilitated building," the building must meet the internal structural framework and external wall retention test. In the case of a building other than a certified historic structure, the internal and external wall retention test is met if, in the rehabilitation process:

- (1) 50 percent or more of the existing external walls of such building are retained in place as external walls;
- (2) 75 percent or more of the existing external walls of such building are retained in place as internal or external walls; and
- (3) 75 percent or more of the existing internal structural framework of such building is retained in place. n152

The area used in the above computations is based upon the area of the external walls or internal structural framework that is retained in place after the rehabilitation is completed, as compared to the total wall area prior to the rehabilitation. The pre-rehabilitation area shall be determined before any destruction, modification or construction of any external walls or internal structural framework is undertaken by any party in anticipation of the rehabilitation. n153

[ii] External Wall

An external wall includes any wall that has one face exposed to the weather, earth, or abutting wall of an adjacent building. n154 In general, the term "external wall" includes only those walls that form the outline or perimeter of the building or that surround an uncovered courtyard. Therefore, the walls of an internal shaft designed solely to bring light or air into the center of the building which enclose space not designed for occupancy or other use by people, any walls surrounded by external walls of the building, and any walls enclosing any other space not designed for occupancy by people are not considered external walls. n155

[iii] Internal Framework

Internal structural framework includes all load-bearing internal walls and any other internal structural supports, including columns, girders, beams, trusses, spandrels, and all other components that are essential to the stability of the building. n156

[iv] Retained in Place

An existing external wall is retained in place if its supporting elements are retained in place. The supporting elements may be reinforced, but not replaced, in the rehabilitation process and still be considered retained in place for the purposes of the test. n157

An external wall is considered retained in place even if the existing doors and windows are modified, eliminated or replaced. An external wall may even be disassembled and reassembled, provided that the original supporting elements are used when the wall is reassembled. n158

[f] Phased Rehabilitation

For any rehabilitation which is reasonably expected to be completed in phases set forth in architectural plans and specifications before the rehabilitation begins, the rehabilitation period is increased from 24 months to 60 months. n159

[g] Time for Claiming Credit

In general, rehabilitation expenditures are taken into account for purposes of the rehabilitation credit in the year in which the rehabilitated building is placed in service. n160 Property to which qualified rehabilitation expenditures are attributed is not treated as being placed in service until the building meets the definition of a qualified rehabilitated building for the taxable year. n161 Accordingly, the property's first taxable year as a qualified rehabilitated building is also the year it is considered to be placed in service. n162

Under certain circumstances, however, a taxpayer will be entitled to elect to claim rehabilitation tax credits for qualified rehabilitation expenditures made with respect to a building that is in the process of undergoing rehabilitation and has not been fully placed in service. A limited exception exists that allows taxpayers to claim credits on "progress expenditure property." Progress expenditure property is property being constructed by or for the taxpayer if, based on facts known at the close of the taxable year in which construction begins, the property is reasonably expected to have a construction period of two years or more. n163

[4] Certified Historic Structure

A certified historic structure is any building that is:

- (1) listed in the National Register, or
- (2) is located in a registered historic district and is certified by the Secretary of the Interior as being of historic significance to the district. n164

A building is considered to be a certified historic structure at the time it is placed in service if: n164.1

- the taxpayer reasonably believes on that date the building will be determined to be a certified historic structure;

- the taxpayer has requested on or before that date a determination from the Department of Interior that the building is a certified historic structure; and
- the Department of Interior later determines that the building is a certified historic structure.

The IRS may, however, waive the requirement that the application for certification of historic status be filed with the US Department of Interior before the property is placed in service. It normally does so by granting an extension of time for an application for certification of historic status with the US Department of the Interior. n164.2

[a] Registered Historic District

The term "registered historic district" means any district listed in the National Register. It also means a district which is designated under a statute of the appropriate state or local government, if such statute is certified by the Secretary of the Interior as containing criteria which will substantially achieve the purpose of preserving and rehabilitating buildings of historic significance to the district, and the Secretary of the Interior certifies that the district substantially meets all of the requirements for listing districts in the National Register. n165

[b] Certified Rehabilitation

A certified rehabilitation is any rehabilitation of a certified historic structure which the Secretary of the Interior has certified as being consistent with the historic character of such property or of the district in which such property is located. n166 It is important to note that the procedures that must be followed to ensure that the rehabilitation of a certified historic structure will qualify as a certified rehabilitation are significantly different (and more complicated) than those that must be followed with respect to a rehabilitation of a building other than a certified historic structure.

The rehabilitation of a building other than a certified historic structure must simply be performed in accordance with the standards established in the Code and the Treasury Regulations thereunder. In contrast, the certified rehabilitation of a certified historic structure must be done not only in accordance with the standards established in the Code and Treasury Regulations, but also in accordance with the standards established by the Department of the Interior. In general, the rehabilitation standards established by the Department of Interior are significantly more restrictive than those contained in the Code. n167

The standards established by the Department of the Interior require, at a minimum, consideration of the following:

- (1) Storefront alterations must be justified.
- (2) If the rehabilitation process requires removal of windows or portions of walls, the taxpayer must show why the process selected was preferable to alternative processes.
- (3) Owners are strongly encouraged to retain and repair original windows.
- (4) Installation of new windows (especially tinted windows) must be justified by supporting documentation.
- (5) Replacement sash should match the original in size, pane configuration, color, trim details and reflective qualities.
- (6) Cleaning of masonry surfaces is generally permitted only to halt deterioration or to remove graffiti and stains. Even then, the cleaning method selected must be of the gentlest means possible. n168

Owners planning to undertake a certified rehabilitation of a certified historic building are strongly encouraged to work closely with an architect that has considerable experience in the rehabilitation of historic structures. Additionally, owners should contact the relevant state preservation office as early as possible in the planning process. The state offices can be very helpful in providing guidance in planning and carrying out the rehabilitation. The standards are very strict, and failure to perform the rehabilitation in accordance with these standards, even in what may seem to be a very minor matter, can result in the denial of certification of the rehabilitation. n169 Without certification of the rehabilitation, a taxpayer will not be entitled to claim rehabilitation tax credits for the rehabilitation expenditures. n170

[5] National Register

As discussed in *Section 5.03 [4]* above, a certified historic structure includes any building listed in the National Register. In order to have a building listed in the National Register, the taxpayer must file a "Historic Preservation Certification Application" with its state office of historic preservation. The application contains three separate sections:

- (1) evaluation of significance;
- (2) description of rehabilitation; and
- (3) certification of rehabilitation.

After all three sections have been completed and certified by the state office, the building, in general, is listed on the National Register. The sections of the application are described below. n171

[a] Evaluation of Significance

The evaluation of significance step is required for those buildings that are not already listed on the National Register or situated in a registered historic district. The evaluation will indicate whether or not the building is significant enough to be listed in the National Register. This step is completed by submitting Part 1 of the Historic Preservation Certification Application to the state office. The state office then has 30 days to review the application and recommend to the National Park Service whether or not the building is eligible for the National Register. A building that meets the requirements with respect to Part 1 of the application is not automatically listed on the National Register; at that point, the building has only a preliminary determination that it is eligible for listing. n172

[b] Description of Rehabilitation

The second step is known as the "description of rehabilitation." This step requires the taxpayer to submit a detailed description of the rehabilitation to the state office. The application breaks down the rehabilitation into components that deal with the significant architectural features of the building.

In general, it is strongly recommended that building owners obtain approval prior to the initiation of any rehabilitation work. However, although there is no statutory requirement that approval be obtained prior to initiation of any rehabilitation work, it is essential that a sufficient number of clear color photographs are taken to document interior and exterior conditions, including site and environment, before and after any rehabilitation is done. Elevation features, interior features, and spaces should be shown. Failure to provide photographs of "before" conditions may result in a denial of the requested certification. n173

[c] Certification

Finally, once the rehabilitation has been completed, the "after" photographs of the building are submitted to the state

office in request for certification of the rehabilitation. The state office passes this request on to the National Park Service for certification. Once the National Park Service has certified the rehabilitation, the building is listed in the National Register. Completion of this final step results in the rehabilitation being treated as a certified rehabilitation of a certified historic structure. n174

[6] Tax Credit Recapture

In general, if a rehabilitated building is disposed of or ceases to be investment credit property within five years of being placed in service, the taxpayer is subject to tax credit recapture. The taxpayer's tax liability for the year of the disposition (or the year the building otherwise ceases to be investment credit property) is increased by the recapture percentage multiplied by the total credits taken. The recapture percentage depends upon the year in which the property ceases being investment credit property:

- (1) 100 percent recapture if disposed of within 1 year after being placed in service;
- (2) 80 percent recapture if disposed of within 2 years after being placed in service;
- (3) 60 percent recapture if disposed of within 3 years after being placed in service;
- (4) 40 percent recapture if disposed of within 4 years after being placed in service; and
- (5) 20 percent recapture if disposed of within 5 years after being placed in service.

There is no recapture after five years. n175

If, during any taxable year, there is a recapture of the rehabilitation tax credit with respect to any building the basis of which was reduced by the amount of the rehabilitation tax credit, the basis of such building (immediately before the recapture) is increased by the amount of the recapture. n176 The additional basis is apparently recovered over the remaining depreciable life of the property.

[7] Partnerships

In the case of a partnership, each partner shall take into account, separately, for its taxable year within which the partnership's taxable year ends, its share of the basis of partnership rehabilitation property. n177

Each partner shall be treated as a separate taxpayer with respect to its share of the basis of partnership rehabilitation property. The class life of the property in the hands of each partner shall be the same as the class life of the property in the hands of the partnership. n178

Each partner's share of the basis of any rehabilitated property is generally determined in accordance with the ratio by which the partners divide the general profits of the partnership (that is, the taxable income of the partnership as described in *IRC Section 702(a)(9)*), regardless of whether the partnership has a profit or loss for the taxable year. n179 Thus, if the partners agree to share losses in one ratio and to share profits in another ratio, the rehabilitation credits are allocated in accordance with the profit sharing ratio even in a year in which the partnership has an overall loss.

If the partnership profit ratio changes during the taxable year of the partnership, the ratio effective on the date on which the property was placed in service applies for purposes of basis and credit allocation. In addition, if the partnership specially allocates all items of income, gain, loss or deduction with respect to any item of property eligible for rehabilitation credits, such special allocation will be respected for rehabilitation property, provided the special allocations are recognized under *IRC Section 704(a)* and the regulations thereunder. n180

Example:

A qualified rehabilitated building with a basis of \$100,000 is placed in service June 1, 19X2. There are five partners in the partnership on January 1, 19X2, and five additional partners are admitted on December 1, 19X2. Allocations are made in accordance with profits interests.

The five partners in the partnership on January 1, 19X2, would each be allocated 20% of the property's basis: \$20,000. The original five would be eligible to claim the related rehabilitation tax credits with respect to their allocated share of the property's qualified rehabilitation expenditures. The five partners admitted after the property was placed in service would not be allocated any of the property's basis and would not be eligible to claim any associated rehabilitation tax credits. n181

[8] Rehabilitation Tax Credit of Lessees**[a] Lessee Rehabilitation Expenditures**

A lessee may claim a credit for qualified rehabilitation expenditures it makes with respect to a qualified rehabilitated building. A lessee's qualified rehabilitation expenditures are eligible for the credit if, as of the time the rehabilitation is completed, the remaining term of the lease is equal to or exceeds the lessee's recovery period for the property (27.5 years for residential property and 39 years for commercial property). n182

In determining whether a lessee's expenditures qualify as a substantial rehabilitation, the building's basis equals the adjusted basis of the lessor plus the adjusted basis of the lessee in the leasehold, and any leasehold improvements that are structural components of the building. n183 If the building is sold before the lessee completes the rehabilitation, however, the new lessor's basis must be taken into account. n184

Example:

A lessee with 50 years remaining on a lease begins a rehabilitation of a building on February 1. At that time, the lessor's adjusted basis in the building is \$200,000. The lessee enters into a qualified rehabilitation plan under which it will incur \$500,000 in expenditures during the next 24-month period. From February to August, the lessee incurs \$150,000 of expenditures on the rehabilitation. On September 1, the lessor sells the building to a third party for \$750,000. The lessee's rehabilitation expenditures will not be deemed to be substantial because the total rehabilitation expenditures will not exceed the new lessor's basis in the building. n185

Planning Tip:

A lessee wishing to preserve the credit for its rehabilitation expenditures should enter into a contract or covenant with the lessor in which the lessor agrees not to sell or otherwise transfer the property until the rehabilitation is completed. n186

[b] Pass-Through of Credit from Lessor to Lessee

A lessor may elect to pass through the rehabilitation tax credit to the lessee. n187 To do so, the lessor must deliver a written statement to the lessee setting forth specified information on or before the filing of the lessee's income tax return. n188 The IRS has also ruled that a trust which is a lessor may elect to pass through the credit to its lessee. n189

[9] Allowance of Credit Against Alternative Minimum Tax

Effective for rehabilitation credits determined attributable to qualified rehabilitation expenses properly taken into account for periods after December 31, 2007 (including any carryback of the credits), the tentative minimum tax is

treated as being zero for purposes of determining the tax liability limitation with respect to the rehabilitation credit. Therefore, these rehabilitation credits may offset AMT liability. n189.1 For prior expenditures, the rehabilitation credit could reduce regular income tax, but could not reduce the AMT. n189.2

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.04

§ 5.04 Low-Income Housing Tax Credits

[1] Introduction

The Low-Income Housing Tax Credit (LIHC) is a federal income tax credit claimed by owners of residential rental properties that are rented to low-income tenants. n190 The credit is claimed as part of the general business credit. n190.1 A taxpayer claiming the credit must file a completed Form 8586, "Low-Income Housing Credit," for each year in which the credit is claimed. A completed Form 8609, "Low-Income Housing Credit Allocation and Certification," must also be filed one time with the IRS in order to claim the credit. n190.2

The LIHC is claimed over ten years, n191 and begins with the taxable year in which the building is placed in service or, at the election of the taxpayer, in the following taxable year. n191.1 The credit can be used in connection with both new and existing buildings. n192 Rehabilitation expenditures by a taxpayer with respect to an existing building are treated as a separate new building for purposes of the LIHC. n192.1 A taxpayer who purchases a building before a prior owner places in service rehabilitation expenditures made may treat the expenditures of the prior owner as a separate new building, and may also incur its own rehabilitation expenditures for purposes of qualifying them as a separate new building for purposes of the LIHC. n192.2 Allocation of the credit is administered by the states. Because Congress expected demand for the LIHC to be exceptionally high, it chose to limit the amount of the credit that would be available in each state. n193 The limitation is generally referred to as LIHC "volume cap." Each state has agencies responsible for allocating the limited quantity of credits to low-income housing projects, and taxpayers must apply to the appropriate agency to receive an LIHC allocation.

A state's LIHC volume cap (or "state housing credit ceiling") for any calendar year after 2000 is an amount equal to the sum of--

(1) the unused state housing credit ceiling (if any) of the state for the preceding calendar year;

(2) the greater of (a) \$1.75 (\$1.50 for 2001) multiplied by the state population, or (b) \$2 million; both the \$1.75 and \$2 million amounts are subject to cost-of-living adjustments after 2002; n193.1 For 2004, the amount is the greater of \$1.80 multiplied by the state population, or \$2,075,000. n193.2 For 2005, the amount is the greater of \$1.85 multiplied by the state population, or \$2,125,000. n193.3 For 2006, the amount is the greater of \$1.90 multiplied by the state population, or \$2,190,000. n193.4 For 2007, the

amount is the greater of \$1.95 multiplied by the state population, or \$2,275,000. n193.5 Legislation enacted in 2008 increases from \$2.00 per resident to \$2.20 per resident the allocation authority provided annually to each State for calendar years 2008 and 2009. n193.6 It also increases the minimum annual cap for certain small population States by ten percent of the otherwise available amounts in 2008 and 2009, respectively. n193.7 Therefore, for 2008, the amount is the greater of \$2.20 multiplied by the state population, or \$2,555,000. n193.8 For 2009, the amount is \$2.30 multiplied by the state population, or \$2,665,000. n193.9 For 2010, the amount is the greater of \$2.10 multiplied by the State population, or \$2,430,000. n193.10

(3) the amount of any state housing credit ceiling returned to the state during the calendar year (e.g., by developers whose projects did not go forward); and

(4) the amount, if any, of the national unused housing credit ceiling allocated to the state by the Secretary of the Treasury. n194

No state housing credit volume cap allocation is required with respect to the portion of any credit attributable to eligible basis financed by tax-exempt bonds that utilized tax exempt bond volume cap. If the principal payments on that financing are applied within a reasonable period to redeem obligations the proceeds of which were used to provide that financing or that financing is refunded. n194.1 And where 50 percent or more of the aggregate basis of any building and the land on which the building is located is financed by such a bond, no state housing credit volume cap is required with respect to the entire building. n195 Costs of acquisition and rehabilitation costs must be aggregated in applying the 50 percent test. Taxpayers cannot separately meet the 50 percent test for an acquisition and a later rehabilitation of a project. n195.1 Such a project would, of course, be eligible only for the "30 percent" credit for federally subsidized projects. n195.2

The Code requires state housing credit agencies to submit annual reports to the Secretary of the Treasury concerning their housing credit allocation activities, and requires those agencies to have in place plans for the allocation of credits among projects that are intended to limit the aggregate of all subsidies allocated to a particular project to the amount necessary for the financing of the project. n196

A low-income housing project will generally be eligible for credits every year for ten years after it has been placed in service. The actual credit period will usually extend over 11 calendar years, because only a *pro rata* portion of a full year's credit is available in the first year, with the remainder being available in the 11th year. n197 The LIHC will not be available (or will be recaptured) unless an LIHC building satisfies specific low-income housing compliance rules for a full 15-year period. n198

Analysis of the LIHC and its eligibility requirements can be divided into two major parts: initial year calculation and succeeding year calculations. The initial year calculation has four components:

- (1) the qualified low-income building; n198.1
- (2) the low-income occupancy percentage; n198.2
- (3) the amount of eligible basis; n198.3 and
- (4) the credit percentage. n198.4

Each of these four factors must be analyzed to determine whether a project is eligible to receive low-income housing credits, and to determine the amount of credits available. To be eligible for any credits, a project must first meet the requirements for a qualified low-income building. (These requirements are discussed in *Section 5.04 [3]* below.) Once a

building is deemed to be a qualified low-income building, its owner must determine the building's "qualified basis" in order to determine the amount of LIHC a project may claim in the initial year. n199 A building's qualified basis is the product of the "low-income occupancy percentage" and the "eligible basis." n200 The amount of LIHC that a building owner may claim in the initial year is the building's qualified basis multiplied by the credit percentage. n201

After the initial year, the first three items listed above continue to affect the amount of LIHC that may be claimed and the determination of whether a tax credit recapture event has occurred. n201.1

The credit percentage is fixed in the initial year and therefore is not affected by subsequent year calculations. However, the other three items can change in the subsequent years and thus decrease (or increase) the amount of credit to which a taxpayer is entitled. These three factors must be redetermined each year. n201.2

The LIHC is an extremely technical income tax area. Because the LIHC is a relatively new income tax provision, it is not supported by a large body of administrative or judicial interpretation. This lack of guidance is exacerbated by the many nuances contained in LIHC law as well as by the changes that have occurred since LIHC legislation was first enacted. The IRS frequently issues private letter rulings responding to requests about application of various LIHC requirements. It has also issued general guidance about various aspects of the credit, n201.3 and has issued revenue procedure under which affected taxpayers in major disaster areas may obtain relief from certain statutory requirements pertaining to the credit. n201.4 Certain rehabilitation costs are also eligible for a 70-percent credit. n201.5

[2] Economic Factors

The LIHC is generally designed to subsidize either 30 percent or 70 percent of the costs of the low-income units in a project. n202 The 30-percent subsidy is for new construction that is already federally subsidized and for the acquisition costs of existing buildings. n203 "Federally subsidized" buildings include buildings financed with tax exempt bonds. n203.1 The 70-percent subsidy is for new construction that is not already receiving federal subsidies. n204

The 30-percent or 70-percent subsidy is realized by claiming federal income tax credits every year for ten years. n205 The actual amount of the annual credit is calculated to yield a present value of either 30 percent or 70 percent of certain building costs. n205.1

In exchange for receiving this credit, the project owner must agree to rent units to low-income individuals at reduced rental rates. n205.2 Theoretically, the credit is designed to provide the additional rent that is necessary to compensate low-income building owners for the reduced rental income.

Even though the low income housing tax credit starts out as a stream of tax benefits over a ten-year period, in practice low income housing developers use low-income housing tax credits as an inducement to raise equity dollars from investors. The amount of capital that a developer can raise based on any specific amount of credits will vary based on such factors as prevailing interest rates, the perceived stability and viability of the project, and the demand for and supply of credits available. For example, every \$1.40 to \$1.70 in tax credits might generate \$1.00 in equity contributions in a transaction in which the investors receive essentially all of the tax credits, one-half of any operating cash flow, and all cash from the sale or refinancing of the property until they receive a return of 100 percent of their capital, with the remainder of cash (if any) being split 50 percent by the investors and 50 percent by the general partner/sponsor.

General economic principles influence where developers choose to build tax credit subsidized low-income housing. Such housing is generally built where the land costs are low and the LIHC allowable rents are close to market-rate rents.

Economic forces generally make it more difficult to build low-income tax credit housing in major cities because land costs are higher and low-income rents are substantially below market-rate rents. However, some additional federal and

state programs make development in these cities more feasible. n206 For this reason, the basis of a building constructed in a high cost area (or the rehabilitation expenditures taken into account in a rehabilitation in such an area) are increased by 30 percent. n207

When deciding whether to apply for an allocation, building owners should consider four major criteria:

- (1) the economic value of the credit;
- (2) the economic value of additional government subsidies;
- (3) the economic cost of the reduced rents; and
- (4) the administrative burden of complying with the LIHC program.

[3] Qualified Low-Income Building

[a] Overview

To qualify for the LIHC, a project must satisfy the requirements for a "qualified low-income building." First, the building must be part of a qualified low-income housing project at all times during the 15-year compliance period. n208 In addition, to be a qualified low-income building, a building must be subject to the depreciation rules of *IRC Section 168*. n209

[b] Qualified Low-Income Housing Project

[i] Set-Aside Test

A qualified low-income housing project is generally any residential rental property that satisfies one of two minimum set-aside tests. n210 These tests are referred to as the minimum set-aside tests because they require a minimum number of units to be set aside for occupancy by low-income tenants. The two tests are known as the 20-50 test and the 40-60 test. n211 A third test for so-called "deep rent skewed" projects is satisfied if 15 percent or more of the low income units in the building or project are occupied by tenants whose gross income is 40 percent or less of the area median gross income. n212

The building owner must identify and elect the minimum set-aside test that the building will attempt to satisfy when the project is placed in service. n213 The applicable set-aside test must be satisfied by the end of the first year of the credit period for the building (or substantial rehabilitation project). n214 The applicable minimum set-aside test must then be complied with continuously thereafter for the entire extended compliance period. n215 The minimum set aside test will not be violated if the income of a low income tenant rises above the specified ceiling, and the unit will continue to be considered to be a low income unit; provided that if the income of the occupants of the unit rises above 140 percent of the income limitation (170 percent, in the case of a deep rent skewed project), the next available unit of a comparable size or smaller (the next available low income unit of any size, in the case of a deep rent skewed project) is rented to a tenant who satisfies the applicable income limitation. n216

Regulations define various terms and detail the workings of this "available unit rule." n217 In determining whether a unit is an over-income unit, the aggregate income of all the occupants of the unit is taken into account. n218 A unit ceases to be treated as a low-income unit under the available unit rule if it becomes an over-income unit and a nonqualified resident occupies any comparable unit that is available or that later becomes available in the same building of a low-income housing project. n219 When a current resident moves to a different unit within the same low-income building, the units exchange status. Thus, the newly-occupied unit adopts the status of the vacated unit, and the vacated unit assumes the status the newly-occupied unit had immediately prior to its occupancy by the qualifying residents.

n220 A unit is not available for purposes of the available unit rule when it is no longer available for rent due to a reservation that is binding under local law. n221

The IRS has established procedures pursuant to which buildings occupied solely by low income tenants may obtain a waiver of the annual income certification requirements, and has informed housing agencies and project owners as to how to obtain income certifications in other circumstances. n222

[A] 20-50 Test

To satisfy the 20-50 test, at least 20 percent of the residential units in the project must be both rent-restricted and occupied by tenants whose gross income is 50 percent or less of the area's median gross income. n223

[B] 40-60 Test

The 40-60 test requires that at least 40 percent of the residential units in the project be both rent-restricted and occupied by tenants whose gross income is 60 percent or less of the area's median gross income. n224

[ii] Rent-Restricted Test

A residential unit is rent-restricted only if the "gross rent" with respect to such unit does not exceed 30 percent of the income limitation applicable under the minimum set-aside test. n225 Therefore, if the 20-50 minimum set-aside test is elected, then gross rent is limited to 30 percent of the 50 percent, i.e., 15 percent, of "area median gross income." Likewise, if the 40-60 minimum set-aside test is elected, then gross rent is limited to 30 percent of 60 percent, i.e., 18 percent, of area median gross income. n226 If the deep rent skewed set aside test is elected, then gross rent is limited to 30 percent of the 40 percent; i.e., 12 percent of the area median gross income.

[A] Gross Rent

The term "gross rent" is defined as a periodic charge for the right to occupy or use someone else's property. It includes an allowance, specified in the Treasury Regulations, for the cost of any utilities that are paid by the tenant, except for the cost of a telephone. n227 Gross rent also includes the cost imposed on the tenant for any non-optional services (i.e., services other than housing services) provided by the landlord to the tenant. A service is optional only if payment for the service is not required as a condition of occupancy. n228 Gross rent does not include rental assistance payments made on behalf of a tenant, such as through Section 8 of the *United States Housing Act of 1937* or any comparable federal or state low-income housing assistance program. n229 In addition, an applicant may not be denied admission to a LIHC project because the applicant holds a voucher or certificate of eligibility under the Section 8 program. n230

[B] Area Median Gross Income

The LIHC rules generally use a definition of Area Median Gross Income that is based upon the HUD methodology used for Section 8 of the *United States Housing Act of 1937*. n231 Under Section 8, median family income estimates are based on decennial census data, updated by Bureau of the Census P-60 income data and Department of Commerce County Business Patterns employment and earnings data. These definitions of income do not make reference to an individual's income for purposes of the federal income tax.

The measurement of area median gross income applied for residential rental property located in certain rural areas is modified in the case of projects subject to the low-income housing credit volume limits. In the case of properties located in rural areas (as defined in section 520 of the Housing Act of 1949), the income targeting rules of the low-income housing credit are applied by reference to the greater of the otherwise applicable area median gross income standard, or the national nonmetropolitan median gross income. This new income targeting rule applies to all such buildings if the building receives a low-income housing credit allocation under the otherwise applicable low-income housing credit

volume limit. It does not apply in the case of buildings which do not require a low-income housing credit allocation because they are substantially bond-financed. n231.1 The area median gross income rules are not changed for buildings in metropolitan areas.

[4] Qualified Basis

The credit amount that an owner may claim with respect to a building is based on the percentage of the building that is occupied by low-income tenants. Specifically, the available credit equals the product of the building's qualified basis multiplied by the "applicable [credit] percentage." n232 The qualified basis of any qualified low-income building for any taxable year is equal to the "applicable fraction (i.e., the low-income occupancy percentage) of the eligible basis of the building. n233

[a] Low-Income Occupancy Percentage

The low-income occupancy percentage is determined as of the close of the taxable year and is the smaller of the unit fraction or the floor space fraction. n234 The term "unit fraction" refers to the ratio of low-income units in the building to the total number of residential units in such building. n235 The number of residential units in the building includes units that are not occupied. n236

The term "floor space fraction" refers to the ratio of total floor space of the low-income units in such building to the total floor space of all residential rental units in such building. n237 The floor space of the residential rental units includes that of units that are not currently occupied. n238

A low-income unit is defined as a unit that is both rent-restricted and occupied by a tenant who satisfies the income limitations under the elected minimum set-aside test. n238.1 In addition to these two general requirements, there are several other specific requirements. A low-income unit: n238.2

- (1) must not be used for transient occupancy (but under certain circumstances may be used to provide transitional housing for the homeless);
- (2) must be suitable for occupancy;
- (3) generally cannot be owner-occupied (or occupied by a person related to the owner) if there are four or fewer units in the project; n239
- (4) must be located in a building (i.e., a trailer park is not eligible);
- (5) must be available to the general public (i.e., occupancy may not be limited to members of a specific social organization or to employees of neither they nor their children are dependents of another individual, or if the full-time students are married and file a joint return a specific employer); n239.1 and
- (6) may not be a manager's unit (but the cost of the Manager's unit is included in eligible basis, and the unit is excluded from both the numerator and the denominator of the "applicable fraction"). n240

In general, student housing does not qualify for the low-income housing credit. There are three exceptions with respect to units occupied by an individual: (1) who is a student and receiving assistance under title IV of the Social Security Act (Temporary Assistance for Needy Families); (2) who is enrolled in a job training program receiving assistance under the Job Training Partnership Act or under other similar Federal, State, or local laws, or (3) who is student who previously foster care assistance (under part B or E of title IV of the Social Security Act). n240.1 A housing unit occupied entirely by full-time students may qualify for the LIHC if the full-time students are single parents and neither they nor their

children are dependents of another individual, or if the full time students are married and file a joint return. n241

In the first year of the credit period, the unit and floor space fractions are calculated on a monthly basis. n242 The calculation begins with the first full month in which the property is placed in service. The occupancy of the unit is determined as of the last day of the month. n243 A credit that may be disallowed in the first year due to this monthly calculation may be claimed in the eleventh year. n244

The Treasury Department is authorized to provide a waiver of penalties for *de minimis* errors in the application of the low-income tenant occupancy requirements. n245 The Treasury Department has adopted procedures for the grant of a waiver of the annual recertification of tenant income for tenants in buildings that are occupied entirely by low-income tenants. n246 Third-party verification of a tenant's or prospective tenant's income from his or her combined assets is not necessary if: (1) the combined assets do not exceed \$5,000; and (2) the tenant or prospective tenant provides a signed, sworn statement to this effect to the building owner. n247

[b] Eligible Basis

In general, "eligible basis" is the acquisition cost of the property, plus the cost of any improvements to the property. n248 Only the adjusted basis of the building may be included in eligible basis. The adjusted basis is determined by taking into account the non-depreciation adjustments described in *IRC Section 1016*. The cost of land is not included in adjusted basis. n248.1 Nonrecourse debt may constitute part of a taxpayer's basis in property as long as the fair market value of the property securing the debt reasonably approximates the principal amount of the debt, n248.2 and the debt is genuine and likely to be paid by the taxpayer. n248.3

Eligible basis also includes facilities for the use of the tenants, other facilities reasonably required by the project, and amenities (e.g., stoves, refrigerators, and air conditioning units) to the extent that the cost of such facilities and amenities in the low-income units are comparable to the cost of the items in any unsubsidized (i.e., "market rate") residential units in the building. n249 The determination of eligible basis is similar to the determination of cost basis used elsewhere in tax law. n250

An existing building can have an eligible basis only if it meets the following requirements:

- It must be acquired by purchase. n250.1
 - Effective for buildings placed in service after July 30, 2008, at least 10 years must have elapsed since the date the building was last placed in service. n250.2 There are two exceptions to this requirement. n250.3 First, the ten-year rule is waived in the case of any Federally-assisted or State-assisted building. n250.4 A Federally-assisted building includes any building which is substantially assisted, financed, or operated under section 8 of the United States Housing Act of 1937, section 221(d)(3), 221(d)(4) or 236 of the National Housing Act, section 515 of the Housing Act of 1949, or any other housing program administered by the Department of Housing and Urban Development or the Rural Housing Service of the Department of Agriculture. n250.5 A State-assisted building is any building which is substantially assisted, financed, or operated under any State law similar in purposes to those of the Federal laws used in the definition of a Federally-assisted building. n250.6 Second, upon application by the taxpayer, the IRS may waive the 10-year requirement if the building is acquired from an insured depository institution in default, or from a receiver or conservator of that institution. n250.7 For buildings placed in service before July 31, 2008, at least 10 years must have elapsed since the later of the date the building was last placed in service or the date of the most recent nonqualified substantial improvement. n250.8 The IRS may waive the 10-year requirement: (1) if the building is acquired from an insured depository institution in default, or from a receiver or conservator of that institution; n250.9 or (2) for federally assisted buildings, if the waiver of the ten-year holding period is necessary to avert an assignment of the

mortgage secured by property in the project to HUD, or the Rural Housing Service (RHS), or (formerly) the FmHA. n250.10 Letter rulings frequently waive the 10-year holding period requirement. n250.11

- The building was not previously placed in service by the taxpayer or a person related to the taxpayer as of the time previously placed in service.

- A credit is allowed for rehabilitation expenditures made to the building. n251

Under the general rule, the eligible basis for the entire compliance period is determined as of the close of the first year of the credit period. n251.1 This rule enables developers to include in eligible basis capitalized costs incurred after the date the building was placed in service, but before the end of the first taxable year of the credit period.

Generally, the amounts included in the adjusted basis account for costs associated with all property that comes under the definition of residential rental property. n251.2 Also included in the adjusted basis are the costs for common areas associated with apartment buildings. n252 The adjusted basis of a building located in a qualified census tract n252.1 can also include depreciable property that is used throughout the taxable year in providing any community service facility used by non-tenants of the low-income building. n252.2 The community service facility, however, may not exceed the sum of: (1) 25 percent of so much of the eligible basis of the qualified low-income housing credit project of which it is a part as does not exceed \$15,000,000; and (2) 10 percent of any excess over \$15,000,000 of the eligible basis of the qualified low-income housing credit project of which it is a part. n252.3 For buildings placed in service before 7/31/08, the facility cannot exceed 10 percent of the eligible basis of the qualified low-income housing credit project of which it is a part. n252.4 Eligible basis can also include community buildings that are used for tenant meetings, various classes, providing social services to project residents, and cooperative child care. n253 Streets, drainage and other utility infrastructure improvements constructed in connection with low-income housing buildings can also be included in eligible basis. n253.1 However, property must be depreciable under *IRC Section 168* if its costs are to be included in the eligible basis. n254 This rule prevents taxpayers from claiming the LIHC with respect to land costs. n254.1

Buildings located in three types of high-cost areas (i.e., qualified census tracts, difficult development areas, and buildings designated by a state housing credit agency as requiring an increase in the credit in order for the building to be financially feasible) are eligible for an enhanced credit. n254.1.1 Under the enhanced credit, the 70-percent and 30-percent credits are increased to a 91-percent and 39-percent credit, respectively. The mechanism for this increase is through an increase from 100 to 130 percent of the otherwise applicable eligible basis of a new building or the rehabilitation expenditures of an existing building. n254.1.2 A further requirement for the enhanced credit for qualified census tracts and difficult development areas is that the portions of each metropolitan statistical area or nonmetropolitan statistical area designated as difficult to develop areas cannot exceed an aggregate area having 20 percent of the population of that statistical area. n254.1.3 This requirement does not apply to buildings eligible for the enhanced credit by virtue of being designated by a State housing credit agency as requiring an increase in the credit in order for the building to be financially feasible. n254.1.4

Private letter rulings sometimes address whether certain costs can be included in eligible basis and, although not citable as precedent, the rulings can provide useful guidance on likely IRS positions with respect to certain costs. For example, the IRS has ruled that for a land preparation cost to be includable in eligible basis, the cost must be for depreciable property. The cost of land preparation is depreciable property only if the preparation is so closely associated with a particular depreciable asset that the preparation would be retired, abandoned, or replaced contemporaneously with that depreciable asset. Whether this would occur in a given case is a question of fact. n254.2

The IRS has ruled that costs associated with the issuance of tax-exempt bonds are generally not includable in a project's eligible basis because they do not qualify as either depreciable property that is residential rental property under *IRC Section 103* or as depreciable property used in a common area or provided as a comparable amenity to all residential units in a building. This is because bond issuance costs are amortizable as an intangible under *IRC Section 167*, but are

not depreciable under *IRC Section 168*. n254.3

The IRS has made several points in its rulings regarding eligible basis generally. First, it has made clear that it is not bound by any State Agency determination that a cost is includable in eligible basis when determining the financial feasibility of the project under *IRC Section 42(m)(2)(A)*. Thus, a state agency's verification and acceptance of a cost will not guarantee its inclusion in eligible basis for purposes of the low-income housing credit. n254.4

Reversing its prior position, n254.5 the IRS has ruled that for the purpose of the low-income housing tax credit, impact fees are includable in the eligible basis of a qualified low-income building. n254.6 Impact fees are one-time charges that are imposed by state or local governments against new development or expansion of existing developments to finance specific offsite capital improvements for general public use that are necessitated by the new or expanded development. In general, impact fees are refundable (in full or in part) if the new or expanded development ultimately is not constructed as planned. Impact fees can be imposed on a variety of items, including water capital, wastewater capital, roads, educational facilities, law enforcement, and fire/rescue facilities. The fees are often based on the type and size of the development. Once construction began, the fees are usually not transferable and remained with the land. n254.7 A change in method of accounting for impact fees to conform to *Revenue Ruling 2002-9* does not affect the amount of credit that has been allocated under *IRC Section 42(h)(1)* or allowed for buildings financed with tax-exempt bonds subject to the volume cap. n254.8

The IRS has also ruled regarding third-party costs and fees incurred by the taxpayer in obtaining a construction loan. In one ruling, the items were amortized over the life of the loan. The IRS ruled that the construction loan intangible was not subject to *IRC Section 168* and was therefore not includable in eligible basis. The IRS noted, however, that *IRC Section 263A* required the amortization deductions relating to the construction loan intangible to be capitalized to the produced property during the construction period. The deductions had to be reasonably allocated to all property produced. Therefore IRS ruled that to the extent the deductions were allocable to the adjusted bases of *IRC Section 168* property that qualified as residential rental property under *IRC Section 103* or to *IRC Section 168* property used in a common area or provided as a comparable amenity to all residential units in the building, the amortization deductions were includable in the project's eligible basis. n254.9 In one ruling, the IRS allowed a partnership to use the substitute cost method n254.9.1 to determine its eligible basis for purposes of the low-income housing credit. n254.9.2 Under the substitute cost method, the taxpayer had to include direct and indirect costs that had to be capitalized under *IRC Section 263A* in the project's eligible basis for purposes of determining amount of the low-income housing credit for which the project was eligible. Certain interest costs required to be capitalized under *IRC Section 263A(f)* were among the indirect costs that could be included in eligible basis. With respect to a partnership (such as the taxpayer in the ruling) or other flow-through entities, rules for assigning to any property the amount of capitalized interest had to first be applied at the entity level and then at the beneficiary level. n254.9.3 The ruling detailed the capitalization requirements and other steps the taxpayer had to take in order to use the substitute cost method. n254.9.4

The IRS has also ruled that fees paid to a developer to engaged in partnership organizational and syndication activities on behalf of the taxpayer are not includable in eligible basis. n254.10 Costs incurred to secure tenants for unit vacancies are also not includable in eligible basis because the costs are not related to the building construction, and therefore cannot establish or add to the basis of depreciable property under *IRC Section 168*. n254.11

Costs included in eligible basis must be reasonable in amount. In reviewing a project's application for the LIHC, each housing credit agency is required to consider the reasonableness of the developmental and operation costs of a project as an additional factor in making its determination as to the proper amount of credits to allocate. n255 Administrative errors and omissions that occur in this process, often relating to misidentified buildings and carryover allocations, are frequently corrected by private letter ruling requests. n256

The eligible basis of a building cannot include any costs financed with the proceeds of a federally funded grant. n257 Certain rental assistance payments made to the owner of a building on behalf of low-income tenants are not federal

grants with respect to the building for this purpose. These payments include the following: n258

- rental assistance payments made under Section 8 of the US Housing Act of 1937 (the "Act"); n259
- payments made under a qualifying program of rental assistance administered under Section 9 of the Act; n260
- payments made to a building owner on behalf of or in respect of a tenant under the *Section 8 Assistance for Single-Room Occupancy Dwellings Program* n261 or under the *Shelter Plus Care Program*; n262
- payments made under such other programs or methods of rental assistance as may be designated in the Federal Register or the Internal Revenue Bulletin;
- payments made on behalf or in respect of a tenant under the *Housing Opportunities for Persons With AIDS* (HOPWA) program; n263
- rental assistance payments made to a building owner on behalf or in respect of a tenant under the *Rent Supplement Payment* program; n263.1 and
- rental assistance payments made to a building owner on behalf or in respect of a tenant under the *Rental Assistance Payments* program. n263.2

Certain rental assistance payments under the Indian Housing Block Grant Program are also not treated as grants. n263.3

[c] Rehabilitation Expenditures

For purposes of the LIHC, qualified rehabilitation expenditures to an existing building are treated as a new building n263.4 and are therefore eligible for the 70-percent credit. n263.5 Rehabilitation expenditures generally include amounts chargeable to capital account that are depreciable, but do not include the costs of acquisition. n263.6 To qualify for the credit, the rehabilitation expenditures must equal the greater of an amount that is (1) at least 20 percent of the adjusted basis of the building being rehabbed, as determined at the beginning of the 24-month rehabilitation period; or (2) at least \$6,000 per low-income unit in the building being rehabbed. n263.7 The \$6,000 amount is indexed for inflation after 2009. n263.8 The above minimum expenditures apply for buildings that receive credit allocations after July 30, 2008 and to substantially tax-exempt bond financed buildings (which satisfy the requirements of *IRC Section 42(h)(4)* and therefore do not require a credit allocation) that receive a tax-exempt bond allocation after July 30, 2008. n263.9 For buildings placed in service before July 31, 2008, the rehabilitation expenditures must equal the greater of an amount that is (1) at least 10 percent of the adjusted basis of the building being rehabbed; or (2) at least \$3,000 per low-income unit in the building being rehabbed. n263.10

For purposes of applying the LIHC, the rehabilitation expenditures are treated as placed in service at the close of the 24-month rehabilitation period. n263.11

Planning Guide:

Taxpayers have discretion in selecting the 24-month rehabilitation period for purposes of determining the placed-in-service date for the rehabilitation expenditures. They may request a private ruling that their selected dates will be accepted by the IRS. n263.12

At the election of the taxpayer, a special rule applies allowing the 30-percent credit to both existing buildings and rehabilitation expenditures if the second prong (i.e., at least \$6,000 of rehabilitation expenditures per low-income unit)

of the rehabilitation expenditures test is satisfied. This election is available only in the case where the taxpayer acquired the building and immediately prior to that acquisition the building was owned by or on behalf of a government unit. n263.13

[5] Credit Percentage

The calculation of the credit percentage depends on whether the project involves new or existing buildings, whether any federal subsidies are used, and when the project was placed in service. New buildings are generally allowed a higher credit percentage than existing buildings. n264

The calculation of the applicable percentage is generally designed to produce a credit equal to: (1) 70 percent of the present value of the building's qualified basis in the case of newly constructed or substantially rehabilitated housing that is not federally subsidized (the "70-percent credit"); or (2) 30 percent of the present value of the building's qualified basis in the case of newly constructed or substantially rehabilitated housing that is federally subsidized and existing housing that is substantially rehabilitated (the "30-percent credit"). n265 Where existing housing is substantially rehabilitated, the existing housing is eligible for the 30-percent credit and the qualified rehabilitation expenses (if not federally subsidized) are eligible for the 70-percent credit. n266

The credit percentage for a low-income building is set for the earlier of: (1) the month the building is placed in service; or (2) at the election of the taxpayer, (a) the month the taxpayer and the housing credit agency enter into a binding agreement with respect to the building for a credit allocation, or (b) in the case of a tax-exempt bond-financed project for which no credit allocation is required, the month in which the tax-exempt bonds are issued. n267

Planning Guide:

Taxpayers making the election must ensure that they have a binding credit allocation commitment and that they make a valid credit percentage election in accordance with regulations. n268 The election must be signed and notarized by the fifth day following the end of the month in which the binding agreement was made. n269 An election to use the credit percentage in effect when the binding credit allocation commitment is made should be given careful consideration due to the significant impact of changing interest rates.

The credit percentages used for the 70-percent credit and 30-percent credit are adjusted monthly by the IRS on a discounted after-tax basis (assuming a 28-percent tax rate) based on the average of the Applicable Federal Rates for mid-term and long-term obligations for the month the building is placed in service. The discounting formula assumes that each credit is received on the last day of each year and that the present value is computed on the last day of the first year. In a project consisting of two or more buildings placed in service in different months, a separate credit percentage may apply to each building. n270 An applicable percentage of 9 percent applies, however, for newly constructed non-Federally subsidized buildings placed in service after July 30, 2008 and before December 31, 2013. n270.1 The 9 percent floor applies notwithstanding a prior irrevocable election by the taxpayer to apply to those buildings a lower applicable percentage. n270.1.1

If any portion of the eligible basis of a building is federally subsidized, then the building is ineligible for the 70-percent credit. Effective for buildings placed in service after July 30, 2008, a Federal subsidy includes only obligations the interest on which is exempt from tax under *IRC Section 103*. This restriction on what constitutes a federal subsidy allows additional buildings to become eligible for the 70-percent credit. n270.2 A tax-exempt obligation used to provide construction financing for any building is not treated as a subsidy if it (when issued) identified the building for which the proceeds of the obligation would be used and it is redeemed before that building is placed in service. n270.3

For buildings placed in service before July 31, 2008, federal subsidies include: (1) any obligation the interest of which is tax exempt from tax under *IRC Section 103*; (2) a direct or indirect federal loan if the interest rate is less than the

applicable federal rate; n271 or (3) assistance provided under the HOME Investments Partnership Act or the Native American Housing Assistance and Self Determination Act of 1996 if certain requirements are not met. n272

Planning Guide:

A developer whose project includes only a small amount of funding from tax-exempt obligations may find it profitable to elect to exclude from the eligible basis of the building the proceeds of those obligations. Doing so may allow the entire project to be eligible for the 70-percent credit on the reduced basis. n273

For buildings placed in service before July 31, 2008, a 70-percent credit is allowed for certain "HOME" (HOME Investment Partnership) or Native American Housing Assistance projects. Projects with HOME or Native American Housing assistance will not be treated as federally subsidized if 40 percent or more of the aggregate residential rental units in the project are occupied by individuals whose gross incomes are 50 percent or less of the area's median gross income. HOME or Native American Housing Assistance projects are not eligible to receive the 30 percent bonus that would be available for an LIHC project in a qualified census tract or difficult development area, but they are eligible for the special rule applicable to certain high cost housing areas (i.e., New York City), pursuant to which only 25 percent of the residential units in the building need be occupied by individuals with gross income of 50 percent or less of the area's median gross income. n274

[6] At-Risk Rules

At-risk rules apply in the determination of the available amount of LIHC, but the at-risk rules adopted for the LIHC differ substantially from the at-risk rules that apply to the allowance of losses under *IRC Section 465*. The LIHC at-risk rules generally follow the at-risk rules applicable to the former investment tax credit, which are set forth in *IRC Section 49(a)(1)*, with certain modifications. n275

The LIHC at-risk rules apply to individuals, including beneficiaries of estates and trusts and shareholders of "S" corporations, and to closely held "C" corporations. n276 These rules do not apply to widely-held "C" corporations. n277 A "closely-held corporation" is a corporation which, at any time during the last half of the taxable year, had more than 50 percent of the value of its outstanding common stock owned, directly or indirectly, by or for not more than five individuals. n278

[a] Nonrecourse Financing

The general at-risk rule is that any non-qualified nonrecourse financing will not be included in the credit base, and expenditures attributable to this financing will therefore generally not qualify for the LIHC. n279 Operationally, the credit base of LIHC property that would otherwise be eligible for the credit is reduced by the amount of the nonrecourse financing. n280 The one exception to this reduction rule is for nonrecourse financing that satisfies the definition of "qualified commercial financing." n281

[b] Qualified Commercial Financing

The term "qualified commercial financing" refers to any debt with respect to an LIHC property if: n282

- (1) the property was acquired by the taxpayer from a person who is not a related person;
- (2) either--(a) the creditor is a qualified person, or (b) the loan is from, or guaranteed by, any federal, state or local government or instrumentality of such government; and
- (3) such financing is not convertible debt.

A "qualified person" is generally any person who is actively and regularly engaged in the trade or business of lending money. n283 However, the term does not include:

- (1) a person from whom the property was acquired (or a person related to that person); n284
- (2) a person who receives a fee with respect to the taxpayer's investment in the property (or a person related to that person). n285

[7] Restriction on Use

In addition to the rules previously described, there are other limitations on the LIHC that are more general in nature. Three of these limitations are the passive loss rules, the general business credit limitations and the alternative minimum tax. Each of these restrictions is discussed below.

[a] Passive Loss Rules

The use of passive activity losses and credits is limited. n286 The limitation applies to individuals (including shareholders of "S" corporations), estates, trusts, closely-held "C" corporations and personal service corporations. Passive activity losses and credits are losses and credits from a passive activity. n287 They can generally be used only against income or tax attributable to a passive activity. n288 A rental activity (e.g., a low-income housing project) is specifically defined as a passive activity. n289 Special rules limiting the application of the passive activity loss rules apply to persons who are active participants in the real estate business. n290

An individual who is not eligible for the special rule for persons active in a real estate business can still claim up to \$25,000 of losses (or credit equivalent) from a rental real estate activity. n291 Two general requirements must be satisfied to qualify for this provision. First, in general, the taxpayer must satisfy a different active participation requirement. n292 Second, in general, the taxpayer must have an adjusted gross income (AGI) of less than \$100,000. If the taxpayer's AGI exceeds \$100,000, then the \$25,000 allowance is reduced by fifty cents for every dollar of such excess. n293 Therefore, this allowance (and the credit equivalent) is fully phased out for taxpayers with AGIs of \$150,000 or more. However, the LIHC also receives special treatment for the purposes of this restriction--the phase-out is eliminated for low-income housing tax credits. n294 Investors should note that this special rule applies only to the credit itself and does not apply to any losses that are generated from the activity. (See Chapter 13 for a detailed discussion of passive losses and credits.)

[b] General Business Credit Rules

The LIHC is treated as a general business credit under the Code. n295 The Code provides for two types of tax credits: refundable (such as the earned income credit) and non-refundable. General business credits are non-refundable tax credits. Excess non-refundable tax credits are either carried back one year and forward 20 years, effective for credits arising in tax years beginning after December 31, 1997. n296

Credits arising in earlier years may be carried back three years or carried forward for up to 15 years. n297

General business credits reduce a taxpayer's regular federal income tax liability, but are subject to two overall limitations. n298 The first limitation allows 100 percent of the first \$25,000 of credits, then 75 percent of the credits in excess of \$25,000. n299 The second limitation prevents the credit from reducing the taxpayer's regular tax below the tentative minimum tax. n300

[c] Alternative Minimum Tax

The alternative minimum tax (AMT) is a separate tax calculation from that of the "regular" income tax. The alternative

minimum tax is an add-on tax, that is, an addition to the regular tax. To determine if the taxpayer is subject to the AMT, one must first calculate the tentative minimum tax (TMT), n301 and then determine if the taxpayer is eligible for the small corporation exemption from the AMT. n302

Effective for low-income housing credits attributable to buildings placed in service after December 31, 2007 (including any carryback of those credits), the LIHC may offset alternative minimum tax liability. n303 For prior periods, the LIHC could reduce regular income tax, but could not reduce the AMT. n304

[8] Transfers

For the year in which a low-income housing project is sold to a different owner, credits must be allocated between the transferor and the transferee, with proper adjustments made under *IRC Section 42(j)*. n305

The credits for the periods before and after the sale are allocated to the transferor and transferee based on the number of days each held the property. n306 However, the IRS allows the allocation to be made using a mid-month convention. n307 Therefore, the transferor and transferee can agree to allocate the credits for the month of the disposition based on which owner held the property the longest during that month. The owner who held the property for the majority of days in the month would be deemed to have held the property for the entire month. If the owners have each held the property for an equal number of days during the month of disposition, the transferor is deemed to have held the property for the entire month. n308

[9] Recapture Issues

[a] Decreases in Qualified Basis

Generally, if the amount of an LIHC project's qualified basis decreases, then the building owner's tax is increased by two amounts: (1) a tax credit recapture; n309 and (2) an interest charge. n310 Decreases in qualified basis generally result from a reduction in eligible basis, a decrease in the low-income occupancy percentage, or a transfer of the building. n310.1 A transfer of bare legal title in order to escape local real estate taxes will not result in recapture, however, if the taxpayer retains all benefits and burdens of ownership. n310.2 Building owners should note that if any noncompliance is corrected within a reasonable period of time after learning of noncompliance, there will be no tax credit recapture nor interest charge. n311 The transfer of partnership interests (in partnerships that invest in low-income housing) from a parent to a subsidiary as a contribution to capital does not result in credit recapture solely as a result of the assignment, provided that the assignment does not result in a reduction of qualified basis. n312 The IRS has also allowed transfers of low-income housing partnership interests among members of an affiliated group to avoid recapture. n312.1 Similar transfers resulting from entity restructurings that are no more than a change in the form of conducting a business may also not result in credit recapture. n312.2

The increase in tax does not apply if the reduction in qualified basis occurs by reason of a casualty loss, to the extent that the loss is restored by reconstruction or replacement within a reasonable period established by the Secretary. n312.3 For basis reductions occurring beyond the first year of the credit period that result from federally declared disasters, a restoration period up to 24 months after the end of the calendar year in which the disaster declaration for the area where the building is located is allowed. n312.4 For property damaged by Hurricane Katrina and located in the GO ZONE, the restoration period may be as long as 48 months after the end of calendar year 2005. n312.5

[b] Full Recapture of the LIHC

If, at the close of any tax year in the compliance period, the amount of the qualified basis of any building with respect to the taxpayer is less than the amount of the qualified basis at the close of the preceding tax year, the taxpayer's tax for the tax year must be increased by the credit recapture amount. n313 Thus, full recapture of the LIHC is generally required if the taxpayer disposes of a low-income building or if the building fails to satisfy statutory requirements for the LIHC

during the compliance period. n314

Effective for buildings disposed of after July 30, 2008, there is no recapture solely by reason of a disposition of a building or an interest in it if it is reasonably expected that the building will continue to be operated as a qualified low-income building for the remaining compliance period. n314.1 Taxpayers may also elect to have this rule apply with respect to earlier dispositions if it is reasonably expected that the building will continue to be a qualified low-income building for the remaining compliance period. n314.2 If there is a disposition before the end of the compliance period, and there is a reduction in the qualified basis of the building that results in recapture, however, the otherwise applicable statute of limitations for assessing a deficiency with respect to the recapture is extended until three years after the Secretary of the Treasury is notified of the reduction in qualified basis. n314.3

For buildings disposed of before July 31, 2008 and for which the taxpayer does not elect to have the above rule apply, a taxpayer may defer or avoid recapture by furnishing a satisfactory bond to the Secretary if it is reasonably expected that the building will continue to be operated as a qualified low-income building for the remainder of the building's compliance period. n315 The IRS may approve a surety bond that is provided by a related taxpayer. n315.1 The purpose of the bond is to secure the taxpayer's liability for LIHC recapture with respect to the taxpayer's disposition of an interest in a qualified low-income building during the compliance period. The bond must be provided for the remainder of the 15-year compliance period after the disposition plus an additional 58 months. A taxpayer who furnishes a bond with respect to the disposition of an interest in a qualified low-income building will be treated solely for purposes of applying *IRC Section 42(j)* with respect to the disposition as if the taxpayer had not disposed of the interest. Instead, the taxpayer's recapture (if any) with respect to the disposed-of interest will be determined under the rules of *IRC Section 42(j)* by deeming the taxpayer to continue to own the disposed-of interest and by determining the qualified basis for the deemed interest in accordance with the rules of *IRC § 42(c)*. Therefore, the taxpayer may be able to avoid any recapture. The taxpayer will not, however, be treated as claiming any additional low-income housing credit with respect to the disposed-of interest for any period following the disposition. n316

If the seller posts a bond, the credits for the year of sale are allocated between the parties based on the number of days each party held the low-income building or interest in it. n316.1 The IRS allows the allocation to be made using a mid-month convention. Essentially, the buyer steps into the shoes of the seller. n317

Because of the relative unavailability of surety bonds, the IRS established a collateral program for pledging certain Treasury securities to the IRS as an alternative to providing a surety bond. Under the program, taxpayers may establish a Treasury Direct Account and pledge certain US Treasury securities to the IRS as security in lieu of a surety bond to secure the taxpayer's liability for credit recapture under *IRC Section 42(j)*. Upon furnishing Treasury securities, the taxpayer will be treated, solely for purposes of *IRC Section 42(j)*, as if the taxpayer had not disposed of the interest and the taxpayer will be deemed to continue to own the disposed-of interest under *IRC Section 42(c)*. The taxpayer will not, however, be treated as claiming any additional low-income housing credit for the disposed-of interest for any period following the disposition. If the qualified basis of the taxpayer's deemed interest in a qualified low-income building decreases after a disposition of the taxpayer's interest in the qualified low-income building, the Treasury securities may be forfeited in whole or in part. n318

Another exception may apply with respect to LIHC projects owned by a partnership with 35 or more partners. Unless the partnership elects otherwise, the partnership itself will be treated as the taxpayer for purposes of the recapture rules, so that a transfer by a partner of its interest in the partnership will not result in recapture. n319 Note that a consequence of this provision is that the continuing partners and the transferee partner remain at risk for the recapture avoided by the transferor partner, if, for example, the building itself should go out of compliance with the tax credit rules, resulting in an overall recapture. The IRS has ruled that a transfer at death of limited partnership interests in low-income housing partnerships does not result in a recapture of the low-income housing credit. n320

[c] Recapture Tax and Interest

The taxable disposition or decrease in qualified basis of a LIHC project triggers both the recapture tax and the additional interest charge. n321 The interest rate is the overpayment rate established under *IRC Section 6621*. The recapture tax (and interest charge) can be avoided in certain statutorily-enumerated situations: posting a bond, originally claiming a reduced credit, receiving no tax benefit for the credit, *de minimis* floor space changes, and disposition due to casualty losses. n322 The IRS has also ruled that the transfer of bare legal title does not trigger the recapture tax if the transferor retains burdens and benefits of ownership. n323 The IRS has also ruled that a corporate reorganization with a transfer of a subsidiary's interest in several partnerships (and underlying low-income housing property) is not a disposition that results in a recapture of low-income housing credits. n324

[d] Recapture Period

The compliance period for a low-income housing project is 15 years. This compliance period begins at the same time as the credit period. If any of the recapture events described in this subsection occur during the 15-year compliance period, tax credit recapture is generally required. The amount of the recapture is based upon the prior LIHC claimed and the time that has elapsed since the credit was first claimed. n325

For years one to 11, one-third of the previously-claimed LIHC is recaptured. During the twelfth year, 4/15 of the credit is subject to recapture. During years 13, 14 and 15, 3/15, 2/15, and 1/15, respectively, is subject to recapture. The following chart summarizes these rules: n326

Years of Recapture Event	Recapture Fraction
Years 1 through 11	1/3
Year 12	4/15
Year 13	3/15
Year 14	2/15
Year 15	1/15

Example (1):

Assume that the project generates \$25,000 of LIHC annually. If the apartment building is disposed of on January 1 of year 6, then the recapture would be equal to 1/3 of the \$25,000 of tax credits that were claimed for each of the five years the building was held. The total recapture of accelerated credit would equal \$41,666 ($1/3 \times \$25,000 \times 5$ years).

Example (2):

If the building was disposed of on January 1 of year 13, then recapture would equal 3/15 of \$25,000 each year for the ten years the LIHC was claimed. The total recapture of accelerated credit would equal \$50,000 ($3/15 \times \$25,000 \times 10$ years). n327

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.05

§ 5.05 Disabled Access Credit

An eligible small business is entitled to a credit with respect to expenditures to provide access to disabled individuals. The amount of the credit is 50 percent of so much of the eligible access expenditures for the taxable year that are in excess of \$250 but not over \$10,250. Thus, the maximum credit for any year is \$5,000. n328 With respect to a partnership, the limit is applied with respect to the partnership and each partner. With respect to an S corporation, the limit is applied with respect to the S corporation and its shareholders. n329

An eligible small business is any person (including an individual, partnership, association, company, or corporation) n330 which either (1) has gross receipts of not more than \$1 million for the preceding taxable year, or (2) employed not more than 30 full-time employees during the preceding taxable year. For this purpose, an employee who is employed at least 30 hours per week for 20 or more calendar weeks in the tax year is considered a full-time employee. n331

Only a taxpayer who has an obligation to comply with ADA requirements may make an eligible expenditure. n331.1 Expenditures eligible for the credit include only those that enable the business to comply with applicable requirements under the Americans With Disabilities Act of 1990 as in effect on November 5, 1990. n332 These include reasonable expenditures to remove architectural, communication, physical, or transportation barriers that prevent a business from being accessible to or usable by individuals with disabilities. A variety of other expenditures not connected with real estate also qualify. n333 No credit is allowed for any amount paid in connection with a facility that is first placed in service after November 5, 1990. n334 No deduction or other credit is allowed for any amount for which the disabled access credit is taken, nor may the adjusted basis of any property be increased by the amount of that credit taken. n335

COMMENT:

A taxpayer may also elect to expense, rather than capitalize, certain expenditures to remove architectural and transportation barriers. n336 See Chapter 4 for a detailed discussion.

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.06

§ 5.06 Nonbusiness Energy Property Credit

[1] In General

Individuals are entitled to a credit for various expenditures that improve the energy efficiency of their homes. n337 Subject to the statutory limits, n338 a credit is allowed for 30 percent of the sum of (1) the amount paid or incurred by the taxpayer during the year for "qualified energy efficiency improvements" n339 and (2) the amount of residential energy property expenditures paid or incurred by the taxpayer during the year. n340

For property placed in service before 2008, the credit was the sum of (1) 10 percent of the amount paid or incurred for qualified energy efficiency improvements that were installed during the year and (2) the entire amount of the residential energy property expenditures paid or incurred during the year. n341 Separate dollar limits applied for these amounts. n341.1

[2] "Qualified Energy Efficiency Improvement" Defined

To qualify as a "qualified energy efficiency improvement," and thereby be eligible for the 10-percent portion of the credit, n342 an improvement must be an energy efficient "building envelope component" that meets specified energy conservation criteria, and also the following requirements: n343

- the component must be installed in or on a dwelling unit n344 located in the United States and owned and used by the taxpayer as the taxpayer's principal residence; n345 This limitation restricts the credit to existing homes; n345.1
- the original use of the component must commence with the taxpayer; and
- the component must be reasonably expected to remain in use for at least 5 years. A component will be treated as reasonably expected to remain in use for at least five years if the manufacturer offers, at no extra charge, at least a two-year warranty providing for repair or replacement of the component in the event of a defect in materials or workmanship. If the manufacturer does not offer such a warranty, all relevant facts and circumstances are taken into account in determining whether the component reasonably can be expected to remain in use for at least five years. n345.2

A "building envelope component" is any of the following: n346

- any insulation material or system that is specifically and primarily designed to reduce the heat loss or gain of a dwelling unit when installed in or on it;
- exterior windows (including skylights);
- exterior doors; and
- any metal roof installed on a dwelling unit, but only the roof has appropriate pigmented coatings that are specifically and primarily designed to reduce the heat gain of the dwelling unit. For property placed in service after October 3, 2008, asphalt roofs are also included, and cooling granules, as well as pigmented coatings, may be used to reduce the heat gain. n346.1

The IRS has provided guidance for manufacturers to follow to certify property as an eligible building envelope component. n346.2

[3] "Residential Energy Property Expenditures" Defined

Residential energy property expenditures are those made by the taxpayer for "qualified energy property" that is installed on or in connection with a dwelling unit located in the United States that is owned and used by the taxpayer as the taxpayer's principal residence n347 (within the meaning of *IRC Section 121*), and originally placed in service by the taxpayer. The term includes expenditures for labor costs that are properly allocable to the onsite preparation, assembly, or original installation of the property. n348 "Qualified energy property" includes the following property, provided that it meets performance and quality standards, and certification requirements to be prescribed in regulations: n349

- "energy-efficient building property," which includes a variety of water heaters, heat pumps, and air conditioners that meet specified energy efficiency standards, n350 and also certain stoves that burn biomass fuel; n350.1
- a qualified natural gas, propane, or oil furnace or hot water boiler; n351 or
- an advanced main air circulating fan. n352

Pending the issuance of regulations, the IRS has issued a notice setting forth interim guidance. The notice provides procedures that manufacturers may follow to certify property as either an "eligible building component" or "qualified energy property." The notice also provides guidance regarding the conditions under which taxpayers seeking to claim the nonbusiness energy property credit may rely on a manufacturer's certification. n352.1

[4] Limits on the Credit

The aggregate amount of credits allowed for taxable years beginning in 2009 and 2010 for any taxpayer is \$1,500. n352.2

For the pre-2008 credit, there are both per-taxpayer and per-item limits on the credit. The per-taxpayer credit is a lifetime limitation. The lifetime credit limit for any taxpayer is \$500. The credit allowed to any taxpayer in any year cannot exceed the excess of \$500 over the aggregate nonbusiness energy property credits allowed for all prior years. n353 This limit means that a taxpayer who claims a \$500 credit in 2006 for improvements to a home cannot again claim the credit for any future year, even if the taxpayer moves and makes otherwise qualifying improvements to a different home. n354

There are also limits to the amount of pre-2008 credit available for particular items. The maximum credit available for exterior windows (including skylights) is \$200. n355 This is also a "lifetime" limit. The maximum credit that can be claimed in any tax year for exterior windows (including skylights) is the excess of \$200 over the amount of credits claimed for those items for all prior years. n356

There is also a per-item limit for other residential energy expenditures, as follows: n357

- \$50 for any advanced main air circulating fan; n358
- \$150 for any qualified natural gas, propane, or oil furnace or hot water boiler; n359 and
- \$300 for any item of "energy-efficient building property," which includes a variety of water heaters, heat pumps, and air conditioners that meet specified energy efficiency standards. n360

[5] Special Rules in Applying Credit

The following special rules apply with respect to the credit: n361

- In determining the amount of available credit, all joint tenants of a single dwelling unit are treated as one taxpayer. The credit may have to be prorated among them if more than one individual makes qualifying expenditures. n362
- Individual tenant-stockholders in cooperative housing corporations n363 and certain condominium owners n364 are entitled to their proportionate share of the credit for any qualifying expenditures by the corporation or condominium association.
- If less than 80 percent of the use of an item that qualifies for the credit is for nonbusiness purposes, only the amount allocated for nonbusiness purposes is eligible for the credit. This restriction prevents taking a credit for improvements to a home office. n365
- An expenditure is generally treated as made only when the original installation of the item for which the expenditure is made is installed. Expenditures that relate to building construction or reconstruction are treated as made when the original use of the constructed or reconstructed structure begins. n366-367
- An expenditure made with respect to two or more dwelling units can qualify for the credit, n368 but the amount of the credit must be computed separately with respect to the amount of the expenditure made for each dwelling unit. n369
- If a credit is allowed for any expenditure with respect to a property, the increase in the basis of the property that would otherwise result from the expenditure must be reduced by the amount of the credit allowed. n370
- For years beginning before January 1, 2009, n370.1 improvements made with subsidized energy financing were not eligible for the credit. n370.2

FOOTNOTES:

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.07

§ 5.07 Residential Energy Efficient Property Credit

[1] In General

Individuals are entitled to a credit for certain expenditures for residential energy efficient property. n371 Subject to the annual statutory limits, n372 a credit is allowed equal to the sum of the following: n373

- 30 percent of the qualified solar electric property expenditures; n374--prior to December 20, 2006, only qualified photovoltaic property expenditures qualified for this credit; n374.1
- 30 percent of the qualified certified solar water heating property expenditures; n375
- 30 percent of the qualified fuel cell property expenditures; n376
- 30 percent of the qualified small wind energy property expenditures; n376.1 and
- 30 percent of the qualified geothermal heat pump property expenditures. n376.2

The credit is allowed only for qualifying property to be used in a dwelling unit in the U.S. that is used as a residence by the taxpayer. n377 For qualified fuel cell property only, the residence must also be the taxpayer's principal residence. n378

The statute clarifies that expenditures for the following qualify for the credit: n379

- labor costs that are properly allocable to the onsite preparation, assembly, or original installation of qualifying property; and
- costs of piping or wiring to interconnect qualifying property to the dwelling unit.

A solar panel or other property installed as a roof (or portion of a roof) is not ineligible for the credit simply because it may constitute a structural component of the structure on which it is installed. n380 There is, however, a storage medium restriction. Expenditures that are properly allocable to a swimming pool, hot tub, or any other energy storage

medium which has a function other than storage are not eligible for the credit. n381

NOTE:

The IRS by notice has set forth procedures that manufacturers may follow to certify that property satisfies certain statutory conditions under *IRC Section 25D*, as well as guidance regarding the conditions under which taxpayers seeking to claim the credit may rely on a manufacturer's certification. n381.1

[2] Limits to the Credit

For tax years beginning after December 31, 2008, dollar limitations on the credit (apart from those based on the amount of tax) n381.2 exist only for qualified fuel cell property expenditures. The limit for these expenditures for any taxable year cannot exceed \$500 for each half kilowatt of capacity of qualified property to which the expenditures relate. There is no dollar limit for the other types of expenditures. n381.3

For earlier years, annual dollar caps apply for the various expenditures, as follows: n382

- \$2,000 for solar electric property, for taxable years beginning before January 1, 2009. For later years, this limitation is repealed. n382.1 Prior to December 20, 2006, this \$2,000 limit applied to qualified photovoltaic property expenditures; n382.2
- \$2,000 for solar water heating property;
- \$500 for each 0.5 kilowatt of capacity of qualified fuel cell property;
- \$500 with respect to each half kilowatt of capacity, not to exceed \$4,000, for qualified small wind energy property; n382.3 and
- \$2,000 for qualified geothermal heat pump property. n382.4

[3] Carryover of Credit

The credit is allowed against both regular tax liability and the AMT. n382.5 For years in which all personal credits are allowed against regular tax and the AMT, n382.6 if the credit allowable exceeds the statutory limitation based on tax liability for the year, n383 reduced by the sum of the other credits allowed under Subpart A of the Code, n384 the excess is carried to the next taxable year and added to the residential energy efficient property credit allowable for that year. n385 For other years, if the credit allowable exceeds the statutory limitation n385.1 for that taxable year, the excess is carried to the succeeding taxable year and added to the residential energy efficient property credit allowable for that year. n385.2

[4] Special Rules in Applying Credit

The following special rules apply with respect to the credit:

- In determining the amount of available credit, all joint occupants of a single dwelling unit are treated as one taxpayer. The credit may have to be prorated among them if more than one individual makes qualifying expenditures. n386
- Individual tenant-stockholders in cooperative housing corporations n387 and certain condominium owners n388 are entitled to their proportionate share of the credit for any qualifying expenditures by the corporation or condominium association.

- If less than 80 percent of the use of an item that qualifies for the credit is for nonbusiness purposes, only the amount allocated for nonbusiness purposes is eligible for the credit. This restriction would prevent taking a credit for an improvement that benefits only a home office. n389
- An expenditure is generally treated as made only when the original installation of the item for which the expenditure is made is installed. Expenditures that relate to building construction or reconstruction are treated as made when the original use of the constructed or reconstructed structure begins. n390
- For tax years beginning before 2009, improvements made with subsidized energy financing were not eligible for the credit. n391
- If a credit is allowed for any expenditure with respect to a property, the increase in the basis of the property that would otherwise result from the expenditure must be reduced by the amount of the credit allowed. n392

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.08

§ 5.08 New Energy Efficient Home Credit

[1] In General

As part of the general business credit, n393 an eligible contractor may take the new energy efficient home credit. n394 The amount of the credit for a tax year is the applicable amount for each qualified new energy efficient home that is: n395

- Constructed by that eligible contractor, and
- Acquired by a person from that eligible contractor for use as a residence during the tax year.

For purposes of the credit, construction includes substantial reconstruction and rehabilitation. n396 The "applicable amount" depends on the energy saving requirements that the dwelling unit meets. The applicable amount is \$2,000 for dwellings (or certain manufactured homes) that are certified (1) to have annual heating and cooling energy consumption at least 50 percent below that of a comparable dwelling unit, and (2) to have building envelope component improvements account for at least 1/5 of that 50 percent. n397 The applicable amount is \$1,000 for certain manufactured homes that are certified (1) to have annual heating and cooling energy consumption at least 30 percent below that of a comparable dwelling unit, and (2) to have building envelope component improvements account for at least 1/3 of that 30 percent. n398 The IRS has set forth the manner in which an eligible contractor may obtain a certification that a dwelling unit is an energy efficient home that satisfies conditions for the credit. The IRS has also provided a list of software programs that may be used in calculating energy consumption for purposes of obtaining certification. n399 A separate notice provides the certification process for manufactured homes. n399.1

Any expenditure taken into account for purposes of the rehabilitation credit n400 or the energy credit n401 cannot be claimed for purposes of the new energy efficient home credit. n402 The new energy efficient home credit is one of the credits eligible for the deduction under *IRC Section 196* for unused business credits. n403

If the new energy efficient home credit is allowed for any expenditure with respect to a property, the increase in the basis of the property that would otherwise result from the expenditure must be reduced by the amount of the credit allowed. n404

[2] "Eligible Contractor" Defined

For purposes of the credit, an eligible contractor is the person who constructed the qualified new energy efficient home or the person who produced the manufactured home that qualifies as one. n405 Curiously, it is the term "qualified new energy efficient home" in the definition of "eligible contractor" that imposes significant limitations on the use of the credit. A qualified new energy efficient home must meet the following requirements: n407

- It must be located in the United States;
- Its construction must be substantially completed after August 8, 2005; and
- It must meet specified energy saving requirements.

The specified energy saving requirements are either of the standards discussed in connection with the applicable amount of the credit in [1], above. Thus, the home must either: n407.1

- Have annual heating and cooling energy consumption at least 50 percent below that of a comparable dwelling unit, and have building envelope component improvements account for at least 1/5 of that 50 percent; n408 or
- For certain manufactured homes, have annual heating and cooling energy consumption at least 30 percent below that of a comparable dwelling unit, and have building envelope component improvements account for at least 1/3 of that 30 percent. n409

CHAPTER 5 Depreciation and Credits on Real Estate *

1-5 Federal Taxes Affecting Real Estate § 5.09

§ 5.09 First-Time Homebuyer Credit

[1] Allowance of Credit

A first-time homebuyer may claim a refundable tax credit equal to the lesser of a specified dollar limit n410 or 10 percent of the purchase price of a principal residence located in the United States. n411 For purposes of the credit, the "purchase price" is the adjusted basis of the residence on the date of purchase. n412 The term "principal residence" has the same meaning as under *IRC Section 121*, n413 and may include a house, condominium, cooperative apartment, houseboat, house trailer, mobile home. n414 If a taxpayer purchases property and uses only part of the property as his/her principal residence, and uses a separate part (such as the second unit in a duplex) to produce rental income, the credit is available only with respect to the portion of the purchase price that is allocable to the part the taxpayer uses as a principal residence. n415

For purchases after November 6, 2009, no credit is allowed if the purchase price of the residence exceeds \$800,000. n416

The credit is available for homes purchased on or after April 9, 2008 and before May 1, 2010. n417 Long-time residents of the same principal residence are also eligible for the credit, effective for qualifying new residences purchased after November 6, 2009 and before May 1, 2010. n418

A taxpayer who enters into a binding contract before May 1, 2010 to close on the purchase of a principal residence before July 1, 2010, and who purchases the residence before October 1, 2010 may claim the credit if the purchase is completed by October 1, 2010. n419 The above May 1, 2010 date is extended for one year for individuals on qualified official extended duty outside the United States and their spouses. The July 1, 2010 and October 1, 2010 dates are extended to July 1, 2011 for those individuals. n419.1 To qualify for these extended dates, the qualifying service outside the U.S. must be for at least 90 days during the period beginning after December 31, 2008 and ending before May 1, 2010. n420

The credit generally is allowed for the tax year in which the taxpayer purchases the residence. n421 For purchases made after 2008, however, a taxpayer may elect to treat the purchase as occurring on December 31 of the prior year, and thereby claim the credit in the prior year. n422 It should be noted that taxpayers who purchase a home in 2009, but claim the credit on a 2008 return, may still claim an \$8,000 credit on the 2008 return. Carrying the credit back to 2008

does not re-instate the lower 2008 credit limit of \$7,500. n423 A taxpayer who elects the application of *Internal Revenue Code Section 36(g)*, is entitled to interest on the refundable credit, in accordance with *IRC Section 6611*. n423.1

PLANNING GUIDE:

Taxpayers who would qualify for a higher credit in the later year should of course not elect to claim the credit in the prior year. This could occur when a taxpayer has reduced income in the later year that removes them from the credit-phase-out range. n424

The credit is claimed by filing the proper version of IRS Form 5405, *First-Time Homebuyer Credit and Repayment of the Credit*. The 2008 Form 5405 must be used for homes purchased before November 7, 2009, for which an election is made to claim the credit for 2008. The December 2009 revision of Form 5405 must be used for all homes purchased after November 6, 2009 (whether the credit is claimed for 2008 or for 2009) and for all claims on 2009 returns for homes purchased any time in 2009. It must also be used for homes purchased in 2010.

NOTE:

Taxpayers who claim the credit on their 2009 return will not be able to file electronically; they will need to file a paper return. n425

[2] Dollar Limitations to the Credit

[a] In General

The maximum dollar amount of the credit depends on the date of purchase. For homes purchased before January 1, 2009, the maximum credit is \$7,500 (\$3,750 for a married individual filing separately). n426 The maximum credit for homes purchased after December 31, 2008, is \$8,000 (\$4,000 for a married individual filing separately). n427

[b] Dollar Limit for Long-Time Residents of Same Principal Residence

The maximum dollar amount of the credit for long-time residents of the same principal residence is \$6,500 (\$3,250 for a married individual filing separately). n428

[c] Phase-Out of Credit Based on Modified Adjusted Gross Income

The credit phases out for individual taxpayers with modified adjusted gross income in excess of stated amounts. For residences purchased after November 6, 2009, the credit phases out at modified adjusted gross income between \$125,000 and \$145,000 (\$225,000-\$245,000 for joint filers) for the year of purchase. Taxpayers with higher income do not qualify for the credit. n429 For qualified purchases before November 7, 2009, the credit phases out at modified adjusted gross income between \$75,000 and \$95,000 (\$150,000-\$170,000 for joint filers) for the year of purchase. n430 For qualified purchases after November 6, 2009, the credit is phased out using the following formula: n431

$$\begin{array}{rcl} \text{Maximum Allowable} & \times & \text{MAGI in excess of } \$125,000 \text{ (}\$225,000 \text{ for married filing jointly)} \\ \text{Credit} & & \\ & & \$20,000 \end{array}$$

Modified adjusted gross income is AGI n432 increased by any amount excluded from gross income under *IRC Sections 911, 931, or 933*. n433

[3] Allocation of Credit Among Unmarried Taxpayers

If two or more unmarried individuals purchase a principal residence, the amount of any allowable credit is allocated

among them, and the total credits allowed cannot exceed the otherwise applicable dollar maximum. n434 The allocation may be done using any reasonable method. A "reasonable method" is one that does not allocate any portion of the credit to a taxpayer not eligible to claim that portion. A reasonable method includes allocating the credit between taxpayers who are eligible to claim the credit based on (1) the taxpayers' contributions towards the purchase price of a residence as tenants in common or joint tenants, or (2) the taxpayers' ownership interests in a residence as tenants in common. n435

Example:

A contributes \$45,000 and B contributes \$15,000 toward the \$60,000 purchase price of a residence. Each owns a one-half interest in the residence as tenants in common. A and B are not married to each other, and both are otherwise eligible to claim the credit. The allowable credit is limited to 10 percent of the purchase price, or \$6,000. A and B may allocate the allowable \$6,000 credit three-fourths to A and one-fourth to B based on their contributions toward the purchase price of the residence, one-half to each based on their ownership interests in the residence, or using any other reasonable method (for example, allocating the entire credit to A or B because both A and B are eligible to claim the entire allowable credit). n436

[4] First-Time Homebuyer Defined

[a] In General

In general, only first-time homebuyers are eligible for the credit. A "first-time homebuyer" is an individual who had no ownership interest in a principal residence in the United States during the 3-year period prior to the purchase of the home to which the credit applies. If the taxpayer is married, the taxpayer's spouse must also meet this requirement. n437 A person may qualify as a first-time homebuyer, even if another person who is not eligible for the credit co-signs the mortgage loan. n438

[b] Long-Time Resident of Same Principal Residence

A long-time resident of the same principal residence (and if married, that individual's spouse) is eligible for a credit of up to \$6,500 (\$3,250 if married filing separate returns). n439 To qualify, the individual must have owned and used the same residence as his or her principal residence for any 5-consecutive-year period during the 8-year period ending on the date of the purchase of a subsequent principal residence. If this requirement is met, the individual is treated as a first-time homebuyer with respect to the purchase of the subsequent residence, and may therefore qualify for the credit if other statutory requirements are satisfied. n440

[5] Purchase Requirements

To qualify for the credit, a taxpayer must purchase a principal residence. n441 The term "principal residence" has the same meaning as under *IRC Section 121*, n442 and may include a house, condominium, cooperative apartment, houseboat, house trailer, mobile home. n443-444 A "purchase" generally includes any acquisition, including construction by the taxpayer. n445 A residence constructed by the taxpayer is treated as purchased on the date the taxpayer first occupies it. n446

Several purchase restrictions apply, however. The following acquisitions do not qualify for the credit:

- An acquisition from a person related to the person acquiring the property, and for purchases after November 6, 2009, an acquisition by a married individual from a person related to that individual's spouse. n447 Whether a person is related is determined under rules in *IRC Sections 267* and *707(b)*, except that an individual's family includes only that individual's spouse, ancestors, and lineal descendants. n448 In response to a request regarding a taxpayer who purchased a home from his father's estate, the IRS noted that the executor of an estate and a beneficiary of the estate are related persons.

n448.1 If the taxpayer were a beneficiary of the estate, he would therefore be eligible for the credit only if the sale satisfied a pecuniary bequest. n448.2

- An acquisition if the basis of the residence to the person acquiring it is determined in whole or part by reference to the adjusted basis of the residence in the hands of the person from whom it is acquired, as in the case of a gift. n449

- An acquisition from a decedent in which the basis of the residence is determined under *IRC Section 1014*. n450

[6] Restrictions Causing Disallowance of Credit

There are several circumstances that will cause the credit to be disallowed. The triggers that cause disallowance of the credit vary, depending on the date of purchase. For residences purchased after November 6, 2009, n451 the credit is not allowed in any of the following situations: n452

Several purchase restrictions apply, however. The following acquisitions do not qualify for the credit:

- If the purchase price of the residence is more than \$800,000; n453
- If the purchaser is a dependent of another taxpayer in the year of purchase; n454
- If the taxpayer is not at least 18 years old on the date of purchase. A married taxpayer is treated as being at least 18 if the taxpayer or the taxpayer's spouse is at least 18. n455
- If the taxpayer is a nonresident alien; n456 or
- If the taxpayer disposes of the residence (or it ceases to be a principal residence of the taxpayer and, if married, the taxpayer's spouse) before the close of the taxable year for which the credit otherwise would be allowable. n457 This can occur if a taxpayer converts the home to a business or rental property or if the lender forecloses on the home.

The credit is also disallowed if a taxpayer fails to attach to the return in which the credit is claimed a properly executed copy of the settlement statement used to complete the purchase. n458

NOTE:

An entry on a return claiming the first-time homebuyer's credit is treated as a mathematical or clerical error if any of the following occurs: n459

- The Secretary obtains information from the person issuing the TIN of the taxpayer that indicates that the taxpayer is not at least 18 years of age as of the date of purchase; n460
- Information provided to the Secretary by the taxpayer on an income tax return for at least one of the 2 preceding taxable years is inconsistent with eligibility for the first-time homebuyer's credit; or
- The taxpayer fails to attach to the return a properly executed copy of the settlement statement used to complete the purchase. n461

This characterization of the above entries as a mathematical or clerical error allows the IRS to issue an assessment and

collect the amount due without having to resort to statutory notice of deficiency procedures. In addition, taxpayers cannot petition the Tax Court to contest the amount claimed due. n462

For residences purchased after 2008 n463 and before November 7, 2009, n464 the credit is not allowed in the following situations: n465

- If the taxpayer is a nonresident alien; or
- If the taxpayer disposes of the residence (or it ceases to be a principal residence of the taxpayer and, if married, the taxpayer's spouse) before the close of the taxable year for which the credit otherwise would be allowable.

For residences purchased before 2009, n466 the credit is not allowed in the following situations: n467

- If the D.C. homebuyer credit n468 is allowable to the taxpayer or the taxpayer's spouse for the taxable year the residence is purchased or a prior taxable year;
- If the residence is financed by the proceeds of a qualified mortgage issue the interest on which is tax-exempt under *IRC Section 103*;
- If the taxpayer is a nonresident alien; or
- If the taxpayer disposes of the residence (or it ceases to be a principal residence of the taxpayer and, if married, the taxpayer's spouse) before the close of the taxable year for which the credit otherwise would be allowable.

[7] Recapture of Credit

[a] In General

In general, there is no recapture of the first-time homebuyer credit for purchases after 2008. n469 For qualifying purchases in 2008, the credit is recaptured ratably over fifteen years with no interest charge beginning in the second taxable year after the taxable year in which the home is purchased. For example, if the taxpayer purchases a home in 2008, the credit is allowed on the 2008 tax return, and recapture commences with the 2010 tax return. n470 The recapture occurs by increasing the amount of income tax due in each year of the 15-year recapture period by 6-2/3 percent of the credit that was allowed. Thus, if the maximum \$7,500 credit is claimed, an additional \$500 income tax will be owed for each year of the recapture period. n471

If the taxpayer sells the home (or the home ceases to be used as the principal residence of the taxpayer or the taxpayer's spouse) prior to complete recapture of the credit, any remaining credit recapture amount is due on the tax return for the year in which the home is sold (or ceases to be used as the taxpayer's principal residence). n472 However, in the case of a sale to an unrelated party, the acceleration of the recapture in the year of sale is limited to the amount of gain from the sale. For this purpose only, gain is determined by reducing the basis of the residence by the amount of the credit to the extent not previously recaptured. n473

NOTE:

An omission of any increase in the tax due as the result of recapture of the first-time homebuyer's credit is treated as a mathematical or clerical error. n474 This characterization allows the IRS to issue an assessment and collect the amount due without having to resort to statutory notice of deficiency procedures. In addition, taxpayers cannot petition the Tax Court to contest the amount claimed due. n475

There are several exceptions with respect to recapture of the credit: n476

- No amount is recaptured after the death of a taxpayer, either through regular recapture or acceleration of recapture. n477
- In the case of an involuntary conversion of the home, recapture is not accelerated if the taxpayer acquires a new principal residence within a two-year period beginning on the date of disposition of the home or the taxpayer's ceasing to use the home as a principal residence. Acceleration of recapture during the recapture period can occur with the new principal residence in the same manner as with the converted residence. n478
- In the case of a transfer of the residence to a spouse or to a former spouse incident to divorce, the transfer itself does not cause acceleration of recapture, and the transferee spouse (and not the transferor spouse) will be responsible for any future recapture. n479

[b] Waiver of Recapture for Purchases After 2008

Recapture of the credit is generally waived for qualifying home purchases after December 31, 2008. This waiver of recapture applies without regard to whether the taxpayer elects to treat the purchase in 2009 as occurring on December 31, 2008. n480 If a taxpayer disposes of the residence, or if the residence otherwise ceases to be the principal residence of the taxpayer within 36 months from the date of purchase, however, the waiver is retroactively nullified, and the credit must be recaptured. In that case, the taxpayer must repay the credit by including the amount of the credit as additional tax on the tax return for the year in which the repayment event occurs. n481 The credit recapture amount is due with the tax return for the year in which the residence is sold or ceases to be used as the taxpayer's principal residence. n482 If the residence is sold to an unrelated party, the amount of the credit recapture is limited to the amount of gain from the sale. For this purpose only, gain is determined by reducing the basis of the residence by the amount of the credit to the extent not previously recaptured. n483

[c] Waiver of Recapture for Individuals on Qualified Official Extended Duty

Accelerated recapture of the first-time homebuyer credit n484 is waived in the case of an early disposition or termination of use of the purchased home as a principal residence, if either of those events occurs in connection with Government orders received by the taxpayer or the taxpayer's spouse for qualified official extended duty service. n485 Furthermore, if the residence was acquired before January 1, 2009, the ordinary 6-2/3% recapture of the credit n486 is waived both in the taxable year in which the disposition (or cessation) occurs and for all subsequent taxable years. n487

For these waiver purposes, "qualified official extended duty service" means service on qualified official extended duty as any of the following: n488

- A member of the uniformed services;
- A member of the Foreign Service of the United States; or
- An employee of the intelligence community.

Qualified official extended duty means any extended duty while serving at a duty station that is at least 50 miles from the residence or while residing under Government orders in Government quarters. The duty must be pursuant to a call or order to that duty for a period of more than 90 days or for an indefinite period. n489

NOTE:

For purposes of the recapture waiver, the duty station need not be outside the United States. n490 In contrast, the extended dates of availability of the first-time homebuyer credit is available only for individuals (and spouses) whose qualified official extended duty is outside the United States. n491

[8] Interaction with D.C. Homebuyer Credit

A \$5,000 credit is allowed to qualifying first-time homebuyers of a principal residence in District of Columbia (D.C. homebuyer credit). n492 No D.C. homebuyer credit under *IRC Section 1400C* is allowed to any taxpayer with respect to the purchase of a residence after 2008 if a first-time homebuyer credit is allowable to the taxpayer (or the taxpayer's spouse) under *IRC Section 36* with respect to the purchase. Taxpayers thus qualify for the more generous national first-time homebuyer credit under *IRC Section 36* rather than the D.C. homebuyer credit for qualifying purchases after 2008. n493 For residences purchased before 2009, taxpayers for whom the D.C. homebuyer credit was allowable in the year of purchase or a prior taxable year could not claim the first-time homebuyer credit under *IRC Section 36*. n494

CHAPTER 6 Dispositions of Real Estate by Sale, Abandonment and Casualty

1-6 Federal Taxes Affecting Real Estate Scope

Scope

SCOPE

In general, a property owner who plans to dispose of property (or who suffers a casualty with respect to property) will have as a goal minimizing the taxes on the transaction and maximizing the after-tax economic benefits of the transaction. This chapter explains the tax rules applicable to sales and other dispositions of real estate and suggests tax planning strategies for maximizing the after-tax return on a disposition of real property.

CHAPTER 6 Dispositions of Real Estate by Sale, Abandonment and Casualty

1-6 Federal Taxes Affecting Real Estate § 6.01

§ 6.01 Character of Gain or Loss

The character of gain or loss on a sale affects the amount of tax that must be paid. The sale of real property may result in:

- (1) capital gain or loss; n1
- (2) gain or loss from disposition of an asset used in a trade or business or an asset that was involuntarily converted; n2 or
- (3) ordinary gain or loss.

[1] Capital Gain or Loss

The opportunity to receive favorable capital gain treatment on the disposition of real property is a significant benefit to those investing in real estate, n3 although if real estate is sold at a loss, the limitations on the deduction of capital losses can be a significant disadvantage. n4 The character of gains also affects the timing of their recognition in some situations (e.g., see Chapter 7). Consequently, it is essential to determine and account for the capital gain and ordinary income components of gains and losses from the disposition of real property.

[a] Assets That Qualify for Capital Gain Treatment

All real estate qualifies for capital gain treatment, either as a capital asset or as an asset used in a trade or business, unless it is inventory or otherwise held primarily for sale to customers in the ordinary course of business. In that case, the real estate is not a capital asset, n5 and any gain from its sale is taxed as ordinary income. n6 The special rules that apply to real estate used in a trade or business are discussed in § 6.01[4], below.

The test, then, is whether property is held primarily for sale to customers in the ordinary course of a trade or business. n7 Although such a determination initially appears simple, it is one of the most controversial areas of taxation and is discussed in detail in Chapter 10.

Capital gains on the sale of personal residences are subject to special rules covered in Chapter 9. n8

[b] Determining the Effect of Capital Gain Transactions

The sale or exchange of a capital asset results in capital gain or loss. n9 A long-term capital gain or loss results if an asset has been held for more than one year at the time of its disposition. n10 If the asset is held for one year or less, the gain or loss is short-term. n11

To determine the effect of capital asset transactions for a taxpayer, it is generally necessary to follow these steps:

- (1) Gains and losses are separated into two groups--long-term and short-term.
- (2) All short-term gains and losses are combined to determine the net short-term capital gain or loss. Likewise, all long-term gains and losses are combined to determine the net long-term capital gain or loss. The net capital gain is the excess of the net long-term capital gains over the net short-term capital losses. n12
- (3) If there are net gains from both short-term and long-term transactions, they are considered separately. Short-term capital gain is fully includable in income and is taxed at ordinary rates for both corporate and noncorporate taxpayers. Because of the requirement to net short-term and long-term capital gains and losses, it is generally a good tax planning idea to shift long-term capital losses into years when there are net short-term capital gains but no long-term capital gains.

It is only when there is a net capital gain--an excess of net long-term capital gains over net short-term capital losses n13--that the differential capital gains rate can provide tax advantages. n13.1

[c] Terminations of Certain Rights with Respect to Property

Gain or loss from the cancellation, lapse, expiration or other termination of a right or obligation with respect to property that is (or on acquisition would be) a capital asset in the hands of the taxpayer is treated as capital gain or loss from the sale of a capital asset. This rule, however, does not apply to the retirement of any debt instrument (whether or not through a trust or other participation arrangement). n14

[2] Capital Gain Taxation of Individuals

[a] In General

The amount of tax imposed on individual capital gains is determined under *IRC Section 1(h)*. The major rules follow:

- Any net gain from sales of capital assets held less than one year are taxed as ordinary income. n15
- For individuals, estates and trusts, the maximum tax rate on gain from capital assets held at least 12 months is generally 15 percent (5 percent for taxpayers in the lowest tax bracket). n16
- The maximum tax rate on gain attributable to unrecaptured Section 1250 gain, however, is 25 percent. n17
- The maximum rate on gain from the sale or exchange of collectibles or small business stock is 28 percent. n18

[b] Adjusted Net Capital Gain Defined

The term "adjusted net capital gain" refers to net capital gain (determined without regard to any dividends taxed at

capital gains rates) n19-21 reduced (but not below zero) by the sum of unrecaptured Section 1250 gain plus 28-percent rate gain. n22 The net capital gain for any tax year must be reduced (but not below zero) by the amount which the taxpayer takes into account as investment income under *IRC Section 163(d)(4)(B)(iii)*. n23 "Net capital gain" refers to the excess of the net long-term capital gain for the taxable year over the net short-term capital loss for that year. n24

[c] 28-Percent Rate Gain Defined

The term "28-percent rate gain" means the excess (if any) of (1) the sum of collectibles gain and Section 1202 gain over (2) the sum of collectibles loss, the net short-term capital loss, and the amount of long-term capital loss carried over to the tax year. n25

[d] Unrecaptured Section 1250 Gain Defined

The term "unrecaptured section 1250 gain" means the excess (if any) of: (1) the amount of long-term capital gain (not otherwise treated as ordinary income) that would be treated as ordinary income if *IRC Section 1250(b)(1)* included all depreciation and the applicable percentage under *IRC Section 1250(a)* were 100 percent, over (2) the excess (if any) of the 28-percent rate gain loss n26 over the 28-percent collectibles and small business stock gain. n27 The amount of long-term capital gain taken into account in determining the unrecaptured Section 1250 gain cannot exceed the amount of net Section 1231 gain for the year. n28-30

[e] Election for Assets Held in Trade or Business in 2001

Under an uncodified provision, a noncorporate taxpayer holding a capital asset used in the taxpayer's trade or business on January 1, 2001, could elect to treat the asset as having been sold on that date for an amount equal to its fair market value, and as having been reacquired on that date for the same amount. n31 If the election was made, any gain had to be recognized, but any loss was disallowed. n32 The Secretary prescribed the manner of making the election. n33 The election, once made was irrevocable. n33.1

[f] Netting Capital Gains and Losses

Gains and losses within each tax rate group (i.e. the 15-percent group, the 25-percent group, and the 28-percent group n34 must be netted in order to determine the net capital gain or loss within that group. The netting procedure is incorporated into *IRC Section 1(h)*, and is explained in detail in *Notice 97-59*. n35 The 1998 technical correction amendments to *IRC Section 1(h)* follow the netting rules set forth in *Notice 97-59*, so the netting procedures detailed in *Notice 97-59* continue to apply. The following netting rules should be noted: n36

(1) *Short-term capital gains and losses.* Short-term capital losses (including short-term capital loss carryovers) are applied first to reduce short-term capital gains, if any, otherwise taxable at ordinary income rates. A net short-term capital loss is then applied to reduce any net long-term gain from the 28-percent group, then to reduce gain from the 25-percent group, and finally to reduce net gain from the 15-percent group.

(2) *Long-term capital gains and losses.* A net loss from the 28-percent group (including long-term capital loss carryovers) is used first to reduce gain from the 25-percent group, then to reduce net gain from the 20-percent group. A net loss from the 15-percent group is used first to reduce net gain from the 28-percent group, then to reduce gain from the 25-percent group.

Any resulting net capital gain that is attributable to a particular rate group is taxed at that group's marginal tax rate.

[g] Limitation and Carry Forward of Losses

For individuals, capital losses in any year are allowed only to the extent of capital gains for that year, plus \$3,000 (\$1,500 in the case of a married individual filing a separate return).ⁿ³⁷ Where both short term and long term capital losses are available, the short term losses are absorbed first.ⁿ³⁸ Excess capital loss may not be carried back to prior years, but may be carried forward indefinitely to subsequent years, at which time it is first deducted from capital gains and then from other income, up to the \$3,000 (\$1,500) limitation described above.ⁿ³⁹ Losses carried over to future years retain their long-term or short-term characteristics. When both short-term and long-term losses are carried over, the short-term loss is similarly absorbed against the \$3000 (\$1500) ordinary income limit before the long-term capital loss carryover is absorbed.ⁿ⁴⁰

Example 1:

In Year 1 an individual investor has the following sales of real property, held for investment, in addition to other taxable income of \$25,000:

Short-term--

Parcel A held three months, sold at a loss of	[6,400)
Parcel B held four months, sold at a gain of	2,000
Net short-term loss	[4,400)

Long-term--

Parcel C held for more than one year, sold at a loss of	[5,000)
Net long-term loss	[5,000)

Assuming that the individual is not a married individual filing a separate return, three thousand dollars (\$3,000) of the short-term loss is offset against the investor's other taxable income in Year 1. The remaining \$1,400 is a carryover to Year 2 as a short-term loss. The \$5,000 long-term loss is a carryover to Year 2 as a long-term loss.

Example 2:

Assume that the taxpayer in the preceding example has taxable income in Year 2 in excess of \$3,000 and no other capital transactions. The remaining \$1,400 short-term capital loss carryover is first deducted from other taxable income, and \$1,600 of the long-term loss carryover is also allowed. The combined deduction in Year 2 for capital losses would then be \$3,000. The taxpayer can carry over the remaining \$3,400 of Year 1 long-term capital loss to Year 3 and subsequent years under the same carryover rules.

[3] Capital Gain Taxation of Corporations

Corporations generally are not eligible for a reduced rate of tax on capital gains.ⁿ⁴¹ Although *IRC Section 1201* provides a maximum tax rate of 35 percent on a corporation's net capital gain,ⁿ⁴² the reduced rate does not come into play because general corporate income tax rates do not exceed that rate.ⁿ⁴³

There is one exception. A temporary reduced 15-percent tax rate applies to qualified corporate timber gains. The reduced tax rate applies for corporations on the portion of a corporation's taxable income that consists of qualified timber gain (or, if less, the net capital gain). The special rate applies only for a tax year ending after May 22, 2008, and beginning on or before May 22, 2009.^{n43.1} In the case of a non-calendar fiscal year that includes either May 22, 2008 or May 22, 2009, only the portion of qualified timber gain occurring between those two dates is eligible for the lower regular tax rate.^{n43.2} The 15-percent rate applies to the least of a corporation's (1) the qualified timber gain, (2) net capital gain, or (3) taxable income.^{n43.3} The temporary 15-percent tax rate also applies for AMT purposes.^{n43.4}

Corporations may deduct capital losses only to the extent of capital gains. n44 Subject to certain limitations and special rules, n44.1 corporation can carry back capital losses for three years and obtain a refund of the taxes paid on capital gains during that period. n44.2 If the entire capital loss cannot be used as a carryback, a five-year carryforward period is provided. n45 Although the character of the capital loss carryover as short-term or long-term is not currently relevant to a corporation, corporate capital loss carryovers are treated as short term capital losses. The benefit of any capital loss that has not been offset against capital gains during the carryback and carryforward periods is lost to the taxpayer.

[4] IRC Section 1231 Gain or Loss

Property subject to depreciation and real property used in a trade or business are not capital assets, but are instead subject to an even more favorable tax regime. n46 Examples of this category of property are land, buildings, and machinery used by a taxpayer in a business, such as a manufacturing plant, or rental property such as apartments, shopping centers, etc. This type of property is known as "Section 1231 property", and the disposition of this type of property can result in even more favorable tax treatment than that given to capital assets because--

- (1) A net gain from all sales of Section 1231 property is taxed as a long-term capital gain. n47
- (2) A net loss from all such sales is fully deductible against other income without the limitations imposed on the deductibility of a capital loss. n48

To qualify for treatment under *IRC Section 1231*, real property must have been held for longer than one year. n49 Property held for a shorter period is not Section 1231 property, and any gain or loss is ordinary income or ordinary loss. n50

Gain or loss from Section 1231 0property is determined as follows:

- (1) Aggregate all gains and losses of Section 1231 property. n51
- (2) If there is a net gain, it is considered long-term capital gain and is grouped with other long-term capital gains.
- (3) If there is a net loss, it is *not* offset against other capital gains, but instead is fully deductible against other income of the taxpayer.

Example:

In Year 1, a taxpayer has the following transactions--

Long-term capital gain--	
Real property held for investment for five years, sold at a gain of	\$10,000
.....	
Section 1231 gains and losses--	
Land used in business held for two years, sold at a gain of	\$15,000
Building used in business held for ten years sold at a loss of	(20,000)
.....	

Net Section 1231 gain or loss	(\$5,000)

.....

Since there is a net loss from the sale of Section 1231 property, it is considered an ordinary loss resulting in an ordinary loss of \$5,000 and a net long term capital gain of \$10,000 resulting in a total net long-term gain of	\$20,000

Had the loss on the building been \$5,000, there would have been a net Section 1231 gain, and the loss of \$5,000 would be offset against long term capital gains and could not be deducted against other ordinary income.

See § 6.02[5], below, for a discussion of depreciation recapture on the sale or exchange of depreciable real estate.

[5] Ordinary Gain or Loss

The sale of real property which is held neither as a capital asset nor as a Section 1231 asset results in ordinary gain or loss. For example, the gain or loss on the disposition of property held primarily for sale to customers in the ordinary course of a trade or business, such as condominium units sold by a condominium developer, is ordinary gain or loss.
n52

[6] Necessity of a Sale or Exchange

In general, a taxpayer can have capital gain or loss, or *IRC Section 1231* gain or loss, only if the property is sold or exchanged. n53 A mere reduction in property value does not generally create a deductible loss if there is no closed and completed transaction. For example, the failure to obtain a hoped-for rezoning for property does not necessarily give rise to a deductible loss if the taxpayer retains the property. n54 There may be, however, a regulatory taking of property that could constitute a realization event for the loss in value of the property, even if the taxpayer retains the property.
n55

A partition of a contiguous jointly-owned tract of real property is generally not a sale or other disposition of property, but merely the severance of joint ownership. Accordingly no gain or loss is realized on the partition. n55.1 A critical factor in one ruling was that no exchange of separate parcels among the owners took place. In addition, each partitioned parcel of property was approximately equal in value to the value of the taxpayers' respective undivided interests in the property immediately prior to the partition, none of the taxpayers benefitted disproportionately as a result of the partition, and no gift was made or received as a result of the partition. Finally, no interest in the property that was subject to a mortgage was transferred or assumed by any of the taxpayers as a result of the partition. n55.1.1 In contrast, an exchange of separate parcels among unrelated tenants-in-common so that each party becomes the sole owner of one of the parcels is a sale or exchange, so that gain or loss must be recognized unless the conditions of *IRC Section 1031* are met. n55.2

[7] Limit to Conversion of Income from Constructive Ownership Transactions

[a] In General

Investors may enter into forward contracts, notional principal contracts, and other similar arrangements with respect to property. These arrangements provide investors with the same or similar economic benefits as owning the property directly, but with potentially different tax consequences (as to the character and timing of any gain). A special rule

limits the amount of long-term capital gain that can be recognized from certain derivative contracts ("constructive ownership transactions") with respect to certain financial assets. n56 The amount of long-term capital gain which a taxpayer can recognize is limited to the amount of such gain the taxpayer would have recognized if the taxpayer held the financial asset directly during the term of the derivative contract. Any gain in excess of this amount is treated as ordinary income. n57 An interest charge is imposed on the amount of gain that is treated as ordinary income. n58

[b] Constructive Ownership Transactions

A taxpayer is treated as having entered into a constructive ownership transaction with respect to a financial asset if the taxpayer: n59

- holds a long position under a notional principal contract with respect to the financial asset;
- enters into a forward contract to acquire the financial asset;
- is the holder of a call option, and the grantor of a put option, with respect to a financial asset, and the options have substantially equal strike prices and substantially contemporaneous maturity dates; or
- to the extent provided in regulations, enters into one or more transactions, or acquires one or more other positions, that have substantially the same effect as any of the transactions described.

Treasury regulations, when issued, are expected to provide specific standards for determining when other types of financial transactions, like those specified in the provision, have substantially the same effect of replicating the economic benefits of direct ownership of a financial asset without a significant change in the risk-reward profile with respect to the underlying transaction. n60

IRC Section 1260 does not apply to any constructive ownership transaction if all of the positions that are part of the transaction are marked to market under the Code or regulations. n61

Taxpayers are treated as holding a long position under a notional principal contract with respect to a financial asset if they: (1) have the right to be paid (or receive credit) for all or substantially all of the investment yield (including appreciation) on the financial asset for a specified period; and (2) are obligated to reimburse (or provide credit) for all or substantially all of any decline in the value of the financial asset. n62 A forward contract is a contract to acquire in the future (or to provide or receive credit for the future value of) any financial asset. n63

Treasury is authorized to prescribe regulations, as necessary, to carry out the purposes of the provision, including regs to: (1) permit taxpayers to mark to market constructive ownership transactions in lieu of the provision; and (2) exclude certain forward contracts that do not convey substantially all of the economic return with respect to a financial asset. n64

[c] Definition of "Financial Asset"

A "financial asset" is defined as any equity interest in a pass-thru entity, and, to the extent provided in regulations, any debt instrument and any stock in a corporation that is not a pass-thru entity. n65 A "pass-thru entity" refers to: n66

- (1) a regulated investment company;
- (2) a real estate investment trust (REIT);
- (3) a real estate mortgage investment conduit (REMIC);

- (4) an S corporation;
- (5) a partnership;
- (6) a trust;
- (7) a common trust fund; and
- (8) a passive foreign investment company. n67

[d] Recharacterization of Gain

The amount of recharacterized gain is calculated as the excess of the amount of long-term capital gain, which the taxpayer would have had absent *IRC Section 1260*, over the "net underlying long-term capital gain" attributable to the financial asset. n68 The net underlying long-term capital gain is the amount of net capital gain which the taxpayer would have realized if it had acquired the financial asset for its fair market value on the date the constructive ownership transaction was opened and sold the financial asset on the date the transaction was closed (only taking into account gains and losses that would have resulted from a deemed ownership of the financial asset). n69 The long-term capital gains rate on the net underlying long-term capital gain is determined by reference to the individual capital gains rates in *IRC Section 1(h)*. n70

Note:

A taxpayer must establish the amount of the net underlying long-term capital gain with clear and convincing evidence. Otherwise, the amount is deemed to be zero. n71 To the extent that the economic positions of the taxpayer and the other party do not equally offset each other, the amount of the net underlying long-term capital gain may be difficult to establish.

[e] Special Rule Where Taxpayer Takes Delivery

If the constructive ownership transaction is closed by reason of taking delivery of the underlying financial asset, the taxpayer is treated as having sold the contract, option or other position that is part of the transaction for its fair market value on the closing date. However, the amount of gain that is recognized as a result of having taken delivery is limited to the amount of gain that is treated as ordinary income by reason of this provision (with appropriate basis adjustments for such gain). n72

[8] Sale of Depreciable Property Between Related Taxpayers

Any gain from the sale or exchange of property between related persons must be recognized as ordinary gain, rather than capital gain, if the property is depreciable property to the transferee. The rule applies to both direct and indirect sales and exchanges. n72.1 "Related persons" for this purpose include the following: n72.2

- A person and all entities that are "controlled entities" [as defined in *IRC § 1239(c)*] with respect to that person;
- A taxpayer and any trust in which the taxpayer or his spouse is a beneficiary, unless that beneficiary's interest is a remote contingent interest [as described in *IRC § 318(a)(3)(B)(i)*];
- Except in the case of a sale or exchange in satisfaction of a pecuniary bequest, an executor of an estate and a beneficiary of that estate;

- An employer and any person related to the employer; and
- A welfare benefit fund that is controlled by an employer or persons related to the employer.

The related party attribution of ownership rules that apply under *IRC Section 1239* are complex and confusing. A "controlled entity" under *IRC Section 1239* means, with respect to any person, a corporation more than 50 percent of the value of the outstanding stock of which is owned (directly or indirectly) by or for that person, a partnership more than 50 percent of the capital interest or profits interest in which is owned (directly or indirectly) by or for that person, and any other entity that is a related person to that person under *IRC Section 267(b)(3)* (two corporations that are members of the same controlled group), *IRC Section 267(b)(10)* (corporation and partnership with the same persons have more than 50 percent overlapping interests), or *IRC Section 267(b)(11)*, or (12) (two S corporations or an S corporation and a C corporation if the same persons own more than 50 percent in value of the outstanding stock of each corporation). n72.3

The constructive ownership rules that apply are those of *IRC Section 267(c)*, other than *IRC Section 267(c)(3)*. n72.4 The *IRC Section 267(c)* constructive ownership rules determine the extent to which stock constructively owned by one person will, as a result of that constructive ownership, be deemed to be constructively owned by another person.

[9] Alternative Minimum Tax Considerations

[a] In General

Although a detailed discussion of the alternative minimum tax (AMT) is beyond the scope of this publication, practitioners should be aware of its potential application in several areas involving real estate. The AMT is a separate tax involving separate calculations from the "regular" income tax. n72.5 The AMT is imposed on the excess of the tentative minimum tax for the tax year over the regular tax. n72.6 The tentative minimum tax is imposed on a taxpayer's alternative minimum taxable income (AMTI) in excess of a statutory exemption amount. n72.7 AMTI is the taxable income of the taxpayer as computed for regular tax purposes, except that various statutory adjustments are taken into account n72.8 and tax preference items are not permitted to reduce AMTI. n72.9 The AMT rate is applied to the AMTI in excess of the exemption amount, which results in the tentative minimum tax. n72.10 If the tentative minimum tax exceeds the regular income tax for the year, the excess is imposed as an additional tax for the year. n72.11 If the tentative minimum tax is less than the regular tax, no additional tax is due, but certain business credits are limited to the excess of the regular tax over the tentative minimum tax. n72.12

The AMT adjustments and preferences most likely to come into play for real estate are the following:

- Depreciation deductions for nonresidential real property and residential rental property placed in service after 1986 and before 1999 must be computed for AMT purposes using a 40-year recovery period. n72.13 For real property placed in service after 1998, AMT and regular tax depreciation deductions are the same, using the straight-line method over the property's MACRS recovery period. n72.14
- Certain mining exploration and development costs must be amortized over 10 years, although certain losses are allowed in the year the loss is sustained. n72.15
- The taxable income from long-term contracts other than home construction contracts must be determined under a modified percentage-of-completion method of accounting. n72.16
- For AMT purposes, any cost recovery deduction for pollution control facilities placed in service

before 1999 must be taken using the alternative depreciation system under *IRC Section 168(g)*. Cost recovery deductions for pollution control facilities placed in service after 1999 must be determined under *IRC Section 168*, using the straight line method over the facilities MACRS recovery period. n72.17 The 5-and 7-year amortization allowed for regular tax purposes n72.18 is not allowed for AMT purposes. n72.19

- For noncorporate taxpayers, no interest deduction is allowed for refinanced home mortgages to the extent the indebtedness resulting from the refinancing exceeds the amount of the indebtedness before the refinancing. n72.20

- Any net operating losses must be computed under AMT rules in *IRC Section 56(d)* rather than under regular tax rules in *IRC Section 172*. Under these rules, the AMT net operating loss is generally limited to 90 percent of the alternative minimum taxable income, determined without regard to the AMT NOL deduction and the deduction under *IRC Section 199* for domestic production activities. n72.21 An exception applies, however, for 2008 or 2009 NOLs that a taxpayer elects to carry back under *IRC Section 172(b)(1)(H)*. The amount of a deduction attributable to a NOL with respect to which a carryback election is made may offset 100 percent of a taxpayer's alternative minimum taxable income in the carryback years. n72.21.1

- Corporations may need to make depreciation, intangible drilling cost, and depletion adjustments in computing their adjusted current earnings. n72.22

- Certain depletion and intangible drilling costs are items of tax preference. n72.23

- Interest on specified tax-exempt private activity bonds is an item of tax preference. n72.24

- Accelerated depreciation or amortization on certain real property placed in service before 1987 is an item of tax preference. n72.25

- Certain farm losses are disallowed in computing AMT income. n72.26

- Passive activity losses must be separately determined under AMT rules in a manner parallel to regular tax rules, with due regard for AMT adjustments and preferences. n72.27

[b] AMT Tax Rates

For corporations, the AMT rate is a flat 20 percent. n72.28 For noncorporate taxpayers, the AMT rate is generally 26 percent for amounts up to \$175,000 and 28 percent for amounts in excess of \$175,000. n72.29 A taxpayer's effective AMT rate is higher than the above rates, however, over the AMT exemption phase-out range. n72.30

Notwithstanding the above rates, however, the maximum AMT rate on any net capital gain of noncorporate taxpayers cannot exceed the capital gains rate that applies for regular tax purposes. In other words, the regular tax capital gains tax rates also apply for AMT purposes. n72.31 This result is accomplished by way of complex computations on Form 6251. Under the limitation, the amount of AMT computed with the usual 26-and 28-percent AMT tax rates cannot exceed the sum of the following amounts: n72.32

- The amount determined by applying the 26-and 28-percent rates on the amount of the taxable excess to which the AMT applies (i.e. alternative minimum taxable income less the applicable exemption amount), reduced by the lesser of (1) the net capital gain, or (2) the sum of (a) the adjusted net capital gain, plus (b) the unrecaptured *IRC Section 1250* gain; plus

- 0 percent (5 percent for tax years beginning before 2008) of so much of the adjusted net capital gain (or, if less, the taxable excess) as does not exceed an amount equal to the excess described in *IRC Section 1(h)(1)(B)*; plus
- 15 percent of the adjusted net capital gain (or, if less, the taxable excess) in excess of the amount on which a tax is determined using the 0-or 5-percent rate in the above step; plus
- 25 percent of the taxable excess in excess of the sum of the amounts on which tax is determined in the above steps.

A special temporary tax rate applies for corporate timber gains. For regular tax purposes, a temporary 15-percent tax rate applies to qualified corporate timber gains. The reduced tax rate applies for corporations on the portion of a corporation's taxable income that consists of qualified timber gain (or, if less, the net capital gain). The special rate applies only for a tax year ending after May 22, 2008, and beginning on or before May 22, 2009. n72.33 In the case of a non-calendar fiscal year that includes either May 22, 2008 or May 22, 2009, only the portion of qualified timber gain occurring between those two dates is eligible for the lower regular tax rate. n72.34 The 15-percent rate applies to the least of a corporation's (1) the qualified timber gain, (2) net capital gain, or (3) taxable income. n72.35

The temporary 15-percent tax rate also applies for AMT purposes. n72.36 The AMT provision reaches this result in a somewhat roundabout way. For provision sets a maximum limit on the amount of tax that can be imposed on qualified timber gains of corporations, determined by reference to the 15-percent regular corporate tax provision on qualified timber gains. The AMT cannot exceed the sum of the following: n72.37

- 20 percent of so much of the taxable excess (if any) as exceeds the qualified timber gain (or, if less, the net capital gain), plus
- 15 percent of the taxable excess in excess of the amount on which the 20-percent tax is imposed.

The end result is that qualified timber gains of corporations are subject to a 15-percent tax rate for AMT purposes for the same periods that the special rate applies for regular tax purposes. n72.38

[c] Small Corporation Exemption from AMT

"Small corporations" are exempt from the AMT. n72.39 The exemption applies only for C corporations. n72.40 The exemption works by treating a corporation's tentative minimum tax as zero for any year in which it qualifies as a small corporation. n72.41

A C corporation is automatically treated as a "small corporation" (and is therefore exempt from the AMT) in the first taxable year of its existence, regardless of the amount of its gross receipts. n72.42 This rule applies, however, only if the corporation does not lose its status as a small corporation because it is aggregated with other corporations, or is treated as having a predecessor corporation. n72.43

After its first year of existence, a corporation qualifies as a small corporation exempt from the AMT only if it has annual gross receipts for all 3-taxable-year periods ending before the tax year in question of not more than \$7.5 million. n72.44 In applying this test for a corporation's first taxable year, a \$5 million limit is used. n72.45 A corporation that fails to qualify as a small corporation for any tax year can never again qualify for the small corporation exemption in a later tax year. n72.46 If a corporation is not in existence for an entire three-year period, the tests are applied using the period that the corporation has been in existence. n72.47 Gross receipts must be annualized if the tax year is less than 12 months. n72.48

NOTE:

The \$5 million test is applied just once, during a corporation's second taxable year. The statutory language relating to the \$5 million test makes reference to looking at the corporation's "first 3-taxable-year period (*or portion thereof*)" ending before the tax year in question. n72.49 In actual practice, however, because of the parenthetical qualification, only the corporation's gross receipts in its first taxable year of existence will ever come into play in applying the test. This is because the corporation's first taxable year will be a "portion" that qualifies for the corporation's first testing period. n72.50 In contrast, the \$7.5 million test applies, and must be separately computed, for every year after the corporation's second taxable year of existence. n72.51

A corporation that fails to meet the gross receipts tests becomes subject to the AMT, but generally only with respect to preferences and adjustments that relate to transactions and investments entered into after the corporation loses its status as a small corporation. n72.52 The restriction in computing AMT does not apply, however, to items acquired by the corporation in a corporate acquisition to which *IRC § 381* applies or to certain substituted basis property. n72.53

[d] AMT Exemption Amounts

Corporations are entitled to a flat \$40,000 exemption. n72.54 Estates and trusts are entitled to a flat \$22,500 exemption. n72.55 The AMT exemption amount for other non-corporate taxpayers varies, depending on their filing status and the particular tax year. n72.56

The AMT exemption for all taxpayers is phased out above certain income amounts. n72.57

For taxable years beginning in 2009 only, the exemption amounts and their phase-out ranges are as follows: n72.57.1

Taxpayer	AMT Exemption	Phase-out Starts at AMT Income of	Phase-out Ends at AMT Income of
Married filing jointly, and qualified surviving spouse	\$70,950	\$150,000	\$433,800
Unmarried and not a surviving spouse	\$46,700	\$112,500	\$298,800
Married filing Separately	\$35,475	\$75,000	\$216,900
Corporations	\$40,000	\$150,000	\$310,000
Estates and trusts	\$22,500	\$75,000	\$165,000

For taxable years beginning in 2008 only, the exemption amounts and their phase-out ranges are as follows: n72.57.1.1

Taxpayer	AMT Exemption	Phase-out Starts at AMT Income of	Phase-out Ends at AMT Income of
Corporation	\$40,000	\$150,000	\$310,000
Married filing	\$69,950	\$150,000	\$429,800

1-6 Federal Taxes Affecting Real Estate § 6.01

jointly, and qualified
surviving spouse

Unmarried and not a surviving spouse	\$46,200	\$112,500	\$297,300
Married filing separately	\$34,625	\$75,000	\$213,500
Estates and trusts	\$22,500	\$75,000	\$165,000

For taxable years beginning in 2007 only, the exemption amounts for noncorporate taxpayers and their phase-out ranges are as follows: n72.58

Taxpayer	AMT Exemption	Phase-out Starts at AMT Income of	Phase-out Ends at AMT Income of
Married filing jointly, and qualified surviving spouse	\$66,250	\$150,000	\$415,000
Unmarried and not a surviving spouse	\$44,350	\$112,500	\$289,900
Married filing separately	\$33,125	\$75,000	\$207,500
Corporations	\$40,000	\$150,000	\$310,000
Estates and trusts	\$22,500	\$75,000	\$165,000

For taxable years beginning in 2006 only, the exemption amounts for noncorporate taxpayers and their phase-out ranges are as follows: n72.61

Taxpayer	AMT Exemption	Phase-out Starts at AMT Income of	Phase-out Ends at AMT Income of
Married filing jointly, and qualified surviving spouse	\$62,550	\$150,000	\$400,200
Unmarried and not a surviving spouse	\$42,500	\$112,500	\$282,500
Married filing separately	\$31,275	\$75,000	\$200,100
Corporations	\$40,000	\$150,000	\$310,000
Estates and trusts	\$22,500	\$75,000	\$165,000

For taxable years beginning in 2003, 2004, and 2005 only, the exemption amounts for noncorporate taxpayers and their

phase-out ranges are as follows: n72.62

Taxpayer	AMT Exemption	Phase-out Starts at AMT Income of	Phase-out Ends at AMT Income of
Married filing jointly, and qualified surviving spouse	\$58,000	\$150,000	\$382,200
Unmarried and not a surviving spouse	\$40,250	\$112,500	\$273,500
Married filing separately	\$29,000	\$75,000	\$191,000
Corporations	\$40,000	\$150,000	\$310,000
Estates and trusts	\$22,500	\$75,000	\$165,000

For all other taxable years, the exemption amounts for noncorporate taxpayers and their phase-out ranges are as follows:
n72.63

Taxpayer	AMT Exemption	Phase-out Starts at AMT Income of	Phase-out Ends at AMT Income of
Married filing jointly, and qualified surviving spouse	\$45,000	\$150,000	\$330,000
Unmarried and not a surviving spouse	\$33,750	\$112,500	\$247,500
Married filing separately	\$22,500	\$75,000	\$165,000
Corporations	\$40,000	\$150,000	\$310,000
Estates and trusts	\$22,500	\$75,000	\$165,000

NOTE:

Because the AMT is not indexed for inflation, frequent legislative "AMT patches" have been enacted to increase the AMT exemption amount in order to prevent subjecting even more middle-class taxpayers to its reach.

Federal Taxes Affecting Real Estate

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 6 Dispositions of Real Estate by Sale, Abandonment and Casualty

1-6 Federal Taxes Affecting Real Estate § 6.02

§ 6.02 Reporting and Timing of the Sale

Having determined the nature of the gain or loss, the seller of real property is then faced with the problem of reporting the sale. The seller needs to know the selling price or amount realized and the tax basis to compute the amount of gain or loss, and needs to know the year in which the sale took place for tax purposes. n73

[1] Computation of Selling Price

The gross selling price of real property generally is the sum of:

- (1) The cash received by the seller.
- (2) Any other amounts receivable by the seller from the purchaser.
- (3) Any liability encumbering the property if the buyer either assumes the liability or takes the property subject to it. n74
- (4) Any other obligations of the seller paid or assumed by the buyer.
- (5) The fair market value of any other property received. n75

A mortgage note or other liability that is discharged on a disposition of property must be included in the selling price or amount realized even if the seller is not personally liable on the note. This can occur where a seller has been relieved of a personal obligation to pay a note in a bankruptcy proceeding. As long as the mortgagee has a legally enforceable obligation to proceeds of sale of the underlying property in the amount of the note, the amount realized includes that amount. n76

Expenses of the sale paid by the seller, such as commissions, recording fees, legal fees, and the like, are reductions of the gross profit if the seller is an investor. n77 For real estate dealers, such expenses are ordinary business deductions (see discussion in Chapter 7). State and local transfer taxes should be deductible as taxes rather than as a reduction in the sales price, if the property sold was held for investment or used in a trade or business.

[2] Computation of Gain or Loss

Gain or loss is the difference between the selling price (amount realized) and the seller's tax basis in the property sold.
n78

Example:

An investor sells real property with a tax basis of \$50,000 and receives from the buyer \$50,000 in cash plus a note with a face amount and fair market value of \$25,000. The buyer takes the property subject to a \$25,000 mortgage. The seller pays a real estate commission of \$5,000 and legal fees of \$200. The gain is computed as follows:

Gross selling price--

Cash received	\$50,000
Note receivable	25,000
Mortgage against property	25,000
	\$100,000

Less--

Sales commission	\$5,000	
Legal fees	200	5,200
Net selling price		\$94,800
Less--Tax basis of property		50,000
Gain realized		\$44,800

Note:

Usually, the amount received on a sale is fairly straightforward, and the amount realized readily determined. Settlement proceeds received in litigation may, however, be characterized as an amount realized from a sale. In one ruling, a taxpayer purchased a home and shortly thereafter sold it (at a loss) because of unanticipated noise that was not disclosed at the time of purchase. He sued the real estate agents and sellers, and in the following year obtained a settlement. The IRS ruled that he could treat the settlement proceeds as proceeds from his sale of the home. The increased proceeds transformed the loss on his sale into a gain, and he was able to exclude a portion of the gain from gross income under *IRC* § 121. n78.1

[3] Timing of the Sale

While there is no single factor that controls the determination of when a real estate transaction is consummated for tax purposes, n79 passage of title is probably the most significant event. n80 In the typical real estate transaction, passage of title occurs at the close of escrow. n80.1

In addition to the passage of title, factors such as receipt of the purchase price by the seller or transfer of possession of the property and risk of loss to the purchaser have been considered in fixing the date of sale. This is particularly true when the escrow is held "open" and the deed is retained by the seller merely to manipulate the timing of the close of sale. n81

A properly drafted escrow agreement has been held to be a valid income-deferral device. In *John E. Reed v. United*

States n82 a contract for the sale of stock calling for deferred payment of the purchase price through the use of an escrow arrangement was effective in deferring income recognition by a cash-basis seller until after the year of sale. The court reached its conclusion based on the following three conditions:

- (1) the escrow arrangement was part of a bona fide, arm's-length agreement between the purchaser and seller calling for a deferred payment;
- (2) the seller received no present beneficial interest from the purchase funds while they were in escrow; and
- (3) the escrowee was not acting under the exclusive authority of the seller.

The purchaser, for business reasons, wanted to close in one year; the seller, however, to minimize taxes, wanted to close in a subsequent year. The court noted that the sale would not have been completed had the purchaser not agreed to the escrow arrangement calling for a deferred payment. The escrow arrangement was bargained for and made a part of the purchase-sale agreement before the date the transaction was executed.

Reed, a cash-basis taxpayer, did not actually or constructively receive the money until after the year it was placed in escrow. Reed was not allowed to receive interest or obtain a line of credit on the deposited funds in escrow. In addition, Reed could not compel the escrowee to distribute the funds to him before the bargained-for date in the subsequent year. Therefore, the court concluded Reed did not recognize income on this sale until after the year the funds were deposited in escrow.

Transfer of possession and the assumption of the benefits and burdens of ownership before the close of escrow have been held to result in a completed sale for tax purposes, when the parties have executed a contract of sale imposing an absolute and unconditional obligation on the seller to deliver a deed to the purchaser upon payment of the purchase price. n83

The view that appears to be the most widely accepted today is that a sale is consummated, for tax purposes, when there has been such a substantial performance of the conditions precedent as to impose on the seller an unconditional obligation to execute and deliver a deed to the purchaser and to impose on the purchaser an unconditional obligation to pay the purchase price. n84 In other words, a sale occurs at the time the risks and rewards of ownership are transferred from seller to buyer. In one case, the Tax Court held that sales of real property were completed at the time contracts for deeds of sale were entered into. Therefore, the accrual basis taxpayer had to recognize gain from the sales in the year the contracts were entered into. n85 Under the agreements, purchasers obtained possession; assumed responsibility for taxes, insurance, and maintenance; and became obligated to make monthly payments, with interest, of the purchase price. The seller would issue a warranty deed only upon full payment of the purchase price, and any default by the buyers before full payment was made would render the contract null and void, with the seller retaining all amounts paid as liquidated damages. The Tax Court held that income attributable to each sale of property had to be recognized in full in the year the contract of deed was executed because, although legal title did not pass on execution of a contract of deed, the purchaser did assume the practical burdens and benefits of ownership at that time. What the seller retained was essentially a security interest. The taxpayer, an accrual basis taxpayer, had a right to receive the income at the time the contracts were executed, and the amount of the income became reasonably determinable at that time as well. The court found that the possibility of default by a purchaser was only a condition subsequent; it did not otherwise affect the taxpayer's entitlement to the sums at the time the contracts were entered into. n86

[4] Holding Period of Property

For gain to qualify as long-term capital gain, the property sold must have been held for more than one year n87 (see § 6.01[1][b], above). For non-corporate taxpayers, a transaction that results in long-term gain (instead of short-term

capital gain) will be eligible for a maximum 20 percent tax rate (25 percent in the case of certain unrecaptured depreciation), rather than the maximum 39.6 percent tax rate applicable to ordinary income and short-term capital gain. Therefore, the taxpayer must know how the holding period of property is determined. A mistake of even one day may mean the difference between the gain being classified as a short-term capital gain or as long-term capital gain.

Usually, the date of acquisition of property is the date on which the buyer takes title. In most instances, this occurs at the closing, when the deed is delivered. Likewise, delivery of the deed at closing normally would end the holding period of the seller. However, if possession and the burdens and privileges of ownership are acquired before the transfer of title, the holding period will commence at the earlier date. ⁿ⁸⁸ This rule normally follows state law. Holding period is discussed more fully in Chapters 2 and 8.

The holding period begins on the day after the property is acquired and ends on the day the property is sold. ⁿ⁸⁹

Example:

A seller purchases investment real estate on June 28, Year 1, and sells the property at a gain on June 29, Year 2. The holding period begins on June 29, Year 1 and ends on June 29, Year 2. Since the seller did not hold the property for more than one year, he realizes a short-term capital gain.

Determining the holding period of improvements made subsequent to the original acquisition of real property often requires careful consideration. A tax problem arises when a taxpayer sells improved property held for less than one year after completion of the improvements but held for more than one year since the land was purchased and the construction began.

Example:

A taxpayer begins construction of an apartment complex in January, Year 1. The total cost of construction is \$60,000. Through March 10, Year 1, \$40,000 of the total cost has been incurred. The complex is sold on March 11, Year 2, for \$90,000. For computation of the holding period on sale, the seller counts back one year and one day (March 10, Year 1). Since the cost of the pre-March 10, Year 1 work was \$40,000, two-thirds of the total cost (\$40,000/\$60,000) was incurred more than one year before the sale. The courts have ruled that the seller is, in effect, selling two properties—one held for the required holding period and the other held for less than the required holding period. ⁿ⁹⁰ The result is that \$20,000 (two-thirds of the \$30,000 profit) is taxed as a long-term capital gain.

This rule applies only to the cost of work actually completed one year before the sale. An advance payment for the construction work does not qualify for this treatment.

This discussion illustrates that proper timing of a sale is critical to the determination of the gain or loss as long-term or short-term. See Chapter 2 for a discussion of the special rules for determining holding periods for property having a substituted basis.

[5] Recapture of Depreciation

Depreciation reduces the tax basis of property. ⁿ⁹¹ The basis is reduced by the greater of the amount of the depreciation allowable or the amount allowed. Thus, the reduction in basis may exceed the amount of depreciation deductions actually claimed by the taxpayer, if a larger amount was actually allowable. ^{n91.1} Consequently, when depreciable property is sold the gain on sale is greater than it otherwise would have been by the amount of depreciation previously allowed or allowable. ⁿ⁹²

The IRS has issued a revenue procedure under which a taxpayer may change its method of determining depreciation for a depreciable or amortizable asset after its disposition. The taxpayer may make the change if the taxpayer did not take into account any depreciation allowance, or did take into account some depreciation but less than the depreciation allowable, for the asset in computing taxable income in the year of disposition or in prior taxable years. Because the taxpayer is permitted to claim the allowable depreciation not taken into account for this asset, the taxpayer's lifetime income is not permanently affected by the "allowed or allowable" rule. n92.1 The possibility that the depreciation deductions, which offset ordinary income during the period of ownership of the property, may be recovered upon the disposition of the property at capital gain rates, historically has been a major factor in the popularity of investing in real estate. However, the Code now contains provisions that tax depreciation recapture at ordinary income tax rates, and that provide for a maximum 25 percent long-term capital gain tax rate with respect to unreaptured depreciation for non-corporate taxpayers. n92.2

The amount of depreciation recapture on the disposition of real estate that will be subject to tax at ordinary income tax rates depends on two factors: the type of real estate and the holding period. n93 In general, the depreciation recapture rules apply to the excess of accelerated depreciation over straight line depreciation, in some cases subject to phase out rules.

The recapture rules under *IRC Section 1250* therefore do not apply for most real property depreciated under MACRS because under MACRS, real property is ordinarily eligible only for straight-line depreciation deductions over the applicable recovery period. n94

The statute (*IRC Section 1250*) segregates depreciation into the three periods described below and provides recapture rules for depreciation deducted during each of the periods.

Post-1975 recapture--For dispositions after 1975, depreciation recapture for the post-1975 period is determined by applying the applicable percentage described immediately below to the lower of the following amounts: n95

- (1) the additional depreciation attributable to periods after 1975; or
- (2) the excess of the amount realized (for sales, exchanges or involuntary conversions) or the fair market of the property (for any other disposition) over the adjusted basis of the property.

Additional depreciation is generally any depreciation in excess of straight-line. If the property has not been held for more than one year, however, additional depreciation includes all depreciation adjustments with respect to the property. n96

The applicable percentage is generally 100 percent. n97 For the following property, however, the applicable percentage is reduced by one percentage point for each month that the property is held in excess of 100 months: n98

- (1) Property financed by a mortgage insured under Section 221(d)(3) or Section 236 of the National Housing Act (or similar state or local statutes, under which return to the investor is limited).
- (2) Property held for occupancy by families or individuals eligible to receive subsidies under Section 8 of the United States Housing Act of 1937 or under the provisions of state or local law authorizing similar levels of subsidy for lower-income housing.
- (3) Property subject to a loan made or incurred pursuant to Title V of the Housing Act of 1949.
- (4) Property subject to a depreciation deduction for rehabilitation expenditures under former *IRC Section 167(k)*.

Post-1969 and pre-1976 recapture--Special recapture rules are provided for depreciation claimed after December 31, 1969, and before January 1, 1976, with respect to certain classes of subsidized housing and residential rental property; however, additional depreciation deducted during this period on all other real estate is subject to 100 percent recapture. n99

The percentage of depreciation recapture for residential rental property is reduced by one percentage point per month for each month the property is held in excess of 100 months. n100 Thus, if property has been held for 200 months (16 2/3 years), there will be no recapture of depreciation deducted during this period. For subsidized housing, the reduction is one percentage point per month for each month the property is held in excess of 20 months. n101

Pre-1970 recapture--Additional depreciation during this period (1964 through 1969) is subject to 100 percent recapture. However, this percentage is reduced by one percentage point per month for each month the property is held in excess of 20 months. Thus, if property has been held for 120 months, there will be no recapture of additional depreciation deducted during this period. These pre-1970 recapture provisions apply to all Section 1250 property. n102

[6] Information Reporting

IRC Section 6045 and regulations thereunder impose reporting requirements for real estate transactions. The "reporting person" must report the following information on Form 1099-S:

- (1) name, address, and taxpayer identification number of the transferor;
- (2) a general description of the real estate transferred;
- (3) the date of closing;
- (4) the gross proceeds of the transaction and, in the case of multiple transferors, the gross proceeds allocated to the transferor;
- (5) whether property or services are part of the consideration;
- (6) whether the transferor may receive non-cash property (other than cash) or services in satisfaction of an obligation having a stated principal amount;
- (7) whether the transferor may receive in connection with a contingent payment transaction an amount of gross proceeds that cannot be determined with certainty and is therefore not includable in gross proceeds;
- (8) the "reporting person's" name, address, and taxpayer identification number; and
- (9) any other information required by Form 1099 or its instructions. n103

In addition, in the case of a real estate transaction involving a residence, the "reporting person" must report:

- (10) the portion of any real property tax which is treated as a tax imposed on the purchaser; and
- (11) whether or not the financing (if any) of the seller was federally-subsidized indebtedness. n104

The reporting requirements do not apply to sales of residences for \$250,000 or less (\$500,000 or less if the seller is

married) if the "reporting person" receives written assurances that the residence is the seller's principal residence within the meaning of Section 121 of the Code; that the seller is married (if applicable); if applicable, that there is no subsidized mortgage financing assistance with respect to the property and various other certifications set forth by the IRS. n105

Although the statute applies to all other real estate transactions, Treasury regulations limit its application. Under the regulations, a transaction is a "real estate transaction" only if it consists in whole or in part of the sale or exchange of "reportable real estate" for money, indebtedness, property other than money, or services. n106 The term "sale or exchange" includes tax-deferred exchanges and sales of a principal residence qualifying under the law as in effect before the enactment of the *Taxpayer Relief Act of 1997* for rollover of gain. n107 The term "reportable real estate" means any present or future ownership interest in:

- (1) improved and unimproved land, including air space;
- (2) inherently permanent structures, including any residential, commercial, or industrial building;
- (3) any condominium unit and its appurtenant fixtures and common elements, including land; or
- (4) any stock in a cooperative housing corporation. n108

Excluded from the reporting requirement is any transaction that is not a sale or exchange, such as a gift, bequest, or financing or refinancing that is not related to the acquisition of reportable real estate, transfers to a creditor whose debt is secured by the property, and transfers for *de minimis* consideration (less than \$600). n109 Transactions involving a corporate or governmental transferor are also excluded. n110

For purposes of this provision, the "reporting person" is defined as:

- (1) the person (including any attorney or title company) responsible for closing the transaction;
- (2) the mortgage lender;
- (3) the seller's broker;
- (4) the buyer's broker; or
- (5) the buyer. n111

The primary responsibility for filing is on the person responsible for the closing. However, other parties to the transaction are also responsible in the order stated above. For example, if the person responsible for closing fails to report the transaction, the reporting obligation falls on the mortgage lender, and so on. A designation agreement may be executed transferring the primary responsibility to either the person (including any attorney or title company) responsible for closing the transaction or the mortgage lender. n112

The requisite form must be filed with the Service between January 1 and February 28 of the calendar year following the year of the transaction. n113 A copy of the form must be furnished to the transferor on or after the date of closing and before February 15 of the following year. n114

Penalties are provided for responsible parties who fail to comply with these information reporting requirements. n115

[7] Escrow Deposits

Real estate transactions frequently require escrow deposits at the time the transaction is entered into. An earnest money deposit, received on the execution of a contract, is not income until the taxpayer acquires an unconditional right to retain it. n116 If the sale is consummated, it fixes the seller's right to retain the deposit, and the earnest money is included as part of the sales proceeds. n117 If the sale is not consummated, the terms of the sales contract determine whether the seller may retain the deposit. If so, the deposit is included in income at the time the contract fixes the seller's right to retain it. n118 Because earnest money is in the nature of a payment for an option, it is included as ordinary income when it is forfeited to the seller. n119

Federal Taxes Affecting Real Estate

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 6 Dispositions of Real Estate by Sale, Abandonment and Casualty

1-6 Federal Taxes Affecting Real Estate § 6.03

§ 6.03 Use of Options in the Sale of Real Estate

The use of options offers advantages to both the buyer and seller of real property. A typical option will grant the proposed buyer the right to buy the property for a specified price within a specific period of time, and will require the prospective buyer to pay a non-refundable option premium. The option will give the buyer time to arrange the necessary financing and to decide if he really wants the property, and if the buyer does not exercise the option, the option premium gives the seller some compensation for having taken the property off the market during the option period.

n120

[1] Treatment of Proceeds

An option is a unilateral agreement. It imposes an obligation on the seller, who must sell, but not on the prospective purchaser, who is not required to buy. A binding purchase and sale contract is initiated only when the option is exercised. Therefore, the receipt of proceeds from the granting of an option to purchase real estate does not constitute a taxable event to either the seller or the buyer. n121 The seller has received cash or other consideration with no immediate taxable income to report, and the buyer has made payments having no immediate tax effect.

If an option lapses, the premium received by the grantor is taxable as ordinary income, n122 and the loss realized by the grantee will have the same character as the grantee would have had on a loss from the sale of the property subject to the option. n123

If an option is exercised, the seller treats the proceeds as part of the selling price of the property. This can result in capital gain treatment for the option payments as part of the proceeds from the sale of the underlying asset. n124 The amount paid for the option by the purchaser is added to its basis in the property.

The distinction between a payment pursuant to a contract of sale and an option premium is important because the first may give rise to a taxable event while the latter does not. For an option to exist, there must be a continuing offer that does not ripen into a contract until accepted, and an agreement to leave the offer open for a period of time. In addition, the holder of the option must have a present ability to accept the offer. n125 A premium payment for a right that does not constitute a true option to purchase property may be taxable to the grantor on receipt. A nonrefundable deposit received in connection with a proposed sale of a parcel of real estate may be economically equivalent to a premium for an option to purchase and, in that case, would be taxable when the purchase did not take place, or treated as part of the

purchase price if the transaction does close. n126 The court's reasoning was that the nonrefundable deposit was to be applied to the purchase price of the real estate.

The length and price of the option should be evidence that the agreement is not a sale. For example, the price of the option should not be equal to the fair market value of the property. The title to the property should remain in the seller's name and the option should not convey possession of the property or other incidents of ownership.

The distinction between granting an option and entering into a contract of sale can have implications beyond the timing of the tax obligation. The Service has ruled that the granting of an option to purchase property exercisable only after the taxpayer's death would not result in income in respect of a decedent if and when the option is exercised. The granting of the option is not a sale, exchange, or other disposition of the property and so is not a taxable event to the optionor. A transaction will create income in respect to a decedent under *IRC Section 691(a)(1)* if the right to receive that income is acquired by the decedent's estate from the decedent. Instead, the property would be included in the taxpayer's estate, valued at its fair market value taking into account the existence of the option. n127

[2] Sale or Exchange of Options

The nature of gain or loss from the sale or exchange of an option is determined by the character of the underlying property.

- (1) If the underlying property is or, if acquired, would be a capital asset, the holder of the option realizes capital gain or loss on its sale or exchange. The period during which the taxpayer holds the option determines whether the gain or loss is short-term or long-term.
- (2) Section 1231 gain or loss results if a sale of the underlying property by the holder of the option would have been subject to the provisions of *IRC Section 1231*. In this case, the option must have been held longer than one year.
- (3) Gain or loss from the sale or exchange of an option which does not result in capital gain or loss or Section 1231 gain or loss is considered ordinary gain or loss. n128

[3] Contribution of Options

Options can be used to make as charitable contributions. The writer of an option on real property to a charitable organization is allowed a charitable deduction for the year in which the organization exercises the option. n129 The value of the contribution is the excess of the fair market value of the property on the date the option was exercised over the exercise price. However, this is not a particularly tax efficient way to make a charitable contribution, because the taxpayer will recognize gain with respect to a portion of the transaction that is treated as a sale.

[4] Failure to Exercise an Option

A holder of an option who incurs a loss upon failure to exercise the option is deemed to have sold the option on the date it expired. n130 The loss cannot be claimed in a later year. n131 The rules for determining the nature of the loss are explained above in *Section 6.03[2]*. Gain to the grantor of an option arising at the time of the holder's failure to exercise the option is ordinary income to the grantor.

A taxpayer will face resistance from the tax system if it attempts to manipulate the time and circumstances in which it will become entitled to claim a loss relating to an expired option. In *Dunlap v. Commissioner*, n132 the taxpayer structured an option for property so that it constituted a series of one-year options. The Tax Court allowed each transaction to stand separately and allowed a loss upon each failure to exercise. However, the case was reversed on

appeal, wherein the court held that the option was still open by virtue of successive options. It should be noted that if the taxpayer had prevailed in *Dunlap*, the logical corollary would have been that the grantor would have had ordinary income as each one-year option "lapsed," even if the property was ultimately sold at a capital gain.

CHAPTER 6 Dispositions of Real Estate by Sale, Abandonment and Casualty

1-6 Federal Taxes Affecting Real Estate § 6.04

§ 6.04 Certain Voluntary and Involuntary Dispositions

Tax planning is also important when the owner of real property makes a voluntary or involuntary disposition of his property. Sound tax planning may minimize what appears to be an economic loss or may even convert it into an economic gain. The tax will depend on the type of disposition made. This section discusses the tax rules applicable to abandonments, casualties, and easements. Condemnations are discussed in detail in Chapter 8.

[1] Abandonments

The provision for depreciation is expected to take into consideration normal obsolescence applicable to depreciable property over the estimated useful life of such property. In most cases, taxpayers will be aware of ultimate obsolescence before the occurrence of the event or events which cause the abandonment of the asset. However, when the usefulness of the property is suddenly terminated, a deduction is available to the owner of the property at that time. This deduction is referred to as an abandonment loss.

A deduction is allowed for abandonments of land and buildings and other assets used in a business or held for investment. n133 The loss will be an ordinary loss if no sale or exchange is involved. Usually, there must be both a complete extinguishment of value and an identifiable event evidencing abandonment in the year in which the abandonment loss is taken for tax purposes. Some courts, however, have held that a loss can be claimed with respect to an abandonment even without worthlessness if a taxpayer can show any other closed and completed transaction or other event supporting worthlessness. n134 Similarly, some courts have held that abandonment is not a prerequisite to the deductibility of a loss based on worthlessness. While the test of complete extinguishment of value is a matter of reasonableness, the courts generally have held that a mere shrinkage of value is not sufficient to qualify for an abandonment deduction. n135 In their determination of "worthlessness," the courts have considered many factors, including:

- (1) The taxpayer's good faith determination of worthlessness.
- (2) Proof that the encumbrances upon the property exceed the property's value.
- (3) The refusal of the taxpayer to pay real estate taxes and other assessments with respect to the property when he is financially able to make such payments.

(4) Attempts made by the owner to sell the property prior to the year of loss.

(5) Increases in operating expenses that made the property uneconomic.

For an abandonment to take place, there must be an intent to abandon and a specific, identifiable event within the taxable year that shows a positive act of abandonment. n136 An abandonment may take place even if the taxpayer retains title to the property. n137 To qualify for a loss from the physical abandonment of raw land or depreciable buildings, a taxpayer must show an intent to discard the asset either irrevocably or permanently so that it will neither be used again by the taxpayer nor retrieved by the taxpayer for sale, exchange or other disposition. n138

Whether an abandonment has taken place is determined from all facts and circumstances. n139 Mere non-use of the property is not sufficient. The following acts can be significant indicators of abandonment:

- (1) refusing to make payments on indebtedness or taxes on the property;
- (2) vacating mortgaged premises and leasing new premises;
- (3) attempting to deed the mortgaged premises to the mortgagee or the local taxing authority;
- (4) cancelling all insurance on the property along with heat, light, and water used on the property;
- (5) cancelling an outstanding lease on the property;
- (6) charging off the lease on the taxpayer's books; or
- (7) surrendering control of the premises.

An abandonment cannot occur if a transferor intends for a particular person to be a transferee. Therefore, no abandonment loss is permitted if a taxpayer merely deeds a parcel of property to another. n139.1

An abandonment loss is allowable to the owner of business property to the extent of the adjusted basis of the property less any salvage. The adjusted basis of real estate is the depreciated basis of the building and the basis of the land. The extent of the tax benefit resulting from the disposition of property will depend on whether the loss offsets ordinary income or capital gains. There are certain instances in which such a loss could offset capital gains. Generally, however, losses resulting from the abandonment of depreciable business property will offset ordinary income. n140

There are several relevant cases that explain the circumstances that must be present to constitute an abandonment. In *Chevy Chase Land Company v. Commissioner*, n141 the landowner negotiated a long-term lease subject to the obtaining of certain zoning. When such zoning was rejected, the application costs were deducted as an abandonment loss. The court, while noting that rezoning costs are not deductible, held for the taxpayer on the basis of abandonment.

In *Hanover v. Commissioner*, n142 a hotel that was not required to meet the building code subjected itself to the code in accordance with an arrangement whereby a lessee would make the improvements. The lessee backed out, and the hotel was boarded up in lieu of a substantial expenditure for demolition. Utilities were cut off, insurance and maintenance were discontinued, and no efforts were made to lease or sell the building. The Tax Court allowed an abandonment loss even though the taxpayer still owned the land.

In *Gilman v. Commissioner*, n143 the taxpayer demolished a roof and replaced tenants' air conditioners scrapped in the demolition so that a second story could be placed on the building. The tax basis of the roof and the cost of the

replacement air conditioners were allowed as losses and were not required to be capitalized as a cost of the second-story addition.

A different result was reached in *Daily v. Commissioner*.ⁿ¹⁴⁴ In that case, the taxpayer purchased a building for use in his rental property business. After a few years of renting the property it was determined that the cost of maintaining and operating the rental property exceeded the rental income. After failing to sell the property, the taxpayer took steps intended to establish that it had abandoned the property. The Tax Court held against the taxpayer, however, disallowing the abandonment deduction because of a provision in the taxpayer's purchase contract entitling the seller to compel specific performance and require the taxpayer to pay the unpaid balance of the purchase price.

An otherwise abandoned expenditure, if part of an integrated plan that is implemented, is not an abandonment loss. This rule has been applied to disallow a deduction for the costs of unsuccessful lease applications that were part of a plan to eventually acquire a lease,^{n144.1} to engineering fees to examine potential, but unchosen, building sites as part of single project to investigate all available sites,^{n144.2} and to costs related to a purchase agreement that was canceled, when the taxpayer eventually purchased the property under different terms in the following year.^{n144.3}

[2] Casualty Losses

Casualty losses, namely, losses resulting from a sudden, unexpected, and identifiable event causing damage to or destruction of a taxpayer's property generally are deductible for tax purposes. Casualty losses include losses from fire, storm, shipwreck or other casualty.ⁿ¹⁴⁵ There must be evidence of physical damage in order to claim a casualty loss.^{n145.1} The loss must also be permanent in nature, and not merely temporary damage or interruption in the use of the property.^{n145.1.1} Expropriation is neither a casualty nor a theft, for loss deduction purposes.ⁿ¹⁴⁶ Neither is a governmental restriction, even if it is implemented in response to a casualty.^{n146.1} For example, a reduction in value to a beach lot owing to a new county setback restriction that was implemented after a hurricane is not a casualty loss because the proximate cause of any "loss" relating to it is a governmental restriction rather than the hurricane itself, and the government restriction is not a casualty.^{n146.2}

Surprisingly, the Internal Revenue Code and the regulations do not define the term "casualty loss," so courts determine on a case-by-case basis whether a casualty loss has occurred. A casualty does not include the progressive deterioration of property through a steadily operating cause.^{n146.3}

The required degree of suddenness is not clear however; deductions have been permitted for such slow casualties as termite damage^{n146.4} damage to trees caused by beetle infestation,^{n146.5} a 40-foot subsidence of land over a one-year period,^{n146.6} and cracks to a building that developed suddenly as the result of considerable, although not catastrophic, seismic activity occurring around the time they appeared.^{n146.7}

Casualty losses incurred with regard to property used in a trade or business or in any transaction entered into for profit are fully deductible.ⁿ¹⁴⁷ Other casualty losses (nonbusiness losses) by individual taxpayers are allowed only to the extent that: (1) they exceed \$100 per casualty (\$500, for tax years beginning in 2009);ⁿ¹⁴⁸ and (2) the net personal casualty losses for the year exceed 10 percent of the taxpayer's adjusted gross income.ⁿ¹⁴⁹

[a] General Comments on Casualty Losses

A casualty loss is deductible in the year in which it is sustained provided the amount of the loss is known.^{n149.1} However, if a taxpayer has a reasonable prospect of recovering insurance or other reimbursement at the end of a tax year, no deduction is allowed for that year; instead, the loss deduction is deferred until it can be ascertained with reasonable certainty whether or not such reimbursement will be received because, to the extent a taxpayer is reimbursed for a loss, it has not really "sustained" the loss.ⁿ¹⁵⁰ The loss is then allowed in the year any insurance claims are settled.ⁿ¹⁵¹ In general, casualty and theft losses are not subject to the passive loss rules.ⁿ¹⁵² (See Chapter 13 for

further discussion.)

Providing proof of a casualty loss is the responsibility of the taxpayer, and carelessness may result in a loss of all or part of the tax benefit. First, of course, a causative connection between the casualty and the physical damage must be shown. n152.1 Proof of the amount of loss must also be offered. It is important that the taxpayer's accumulation of proof be complete and objective. The best time to accumulate support for a casualty claim is as soon after the casualty as possible, certainly before cleaning up or making repairs. Receipted repair bills, photographs, and independent appraisals have proved invaluable in sustaining casualty deductions and, together with any other supporting evidence, should be obtained contemporaneously and retained until the tax issues relating to the casualty have been finally resolved. n153

In certain instances, it may be difficult or impossible to determine the amount by which the value of the property may have declined as a result of the casualty. It is then necessary for the taxpayer to look to the cost of restoration or repair to determine the amount of loss. In some instances, the cost of repair is the only accurate measure of the loss. Under these circumstances, it is necessary to show that the repairs are reasonable and necessary, cover only the damage suffered, and in no way increase either the value or useful life of the property beyond that which existed immediately prior to the casualty. n154 Estimates of the cost of repairs, however, are not evidence of the actual costs of repairs (and therefore sufficient evidence of casualty loss) unless the repairs are actually made. n154.1

Costs of precautionary measures to avoid a future casualty are not deductible as a casualty loss. Thus, the cost of removing trees to protect against potential damage to a residence, installing a burglar alarm or smoke detector, n154.1.1 or installing vinyl siding to protect a brick exterior of a home n154.1.2 is not deductible. In addition, no casualty deduction is permitted for a loss in market value due to temporary buyer resistance that is not the result of a permanent casualty to the property. n155 Regulations do not address the problem of loss created by buyer resistance, as opposed to physical damage. At least one court has held that permanent buyer resistance--as opposed to a temporary market fluctuation--may support a casualty loss deduction even in the absence of physical damage to property. n155.1 Absent physical damage to property, however, courts have been reluctant to find deductible casualty losses. n155.2

Special rules come into play in valuing casualty losses to timber. A timber depletion block is treated as the single, identifiable property for purposes of determining the limitation of a taxpayer's casualty loss deductions. n156 For losses to timber, a casualty loss exists only if there is a diminution in the fair market value of the single identifiable property. n156.1

Because the provisions dealing with damages or destruction to business property differ from those that apply to nonbusiness property, it will be necessary to discuss each separately.

[b] Business Property--Casualties

Business property includes all property used in a trade or business or held for the production of income. In the case of business property, any loss due to damage or destruction of a taxpayer's property is deductible. n157 However, if a sudden termination of usefulness is not caused by a tangible external force, it is considered "obsolescence" and may be eligible for a depreciation deduction. n158

If business property is completely destroyed, the allowed loss is equal to the adjusted basis of the property less any insurance and/or salvage. This is the amount of loss even if the fair market value of the property before the casualty is less than the adjusted basis of the property. n159 If the property is only partially destroyed, the allowable loss is limited to the lesser of the loss in value at the time of destruction or the adjusted basis of the asset. The loss in value caused by the destruction is equal to the difference between the fair market value of the property immediately before and immediately after the casualty. n160 Of course, insurance and other recoveries reduce the loss. n161

For property used in a trade or business, the loss must be determined by reference to the single identifiable property

damaged or destroyed. In the case of land with improvements, a separate basis must be assigned to each depreciable improvement to distinguish it from the land, which is not depreciable. n162 This requirement limits the amount of loss by preventing taxpayers from applying their entire cost basis in a property to calculate the amount of a casualty loss on a depreciable improvement. n163

When property has been used for both business and nonbusiness purposes (such as a realtor's combined office and home), loss must be computed as though two separate pieces of property were involved. The loss is allocated between business and nonbusiness losses according to the percentages by which the asset is used for business and nonbusiness purposes. The amounts deductible as business and non-business losses are determined separately. The \$100 per casualty requirement (\$500, for tax years beginning in 2009) n164 and the limitation based on 10 percent of the taxpayer's adjusted gross income n165 apply only to the non-business portion of the loss. n166

[c] Nonbusiness Property--Casualties

Nonbusiness property encompasses all property not held for investment or for use in a trade or business. The rules governing the deductibility of losses due to damage or destruction of a taxpayer's nonbusiness property are much more strict than those governing business property; only losses arising from storm, fire, shipwreck, theft, or other casualty are allowable. n167 "Other casualty" has been defined as a loss created by an external force that is sudden, unusual, and unexpected. Damage to lawn, trees, and shrubs from an erroneous application of weed killer has been allowed as a loss resulting from an "other casualty. n167.1 The omission of one of the aforementioned requirements generally will result in disallowance of the loss. n168 A casualty loss deduction has been allowed, however, for losses that, at first blush, would not qualify as a casualty. In one case, the Tax Court held that negligent work done by workmen, resulting in significant damage to a residence, gave rise to a deductible casualty loss. n169 An "other casualty" must not be due to the deliberate actions of the taxpayer. n170

The Service has long held that drought losses are not sudden, unusual, and unexpected. However, the President of the United States has announced in the past that certain drought areas qualify as disaster areas because of the impact of a drought in those regions. Since the disaster loss election of *IRC Section 165(i)* is available only if the loss qualifies as a casualty loss, this announcement seems to contradict the Service position that drought losses are not casualty losses.

A nonbusiness property loss is limited to the lesser of:

- (1) the reduction in the property's fair market value as a result of the casualty; or
- (2) the property's adjusted basis for determining the loss from a sale or other disposition. n171

Where property has a high fair market value and a low basis, insurance proceeds may well exceed the adjusted basis of the property. In that case, no casualty loss will be allowed. n171.1 Nonbusiness casualty losses by individual taxpayers are allowed only to the extent that they exceed \$100 (\$500, for tax years beginning in 2009). n172 In addition, nonbusiness casualty losses are allowed only to the extent that the taxpayer's net personal casualty losses for the year exceed 10 percent of the taxpayer's adjusted gross income. n173

In determining the adjusted basis of nonbusiness property subject to a casualty loss, the adjusted basis of the entire economic unit is used (rather than only the adjusted basis allocable to the specific property destroyed). n174 A further limit for nonbusiness property is that any individual nonbusiness loss that is covered by insurance is allowed only if the individual files a timely insurance claim with respect to the loss. n175

[d] Special Election for Disaster Losses

A special rule applies for losses arising from federally declared disasters. Taxpayers may elect to deduct these losses for

the tax year immediately preceding the tax year in which the disaster occurred. n176 Details regarding the election are discussed in Chapter 1, at § 1.05[2].

NOTE:

A variety of other special rules can come into play with respect to losses attributable to federally declared disasters, including an increase in the standard deduction by the amount of the disaster loss deduction, n177 a 5-year NOL carryback for qualified disaster losses, n178 a deduction for qualified disaster expenses, n179 and a waiver of certain mortgage bond revenue requirements for principal residences that are destroyed in disasters. n180-181 These rules are discussed in detail in Chapter 1, at § 1.05.

[3] Voluntary Removal or Destruction of Buildings

No deduction is allowed for the cost of demolition or for any loss associated with the demolition of any building. n182 This applies regardless of when the building was acquired or what the intention of the taxpayer was at the time of acquisition or whether the taxpayer is the owner or merely the lessee of the land. In lieu of the deduction, the tax basis of the land on which the building is located is increased. n183 This rule makes the costs and losses from demolition nondeductible. It also prevents these costs from being considered part of the depreciable basis of any replacement building, even if the demolition is undertaken as a necessary step in the construction of a new building. As a result, the costs involved cannot be recovered until the land is sold. n184 Where the demolished structure was on leased land, presumably the recovery of the demolition cost will be deferred until the end of the lease.

Under *IRC Section 280B*, the term "structure" includes only a building and its structural components, but not other inherently-permanent structures, such as oil and gas storage tanks, blast furnaces and coke ovens. n185

IRC Section 280B takes precedence over contrary Code provisions that otherwise might apply. For example, although *IRC Section 168(i)(8)* may allow a landlord to take a loss on lessor improvements that are abandoned or disposed of at the end of a lease term, n186 that provision does not apply to the extent *IRC Section 280B* applies to the demolition of a structure, a portion of which may include leasehold improvements. n187 *IRC Section 280B* also renders obsolete existing regulations under *IRC Section 165* that deal with losses relating to the demolition of buildings, to the extent those regulations are inconsistent. n188

The Service has issued a revenue procedure under which certain structural modifications to a building are not treated as a demolition under *IRC Section 280B*, but are instead subject to treatment as otherwise provided in the Code. n191 Depending on the particular expenditure, the modification may be expensed, capitalized and depreciated, or simply capitalized. n192

The revenue procedure contains two safe harbors. For buildings other than certified historic structures, a modification is not treated as a demolition under *IRC Section 280B* if:

- (1) 75 percent or more of the existing external walls of the building are retained in place as internal or external walls; and
- (2) 75 percent or more of the existing internal structural framework of the building is retained in place. n193

For certified historic structures, n194 a modification will be treated as a demolition under *IRC Section 280B* unless the above conditions are met and the modification is also part of a certified rehabilitation. n195

For tax planning purposes, the renovation of an older or damaged building may provide greater tax benefits than the

demolition of the building. In general, rehabilitation costs increase the depreciable basis of the building. n196 Rehabilitation costs may be recovered over the statutory recovery period through depreciation deductions. n197 In addition to depreciation deductions, tax credits may be available for rehabilitation expenses for older industrial and commercial buildings as well as for certified historic structures. n198 The tax savings resulting from recovering rehabilitation expenses through depreciation deductions instead of increasing the basis of land for demolition expenses may be significant. n199

[4] Proceeds From Granting of Easements

Although the term "easement" is susceptible to many definitions, it generally is defined as an interest in real property for a special purpose. Before a determination can be made as to the proper tax treatment of the grantor's receipt of proceeds from the easement, it is necessary to know the effect of the easement on the grantor.

If the grantor is deprived of the beneficial use of the land, the grant is treated as a sale of all or a portion of the land on which gain or loss is recognized. If the grantor retains the beneficial use of the land, however, the transaction is considered a "sale of an easement in which proceeds are first applied to reduce the basis of the burdened land." n200 The following examples demonstrate this distinction:

Example:

Sale of an easement:

The owner of real property grants rights to the U.S. government to flood land for flood control purposes under a "flowage deed." The flooding occurs infrequently, and the owner reserves the use of the land when not flooded. The owner is deemed to retain beneficial use of the land, and the grant is considered a "sale of an easement."

The proceeds from the "sale of an easement" first reduce the basis of the subservient land, and only after all tax basis is recovered will gain or loss be recognized. n201

Example:

Sale of land:

The owner of real property grants an easement to a levee district to utilize the land to suit its needs. The land is usually flooded, and the owner is deprived of substantial use of the land under easement. The grant is deemed to be a "sale of land" since only bare legal title is retained by the owner.

Gain or loss must be recognized on the "sale of land," whereas when gain or loss is recognized, it is subject to the same rules as apply to a sale of land.

If the easement affects only part of the taxpayer's property, only the basis allocable to such portion is taken into account in determining the amount of gain realized. n202 As previously stated, any excess of proceeds from the sale of the easement over the allocated basis of the property subject to the easement results in taxable gain. n203

If it is not possible to allocate between the portion of the transaction that is a "sale of land" or a "sale of an easement," the transaction results in gain only if the consideration for the grant exceeds the basis of the entire property. In addition, when it is impossible to determine how much of the property would be affected by the easement, the consideration received for the easement reduces the basis of the entire property. n204

The following is an example of the tax treatment applicable to amounts received for granting an easement:

Example:

A purchased 20,000 acres of land for \$1 million to be used for raising cattle. A granted an easement to a public utility covering a narrow strip of land running through 1,000 acres. In return for this right, A received \$10,000. Based upon appraisals, A has allocated \$20,000 as the cost basis of the portion of the land burdened by the easement. In Case 1 below, the tax consequences are presented, assuming that A is deprived of all beneficial interest in the portion of the land burdened by the easement. In Case 2, A has retained beneficial use of the property.

Case 1		Case 2	
Allocated basis	\$..... 20,000	Allocated basis	\$.....20,0 00
Proceeds received	10,000	Proceeds received	10,000
Loss recognized	\$..... 10,000	Loss recognized	--0--
		Revised adjusted basis	\$.....10,0 00

If the proceeds had been \$30,000 a gain of \$10,000 would be recognized in both cases since the proceeds exceed the allocated basis of the easement.

Federal Taxes Affecting Real Estate

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 6 Dispositions of Real Estate by Sale, Abandonment and Casualty

1-6 Federal Taxes Affecting Real Estate § 6.05

§ 6.05 Charitable Contributions of Real Property

[1] In General

Charitable contributions of real estate can provide valuable deductions for both income tax and estate planning purposes. Subject to annual percentage limits that restrict the amount of deduction in a given year and limitations based on the characteristics of the donee organization, n205 a taxpayer making a charitable contribution of capital gain property held for more than one year is entitled to a deduction equal to the fair market value of the property at the time of the contribution. By making a contribution of appreciated real estate, a taxpayer may thereby take a deduction equal to the fair market value of the property and at the same time avoid recognizing any gain resulting from the appreciation. n206 There must, of course, be a bona fide transfer of property in order for a valid contribution to exist. n206.1 This requirement is not usually in issue. n206.2

The "fair market value" standard in valuing a charitable contribution of property contemplates a hypothetical seller and buyer, and precludes consideration of specific characteristics of any buyer or seller. That a property may have a value to a particular recipient that exceeds the fair market value does not permit a charitable deduction above the fair market value of the property on the open market. n207

If the real estate contributed has not been held long enough to qualify for long-term capital gain treatment if it were sold (more than one year), n208 then the amount of the charitable contribution deduction must be reduced by the amount of gain that would have not been long-term capital gain if the property contributed had been sold by the taxpayer at its fair market value. n209

Any amount not deductible in the year of contribution because of the annual percentage limitations may be carried over to the next five years. n210 Qualified conservation contributions of real property are entitled to a 15-year carryover period. n210.1

In general, no deduction is allowed for gifts of partial interests in property, other than certain transfers in trust. n211 There are three exceptions to this rule. A deduction is allowed for a charitable contribution of the following partial interests in real estate: n212

- (1) the remainder interest in a personal residence or farm; n213

(2) an undivided portion of the taxpayer's entire interest in property (such as a percentage interest in real estate); n214 and

(3) a qualified conservation easement. n215

If the rights in the contributed property retained by the donor are so insubstantial that the donor has, in substance, transferred his or her entire interest in the property, the partial interest limitations do not apply and the charitable deduction is allowed. n215.1

If a donor retains a purchase option on property donated to charity and the possibility that the option will be exercised is not remote, then the donation is not considered to be made until the option expires, and the value of the donation is determined at that time. n216

A contribution of a right to use property is treated as a contribution of less than the taxpayer's entire interest in the property. n217 As a result, the conveyance of rent-free use and occupancy of real property does not qualify as a deductible charitable contribution. n218 A taxpayer may, however, claim a charitable deduction for expenses incurred with respect to real property that is being used by a charitable organization. To do so, the taxpayer must substantiate any "contribution" of the expenses that exceed \$250 with a written acknowledgment from the charitable organization. n218.1

Charitable contribution deductions are allowed for donations of all types of properties. Deductions have been permitted for donations of grave sites, n219 oil and gas wells, speculative property rights in land submerged in a man-made canal, n220 and even air space easements. n221 The waiver of a federal grazing permit back to the federal government when an underlying ranch is sold, however, is ineligible for a charitable deduction because under federal law, the permit holder does not have a transferable interest that can be sold or transferred. n221.1

The fair market value of donated property is the most frequently litigated issue in charitable contribution cases. The issue is a question of fact to be determined from all relevant evidence in the record. n222 Valuation of real property in general is discussed in detail in Chapter 20, "Valuation of Real Property." One specific rule regarding valuation comes into play for charitable contributions of remainder interests in real property, and should be noted here. In determining the value of a remainder interest in real property for purposes of computing a charitable deduction for income tax purposes, depreciation (using the straight line method) and depletion (using the cost depletion method) of the property must be taken into account. n222.1 The value of the remainder interest must also be discounted at a rate of 6 percent per year unless the Secretary provides a different rate by regulations. n222.2

NOTE:

Depreciation is not taken into account in computing the valuation of the remainder for gift tax purposes. Therefore, the value of the charitable remainder interest will be higher for gift tax purposes than for purposes of computing the income tax deduction. n222.3

[2] Donative Intent

For a charitable deduction to be allowed when property is contributed, the taxpayer must have the requisite donative intent to make a gift. n223 To satisfy this criterion, the donation must be made with a detached and disinterested generosity, and without any expectation of something in return. n224 Both the subjective attitude of the grantor and the benefits which the grantor expects to directly or indirectly receive as a result of the transaction are considered. The question of whether a taxpayer makes a gift or has transferred property in return for receipt of economic benefits is one of fact. n225

For an estate to claim a charitable deduction, the decedent's will must provide evidence of a charitable intent. The transfer of real property to a charity by estate trustees or the executor does not entitle the estate to a charitable contribution deduction unless there is a clear direction from the decedent that a charitable transfer is intended. n226

A transfer that is motivated primarily by the anticipation of an economic benefit or is in fact an exchange in the form of a *quid pro quo* does not qualify as a charitable contribution. Charitable deductions have been denied where taxpayers transferred property:

- pursuant to a contractual obligation or local ordinance;
- in exchange for a zoning change or variance or permit; or
- in exchange for a promise by a city to construct schools or widen roads. n227

The IRS has also questioned a deduction for a donation of rights of way under the Rails to Trails program, finding the donation to be an attempt to gain a substantial economic benefit, i.e., avoid the cost and burden of maintaining unused rights-of-way but retain the right to reactivate service (a valuable asset) in the future should it become economically advantageous. n227.1

In at least one case, the IRS made a blanket assertion that taxpayers who donate conservation easements cannot have the requisite donative intent to make a gift because their primary motivation is to maintain property values and obtain a deduction. The court rejected that argument. n228 Indeed, courts can be fairly liberal in finding donative intent, notwithstanding the reservation of rights in the property, if something of value is in fact given. In one case, a deduction was permitted for the donation of a scenic easement even though the taxpayers reserved rights to subdivide the easement property, build four new family residences and roads, cut timber, and farm portions of the property. The court granted a partial deduction because the easement did impose restrictions on commercial activity, construction and various mining and other activities. The court found that the transfer of these restrictions was a transfer of something of value for which the taxpayers were entitled to a charitable deduction, notwithstanding their retention of other rights in the property. n229

In at least one ruling, however, the IRS has given a caveat that an conservation easement deduction may be lost, even without a *quid pro quo* arrangement or exchange if property retained by the taxpayer would increase as a result of the easement. n229.1

[3] Qualified Conservation Contributions; Scenic and Conservation Easements

[a] Overview of Requirements for Charitable Deduction

A charitable contribution deduction is allowed for a qualified conservation contribution. n230

A qualified conservation contribution is a contribution of a qualified real property interest to a qualified organization made exclusively for conservation purposes. n231 In addition, to be eligible for a deduction, the conservation purpose must be protected in perpetuity. n232

[b] Qualified Real Property Interest and Qualified Donee Requirements

The requirements of a qualified real property interest n233 and a qualified donee organization n234 are straightforward and seldom litigated. It is probably prudent, however, to restrict donations to established, well-known groups whose dedication to conservation purposes is unquestioned. Even then, the IRS may require restrictions in the deed regarding later transfers of that property by the initial donee. As a condition to granting a favorable ruling on an easement

donation, the IRS in rulings has required the taxpayer to add to the deed a restriction that the donee could transfer the easement only to a transferee that had a commitment to protect the conservation purposes of the donation and the resources to enforce the restrictions of the deed. n234.1 A contribution to a government entity or agency, such as a county, would also qualify. n234.2

A qualified real property interest includes the following: n235

- (1) an entire interest of the donor, other than a qualified mineral interest;
- (2) a remainder interest; and
- (3) a restriction granted in perpetuity on the use which may be made of the real property.

Scenic and conservation easements are included in the third category. A scenic easement is a negative easement--one that prevents certain activities on property. Typically, a scenic easement protects the public's right to sunlight or a view of landscape or sky. It may also bar an owner from erecting certain obstructive structures. A conservation easement is an affirmative easement that preserves or gives access to property to people who do not own or lease it.

[c] Qualified Conservation Purposes

In general, a contribution is for a conservation purpose if it does any of the following: n236

- Preserves land for outdoor recreation by, or the education of, the general public;
- Protects a relatively natural habitat of fish, wildlife, or plants, or similar ecosystem;
- Preserves open space for the scenic enjoyment of the general public or pursuant to a federal, state, or local governmental conservation policy, and this preservation will yield a significant public benefit; or
- Preserves a historically important land area or a certified historic structure.

Each of the above four prongs is a conservation purpose in and of itself, and a taxpayer's satisfaction of one of these prongs suffices to establish the requisite conservation purpose. n236.1 Uses that satisfy the open space requirement usually involve the preservation of the natural state of land. Legislative history gives the following as qualifying examples: n236.2

- Preservation of land as a public garden;
- Preservation of farmland pursuant to a State program for flood prevention and control;
- Preservation of a unique natural land formation for the enjoyment of the general public;
- Preservation of woodland along a Federal highway pursuant to a government program to preserve the appearance of the area so as to maintain the scenic view from the highway; and
- Preservation of a stretch of undeveloped oceanfront property located between a public highway and the ocean so as to maintain the scenic ocean view from the highway.

In one case, a taxpayer was denied a charitable contribution for a deed to the county that limited development of a specified property to 30 lots, rather than the 62 lots it was supposedly entitled to. The "open space" requirement was not

met because there were no restrictions placed on open space within the buildable area, nor did anything in the deed limit the size of homes that could be built, so as to protect the view from a nearby historical area, or prevent the owner from later seeking rezoning to a denser development classification. n236.3 The same case also held that the attempted easement did not satisfy the historic preservation requirement prong. The property being developed did not contain any historical structure to preserve, and the proposed limitation on development of land did nothing to protect historical structures on nearby land that the taxpayer did not own. n236.4

It is not usually difficult to satisfy the "conservation purpose" requirement, n236.5 but the IRS can take a surprisingly hard line at times. In one significant case, the full Tax Court rejected the IRS position, and held that an easement that restricted the development of Lake Michigan property in order to protect habitat for two endangered plant species and preserve a roosting spot for bald eagles satisfied the second prong in protecting a relatively natural habitat of fish, wildlife, or plants, or similar ecosystem. n236.6 The Sixth Circuit affirmed. n236.7

A problem with respect to conservation purposes can arise if a donation achieves one of the required conservation purposes, but would permit destruction of some other significant conservation interest. In that case, a deduction is prohibited. n237

[d] Perpetuity Requirement

As noted above, a contribution of a qualified real property interest may be exclusively for conservation purposes only if it is protected in perpetuity. n237.1 With respect to the perpetuity requirement, regulations require legally enforceable restrictions against property retained by the donor, and that the donor agree in writing to various donee rights to assist enforcement of the easement. n238 For donated property that is subject to a mortgage, the mortgagee must subordinate its rights in the property to the rights of the qualified organization to enforce the conservation purposes of the gift. n239 If a donation of property may be defeated by the performance of some act or by a subsequent event, a deduction is permitted only if the possibility of the occurrence of such an act or event on the date of the gift is so remote as to be negligible. n240 The term "so remote as to be negligible" has been defined in various ways. n241 To avoid problems over whether the possibility of a defeating event in the future is sufficiently remote, a donor should obtain a statement signed by the donee as a condition to the gift of property. The statement should indicate the donee's future plans with respect to the property, as well as the remoteness of the danger of a reversion.

If a subsequent unexpected change in the conditions surrounding the property that is the subject of a conservation easement donation can make impossible or impractical the continued use of the property for conservation purposes, the conservation purpose can nonetheless be treated as protected in perpetuity if the restrictions are extinguished by judicial proceeding and all of the donee's proceeds from a subsequent sale or exchange of the property are used by the donee organization in a manner consistent with the conservation purposes of the original contribution. n241.01 For this use-of-proceeds requirement to be met, the donor, at the time of the gift, must agree that the donation of the perpetual conservation restriction gives rise to a property right, immediately vested in the donee organization, with a fair market value that, at the time of the gift, is at least equal to the proportionate value that the perpetual conservation restriction bears to the value of the property as a whole. That proportionate value of the donee's property rights must remain constant. Thus, when a change in conditions give rise to the extinguishment of a perpetual conservation restriction, the donee organization, on a subsequent sale, exchange, or involuntary conversion of the subject property, must be entitled to a portion of the proceeds at least equal to that proportionate value of the perpetual conservation restriction. This requirement need not be met, however, if state law provides that the donor is entitled to the full proceeds from the conversion without regard to the terms of the prior perpetual conservation restriction. n241.02

NOTE:

A simple mortgage may cause this "use-of-proceeds" requirement to be unmet and lead to a denial of a charitable deduction. In one case, the taxpayers were denied a deduction for the donation of a facade easement on a property on which they had a mortgage. The lending bank retained a "prior claim" to all

proceeds of condemnation and to all insurance proceeds as a result of any casualty on the property. The bank retained its preference for these proceeds (over the charitable donee) until such time as the mortgage was satisfied and discharged. As a result of this priority, the court found that the facade easement donation was not protected in perpetuity, and it denied a charitable deduction. n241.03

As part of satisfying the perpetuity requirement, any deed to the qualified organization should also require that any transferee to whom the donee might transfer the easement also have a commitment to protect the conservation purposes of the easement and the resources to enforce easement restrictions. n241.1

A charitable deduction may be taken for a contribution of a permanent conservation easement where a mineral interest has been retained and surface mining is possible, as long as the probability of surface mining is so remote as to be negligible. n242

[e] Effect of Incidental Benefit to Donor

The existence of donative intent may be questioned if a taxpayer receives something other than an incidental benefit as a result of the grant of conservation restrictions where the easement limits the uses to which the taxpayer's property may be put. n243 The IRS has even indicated that a *quid pro quo* arrangement or exchange isn't necessary for an improper benefit to be present. In one ruling it suggested that a deduction for a conservation easement donation would be lost if property retained by the taxpayer would increase as a result of the donation. n243.1

[f] Valuation Issues

The most frequently litigated issue with respect to contributions of conservation and scenic easements is valuation. The fair market value of a restrictive conservation easement may be determined on the basis of comparable sales of similar easements. n243.2 Because sales of similar easements are usually unavailable for comparison, however, the value of the easement is ordinarily determined by applying a "before and after" approach with respect to the value of the burdened land. The value of the property before the contribution is compared to the value of the property after the contribution. The difference in the values is used as the fair market value of the easement. n244 The "before and after" method will not be applied mechanically, however, when other reliable indicators of market value are available. n245 The fair market value of an easement must be based on the highest and best use of the property on the valuation date. n246 Valuation of real property in general, including a discussion of highest and best use, is discussed in detail in Chapter 20, "Valuation of Real Property."

If the granting of a perpetual conservation restriction increases the value of any other property owned by the grantor or a related person, the amount of the deduction must be reduced by the amount of the increase in the value of that other property. The reduction is required whether or not the other property is contiguous to the donated property. n247

If the donor or related person receives or can expect to receive a substantial economic benefit as a result of the donation that is greater than benefits that will inure to the public as a result of the donation, no charitable contribution deduction is permitted. If the donor or related party receives a substantial benefit as a result of the donation, but the benefit is less than the amount of the transfer, a deduction is allowable for the excess of the value of the easement transferred over the amount of the benefit received or reasonably expected to be received by the donor or related person. n248

To meet the statutory exclusivity requirement, n249 a qualified conservation contribution must contain a prohibition on the right to extract minerals by any surface mining method, when a "qualified mineral interest" has been retained by the grantor. n250 A qualified mineral interest includes subsurface oil, gas or other minerals, and the right of access to them. n251 Sand and gravel have also been held to be "subsurface" minerals. n252

[g] Trust as Donor

If a trust is the donor of an otherwise qualified conservation contribution under *IRC Section 170(h)*, the IRS has ruled that no charitable or distribution deduction may be taken unless the contribution is from trust income. If the contribution is of trust principal, no deduction is permitted. n252.1 In the ruling, a complex trust contributed a perpetual conservation easement to a qualified charity with respect to a 20-acre parcel it owned. In the year of the contribution, the trust's gross income exceeded the value of the easement, and no distributions were made to trust beneficiaries. The governing instrument of the trust authorized the trustee to make charitable contributions, including contributions of trust income. The Service's rationale for denying a charitable deduction was that an estate or trust can take charitable deductions only as provided by *IRC Section 642(c)*, and under that provision, a charitable deduction is available only if the source of the contribution is gross income. The contribution, however, had been made with respect to trust principal. The IRS also disallowed a distribution deduction for the contribution because a deduction for amounts paid, permanently set aside, or to be used for charitable purposes are deductible by trusts only as provided in *IRC Section 642(c)*. n252.2

In a separate case, a trust conveyed conservation easements to property and allocated the charitable contribution to the sole income beneficiary, who then claimed the deduction (and carryovers of the deduction for later years) on his joint return. The Tax Court denied the deduction because although the taxpayer was treated as the owner of the income portion of the trust, he failed to prove that the conservation easements were made from the income portion of the trust. The mere fact that petitioner failed to withdraw trust income that he was due did not cause him to be treated as the owner of the corpus. The court also held that the taxpayer did not prove that the trust's distributions to charity were deemed distributions to him, followed by his contribution of the easements to charity. n252.3

COMMENT:

The Tax Court didn't mention *Revenue Ruling 2003-123* in *Goldsby*, since the trust was not claiming the deduction. Because a conservation easement necessarily relates to property, however, it is hard to imagine when a conservation easement ever could be made from the income portion, rather than the corpus, of a trust. Thus, it appears that the only way a conservation easement charitable contribution deduction can be taken for property held in a trust is for the trust to distribute the property to a beneficiary, who may then make the contribution of the easement.

[h] Percentage Limitations and Carryover Rules for Qualified Conservation Contributions

Separate percentage limitation and carryover rules apply with respect to the charitable deduction allowed for qualified conservation contributions, effective for contributions made in taxable years beginning after December 31, 2005, and before January 1, 2010. n252.4 *Notice 2007-50* provides detailed guidance regarding the statutory percentage limitations on qualified conservation contributions made by individuals. n252.4.1 The usual 30-percent contribution base limitation on contributions of capital gain property by individuals n252.4.2 does not apply to qualified conservation contributions. n252.5 Instead, individuals may deduct the fair market value of any qualified conservation contribution to an organization described in *IRC Section 170(b)(1)(A)* (i.e. public charities, private foundations other than private non-operating foundations, and certain governmental units) to the extent of the excess of 50 percent of the contribution base over the amount of all other allowable charitable contributions. n252.6 These contributions are not taken into account in determining the amount of other allowable charitable contributions. n252.7 Individuals are allowed to carry over any qualified conservation contributions that exceed the 50-percent limitation for up to 15 years. n252.8

Example:

Tom, an individual, has a contribution base of \$100,000. He makes a qualified conservation contribution of property with a fair market value of \$80,000 and makes other charitable contributions subject to the 50-percent limitation of \$60,000. Tom is allowed a deduction of \$50,000 in the current taxable year for the non-conservation contributions (50 percent of his \$100,000 contribution base) and is

allowed to carry over the excess \$10,000 for up to 5 years. n252.9 No current deduction is allowed for the qualified conservation contribution, n252.10 but the entire \$80,000 qualified conservation contribution may be carried forward for up to 15 years. n252.11

Even more lenient deduction limitations apply to qualified conservation contributions by qualified farmers and ranchers. A qualified farmer or rancher for this purpose means a taxpayer whose gross income from the trade or business of farming n252.12 is greater than 50 percent of the taxpayer's gross income for the taxable year. n252.13 In the case of an individual who is a qualified farmer or rancher for the taxable year in which the contribution is made, a qualified conservation contribution is allowable up to 100 percent of the excess of the taxpayer's contribution base over the amount of all other allowable charitable contributions. n252.14

Example:

Mary, an individual, is a qualified farmer. She has a contribution base of \$100,000. She makes a qualified conservation contribution of property with a fair market value of \$80,000 and makes other charitable contributions subject to the 50-percent limitation of \$60,000. Mary is allowed a deduction of \$50,000 in the current taxable year for the non-conservation contributions (50 percent of her \$100,000 contribution base) and is allowed to carry over the excess \$10,000 for up to 5 years. n252.15 She may also deduct an additional \$50,000 for the qualified conservation contribution. n252.16 The remaining \$30,000 of the qualified conservation contribution may be carried forward for up to 15 years as a contribution subject to the 100-percent limitation. n252.17

NOTE:

If a qualified conservation contribution is made by a pass-through entity such as a partnership or S corporation, the determination as to whether an individual who is a partner or shareholder is a qualified farmer or rancher for the taxable year of the contribution is made at the partner or shareholder level. n252.17.1

In the case of a corporation (other than a publicly traded corporation) that is a qualified farmer or rancher for the taxable year in which the contribution is made, n252.18 any qualified conservation contribution is allowable up to 100 percent of the excess of the corporation's taxable income n252.19 over the amount of all other allowable charitable contributions. n252.20 Any excess may be carried forward for up to 15 years as a contribution subject to the 100-percent limitation. n252.21 An additional condition applies for certain corporate contributions of property that is used in or is available for use in agriculture or livestock production. The 100-percent limitation applies for contributions of this property only if the property is subject to a condition that it remain available for that use. This condition applies only for contributions made after August 17, 2006; it does not apply to contributions made before that date. n252.22

[i] Reduced Deduction if Rehabilitation Credits Taken

For any qualified conservation contribution, the amount of the charitable deduction is reduced by an amount that bears the same ratio to the fair market value of the contribution as the sum of the rehabilitation credits n252.23 for the preceding five taxable years with respect to a building that is part of the contribution bears to the fair market value of the building on the date of the contribution. n252.24

Example:

Jim makes a qualified conservation contribution with respect to a building. The fair market value of the building with respect to which the contribution is made is \$1,000,000. In the five years before the year of the contribution is made, Jim has claimed rehabilitation credits with respect to the building

totaling \$100,000. He must therefore reduce the amount of the contribution by 10 percent, or \$100,000 (\$100,000/\$1,000,000). n252.25

[j] IRS Approaches to Challenging Conservation Contribution Deductions

The IRS has announced closer scrutiny of charitable deductions claimed in connection with charitable transfers of conservation easements, its key concerns being deductions claimed for that do not qualify as qualified conservation contributions, or deductions claimed for amounts that exceed the fair market value of the donated easement. It will challenge inappropriate transactions using various approaches: n252.26

- Disallowing improper deductions and imposing accuracy-related penalties for negligence and/or substantial valuation misstatements. n252.27
- Imposing a variety of penalties on promoters, appraisers, and other persons involved in these transactions. These penalties may include those imposed for promoting abusive tax shelters, n252.28 those imposed on income tax return preparers for understating tax liability, n252.29 and penalties for aiding and abetting the understatement of tax liability. n252.30
- Challenging the tax-exempt status of the charitable organization, based on the organization's operation for a substantial nonexempt purpose or impermissible private benefit.
- Assessing the tax on excess benefit transactions n252.31 against any disqualified person who receives an excess benefit from a conservation easement transaction, and against any organization manager who knowingly participates in the transaction.
- Reviewing promotions of transactions involving improper deductions for conservation easements.

NOTE:

Many feel that the IRS is taking an overly strict view of conservation easement donations, often asserting zero valuations for them. Some practitioners have claimed the IRS treats any claimed conservation easement deduction as a tax shelter, and that any claim of a conservation easement deduction will automatically trigger an audit. The IRS seems to give especially close scrutiny if the donation benefits the taxpayer in any way. n252.32

[4] Facade Easements

[a] In General

A facade easement is intended to preserve the exteriors of historic structures. n253 Charitable deductions for donations of facade easements are generally determined under the same rules that apply to scenic and conservation easements. n254 The easement is usually granted by a property owner to a governmental agency or nonprofit institution entrusted with responsibility for preserving historic structures. Typical facade easements bar the owner's modification, remodeling, demolition or extension of the facade or structure without the prior written consent of the recipient of the easement and generally require the owner to maintain the facade in good condition. n255

As with scenic and conservation easements, the usual issue regarding the charitable donation of a facade easement is one of valuation. The donor's qualified appraisal must identify the method of valuation and the specific basis for the valuation of the easement. n255.1 Due to the general absence of a market for the sale of them, the fair market value of a facade easement is ordinarily determined in the same manner as for other conservation easements--by comparing the value of the total property before and after the grant of the easement. The difference in value is the fair market value of the easement. n256 As with other charitable contributions, deductions for donations of facade easements may be denied

if statutory requirements related to acknowledgment, record-keeping, or appraisal are not followed. n256.1

The grant of a facade easement is a disposition that may result in recapture of the rehabilitation tax credit. n257

[b] Special Rules for Buildings in Registered Historic Districts

Special rules apply to charitable contributions of facade easements on the exterior of buildings that are located in a registered historic district. A charitable deduction is allowable with respect to those buildings, but only if the qualified real property interest transferred that relates to the exterior of the building preserves the entire exterior of the building, including the space above the building, the sides, the rear, and the front of the building. n257.1 In addition, the qualified real property interest must provide that no portion of the exterior of the building may be changed in a manner inconsistent with the historical character of the exterior. n257.2 These requirements would prevent a contribution of a restriction on air rights or unused development rights alone from qualifying for a deduction with respect to a certified historic structure. n257.2.1 The donor and the donee must also enter into a written agreement certifying, under penalty of perjury, that the donee is a qualified organization, with a purpose of environmental protection, land conservation, open space preservation, or historic preservation, and that the donee has the resources to manage and enforce the restriction and a commitment to do so. n257.3

For any contribution relating to a registered historic district made after August 17, 2006, taxpayers must include with the return for the taxable year of the contribution a qualified appraisal of the qualified real property interest (irrespective of the claimed value of that interest) and attach the appraisal with the taxpayer's return, photographs of the entire exterior of the building, n257.4 and descriptions of all current restrictions on development of the building, including, for example, zoning laws, ordinances, neighborhood association rules, restrictive covenants, and other similar restrictions. Failure to obtain and attach an appraisal or to include the required information will result in disallowance of the deduction. n257.5

Taxpayers claiming a deduction for a qualified conservation contribution with respect to the exterior of a building located in a registered historic district in excess of \$10,000 must pay a \$500 fee to the IRS, or the deduction is not allowed. n257.6

[5] Bargain Sales

A taxpayer may make a charitable contribution through a bargain sale of property. To qualify for a charitable deduction:

- (1) the sale of property must be to a qualifying organization;
- (2) it must be accompanied by a donative intent; and
- (3) the selling price must be less than the fair market value of the property. n258

The fair market value of the property is measured on the date of the contribution. n259 The amount of the charitable contribution is the difference between the fair market value of the property at the time of contribution and the sales price. n260 The restrictions that apply to charitable donations of real property generally also apply to bargain sales that qualify for a charitable deduction. n261

If a taxpayer is allowed a charitable deduction by reason of a bargain sale, then the adjusted basis for determining the gain from that sale is the portion of the adjusted basis of the property which bears the same ratio to the adjusted basis as the amount realized bears to the fair market value of the property. n261.1 This rule prevents a taxpayer from subtracting the full adjusted basis of the property from the amount received. Instead, a taxpayer may deduct only the amount of the adjusted basis proportional to the amount realized in the part sale over the fair market value of the entire property.

n261.2

Example:

T Corporation owns property with a fair market value of \$1 million and an adjusted basis of \$200,000. *T* makes a bargain sale of the property to a qualified charitable organization for \$500,000. *T*'s adjusted basis for determining gain on the sale is \$100,000 [$\$200,000 \times \$500,000 / \$1,000,000$]. *T* therefore recognizes \$400,000 gain on the sale, and is allowed a \$500,000 charitable contribution deduction.

n261.3

NOTE:

The IRS has announced closer scrutiny of charitable deductions claimed in connection with bargain sales when in order to determine whether part of the stated purchase price is inappropriately categorized as a charitable contribution. One scenario that has occurred is for the charitable organization to purchase the property and place a conservation easement on it. Then, the charitable organization sells the property subject to the easement to a buyer for a price that is substantially less than the price paid by the charitable organization for the property. As part of the sale, the buyer makes a second payment, designated as a charitable contribution, to the charitable organization. The total of the payments from the buyer to the charitable organization fully reimburses the charitable organization for the cost of the property. The IRS will use a "substance over form" rationale to recharacterize the above transactions. It may therefore treat the total of the buyer's payments to the charitable organization as the purchase price paid by the buyer for the property. It may also impose a variety of penalties and seek to challenge the tax-exempt status of the charitable organization, based on the organization's operation for a substantial nonexempt purpose or impermissible private benefit.

[6] Acknowledgment by Donee

In order to claim a charitable deduction for contributed real estate, the donor must generally substantiate the contribution by a contemporaneous written acknowledgment of the contribution by the donee. n263 The acknowledgment must describe the property, state whether the donee provided goods or services in consideration for the property or any part of it, and estimate the value of those goods or services. If the goods or services are solely intangible religious benefits, a statement to that effect must be included. n264 Regulations detail further requirements with respect to the acknowledgment. n264.1 Failure to obtain an acknowledgement that complies with statutory and regulatory requirements may cause deductions to be disallowed. n264.2

The acknowledgement is not required if the donee organization files a return including specified information about the contribution. n265-266

[7] Reporting and Return Requirements**[a] In General**

In general, if the total charitable deduction claimed for non-cash property exceeds \$500, a taxpayer must file IRS Form 8283 (Noncash Charitable Contributions) with the IRS that describes the property. n267 C corporations (other than personal service corporations and closely-held corporations) are required to file Form 8283 only if the deduction claimed exceeds \$5,000.

[b] Returns for Dispositions of Donated Property by Donee

A donee of charitable deduction property that disposes of it within three years of its receipt must make a return (Form 8282, Donee Information Return), showing the following: n267.1

- the name, address, and TIN of the donor;
- a description of the property;
- the date of the contribution;
- the amount received on the disposition;
- the date of the disposition;
- a description of the donee's use of the property; and
- a statement indicating whether the use of the property was related to the purpose or function constituting the basis of the donee's tax exemption. n267.2

For purposes of the return requirement, "charitable deduction property" includes property (other than publicly traded securities) for which the donor claimed a charitable contribution deduction, if the claimed value of that property (plus the claimed value of similar items of property donated by the donor to one or more donees) exceeds \$5,000. n267.3

[c] Reporting "Transactions of Interest"

The IRS has issued a notice regarding reporting requirements with respect to charitable contributions of successor member interests in entities holding real estate, when the taxpayer claims a deduction for the contribution that is significantly higher than the amount the taxpayer paid to acquire the interest. The notice identifies various transactions as "transactions of interest," n267.4 and alerts persons involved with the transactions to certain reporting responsibilities relating to that involvement. n267.5

The notice describes a fact pattern involving an LLC that owns real property subject to a long-term lease. An Advisor owns all of the membership interests in the LLC, and enters into an agreement under which the Advisor continues to own the membership interests in LLC for a term of years (the Initial Member Interest). A taxpayer purchases the successor member interest in LLC (the Successor Member Interest), which entitles the taxpayer to own all of the membership interests in LLC upon the expiration of the term of years. In some variations of the transaction, the taxpayer may hold the Successor Member Interest through another entity, such as a single-member LLC. Further, the agreement may refer to the Successor Member Interest as a remainder interest. After holding the Successor Member Interest for more than one year (in order to treat the interest as long-term capital gain property), the taxpayer transfers the Successor Member Interest to a charitable organization. The taxpayer claims the value of the Successor Member Interest to be an amount that is significantly higher than the taxpayer's purchase price (for example, an amount that is a multiple of taxpayer's purchase price and a price that exceeds normal appreciation). The taxpayer claims a charitable contribution deduction based on this higher amount, determining the value by taking into account an appraisal obtained by or on behalf of Advisor or taxpayer of the fee interest in the underlying real property and the *IRC Section 7520* valuation tables. n267.6

Transactions that are the same as, or substantially similar to, the above transactions are treated by the IRS as "transactions of interest" for purposes of various reporting requirements. n267.7 Persons entering into those transactions must disclose them, in accordance with regulations. n267.8 Similarly, material advisors who make a tax statement with respect to them also have disclosure and list maintenance obligations. n267.9

The notice also explains which parties will be treated as participants in the transaction, n267.10 the time of required disclosure, n267.11 and the material advisor threshold amount. n267.12

Persons required to disclose these transactions under regulations n267.13 who fail to do so may be subject to the penalty under *IRC Section 6707A*. Persons required to disclose these transactions as a "reportable transaction" n267.14 who fail to do so may be subject to the penalty under *IRC Section 6707(a)*. Persons required to maintain lists of advisees n267.15 who fail to do so (or who fail to provide those lists when requested by the IRS) may be subject to the penalty under *IRC Section 6708(a)*. In addition, the Service may impose other penalties on persons involved in these transactions or substantially similar transactions, including accuracy-related penalties. n267.16

[8] Appraisal Requirements

All C corporations, individuals, closely-held corporations, personal service corporations, partnerships, and S corporations must obtain a qualified appraisal of contributed real property if the amount of the deduction claimed exceeds \$5,000. n268 In addition, if the amount of the contribution of property other than cash, inventory, or publicly traded securities exceeds \$500,000, then the donor (whether an individual, partnership, or corporation) must attach the qualified appraisal to the donor's tax return. n269 For purposes of these dollar thresholds, property and all similar items of property donated to one or more donees are treated as one property. n270 A donor that fails to properly substantiate a charitable contribution of property may be denied charitable contribution deduction. n271 If the donor is a partnership or S corporation, the deduction is denied at the partner or shareholder level. n272 The denial of the deduction does not apply if it is shown that the failure to substantiate is due to reasonable cause and not to willful neglect. n273 Pursuant to statutory authority, n274 the IRS has issued regulations imposing various recordkeeping, return, and appraisal requirements with respect to charitable contribution deductions. n274.1 Courts have ruled that substantial compliance with the regulations will suffice to allow deductions. n274.2

A qualified appraisal is one that is treated as a qualified appraisal under regulations or other guidance provided by the Secretary, and which is conducted by a qualified appraiser in accordance with generally accepted appraisal standards and regulations or other guidance provided by the Secretary. n275 The appraisal, as well as the Declaration of Appraiser of Form 8283, must be signed by an individual, not by an appraisal firm. n275.1 If someone other than the person(s) who conducted the appraisal is signing the appraisal, the appraisal is not a qualified appraisal, and the claimed deduction may be disallowed. This is regardless of whether the person signing is or is not an appraiser. n275.2 If two or more appraisers contribute to an appraisal, each appraiser must sign the appraisal. n275.3

A qualified appraiser is an individual who: n276

- has earned an appraisal designation from a recognized professional appraiser organization or has otherwise met minimum education and experience requirements to be determined by the IRS in regulations;
- regularly performs appraisals for which he or she receives compensation;
- can demonstrate verifiable education and experience in valuing the type of property for which the appraisal is being performed;
- has not been prohibited from practicing before the IRS by the Secretary at any time during the three years preceding the conduct of the appraisal; and
- meets other requirements as may be provided under applicable Treasury regulations.

NOTE:

A civil penalty is imposed on any person who prepares an appraisal that is to be used to support a tax position if the appraisal results in a substantial or gross valuation misstatement, or a substantial estate or gift tax valuation understatement. n277 The penalty is equal to the greater of \$1,000 or 10 percent of the

understatement of tax resulting from a substantial or gross valuation misstatement, up to a maximum of 125 percent of the gross income derived from the appraisal. n278 The penalty does not apply if the appraiser establishes that it was "more likely than not" that the appraisal was correct. n279 The penalty is in addition to any other penalties that may be imposed. n280

[9] Contributions to Donor Advised Funds

[a] Overview

Donor advised funds and contributions of appreciated real estate to them have proliferated in recent years. Many financial institutions have formed charitable corporations for the principal purpose of offering donor advised funds, sometimes referred to as "commercial" donor advised funds. In addition, some established charities have begun operating donor advised funds in addition to their primary activities. The IRS has recognized several organizations that sponsor donor advised funds, including "commercial" donor advised funds, as *IRC Section 501(c)(3)* public charities.

Donor advised funds are typically accounts to which donors may contribute real estate or other assets and thereafter provide non-binding advice or recommendations with regard to distributions from the fund or the investment of assets in the fund. Donors who make contributions to charities for maintenance in a donor advised fund generally claim a charitable contribution deduction at the time of the contribution, n281 but if the sponsor of the fund does not have control over the assets (or permits a donor to exercise control over amounts contributed), the donor's contributions may not qualify for a charitable deduction. In the case of a community foundation, the contribution may be treated as being subject to a material restriction or condition by the donor.

The Code provides a statutory framework for evaluating charitable contributions to donor advised funds, and several strict penalties intended to prevent donor control over assets contributed to those funds. Provisions include the following:

- a detailed statutory definition of a donor advised fund; n282
- denial of a charitable deduction for certain contributions to maintain a donor advised fund; n283
- application of the excess business holdings tax to donor advised funds. n284
- imposition of the excess benefits transactions taxes to various payments from a donor advised fund to certain disqualified individuals; n285
- imposition of a 20-percent tax on taxable distributions from a donor advised fund, and a 5-percent tax (not to exceed \$10,000) on managers who knowingly approve a taxable distribution; n286
- imposition of a 125-percent tax if certain parties connected with a donor advised fund provide advice as to a distribution that results those parties receiving a more than incidental benefit, and a 10-percent tax (not to exceed \$10,000) on managers who knowingly agree to the distribution; n287 and
- reporting and disclosure requirements for sponsoring organizations of donor advised funds. n288

[b] Definition of "Donor Advised Fund" and "Sponsoring Organization"

Subject to several exceptions, discussed below, a "donor advised fund" is a fund or account that is: (1) separately identified by reference to contributions of a donor or donors (2) owned and controlled by a sponsoring organization and (3) with respect to which a donor (or any person appointed or designated by a donor (a "donor advisor")) has, or

reasonably expects to have, advisory privileges with respect to the distribution or investment of amounts held in the separately identified fund or account by reason of the donor's status as a donor. All three prongs of the definition must be met in order for a fund or account to be treated as a donor advised fund. n289 A "sponsoring organization" is an organization that: (1) is a qualifying charitable organization under *IRC Section 170(c)* (other than a governmental entity n290 and without regard to any requirement that the organization be organized in the United States); (2) is not a private foundation; n291 and (3) maintains one or more donor advised funds. n292

NOTE:

The Joint Committee conference report accompanying the legislation elaborates extensively on the definition of "donor advised fund" and how and when various relationships between a donor and the receiving entity will cause a fund to fall within or outside of that definition. Each of the three prongs of the definition is discussed at length. The first prong of the definition requires that a donor advised fund be separately identified by reference to contributions of a donor or donors. n293 The conference report elaborates on this requirement at some length. It states that a distinct fund or account of a sponsoring organization does not meet this prong of the definition unless the fund or account refers to contributions of a donor or donors, such as by naming the fund after a donor, or by treating a fund on the books of the sponsoring organization as attributable to funds contributed by a specific donor or donors. Although a sponsoring organization's general fund is a "fund or account," a general fund will not usually be treated as a donor advised fund because the general funds of an organization typically are not separately identified by reference to contributions of a specific donor or donors; rather contributions are pooled anonymously within the general fund. Similarly, a fund or account of a sponsoring organization that is distinct from the organization's general fund and that pools contributions of multiple donors generally will not meet the first prong of the definition unless the contributions of specific donors are in some manner tracked and accounted for within the fund. Accordingly, if a sponsoring organization establishes a fund dedicated to the relief of poverty within a specific community, or a scholarship fund, and the fund attracts contributions from several donors but does not separately identify or refer to contributions of a donor or donors, the fund is not a donor advised fund even if a donor has advisory privileges with respect to the fund. However, a fund or account may not avoid treatment as a donor advised fund even though there is no formal recognition of separate contributions on the books of the sponsoring organization if the fund or account operates as if contributions of a donor or donors are separately identified. The Secretary has the authority to look to the substance of an arrangement, and not merely its form. In addition, a fund or account may be treated as identified by reference to contributions of a donor or donors if the reference is to persons related to a donor. For example, if a husband made contributions to a fund or account that in turn is named after the husband's wife, the fund is treated as being separately identified by reference to contributions of a donor. n294

As to the second prong of the definition--that the fund be owned and controlled by a sponsoring organization n295--the conference report notes that to the extent that a donor or person other than the sponsoring organization owns or controls amounts deposited to a sponsoring organization, a fund or account is not a donor advised fund. Furthermore, in cases where a donor retains control of an amount provided to a sponsoring organization, there may not be a completed gift for purposes of the charitable contribution deduction. n296

The third prong of the definition provides that with respect to a fund or account of a sponsoring organization, a donor or donor advisor has or reasonably expects to have advisory privileges with respect to the distribution or investment of amounts held in the fund or account by reason of a donor's status as a donor. n297 The conference report notes that advisory privileges are distinct from a legal right or obligation. For example, if a donor executes a gift agreement with a sponsoring organization that specifies certain enforceable rights of the donor with respect to a gift, the donor will not be treated as

having "advisory privileges" due to those enforceable rights for purposes of the donor advised fund definition. The presence of an advisory privilege may be evident through a written document that describes an arrangement between the donor or donor adviser and the sponsoring organization whereby a donor or donor adviser may provide advice to the sponsoring organization about the investment or distribution of amounts held by a sponsoring organization, even if those privileges are not exercised. The presence of an advisory privilege also may be evident through the conduct of a donor or donor adviser and the sponsoring organization. For example, even in the absence of a writing, if a donor regularly provides advice to a sponsoring organization and the sponsoring organization regularly considers that advice, the donor has advisory privileges under the provision. Even if advisory privileges do not exist at the time of a contribution, later acts by the donor (through the provision of advice) and by the sponsoring organization (through the regular consideration of advice) may establish advisory privileges subsequent to the time of the contribution. For example, if a past donor of a building or land later notifies a sponsoring organization that he would like the organization to distribute \$10,000 to a specific charitable organization n298 although the mere act of providing advice does not establish an advisory privilege, if the sponsoring organization distributed the \$10,000 to the organization specified by the donor in consideration of the donor's advice, and reinforced the donor in some manner that future advice similarly would be considered, advisory privileges (or the reasonable expectation thereof) might be established. However, the mere provision of advice by a donor or donor adviser does not mean the donor or donor adviser has advisory privileges. For example, a donor's singular belief that he or she has advisory privileges with respect to the contribution does not establish an advisory privilege; there must be some reciprocity on the part of the sponsoring organization. n299

The conference report states that a person reasonably expects to have advisory privileges if both the donor or donor adviser and the sponsoring organization have reason to believe that the donor or donor adviser will provide advice and that the sponsoring organization generally will consider it. Thus, a person reasonably may expect to have advisory privileges even in the absence of the actual provision of advice. However, a donor's expectation of advisory privileges is not reasonable unless it is reinforced in some manner by the conduct of the sponsoring organization. If, at the time of the contribution, the sponsoring organization had no knowledge that the donor had an expectation of advisory privileges, or no intention of considering any advice provided by the donor, then the donor does not have a reasonable expectation of advisory privileges. Ultimately, the presence or absence of advisory privileges (or a reasonable expectation thereof) depends upon the facts and circumstances, which in turn depend upon the conduct (including any agreement) of both the donor or donor adviser and the sponsoring organization with respect to the making and consideration of advice. n300

A further requirement of the third prong is that the reasonable expectation of advisory privileges is by reason of the donor's status as a donor. n301 The conference report states that, under this requirement, if a donor's reasonable expectation of advisory privileges is due solely to the donor's service to the organization--as by reason of the donor's position as an officer, employee, or director of the sponsoring organization--then the third prong of the definition is not satisfied. For instance, in general, a donor who is a member of the board of directors of the sponsoring organization may provide advice in his or her capacity as a board member with respect to the distribution or investment of amounts in a fund to which the board member contributed. However, if by reason of that donor's contribution to the fund, the donor secured an appointment on a committee of the sponsoring organization that advises how to distribute or invest amounts in that fund, the donor may have a reasonable expectation of advisory privileges, notwithstanding that the donor is an officer, employee, or director of the sponsoring organization. n302

The committee report notes that the third prong of the definition is applicable to a donor or any person appointed or designated by that donor (the donor adviser). For purposes of this prong, a person appointed or designated by a donor adviser is treated as being appointed or designated by a donor. In addition, for

purposes of any exception to the definition of a donor advised fund, to the extent a donor recommends to a sponsoring organization the selection of members of a committee that will advise as to distributions or investments of amounts in a fund or account of the sponsoring organization, those members are not treated as appointed or designated by the donor if the recommendation of those members by the donor is based on objective criteria related to the expertise of the member. For example, if a donor recommends that a committee of a sponsoring organization that will provide advice regarding scholarship grants for the advancement of science at local secondary schools should consist of persons who are the heads of the science departments of those schools, then the donor generally would not be considered to have appointed or designated those persons, and they would not be treated as donor advisors. n303

There are several exceptions to the definition of a donor advised fund. n304 The term does not include a fund or account that makes distributions only to a single identified organization or governmental entity. n305 The conference report elaborates on this exception. It notes that an endowment fund owned and controlled by a sponsoring organization that is held exclusively to for the benefit of that sponsoring organization is not a donor advised fund even if the fund is named after its principal donor and the donor has advisory privileges with respect to the distribution of amounts held in the fund to the sponsoring organization. Accordingly, a donor that contributes to a university for purposes of establishing a fund named after the donor that exclusively supports the activities of the university is not a donor advised fund even if the donor has advisory privileges regarding the distribution or investment of amounts in the fund. n306

A donor advised fund also does not include a fund or account with respect to which a donor or donor advisor provides advice as to which individuals receive grants for travel, study, or other similar purposes, provided that (1) the donor's or donor advisor's advisory privileges are performed exclusively by that donor or donor advisor in that person's capacity as a member of a committee all of the members of which are appointed by the sponsoring organization, (2) no combination of a donor or donor advisor or persons related to them, control, directly or indirectly, that committee, and (3) all grants from the fund or account are awarded on an objective and nondiscriminatory basis pursuant to a procedure approved in advance by the board of directors of the sponsoring organization, and that procedure is designed to ensure that all such grants meet statutory requirements concerning grants to individuals by private foundations. n307

In addition, the Secretary may exempt a fund or account from treatment as a donor advised fund if it is advised by a committee not directly or indirectly controlled by a donor, donor advisor, or persons related to a donor or donor advisor. n308 The conference report indicates that it is intended that indirect control includes the ability to exercise effective control. For example, if a donor, a donor advisor, and an attorney hired by the donor to provide advice regarding the donor's contributions constitute three of the five members of an advising committee, the committee would be treated as being controlled indirectly by the donor under the exception. Board membership alone does not establish direct or indirect control. In general, under this authority, the Secretary may establish rules regarding committee advised funds generally that, if followed, would result in the fund not being treated as a donor advised fund. The Secretary also may establish rules excepting certain types of committee-advised funds, such as a fund established exclusively for disaster relief, from the donor advised fund definition. n309 Finally, the Secretary may exempt a fund or account from treatment as a donor advised fund if it benefits a single identified charitable purpose. n310

[c] Denial of Charitable Deduction for Contributions to Maintain Donor Advised Fund

Contributions to a sponsoring organization for maintenance in a donor advised fund are not eligible for a charitable deduction for income tax purposes if the sponsoring organization is a veterans organization, n311 a fraternal society, n312 or a cemetery company. n313 For gift tax purposes, a contribution to a sponsoring organization for maintenance in a donor advised fund is not deductible if the sponsoring organization is a fraternal society n314 or a veterans' organization. n315 For estate tax purposes, the contribution to a sponsoring organization for maintenance in a donor advised fund is not deductible if the sponsoring organization is a fraternal society n316 or a veterans' organization. n317

In addition, contributions to a sponsoring organization for maintenance in a donor advised fund are not eligible for a

charitable deduction for income, gift, or estate tax purposes if the sponsoring organization is a Type III supporting organization (other than a functionally integrated Type III supporting organization). n318 A functionally integrated Type III supporting organization is a Type III supporting organization that is not required under regulations established by the Secretary n319 to make payments to supported organizations due to the activities of the organization related to performing the functions of, or carrying out the purposes of, those supported organizations. n320

Even if the above restrictions do not preclude a deduction, a donation to a donor advised fund is deductible only if statutory substantiation requirements are met n321 and if the donor obtains, with respect to each charitable contribution to a sponsoring organization to be maintained in a donor advised fund, a contemporaneous written acknowledgment n322 from the sponsoring organization providing that the sponsoring organization has exclusive legal control over the assets contributed. n323

[d] Excess Business Holdings Tax Applies to Donor Advised Funds

The excess business holdings tax applies to donor advised funds. n324 Thus, a 10 percent tax is imposed on the excess business holdings of a donor advised fund n325, with a 200 percent additional tax imposed if the donor advised fund has excess business holdings in a business enterprise at the close of the taxable period with respect to those holdings. n326 The taxes may be abated in certain cases. n327

In applying the excess business holdings rules to donor advised funds, a "disqualified person" with respect to a donor advised fund is a donor, donor advisor, a member of the family of a donor or donor advisor, or a 35-percent controlled entity of any such person. n328 Complex transition rules apply to the holdings that a donor advised fund has on August 17, 2006. n329

[e] Taxes on Excess Benefit Transactions

Any grant, loan, compensation, or other similar payment from a donor advised fund to a person that with respect to that fund is a donor, donor advisor, or a person related to a donor or donor advisor automatically is treated as an excess benefit transaction. n330 The entire amount paid to any such person is treated as the amount of the excess benefit n331 upon which the excess benefits transactions taxes are based. n332 The taxes may be abated in certain cases. n333

NOTE:

The conference report accompanying the legislation clarifies that "other similar payments" that can be treated as an excess benefit transaction include payments in the nature of a grant, loan, or payment of compensation, such as an expense reimbursement. "Other similar payments," however, do not include payments pursuant to bona fide sale or lease of property, which instead are subject to the general rules of *IRC Section 4958* under the special disqualified person rule described below. Also as described below, payment by a sponsoring organization of, for example, compensation to a person who both is a donor with respect to a donor advised fund of the sponsoring organization and a service provider with respect to the sponsoring organization generally, will not be subject to the automatic excess benefit transaction rule unless the payment (of a grant, loan, compensation, or other similar payment) properly is viewed as a payment from the donor advised fund and not from the sponsoring organization. n334

For purposes of the taxes on excess benefits transactions, donors and donor advisors with respect to a donor advised fund (as well as persons related to a donor or donor advisor) are treated as disqualified persons with respect to transactions with that donor advised fund (though not necessarily with respect to transactions with the sponsoring organization more generally). n335 For example, if a donor to a donor advised fund purchased real estate from the fund, the purchase is subject to the excess benefits transaction rules because the donor is a disqualified person with respect to the fund. Thus, if as a result of the purchase, the donor receives an excess benefit n336 then the donor is subject to tax.

n337 If the purchase was of real estate that was contributed by the donor, a factor that may indicate the presence of an excess benefit is if the amount paid by the donor to acquire the property is less than the amount the donor claimed the property was worth for purposes of any charitable contribution deduction of the donor. In addition, if a donor advised fund distributes property to the sponsoring organization of the fund prior to purchase by the donor, consideration should be given to whether the distribution to the sponsoring organization prior to the purchase was intended to circumvent the disqualified person rule of *IRC Section 4958*. If so, the distribution may be disregarded, with the result that the purchase is treated as being made from the donor advised fund and not from the sponsoring organization. n338

A person who is a donor to a donor advised fund and thus a disqualified person with respect to the fund n339 also may be a service provider with respect to the sponsoring organization. In general the sponsoring organization's transactions with the service provider are not subject to *IRC Section 4958* unless the service provider is a disqualified person with respect to the sponsoring organization (e.g., if the service provider serves on the board of directors of the sponsoring organization), or unless the transaction is not properly viewed as a transaction with the sponsoring organization but in substance is a transaction with the service provider's donor advised fund. n340 If the transaction properly is viewed as a transaction with the donor advised fund of a sponsoring organization, then the transaction is subject to *IRC Section 4958*, and, as described above, if the transaction involves payment of a grant, loan, compensation, or other similar payment, then the transaction is subject to the special automatic excess benefit transaction rule. n341

The conference report gives an example to explain the above rules. For example, if a sponsoring organization pays an amount as part of a service contract to a service provider (a bank, for example) who also is a donor to a donor advised fund of the sponsoring organization, and those amounts reasonably are charged uniformly in whole or in part as routine fees to all of the sponsoring organization's donor advised funds, the transaction generally is considered to be between the sponsoring organization and the service provider in that service provider's capacity as a service provider. The transaction is not considered to be a transaction between a donor advised fund and the service provider even though an amount paid under the contract was charged to a donor advised fund of the service provider. n342

An investment advisor (as well as persons related to the investment advisor) is treated as a disqualified person with respect to the sponsoring organization under the excess benefits transactions rules. n343 A "investment advisor" means, with respect to any sponsoring organization, any person (other than an employee of the sponsoring organization) compensated by the sponsoring organization for managing the investment of, or providing investment advice with respect to, assets maintained in donor advised funds (including pools of assets all or part of which are attributed to donor advised funds) owned by the sponsoring organization. n344

[f] Tax Imposed on Distributions from Donor Advised Funds

A 20-percent tax is imposed on taxable distributions from a donor advised fund. The tax is imposed on the sponsoring organization. n345 In addition, an excise tax equal to five percent of the amount of the distribution is imposed against any manager of the sponsoring organization who knowingly approved the distribution, not to exceed \$10,000 with respect to any one taxable distribution. n346 The taxes are subject to abatement if the event triggering the tax was due to reasonable cause and not willful neglect, and is corrected. n347 The taxes are effective for tax years beginning after August 17, 2006. n348

A "taxable distribution" is generally any distribution from a donor advised fund to the following: n349

- to any natural person;
- to any other person for any purpose other than one specified in *IRC Section 170(c)(2)(B)* (generally, a charitable purpose); or
- to any other person, if the sponsoring organization does not exercise expenditure responsibility with

respect to the distribution in accordance with statutory standards. n350

A taxable distribution does not, however, include any a distribution to from a donor advised fund to the following:
n351

- an organization described in *IRC Section 170(b)(1)(A)* (other than to a disqualified supporting organization); n352
- the sponsoring organization of the donor advised fund making the distribution; or
- another donor advised fund.

NOTE:

The conference report accompanying the donor advised fund legislation clarifies the meaning of the requirement that a distribution be "to" an organization described in *IRC Section 170(b)(1)(A)* in order to avoid being a taxable distribution. n353 Rules similar to those in *Treasury Regulation Section 53.4945-5(a)(5)* are to apply. Thus, if a sponsoring organization makes a good faith determination (under standards similar to those currently applicable for private foundations) that a distributee organization is an organization described in *IRC Section 170(b)(1)(A)* (other than a disqualified supporting organization), then a distribution to the organization is not considered a taxable distribution. n354

[g] Tax on Prohibited Benefits from Donor Advised Funds

If a donor, a donor advisor, or a person related to a donor or donor advisor of a donor advised fund provides advice as to a distribution that results in any such person receiving, directly or indirectly, a more than incidental benefit, an excise tax equal to 125 percent of the amount of that benefit is imposed against the person who advised as to the distribution, and against the recipient of the benefit. n355 Persons subject to the tax are jointly and severally liable for the tax. n356 In addition, if a manager of the sponsoring organization agreed to the making of the distribution, knowing that the distribution would confer a more than incidental benefit on a donor, a donor advisor, or a person related to a donor or donor advisor, the manager is subject to an excise tax equal to 10 percent of the amount of that benefit, not to exceed \$10,000. n357 The taxes are subject to abatement if the event triggering the tax was due to reasonable cause and not willful neglect, and is corrected. n358 The taxes are effective for tax years beginning after August 17, 2006. n359

The committee report accompanying the legislation indicates that there is a more than incidental benefit if, as a result of a distribution from a donor advised fund, a donor, donor advisor, or related person with respect to that fund receives a benefit that would have reduced (or eliminated) a charitable contribution deduction if the benefit was received as part of the contribution to the sponsoring organization. n360

[h] Reporting and Disclosure Requirements

Each sponsoring organization must disclose on its information return (Form 990, Return of Organization Exempt from Tax) the following information: n361

- the total number of donor advised funds it owns;
- the aggregate value of assets held in those funds at the end of the organization's taxable year; and
- the aggregate contributions to and grants made from those funds during the year.

In addition, when seeking recognition of its tax-exempt status (Form 1023, Application for Recognition of Exemption Under *Section 501(c)(3) of the Internal Revenue Code*), a sponsoring organization must disclose whether it intends to maintain donor advised funds. n362 It is intended that the organization must provide information regarding its planned operation of those funds, including, for example, a description of procedures it intends to use to: (1) communicate to donors and donor advisors that assets held in donor advised funds are the property of the sponsoring organization; and (2) ensure that distributions from donor advised funds do not result in more than incidental benefit to any person. n363

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.01

§ 7.01 Statutory Framework and Benefits

Many real estate sales result in the seller receiving some or all of the purchase price after the year of sale. If the sale produces a gain, general tax accounting rules would typically require the seller to recognize the full amount of the gain in the year of sale. This could result in a significant tax liability, even though the seller does not receive most of the sale proceeds until several years hence.

Congress recognized that the tax liability might pose a serious cashflow problem for the seller if he could not match the payment of tax with the receipt of cash from the buyer. Consequently, the Code provides specific installment sale tax rules to allow a seller, under certain circumstances, to spread out tax payments over an extended period of time. n1

The installment sale rules provide yet another benefit: Because tax rates are graduated upward, it is generally less expensive to report the receipt of a substantial amount of income over a period of years rather than to bunch it all up in one year--particularly if the gain is taxed as ordinary income, rather than as capital gain. The primary downside, however, is that a taxpayer who defers the recognition of gain assumes the risk of an increase in tax rates in later years: Subsequent installment payments are taxed at the rates in effect in the year collected, rather than the rates in effect in the year of sale. n1.1

The bulk of the installment sale rules appear in *IRC Section 453*. This section allows most real estate sellers to use the installment method, with one main exception--the installment method cannot be used for dealer dispositions, unless the property being sold is farm property or certain timeshares and residential lots. n2 Real estate investors who make significant installment sales will typically be subject to additional rules under *IRC Section 453A*. That section generally requires these sellers to pay interest on income taxes they defer by using the installment method. Finally, *IRC Section 453B* provides rules that apply to sellers who sell property on the installment basis, receiving an installment obligation from the buyer, but dispose of the obligation before it has been paid in full.

Note:

Federal legislation enacted in 1999 precluded accrual method taxpayers from using the installment method. This legislation caused an immediate uproar and was retroactively repealed in December 2000. The installment sale statutory provisions are to be applied and administered as if the 1999 legislation had not been enacted. n2.1

The retroactive repeal allows accrual method taxpayers who sold real estate or had other transactions that may be reported on the installment method to file an amended return for 1999 (for sales occurring during 1999 when the now-repealed provisions were effective), or file a claim for refund for estimated tax payments for payments made with respect to sales that took place in 2000. The repealed provision may be ignored in preparing income tax returns for 2000 calendar and tax year returns.

The IRS has issued a notice providing guidance regarding the interplay of the repealing legislation and the election out provision in the installment method rules. n2.2 The installment method does not apply to any disposition for which the taxpayer elects out of the installment method. n2.3 A taxpayer who reports an amount realized equal to the selling price on the tax return filed for the taxable year in which an installment sale occurs is considered to have made an election out of the installment method. n2.4 An election out of the installment method may be revoked only with the consent of the Secretary, n2.5 and any revocation is retroactive. n2.6 In the notice, the IRS states that an accrual method taxpayer that entered into an installment sale on or after December 17, 1999, and filed a federal income tax return by April 16, 2001, reporting the sale on an accrual method (and, thus, an amount realized equal to the selling price) has the consent of the Secretary to revoke its effective election out of the installment method. The consent is effective only if the taxpayer files timely amended federal income tax return(s) for the taxable year in which the installment sale occurred, and for any other affected taxable year, reporting the gain on the installment method. Thus, a taxpayer may not revoke its effective election out of the installment method if the taxable year in which any payment on the installment obligation was received has closed. n2.7

One point worth noting at the outset is that the Code's definition of an installment sale varies from that phrase's meaning in common parlance. Though most installment sales call for multiple payments over an extended period of time, the Code merely requires that the buyer make at least one payment following the year of sale. n3 In addition, the installment sale rules apply only to sales that produce a gain. n4 Subject only to general tax rules limiting loss deductions, a seller recognizes the full amount of the loss on property in the year of sale--even if the sales price is paid over a number of years.

Finally, it should be noted that the installment method cannot be used for sales in which a taxpayer receives only indebtedness that is readily tradable, regardless of the nature of the issuer. The reason for this is that receipt of any readily tradable indebtedness is treated as "payment." Therefore, if a taxpayer sells property solely in exchange for readily tradable debt of a partnership, the partnership debt is treated as payment on the installment note, and the installment method is unavailable to the taxpayer. n4.1 For sales occurring before October 22, 2004, the installment method was not available if the taxpayer sold property in exchange for readily tradable evidence of indebtedness that was issued by a corporation or a government or political subdivision. Instead, the receipt of that indebtedness was treated as a receipt of payment. n4.2

FOOTNOTES:

(n1)Footnote 1. See *IRC* § 453.

(n2)Footnote 1.1. See, eg, *Sanford v Commr*, 76 AFTR2d P 95-5136 (5th Cir 1995) (an unpublished per curiam opinion which is also available electronically at 95 TNT 144-12), where the taxpayer sold property in 1986 using the installment method. The capital gains deduction under prior-law *IRC* § 1202 was available at the time of sale, but not when the taxpayer reported an installment payment in 1989. The Fifth Circuit, citing *Commr v So Tex Lumber Co*, 333 US 496 , 1948-2 USTC P 5929, 36 AFTR P 604 (1948), concluded that the taxpayer could not take the capital gains deduction for the 1989 payment.

(n3)Footnote 2. *IRC* § 453(b)(2)(A), (l). Whether a seller is a dealer is governed by general rules that consider the

level and nature of the seller's activities. See Ch 10. See also *Ltr Rul 9331013* , where the Service ruled that a partnership which purchased a high rise building and sold apartment units in the building through a direct marketing campaign, unit-by-unit, was not a dealer for purposes of *IRC § 453(l)(1)* and could, therefore, use the installment method to report the sales. Also see *Raymond v Commr, TC Memo 2001-96* , where the Tax Court held that the face amount of promissory notes received in the sales of 41 single family homes by a sole proprietor had to be included in gross income because the sales were dealer dispositions and not eligible for the installment method. The court found the homes to be held in the ordinary course of the taxpayer's business because the taxpayer had purchased land with the intent of subdividing it into residential lots and constructing single-family residences. He had made the improvements, listed the homes with an outside seller, and sold more than 58 homes in a 2-year period.

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.02

§ 7.02 The Installment Method

[1] Transactions Eligible For Installment Sale Treatment

Sales of real estate that are not sales to customers in the ordinary course of business (i.e., that are not dealer sales) are generally reportable on the installment basis if at least a portion of the payment is received after the year of sale. n5 Installment sale reporting may be combined with the *IRC Section 121* exclusion, to report gain in excess of the exclusion. n5.1 The installment method automatically applies to qualifying sales, unless the seller "elects out" and deliberately chooses to report the transaction as completed in the year of sale. The "election out" rules are located in *IRC Section 453(d)*.

Despite the general rule that dealer sales are ineligible for installment sale treatment, n6 there are certain dealer dispositions which may be reported under the installment method. These favored dispositions include the following:

- Installment sales of farm property described in *IRC § 2032A(e)(4)* or *(5)*; n6.1
- Dealer sales to an individual of a timeshare right to use a timeshare ownership interest in residential real estate, provided that the right to use the real property cannot exceed more than six weeks per year; n6.2
- Dealer sales to an individual of a timeshare right to use specified campgrounds for recreational purposes; n6.3 and
- Dealer sales to an individual n6.4 of any residential lot, but only if the taxpayer (or any related person) is not to make any improvements with respect to the lot. n6.5

Qualifying dealer dispositions of timeshares and residential lots may be reported on the installment method only if the dealer makes an election to pay interest on the tax liability that is deferred through the use of the installment method. n6.6 The election is available, however, only if the installment obligation is not guaranteed by any person other than an individual. n6.7

Note:

A dealer is not required to report any or all qualifying timeshare sales on the installment basis. Indeed, a dealer may report some sales on the installment basis and not others. n6.8

Whether property is residential real property or a residential lot for purposes of the above dealer dispositions is usually not in issue. n7 In one case, the Tax Court held that undeveloped real estate marketed as a speculative investment did not qualify as residential lots so as to entitle the taxpayers to the residential real estate exception for dealer dispositions. n7.1 The court found that temporary regulations under former *IRC Section 453C* n7.2 provided the best guidance for interpreting the term "residential lots" in *IRC Section 453(l)(2)(B)*. Those regs defined a residential lot as "a parcel of unimproved land on which the purchaser intends to construct (or intends to contract to have another person construct) a dwelling unit for use as a residence by the purchaser." Applying this definition, the Tax Court found that the land sold by the dealer-taxpayers was not residential property. Although the zoning for the lots permitted a buyer to construct a house on them, the land was marketed as a speculative investment. The offering materials exclusively focused on return on investment, capital preservation (safety), and tax considerations. The land was not represented to potential buyers as suitable for use as residential lots, and the overwhelming weight of evidence indicated that no buyer ever constructed a dwelling unit on the land. The court concluded that the taxpayers could not use the installment sales method for reporting gain because they failed to satisfy the residential real estate exception for dealer dispositions. n7.3

The majority of real estate installment sales involve nondealers, and many of these taxpayers must contend with *IRC Section 453A*. This provision imposes an interest charge on a seller's installment sale if the sales price of the property in question is greater than \$150,000 and if the sale took place in a year when the taxpayer made installment sales which gave rise to installment obligations which have a total outstanding face value exceeding \$5 million at year's end. n8

[2] Electing Out of Installment Sale Treatment

The law presumes that a taxpayer who can report on the installment basis will do so. Thus, the Code says that the installment sale rules apply automatically to eligible dispositions unless the taxpayer elects out of the special treatment. n9

The taxpayer who wants installment sale treatment reflects the sale on IRS Form 6252 (Installment Sale Income). To elect out, a taxpayer simply reports the entire gain from the transaction on whichever of these IRS Forms is appropriate: Form 1040 Schedule D (Capital Gains and Losses) or IRS Form 4797 (Sales of Business Property). Temporary regulations provide that the election must be made in the manner prescribed by the appropriate forms for the taxpayer's return in the year of sale. n10

A taxpayer interested in electing out of installment sale treatment must do so by the due date, including extensions, for the tax return for the sale year. n11 Revocation of the election out may be revoked only with the consent of the IRS. n12 The grounds for most consents is that the taxpayer's advisor made an error. n13 Taxpayers should not expect to receive consent when one purpose of revoking the election is to avoid federal income tax n14 or when the tax year in which any payment was received is now closed. n15

NOTE:

The IRS has issued a notice providing guidance regarding the interplay of the repeal of legislation that precluded accrual basis taxpayers from using the installment method n15.1 and the election out provision in the installment method rules. n15.2 The installment method does not apply to any disposition for which the taxpayer elects out of the installment method. n15.3 A taxpayer who reports an amount realized equal to the selling price on the tax return filed for the taxable year in which an installment sale occurs is considered to have made an election out of the installment method. n16 An election out of the installment method may be revoked only with the consent of the Secretary, n17 and any revocation is retroactive. n18 In the notice, the IRS states that an accrual method taxpayer that entered into an installment sale on or after December 17, 1999, and filed a federal income tax return by April 16, 2001,

reporting the sale on an accrual method (and, thus, an amount realized equal to the selling price) has the consent of the Secretary to revoke its effective election out of the installment method. The consent is effective only if the taxpayer files timely amended federal income tax return(s) for the taxable year in which the installment sale occurred, and for any other affected taxable year, reporting the gain on the installment method. Thus, a taxpayer may not revoke its effective election out of the installment method if the taxable year in which any payment on the installment obligation was received has closed. n19

[3] Alternative Minimum Tax Considerations

[a] Corporations

For C corporations not exempt under the small corporation exemption, n20 installment dispositions can be problematic because of the special AMT provision that applies to this type of taxpayer. The provision in question is the AMT adjustment for adjusted current earnings (the ACE adjustment). In somewhat simplistic terms, this adjustment is designed to penalize taxpayers that have significant economic income, but report comparatively smaller amounts of income for regular tax purposes. One way the ACE adjustment does this is by preventing a corporation from using the installment method for ACE purposes, except to the extent that the corporation pays interest on the deferred tax liability attributable to the applicable percentage of gain under *IRC Section 453A*. n21

Example:

XYZ Corp. sells an undeveloped parcel of real estate for \$4 million in Year 1, calling for four annual \$1 million payments beginning in Year 2, plus adequate stated interest. XYZ's adjusted basis in the property is \$500,000. XYZ is not a dealer, and this is the only sale it makes using the installment method in Year 1. Because the face amount of this obligation does not exceed \$5 million, *IRC Section 453A* does not apply to this disposition. In Year 1, XYZ recognizes none of its \$3.5 million gain (i.e., \$4,000,000 - \$500,000) for regular tax purposes. It must, however, recognize the full \$3.5 million gain for ACE adjustment purposes in Year 1. n22

[b] Non-Corporate Taxpayers

The maximum AMT rate on net capital gains of a noncorporate taxpayer cannot exceed the capital gains rate that applies for regular tax purposes. Thus, the regular tax capital gains tax rates also apply for AMT purposes. n22.1 The amounts of these net capital gains for AMT purposes are determined according to the principles used for regular tax purposes, although the AMT amounts can vary from the regular tax amounts because of AMT adjustments and preferences. n22.2

The manner in which the regular capital gains rates is applied for AMT purposes is by means of a statutory limitation that requires complex and convoluted computations that fill the second page of Form 6251. Under the limitation, the amount of AMT computed with the usual 26-and 28-percent AMT tax rates cannot exceed the sum of the following amounts: n22.3

- (1) The amount determined by applying the 26-and 28-percent rates on the amount of the taxable excess (i.e., alternative minimum taxable income less the applicable exemption amount), reduced by the lesser of (a) the net capital gain, or (b) the sum of (i) the adjusted net capital gain, plus (ii) the unrecaptured *IRC Section 1250* gain; plus
- (2) 5 percent (0 percent for tax years beginning after 2007) of so much of the adjusted net capital gain (or, if less, the taxable excess) as does not exceed an amount equal to the excess described in *IRC Section 1(h)(1)(B)*; plus
- (3) 15 percent of the adjusted net capital gain (or, if less, the taxable excess) in excess of the amount on

which a tax is determined using the 5 percent rate in step (2) above; plus

(4) 25 percent of the taxable excess in excess of the sum of the amounts on which tax is determined in steps (1) through (3), above.

Noncorporate taxpayers with significant capital gains from an installment sale will not solely by virtue of those gains become liable for the AMT. n22.4 Capital gains from an installment sale may, however, indirectly cause a noncorporate taxpayer to become liable for the AMT at the regular AMT rate if the gains cause the taxpayer's AMT income to exceed the AMT exemption amount. n22.5 A noncorporate taxpayer's AMT income include long-term capital gains. n22.6 Therefore, significant capital gains may cause a taxpayer's AMT exemption amount to be phased out. This, in turn, may trigger AMT taxation of other income at the 26 or 28 percent tax rate. n22.7

[4] Interaction with Other Code Sections

A taxpayer's decision to use the installment method does not necessarily preclude the use of other tax-favored Code provisions. For example, it is not uncommon for a taxpayer to use the installment sale rules in connection with the like-kind exchange provisions under *IRC Section 1031*. How these two provisions interact is discussed in Chapter 8.

The special rules relating to gain on the sale of a principal residence--provided in *IRC Section 121*--can also be used in conjunction with an installment sale. This subject is discussed in Chapter 9.

FOOTNOTES:

(n1)Footnote 5. *IRC § 453(a)*. Special rules apply to installment sales of depreciable property to controlled entities. This subject, which is beyond the scope of this treatise, is governed by *IRC § 453(g)*. CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.03

§ 7.03 Definitions

To understand the mechanics of the installment method of reporting income, it is necessary to understand the terms discussed below.

[1] Installment Sale

An installment sale is a disposition of property with at least one payment received after the close of the taxable year in which the disposition occurs. ⁿ²³ In fact, the seller need not receive any payment in the year of sale. Moreover, an installment sale is possible when the purchase price is satisfied with just one payment.

Example:

S sells a parcel of undeveloped real estate to P on December 1, Year 1. S's adjusted basis in the property is \$100,000 and the sales contract calls for P to pay S \$500,000 on January 15, Year 2. Unless S elects out, she must report her gain using the installment method. This is so even though P makes only one payment to S, rather than a series of payments, and even though P pays S nothing in the year of sale.

[2] Selling Price

The selling price is the total amount the purchaser must pay for the property. If the property is encumbered by a mortgage, the unpaid balance of the mortgage at the date of sale is included in the selling price, whether the purchaser assumes the mortgage or merely takes title subject to it. Selling expenses and commissions are not deducted in computing the selling price. Neither interest nor any original issue discount is included in the selling price. ⁿ²⁴

Example:

S, an individual investor, sells a parcel of undeveloped real estate to P on December 1, Year 1. S's adjusted basis in the property is \$100,000 and the sales contract calls for P to pay S \$500,000 on January 15, Year 2, and to assume a \$300,000 mortgage on the property. S pays X, a real estate broker, \$65,000, for his services. The property's selling price for installment sale purposes is \$800,000. This consists of the \$500,000 cash P pays, plus the \$300,000 mortgage P assumes. The broker's commission is not included in the selling price.

[3] Gross Profit

The gross profit on an installment sale is the excess of:

(1) the selling price over

(2) the seller's adjusted basis increased by--(a) selling expenses, if the seller is not a dealer; and (b) any *IRC Section 1245* and *IRC Section 1250* recapture income. n25

While the temporary regulations make clear that an investor increases his adjusted basis by selling expenses, they are silent about the effect of depreciation recapture income. n26 The explanation for the omission is simple: The regulations predate *IRC Section 453(i)*, which requires a taxpayer to recognize all recapture income in the year of sale. The legislative history, n27 as well as IRS documents, n28 clarify that a taxpayer increases his adjusted basis by recapture income when computing gross profit. The result also makes sense, since the seller recognizes the total recapture amount in the year of sale, even though he uses the installment method.

The treatment of selling expenses differs for investors and dealers. n29 (For this purpose, selling expenses include sales commissions, advertising, transfer taxes, stamp taxes and legal, escrow and recording fees.) An investor must add his selling expenses (other than state or local transfer taxes, which are treated as a reduction of the amount realized) to his basis to compute gain on the sale. n30 This requirement forces the investor to recover his selling expenses over the life of the installment contract; selling expenses cannot be deducted from the initial payment.

A dealer, however, deducts selling expenses as business expenses independent of the sale. n31 This permits the dealer to deduct the entire amount of these expenses in the year of sale, with the gain being postponed to the later years of the installment contract.

Example:

On January 15, Year 1, investor S sells an office building for \$1.1 million. This consists of a \$400,000 down payment, seven annual \$100,000 installments beginning in Year 2, plus adequate stated interest. S's adjusted basis is \$200,000. There is \$75,000 of recapture income and the sale expenses are \$20,000. S's gross profit is \$805,000, computed as follows:

Selling price	\$1,100,000
Less: adjusted basis.....\$200,000	
recapture income.....\$75,000	
selling expenses..... \$20,000	
	\$295,000
Gross profit (total gain on sale)	\$805,000

[4] Total Contract Price and Qualifying Indebtedness

The total contract price equals the:

"selling price reduced by that portion of any qualifying indebtedness...assumed or taken subject to by the buyer, which does not exceed the seller's basis in the property (adjusted... to reflect commissions and other selling expenses..." n32

For this purpose, "qualifying indebtedness" refers to:

"a mortgage or other indebtedness encumbering the property and indebtedness, not secured by the property but incurred or assumed by the purchaser incident to the purchaser's acquisition, holding, or operation in the ordinary course of business or investment, of the property." n33

Example:

S, an investor, agrees to sell a parcel of land to P for \$1 million in 1998. S's adjusted basis in the land is \$400,000. There is a long-standing mortgage on the property of \$500,000, and S has \$20,000 of selling expenses. P pays for the property with a \$50,000 downpayment, and by assuming the \$500,000 mortgage and giving S a \$450,000 note. The note is payable in 3 equal annual installments of \$150,000, plus adequate stated interest, beginning in 1999. The total contract price is \$580,000, computed as follows:

1. Selling price		\$.....1,000,000
2. Qualifying indebtedness	\$.....500,000	
3. Seller's adjusted basis		
(\$400,000) plus selling		
expenses (\$20,000)	\$.....420,000	
4. Less: smaller of 2 or 3		\$.....420,000

		—
5. Total contract price		\$.....580,000

		—

		—

Debt that the seller puts on property in anticipation of the property's sale will not be considered "qualifying debt" when the purchaser assumes or takes the property subject to it. n34 A different rule could allow a seller to bail out part or all of his gain tax free, as the following two examples demonstrate.

Example (1):

S, an investor, owns an undeveloped real estate parcel which has a fair market value of \$100,000 and an adjusted basis of \$40,000. The property is not encumbered when P offers to purchase it for a \$30,000 downpayment and seven annual installments of \$10,000, beginning the following year. As discussed in *Section 7.04*, below, 60 percent of each payment—including the \$30,000 downpayment—will be taxable, since 60 percent of the sale price (\$60,000/\$100,000) represents profit.

Example (2):

Assume the same facts as in the preceding example, except that S takes out a \$30,000 mortgage from bank B immediately before sale, receiving \$30,000 cash. If P assumes the mortgage, and the mortgage were treated as qualifying debt, S would be able to avoid any tax on the first \$30,000 he received. n35

To prevent the result in the second example, the regulations preclude S from reducing the \$100,000 selling price by the \$30,000 mortgage. n36 In addition, P's assumption of the mortgage is treated as a \$30,000 payment, 60 percent of which is gain. n37

[5] Gross Profit Percentage

The seller's gross profit percentage is simply his gross profit divided by the contract price.

Example:

S has a gross profit of \$400,000 on the sale of real estate that has a contract price of \$1,000,000, plus adequate stated interest. S's gross profit percentage is 40 percent ($\$400,000/\$1,000,000$). This means that S will recognize gain on 40 percent of each installment payment he receives.

[6] Payment

The term "payment" is significant for installment sale purposes because the seller must receive "at least 1 payment" after the year of disposition. n38 Moreover, the amount of income which the seller recognizes each year is computed using "the payments received in that year..." n39

"Payment" includes cash or other property, including foreign currency and marketable securities. The most important exception is the purchaser's indebtedness. The evidence of indebtedness (usually an installment note) which the purchaser gives to the seller is not considered payment, unless the note is: (1) payable on demand; or (2) readily tradable. n40 An evidence of indebtedness is generally considered to be readily tradable if it is issued in a form designed to be readily tradable in an established securities market. n41

Example:

S, an investor, owns an undeveloped real estate parcel which has a fair market value of \$100,000 and an adjusted basis of \$40,000. S sells the property to P for a \$30,000 downpayment and seven annual installments of \$10,000, beginning following the sale year. The note evidencing the seven installments is not considered to be a payment, assuming it is not payable on demand or readily tradable. Thus, S is treated as receiving a payment of \$30,000 in the year of sale. Each subsequent year, when P pays an additional \$10,000, S is treated as receiving an additional payment of \$10,000.

[a] Third-Party Guarantees and Standby Letters of Credit

An installment sale allows a seller to defer tax on the sale's gain. The deferred payment arrangement which an installment sale requires, however, exposes the seller to the possibility that the purchaser will be unable to make all payments required by the installment obligation. To protect themselves from this risk, sellers have adopted a number of strategies.

In real estate installment sales, the most common, and obvious, form of protection is for the seller to take back a mortgage to cover the amount due under the installment obligation. Many sellers, however, look for more protection--especially in situations where the seller's mortgage is large and sits behind a pre-existing mortgage. In these cases, a drop in the fair market value of the property could effectively wipe out the value of the seller's mortgage.

The problem with some of the more aggressive protection strategies is that they may be treated for tax purposes as "payments" for installment sale purposes--thereby triggering taxable gain. n42

Two strategies that are *not* treated as payments are third-party guarantees and most standby letters of credit securing the

purchaser's payment. n43 A standby letter of credit is not treated as a payment if it is:

- (1) non-negotiable and nontransferable (except together with the note it secures);
- (2) issued by a bank or other financial institution; and
- (3) serves as a guarantee of the note which the letter of credit secures. n44

[b] Escrow and Trust Arrangements

Installment sellers like the security which an escrow or trust arrangement provides. The Service, however, takes the position that an installment obligation "which is secured directly or indirectly by cash or a cash equivalent, such as a bank certificate of deposit or a treasury note, will be treated as the receipt of payment." n45

If the seller's access to escrow or trust funds is subject to a substantial restriction providing a benefit to the buyer, the funds are not considered to be a payment when the escrow or trust is first established. n46 A provision precluding the seller from receiving the funds if he competes with the buyer over a fixed period should be a sufficient restriction for these purposes. n47 On the other hand, a restriction that simply prevents the seller from obtaining the escrow or trust funds until the date they are payable under the terms of the installment obligation is not a substantial restriction. n48

[c] Assuming, or Taking Subject to, a Mortgage

If property being sold is encumbered by a mortgage that is "qualifying indebtedness," n49 and the buyer assumes, or takes the property subject to, the mortgage, the buyer's assumption or taking subject to the mortgage is generally not treated as a payment. The exception to this rule is where the mortgage exceeds the seller's adjusted basis (after adding the costs of the installment sale to the seller's adjusted basis). Then, the excess of the mortgage over the adjusted basis is considered a payment in the year of sale. n50

Example (1):

S, an investor, agrees to sell a parcel of land to P for \$1 million in 1998. S's adjusted basis in the land is \$400,000. There is a long-standing mortgage on the property of \$500,000 which S owes to Bank X, and S has expenses of \$20,000 relating to the sale. P pays for the property by assuming the \$500,000 mortgage and giving S a \$500,000 note, payable in 5 equal annual installments of \$100,000, plus adequate stated interest, beginning in 1999. Even though S receives no cash in the year of sale, she recognizes \$80,000 of income that year because P assumed her mortgage. The computation is as follows:

1. Qualifying Indebtedness	\$.....5 00,000
2. Less: S's adjusted basis	(\$.....4) 00,000
plus selling expenses (\$20,000)	\$.....4 20,000
3. Gain recognized in year of sale	\$.....8 0,000

[d] Wraparound Mortgages

One technique that sellers have used to prevent the assumption of a mortgage in excess of the seller's adjusted

basis--and to avoid the taxable income that results from it--is the "wraparound" mortgage. With this type of mortgage (discussed in Chapter 12), the buyer gives the seller one mortgage for the entire non-cash portion of the sales price--i.e., one that "wraps around" existing mortgages. The seller remains liable on the first mortgage, which may be at an interest rate lower than current mortgage rates, and the wraparound is subordinate to the first mortgage.

Example (2):

Assume the same facts as in the preceding Example (1), except that P does not assume S's mortgage liability to Bank X. Instead, S finances the whole \$1 million purchase price (the wraparound mortgage). Under the terms of the installment sale contract, P will pay S \$200,000 annually for five years, plus adequate stated interest, beginning in 1999. S remains liable on the \$500,000 underlying mortgage to Bank X.

In 1981, the Service issued temporary regulationsⁿ⁵¹ stating that property transferred using a wraparound mortgage is "deemed" to have been taken subject to the seller's first mortgage. The Service intended, with this regulation, to make wraparound transactions analogous to situations where the buyer either assumed the seller's mortgage or took the property subject to it.

Example (3):

Based on the rule enunciated in the temporary regulations, S's tax treatment in Example (2) would be the same as in Example (1); i.e., S would have \$80,000 of taxable income in 1998, even though P did not actually assume S's mortgage.

The Service's position flew in the face of several prior decisions which rejected the Service's approach--at least when it was evident that the underlying debt was still the seller's responsibility.ⁿ⁵² In 1987, the Tax Court held the temporary regulations invalid.ⁿ⁵³ Despite some unhappiness with the Tax Court's decision, the Service conceded the point by acquiescing.ⁿ⁵⁴

Example (4):

Under current law, S recognizes no taxable income in 1998 if the parties use the wraparound mortgage described in Example (2).

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.04

§ 7.04 Computation of Reportable Gain in Year of Sale and Subsequent Periods

[1] In General

To compute gain on an installment sale, a seller must take these six steps:

(1) *Compute the gross profit to be realized on the sale.* The seller does this by determining the excess of the selling price over his adjusted basis. If the seller is an investor, he increases his adjusted basis by selling expenses. *IRC Section 1245* and *IRC Section 1250* recapture are also added to the seller's adjusted basis for purposes of determining total gain. This is because the total recapture amount is currently recognized, despite the seller's use of the installment method. n55

(2) *Compute the contract price.* This is the selling price reduced by that portion of any qualifying indebtedness which the buyer assumes or takes subject to, provided it does not exceed the seller's basis in the property, adjusted to reflect commissions and other selling expenses. n56

(3) *Determine the ratio of total gain (Step 1) to total contract price (Step 2).* This is the gross profit percentage.

(4) *Determine payments received during the taxable year.*

(5) *Multiply the payments received during the taxable year (Step 4) by the gross profit percentage (Step 3).* The result is the gain to be recognized for the year. The tax treatment of this gain will depend on whether the asset is a capital asset in the seller's hands (producing capital gain) or an ordinary asset which may or may not be subject to *IRC Section 1231* treatment. n57

(6) *Increase Step 5 by any recapture income.* If the computation is for the year of sale and the sale resulted in depreciation recapture under *IRC Sections 1245* and *1250*, increase the amount computed in Step 5 by the recapture amount. The recapture amount will be accorded ordinary income treatment.

Example:

On January 15 of year 1 S, an investor, sells P an office building for \$1.1 million. The building is subject to a mortgage of \$150,000, which P assumes. P also makes a \$250,000 downpayment and gives S a \$700,000 note, providing for adequate stated interest. Sale expenses are \$20,000. After the sale, but

before the close of S's taxable year, he receives an additional payment of \$120,000 from P. S's adjusted basis is \$200,000. Assume that there is no recapture income. S's taxable gain in the year of sale is computed as follows:

Step 1 (Gross Profit):

Selling price	\$.....1,100,000
Less: adjusted basis	200,000
selling expenses	20,000
	220,000
Gross profit (total gain on sale)	\$.....880,000

Step 2 (Contract price):

Selling price	\$.....1,100,000
Less: mortgage debt assumed	150,000
Contract price	\$.....950,000

Step 3 (Gross Profit Percentage):

Ratio of gross profit (\$880,000) to contract price (\$950,000)	92.63%

Step 4 (Payments Received During Year):

Downpayment	\$.....250,000
Installment payment	\$.....120,000
Payments for year	\$.....370,000

Step 5 (Gain Recognized in sale year):

Gain taxable in year of sale (92.63% x \$370,000)	\$.....342,731

Step 6 (Additional Recapture Income):

No recapture	0
Income recognized for year 1	\$.....342,731

Example:

Assume the same facts as in the preceding example, except that the sale also produces \$30,000 of recapture income. S's income from the sale in year 1 is computed as follows:

Step 1 (Gross Profit):

Selling price	\$.....1,100,000	
Less: adjusted basis	\$.....200,000	
recapture income	\$.....30,000	
selling expenses	\$.....20,000	\$.....250,000
Gross profit (total gain on sale)		\$.....850,000

Step 2 (Contract price):

Selling price	\$.....1,100,000	
Less: mortgage debt assumed	\$.....150,000	
Contract price		\$.....950,000

Step 3 (Gross Profit Percentage):

Ratio of gross profit (\$850,000) to contract price (\$950,000)	89.47%

Step 4 (Payments Received During Year):

Downpayment	\$.....250,000	
Installment Payment	\$.....120,000	
Payments for year	\$.....370,000	

Step 5 (Gain Recognized in sale year):

Gain taxable in year of sale (89.47% x \$370,000)	\$.....331,039

1-7 Federal Taxes Affecting Real Estate § 7.04

Step 6 (Additional Recapture Income):

Recapture Income	\$.....30, 000
Income recognized for year 1	\$.....361 ,039

In this example, \$30,000 of the income recognized in year 1 would be accorded ordinary income treatment. The balance would typically be treated as capital gain or taxed under *IRC Section 1231*.

Once the gross profit percentage has been determined, this figure is applied against all subsequent payments which the seller receives:

Example:

Assume the same facts as in the preceding example. In year 2, the year following the installment sale, S receives a principal payment of \$120,000 from P, plus applicable interest on the installment obligation. S reports \$107,364 of income on account of this payment, which is the gross profit percentage (89.47%) times the payment (\$120,000).

[2] Installment Sales of Depreciable Property Where Portion of Gain is Unrecaptured Section 1250 Gain

IRC Section 1(h) divides a taxpayer's net capital gain into several tax rate groups. A maximum marginal rate of 28 percent applies to the 28-percent rate gain. n58.1 A maximum marginal rate of 25 percent applies to unrecaptured Section 1250 gain (25-percent gain). n58.2 Unrecaptured Section 1250 gain is the amount of long-term capital gain (not otherwise treated as ordinary income) that would be treated as ordinary income if *IRC Section 1250(b)(1)* included all depreciation and the applicable percentage under *IRC Section 1250(a)* were 100 percent, reduced by any net loss in the 28-percent rate category. n58.3 A maximum marginal rate of 15 percent applies to adjusted net capital gain (15/5 percent gain). n58.4 Adjusted net capital gain is the portion of net capital gain (determined without regard to any dividends taxed at capital gains rates) n58.4.1 that is not taxed at the 28-percent or 25-percent rates. n58.5 A reduced rate of 5 percent is applied to the portion of the taxpayer's adjusted net capital gain that would otherwise be taxed at the lowest regular income tax rate. n58.6

Special rules apply to determine the proper tax rate for various amounts with respect to capital gains from an installment sale of depreciable real property when the gain to be reported consists of both 25-percent gain and 15/5-percent gain. n58.7 If a portion of the capital gain from an installment sale of real depreciable property consists of 25-percent gain, and a portion consists of 15/5 percent gain, a taxpayer must take the 25-percent gain into account before the 15/5 percent gain, as payments are received. n58.8 Any *IRC Section 1231* gain from an installment sale that is recharacterized as ordinary gain under *IRC Section 1231(c)* (dealing with recapture of net ordinary losses) is deemed to consist first of 25-percent gain, and then 15/5 percent gain. n58.9 Consistent with this treatment and with the general rule that 25-percent gain is taken into account first, where there is installment gain that is characterized as ordinary gain under *IRC Section 1231(a)* because there is a net Section 1231 loss for the year, then the gain is treated as consisting of

25-percent gain first, before 15/5 percent gain, for purposes of determining how much 25-percent gain remains to be taken into account in later payments. n58.10

Several transitional rules related to changes in the capital gains tax rates can come into play. Uncodified transitional rules enacted with the reduction of the lowest capital gain rates from 20/10 percent to 15/5 percent in 2003 n58.10.1 require an allocation of the differential tax rates in tax years that included May 6, 2003, the effective date of the rate changes. The 15/5 tax rates apply only for sales and exchanges (and installment payments received) on or after May 6, 2003. n58.10.2 The regulations should be applied accordingly.

Similar transition rules in the regulations relate to 1997 legislation. The capital gain rates applicable to installment payments that are received on or after May 6, 1997 (the effective date of 1997 tax legislation) from sales taking place prior to May 6, 1997, are determined as if, for all payments received after the date of sale but before May 6, 1997, 25-percent gain had been taken into account before the 20/10-percent gain rate that became effective in 1997. n58.11

In the event that the cumulative amount of 25-percent gain actually reported in installment payments received during the period between May 6, 1997, and August 23, 1999 (the effective date of the final regulations) is less than the amount that would have been reported using the front-loaded allocation method of the regulations, then the amount of 25-percent gain actually reported, rather than an amount determined under a front-loaded allocation method, must be used in determining the amount of 25-percent gain that remains to be reported. n58.12

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.05

§ 7.05 Interest Due on Tax Liabilities Deferred by an Installment Sale

In an effort to reduce the benefits of the installment method, Congress added provisions which, in some instances, require a taxpayer to pay interest on the tax liability he is able to defer by using the installment sale rules. n59 The interest rules, however, apply to only limited types of installment sales. For taxpayers selling real estate, there are two kinds of installment sales which may require the payment of interest:

(1) *Nondealer property.* IRC Section 453A provides rules for the payment of interest for installment sales of nondealer property. As discussed below, several types of nondealer property are excluded from the coverage of this provision. Moreover, the Section exempts many smaller transactions completely. Some larger transactions also fall outside of the provision because the taxpayer's total installment sales for the year do not exceed the annual threshold.

(2) *Dealer dispositions of certain timeshares and residential lots.* IRC Section 453(l)(3) provides a separate interest calculation rule for dealer dispositions of these kinds of real estate.

[1] Nondealer Property

[a] When Interest Rules Apply

The interest rules under IRC Section 453A apply only when these three requirements are satisfied:

- (1) the sale is of nondealer property sold for more than \$150,000 (but excluding personal use and farming property);
- (2) the obligation resulting from the installment sale is outstanding at the close of the seller's tax year; and
- (3) the face amount of these obligations which arose during the tax year, and are outstanding at the close of the year, exceeds \$5 million. n60

"Personal use property" is defined by reference to IRC Section 1275(b)(3), which describes this as "any property substantially all of the use of which by the taxpayer is not in connection with a trade or business of the taxpayer or an

activity described in section 212."

A taxpayer who uses an installment sale to dispose of a timeshare or residential lot in the ordinary course of his trade or business will typically be subject to the interest provisions described in *Section 7.05[2], below*. The installment sale of a timeshare or residential lot could, however, be subject to *IRC Section 453A* if, for example, the taxpayer was not in the trade or business of selling such property and the three requirements described above were satisfied.

The operation of these three requirements can be seen by the following examples:

Example (1):

In Year 1, S, an individual investor, disposes of a building using the installment method. The sales price of the building is \$300,000. The total face amount of installment obligations resulting from sales which S makes in Year 1, and which are outstanding at the end of Year 1, is \$10 million. The interest rule in *IRC Section 453A* applies to the \$300,000 sale.

Example (2):

Assume the same facts as in Example (1), except that it is now Year 2. S sells another building for \$400,000 using the installment method, but makes no other installment sales in Year 2. Assume, also, that S has \$9 million of installment sales obligations outstanding at the end of Year 2. *IRC Section 453A* does not apply to the Year 2 sale, because S did not make new sales in Year 2 that gave rise to \$5 million of installment obligations outstanding at the end of Year 2. *IRC Section 453A*, however, continues to apply to the Year 1 sales.

If the \$5 million threshold is met, an entire year's interest is payable on applicable installment obligations that arise during the year and that are outstanding at year-end, regardless of the date of sale. For example, if an installment sale occurs December 30 of year 1, and the proceeds are collected January 2 of year 2, an entire year's interest is payable for year 1, if *IRC Section 453A* applies to the sale. (No interest is payable in year 2, since the obligation is not outstanding at year-end.)

[b] Computation of Interest

When an installment obligation to which *IRC Section 453A* applies is outstanding at the end of the taxable year, the interest equals the product of the applicable percentage of the deferred tax liability with respect to the obligation multiplied by the underpayment rate in effect under *IRC Section 6621(a)(2)* for the month with or within which the taxable year ends. n60.1 An IRS Chief Counsel Advice has ruled that the required interest charge arises as of the last day of the taxable year regardless of whether a sale occurs on the last day of the taxable year or any other day in the taxable year. (The advice assumed that the sales contract did not involve contingent payments.) The interest is computed by using the interest rate under *IRC Section 6621(a)* as of the close of the year, not by applying a weighted average of the interest rates. n60.2

The interest attributable to an obligation for a tax year is determined using this equation: n61

$$I = [(FA - \$5,000,000)/FA] \times [UR \times MTR] \times UPR$$

where

I = Interest on the deferred tax liability (which becomes the additional tax)

FA = Face amount of all obligations subject to *IRC Section 453A(b)(2)* which are outstanding at year end

UR = Unrecognized gain on an obligation, at the end of the taxpayer's tax year

MTR = Maximum tax rate applicable under either IRC Section 1 (for a non-corporate taxpayer) or 11 (for a corporation). If (1) the taxpayer is not a corporation, (2) the gain is capital, and (3) the taxpayer would use the 20 percent maximum tax rate provided in IRC Section 1(h) for any capital gain reported, then MTR will equal 20 percent. n62

UPR = IRC Section 6621(a)(2) underpayment rate in effect for the last month of the taxpayer's tax year.

Example:

Assume that on December 31 of year 1, S, an individual investor, has outstanding installment obligations with a face amount of \$20 million on which he is required to pay interest pursuant to *IRC Section 453A(b)(2)*. One of these obligations, which arose in year 1, has unrecognized gain of \$1 million at year end. Assume that this obligation qualifies for capital gain treatment and that S's maximum tax rate, pursuant to *IRC Section 1(h)*, is 15 percent. Assume, further, that the *IRC Section 6621(a)(2)* underpayment rate in effect for December of year 1 is 5 percent. The interest which S must pay on account of this obligation is computed as follows:

$$\begin{aligned}
 I &= [(FA - \$5,000,000)/FA] \times [UR \times MTR] \times UPR \\
 &= [(\$20,000,000 - \$5,000,000)/\$20,000,000] \times \\
 &\quad [\$1,000,000 \times 15\%] \times 5\% \\
 &= [75\%] \times \$150,000 \times 5\% \\
 &= \$7,500
 \end{aligned}$$

[c] Tax Treatment of Interest

IRC Section 453A(c)(1) says that interest paid under *IRC Section 453A(c)* is treated as an increase of the taxpayer's tax liability. *IRC Section 453A(c)(5)*, however, states that the interest is taken into account in computing the deduction the taxpayer is allowed for interest paid or accrued during the tax year. For an accrual taxpayer, the *tax year* refers to the year that the required addition to tax under *IRC Section 453A* is imposed, not to the subsequent year during which the interest is paid. n63

[2] Timeshares and Residential Lots

[a] When Interest Rules Apply

A dealer in qualified timeshares or residential lots may use the installment method only if he agrees (i.e., elects) to pay interest on the tax liability he defers through use of this method. n64 The interest rules then apply if the seller receives a payment on an obligation arising from such a sale during a tax year following the year of sale. Payments received in the year of sale are expressly excluded from the interest charge. n65

[b] Computation of Interest

Determining the interest due on a payment (other than a payment received in the year of sale) requires the seller to take these steps with respect to the payment: n66

(1) *Determine the gain recognized as a result of payments on the obligation during the year.*

(2) *Determine the tax attributable to the gain recognized during the year.* The Code is notably silent on how this is done. A 1991 Technical Advice Memorandum seems to take the approach that the tax attributable to the gain is the incremental tax which the taxpayer must pay as a result of the payments received, allocated pro rata among the payments. (This applies the taxpayer's highest marginal rates to

the payments.) n67

(3) *Compute the interest on the tax due.* This is based on the applicable Federal rate (AFR) under *IRC Section 1274* (without regard to *IRC Section 1274(d)(2)*) in effect on the sale date, compounded semiannually. n68 Although the Code does not say which AFR should apply, the Service has indicated that the short-term AFR should be used for an obligation that has a term of three or fewer years; the mid-term AFR for an obligation with a term of more than three, but fewer than nine, years; and the long-term rate for an obligation with a term of nine or more years. The relevant period for purposes of the interest computation is that between the sale date and the payment date.

Example:

S, a cash-basis, calendar-year individual whose business involves marketing undeveloped real estate, sells a qualifying residential lot on the installment basis on September 1, 1998, for \$30,000. P, the purchaser, makes a downpayment of \$10,000 on September 1, 1998, and agrees to pay an additional \$10,000 of principal on each of December 1, 1998, and March 1, 1999. Assume that 40 percent of each payment (i.e., \$4,000) represents taxable gain, and that the short-term AFR, based on the rate applicable at the time of sale, is 8 percent compounded semi-annually.

Neither the downpayment nor the December 1, 1998, installment payment is subject to an interest charge. This is because both payments were received in the year of sale. The situation is different for the March 1, 1999, payment. Assume that S is in the 36 percent marginal tax bracket, and that the \$4,000 of income which arises from the March 1, 1999 payment generates a tax liability of \$1,440 (\$4,000 x 36%). Since there are 182 days between the sale on September 1, 1998, and the March 1, 1999, payment, the interest attributable to this payment is computed as follows: n69

$$\begin{aligned}\text{Interest on tax} &= ((\$1,440 \times .08)/365) \times 182 \text{ days} \\ &= \$57.44\end{aligned}$$

[c] Tax Treatment of Interest

Even though the Code says that the interest on the tax is additional tax, n70 this additional payment is treated as interest for purposes of computing the taxpayer's allowable interest deductions. n71 This will typically be trade or business interest. It should be noted that S corporation shareholders may not deduct interest they pay as a result of tax incurred on installment sales of timeshares by their S corporation under *IRC Section 453(l)(3)(C)*. n71.1

FOOTNOTES:

(n1)Footnote 59. See generally Seago & Cornwall, "Interest on Taxes Deferred Through Installment Sales," 22 *Tax Adv* 532 (1991).

(n2)Footnote 60. *IRC § 453A(b)*. The \$5 million threshold is applied at the owner's level of a pass-through entity. *Notice 88-81, 1988-2 CB 397*.

(n3)Footnote 60.1. *IRC § 453A(c)(2)*.

(n4)Footnote 60.2. CCA 201021020.

(n5)Footnote 61. The equation comes from *IRC § 453A(c)*. $[(FA - \$5,000,000)/FA]$ produces the applicable percentage set forth in *IRC § 453A(c)(4)*. All *IRC § 453A(b)(2)* obligations arising during the same tax year will have the same applicable percentage. This percentage does not change in subsequent years as the purchaser makes payment on an obligation (or is treated as making payment under the pledging rule). HR Rep No 495, 100th Cong, 1st Sess 930 (1987). $[UR \times MTR]$ produces the deferred tax liability set forth in *IRC § 453A(c)(3)*.

(n6)Footnote 62. *IRC § 453A(c)(3)*(flush language) refers to *IRC § 1(h)* or *§ 1201* (providing a maximum capital gain rate for corporations). Based on the present rates under *IRC § 11*, *IRC § 1201* could not come into play.

(n7)Footnote 63. CCA 201021020 .

(n8)Footnote 64. *IRC § 453(l)(3)(A)*. For a discussion of the kinds of sales which qualify for the election, see § 7.02[1], above.

(n9)Footnote 65. *IRC § 453(l)(3)(B)(iii)*.

(n10)Footnote 66. These steps come from *IRC § 453(l)(3)(B)*.

(n11)Footnote 67. *TAM 9133002* . A taxpayer could presumably take the position that an average tax rate is appropriate in determining the tax attributable to the gain.

(n12)Footnote 68. But see *TAM 9133002* , where the Service did not use compound interest.

(n13)Footnote 69. Because of the short period between the sale and this payment, this formula does not need to take into account compounding of interest. As the preceding note indicates, the Service is not fond of this complication, which can be particularly unpleasant when the period between the payment and the sale date is not exactly divisible by six months. But the Code appears to require compounding.

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.06

§ 7.06 Dispositions and Pledges of Installment Obligations

Frequently, a seller wishes to raise additional cash after making an installment sale. One way to do this is to pledge or sell all or part of the installment obligation. In most cases the seller is looking for some form of tax nirvana--the receipt of cash without the payment of income tax.

In other cases, the seller may have a "purer" motive for disposing of the installment obligation. For example, the seller may wish to make a gift or charitable contribution of all or part of the obligation.

The Code provisions that deal with the seller's tax treatment in these situations are in *IRC Section 453B*, which relates to sales and other dispositions of an installment obligation, and *IRC Section 453A(d)*, dealing with the taxation of pledged obligations. As discussed in the materials that follow, these Code sections generally accelerate the income from the original installment sale when the seller disposes of or pledges the obligation.

While taxpayers are usually unhappy about having their installment gain accelerated, this is not always the case. A taxpayer might favor this result if he expected Congress to raise the rates applicable to his installment income. n72 Acceleration of the installment income might also be desirable if the taxpayer needs to generate income to use deductions which would otherwise produce no tax benefit.

The most efficient way to accelerate installment income is usually through a pledge of the obligation, assuming it arose from the sale of property described in *IRC Section 453A* (generally nondealer property sold for more than \$150,000, but excluding personal use property, farming property, and qualified timeshares and residential lots). As discussed in § 7.06[2][b], below, the amount of income accelerated is a function of the loan proceeds the taxpayer receives in connection with the pledge. This gives the taxpayer some flexibility in deciding how much income he wants to accelerate.

[1] Determining which Transactions Accelerate Income

[a] Transactions that Accelerate Income

The following are examples of transactions that accelerate income:

- (1) the sale or exchange (including the discounting) of an installment obligation; n73

- (2) the distribution of an installment obligation to a shareholder as a dividend;
- (3) making a gift of an installment obligation; n74
- (4) cancellation of the obligation, or its becoming unenforceable; n75
- (5) the pledge of an obligation arising from the sale of property described in *IRC Section 453A* (generally nondealer property sold for more than \$150,000, but excluding personal use property, farming property, and qualified timeshares and residential lots) (the "pledging rule").

This last category warrants additional attention. Most of *IRC Section 453A* provides rules requiring payment of interest on certain tax liabilities that are deferred through use of the installment method. These interest rules apply when the following requirements are satisfied:

- (1) The sale is of nondealer property sold for more than \$150,000 (but excluding personal use property, farming property, and qualified timeshares and residential lots).
- (2) The obligation resulting from the installment sale is outstanding at the close of the seller's tax year.
- (3) The face amount of these obligations, which arose during the tax year and are outstanding at the close of the year, exceeds \$5 million. n76

The pledging rule applies whenever the first of these three tests is satisfied. The second and third tests are relevant only for purposes of determining whether the taxpayer also owes interest. n77

Example:

In Year 1, S disposes of a building using the installment sale method. The sales price of the building is \$300,000. The total amount of installment sales which S makes in Year 1, and which are outstanding at the end of Year 1, is \$3 million. The pledging rule would apply to pledged obligations arising from the \$300,000 sale. The interest rule, however, does not apply, because the installment obligations which arose during the tax year and are outstanding at the close of the year do not exceed \$5 million.

[b] Transactions that Do Not Accelerate Income

These transactions do not produce taxable income: n78

- (1) The transfer of an installment obligation between spouses or a transfer between former spouses incident to a divorce. n79
- (2) The transfer of the obligation at death. n80 However, *IRC Section 691* governs the tax treatment of proceeds the estate or beneficiary receives as the obligation is paid off. n81 Note, also, that special rules apply to (a) an installment obligation which the decedent transfers to the installment obligor n82 and (b) any installment obligation which the decedent's estate uses to satisfy a pecuniary bequest. n83
- (3) Contribution of the obligation to a controlled corporation solely in exchange for stock pursuant to *IRC Section 351*. n84 If the transferor also receives boot (e.g., cash) in exchange for the obligation, some or all of the installment gain will be accelerated. n85

(4) Transfer of the obligation to a corporation under the reorganization rules of *IRC Section 361*. n86

(5) Contribution of the obligation to a partnership. n87

(6) Distribution of the obligation by a partnership to a partner, except as provided in *IRC Section 751*. n88

(7) Transfer of the obligation to a trust which the transferor is considered to own under the grantor trust rules. n89

In these types of dispositions, the transferee assumes the transferor's basis, and the transferee reports income as installments are received. n90

[2] Determining the Amount of Income Accelerated

[a] Sales and Other Dispositions

Computing the gain or loss on the disposition of an installment obligation typically requires two steps:

(1) Determine the taxpayer's basis in the installment obligation.

(2) Subtract the basis from the amount the taxpayer realizes. If, however, the obligation is not sold, exchanged, or satisfied at other than face value, the taxpayer subtracts the basis in the installment obligation from the fair market value of the obligation. n91

Obviously, the value assigned in Step 2 depends on whether there has been a sale or exchange or other satisfaction of the note. While it is usually clear whether this is the case, it is not always so. n92 The Code, however, expressly addresses the situation when an installment obligation is canceled or otherwise becomes unenforceable. These transactions are always treated as a disposition that is not a sale or exchange. Moreover, if the parties to the obligation are related within the meaning of *IRC Section 453(f)(1)*, the fair market value of the obligation cannot be treated as less than the obligation's face value. n93

The taxpayer's basis in an obligation equals its face value, less the income which the obligation would generate if it were paid in full. n94 This will typically equal the portion of the obligation which represents the return of the taxpayer's adjusted basis.

Example:

S, an investor, sells a parcel of undeveloped real estate using the installment method, and the installment obligation provides for adequate interest. S's adjusted basis in the property is \$100,000 and the sale price is \$400,000. The terms of sale call for the purchaser, P, to pay \$100,000 annually in each of the four years following the year of sale. Because S's gross profit percentage is 75%, each payment would produce \$75,000 of income for S. P has yet to make the last two payments due when S sells the installment obligation to a third party for \$190,000. S's gain on the sale of the obligation is computed as follows:

Computation of S's basis in the obligation

Remaining face value of obligation sold	\$.....20
	0,000

Less: Income the obligation would generate

1-7 Federal Taxes Affecting Real Estate § 7.06

if paid in full	\$.....15 0,000

Basis in the obligation	\$.....50, 000

<i>Computation of S's gain on sale of the obligation</i>	
Amount realized	\$.....19 0,000
Less: basis in the obligation	\$.....50, 000

Gain on sale of the obligation	\$.....14 0,000

[b] Pledges

Another way for a seller to realize cash following an installment sale is to borrow, pledging the installment note as collateral. For example, a seller may pledge an installment contract or note to secure a loan from a third-party creditor.

If the pledged obligation arose from the sale of property described in *IRC Section 453A*, the net proceeds of the loan which the installment obligation secures is treated as payment received on the obligation. n95 The borrower is treated as receiving this payment when he provides the installment obligation as security or, if later, when he receives the loan proceeds. n95.1

Indebtedness is secured by an installment obligation under *IRC Section 453A* to the extent that the payment of principal or interest on that indebtedness is directly secured (under the terms of the indebtedness or any underlying arrangement) by any interest in that installment obligation. A payment is treated as directly secured by an interest in an installment obligation to the extent an arrangement allows the taxpayer to satisfy all or a portion of the indebtedness with the installment obligation. n95.2

Example:

T disposes of property in exchange for an installment note. The disposition is properly reported using the installment method. T only recognizes gain upon receiving deferred payments. If the installment note is pledged as security for a loan, however, T must treat the proceeds of the loan as a payment on the installment note and recognize the appropriate amount of gain. Similarly, if T has the right to "put" or

repay a loan by transferring the installment note to the creditor, T must treat the proceeds of the loan as payment on the installment note to that extent. n95.3

Once a taxpayer has pledged an installment obligation, special rules apply to subsequent payments received on the installment obligation. In particular, installment payments the taxpayer receives after recognizing the pledge income are not taxable until these payments exceed the income which the pledge accelerated. n95.4

Example:

S, an individual investor, sells undeveloped real estate using the installment method in 1998 for \$500,000. The payment terms call for P to pay S \$100,000 per year, plus adequate stated interest, for five years, with the first payment due in 1999. S's adjusted basis in the property is \$200,000. In 1999, before S receives the first \$100,000 payment, she pledges the installment obligation to X to secure a \$150,000 loan. S recognizes \$150,000 of income as a result of the pledge. However, when she receives \$100,000 from P later in 1999, she does not include any part of the payment in her 1999 income. n95.5

One question that sometimes arises in these contexts is whether the taxpayer pledged an installment obligation or, instead, actually sold it. The Service has ruled that pledging an installment obligation is a disposition if the loan is "substantially equal to the face amount of the obligation." n96 The Tax Court has held, however, that no disposition occurred when installment sales and other assets were pledged to secure a line of credit. n97

[3] Impact of Modification

The holder of an installment obligation may agree, as a result of changed circumstances, to a change in the terms of the obligation and a substitution of collateral. In other instances, the buyer of the real estate may turn around and resell the property. If this subsequent sale is made using the installment method, the original buyer may ask the original seller to accept the new buyer's note as a substitute for the original installment obligation. The issue in each of these cases is whether a change in the terms of the original installment obligation is treated as a disposition of that obligation. If it is, the original seller's gain may be accelerated as a result of the modification.

IRC Section 1001 and pronouncements relating to it provide general rules dealing with the types of modifications which are considered to result in the disposition of a debt instrument. n98 The Service, however, takes the position that the rules under *IRC Section 1001* do not apply to modifications of installment obligations. n99 This is fortunate for most owners of installment obligations because relatively minor modifications are sufficient to trigger a disposition for *IRC Section 1001* purposes, while a fairly significant modification is required under *IRC Section 453B*. n100

For example, the obligation holder's agreement to extend a maturity date or change an interest rate is not a taxable modification; n101 neither is substituting obligors; n102 suspending principal payments for a stated period; n103 modifying the price of the original sale; n104 changing the interest rate n105 or converting it from a variable rate to a flat rate; n106 or dividing one installment note into two, if the only effect of the division is to change the collateral. n107

FOOTNOTES:

(n1)Footnote 72. Similarly, an individual taxpayer may be in the 15 percent bracket in Year 1 and want to increase the amount of income taxed at that favorable rate.

CHAPTER 7 Installment Sales

*1-7 Federal Taxes Affecting Real Estate § 7.07***§ 7.07 Repossession of Property Sold on the Installment Basis****[1] Computation of Gain on Repossession: General Rule**

IRC Section 1038 provides special treatment for repossessions of real property. n108 Instead of treating the repossession as a separate sale or disposition, the section looks to the original sale to determine whether the seller must recognize any gain on the repossession. In any event, the seller cannot recognize any loss upon repossession, and no bad debt deduction is allowed on reacquisition for worthlessness of any part of the purchaser's obligation. n109 *IRC Section 1038* may also apply to reacquisitions of oil, gas and mineral leases that are reacquired under a repurchase option. n109.1

The Section's "general rule" requires the seller to treat the purchaser's payments before default as if they consisted exclusively of gain. This general rule (which is subject to a significant limitation discussed below) obligates the seller to recognize gain upon repossession to the extent that the total collections received before the reacquisition exceed gain previously reported. For this purpose, the seller does not include in total collections interest (whether stated or unstated) and any note or other obligation of the purchaser. n110

Example (1):

Taxpayer sells a building in Year 1 for \$80,000. His adjusted basis in the building is \$60,000. The gain realized is \$20,000 (25 percent of the selling price). The downpayment is \$20,000, with six yearly installments of \$10,000, payable beginning in Year 2. The sale is reported using the installment method, and the seller includes 25 percent of each cash payment as taxable income. In Year 4, after the purchaser has made three installment payments, the buyer defaults and the taxpayer repossesses the property, which, at that time, has a fair market value of \$40,000. The costs associated with the repossession are \$500. The gain on repossession is determined under the *general* rule as follows:

Gain Based on General Rule

Total cash received in all years prior to repossession	\$50,000
Less: Portion of gain previously included in income (25% of \$50,000)	\$12,500

Gain based on the general rule	\$37,500

IRC Section 1038 does not come into play unless there is a sale and reacquisition of the same property. n111 If a taxpayer receives property in lieu of foreclosure of a loan and the underlying transaction was not a sale of that property, the taxpayer realizes ordinary income to the extent that the net fair market value of the property received exceeds the taxpayer's adjusted basis in the debt. n112

IRC Section 1038 applies without regard to any changes that may occur to the property between the time of sale and the reacquisition. n112.1 Furthermore, if the property has been damaged during that period, no loss is allowed. n112.2

[2] Limitation on Gain

The gain determined under the general rule is often limited. The limitation is designed to ensure that the taxpayer's gain on the repossession does not result in the recognition of more income than was realized when the property was initially sold. Thus, the additional gain resulting from the repossession cannot exceed: (1) the original gain (i.e., the amount by which the original sale price exceeded the property's adjusted basis at the time of the sale), reduced by (2) the gain previously reported (i.e., the amount of gain on the sale of the real property which is returned as income for periods prior to the acquisition) and the cost of repossession (i.e., the amount of money and the fair market value of other property paid or transferred by the seller in connection with the reacquisition). n113

Example (2):

Assume the same facts as in the preceding Example(1). Because of the limitation just described, the taxpayer will, in fact, recognize less than the \$37,500 which applies under the general rule:

Limitation--

Selling price of property	\$.....80,000
Less--Basis	\$.....60,000
Original gain	\$.....20,000
Less--Portion of gain previously included in income	\$.....12,500
Repossession costs	\$.....13,000

Gain under the limitation	\$.....	7,000
		0

This result makes sense: Although the general rule produced a \$37,500 figure, the taxpayer didn't have this great a gain from the sale. The limitation rule, in this case, ensures that the gain from the reacquisition is appropriate.

[3] Tax Treatment of Gain on Reacquisition and Holding Period

The tax treatment of the gain on reacquisition--whether ordinary or capital--is determined by the treatment that applied when the sale was initially made. n114 If the seller, in a tax year before the reacquisition, treated the purchaser's indebtedness in whole or in part as a bad debt, the seller, upon repossession, is considered to have received income equal to the bad debt previously deducted. n115 The income is treated as a recovery of a bad debt previously deducted as wholly or partially worthless. n116

The holding period of the property reacquired includes the period for which the seller held the property before the original sale, but not the period between the date of the original sale and the date of the reacquisition. n117 If, however, the purchaser made improvements on the repossessed property, a separate holding period will apply to the improvements. The holding period for the improvements starts with the reacquisition of the realty. n118

[4] Seller's Basis in Reacquired Property

Following reacquisition of the property, the seller takes a new basis. The basis equals the sum of these items:

- (1) the seller's adjusted basis in the *indebtedness* secured by the property;
- (2) gain that the seller recognizes on the acquisition; and
- (3) cash and any other property (other than the repossessed real estate and the purchaser's notes secured by the real estate) which the seller pays in connection with the reacquisition. This includes the seller's repossession costs. n119

The seller's adjusted basis in the indebtedness is increased by any portion of the indebtedness which the seller treated as worthless before the reacquisition. n120

Example (3):

In Example (1), above, the taxpayer's basis in the debt is 75 percent of the face value of the debt (which equals the taxpayer's adjusted basis in the property sold (\$60,000) divided by the sale price (\$80,000)). At the time of reacquisition, the taxpayer holds notes with a face value of \$30,000 and an adjusted basis of \$22,500 (75% x \$30,000). Thus, the taxpayer's adjusted basis in the reacquired property is \$30,000, computed as follows:

Taxpayer's adjusted basis in notes	\$22,500

Plus: gain recognized on reacquisition	7,000
repossession costs	500
Adjusted basis in reacquired property	\$30,000

[5] Repossession of Residence

Special rules may apply if a taxpayer sells his or her residence on the installment basis n121 and then repossesses the home. The rules are as follows: n122

- (1) If the taxpayer does not use *IRC Section 121* to reduce taxable gain on the installment sale, the regular rules of *IRC Section 1038* apply upon repossession.
- (2) If the taxpayer uses *IRC Section 121* on the installment sale, but waits *at least one year* before reselling the home, the regular rules of Section 1038 apply upon repossession.
- (3) If the taxpayer uses *IRC Section 121* on the installment sale, but waits *less than one year* before reselling the home, the taxpayer does not recognize any gain on the repossession and the resale is considered part of the original sale for purposes of applying the rules under *IRC Section 121*.

For sales and exchanges before May 7, 1997, the special rules above applied if the taxpayer used either former *IRC § 121* (relating to sales of principal residences by persons at least 55 years old) or former *IRC § 1034* (relating to rollover of gain from sale of principal residence). n123

[6] Reacquisition by Seller's Estate

The special rules set forth in *IRC Section 1038* are available to a decedent's estate. Thus, if the taxpayer sells property on the installment basis and dies prior to repossession of the property, his estate will be able to use the provisions of *IRC Section 1038* to mitigate the gain which the estate recognizes on repossession. n124

FOOTNOTES:

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.08

§ 7.08 Imputed Interest on Selling Price

Most installment sales provide that the purchaser will pay interest on the deferred principal payments. If, however, the installment obligation does not provide for interest, or the interest is below market rates, the Code will recharacterize some of the principal payments as interest. This approach is designed to deny sellers any tax advantage which might result from allowing them to treat installment payments as consisting solely of principal. n125

In most cases, the original issue discount (OID) rules under *IRC Section 1274* will apply to transactions where the installment obligation does not provide for "adequate stated interest" n126 and at least one payment under the obligation is due more than six months after the sale or exchange. n127 Interest is generally inadequate if it is less than the applicable Federal rate (AFR) for the period that the installment obligation is outstanding. The three AFRs described in *IRC Section 1274(d)* are the Federal short-term rate (for debt instruments with a term of three years or less); the Federal mid-term rate (for debt instruments with a term of three years, but not over nine years); and the Federal long-term rate (for debt instruments with a term of over nine years). n128 The Service revises these AFRs each month to reflect changes in market interest rates.

Several types of transactions which could involve real estate installment sales are excluded from the application of *IRC Section 1274*, namely: n129

- (1) farm sales by individuals, estates, testamentary trusts and small businesses when the sale price does not exceed \$1 million;
- (2) sales of principal residences;
- (3) sales involving total payments of \$250,000 or less;
- (4) certain land transfers for \$500,000 or less between related persons, if *IRC Section 483(e)* applies to the debt which arises from the transfer; and
- (5) cash method debt instruments with a stated amount of \$2 million or less (adjusted for inflation after 1989). n130

Obligations that are not subject to *IRC Section 1274* may, nonetheless, have imputed interest because of *IRC Section 483*. Section 483 applies to an installment obligation if the obligation is not subject to *IRC Section 1274*, n131 the sale or exchange that gives rise to the installment obligation has a price of more than \$3,000, n132 at least one payment is due more than one year after the sale or exchange, n133 and the obligation calls for no interest or an inadequate rate of interest. n134 Thus, *IRC Section 483* typically applies to the five types of transactions described above which are not subject to *IRC Section 1274*.

FOOTNOTES:

(n1)Footnote 125. The discussion of this complicated subject is, necessarily, just an overview. For detailed coverage, see, eg, David Garlock, ed, *Federal Income Taxation of Debt Instruments* (Prentice-Hall Law and Business 1994); McCawley, 333-4th TM, *Time Value of Money: OID and Imputed Interest* (BNA); Lawrence Lokken, "The Time Value of Money Rules," 42 *Tax L Rev* 1 (1986) (a 300-page article).

(n2)Footnote 126. *IRC § 1274(c)(1)*. For a definition of adequate stated interest, see *IRC § 1274(c)(2)*.

(n3)Footnote 127. *IRC § 1274(c)(1)(B)*.

(n4)Footnote 128. If a debt instrument given for property does not have a stated principal amount in excess of \$2.8 million, the AFR used to determine the issue price cannot exceed 9 percent. *IRC § 1274A(a), (b)*. The \$2.8 million figure is adjusted annually for inflation; the amount is \$3,885,500 for sales or exchanges in 1999 (*Rev Rul 98-58, 1998-2 CB 799*), \$3,960,100 for sales and exchanges in 2000 (*Rev Rul 99-50, 1999-2 CB 656*), \$4,085,900 for sales and exchanges in 2001 (*Rev Rul 2000-55, 2000-2 CB 595*), \$4,217,500 for sales and exchanges in 2002 (*Rev Rul 2001-65, 2001-2 CB 639*), \$4,280,500 for sales and exchanges in 2003 (*Rev Rul 2002-79, 2002-2 CB 908*), \$4,381,300 for sales and exchanges in 2004 (*Rev Rul 2003-119, 2003-2 CB 1094*), \$4,483,000 for sales and exchanges in 2005 (*Rev Rul 2004-107, 2004-2 CB 852*), \$4,630,300 for sales and exchanges in 2006, \$4,800,800 for sales and exchanges in 2007 (*Rev Rul 2007-4, 2007-4 IRB 351*), \$4,913,400 for sales and exchanges in 2008 (*Rev Rul 2008-3, 2008-2 IRB 249*), \$5,131,700 for sales and exchanges in 2009 (*Rev Rul 2008-52, 2008-49 IRB 1233*), and \$5,115,100 for sales and exchanges in 2010 (*Rev Rul 2010-2, 2010-3 IRB 272*).

(n5)Footnote 129. *IRC §§ 1274(c)(3), 1274A(c)(1)*.

(n6)Footnote 130. For transactions in 2001, the amount is \$2,918,500 (*Rev Rul 2000-55, 2000-2 CB 516*); for transactions in 2002, the amount is \$3,012,500 (*Rev Rul 2001-65, 2001-2 CB 639*); for transactions in 2003, the amount is \$3,057,700 (*Rev Rul 2002-79, 2002-2 CB 908*); for transactions in 2004, the amount is \$3,129,500 (*Rev Rul 2003-119, 2003-2 CB 1094*); for transactions in 2005, the amount is \$3,202,100 (*Rev Rul 2004-107, 2004-2 CB 852*); for transactions in 2006, the amount is \$3,307,400 (*Rev Rul 2007-4, 2007-4 IRB 351*); for transactions in 2007, the amount is \$3,429,100 (*Rev Rul 2007-4, 2007-4 IRB 351*); for transactions in 2008, the amount is \$3,509,600 (*Rev Rul 2008-3, 2008-2 IRB 249*); for transactions in 2009, the amount is \$3,665,500 (*Rev Rul 2008-52, 2008-49 IRB 1233*). For transactions in 2010, the amount is \$3,653,600 (*Rev Rul 2010-2, 2010-3 IRB 272*).

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.09

§ 7.09 Treatment of an Installment Sale When a Taxpayer Elects Not to Use the Installment Method

A taxpayer who elects not to report a qualified sale on the installment method must recognize gain on the sale in accordance with the taxpayer's overall accounting method. n135 For fixed amount obligations, an accrual-method taxpayer recognizes the total amount payable under the installment obligation. n136 A cash-method taxpayer, on the other hand, recognizes an amount equal to the fair market value of the obligation, which cannot be less than the sale price of the property sold, minus any other consideration the taxpayer receives on the sale. n137

In addition, the regulations provide that any provision of contract or local law restricting the transferability of the installment obligation must be disregarded in the determination of the fair market value. n138 Thus, a "nonnegotiable" note cannot be considered to have a reduced fair market value. The regulations reach all types of obligations, whether represented by a note, executory contract or even an oral promise enforceable under local law.

CHAPTER 7 Installment Sales

1-7 Federal Taxes Affecting Real Estate § 7.10

§ 7.10 Open-End or Contingent Selling Price

One type of sale that is used occasionally, particularly between a landowner and a subdivider, is the open-end or contingent price sales contract. With this type of sale, a landowner may not agree to a fixed price per acre but may want to tie the price to the ultimate success and value created by the development and sale of the property. A variation provides the seller with a fixed price per acre, with the buyer agreeing to pay an additional amount contingent upon the success of the ultimate sale of the property. A third approach is to establish a higher sales price with a provision that, if the buyer does not reach certain profit levels on resale, the sales price will be reduced. These transactions are the same in one respect--the seller does not know the final amount of the selling price.

IRC Section 453(j)(2) provides that installment method reporting is available under regulations prescribed by the Secretary in transactions when the gross profit or the total contract price (or both) cannot be readily ascertained. The temporary regulations n139 provide the rules for allocation of basis to payments received in three basic fact situations:

- (1) sales for which a maximum selling price is determinable;
- (2) sales for which a maximum selling price is not determinable, but the time period in which the payments will be received is determinable; or
- (3) sales for which neither a maximum selling price nor a definite payment term is determinable.

In a situation where the maximum selling price is determinable, such maximum price is treated as the "selling price" for purposes of making the usual installment method calculations. n140 When the maximum amount is subsequently reduced, the gross profit ratio is recomputed with respect to payments received in or after the taxable year in which the event requiring reduction occurs. n141

When a stated maximum selling price cannot be determined, but the maximum period over which the payments may be received is fixed, the seller generally allocates his adjusted basis equally among the years in which payment may be received. n142 If in any taxable year no payment is received or the amount of payment received (exclusive of interest) is less than the basis allocated to that taxable year, the seller cannot take a loss deduction unless the taxable year is the final payment year under the agreement. Instead of taking a loss deduction, the seller carries forward the unrecovered portion of the basis allocated to that taxable year to the next succeeding year. n143

If neither a maximum selling price nor fixed payment period is determinable, the Service will question whether a sale really has occurred or whether, in economic effect, the payments received are really in the nature of rent or royalty income or joint venture distributions. The regulations state that such arrangements will be closely scrutinized. However, if the arrangement is ultimately determined to qualify as a sale, the taxpayer's basis will be recovered in equal annual increments over a period of 15 years. n144

The general rule requiring the recovery of basis over 15 years does not apply if the taxpayer can establish to the Service's satisfaction that application of such a general rule would substantially and inappropriately defer the recovery of the taxpayer's basis. Conversely, if the Service determines that the 15-year period substantially and inappropriately accelerates recovery of the taxpayer's basis in early years of that 15-year term, the Service may require that the basis be reallocated within the 15-year term, but in no event will that basis be allocated over more than a 15-year period. n145

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate Scope

Scope

SCOPE

This chapter discusses the requirements and operation of *Section 1031 of the Internal Revenue Code*, which provides for nonrecognition of gain or loss on qualifying exchanges of like-kind property. Included is a comprehensive review of the various requirements for complying with Section 1031 as it applies to real estate. Multiparty exchanges and deferred exchanges are also discussed in detail.

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.01

§ 8.01 Overview of IRC Section 1031

[1] In General

A transferor generally realizes gain or loss on a sale or other disposition of real property. The amount of gain or loss is the difference between the adjusted basis of the property and the amount realized from the sale or other disposition. n1 Unless a statutory nonrecognition provision applies, any realized gain must also be recognized. n2 If realized gain or loss is subject to nonrecognition treatment under a Code provision, the gain is not included in gross income, nor is the loss deductible from gross income.

IRC Section 1031 is one of several nonrecognition provisions in the Internal Revenue Code. It provides that no gain or loss is recognized when there is a qualifying like-kind exchange of property. n3 Its underlying rationale is that recognition of gain or loss is not appropriate when a taxpayer essentially continues an investment in the same kind of property, notwithstanding the occurrence of an otherwise taxable transaction. The provision also recognizes that a taxpayer who receives only real estate in an exchange may not have cash available to pay tax on the realized gain. n4 *Internal Revenue Code Section 1031* generally permits taxpayers to exchange unwanted real estate and acquire other like-kind property without incurring immediate tax on the gain.

Nonrecognition is available, however, only if the taxpayer satisfies detailed statutory requirements. These requirements are discussed in the following parts of the chapter.

Complete nonrecognition of gain or loss is available for exchanges that consist solely of like-kind property. n5 If cash or other property in addition to like-kind property is received in an otherwise qualifying exchange, the transaction is not taken out of *IRC Section 1031*. Rather, gain, if any, must be recognized, but only to the extent of the money and fair market value of non like-kind property received by the taxpayer in the exchange. n6 Still, however, no loss can be recognized. Thus, if **any** like-kind property is received in an exchange, the transaction falls within the ambit of *IRC Section 1031*. A taxpayer wishing to recognize a loss in an exchange must therefore take care not to receive any like-kind property in the exchange. n7

[2] Nonrecognition Treatment Under IRC Section 1031 Not Elective

IRC Section 1031 is a non-elective provision. If a transaction falls within its ambit, nonrecognition of gain or loss automatically follows. n8

Planning Tip:

Ordinarily, tax planning around *IRC Section 1031* involves structuring and implementing transactions so as to meet statutory requirements and thereby qualify for nonrecognition. In appropriate situations, however, the opposite may be true--a taxpayer may want to assure that the requirements of *IRC Section 1031* are **not** met so that gain or loss may be recognized. For example, a taxpayer may wish to sell real estate in order to claim a loss, and reinvest the proceeds in like-kind property. A taxpayer may also wish to fully recognize taxable gain on the sale of property in order to obtain an increased basis for depreciation in the replacement property, take advantage of currently low capital gains rates, or offset another loss or loss carryover.

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.02

§ 8.02 Reporting Requirements

[1] Income Tax Reporting Requirements

Section 1031 exchanges must be reported to the IRS, notwithstanding the nonrecognition of gain or loss. Form 8824, Like-Kind Exchanges, must be filed for each exchange of qualifying business or investment property for property of a like-kind. Multiple exchanges may be reported on separate Forms 8824, or one summary Form 8824 may be filed, with attached statements showing all the information requested on Form 8824 for each exchange. n10

Form 8824 must be filed in any tax year the taxpayer transfers property to another party in a like-kind exchange. The requested information must be provided in accordance with the instructions to the form. A Form 8824 must also be filed for the 2 years following the year of a related party exchange.

Any gain recognized on a like-kind exchange under *IRC Section 1031(b)* must also be reported on Schedule D to Form 1040 or Form 4797, Sales of Business Property, whichever applies.

[2] Broker Returns

The person(s) responsible for closing a like-kind exchange may be required to file a Form 1099-S, Proceeds from Real Estate Transactions, in accordance with the instructions to the form. The person responsible for closing the transaction is usually the person listed as the settlement agent on the Uniform Settlement Statement prescribed under the Real Estate Settlement Procedures Act of 1974 (RESPA). n11

If no one is responsible for closing, the person responsible for filing is one of the following (in the following order):
n12

- the mortgage lender;
- the transferor's broker;
- the transferee's broker; or
- the transferee.

Both parties to the exchange are treated as transferors for whom a Form 1099-S must be filed. The regulations provide an example of reporting requirements for gross proceeds in an exchange. n13

No information return is required with respect to a transferor that is a corporation, a governmental unit, or an exempt volume transferor, but if there is a non-exempt transferor, the reporting person must still file a Form 1099-S for the non-exempt transferor. n14 Sales and exchanges of certain property that are not related to the sale or exchange of reportable real estate are also exempt from the Form 1099-S reporting requirements, including sales and exchanges of interests in natural resources or crops, burial plots or vaults, or mobile homes. n15

[3] Withholding on Acquisitions of U.S. Real Property Interests Acquired from Foreign Persons

When a foreign person transfers a U.S. real property interest, the transferee is required to deduct and withhold a tax equal to 10 percent of the amount realized by the foreign person on the disposition. n16 Because the withholding amount is based on the amount *realized*, rather than the amount *recognized*, by the transferor, the transferee is subject to the withholding requirement even in a tax-free exchange. n17 The amount required to be withheld, however, cannot exceed the transferor's maximum tax liability. n18

It is the responsibility of a transferee to determine if a transferor is a foreign person. If the transferor is a foreign person, and the transferee fails to withhold, the transferee may be held liable for the tax. n19

Transferees must use Forms 8288, U.S. Withholding Tax Return for Dispositions by Foreign Persons of U.S. Real Property Interests, and 8288-A, Statement of Withholding on Dispositions by Foreign Persons of U.S. Real Property Interests, to report and pay to the IRS any tax withheld on the acquisition of a U.S. real property interest. The forms must generally be filed and any tax withheld paid by the 20th day after the date of the transfer. n20

There are several exceptions under which withholding is not required. n21 The primary exception pertaining to like-kind exchanges is where the transferor is not required to recognize any gain or loss with respect to the transfer, and the requirements of *Regulation Section 1.1445-2(d)(2)* are met. That regulation sets forth requirements regarding the transferor's notice to the transferee that the transferor need not recognize any gain, and the transferee's timely providing of a copy of the notice to the IRS. n22

Withholding may also be reduced or eliminated pursuant to a withholding certificate issued by the IRS. n23 Procedures for obtaining a withholding certificate under *Regulations Sections 1.1445-3* and *1.1445-6* are set forth in *Revenue Procedure 2000-35*. n24 Details on withholding on dispositions of U.S. real property interests can be found in Publication 515.

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.10

§ 8.10 Overview of Requirements

[1] In General

Under *IRC Section 1031(a)(1)*, no gain or loss is recognized on the exchange of property held for productive use in a trade or business or for investment if that property is exchanged solely for property of like-kind which is also to be held for productive use in a trade or business or for investment. Thus, nonrecognition is available under *IRC Section 1031* only if the following requirements are met: n25

- there must be an "exchange" of property; the exchange requirement is discussed in § 8.11;
- both the property exchanged and the property received must be held for productive use in a trade or business or for investment; this is referred to as the "holding requirement", which is discussed in § 8.12; and
- the properties exchanged must be of like-kind; the "like-kind" requirement is discussed in § 8.13.

For deferred exchanges, a number of additional requirements must be met. n26 These are discussed in § 8.14.

[2] Excluded Property

[a] In General

Even if the requirements in [1] are met, certain property is specifically excluded from *IRC Section 1031*. The provision does not apply to any exchange of the following property: n27

- stock in trade or other property held primarily for sale; n28
- stocks, bonds, or notes; n29
- other securities or evidences of indebtedness or interest;
- interests in a partnership; n30

- certificates of trust or beneficial interest; or
- choses in action.

Thus, the exchange of these types of property, even if for other like-kind property, does not receive nonrecognition treatment under *IRC Section 1031*. The exceptions for stock in trade or other property held primarily for sale and partnership interests are discussed in further detail in [b] and [c], below. The remainder of the exceptions have less relevance to real estate, and are intended to exclude intangible property. n31

[b] Stock in Trade or Other Property Held Primarily for Sale

[i] Two Distinct Categories of Property

IRC Section 1031 does not apply to exchanges of stock in trade or other property that is held primarily for sale. n32 This exception refines the requirement that property be held for productive use in a trade or business or for investment. The major source of difficulty here is that property held for investment qualifies only if it is not held primarily for sale, but the very notion of investment implies holding property for future sale. The distinction between holding property primarily for sale and holding property for investment is further complicated by analogous statutory requirements in the capital gains area. Capital gain treatment is not allowed to property held by a taxpayer primarily for sale to customers in the ordinary course of a trade or business. n33

This exception under *IRC Section 1031* encompasses two distinct categories: n34

- stock in trade; and
- other property held primarily for sale.

[ii] "Stock in Trade" Category

The stock in trade category is intended to exclude real property that is inventory of a dealer. The primary issue that arises under this category is whether a particular taxpayer is a "dealer" in real estate. A considerable and confusing body of case law has developed to distinguish between dealers and nondealers (investors) in real estate. n35 Status as a "dealer" does not automatically preclude the use of *IRC Section 1031*. A dealer in real property may also acquire and hold real property for investment purposes, in other words, a taxpayer can be a dealer with respect to some properties, and an investor with respect to others. n36 When seeking to take advantage of *IRC Section 1031* with respect to a particular property, however, a dealer has the burden of proving that it is an investor with respect to that property. n37

To prove investor status with respect to particular property a dealer must generally show that the property was held for the production of income (whether presently or in the future). Property held for long-term appreciation cannot qualify. For a dealer, even holding property for many years does not establish an intent to hold it for investment rather than for sale. n38

In one pro-dealer case, the Tax Court found that an exchange of property qualified for nonrecognition under *IRC Section 1031* because the taxpayer--a real estate dealer--held the particular property in question as a capital asset and not primarily for sale. The case involved an exchange by the taxpayer's largest shareholder, who was liquidating the taxpayer's assets. n39

[iii] "Other Property Held Primarily for Sale" Category

The other category in the exception--"other property held primarily for sale"--is broader than the "stock in trade"

category. It encompasses *any* property held primarily for sale, whether or not that property is stock in trade or inventory. This category is also broader than the corresponding exclusion for capital asset property n40 because it does not require that the property be held for sale in the ordinary course of a trade or business. Rather, it requires only that the property be held primarily for sale. n41

For purposes of *IRC Section 1031*, "primarily" means "of first importance" or "principally." n42 Neither the Code nor the regulations define "held primarily for sale." The determination of whether property is held primarily for sale is a question of fact, and therefore requires an examination of the circumstances of each case. Courts look to several factors in determining whether property is held primarily for sale for purposes of *IRC Section 1031*, including the following: n43

- the purpose for which the property was initially acquired;
- the purpose for which the property was subsequently held; n44
- the ordinary business of the taxpayer, i.e., whether a taxpayer's real estate operations are limited to the properties in question or are engaged in as part of a general real estate business; n45
- whether the taxpayer makes improvements on the property; n46
- the extent of development or other activity with respect to the property; n47 and
- the extent of marketing of the property.

[c] Interests in a Partnership

[i] Applicability of Exception

IRC Section 1031 does not apply to any exchange of interests in a partnership. n48 Thus, a partnership as a taxpayer may exchange real estate for other like-kind property and take advantage of Section 1031. However, a partner may not exchange an interest in a real estate partnership for another partnership interest without triggering a taxable event. n49 The exception for exchanges of partnership interests applies regardless of whether the interests exchanged are general or limited partnership interests, or are interests in the same partnership or in different partnerships. n50

Note:

It should be noted that a conversion of a general partnership into a limited partnership or into an LLC is not considered an exchange and therefore does not fall within the scope of *IRC § 1031*. Generally, these conversions can be accomplished tax-free unless there is a shift in a partner's share of partnership liabilities. n51

If a partnership is used to hold real estate, careful attention must be paid to any attempts to avoid this limitation on Section 1031. For example, the distribution of an interest in real estate from a partnership to a partner, followed by that partner's exchange of the real estate in a Section 1031 transaction, may still be prohibited by Section 1031. The IRS may assert that the holding requirement has not been met or, applying the step transaction doctrine, may collapse the various steps and determine that the substance of the transactions is an exchange of partnership interests. n52

Planning Tip:

A common problem faced by taxpayers holding property in partnerships is how to dispose of the partnership property when not all of the partners want to continue in the partnership, but some of the

partners want to defer their gain through a *IRC Section 1031* exchange. Attempts to accomplish that goal often run afoul of the holding requirement or can be collapsed into an exchange of partnership interests. n53

It is not always clear whether an arrangement is a mere co-ownership or a partnership. A mere joint undertaking merely to share expenses is not a partnership, nor is mere co-ownership of property that is maintained, kept in repair, and rented or leased. Tenants in common may be partners, however, if they actively carry on a trade, business, financial operation or venture, and divide the profits. For example, a partnership exists if co-owners of an apartment building lease space and in addition provide services to the occupants either directly or indirectly. n54

Note:

The IRS has specified the conditions under which it will consider a request for a ruling that an undivided fractional interest in rental real property (other than a mineral property) is not an interest in a business entity. n55

It is the degree of services that determine whether a partnership is present. Providing customary services of maintenance and repair will not render co-ownership a partnership, but the furnishing of additional services by the owners or through an agent will. Owners are not treated as providing services that are provided by an independent management company that is not an agent of the owners, provided the owners do not share the income earned from these additional services. n56 The temporary pooling of funds on a non-pro rata basis and the appointment of a tenant-in-common owner as a payment and/or communications agent because of the bankruptcy of the master tenant will not necessarily cause the tenants-in-common to become partners in a partnership if the arrangement was not a partnership prior to the temporary pooling of funds. n56.1

The filing of partnership returns will also indicate that a partnership is present. n57

Note:

An LLC with two or more members is treated for tax purposes as a partnership, in the absence of an election to be taxed as a corporation. n58 Therefore, the prohibition of exchanges of partnership interests n59 also applies to exchanges of LLC interests.

[iii] Partnerships with Section 761 Election in Effect

An interest in a partnership that has in effect a valid election under *IRC Section 761* to be excluded from the partnership provisions n60 is treated as an interest in each of the partnership assets and not as an interest in a partnership. n61 Therefore, qualifying exchanges of these partnership interests may qualify for nonrecognition under *IRC Section 1031* if statutory requirements are met. n62

An exchange of an interest in a partnership with a Section 761 election in effect does not qualify for nonrecognition with respect to any asset of the partnership that is otherwise excluded under *IRC Section 1031(a)(2)*, n63 however, or to the extent that the exchange (which is of assets of the partnership) does not otherwise satisfy the statutory requirements for nonrecognition. n64 It should be noted that the Section 761 election is available only for partnerships that are not actively conducting a business. n65

[d] Special Rule For Single-Member LLCs

LLCs that elect to be treated as partnerships for tax purposes are generally treated the same way as partnerships for purposes of the like-kind exchange provisions. Thus, a member of an LLC may not exchange an LLC interest for another LLC interest under *IRC Section 1031*. n66

Similarly, LLCs that elect to be treated as corporations for tax purposes are generally treated the same way as corporations for purposes of the like-kind exchange provisions. Thus, a member of such an LLC may not exchange stock in that LLC for other stock in an LLC without triggering a taxable event. n67

The IRS has ruled, however, that a single-member LLC that does not elect to be treated as an association under the entity classification rules n68 will be disregarded as an entity separate from its owner for tax purposes. n69

Revenue Ruling 99-6 allows a taxpayer to engage in a like-kind exchange by exchanging an interest in real property for an interest in a single member LLC that owns an interest in like-kind property. In essence, the real property owned by the LLC is treated as owned directly by the taxpayer. Therefore the membership interest in the LLC is treated as like-kind to the property exchanged by the taxpayer. This treatment does not apply if the LLC elects to be treated as an association (and taxable as a corporation) for tax purposes. n70

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.11

§ 8.11 Exchange Requirement

[1] In General

IRC Section 1031 provides for nonrecognition treatment only if there is an exchange of property. n71 There are three general requirements for the exchange requirement to be met: n72

- the taxpayer must demonstrate its intent to achieve an exchange (and the properties exchanged must be of like-kind and held for a qualified use); n73
- the steps in the transfers involved in the exchange must be part of an integrated plan to exchange the relinquished property for the replacement property; n74 and
- the party holding the replacement property must not be the taxpayer's agent. n75

[2] Definition of "Exchange"

An exchange is a reciprocal transfer of property, as distinguished from a transfer of property for money consideration. n76 A sale of property with a reinvestment of the proceeds into a second like-kind property ordinarily does not qualify as an exchange, even if the reinvestment is made immediately, n77 and even if other statutory like-kind exchange requirements are met, such as a timely designation and receipt of replacement property. n78 Similarly, in a reverse exchange context, the purchase of one property and the subsequent sale of another property does not generally qualify as an exchange. n79

A transaction may qualify as an exchange for tax purposes even though an actual exchange would be forbidden under state law. In one ruling, the IRS applied a "substance over form" rationale and concluded that a transaction cast as a sale of farmland and subsequent purchase of other farmland was in fact an exchange under *IRC Section 1031*. An exchange would have been illegal under state law because the land was owned by an incompetent whose guardian was acting on his behalf. n80

The distinction between an exchange and a sale/purchase is not always clear, especially when multiple parties and escrows, qualified intermediaries, and/or deferred exchanges are involved. n81 In court challenges involving the exchange requirement, the IRS often asserts that the taxpayer has received or otherwise controls the proceeds from the

property being relinquished, either by virtue of constructive receipt, or because an intermediary or third party holding the proceeds on the taxpayer's behalf is acting as the taxpayer's agent. n82

Nevertheless, applying the step transaction doctrine, courts and the IRS have allowed taxpayers a certain amount of leeway in structuring a series of transactions that eventually accomplish an exchange. The various steps are collapsed and treated as component parts of the ultimate exchange transaction, and the interim steps are ignored for tax purposes. For a series of transactions to comprise an exchange and not be treated as separate sales and purchases, courts generally require that each specific transaction be an interrelated step in a single integrated transaction constituting an exchange. In other words, the step transaction doctrine applies the standard of the "integrated plan" in determining whether a qualified exchange has occurred. n83

Courts have also applied a "contractual interdependence" standard. This usually requires that each step must be contractually interdependent to the others, that is, the sale of the taxpayer's property cannot occur without the purchase of the replacement property. Under this standard, if contractual interdependence is not present, each step is likely to be treated as a separate taxable event. The mere fact that proceeds from the sale of one property are to be used to purchase the other property does not establish the requisite contractual interdependence. n84

Courts have been reluctant to deny nonrecognition treatment due to defects in the form of the transaction so long as an exchange is intended, and all aspects of the transaction reflect an integrated plan whereby the taxpayer would part with property in return for like-kind property. n85

While intent alone is not dispositive of the existence of an exchange, n86 it is relevant in dissecting the various steps. n87 Cases have found an exchange to be present even though one or more of the following circumstances were present:

- the purchaser never held title to the exchange property; n88
- the exchange involved a nonsimultaneous exchange of property; n89
- multiple parties were involved; n90
- a party held transitory ownership of exchange property solely for purposes of effecting the exchange; n91
- sale proceeds were deposited into an escrow account before an exchange property was located; n92
- the intermediary did not acquire legal title to the exchange property; n93
- the initial sale transaction was changed to an exchange transaction even though the property to be received on the exchange was not identified as of the date the original agreement was made; n94
- the taxpayer retained the right to require a cash payment if the other party to the exchange was unable to acquire for exchange an identified property desired by the taxpayer; n95
- the buyer could direct the third party in a three-way exchange to deed property directly to the taxpayer, as long as the cash paid to the third party was transferred directly from the buyer to the third party and not through the taxpayer; n96 and
- the taxpayer oversaw improvements on the replacement property to be acquired and advanced funds toward the purchase of the replacement property to be acquired by exchange. n97

The only defect that is always fatal to the finding of an "exchange" is the taxpayer's actual or constructive receipt of, or discretionary control over, cash proceeds from the relinquished property. Receipt of cash will defeat the existence of an exchange even if the taxpayer takes receipt of the cash simply to avoid otherwise unnecessary duplication of titles and related filing or transaction costs. n98

Other deviations have also resulted in a finding that no exchange is present. These are often the result of poor tax planning. The following circumstances have resulted in a finding that a sale, rather than an exchange, was present:

- a transfer of buildings and land to a contractor in partial consideration for the construction of a new plant on land owned by the taxpayer (the court found a sale because the contractor did not own the land on which the new building was constructed, never owned the new building, and never conveyed the building to the taxpayer); n99
- a disposition of property followed by use of the sales proceeds to pay off the mortgage on the property and to construct a building on other property owned by the taxpayer; n100 and
- the exercise by a buyer of an option to buy property from the taxpayer just before the option was to expire (the taxpayer arranged to exchange the property with another party upon expiration of the option). n101

Planning Tip:

Any contract involving a like-kind exchange should expressly provide that the taxpayer cannot receive cash instead of like-kind property in the exchange, and this restriction should be carefully complied with. Even if a contract clause provides that the transfer of the taxpayer's property is expressly contingent on the receipt of like-kind property, care must be taken that the taxpayer never has even momentary control over cash proceeds.

Generally, the taxpayers in the reported cases have created their own problems. Regardless of whether the courts chose to overlook these problems or whether they denied nonrecognition treatment on the basis of them, most of the problems could have been eliminated by simple planning and careful execution of the transactions. In reviewing the case law for guidance, taxpayers should structure any transactions intended to comprise an exchange in a logical and integrated manner and execute the transactions according to the plan. Since the difference between an exchange and a sale and reinvestment is largely a matter of form, the taxpayer should avoid cutting corners. All escrow instructions and other agreements should follow the exchange format and should be executed accordingly. Although the courts have demonstrated considerable tolerance for error, taxpayers would be foolish to rely on this tolerance when favorable results can be assured through proper attention to detail.

The vast majority of like-kind exchanges involve multiple parties and/or deferred exchanges. The easiest way to assure that the exchange requirement is met with respect to these exchanges is to comply with safe harbors that are provided in regulations, n102 or set up a "qualified exchange accommodation arrangement" in accordance with *Revenue Procedure 2000-37*. n103 Absent this, one may be forced to rely on the above case law standards to establish that an exchange has occurred. n104 This is usually inadvisable, because these standards are more subjective, and their application to a particular set of facts may be unclear at best.

[3] Multi-Party Exchanges

The IRS n105 and courts have long approved of multi-party exchanges, that is, exchanges involving three or more parties. n106 As a practical matter, almost all exchanges *are* multi-party exchanges, since it is rare for two parties to

own properties they want to exchange with each other. There are several typical formats for multi-party exchanges:

- the ultimate purchaser of the taxpayer's property first purchases the property that the taxpayer wants, and then exchanges it with the taxpayer for the taxpayer's property (this is often called an *Alderson* exchange); n107 or
- the taxpayer exchanges property directly with the party owning the desired property, and that party immediately sells the taxpayer's former property to a cash purchaser (this is often called a *Baird Publishing* exchange). n108

Four-party exchanges (the fourth party often being a broker or intermediary) are often used when a party refuses to participate in an exchange directly with other parties. This can occur when a party refuses to take title to an exchange property even momentarily because of environmental or other liability concerns. In that case, the fourth party purchases the property desired by the taxpayer, trades it with the taxpayer, and sells the taxpayer's former property to the party wishing to acquire it. n109

Planning Tip:

Whatever particular form multi-party transactions take, they ultimately involve multiple conveyances of property in an effort to structure an exchange under *IRC Section 1031* instead of a sale and investment. Case law has often focused on the effect of particular circumstances on the ultimate issue of whether an exchange has taken place. As discussed with respect to the "exchange" requirement in [2], above, the line between an exchange on one hand, and a nonqualifying sale and reinvestment on the other, is often subjective and indistinct. n110 The danger of having an exchange not qualify for nonrecognition--especially with respect to matters of constructive receipt of cash and agency concerns--can be avoided by complying with safe harbors enacted for deferred exchanges. n111 The safe harbor for qualified intermediaries is especially useful, since it can be used both for simultaneous or deferred exchanges. n112

The IRS has indicated that it will carefully scrutinize transactions that are not structured to come within the safe harbors, and there is little reason not to comply with them. A multi-party exchange that does not comply with one the safe harbors in the regulations will have to qualify for *IRC Section 1031* nonrecognition under the more nebulous "exchange" standards discussed in [2], above.

[4] Sale-Leaseback Transactions

[a] Overview of Sale-Leaseback Transactions

A sale-leaseback transaction is one in which the owner (the seller-lessee) of the property sells a fee interest in the property to another party but retains possession by simultaneously leasing the property back from the new owner. Thus, in a sense, the owner is exchanging a fee interest in real estate for a leasehold interest in the same property.

A sale-leaseback can be an attractive alternative to mortgaging property. Just as with a mortgage, the seller-lessee in a sale-leaseback receives a lump sum in cash equal to the value of the property, makes periodic payments to the "lender," and retains possession of the property. If the property is subject to a long-term lease, the economic difference between a mortgage and a sale-leaseback is essentially eliminated because the value of the reversionary interest surrendered by the seller-lessee is nominal. If the value of the property at the time of the transaction is lower than the owner's adjusted basis in the property, a bona-fide sale-leaseback permits a taxpayer to realize a taxable loss without losing possession of the property. n113

Sale-leaseback transactions are covered in detail in Chapter 4.

[b] IRS Position in Sale-Leaseback Loss Transactions

In order to prevent taxpayers from recognizing losses in sale-leaseback transactions, the IRS often takes the position that sale-leaseback transactions are in substance a single integrated transaction under which there is an exchange of like-kind property with cash as boot. As such, the IRS insists that *IRC Section 1031(c)* applies, and that no loss on the exchange can be recognized. n114 The IRS position is based on the like-kind equivalence of a fee interest in real estate (which the taxpayer is relinquishing) and a lease of more than 30 years (which the taxpayer is acquiring, along with cash). n115 The IRS collapses the transactions, and argues that what is really occurring is an exchange. As such, the presence of like-kind properties brings the exchange within the ambit of *IRC Section 1031*. As a result, the IRS claims that any realized loss cannot be recognized under Section 1031(c).

The IRS position has validity in cases where the seller-lessee receives less than fair market value on the sale and pays less than market rates of rental. This was the situation in *Century Electric Co v Commr*, in which the court accepted the IRS position. n116 In that case, the taxpayer transferred a foundry to a college in exchange for cash and a 95-year lease. The amount of cash transferred was less than the value of the property. Thus it was clear that the lease had premium value and that a true exchange of valuable real estate (fee interest for a long-term leasehold), plus cash boot, had occurred. Had the taxpayer been permitted to treat the transaction as a cash sale, treating only the cash received as the amount realized, it would have been permitted to realize a fictitious loss. However, in applying Section 1031 to deny recognition of the loss, the court did not stress this factor. Instead, it emphasized that the taxpayer's economic position was unchanged by the transaction, and that under the regulations, the exchange of a fee for a long-term leasehold is an exchange of like-kind property. n117

Courts rightfully reject the IRS position, however, where the seller-lessee receives sale proceeds equal to the full fair market value of the property and subsequently leases the property for fair rental value. In this situation, no exchange should be found to be present because full value is paid in cash for the fee interest, and the lease has no premium value. The leading pro-taxpayer authority is the *Jordan Marsh* case, in which the court refused to find that a sale-leaseback was an exchange when full cash consideration was paid. In the case, n118 the taxpayer sold property to an unrelated party for its full fair market value and leased the property back for a 30-year term, plus renewal options. The court held that the taxpayer could recognize its loss on the sale of the building. The taxpayer received the full value of the property in cash, and thus the lease was not an element of the consideration. The court noted that this factor distinguished the case from *Century Electric*. n119

Although the IRS ruled that it would not follow the decision in *Jordan Marsh*, n120 subsequent court decisions have consistently followed *Jordan Marsh*. In *City Investing Co v Commr*, n121 the taxpayer sold property for fair market value subject to a long-term leaseback at fair market rental. The Tax Court refused to characterize the transaction as an exchange and allowed the taxpayer to recognize a loss on the sale. n122 The IRS refused to follow this decision as well. n123 In *Leslie Co v Commr* n124 the taxpayer was again permitted to recognize a loss on a sale-leaseback transaction because the buyer-lessor paid full fair market value and received the market rate of rent. Thus, the lease obtained by the seller-lessee had no capital value and could not be viewed as part of the consideration paid for the fee. n125 Again the IRS refused to acquiesce. n126

In a 1976 ruling, the IRS reasserted its position. In Revenue Ruling 76-301 n127 the taxpayer held a long term lease on a twenty-story building. The taxpayer needed only the first five floors. The taxpayer transferred its entire leasehold interest to an unrelated corporation. The parties agreed that the taxpayer would sublet the first five floors for the remaining term of the lease, and the corporation would pay the taxpayer a cash sum equal to the value of the leasehold interest and leasehold improvements in the top fifteen floors. This cash amount was less than the taxpayer's basis in the leasehold and improvements for the top fifteen floors. The IRS ruled that the loss could not be recognized. Its rationale was that the transfer of the lease and the receipt of the sublease were "reciprocal." They therefore constituted a like-kind exchange under Section 1031, and loss therefore could not be recognized under *IRC Section 1031(c)*. This was true even though the corporation paid the full value in cash for what it received.

Revenue Ruling 76-301 is more extreme than any position previously taken by the IRS because it denies the taxpayer recognition of loss on the disposition of property that the taxpayer no longer continues to possess or have any economic interest in (the top fifteen floors of the building) merely because the taxpayer continues to possess a portion of the property (the bottom five floors). Interestingly, the ruling makes no mention of the *Jordan Marsh* case, although it does mention *Century Electric* holding.

The Tax Court perhaps attempted to compromise with the IRS by adopting a dual test. In *Crowley, Milner & Co v Commr*, n128 the taxpayers were permitted to recognize loss on the sale-leaseback of a department store. The taxpayers received fair market value on the sale and were to pay fair market rent. Thus, the lease had no value and was not consideration for the fee. In addition, the court was willing to consider whether the transaction, although a true sale, permitted evasion of the policy behind Section 1031. The court was satisfied that the taxpayer had cashed in its investment and that nonrecognition treatment under Section 1031 was therefore inappropriate. n129

Planning Tip:

Given the IRS stubbornness in this area, taxpayers should take precautions to assure that in any sale-leaseback full cash consideration is paid by the purchaser-lessor for the property and that fair market rate rent is paid during the term of the lease. Independent appraisals of both the value of the property and fair market rentals should be obtained by both parties to the transaction.

NOTE:

Nonrecognition treatment under Section 1031 can never apply to the buyer-lessor. The receipt of property in exchange for the execution of a lease is always treated as the advance payment of rent, not as an exchange of like-kind property. n130

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.12

§ 8.12 Holding Requirement

[1] In General

Nonrecognition under *IRC Section 1031* is available only if the properties exchanged are both held for productive use in a trade or business or for investment. n131 This is referred to as the "holding" requirement. It should be noted that property held for productive use in a trade or business may be exchanged for property to be held for investment, and property held for investment may be exchanged for property to be held for productive use in a trade or business. n132

A taxpayer's intent to hold property for investment or in a trade or business is determined as of the time of the exchange. n133 Thus, property held for a qualifying purpose at the time of an exchange meets the holding requirement even if it was not originally acquired with the intent to hold it in a trade or business or for investment. n134 A taxpayer ordinarily has the burden of proving the requisite holding intent. n135

Investment intent must be the taxpayer's primary motivation for holding the exchanged property in order for the holding requirement to be met. n135.1 The exclusive use of property as a residence by the taxpayer prevents the property from being held for investment for purposes of the holding requirement, even if the property is held with an expectation that it will appreciate in value. n135.2 Similarly, one case held that an exchange of vacation homes did not meet the holding requirement because the properties were held primarily for use by the taxpayers for recreational purposes. n135.3

In the Ninth Circuit, a taxpayer may satisfy the holding requirement merely by lacking an intent either to liquidate the property or use to it for personal pursuits. n136 Under this standard, an intent to exchange property for like-kind property satisfies the holding requirement, because it is not an intent to improperly dispose of it or use it for personal pursuits. n137

The IRS sets a higher standard, and seems to forbid acquiring property merely for the purpose of exchanging it. The IRS even seems to recognize that there may exist situations where a transaction will qualify under *IRC Section 1031* with respect to one party but not the other. n138

An Illinois case also held that the holding requirement was not met when the taxpayers, who were farmers, acquired a restaurant (which the exchange party wanted) and immediately exchanged it for farmland. The court found that because the restaurant was not held for productive use in a trade or business or for investment, the requirements of *IRC Section*

1031 were not met. This was the result the taxpayers wanted, however; they hoped to claim the investment tax credit on farm improvements they received in the exchange and could not do so if the exchange qualified under *IRC Section 1031*. n139

Another case found the holding requirement not met when the taxpayers held the replacement property for rent for only two months before moving into it as their personal residence. Sales efforts were minimal and the taxpayers had not inquired before purchasing the property whether homeowners association rules permitted the property to be rented out. The Tax Court also rejected the argument that an investment intent was shown by the fact that the value of the replacement property was not extravagant when compared to the costs of properties given up. The court held that the relative values of the exchanged properties are irrelevant in determining investment intent or whether there is productive use in a trade or business. n139.1

With respect to replacement property received in an exchange, numerous cases have held that the taxpayer's intent at the time of the exchange to liquidate or dispose of an interest in property acquired in the exchange disqualifies the exchange for nonrecognition under *IRC Section 1031*. n140 For example, nonrecognition treatment has been denied when the taxpayer had a binding contract to sell the property received in the exchange. The court held that the binding contract prevented the possibility of meeting any holding requirement at the time of the exchange. n141 Nonrecognition was also denied when the sole individual owner of a corporation, in a pre-arranged plan, liquidated the corporation and transferred its sole asset--a shopping center--to a third party in exchange for like-kind property. The IRS ruled that the corporation was liquidated to facilitate the further exchange between the individual and third party of their respective properties. Consequently, the individual did not hold the shopping center for use in a trade or business or for investment because the corporation's previous trade or business use could not be attributed to its sole shareholder. Therefore the exchange did not qualify for nonrecognition under *IRC Section 1031*. n141.1

The holding requirement will also not be met if the taxpayer at the time of the exchange intends to sell the property, n142 give it to relatives as a gift, n143 or donate it to charity. n144

That property is eventually disposed of or used in a nonconforming manner does not always require a finding that the requisite intent to hold the property was not present at the time of the exchange. n145 In one ruling, an exchange by a testamentary trust was held to qualify as a like-kind exchange even though the trust would terminate shortly thereafter, with the acquired property being distributed to beneficiaries. The IRS ruled that the termination date of the trust had been fixed by the decedent, and that the trust was therefore not engaging in the exchange in order to dispose of the acquired property pursuant to a pre-arranged plan. Because the exchange was wholly independent of the distribution of the properties under the plan of termination of the trust, and other statutory requirements were met, the IRS ruled that the exchange would qualify for nonrecognition under *IRC Section 1031*. The length of time between the exchange and the termination of the trust was not specified in the ruling, and in any event appeared to be irrelevant. n145.1 However, because actual subsequent behavior is evidence of intent at the time of the exchange, taxpayers have been denied nonrecognition treatment when they dispose of or improperly use property shortly after the exchange. n146 Both the length of the holding period after the exchange n147 and other circumstances come into play in determining whether a taxpayer has the requisite holding intent at the time of the exchange. n148

NOTE:

A taxpayer need not actually dispose of the property after the exchange to be denied nonrecognition treatment. The taxpayer need only lack the requisite intent to hold for investment at the time of the exchange. n149

[2] Length of Time Property Must Be Held

There is no clear answer to the question of the length of time a taxpayer must hold property in order to satisfy the holding requirement. The IRS has not established a "safe harbor" period of time that will suffice. The IRS position is

often simply that at some point before the taxpayer decides to exchange the property (for property that is relinquished) he or she must have intended to keep the property as an investment or for use in a trade or business. n150 Similarly, for property acquired in an exchange, the IRS position is that the holding requirement is not met if a taxpayer has a contractual obligation to dispose of the property before receiving it, n151 or if the taxpayer puts the property to a nonconforming use or disposes of it shortly after it is received in the exchange. n152

Nowhere, however, has the IRS stated exactly how long a taxpayer has to hold the property in order to satisfy the holding requirement. In one ruling, the IRS ruled that the holding requirement would be met by a trust that acquired like-kind replacement property in an exchange, even though the trust would involuntarily terminate "shortly after the exchange" when the youngest beneficiary of the trust reached age 25. The IRS ruled that the mere fact of the involuntary termination would not alone prevent the holding requirement from being met. n153

Cases do not give clear guidance for establishing time-limit parameters either. The focus is on determining the taxpayer's holding intent at the time of the exchange, and the length of time the taxpayer holds the property after the exchange is merely one factor--and perhaps not the most important one--taken into account. Nonrecognition treatment has been denied when the taxpayer donated the exchange property to charity eight days after the exchange, the court understandably feeling that the taxpayer's donative intent had been formed before the exchange. n154

Similarly, another court held that a corporate taxpayer's vote to liquidate and sell property received in an exchange two weeks after an exchange reflected a lack of intent to hold the property for investment at the time of the exchange. n155 Another case held that gifts of two residences made seven months after they were received in an exchange were part of a prearranged plan, which showed that the taxpayer did not intend to hold the houses for investment at the time of the exchange. n156 In another case, a taxpayer exchanged land for a house. She then had the house painted, put it up for sale, and sold it eight months later. The court held that the taxpayer never held the house for investment, but its decision rested less on the period of the time the taxpayer held the house after the exchange than on her testimony that she at all times was holding it for sale. n157

A gift of a ranch nine months after it was received in an exchange, however, was found not to negate the necessary holding intent at the time of the exchange. Facts other than the length of time the property was held after the exchange were more important to the court in determining the taxpayer's intent at the time of the exchange. Nonrecognition treatment was allowed because the taxpayer had no concrete plans at the time of the exchange to make the gift. He did not discuss the gift with his accountants until after the exchange, and he used the exchange property in his ranching business after the exchange before making the gift. The court held that a general desire to make a gift before the exchange is not inconsistent with an intent to hold property for productive use in business or for investment. n158

Probably the most pro-taxpayer decision in this regard is a Ninth Circuit case, *Bolker v Commr.*, n159 In *Bolker*, a taxpayer received property in a liquidating distribution from his wholly-owned corporation. Three months later, he exchanged the property in a like-kind exchange pursuant to an executory contract that was entered into the same day of the liquidating distribution. The IRS claimed that the taxpayer could not have the requisite holding intent because of the almost immediate contractual obligation he had entered into to exchange it. The Ninth Circuit rejected the IRS position as improperly reading into *IRC Section 1031* an additional requirement that the taxpayer have, previous to forming the intent to exchange property for like-kind property, an intent to keep the first property indefinitely. The Ninth Circuit held that the holding requirement was met if a taxpayer owned property that he or she did not intend to liquidate or use for personal pursuits. Under this rationale, the intent to exchange property for like-kind property satisfied the holding requirement because it was not an intent to use it for personal pursuits. Although the court did not expressly address the length of time the property had to be held with this intent, the taxpayer's 3-month holding period was sufficient, and the implication is that the requisite intent, even if held only momentarily at the time of the exchange, was sufficient. n160

Following *Bolker*, the Tax Court has also held that the holding requirement was met when a corporation engaged in a like-kind exchange and several days later liquidated under former *IRC Section 333* and distributed the property received

in the exchange to its controlling shareholders, who continued to use the property for investment purposes. The court rejected the IRS argument that the intent to liquidate the asset at the time of the exchange by distributing it to shareholders caused the exchange to fail the holding requirement. The court found the necessary continuity of investment, and it attributed the corporate holding purposes to the taxpayer-shareholders. n161 Although former *IRC Section 333* has been repealed, the rationale of *Bolker* and *Maloney* may arguably be extended to other situations when a taxpayer receives a tax-free distribution of property and shortly thereafter exchanges it for like-kind property.

Note:

The analysis of the period for holding property differs when the taxpayer transfers property received in an exchange to a controlled entity shortly after an exchange. n162

[3] Post-Exchange Transfer to Corporation or Partnership

The IRS takes the position that a post-exchange transfer of property received in an exchange to a corporation, n163 partnership, n164 or other entity controlled by the taxpayer violates the holding requirement and prevents the exchange from eligibility for nonrecognition under *IRC Section 1031*. The reasoning of the IRS is that the entity's holding of the property for productive use in a trade or business or for investment cannot be attributed to the taxpayer. n165

Courts, however, may be more lenient. In *Magneson v Commr*, n166 the taxpayers exchanged an apartment building for a 10 percent undivided fee interest in another property. On the same day, they transferred their interest in the new property to a California limited partnership. The Ninth Circuit held that the taxpayers met the holding requirement with respect to property received in the exchange. Its rationale was that contributing the property to a partnership in return for a partnership interest was "holding" the property for investment within the meaning of *IRC Section 1031*. Moreover, the court found that the conversion from a tenant-in-common interest to that of a general partner did not involve a substantial change in the form of the taxpayer's investment. n167

The Ninth Circuit's holding in *Magneson* is broad. It expressly declined to read into Section 1031(a) a requirement that taxpayers continue to hold property in an exchange in the same exact form of ownership in which it was acquired. All that is necessary, according to the Ninth Circuit, is that the taxpayers continue to own the property and to hold it for investment. A change in the mechanism of ownership that does not significantly alter the amount of control or the nature of the underlying investment does not preclude nonrecognition under Section 1031(a).

Although the court pointed out that it was not bound by *Revenue Ruling 75-292*, it did not reject the position in that ruling, at least as applied to post-exchange transfers to corporations. The court distinguished a transfer to a general partnership from a transfer to a corporation, noting that taxpayers retain management control over property transferred to a general partnership, but relinquish ownership and control of property transferred to a corporation. n168

Note:

Since the time of the transaction in *Magneson*, Section 1031 has been amended to exclude from its provisions any exchange of partnership interests. n169 It is unclear how this statutory restriction might affect a court's analysis of the holding requirement in a case with the same scenario as was present in *Magneson* today. It is possible that taxpayers would be permitted to receive property in a distribution from a partnership, exchange it for other property, and contribute the new property to another partnership, all without the recognition of gain, under a rationale that the transfer of the property to the partnership is merely a continuation of the old investment in a different form, and that the transfer of the property to the partnership is a distinct step for tax purposes. However, a court might also apply the step transaction doctrine, n170 collapse the various transactions, and find that the substance of what occurred was an exchange of partnership interests. In that case, the exchange would not be eligible for

nonrecognition under *IRC Section 1031*. n171

[4] Effect of Intervening Entity Restructurings

The IRS takes a fairly liberal view of corporate and other entity restructurings during and after like-kind exchanges and has allowed liquidations, mergers, and transfers of properties to substituted parties to occur without jeopardizing the existence of a like-kind exchange. In doing so, it seems to be recognizing the pragmatic non-tax exigencies that require the formation of wholly owned, but separate, entities to receive properties, as well as occasional lender requirements for single asset entities.

Sometimes, the rulings involve a simple disregarding of an entity that is not treated as separate from its owner for tax purposes. In one ruling, the IRS allowed the taxpayer, a limited partnership, to form separate entities to receive individual replacement properties in a proposed exchange. Each entity was a "business entity" that was a "domestic eligible entity" and was not a corporation under the regulations. n172 Because the taxpayer was the sole owner of the ownership interests in each replacement entity, and each entity was disregarded as an entity separate from its owner for tax purposes, the IRS ruled that the replacement property would be treated as being received directly by the taxpayer for purposes of nonrecognition under *IRC Section 1031*. n173

In the entity restructuring rulings, the common theme is the underlying rationale behind granting tax-free treatment to like-kind exchanges in the first place--that there should not be a taxable event if the taxpayer has not cashed in the investment in the relinquished property. (The IRS has also mentioned concern with administrative problems that may arise with respect to valuing property that is exchanged for like-kind property.) In the rulings, the IRS has noted that under *IRC Section 1031*, there is a carryover of tax attributes following a Section 332 liquidation, a tax-free merger, n174 a C reorganization, n175 or D reorganization spinoff. n176

A review of facts in specific rulings can be instructive. In one, the IRS ruled that a taxpayer's intervening corporate liquidation and merger n177 into another entity does not necessarily affect whether the holding requirement is met with respect to property the taxpayer received in an exchange. In the ruling, the taxpayer was a corporation, whose stock was held by a holding company, H. After the taxpayer relinquished real property to a qualified intermediary as part of a like-kind exchange, but before it received replacement property, the taxpayer formed a separate LLC (which did not elect to be taxed as an association) and directed the qualified intermediary to transfer the property to that LLC. After the property was transferred to the LLC, the taxpayer planned to liquidate into H in a tax-free liquidation under *IRC Section 332*. H would then merge with another corporation, S, in a Type A tax-free reorganization. As a result of the merger of H with S, S would be the sole owner of the LLC. S would then transfer its interest in the LLC to another LLC and both LLCs would continue in existence. The IRS ruled that the liquidation and merger would not prevent the taxpayer from meeting the holding requirement and that the transfer by S of its interest in the LLC would not affect the qualification of the exchange under *IRC Section 1031*. n178

In another ruling, two subsidiaries in a consolidated group relinquished hotel properties and, before they acquired replacement properties, planned to liquidate into their parent corporation, the taxpayer. A sister corporation of the taxpayer would then merge into the taxpayer. n179 Then, the taxpayer would form separate LLCs to receive each separate replacement property. The taxpayer would own the entire LLC ownership interest of each LLC and neither LLC would elect to be classified as an association. The IRS ruled that the taxpayer would be treated as the transferor of the relinquished properties and the transferee of the replacement properties, and that the acquisition of the replacement property by each wholly owned LLC would be deemed an acquisition by the taxpayer. The IRS ruled that the holding requirement would not be violated merely because the replacement property was received by the wholly-owned LLCs. n180

In another ruling, the IRS permitted a publicly traded REIT that acquired a taxpayer solely for voting stock (a C reorganization) n181 to be treated as the transferor of the relinquished property that was transferred in a deferred

exchange before the reorganization. That a different taxpayer received replacement property than transferred the relinquished property did not prevent there being an exchange or violate the holding requirement. n182

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.13

§ 8.13 "Like-Kind" Requirement

[1] Overview

[a] In General

The properties exchanged in a Section 1031 nonrecognition transaction must be of "like-kind." n183 With respect to different kinds of real estate, the "like-kind" is a fairly expansive concept. It has reference to the nature or character of the property and not to its grade or quality. One kind or class of property may not be exchanged for property of a different kind or class. The fact that any real estate involved is improved or unimproved is not material, however, for that fact relates only to the grade or quality of the property and not to its kind or class. n184

The regulations give the following examples of exchanges of real estate that satisfy the like-kind requirement: n185

- urban real estate for rural real estate;
- a 30-year leasehold for a fee simple interest in real estate; n185.1 and
- improved real estate for unimproved real estate.

The following properties have also been held to be of like-kind:

- rental real property (land and improvements) and farm real property (land and improvements); n186
- ranchland and a multi-unit apartment building; n187
- a commercial building and a commercial condominium (conditioned on there being a common interest in the underlying land being part of the condominium articles); n188
- a tenant-stockholder's interest in a cooperative building and a condominium; n189
- a tenant-stockholder's shares in a New York cooperative apartment and improved or unimproved real property; n189.1

- a possessory fee interest in real estate and a nonpossessory remainder interest, but an important factor was that the remainder interest was indefeasible and was certain to become certain to become a fee interest; n190
- farmland and personal residences in a city; n191
- a fee interest in real property and a contract right to purchase real property; n192 and
- perpetual water rights for a fee interest in real estate, provided the water rights are treated as real estate under state law. n193

Although the like-kind requirement is liberally construed, the mere fact that the properties exchanged both constitute real property does not entirely determine whether they are of like-kind. There must be a comparison of the exchanged properties to ascertain whether the nature and character of the transferred rights in and to the respective properties are substantially alike. In making this comparison, consideration must be given to the respective interests in the physical properties, the nature of the title conveyed, the rights of the parties, the duration of the interests, and any other factor bearing on the nature or character of the properties as distinguished from their grade or quality. n194 One court making this comparison determined that water rights of 50 years duration that were limited in quantity and priority were not like-kind to a fee interest in real estate, even though they were treated as a real property interest under state law. n194.1

[b] Effect of State Law Characterization of Property Interest

State law usually controls for purposes of determining whether various interests in property--often interests in natural resources or easements--are like-kind to other interests in real property. Interests in property that are treated as real property under state law are usually treated as like-kind to real estate for purposes of *IRC Section 1031*. Thus, in one case, oil, gas, and mineral rights that were treated as real property under state (Louisiana) law were held to be like-kind to an interest in a city lot with which they were exchanged. n195 Similarly, residential land use and development rights that were interests in real estate under state law have been ruled to be like-kind to a fee interest in real estate, to a leasehold interest in real estate with 30 years or more remaining at the time of the exchange, and to land use rights for hotel units. n195.1 See § 8.13[4][c], below, for a detailed discussion of water rights and the duration requirement. Similarly, an interest treated as personalty under state law will usually not be treated as like-kind to real estate. n195.2

Perpetual water rights, n196 agricultural conservation easements n197 and scenic conservation easements n198 that are treated as real estate under state law have also been treated as like-kind to a fee interest in land. Water rights of 50 years duration that were limited in quantity and priority, however, have been held to be *not* like-kind to a fee interest in real estate, even though they were treated as a real property interest under state law. n198.1 The IRS has also ruled that unharvested crops on land are classified as interests in real estate and are like-kind with other land with unharvested crops. n199

In a ruling not involving easements or natural resources, the IRS held that shopping center improvements (separate from the land) were like-kind to a fee simple interest in real estate, because the improvements affixed to land were real property under state law. n200

A tenant-stockholder's interest in a cooperative building and a condominium interest have also been ruled to be like-kind, because the tenant-stockholder's interest included a lease with a term in excess of 30 years and because state law characterized the interest as a real property interest. n201

In a ruling involving an involuntary conversion, the IRS ruled that life beneficiaries' interests in a trust owning real estate were like-kind to real property because under state law the beneficiaries' interests were considered interests in

land. n202 The IRS later clarified that the ruling presumed the beneficiaries' life expectancies at the time of the purchase were at least 30 years n202.1.

State law characterization of an interest as real property, however, is not conclusive of like-kind status with other real estate. Although the IRS generally looks to state law in determining what property rights constitute real property interests, state law classifications are not necessarily determinative of what real property interests are of like kind to other real property interests under federal income tax law. That determination is a matter of federal law, rather than state law. n202.2 The nature and the character of the physical properties must still be examined, as well as the nature and character of the title conveyed or the rights of the parties therein. If the rights are not of the same general character and substantial equality, the properties will not be like-kind for purposes of *IRC Section 1031*. In one case, the U.S. Supreme Court held that a carved out oil payment right was not like-kind to a fee interest in real estate, even though applicable state law characterized the oil payment right as an interest in real property. n203

[2] Land and Improvements

[a] In General

Improved real estate and unimproved real estate are like-kind properties. n204 Thus, land with buildings and other improvements can be exchanged for unimproved land. n204.1 Assets on land that are in the nature of real estate can also be exchanged for real estate. For example, unharvested crops on land are classified as interests in real estate and can be transferred for other land with unharvested crops. n205

The IRS takes the position that improvements that are owned separately from land are *not* like-kind property with unimproved land. Thus, in a ruling involving an involuntary conversion, it has ruled that land is not like-kind to a building, because land is not of the same character or nature as a building. The IRS noted that although the term "real estate" often is used to describe both land and improvements on the land, the two are not alike merely because one term is used to describe both. n206 This ruling seems surprising and implausible, since land is like-kind to land that is improved with a building. n207

If state law characterizes the improvements as real property, the IRS may not feel bound by its position in *Rev Rul 67-255*. In one private ruling, the IRS held that shopping center improvements (separate from the land) were like-kind to a fee simple interest in real estate, because improvements affixed to land were real property under state law. n208

[b] Improvements to Be Constructed

The IRS takes the position that real estate is not like-kind to improvements that are to be constructed on land owned by the taxpayer. Thus, in interpreting the involuntary conversion provisions, it has ruled that the proceeds from the condemnation of a mobile home park (land) cannot be used to construct a motel (an improvement) on land owned by the taxpayer. n209 Similarly, it has ruled that the proceeds from the condemnation of farmland (land) cannot be used to construct an office building (an improvement) on land owned by the taxpayer. n210 In a private ruling, the IRS has similarly ruled that land is not like-kind to a shopping mall to be constructed on land owned by the taxpayer because land and improvements are not of like-kind. n211

Although the above rulings deal with the "like-kind" requirement in the context of replacing property that has been involuntarily converted, n212 they also have relevance for like-kind exchanges because the meaning of "like-kind" is the same under both *IRC Section 1031* and *IRC Section 1033(g)*. n213 Therefore, taxpayers who exchange real estate for improvements to be built on their own land can expect a challenge from the IRS if they claim nonrecognition treatment under Section 1031.

Planning Tip:

To circumvent the Service's position regarding separately owned or constructed improvements and land under *IRC Section 1031*, a taxpayer could first sell the land it owns to an exchange partner. The exchange partner could then develop the land, and trade the improved property back to the taxpayer for the land that the taxpayer wishes to relinquish. n214 The exchange of two parcels of improved land would qualify as a like-kind exchange. n215

If property upon which improvements are to be constructed is not owned by the taxpayer, like-kind exchange treatment may be available if a qualified intermediary or exchange partner acquires the desired property and completes improvements on the property before transferring the property to the taxpayer as part of the exchange. n216 In that case, however, the transaction may file to qualify for nonrecognition under *IRC Section 1031* for the exchange partner because of the "holding" requirement. n217

In one ruling the IRS allowed the taxpayer a certain amount of latitude in structuring a like-kind exchange involving improvements to be constructed on leased property owned by a third party. It approved a like-kind exchange in which the exchange partner leased land desired by the taxpayer from a third party and built an office building on it pursuant to plans and specifications approved by the taxpayer and with construction financing provided by the taxpayer. The taxpayer then exchanged land and a building for the leasehold interest (which had a remaining term of more than 30 years) along with the improvements. The ruling contained detailed contractual provisions the parties had devised that set forth the relationship of the parties as grantor and grantee. The parties took special pains taken to avoid having themselves be treated as partners or joint venturers and carefully avoided creating an agency, representative, nominee or similar relationship. The exchange party also had significant risks of ownership prior to the exchange. n218

In another ruling, the IRS allowed a taxpayer to exchange a fee interest in an apartment building with property upon which a qualified intermediary constructed a golf course using funds from the taxpayer that were deposited in a qualified escrow account. n219 Courts have also allowed taxpayers to oversee improvements on land to be acquired in an exchange. n220

In any situation involving improvements made on land to be acquired by the taxpayer, however, the IRS may challenge like-kind exchange treatment by claiming the party building the improvements is acting as the taxpayer's agent or that the parties are involved in a joint venture or partnership. It may also challenge like-kind exchange treatment for the other party in the exchange because of lack of compliance with the holding requirement. n221

[c] Development Rights

Development rights in land have been ruled to be like-kind to real estate. In one ruling, the taxpayer transferred one set of development rights pertaining to density of permitted residential development for other development rights pertaining to hotel development. The IRS ruled that the two types of development rights were like-kind to each other. In addition, the taxpayer transferred other development rights for a separate fee interest in land, and another long-term leasehold interest in additional real property. The IRS ruled that these interests were also like-kind to the development rights. Although not necessarily determinative of the issue, it was relevant that the development rights were treated as real property interests under applicable state law. n221.1

[3] Fractional Interests

A fractional interest in real estate may be like-kind to another fractional interest or to an undivided fee in real property. The IRS takes a fairly liberal view of conversions of commonly held property into individually held property, as when jointly held property is partitioned. Exchanges of undivided interest in multiple parcels of real estate for 100 percent ownership of one or more parcels of the same real estate routinely qualify as valid like-kind exchanges. n221.2 For example, tenants in common may exchange their fractional interests in a property for undivided, individually held ownership interests in single parcels under *IRC Section 1031*. n222 The fractional interest need not involve a fee in

order to be like-kind to real estate. For example, an undivided fractional interest in minerals has been treated as like-kind to an undivided interest in a hotel. n223

The acquisition of an additional interest in property already owned by the exchanging taxpayer will constitute a valid replacement with like-kind property so long as the taxpayer acquires it in an arm's length transaction. n223.1

If a fractional interest in property is an interest in a business entity n223.2 it will not qualify as an undivided fractional interest, so as to be eligible replacement property under *IRC Section 1031(a)*. n223.3 The IRS has issued a revenue procedure in which it specifies the conditions under which it will consider a request for a ruling that an undivided fractional interest in rental real property (other than a mineral property) is not an interest in a business entity for tax purposes. n224 The procedure details the guidelines for submitting ruling requests, the information to be submitted, and conditions for obtaining rulings. The conditions relate to tenancy in common ownership of the property, number of co-owners, no treatment of the co-ownership as an entity, co-ownership agreements, voting by co-owners, restrictions on alienation, sharing of proceeds and liabilities upon sale of the property, proportionate sharing of profits and losses, proportionate sharing of debt, options, no business activities by the co-owners, management and brokerage agreements, leasing agreements, loan agreements, and payments to sponsors. In addition, the revenue procedure sets forth a list of documents, supplementary materials, and general information required for a ruling. n224.1 The procedure applies to co-ownership of rental real property in an arrangement classified under local law as a tenancy-in-common. It should be noted that the guidelines provided are only issued for the purpose of assisting taxpayers in preparing ruling requests; they are not intended to be substantive rules, and are not to be used for audit purposes. n224.2

[4] Natural Resource Interests, Water Rights, Mineral Payment Rights, and Royalty Interests

[a] In General

Whether an interest in natural resources is treated like-kind property to a fee interest in real estate depends on the duration of the particular interest, that is, whether the interest continues until the natural resource is exhausted, or whether interest is a lesser, carved out, right that terminates when a specified quantity of minerals has been produced or a stated amount of proceeds from the sale of minerals has been received. n225 An overriding royalty interest in minerals--one that continues until the mineral deposit is exhausted--is treated as like-kind to a fee interest in real property. An undivided fractional interest in minerals, for example, has been held to be like-kind to an undivided interest in a hotel. n226 An exchange of an oil producing lease (which is not limited to a fixed amount of proceeds or minerals, and which extends until exhaustion of the oil) for a fee interest in a ranch also qualifies as a like-kind exchange. n227 The IRS has also approved as like-kind an exchange of an interest in coal leases, surface rights in the land above it (subject to options), and lease bonus payments for a fee interest in other real estate. n228

In contrast, a carved out oil payment right (or other limited extraction interest) is not like-kind to a fee interest in real estate, even if applicable state law characterizes the oil payment right as an interest in real property. Therefore, an assignment of a fixed amount of income from producing oil wells in exchange for a fee interest in real estate has been held not to be an exchange of like-kind properties. n229 Similarly, an exchange of an oil payment for an overriding oil and gas royalty reserved from the same lease is not an exchange of like-kind property, because the oil payment is a limited interest in the property, whereas the overriding royalty continues so long as oil or gas is produced. n230

A right to remove a specified amount of gravel has also been held not to be like-kind to a residual fee interest in real property because of the difference in the duration of the rights received by each party. n231-232

Occasionally courts grapple with a similar, but distinct, issue of whether assets connected with the land should be treated as part of the underlying real estate eligible for nonrecognition under *Internal Revenue Code Section 1031* or as a separate asset, such as non-qualifying inventory. n233 In one case, the Tax Court held that unmined sand located on real estate that was exchanged was a part of the underlying land eligible for nonrecognition, and not an asset separate

from it. n234 In another, the Tax Court held that operating gold mines, including realty, were like-kind to operating coal mines that were subject to coal supply contracts that obligated the mine owner to provide electric utilities with coal. The gold mines were not subject to supply contracts. Although the IRS argued that the coal supply contracts were not real property and/or like-kind property and therefore constituted taxable "boot", the Tax Court held that the contracts were real property under State (New Mexico) law because they were covenants running with and appurtenant to the underlying land. They were therefore like-kind property to the gold mines. n234.1

Similar holdings have been made with respect to unharvested crops exchanged as a part of land, n235 and coal in an abandoned coal mine. n236 In each case, the court has focused on the primary purpose for which the taxpayer held the particular asset, i.e. whether it was held primarily for sale, or whether it was treated by the taxpayer as a part of the underlying property. n237

[b] Timber and Timberlands

Consistent with the expansive concept of "like-kind" set forth in the regulations, n238 the IRS has ruled that different timberlands may be exchanged for each other as like-kind property under Section 1031 regardless of the differences in quantity, quality, age, and species of timber growing on the land. These differences do not influence the kind or class of the property (land) that is exchanged. n239

The IRS has also ruled that an exchange of timberland for bare land is a like-kind exchange, n240 as is an exchange of timberland for a tree farm. n241

A mere timber-cutting right, however, has been held not to be like-kind to a fee interest in real property because the right to cut timber is transient (and personal property under state law), whereas the fee interest is ownership of the land itself. n242 Similarly, the IRS has ruled that an exchange of a fee interest in real property for a 2-year right to remove all cut and standing timber from property is not an exchange of like-kind properties because the right of removal is temporary and does not include the right to remove an unlimited quantity of trees. The timber-cutting right is therefore more similar to a limited "carved-out" interest in minerals than to an unlimited overriding royalty interest. n243

The IRS has also ruled that planned cutting of timber within two years of an exchange would not be a disposition that requires recognition of gain under *IRC Section 1031(f)*. n243.1

[c] Water Rights

Perpetual water rights are treated as like-kind to a fee interest in land. Water rights of a lesser duration, however, have been found to be not of like-kind to a fee interest in real estate. For example, water rights limited to a specific total amount of water or a specific amount of water for a limited period have been ruled to be not like-kind to a fee interest in real estate. n243.2

The exact parameters of the required duration or amount of water in order to qualify for like-kind status to land are not completely clear, and the categorization of water rights as a real property interest (as opposed to a perpetual interest) under state law is not conclusive. In one case, water rights of 50 years duration that were limited in quantity and priority were held not to be like-kind to a fee interest, even though they were treated as a real property interest under state law. n243.3 In a private ruling, however, the IRS found that restricted water rights were like-kind to a fee interest in farm land. The rights in question gave the owner a right to pump ground water from an aquifer for irrigation purposes and specified tracts of land. The water rights were limited to a per-minute and per-year maximum diversion rate. The water rights were not limited in duration, but the state retained the authority to make reasonable reductions in the diversion rate and the quantity pumped as might be deemed to be in the public interest. Also of importance was the classification of the water rights as a perpetual interest under state law. Unlike the water rights in *Wiechens*, the water rights in the ruling were limited in quantity to a specified amount per year rather than to a specific percentage of the overall supply

of agricultural water. This distinction, the lack of a limited duration to the rights, and the priority of the taxpayer's rights enabled the IRS to conclude that the water rights were like-kind to the replacement interest in farm land. n243.4

[5] Leasehold Interests

[a] In General

A leasehold is an interest of limited duration and therefore, in principle, is not like-kind to a fee interest. Nevertheless, a leasehold of a fee with 30 years or more to run is treated as like-kind to a fee interest in real estate. n244 Therefore, the exchange of a fee interest in real property for a 30-year or longer leasehold in real property qualifies for nonrecognition treatment under *IRC Section 1031*. n245 Similarly, an exchange of a 30-year leasehold for another 30-year leasehold is an exchange of like-kind property. n246

The exchange of a leasehold with less than 30 years to run for a leasehold with 30 or more years to run is not an exchange of like-kind property. n247 A leasehold for less than 30 years can, however, be exchanged tax-free for another leasehold of a term less than 30 years. n248 Renewal options are included in determining the length of a leasehold. n249

When property is encumbered by a 30-year lease, both the lessee and the lessor may transfer their interests in exchange for a fee or a long-term leasehold in other real estate, because the lessor holds the fee and the lessee is also deemed to hold the equivalent of a fee. n250

The like-kind equivalence of a long-term leasehold and real property is not affected by options that may be exercised by third parties with respect to the leasehold. The IRS has ruled that a taxpayer's exchange of a fee interest in real estate for a 51-year leasehold interest in land and an office building qualified as a like-kind exchange under Section 1031, even though the leasehold interest received by the taxpayer in the exchange was taken subject to an option by the property's owner (who was not a party to the exchange) to buy back the leasehold and building if specified events occurred. The characterization of the leasehold as like-kind to a fee was not affected by the option because the taxpayer continued to have a right to possess, occupy, and use the property for 51 years. n251

[b] Initial Execution of Lease as Part of Exchange

The initial execution of a leasehold as part of an exchange, as opposed to the exchange of an existing leasehold interest, does not qualify for nonrecognition to the lessor under *IRC Section 1031*. This is true even if the leasehold is for longer than 30 years, and even though the leasehold is executed in exchange for an interest in property (such as a fee) that is like-kind to the leasehold interest. The reason is that the transaction is viewed as an in-kind advance payment of rent rather than an exchange. In *Pembroke v Helvering*, n252 the taxpayer executed a 99-year lease on property he owned in consideration of annual rents and a fee interest in other property. The taxpayer was required to include the value of the fee interest in income as an advance rental payment. Consistent with the *Pembroke* decision, the IRS has ruled that although the transfer of a fee interest in real property in consideration of the execution of a leasehold interest in the same or other property may be a Section 1031 nonrecognition exchange to the transferor-lessee, it is not a like-kind exchange for the transferee-lessor, because the fee interest received by the lessor is an advance rental payment under the lease, includable in gross income. n253

The execution of an option to buy under a 99-year lease is also considered a purchase rather than an exchange. In one case, taxpayers were deemed to have purchased rather than exchanged property when they exercised a \$200,000 option to buy property on which they had a 99-year lease. The court held that the taxpayers did not exchange the balance of the leasehold for the title to the land because the two merged with the acquisition of the legal title. n254

[c] Exchange of Property Subject to a Lease

The exchange of property that is subject to a lease, as opposed to the execution of an initial lease as part of an exchange,

n255 is eligible for like-kind exchange treatment. In one case, the taxpayer exchanged a fee interest in certain parcels of real estate, not encumbered by a leasehold interest, for other parcels that were subject to 99-year condominium leases. The IRS argued that the taxpayers had transferred a fee interest in real property for a 99-year income stream, plus a reversionary interest that could be disregarded because it had only nominal value at the time of the exchange. The Tax Court disagreed, however, and held that the exchange of fee interests constituted a like-kind exchange regardless of the lease. The court held that the taxpayer's right to receive rent was inherent in the ownership of the fee, not a separate property right; furthermore, if the rent was not paid the taxpayer would obtain possession of the property before the lease expired. The taxpayer's interest in the land was of unlimited duration, even though the taxpayer was obligated to accept a certain income stream for a long period of time. Thus, the taxpayer's interest was not limited to a fixed amount of income as with an oil payment. n256

[6] Easements

A perpetual agricultural conservation easement n257 or perpetual scenic conservation easement n258 that is treated as real property under state law is treated as like-kind to a fee interest in land. Thus, an exchange of the easement for a fee interest in other real estate may qualify as a like-kind exchange under *IRC Section 1031* if other statutory requirements are also met. n258.1 Like-kind treatment does not apply, however, if the easement is not perpetual. n259

The IRS has also ruled that a permanent power line easement and right of way is like-kind to a fee interest in real property. Although the ruling involved the investment of proceeds from an easement and right of way that were granted under threat of condemnation under *IRC Section 1033(g)*, the ruling also applies under *IRC Section 1031*. The rationale for like-kind treatment is that the easement/right of way and the replacement property are continuing interests in real estate and therefore of the same nature and character. n260

[7] Life Estates, Remainder Interests, and Reversionary Interests

The 30-year benchmark that applies for leaseholds to be treated as equivalent to a fee interest in property n261 also comes into play for life estates and other interests of limited duration. Thus, a life estate with at least 30 years to run is treated as the equivalent of a fee interest. The duration of a life estate is determined by reference to standard mortality tables. n262

In Revenue Ruling 72-601 , n263 a father aged 70 owned a farm in fee, and so did his son. The son conveyed a life estate in his farm to the father, measured by the father's life, and retained the reversion. In exchange, the father conveyed the remainder interest in his farm to the son, reserving a life estate in himself. The ruling equates a remainder interest with a fee and equates a life estate with a leasehold. The father had transferred a remainder interest (treated as a fee interest) in exchange for a possessory interest (the life estate). Since the father's life expectancy did not exceed 30 years, the life estate was not like-kind to the remainder interest transferred. The son was denied nonrecognition treatment because the receipt of a fee interest (or equivalent) in exchange for the execution of a possessory interest (i.e. a life estate) in property was treated as an advance payment of rent rather than an exchange of property. The granting of the life estate was treated in the same manner as the initial execution of a leasehold. n264

An exchange of remainder interests qualifies as an exchange of like-kind properties. In one ruling, the taxpayer and her husband owned two tracts of land as community property. The husband died, leaving the taxpayer a life estate in his community half-interest in the parcels and leaving the remainder interest to his children. Thus the taxpayer owned one half of each parcel in fee (her retained community half-interest) and held a life estate in the other half of each parcel. The taxpayer divided her fee interest in one of the parcels into a life estate and remainder, and exchanged the remainder for the children's remainder interest in half of the other parcel. The taxpayer now owned one parcel entirely in fee and had a life estate in the other parcel. The IRS ruled that the exchange of remainder interests qualified as a like-kind exchange. n265

The IRS has also ruled that an indefeasible vested remainder interest in real property is like-kind to a fee interest in real property. The IRS noted that the remainder interest was indefeasible and certain to become a fee interest. n265.1 Similarly, a reversionary interest following a 47-year ground lease has been ruled to be like-kind to a fee interest in real estate. n265.2

In a ruling involving an involuntary conversion, the IRS ruled that life beneficiaries' interests in a trust owning real estate were like-kind to real property because under state law the beneficiaries' interests were considered interests in land. n266

[8] Land Trust Interests

An Illinois land trust is a trust created under Illinois law solely for the purpose of having the trustee hold title to real property and execute documents related to the title. The purpose of the trust is to hide the true owner's identity. The beneficiary, who creates the trust, continues to exercise all other rights and powers of an owner with respect to the property. The trustee has no power to act with respect to the title except pursuant to instructions from the beneficiary. The IRS has ruled that a beneficiary's interest in an Illinois land trust is like-kind to a fee interest in other real property of the same kind as the property subject to the trust. n267

The ruling also applies to interests or similar arrangements under the laws of any state where the following requirements are met: n268

- the trustee has title to real property;
- the beneficiary (or a designee of the beneficiary) has the exclusive right to direct or control the trustee in dealing with the title to the property; and
- the beneficiary has the exclusive control of the management of the property, the exclusive right to the earnings and proceeds from the property, and the obligation to pay any taxes and liabilities relating to the property.

In a ruling involving an involuntary conversion, the IRS ruled that life beneficiaries' interests in a trust owning real estate were like-kind to real property because under state law the beneficiaries' interests were considered interests in land. n269

In a ruling involving a Delaware statutory trust, n269.1 the IRS ruled that a taxpayer could exchange real property for an interest in the Delaware statutory trust without recognition of gain or loss under *IRC Section 1031*, if the other requirements of *IRC Section 1031* were satisfied. The ruling concluded that real property and the trust interest were like-kind properties. n269.2

[9] Foreign Real Property

Foreign real property and real property located in the United States are not like-kind property, and cannot be exchanged tax-free under *IRC Section 1031*. n270 Two or more properties each of which is located outside the United States, however, are like-kind properties with respect to each other. n271 In determining whether property is located outside the United States for this purpose, Puerto Rico and the U.S. Virgin Islands are treated as part of the United States. n272

[10] Real Estate and Personal Property

An exchange of real estate for personal property does not satisfy the like-kind requirement. n273 Thus, an exchange of land for the right to cut timber on other land (personal property) is not an exchange of like-kind property and is not

eligible for nonrecognition treatment under *IRC Section 1031*. n274 Similarly, real property is not like-kind to a deed of trust note. n275

[11] Special Rule For Single-Member LLCs

LLCs that elect to be treated as partnerships for tax purposes are generally treated the same way as partnerships for purposes of the like-kind exchange provisions. Thus, a member of an LLC may not exchange an interest in an LLC for another LLC interest under *IRC Section 1031*. n276

Similarly, LLCs that elect to be treated as corporations for tax purposes are generally treated the same way as corporations for purposes of the like-kind exchange provisions. Thus, a member of such an LLC may not exchange stock in that LLC for other LLC stock without triggering a taxable event. n277 The IRS has ruled, however, that a single-member LLC that does not elect to be treated as an association (and therefore taxable as a corporation) under the entity classification rules n278 will be disregarded as an entity separate from its owner for tax purposes. n279

Revenue Ruling 99-6 allows a taxpayer to engage in a like-kind exchange by exchanging an interest in real property for a membership interest in a single member LLC that owns an interest in like-kind property. In essence, the real property owned by the LLC is treated as owned directly by the taxpayer. The membership interest in the LLC is therefore like-kind to the property exchanged by the taxpayer. This like-kind treatment does not apply if the LLC elects to be treated as an association (and taxable as a corporation) for tax purposes. n280

[12] Personal Property for Personal Property

[a] Tangible Personal Property

An exchange of business or investment personal property for other like-kind personal property comes within the scope of *IRC Section 1031*. The nonrecognition rules of *IRC Section 1031* do not apply to an exchange of one kind or class of tangible personal property for another kind or class of tangible personal property. n281 Personal property used predominantly within the United States and personal property used predominantly outside the United States can never be like-kind property. n282

Depreciable tangible personal properties of a like-class are considered to be of a like-kind under *IRC Section 1031*. An exchange of these properties of a like-kind may qualify as a like-kind exchange regardless of whether the properties are also of a like-class. In determining whether exchanged properties are of a like-kind, no inference is to be drawn from the fact that they are not of a like-class. n283 Depreciable tangible personal properties are of a like class (and consequently of a like-kind) if they are either within the same "General Asset Class" or within the same "Product Class." n284

There are 13 General Business Asset Classes, which consist of depreciable tangible personal property described in asset classes 00.11 through 00.28 and 00.4 of *Revenue Procedure 87-56*. n285 *Revenue Procedure 87-56*, as modified from time to time, provides a classification system for property for the purpose of determining depreciation deductions under *IRC Section 168*. Certain of these general asset classes are adopted to determine what property is of like-kind for purposes of the like-kind exchange rules, and the types of personal property included in each general class listed are identified. n285.1 The North American Industry Classification System (NAICS), Sectors 31 through 33 (pertaining to manufacturing), are used to define the product classes for purposes of like-kind exchanges of depreciable tangible personal property. n285.2 Within NAICS, product classes are designated using 6-digit codes. The Commissioner may revise general asset classes and product classes as set forth in the NAICS manual. n285.3

An exchange of nondepreciable personal property qualifies for nonrecognition under *IRC Section 1031* only if the exchanged properties are of a like-kind. No like-classes are provided for nondepreciable personal property. n286

The IRS has issued a revenue procedure that provides various safe harbors for meeting *IRC Section 1031* requirements with respect to like-kind exchange programs involving ongoing exchanges of tangible personal property using a single intermediary. n286.1

[b] Intangible Property

An exchange of intangible personal property qualifies for nonrecognition under *IRC Section 1031* only if the exchanged properties are of a like-kind. No like-classes are provided for intangible property. Whether intangible personal property is of a like-kind to other intangible personal property generally depends not only on the nature or character of the rights involved (for example, a patent or a copyright) but also on the nature or character of the underlying property to which the intangible personal property relates. n287 Goodwill or going concern value of one business is not of a like-kind to the goodwill or going concern value of another business. n288

The IRS has reversed its prior position, and ruled that intangibles such as trademarks, trade names, mastheads, and customer-based intangibles that can be separately described and valued apart from goodwill can qualify as like-kind property under *IRC Section 1031*. Trademarks and trade names will only rarely be treated as inseparable from goodwill. n288.1

In one ruling, the IRS ruled that an old facility used in a trade or business of transporting processed minerals to customers was like kind to a new facility that the taxpayer would use in the same business. Both the old and new facilities consisted of unspecified tangible and intangible property. The ruling noted that although of like kind, there might nevertheless be gain that could not be deferred under *IRC § 1031* because multiple properties were involved. n288.2

[13] Exchanges of Multiple Properties

The regulations set forth the rules for determining gain recognition and basis in a Section 1031 exchange involving multiple properties. They provide an exception to the general rule that the application of *IRC Section 1031* requires a property-by-property comparison for computing the gain recognized and basis of property received in a like-kind exchange. n289

An exchange is considered an exchange of multiple properties if the properties transferred are separable into more than one "exchange group." An exchange group consists of all properties transferred and received within an exchange that are of a like-kind or like-class. For example, all properties within the same General Asset Class or within the same Product Class are within the same exchange group. n290 Thus, in an exchange of cars and computers for cars and computers, there would be two exchange groups--one of cars and one of computers. Each exchange group must consist of at least one property transferred and at least one property received in the exchange. n291

[14] Air Rights

Although no ruling or case has directly addressed the issue, a perpetual easement of air rights over land is probably like-kind to fee simple real estate for purposes of *IRC Section 1031*. In other contexts, air rights have been treated as an interest in real property. In a case allowing a charitable deduction for a grant of a right to build on top of a building, the Tax Court stated that the right to use the air space superjacent to the ground is one of the rights in land. Furthermore, it observed that air rights can be one of the most valuable rights connected with land since the value of commercial property consists almost exclusively of the right of the owner to erect business and industrial structures. n291.1 Air rights have also been found to constitute an interest in real property for purposes of the REIT provisions. n291.2 Finally, the grant of an air rights easement has been treated as a sale of a portion of land for purposes of the involuntary conversion provisions. n291.3

[15] Shares of Stock in Mutual Ditch, Reservoir, or Irrigation Company

In general *IRC Section 1031* does not apply to exchanges of stocks, bonds, or notes. n291.4 Tax-free treatment is permitted under *IRC Section 1031*, however, for shares in a mutual ditch, reservoir, or irrigation company, if at the time of the exchange the following requirements are met: n291.5

- The company is an organization described in *IRC Section 501(c)(12)(A)* (determined without regard to the percentage of its income that is collected from its members for the purpose of meeting losses and expenses); and

- The shares in the company have been recognized by the highest court of the State in which that company was organized or by applicable State statute as constituting or representing real property or an interest in real property.

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.14

§ 8.14 Nonsimultaneous (Deferred) Exchanges

[1] In General

A deferred exchange is one in which, pursuant to agreement, a taxpayer transfers the property to be relinquished in an exchange and subsequently receives the replacement property. n292 Typically, the timing delay preventing simultaneous closings for the relinquished and replacement properties occurs because the buyer of the taxpayer's property has not acquired the replacement property the taxpayer wants, or because the taxpayer has not yet identified the desired replacement property. Deferred exchanges are often referred to as "*Starker* exchanges" in homage to the case that first sanctioned their use and held that deferred exchanges could qualify for nonrecognition under *IRC Section 1031*. n293

[2] Statutory Framework

In response to the *Starker* decision, Congress enacted a statutory scheme setting forth time limits for identifying and receiving replacement property in deferred exchanges. The time limits must be met in order for a deferred exchange to be entitled to nonrecognition under *IRC Section 1031*. If the time limits are not met, the replacement property will not be considered like-kind property to the property relinquished by the taxpayer in the exchange. n294

The statutory requirements are as follows: n295

- the replacement property must be identified as property to be received in the exchange within 45 days after the date on which the taxpayer transfers the property relinquished in the exchange; n296 and
- the replacement property must be received within the earlier of the following:
 - ☐ 180 days after the date on which the taxpayer transfers the property relinquished in the exchange; or
 - ☐ the due date (determined with regard to extensions) of the taxpayer's return for the taxable year in which the transfer of the relinquished property occurs. n297

The extensions with respect to a tax return refer to actual extensions granted, not to available or possible extensions. Therefore, if no extension for filing a return is in fact given, the initial due date of the taxpayer's return is the critical date. n298

Note:

The above timing requirements are strictly construed. However diligent a taxpayer's attempts are to satisfy the above timing requirements, failure to do so results in a denial of nonrecognition treatment even if failure to comply is due to circumstances outside of the taxpayer's control. Equitable relief cannot be given. n299 In one ruling, a receivership proceeding against the qualified intermediary froze proceeds of a sale of real property that the taxpayer had deposited with the intermediary. The IRS ruled that this circumstance did not excuse non-compliance with the 180-day statutory replacement period for a like-kind exchange, or allow that replacement period to be suspended during the period of the receivership. n299.1 Bankruptcy of the qualified intermediary also does not permit the statutory replacement period to be extended. n299.2 Notwithstanding the strict construction, the IRS has authorized relief to taxpayers affected by disasters or terrorist or military actions. In these situations, the IRS may grant relief up to 180 days after the last day of a period to perform an act that is part of a deferred like-kind exchange or a safe-harbor parking arrangement. n299.3

Extensive regulations have been issued that govern the treatment of deferred exchanges. n300

[3] Requirements for Identification of Replacement Property

[a] In General

The regulations provide detailed rules for the identification of replacement property. n301 Replacement property must be identified before the end of the identification period. The identification period begins on the date the taxpayer transfers the relinquished property and ends on midnight on the 45th day after the date the taxpayer transfers the relinquished property. n302 If, as part of the same deferred exchange, a taxpayer transfers more than one relinquished property and they are transferred on different dates, the identification period is determined by reference to the earliest date on which any of the properties are transferred. n303

Replacement property is treated as identified only if it is designated as replacement property in either (1) a written agreement covering the exchange that is signed by all parties before the end of the identification period, or (2) a written document signed by the taxpayer and hand delivered or mailed, telecopied, or otherwise sent before the end of the identification period to a person involved in the exchange (such as an intermediary, escrow agent, or title company) other than the taxpayer or a related party. n304 The replacement property is treated as identified only if it is unambiguously described in the written document or agreement. For real property, a legal description or street address, or distinguishable name (e.g., the Mayfair Apartment Building) is acceptable. n305

Notwithstanding the above identification requirements, however, any replacement property that is received by the taxpayer before the end of the identification period will be treated as timely identified. n306

An identification of property as replacement property may be revoked at any time before the end of the identification period. If the identification was made in a written agreement, the revocation must be made in a written amendment to the agreement or in a written document signed by the taxpayer and hand delivered, mailed, telecopied, or otherwise sent before the end of the identification period to all parties to the agreement. Otherwise, the revocation must be made in a written document signed by the taxpayer and hand delivered, mailed, telecopied, or otherwise sent before the end of the identification period to the person to whom the initial identification was sent. n307

[b] Identification of Alternative and Multiple Replacement Properties

A taxpayer may identify more than one property as replacement property. However, the maximum number of replacement properties that the taxpayer may identify are: n308

- three properties of any fair market value (the "3-property rule"); or
- any number of properties, as long as their aggregate fair market value at the end of the identification period does not exceed 200 percent of the aggregate fair market value of all the relinquished properties as of the date the relinquished properties were transferred (the "200-percent rule").

The above rules apply regardless of the number of relinquished properties transferred as part of the same deferred exchange. n309

If a taxpayer identifies more properties than is permitted, the situation is generally treated as if no replacement property had been identified, but this "non-identification" penalty does not apply to the following property: n310

- any replacement property that is received by the taxpayer before the end of the identification period; or
- any replacement property identified before the end of the identification period and received by the taxpayer before the end of the exchange period, but only if the taxpayer receives before the end of the exchange period identified replacement property the fair market value of which is at least 95 percent of the aggregate fair market value of all identified replacement properties (the "95-percent rule") [for this purpose, the fair market value of each identified replacement property is determined as of the earlier of the date the property is received by the taxpayer or the last day of the exchange period].

Fair market value is measured on the earlier of the date the taxpayer receives the property or the last day of the exchange period. n311 Fair market value under the rules refers to the fair market value without regard to any liabilities secured by the property. n312 For purposes of applying the 3-property rule, 200-percent rule, and 95-percent rule, all unrevoked identifications of property are taken into account. n313

Special rules also apply to multiple replacement property transactions in which incidental property is transferred with a larger item of replacement property, as where a taxpayer exchanges furniture and fixtures along with a condominium. This incidental property is ignored for purposes of the multiple property identification rules if it is standard commercial practice to transfer that property, and the fair market value of the incidental property does not exceed 15 percent of the fair market value of the larger item of property. n314 Accordingly, the incidental property is not counted as a separate property for purposes of the three-property limitation, and does not have to be separately identified and described for purposes of the deferred exchange replacement property identification requirements. n315

[4] Requirements for Receipt of Replacement Property

[a] Replacement Period

The regulations provide detailed rules regarding the timely receipt of replacement property. n316 Property is timely received if it is received before the end of the exchange period and is substantially the same property as was identified. n317 The exchange period begins on the date the taxpayer transfers the relinquished property and ends at midnight on the earlier of (1) 180 days after the date on which the taxpayer transfers the relinquished property, or (2) the due date (including extensions) for the taxpayer's return for the year in which the transfer occurs. n318

The extensions with respect to a tax return refer to actual extensions granted, not to available or possible extensions.

Therefore, if no extension for filing a return is, in fact, given, the initial due date of the taxpayer's return is the critical date. n319

If, as part of the same deferred exchange, a taxpayer transfers more than one relinquished property and they are transferred on different dates, the exchange period is determined by reference to the earliest date on which any of the properties are transferred. n320

Ordinarily, it is the taxpayer who receives the replacement property, so the identity of the taxpayer does not raise an issue with respect to a qualifying receipt of the property. One private letter ruling involved an exchange by a wholly-owned third-tier LLC. That LLC assigned its rights in a contract of sale to its parent, the second-tier LLC, who then assigned the rights to its parent LLC, the taxpayer. It was also arranged that the replacement property would be acquired by a newly created LLC, which would also be wholly owned by the taxpayer. All the lower-tier LLCs were disregarded as an entity separate from the taxpayer under the entity classification regulations. n320.1 Given this fact, the IRS ruled that the actions of the lower tier LLCs were attributable to the taxpayer, and that the acquisition of the replacement property by the newly created LLC would also be treated as an acquisition of property by the taxpayer. Provided the exchange complied with the various timing requirements, it would qualify under *IRC Section 1031*. n320.2

[b] Substantially the Same Property Requirement

Any replacement property that is received in an exchange must be substantially the same property that was identified. n321 The regulations provide several examples involving real property that illustrate this requirement. Replacement property is substantially the same property as the real property identified in the following situations: n322

- the taxpayer initially identifies three real properties as potential replacement properties, and later timely selects one and receives it within the replacement period;
- a fence is erected on the property after its identification; or
- the taxpayer initially identifies a 2-acre unimproved lot as replacement property, but eventually ends up receiving only 1.5 acres of the 2-acre parcel in the exchange, which has a value of 75 percent of the 2-acre lot.

The regulations also provide an example of the requirement not being met. In the example, a 2-acre parcel with a barn is identified as replacement property, with a fair market value of \$250,000 (\$187,500 for the barn and underlying land, and \$87,500 for the remaining land). The taxpayer eventually receives in exchange only the barn and the property underlying it. The example states that the barn and underlying land differ in basic nature or character from the 2-acre parcel as a whole, and therefore are not substantially the same property as identified. n323

[5] Replacement Property to be Constructed

Special rules apply for identification and receipt of replacement property that is not in existence or is to be produced at the time it is identified as replacement property. n324 A transfer of relinquished property in a deferred exchange can qualify for nonrecognition even though replacement property is not in existence or is being produced at the time the property is identified as replacement property. This rule allows replacement property to be built to the taxpayer's specifications. n324.1 Although these rules apply primarily to personal property, they can also come into play for real property upon which improvements are to be constructed. Regarding identification, when replacement property includes real property upon which improvements are to be constructed, the identifying description should include a legal description of the underlying land and as much detail regarding construction of improvements as is practicable at the time the identification is made. n325

In determining whether the replacement property received by the taxpayer is substantially the same property as identified when the identified replacement property is to be constructed, variations due to usual or typical construction changes are not taken into account. However, if substantial changes are made in the property to be constructed, the replacement property received will not be considered to be substantially the same property as identified. n326

In addition, if the identified property is real property upon which improvements are to be constructed and the construction is not completed on or before the date the taxpayer receives the property, the property received will be considered to be substantially the same property as identified only if, had the construction been completed by the date the taxpayer receives the property, the replacement property received would have been considered to be substantially the same property as identified. Even so, the property received is considered to be substantially the same property as identified only to the extent the property received constitutes real property under local law. n327

Further, any additional production occurring with respect to the replacement property after the property is received by the taxpayer is not treated as the receipt of property of a like-kind, but is instead considered to be transferred in exchange for services. n328 Thus, if construction to take place on the replacement real property is only 20 percent completed when the taxpayer receives it, then the property is considered to be substantially the same property as identified only to the extent of the underlying land and the 20 percent of construction that is completed. Any additional construction performed after the taxpayer receives it is not treated as receipt of like-kind property. n329

For purposes of the 200-percent rule and incidental property, the fair market value of replacement property that is to be constructed is its estimated fair market value as of the date it is expected to be received by the taxpayer. n330

[6] Receipt of Money or Other Property

Actual or constructive receipt of money or other property in a deferred exchange can be a pitfall that prevents a tax-free exchange under *IRC Section 1031* from taking place. In a deferred exchange, gain or loss may be recognized if the taxpayer actually or constructively receives money or other property before actually receiving the like-kind replacement property. In addition, if the taxpayer actually or constructively receives money or other property in the full amount of the consideration for the relinquished property before receiving like-kind replacement property, the transaction will constitute a sale and not a deferred exchange, even though the taxpayer eventually receives like-kind replacement property. n331

A taxpayer is in constructive receipt of money or property when it is credited to the taxpayer's account, set apart for the taxpayer, or otherwise made available so that the taxpayer may draw upon it at any time or upon giving notice of intent to withdraw it. Substantial limitations or restrictions on the taxpayer's right to receive or control the money or property will prevent constructive receipt until the limitations or restrictions lapse, expire, or are waived. Actual or constructive receipt of money or property by the taxpayer's agent is treated as actual or constructive receipt by the taxpayer. n332

Constructive receipt can occur unexpectedly. Merely reserving a right to require that another party to an exchange transaction pay cash instead of acquiring and transferring replacement property may result in constructive receipt if that right may be exercised before the end of the exchange period. n333

Planning Tip:

The safest way to avoid the possibility of constructive receipt of cash or other property that will destroy a like-kind exchange is to comply with one of the safe harbors provided in the regulations, as discussed in [7], below. Given the relative ease of doing so, it is imprudent not to structure deferred exchanges to take advantage of the safe harbors. n334

[7] Safe Harbors to Avoid Premature Actual or Constructive Receipt

[a] In General

The use of various guarantee or security arrangements is common in deferred exchanges due to the unwillingness of taxpayers to rely on a transferee's unsecured promise to transfer the like-kind replacement property. Intermediary arrangements are often used because the transferee is unwilling or unable to acquire the replacement property. The use of these arrangements, however, raises issues concerning actual or constructive receipt. Therefore, the regulations provide four safe harbors that prevent taxpayers from being treated as in actual or constructive receipt of money or other property. n335

CAUTION

The IRS has indicated that it will carefully scrutinize transactions that are not structured to come within the safe harbors.

[b] First Safe Harbor: Non-Cash Security or Guaranty Arrangements

The first safe harbor deals with security or guarantee arrangements. Under this rule, the transferee's obligation to transfer the replacement property to the taxpayer may be secured or guaranteed by one or more of the following: n336

- a mortgage, deed of trust, or other security interest in property (other than cash or a cash equivalent);
- a standby letter of credit n337 that does not allow the taxpayer to draw on it except upon a default of the transferee's obligation to transfer like-kind property to the taxpayer; or
- a guarantee of a third party.

This safe harbor ceases to apply if at any time the taxpayer has an immediate ability or unrestricted right to receive money or other property pursuant to the security or guarantee arrangement. n338

[c] Second Safe Harbor: Qualified Escrow Accounts and Qualified Trusts

Under the second safe harbor, the obligation of the transferee to transfer the replacement property to the taxpayer may be secured by cash or a cash equivalent that is held in a qualified escrow account or a qualified trust. n339 An escrow account or trust is qualified if the escrow holder or trustee is not the taxpayer or a "disqualified person," n340 and if the terms of the escrow or trust agreement expressly limit the taxpayer's rights to receive, pledge, borrow, or otherwise obtain the benefits of the cash or cash equivalent held in the escrow account or by the trustee as provided in the regulations. n341

This safe harbor ceases to apply at the time the taxpayer has an immediate ability or unrestricted right to receive, pledge, borrow, or otherwise obtain the benefits of the cash or cash equivalent held in the escrow account or by the trustee. The taxpayer may, however, exercise rights under state law to terminate or dismiss the escrow holder or trustee without losing benefit of the safe harbor. n342

[d] Third Safe Harbor: Use of Qualified Intermediary**[i] In General**

Under the third safe harbor, a taxpayer may use a qualified intermediary in a deferred exchange without being considered in constructive receipt of the proceeds. The taxpayer's transfer of relinquished property and subsequent receipt of like-kind replacement property is treated as an exchange, and the determination of whether the taxpayer is in

actual or constructive receipt of money or other property before the taxpayer actually receives like-kind replacement property is made as if the qualified intermediary were not the agent of the taxpayer. This safe harbor is available only if the agreement between the taxpayer and the qualified intermediary expressly limits the taxpayer's rights to receive, pledge, borrow, or otherwise obtain the benefits of the money or property held by the qualified intermediary, as provided in regulations. n343

In one ruling, a partnership violated this requirement because one partner had the right to, and did, receive cash proceeds from the intermediary. Although each partner separately satisfied the qualified escrow account safe harbor, the partnership was treated as constructively receiving the money received by the partner. The IRS found that this occurred only as to the exchange account attributable to the particular partner, however, and not to proceeds held in the other exchange accounts. The IRS ruled that the partnership had to recognize gain to the extent of the amount of cash received by the one partner. n344

A qualified intermediary is a person other than the taxpayer or a "disqualified person" who enters into a written agreement with the taxpayer (the "exchange agreement") and, as required by the exchange agreement, acquires the relinquished property from the taxpayer, transfers the relinquished property, acquires the replacement property, and transfers the replacement property to the taxpayer. n345

A "disqualified person" is anyone who is the taxpayer's agent or who is related to the taxpayer or the agent in a manner described in the regulations. n346

Any person who has acted as the taxpayer's employee, attorney, accountant, investment banker or broker, or real estate agent or broker within the two-year period ending on the date of the transfer of the first of the relinquished properties is treated as the taxpayer's agent at the time of the transaction. Thus, these parties generally cannot act as the intermediary in the deferred exchange without the taxpayer being considered in constructive receipt of the proceeds of the relinquished property, resulting in a taxable sale rather than a tax-deferred exchange. Certain services provided for the taxpayer are not taken into account in determining if the provider is the taxpayer's agent, including services for the taxpayer with respect to exchanges of property intended to qualify for nonrecognition under *IRC Section 1031* and routine financial, title insurance, escrow, or trust services for the taxpayer by a financial institution, title insurance company, or escrow company. n347 In one ruling, a taxpayer offered loans to customers to facilitate like-kind exchanges. The IRS ruled that the taxpayer qualified as a financial institution and that the loan services were routine. Therefore, those services were ignored in determining if the taxpayer was an agent or a disqualified person under the like-kind exchange rules. In addition to offering loans, the taxpayer offered properties as replacement properties in like-kind exchanges to customers of a qualified intermediary that was related to the taxpayer. The IRS also ruled that the sale or offering for sale of these properties would not by itself cause the taxpayer or the qualified intermediary to be considered an agent of the customers, so as to be a disqualified person with respect to the transactions. The IRS noted that the taxpayer would be a disqualified person, however, if it acted as a real estate broker or agent. n347.1

Also treated as "disqualified persons" are persons related to the above agents of the taxpayer. n348

Parties related to the taxpayer who are "disqualified persons" for this purpose include those in any of the following relationships with the taxpayer: n349

- family members (brothers, sisters, spouses, ancestors, and lineal descendants);
- a corporation and a more than 10 percent shareholder;
- corporations in the same controlled group;
- grantors and trust fiduciaries;

- fiduciaries of different trusts with the same grantor;
- fiduciaries and beneficiaries of the same trust or of different trusts with the same grantor;
- trust fiduciaries and corporations more than 10 percent in value of the outstanding stock of which is owned by or for the trust or the grantor of the trust;
- persons and certain tax exempt organizations controlled by that person and family members;
- a corporation and a partnership if the same persons own more than 10 percent interests;
- two S corporations or an S corporation and a C corporation with more than 10 percent overlapping interests;
- executors or an estate and a beneficiary of the estate, except in the case of a sale or exchange in satisfaction of a pecuniary bequest;
- partnerships and partners with more than 10 percent of the capital or profits interest; or
- partnerships in which the same persons own more than 10 percent of the capital or profits interest.

Complex entity composition and prior interactions among parties involved in an exchange may make it quite unclear whether a particular party is disqualified with respect to a particular exchange. These conditions may mandate that a taxpayer request a letter ruling. n349.1

Example:

An LLC electing to be treated as a C corporation is an intermediary (O) that facilitates like-kind exchanges. The taxpayers wish to use O as the qualified intermediary to facilitate a like-kind exchange. O has a single shareholder, IS. A separate entity, Manager LLC, serves as the O's sole manager. A legal firm is the sole member of Manager LLC and the firm has provided legal services and advice to the taxpayers and to IS within the past two years. Accordingly, the law firm is considered an agent of the taxpayers and is a disqualified person. n349.2 In addition, the taxpayers' son is a manager of Manager LLC and a member of the law firm. He is related to the taxpayers and is also a disqualified person. n349.3

Even though the law firm and the son are disqualified persons with respect to the taxpayers, neither owns an interest, directly or indirectly, in O. Moreover, Manager LLC does not own an interest, directly or indirectly in O. Therefore, even though the law firm has provided legal services to the taxpayers within the two years prior to the exchange, and the firm owns Manager LLC, which is the manager of the O, the law firm's ownership of Manager LLC does not make the O a disqualified person. Therefore, O is not a disqualified person with respect to the taxpayers for purposes of qualifying as a qualified intermediary. n349.4

NOTE:

Before 2000, banks could not be affiliated with entities engaged principally in the issue, flotation, underwriting, public sale, or distribution of stocks, bonds, debentures, notes or other securities. Legislation enacted in 1999 n349.5 repealed these restrictions, and also authorized qualifying financial institutions to engage in certain financial activities, such as (1) providing financial, investment, or economic advice (including advising investment companies), (2) issuing and selling instruments

representing interests in pools of assets permissible for a bank to hold directly, and (3) underwriting, dealing in, and making a market in securities.

As a result of the above legislation and other policy changes by the Federal Reserve System in recent years, many banks and bank holding companies are becoming members of controlled groups that include investment banking and brokerage firms. To account for these changes, the definition of "disqualified person" in the regulations has been modified. A member of a controlled group that includes an investment banking or brokerage firm as a member will not be a disqualified person merely because the investment banking or brokerage firm has provided services to an exchange customer within a two-year period ending on the date of the transfer of the relinquished property by the customer. n350

The qualified intermediary safe harbor provides considerable flexibility in structuring deferred exchanges. An intermediary is considered to have acquired and transferred property if it transfers legal title to that property. As long as the requisite acquisitions and transfers to implement an exchange occur pursuant to the intermediary's contract, the intermediary need not take legal title to the properties. This allows the intermediary to facilitate the direct conveyance of deeds between the principal parties, thereby insulating itself from potential liabilities, such as environmental liabilities, that can arise from being included in the chain of title. n351

Moreover, an intermediary is considered to have entered into an agreement if the rights of a party to an agreement are assigned to it and if all parties to the agreement are notified in writing of the agreement on or before the date of transfer. This provides maximum flexibility to the parties in negotiating and contracting for the overall exchange transaction, while delaying the intermediary's involvement until the parties are ready to proceed with the transactions necessary to complete the exchange. n352

The use of an otherwise qualified intermediary or escrow account to hold funds from the sale of taxpayer's property until a replacement property is identified will not prevent a finding of constructive receipt if the taxpayer has unrestricted control over the escrow account and the ability to change the escrow instructions. In that situation the taxpayer is in constructive receipt of the funds deposited in escrow and a taxable sale and reinvestment, rather than a tax-deferred exchange, occurs. n353

CAUTION

Although it is studying the area, the IRS currently takes the position that the qualified intermediary safe harbor is **not** available for reverse-*Starker* exchange transactions, i.e. those in which the taxpayer closes on the purchase of replacement property before selling the relinquished property. Therefore, if the transactions in an exchange occur in this order, a taxpayer will have to rely on ordinary rules of agency and constructive receipt in order to have the exchange respected as a tax-free like-kind exchange of properties. n354 For reverse-*Starker* exchanges, however, a separate safe harbor under *Revenue Procedure 2000-37* may be available. n355

A taxpayer who uses a qualified intermediary in a Section 1031 exchange is considered to have engaged in the exchange with the qualified intermediary. Consequently, the qualified intermediary considered the transferee of the relinquished property and the qualified intermediary considered the transferor of the replacement property must be the same person or entity. n355.1 The IRS has issued a ruling addressing the change in legal status of a qualified intermediary during the pendency of an exchange. In the ruling, ownership of three qualified Subchapter S subsidiaries--all of which were qualified intermediaries--was transferred to an LLC. As Subchapter S subsidiaries, they were disregarded entities for tax purposes. After the transfer, they were C corporations. After the transfer, each corporation would conduct is same qualified intermediary business in the same manner. The IRS ruled that, notwithstanding the transfer, the legal identities of the three corporations would not change because each would continue to be, for state law purposes, an entity engaged

in the business of providing qualified intermediary services that is no different from the entity that existed prior to the transfer. Therefore, the IRS ruled that with respect to pending like-kind exchanges (exchanges in which a taxpayer has transferred relinquished property to a qualified intermediary but not yet received replacement property from it), a change from a disregarded entity to an entity no longer disregarded should not cause the subsidiaries to be treated as qualified intermediaries that are different from the entities considered to be the transferees of the relinquished property. Accordingly, the IRS ruled that, after the ownership transfer, each subsidiary would retain its status as the transferee of the relinquished property. n355.2

[iii] Safe Harbor for Transactions when Qualified Intermediary Defaults

Numerous taxpayers who have initiated like-kind exchanges with qualified intermediaries have failed to complete them because the qualified intermediary (QI) defaults on its obligation to acquire and transfer replacement property to the taxpayer. In many of these cases, the QI enters bankruptcy or receivership, thus preventing the taxpayer from obtaining immediate access to the proceeds of the sale of the relinquished property. Numerous taxpayers have sought relief from the IRS in this situation--such as seeking to extend the 180-day statutory replacement period, n355.3 but the IRS has been hamstrung in providing equitable relief by the mandatory statutory provisions.

The IRS has generally taken the view, however, that a taxpayer who in good faith sought to complete the exchange using the QI, but who failed to do so because the QI defaulted on the exchange agreement and became subject to a bankruptcy or receivership proceeding, should not be required to recognize gain from the failed exchange until the taxable year in which the taxpayer receives a payment attributable to the relinquished property. As a result, the IRS has issued a revenue procedure that provides a safe harbor method of reporting gain or loss when there is a failed like-kind exchange due to a QI default. n355.4

The revenue procedure is effective for taxpayers whose like-kind exchanges fail due to a QI default occurring on or after January 1, 2009. A taxpayer who is within the scope of this revenue procedure may, subject to statutory limitations on credit or refund, n355.5 file an original or amended return to report a deferred like-kind exchange that failed due to a QI default in a taxable year ending before January 1, 2009. n355.6

The safe harbor is available only to taxpayers who did all of the following: n355.7

- Transferred relinquished property to a QI in accordance with regulations; n355.8
- Properly identified replacement property within the identification period (unless the QI default occurs during that period);
- Did not complete the like-kind exchange solely because of a QI default involving a QI that becomes subject to a bankruptcy proceeding under the United States Code or a receivership proceeding under federal or state law; and
- Did not, without regard to any actual or constructive receipt by the QI, have actual or constructive receipt of the proceeds from the disposition of the relinquished property or any property of the QI prior to the time the QI entered bankruptcy or receivership. (For this purpose, relief of a liability pursuant to the exchange agreement prior to the QI default, either through the assumption or satisfaction of the liability in connection with the transfer of the relinquished property or through the transfer of the relinquished property subject to the liability, is disregarded. n355.9

If the safe harbor applies, the following rules are used to determine gain or loss for taxpayers who qualify to use it: n355.9.1

No gain is recognized until payment is received. If a QI defaults on its obligation to acquire and transfer replacement property to the taxpayer and becomes subject to a bankruptcy or receivership proceeding, the taxpayer generally may not seek to enforce its rights under the exchange agreement with the QI or otherwise access the sale proceeds from the relinquished property outside of the bankruptcy or receivership proceeding while the proceeding is pending. Consequently, the IRS will treat the taxpayer as not having actual or constructive receipt of the proceeds during that period if the taxpayer reports gain in accordance with this revenue procedure. Accordingly, the taxpayer need recognize gain on the disposition of the relinquished property only as required under the safe harbor gross profit ratio method described below. n355.10

Gain is recognized upon receipt of payment. The taxpayer may report gain realized on the disposition of the relinquished property as the taxpayer receives payments attributable to the relinquished property using the safe harbor gross profit ratio method described below. n355.11

A safe harbor gross profit ratio method is used to report gain. Under the safe harbor gross profit ratio method, the portion of any payment attributable to the relinquished property that is recognized as gain is determined by multiplying the payment by a fraction. The numerator of the fraction is the taxpayer's gross profit and the denominator of which is the taxpayer's contract price. n355.12 The terms used in the gross profit ratio method are given specific definitions:

- A payment attributable to the relinquished property is a payment of proceeds, damages, or other amounts attributable to the disposition of the relinquished property (other than selling expenses), whether paid by the QI, the bankruptcy or receivership estate of the QI, the QI's insurer or bonding company, or any other person. Satisfied indebtedness is generally not a payment attributable to the relinquished property, but the amount of satisfied indebtedness in excess of the adjusted basis of the relinquished property is treated as a payment attributable to the relinquished property in the year in which the indebtedness is satisfied. n355.13

- *Gross profit* is the selling price of the relinquished property, minus the taxpayer's adjusted basis in the relinquished property (increased by any selling expenses not paid by the QI using proceeds from the sale of the relinquished property). n355.14

- *Selling price* of the relinquished property is generally the amount realized on the sale of the relinquished property, without reduction for selling expenses. However, if a court order, confirmed bankruptcy plan, or written notice from the trustee or receiver specifies, by the end of the first taxable year in which the taxpayer receives a payment attributable to the relinquished property, an amount to be received by the taxpayer in full satisfaction of the taxpayer's claim, the selling price of the relinquished property is the sum of the payments attributable to the relinquished property (including satisfied indebtedness in excess of basis) received or to be received and the amount of any satisfied indebtedness not in excess of the adjusted basis of the relinquished property. n355.15

- *Contract price* is the selling price of the relinquished property minus the amount of any satisfied indebtedness not in excess of the adjusted basis of the relinquished property. n355.16

- *Satisfied indebtedness* is any mortgage or encumbrance on the relinquished property that was assumed or taken subject to by the buyer or satisfied in connection with the transfer of the relinquished property. n355.17

Recapture income is taken into account. Any required depreciation recapture must be taken into account in accordance with *IRC Sections 1245 and 1250*, except that the recapture income is included in income in the taxable year in which gain is recognized under the above safe harbor, and only to the extent of the gain recognized in that taxable year. n355.18

A maximum amount of gain to be recognized applies. The maximum total gain (including recapture income) recognized under the safe harbor should not exceed the sum of (1) the payments attributable to the relinquished property (including satisfied indebtedness in excess of basis) and (2) the satisfied indebtedness not in excess of basis, minus the adjusted basis of the relinquished property. Adjustments to the gain determined using the safe harbor gross profit ratio method should be made in the last taxable year in which the taxpayer receives a payment attributable to the relinquished property. n355.19

Loss deduction is available. Taxpayers eligible to use the safe harbor may claim a loss deduction under *IRC Section 165* for the amount, if any, by which the adjusted basis of the relinquished property exceeds the sum of (1) the payments attributable to the relinquished property (including satisfied indebtedness in excess of basis), plus (2) the amount of any satisfied indebtedness not in excess of basis. They may also claim a loss deduction under *IRC Section 165* for the amount of any gain recognized in accordance with the safe harbor in a prior taxable year. n355.20

Imputed interest rules apply. In applying the safe harbor, the selling price, the contract price, and any payment attributable to the relinquished property must be reduced by the amount of any imputed interest allocable to the payment, as determined under *IRC Section 483* or *IRC Section 1274* and the regulations. For purposes of applying either provision to a transaction within the scope of the safe harbor, the taxpayer is treated as selling the relinquished property on the date of the confirmation of the bankruptcy plan or other court order that resolves the taxpayer's claim against the QI (the "safe harbor sale date"). As a result, if the only payment in full satisfaction of the taxpayer's claim is received by the taxpayer on or before the date that is six months after the safe harbor sale date, then no interest is imputed on this payment under either provision. In addition, the selling price (determined without regard to this imputed interest rule) is used to determine whether *IRC Section 483* (in general, sales for \$250,000 or less) or *IRC Section 1274* (in general, sales for more than \$250,000) applies to the transaction. n355.21

Special imputed interest rule applies for exchange facilitator loans. A special imputed interest rule applies if in the transaction subject to the safe harbor, exchange funds held by the QI were treated as an exchange facilitator loan n355.22 and the loan otherwise met the requirements of *Treas Reg § 1.1031(k)*. (Under that regulation, an exchange facilitator loan is exempt from *Treas Reg § 1.1031(k)* if the amount of the exchange funds treated as loaned does not exceed \$2 million and the duration of the loan is six months or less.) If these conditions are met, the IRS will continue to treat the loan as being exempt from *IRC Section 7872* by virtue of the regulatory exception until the safe harbor sale date, even if the duration of the loan exceeds six months solely due to the QI default. In addition, if an exchange facilitator loan fails to qualify for the exception because it exceeds \$2 million, the IRS will not impute additional interest on the loan after the date of the QI default under *Treas Reg § 1.1031-1(g)(8)*. However, interest may be imputed under *IRC Section 483* or *IRC Section 1274*, as noted above. n355.23

Examples:

The revenue procedure provides the following examples to illustrate how the safe harbor works: n355.24

Example 1. A, an individual calendar year taxpayer, owns investment property (Property 1) with a fair market value of \$150x and an adjusted basis of \$50x. A enters into an agreement with QI, a qualified intermediary, to facilitate a deferred like-kind exchange. On May 6, Year 1, A transfers Property 1 to QI and QI transfers Property 1 to a third party in exchange for \$150x. A intends that the \$150x held by QI be used by QI to acquire A's replacement property. On June 1, Year 1, A identifies Property 2 as replacement property. On June 15, Year 1, QI notifies A that it has filed for bankruptcy protection and cannot acquire replacement property. Consequently, A fails to acquire Property 2 or any other replacement property within the exchange period. As of December 31, Year 1, QI's bankruptcy proceedings are ongoing and A has received none of the \$150x proceeds from QI or any other source.

On July 1, Year 2, QI exits from bankruptcy and the bankruptcy court approves the trustee's final report,

which shows that A will be paid \$130x in full satisfaction of QI's obligation under the exchange agreement. A receives the \$130x payment on August 4, Year 2 and does not receive any other payment attributable to the relinquished property. A is within the scope of *Revenue Procedure 2010-14* and thus may report the failed like-kind exchange due to the QI default in accordance with its safe harbor.

Accordingly, A is not required to recognize gain in Year 1 because A did not receive any payments attributable to the relinquished property in Year 1. A recognizes gain in Year 2. A's selling price is \$130x (the payments attributable to the relinquished property (the amount specified by the trustee before the end of the first taxable year in which A receives a payment attributable to the relinquished property)). A's contract price also is \$130x because there is no satisfied or assumed indebtedness. A's gross profit is \$80x (the selling price (\$130x) minus the adjusted basis (\$50x)). A's gross profit ratio is 80/130 (the gross profit over the contract price). A must recognize gain in Year 2 of \$80x (the payment attributable to the relinquished property (\$130x) multiplied by A's gross profit ratio (80/130)). Furthermore, even though the payment attributable to the relinquished property (\$130x) is less than the \$150x proceeds received by the QI, A is not entitled to a *IRC Section 165* loss deduction because the payment attributable to the relinquished property exceeds A's adjusted basis in the relinquished property (\$50x).

Example 2. B, an individual calendar year taxpayer, owns investment property (Property 1) with a fair market value of \$160x and an adjusted basis of \$90x. Property 1 is encumbered by a mortgage of \$60x. B enters into an agreement with QI, a qualified intermediary, to facilitate a deferred like-kind exchange. On May 6, Year 1, B transfers Property 1 to QI and QI transfers Property 1 to a third party in exchange for \$160x. At closing, QI uses \$60x of the proceeds to satisfy the mortgage on Property 1 and retains the remaining \$100x. B intends that the \$100x held by QI be used by QI to acquire B's replacement property. On June 1, Year 1, B identifies Property 2 as replacement property. On June 15, Year 1, QI notifies B that it has filed for bankruptcy protection and cannot acquire replacement property. Consequently, B fails to acquire Property 2 or any other replacement property during the exchange period. As of December 31, Year 1, QI's bankruptcy proceedings are ongoing and B has received none of the \$100x proceeds from QI or any other source.

On September 1, Year 2, QI exits from bankruptcy and the bankruptcy plan of reorganization specifies that B will receive \$70x in full satisfaction of QI's obligation under the exchange agreement. The terms of the bankruptcy plan of reorganization provide that QI will pay B \$35x in October of Year 2 and \$35x in February of Year 3. B receives the payments according to the plan and does not receive any other payment attributable to the relinquished property. B is within the scope of *Revenue Procedure 2010-14* and thus may report the failed like-kind exchange due to the QI default in accordance with its safe harbor.

Accordingly, B is not required to recognize gain in Year 1 because B did not receive any payments attributable to the relinquished property in Year 1 (the amount of the mortgage satisfied by QI did not exceed B's adjusted basis in Property 1). B recognizes gain in Year 2 and Year 3. B's selling price is \$130x (the payments attributable to the relinquished property (the amount specified by the bankruptcy plan before the end of the first taxable year in which B receives a payment attributable to the relinquished property (\$70x)) plus the mortgage satisfied by QI (60x)). B's contract price is \$70x (the selling price (\$130x) minus the satisfied indebtedness not in excess of basis (\$60x)). B's gross profit is \$40x (the selling price (\$130x) minus the adjusted basis (\$90x)). B's gross profit ratio is 40/70 (the gross profit over the contract price). In Year 2 and Year 3, B must recognize gain of \$20x each year (the payment attributable to the relinquished property (\$35x) multiplied by B's gross profit ratio (40/70)). B is not entitled to a *IRC Section 165* loss deduction because the sum of all payments attributable to the relinquished property (\$70x) and the amount of B's satisfied indebtedness not in excess of basis (\$60x) exceeds B's adjusted basis in the relinquished property (\$90x).

Example 3. The facts are the same as in Example 2 except *B*'s adjusted basis in Property 1 is \$40x. *B* is within the scope of *Revenue Procedure 2010-14* and thus may report the failed like-kind exchange due to the QI default in accordance with its safe harbor. *B* is considered to have received a payment of \$20x in Year 1 because the amount of the mortgage satisfied by QI (\$60x) exceeds *B*'s adjusted basis in the relinquished property (\$40x). *B* recognizes gain in Year 1. *B*'s selling price is \$160x (the amount realized by the QI on the sale of the relinquished property because neither a court order, the bankruptcy plan, nor the trustee specified by the end of Year 1, the first year in which *B* receives a payment attributable to the relinquished property, the amount *B* will receive in full satisfaction of *B*'s claim). *B*'s contract price is \$120x (the selling price (\$160x) minus the satisfied indebtedness not in excess of basis (\$40x)). *B*'s gross profit is \$120x (the selling price (\$160x) minus the adjusted basis (\$40x)). *B*'s gross profit ratio is 120/120 (the gross profit over the contract price). Thus, *B* must recognize gain in Year 1 of \$20x (the deemed payment of \$20x multiplied by 120/120) and \$35x in Year 2 and Year 3 (the payments attributable to the relinquished property received by *B* in those years multiplied by 120/120). *B* is not entitled to a *IRC Section 165* loss deduction because the sum of the payments attributable to the relinquished property (\$90x) and the amount of *B*'s satisfied indebtedness not in excess of basis (\$40x) exceeds *B*'s adjusted basis in the relinquished property (\$40x).

Example 4. *C*, an individual calendar year taxpayer, owns investment property (Property 1) with a fair market value of \$100x and an adjusted basis of \$40x. *C* enters into an agreement with QI, a qualified intermediary, to facilitate a deferred like-kind exchange. On May 6, Year 1, *C* transfers Property 1 to QI and QI transfers Property 1 to a third party in exchange for \$100x. *C* intends that the \$100x held by QI be used by QI to acquire *C*'s replacement property. On June 1, Year 1, *C* identifies Property 2 as replacement property. On June 15, Year 1, QI notifies *C* that it has filed for bankruptcy protection and cannot acquire replacement property. Consequently, *C* fails to acquire Property 2 or any other replacement property within the exchange period. As of December 31, Year 1, QI's bankruptcy proceedings are ongoing and *C* has received none of the \$100x proceeds from QI or any other source. On September 1, Year 2, QI exits from bankruptcy and the bankruptcy plan of reorganization provides that *C* will receive \$35x in October of Year 2 in partial satisfaction of QI's obligation under the exchange agreement. The bankruptcy plan also provides that, depending on various facts and circumstances described in the reorganization plan, *C* may receive a payment in February of Year 3. On October 2, Year 2, QI pays *C* \$35x. On February 3, Year 3, *C* is notified that there will be no Year 3 payment and that the \$35x received by *C* in Year 2 represents full satisfaction of QI's obligation under the exchange agreement. *C* receives no other payments attributable to the relinquished property. *C* is within the scope of this *Revenue Procedure 2010-14* and thus may report the failed like-kind exchange due to the QI default in accordance with its safe harbor.

Accordingly, *C* is not required to recognize gain in Year 1. *C* recognizes gain in Year 2. *C*'s selling price is \$100x (the amount realized by the QI on the sale of the relinquished property because, by stating that *C* may receive a payment in Year 3, the bankruptcy plan did not specify by the end of Year 2, the first year in which *C* receives a payment attributable to the relinquished property, the amount *C* will receive in full satisfaction of *C*'s claim). Because there is no satisfied or assumed indebtedness, *C*'s contract price also is \$100x. *C*'s gross profit is \$60x (the selling price (\$100x) minus the adjusted basis (\$40x)). *C*'s gross profit ratio is 60/100 (the gross profit over the contract price). Thus, *C* must recognize gain in Year 2 of \$21x (the payment attributable to the relinquished property (\$35x) multiplied by 60/100). In Year 3, *C* is entitled to a Section 165 loss deduction of \$5x, the excess of *C*'s adjusted basis (\$40x) over the payments attributable to the relinquished property (\$35x). *C* is also entitled to a *IRC Section 165* loss deduction of \$21x in Year 3, the amount of gain that *C* recognized in Year 2.

Example 5. *D*, an individual who uses the cash receipts and disbursements method of accounting and

files federal income tax returns on a calendar year basis, owns investment property (Property 1) with a fair market value of \$150x and an adjusted basis of \$50x. *D* enters into an agreement with *QI*, a qualified intermediary, to facilitate a deferred like-kind exchange. On May 6, Year 1, *D* transfers Property 1 to *QI* and *QI* transfers Property 1 to a third party in exchange for \$150x. *D* intends that the \$150x held by *QI* be used by *QI* to acquire *D*'s replacement property. On June 1, Year 1, *D* identifies Property 2 as replacement property. On June 15, Year 1, *QI* notifies *D* that it has filed for bankruptcy protection and cannot acquire replacement property. Consequently, *D* fails to acquire Property 2 or any other replacement property within the exchange period. As of December 31, Year 1, *QI*'s bankruptcy proceedings are ongoing and *D* has received none of the \$150x proceeds from *QI* or any other source. On July 1, Year 2, *QI* exits from bankruptcy and the bankruptcy court approves the trustee's final report, which shows that *D* will be paid, in August of Year 3, \$130x in full satisfaction of *QI*'s obligation under the exchange agreement. *D* receives the \$130x payment on August 1, Year 3 and does not receive any other payment attributable to the relinquished property. Assume that the selling price of Property 1 is less than \$250,000 and that, based on *IRC Section 483*, \$5x of the \$130x payment is unstated interest.

D is within the scope of *Revenue Procedure 2010-14* and thus may report the failed like-kind exchange due to the *QI* default in accordance with its safe harbor.

D is not required to recognize gain in Year 1 or Year 2 because *D* did not receive any payments attributable to the relinquished property in those years. Further, *IRC Section 483* applies to *D*'s Year 3 payment because the payment was due more than 6 months after the safe harbor sale date and *D* received the payment more than 1 year after that date [See *IRC § 483(c)*]. *D*'s selling price is \$125x (\$130x minus the \$5x of unstated interest). *D*'s contract price also is \$125x because there is no assumed or satisfied indebtedness. *D*'s gross profit is \$75x (the selling price (\$125x) minus the adjusted basis (\$50x)). *D*'s gross profit ratio is 75/125 (the gross profit over the contract price). *D* must recognize gain in Year 3 of \$75x (the payment attributable to the relinquished property (\$125x) multiplied by *D*'s gross profit ratio (75/125)). In addition, *D* must include \$5x of the \$130x payment in income in Year 3 as interest income [see *Treas Reg § 1.446-2*]. Even though the payment attributable to the relinquished property (\$125x) is less than the \$150x proceeds received by the *QI*, *D* is not entitled to a *IRC Section 165* loss deduction because the payment attributable to the relinquished property exceeds *D*'s adjusted basis in the relinquished property (\$50x).

[e] Fourth Safe Harbor: Entitlement to Growth Factor on Exchange Property

Under the fourth safe harbor a taxpayer is permitted to receive interest or a growth factor with respect to a deferred exchange without being considered in constructive receipt of the proceeds. This safe harbor applies, however, only if the agreement allowing the taxpayer to receive the interest or growth factor expressly limits the taxpayer's rights to do as provided in the regulations. n356 A taxpayer is treated as being entitled to receive interest or a growth factor with respect to a deferred exchange if the amount of money or property the taxpayer is entitled to receive depends upon the length of time elapsed between transfer of the relinquished property and receipt of the replacement property. n357 The taxpayer must include the interest or growth factor in gross income. n358

[f] Additional Restrictions on Safe Harbors

Additional restrictions must be met for the second, third, and fourth safe harbors. n359 For these safe harbors, the agreement between the escrow or the qualified intermediary, or the agreement under which the taxpayer is or may be entitled to interest or growth factor with respect to the deferred exchange, generally must provide that the taxpayer has no rights to receive, pledge, borrow, or otherwise obtain the benefits of money or other property before the end of the exchange period. n360

The agreements may provide, however, that if a taxpayer has not identified replacement property by the end of the identification period, the taxpayer may have rights to receive, pledge, borrow, or otherwise obtain the benefits of money or other property at any time after the end of the identification period. This rule permits the taxpayer to have access to cash if the transaction fails to qualify for exchange treatment due to lack of identification. n361 Furthermore, the agreements may provide that if a taxpayer has identified replacement property, the taxpayer may have rights to receive, pledge, borrow, or otherwise obtain the benefits of money or other property on or after: n362

- receipt by the taxpayer of all the replacement property to which the taxpayer is entitled under the exchange agreement (this allows the taxpayer to have access to cash if the exchange is completed); or
- the occurrence after the end of the identification period of a material and substantial contingency that (a) relates to the deferred exchange, (b) is provided for in writing, and (c) is beyond the control of the taxpayer and of any disqualified person, other than the person obligated to transfer the replacement property to the taxpayer.

The substantial contingency provision does not give a taxpayer a right to proceeds simply because, after bargaining in good faith, a taxpayer cannot acquire one or more of the identified replacement properties. The IRS takes the position that the types of contingencies considered to be beyond an owner's control are those of a party not involved in the exchange (such as a government agency's seizure, requisition, or condemnation of the replacement property, or refusal to rezone or approve the transfer of the property), or an act beyond anyone's control (such as destruction of the property by natural forces). It is the view of the IRS that deciding whether or not to meet a seller's demands is within the control of the taxpayer. n363

In determining whether the second, third, and fourth safe harbors n364 cease to apply and whether the taxpayer's right to funds is properly limited, n365 the taxpayer may receive or be entitled to receive the following amounts without violating the safe harbor: n366

- items that a seller may receive as a consequence of the disposition of property which are not included in the amount realized from the disposition, such as prorated rents; and
- transactional items that relate to the disposition of the relinquished property or to the acquisition of the replacement property, and which appear under local standards in the typical closing statement as the responsibility of the buyer or seller, including such items as commissions, prorated taxes, recording or transfer taxes, and title company fees.

[8] Reverse *Starker* Transactions

[a] In General

A "reverse *Starker*" transaction occurs when replacement property is received before the date on which the relinquished property is transferred. n367 A reverse *Starker* transaction may occur when a taxpayer needs possession of the replacement property but the exchangor insists on finding a potential buyer for the taxpayer's relinquished property before acquiring it. It may also occur when an accommodation party insists on closing on the replacement property transaction before the relinquished property transaction can close. n368

The deferred exchange rules of Section 1031(a)(3) and the final regulations (including the safe harbors) under that section n369 do not apply to reverse *Starker* transactions. n370

To circumvent that prohibition, taxpayers have engaged in a wide variety of so-called "parking" transactions to facilitate

reverse like-kind exchanges. Parking transactions typically are designed to park the desired replacement property with an accommodation party until such time as the taxpayer arranges for the transfer of the relinquished property to the ultimate transferee in a simultaneous or deferred exchange. Once such a transfer is arranged, the taxpayer transfers the relinquished property to the accommodation party in exchange for the replacement property, and the accommodation party then transfers the relinquished property to the ultimate transferee. In the parking arrangements, taxpayers attempt to arrange the transaction so that the accommodation party has enough of the benefits and burdens relating to the property so that the accommodation party will be treated as the owner for federal income tax purposes.

[b] Revenue Procedure 2000-37 Safe Harbor for Like-Kind Exchange Parking Arrangements

The IRS has recognized the existence of reverse *Starker* parking arrangements, and has issued a revenue procedure that provides a safe harbor for any reverse-*Starker* exchange that is structured as a "qualified exchange accommodation arrangement" ("QEAA"). Under the safe harbor, taxpayers may treat the exchange accommodation titleholder party as the beneficial owner of property for federal income tax purposes, thereby enabling taxpayers to accomplish a qualifying like-kind exchange. n371

Practice Tip:

The safe harbor offered by *Revenue Procedure 2000-37* is significant because it outlines a simple approach for reversing the order of the steps of a non-simultaneous exchange of like-kind properties. Allowing these reverse exchanges significantly aids taxpayers whose transfer of a relinquished property is delayed, or whose acquisition of a replacement property is accelerated by events beyond the taxpayer's control. Owners of real property often face the prospect of losing the opportunity to acquire a desirable replacement property because the current owner of that property is unwilling to wait while the taxpayer completes the disposition of a relinquished property. *Revenue Procedure 2000-37* gives taxpayers a useful tool to sidestep these timing problems and complete legitimate business and investment exchanges on a tax-deferred basis.

Under the safe harbor, if property is held in a QEAA, the IRS will treat an exchange accommodation titleholder as the beneficial owner of property for tax purposes if the property is held in a QEAA. Property held in a QEAA may therefore qualify as either replacement property or relinquished property in a like-kind exchange. For this treatment to apply, the exchange must otherwise meet the requirements for a like-kind exchange. The safe harbor does not apply to replacement property held in a QEAA if the property is owned by the taxpayer within the 180-day period ending on the date of transfer of qualified indicia of ownership of the property to an exchange accommodation titleholder. n371.1

Note:

As initially adopted, *Revenue Procedure 2000-37* provided that if property was held in a QEAA, the IRS would not challenge (1) the treatment of property as replacement property or relinquished property, or (2) the treatment of an exchange accommodation titleholder as the beneficial owner of property. Some taxpayers then took the position that the language in *Revenue Procedure 2000-37* allowed them to treat as a like-kind exchange a transaction in which the taxpayer transferred property to an exchange accommodation titleholder and received that same property as replacement property in a purported exchange for other property of the taxpayer. The safe harbor language of *Revenue Procedure 2000-37* was modified, as noted above, to make clear that this was not the case. n371.2

Property is held in a QEAA only if all of the following requirements are met: n372

(1) Qualified indicia of ownership of the property is held by a person (the "exchange accommodation titleholder") who is not the taxpayer or a disqualified person. In addition, that person must be subject to federal income tax or, if that person is treated as a member of a partnership or S corporation for federal income tax purposes, more than 90 percent of its interests or stock must be owned by partners or shareholders who are subject to federal income tax. Qualified indicia of ownership must be held by the exchange accommodation titleholder at all times from the date of acquisition by the exchange accommodation titleholder until the property is transferred as required under paragraph (5) below. "Qualified indicia of ownership" means legal title to property, other indicia of ownership of the property that are treated as beneficial ownership of the property under applicable principles of commercial law (e.g. a contract for deed), or interests in an entity that is disregarded as an entity separate from its owner for federal income tax purposes (e.g. a single-member LLC) and that holds either legal title to the property or such other indicia of ownership.

(2) At the time the qualified indicia of ownership of the property is transferred to the exchange accommodation titleholder, it is the taxpayer's bona fide intent that the property held by the exchange accommodation titleholder represent either replacement property or relinquished property in an exchange that is intended to qualify for nonrecognition of gain (in whole or in part) or loss under *IRC Section 1031*.

(3) No later than 5 business days after the transfer of qualified indicia of ownership of the property to the exchange accommodation titleholder, the taxpayer and the exchange accommodation titleholder enter into a written agreement (the "qualified exchange accommodation agreement") that provides that the exchange accommodation titleholder is holding the property for the benefit of the taxpayer in order to facilitate an exchange under *IRC Section 1031* and *Revenue Procedure 2000-37*, and that the taxpayer and the exchange accommodation titleholder agree to report the acquisition, holding, and disposition of the property as provided in *Revenue Procedure 2000-37*. The agreement must specify that the exchange accommodation titleholder will be treated as the beneficial owner of the property for all federal income tax purposes. Both parties must report the federal income tax attributes of the property on their federal income tax returns in a manner consistent with this agreement.

Note:

The IRS has issued a letter ruling that should ease concerns about duplicate property transfer taxes in qualified exchange accommodation arrangements. The ruling allows taxpayers to avoid duplicate State and local transfer taxes by providing a clause in the written agreement that the exchange accommodation titleholder is to be treated as the taxpayer's agent for all purposes other than federal income tax purposes. The inclusion of such a clause will not affect the qualification of the agreement between the parties or the QEAA, nor will it violate the requirements of *Revenue Procedure 2000-37*. The Service's approval of the clause recognizes the state law property transfer tax advantages of an agency relationship, while disavowing the state law characterization of that relationship for federal tax purposes. The ruling prevents adverse federal tax consequences (such as constructive receipt) resulting from the state law characterization of the relationship. n373

(4) No later than 45 days after the transfer of qualified indicia of ownership of the replacement property to the exchange accommodation titleholder the relinquished property is properly identified. Identification must be made in a manner consistent with the principles of *Regulation Section 1.1031(k)-1(c)*. For purposes of the QEAA requirements, the taxpayer may properly identify alternative and multiple properties, as described in *Regulation Section 1.1031(k)-1(c)(4)*.

(5) No later than 180 days after the transfer of qualified indicia of ownership of the property to the exchange accommodation titleholder, (a) the property is transferred [either directly or indirectly through a qualified intermediary (as defined in *Treas Reg § 1.1031(k)-1(g)(4)*)] to the taxpayer as replacement property; or (b) the property is transferred to a person who is not the taxpayer or a disqualified person as relinquished property.

(6) The combined time period that the relinquished property and the replacement property are held in a QEAA does not exceed 180 days.

Property will not fail to be treated as being held in a QEAA as a result of any one or more of the following legal or contractual arrangements, regardless of whether they contain terms that typically would result from arm's length bargaining between unrelated parties with respect to those arrangements: n374

- an exchange accommodation titleholder that satisfies the requirements of the qualified intermediary safe harbor set forth in *Regulation Section 1.1031(k)-1(g)(4)* may enter into an exchange agreement with the taxpayer to serve as the qualified intermediary in a simultaneous or deferred exchange of the property under *IRC Section 1031*;
- the taxpayer or a disqualified person guarantees some or all of the obligations of the exchange accommodation titleholder, including secured or unsecured debt incurred to acquire the property, or indemnifies the exchange accommodation titleholder against costs and expenses;
- the taxpayer or a disqualified person loans or advances funds to the exchange accommodation titleholder or guarantees a loan or advance to the exchange accommodation titleholder;
- the property is leased by the exchange accommodation titleholder to the taxpayer or a disqualified person;
- the taxpayer or a disqualified person manages the property, supervises improvement of the property, acts as a contractor, or otherwise provides services to the exchange accommodation titleholder with respect to the property;
- the taxpayer and the exchange accommodation titleholder enter into agreements or arrangements relating to the purchase or sale of the property, including puts and calls at fixed or formula prices, effective for a period not in excess of 185 days from the date the property is acquired by the exchange accommodation titleholder; or
- the taxpayer and the exchange accommodation titleholder enter into agreements or arrangements providing that any variation in the value of a relinquished property from the estimated value on the date of the exchange accommodation titleholder's receipt of the property be taken into account upon the exchange accommodation titleholder's disposition of the relinquished property through the taxpayer's advance of funds to, or receipt of funds from, the exchange accommodation titleholder.

Property will not fail to be treated as being held in a QEAA merely because the accounting, regulatory, or state, local, or foreign tax treatment of the arrangement between the taxpayer and the exchange accommodation titleholder is different from the treatment required by paragraph (3) above. n375

If the requirements of *Revenue Procedure 2000-37* are not satisfied (for example, the property subject to a QEAA is not transferred within the time period provided), then *Revenue Procedure 2000-37* does not apply. Accordingly, the determination of whether the taxpayer or the exchange accommodation titleholder is the owner of the property for federal income tax purposes, and the proper treatment of any transactions entered into by or between the parties, will be made without regard to the provisions of *Revenue Procedure 2000-37*.

Revenue Procedure 2000-37 is limited in scope. The safe harbor of *Revenue Procedure 2000-37* has no application to any federal income tax determinations other than determinations that involve arrangements qualifying for the safe harbor. No inference is intended with respect to the federal income tax treatment of arrangements similar to those

described in the revenue procedure that were entered into prior to its effective date (September 15, 2000). The IRS recognizes that "parking" transactions can be accomplished outside of the safe harbor. Accordingly, no inference is intended with respect to the federal income tax treatment of parking transactions that do not satisfy the terms of the safe harbor provided in *Revenue Procedure 2000-37*, whether entered into prior to or after the effective date of *Revenue Procedure 2000-37*.

Services for the taxpayer in connection with a person's role as the exchange accommodation titleholder in a QEAA are not taken into account in determining whether that person or a related person is a disqualified person [as defined in *Treas Reg § 1.1031(k)-1(k)*]. Even though property will not fail to be treated as being held in a QEAA as a result of one or more arrangements that qualify as QEAA's, the IRS still may recast an amount paid pursuant to such an arrangement as a fee paid to the exchange accommodation titleholder for acting as an exchange accommodation titleholder to the extent necessary to reflect the true economic substance of the arrangement. Other federal income tax issues implicated, but not addressed, in *Revenue Procedure 2000-37* include the following:

- the tax treatment of payments made by the taxpayer to the exchange accommodation titleholder or by the exchange accommodation titleholder to the taxpayer resulting from a variation in the value of relinquished property after it is received by the exchange accommodation titleholder; and
- whether an exchange accommodation titleholder may be precluded from claiming depreciation deductions (e.g., as a dealer) with respect to the relinquished property or the replacement property.

Revenue Procedure 2000-37 may be used to by a taxpayer to acquire an entire partnership interest under *IRC Section 1031*, at least where the taxpayer already owns the remaining partnership interest at the time of the exchange. In a private ruling, the IRS allowed an exchange accommodation titleholder to acquire from a person unrelated to the taxpayer a 50-percent interest in a partnership whose only asset was real estate. The other 50 percent interest in the partnership was already owned by the taxpayer. The IRS ruled that under those circumstances, the acquisition of the partnership interest by the exchange accommodation titleholder was not inconsistent with that entity's status as an exchange accommodation titleholder. n375.1

[c] Use of Same Property for Both Reverse Like-Kind Exchange and Deferred Like-Kind Exchange

The IRS Chief Counsel has ruled that a taxpayer may engage in a reverse like-kind exchange under *Revenue Procedure 2000-37* n375.2 and a deferred like-kind exchange (a "forward" exchange) n375.3 using the same relinquished property in both exchanges. n375.4 In the ruling, the taxpayer structured two separate exchanges, one a reverse exchange in which replacement property was acquired and "parked" with an exchange accommodation titleholder before the taxpayer transferred its relinquished property, followed by a standard deferred exchange in which the relinquished property was transferred prior to the acquisition of the replacement property. For the reverse exchange, RP was acquired and parked with an exchange accommodation titleholder within the guidelines of *Revenue Procedure 2000-37*, and the taxpayer identified RQ in a timely manner. RQ, however, had a value far in excess of RP. Thus, the taxpayer intended to engage in a second like-kind exchange to defer the gain that remained after the exchange of RQ for RP. Although the taxpayer acted in good faith, the second exchange was never completed.

The ruling notes that *IRC Section 1031*, the regulations under it, and *Revenue Procedure 2000-37* do not expressly allow the same relinquished property to be used in both a reverse exchange under *Revenue Procedure 2000-37* and a deferred exchange. Yet, the ruling concludes that nothing in the statute, regulations or revenue procedure prohibits this coupling in the use of the same relinquished property. Also, taxpayers using the revenue procedure are not constrained to exclusively acquire as replacement property only the property parked with the exchange accommodation titleholder. n375.5

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.20

§ 8.20 Computation of Gain or Loss

[1] In General

No realized gain or loss is recognized if a taxpayer receives only qualifying like-kind property in exchange for qualifying property. n376 Any gain or loss that is not recognized because of Section 1031 is simply deferred. That gain or loss is preserved in the taxpayer's basis in the replacement property received in the exchange. n377

[2] Exchanges Not Solely in Kind; Boot

[a] Gain

Since it is unusual for two properties being exchanged to be exactly equal in value, an exchange of real property is likely to also involve a transfer of cash or other nonqualifying (that is, non-like-kind) property to equalize the transaction. This nonqualifying property, whether cash or other property, is referred to as "boot." If a taxpayer receives boot in an exchange in addition to qualifying like-kind property, any realized gain is recognized, but only to the extent of the amount of money and the fair market value of any non-cash boot received. This rule allows taxpayers to enjoy at least a partial deferral of gain under *IRC Section 1031*. n378 The partial gain attributable to the boot that is recognized in the exchange is added to the taxpayer's basis in the replacement property. n379

Taxpayers may be in constructive receipt of boot that they do not receive directly. In one case, the taxpayers had excess cash deposited directly from the escrow account to reduce the mortgage they had assumed on the replacement property. The Tax Court found that the taxpayers' control of the proceeds was equivalent to ownership and receipt and held that the proceeds were taxable as boot. n380

[b] Loss

In contrast to the relatively lenient rule that allows at least some nonrecognition of gain when boot is received, n381 an extreme "all-or-nothing" rule applies to losses from exchanges that are not solely of like-kind properties. If a taxpayer transfers qualifying loss property and receives *any* like-kind replacement property as consideration, no loss can be recognized on the exchange of the qualifying loss property to any extent. Thus, a taxpayer wishing to dispose of real estate worth less than its adjusted basis must be sure that no qualifying like-kind property is received as consideration. Otherwise, the transaction may be treated as an exchange not solely in kind, and no loss may be recognized, even if the

like-kind replacement property constitutes only a small portion of the total consideration received for the relinquished property. n382 Although the unrecognized loss is preserved through the taxpayer's substituted basis in the replacement property, n383 this may be of little solace to a taxpayer who was hoping to deduct a large loss in the year of the exchange.

Example:

T owns real property with a basis of \$200,000 and a fair market value of \$50,000. If T sells the property for \$50,000 in cash, the \$150,000 loss is both realized and recognized. However, if T instead receives as consideration both \$45,000 in cash and qualifying like-kind property worth \$5,000, none of the \$150,000 realized loss may be recognized. n384

[c] Transfer of Qualifying Property and Boot by Taxpayer

Giving boot or nonqualifying property along with qualifying property in an exchange will not take the transaction out of Section 1031. n385 A taxpayer who transfers qualifying property and non-cash boot in an exchange and receives only qualifying replacement property has received no boot, and therefore does not recognize any gain or loss on the exchange of the qualifying property. n386

The taxpayer must, however, recognize any realized gain or loss on the transfer of the non-cash boot, because as nonqualifying property, it is not entitled to nonrecognition under Section 1031. n387 The taxpayer is deemed to have received an amount equal to the nonqualifying property's fair market value on the date of the exchange, n388 and the taxpayer's gain or loss is the difference between the nonqualifying property's fair market value and its adjusted basis. n389

[d] Transfer and Receipt of Both Qualifying Property and Boot by Taxpayer

A taxpayer who transfers both qualifying property and boot in an exchange and receives both qualifying like-kind property and boot may be taxable on both the boot and the qualifying property transferred. Any realized gain or loss on the transfer of the nonqualifying property must be recognized because that property is not eligible for nonrecognition under *IRC Section 1031*. n390 The taxpayer is deemed to have received an amount equal to the nonqualifying property's fair market value on the date of the exchange. n391

Any gain realized on the transfer of the qualifying property must be recognized to the extent of the boot received. n392 No loss realized on the transfer of the qualifying property, however, may be recognized. n393 Both the qualifying and nonqualifying properties are treated as being transferred for a pro rata share (based on the value of the properties transferred by the taxpayer) of each of the properties received. n394

[3] Assumption of Liabilities

[a] In General

When another party in an exchange assumes a liability of the taxpayer as part of the exchange, the amount of the liability assumed is treated as money--and therefore boot--received by the taxpayer on the exchange. n395 This is true whether or not the assumption of liability results in recognition of gain or loss to the taxpayer. n396

The amount of liability assumed in an exchange is determined under *IRC Section 357(d)*. Except as may be provided otherwise in the regulations, a recourse liability is treated as having been assumed under that provision if, based on all facts and circumstances, the transferee has agreed to, and is expected to, satisfy the liability, whether or not the transferor has been relieved of the liability. n397

Under *IRC Section 357(d)*, except as may be provided by the regulations, a nonrecourse liability is generally treated as having been assumed by the transferee of any asset subject to that liability. n398 The amount of the nonrecourse liability treated as assumed, however, is reduced by the lesser of the following: n399

- the amount of the nonrecourse liability which an owner of other assets not transferred to the transferee and also subject to that liability has agreed with the transferee to, and is expected to, satisfy; or
- the fair market value of those other nontransferred assets, determined without regard to *IRC Section 7701(g)* (which treats the fair market value as being not less than the amount of any nonrecourse indebtedness to which the property is subject).

Note:

The *IRC Section 357(d)* boot rules at first glance apply only to assumptions of a taxpayer's liabilities, and not to the acquisition of a property that is subject to a liability. n400 The statutory clarification of when liability is assumed, however, as discussed above, has the effect of including under *IRC Section 357(d)* specified recourse and nonrecourse liabilities when property subject to those liabilities is transferred as part of the transaction. n401

What the above rules end up meaning is that any mortgage relief received by the taxpayer in an exchange will be treated as cash. As such, it is boot, which will affect the taxpayer's basis in the replacement property and will require recognition of any gain realized on the exchange to the extent of the boot received unless it is offset. n402

The retention of a mortgage liability on property by a party to the exchange is not treated as boot to the taxpayer. In one ruling, the taxpayer exchanged a portion of an overriding royalty interest in oil and gas leases for a fee interest in a ranch that was encumbered with an outstanding mortgage. The exchange party transferred the ranch subject to the mortgage, but remained personally liable for the outstanding mortgage indebtedness. The taxpayer retained a security interest in the overriding royalties to ensure that the exchange party would fulfill its agreement to pay off the mortgage debt. The IRS ruled that the exchange party's personal liability for the prior outstanding mortgage was not boot to the taxpayer, because it was not a satisfaction of a debt previously owed by the taxpayer. n403

[b] Offsetting Assumptions of Liability

If the taxpayer does not assume any liabilities in connection with replacement property received in a like-kind exchange, the entire amount of liabilities the other party to the exchange assumes in connection with the property relinquished by the taxpayer is treated as boot to the taxpayer. n404 If the taxpayer has also assumed liabilities in connection with the replacement property received in the exchange, however, the liabilities assumed by the parties to the exchange must be netted in order to determine the amount of boot received by the taxpayer. In short, the liabilities assumed by the taxpayer with respect to the replacement property must be offset against the boot the taxpayer received in the form of liabilities assumed on the relinquished property by the other party in the exchange. n405

If two properties are exchanged, both subject to mortgages, the mortgages are netted and only the party receiving net mortgage relief receives boot. The amount of boot received is the difference between the exchanged boot amounts. n406 Any mortgage taken into account in the netting must be a bona fide mortgage, but as long as the mortgage has substance, the Tax Court has been lenient in allowing it to be offset. In one case it allowed an offset against a recently acquired mortgage that was placed on the property shortly before an exchange, apparently in order to equalize the net values of the properties being exchanged. n407

It is critical to note that boot received by the taxpayer in the form of cash or other property (other than an assumption of liabilities) is **not** reduced by boot transferred by the taxpayer in the form of assumption of liabilities. However,

consideration *given* by the taxpayer in the form of cash or other property *is* offset against consideration received in the form of an assumption of liabilities. n408

Planning Tip:

A taxpayer who is "trading up," that is, receiving property in an exchange that is worth more than the property transferred, can eliminate recognition of gain by receiving boot only in the form of mortgage relief. If the taxpayer's equity in the property to be relinquished exceeds the other party's equity in the replacement property, the taxpayer must receive additional consideration to balance the exchange. If the compensation is in cash or other nonqualifying property, the taxpayer must recognize gain to the extent of that boot, despite the fact that the actual investment in qualifying property has been increased rather than cashed out. n409

The parties to an exchange may wish to reconcile unequal equities in the properties and equalize the liabilities they each assume as part of the exchange. There are several possible ways to do this, and some appear to be safer than others. The statutory framework and regulations provide expressly for each party assuming the mortgage liability of the other. n410

Options other than a straightforward swapping of mortgage assumptions will also work. For example, the taxpayer may have the exchange party increase the mortgage on the replacement property the taxpayer will receive in the exchange, and the taxpayer may then assume that liability as part of the exchange. As long as the mortgage obtained by the exchange party is bona fide and has independent economic significance, the acquisition of the additional mortgage debt and the taxpayer's assumption of it as part of the exchange should be respected. The Tax Court specifically approved this type of arrangement in *Garcia*, and the IRS has acquiesced in the decision. In the case, the court said it was simply beside the point that the debt was assumed in contemplation of the exchange and at the taxpayer's insistence. Therefore, the court held that taxpayer's assumption of the liability in the exchange could be offset against the mortgage liabilities that the exchange partner assumed on property relinquished by the taxpayer in the exchange. n411

If a mortgage cannot be assumed by another party for some reason, other equity equalizing options may be available. For example, the exchange party could pay off the taxpayer's existing mortgage, rather than assume it, and the taxpayer could obtain a new mortgage to finance the replacement property. The IRS approved of this in a ruling in which an exchange party used its own funds to pay off the taxpayer's mortgage on the property the taxpayer was relinquishing in the exchange. (The exchange party was financing its acquisition by bond financing, which precluded it from assuming the taxpayer's existing mortgage on the property.) The IRS ruled that the taxpayer could net this form of liability relief against the new liability the taxpayer incurred in acquiring replacement property. n412

Boot-netting has also been upheld in an exchange if the exchange party advances cash to enable the taxpayer to pay off a mortgage on the property to be relinquished in the exchange, but this is acceptable only if the contractual arrangement between the parties clearly requires that the cash be used to pay off the mortgage. If the taxpayer has any discretion over the use of the cash, it will be treated as taxable boot. n413

The IRS has also allowed a taxpayer to offset liabilities the exchange party assumed on the relinquished property against boot that the taxpayer paid to the exchange party in the form of a refinancing of the mortgage on the replacement property. The taxpayer executed a note using the replacement property as collateral, and the exchange party's mortgage was paid off with the proceeds of the note. n414

Taxpayers have had less luck placing additional mortgages on the property they intend to relinquish in the exchange, especially if the increased mortgage is placed on the property at a time proximate to the exchange or if the mortgage is taken out as part of the exchange. The IRS has ruled that these mortgages cannot be included in the boot-netting of assumptions of liabilities. n415 There is authority for taking into account these mortgages, however, if they are shown to be unrelated to the exchange or the netting of liabilities. In one case, the taxpayer refinanced an apartment building with an independent lender one week after entering into a sales agreement (later converted into an exchange) for the building. The taxpayer had reasons for refinancing that were unrelated to the exchange and the court held that the proceeds from the loan were not boot. The Tax Court rejected the Service's argument that the taxpayer was merely cashing out his investment in the property with the loan. n416

Although there is no direct authority in point, the rationale in *Fredericks* might arguably support post-exchange borrowings on replacement property shortly after the property is received in an exchange. The IRS position would likely be that loan proceeds acquired soon after an exchange are in fact taxable cash boot connected with and received in the exchange.

Note:

The regulations under *IRC Section 1031(d)* still make reference to consideration in the form of a transfer of "property subject to a liability." This reference fails to reflect the statutory change that struck that language from *IRC Section 1031(d)*. n417 The regulation should be read as stating that consideration involving an assumption (as determined under *IRC Section 357(d)*) of liability is to be treated as "other property or money" under *IRC Section 1031(b)*. n418 As noted above, the statutory clarification of when liability is assumed has the effect of including under *IRC Section 357(d)* many transfers of property subject to a liability. Thus, these transfers of property subject to a liability would also be included as "other property or money" under *IRC Section 1031(b)*. n419

[c] Partnership Liabilities in Like-Kind Exchanges Involving Multiple Years

The IRS has issued a ruling that gives its position with respect to a like-kind exchange by a partnership in which property subject to a liability is relinquished in one taxable year of the partnership and property subject to a liability is received in the following taxable year. The ruling holds that the liabilities encumbering the relinquished property and the liabilities encumbering the replacement property must be netted for purposes of *IRC Section 752* (which deals with determining a partner's share of partnership liabilities). The year in which the netting must take place differs, depending on whether there is a net increase or decrease in the liabilities. n419.1

If there is a net decrease in the liabilities (i.e. the liabilities connected with the relinquished property are greater than the liabilities connected with the replacement property), the decrease in a partner's share of partnership liability must be taken into account for purposes of *IRC Section 752(b)* in the first taxable year of the partnership involved in the exchange, since the excess is attributable to the transfer of the relinquished property subject to the relinquished liability in that year. Any deemed distribution of money to the partners in the first taxable year of the partnership is treated as an advance or drawing of money to the extent of each partner's distributive share of partnership income for that year. n419.2 Any gain recognized by the partnership on the exchange under *IRC Section 1031(b)* from the net decrease in liability is included in the partners' distributive share of partnership income for the partnership's first taxable year involving the exchange. The amount treated as an advance or drawing of money is taken into account by the partners at the end of that year (rather than on the date of the exchange). n419.3

There is also a netting if the partner's share of replacement liabilities exceeds the partner's share of the relinquished liabilities. Only the net increase in liabilities is taken into account for purposes of

determining a partner's share of partnership liabilities under *IRC Section 752(a)*. In contrast, however, if there is a net increase in the liabilities (i.e. the liabilities connected with the replacement property are greater than the liabilities connected with the relinquished property), the increase in a partner's share of partnership liabilities must be taken into account for purposes of *IRC Section 752(a)* in the second taxable year of the partnership involved in the exchange, since the excess is attributable to the receipt of the replacement property subject to the replacement liabilities in that year. n419.4 Finally the ruling holds that if the relinquished liabilities and the replacement liabilities are nonrecourse, then the partnership minimum gain (generally, the amount the partnership would realize if it disposed of the property subject to a nonrecourse liability for no consideration other than full satisfaction of that liability) n419.5 on the last day of the first taxable year of the partnership involved in the exchange is computed by using the replacement property and the replacement nonrecourse liability. n419.6

Example 1:

P is a general partnership with two equal partners that reports on the calendar year. P owns Property 1, which has a fair market value of \$300 and is subject to a liability of \$100. P has an adjusted basis of \$80 in Property 1. P enters into an agreement for a deferred like-kind exchange. Pursuant to the agreement, P transfers Property 1 on October 16, Year 1, subject to the \$100 liability. On January 17, Year 2, P receives Property 2, which has a fair market value of \$260, subject to a liability of \$60. As a result of the exchange, P has a net decrease in liability of \$40.

The IRS treats the \$100 relinquished property liability as being offset by the \$60 replacement property liability in determining the amount of money or other property P receives. The difference is property or other money for purposes of recognizing gain under *IRC Section 1031(b)*. n419.7 P therefore must recognize \$40 in Year 1. n419.8 The gain is allocated \$20 to each partner as that partner's distributive share in Year 1. Furthermore, each partner is treated as receiving a deemed distribution of \$20 from the partnership in Year 1. n419.9

Example 2:

P is a general partnership with two equal partners that reports on the calendar year. P owns Property 1, which has a fair market value of \$300 and is subject to a liability of \$100. P has an adjusted basis of \$80 in Property 1. P enters into an agreement for a deferred like-kind exchange. Pursuant to the agreement, P transfers Property 1 on October 16, Year 1, subject to the \$140 liability. On January 17, Year 2, P receives Property 2, which has a fair market value of \$340, subject to a liability of \$140. Thus, P has a net increase in liability of \$40.

P realizes \$300 on the exchange [the fair market value of the replacement property (\$340) increased by the relinquished liability (\$100), and decreased by the replacement liability (\$140)]. P's adjusted basis in the relinquished property is \$80, resulting in a realized gain of \$220. In determining the amount of money or other property P received for purposes of determining gain under *IRC § 1031(b)*, however, the relinquished liability of \$100 is offset by the replacement liability of \$140. Therefore, P is not treated as having received money or other property. Accordingly, P recognizes no gain in Year 1. Furthermore, each partner is treated as having made a contribution to the partnership of \$20 in Year 2. n419.10

COMMENT:

Revenue Ruling 2003-56 admirably clarifies the coordination of the *IRC Section 1031* deferred exchange rules with the rules under *IRC Section 752* dealing with a partner's share of partnership liabilities when a like-kind exchange by the partnership straddles two taxable years. The ruling provides relative certainty on the tax effect of the exchange on the partners. n419.11

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.21

§ 8.21 Basis of Replacement Property Received in Like-Kind Exchange

[1] Basis of Replacement Property

[a] In General

The taxpayer's basis in like-kind property received in a Section 1031 exchange is the same as that of the property relinquished by the taxpayer, decreased by the amount of money received, and increased by the amount of gain (or decreased by the amount of loss) recognized on the exchange. n420 The taxpayer's basis in the replacement property is also increased by any additional cash consideration the taxpayer pays for the property. n421 Expenses of the exchange that are paid by the taxpayer, such as brokerage commissions, are also added to the taxpayer's basis in the replacement property. n422

The above basis rules are straightforward and easy to apply. In the vast majority of like-kind exchanges, however, non-cash boot is transferred by one or both parties, or taxpayers assume liabilities on replacement property that is received in the exchange, or transfer property upon which the transferee assumes liability. Computation of basis becomes more difficult when these items are taken into account, as discussed in [b] through [e], below. n423 The exchange of multiple properties also increases the complexity of the basis computations. n424

[b] Taxpayer Transfers Boot

If the taxpayer transfers qualifying property and non-cash boot in an exchange and receives only qualifying like-kind replacement property, the taxpayer's basis in the replacement property is the sum of the taxpayer's adjusted bases in both the qualifying relinquished property and the boot transferred. This sum is increased by any gain recognized, or decreased by any loss recognized, on the transfer of the boot. The taxpayer's basis in the replacement property is also increased by any cash paid by the taxpayer in the transaction. n425

Example (1):

T transfers a qualifying property with an adjusted basis of \$50 and a fair market value of \$100, plus \$50 cash, in exchange for a qualifying like-kind replacement property worth \$150. T receives no boot. T does not recognize any gain on the exchange. Therefore, T's basis in the replacement property received is \$100, the sum of T's adjusted basis in the relinquished property at the time of the exchange plus \$50

additional cash consideration paid.

Example (2):

Assume the same facts as in preceding Example (1) except that instead of cash boot, T transfers in the exchange stock with a fair market value of \$50 and an adjusted basis to T of \$10. T realizes and recognizes a gain of \$40 on the transfer of the stock. T's basis in the replacement property is \$100, which is the sum of T's adjusted bases in the relinquished properties ($\$10 + \$50 = \$60$) plus the amount of gain recognized on the exchange (\$40). If T's adjusted basis in the stock is \$60 instead of \$40, \$10 of taxable loss is realized and recognized. T's basis in the replacement property is \$100, which is the sum of the T's adjusted bases in the relinquished properties ($\$50 + \$60 = \$110$) minus the loss recognized on the exchange (\$10). n426

If a taxpayer receives more than one qualifying property in the exchange, the basis is allocated between the qualifying properties received in proportion to their fair market values. n427

[c] Taxpayer Receives Cash Boot

If the only boot received by the taxpayer in an exchange is cash, the taxpayer's basis in the qualifying replacement property received in the exchange is equal to the taxpayer's adjusted basis in the relinquished property on the date of the exchange, less the amount of money received, plus the amount of gain recognized on the exchange. n428

Example (1):

T transfers a real property with an adjusted basis of \$50,000 and fair market value of \$120,000 for like-kind replacement property worth \$100,000 plus \$20,000 in cash. T recognizes \$20,000 of the \$70,000 realized gain in the exchange. n429 T's basis in the replacement property is \$50,000, which is T's adjusted basis in the relinquished property (\$50,000), less the \$20,000 cash received, plus the \$20,000 gain recognized in the transaction.

Example (2):

Assume the same facts as in preceding Example (1) except that T's adjusted basis in the relinquished property is \$110,000. T's realized gain on the transaction is \$10,000 ($\$120,000$ amount realized less $\$110,000$ basis). The realized gain is recognized because the amount of boot received exceeds the amount of realized gain. T's basis in the replacement property is \$100,000 ($\$110,000$ adjusted basis in relinquished property, less \$20,000 cash received, plus the \$10,000 gain recognized in the transaction. n430

If a taxpayer receives more than one like-kind replacement property along with the cash boot, the basis must be allocated among the replacement properties in proportion to their fair market values on the date of the exchange. n431

[d] Taxpayer Receives Noncash Boot

A taxpayer who transfers in an exchange only qualifying property and who receives in return both like-kind qualifying replacement property and noncash boot must recognize any realized gain to the extent of the fair market value of the boot received. n432

The taxpayer's total basis in all the property received in the exchange (both the like-kind replacement property and the non-cash boot) is the sum of the taxpayer's adjusted basis at the time of the exchange in the property relinquished, plus the amount of recognized gain. This total basis must be allocated among all the properties received in the exchange,

including both the like-kind replacement property and the noncash boot. That basis is first allocated to the boot to the extent of its fair market value on the date of the exchange. The remaining basis is allocated to the like-kind replacement property. n433

Example:

T transfers qualifying real estate with an adjusted basis of \$50,000 and a fair market value of \$120,000 for like-kind real estate worth \$100,000 plus stock worth \$20,000 at the time of the exchange. T realizes a gain of \$70,000 on the exchange, but recognizes a gain of only \$20,000. The total basis that T must allocate between the replacement property and the stock is \$70,000 (\$50,000 adjusted basis in the relinquished property plus \$20,000 gain recognized on the exchange). Of this \$70,000 basis, the fair market value of the stock at the time of the exchange, or \$20,000, must be allocated to the stock. The remainder, \$50,000, must be allocated to the like-kind real estate. n434

[e] Taxpayer Both Transfers and Receives Boot

A taxpayer who transfers both qualifying property and boot in an exchange and receives both qualifying property and boot must make separate gain and loss computations, which in turn affect the computation of basis in the like-kind replacement property and boot received. Gain or loss must be recognized on the transfer of the boot because the boot is not entitled to nonrecognition under *IRC Section 1031*. n435 Similarly, any gain (but not loss) that realized on the transfer of the qualifying relinquished property will be recognized to the extent of the boot received. n436

The major issue is determining how much boot the taxpayer is deemed to receive. Logically, a taxpayer should be permitted to reduce the amount of taxable boot received by the amount of boot transferred to the other party. In other words, the taxpayer should be taxable only to the extent of net boot. The regulations, however, have adopted this logic in some respects, but not others. The regulations allow a netting only for certain items, as follows: n437

- Boot received in the form of mortgage relief (i.e. liabilities on the qualified relinquished property that are assumed by another party to the exchange) may be reduced by the amount of liabilities the taxpayer has assumed in connection with property received in the exchange. In other words, assumed liabilities may be offset against each other.
- Consideration given by the taxpayer in the form of cash or other property is offset against consideration received in the form of an assumption of liabilities.
- Boot received by the taxpayer in the form of cash or other property is **not** reduced by boot transferred by the taxpayer in the form of assumption of liabilities.
- Boot received by the taxpayer in the form of cash or nonqualifying property is not reduced by boot transferred by the taxpayer in the form of cash or other nonqualifying property.

The above boot allocation rules can cause unexpected problems, especially if the equities in the qualifying properties exchanged are unequal.

Example (1):

T has a building with adjusted basis of \$50,000 and a fair market value of \$100,000. The building is encumbered with a nonrecourse mortgage of \$30,000. T exchanges the building with X for like-kind replacement property with a fair market value of \$150,000. The replacement property is encumbered with a nonrecourse mortgage of \$80,000. Although there is no express agreement as to whether T or X

will assume the mortgage liability on the property each receives in the exchange, under *IRC Section 357(d)*, T and X are each treated as having assumed the nonrecourse liability on the property each receives in the exchange.

As the equities in the exchanged properties are both \$70,000, the exchange is an equal one, requiring no additional property to balance it. T is treated as having paid boot of \$80,000, by assuming the mortgage on the replacement property. T has received \$30,000 of boot, in the form of the nonrecourse mortgage on the relinquished property that is assumed by X. The boot figures are netted, so T is treated as having paid \$50,000 boot and received none. Therefore, although T realizes \$50,000 on the transaction, T recognizes no gain. T's basis in the replacement property is \$50,000, which is the amount of T's adjusted basis in the relinquished property. Because T has not treated as having received any boot, there is no decrease in basis to reflect money received, and there is no increase in basis related to gain because T does not recognize any gain on the transaction.

Example (2):

Assume the same facts as in preceding Example (1), T's building has the same adjusted basis of \$50,000, the same fair market value of \$100,000, and continues to be encumbered with a nonrecourse mortgage of \$30,000. T's equity in the property is therefore \$70,000. T exchanges the building with Z for like-kind replacement property with a fair market value of \$150,000. Z's property, however, is subject to a nonrecourse mortgage of \$100,000. Z's equity in the property is therefore only \$50,000. Again, both T and Z are treated as having assumed the nonrecourse liability on the property each receives in the exchange. T also receives \$20,000 cash in order to balance the differing equities in the properties.

T has assumed a larger mortgage liability (\$100,000) than the mortgage liability assumed by Z (\$30,000). Nevertheless, the \$20,000 cash boot received by T is not reduced by the boot transferred by Z in the form of assuming the nonrecourse mortgage on the replacement property. T's realized gain on the exchange is still \$50,000 [(\$150,000 + \$30,000 + \$20,000) less (\$50,000 + \$100,000)]. However, T must recognize \$20,000 of that gain, equal to the amount of cash boot received. n438

T's basis in the replacement property is \$50,000, which is the amount of T's adjusted basis in the relinquished property (\$50,000) less \$20,000 cash boot received, plus \$20,000 gain recognized in the exchange. Note that, after the exchange, T could use the \$20,000 cash boot to reduce the mortgage on the replacement property to \$80,000, thus producing the same economic result as in the preceding example. n439

[2] Basis of Non-Cash Boot Received in the Exchange

A taxpayer's basis in any non-cash boot received in a Section 1031 exchange is its fair market value at the time of the exchange. n440 If non-cash boot is received in an exchange, the taxpayer's total basis is first allocated to the boot to the extent of its fair market value, and the remainder of the basis is allocated to the like-kind properties received in the exchange, in accordance with their fair market values at the time of the exchange. n441

[3] Effect of Assumptions of Liability on Basis

If another party to the exchange assumes a liability of the taxpayer, that assumption is considered to be money received by the taxpayer. n442 The amount of a taxpayer's liabilities that are assumed by the other party (or the net amount, if there is an offset of assumed liabilities) therefore decreases the taxpayer's adjusted basis in the replacement property. Any gain recognized by the taxpayer on the exchange, however, increases the taxpayer's adjusted basis in the replacement property. Therefore, there may be a wash or partial wash with respect to the taxpayer's basis in the replacement property resulting from the assumption of liabilities and the corresponding recognition of gain that is

required. n443

[4] Allocation of Basis to Multiple Replacement Properties

A taxpayer who receives more than one qualifying replacement property in an exchange must allocate the substituted basis among them in proportion to their fair market values on the date of the exchange. n444

Example:

T exchanges a parcel of real estate with an adjusted basis of \$100,000 and a fair market value at the time of the exchange of \$200,000 for two like-kind replacement properties, one with a fair market value of \$150,000 and one with a fair market value of \$50,000. No boot is transferred in the exchange, nor are any liabilities assumed with respect to the properties by either party. T's total basis in the replacement properties is \$100,000. T's basis in the first replacement property is \$75,000, [$\$100,000 \times (150,000/200,000)$] and his basis in the second replacement property is \$25,000 [$\$100,000 \times (50,000/200,000)$]. The same result would occur if T relinquished two properties that had a total adjusted basis at the time of the exchange of \$100,000. n445

[5] Allocation When Assets Constitute a Trade or Business

If a like-kind exchange involves a transfer of assets that constitute a trade or business, and the transferee's basis in the assets is determined wholly by reference to the consideration paid for those assets, the exchange may constitute an "applicable asset acquisition" under *IRC Section 1060*. n446 In that case, detailed regulations under *IRC Section 1060* specify the manner of allocating consideration to different assets in the exchange. n447

If an applicable asset acquisition involves non-recognition of gain or loss on the transfer of some of the assets, as in a like-kind exchange under *IRC Section 1031*, all of the assets transferred--including the non-recognition assets--are taken into account in determining whether the group of assets constitutes a trade or business. n448

The allocation of consideration, however, is done without taking into account either the non-recognition assets or the amount of money or other property that is treated as transferred in exchange for the non-recognition assets (together, the nonrecognition exchange property). In other words, the like-kind property and other property or money that are treated as transferred in exchange for the like-kind property are excluded from the allocation rules of *IRC Section 1060*. n449

The basis in and gain or loss recognized with respect to the non-recognition exchange property are determined under the same rules that otherwise apply to the exchange. The amount of the money and other property treated as exchanged for non-recognition assets is the amount by which the fair market value of the nonrecognition assets transferred by one party exceeds the fair market value of the non-recognition assets transferred by the other (to the extent of the money and the fair market value of property transferred in the exchange). n450

The money and other property that are treated as transferred in exchange for the non-recognition assets (and which are not included among the assets to which *IRC Section 1060* applies) are allocated using the residual method and are considered to come from specified classes of assets in a specific order. n451

[6] Payment of Taxpayer's Mortgage in Lieu of Assumption

Instead of assuming the taxpayer's mortgage, n452 the other party to the exchange may choose to pay off the taxpayer's mortgage, in whole or in part. Assume that a taxpayer transfers qualifying property worth \$100, subject to a nonrecourse mortgage of \$30, and in the exchange receives property worth \$150, subject to a nonrecourse mortgage of \$80. There is no express agreement as to whether the taxpayer will assume the mortgage liability on the property received in the exchange, nor is there an express agreement as to whether the other party in the exchange will assume

the mortgage on the property transferred by the taxpayer in the exchange. Both the taxpayer and the other party in the exchange are treated as having assumed the nonrecourse liability on the property each received in the exchange. n453

As discussed above, the taxpayer recognizes no gain on the transfer because the mortgage assumed by the taxpayer exceeds the mortgage relief received, and no boot other than mortgage relief is received. n454 The party receiving the qualifying property from the taxpayer can, of course, pay off all or part of the \$30 mortgage on that property after the exchange. Instead, the exchange party could transfer \$30 in cash to the taxpayer at the time of the exchange, pursuant to an agreement requiring the taxpayer to pay off the mortgage before transferring the qualifying property. The payment of the \$30 under these circumstances will qualify as mortgage relief to the taxpayer, just as if the other party had first assumed the mortgage and paid it off after the exchange. n455

[7] Depreciation of MACRS Property Acquired in a Like-Kind Exchange

[a] In General

Final regulations cover the proper depreciation of property acquired in *IRC Section 1031* like-kind exchanges. n456 While much of their focus is on non-real estate property, the discussion here is directed to their application to real estate acquired in like-kind exchanges.

The final regulations supersede prior temporary regulations, and generally apply to a like-kind exchange or an involuntary conversion of MACRS property for which the time of disposition and the time of replacement both occur after February 27, 2004. n457 For a like-kind exchange of MACRS property for which the time of disposition, the time of replacement, or both occur on or before February 27, 2004, a taxpayer may apply the final regulations or rely on prior guidance issued by the IRS in *Notice 2000-4*. n457.1 In either case, a choice will necessitate seeking IRS consent for a change of accounting method. n457.2

Notice 2000-4 instructed taxpayers how to depreciate replacement MACRS property when the exchanged property was also MACRS property. The notice stated that replacement MACRS property placed in service after January 3, 2000, was to be depreciated over the remaining recovery period of, and using the same depreciation method and convention as, the relinquished MACRS property and that any excess of the basis in the replacement MACRS property over the adjusted basis in the relinquished MACRS property was to be treated as newly purchased MACRS property. *Notice 2000-4* also stated that regulations would be issued to address these transactions. n458 The regulations discussed below are the result, and they make *Notice 2000-4* obsolete after February 27, 2004.

[b] Application of Regulations to MACRS Property

The regulations instruct taxpayers how to determine the annual depreciation allowance for MACRS property (i.e. depreciable property placed in service after December 31, 1986) that is acquired in a like-kind exchange. The regulations also apply to like-kind exchanges involving MACRS property that is replaced with other MACRS property in a transaction between members of the same affiliated group. The regulations do not apply to a like-kind exchange if (1) the allowance for depreciation of either the relinquished or replacement property is computed under a depreciation system other than MACRS, or (2) the special rules relating to like-kind exchanges of tax-exempt use property n458.1 apply. n458.2

If replacement MACRS property is acquired by a taxpayer in a like-kind exchange, the depreciation treatment of the replacement MACRS property by previous owners has no effect on the determination of depreciation allowances for the replacement MACRS property in the hands of the acquiring taxpayer. For example, a taxpayer exchanging, in a like-kind exchange, MACRS property for property that was depreciated using ACRS by the previous owner must use the MACRS depreciation described in the final regulations because the replacement property will become MACRS property in the hands of the acquiring taxpayer. In addition, elections made by previous owners in determining

depreciation allowances for the replacement MACRS property have no effect on the acquiring taxpayer. For example, a taxpayer exchanging, in a like-kind exchange, MACRS property that the taxpayer depreciates under the general depreciation system of *IRC § 168(a)* for other MACRS property that the previous owner elected to depreciate under the alternative depreciation system n458.3 does not have to continue using the alternative depreciation system for the replacement MACRS property. n458.4 Final regulations clarify that taxpayers cannot depreciate land that is acquired in a like-kind exchange for MACRS property. n458.5

[c] General Rule for Depreciation of Exchanged Basis

The regulations provide rules for determining the applicable recovery period, depreciation method, and convention used to determine the depreciation allowances for the replacement MACRS property with respect to so much of the taxpayer's basis (as determined under the like-kind exchange rules) in the replacement MACRS property as does not exceed the taxpayer's adjusted depreciable basis in the relinquished MACRS property (exchanged basis). In general, the exchanged basis is depreciated over the remaining recovery period of, and using the depreciation method and convention of, the relinquished MACRS property (general rule). n458.6

This general rule applies if the replacement MACRS property has the same or a shorter recovery period or the same or a more accelerated depreciation method than the relinquished MACRS property. n458.7 This could occur, for example, if replacement property were residential rental property with a recovery period of 27.5 years and the relinquished property were nonresidential real property with a recovery period of 39 years. n458.8 Therefore, the general rule can adversely affect taxpayers engaging in like-kind exchanges by requiring depreciation of replacement MACRS property over the longer recovery period of the relinquished MACRS property. To avoid this problem, the regulations allow taxpayers to elect not to apply the general rule, but instead to treat the replacement MACRS property as MACRS property placed in service by the acquiring taxpayer at the time of replacement. n458.9

The general rule does not apply if the replacement MACRS property has a longer recovery period or less accelerated depreciation method than the relinquished MACRS property. In that case, the taxpayer's exchanged basis in the relinquished MACRS property is depreciated beginning in the year of replacement over the remainder of the recovery period that would have applied to the replacement MACRS property if the replacement MACRS property had originally been placed in service when the relinquished MACRS property was placed in service by the acquiring taxpayer. n458.10 Similarly, if the depreciation method of the replacement MACRS property is less accelerated than that of the relinquished MACRS property, then the taxpayer's exchanged basis in the relinquished MACRS property is depreciated beginning in the year of replacement using the less accelerated depreciation method of the replacement MACRS property that would have applied to the replacement MACRS property if the replacement MACRS property had originally been placed in service when the relinquished MACRS property was placed in service by the acquiring taxpayer. n458.11

For taxpayers who use the optional depreciation tables to determine depreciation allowances for the replacement MACRS property instead of the formulas, n458.12 the regulations provide guidance on choosing the applicable optional table and explain the modifications that must be made to compute depreciation allowances for the replacement MACRS property. Taxpayers who used an optional depreciation table for the relinquished MACRS property are not required to use an optional table for the depreciable exchanged basis of the replacement property. n458.13

Regulations also deal with the depreciation convention to be used. For MACRS nonresidential real property and residential rental property, the exchanged basis must be depreciated using the mid-month convention. n458.13.1 Regarding the recovery period of the replacement property, the replacement MACRS property is treated as placed in service at the time of replacement under the convention that applies to the replacement MACRS property (i.e. the mid-month convention for MACRS nonresidential real property and residential rental property). The remaining recovery period of the replacement MACRS property at the time of replacement is the excess of the recovery period for the replacement MACRS property over the period of time that the replacement MACRS property would have been in

service if it had been placed in service when the relinquished MACRS property was placed in service and removed from service at the time of disposition of the relinquished MACRS property. This period is determined by using the convention that applied to the relinquished MACRS property to determine the date that the relinquished MACRS property is deemed to have been placed in service and the date that it is deemed to have been disposed of. The length of time the replacement MACRS property would have been in service is determined by using these dates and the convention that applies to the replacement MACRS property. n458.13.2

If, using the convention that applies to the relinquished MACRS property, the remaining recovery period of the relinquished MACRS property at the beginning of the year of disposition is less than the number of months between the first of that year and the time of disposition, the entire basis in the relinquished MACRS property is deductible in the year of disposition and the exchanged basis is zero. n458.13.3

Example:

A1, a calendar-year taxpayer, exchanges Building M, an office building, for Building N, a warehouse, in a like-kind exchange. Building M is relinquished in July 2004 and Building N is acquired and placed in service in October 2004. A1 did not make any elections under *IRC Section 168* for either Building M or Building N. The unadjusted depreciable basis of Building M was \$4,680,000 when placed in service in July 1997. Since the recovery period and depreciation method for Building N (39 years, straight line method) are the same as the recovery period and depreciation method for Building M (39 years, straight line method), Building N is depreciated over the remaining recovery period of, and using the same depreciation method and convention as that of, Building M. Applying the applicable convention, Building M is deemed disposed of on July 15, 2004, and Building N is placed in service on October 15, 2004. Thus, Building N will be depreciated using the straight line method over a remaining recovery period of 32 years beginning in October 2004 (the remaining recovery period of 32 years and 6.5 months at the beginning of 2004, less the 6.5 months of depreciation taken prior to the disposition of the exchanged MACRS property (Building M) in 2004). For 2004, the year in which the transaction takes place, the depreciation allowance for Building M is $(\$120,000)(6.5/12)$ which equals \$65,000. The depreciation allowance for Building N for 2004 is $(\$120,000)(2.5/12)$ which equals \$25,000. For 2005 and subsequent years, Building N is depreciated over the remaining recovery period of, and using the same depreciation method and convention as that of, Building M. Thus, the depreciation allowance for Building N is the same as Building M, namely \$10,000 per month. n458.14

[d] Rules for Depreciation of Excess Basis

Any excess basis in replacement MACRS property over the taxpayer's exchanged basis in the relinquished MACRS property is referred to as the excess basis. n458.14.1 The excess basis in the replacement MACRS property is treated as property that is placed in service by the acquiring taxpayer in the year of replacement. The depreciation allowances for the excess basis are determined by using the applicable recovery period, depreciation method, and convention prescribed under *IRC Section 168* for the replacement MACRS property at the time of replacement. However, if replacement MACRS property is disposed of during the same taxable year the relinquished MACRS property is placed in service by the acquiring taxpayer, no depreciation deduction is allowable for either MACRS property. n458.15

[e] Special Rules for Deferred Transactions

A taxpayer who disposes of relinquished MACRS property before acquiring the replacement MACRS property cannot take depreciation on the relinquished MACRS property during any intervening period between the disposition of the relinquished MACRS property and the acquisition of the replacement MACRS property. Accordingly, the recovery period for the replacement MACRS property is suspended during this period. n458.16 The final regulations reserve on providing specific guidance as to whether an intermediary (such as an exchange accommodation titleholder) is entitled

to depreciation. n458.17

[f] Acquisition Prior to Disposition

When replacement MACRS property is acquired and placed in service by a taxpayer before the relinquished MACRS property is disposed of (for example, under threat of condemnation), the regulations allow the taxpayer to depreciate the unadjusted depreciable basis of the replacement MACRS property until the taxpayer disposes of the relinquished MACRS property. At the time of disposition of the relinquished MACRS property, the taxpayer determines the exchanged basis and the excess basis of the replacement MACRS property and begins to depreciate the depreciable exchanged basis of the replacement MACRS property in accordance with the rules for depreciation of exchanged basis. n458.18 The depreciable excess basis of the replacement MACRS property continues to be depreciated by the taxpayer in accordance with the rules for excess basis. In the year of disposition of the relinquished MACRS property, the taxpayer must include in taxable income the excess of the depreciation deductions allowable on the unadjusted depreciable basis of the replacement MACRS property over the depreciation deductions that would have been allowable to the taxpayer on the depreciable excess basis of the replacement MACRS property from the date the replacement MACRS property was placed in service by the taxpayer (taking into account the applicable convention) to the time of disposition of the relinquished MACRS property. n458.18.1

[g] Transactions Involving Land or Other Nondepreciable Property

Land or other nondepreciable property acquired in a like-kind exchange for MACRS property is not depreciable, and is not within the scope of the regulations. If MACRS property or both MACRS property and land or other nondepreciable property are acquired in a like-kind exchange for land or other nondepreciable property, the basis of the replacement MACRS property is treated as property placed in service by the acquiring taxpayer in the year of replacement. n458.19

[h] Election Not To Apply Regulations

In order to ease computational and administrative difficulties that could result from having to track different depreciation components of one asset, taxpayers may elect to have the regulations not apply. n458.20 A taxpayer who makes that election must treat the entire basis (i.e. both the exchanged and excess basis) of the replacement MACRS property as being placed in service by the acquiring taxpayer at the time of replacement. Consistent with this treatment, the taxpayer treats the relinquished MACRS property as disposed of at the time of the disposition of the relinquished MACRS property. n458.21

A separate election is required for each like-kind exchange. n458.21.1 The election must be made in the manner provided for on Form 4562, Depreciation and Amortization, and its instructions, n458.21.2 and must be made by the due date (including extensions) of the taxpayer's Federal tax return for the year of replacement. n458.22 The election is made for each member of a consolidated group by the common parent of the group, by the partnership (and not by the partners separately) in the case of a partnership, or by the S corporation (and not by the shareholders separately) in the case of an S corporation. n458.22.1 The election may be revoked only with the consent of the Commissioner, which will be granted only in extraordinary circumstances. n458.23

[i] Additional First Year Depreciation

Previously issued regulations n458.24 provide that the exchanged basis (referred to as the "carryover basis" in these regulations) and the excess basis, if any, of the replacement MACRS property (referred to as the "acquired MACRS property" in these regulations) is eligible for the additional first year depreciation deduction provided under prior *IRC Section 168(k)* or *IRC Section 1400L(b)* if the replacement MACRS property is qualified property, n458.25 or 50-percent bonus depreciation property under prior law. n458.26 However, if qualified property or 50-percent bonus depreciation property is placed in service by the taxpayer and then disposed of by that taxpayer in a like-kind exchange in the same taxable year, the relinquished MACRS property (referred to as the "exchanged MACRS property" in these

regulations) is not eligible for the additional first year depreciation deduction. n458.26.1 However, the exchanged basis (and excess basis, if any) of the replacement MACRS property may be eligible for the additional first year depreciation deduction. The rules provided under these regulations for additional first-year depreciation n458.27 apply without regard to whether the taxpayer applies or elects not to apply the MACRS depreciation regulations for property acquired in a like-kind exchange. n458.28

[j] Exchanges of Multiple Properties

The determination of the basis of property acquired in a like-kind exchange involving multiple properties is described in regulations. n458.29 The IRS and Treasury Department believe that issues related to allocation of basis among multiple properties involved in like-kind exchanges or involuntary conversions for purposes of depreciation are covered in those regulations under *IRC Section 1031*; therefore, the regulations under *IRC Section 168(i)* do not address these issues. n458.30

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.22

§ 8.22 Holding Period for Property Received in Like-Kind Exchanges

The holding period of qualifying like-kind replacement property received in a Section 1031 exchange includes the period for which the taxpayer held the relinquished property that was transferred in the exchange. The "tacking" of holding periods applies only if the replacement property has the same basis in whole or in part to the taxpayer as the relinquished property, and if, at the time of the exchange the relinquished property was a capital asset or property used in a trade or business. The so-called tacking of holding periods reflects the policy of Section 1031 that like-kind exchanges represent a continuing investment. n459

When multiple properties with different holding periods are exchanged, holding periods must be determined for each of the properties. In fact, a single property may arguably have different holding periods for different portions of its basis. n460

Boot received in a like-kind exchange has a holding period beginning on the date of the exchange, because its basis is determined by its fair market value on the date of the exchange. n461

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.23

§ 8.23 Exchanges of Multiple Properties

[1] In General

The application of *IRC Section 1031* generally requires a property-by-property comparison for computing the gain recognized and the basis of property received in a like-kind exchange. The regulations provide an exception for exchanges of multiple properties. n462 Although the exception applies broadly to exchanges of personal property, it can come into play in any exchange of real estate that also includes a transfer of personal property. Typical scenarios would be exchanges involving motels, hotels, and condominiums that include their furnishings or exchanges of entire businesses. n463

It is not necessary that the different types of property be connected or related in use for the exception for exchanged of multiple properties to apply. All that is necessary is that one of the following conditions be present: n464

- the properties involved in the exchange can be separated into more than one "exchange group"; or
- if only one exchange group is created, there is more than one property being transferred or received within that exchange group.

The following steps are involved in applying the regulation:

- First, the properties transferred and the properties received by the taxpayer in the exchange must be separated into exchange groups in the manner provided in the regulations. n465
- Second, all liabilities assumed by the taxpayer as part of the transaction are offset by all liabilities of which the taxpayer is relieved as part of the transaction, with the excess liabilities assumed or relieved then allocated in accordance with the regulations. n466
- Third, the rules of *IRC Section 1031* and the regulations are applied separately to each exchange group to determine the amount of gain recognized in the exchange. n467
- Finally, the rules of *IRC Section 1031* and the regulations are applied separately to each exchange

group to determine the basis of the properties received in the exchange. n468

The regulations provide detailed examples of determinations required under the multiple asset exception. n469

Even though properties exchanged are of like kind and no cash is received in the exchange, it is still possible that some of the gain realized from the transaction must be recognized when multiple properties are exchanged.

For example, assume a taxpayer exchanges Property A and Property B for Property C and Property D. The fair market values of the exchanged properties are as follows:

Property A	\$100	Property C	\$85
Property B	\$250	Property D	\$265
Total	\$350		\$350

Assume also that Property A is of like-kind to Property C (but not to Property D), Property B is of like-kind to Property D (but not Property C), and the exchanging taxpayer has a \$0 adjusted basis in Property A and B. Even though there is an exchange of like-kind properties worth \$350, the taxpayer is considered to have received \$15 of non-like kind property. That is, since Property A, with a fair market value of \$100, was exchanged for Property C, which is worth \$85, the exchanging taxpayer is considered to have received \$15 worth of Property D for Property A and Property D is not of like-kind to Property A. Consequently, the taxpayer has \$15 of gain that is not deferred under *IRC Section 1031*. n469.1

[2] Separation of Properties into Exchange Groups

The exception for multiple property exchanges applies if the properties involved in the exchange can be placed in more than one exchange group. An "exchange group" consists of all properties transferred and received within an exchange that are of a like-kind or like-class. Thus, two or more exchange groups would be likely in an exchange that includes properties that are not like-kind--such as real estate and personal property--but both of which might qualify under *IRC Section 1031*. n470

Different categories of personal property are also placed in different exchange groups. For example, all properties within the same General Asset Class or within the same Product Class are within the same exchange group.

If a property may be placed in more than one exchange group, the taxpayer may include the property in any of those groups. Each exchange group must consist of at least one property transferred and at least one property received in the exchange. n471

The main restriction is that only property otherwise subject to *IRC Section 1031* may be placed within an exchange group. Money or any property that is expressly excluded from the operation of *IRC Section 1031* n472 may not be included within an exchange group. Thus, stock in trade and other property held primarily for sale, inventory, stocks, bonds, notes, other securities or evidences of indebtedness, interest, interests in a partnership, certificates of trust or beneficial interests, or choses in action cannot be placed in an exchange groups. The other notable restriction is that property otherwise eligible for *IRC Section 1031* that is transferred in the exchange, but which is not like-kind or like-class with any other property in the exchange, cannot be placed in an exchange group. n473

Once properties are placed in appropriate exchange groups, the fair market value for each property transferred and each property received must be determined. In addition, the adjusted basis for each property transferred by the taxpayer in the exchange must be determined. n474

In addition, for each exchange group, an exchange group surplus or exchange group deficiency must be calculated. An "exchange group deficiency" is the excess of the aggregate fair market value of the properties transferred in an exchange group over the aggregate fair market value of the properties received in that exchange group (less the amount of any excess liabilities assumed by the taxpayer that are allocated to that exchange group). An "exchange group surplus" is the excess of the aggregate fair market value of the properties received in an exchange group (less the amount of any excess liabilities assumed by the taxpayer that are allocated to that exchange group) over the aggregate fair market value of the properties transferred in that exchange group. n475

If the aggregate fair market value of the properties transferred in all exchange groups differs from the aggregate fair market value of all properties received in all exchange groups, taking liabilities into account, n476 a "residual group" is created. The residual group consists of an amount of money or other property having an aggregate fair market value equal to the difference in the aggregate fair market values between all properties transferred and all properties received. Thus, the residual group will consist either of money or other property transferred in the exchange or money or other property received in the exchange, but not both. Unlike the exchange groups, the residual group *may* include money or other property otherwise expressly excluded from nonrecognition under *IRC Section 1031*. It also may include property otherwise eligible for *IRC Section 1031* that is transferred or received in the exchange, but which is not like-kind or like-class with any other property in the exchange. n477

[3] Treatment of Liabilities

All liabilities assumed by the taxpayer as part of the exchange must be offset against all liabilities of which the taxpayer is relieved as part of the exchange. If the amount of liabilities assumed by the taxpayer exceeds the amount of liabilities of which the taxpayer is relieved, the excess is allocated among the exchange groups (but not to the residual group) in proportion to the aggregate fair market value of the properties received by the taxpayer in each exchange group. The amount of excess liabilities assumed by the taxpayer that are allocated to each exchange group cannot exceed the aggregate fair market value of the properties received in the exchange group. If the amount of liabilities of which the taxpayer is relieved exceeds the amount of liabilities assumed by the taxpayer, the excess is allocated to the residual group. n478

[4] Computation of Gain

The rules of *IRC Section 1031* and regulations are applied separately to each exchange group to determine the amount of any gain that must be recognized in the exchange. This is done by first computing an "exchange group surplus" or "exchange group deficiency" for each exchange group. An exchange group surplus is the excess of the aggregate fair market value of the replacement properties in an exchange group, less any allocated excess liabilities assumed, over the fair market value of the relinquished properties in that exchange group. An exchange group deficiency is the excess of the aggregate fair market value of the relinquished properties in an exchange group over the aggregate fair market value of the properties received, less the amount of any excess liabilities assumed by the taxpayer that are allocated to that exchange group. n479

The amount of gain or loss realized in each exchange group and the residual group is the difference between the aggregate fair market value of the properties transferred in that exchange group or residual group and the properties' aggregate adjusted basis. The gain realized with respect to each exchange group is recognized to the extent of the lesser of the gain realized, or the amount of the "exchange group deficiency," if any. The total amount of gain recognized for the transaction is the sum of the amount of gain recognized from each exchange group. Losses realized with respect to an exchange group are not recognized. n480

Any gains or losses with respect to properties transferred by the taxpayer that are not within any exchange group or the residual group are determined under regular rules outside of *IRC Section 1031*. n481

[5] Determination of Basis of Properties Received

In an exchange of multiple properties, the aggregate bases of properties received in each of the exchange groups (but not the residual group) is the aggregate adjusted bases of the properties transferred within that exchange group, adjusted as follows: n482

- increased by the amount of gain recognized by the taxpayer with respect to that exchange group;
- increased by the amount of the exchange group surplus, or decreased by the amount of the exchange group deficiency; and
- increased by the amount of any excess liabilities assumed by the taxpayer that are allocated to that exchange group.

The total basis of each exchange group is allocated proportionately to each property received in the exchange group in accordance with its fair market value. The basis of each property received within the residual group (other than money) is its fair market value. n483

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.24

§ 8.24 Depreciation Recapture in Section 1031 Exchanges

[1] Application of Recapture Rules to Real Estate

Depreciation recapture is the process by which gain realized on the sale, exchange, or other disposition of property is treated as ordinary income to the extent of all or part of the depreciation deductions previously taken on the property. n484 The recapture provisions operate independently of the nonrecognition provisions of the Internal Revenue Code, and recognition of recapture income may be required even though gain is not otherwise recognized under Section 1031.

Recapture rules apply to like-kind exchanges involving Section 1245 and/or Section 1250 property. n485 Very few types of real property are Section 1245 property, n486 so for most real property any recapture rules that do come into play are those under *IRC Section 1250*, as discussed in [2], below. n487

Under *IRC Section 1250*, any depreciation on real estate that is held for one year or less must be recaptured as ordinary income if the property is disposed of. n488 For any real property held more than one year, however, recapture is required only to the extent that depreciation adjustments exceed those that would have been taken under the straight line method. n489 Real property placed in service after 1986 cannot be depreciated under an accelerated depreciation method. n490 Therefore, on a like-kind exchange of this real property, there will be no amount to be recaptured under *IRC Section 1250*. n491

The depreciation recapture rules of *IRC Section 1245*, rather than *IRC Section 1250*, can come into play for certain real property that was placed in service after 1980 and before 1987. Recapture under Section 1245 applies for any real estate that was classified as "Section 1245 recovery property" under pre-1987 ACRS depreciation rules. n492

"Section 1245 recovery property" includes real property (other than real property for which straight-line depreciation was elected) that had a 15-18-or 19-year recovery period under pre-1987 ACRS depreciation rules, and certain low-income residential property. n493 When Section 1245 recovery property is disposed of in a like-kind exchange, *IRC Section 1245* recapture rules apply, and all depreciation adjustments--not just those in excess of straight line depreciation--are subject to recapture as ordinary income. n494 These rules for recapture are discussed in [3], below.

[2] Section 1250 Recapture in Like-Kind Exchanges

Section 1250 property includes nearly all real estate that is or has been subject to depreciation deductions. This would

include improvements on real estate, such as buildings, but would not include unimproved land, which is not depreciable. n495

If Section 1250 property is exchanged in a transaction in which gain is not recognized in whole or in part under Section 1031, recapture under *IRC Section 1250* may be required if the real estate has been depreciated and has been held for one year or less. Recapture may also be necessary if the property has been held for more than one year and has had depreciation adjustments in excess of straight line depreciation. (This can occur only for real property that was placed in service before 1987.) n496

Any recapture gain that must be recognized is treated as ordinary income. n497 The amount of recapture gain taken into account is limited to the greater of the following: n498

- the amount of gain recognized under Section 1031; or
- the amount by which the recapture amount exceeds the fair market value of Section 1250 property received in the exchange.

Thus, the amount required to be recognized under Section 1250 can exceed the amount required to be recognized under Section 1031, and cause the ordinary income to be recognized in what is ostensibly a tax-free exchange. The second limitation above causes recapture income to be recognized to the extent that the recapture amount exceeds the fair market value of the Section 1250 property received in the exchange. To the extent that the recapture amount is covered by the fair market value of the Section 1250 property received, recognition of recapture income is deferred until the Section 1250 property is sold. n499

Note:

It should be noted that a taxpayer can relinquish Section 1250 property in a like-kind exchange under *IRC Section 1031* without receiving Section 1250 property in return as replacement property. This can occur, for example, when a taxpayer exchanges improved real estate for unimproved land. Although the unimproved land is like-kind to the improved real estate for purposes of *IRC Section 1031*, it is not Section 1250 property that would be taken into account in applying the second limitation above. n500

[3] Dispositions Subject to Recapture Under *IRC Section 1245*

Upon the sale, exchange, or other disposition of property subject to recapture under *IRC Section 1245*, all realized gain must be treated as ordinary income to the extent of the sum of the depreciation deductions taken on the property. n501

Recapture under *IRC Section 1245* applies primarily to personal property. It comes into play for real estate primarily with respect to real estate placed in service between 1980 and 1987 that qualifies as "Section 1245 recovery property." "Section 1245 recovery property" includes real property (other than real property for which straight-line depreciation was elected) that had a 15-18-or 19-year recovery period under pre-1987 ACRS depreciation rules, and certain low-income residential property. n502 Recapture under *IRC Section 1245* applies only to very limited types of real property placed in service after 1986. n503

If property subject to recapture under Section 1245 is disposed of and gain is not recognized in whole or in part under *IRC Section 1031*, the amount of recapture income which must be recognized is limited to the sum of the following: n504

- the gain recognized on the disposition without regard to Section 1245; plus

■ the fair market value of the property acquired which is not Section 1245 property (other than boot causing recognition of gain under *IRC Section 1031*).

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.25

§ 8.25 Receipt of Installment Obligations Received in Section 1031 Exchanges

[1] In General

A taxpayer who sells property on the installment method n505 reports as gain only a percentage of each payment received. This percentage (the gross profit ratio) is determined by dividing the gross profit to be realized on the transaction by the contract price. As a formula, the gross profit ratio is shown as follows: n506

$$\text{Gross Profit Ratio} = \frac{\text{Gross profit on transaction}}{\text{Contract price}}$$

The installment method of reporting is discussed in detail in Chapter 7.

Special rules for installment reporting apply when a seller receives both like-kind property and an installment obligation in a Section 1031 exchange. The installment obligation is treated as boot requiring recognition of realized gain. n507 The gain is not entirely recognized in the year of the exchange, however, but instead is recognized over the period of time that payments are made under the installment contract. n508

In addition, special rules apply that affect the amount of gain that must be reported on each installment. Two modifications to the above gross profit ratio formula must be made:

- the total contract price (the denominator of the gross profit ratio) does not include the value of the like-kind property permitted to be received on the exchange without recognition of gain; n509 and
- the gross profit on the transaction (the numerator of the fraction) from the exchange does not include any gain that is not recognized by reason of *IRC Section 1031(b)*. n510

Additionally, the like-kind property received on the exchange is not considered a payment in the year of sale. n511 The effect of the above rules is to assure that the taxpayer does not recognize gain until cash or other boot is actually received. n512

Example:

T exchanges real property with an adjusted basis of \$500,000 for like-kind real estate worth \$800,000 and an installment note for \$200,000. Under *IRC Section 1031(b)*, the recognized gain is \$200,000, the amount of the boot. In applying the installment sale rules, the contract price is \$200,000 (\$1,000,000 total price less the \$800,000 value of the like-kind property received). The gross profit is \$200,000 (\$500,000 realized gain less \$300,000 of the gain that is not recognized under *IRC Section 1031*). Therefore, 100 percent (\$200,000/\$200,000) of each payment on the installment note is taxable gain. The receipt of the like-kind property is not treated as a payment for this purpose. Thus, the \$200,000 of recognized gain on the exchange is reported only as payments are received on the note. n513

Note:

The allocation of basis between the replacement property and the installment obligation is uncertain. Regulations proposed in 1984 n514 provided that the taxpayer's basis in the relinquished property was first allocated to the like-kind replacement property received in the exchange to the extent of its fair market value. Any remaining amount was referred to as "excess basis," and was in effect allocated to the installment obligation and other boot. n515 The effect of this allocation of basis to replacement property to the extent of its fair market value (rather than allocating basis according to respective fair market values of the replacement property and the installment obligation) was to maximize the portion of each payment on the installment obligation that is taxable.

The proposed regulations were removed, however, n516 and the IRS has not issued further guidance. A plausible position might be to allocate the taxpayer's basis in the relinquished property to the replacement property, boot, and installment obligation in accordance with their fair market values on the date of the exchange, as is done for allocations among multiple qualifying replacement properties. n517 Another possible position would be to make an allocation under *IRC Section 1031(d)*, which would first allocate basis to boot and the installment obligation to the extent of their fair market values as discussed in § 8.21[2].

[2] Deferred Exchanges

The regulations coordinate the like-kind exchange rules with the installment sale rules when a deferred exchange is involved. n518 Several rules apply, and all assume that a deferred exchange is present, that a qualified intermediary is used, and that the property relinquished by the taxpayer was otherwise qualified property under *IRC Section 1031*.

First, in a deferred exchange using intermediaries, regulations allow taxpayers to treat the receipt of an evidence of indebtedness of the transferee of a qualified intermediary as the receipt of an evidence of indebtedness of the person acquiring the property for purposes of *IRC Section 453*. n519

Second, securing an obligation by cash or a cash equivalent could, absent a rule to the contrary, result in constructive receipt of the amount of the secured obligation. To avoid this occurrence, the regulations provide that if an exchange party's obligation to transfer replacement property to the taxpayer is or may be secured by cash or a cash equivalent, the determination of whether the taxpayer has received a payment for purposes of the installment sale provisions will be made without regard to the fact that security in the form of cash or cash equivalent is held in a qualified escrow account or qualified trust. This rule ceases to apply at the earlier of the following: n520

- the time that the taxpayer has an immediate ability or unrestricted right to receive, pledge, borrow, or otherwise obtain the benefits of the cash or the cash equivalent held in the qualified escrow account or qualified trust; n521 or

- at the end of the exchange period.

Finally, in the case of a taxpayer's transfer of relinquished property involving a qualified intermediary, the determination of whether the taxpayer has received a payment for purposes of the installment sale provisions is made as if the qualified intermediary is not the taxpayer's agent. n522

The above exceptions for qualified intermediaries n523 apply only if the taxpayer has a bona fide intent to enter into a deferred exchange of like-kind property at the beginning of the exchange. n524

It appears that this requisite intent may be present, however, even if the like-kind requirement is not in fact met. In a case involving an exchange of timber-cutting rights for realty, it was unclear under state law whether the two interests were of like-kind. The Tax Court did not resolve this issue, but determined that whether or not the like-kind requirement was met, the relevant intent was present. This was in part because of the presence of the following factors: n525

- the exchange agreement expressly made the transaction conditioned on "reasonable cooperation and a tax free exchange qualifying under Section 1031";
- the taxpayer used a qualified escrow account and a proper escrow agent, as required by regulations; n526
- the taxpayer identified and received the replacement properties within the 45-day and 180-day periods as required by *IRC Section 1031(a)(3)*;
- the taxpayer credibly testified that he intended to have a like-kind exchange; and
- in planning the transaction, the taxpayer relied on a well-known timber taxation expert and from his long-time accountant.

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.26

§ 8.26 Special Rules for Exchanges Between Related Persons

[1] Loss of Nonrecognition on Exchange

Nonrecognition treatment may be lost if a taxpayer exchanges property with a related person in an exchange under which there is nonrecognition of gain or loss under *IRC Section 1031*. Nonrecognition is lost if, within two years after the date of the last transfer that was part of the original exchange, either of the following occurs: n527

- the related party disposes of the property relinquished by the taxpayer; n527.1 or
- the taxpayer disposes of the like-kind replacement property received in the exchange.

The gain or loss must be recognized under this provision as of the date of the subsequent transfer. n528

The running of the two-year testing period n529 is suspended during any period in which the holder of the exchanged property has substantially diminished risk of loss by holding a put with respect to the property, by having another person have a right to acquire the property, or by means of a short sale or a similar transaction. Thus, the two-year holding period cannot be circumvented by such means. n530

IRC Section 1031(f) is intended to deny non-recognition treatment for transactions in which related parties make like-kind exchanges of high-basis property for low-basis property in anticipation of the sale of the low-basis property. In the absence of *IRC Section 1031(f)*, a taxpayer anticipating the sale of low basis property could exchange the low basis property for high basis property owned by a related person, with the related person then selling the property received in the exchange at a reduced gain (or possibly a loss) because of the shift to that property of the related person's high basis in the property relinquished by the taxpayer in the exchange. n530.1 To prevent related parties from circumventing the rules of *IRC Section 1031(f)(1)*, *IRC Section 1031(f)(4)* provides that the nonrecognition provisions of *IRC Section 1031* do not apply to any exchange that is part of a transaction (or a series of transactions) structured to avoid the related party rules of *IRC Section 1031(f)(1)*. This generally occurs when one of the parties is cashing out its investment in real estate. n530.2

Taxpayers cannot avoid the related party rules through the use of qualified intermediaries. The IRS generally frowns on transactions in which a taxpayer exchanges relinquished property in a delayed exchange using a qualified intermediary,

and then has the qualified intermediary acquire replacement property from a related taxpayer. If there is a cash-out of the property or the receipt of cash or non like-kind property by a related taxpayer, gain or loss must be recognized even if the exchange takes place through an unrelated qualified intermediary. n530.3

Example:

Individual A owns real property (Property 1) with a fair market value of \$150x and an adjusted basis of \$50x. Individual B owns real property (Property 2) with a fair market value of \$150x and an adjusted basis of \$150x. Both Property 1 and Property 2 are held for investment. A and B are related persons. C, an individual unrelated to A or B, wishes to acquire Property 1 from A. A enters into an agreement for the transfers of Property 1 and Property 2 with B, C, and a qualified intermediary (QI). QI is unrelated to A or B. Pursuant to their agreement, A transfers Property 1 to QI and QI transfers Property 1 to C for \$150x. Shortly thereafter, QI acquires Property 2 from B, pays B the \$150x sale proceeds from QI's sale of Property 1, and transfers Property 2 to A.

A must recognize gain on the transfer of Property 1, and is not entitled to nonrecognition under *IRC Section 1031*, in light of B's receiving cash for the replacement property. Although the transaction is structured so that A engages in a like-kind exchange with a qualified intermediary (an unrelated third party) instead of B, the end result of the transaction is the same as if A had exchanged property with B followed by a sale from B to C. A's use of a qualified intermediary to circumvent the purposes of the related party rules will be unsuccessful, and A's exchange of Property 1 for Property 2 is a taxable transaction. Under *IRC Section 1001(a)*, A has gain of \$100x, the difference between the amount realized on the exchange (\$150x, the fair market value of Property 2) and A's adjusted basis in the property exchanged (\$50x). n531

The Tax Court has also rejected like-kind exchange treatment for transactions using an intermediary if the transactions are structured to avoid the related party rules. In one case, the taxpayer in a series of planned transactions transferred low basis real properties to a qualified intermediary (QI), which then sold them to unrelated third parties. The QI used the sale proceeds, as well as additional funds from the taxpayer, to purchase like-kind replacement properties for the taxpayer from a corporation related to the taxpayer. The Tax Court held that under *Treas Reg § 1.1031(a)*, the taxpayer was not entitled to defer gains realized on the exchanges, even though all of the transactions otherwise met the general requirements for like-kind exchanges. The court concluded that the transactions were economically equivalent to a direct exchange of properties between the taxpayer and a related person, followed by the related person's sale of the property relinquished by the taxpayer. The court noted that tax savings resulting from the redirection of the proceeds from the sale of the relinquished property to the related person because of the related person's high basis in the property. The Ninth Circuit affirmed the Tax Court's decision. n532 Another case involving a similar shift of low basis for high basis property through an intermediary reached the same result, even though the taxpayer used replacement property from the related person as like-kind property in the exchange only because no other suitable property could be found. That there was not a pre-arranged plan to conduct an exchange with a related person did not prevent the application of *IRC Section 1031(f)* to the exchange. n532.1

If neither the taxpayer nor the related party is cashing out its investment in real property, and no party disposes of replacement property for two years after the exchange, n532.2 however, then the like-kind exchange may be given nonrecognition treatment. n532.2.1 Even if a related party plans to dispose of property relinquished by the taxpayer in an exchange within two years, *IRC Section 1031(f)* may still not preclude nonrecognition if that disposal would not result in a "cashing out" of an investment or shifting of basis between the related parties. n532.2.2

Example:

Trust and S Corporation are related persons within the meaning of *IRC Section 1031(f)(3)*. Trust owns Building 1 and S Corporation owns Building 2. Trust has transferred Building 1, including land and improvements, to an unrelated buyer. Trust wants to defer the recognition of the gain on the transfer of

Building 1. Therefore, Trust will acquire Building 2, including land and improvements, as one of its identified replacement properties in exchange for Building 1 in a transaction intended to qualify for nonrecognition treatment under *IRC Section 1031*. S Corporation will also engage in an exchange of Building 2 for other like-kind property in a transaction intended to qualify for nonrecognition treatment under *IRC Section 1031*.

In another favorable ruling, the IRS found that *IRC Section 1031(f)* did not apply because the taxpayer and the related party were not exchanging properties directly or through a qualified intermediary (QI). The taxpayer was an LLC taxed as a partnership. It owned all of Property D LLC, a disregarded entity that owned real property in its leasing business. The taxpayer agreed to transfer its membership interest in Property D LLC to a taxable REIT subsidiary (TRS) for cash equal to its fair market value. The taxpayer also entered into an agreement with a QI under which it assigned to the QI its rights to receive all proceeds payable by TRS. TRS would pay the proceeds to QI, and the taxpayer would then convey its interest in Property D LLC to TRS. The taxpayer would then identify replacement properties and direct the QI to timely acquire and transfer them to the taxpayer. TRS anticipated selling at least part of the property it acquired within two years. The taxpayer and TRS were related under *IRC Section 1031(f)*. The IRS ruled that the taxpayer and TRS were not exchanging properties either directly or through QI. Prior to the exchange, TRS did not own any property that the taxpayer acquired in the exchange. Rather, TRS merely acquired property by purchasing it for fair market value price from QI. Because there was no transaction or series of transactions structured to avoid the related party rules, *IRC Section 1031(f)(4)* did not come into play, and the 2-year restriction on the disposition of the relinquished or replacement property n532.3 did not apply. n532.4

To facilitate their exchanges, Trust and S Corporation will enter into exchange agreements with a qualified intermediary ("QI"), under which QI will be treated as the seller of Building 1 to Buyer. Moreover, QI will be treated as acquiring Building 2 from S Corporation and transferring it to Trust in exchange for Building 1. Similarly, pursuant to S Corp's exchange agreement, QI will be treated as acquiring property to replace Building 2 ("S Corporation's Replacement Property") and transferring it to S Corporation in exchange for Building 2. S Corporation's Replacement Property is, prior to its transfer to QI, owned by a party that is not related to either Trust or S Corporation. Once all the transactions are completed, Trust will own Building 2, S Corporation will own its, and Buyer will own Building 1. Trust and S Corporation will not dispose of their replacement properties within two years of acquiring them.

IRC Section 1031(f) does not trigger recognition of any gain realized in Trust's exchange of Building 1 for Building 2 or S Corporation's exchange of Building 2 for its replacement property. *IRC Section 1031(f)(1)* does not apply to cause Trust to recognize gain on its disposition of Building 1 because Trust is exchanging property with a qualified intermediary, who is not a related party. Furthermore, because the acquisition by S Corporation of its replacement property is another tax-free exchange under *IRC Section 1031* and not a disposition that cashes out its investment in real estate, Trust's exchange is not structured to avoid the purposes of *IRC Section 1031(f)*, so no recognition of gain is required under *IRC Section 1031(f)(4)*. Upon completion of the series of transactions, both related parties will own property that is like-kind to the property they exchanged. Moreover, neither party will have ever been in receipt of cash or other non-like kind property (other than boot received in the exchange) in return for the relinquished property. n532.5

[2] "Related Person" Defined

A "related person" for purposes of this provision is any person who bears a relationship to the taxpayer as set forth in *IRC Section 267(b)* or *IRC Section 707(b)(1)*. n533 Thus, the term includes the following: n534

- family members (brothers, sisters, spouses, ancestors, and lineal descendants);
- a corporation and a more than 50 percent shareholder;
- corporations in the same controlled group;

1-8 Federal Taxes Affecting Real Estate § 8.26

- grantors and trust fiduciaries;
- fiduciaries of different trusts with the same grantor;
- fiduciaries and beneficiaries of the same trust or of different trusts with the same grantor;
- trust fiduciaries and corporations more than 50 percent in value of the outstanding stock of which is owned by or for the trust or the grantor of the trust;
- persons and certain tax exempt organizations controlled by that person and family members;
- a corporation and a partnership if the same persons own more than 50 percent interests;
- two S corporations or an S corporation and a C corporation with more than 50 percent overlapping interests;
- executors or an estate and a beneficiary of the estate, except in the case of a sale or exchange in satisfaction of a pecuniary bequest;
- partnerships and partners with more than 50 percent of the capital or profits interest; or
- partnerships in which the same persons own more than 50 percent of the capital or profits interest.

An individual is not considered a related person to a trust whose trustees are the spouse of that individual's deceased sibling, and that deceased sibling's children. n534.1

[3] Excluded Dispositions

The following dispositions do not trigger the application of the related party nonrecognition rule: n535

- any disposition that occurs after the death of the taxpayer or of the related person;
- any disposition in a compulsory or involuntary conversion, if the exchange occurred before any threat or other indication of the imminence of the conversion was known;
- any disposition that does not have as one of its principal purposes the avoidance of federal income tax; n536 or
- any disposition occurring more than two years after the original exchange. n537

The "non-tax avoidance exception" for dispositions that do not have as one of their principal purposes the avoidance of federal income tax n537.1 generally applies only to the following: n537.2

- transactions involving an exchange of undivided interests in different properties that result in each taxpayer holding either the entire interest in a single property or a larger undivided interest in any of those properties;
- dispositions of property in nonrecognition transactions; and

- transactions that do not involve the shifting of basis between properties.

CHAPTER 8 Tax-Deferred Like-Kind Exchanges

1-8 Federal Taxes Affecting Real Estate § 8.27

§ 8.27 Disposition of Principal Residence in Like-Kind Exchange

[1] In General

The IRS has issued a pro-taxpayer revenue procedure that provides guidance when both *IRC Section 121* and *IRC Section 1031* apply to a single exchange of property. n538 Neither statute addresses their dual application to a single exchange, as when a taxpayer exchanges a residence containing a home office, or a former residence, for property held for the production of income or used in a trade or business. Both *IRC Sections 121* and *1031* can come into play because *IRC Section 121* does not require the property to be the taxpayer's principal residence on the sale or exchange date. All that is required is that the taxpayer have used the house as a principal residence for at least 2 years during the 5-year period prior to the exchange. n539 If those requirements are met, and all or a portion of the property has been converted to use in a trade or business (including a home office) or is held for investment at the time of the exchange, *IRC Section 1031* may then also come into play.

Revenue Procedure 2005-14 indicates that, in certain cases, a homeowner may benefit from both the home-sale exclusion and the like-kind deferral. The revenue procedure makes clear that to benefit from both provisions and from the guidance set forth in the revenue procedure, the property must have been used consecutively or concurrently as a home and a business (e.g. rental residence) at the time of the exchange. In other words, *Revenue Procedure 2005-14* applies only if (1) the property meets the ownership and use requirements of *IRC Section 121*, and (2) at the time of the exchange, at least a portion of the property is used in a trade or business or is held for investment. n540

The revenue procedure sets forth an ordering rule for applying *IRC Sections 121* and *1031*, an application of *IRC Section 1031* to depreciation recapture amounts that are not excluded under *IRC Section 121*, the manner in which boot is taken into account in applying *IRC Section 1031*, and a method for computing the basis of replacement property received in an exchange. n541 The application of the rules vary, depending on whether (1) the entire house is a rental property, (2) the property contains a home office, or (3) the business property is separate from the dwelling unit or a part of it. The revenue procedures also provides six detailed examples with those factual variations, illustrating the treatment of gain recognition, depreciation, and boot. n542

[2] Application of Revenue Procedure 2005-14

The manner in which *IRC Sections 121* and *1031* apply to an exchange is as follows: n543

A. Computation of Gain

1. *IRC Section 121* is applied to gain realized before applying *IRC Section 1031*.
2. *IRC Section 1031* is then applied to gain attributable to depreciation. The principal residence exclusion does not apply to gain attributable to depreciation deductions for periods after May 6, 1997, claimed with respect to the business or investment portion of a residence. n544 Nevertheless, *IRC Section 1031* may apply to defer recognition of that gain.
3. In applying *IRC Section 1031*, cash or other non-like-kind property (boot) received in exchange for property used in the taxpayer's trade or business or held for investment (the relinquished business property), is taken into account only to the extent that the boot exceeds the gain excluded under *IRC Section 121* with respect to the relinquished business property.

B. Computation of Basis

In determining the basis of the property received in the exchange to be used in the taxpayer's trade or business or held for investment (the replacement business property), any gain excluded under *IRC Section 121* is treated as gain recognized by the taxpayer. Thus, under *IRC Section 1031(d)*, the basis of the replacement business property is increased by any gain attributable to the relinquished business property that is excluded under *IRC Section 121*.

[3] Examples Illustrating Revenue Procedure 2005-14

Revenue Procedure 2005-14 provides six examples explaining the interactions of *IRC Sections 121* and *1031* in a qualifying exchange. In each example, the taxpayer is assumed to be an unmarried individual, and the property or a portion of it has been used in the taxpayer's trade or business or held for investment within the meaning of *IRC Section 1031(a)* as well as used as a principal residence as required under *IRC Section 121*. The examples are as follows: n545

Example 1. (i) Taxpayer A buys a house for \$210,000 that A uses as A's principal residence from 2000 to 2004. From 2004 until 2006, A rents the house to tenants and claims depreciation deductions of \$20,000. In 2006, A exchanges the house for \$10,000 of cash and a townhouse with a fair market value of \$460,000 that A intends to rent to tenants. A realizes gain of \$280,000 on the exchange.

(ii) A's exchange of a principal residence that A rents for less than 3 years for a townhouse intended for rental and cash satisfies the requirements of both *IRC Sections 121* and *1031*. *IRC Section 121* does not require the property to be the taxpayer's principal residence on the sale or exchange date. Because A owns and uses the house as A's principal residence for at least 2 years during the 5-year period prior to the exchange, n546 A may exclude gain under *IRC Section 121*. Because the house is investment property at the time of the exchange, A may also defer gain under *IRC Section 1031*.

(iii) A applies *IRC Section 121* to exclude \$250,000 of the \$280,000 gain before applying the nonrecognition rules of *IRC Section 1031*. A may defer the remaining gain of \$30,000, including the \$20,000 gain attributable to depreciation, under *IRC Section 1031*. Although A receives \$10,000 of cash (boot) in the exchange, A is not required to recognize gain because the boot is taken into account for purposes of *IRC Section 1031(b)* only to the extent the boot exceeds the amount of excluded gain.

(iv) A's basis in the replacement property is \$430,000, which is equal to the basis of the relinquished property at the time of the exchange (\$190,000) increased by the gain excluded under *IRC Section 121* (\$250,000), and reduced by the cash A receives (\$10,000).

Example 2. (i) Taxpayer B buys a property for \$210,000. The property consists of two separate dwelling units, n547

including both a house and a guesthouse. From 2001 until 2006, B uses the house as B's principal residence and uses the guesthouse as an office in B's trade or business. Based on the square footage of the respective parts of the property, B allocates 2/3 of the basis of the property to the house and 1/3 to the guesthouse. In 2006, B exchanges the entire property for a residence and a separate property that B intends to use as an office. The total fair market value of B's replacement properties is \$360,000. The fair market value of the replacement residence is \$240,000 and the fair market value of the replacement business property is \$120,000, which is equal to the fair market value of the relinquished business property. From 2001 to 2006, B claims depreciation deductions of \$30,000 for the business use. B realizes gain of \$180,000 on the exchange.

(ii) Under *IRC Section 121*, B may exclude gain of \$100,000 allocable to the residential portion of the house (2/3 of \$360,000 amount realized, or \$240,000, minus 2/3 of \$210,000 basis, or \$140,000) because B meets the ownership and use requirements for that portion of the property. Because the guesthouse is business property separate from the dwelling unit and B has not met the use requirements for the guesthouse, B may not exclude the gain allocable to the guesthouse.ⁿ⁵⁴⁸ However, because the fair market value of the replacement business property is equal to the fair market value of the relinquished business property and B receives no boot, B may defer the remaining gain of \$80,000 (1/3 of \$360,000 amount realized, or \$120,000, minus \$40,000 adjusted basis, which is 1/3 of \$210,000 basis, or \$70,000, adjusted by \$30,000 depreciation) under *IRC Section 1031*. These results are illustrated as follows:

	Total property	2/3 residential property	1/3 business property
Amount realized	\$360,000	\$240,000	\$120,000
Basis	\$210,000	\$140,000	\$70,000
Depreciation adjustment	\$ 30,000		\$ 30,000
Adjusted basis	\$180,000	\$140,000	\$ 40,000
Realized gain	\$180,000	\$100,000	\$ 80,000
Gain excluded under § 121	\$100,000	\$100,000	
Gain deferred under § 1031	\$80,000		\$ 80,000

(iii) Because no portion of the gain attributable to the relinquished business property is excluded under *IRC Section 121* and B receives no boot and recognizes no gain or loss in the exchange, B's basis in the replacement business property is equal to B's basis in the relinquished business property at the time of the exchange (\$40,000). B's basis in the replacement residential property is the fair market value of the replacement residential property at the time of the exchange (\$240,000).

Example 3. (i) Taxpayer C buys a property for \$210,000. The property consists of a house that constitutes a single dwelling unit.ⁿ⁵⁴⁹ From 2001 until 2006, C uses 2/3 of the house (by square footage) as C's principal residence and uses 1/3 of the house as an office in C's trade or business. In 2006, C exchanges the entire property for a residence and a separate property that C intends to use as an office in C's trade or business. The total fair market value of C's replacement properties is \$360,000. The fair market value of the replacement residence is \$240,000 and the fair market value of the replacement business property is \$120,000, which is equal to the fair market value of the business portion of the relinquished property. From 2001 to 2006, C claims depreciation deductions of \$30,000 for the business use. C realizes gain of \$180,000 on the exchange.

(ii) Under *IRC Section 121*, C may exclude the gain of \$100,000 allocable to the residential portion of the house (2/3 of \$360,000 amount realized, or \$240,000, minus 2/3 of \$210,000 basis, or \$140,000) because C meets the ownership and

use requirements for that portion of the property.

(iii) The remaining gain of \$80,000 (1/3 of \$360,000 amount realized, or \$120,000, minus \$40,000 adjusted basis, which is 1/3 of \$210,000 basis, or \$70,000, adjusted by \$30,000 depreciation) is allocable to the business portion of the house (the office). C applies *IRC Section 121* before applying the non-recognition rules of *IRC Section 1031*. C may exclude \$50,000 of the gain allocable to the office because the office and residence are part of a single dwelling unit. n550 C may not exclude that portion of the gain (\$30,000) attributable to depreciation deductions, but may defer the remaining gain of \$30,000 under *IRC Section 1031*. These results are illustrated as follows:

	Total property	2/3 residential property	1/3 business property
Amount realized	\$360,000	\$240,000	\$120,000
Basis	\$210,000	\$140,000	\$70,000
Depreciation adjustment	\$ 30,000		\$30,000
Adjusted basis	\$180,000	\$140,000	\$ 40,000
Realized gain	\$180,000	\$100,000	\$ 80,000
Gain excluded under § 121	\$150,000	\$100,000	\$ 50,000
Gain deferred under § 1031	\$30,000		\$ 30,000

(iv) C's basis in the replacement residential property is the fair market value of the replacement residential property at the time of the exchange (\$240,000). C's basis in the replacement business property is \$90,000, which is equal to C's basis in the relinquished business property at the time of the exchange (\$40,000), increased by the gain excluded under *IRC Section 121* attributable to the relinquished business property (\$50,000).

Example 4. (i) The facts are the same as in Example 3 except that C also receives \$10,000 of cash in the exchange and the fair market value of the replacement business property is \$110,000, which is \$10,000 less than the fair market value of the business portion of the relinquished property (\$120,000).

(ii) Under *IRC Section 121*, C may exclude the gain of \$100,000 allocable to the residential portion of the house (2/3 of \$360,000 amount realized, or \$240,000, minus 2/3 of \$210,000 basis, or \$140,000).

(iii) The remaining gain of \$80,000 (1/3 of \$360,000 amount realized, or \$120,000, minus \$40,000 adjusted basis) is allocable to the business portion of the house. C applies *IRC Section 121* to exclude gain before applying the nonrecognition rules of *IRC Section 1031*. C may exclude \$50,000 of the gain allocable to the business portion of the house but may not exclude the \$30,000 of gain attributable to depreciation deductions. n551 C may defer the \$30,000 of gain under *IRC Section 1031*. Although C receives \$10,000 of cash (boot) in the exchange, C is not required to recognize gain because the boot is taken into account for purposes of *IRC Section 1031(b)* only to the extent the boot exceeds the amount of excluded gain attributable to the relinquished business property. These results are illustrated as follows:

	Total property	2/3 residential property	1/3 business property
Amount realized	\$360,000	\$240,000	\$110,000 + 10,000
Basis	\$210,000	\$140,000	\$70,000
Depreciation adjustment	\$ 30,000		\$ 30,000
Adjusted basis	\$180,000	\$140,000	\$ 40,000
Realized gain	\$180,000	\$100,000	\$ 80,000

1-8 Federal Taxes Affecting Real Estate § 8.27

Gain excluded under § 121	\$150,000	\$100,000	\$ 50,000
Gain deferred under § 1031	\$ 30,000		\$ 30,000

(iv) C's basis in the replacement residential property is the fair market value of the replacement residential property at the time of the exchange (\$240,000). C's basis in the replacement business property is \$80,000, which is equal to C's basis in the relinquished business property (\$40,000), increased by the gain excluded under *IRC Section 121* (\$50,000), and reduced by the cash (\$10,000) received.

Example 5. (i) The facts are the same as in Example 3 except that the total fair market value of the replacement properties is \$540,000. The fair market value of the replacement residence is \$360,000, the fair market value of the replacement business property is \$180,000, and C realizes gain of \$360,000 on the exchange.

(ii) Under *IRC Section 121*, C may exclude the gain of \$220,000 allocable to the residential portion of the house (2/3 of \$540,000 amount realized, or \$360,000, minus 2/3 of \$210,000 basis, or \$140,000).

(iii) The remaining gain of \$140,000 (1/3 of \$540,000 amount realized, or \$180,000, minus \$40,000 adjusted basis) is allocable to the business portion of the house. C excludes the gain before applying the nonrecognition rules of *IRC Section 1031*. C may exclude \$30,000 of the gain allocable to the business portion, at which point C will have excluded the maximum limitation amount of \$250,000. n552 C may defer the remaining gain of \$110,000 (\$140,000 realized gain minus the \$30,000 gain excluded under *IRC Section 121*), including the \$30,000 gain attributable to depreciation, under *IRC § 1031*. These results are illustrated as follows:

	Total property	2/3 residential property	1/3 business property
Amount realized	\$ 540,000	\$360,000	\$180,000
Basis	\$ 210,000	\$140,000	\$70,000
Depreciation adjustment	\$ 30,000		\$30,000
Adjusted basis	\$180,000	\$140,000	\$40,000
Realized gain	\$360,000	\$ 220,000	\$140,000
Gain excluded under § 121	\$250,000	\$220,00	\$30,000
Gain deferred under § 1031	\$110,000		\$110,000

(iv) C's basis in the replacement residential property is the fair market value of the replacement residential property at the time of the exchange (\$360,000). C's basis in the replacement business property is \$70,000, which is equal to C's basis in the relinquished business property (\$40,000), increased by the amount of the gain excluded under *IRC Section 121* (\$30,000).

Example 6. (i) The facts are the same as in Example 3 except that the total fair market value of the replacement properties is \$750,000. The fair market value of the replacement residence is \$500,000, the fair market value of the replacement business property is \$250,000, and C realizes gain of \$570,000 on the exchange.

(ii) The gain allocable to the residential portion is \$360,000 (2/3 of \$750,000 amount realized, or \$500,000, minus 2/3 of \$210,000 basis, or \$140,000). C may exclude gain of \$250,000 from gross income under *IRC Section 121*. C must include in income the gain of \$110,000 allocable to the residential portion that exceeds the *IRC Section 121(b)* exclusion limitation amount.

(iii) The remaining gain of \$210,000 (1/3 of \$750,000 amount realized, or \$250,000, minus \$40,000 adjusted basis) is allocable to the business portion of the house. C may defer the \$210,000 of gain, including the \$30,000 gain attributable to depreciation, under *IRC Section 1031*. These results are illustrated as follows:

	Total property	2/3 residential property	1/3 business property
Amount realized	\$750,000	\$500,000	\$250,000
Basis	\$210,000	\$140,000	\$70,000
Depreciation adjustment	\$ 30,000		\$ 30,000
Adjusted basis	\$180,000	\$140,000	\$ 40,000
Realized gain	\$570,000	\$360,000	\$210,000
Gain excluded under § 121	\$250,000	\$250,000	
Gain deferred under § 1031	\$210,000		\$ 210,000
Gain Recognized	\$110,000	\$110,000	

(iv) C's basis in the replacement residential property is the fair market value of the replacement residential property at the time of the exchange (\$500,000). C's basis in the replacement business property is \$40,000, which is equal to C's basis in the relinquished business property at the time of the exchange.

[4] Safe Harbor for Exchange of Dwelling Units Used for Personal Purposes

In general, the gain or loss from an exchange of personal residences cannot be deferred under *IRC Section 1031* because the residences are not property held for productive use in a trade or business or for investment. This general rule applies both for exchanges involving principal residences as well as for secondary or vacation homes. n553 Courts have rejected arguments that residences have been held for investment rather than personal purposes because they were expected to appreciate in value. The mere hope or expectation that property may be sold at a gain cannot establish an investment intent if the taxpayer uses the property as a residence. n554

In recognition of the fact that many taxpayers hold dwelling units primarily for the production of current rental income, but also use them occasionally for personal purposes, the IRS has provided a safe harbor under which it will not challenge whether a dwelling unit qualifies as property held for productive use in a trade or business or for investment under *IRC Section 1031*, even though a taxpayer occasionally uses the dwelling unit for personal purposes. n555

To meet the safe harbor, the dwelling unit must meet the qualifying use standards set for the in the revenue procedure. The standards differ, depending on whether the dwelling unit is relinquished property or replacement property. A dwelling unit that a taxpayer intends to be relinquished property in an *IRC Section 1031* exchange qualifies as property held for productive use in a trade or business or for investment if the following requirements are met: n556

- The dwelling unit must be owned by the taxpayer for at least 24 months immediately before the exchange (the "qualifying use period"); and
- Within the qualifying use period, in each of the two 12-month periods immediately preceding the exchange, (1) the taxpayer must rent the dwelling unit to another person or persons at a fair rental for 14 days or more, and (2) the period of the taxpayer's personal use of the dwelling unit cannot exceed the greater of 14 days or 10 percent of the number of days during the 12-month period that the dwelling unit is rented at a fair rental.

For this purpose, the first 12-month period immediately preceding the exchange ends on the day before the exchange takes place (and begins 12 months prior to that day) and the second 12-month period ends on the day before the first 12-month period begins (and begins 12 months prior to that day). n557

A dwelling unit that a taxpayer intends to be replacement property in an *IRC Section 1031* exchange qualifies as property held for productive use in a trade or business or for investment if the following requirements are met: n558

- The dwelling unit is owned by the taxpayer for at least 24 months immediately after the exchange (the "qualifying use period"); and
- Within the qualifying use period, in each of the two 12-month periods immediately after the exchange, (1) the taxpayer rents the dwelling unit to another person or persons at a fair rental for 14 days or more, and (2) the period of the taxpayer's personal use of the dwelling unit does not exceed the greater of 14 days or 10 percent of the number of days during the 12-month period that the dwelling unit is rented at a fair rental.

For this purpose, the first 12-month period immediately after the exchange begins on the day after the exchange takes place and the second 12-month period begins on the day after the first 12-month period ends. n559

Specific definitions apply for purposes of the safe harbor. "Personal use" of a dwelling unit occurs on any day on which a taxpayer is deemed to have used the dwelling unit for personal purposes under *IRC Section 280A(d)(2)*, except that for purposes of the safe harbor, personal use of a dwelling unit includes periods of personal use by the taxpayer before and after a qualified rental of a principal residence. n560 Whether a dwelling unit is rented at a "fair rental" is determined based on all of the facts and circumstances that exist when the rental agreement is entered into. All rights and obligations of the parties to the rental agreement are taken into account. n561

If a taxpayer files a federal income tax return and reports a transaction as an like-kind exchange under *IRC Section 1031*, based on the expectation that a dwelling unit will meet the qualifying use standards for replacement property, and subsequently determines that the dwelling unit does not meet those standards, the taxpayer, if necessary, should file an amended return and not report the transaction as a like-kind exchange. n562

The safe harbor is used only to determine whether a dwelling unit qualifies as property held for productive use in a trade or business or for investment under *IRC § 1031*. A taxpayer using the safe harbor must satisfy all other statutory and regulatory requirements for a like-kind exchange. n563

The safe harbor is effective for exchanges occurring on or after March 10, 2008. No inference is intended with respect to the federal income tax treatment of exchanges of dwelling units occurring prior to the effective date of this revenue procedure. n564

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.00

§ 8A.00 Introduction

A taxpayer experiences an involuntary conversion when there is a compulsory or involuntary loss of all or part of a property as a result of destruction, theft, seizure or condemnation. As the taxpayer generally has no control over an involuntary conversion, *IRC Section 1033* provides relief from the usual result of gain recognition (measured by the excess of cash or fair market value of property received at the time of conversion over the adjusted basis of property lost). n1 However, the nonrecognition provisions of *IRC Section 1033* do not apply to losses; losses will be recognized in the year incurred. n2

Almost any type of property can be seized or destroyed in an involuntary conversion, including personal property, real property, air rights, n2.1 investment property, depreciable property, inventory, and property held for sale to customers in the ordinary course of a trade or business. n2.2 A right to use real property, as opposed to a title interest in the property itself, may also be involuntarily converted. n2.3

Even intangibles may be subject to condemnation--municipal authorities have suggested that sports franchises of teams considering a move might be subject to condemnation. The governing statute is remedial in nature and broad in scope, and neither *IRC Section 1033* nor the regulations thereunder limit the type of property that may benefit from *IRC Section 1033* if involuntarily converted. *IRC Section 1033* nevertheless may overlap with other nonrecognition provisions of the Code. For example, a taxpayer may report the involuntary conversion of a personal residence as either an involuntary conversion or as a sale or exchange of a personal residence. Similarly, an involuntary conversion may also qualify as an *IRC Section 1031* tax-deferred exchange. n3

Involuntary conversions also include dispositions as a result of requisition or condemnation or the threat or imminence thereof or of theft, destruction in whole or in part, seizure, or sale due to acreage limitations of reclamation laws. n4 An arson can constitute an involuntary conversion. n5 Although theft or destruction of property is not difficult to determine (e.g., hail losses, fire, lightning damage, flood destruction, and the voluntary sale of timber after being uprooted by a hurricane), n6 not all involuntary losses of property will result in a qualifying involuntary conversion. The following forced dispositions have been held not to be involuntary conversions:

- (1) foreclosure sale;
- (2) sale of land to pay paving assessment;

(3) condemnation by public health or safety officials (not a taking for public use); and

(4) sale of stock under state court order. n7

Conversions or sales of property where an owner has a choice of keeping the property or converting or selling it also do not usually qualify as involuntary conversions. n8 This is because *IRC Section 1033* defers only gains resulting from compulsory or involuntary conversions; the conversion into money or other property must occur from circumstances beyond the taxpayer's control. n8.01 If a taxpayer takes voluntary action to cause the conversion of the taxpayer's property into other property or money, the conversion does not qualify as an involuntary conversion, and deferral under *IRC Section 1033* is not available. Thus, an owner who voluntarily consented to the subsequent conversion of part of his property for the purpose of constructing a school as a condition to receiving approval for the development of his remaining property was not entitled to use *IRC Section 1033* with regard to the sale of the land on which the school would be constructed. n8.02

In one case, however, a forest products manufacturer was allowed to defer gain under *IRC Section 1033* for an early harvest of damaged trees, even though it chose to process the damaged trees into the end product that it regularly sold in the course of its business. The taxpayer was allowed to defer only that portion of the gain attributable to the difference between its basis and the amount it would have recognized had it sold the damaged trees on the open market instead of further processing them into finished products. The court held that the further processing by the taxpayer did not prevent the early harvest of the trees from qualifying as an involuntary conversion. n8.1

Involuntary conversions due to condemnations and sales under threat of condemnation have prompted extensive litigation. Condemnation is the exercise of legal power by the government to take privately owned property for necessary public use, with or without the owner's consent, upon payment of a reasonable price to the owner. n9 In Revenue Ruling 63-221, n10 the Service ruled that a threat or imminence of condemnation exists when a property owner has been informed by an authorized government official that a decision has been made to acquire his property, and the property owner reasonably believes that condemnation proceedings will be instituted if a voluntary sale is not negotiated. n11 This rule applies even if the proposed condemning authority lacks currently available funds to make the acquisition. n12 The Service indicated in another ruling that an involuntary conversion results even though the condemning agency does not yet have, but could readily obtain, condemnation authority. However, the seller must be aware of the identity of the condemning agency. n13

A total condemnation or threat of condemnation of an entire property is not required for an involuntary conversion to occur. An easement or threat of one that would substantially deprive a taxpayer of a beneficial interest in the land constitutes an involuntary conversion. In one ruling, the IRS ruled that an easement allowing the government a perpetual right to flood the taxpayer's farm was an involuntary conversion. n13.1 A voluntary sale to the Army Corps of Engineers after the Corps threatened to impose an easement that would prohibit any further significant development or timber operations, restrict current outdoor and recreational use of the property tourist operations, and allow flooding of the property was also held to be an involuntary conversion. n13.2 A sale of a fishing resort to the United States after Congress passed a law prohibiting the use of motorboats on the lake is also an involuntary conversion. n13.3

Sales to third parties may be permissible. n14

Any reasonable threat of condemnation that causes a taxpayer to dispose of property may result in the application of *IRC Section 1033*. n15 A threat or imminence of condemnation exists when a public body having the authority to condemn land or to institute condemnation proceedings indicates, by public resolution or public act, that specifically designated property located within a given geographical area will be condemned. It is not required that the taxpayer receive this knowledge officially. n16 An actual condemnation need not take place in order for *IRC Section 1033* to apply. It is sufficient if the taxpayer has a reasonable belief that a condemnation is likely to occur. n16.1

Property that is subject to an involuntary conversion or condemnation action need not be sold to or acquired by the condemning authority for *IRC Section 1033* to apply. Although most sales under threat of condemnation are made to an agent of the government body seeking the property, n17 a sale to a third party will qualify for relief under *IRC Section 1033*. In one ruling, the IRS found that a sale of property to a third party qualified for relief under *IRC Section 1033* when the sale was made after the city had taken all administrative steps to approve a comprehensive development project that included the property within it. The IRS ruled that the sale was under threat of condemnation because the only step left to be taken by the city was the institution of condemnation proceedings. n17.1 A similar ruling had the same result when the taxpayer sold property to a designated developer of an urban renewal area; the property was in the urban renewal area, and the area was under threat of condemnation from the redevelopment authority. n17.2

In another case, the taxpayer owned the only property on a block that was not owned by a private financial institution. He refused several offers to sell his property to the institution, which needed his property to build a new structure. The financial institution then requested from the city attorney an opinion as to whether the city would condemn the land under its urban development authority. Before receiving a definitive response, the parties negotiated and concluded the sale. The court held that the taxpayer had a reasonable belief that his property would be condemned and, therefore, the sale to the nongovernmental body was under threat of condemnation. n18

The Tax Court has also held that a taxpayer may treat the proceeds from condemned property and other real property in the aggregate as involuntary conversion proceeds if the properties constitute one economic unit or have a substantial economic relationship to each other. n19 For instance, a taxpayer owns Property A and Property B, both of which are operated as one business activity. A government authority condemns Property A, which also reduces the business utility of Property B. The condemnation of A and the sale of B both qualify as involuntary conversions if the taxpayer properly reinvests both proceeds. However, the Service has disallowed involuntary conversion treatment to a taxpayer who voluntarily sold property claimed to be in an "economic unit" with condemned property owned by a related party (his father). n20

CHAPTER 8A Involuntary Conversions of Real Estate *

*1-8A Federal Taxes Affecting Real Estate § 8A.01***§ 8A.01 Deferral of Gain Recognition****[1] In General**

When property is directly converted into property "similar or related in service or use" through an exchange, nonrecognition of gain is mandatory. n21

However, if property is converted into cash through a condemnation award, insurance proceeds, etc., the owner can elect to defer gain if the property involuntarily converted is replaced within the allotted replacement period. n22 The owner must recognize gain to the extent the proceeds received exceed the cost of the replacement property. The cost of the replacement property is determinative, not the purchaser's equity interest therein (i.e., the taxpayer may finance the acquisition of the replacement property). The excess of the condemnation proceeds or other award received over the cost of the replacement property must be recognized as gain. n23

Example:

A warehouse with a basis of \$200,000 is destroyed by fire, and insurance proceeds of \$350,000 are received. The following examples set forth the amount of gain recognized, assuming the reinvestment of all or a part of the proceeds within the allowable time period:

	Examples		
	A	B	C
Cost of replacement property	\$.....1 50,000	\$.....3 00,000	\$.....4 00,000
Proceeds received	\$.....3 50,000	\$.....3 50,000	\$.....3 50,000
Less: Basis of old property	200,000	200,000	200,000
Gain on conversion (1)	\$.....1 50,000	\$.....1 50,000	\$.....1 50,000
Proceeds	\$.....3	\$.....3	\$.....3

1-8A Federal Taxes Affecting Real Estate § 8A.01

received	50,000	50,000	50,000
Cost of replacement property	150,000	300,000	400,000
Limit on gain recognized (2)	\$.....2 00,000	\$.....5 0,000	\$.....0
Gain recognized:			
The lesser of (1) or (2)	\$.....1 50,000	\$.....5 0,000	\$.....0

In one case, the issue was whether insurance proceeds were used solely to replace the involuntarily converted property with similar property. ⁿ²⁴ The taxpayers' home suffered significant damage, and the taxpayers used insurance proceeds to make repairs. The IRS argued that the taxpayers made improvements, not replacements, because they installed windows and kitchen items of better quality than the items that were destroyed. They also installed air conditioning and planted trees on the property. The IRS therefore argued that *IRC Section 1033* did not apply because the settlement proceeds were not used solely to replace the damaged property. The Tax Court rejected the argument and held that *de minimis* enhancements could be made to the property without violating the statutory use of funds requirement. The line where the quality of replacement property could violate *IRC Section 1033* is unclear, but in situations of this kind it would appear that as long as insurance proceeds are used, in substantial part, to restore property to its original condition, taxpayers can defer gain under *IRC Section 1033*. ^{n24.1} Amounts allocated to relocation costs for property are treated as part of the cost of replacement property, and are eligible for deferral under *IRC Section 1033*. ⁿ²⁵

Insurance proceeds that are received for reasons other than to compensate for an involuntary conversion itself are not eligible for nonrecognition and deferral of gain under *IRC Section 1033*, even if they are related to the conversion. Thus, insurance payments made to cover injury or threat of injury to third parties resulting from environmental contamination that involuntarily converts property are not eligible for nonrecognition under *IRC Section 1033*. ^{n25.1} Nor are insurance payments for lost profits and fixed charges paid in connection with an involuntary conversion. ^{n25.2} Interest payments paid in connection with an involuntary conversion are also not subject to *IRC Section 1033*. ^{n25.3}

Planning Guide:

Taxpayers can take steps so that condemnation awards or insurance payments can qualify for deferral under *IRC § 1033*. To the extent possible, negotiations with condemning authorities and contract clauses in insurance policies should clearly designate and seek to maximize recoveries as payment for the acquisition of property or as payment for the loss of the use of property. Amounts allocated to these items will usually be eligible for deferral under *IRC § 1033*, whereas any recovery allocated to a claim of lost profits or other type of damages will not be. ^{n25.4} The IRS and courts look to the terms of contracts, the type of damages requested in administrative documents or in negotiations, and allegations in court documents to determine if a particular award or part of it is eligible for deferral under *IRC § 1033*. ^{n25.5}

As usual, mortgages add complexity to the determination of gain recognition. A taxpayer must use all the proceeds when purchasing replacement property, without reduction for satisfaction of a mortgage or other lien on the converted property. ⁿ²⁶ The Ninth Circuit has held, however, that where the encumbrance is not a personal liability of the property owner, the nonrecognition provisions are satisfied when the owner reinvests an amount equal to his equity. ⁿ²⁷ As the circuit courts disagree on this matter, the question remains unsettled. This reinvestment amount rule generally applies irrespective of whether the debt is paid personally by the taxpayer or is paid by another party (such as the

insurer) directly to the mortgagee. For example, assume fire destroys A's warehouse, worth \$400,000 and subject to a mortgage debt of \$150,000. Although the insurer pays \$250,000 to A and the balance of \$150,000 directly to the mortgagee, A must purchase \$400,000 in replacement property to avoid recognition of gain. A may, of course, borrow to finance the replacement property to any extent without tax repercussions. In a different context, the Board of Tax Appeals, the predecessor of the Tax Court, held that the reduction of mortgage indebtedness on business property with condemnation proceeds from adjacent business property will not qualify for nonrecognition under *IRC Section 1033*.ⁿ²⁸

To defer recognition of gain under the involuntary conversion provisions, a taxpayer is only required to reinvest the net proceeds. Net proceeds are the total proceeds reduced by (1) expenses of securing the award, including attorneys' fees and other costs, and (2) any special assessments levied against remaining property as a result of improvements, such as a street or sewer on the condemned portion.ⁿ²⁹ For example, in securing a \$100,000 award, A paid his attorney \$5,000 and paid expert witnesses \$2,000. A must only reinvest \$93,000 to avoid recognition of gain. Additionally, a taxpayer need not trace the proceeds of a conversion to the replacement assets. Thus, one may acquire a replacement asset within the requisite time period under threat of condemnation before the actual receipt of the award.ⁿ³⁰

The gain deferral provisions of *IRC Section 1033* may not be available to a taxpayer who receives the proceeds for business interruption insurance upon an involuntary conversion. However, a recovery for the loss of use and occupancy of the involuntarily converted property will trigger the gain deferral provisions.ⁿ³¹ If the taxpayer recovers insurance for lost profits, revenues, or rentals, the proceeds are taxed as ordinary income.ⁿ³²

[2] Severance Damages

Severance damages are generally awarded to a condemnee for harm caused to his property remaining with him after a portion of the property has been condemned. An amount awarded specifically for severance damages will not enter into the computation of gain or loss on the condemned portion of the property.ⁿ³³

The amount and treatment of severance damages are determined as follows:ⁿ³⁴

(1) First, "net" severance damages must be ascertained. Net severance damages are computed by reducing the gross amount received as severance damages by:

(a) the applicable portion of the total expenses incurred in obtaining the combined severance and condemnation award; and

(b) any unpaid special assessment against the remaining property.

(2) Net severance damages are applied to reduce the basis of the retained property.ⁿ³⁵

(3) Any severance damages in excess of the basis of the retained property are taxable when not reinvested.ⁿ³⁶

The nature of the gain, whether capital or ordinary, depends upon the nature of the asset. The gain will not be taxed as a long-term capital gain if the property has not been held for the required time period or if the property owner is a dealer and the land is held for resale. In situations where severance damages are paid and improved property is involved, recapture of depreciation may be a consideration.ⁿ³⁷

Example:

A has a large parcel of property upon which she has a factory and parking lot. The county decides to make the highway bordering A's property into a four-lane highway and condemns part of A's parking lot

1-8A Federal Taxes Affecting Real Estate § 8A.01

and a corner of the factory. A receives a condemnation award as follows:

Award Received:

For property taken	\$.....15 0,000
For damages to property re- tained	50,000_____ _____
Gross Award	\$.....20 0,000
Less: Assessment for improved road	10,000_____ _____
Total cash received by A	\$.....19 0,000_____ _____ _____ _____

The cost of obtaining the combined award was \$4,000 for attorneys' fees. The basis of the property retained is \$900,000, and the basis of the property taken was \$100,000. A's gain and her basis in the remaining property are computed as follows:

Gain on Condemnation:

Amount received for property taken	\$150,000
Less: Allocable portion of at- torneys' fees--75% ♦	3,000_____ _____ _____
Net Award	\$147,000
Less: Basis of property taken	100,000_____ _____ _____
Gain: Taxable unless all of the net award (\$147,000) is rein- vested in replacement property	\$..... 47,00 0_____ _____ _____ _____
Basis Reduction in Property Retained:	
Basis of property retained	\$900,000
Severance damages	\$..... 50,00 0

1-8A Federal Taxes Affecting Real Estate § 8A.01

Less:

Assessment for improved road	(10,000)	
Portion of legal fees--25% ♦	(1,000)	

Applied to reduce basis	\$.....	(.....)
	39,00	39,000
	0	
	_____	_____
	_____	_____
	_____	_____
	_____	_____
	_____	_____
Adjusted basis of property retained		\$861,000

♦ Allocation is made based upon the percentage of each portion of the award to the total award.

For a taxpayer to allocate part of the condemnation proceeds to severance damages, the Service has held that the condemnation award document must expressly state and itemize the amounts attributed to various portions. n38 The courts have allowed a taxpayer to submit evidence upon which to base an allocation if records indicate severance damages have been paid but no specific amount is stated in the award. n39 However, because the Service considers such allocations impermissible, litigation may be required to sustain such an allocation. Consequently, the taxpayer should request that severance damages be specifically set out in the award.

Although the Service's position has been more stringent than the courts' conclusions, it has liberalized its treatment of severance damages. A 1973 Revenue Ruling held that *IRC Section 1033* nonrecognition applies to severance damages received from a condemnation destroying the usefulness of retained property when the retained property was sold to acquire replacement property at a cost exceeding the sum of the condemnation award, severance damages, and sales proceeds. n40 Similarly, a district court has held that, when severance damages are part of a condemnation award, the Service may have authority to divide the award between compensation for the property taken and damages to the remainder, but this allocation does not affect the availability of involuntary conversion treatment. The Service took the position that severance damages were not deferrable under the involuntary conversion provisions except when the property purchased with the severance damages is adjacent to the damaged property and the damages are used to restore the usability of the damaged land. n41 The court rejected this argument, holding that there is no authority authorizing the Service to treat severance damages any differently from its treatment of the proceeds of condemnation. The Service now holds that severance damages reinvested in "like-kind" property may be accorded nonrecognition treatment under *IRC Section 1033(g)(1)*. n42

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.02

§ 8A.02 Similar Property Requirement

[1] Relationship to Like-Kind Property Test

Generally, to defer recognition of gain under *IRC Section 1033*, the taxpayer must either reinvest the proceeds of an involuntary conversion in replacement property "similar or related in service or use" to the property converted or use the proceeds to acquire a controlling stock interest in a corporation holding such qualifying replacement property. n43 In addition, *IRC Section 1033(g)* provides special rules that allow certain converted real property to be replaced with "like-kind property." *IRC Section 1033* does not operate to the exclusion of the similar or related in service or use rule.

■ *Federally Declared Disaster Areas.* Where an involuntary conversion occurs with respect to property held for productive use in a trade or business or for investment located in a disaster area and converted as a result of a federally declared disaster, n43.1 *any* tangible property of a type held for productive use in a trade or business is treated as "property similar or related in service or use" to the property involuntarily converted for purposes of *IRC Section 1033*. n44 Note that while the involuntarily converted property may be property held for productive use in a trade or business *or for investment*, the replacement property subject to the amendment must be of a type held for productive use in a trade or business, with no mention of property held for investment. n45 The legislative history does not elaborate on this seeming incongruity.

The relationship between the like-kind test, usually used in the context of *IRC Section 1031*, and the similar or related in service or use test is codified in *IRC Section 1033(g)*:

"[I]f real property ... held for productive use in trade or business or for investment is ... involuntarily converted, property of a like kind to be held either for productive use in trade or business or for investment shall be treated as property similar or related in service or use to the property so converted."

When *IRC Section 1033(g)* applies, the taxpayer has a choice of whether to use the "similar or related in service or use" standard n46 or the "like-kind" standard n46.1 in choosing replacement property. n46.2 For example, in *Davis v. United States*, n47 the government condemned certain agricultural properties, and the taxpayer reinvested the proceeds in improvements on previously owned industrial land. The district court held that the reinvestment was of a "like-kind" and, therefore, qualified for nonrecognition. This holding was contrary to the Service's position that improvements to owned land are not like-kind. The Ninth Circuit nonetheless affirmed on the grounds that the reinvestment was in property similar or related in use and, consequently, found it unnecessary to determine the like-kind test. However, this

"liberal" interpretation of the similar or related-in-use test may not necessarily be followed by other circuits.

As seen below, this relationship has led courts to adopt the like-kind test for replacement property if real property is condemned or sold under threat of condemnation.

Planning Tip:

The similarity of *IRC Sections 1031* and *1033* provides taxpayers with the choice of treatment if real property is involuntarily converted. Pursuant to *IRC Section 1031*, a taxpayer can dispose of property while deferring the gain or loss inherent in the property by exchanging the property for like-kind replacement property. However, if a taxpayer suffers a loss on a conversion, it may be advantageous to treat the transaction as an *IRC Section 1033* involuntary conversion since losses are deferred under *IRC Section 1031*.

[2] Restrictions on Replacement Property

[a] Based on Purpose of Ownership

In determining whether replacement property qualifies as an involuntary conversion for nonrecognition, courts have stratified treatment depending on the type of property owner involved. This stratification is summarized as follows:

(1) For all involuntary conversions except condemnations or threats of condemnation:

(a) owner-users (e.g., operators and users of a manufacturing plant) must invest in replacement property having the same end use (e.g., another manufacturing plant, not a warehouse); n48

(b) owner-investors (e.g., owners and lessors of an office building) must invest in replacement property having the same business purpose (e.g., another property held out for lease). n49

(2) For all condemnations or threats of condemnation of business or investment real property, the qualification of the replacement property may be determined under *IRC Section 1033* or under the like-kind rules of tax-deferred exchanges whereby business or investment property may be replaced with other business or investment property. n50

If an owner-user's property is converted in a way other than condemnation or threat thereof (item (1) above), a functional use test is applied to determine whether replacement property is "similar or related in use or service." Both the converted property and the replacement property must have a close functional similarity and have closely related physical characteristics and similar end uses to be considered similar or related. n50.1 For example, a hardware store that was destroyed by arson was held to be similar in use or kind to the replacement property, which was also operated as a hardware store. n51

In contrast, the replacement of a light manufacturing plant with a wholesale grocery warehouse, unimproved real estate with improved real estate, or a building lease with machinery would not qualify for nonrecognition. As an example of the Service's strict interpretation in this area, *Revenue Ruling 76-319* held that a recreational bowling center was not similar or related in service or use to a billiard center since their physical characteristics differed. n52 The replacement of a condemned parcel of real estate with a partnership interest in a partnership that purchases real estate also does not qualify for nonrecognition under *IRC Section 1033*. n53

However, the above stated distinction between owner-users and owner-investors is not well defined. Indeed, the owner-investor need only have the same business purpose for the replacement property. The following excerpt from *Revenue Ruling 64-237*, n54 explains the owner-investor's requirement regarding replacement property:

"In considering whether replacement property acquired by an investor is similar in service or use to the converted property, attention will be directed primarily to the similarity in the relationship of the services or uses which the original and replacement properties have to the taxpayer-owner. In applying this test, a determination will be made as to whether the properties are of a similar service to the taxpayer, the nature of the business risks connected with the properties, and what such properties demand of the taxpayer in the way of management, services, and relations to his tenants."

For example, where the taxpayer is a lessor, who rented out the converted property for a light manufacturing plant, and then rents out the replacement property for a wholesale grocery warehouse, the nature of the taxpayer-owner's service or use of the properties may be similar although that of the end users changes. The two properties will be considered as similar or related in service or use where, for example, both are rented and where there is a similarity in the extent and type of the taxpayer's management activities, the amount and kind of services rendered by him to his tenants, and the nature of his business risks connected with the properties.

In contrast, the IRS has ruled that a taxpayer who uses insurance proceeds from the destruction of an apartment building to purchase a motel cannot take advantage of *IRC Section 1033* because, in changing from a lessor of apartments to an operator of a motel, the taxpayer's relationship to the properties has substantially altered. Because of the difference in services required with respect to the properties, the motel was not similar or related in service or use to the apartment building. n55

If the end use of the property does not change, a taxpayer apparently may use the proceeds of an involuntary conversion to rearrange existing plant facilities or to remodel currently owned buildings. The Service has held that proceeds can be used to remodel other facilities owned prior to conversion as long as they can be used in a manner similar to the property converted. n56

Thus, it is the service or use that the properties have to the taxpayer that is relevant, regardless of whether the taxpayer is a user or investor. If the taxpayer is an owner-lessor of either the original or the replacement property, and uses or operates the other, the relationship of the original and replacement properties to the taxpayer will be substantially different. n57

The Service has ruled that a timely acquired fee simple property interest qualifies under *IRC Section 1033(a)* as replacement property similar or related in service to an involuntarily converted 15-year leasehold if the fee property is to be used in the same business and for the identical purpose as the condemned leasehold. n58 A replacement of a 10-year n59 or 20-year n60 leasehold with fee simple property has also been held to qualify under § 8.A08[3]. The IRS has also ruled that fee simple property can qualify as replacement property for involuntarily converted easements. n60.1

A lessee under a long-term lease may replace its leasehold interest with a fee interest in real property under *IRC Section 1033* if the property where the leasehold is located is condemned. n61 The same does not hold true, however, if the property is destroyed by a fire or other casualty, rather than condemned. In that case, the lessee has not suffered an involuntary conversion of its leasehold. Rather the loss is only to improvements on the property. Thus, a lessee who uses insurance proceeds received from a fire on leased property to purchase other property in fee cannot use *IRC Section 1033* to defer recognition of gain on receipt of the proceeds, because the property destroyed by the fire and insured by the insurance policy is the lessee's tangible property, not the leasehold itself. Notwithstanding the damage to the property, the lessee's leasehold interest remains intact; therefore, the fee interest in the property purchased does not qualify as replacement property to the leasehold interest. n62

[b] Replacement of Condemned Property

If business or investment in real property is converted from condemnation or threat thereof, the taxpayer may apply either the similar use test or the "like-kind" test to the replacement property. A taxpayer benefits if the property falls in this category as the like-kind rule is generally more liberal than the "similar or related in use or service" test. Thus, the proceeds from condemned real property may be invested in "like-kind" property, which may be either investment real estate or real estate used in the taxpayer's business. n62.1 See § 8.01, above, for further discussion of the "like-kind" type of replacement. See § 8.02[2][a] above for a further discussion of "like-kind" in connection with Presidentially Declared Disasters.

In 1971, the Service issued *Revenue Ruling 71-41*, n63 which seems to modify the general proposition that all forms of real estate held for productive use in a trade or business or for investment are like-kind with other real estate so held, as in the case of *IRC Section 1031*. In this ruling, a taxpayer owned and rented out a warehouse and land that was condemned by the state at a gain to the taxpayer. The taxpayer used the condemnation proceeds to erect a gas station on other land currently owned by him, and he then rented the gas station to an oil company. The Service ruled the taxpayer did not qualify for the liberal "like-kind" test as "the replacement property" (gas station without land) and the property converted (land and warehouse) were not properties of a "like kind." The Service did not elaborate on this conclusion but added that the gas station qualified for involuntary conversion treatment regardless, based on the "similar or related in service or use" test. n64

[c] Improved Dealer-Owned Property

While real property owned by dealers is generally subject to the provisions of involuntary conversions, problems may arise when the converted property has also been improved. When improved dealer property has been converted, the replacement property must pass the narrow end-use test (the strict interpretation of the "similar or related in use or service" rule) rather than the broader "like-kind" test. n65

[d] Acquisition from Related Persons

Deferral of gain under *IRC Section 1033* is denied in some cases if the replacement property is purchased from a related party. n66 The deferral generally is denied for the following taxpayers: n67

- (1) C corporations;
- (2) partnerships (and presumably LLCs) in which one or more C corporations own more than 50 percent of the capital interest or profits interest in the partnership at the time of the involuntary conversion; and
- (3) effective for involuntary conversion occurring after June 8, 1997, any other taxpayer (including an individual), if, with respect to property that is involuntarily converted for the year, the taxpayer has aggregate realized gains exceeding \$100,000. In the case of a partnership or S corporation, this annual \$100,000 limit applies to both the entity and to the partner or shareholder.

With respect to the ownership requirement in (2) above, the ownership of capital or profits interests in the partnership can be direct or indirect (determined in accordance with *IRC Section 707(b)(3)*). n68 The disqualification does not apply to the extent that the related person acquired the replacement property or stock from an unrelated person during the period described in *IRC Section 1033(a)(2)(B)*. n69 Thus, the transfer of replacement property among related entities will not trigger disqualification, provided the property is timely acquired by one of those entities from an unrelated party. Applying this rationale, the IRS in a complex technical advice memorandum ruled that property acquired by a taxpayer through the merger of a related entity qualified as replacement property. n69.1 The term "related person" is defined by cross reference to *IRC Sections 267(b)* and *707(b)(1)*. n70

[3] Who May Make the Replacement

Generally, the owner of the involuntary converted property makes the election for nonrecognition of gain and reinvests in the replacement property, but there are a number of exceptions.

[a] Decedents' Estates

The courts and the Service conflict as to the treatment of decedents' estates. The Service has held that, when a property owner receives the proceeds of an involuntary conversion, but dies before making a suitable replacement, her personal estate representative cannot reinvest the proceeds and thereby avoid gain recognition. ⁿ⁷¹ Previously, however, the court in *Estate of Goodman v. Commissioner* ⁿ⁷² held that a personal representative can reinvest and qualify for nonrecognition. In 1974, the Tax Court held that, when a surviving spouse completed an involuntary conversion commenced by the taxpayer, the conversion *did not qualify* for the nonrecognition treatment because the spouse purchased the replacement property in her own name rather than in the name of the estate, which she apparently could have done as executrix. ⁿ⁷³

[b] Trusts

The Service and Tax Court have also found *IRC Section 1033* applicable to trusts. The Service has held that, when the grantor of a reversionary trust is treated as the owner of the trust and is taxable on any gains realized on the sale of trust property, the grantor is the "taxpayer" for *IRC Section 1033* purposes and may make an election to have the nonrecognition provisions apply. ⁿ⁷⁴ In *Estate of Gregg v. Commissioner*, ⁿ⁷⁵ the taxpayer placed property in a revocable grantor trust prior to its condemnation. The grantor died before completing replacement of the condemned property; accordingly, the grantor's surviving spouse and the executor jointly elected *IRC Section 1033* involuntary conversion treatment, and the trust completed the replacement. The court held that *IRC Section 1033* applied to the grantor, and the trustee was acting on behalf of the grantor. Thus, replacements made after the grantor's death qualified the initial disposition for nonrecognition.

The IRS has also ruled that a testamentary trust's acquisition of qualifying replacement property meets the requirements of *IRC Section 1033(g)* regarding productive use of the property in a trade or business, even though by its own terms the trust would soon terminate, and the acquired property would be distributed to a trust beneficiary. ^{n75.1}

[c] Partners and Partnerships

In the case of partnerships, generally only the partnership, not the partners, may make the election and defer the gain when the partnership has property involuntarily converted. ⁿ⁷⁶

The IRS has privately ruled that two partnerships formed by a partnership whose property was involuntarily converted are a continuation of the original partnership, and therefore are entitled to nonrecognition and can re-invest condemnation proceeds under *IRC Section 1033* under the election made by the original partnership. ^{n76.1}

[d] Shareholders of Corporations

IRC Section 1033 nonrecognition is not available to a sole individual shareholder who, on complete liquidation of his corporation following condemnation of its property, received the condemnation proceeds awarded the corporation and reinvested them in similar property. ⁿ⁷⁷

However, a corporate parent may reinvest under Treas Reg § 1.1033(b) following the liquidation under *IRC Section 332* of a subsidiary that experienced an involuntary conversion. ⁿ⁷⁸

[e] Single Member LLCs

The IRS has ruled that a single-member LLC owned by the taxpayer may purchase replacement property in exchange for property that was owned separately by the taxpayer, and still qualify for deferral of gain under *IRC Section 1033*.ⁿ⁷⁹ This is an exception to the usual rule that the replacement property must be purchased by the taxpayer.ⁿ⁸⁰ In the ruling, two LLCs owned by the taxpayer purchased replacement property. Neither LLC was a corporation under federal regulations, and each was treated as a sole proprietorship for federal income tax purposes.ⁿ⁸¹ The IRS's rationale was that the LLCs were single-member LLCs owned by the taxpayer, and that, under federal regulations, they would be disregarded as entities separate from the taxpayer for federal tax purposes.ⁿ⁸² The IRS cautioned that or final regulations pertaining to this issue might be issued in the future. To the extent any such regulations were inconsistent with any conclusion in this ruling, they would modify or revoke the ruling.ⁿ⁸³

[4] Structuring Transactions Under *IRC Section 1033*

In an involuntary conversion, no gain is recognized to the extent the taxpayer uses proceeds of the conversion to acquire control of a corporation that owns qualifying replacement property.ⁿ⁸⁴ One has control if he owns at least 80 percent of the combined voting power of all classes of stock and at least 80 percent of the total number of shares of all other classes of stock.ⁿ⁸⁵ The acquired corporation must own the similar or related property (i.e., the qualifying replacement property) at the time control is acquired.ⁿ⁸⁶

Structuring certain transactions involving property transfers within *IRC Section 1033* requires caution. In *Templeton v. Commissioner*,ⁿ⁸⁷ a taxpayer, upon learning that Tract A would be condemned, transferred Tract B, which he owned jointly with his son and daughter, to a newly formed corporation. He then used his condemnation proceeds to acquire control of the corporation. The court held that the transaction did not qualify for nonrecognition because the taxpayer did not establish that he acquired the stock "for the purpose of" replacing the condemned property. On the other hand, *Revenue Ruling 84-29* indicates that a transfer of assets (which were purchased in accordance with *IRC Section 1033*) to a taxpayer's newly organized subsidiary will qualify since the taxpayer never lost "control of the assets."ⁿ⁸⁸

In the case of an acquisition of stock of an affiliated corporation, *IRC Section 1033* requires the acquired stock's "cost" to be measured by its unadjusted basis pursuant to *IRC Section 1012*, and the acquisition of stock to be treated as a "purchase." If one corporation acquires the stock of a commonly controlled "sister" corporation subject to *IRC Section 304(a)*, the acquired stock is treated as if it is received as a contribution to capital if the acquisition results in a deemed dividend.ⁿ⁸⁹ As a contribution to capital, the basis of the stock acquired is not its cost, so that the stock will not qualify as *IRC Section 1033* replacement property. Conversely, a subsidiary's purchase of its parent's stock for replacement purposes using the proceeds from an involuntary conversion should qualify as the parent corporation is not deemed to have received a taxable constructive dividend.ⁿ⁹⁰

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.03

§ 8A.03 Basis Computation

Generally, if property is converted directly into replacement property as the result of an involuntary conversion, the basis of the replacement property is equal to the basis of the original property, decreased by money received and not reinvested in replacement property, and increased by the amount of gain (or decreased by the amount of loss) a taxpayer recognizes in connection with the conversion. n91

However, if property is involuntarily converted into money or property not similar or related, the basis of property acquired as replacement property is its cost less any deferred gain (i.e., gain not recognized). n92 If the property purchased consists of more than one piece of property, the basis determined under the prior sentence must be allocated to the purchased properties in proportion to their respective costs. n93

The basis reduction and allocation rules are applied first solely to Section 1250 properties and to unrecognized Section 1250 recapture gain, and then to all purchased properties (including the Section 1250 properties) and to remaining unrecognized gain. n94 The unrecognized Section 1250 recapture gain in respect of the acquired property includes the amount of additional depreciation attributable to the Section 1250 property that was disposed of. The amount is equal to the amount of gain that escaped taxation on the disposition. n95

A special basis rule applies when the replacement property is stock in a corporation to which a basis reduction is required. n96 In that case, the basis of the property held by the corporation at the time the taxpayer acquired control n97 generally must be reduced by the same amount by which the taxpayer reduces its basis in the stock. n98 The corporation's adjusted basis in its assets will not be reduced, in the aggregate, below the taxpayer's basis in its stock (determined after the appropriate basis adjustment for the stock). n99 In addition, the basis of any individual asset will not be reduced below zero. n100 The basis reduction first is applied to: (1) property that is similar or related in service or use to the converted property, then (2) to other depreciable property, then (3) to other property. n101

The application of these rules can be demonstrated by the following examples:

Example 1:

Assume that a taxpayer owned a commercial building with an adjusted basis of \$100,000 that was involuntarily converted, causing the taxpayer to receive \$1 million in insurance proceeds. Further assume that the taxpayer acquires, as replacement property, all of the stock of a corporation, and the sole asset of

the corporation is a building with a value and an adjusted basis of \$1 million. Under the provision, for *IRC Section 1033* to apply, the taxpayer would reduce its basis in the stock to \$100,000 (as under present law) and the corporation would reduce its adjusted basis in the building to \$100,000.

Example 2:

Assume the same facts as in Example 1, except that on the date of acquisition, the corporation has an adjusted basis of \$100,000 (rather than \$1 million) in the building. Under the new provision, the taxpayer reduces its basis in the stock to \$100,000 (as under present law) and the corporation is not required to reduce its adjusted basis in the building.

Planning Tip:

Taking corporate stock as replacement property, rather than acquiring property owned by the corporation directly, can have disastrous tax consequences because of the double taxation that can result. Because both the taxpayer's basis in the corporate stock and the corporation's basis in its assets are reduced, a liquidating distribution by the corporation can result in double taxation--the taxpayer must recognize gain on the

redemption of the reduced-basis stock, n102 and the corporation must recognize gain on the distribution of the reduced-basis distributed property. n103

By acquiring the replacement property directly, the taxpayer avoids having to pay the tax due from the corporation on the liquidation in exchange for a reduced basis in the property.

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.05

§ 8A.05 Period of Replacement

Generally, the taxpayer must replace the converted property within two years from the close of the taxable year in which any gain from the conversion is realized. n105 However, the replacement period is three years in the case of government condemnation of business investment real property held for productive use in trade or business or for investment. n106

Real property that is stock in trade or held by the taxpayer primarily for sale does not qualify for the 3-year replacement period. n106.1 A taxpayer may request an extension of the deferral period. n107 Multiple replacement periods with respect to a single condemnation are not permitted, even if conversion proceeds are received on different dates. An extension of the deferral period should be requested when all or a portion of proceeds from a condemnation may be received after the regular replacement period expires. n108 The date of the conversion in the event of a condemnation is the date the condemning authority takes possession of the condemned property. n109

In the case of certain federally declared disasters, the time under *IRC Section 1033(a)(2)(B)* to rebuild or buy a principal residence is four years. n110 This rule is applicable to residences situated in disaster areas determined by the President to warrant assistance by the Federal Government under the Robert T. Stafford Disaster Relief and Emergency Assistance Act. n111 Extensions of time beyond the four-year period may be applied for pursuant to statutory authority. n112

For property that was involuntarily converted within the New York Liberty Zone as a result of the terrorist attacks that occurred on September 11, 2001, the replacement period is five years. The five-year replacement period is available only if substantially all of the use of the replacement property is in New York City. n112.1

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.06

§ 8A.06 Election Requirement

In a case where property is converted into money or property not similar or related in service or use to the converted property, the nonrecognition provisions of *IRC Section 1033* are not mandatory. Taxpayers make the election to recognize or defer the gain from involuntary conversions by either reporting or omitting to report the gain in the tax return for the year of conversion. n113 The filing of a return in which *IRC Section 1033* is not elected is itself an election not to apply *IRC Section 1033*. n114 In the case of a partnership, the election must be made by the partnership and not by partners individually. n115 An election, in whatever form made, is effective only for the year in which it is made, and not for a taxable year for which a return has already been filed. Thus, an election cannot be made for a prior year for which a return not making the election was filed. n116 A taxpayer who elects to report the gain may file a claim for refund for any year in which gain from the involuntary conversion is realized; that claim would have to be filed within the regular period of limitations set forth in *IRC Section 6511* (generally the later of 3 years from the date the return is filed or 2 years from the time the tax is paid). n117

When an election to defer the gain has been made and:

- (1) no replacement property has been purchased;
- (2) conversion proceeds have not been completely utilized; or
- (3) replacement property has been acquired after the replacement period has expired,

it is necessary to file an amended return reporting the gain in the year of the conversion. n118

When the replacement property is acquired, it must be identified as such in the tax return for the year of its acquisition. n119 It is important that details regarding the purchase of replacement property take place and be reported currently. Taxpayers cannot use hindsight either in electing *IRC Section 1033(a)* or in designating replacement property; thus, taxpayers cannot ordinarily designate property as replacement property some time after the replacement property is acquired. n120

Where replacement property has been identified, however, and the taxpayer desires to designate other property as a replacement before the replacement period expires, the Service has ruled that the taxpayer may not substitute. However,

where the replacement property is found not to qualify, substitution within the required period is acceptable. n121

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.07

§ 8A.07 Depreciation Recapture

The ordinary income recapture provisions under *IRC Sections 1245 and 1250* override the provisions of *IRC Section 1033* n122 and may cause income to be recognized upon an involuntary conversion. These rules must be reviewed carefully to ensure that a deferral of income will result.

Generally, when depreciable personal property is involuntarily converted, there may be a recapture of depreciation. The amount of depreciation recapture is treated as ordinary income. In the case of an involuntary conversion, the recapture is limited to the amount of gain recognized plus the fair market value of nondepreciable personal property received in the conversion.

Recapture of depreciation may also be applicable upon the involuntary conversion of depreciable real property such as buildings. If the cost of nonresidential property is depreciated in a manner other than straight-line, all gain will be ordinary income to the extent of all previous depreciation taken. In the case of an involuntary conversion, this recapture is limited to the greater of the following:

- (1) gain recognized upon disposition plus the fair market value of corporate stock acquired as replacement property; n123 or
- (2) the excess of the recaptured depreciation (without regard to the above limitation) over the fair market value of depreciable real property acquired in the conversion. n124

Depreciation recapture is discussed more fully in Chapters 5 and 6.

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.08

§ 8A.08 Depreciation of MACRS Property Acquired in Involuntary Conversions

[1] In General

Regulations cover the proper depreciation of property acquired in involuntary conversions. n124.1 While much of their focus is on non-real estate property, the discussion here is directed to their application to involuntarily converted real estate.

The final regulations supersede prior temporary regulations, and generally apply to an involuntary conversion or like-kind exchange of MACRS property for which the time of disposition and the time of replacement both occur after February 27, 2004. n124.2 For an involuntary conversion of MACRS property for which the time of disposition, the time of replacement, or both occur on or before February 27, 2004, a taxpayer may apply these final regulations or rely on prior guidance issued by the IRS in *Notice 2000-4*. n124.3 In either case, a choice to will necessitate seeking IRS consent for a change of accounting method. n124.4

Notice 2000-4 instructed taxpayers how to depreciate replacement MACRS property when the involuntarily converted property was also MACRS property. The notice stated that replacement MACRS property placed in service after January 3, 2000, was to be depreciated over the remaining recovery period of, and using the same depreciation method and convention as, the relinquished MACRS property and that any excess of the basis in the replacement MACRS property over the adjusted basis in the relinquished MACRS property was to be treated as newly purchased MACRS property. *Notice 2000-4* also stated that regulations would be issued to address these transactions. n124.5 The regulations discussed below are the result, and they make *Notice 2000-4* obsolete after February 27, 2004.

[2] Application of Regulations to MACRS Property

The regulations instruct taxpayers how to determine the annual depreciation allowance for MACRS property (i.e. depreciable property placed in service after December 31, 1986) acquired in an involuntary conversion. The regulations also apply to involuntary conversions involving MACRS property that is replaced with other MACRS property in a transaction between members of the same affiliated group. The regulations do not apply to property acquired in an involuntary conversion to replace property whose depreciation allowance is computed under a depreciation system other than MACRS. n124.6

The depreciation treatment used by previous owners in determining depreciation allowances for the replacement

MACRS property is not relevant. In addition, elections made by previous owners in determining depreciation allowances of the replacement MACRS property have no effect on the acquiring taxpayer. n124.7 Regulations clarify that taxpayers cannot depreciate land that is acquired in an involuntary conversion for MACRS property. n124.8

[3] General Rule for Depreciation of Exchanged Basis

Regulations provide rules for determining the applicable recovery period, depreciation method, and convention used to determine the depreciation allowances for the replacement MACRS property with respect to so much of the taxpayer's basis (as determined under the involuntary conversion rules) in the replacement MACRS property as does not exceed the taxpayer's adjusted depreciable basis in the relinquished MACRS property (exchanged basis). In general, the exchanged basis is depreciated over the remaining recovery period of, and using the depreciation method and convention of, the relinquished MACRS property (general rule). n124.9 It should be noted that the term "relinquished MACRS property" in this context refers to the MACRS property that is transferred by the taxpayer in an involuntary conversion. n124.9.1

This general rule applies if the replacement MACRS property has the same or a shorter recovery period or the same or a more accelerated depreciation method than the relinquished MACRS property. n124.10 Therefore, the general rule can adversely affect taxpayers whose property is involuntarily converted by requiring depreciation of replacement MACRS property over the longer recovery period of the relinquished MACRS property. To avoid this problem, the regulations allow taxpayers to elect not to apply the general rule, but instead to treat the replacement MACRS property as MACRS property placed in service by the acquiring taxpayer at the time of replacement. n124.11

The general rule does not apply if the replacement MACRS property has a longer recovery period or less accelerated depreciation method than the relinquished MACRS property. In that case, the taxpayer's exchanged basis in the relinquished MACRS property is depreciated beginning in the year of replacement over the remainder of the recovery period that would have applied to the replacement MACRS property if the replacement MACRS property had originally been placed in service when the relinquished MACRS property was placed in service by the acquiring taxpayer. n124.12 Similarly, if the depreciation method of the replacement MACRS property is less accelerated than that of the relinquished MACRS property, then the taxpayer's exchanged basis in the relinquished MACRS property is depreciated beginning in the year of replacement using the less accelerated depreciation method of the replacement MACRS property that would have applied to the replacement MACRS property if the replacement MACRS property had originally been placed in service when the relinquished MACRS property was placed in service by the acquiring taxpayer. n124.13

For taxpayers who use the optional depreciation tables to determine depreciation allowances for the replacement MACRS property instead of the formulas, n124.14 the regulations provide guidance on choosing the applicable optional table and explain the modifications that must be made to compute depreciation allowances for the replacement MACRS property. Taxpayers who used an optional depreciation table for the relinquished MACRS property are not required to use an optional table for the depreciable exchanged basis of the replacement property. n124.15

Regulations also deal with the depreciation convention to be used. For MACRS nonresidential real property and residential rental property, the exchanged basis must be depreciated using the mid-month convention. n124.15.1 Regarding the recovery period of the replacement property, the replacement MACRS property is treated as placed in service at the time of replacement under the convention that applies to the replacement MACRS property (i.e. the mid-month convention for MACRS nonresidential real property and residential rental property). The remaining recovery period of the replacement MACRS property at the time of replacement is the excess of the recovery period for the replacement MACRS property over the period of time that the replacement MACRS property would have been in service if it had been placed in service when the relinquished MACRS property was placed in service and removed from service at the time of disposition of the relinquished MACRS property. This period is determined by using the convention that applied to the relinquished MACRS property to determine the date that the relinquished MACRS

property is deemed to have been placed in service and the date that it is deemed to have been disposed of. The length of time the replacement MACRS property would have been in service is determined by using these dates and the convention that applies to the replacement MACRS property. n124.15.2

If, using the convention that applies to the relinquished MACRS property, the remaining recovery period of the relinquished MACRS property at the beginning of the year of disposition is less than the number of months between the first of that year and the time of disposition, the entire basis in the relinquished MACRS property is deductible in the year of disposition and the exchanged basis is zero. n124.15.3

Example:

On January 1, 2004, E, a calendar-year taxpayer, acquired and placed in service Canopy V, a gas station canopy. The purchase price of Canopy V was \$60,000. On August 1, 2004, Canopy V was destroyed in a hurricane and was therefore no longer usable in E's business. On October 1, 2004, as part of the involuntary conversion, E acquired and placed in service new Canopy W with the insurance proceeds E received due to the loss of Canopy V. E elected not to deduct the additional first year depreciation for 5-year property placed in service in 2004. E depreciates both canopies under the general depreciation system n124.15.4 by using the 200-percent declining balance method of depreciation, a 5-year recovery period, and the half-year convention. No depreciation deduction is allowable for Canopy V in 2004. The depreciation deduction allowable for Canopy W for 2004 is \$12,000 (\$60,000 x the annual depreciation rate of .40 x 1/2 year). For 2005, the depreciation deduction for Canopy W is \$19,200 (\$48,000 adjusted basis x the annual depreciation rate of .40). n124.15.5

[4] Rules for Depreciation of Excess Basis

Any excess basis in replacement MACRS property over the taxpayer's exchanged basis in the relinquished MACRS property is referred to as the excess basis. n124.16 The excess basis in the replacement MACRS property is treated as property that is placed in service by the acquiring taxpayer in the year of replacement. The depreciation allowances for the excess basis are determined by using the applicable recovery period, depreciation method, and convention prescribed under *IRC Section 168* for the replacement MACRS property at the time of replacement. However, if replacement MACRS property is disposed of during the same taxable year the relinquished MACRS property is placed in service by the acquiring taxpayer, no depreciation deduction is allowable for either MACRS property. n124.17

[5] Special Rules for Deferred Transactions

A taxpayer who disposes of relinquished MACRS property before acquiring the replacement MACRS property cannot take depreciation on the relinquished MACRS property during any intervening period between the disposition of the relinquished MACRS property and the acquisition of the replacement MACRS property. Accordingly, the recovery period for the replacement MACRS property is suspended during this period. n124.18

[6] Acquisition Prior to Disposition

When replacement MACRS property is acquired and placed in service by a taxpayer before the relinquished MACRS property is disposed of (for example, under threat of condemnation), the regulations allow the taxpayer to depreciate the unadjusted depreciable basis of the replacement MACRS property until the taxpayer disposes of the relinquished MACRS property. At the time of disposition of the relinquished MACRS property, the taxpayer determines the exchanged basis and the excess basis of the replacement MACRS property and begins to depreciate the depreciable exchanged basis of the replacement MACRS property in accordance with the rules for depreciation of exchanged basis. n124.19 The depreciable excess basis of the replacement MACRS property continues to be depreciated by the taxpayer in accordance with the rules for excess basis. In the year of disposition of the relinquished MACRS property, the taxpayer must include in taxable income the excess of the depreciation deductions allowable on the unadjusted

depreciable basis of the replacement MACRS property over the depreciation deductions that would have been allowable to the taxpayer on the depreciable excess basis of the replacement MACRS property from the date the replacement MACRS property was placed in service by the taxpayer (taking into account the applicable convention) to the time of disposition of the relinquished MACRS property. n124.19.1

[7] Transactions Involving Land or Other Nondepreciable Property

Land or other nondepreciable property acquired in an involuntary conversion for MACRS property is not depreciable, and is not within the scope of the regulations. If MACRS property or both MACRS property and land or other nondepreciable property are acquired in an involuntary conversion for land or other nondepreciable property, the basis of the replacement MACRS property is treated as property placed in service by the acquiring taxpayer in the year of replacement. n124.20

[8] Election Not To Apply Regulations

In order to ease computational and administrative difficulties that could result from having to track different depreciation components of one asset, taxpayers may elect to have the regulations not apply. n124.21 A taxpayer who makes that election must treat the entire basis (i.e. both the exchanged and excess basis) of the replacement MACRS property as being placed in service by the acquiring taxpayer at the time of replacement. Consistent with this treatment, the taxpayer treats the relinquished MACRS property as disposed of at the time of the disposition of the relinquished MACRS property. n124.22

A separate election is required for each involuntary conversion. n124.23 The election must be made in the manner provided for on Form 4562, Depreciation and Amortization, and its instructions, n124.23.1 and must be made by the due date (including extensions) of the taxpayer's Federal tax return for the year of replacement. n124.23.2 The election is made for each member of a consolidated group by the common parent of the group, by the partnership (and not by the partners separately) in the case of a partnership, or by the S corporation (and not by the shareholders separately) in the case of an S corporation. n124.23.3 The election may be revoked only with the consent of the Commissioner, which will be granted only in extraordinary circumstances. n124.24

[9] Additional First Year Depreciation

Regulations n124.25 provide that the exchanged basis (referred to as the "carryover basis" in these regulations) and the excess basis, if any, of the replacement MACRS property (referred to as the "acquired MACRS property" in these regulations) is eligible for the additional first year depreciation deduction provided under prior *IRC Section 168(k)* or *IRC Section 1400L(b)* if the replacement MACRS property is qualified property, n124.26 or 50-percent bonus depreciation property under prior law. n124.27 However, if qualified property or 50-percent bonus depreciation property is placed in service by the taxpayer and then disposed of by that taxpayer in an involuntary conversion in the same taxable year, the relinquished MACRS property (referred to as the "exchanged or involuntarily converted MACRS property" in these regulations) is not eligible for the additional first year depreciation deduction. n124.27.1 However, the exchanged basis (and excess basis, if any) of the replacement MACRS property may be eligible for the additional first year depreciation deduction. The rules provided these regulations for additional first-year depreciation n124.28 apply without regard to whether the taxpayer applies or elects not to apply the MACRS depreciation regulations for property acquired in an involuntary conversion. n124.29

[10] Involuntary Conversions Involving Multiple Properties

The determination of the basis of multiple properties acquired as a result of an involuntary conversion is described in regulations. n124.30 The IRS and Treasury Department believe that issues related to allocation of basis among multiple properties involved in like-kind exchanges or involuntary conversions for purposes of depreciation are covered in those regulations under *IRC Section 1033*; therefore, the regulations under *IRC Section 168(i)* do not address these issues.

CHAPTER 8A Involuntary Conversions of Real Estate *

1-8A Federal Taxes Affecting Real Estate § 8A.09

§ 8A.09 Statute of Limitations Issues in Involuntary Conversions

If a taxpayer elects to defer gain from an involuntary conversion, a special statute of limitations rule applies. The statutory period for assessing a deficiency related to that gain for a taxable year in which any part of the gain on the conversion is realized, does not expire until three years from the date the IRS is notified by the taxpayer of the replacement of the converted property or of an intention not to replace. n125 This has the effect of extending the general 3-year period of limitations under *IRC Section 6501(a)*. n126 The IRS may assess a deficiency within the extended three-year period without regard to any other statutory provisions that would otherwise prevent the assessment. n127

Regulations detail the manner of notification. If a replacement has been made, the notification must contain all the details in connection with the replacement. The notification must be made in the return for the tax year(s) in which the replacement occurs, or the intention not to replace is formed, or the period for replacement expires. n128 If proper notification is not given, the statute of limitations does not begin to run, and the IRS may assess a deficiency at any time. n129 The IRS has also ruled that the same extended statute of limitations for assessing a deficiency with respect to a taxpayer's gain on the involuntary conversion applies for partners of the taxpayer and, if the partner is a lower-tier subsidiary, against that partner's parent corporation. n130

When gain is realized from an involuntary conversion of property in more than one taxable year, the statute of limitations does not run until the expiration of the period within which a deficiency may be assessed for last of those taxable years. n131

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.01

§ 9.01 Overview of Relief Provisions and Other Tax Benefits for Personal Residences

The most significant, and in many cases the only, real estate experience for the vast majority of taxpayers will occur in connection with their personal residences. Many of the tax rules applicable to personal residences are different than those applicable to other types of real estate. In some circumstances, gain realized and received in cash is not subject to tax. n1 Depreciation and realized losses are generally not deductible. n2 Interest expense is subject to different deduction limitations than those applicable to business or investment real estate. n2.1 State or local tax incentives relating to personal residences may exist. n3 Other rules of general applicability do apply to personal residences. Gain realized on the sale or exchange of a taxpayer's residence may result in taxable income if the transaction does not satisfy the statutory requirement of the exclusion provision. n3.1 The taxpayer's holding period will determine whether any gain subject to tax is short-term or long-term capital gain. n4

Legislation enacted in 1997 significantly changed the relief provisions with respect to sales of principal residences. *IRC Section 1034*, relating to rollovers of gain from the sale of principal residences, was repealed, effective generally for sales and exchanges after May 6, 1997. n5 *IRC Section 121*, relating to the exclusion of gain from sales of principal residences, was revised and expanded and now excludes from gross income \$250,000 of gain from the sale of a principal residence (\$500,000 for certain taxpayers filing a joint return). n6 The exclusion under *IRC Section 121* is now available without regard to the taxpayer's age, and the exclusion is no longer a "once in a lifetime" opportunity. The 1997 amendments to *IRC Section 121* are effective generally for sales and exchanges after May 6, 1997. n7

Section 9.02, below, discusses relief provisions under current *IRC Section 121*.

Section 9.03[1], below, discusses the relief provisions available under former *IRC Section 1034*. *Section 9.03[2], below*, discusses the former \$125,000 once-in-lifetime exclusion from income for taxpayers 55 and over who sold their principal residences. n8 The discussion of these repealed provisions has been retained in this treatise since the reader may encounter cases under audit where the repealed provisions were in effect at the time of the applicable sales or exchanges.

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.02

§ 9.02 Exclusion of Gain from Sale of Principal Residence

[1] In General

IRC Section 121 excludes from gross income \$250,000 of gain from the sale of a principal residence (\$500,000 for certain taxpayers filing a joint return). n9 Each unmarried or married taxpayer who jointly owns property and who files a separate return is eligible to exclude up to \$250,000 of gain that is attributable to each taxpayer's interest in the property. n9.1 The exclusion is available for any sale or exchange of a principal residence that satisfies the ownership and use requirements discussed below, unless an exclusion has applied to a sale or exchange of a principal residence within the preceding two years. The two-year period is measured from the date of the sale in question. n9.2 In circumstances in which the buyer needs occupancy before the two-year period will have expired, it is possible for the seller to take advantage of the relief provision and still accommodate the buyer by entering into a contract with a closing date after the end of the two-year period and allowing the buyer to rent the property for the interim period. n9.3

Example:

H&P purchase Blackacre on 7/1/95 and immediately use it as their principal residence. On 10/18/97, they purchase Whiteacre, to which they move as their new principal residence, converting Blackacre to a rental property. They sell Blackacre on 6/10/98 in a transaction that takes advantage of *IRC Section 121*. In January, 2000, they put Whiteacre on the market and find a buyer who must move in by 6/1/00. H&P can sign a contract for the sale of Whiteacre with a 6/15/00 closing date, providing that the risk of loss from fire or other casualty remains with them, and lease Whiteacre to the Buyer from 6/1/00 through 6/15/00, for an arm's length rental. The sale of Whiteacre will close (and take place for tax purposes) on 6/15/00, which is more than two years after the sale of Blackacre. H&P occupied each of Blackacre (from 7/1/95-10/18/97) and Whiteacre (from 10/19/97-5/31/00) as their principal residence for more than two years during the five-year period preceding the sale of each property. If other requirements of *IRC Section 121* are met, each sale can take advantage of *IRC Section 121*. n9.4

In determining whether there has been a sale or exchange within the preceding two years, sales or exchanges before May 7, 1997, are not taken into account. n10 The exclusion is available without regard to the taxpayer's age. n11 The exclusion does not apply to any gain attributable to depreciation adjustments n12 for periods after May 6, 1997; such gain must be recognized. n13 Depreciation adjustments allocable to any portion of the property to which the *IRC*

Section 121 exclusion does not apply, however, are not taken into account. n14 The statute is silent about recapture of pre-May 7, 1997 depreciation. The IRS has ruled, however, that a portion of the gain attributable to those depreciation deductions must be recaptured under Treas Reg § 1.121-l(b)(2). n14.1

[2] Ownership Requirement

To qualify for the exclusion, the taxpayer must have owned the property for at least two years of the five-year period ending on the date of the sale or exchange. n15 The ownership requirement may be satisfied by establishing ownership for 24 full months or 730 days. The requirements of ownership and use may be satisfied during non-concurrent periods, provided that both ownership and use requirements are met on the date of the sale or exchange. n15.1

If a residence is held by a trust, a taxpayer is treated as the owner and seller during the period that the taxpayer is treated as the owner of the trust or the portion of the trust that includes the residence under the grantor trust provisions. Therefore, a sale of the residence by the trust is eligible for the *IRC Section 121* exclusion. n15.2 Similar treatment applies if the residence is owned by a single-member entity that is disregarded as an entity separate from its owner. In that case, the owner is treated as owning the residence for purposes of satisfying the 2-year ownership requirement, n15.3 and the sale or exchange by the entity will be treated as if made by the owner. n15.4

The IRS takes the position that residences owned by a partnership or limited partnership are not eligible for the exclusion under *IRC Section 121*, n15.5 even if a grantor trust owns nearly all of the partnership interests. n15.6 The Tax Court has also held that a residence held by a family partnership was not entitled to the exclusion. n15.6.1

[3] Use as Principal Residence Requirement

[a] In General

To qualify for the exclusion, the taxpayer must have used the property as a principal residence for at least two years of the five-year period ending on the date of the sale or exchange. n15.7 The use requirements may be satisfied by establishing use for 24 full months or 730 days. The requirements of ownership and use may be satisfied during non-concurrent periods, provided that both ownership and use requirements are met on the date of the sale or exchange. n15.8

"Use" requires occupancy of the residence. Short temporary absences as for vacation or other seasonal absence (even if the residence is rented) are counted as periods of use. n15.9 Regulations do not specify a maximum period that can qualify as short or temporary and that can still qualify as "use" under *IRC Section 121*. The determination will depend on all facts and circumstances, and be made on a case-by-case basis. n15.10

A divided Tax Court has held that the property sold must include the dwelling that the taxpayer actually used as a principal residence. In the case, the taxpayers demolished their old home (which they had used as a principal residence for more than two years) and constructed a new house on the property. They never occupied the new house, however, but instead sold it. The Tax Court held that the taxpayers were not entitled to exclude any gain from the sale under *IRC Section 121* because they never met the "use" requirement with respect to the new house. The court rejected the taxpayers' argument that they were entitled to the exclusion because the new residence was built on the same land where the old residence was located, and that the term "property" as used in *IRC Section 121* included not only the dwelling but also the land on which the dwelling was located. n15.10.1

NOTE:

The dissent in the *Gates* case, joined by five judges, points out the perhaps untenable distinction between remodeling a house (in which case the *IRC Section 121* exclusion would be allowed for a post-remodel sale of the home) and demolishing and rebuilding a new house (the situation for which the majority denied the exclusion). The dissent would allow the *IRC Section 121* exclusion in both cases. Expect an

appeal of the Tax Court's decision. n15.10.2

NOTE:

There are exceptions allowing the "use" requirement to be satisfied notwithstanding long-term absences from the home. One allows absence for outside health care, n15.11 the other allows members of the uniformed services US Foreign Service to elect to suspend the 5-year period during which the 2-year use and ownership requirements must be met during periods of qualified official extended duty. n15.12 Except for these circumstances, non-occupancy for a long-term period cannot be counted as "use." n15.13

Whether property is used by the taxpayer as a residence depends upon all the facts and circumstances. A residence may be a houseboat, a house trailer, or the house or apartment that the taxpayer is entitled to occupy as a tenant-stockholder in a cooperative housing corporation. n15.14

[b] Principal Residence When Taxpayer Has Multiple Residences

In the case of a taxpayer using more than one property as a residence, whether a property is used by the taxpayer as his or her principal residence depends upon all the facts and circumstances. If a taxpayer alternates between two properties, using each as a residence for successive periods of time, the property that the taxpayer uses a majority of the time during the year ordinarily will be considered the taxpayer's principal residence. n15.14.1 The regulation refers to the time spent in a residence *during a single tax year*. In one case, a district court ruled that a residence was not the taxpayers' principal residence because they had spent more time in it than in one of their other residences only in one year of the five-year period. n15.14.2 The court also noted that for the entirety of the five-year period the taxpayers had spent more time in their other homes combined than they did in the house in question. In addition to the taxpayer's use of the property, however, relevant factors in determining a taxpayer's principal residence, include, but are not limited to the following: n15.15

- the taxpayer's place of employment;
- the principal place of abode of the taxpayer's family members;
- the address listed on the taxpayer's federal and state tax returns, driver's license, automobile registration, and voter registration card;
- the taxpayer's mailing address for bills and correspondence;
- the location of the taxpayer's banks; and
- the location of religious organizations and recreational clubs with which the taxpayer is affiliated.

A taxpayer may meet the principal residence use requirement for more than one residence.

In one case, the taxpayers purchased a second home, where the wife lived full-time, while the husband returned only on weekends and non-workdays. The Tax Court agreed with the taxpayers that the second home was their principal residence, even though they kept license and voter registrations, and received mail, at their old residence. They wanted to maintain a consistent appearance regarding the husband's profession and business activities, which were closer to the old residence. In addition, although they dropped nearly all social and organizational attachments at the old residence, they didn't join new ones near the second home because the husband traveled with business and the wife spent much time caring for a daughter. n15.15.1

Example:

T owns two residences, one in Virginia and one in Maine. During Year 1 and Year 2, T lives in the Virginia residence. During Year 3 and Year 4, she lives in the Maine residence. During Year 5, she lives in the Virginia residence. T's principal residence during Years 1, 2, and 5 is the Virginia residence. T's principal residence during Years 3 and 4 is the Maine residence. T would be eligible for the *IRC Section 121* exclusion of gain from the sale or exchange of either residence (but not both) during Year 5. n15.16

[c] Use Determination During Periods of Outside Care

A taxpayer is treated as using his or her residence for purposes of the use requirement during any period in which he or she is incapable of self-care and resides in a licensed nursing home or similar facility, provided the following requirements are met: n15.17

- the taxpayer is physically or mentally incapable of self-care;
- the taxpayer owns and uses the property as a principal residence for at least one year of the five-year period ending on the date of the sale or exchange; and
- the taxpayer owns the property while living in the licensed nursing home or other facility.

Note that this relief provision would not apply to an incapacitated taxpayer who is residing with a relative. n15.18

[d] Property Used in Part as a Residence

The *IRC Section 121* exclusion does not apply to the gain allocable to any portion of property sold or exchanged with respect to which a taxpayer does not satisfy the use requirement if the non-residential portion is separate from the dwelling unit. Thus, if a portion of the property was used for residential purposes and a portion of the property (separate from the dwelling unit) was used for non-residential purposes, only the gain allocable to the residential portion is excludable under *IRC Section 121*. n15.19 Allocation of basis and the amount realized between the business and residential portions of the property must be made in the same manner as any depreciation adjustments. n15.20 No allocation is required if both the residential and non-residential portions of the property are within the same dwelling unit. However, *IRC Section 121* does not apply to any gain allocable to the non-residential portion of the property. n15.21 If the depreciation for periods after May 6, 1997, attributable to the non-residential portion of the property exceeds the gain allocable to the non-residential portion of the property, the excess will not reduce the *IRC Section 121* exclusion applicable to gain allocable to the residential portion of the property. n15.22

[4] Requirements When Joint Return Is Filed

The \$250,000 exclusion is available when a husband and wife file a joint return if either spouse meets the statutory ownership and use requirements with respect to the property. n16 Each spouse is entitled to the full \$250,000 exclusion with respect to property as to which he or she separately satisfied the use and ownership requirements. n16.1 If either spouse filing a joint return fails to meet the ownership and use requirements, the maximum exclusion to be claimed by the couple is the sum of each spouse's limitation amount determined on a separate basis as if they had not been married. For this purpose, each spouse is treated as owning the property during the period that either spouse owned the property. n16.2

Example (1):

Married taxpayers H and W each sell a residence that each had separately owned and used as a principal residence before their marriage. Each spouse meets the ownership and use tests for his or her respective residence. Neither spouse meets the use requirement for the other spouse's residence. H and W file a joint return for the year of the sales. The gain realized from the sale of H's residence is \$200,000. The gain realized from the sale of W's residence is \$300,000. Because the ownership and use requirements are met for each residence by each respective spouse, H and W are each eligible to exclude up to \$250,000 of gain from the sale of their individual residences. However, W may not use H's unused exclusion to exclude gain in excess of her limitation amount. Therefore, H and W must recognize \$50,000 of the gain realized on the sale of W's residence. n16.3

A \$500,000 exclusion is available, however, if the following requirements are met: n17

- a husband and wife file a joint return;
- either spouse meets the ownership requirements during the applicable two-year period;
- both spouses meet the use requirements with respect to the property during the applicable two-year period; and
- neither spouse is ineligible for the exclusion by virtue of a sale or exchange of a principal residence within the preceding two years.

Example (2):

H, a single taxpayer who owns his principal residence and is otherwise eligible for an exclusion under *IRC Section 121*, marries W, who has recently used the exclusion, H is allowed a maximum exclusion of \$250,000, whether on a separate return or on a joint return with W. Once both spouses satisfy the eligibility rules and two years have passed since the last exclusion was allowed to either spouse, the taxpayers may exclude \$500,000 on their joint return. n18

Where a husband and wife filing a joint return do not satisfy the two-year ownership test, the two-year use test and the prohibition on any other sale or exchange of a residence within the last two years, the limit on the amount of excludable gain is computed separately for each spouse. Each spouse is treated as owning the property during the period that either spouse owned the property. n19

Example:

H and W marry in June. H and W each owned separate residences before marrying each other, and each satisfied the statutory ownership and use tests of *IRC Section 121*. Both residences are sold in July. H and W may each exclude up to \$250,000 of gain from the sale of their residences. Assume instead that only H sells his residence, and that he recognizes a gain of \$300,000 on the sale. On their joint return, H and W may exclude only \$250,000 of H's gain under *IRC Section 121*. n19.1

[5] Availability of Partial Exclusion

[a] In General

A partial exclusion may be available for taxpayers who have owned or used a principal residence for less than two of the five years preceding the sale or exchange or who have excluded gain from another sale or exchange during the last two years. n20 A partial exclusion is available only if the sale or exchange is by reason of a change in place of employment, n21 health, n22 or, to the extent provided in regulations, unforeseen circumstances. n23 The partial

exclusion is computed by multiplying the maximum dollar limitation of \$250,000 (\$500,000 for qualifying joint filers) by a fraction. The numerator of the fraction is the shortest of the following:

- the period of time that the taxpayer owned the property during the 5-year period ending on the date of the sale or exchange;
- the period of time that the taxpayer used the property as the taxpayer's principal residence during the 5-year period ending on the date of the sale or exchange; or
- the period of time between the date of a prior sale or exchange of property for which the taxpayer excluded gain under *IRC Section 121* and the date of the current sale or exchange.

The numerator of the fraction may be expressed in days or months. The denominator of the fraction is 730 days or 24 months (depending on the measure of time used in the numerator). n23.1

Example (1):

A purchases a house that she uses as her principal residence. Twelve months after the purchase, A sells the house due to a change in the place of her employment. A has not excluded gain under *IRC Section 121* on a prior sale or exchange of property within the last 2 years. A is eligible to exclude up to \$125,000 of the gain from the sale of her house ($12/24 \times \$250,000$). n23.2

Example (2):

H owns a house that he has used as his principal residence since Year 1. On January 15, Year 3, H and W marry and W begins to use H's house as her principal residence. On January 15, Year 4, H sells the house due to a change in W's place of employment. Neither H nor W has excluded gain under *IRC Section 121* on a prior sale or exchange of property within the last 2 years.

Because H and W have not each used the house as their principal residence for at least 2 years during the 5-year period preceding its sale, the maximum dollar limitation amount that may be claimed by H and W will not be \$500,000, but the sum of each spouse's limitation amount determined on a separate basis as if they had not been married. n23.3

H is eligible to exclude up to \$250,000 of gain because he meets the requirements of *IRC Section 121*. W is not eligible to exclude the maximum dollar limitation amount. Instead, because the sale of the house is due to a change in place of employment, W is eligible to claim a reduced maximum exclusion of up to \$125,000 of the gain ($365/730 \times \$250,000$). Therefore, H and W are eligible to exclude up to \$375,000 of gain ($\$250,000 + \$125,000$) from the sale of the house. n23.4

NOTE:

When the proration provision comes into play, it reduces the amount of the exclusion available. It is not applied to reduce the amount of recognized gain that is eligible for the exclusion. For example, assume T owns a home for one year and is then transferred by her employer to another city. T sells the home at a \$40,000 gain. The proration provision reduces the exclusion for which T is eligible to \$125,000 [$\$250,000 \times 1/2$]. Because the amount of T's gain is less than the reduced exclusion amount, however, T may exclude the full \$40,000 from gross income. n23.4.1

[b] Circumstances Qualifying for Partial Exclusion

[i] In General

The reduced maximum exclusion is available only if the sale or exchange is by reason of a change in place of employment, health, to the extent provided by regulations, or unforeseen circumstances. n23.5 Extensive regulations provide safe harbors for each of the three types of available circumstances. If one of the safe harbors applies, a sale or exchange is deemed to be by reason of a change in place of employment, health, or unforeseen circumstances. If a safe harbor does not apply, the taxpayer may nevertheless be eligible to claim a reduced maximum exclusion if the taxpayer establishes, based on the facts and circumstances, that his or her primary reason for the sale or exchange is a change in place of employment, health, or unforeseen circumstances. n23.6 Factors that may be relevant in determining the taxpayer's primary reason for the sale or exchange include (but are not limited to) the extent to which: n23.7

- the sale or exchange and the circumstances giving rise to the sale or exchange are proximate in time;
- the suitability of the property as the taxpayer's principal residence materially changes;
- the taxpayer's financial ability to maintain the property is materially impaired;
- the taxpayer uses the property as his or her residence during the period of the taxpayer owns the property;
- the circumstances giving rise to the sale or exchange are not reasonably foreseeable when the taxpayer begins using the property as the taxpayer's principal residence; and
- the circumstances giving rise to the sale or exchange occur during the period of the taxpayer's ownership and use of the property as the taxpayer's principal residence.

[ii] Change of Employment

A sale or exchange is by reason of a change in place of employment if the taxpayer's primary reason for the sale or exchange is a change in the location of the employment of a qualified individual. n23.8 "Employment" is defined as the commencement of employment with a new employer, the continuation of employment with the same employer, or the commencement or continuation of self-employment. n23.9 A qualified individual can be the taxpayer, the taxpayer's spouse, a co-owner of the residence, or a person whose principal place of abode is in the same household as the taxpayer. n23.10

A safe harbor provides that a sale or exchange is deemed to be by reason of a change in place of employment if the new place of employment of a qualified individual is at least fifty miles farther from the residence sold or exchanged than was the former place of employment. If the individual was unemployed, the distance between the new place of employment and the residence sold or exchanged must be at least fifty miles. The safe harbor applies only if the change in place of employment occurs during the period of the taxpayer's ownership and use of the property as the taxpayer's principal residence. n23.11 If a sale or exchange does not satisfy this safe harbor, a taxpayer may still qualify for the reduced maximum exclusion by reason of a change in place of employment if the facts and circumstances indicate that a change in place of employment is the primary reason for the sale or exchange. n23.12

[iii] Health

The general rule is that a sale or exchange is by reason of health if the taxpayer's primary reason for the sale or exchange is (1) to obtain, provide, or facilitate the diagnosis, cure, mitigation, or treatment of disease, illness, or injury of a qualified individual, or (2) to obtain or provide medical or personal care for a qualified individual suffering from a disease, illness, or injury. A sale or exchange that is merely beneficial to the general health or well-being of the

individual is not a sale or exchange by reason of health. n23.13 There is a "physician's recommendation" safe harbor, under which a sale or exchange is deemed to be by reason of health if a physician n23.14 recommends a change of residence for reasons of health. n23.15 For purposes of the reduced maximum exclusion by reason of health, a "qualified individual" includes the taxpayer, the taxpayer's spouse, a co-owner of the residence, n23.15.1 a person whose principal place of abode is in the same household as the taxpayer, and certain family members of these individuals. This definition is broader than the definition that applies to the exclusions by reason of change in place of employment and unforeseen circumstances because it encompasses taxpayers who sell or exchange their residence in order to care for sick family members. n23.16 One ruling found a sale of a personal residence made in order to accommodate the taxpayer's mother-in-law, who had become partially paralyzed, to be made by reason of health. n23.16.1

[iv] Unforeseen Circumstances

A sale or exchange is by reason of unforeseen circumstances if the primary reason for the sale or exchange is the occurrence of an event that the taxpayer could not reasonably have anticipated before purchasing and occupying the residence. A sale or exchange by reason of unforeseen circumstances (other than a sale or exchange within a safe harbor) does not qualify for the reduced maximum exclusion if the primary reason for the sale or exchange is simply a preference for a different residence or an improvement in financial circumstances. n23.17 There are several "specific event" safe harbors under which the a sale or exchange is deemed to be by reason of unforeseen circumstances if one of the safe harbor events occurs during the taxpayer's ownership and use of the property as the taxpayer's principal residence. The safe harbor events include the involuntary conversion of the residence, a natural or man-made disaster or act of war or terrorism resulting in a casualty to the residence, n23.18 and, in the case of a qualified individual: n23.19

- death;
- the cessation of employment as a result of which the individual is eligible for unemployment compensation;
- a change in employment or self-employment status that results in the taxpayer's inability to pay housing costs and reasonable basic living expenses for the taxpayer's household;
- divorce or legal separation under a decree of divorce or separate maintenance; and
- multiple births resulting from the same pregnancy.

The Commissioner may designate other events or situations as unforeseen circumstances in published guidance of general applicability or in a ruling directed to a specific taxpayer. n23.20 In one ruling, the IRS ruled that unexpected criminal activities in the neighborhood and personal assaults on the taxpayer sufficed as unforeseen circumstances. n23.20.1 The IRS has also ruled that threats to the life of a narcotics investigator after his participation in an arrest of a drug dealer sufficed as an unforeseen circumstance. n23.20.2 A violent crime against the taxpayer just outside of the residence also sufficed. n23.20.2.1 In another, the taxpayers had purchased a home in a retirement community. Shortly thereafter, their daughter lost her job and divorced her husband, and she and the taxpayers' granddaughter therefore needed to live with the taxpayers. They could not do so, however, because of age restrictions in the retirement community. The IRS ruled that the sale of the home in order to purchase a new home to house the daughter and granddaughter was a sale primarily due to unforeseen circumstances. n23.20.3 A pregnancy n23.20.3.1 or the birth of a single child has also been ruled to be an unforeseen circumstance, n23.20.4 as has the adoption of a child. n23.20.5 Although reasonably anticipated street noise (and presumably other local noise) does not ordinarily qualify as an unforeseen circumstance, n23.20.6 one ruling did allow a taxpayer who conducted a reasonable investigation of a residence and neighborhood to use the unforeseen circumstance provision when airport noise caused him to later sell the home. He had lived the same distance from the airport before purchasing the property, but in a different direction (in

which airport noise was not a problem). His contention that he did not anticipate airport noise before purchasing the home was found to be credible and reasonable. n23.20.7 In another ruling, the taxpayer, a member of the military, received an unexpected assignment that required him to live in government quarters. The IRS ruled that this was an unforeseen circumstance that allowed him to take advantage of a reduced exclusion under *IRC Section 121(c)*. n23.20.8

A taxpayer who does not qualify for a safe harbor may demonstrate that the primary reason for the sale or exchange is unforeseen circumstances, under a facts and circumstances test. n23.21 For purposes of the reduced maximum exclusion by reason of unforeseen circumstances, a "qualified individual" includes the taxpayer, the taxpayer's spouse, a co-owner of the residence, and a person whose principal place of abode is in the same household as the taxpayer. n23.22

Note:

In its final regulations, IRS and Treasury refused to adopt suggestions of commentators that marriage, bankruptcy of the taxpayer's employer not resulting in the loss of the taxpayer's employment, and the adoption of a family member should be additional unforeseen circumstances safe harbors. These events may still qualify a taxpayer for the reduced maximum exclusion under the facts and circumstances test if, as a result of one of those events, the taxpayer's primary reason for the sale or exchange is a change in place of employment, health, or unforeseen circumstances. n23.23

[v] Effective Date of Final Regulations

The final regulations relating to the reduced maximum exclusion n23.24 apply to sales and exchanges on or after August 13, 2004. n23.25 For sales or exchanges before August 13, 2004, and on or after May 7, 1997, taxpayers may elect to apply the rules retroactively and will be afforded audit protection. n23.26

[c] Recognition of Gain that Is Allocated to Periods of Nonqualified Use

Gain from the sale or exchange of a principal residence that is allocated to periods of nonqualified use is not excluded from gross income under *IRC Section 121*. n23.27 The amount of gain allocated to periods of nonqualified use is the amount of gain multiplied by a fraction. The numerator is the aggregate periods of nonqualified use during the period the property was owned by the taxpayer; the denominator is the period the taxpayer owned the property. n23.28 Both these versions are mis-numbered, and duplicate an existing *IRC Section 121(b)(4)*, which deals with sales of a principal residence by surviving spouse [see § 9.02[6][a], below, for a discussion of that provision]. Presumably, a future technical corrections bill will eliminate the duplicate renumbering.

A period of nonqualified use means any period (not including any period before January 1, 2009) during which the property is not used by the taxpayer or the taxpayer's spouse or former spouse as a principal residence. n23.29 For purposes of determining periods of nonqualified use, the following periods are not taken into account: n23.30

- Any period after the last date the property is used as the principal residence of the taxpayer or spouse (regardless of use during that period);
- Any period (not to exceed an aggregate period of 10 years) during which the taxpayer or the taxpayer's spouse is serving on qualified official extended duty with the U.S. uniformed services, Foreign Service, or as an employee of the intelligence community; n23.31 curiously, periods of time serving for the Peace Corps cannot be omitted in determining periods of qualified use; n23.31.1 or
- Any period (not to exceed two years) that the taxpayer is temporarily absent by reason of a change in place of employment, health, or, to the extent provided in regulations, unforeseen circumstances.

If any gain is attributable to post-May 6, 1997 depreciation, the exclusion does not apply to that amount of gain, and that gain is not taken into account in determining the amount of gain allocated to nonqualified use. n23.32

Example (1):

Tom buys a property on January 1, 2008, for \$400,000, and uses it as rental property for two years, claiming \$20,000 of depreciation deductions. On January 1, 2010, Tom converts the property to his principal residence. On January 1, 2012, Tom moves out, and sells the property for \$700,000 on January 1, 2013. The \$20,000 gain attributable to the depreciation deductions is included in gross income. Of the remaining \$300,000 gain, 40% of the gain (2 years divided by 5 years), or \$120,000, is allocated to nonqualified use and is not eligible for the exclusion. Since the remaining gain of \$180,000 is less than the maximum gain of \$250,000 that may be excluded, gain of \$180,000 is excluded from Tom's gross income. n23.33

Example (2):

Mary buys a principal residence on January 1, 2008, for \$400,000. She moves into the home and begins using it as her principal residence on that date. She moves out on January 1, 2018, and on December 1, 2020 (more than two years after she last used the property as her principal residence) sells the property for \$600,000. The entire \$200,000 gain is excluded from Mary's gross income. n23.34

[6] Application of Exclusion Under Special Circumstances

[a] Property of Deceased Spouse

A surviving spouse who has not remarried at the time of sale is entitled to a \$500,000 exclusion, provided that the sale occurs within two years of the date of death of the deceased spouse, and the statutory ownership and use requirements were met immediately before the date of the deceased spouse's death. n23.34.1

For purposes of satisfying the ownership and use requirements of *IRC Section 121*, a taxpayer is treated as owning and using property as the taxpayer's principal residence during any period that the taxpayer's deceased spouse owned and used the property as a principal residence before death. n23.35 This rule applies, however, only if the taxpayer's spouse is deceased on the date of the sale or exchange of the property; and the taxpayer has not remarried at the time of the sale or exchange of the property. n23.36

Example:

H has owned and used a house as his principal residence for more than five years. H and W marry on July 1 of Year 1 and from that date they use H's house as their principal residence. H dies on August 15, of Year 2, and W inherits the property. W sells the property on March 1 of Year 3, at which time she has not remarried. Although W has owned and used the house for less than 2 years, W will be considered to have satisfied the ownership and use requirements of *IRC Section 121* because W's period of ownership and use includes the period that H owned and used the property before death. n23.37 W is entitled to a \$500,000 exclusion on the sale. n23.38

Note:

IRC Section 121 and regulations thereunder do not clarify the computation of basis and gain for

surviving spouses, or explain any interaction between *IRC Section 121* and *IRC Section 1014*, which provides a step-up in basis for inherited property.

[b] Property Owned by Spouse or Former Spouse

For property transferred to a spouse or to a former spouse incident to a divorce, the period that the transferee owns the property includes the period the transferor owned the property. ⁿ²⁴ In addition, an individual is treated as using property as a principal residence during any period that the taxpayer has an ownership interest in the property while that individual's spouse or former spouse is granted use of the property under a divorce or separation instrument. ⁿ²⁵ This rule applies only if the spouse or former spouse uses the property as his or her principal residence. ^{n25.1}

Note:

At least one commentator has suggested the possibility that these rules can result in a \$750,000 exclusion. If the spouse who is granted the use of the home under the divorce instrument remarries, and continues to use the home as a principal residence, a \$500,000 exclusion may be available if a joint return is filed with the new spouse in the year of sale. At the same time, however, the former spouse who lost use of the home in the divorce instrument, but who still retains an ownership interest in the home, can qualify for a \$250,000 exclusion on the sale. The IRS has not ruled on this circumstance, however. ^{n25.2}

[c] Tenant-Stockholders in Cooperative Housing Corporations

IRC Section 121 applies to tenant-stockholders in cooperative housing corporations. In that case, the holding requirements are applied to the holding of the stock, and the use requirements are applied to the house or apartment that the taxpayer's stock ownership (and proprietary lease) entitle it to occupy. ⁿ²⁶

[d] Involuntary Conversions

For purposes of *IRC Section 121*, an involuntary conversion or destruction is treated as a sale of the property. ⁿ²⁷ The IRS takes the position that a complete destruction, e.g., in whole, of the residence is required, and that a partial destruction will not be treated as a sale or exchange of the residence. ^{n27.1} In applying *IRC Section 1033*, the amount realized from the sale or exchange is treated as being the amount determined without regard to *IRC Section 121*, reduced by the amount of gain not included in gross income by reason of *IRC Section 121*. ⁿ²⁸ If the taxpayer takes a carryover basis under *IRC Section 1033(b)* in property acquired after the involuntary conversion, the holding and use periods of the converted property are taken into account with respect to the acquired property. ⁿ²⁹ It should be noted that an involuntary conversion is an unforeseen circumstance that qualifies as a safe harbor under which a taxpayer may qualify for a partial exclusion under *IRC Section 121*. ^{n29.1}

Example:

A fire destroys T's house, which has an adjusted basis of \$80,000. T had owned and used this property as her principal residence for 20 years prior to its destruction. T's insurance company pays her \$400,000 as a result of the fire. T realizes a gain of \$320,000 (\$400,000 - \$80,000). Six months later, T purchases a new house for \$100,000.

Because the destruction of the house is treated as a sale for purposes of *IRC Section 121*, T may exclude \$250,000 of the realized gain from her gross income. For purposes of *IRC Section 1033*, the amount realized is then treated as being \$150,000 (\$400,000 - \$250,000) and the gain realized is \$70,000 (\$150,000 amount realized - \$80,000 basis). T elects under *IRC Section 1033* to recognize only \$50,000

of the gain (\$150,000 amount realized - \$100,000 cost of new house). The remaining \$20,000 of gain is deferred and T's basis in the new house is \$80,000 (\$100,000 cost - \$20,000 gain not recognized).

T will be treated as owning and using the new house as her principal residence during the 20-year period that she owned and used the destroyed house. n29.2

[e] Sales of Partial and Remainder Interests

A taxpayer may exclude under *IRC Section 121* gain from the sale or exchange of partial interests (other than interests remaining after the sale or exchange of a remainder interest) in the taxpayer's principal residence if the interest sold or exchanged includes an interest in the dwelling unit. n29.3

Only one maximum limitation amount of \$250,000 (\$500,000 for qualifying joint returns), however, applies to the combined sales or exchanges of partial interests. For purposes of determining the maximum limitation amount n29.4 the sales or exchanges of partial interests in the same principal residence are treated as one sale or exchange. In applying the maximum limitation amount to sales or exchanges that occur in different taxable years, a taxpayer may exclude gain from the first sale or exchange of a partial interest up to the taxpayer's full maximum limitation amount and may exclude gain from the sale or exchange of any other partial interest in the same principal residence to the extent of any remaining maximum limitation amount. Each spouse is treated as excluding one-half of the gain from a sale or exchange to which limits for joint returns apply. n29.5

For purposes of restricting the *IRC Section 121* exclusion to only one sale or exchange every two years, n29.6 each sale or exchange of a partial interest is disregarded with respect to other sales or exchanges of partial interests in the same principal residence, but is taken into account as of the date of the sale or exchange in applying that two-year restriction to that sale or exchange and the sale or exchange of any other principal residence. n29.7

A similar, but separate rule, applies to a sale of a remainder interest. Unless the sale or exchange is with a related party, n30 a taxpayer selling a remainder interest in a principal residence may elect to have the exclusion apply. However, the exclusion does not apply to any other interest in that residence that is sold or exchanged separately. n31

A taxpayer makes the election simply by filing a return for the taxable year of the sale or exchange that does not include the gain from the sale or exchange of the remainder interest in the taxpayer's gross income. A taxpayer may make or revoke the election at any time before the expiration of a 3-year period beginning on the last date prescribed by law (determined without regard to extensions) for the filing of the return for the taxable year in which the sale or exchange occurred. n31.1

[f] Principal Residences Acquired in Rollovers Under Former IRC Section 1034

In the case of a principal residence acquired in a reinvestment pursuant to which any gain was not recognized on the sale or exchange of another residence under former *IRC Section 1034*, the period that the taxpayer owned and used the replacement residence includes the period the taxpayer owned and used the prior residence (and also the period of ownership and use of any other prior residences taken into account under *IRC Section 1223(6)*) in determining the holding period of the replacement residence. n32

[g] Expatriates

The exclusion is not available for certain expatriates. n33

Note:

It is unclear how this provision will be interpreted after June 18, 2008. Under legislation enacted in 2008, *IRC Section 877* does not apply to any individual whose expatriation date is on or after June 18, 2008.

n33.0.1 To carry out the intent of the provision, it seems that *IRC Section 121(e)* will need to be amended to refer to *IRC Section 877A*, the new expatriate taxation provision, as well.

[h] Bankruptcy Trustees

The bankruptcy estate of an individual in a chapter 7 or 11 bankruptcy case under title 11 of the United States Code succeeds to and takes into account the individual's *IRC Section 121* exclusion if the individual satisfies the requirements of *IRC Section 121*. n33.1 The final regulations are in accord with prior cases that held that a Chapter 7 or Chapter 11 bankruptcy trustee may use the *IRC Section 121* exclusion in selling the debtor's principal residence, n34 Furthermore, after a long series of defeats, the IRS finally acquiesced in the court holdings. n35 Therefore, for periods prior to the effective date of the regulations, it will not challenge a position that a bankruptcy estate may use the *IRC Section 121* exclusion if the debtor would otherwise satisfy the statutory requirements. n35.1

Note:

The regulations and cases cited above depart from cases interpreting the pre-1998 version of *IRC Section 121*. Those cases held that bankruptcy trustees could not make an election to exclude gain under the pre-1998 version of *IRC Section 121*. n36

[i] Grantor Trusts

If a grantor trust owns title to the trustor's personal residence, the trustor is treated as the owner of the trust and the residence under statutory grantor trust provisions. n37 The trustor is also treated as the owner of the residence for purposes of meeting requirements under *IRC Section 121*. Therefore, a sale by the trustee-grantor of the residence is eligible for the exclusion under *IRC Section 121* if statutory conditions are otherwise met. n37.1

[j] Application of Exclusion to Sales or Exchanges of Vacant Land

A sale or exchange of vacant land is treated as a sale or exchange of the taxpayer's principal residence only if all of the following requirements are met: n37.2

- the vacant land is adjacent to land containing the dwelling unit of the taxpayer's principal residence;
- the taxpayer owned and used the vacant land as part of the taxpayer's principal residence;
- the taxpayer sells or exchanges the dwelling unit in a sale or exchange that meets the requirements of *IRC Section 121* within 2 years before or 2 years after the date of the sale or exchange of the vacant land; and
- the requirements of *IRC Section 121* have otherwise been met with respect to the vacant land.

For purposes of the statutory maximum limitation amount n37.2.1 sales or exchanges of the dwelling unit and vacant land are treated as one sale or exchange. Therefore, only one maximum limitation amount of \$250,000 (\$500,000 for qualifying joint returns) applies to the combined sales or exchanges of the vacant land and dwelling unit. n37.2.2 In applying the maximum limitation amount to sales or exchanges that occur in different taxable years, gain from the sale or exchange of the dwelling unit, up to the maximum limitation amount n37.2.3 is excluded first, and each spouse is treated as excluding one-half of the gain from a sale or exchange to which the limitations apply. n37.2.4

Sales or exchanges of the dwelling unit and adjacent vacant land in separate transactions are disregarded in applying *IRC Section 121(b)(3)* (restricting the exclusion to only 1 sale or exchange every 2 years) to each other, but are taken

into account as a sale or exchange of a principal residence on the date of each transaction in applying the limit to that transaction and the sale or exchange of any other principal residence. n37.2.5

If the sale or exchange of the dwelling unit occurs in a later taxable year than the sale or exchange of the vacant land and after the date prescribed by law (including extensions) for the filing of the return for the year of the sale or exchange of the vacant land, any gain from the sale or exchange of the vacant land must be treated as taxable on the taxpayer's return for the taxable year of the sale or exchange of the vacant land. A taxpayer meeting the statutory requirements, however, may later claim the exclusion under *IRC Section 121* with regard to the sale or exchange of the vacant land by filing an amended return, if the statute of limitations for doing so n37.2.6 has not run. n37.2.7

Example:

C owns a house and 10 acres that she has used as her principal residence for 5 years. In May of Year 1, C sells 8 acres of the land and realizes a gain of \$110,000. C does not sell the dwelling unit before the due date for filing her Year 1 return, so she is not eligible to exclude the \$110,000 of gain. In March of Year 3, C sells the house and remaining 2 acres, realizing a gain of \$180,000 from the sale of the house. C may exclude the \$180,000 of gain. Because the sale of the 8 acres occurred within 2 years from the date of the sale of the dwelling unit, the sale of the 8 acres is treated as a sale of the taxpayer's principal residence. C may file an amended return for Year 1 to claim an exclusion for \$70,000 (\$250,000 - \$180,000 gain previously excluded) of the \$110,000 gain from the sale of the 8 acres. n37.2.8

[k] Deemed Sale Election Made Under Uncodified 1997 Legislation

Section 311(e) of the Tax Reform Act of 1997 allows a noncorporate taxpayer holding a capital asset on January 1, 2001 to elect to treat that asset as having been both sold and reacquired on that date for an amount equal to its fair market value. The availability of the election was intended to allow the asset to have a holding period beginning after 2000, which would make the asset eligible for the 18-percent capital gains rates if a 5-year holding period requirement was satisfied. n37.2.9 The purpose of the deemed sale election was obsoleted by the reduction in capital gains rates to 15 percent (5 percent for low-income taxpayers), effective for tax years beginning on or after May 6, 2003. n37.2.10

In hindsight, some taxpayers who made the deemed sale election would have been better off not doing so. Section 311(e)(2)(A) of the Tax Reform Act of 1997 provides that any gain resulting from the election must be treated as received or accrued on the date the asset is treated as sold, and that the gain must be recognized notwithstanding any other provision of the Code.

The IRS has ruled that a deemed sale election under Section 311(e) of the Tax Reform Act of 1997 for a principal residence prevents the taxpayer from excluding the gain on the deemed sale under *IRC Section 121*. n37.2.11 The ruling addresses the application of the above provision in the context of an individual's election to treat his principal residence as both sold and reacquired on January 1, 2001. The fact pattern in the ruling is that the taxpayer makes a Section 311(e) election on his federal income tax return for the year including January 1, 2001. On January 1, 2001, the taxpayer's residence had a fair market value that was \$250,000 in excess of the taxpayer's basis. If the taxpayer had actually sold the home on that date for its fair market value, *IRC Section 121* would have allowed the taxpayer to exclude from gross income the full \$250,000 of gain realized on the sale.

Because the taxpayer made the election, however, the IRS ruled that the taxpayer could not exclude from gross income any of the gain on the deemed sale under *IRC Section 121*. It noted that the Section 311(e) election conferred tax benefits (a holding period beginning after December 31, 2000 and a step-up in basis), but in exchange imposed a tax cost--the current recognition of gain resulting from any existing appreciation in the asset. The IRS ruled that the statutory requirement that gain be recognized "notwithstanding any other provision" of the Code necessarily precluded

application of the exclusion otherwise available under *IRC Section 121*. Otherwise, the intended consequences of the mandated recognition (taxation of the gain) would be prevented. n37.2.12

[l] Members of Uniformed Services and Foreign Service, Employees of the Intelligence Community, and Peace Corps Workers

Under the general rule of *IRC Section 121*, gain from the sale of a principal residence may be excluded from gross income only if the taxpayer owned and used the property as a principal residence for at least two years during the 5-year period before the date of the sale or exchange. n37.2.13 Qualifying taxpayers may elect to suspend the 5-year period during which the 2-year use and ownership requirement must be met. The 5-year period may be suspended during any year that the individual or that individual's spouse is serving on qualified official extended duty as a member of the uniformed services or of the Foreign Service of the United States. n37.2.14 The election is limited to one property at a time, and an election does not suspend the running of the 5-year period for any period during which the running of the 5-year period with respect to any other property of the taxpayer is suspended by an election under *IRC Section 121(d)(9)*. n37.2.15 A taxpayer makes an election by filing a return for the taxable year of the sale or exchange of the residence that does not include the resulting gain in the taxpayer's gross income. n37.2.16 An election may be revoked at any time. n37.2.17 The maximum period of suspension is 10 years. n37.2.18

"Qualified official extended duty" is a period of active duty pursuant to a call or order to that duty for at least 90 days or an indefinite period. The duty must be served at a duty station at least 50 miles from the residence or while residing under Government orders in Government quarters. n37.2.19

Specified employees of the intelligence community may elect to suspend the running of the five-year test period during any period in which they are serving on extended duty, in the same manner as members of the uniformed services or the Foreign Service of the United States. n37.2.20 The five-year period may not be extended more than 10 years. n37.2.21

The term "employee of the intelligence community" means an employee of the Office of the Director of National Intelligence, the Central Intelligence Agency, the National Security Agency, the Defense Intelligence Agency, the National Geospatial-Intelligence Agency, or the National Reconnaissance Office. The term also includes employment with: (1) any other office within the Department of Defense for the collection of specialized national intelligence through reconnaissance programs; (2) any of the intelligence elements of the Army, the Navy, the Air Force, the Marine Corps, the Federal Bureau of Investigation, the Department of the Treasury, the Department of Energy, and the Coast Guard; (3) the Bureau of Intelligence and Research of the Department of State; and (4) the elements of the Department of Homeland Security concerned with the analyses of foreign intelligence information. n37.2.22

Peace Corps employees and volunteers and their spouses may also elect to suspend the running of the five-year test period during any period in which they or their spouses are serving outside the U.S. on qualified official extended duty as a Peace Corps employee or as an enrolled volunteer or volunteer leader. n27.2.23 The five-year period may not be extended by more than 10 years. n27.2.23.1 In addition, the election is limited to one property at a time, and an election may be made only if an election is not in effect with respect to any other property. An election may be revoked at any time. n27.2.23.2

[m] Principal Residences Acquired in Like-Kind Exchanges

The exclusion for gain on the sale or exchange of a principal residence does not apply if the principal residence was acquired in a like-kind exchange in which any gain was not recognized within the prior five years. n37.2.24 If a taxpayer acquires property in a like-kind exchange in which any gain is not recognized n37.2.25 the exclusion from gain does not apply to any sale or exchange of the residence by the taxpayer for five years beginning with the date of the acquisition. The exclusion is also not available during that period for a sale or exchange of the residence by any person whose basis in the residence is determined, in whole or in part, by reference to the basis of the residence in the hands of

the taxpayer. n37.2.26 This could occur, for example, when a person receives property as a gift n37.2.27 or incident to a divorce. n37.2.28

[n] Disposition of Principal Residence in Like-Kind Exchange

The IRS has issued a pro-taxpayer revenue procedure that provides guidance when both *IRC Section 121* and *IRC Section 1031* apply to a single exchange of property. n37.2.29 *Revenue Procedure 2005-14* indicates that, in certain cases, a homeowner may benefit from both the home-sale exclusion and the like-kind deferral. The revenue procedure sets forth an ordering rule for applying *IRC Sections 121* and *1031*, an application of *IRC Section 1031* to depreciation recapture amounts that are not excluded under *IRC Section 121*, the manner in which boot is taken into account in applying *IRC Section 1031*, and a method for computing the basis of replacement property received in an exchange. n37.2.30 *Revenue Procedure 2005-14* is discussed in detail in Chapter 8.

[o] Property Acquired From Decedents Dying After 2009

Effective for estates of decedents dying after 2009, n37.3 the exclusion for the sale of a principal residence is extended to estates and individuals who acquire a residence from the decedent. n37.4 If the decedent's estate or an individual heir sells the decedent's principal residence, \$250,000 of gain can be excluded on the sale of the residence, provided the decedent used the property as a principal residence for two or more years during the five-year period prior to the sale. n37.5 The exclusion for the gain on the sale of a principal residence also applies to property sold by a trust that was a qualified revocable trust under *IRC Section 645* immediately prior to the decedent's death. n37.6 The decedent's period of occupancy of the property as a principal residence can be added to an heir's subsequent ownership and occupancy in determining whether the property was owned and occupied for two years as a principal residence, regardless of whether the residence was owned by the trust during the decedent's occupancy. n37.7

[7] Election Not to Have Exclusion Apply

The exclusion does not have to be elected (except for sales of remainder interests), n38 and automatically applies unless the taxpayer makes an election not to have the exclusion apply. n39 Such an election might be prudent where the taxpayer expects to have two eligible sales within a two-year period, and expects that the gain on the first sale will be less than the \$250,000/\$500,000 ceiling and also smaller than the gain on the second sale. Under these circumstances, it would make sense for the taxpayer to waive the application of the exclusion to the first sale so that it can apply to the second sale.

An election not to have *IRC Section 121* apply to a sale or exchange (or an election to revoke an election to have *IRC Section 121* not apply) may be made at any time before the expiration of a 3-year period beginning on the last date prescribed by law (determined without regard to extensions) for the filing of the return for the taxable year in which the sale or exchange occurred. n39.1

[8] Return Filing Requirements

The return that is generally required in the case of a real estate transaction n39.2 need not be filed with respect to sales or exchanges of residences for \$250,000 or less (or \$500,000 or less if the seller is married) if the real estate reporting person has written assurance of the following: n40

- the property is the principal residence of the seller;
- there is no federally subsidized mortgage assistance with respect to the mortgage on the residence;
- the full amount of gain is excludable under *IRC Section 121*; and

- when the \$500,000 base amount applies, the seller is married.

Revenue Procedure 2007-12 sets for the acceptable form of the written assurances (certification) that a real estate reporting person must obtain from the seller of a principal residence to except the sale or exchange of the residence from the information reporting requirements for real estate transactions under *IRC Section 6045(e)(5)*. n40.1 The Secretary is authorized to increase the above dollar amounts by regulation. n40.2

Planning Tip:

It should be noted that, for purposes of the above exception to the reporting requirements, the \$250,000 amount (or \$500,000 amount if the seller is married) refers to the *selling price* of the property, not the amount of gain from the sale. n41

[9] Effective Date and Transition Rules

[a] Effective Date of *IRC Section 121*

The exclusion of gain under *IRC Section 121* described above is generally effective for sales and exchanges after May 6, 1997. However, a taxpayer may elect to have the 1997 amendments to *IRC Section 121* not apply to any sale or exchange taking place before August 5, 1997, or to any sale or exchange taking place after August 4, 1997, pursuant to a binding contract in effect on August 5, 1997. A taxpayer may also elect not to have the 1997 amendments apply to a sale or exchange taking place after August 4, 1997, if, without regard to the amendments, gain would not be recognized under former *IRC Section 1034*, as in effect before August 5, 1997, on the sale or exchange by reason of the acquisition of a new residence on or before that date, or with respect to the acquisition of which by the taxpayer a binding contract was in effect on that date. n42

[b] Effective Date of Regulations

Final and temporary regulations under *IRC Sale 121* are effective for sales and exchanges occurring on or after December 24, 2002. n42.1 A taxpayer who would otherwise qualify under those regulations to exclude gain from a sale or exchange before the effective date of the regulations, but on or after May 7, 1997, may elect to apply the provisions of the final regulations for any years for which the period of limitation under *IRC Section 6511* has not expired. A taxpayer may make the election by filing a return for the taxable year of the sale or exchange that does not include the gain from the sale or exchange of the taxpayer's principal residence in the taxpayer's gross income. A taxpayer who has filed a return for the taxable year of the sale or exchange may elect to apply the provisions of the final regulations for any years for which the period of limitation under *IRC Section 6511* has not expired by filing an amended return. n42.2

The IRS will not challenge a taxpayer's position that a sale or exchange before the effective date of the regulations but on or after May 7, 1997, qualifies for the *IRC Section 121* exclusion if the taxpayer has made a reasonable, good faith effort to comply with the requirements of *IRC Section 121*. Compliance with the provisions of the proposed regulations that preceded final regulations generally will be considered a reasonable, good faith effort. n42.3

[10] Alternative to Sale--Conversion to Business Use

An alternative to selling a personal residence is to convert it to business or investment real estate. The tax benefits available to the investor, together with potential rental income and appreciation, may make conversion economically advantageous. Consideration should be given to the tax effects of *IRC Section 1231*, discussed in Chapter 6. Under *IRC Section 1231*, property that has been converted to investment or income-producing property may receive capital gains treatment if sold at a profit, or ordinary loss treatment if sold below basis. n43

When converting property from personal use to business or investment use, a taxpayer generally obtains a new tax basis

for the converted property. The new basis, which is used to determine allowable depreciation as well as the amount of any loss sustained, is the lesser of: (1) the fair market value of the property at the time of conversion; or (2) the original cost, adjusted upward for capital improvements and downward for any allowable deductions (e.g., depreciation up to the date of conversion).ⁿ⁴⁴ The taxpayer will have the burden of establishing the fair market value of the property at the time of conversion.ⁿ⁴⁵

A personal residence is converted, for these purposes, only if it achieves the status of income-producing property.ⁿ⁴⁶ Property offered for rent, as evidenced by the owner's affirmative actions, will be considered as having been converted to income-producing property for purposes of deducting business expenses and depreciation, but a taxpayer will be entitled to deduct a loss on the sale of a former personal residence only if the property has actually been rented for more than a *de minimis* period of time.ⁿ⁴⁷ The key issue is the intent of the taxpayer in light of all the facts and circumstances.ⁿ⁴⁸

It should be noted that, once the property is converted to investment status, the relief provisions discussed earlier in this chapter may no longer be available to the taxpayer when the property is sold.ⁿ⁴⁹

A prior version of *IRC § 121(b)(4)* was enacted by Pub Law 110-142, and was effective for sales and exchanges after Dec 31, 2007. The only difference between that provision and the provision enacted by Pub Law 110-289 was that the period of non-qualified use in the prior version did not include any period before Jan 1, 2008; the provision enacted by Pub Law 110-289 states that the period of non-qualified use in the prior version did not include any period before Jan 1, 2009. The provision is intended to eliminate the exclusion for second homes during any period those homes were used as rental properties.

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.03

§ 9.03 Prior Law Relief Provisions for Principal Residences

[1] Rollover of Gain From Sale of Principal Residence Under Former IRC Section 1034

Former IRC Section 1034, relating to the rollover and nonrecognition of gain from the sale of principal residences, has been repealed, effective generally for sales and exchanges after May 6, 1997. n50 As is noted above, taxpayers may elect to have former IRC Section 1034 apply to any sale or exchange occurring before August 5, 1997. n51 In addition, taxpayers may elect to have former IRC Section 1034 apply to any sale or exchange occurring after August 4, 1997, if either of the following circumstances is present: n52 (1) the sale or exchange is pursuant to a contract that was binding on August 5, 1997; or (2) if, without regard to the 1997 federal amendments, gain would not be recognized under former IRC Section 1034, as in effect before August 5, 1997, on the sale or exchange by reason of the acquisition of a new residence on or before that date, or with respect to the acquisition of which by the taxpayer a binding contract was in effect on that date.

Accordingly, the discussion in this subsection dealing with the provisions of *IRC Section 1034* before its repeal by 1997 federal legislation, is of interest primarily for taxpayers who may wish to take advantage of the transition rules and for those who have an issue relating to former IRC Section 1034 raised on audit.

Former IRC Section 1034 offers relief by providing that the gain realized on the sale or exchange of the "principal residence" of the taxpayer is deferred when the proceeds are invested in another "principal residence" that the taxpayer buys or builds within specified time limits. In contrast to *IRC Section 121*, which provides a complete exclusion from gain income for residence sales meeting its criteria, former IRC Section 1034 provided only a deferral of tax.

There are three general requirements that must be met for a transaction to qualify under former IRC Section 1034. These concern:

- (1) the definition of a taxpayer's principal residence;
- (2) the timing of the purchase or construction and the use of the new principal residence by the taxpayer;
and
- (3) the extent to which the proceeds from disposition of an old principal residence are reinvested in a

new principal residence. n53

An exchange of a residence for other property is treated as a sale of the residence. Conversely, the acquisition of a residence in exchange for other property is treated as a purchase of that new residence. n54

[a] "Principal Residence" Requirement

The first requirement is that the "principal residence" of a taxpayer must have been sold or exchanged and another "principal residence" purchased, constructed or reconstructed within the specified time frame. There is no clear definition of this term, and what constitutes the principal residence of a taxpayer depends primarily on the facts and circumstances in each case. n55 The IRS will not issue advance rulings on the issue of whether a property qualifies as a principal residence for purposes of former IRC Section 1034. n56 Obviously, the term presupposes a use requirement, although it is not necessary that the property be occupied as a residence at the time of sale. Property cannot constitute a principal residence if the taxpayer never has resided there. n57 In addition, the taxpayer must have title to the property claimed to be a principal residence. n58 A partner in a partnership that held title to property used by the taxpayer as a residence was not able to use the benefits of former IRC Section 1034 when the partnership sold the property because the partnership, and not the taxpayer, held title. n59

A taxpayer can have only one "principal residence" at a time, and this could present a serious problem to a taxpayer who maintains more than one home. In one case, the Tax Court considered the following factors:

- (1) length of time spent in each residence;
- (2) business location;
- (3) where state income tax returns were filed; and
- (4) where the taxpayer was registered to vote. n60

A potential problem in obtaining deferral of gain occurs when the taxpayer stops using the principal residence as a residence, i.e., when he or she vacates the home or converts the residence into income-producing property.

[i] Manifestations of Principal Residence Intent

Taxpayer intent, as evidenced by objective facts, is an important factor in determining whether a residential property no longer being used by the taxpayer as a residence continues to be the taxpayer's principal residence. n61 If the taxpayer indicates an intent never to return, that home will no longer be considered the taxpayer's principal residence. n62 However, temporary rental will not violate the nonrecognition provisions *per se*, especially when care and maintenance of the property, instead of rental income, are the important concerns of the taxpayer. Similarly, the fact that depreciation and maintenance deductions are claimed on the temporarily-rented house is not determinative when care and maintenance are the important reasons for the rental. n63

A Ninth Circuit case allows a taxpayer to claim deductions for depreciation, insurance and miscellaneous expenses in excess of rental income even though the house is held for sale, and ultimate gain on sale qualifies for former IRC Section 1034 deferral. The Tax Court decision reversed by the Ninth Circuit had limited the taxpayer's deductions to the amount of rental income generated by the property. The Ninth Circuit rejected the Service's argument that a residence that qualifies for nonrecognition treatment cannot also be held for the production of income. The opinion stated: "If the IRS wants such a rule, it should ask Congress to enact it." n64 The Service may, however, continue to argue that a principal residence cannot qualify for former IRC Section 1034 deferral and also be considered as held for the

production of income. Immediate efforts to sell a principal residence after a taxpayer moves out is the best evidence that the taxpayer intends to sell the property and not hold it for rental income. When these efforts occur, courts will consider external factors, such as a lack of a ready marketⁿ⁶⁵ or refusal of a co-owner to cooperate in the sale,ⁿ⁶⁶ as evidence that the residence remains the taxpayer's principal residence even after the taxpayer has moved out with no intent to return. The IRS frequently takes positions that are seemingly inconsistent, challenging principal residence characterization where a residential property is sold at a profit, but contending that a property was a principal residence when the property is sold at a loss.ⁿ⁶⁷

Nevertheless, cases typically hold that a taxpayer who leaves a residence, rents a home elsewhere for a period of time, and eventually sells the old residence and purchases a new one is ordinarily not entitled to roll over gain under former IRC Section 1034. The rationale is usually that the taxpayer's ceasing to use the residence as his or her actual residence reflects an intent not to use the residence as a principal residence.ⁿ⁶⁸

For example, a spouse who relinquishes a former marital residence in a divorce to the other spouse cannot roll over gain from the later sale of the residence under former IRC Section 1034 because that house is no longer the departing spouse's principal residence. This result occurs even if the departing spouse retains a financial interest in the residence and even if the parties agree at the time of the departure and divorce to later sell the residence and split the proceeds.ⁿ⁶⁹

[iii] Adjacent Land--Partial Residence Use

Property may be used partially for a principal residence and partially for other purposes. A question arises when a house that is the principal residence of a taxpayer is situated on a large tract of land--that is, how much of the surrounding land is includable in the nonrecognition provisions?

Taxpayers who own and intend to sell land adjacent to their principal residence will find that in some circumstances the sale of the adjacent land would be eligible for rollover treatment under former IRC Section 1034, whereas in others it would not. While the principal residence can consist of a dwelling house and adjacent land, the adjacent land alone cannot be considered a residence.ⁿ⁷⁰ However, land and a dwelling need not always be sold together. In *Bogley v Commissioner*,ⁿ⁷¹ the taxpayer first sold his residence and three acres of land surrounding it. When he later sold the remaining ten acres of the original 13-acre tract, and the court held that the ten acres had not lost their status as part of the residence. The abandonment theory, however, could probably have been successfully argued by the Commissioner if the remaining land had been sold long after the sale of the residence.

Case law in this area has been based on the actual use of the property and the intent of the taxpayer, rather than on the amount of land surrounding the house. In *Estate of Campbell v Commissioner*,ⁿ⁷² the court ruled that a house itself and the five acres surrounding it constituted the residence, but not the 37 acres used for farming. In *Beckwith v Commissioner*,ⁿ⁷³ the court would not include as part of the replacement personal residence the 28 acres of marshland and wooded area adjoining a residence. In another case, the jury held that a house and the full 65-acre tract surrounding it constituted a principal residence.ⁿ⁷⁴ In *Lokan v Commissioner*,ⁿ⁷⁵ the court held that only one and one-half of the seven and one-half acres constituted the replacement principal residence of the taxpayer.

However, it should be noted that courts take a fairly liberal view of residential purposes and property use under former IRC Section 1034. Therefore, if there is a home on the old property or on the replacement property, a large amount of the adjoining property--up to 65 acres in one case--may be considered part of the principal residence eligible for rollover treatment.ⁿ⁷⁶

Property used by the taxpayer as his principal residence may include a houseboat, a house trailer, stock held by a tenant/stockholder in a cooperative housing corporation,ⁿ⁷⁷ or a condominium apartment.ⁿ⁷⁸ However, a transferable membership in a life-care facility did not qualify as a new residence for purposes of former IRC Section 1034.ⁿ⁷⁹

[b] Timing Requirements

The second requirement concerns timing. The purchase and use of a new principal residence must be accomplished within two years before or after disposition of an old principal residence. n80 This provides, in effect, a four-year replacement period. It is important to define the actual date of the sale of the old residence when the taxpayer is nearing this two-year limit. In one case, n81 the taxpayer was denied deferral of gain because the two-year time period was determined by reference to the date on which the benefits and burdens of ownership were shifted to the purchaser, which took place on the date the sales agreement was executed, not the date on which legal title was transferred.

The timing requirements are strictly construed, and cannot be waived even if there are extraordinary circumstances. Courts routinely refuse to waive the statutory replacement period requirement, even if the taxpayer makes good faith efforts to timely find a replacement residence and the failure to comply is due to physical, financial, or some other hardship outside of the taxpayer's control. n82 Accordingly, it was common to include a "time-is-of-the-essence" provision in the contract for the acquisition of the replacement residence. Similarly, if the replacement home is being constructed rather than purchased, and construction of the new home is incomplete at the end of the replacement period, no rollover under former IRC Section 1034 is allowed. Residential use within the statutory replacement period is an essential prerequisite to construction cost inclusion. n82.1

[i] Multiple Replacements

Former IRC Section 1034(k) extended the reinvestment period up to four years for taxpayers who had a new tax home (as defined in *IRC Section 911(d)(3)*) outside the United States (with certain exceptions) after the sale of their old residence. This longer period is appropriate because the Service generally refuses to extend the reinvestment period even when there are extenuating circumstances. n83 Members of the armed services also have four years in which to replace their residences. This can be extended to eight years if they are stationed overseas, or one year after returning to the United States--whichever period is shorter. n84

If a taxpayer, during the two-year replacement period, purchases more than one residence that is used at some time within that replacement period as a principal residence, only the last residence so used within the replacement period is treated as a new residence under former IRC Section 1034. n85 The tax deferral under former IRC Section 1034 is not available if a taxpayer has deferred gain from the sale of another principal residence within two years before the date of the later sale. n86 This restriction does not apply, however, for certain sales required by employment-related relocations. n87

[ii] Actual Use as Residence

The requirement about timing has two facets:

- (1) The new residence must be purchased or constructed within the applicable replacement period.
- (2) The taxpayer must actually use the new residence as his principal residence during some time within the same period. "Use" requires physical occupancy, i.e., a taxpayer must live in the new residence. n88

In *Welch v Commissioner*, n89 it was held that failure to move into the new residence within the required period will render the original sale a taxable transaction, regardless of the circumstances causing the delay.

[iii] Related Party Sales

A 1983 letter ruling stated there was no prohibition under former IRC Section 1034 against a sale between related parties. n90 Consequently, nonrecognition of gain was allowed, even though the old residence was sold to the taxpayer's

wholly-owned corporation that would use the former residence for business purposes. Under *IRC Section 1239*, any gain recognized on the sale of property to a related party must be treated as ordinary income if the property is depreciable by the transferee. However, the ruling concluded that *IRC Section 1239* did not apply to the transaction at hand because no gain was recognized under former *IRC Section 1034*.

[c] Reinvestment of Proceeds

The third requirement for deferral of gain under former *IRC Section 1034* is the reinvestment requirement. Under former *IRC Section 1034*, gain on the sale of a principal residence would be deferred completely only if the cost of a new residence was at least equal to the "adjusted sales price" of the old residence. Gain is recognized to the extent that the "adjusted sales price" of the old residence exceeds the cost of the new residence. n91 This requirement could be satisfied through a purchase or construction of a new residence or the partial or total construction or reconstruction of an existing residence. The mere improvement of a residence that does not amount to a reconstruction cannot qualify as a new residence. n92 In one private letter ruling, the Service ruled that the building of an addition onto existing residential rental property owned by the taxpayer qualified as a new residence because it was new construction, rather than a mere improvement. The addition added 1,500 square feet to the existing building, which was about one-third the size of the entire completed building (existing structure plus the addition). The Service may have been influenced by the fact that the taxpayer was to reside only in the addition, and that the existing structure before the improvements would continue to be leased to unrelated tenants. n93

The term "adjusted sales price" means the "amount realized" on the sale of the former residence, reduced by the aggregate of the expenses for work performed on the former residence to assist in its sale. n94 These costs are commonly referred to as "fixing-up" costs and are discussed in *Section 9.03[1][d]*, below.

The "amount realized" is the selling price of an old residence, reduced by sales commissions and other selling expenses. Selling price includes:

- (1) cash or other property received;
- (2) notes or purchase money mortgages of the buyer; and
- (3) any indebtedness to which the old residence was subject, if the purchaser assumes the indebtedness or takes the property subject to the indebtedness.

Any amount received by the seller from his or her employer, pursuant to a guarantee-against-loss agreement, is compensation and is not included in the computation of the "amount realized." n95 However, if the employer purchases the employer's principal residence, or arranges for its purchase, the transaction is treated in the manner of a sale to a third party. n96

The excess of the "amount realized" on the sale over the "adjusted basis" of the residence is, of course, the gain realized. n97 The adjusted basis of a residence is its original cost, plus any capital improvements, less such items as casualty losses deducted, depreciation for partial business use, or gain deferred under former *IRC Section 1034* on the prior sale of a residence. n98

[i] Cost Defined

The cost of a new residence includes: n99

- (1) the purchase price of the new residence and any reconstruction costs and capital improvements that

are incurred within the replacement period; n100

(2) construction costs; and

(3) other fees and expenses which a taxpayer incurs in its acquisition.

If a new residence is being constructed, only those costs attributable to the construction of a structure that is put into use as a residence within two years of the date the old residence is sold may be taken into account. n100.1 If the construction is not completed within the 2-year period, and the new home put into use as a residence by the taxpayers within that time, construction costs cannot be taken into account, even if the taxpayers reside in a temporary dwelling on the same replacement parcel during the construction of a permanent residence. n100.2

The cost also includes all liabilities to which the property is subject, whether or not a taxpayer assumes the debt. For example, in some cases, the cost of a cooperative apartment may include a taxpayer's proportionate share of any unpaid mortgage on the building owned by the cooperative corporation. n101

The tax basis of a new residence is determined by aggregating the costs described above, and subtracting the amount of deferred gain on the disposition of the old residence. n102

[ii] Partial Use as Residence

When part of the property sold was used by the taxpayer as his principal place of residence and part was used for other purposes, as in the case of a multifamily rental dwelling or when a taxpayer maintains an office on part of the property, an allocation of the gain must be made to determine the part of the gain attributable to the residential portion. The part of the gain allocable to the residential portion, and the part allocable to any business use portion that does not meet the business-use requirements of *IRC Section 280A* in the year of sale can qualify for deferral. n103 Similarly, if only part of the new property is used only partially for residential purposes, only that part of the cost that is allocable to the residential portion qualifies as reinvested proceeds. n104

[iii] Identity of Owner

In general, the new residence must be owned by the same taxpayer who sold the old residence. n105 If the new residence is purchased by someone other than the taxpayer--for whatever reason--nonrecognition under former *IRC Section 1034* is not available. n106 This result ensues even if title to the new residence is taken in the name of another only for purposes of convenience to the taxpayer, as when a parent takes title to replacement property only in order to obtain a loan for the child to purchase a replacement property. n107

There is a special provision for a husband and wife, however, whereby a taxpayer and his or her spouse can file a consent to have themselves treated as a single taxpayer. n108 Such treatment is available only if the old and new residences are each used by the taxpayer and his/her spouse as their principal residences.

Frequently, a divorcing taxpayer sells a home owned jointly with the soon-to-be-ex-spouse and within the replacement period purchases a new home, either alone or jointly with a new spouse. In either case, the gain from the sale of the old principal residence may be rolled over, provided statutory requirements are met. For a taxpayer buying a new home alone, the entire gain may be rolled over against the entire cost of the new principal residence. It is the position of the IRS that if a home is purchased jointly with a new spouse, however, the gain may be rolled over under prior law only if the taxpayer's share of the cost of the new residence exceeds the taxpayer's share of the adjusted sales price of the old residence. n109 This position was rejected, and the cited regulation invalidated by the Fourth Circuit. n110

Example:

In 1995, W sells a home that she owned jointly with her ex-husband. The total adjusted sales price is \$400,000, and the total basis in the home was \$200,000. W's half portion of the adjusted sales price is \$200,000, and her half basis in the home is \$100,000. W files a separate return for 1995. In 1996, W and her new husband purchase a home jointly for \$250,000. According to *Treasury Regulation Section 1.1034-1(f)*, W cannot roll over her gain from the sale of the old residence to the entire cost of the new one because she has only a one-half interest in the new residence. Her share of the cost of the new residence (\$125,000) is therefore less than her share of the adjusted sales price of the old residence (\$200,000). However, if W lives in the Fourth Circuit (Maryland, Virginia, West Virginia, North Carolina and South Carolina), she could rollover the gain; n111 and even the IRS would agree that if W did not own the new home jointly with her new spouse, but was the sole owner, she could roll over the gain from the sale of the old residence.

Revenue Ruling 74-250 n112 explains the application of former IRC Section 1034 in divorce situations. The ruling provides that if each divorcing spouse is entitled under state law to receive one-half of the proceeds of the sale of the old residence, each is eligible for rollover treatment on his or her one-half share of the gain resulting from the sale of a principal residence pursuant to a divorce if the statutory requirements of former IRC Section 1034 are otherwise met. This is accomplished by allocating one-half of the adjusted sale price from the sale of the residence to each spouse. A determination is then made separately for each as to whether enough of the adjusted sale price is reinvested in a new principal residence within the required time period. If the cost of each new residence exceeds each spouse's respective share of the adjusted sale price, then each will be entitled to roll over the gain from the sale of the old residence. Divorcing spouses should be aware that although each is entitled to compute gain on the sale of the jointly held residence by taking into account only one-half of the basis and net proceeds from the sale of the property, if the parties file a joint return for the year of sale, the joint and several liability provisions of the Code will provide that either spouse may be held responsible for the tax on the entire gain if for some reason rollover treatment under former IRC Section 1034 is not available, or if one or both of the former spouses decides not to reinvest in a new principal residence. n113

Note that the way for the spouses to avoid potential joint and several liability for tax on the entire gain from the sale of a principal residence is to file separate returns for the year in which the principal residence is sold, although this may result in a higher aggregate tax burden for the year of the sale because of the higher tax rates applicable to married persons filing separate tax returns. Merely specifying in the divorce decree that the spouses agree to split the sale proceeds and that each spouse is responsible for reinvesting his or her share of the proceeds within the required time period does not nullify joint and several liability arising from the filing of a joint return for the year of sale. n114 Further, the gain on the sale of the former residence must be allocated in accordance with the spouses' ownership interests in the property, even if the divorce decree provides that the proceeds will be shared in a different ratio. n115

The same rule applies for two unmarried people who marry and replace their separate homes with a single, jointly-owned home. Each spouse must separately satisfy the requirements for postponing gain, and each spouse's share of the cost of the new home must be equal to or greater than the adjusted sales price of his or her old home. Similarly, if only one of the spouses has gain to defer, that gain may be rolled over only with respect to that spouse's share of the cost of the new jointly-owned home. n116

[d] Treatment of "Fixing-Up" Expenses

"Fixing-up" expenses are noncapital expenditures incurred on the sale of the residence to assist in its sale, such as painting. As previously stated, these expenses are deducted from the amount realized to determine "adjusted sales price." To qualify as "fixing-up" expenses, the expenditures must meet the following conditions:

- (1) They must be for work performed within a 90-day period before the execution of the contract for sale of the old residence.

(2) They must be paid within 30 days after the date of the sale.

(3) They must not be capital in nature (capital expenditures would, of course, be included in the adjusted basis of the old residence without regard to the 90-day or 30-day periods).

(4) They must not be otherwise allowable as deductions. n117

[e] Example of Gain Determinations

The following example illustrates the computation of gain to be deferred and basis of a new residence.

Example:

A taxpayer purchases his old residence for \$14,000 on June 5, 1950. He makes permanent improvements costing \$6,000. He sells the residence for \$50,000 on May 2, 1994. Selling expenses and commissions amount to \$3,000. During the 90-day period before execution of the contract of sale, the taxpayer spends \$2,000 to paint and "dress up" the house to make it more saleable. On January 15, 1996, he purchases a new residence for \$44,000, inclusive of all fees incident to purchase. The taxpayer occupies the new residence on April 1, 1996, which is within two years from the date of sale.

Selling price of old home		\$50,000
Less: Selling expenses		3,000_____

		—
Amount realized		47,000
Cost of old home	\$14,000	
Add: Cost of capital improvements	6,000_____	

Tax basis of old home		20,000_____

		—
Gain realized on sale		\$27,000_____

Amount realized	\$47,000	
Less: "Fixing-up" expenses	2,000_____	

Adjusted sales price		\$45,000
Cost of new home		44,000_____

		—
Gain recognized and subject to tax		\$1,000_____

1-9 Federal Taxes Affecting Real Estate § 9.03

Total cost of new home		\$44,000
Gain realized on sale of old home	\$27,000	
Less: Recognized gain	1,000	
Deferred portion of gain realized		26,000
Tax basis of new home		\$18,000

[f] Reporting Requirements

The taxpayer is required to report the sale or exchange of his residence on Form 1040, Schedule D, for the year of disposition, whether or not there is a deferral of the gain. If the taxpayer does not intend to purchase a new residence within the specified time period, the total gain subject to capital gains treatment (discussed in Chapter 6) must be included in the taxpayer's taxable income in the year of the sale (assuming that the sale is not made on the installment basis). If the taxpayer later changes his mind and purchases a residence within the replacement period, he will be entitled to a refund of the tax paid. The refund is obtained by filing an amended return. When a new residence is purchased before a taxpayer has filed his return, he must attach a statement to his return showing the necessary computations of the gain and the basis of the new residence. Form 2119, Sale or Exchange of Personal Residence, shows the required details and computations.

If a taxpayer intends to purchase a new residence but has not done so by the time the return is due for the year of disposition of the old residence, and the replacement period has not expired, the gain on Schedule D should be shown as "none." A statement should be attached to the return showing the computation of the gain and indicating that a new residence has not yet been purchased, but that the taxpayer intends to do so. When a purchase is later made, the taxpayer must then forward to the district director the information and computations necessary to establish the deferral of the gain. If the adjusted sales price exceeds the cost of the new residence, thereby causing some of the gain to be taxed currently, the taxpayer must file an amended return, showing the amount of taxable gain, and remit the tax due. Interest must be paid on any tax deficiency. n118 The statute of limitations for the year of the sale with respect to the assessment of tax on the gain on the sale does not expire until three years after the taxpayer furnishes the district director with a written statement concerning his or her reinvestment, decision not to reinvest, or failure to reinvest within the statutory time limits. n119

[g] Election for Involuntary Conversions

When there has been an involuntary conversion of the taxpayer's principal residence, he has the option of electing to come under the provisions of the "sale of residence" rules of former IRC Section 1034 or under the involuntary conversion provisions of *IRC Section 1033* (discussed in Chapter 8). n120 This election is made in a statement attached to the taxpayer's income tax return for the year of disposition of the old residence.

[h] Using Both Unlimited Rollover and Over 55 Exclusion

It was possible under prior law to use both the unlimited rollover of gain discussed in this section and the over age 55 exclusion discussed in the immediately following section.

[2] Exclusion for Persons Age 55 or Over Under Prior *IRC Section 121***Planning Note:**

IRC Section 121, as currently in effect, allows all taxpayers to exclude up to \$250,000 on the sale of a principal residence. That provision is discussed in detail in *Section 9.02*, above. The discussion in this subsection deals with the provisions of former *IRC Section 121*, as in effect before its substantial modification by the 1997 amendments. n121

The provisions discussed below are repealed, effective generally for sales and exchanges after May 6, 1997. n122 Taxpayers may elect to have former *IRC Section 121* apply, however, to any sale or exchange occurring before August 5, 1997. n123 In addition, taxpayers may elect to have former *IRC Section 121* apply to any sale or exchange occurring after August 4, 1997, if either of the following circumstances is present: n124 (1) the sale or exchange is pursuant to a contract that was binding on August 5 1997; or (2) if, without regard to the 1997 federal amendments, gain would not be recognized under former *IRC Section 1034*, as in effect before August 5, 1997, on the sale or exchange by reason of the acquisition of a new residence on or before that date, or with respect to the acquisition of which by the taxpayer a binding contract was in effect on that date.

Former *IRC Section 121* n125 provided a once-in-a-lifetime election for taxpayers age 55 or over, whereby up to \$125,000 (\$62,500 in the case of married individuals who file separate returns) of gain on the sale or exchange of a principal residence is forever tax free. n126

Two general requirements must be satisfied before a taxpayer could elect the relief provided by this section:

- (1) the age of the taxpayer; and
- (2) the ownership and use of the property.

[a] Principal Residence and Ownership Issues

The property must be owned and used by a taxpayer as his principal residence for at least three out of the five years preceding the date of sale. The ownership requirement means that the taxpayer must have title or must have assumed the benefits and burdens of ownership of the property claimed to be a principal residence. n127 In one case, the taxpayer was a partner in a partnership that held title to property used by the taxpayer as a residence. The Tax Court held that the benefits of *IRC Section 121* were not available with respect to the partner's allocable share of gain from the partnership when the partnership sold the property because the partnership, and not the taxpayer, held title. n128 The holding period of a condemned or otherwise involuntarily converted principal residence will tack on to the holding period of the replacement residence, but no other holding period tack-on is permitted. n129

The use requirement means that the taxpayer must have used the residence as his or her principal residence for the requisite three-year period. Short temporary absences are not disqualifying, even though a residence may be rented during the periods of absence. n130

The U.S. Court of Federal Claims has held that physical occupancy is not necessarily required to satisfy the "use" requirement. The court held that a "facts and circumstances" analysis should be undertaken to determine whether the home was used as a principal residence for the requisite period. The court held that, depending on the situation, an individual who did not physically occupy a home for the required time could have extenuating circumstances which prevented physical occupancy, but which would not deny the characterization of use of the property as a principal residence. If an absence from the residence is explained under a "facts and circumstances" test, a court might or might

not find that the party used the property as a principal residence for the requisite period. n131 The Tax Court has also applied a "facts and circumstances" analysis in determining whether the taxpayer has met the use requirement. n131.1

When the property is held by a husband and wife as joint tenants, as tenants by the entirety or as community property, the age, ownership and use requirements are satisfied when either the husband or wife meets all three requirements, as long as the spouses file a joint return. n132 Similar treatment applies to a surviving taxpayer whose deceased spouse had met the age, ownership and use requirements as long as the surviving spouse has not remarried by the time of the sale and provided that the deceased spouse had not previously made an election under former *IRC Section 121(a)*. n133 An unmarried individual qualifies when he holds the residence in joint tenancy or as a tenant in common. n134 Since a grantor is treated for tax purposes as the owner of property held by a revocable trust, a sale of the grantor's principal residence by the trust qualifies for the Section 121 election. n135 A bankruptcy trustee, however, could not make an election to exclude gain under former *IRC Section 121*. n136 A special rule was provided for taxpayers who become physically or mentally incapable of self-care. n137

[b] Age Requirement

This relief provision is available only for taxpayers who have attained the age of 55 before the date of the sale or exchange of their "principal residence." n138

[c] Elective Treatment

The relief provision must be specifically elected before the expiration of the statute of limitations on refunds for the taxpayer's return for the year of disposition, generally three years from the due date of the return for that year. n139 It is not necessary, therefore, that the election be made on the return in the year of disposition. In addition, an election once made can be revoked at any time before the expiration of the statute of limitations on refunds for the year of disposition. n140 If an election is made for a sale that generates less than the maximum excludable gain--for example, \$75,000--then the tax benefit of the remaining exclusions is permanently lost. n141

A taxpayer who makes this election is forever barred from making a similar election for any later sale or exchange of a principal residence. n142 This rule has broad implications for married taxpayers who make this election during marriage and later divorce--not even remarriage will reinstate the ability to make the election. The divorced spouse *and* the new spouse are barred from ever making another election. n143

Cases have held that a bankruptcy trustee could not make an election to exclude gain under former *IRC Section 121*. n144

[d] Miscellaneous Issues

A number of Treasury rulings make planning for the sale of a home important. For example, assume a man and a woman who each own their own home decide to sell their individual homes, get married, and then buy a new home together. They may each claim the \$125,000 exclusion (if all other requirements are met) on their joint return. The critical time for selling their separate homes was before they married. n145

Moreover, the Service ruled for the taxpayer in the following situation: An individual sold his principal residence in January 1984. At the time of the sale he qualified for and took the \$125,000 exclusion. In June, he married and the couple filed a joint return for 1984. The spouse did not join in this election, however, because they were not married at the time the sale was made. The husband died in 1986, and the wife qualified for the election when selling their joint residence. The Service held that, for purposes of the election, marital status is determined as of the date of the sale or exchange. n146

[e] Interrelation of Former Unlimited Rollover and Age 55-or-Over Provisions

A taxpayer who attains the age of 55 before the sale of his personal residence can obtain the dual benefits of the rollover relief provisions discussed in *Section 9.03[1]*, above, as well as the "55-or-over exclusion." n147 Thus, any gain that would otherwise be recognizable after electing the once-in-a-lifetime exclusion may be subject to the general deferral provision of former IRC Section 1034.

Example:

Sales price of old residence	\$210,000
Tax basis of old residence	50,000
Gain realized	\$160,000
Sales price of old residence	\$210,000
Gain excluded under former IRC Section 121 election	125,000
Amount realized for purposes of applying former IRC Section 1034	\$85,000
Purchase price of new residence	75,000
Net gain taxable	\$10,000
Gain realized on sale	\$160,000
Less gain excluded under former IRC Section 121 election	\$125,000
Adjusted gain realized on sale	\$35,000
Less gain recognized	10,000
Deferred portion of gain realized	\$25,000
Purchase price of new residence	\$75,000
Less deferred portion of gain realized	25,000
Tax basis of new residence	\$50,000

In an unusual ruling, the taxpayer sold his personal residence to a charity in a bargain sale in exchange for a private annuity for life. As it was a bargain sale, the taxpayer was required to allocate basis between the charitable gift portion and the exchange portion. He was allowed to elect former *IRC Section 121* and defer gain via former IRC Section 1034 so that no tax was due on the exchange. Also, he was allowed a charitable deduction for the contribution element. n148

CHAPTER 9 Personal Residences *

1-9 Federal Taxes Affecting Real Estate § 9.04

§ 9.04 Relief Provisions for Interest

[1] Qualified Residence Interest

[a] In General

Although in general there are significant limitations on the deductibility of many types of interest expense, qualified-residence interest is deductible. It is defined as any interest paid or accrued n149 during the taxable year on "acquisition indebtedness" or "home equity indebtedness" for any qualified residence of the taxpayer. n150

Acquisition indebtedness includes any indebtedness incurred in the acquisition, construction, or substantial improvement of any qualified residence of the taxpayer, and secured by such residence. The term also includes any debt, secured by such residence, resulting from the refinancing of such debt. n151 Refinancing debt, however, only qualifies to the extent it does not exceed the amount of acquisition indebtedness refinanced. The aggregate amount treated as acquisition indebtedness for any period may not be greater than \$1 million (\$500,000 for a married individual filing separately). n152 Taxpayers may compute the average balance of outstanding home acquisition loans in order to determine whether their loans exceed the \$1 million limit. For a residence owned only part of the year, to calculate the average daily balance, taxpayers must add the daily balance for each day a loan is outstanding and divide the sum by the number of days the residence is a qualified residence during the year (not in excess of the number of days the taxpayers own the residence). n152.1

Under a lenient interpretation of the definition of "acquisition indebtedness" relating to the \$1 million acquisition indebtedness limitation, the IRS Chief Counsel has ruled that the \$1 million limitation set forth in the statute n152.2 is a component element of the definition of acquisition indebtedness, and not a separate limit to deductibility. Therefore, indebtedness that otherwise qualifies as acquisition indebtedness fails to qualify to the extent it exceeds \$1 million. Therefore, a taxpayer who borrows in excess of \$1 million to acquire, construct, or substantially improve a qualified residence may be able to treat up to \$100,000 of the excess above \$1 million as home equity indebtedness, because that amount by definition does not constitute acquisition indebtedness. n152.3 The conclusion of the Chief Counsel Memorandum criticizes and disagrees with the result in two cases addressing the same issue. n152.4 The other possible interpretation of the definition of "acquisition indebtedness"--the one accepted by the court decisions--is that acquisition indebtedness means all indebtedness, *regardless of amount*, incurred to acquire, construct, or substantially improve a qualified residence. n152.5 Under that interpretation, the \$1 million limitation n152.6 is not an element of the definition of acquisition indebtedness, but is a separate limitation on deductibility. If that interpretation were correct, then a

taxpayer who borrowed in excess of \$1 million to acquire, construct, or substantially improve a qualified residence could not treat the excess above \$1 million as home equity indebtedness, because that amount, even though in excess of \$1 million, would still be considered acquisition indebtedness. n152.7 The Chief Counsel ruling also holds that the \$1million limitation n152.8 is part of the definition of "acquisition indebtedness" for AMT purposes. n152.9

Example:

T buys a principal residence for \$1,500,000, paying \$200,000 in cash and borrowing the remaining \$1,300,000 through a loan that is secured by the residence. Up to \$100,000 of T's indebtedness in excess of \$1 million can qualify as home equity indebtedness. n152.10 Therefore, interest on up to \$1.1 million of the debt is deductible (\$1 million of acquisition indebtedness and \$100,000 of home equity indebtedness). n152.11

Generally, an "acquisition indebtedness" must be an obligation of the taxpayer and not of another. n153 Regulations, however, do allow a deduction for interest on a mortgage on which the taxpayer is not personally liable, where the mortgage is nonrecourse or where the taxpayer purchases property subject to a mortgage. n154

In addition, cases sometimes address the issue of whether taxpayers may deduct mortgage interest payments made by them on residences in which legal title is held by a sibling or other family member, or a third party. For mortgage interest to be deductible by a particular taxpayer, the mortgage must ordinarily be the obligation of the taxpayer claiming the deduction, not the obligation of another. n154.1 However, even though property may not be in a taxpayer's name, a deduction may be allowed if the taxpayer is the legal or equitable owner of the property, and is at least indirectly liable on the mortgage. n154.2 Voluntary mortgage payments made by a family member or other third party who has no obligation on the mortgage and who does not have a legal or equitable interest in the residence cannot support a mortgage interest deduction, even if the person making the payment lives in the home. n154.3 Usually, the family member has acted in an accommodation capacity in order to acquire a loan for which the taxpayer could not qualify. Almost always, courts deny the deduction. n155 The Tax Court has also disallowed an interest deduction for amounts a taxpayer paid under a real property lease-option agreement. The court found that the agreement under which payments were made was an option, and not a purchase or sale of the underlying property. Although the taxpayer paid real property taxes and the amount of his lease payments was tied to the owner's mortgage payments, he did not have an equity ownership interest in the property that would support an interest deduction. n155.1

In one case, however, the Tax Court allowed the deduction even though the taxpayers did not have legal title to the house and were not personally liable on the mortgage. The taxpayers deducted mortgage interest payments on a mortgage that the husband's brother had signed for them. The court found that, in effect, the mortgage payments made by the taxpayers to the lending institution were payments of principal and interest to the husband's brother. As such, the payments constituted payments on an indebtedness of the taxpayers. The court found that the taxpayers' agreement with the husband's brother to pay the mortgage, coupled with their continued occupancy of the property and their performance of all obligations under the mortgage, were sufficient to render the taxpayers' obligation to pay off the mortgage an enforceable debt to the husband's brother for the amount of the mortgage at the interest rate specified in the mortgage. The Tax Court found that the taxpayers held equitable and beneficial ownership of the property because they had made every required mortgage payment, had paid all property maintenance expenses, and had been the sole occupants of the property since the date of purchase. In addition, the court noted that real property taxes and insurance on the property were paid from an escrow account funded with a portion of the taxpayers' mortgage payments. n156 The *Uslu* case was followed in another case in which a relative of the taxpayers obtained a mortgage for them because their prior bankruptcy prevented them from obtaining a loan in their own names. The taxpayers made the down payment on the property, paid all mortgage payments and property taxes, and also paid for improvements on the property. The court, citing *Uslu*, stated that the taxpayers had the burdens and benefits of ownership and thus allowed them to deduct mortgage interest and property taxes paid on the property. n156.1

Taxpayers may deduct more than their proportionate share of mortgage interest arising from property in which they

have an interest as a tenant in common where they pay the mortgage in order to avoid personal liability or to preserve their interest in the property. This could occur if a co-tenant makes mortgage payments in order to avoid foreclosure of property. n156.2 Taxpayers may not deduct more than their share of mortgage interest, however, where they are entitled to reimbursement for payments in excess of their proportionate share under State law, and they in fact receive contribution from co-tenants. Thus, taxpayers may deduct mortgage interest payments beyond their proportionate share only to the extent they actually make the payments and do not receive reimbursement from fellow co-tenants. n156.3

Home equity indebtedness means any indebtedness secured by a qualified residence that does not exceed the fair market value of the residence, less the amount of acquisition indebtedness on the property; provided that the aggregate amount treated as home equity indebtedness for any period may not exceed \$100,000 (\$50,000 for married individuals filing separately). n157 Interest on qualifying home equity indebtedness is deductible even if the proceeds are used for personal expenditures.

NOTE:

As noted above, the IRS now takes the lenient position that a taxpayer who borrows in excess of \$1 million to acquire, construct, or substantially improve a qualified residence may be able to treat up to \$100,000 of the excess above \$1 million as home equity indebtedness, because any borrowed amount in excess of \$1 million does not constitute acquisition indebtedness. n157.1

A qualified residence includes the principal residence of the taxpayer and one other residence (i.e., a vacation home). A principal residence is one that qualifies for gain exclusion under *IRC Section 121*. n158 The second residence must be one designated by the taxpayer and used for personal purposes for a number of days exceeding the greater of 14 days or 10 percent of the number of days during the year for which the home is rented at fair market value. n159 Qualifying use of a second residence may include use by a family member of the taxpayer, even if the taxpayer does not reside in the residence. n160 If the second home is neither rented nor used as a residence at any time during the tax year, a special rule provides that the residence still may be treated as a taxpayer's second residence for the tax year, regardless of the lack of personal use. n161 The taxpayer is able to switch his second residence designation from year to year among otherwise qualifying residences. Note also that a principal or a second residence can include a boat or mobile home provided that basic sanitation and eating and sleeping facilities are present. n162

The Service has ruled that when a taxpayer's principal residence is destroyed by a natural disaster and the underlying land is later sold or the dwelling reconstructed within a reasonable period of time, the property continues to qualify as a "qualified residence" during the period between the destruction of the dwelling and its sale or re-occupancy. Therefore, interest paid on the mortgage debt on the property during that period is deductible. n163

Interest paid on indebtedness incurred to acquire an interest in a residence incident to a divorce may also be deductible as qualified residence interest, without regard to the treatment of the transaction under *IRC Section 1041*. n164

Example:

As part of a property settlement agreement in a divorce, H receives W's interest in a family home and various other assets. In exchange, H must pay W \$100,000 over 10 years, with interest at 10 percent. H executes a promissory note to W containing the payment provisions. To secure the note, H also conveys to W a mortgage deed on the home. Subject to the home equity indebtedness statutory limit, n165 H may deduct interest paid to W as qualified personal residence interest to the extent the indebtedness is allocable to the home. n166

[b] Mortgage Insurance Premiums as Qualified Residence Interest

A temporary provision allows certain mortgage insurance premiums to be treated as qualified residence interest. n166.1

The provision applies only with respect to mortgage insurance contracts issued after 2006 and before 2015.

Subject to the above effective date limits, premiums paid or accrued for qualified mortgage insurance by a taxpayer during the taxable year in connection with acquisition indebtedness on a qualified residence of the taxpayer are treated as interest that is qualified residence interest. The premiums are therefore deductible. n166.2 The amount allowable as a deduction is phased out ratably by 10 percent for each \$1,000 by which the taxpayer's adjusted gross income exceeds \$100,000 (\$500 and \$50,000, respectively, in the case of a married individual filing a separate return). Thus, the deduction is not allowed if the taxpayer's adjusted gross income exceeds \$110,000 (\$55,000 in the case of married individual filing a separate return). n166.3

For purposes of the provision, qualified mortgage insurance means mortgage insurance provided by the Veterans Administration, the Federal Housing Administration, or the Rural Housing Administration, and private mortgage insurance (defined in section 2 of the Homeowners Protection Act of 1998 as in effect on December 20, 2006). n166.4 Amounts paid for qualified mortgage insurance that are properly allocable to periods after the close of the taxable year are treated as paid in the period to which they are allocated. n166.4.1
