(4) as of the last day of any taxable year in which the corporation issues an obligation to acquire the stock or assets of another corporation, either (a) the ratio that the total indebtedness of the corporation bears to the sum of its money and the adjusted bases of all of its other assets less such total indebtedness--its debt-equity ratio--is greater than 2-to-1, or (b) the projected earnings of the corporation (and of the acquired corporation in any case where the issuing corporation acquired control of, or substantially all of the assets of, the acquired corporation) do not exceed three times the annual interest to be paid and incurred on the total outstanding indebtedness of the issuing corporation (and of the acquired corporation in any case in which projected earnings include those of the acquired corporation).ⁿ³³

The deduction will not be disallowed before the first taxable year in which application of condition (4) specified above results in an obligation being treated as corporate acquisition indebtedness.ⁿ³⁴ But once an obligation is determined to be corporate acquisition indebtedness, it will continue to be such,ⁿ³⁵ unless either (1) the issuing corporation acquires control of the acquired corporation in a later year, and in such year the projected earnings of both corporations exceed three times the annual interest paid or incurred on the total indebtedness of both corporations;ⁿ³⁶ (2) for each of the three years immediately following any year in which an obligation is determined to be corporate acquisition indebtedness, the corporation's debt-equity ratio is less than 2-to-1 and its projected earnings are more than three times as great as the annual interest to be paid and incurred, in which case the obligation will lose its "taint" after the three-year period;ⁿ³⁷ or (3) the obligation was issued to provide the consideration for the acquisition of stock in another corporation, and the issuing corporation has not owned 5 percent or more of the voting stock of such other corporation at any time between October 9, 1969 and the close of the taxable year in which the acquisition occurs.ⁿ³⁸

While an extension, renewal or refinancing of an obligation evidencing a preexisting indebtedness is not the issuance of a new obligation,ⁿ³⁹ any obligation that constitutes corporate acquisition indebtedness of the issuing corporation will also be corporate acquisition indebtedness of any corporation that assumes the obligation or becomes liable for such obligation as a guarantor, endorser, or indemnitor.

The thrust of *IRC Section 279* is the denial of excessive interest deductions when the underlying instrument is endowed with some of the characteristics of equity. However, it should be noted that the provision is not the exclusive means of limiting the deduction for interest paid on obligations used to acquire stock or assets of another corporation. *IRC Section 279(j)* prohibits one from drawing the inference that any instrument designated as a debt security by its issuer represents a debt of such issuer for the purpose of applying any other provision of the Code. Thus, the enactment of *IRC Section 279* does not prevent the disallowance of an interest deduction on the ground that the supposed debt is, in fact, equity and, therefore, that no indebtedness exists.ⁿ⁴⁰ Viewed in this perspective, *IRC Section 279* will most likely be invoked when the Service feels that it has a weak case on the issue of debt versus equity.

[5] Reorganizations Involving Two or More Investment Companies.

The Tax Reform Act of 1976 amended the reorganization provisions by adding a new subparagraph, *IRC Section 368(a)(2)(F)*, for the express purpose of requiring recognition of gain or loss on transactions which, from an investor's standpoint, resemble the formation of an exchange fund, a fund designed to attract low-basis, high-value investments by

giving the investor untaxed appreciation on the formation of the fund and tax-free diversification of his investment assets.ⁿ¹ The provision is designed to become operative if the reorganization involves an undiversified investment company and the result of the exchange is significantly greater diversification than existed before the transaction.ⁿ² Put more specifically, if the parties to a transaction which would normally meet the definition of reorganization contained in Section 368(a)(1) include two or more investment companies, the exchange will not qualify for nonrecognition treatment as to any of the investment companies and its shareholders if the company owned an undiversified portfolio of stock or securities before the exchange.ⁿ³

The new rule has no effect on reorganizations generally, nor does it render taxable reorganization exchanges between two or more diversified investment companies or between an undiversified company and a corporation which is not an investment company. Moreover, it is important to note that even if the transaction involves multiple investment companies, any party to the exchange which is not an undiversified investment company will continue to qualify for customary reorganization treatment. Finally, reorganizations of commonly controlled investment companies, those owned substantially by the same persons in the same proportions, continue to be tax-free.ⁿ⁴

The operation of the amendment can be illustrated by the case of the shareholder of an undiversified investment company who exchanges his stock solely for the voting stock of a diversified investment company in what would otherwise be a "B" reorganization. The shareholder will be treated as having sold his stock in a taxable transaction; the acquiring corporation, because diversified, continues to enjoy the benefits of the reorganization provision. If the shareholder of a diversified company exchanges his stock for the stock of another diversified company, the exchange will be tax-free.

For purposes of the reorganization provisions, a company is an investment company if it is a regulated investment company, a real estate investment trust, or a corporation with 50 percent or more of the value of its total assets consisting of stocks and securities and with 80 percent or more of the value of its total assets being assets held for investment.ⁿ⁵ (Investment assets in the 80 percent category include, but are not limited to stocks and securities.)ⁿ⁶ In making the 50 percent and 80 percent calculations, (1) stock and securities in any subsidiary corporation are to be disregarded and the parent corporation deemed to own its ratable share of the subsidiary's assets,ⁿ⁷ and (2) total assets are to be determined by excluding cash and cash items (including receivables), United States Government securities, and any assets acquired for the purpose of causing the corporation not to be an investment company.ⁿ⁸

A company meeting the definition of investment company is considered to be undiversified unless it is a regulated investment company, a real estate investment trust, or an investment company having not more than 25 percent of the value of its total assets invested in the stock or securities of any one nor more than 50 percent of the value of its total assets invested in the stock or securities of five or fewer issuers (other than a regulated investment company, a real estate investment trust, or an investment company of the type just described.)ⁿ⁹ A person holding stock in a regulated investment company, a real estate investment trust, or an investment company described in the previous sentence, is treated as holding a proportionate share of the assets held by the company or trust. In making these percentage determinations, authority is given to the Service to disregard active business assets and other property deliberately acquired before a planned reorganization for the purpose of qualifying the company as diversified.ⁿ¹⁰

The provision contains rules (the "reverse acquisition") to insure that regardless of whether, in form, the investment company is the acquired corporation or the acquiring corporation, nonrecognition treatment will be denied for the portion of the exchange involving the undiversified investment company and its shareholders. Thus, if an undiversified investment company acquires the assets of another investment company (diversified or undiversified) in a statutory merger or "C" reorganization, the tax consequences of the transaction to the investment company and its shareholders will be determined as though the undiversified investment company had been acquired by the other party to the transaction.ⁿ¹¹ In other words, the undiversified company is treated as if it had exchanged its assets for the stock of the other corporation and then had distributed the stock to its shareholders in exchange for their stock in the undiversified company. If the undiversified company acquires the stock of another investment company in a "B" reorganization, the

shareholders of the undiversified company will be treated as having exchanged their stock in the undiversified company for stock of the other corporation having a fair market value equal to the fair market value of the stock of the investment company owned by the shareholders immediately after the acquisition.ⁿ¹²

(n66)Footnote 24. *XII-2 CB 57 (1933)*. *GCM 12148* has been declared obsolete. *Rev Rul 68-674, 1968-2 CB 609*.

(n67)Footnote 25. *Davis v US, 46 F2d 377 (Ct Cl 1931)*. There were payments in more than one year following the year of sale, in which there was no payment.

(n68)Footnote 26. *Gilbert v Commr, 241 F2d 491 (9th Cir 1957)* (no payment in year of sale; multiple payments thereafter).

(n69)Footnote 27. There seems no reason not to treat the obligations as evidences of indebtedness whenever they are not of the type described in *IRC § 453(f)(4)*. The fact that the debt will be paid in stock rather than cash should have no effect on the result.

(n70)Footnote 28. *Prop Treas Reg § 1.1273-2(e)*.

(n71)Footnote 29. The dollar amount that may be deducted must be reduced by the amount of interest paid or incurred by the corporation on obligations, issued in or after 1968 as consideration for the acquisition of stock or assets

of another corporation, but which do not meet the definition of "corporate acquisition indebtedness." *IRC § 279(a)(2)*.

(n72)Footnote 30. *IRC § 279(b)(1)*. A tax-free acquisition of stock of a corporation that the issuing corporation controls after the acquisition will be considered an acquisition under *IRC § 279(b)(1)* only if immediately before the transaction (a) the acquired corporation was in existence and (b) the issuing corporation was not in control of the acquired corporation. *IRC § 279(e)*. Control is present when the issuing corporation owns 80 percent of the voting stock and 80 percent of the total number of shares of all other classes of stock of the corporation. *IRC § 368(c)*.

Indebtedness issued to acquire the stock or assets of a foreign corporation will not be considered corporate acquisition indebtedness, if, for the three-year period ending with the date of acquisition, the acquired corporation received substantially all of its income from foreign sources. *IRC § 279(f)*.

If the stock of one corporation is acquired from another corporation and such stock constitutes at least two thirds of the assets of the latter corporation, the acquisition is treated as an asset acquisition. If the issuing corporation acquires less than two thirds of the assets of a corporation and those assets include the stock of a third corporation, the acquisition is a stock acquisition. *Treas Reg § 1.279-3(b)(3)*.

Obligations issued to provide indirect consideration for an acquisition of stock or assets comes within *IRC § 279*. An obligation is issued to provide such indirect consideration if (a) at the time of issuance the issuing corporation anticipated the acquisition and otherwise would not have issued the obligation, or (b) at the time of acquisition, the issuing corporation foresaw or reasonably should have foreseen that it would be required to issue obligations, which it would not have been required to issue if the acquisition had not occurred. *Treas Reg § 1.279-3(b)(2)*.

(n73)Footnote 31. *IRC § 279(b)(2)*. The term "substantial amount of unsecured indebtedness" is defined as an amount of unsecured indebtedness equal to 5 percent or more of the face amount of the obligations issued to finance the acquisition. *Treas Reg § 1.279-3(c)(2)*.

(n74)Footnote 32. *IRC § 279(b)(3)*. If the issuing corporation is a member of an affiliated group, the provisions of *IRC § 279(b)(3)* are deemed satisfied if the stock into which the obligation or option is convertible is the stock of any member of the group. *Treas Reg § 1.279-3(d)*.

(n75)Footnote 33. *IRC §§ 279(b)(4), 279(c)(1)(4)*. The term "projected earnings" means the average annual earnings and profits for the three-year period ending with the year of acquisition. In computing earnings and profits, no reduction can be made on account of interest paid or incurred, depreciation or amortization allowed as a deduction, income taxes paid to the United States, and dividend distributions (other than distributions made by the acquired corporation to the issuing corporation). *IRC § 279(c)(3)*.

An obligation, that is not corporate acquisition indebtedness in the year in which it is issued, will be subject to the test of *IRC § 279(b)(4)* in a subsequent year if the issuing corporation issues any obligation for an acquisition with respect to the same acquired corporation. The new test will be required whether or not the subsequent obligation is classified as corporate acquisition indebtedness. *Treas Reg § 1.279-5(b)(2)(i)*.

(n76)Footnote 34. *IRC § 279(d)(1)*.

(n77)Footnote 35. *IRC § 279(d)(2)*.

(n78)Footnote 36. *IRC § 279(d)(3)*.

(n79)Footnote 37. *IRC § 279(d)(4)*.

(n80)Footnote 38. *IRC § 279(d)(5)*. This provision is intended to eliminate de minimis stock acquisitions from the scope of the disallowance rule. S Rep No 91-552, 91st Cong, 1st Sess 143 (1969).

(n81)Footnote 39. *IRC § 279(h)(1); GCM 39618 ; Ltr Rul 8712059* . The protection granted by *IRC § 279(h)(1)* will not be honored if the refinancing was contemplated at the time of the stock or asset acquisition, and the refinancing did not have a valid business purpose.

(n82)Footnote 40. HR Rep No 91-413 (Pt 1), 91st Cong, 1st Sess 104-105 (1969).

(n83)Footnote 1. Because the loss is recognized, it becomes subject to the disallowance provisions of *IRC § 267(a)(1)*, if both corporations are members of the same controlled group. *IRC §§ 267(b)(3)*.

(n84)Footnote 2. S Rep No 94-938, Pt II, 94th Cong 2d Sess 49 (1976).

(n85)Footnote 3. Since recapitalizations involve a single corporation, they are not covered by the amendment.

The Service will issue advance rulings with respect to transactions covered by *IRC § 368(a)(2)(F)*. *Rev Proc 77-1, 1977-1 CB 534* .

(n86)Footnote 4. *IRC § 368(a)(2)(F)(v)*.

(n87)Footnote 5. *IRC § 368(a)(2)(F)(i),(iii)*.

(n88)Footnote 6. S Rep No 94-938, Pt II, 94th Cong, 2d Sess 50 (1976). The types of investment assets which should be treated as "securities" for purposes of *IRC § 368(a)(2)(F)* include obligations of state and local governments commodity futures contracts, shares of regulated investment companies and real estate investment trusts, and other investments constituting a security within the meaning of the Investment Company Act of 1940. *IRC § 368(a)(2)(F)(vii)*.

(n89)Footnote 7. *IRC § 368(a)(2)(F)(iii)*. A corporation is a subsidiary if the parent owns 50 percent or more of the combined voting power of all classes of stock entitled to vote or 50 percent or more of the total value of shares of all classes of stock outstanding.

(n90)Footnote 8. *IRC § 368(a)(2)(F)(iv)*.

(n91)Footnote 9. *IRC § 368(a)(2)(F)(ii)*. All members of a controlled group, as defined in *IRC § 1563(a)* are treated as a single issuer.

(n92)Footnote 10. *IRC § 368(a)(2)(F)(iv)*.

(n93)Footnote 11. *IRC § 368(a)(2)(F)(iv)*. For purposes of *IRC § 1001*, the deemed acquisition and exchange is treated as a sale or exchange of property by the corporation and the shareholders.

(n94)Footnote 12. *IRC § 368(a)(2) ((F)(vi)*. The shareholders would be required to recognize gain in the difference between the basis of their stock in their own company and the value of the other company's stock deemed acquired in the deemed exchange.

1-8 Taxation of Securities Transactions § 8.08

§ 8.08 Rollover of Publicly Traded Securities Gain into Specialized Small Business Investment Companies

Under *IRC Section 1044(a)*, added by the Omnibus Budget Reconciliation Act of 1993 and effective for taxable years ending on or after August 10, 1993, gain from the sale of publicly traded securities (securities traded on an established securities marketⁿ¹) will be recognized only to the extent that the amount realized on the sale exceeds (1) the cost of any common stock or partnership interest in a specialized small business investment company (SSBIC)ⁿ² purchased by the taxpayer during the 60-day period beginning on the date of sale, reduced by (2) any portion of the cost previously taken into account under *IRC Section 1044(a)*.ⁿ³ The provision is elective and applies only to gain that is otherwise treated as capital gain.ⁿ⁴ It may not be availed of by an estate, trust, partnership or S corporation.ⁿ⁵

The amount that can be excluded in any taxable year is limited. In the case of an individual, the maximum amount is the lesser of \$50,000, or \$500,000 reduced by the amount of gain excluded under *IRC Section 1044(a)* for all preceding taxable years.ⁿ⁶ The amounts are halved for a married person filing a separate return.ⁿ⁷

The amount that can be excluded by a C corporation for any taxable year cannot exceed the lesser of \$250,000, or \$1 million reduced by the amount of gain excluded under the provision for all prior taxable years.ⁿ⁸ All corporations that are members of the same controlled group of corporations are treated as one corporation, while any gain excluded by a predecessor of any C corporation is treated as having been excluded by that C corporation.ⁿ⁹

Gain that is not recognized because of the application of *IRC § 1044(a)* is applied to reduce (in the order acquired) the basis for determining gain or loss of any common stock or partnership interest in any SSBIC that is purchased by the taxpayer during the specified 60-day period.ⁿ¹⁰

FOOTNOTES:

(n1)Footnote 1. *IRC § 1044(c)(1)*.

(n2)Footnote 2. An SSBIC is any partnership or corporation that is licensed by the Small Business Administration under § 3(d) of the Small Business Investment Act of 1958 (as in effect on May 13, 1993). *IRC § 1044(c)(3)*.

(n3)Footnote 3. For this purpose, a purchase occurs if the unadjusted basis of the common stock or partnership interest is its cost within the meaning of *IRC § 1012*. *IRC §§ 1043(b)(4), 1044(c)(2)*.

(n4)Footnote 4. The election must be made on or before the due date (including extensions) for the income tax

return for the year in which the publicly traded securities are sold. The election is to be made by reporting the entire gain from the sale of publicly traded securities on Schedule D, and by attaching a statement to the schedule showing (1) how the nonrecognized gain was calculated; (2) the SSBIC in which common stock or a partnership interest was purchased; (3) the date the SSBIC stock or partnership interest was purchased; and (4) the basis of the SSBIC stock or partnership interest. *Treas Reg § 1.1044(a)-1(b)*. The election is revocable with the consent of the Commissioner. *Treas Reg § 1.1044(a)-1(c)*.

(n5)Footnote 5. *IRC § 1044(c)(4)*.

(n6)Footnote 6. *IRC § 1044(b)(1)*. In the case of any joint return, the amount excluded under *IRC § 1044(a)* is allocated equally between the spouses for purposes of applying the limitation to subsequent taxable years. *IRC § 1044(b)(3)(B)*.

(n7)Footnote 7. *IRC § 1044(b)(3)(A)*.

(n8)Footnote 8. *IRC § 1044(b)(2)*.

(n9)Footnote 9. *IRC § 1044(b)(4)*. The term "controlled group of corporations" for purposes of *IRC § 1044(b)* has the same meaning given to it by *IRC § 1563(a)*, except that the requisite stock ownership level is reduced from 80 percent to 50 percent. *IRC § 52(a)*.

(n10)Footnote 10. *IRC § 1044(d)*. The provision does not apply for purposes of *IRC § 1202*, discussed in § 2.06[2][a][ii].

CHAPTER 8 Reorganizations and Other Exchanges

1-8 Taxation of Securities Transactions § 8.09

§ 8.09 Reorganizations Involving Foreign Corporations

With the prevalence of a global economy, U.S. tax law in recent years has struggled to address issues related to reorganizations involving non-domestic corporations.

Even in one of the simplest situations, a merger between two foreign corporations, guidance has been relatively recent. It was not until 2005 that the Treasury Department acknowledged that such a merger should not have adverse effects on a U.S. shareholder of one of the corporations.ⁿ¹

Creating more significant problems are the "cross border" type of reorganizations, where U.S. assets are effectively transferred to foreign corporations and then retransferred to the U.S. The concern is that the deferral of gain associated with corporate reorganizations could end up permanent. This could result from the transfer of property with untaxed built-in gain to a tax jurisdiction outside of the United States. In some cases there could even be a repatriation of the assets after the imposition of taxation under a foreign jurisdiction.

IRC Section 367 is the primary means used to avoid such permanent deferral in situations of transfers to controlled corporations under *IRC Section 351*, and reorganizations under *IRC Section 361*. *IRC Section 367* is discussed at length at *Section 3.02[6]*, above, primarily in the context of forming a foreign corporation. The principles discussed in that context, however, will apply as well to a reorganization involving a transferor that is a U.S. person and a transferee that is a foreign corporation.

In particular, reorganizations involving a transferor domestic corporation and a transferee foreign corporation will be subject to *IRC Section 367(a)(5)*. That provision creates a requirement that there be at least 80 percent control of the transferor by five or fewer domestic corporations in order for the transfer to be eligible for tax-free reorganization treatment.

The function of the control requirement is to ensure that the tax-free treatment is in fact merely deferral. The control of the transferor corporation by domestic corporations will ensure that future taxation on the sale of the corporate stock received in the reorganization will be subject to U.S. taxing jurisdiction.

Where there is a minority shareholder (20 percent or less) of the transferor corporation that is not a domestic corporation, then that would trigger immediate gain to the extent that the U.S. would no longer have taxing jurisdiction.

Proposed regulations were issued on August 19, 2008ⁿ² under which domestic corporations in the control group would have the option of avoiding the immediate taxation by appropriate basis adjustments designed to preserve the deferred gain for ultimate U.S. taxation.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions 9.syn

§ 9.syn Synopsis to Chapter 9: Stock Options

§ 9.01 Introduction

§ 9.02 Options to Buy and Sell

[1] Definitions.

[a] "Puts" and "Calls."

[b] Combination Options--"Straddles," "Spreads," "Strips," and "Straps."

[2] Tax Treatment of "Puts."

[a] Grant of the Option.

[b] Exercise of the Option.

[c] Lapse of the Option.

[d] Sale or Exchange of the Option.

[e] Hedging Transactions.

[3] Tax Treatment of "Calls."

[a] Grant of the Option.

[b] Exercise of the Option.

[c] Lapse of the Option.

[d] Sale or Exchange of the Option.

[e] Hedging Transactions.

[4] Tax Treatment of "Straddles."

[a] Allocation of Option Premium.

[b] Lapse of a Component Option.

[c] Exercise of a "Call" Option by a Holder of Both Components of a "Straddle."

[d] Loss Deferral.

[e] Options Marked to Market.

[5] Dividends Paid on Stock Subject to Options.

[6] Tax Techniques Involving "Puts" and "Calls."

[a] Using "Puts" to Defer Gain Without Risk of Loss.

[b] Using "Puts" to Achieve Gain in a Declining Market.

[c] Using "Puts" to Limit Losses.

[d] Using "Calls" and Short Sales to Insure Gains.

§ 9.03 Statutory Stock Options--Options Granted Under Employee Stock Purchase Plans

[1] Requirements and Conditions of Employee Stock Purchase Plans.

[a] Stock Ownership Limitation.

[b] Eligible Employees.

[c] Equality of Rights Under Plan.

[d] Option Price.

[e] Option Period.

[f] Purchase Limitation.

[g] Transferability.

[2] Modification, Extension, and Renewal of the Option.

[3] Treatment of Options Granted Under Stock Purchase Plans.

[a] Exercise of the Option.

[i] By the Optionee.

[ii] By the Optionee's Estate.

[b] Dispositions of Stock Acquired Through Exercise of the Option.

[i] Effect of a Disqualifying Disposition.

[ii] Effect of the Option Price on the Character of Gain Realized in a Qualifying Disposition.

[iii] Dispositions of Stock Acquired by an Estate's Exercise of the Option.

[c] Special Basis Rules for Stock Acquired by an Estate on the Exercise of the Option.

[4] Effect on the Grantor Corporation.

§ 9.04 Statutory Stock Options--The Incentive Stock Option

[1] Requirements and Conditions--The Definition of an Incentive Stock Option.

[a] Employment.

[b] Stock Option Plan.

[c] Time Periods for Granting and Exercising the Option.

[d] Option Price.

[e] Stock Ownership and Value Limitations.

[f] Transferability of the Option.

[g] Permissible Provisions.

[2] Modification, Extension and Renewal of the Option.

[3] Treatment of Incentive Stock Option.

[a] Exercise of the Option.

[b] Dispositions of Stock Acquired Through Exercise of the Option.

[4] Effect on the Grantor Corporation.

§ 9.05 Reporting Requirements With Respect to Statutory Stock Options

§ 9.06 Nonstatutory Stock Options

[1] Treatment of Options Having a Readily Ascertainable Value.

[a] Determination of a Readily Ascertainable Value.

[b] Grant of the Option.

[c] Transfer or Exercise of the Option.

[d] Disposition of Stock Acquired on the Exercise of the Option.

[2] Treatment of Options Without a Readily Ascertainable Value.

[a] Grant of the Option.

[b] Transfer of the Option.

[c] Exercise of the Option.

[d] Death of the Optionee Prior to Realizing Compensation Income.

[e] Basis of Stock Acquired on the Exercise of the Option.

[3] Effect on the Grantor of the Option.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.01

§ 9.01 Introduction

A stock option affords the holder of the option the ability to watch and capitalize on the market trend of the subject stock without incurring any cost other than the cost of acquiring the option. For example, if one acquires an option to purchase 100 shares of stock at \$50 a share and the price of the stock increases to \$75 a share, the optionee is in a position to make an advantageous purchase of the stock. But in addition, he holds a valuable asset--the option itself--and he can sell the option at a gain if he so desires. If the stock declines in price to, say, \$35 a share and the option holder still desires to purchase the stock, he will do so on the open market and permit the option to lapse. In the latter case, the option does not confer a tangible benefit on the holder. However, it does act as insurance against an unprecedented rise in the price of the stock.

A second type of option, the employee stock option, serves a different function. It provides the optionee with the opportunity of acquiring a proprietary stake in his employer's business. And if the option is a statutory stock option (an option granted under an employee stock purchase plan or an incentive stock option), any spread between the option price and the value of the stock at the time of exercise may not be taxed as compensation.

The first part of this chapter will focus upon the tax consequences which attach to the grant, exercise, lapse, and transfer of options which are not employee stock options. Following that, the discussion will turn to the employee stock option, both statutory and nonstatutory. The final portion will be devoted to consideration of the tax problems surrounding the acquisition of restricted stock other than by the exercise of an option, and to a brief discussion of phantom stock plans.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.02

§ 9.02 Options to Buy and Sell

[1] Definitions.

[a] "Puts" and "Calls." A "put" is an option that gives the holder (the optionee) the right to sell a given number of shares of a specified stock at a prescribed price within a certain period of time. The maker of the option (the optionor) is the person required to purchase the stock if the option is exercised. A "call" is the opposite of a "put"; it gives the optionee the right to buy a given amount of the optionor's stock at a certain price within a certain time.

[b] Combination Options--"Straddles," "Spreads," "Strips," and "Straps." "Puts" and "calls" may be issued in combination. When the option gives the holder both the right to buy and the right to sell the same stock at the same price during the same period of time, the option is called a "straddle." Where the combination option is issued with respect to the same stock, but the "put" price is below and the "call" price is above the then market price, the option becomes a "spread."¹ Adding a "put" to a "straddle" produces a "strip"; adding a "call" to a "straddle" creates a "strap."²

[2] Tax Treatment of "Puts."

[a] Grant of the Option. The grantor of a "put" option does not realize any gain or loss until the option is exercised or allowed to expire. The holder also has no gain or loss as a result of the granting of the option, but the transaction is not always without tax effect for him, since acquisition of a "put" may be treated as a short sale.¹

[b] Exercise of the Option. Gain realized on the exercise of a "put" will be short-term capital gain if (1) on the date the "put" is acquired, the grantee of the option has not held the stock covered by the option (or substantially identical stock) for more than one year, or (2) the stock covered by the option or substantially identical property is acquired after the acquisition of the option and before its exercise. This result is dictated by the special rule of *IRC Section 1233(b)(1)*;² acquisition of the "put" is treated as a short sale, and its exercise, the closing thereof. To illustrate:

Example:

Suppose that a taxpayer owns 100 shares of X Corp. stock that he purchased at \$10 a share on February 1, 1988 and 100 shares that he purchased at \$12 a share on March 1, 1989. Suppose further that an option to sell 100 shares of the stock at \$14 a share is acquired by the taxpayer on August 1, 1989, and exercised on October 1, 1989 by the delivery of the February shares. Application of *IRC Section*

1233(b)(1) makes the realized gain a short-term capital gain; the "put" was acquired at a time when stock substantially identical to that covered by the option had been held by the taxpayer for less than one year. The fact that the delivered stock had been held for more than one year prior to the acquisition and exercise of the option does not change the result. Furthermore, since the remaining 100 shares had been held for less than one year at the time that the taxpayer acquired the "put," *IRC Section 1233(b)(2)* would become operative and cause the holding period of such shares to begin on October 1, 1989 the date of closing of the short sale. Had the taxpayer delivered the March shares, the gain would still have been short-term, but the holding period of the remaining shares (the February, 1988 shares) would have been unaffected by *IRC Section 1233(b)(2)* since held for more than one year at the time the "put" was acquired.

Under *IRC Section 1233(c)*, the acquisition of an option to sell is not considered a short sale if the option and the stock that the taxpayer identifies as the stock he intends to use in exercising the option are acquired on the same day, and such stock is, in fact, sold under the exercise of the option. If identification of the stock intended to be used in exercising the option is not contained in the option itself, it must be made by appropriate entries in the taxpayer's records within fifteen days after the acquisition of the property.ⁿ³ Since the acquisition of an option covered by *IRC Section 1233(c)* is not treated as a short sale, gain realized on the exercise of the option is classified as long-term or short-term gain solely by reference to the length of time between acquisition and exercise. If held for more than one year, the gain will be long-term, otherwise it will be short-term.

Gain resulting from the exercise of a "put" will always be long term gain if the stock delivered on exercise is obtained more than one year prior to the acquisition of the option and the taxpayer does not acquire additional stock in the corporation (or substantially identical stock) within the period beginning one year before acquisition of the option and ending with its exercise. In such case, *IRC Section 1233(b)* is inapplicable and the acquisition of the "put" is not treated as a short sale.

The character of any loss resulting from the exercise of a "put" is dependent upon the taxpayer's holding period of the stock sold under the option. A holding period of more than one year will produce a long-term loss; one of one year or less, a short-term loss. The character of the loss is not affected by *IRC Section 1233(d)*, the provision that requires a loss realized on a short sale to be treated as a long-term loss whenever stock or securities substantially identical to those sold short have been held by the taxpayer on the date of the short sale for more than one year; the acquisition of the "put" is not a short sale for the purposes of *IRC Section 1233(d)*.ⁿ⁴ Nor is the character of the loss affected by *IRC Section 1233(b)(1)*, since that provision operates only when the short sale results in a gain. But although *IRC Section 1233(b)(1)* has no application, the special holding period rule of *IRC Section 1233(b)(2)* may become operative even though a loss is realized on the transaction. To illustrate:

Example:

A taxpayer purchased 100 shares of X Corp. stock on February 1, 1988 and an additional 100 shares on May 1, 1989. An option to sell 100 shares was acquired on September 1, 1989 and exercised on December 1, 1989 by the sale of the February shares at a loss, a long-term loss since the taxpayer had held the stock for more than one year prior to acquiring the option. A further consequence results from the operation of *IRC Section 1233(b)(2)*, made applicable by the fact that the "put" was acquired within one year of the purchase of the May shares. The holding period of those shares will commence on the date of exercise of the option (the closing of the short sale deemed to have been made when the "put" was acquired). Had the May shares been the ones sold on the exercise of the option, the loss would still have been long-term, but the holding period of the February shares would not have been subject to the rule of *IRC Section 1233(b)(2)*; those shares had been held for more than one year when the option was acquired.ⁿ⁵

The amount of gain or loss realized by an option holder on the exercise of a "put" is determined by first offsetting the

amount paid for the option against the option price and then subtracting therefrom the basis of the stock sold under the option.ⁿ⁶ For example, if a taxpayer paid \$500 for an option to sell stock for \$10,000, and he exercised the option by selling stock with a basis of \$8,000, his gain would be \$1,500 (\$10,000 option price, less \$500 option cost, less \$8,000 stock basis).

The maker of the option, the one required to purchase the stock if the option is exercised, realizes neither gain nor loss if the option is exercised. All he does is determine his basis for the stock by reducing the amount paid therefor by the amount received on the granting of the option.ⁿ⁷

[c] Lapse of the Option. As a general rule, loss attributable to the failure to exercise an option to sell "shall be considered gain or loss from the sale or exchange of property which has the same character as the property to which the option ... relates as in the hands of the taxpayer. ..."n8 Thus, if the stock covered by the option is a capital asset in the hands of the optionee, his loss on lapse will be a capital loss, with the long-term or short-term nature of the loss depending on the length of time that the taxpayer held the option; the sale or exchange is deemed to take place on the day that the option expires.ⁿ⁹

The general rule will be inapplicable, and the loss on expiration treated as an ordinary loss, if the taxpayer is a dealer in options or a dealer in the property subject to the option.ⁿ¹⁰ The general rule is also inapplicable if the expired option and the stock intended to be used in exercising the option were acquired on the same day.ⁿ¹¹ In such case, the loss is not recognized, and the cost of the option is added to the basis of the stock with which it is identified.ⁿ¹²

We have seen that the purchase of a "put" is treated as a short sale if, at the time of acquisition, the taxpayer has held stock substantially identical to the stock covered by the option for less than one year. The lapse of the "put" marks the closing of that short sale. Although this will have no effect on the character of the loss, it does trigger the special holding period rule of *IRC Section 1223(b)(2)* and cause the holding period of as many shares of substantially identical stock held by the taxpayer as is equal to the number of shares covered by the option to commence on the date on which the option expires.ⁿ¹³ The last stated rule is again inapplicable if the "put" and the stock intended to be sold on its exercise were acquired on the same day.ⁿ¹⁴

Any gain realized by the grantor of the option on account of the failure of the holder to exercise it will be treated as short-term capital gain unless the option was granted by a dealer in options in the ordinary course of the dealer's business.ⁿ¹⁵ However, under *IRC Section 1032*, a corporation does not recognize any gain or loss resulting from the lapse of an option or with respect to a securities futures contract to buy or sell its stock (including Treasury stock).ⁿ¹⁶

[d] Sale or Exchange of the Option. Section 1234(a)(1) sets forth the general rule, in the case of the purchaser of the option, that gain or loss attributable to the sale or exchange of an option will be capital gain or loss, if the stock to which the option relates is, or would have been, a capital asset in the hands of the taxpayer. The period for which the taxpayer has held the option determines whether the gain or loss is long-term or short-term.ⁿ¹⁷

The general rule is inapplicable if the option is part of an option dealer's inventory or stock in trade, or if income derived in connection with the option would otherwise be treated as ordinary income.ⁿ¹⁸ For example, since some of the gain resulting from the sale of an option treated as Section 306 stock, or from the sale of a nonstatutory employee stock option, would be considered ordinary income apart from Section 1234(a)(1), the section will be inoperable, and the gain from such sale or exchange treated as ordinary income.ⁿ¹⁹

The character of any gain or loss realized on the sale or exchange of a "put" is unaffected by Section 1223(b); the language of that provision limits its application to instances in which a "put" constituting a short sale either is exercised or permitted to expire. Accordingly, the nature of the gain or loss resulting from the sale will be determined by the length of time that the option was held.ⁿ²⁰ Moreover, since the sale or exchange of the "put" is not the equivalent of the closing of a short sale, the holding period of so much of the substantially identical stock as is affected by *IRC Section*

1233(b)(2) will run from the date on which the stock was actually acquired and not from the date of sale of the option.

In the case of the grantor of the option, gain or loss from the sale or exchange of the option is treated as short-term capital gain or loss.ⁿ²¹

[e] Hedging Transactions. Gain or loss on an acquired or written "put" that is (or is identified as being) part of a hedging transaction is treated as ordinary gain or loss.ⁿ²²

[3] Tax Treatment of "Calls."

[a] Grant of the Option. As in the case of sell options, the grant of a "call" does not produce any gain or loss for either optionor or optionee.ⁿ¹ Tax consequences attach only upon the exercise of the option, its sale or exchange, or its expiration.

[b] Exercise of the Option. The exercise of a "call" requires the grantor of the option to sell the subject stock at the option price. To determine the gain or loss realized on the sale, the optionor must first add the option premium (the amount paid for the option) to the selling price of the stock, and then compare the resulting figure (the amount realized) with his basis for the stock.ⁿ² The gain or loss will be long-term or short-term depending on the length of time that the optionor has held the stock.

The optionee's basis for the acquired stock is the sum of the option price and the option premium. His holding period for the acquired stock commences on the day following acquisition; the period for which the optionee held the option cannot be "tacked."ⁿ³

[c] Lapse of the Option. Loss attributable to the expiration of a "call" is treated as loss arising from the sale or exchange (on the date of lapse) of property "which has the same character as the property to which the option ... relates ... would have in the hands of the taxpayer if acquired by him. ..." ⁿ⁴ Since, in the vast majority of cases, the stock covered by the option would be a capital asset in the optionee's hands, the loss sustained on the lapse of the "call" will be a capital loss. The period that the optionee held the option determines whether the loss is short-term or long-term.ⁿ⁵

The option premium received by the optionor at the time the "call" was granted becomes an item of short-term capital gain for the optionor on the date that the option expires.ⁿ⁶ However, any gain or loss realized by a corporation on the lapse or acquisition of an option to buy its stock (including treasury stock) is not recognized under *IRC Section 1032*.ⁿ⁷

[d] Sale or Exchange of the Option. Under *IRC Section 1234(a)*, the sale or exchange of an option to buy stock will ordinarily produce a capital gain or loss for the holder; the option takes its character as a capital or noncapital asset from the stock to which it relates.ⁿ⁸ Whether the gain or loss is long-term or short-term depends on the optionee's holding period for the option.ⁿ⁹

As in the case of the sale of a "put," *IRC Section 1234(a)(1)* will not apply to:

- (1) gain from the sale or exchange of an option constituting inventory or stock in trade of the optionor;ⁿ¹⁰ or
- (2) gain that is treated as ordinary income without regard to *IRC Section 1234(a)*, eg, gain from a nonstatutory stock option that is in the nature of compensation.ⁿ¹¹

The Service originally took the position that, where the purchaser of the option was the original seller of the "call," and the cost of repurchasing the option was greater than the premium received on the sale of the "call," the option or purchaser was not entitled to deduct the excess cost as a loss, but had to treat such excess as a capital expenditure and add it to the basis of the underlying stock.ⁿ¹²

However, in a private letter ruling issued to the Chicago Board Options Exchange,ⁿ¹³ the Service took the position that a loss incurred in a "closing transaction" (a cancellation of the option writer's obligation by the purchase of a call containing terms identical to the option previously written) constituted an ordinary loss. Congress changed that result by adding *IRC Section 1234(b)(1)*, which turns gain or loss from any closing transaction with respect to an option in property into a short-term capital loss.ⁿ¹⁴ Dealers in options continue to treat such gain or loss as ordinary income or loss provided the options are written in the ordinary course of their business.ⁿ¹⁵

[e] Hedging Transactions. Gain or loss on an acquired or written "call" that is (or is identified as being) part of a hedging transaction is treated as ordinary gain or loss.ⁿ¹⁶

[4] Tax Treatment of "Straddles."

Since a "straddle" is nothing more than a buy and sell option combined, the rules prescribed for "puts" and "calls" should apply with equal force to "straddles." However, the dual option nature of a "straddle" gives rise to some special rules applicable solely to such options.

[a] Allocation of Option Premium. The first problem relating specifically to "straddles" concerns the manner in which the premium received by the writer of the option should be allocated to the two component options. Prior to 1965, it was common practice to allocate the entire premium received to either the "put" or the "call" depending upon which one was exercised. This had the effect of reducing the writer's basis in stock sold to him under the optionee's exercise of the "put" side of the combination and increasing the gain realized if the "call" option were the only one exercised. Allocation of the entire premium to the exercised option is no longer permissible. Instead, the premium received for writing the "straddle" must be allocated to both the "put" and the "call" on the basis of the relative market values of the component options.ⁿ¹ As an alternative to an allocation based on relative fair market values, the Service permits the taxpayer to apportion 55 percent of the premium to the "call" option and 45 percent to the "put."ⁿ² An option writer who decides to use the 55-45 allocation method must indicate his election to do so in a statement attached to his income tax return.ⁿ³

[b] Lapse of a Component Option. Suppose that a taxpayer receives \$1,000 for writing a "straddle," and allocates 45 percent of the premium to the "put" component and 55 percent to the "call." If only the "put" side of the combination option is exercised, the expiration of the "call" would, without more, produce ordinary income of \$550 for the writer of the option. Conversely, the exercise of the "call" and the expiration of the "put" would give rise to ordinary income of \$450. If both options lapsed, the entire \$1,000 would constitute ordinary income to the writer.

Gain attributable to the lapse of a single component option of a straddle is now taxed as short-term capital gain, provided the option was not granted by a dealer in the ordinary course of his business as a dealer in options.ⁿ⁴ The original provision granting such treatment, *IRC Section 1234(c)(1)*, could apply to the lapse of an option granted as part of a multiple option, but only if (1) the lapsed option was part of the "straddle" portion of the multiple option, and (2) the grantor identified which two of the options in the multiple option constituted the straddle. The repeal of *IRC Section 1234(c)* and the addition of *IRC Section 1234(b)(1)* produces no change in the character of the gain realized on the lapse of a component option of a straddle. However, since *IRC Section 1234(b)(1)* applies to all options, not just straddles, it should apply to the lapse of a component option of a multiple option in all events.

[c] Exercise of a "Call" Option by a Holder of Both Components of a "Straddle." If the same person purchases both sides of a "straddle" and then exercises the "call" option first, his holding period for the acquired stock will not begin to run unless, at the time he purchased the option, he owned as many shares of the subject stock as are covered by the option. This results from the fact that, under *IRC Section 1233(b)*, the acquisition of the stock causes the "put" to be treated as an open short sale, in turn triggering the special holding period rule of *IRC Section 1233(b)(2)*. Thus, if the shares acquired by the exercise of the "call" constitute the taxpayer's only long position in the stock, the holding period of the stock cannot commence until the "put" is exercised or expires.

[d] Loss Deferral. *IRC Section 1092(a)(1)(A)* sets forth a general rule that losses realized on the disposition of one or more positions in a straddle are deductible in the loss year only to the extent of the losses over the unrecognized gains in offsetting positions.ⁿ⁵ The nondeductible portion is deferred and available for deduction in the first year in which there are no gains in offsetting positions.ⁿ⁶ If a taxpayer settles a position that is part of a straddle by delivering property to which the position relates (and the position, if terminated, would result in a realization of loss), the taxpayer is treated as if the taxpayer terminated the position for its fair market value immediately before the settlement, and sold the delivered property at its fair market value.^{n6.1}

For purposes of *IRC Section 1092*, a straddle must relate to offsetting positions in personal property that is actively traded.ⁿ⁷ "Actively traded" personal property includes any personal property for which there is an established financial market.ⁿ⁸ An established financial market includes:

- (i) a national securities exchange that is registered under Section 6 of the Securities Exchange Act of 1934;
- (ii) an interdealer quotation system sponsored by a national securities association registered under Section 15A of the Securities Exchange Act of 1934;
- (iii) a domestic board of trade designated as a contract market by the Commodities Future Trading Commission;
- (iv) a foreign securities exchange or board of trade that satisfies analogous regulatory requirements under the law of the jurisdiction in which it is organized (such as the London International Financial Futures Exchange, the *March 'e 'a Terme International de France*, the International Stock Exchange of the United Kingdom and the Republic of Ireland, Limited, the Frankfurt Stock Exchange, and the Tokyo Stock Exchange);
- (v) an interbank market;
- (vi) an interdealer market; and
- (vii) solely with respect to a debt instrument, a debt market.ⁿ⁹

An "interdealer market" is characterized by a system of general circulation (including a computer listing distributed to subscribing brokers, dealers, or traders) that provides a reasonable basis to determine fair market value by disseminating price quotations (including rates, yields, or other pricing information) or actual prices of recent transactions.ⁿ¹⁰ An interdealer market does not include a directory or listing of brokers, dealers, or traders for specific contracts that provides neither price quotations nor actual prices of recent transactions.ⁿ¹¹

A "debt market" exists with respect to a debt instrument if price quotations for the instrument are readily available from brokers, dealers, or traders.ⁿ¹² A debt market does not exist with respect to a debt instrument if:

- (A) no other outstanding debt instrument of the issuer (or of any other person who guarantees the debt instrument) is traded on an established financial market;
- (B) the original stated principal amount of the issue that includes the debt instrument does not exceed \$25 million;
- (C) the conditions and covenants relating to the issuer's performance with respect to the debt instrument are materially less restrictive than the conditions and covenants included in all of the issuer's other traded

1-9 Taxation of Securities Transactions § 9.02

debt (e.g., the debt instrument is subject to economically significant subordination provisions whereas the issuer's other traded debt is senior); or

(D) the maturity date of the debt instrument is more than three years after the latest maturity date of the issuer's other traded debt.ⁿ¹³

The regulations prescribe the manner in which the loss deferral rules are coordinated with the wash sale rules.ⁿ¹⁴ Any loss on the disposition of a position in a straddle is not taken into account if, within the period beginning 30 days before the disposition and ending 30 days thereafter, the taxpayer acquires (in a purchase or exchange in which the entire amount of gain is recognized), or enters into a contract to acquire, substantially identical stock or securities.ⁿ¹⁵ If the taxpayer disposes of less than all of the positions of a straddle, any loss sustained on the disposition of that position is not taken into account to the extent that the loss exceeds the unrecognized gain in successor positions,ⁿ¹⁶ offsetting positions to the loss position or offsetting positions to any successor position.ⁿ¹⁷ Any disallowed loss can be carried over to the succeeding taxable year, but if the disallowance was due to the acquisition of substantially identical stock or securities, the loss will not be allowed until there is a disposition of the stock or securities.ⁿ¹⁸

The general rule does not apply to losses on identified positions comprising an identified straddle.ⁿ¹⁹ If there is any loss with respect to any identified position of the identified straddle, the basis of each of the identified offsetting positions in the identified straddle is increased by an amount that bears the same ratio to the loss as the unrecognized gain with respect to the offsetting position bears to the unrecognized gain with respect to all of the offsetting positions; any such loss is not otherwise taken into account for federal income tax purposes.ⁿ²⁰ An identified straddle is defined as a straddle (i) that is clearly identified as such on the taxpayer's records before the earlier of the close of the day on which the straddle is acquired, or such time as the Service prescribes by regulation, (ii) to the extent provided by regulations, the value of each position of which (in the hands of the taxpayer immediately before the creation of the straddle) is not less than the basis of the position in the hands of the taxpayer at the time the straddle is created, and (iii) that is not part of a larger straddle.ⁿ²¹ The Code requires the promulgation of regulations that specify the proper methods for clearly identifying a straddle as an identified straddle (and the positions comprising that straddle), that specify the rules for the application of *IRC Section 1092(a)(2)(B)* for a taxpayer that fails to properly identify the positions of an identified straddle, and that specify rules in cases where a taxpayer disposes of less than an entire position that is part of an identified straddle.ⁿ²²

Hedging transactions are exempt from the loss deferral rule.ⁿ²³ To qualify for the exemption, the transaction must be entered into by the taxpayer in the normal course of the taxpayer's trade or business to reduce the risk of certain interest or price changes or currency fluctuations and result in ordinary income or loss.ⁿ²⁴ In addition, the taxpayer must identify the transaction as a hedging transaction before the close of the day on which it was entered.ⁿ²⁵

Straddles in which all of the offsetting positions consist of one or more qualified covered call options and the optioned stock and which are not part of a larger straddle are not covered by the loss deferral rule.ⁿ²⁶ The exception does not apply if the gain on the stock acquired by exercise of the qualified covered call options is realized in a taxable year later than the year of exercise, and the stock was not held by the taxpayer for at least 30 days after the closing of the options.ⁿ²⁷ The exception is also inapplicable if the stock is sold at a loss, the related option is not held for 30 days thereafter, and gain on the option is realized in a subsequent taxable year.ⁿ²⁸ An option can be a qualified covered call option only if it: (1) is traded on a national securities exchange that is registered with the Securities and Exchange Commission or other market designated by the Service; (2) is granted for a period of more than 30 days; (3) is not a deep-in-the-money option; (4) is not granted by an options dealer (a registered market maker or specialist in listed options) in connection with his activity in dealing in options; and (5) gain or loss produced by the option is not ordinary income or loss.ⁿ²⁹

A deep-in-the-money option is one having a strike price (exercise price) lower than the lowest qualified bench mark.ⁿ³⁰ The lowest qualified bench mark is the highest available strike price which is less than the applicable stock price (the

closing price of the stock on the most recent day on which it was traded before the date on which the option was granted, or the opening price on the day the option was granted if such price is greater than 110 percent of the closing price on the last previous trading date).ⁿ³¹ A number of special rules affect the determination of the lowest qualified bench mark. If the option is granted for more than 90 days with a strike price of more than \$50, the lowest qualified bench mark is the second highest available strike price which is less than the applicable stock price.ⁿ³² If the applicable stock price is \$25 or less, the lowest qualified bench mark can never be less than 85 percent of the applicable stock price.ⁿ³³ Finally, if the applicable stock price is \$150 or less, the lowest qualified bench mark must be at least the applicable stock price less \$10.ⁿ³⁴

Although the loss deferral rule extends beyond stock options to any situation in which the taxpayer holds offsetting positions with respect to personal property, the provisions of *IRC Section 1092* are inapplicable to any straddle involving the holding of stock (but not an interest in stock) unless (1) the stock is of a type that is actively traded and at least one of the positions offsetting the stock is a position with respect to the stock or substantially similar or related property, or (2) the stock is of a corporation formed or availed of to take positions in personal property that offset positions taken by any shareholder.ⁿ³⁵ A position is defined as an interest (including a futures or forward contract or option) in personal property.ⁿ³⁶

IRC Section 1092(b) requires the promulgation of "such regulations with respect to gain or loss on positions which are part of a straddle as may be appropriate to carry out the purposes of this section. ..." Consistent with such purposes, the regulations are to include rules applying wash sale principles and short sale gain, loss and holding period principles. In addition, the regulations must also prescribe the treatment of gain or losses from mixed straddles.

The holding period of any position in a straddle cannot begin earlier than the date the taxpayer no longer holds (directly or indirectly) an offsetting position with respect to that position, unless the position was held by the taxpayer for the long-term capital gain holding period or longer before a straddle that includes the position was established.ⁿ³⁷

Loss on the disposition of a loss position is treated as a long-term capital loss if (1) on the date the taxpayer entered into the loss position the taxpayer held, directly or indirectly, an offsetting position, and (2) all gain or loss with respect to a position in the straddle would be treated as long-term capital gain or loss if the position were disposed of on the day the loss position was entered into. Losses on non-Section 1256 positions in a mixed straddle are treated as 60 percent long-term and 40 percent short-term capital loss.ⁿ³⁸

The holding period and loss rules do not apply to positions that are part of a hedging transaction, to straddles that consist only of Section 1256 contracts, or to positions in a mixed straddle account.ⁿ³⁹

Gains and losses from the disposition of an identified mixed straddle are subject to a series of rules.ⁿ⁴⁰ If all positions in an identified mixed straddle are disposed of on the same day, gains and losses from Section 1256 contracts and gains and losses from non-Section 1256 contracts are netted, with the net gain or loss from the former being offset against the net gain or loss from the latter to determine the net gain or loss from the straddle. If the net gain or loss from the straddle is attributable to Section 1256 contracts, the gain or loss is 60 percent long-term and 40 percent short-term. If attributable to non-Section 1256 positions, the gain or loss is all short-term.ⁿ⁴¹

If all of the non-Section 1256 positions of an identified mixed straddle are disposed of on the same day, the gain and loss realized on such disposition is netted and then offset against the net *realized and unrealized* gain or loss with respect to non-Section 1256 positions of the straddle to determine the net gain or loss from the straddle. Net gain or loss from the straddle attributable to the non-Section 1256 positions must be realized and treated as short-term capital gain or loss, while net gain or loss from the straddle attributable to *realized* gain or loss attributable to Section 1256 contracts is treated as 60 percent long-term and 40 percent short-term. Any gain or loss subsequently realized on the Section 1256 contracts is adjusted to take into account the extent to which gain or loss was offset by unrealized gain on the Section 1256 contracts.ⁿ⁴²

If all of the Section 1256 contracts of an identified mixed straddle are disposed of on the same day, the gain and loss realized therefrom is netted and treated as short-term capital gain or loss to the extent of the net realized and unrealized gain or loss with respect to the non-Section 1256 positions of the straddle. Any excess gain or loss from the Section 1256 contracts is treated as 60 percent long-term and 40 percent short-term.ⁿ⁴³ Gain or loss on a non-Section 1256 position that is part of an identified mixed straddle and is held after all Section 1256 contracts in the straddle are disposed of is treated as short-term gain or loss to the extent attributable to the period when the positions were part of the straddle.ⁿ⁴⁴

If some, but not all, of the positions in an identified mixed straddle are disposed of on the same day, and the previous two paragraphs do not apply, the net gain or loss from the Section 1256 contracts disposed of on that day is offset against the net gain or loss from the disposition of non-Section 1256 positions. If the resulting net gain or loss is attributable to non-Section 1256 positions, the rules relating to the disposition of all of the non-Section 1256 positions in a mixed straddle apply. If the gain or loss is attributable to Section 1256 contracts, the applicable rules are those in the immediately preceding paragraph. If the netting process yields only gains or only losses, the gains or losses are treated separately under the rules described in the preceding two paragraphs.ⁿ⁴⁵

A taxpayer may elect to establish one or more mixed straddle accounts.ⁿ⁴⁶ Gains and losses in such an account are determined daily by netting gains and losses from Section 1256 contracts and from non-Section 1256 positions and then offsetting the net amounts against each other. The gain or loss is short-term to the extent attributable to non-Section 1256 positions, and 60 percent long-term and 40 percent short-term if attributable to Section 1256 contracts. An adjustment is made to any subsequent gain or loss to reflect any gain or loss taken into account for prior business days.ⁿ⁴⁷ At the end of each year, the daily account gains and losses are netted to arrive at any annual account gain or loss.ⁿ⁴⁸

Finally, if a taxpayer holds stock on which he has granted a qualified covered call option to purchase the stock at a strike price less than the applicable stock price, any loss on the call will be a long-term loss if the stock has been held for more than one year.ⁿ⁴⁹ That holding period is suspended during the option period.ⁿ⁵⁰

[e] Options Marked to Market. The Tax Reform Act of 1984 extended the mark-to-market rule that had applied only to regulated futures contracts and foreign currency contracts to nonequity options and dealer equity options and labeled all of such Section 1256 contracts.ⁿ⁵¹ The list was expanded in 2000 with the addition of dealer securities futures contracts.ⁿ⁵² Under *IRC Section 1256(a)(1)*, each Section 1256 contract held by a taxpayer at the close of the taxable year is treated as sold for its fair market value on the last business day of the year.ⁿ⁵³ The gain or loss so created is treated as 60 percent long-term and 40 percent short-term without regard to the actual holding period. (The wash sale rules of *IRC Section 1091* do not apply to any loss taken into account under *IRC Section 1256(a)(1)*).^{n53.1} The same treatment applies to a termination or transfer of the taxpayer's obligation or rights with respect to a Section 1256 contract.ⁿ⁵⁴ However, if two or more Section 1256 contracts are part of a straddle and the taxpayer takes delivery under or exercises any of such contracts, the other contracts are treated as terminated on the day of delivery instead of the last day of the year.ⁿ⁵⁵

A nonequity option is any option listed on a qualified board or exchangeⁿ⁵⁶ other than an equity option. An equity option is either an option to buy or sell stock or an option the value of which is determined directly or indirectly by reference to any stock, or any narrow-based security index (as defined in Section 3(a)(55) of the Securities Exchange Act of 1934).ⁿ⁵⁷ A dealer equity option is an equity option purchased or granted by an options dealer in the normal course of his activity of dealing in options and listed on the qualified board or exchange on which the option dealer is registered.ⁿ⁵⁸

A dealer securities futures contract is, with respect to any dealer, any securities future contract, and any option on such a contract, that (1) is entered into by the dealer (or, in the case of an option, is purchased or granted by the dealer) in the

normal course of the activity of dealing in such contracts (or options), and (2) is traded on a qualified board or exchange.ⁿ⁵⁹ A person will be treated as a dealer in securities futures contracts or options on such contracts if the Service determines that the person performs, with respect to such contracts or options, functions similar to those performed by an options dealer.ⁿ⁶⁰

The mark-to-market rules do not apply to hedging transactions (a transaction that a taxpayer enters into in the normal course of business primarily to reduce the risk or interest rate or price changes or currency fluctuations).ⁿ⁶¹ However, *IRC Section 1256(e)(4)* limits the deduction for hedging losses of limited partners and S corporation shareholders (if more than 35 percent of the losses for the year are allocable to the limited partners or shareholders) to the extent of the taxpayer's taxable income from the trade or business in which the hedging transactions were entered into. (Such taxable income is determined by not taking into account items attributable to hedging transactions.)ⁿ⁶² The disallowed portion of the loss is carried over and allowed as a deduction attributable to a hedging transaction in the succeeding taxable year. An economic loss exception makes the limitation inapplicable to any hedging loss to the extent it exceeds the unrecognized gains from hedging transactions at the close of the taxable year.ⁿ⁶³

Gain or loss resulting from the exercise of a Section 1256 contract must be recognized and, therefore, does not come within the 60-40 rule of *IRC Section 1256(a)*.ⁿ⁶⁴ Gain or loss attributable to the cancellation, lapse, expiration, or other termination of a Section 1256 contract (other than a securities futures contract) that is a capital asset in the hands of the taxpayer is treated as gain or loss from the sale of a capital asset.ⁿ⁶⁵ However, gain cannot be considered capital gain if the property involved was part of a hedging transaction.ⁿ⁶⁶

Traders in Section 1256 contracts realize capital gain or loss from trading in such contracts except to the extent the contract is used to hedge property that would produce ordinary loss.ⁿ⁶⁷ In determining the character of the gain or loss, the fact that the taxpayer is actually engaged in dealing in or trading Section 1256 contracts is not taken into account.ⁿ⁶⁸

The taxpayer can elect to have *IRC Section 1256* not apply to Section 1256 contracts that are part of a mixed straddle (a straddle where at least one but not all of the positions are Section 1256 contracts) in which the positions are clearly identified at the close of the day on which the first Section 1256 contract forming part of the straddle is acquired (or such earlier time as regulations prescribe).ⁿ⁶⁹ The election applies to the taxable year for which it is made and to all subsequent years unless the Service consents to its revocation.ⁿ⁷⁰

[5] Dividends Paid on Stock Subject to Options.

Under current practice, "put" and "call" options generally provide that the option price will be reduced by the amount of dividends received by the owner of the stock during the option period. Because of this adjustment, the seller of the subject stock receives less for his stock, thereby decreasing the amount of gain or increasing the amount of loss to be realized on the sale. The purchaser's basis for the stock will similarly be reduced, since the adjustment to the option price requires him to pay less for the stock.

The option may require the seller to deliver the amount of dividends received during the life of the option without any increase in the option price. The tax consequences here are no different from the instance in which the dividends work an adjustment to the option price; both the amount realized by the seller and the basis of the stock in the hands of the purchaser are reduced in an amount equal to the amount of delivered dividends.ⁿ¹

Whether the option calls for an adjustment of the option price or for the delivery of the amount of the dividends to the purchaser has no effect on the identity of the person who must include the dividends in gross income. The taxable person is still the one who owned the stock on the date that holders of the stock became entitled to receive the dividends.ⁿ²

[6] Tax Techniques Involving "Puts" and "Calls."

[a] Using "Puts" to Defer Gain Without Risk of Loss. A taxpayer holding stock which has appreciated in value can defer recognition of the gain while guarding against a reduction in the amount of gain by acquiring a "put." While the same result can be achieved through a short sale, the acquisition of a "put" allows the taxpayer to obtain the benefit of an increase in the price of the stock. The major disadvantage comes in the fact that the acquisition of the "put" will be considered a short sale if, on the date of acquisition, the taxpayer has held the subject stock for less than one year.ⁿ¹ There is, of course, the added cost of the option, but this should be viewed more as a necessary cost in obtaining the right to reap the benefit of a subsequent increase in the price of the stock than as an expense of guarding against a loss of the potential gain.

The following example illustrates the use of the technique described above:

Example:

A taxpayer purchases 100 shares of X Corp stock on August 15, 1990, at a cost of \$50 a share. On February 10, 1991, the taxpayer pays \$800 for a six-month option to sell the stock at \$80 a share. (The acquisition of the "put" would be considered a short sale since the stock had been held for less than one year.) On July 20, 1991, when the stock is selling at \$90 a share, the taxpayer decides to dispose of his stock. Since the stock is selling at a price in excess of the option price, the sale should be made without exercising the option, thereby giving rise to a gain of \$40 a share in 1991. The gain would be short-term capital gain since acquisition of the "put" made *IRC Section 1233(b)(2)* applicable, and caused the holding period of the stock to begin on the date of disposition. The taxpayer would then attempt to sell the option in order to realize a loss. A loss would result from the sale of the "put" as long as the price of the stock remained above \$80 a share, failing which he would allow the option to lapse. In either case, the loss would be a short-term capital loss.ⁿ² If the price of the stock plunged after the stock was sold, the "put" itself could be sold at a gain.ⁿ³

If the price of the stock dropped to \$60 a share after the "put" was acquired, the taxpayer would then sell the option at a price which approximates the difference between the option price and the price of the stock, a difference here of \$20 a share, realizing a gain of \$12 (\$20 less the \$8 cost of the option). The gain would be short-term; the length of time that the taxpayer held the option would always be less than one year. An immediate sale of the stock at \$60 a share would produce an additional short-term capital gain of \$10 a share. (The tainted holding period rule of *IRC Section 1233(b)(2)* would preclude long-term gain on the sale of the stock even if actually held for more than one year.)

[b] Using "Puts" to Achieve Gain in a Declining Market. An investor who believes that the market price of a particular stock will decline can attempt to secure a gain either by selling the stock short or by acquiring a "put" and then selling the option prior to its expiration. If the taxpayer does not own the stock subject to the short sale at the time that he makes the sale, any gain realized by him will be short-term capital gain; the later purchase of stock to cover the short sale will be the acquisition of substantially identical property, bringing into play the special gain rule of *IRC Section 1233(b)(1)*. On the other hand, if a "put" is acquired and the market price of the stock declines, the taxpayer can sell the option at a gain. If the taxpayer has not held the option for more than one year, the gain realized on the sale of the option will be short-term capital gain.ⁿ⁴ If the price of the stock increases, a sale or lapse of the option would result in a short-term capital loss.ⁿ⁵ If the stock were held for more than one year, its sale would give rise to a long-term gain.

[c] Using "Puts" to Limit Losses. We have seen that the simultaneous acquisition of an option to sell and the stock identified as the stock which the taxpayer intends to use in exercising the option will prevent the acquisition of the "put" from being treated as a short sale.ⁿ⁶ The practical effect of this rule is that, by acquiring stock and an option to sell the stock at a price equal to its purchase price, the taxpayer can limit his loss on the stock to the option premium (if the stock declined in value, he would exercise the option) without foregoing the opportunity to achieve long-term

capital gain treatment if the stock were to appreciate and be held for more than one year.

[d] Using "Calls" and Short Sales to Insure Gains. A "call" option and the stock subject to it are not considered substantially identical property.ⁿ⁷ Therefore, the holder of an appreciated "call" can enter into a short sale of the underlying property and not be concerned with the application of *IRC Section 1233(b)*. Why should he do so? The answer is simple--to protect himself against an economic loss produced by a decline in the market. To illustrate:

Example:

Assume that a taxpayer pays \$500 for a six-month option to purchase 100 shares of stock at \$50 a share. Assume further that when the stock increases to \$70 a share, the taxpayer makes a short sale of the stock at \$70 a share. By so doing, the taxpayer has insured a minimum gain of \$1,500 (\$7,000 realized on the short sale less the sum of \$5,000, the option price to be paid on the exercise of the option, and \$500, the option premium). If the value of the stock were to increase further, say, to \$85 a share, the "call" would be sold for approximately \$3,500, the difference between the option price and the market price of the stock. The short sale would be covered by purchasing stock on the open market at \$85 a share, producing a short-term capital loss of \$1,500. The net economic gain is still \$1,500, the difference between the \$3,500 gain realized on the sale of the "call" and the sum of the \$1,500 loss on the short sale and the \$500 option premium. If the value of the stock declined after the short sale, say, to \$55 a share, the short sale would be covered by a purchase of 100 shares at the market price, yielding a short-term gain of \$1,500. The "call" would be sold for \$500, but the amount would be offset by the cost of the option. The economic gain once again is \$1,500. If the market price of the stock fell below \$50 a share, the taxpayer would realize a gain by closing the short sale with shares purchased on the open market. If the price of the stock did not then increase above the option price, he would realize a loss by letting the option lapse or by selling it prior to expiration.

The combination of a "call" and a short sale can be used to advantage whenever the taxpayer anticipates a sudden, but short-lived increase in the value of a particular stock. The acquisition of an option to purchase at the present market price followed by a short sale when the price rise occurs will produce a gain equal to the difference between the short sale price and the sum of the option price and option premium. If the price of the stock continues to increase, the taxpayer will sell the "call" and close the short sale by purchasing shares on the open market. The gain on the sale of the option will be short-term since the option would not be held for more than one year prior to sale; the loss on the short sale will be a short-term loss. If the market price declines below the option price, the short sale will again be closed by stock purchased on the open market. Here the only gain will be on the closing of the short sale and it will be a short-term gain; the expiration of the option, or its sale prior to expiration, will produce a short-term loss.

(n22)Footnote 20. Ltr Rul, Sept. 7, 1973, 6 P.-H. 1974 Fed. Taxes P 55,130.

(n23)Footnote 21. *IRC § 1234(b)(1), (2)*.

(n24)Footnote 22. *Treas Reg §§ 1.1221-2(a)(2), 1.1234-4*.

(n25)Footnote 1. *Rev Rul 72-198, 1972-1 CB 223* (corporation does not recognize gain or loss when it issues warrants as consideration for the acquisition of another corporation); *Rev Rul 71-265, 1971-1 CB 223* (grant of option exercisable only after optionor's death not a sale, exchange, or other disposition of the subject property).

It is important that the transaction be the granting of an option. The taxpayer in *Holmes v Commr, TC Memo 1978-437* , realized ordinary income when he entered into an agreement granting a right of first refusal. He did not enter into an arrangement giving the other party the right to buy the property at a fixed price within a certain time.

(n26)Footnote 2. *Rev Rul 58-234, 1958-2 CB 279* .

(n27)Footnote 3. *Weir v Commr, 10 TC 996 (1948) , affd per curiam 173 F2d 222 (3rd Cir 1949) ; Rev Rul 72-198, 1972-1 CB 223* .

(n28)Footnote 4. *IRC § 1234(a)(1)*. A unilateral breach of a contract to purchase stock and the forfeiture of liquidated damages is not a loss governed by *IRC § 1234(a)*. *US Freight Co v US, 422 F2d 887 (Ct Cl 1970)* .

In *Dunlap v Commr, 670 F2d 785 (8th Cir 1982)* , no deduction was allowed on the lapse of the first of ten separately

purchased but consecutive annual options. The time to deduct the loss would be after the last option expired, because only then would the loss have been sustained.

(n29)Footnote 5. *Treas Reg § 1.1234-1(a)(1)*.

(n30)Footnote 6. *IRC § 1234(b)(1)*. Dealers in options treat the option premium as ordinary income. *IRC § 1234(b)(3)*.

The provisions of *IRC § 1234(b)(1)* apply to a cash settlement option, an option which on exercise is settled in or could be settled in cash or property other than the underlying property. *IRC § 1234(c)*.

A unilateral extension of the expiration date of a warrant has the effect of the grant of a new warrant. The issuer recognizes gain on the date the original unexercised warrant lapses. *Rev Rul 80-134, 1980-1 CB 187*.

The purchase of a call option by the writer of an option to close out the previously issued call option is subject to the provisions of *IRC § 1234(b)*. *Ltr Rul 8517029*.

(n31)Footnote 7. The Service had held that gain was recognized in such cases. *Rev Rul 72-198, 1972-1 CB 223*.

(n32)Footnote 8. The rule applies to cash settlement options as well.

(n33)Footnote 9. *Treas Reg § 1.1234(a)*.

(n34)Footnote 10. *IRC § 1234(a)(3)(A)*.

(n35)Footnote 11. *IRC § 1234(a)(3)(B)*. The sale of an employee stock option led to ordinary income in *Rank v US, 345 F2d 337 (5th Cir 1965)*; *Dugan v US, 234 F Supp 7 (SDNY 1964)*; and *Kunsman v Commr, 49 TC 62 (1967)*. The same result was reached in *Rev Rul 67-366, 1967-2 CB 165* and *Rev Rul 73-146, 1973-1 CB 61*. The transfer in *Rev Rul 73-146* took the form of a cancellation of the stock options in connection with a corporate acquisition. A similar transaction was involved in *TAM 9540003*.

In *Young v Commr, TC Memo 1961-33*, the taxpayer paid a minimal amount for an option to buy stock of a corporation. The option was in fact part of a device to disguise expected selling commissions due the taxpayer from the corporation. The gain from the sale of the option was taxed as ordinary income.

(n36)Footnote 12. *Rev Rul 70-205, 1970-1 CB 174*. The Service eventually revoked *Rev Rul 70-205*. *Rev Rul 78-181, 1978-1 CB 261*.

(n37)Footnote 13. *Ltr Rul Apr 8, 1974*.

(n38)Footnote 14. A closing transaction is any termination of the taxpayer's obligation under an option other than through exercise or lapse of the option. *IRC § 1234(b)(2)(A)*. Options fall within the provision if they are options in stocks or securities (including stocks or securities dealt with on a "when issued" basis), commodities, and commodities futures. *IRC § 1234(b)(2)(B)*.

(n39)Footnote 15. *IRC § 1234(b)(3)*.

(n40)Footnote 16. *Treas Reg §§ 1.1221-2(a)(2), 1.1234-4*.

(n41)Footnote 1. *Rev Rul 78-182, 1978-1 CB 265*.

(n42)Footnote 2. *Rev Proc 65-29, 1965-2 CB 1023*; *Treas Reg § 1.1234-2(f)*.

(n43)Footnote 3. *Rev Proc 65-29, 1965-2 CB 1023* .

(n44)Footnote 4. *IRC §§ 1234(b)(1), (3), 1234A*.

(n45)Footnote 5. A taxpayer has offsetting positions if there is a substantial diminution of the taxpayer's risk of loss from holding any position with respect to the property by reason of his holding one or more other positions. *IRC § 1092(c)(2)*. A number of presumptions apply in determining whether two or more positions are offsetting. *IRC § 1092(c)(3)*. A position held by the taxpayer's spouse is treated as held by the taxpayer, while a corporation is deemed to hold any position held by any other corporation with which it files a consolidated return. *IRC § 1092(d)(4)(A),(B)*.

If part or all of the gain or loss with respect to a partnership, trust, or other entity is properly taken into account for income tax purposes by a taxpayer, the position is treated as held by the taxpayer. *IRC § 1092(d)(4)(C)*.

An obligor's interest in a nonfunctional currency denominated debt obligation is treated as a position in the nonfunctional currency. *IRC § 1092(d)(7)(A)*.

A corporation, whose stock is publicly traded, issued investment units consisting of one share of stock and one separately tradeable contingent payment right, the value of which varied inversely with the value of the stock. The Service has held that the holder of a right is in an economic position identical to the holder of a put with respect to the stock, and that the investment unit is a straddle because the right serves to diminish substantially a stockholder's risk of loss from a decline in value of the stock. *Rev Rul 88-31, 1988-1 CB 302* .

(n46)Footnote 6. *IRC § 1092(a)(1)(B)*.

(n47)Footnote 6.1. *IRC § 1092(d)(8)*.

(n48)Footnote 7. *IRC § 1092(c)(1), (d)(1)*. Foreign currency for which there is an active interbank market is presumed to be actively traded. *IRC § 1092(d)(7)(B)*.

A notional principal contract (a financial instrument that provides for the payment of amounts by one party to another at specified intervals calculated by reference to a specified index upon a notional principal amount in exchange for a specified consideration or a promise to pay similar amounts) constitutes personal property of a type that is actively traded if contracts based on the same or substantially similar specified indices are purchased, sold, or entered into on an established financial market. *Treas Reg § 1.1092(d)-1(c)*.

A proposed regulation would provide that an obligation under a debt instrument can be a position in personal property that forms part of a straddle. *Prop Treas Reg § 1.1092(d)-1(d)*.

(n49)Footnote 8. *Treas Reg § 1.1092(d)-1(a)*.

(n50)Footnote 9. *Treas Reg § 1.1092(d)-1(b)(1)*.

(n51)Footnote 10. *Treas Reg § 1.1092(d)-1(b)(2)(i)*.

(n52)Footnote 11. *Treas Reg § 1.1092(d)-1(b)(2)(i)*.

(n53)Footnote 12. *Treas Reg § 1.1092(d)-1(b)(2)(ii)*.

(n54)Footnote 13. *Treas Reg § 1.1092(d)-1(b)(2)(ii)*.

(n55)Footnote 14. The regulations apply to dispositions of loss positions on or after Jan 24, 1985. *Temp Treas Reg § 1.1092(b)-1T(f)*.

(n56)Footnote 15. *Temp Treas Reg § 1.1092(b)-1T (a)(1)*.

(n57)Footnote 16. A successor position is a position that is, or was at any time, offsetting to a second position if (a) the second position was offsetting to a loss position disposed of, and (b) the position was entered into within 30 days before or after the disposition of the loss position. *Temp Treas Reg § 1.1092(b)-5T(n)*.

(n58)Footnote 17. *Temp Treas Reg § 1.1092(b)-1T (a)(2)*.

(n59)Footnote 18. *Temp Treas Reg § 1.1092(b)-1T(b)*. If the disallowed loss would have been a capital loss when sustained, it will be treated as a capital loss when allowed. *Temp Treas Reg § 1.1092(b)-1T(c)*.

(n60)Footnote 19. *IRC § 1092(a)(2)(A)(i)*. Although the loss deferral rule applies to straddles having one or more positions in *IRC § 1256* contracts governed by the mark-to-market rules, the identified straddle exception applies to such contracts if all of the positions are identified straddles. *IRC § 1092(d)(5)*.

(n61)Footnote 20. *IRC § 1092(a)(2)(A)(ii), (iii)*. Unrecognized gain is (a) in the case of any position held by the taxpayer as of the close of the taxable year, the amount of gain that would be taken into account with respect to the position if it were sold on the last business day of the taxable year at fair market value, and (b) in the case of any position with respect to which, as of the close of the taxable year, gain has been realized by not recognized, the amount of such gain. *IRC § 1092(a)(3)(A)*.

The unrecognized gain with respect to any identified offsetting position is the excess of fair market value of the position at the time of determination over the fair market value of the position at the time the taxpayer identified the position as a position in an identified straddle. *IRC § 1092(a)(3)(B)*.

(n62)Footnote 21. *IRC § 1092(a)(2)(B)*.

(n63)Footnote 22. *IRC § 1092(a)(2)(B)*. The Code also calls for such regulations or guidance as may be necessary or appropriate to carry out the purposes of the special rule for identified straddles. *IRC § 1092(a)(2)(C)*.

(n64)Footnote 23. *IRC § 1092(e)*.

(n65)Footnote 24. *IRC § 1256(e)*.

(n66)Footnote 25. *IRC § 1256(e)(2)(C)*. The identification of a hedging transaction for purposes of *IRC § 1256(e)(2)(C)* must satisfy the requirements of *Treas Reg § 1.1221-2(f)(1)*, discussed in § 2.04(2)(a), *supra*. *Treas Reg § 1.1256(e)-1(b)*. However, solely for purposes of *IRC § 1256(f)(1)* (denying capital gain treatment to Section 1256 contracts involving property that is part of a hedging transaction), an identification that does not satisfy all of the requirements of *Treas Reg § 1.1221-2(f)(1)*, is nevertheless treated as an identification under *IRC § 1256(e)(2)*. Any identification for purposes of *Treas Reg § 1.1221-2(f)(1)* is also an identification for purposes of *Treas Reg § 1.1256(e)-1*. A transaction inadvertently identified as a hedging transaction and not treated as such pursuant to *Treas Reg § 1.1221-2(f)(1)(ii)* is not treated as a hedging transaction for purposes of *IRC § 1256(e)(2)*.

(n67)Footnote 26. *IRC § 1092(c)(4)(A)*. In Rev Rul 2002-66, 2002-2 CB 812, the Service ruled that if a grantor of a qualified covered call option held a put option on the same underlying equity, the straddle consisting of the underlying equity and the written call option was not excluded from straddle treatment by *IRC § 1092(c)(4)(A)*. In each of the three situations presented in the ruling, it was assumed that: (1) at the time the call option was written and at the time the put option was acquired, there was an inverse relationship between the value of the underlying equity and the value of each option position; (2) as a result of the magnitude of the inverse relationships, each option position substantially diminished the risk arising from holding the equity; (3) the acquisition of the put option substantially diminished the risk of loss with respect to the combined position consisting of the equity and the qualified covered call option on that equity; and (4) the call option was a qualified covered call option under *IRC § 1092(c)(4)(B)*.

(n68)Footnote 27. *IRC § 1092(c)(4)(E)*.

(n69)Footnote 28. *IRC § 1092(c)(4)(E)*.

(n70)Footnote 29. *IRC § 1092(c)(4)(B)*. An option is not a qualified covered call option unless it is granted not more than 12 months before the day on which the option expires or satisfies term limitation and qualified benchmark requirements established by the Service in guidance published in the Internal Revenue Bulletin. *Treas Reg § 1.1092(c)-1(b)(1)*. The 12-month period is extended to 33 months if the lowest qualified bench mark is determined using the adjusted applicable stock price, as defined in *Treas Reg § 1.1092(c)-4(e)*. *Treas Reg § 1.1092(c)-1(b)(2)*.

A qualifying over-the-counter option is a qualified covered call option if it meets the requirements of *Treas Reg §§ 1.1092(c)-1* and *1.1092(c)-2(c)*, after using the language "qualifying over-the-counter option" in place of "equity option with flexible terms." *Treas Reg § 1.1092(c)-3(b)*. A qualifying over-the-counter option is an equity option that (1) is not traded on a national securities exchange registered with the Securities and Exchange Commission; and (2) is entered into with (a) a registered broker-dealer, acting as principal or agent who must comply with the record-keeping requirements of *17 CFR § 240.17a3*, (b) an alternative trading system under *17 CFR § 242.300 through 17 CFR § 242.303*, or (c) a bank, acting as principal or agent, that must comply with record-keeping requirements for securities transactions described in *12 CFR §§ 12.3, 208.34, or 344.4*. *Treas Reg § 1.1092(c)-4(c)*.

(n71)Footnote 30. *IRC § 1092(c)(4)(C)*. An equity option with flexible terms is a qualified covered call option only if (i) the option meets the requirements of *IRC § 1092(c)(4)(B)* and *Treas Reg § 1.1092(c)-1*; (ii) the only payments permitted with respect to the option are a single fixed premium paid not later than five business days after the day the option is granted, and a single fixed strike price (as defined in *Treas Reg § 1.1092(c)-4(d)*) that is payable entirely at, or within five business days of, exercise; (iii) an equity option with standardized terms is outstanding for the underlying equity; and (iv) the underlying security is stock in a single corporation. *Treas Reg § 1.1092(c)-2(c)*. An equity option with standardized terms is an equity option that (a) is traded on a national securities exchange registered with the Securities and Exchange Commission; (b) on the date the option is written, expires on the Saturday following the third Friday of the month of expiration; (c) has a strike price that is not less than \$1 and is set at a minimum strike price interval that is established by the applicable national securities exchange registered with the Securities and Exchange Commission; and (d) has stock in a single corporation as its underlying security. *Treas Reg § 1.1092(c)-4(b)*.

(n72)Footnote 31. *IRC § 1092(c)(4)(D)(i), (G)*. The availability of a strike price for equity options with flexible terms does not affect the determination of the lowest qualified benchmark for an option that is not an equity option with flexible terms. *Treas Reg § 1.1092(c)-2(b)*. For purposes of determining whether an equity option with flexible terms is deep in the money, the lowest qualified bench mark is the same for an equity option with flexible terms as the lowest qualified bench mark for an equity option with standardized terms on the same stock having the same applicable stock price. *Treas Reg § 1.1092(c)-2(c)(2)*.

(n73)Footnote 32. *IRC § 1092(c)(4)(D)(ii)*.

(n74)Footnote 33. *IRC § 1092(c)(4)(D)(iii)*.

(n75)Footnote 34. *IRC § 1092(c)(4)(D)(iv)*.

(n76)Footnote 35. *IRC § 1092(d)(3)(A)*. For purposes of this rule, the term "substantially similar or related property" is defined in *Treas Reg § 1.246-5* (other than *Treas Reg § 1.246-5(b)(3)*). *Treas Reg § 1.1092(d)-2(a)*. See Ch 4 for a discussion of *Treas Reg § 1.246-5*.

Treas Reg § 1.1092(d)-2(b) applies to positions, if the taxpayer substantially diminishes its risk of loss by holding substantially similar or related property involving the following types of transactions: (1) holding offsetting positions consisting of stock and a convertible debenture of the same corporation where the price movements of the two positions

are related, or (2) holding a short position in a stock index regulated futures contract (or, alternatively, an option on such a regulated futures contract or an option on the stock index) and stock in an investment company whose principal holdings mimic the performance of the stocks included in the stock index (or, alternatively, a portfolio of stocks whose performance mimics the performance of the stocks included in the stock index). *Treas Reg § 1.1092(d)-2(b)*.

For the purpose of determining whether stock is of a corporation formed or availed of to take positions in personal property taken by any shareholder, all includable corporations of an affiliated group (within the meaning of *IRC § 1504(a)*) are treated as one taxpayer. *IRC § 1092(d)(3)(B)*.

(n77)Footnote 36. *IRC § 1092(d)(2)*.

(n78)Footnote 37. *Temp Treas Reg § 1.1092(b)-2T (a)(1), (2)*.

(n79)Footnote 38. *Temp Treas Reg § 1.1092(b)-2T(b)*.

(n80)Footnote 39. *Temp Treas Reg § 1.1092(b)-2T(c)*.

(n81)Footnote 40. The taxpayer must elect to have identified mixed straddles so treated. *Temp Treas Reg § 1.1092(b)-3T(d)*. The rules are applied prior to application of the loss deferral and wash sale rules. *Temp Treas Reg § 1.1092(b)-3T(c)*.

(n82)Footnote 41. *Temp Treas Reg § 1.1092(b)-3T(b)(2)*.

(n83)Footnote 42. *Temp Treas Reg § 1.1092(b)-3T(b)(3)*.

(n84)Footnote 43. *Temp Treas Reg § 1.1092(b)-3T(b)(4)*.

(n85)Footnote 44. *Temp Treas Reg § 1.1092(b)-3T(b)(7)*.

(n86)Footnote 45. *Temp Treas Reg § 1.1092(b)-3T(b)(5)*.

(n87)Footnote 46. A mixed straddle account is an account for determining gains and losses from all positions held as capital assets in a designated class of activities by the taxpayer at the time the taxpayer elects to establish a mixed straddle account. A separate mixed straddle account must be established for each separate designated class of activities. A taxpayer may designate as a class of activities the types of positions that a reasonable person, on the basis of all facts and circumstances, would ordinarily expect to be offsetting positions. *Temp Treas Reg § 1.1092(b)-4T(a),(b)(1), (2)*.

(n88)Footnote 47. *Temp Treas Reg § 1.1092(b)-4T(c)(1)*.

(n89)Footnote 48. *Temp Treas Reg § 1.1092(b)-4T(c)(2)*.

(n90)Footnote 49. *IRC § 1092(f)(1)*.

(n91)Footnote 50. *IRC § 1092(f)(2)*.

(n92)Footnote 51. *IRC § 1256(b)*.

(n93)Footnote 52. A securities futures contract or an option on such a contract is a Section 1256 contract only if it is a dealer securities futures contract.

(n94)Footnote 53. Proper adjustment is made in the gain or loss subsequently realized to adjust for the gain or loss taken into account on the deemed sale. *IRC § 1256(a)(2)*.

The taxpayer, in *Murphy v US*, 992 F2d 929 (9th Cir 1993) , challenged the constitutionality of IRC § 1256 on the ground that it taxed unrealized gains. The court noted that a taxpayer who trades in futures contracts receives, and is entitled to withdraw, profits as a matter of right each day. Since such a taxpayer is in constructive receipt of income on a daily basis, IRC § 1256 is not arbitrary, capricious, or confiscatory, and, therefore, is constitutional.

(n95)Footnote 53.1. IRC § 1256(f)(5).

(n96)Footnote 54. IRC § 1256(c)(1). The Second Circuit has held that futures contracts that are donated to charity must be marked to market. *Greene v US*, 79 F3d 1348 (2d Cir 1996) , *cert denied* 519 US 1028 . On remand, the taxpayers urged the trial court to make a proper adjustment under IRC § 1256(a)(2) to reflect that they realized no gain on the donation of the futures contracts, because they received no cash or property in exchange for the donations. However, the court held that statute forces the taxpayers, in effect, to treat their contributions as cash as opposed to contributions of investment contracts and does not accommodate the adjustment sought by the taxpayers. The opinion on remand is reported at 975 F Supp 273 (SDNY 1997) . The Second Circuit affirmed. 185 F3d 67 (2d Cir 1999) .

(n97)Footnote 55. IRC § 1256(c)(2).

(n98)Footnote 56. A qualified board or exchange is defined as a national securities exchange that is registered with the Securities Exchange Commission, a domestic board of trade designated as a contract market by the Commodity Futures Trading Commission, or any other exchange, board of trade, or market that the Service determines has rules adequate to carry out the purposes of the mark-to-market rules. IRC § 1256(g)(7). For example, the Internal Revenue Service has determined that the London International Financial Futures and Options Exchange (LIFFE), a regulated exchange of the United Kingdom, is a qualified board or exchange within the meaning of IRC § 1256(g)(7)(C), effective January 1, 2010, and has granted consent to taxpayers to change to the section 1256 mark-to-market method for the first taxable year during which the taxpayer holds a LIFFE Contract entered into on or after January 1, 2010. Notice 2010-2, 2010-3 IRB 272 .

The statutory definition of an equity option is meant to exclude options on "broad-based" stock indices (such as the Standard & Poor's 500 index). Instead, these options are meant to qualify as nonequity options. HR Rep No 861, 98th Cong, 2d Sess 902 (1984).

(n99)Footnote 57. IRC § 1256(g)(6)(A), (B). The term "equity option" includes any option on a group of stocks only if such group meets the requirements for a narrow-based security index. The Service may prescribe regulations regarding the status of options the values of which are determined directly or indirectly by reference to any index that becomes (or ceases to be) a narrow-based security index.

(n100)Footnote 58. An options dealer is any person registered with an appropriate securities exchange as a market maker or specialist in listed options, or any person that the Service determines performs similar functions. IRC § 1256(g)(8).

(n101)Footnote 59. IRC § 1256(g)(9)(A). The term "securities futures contract" has the meaning given to the term by IRC § 1234B (see § 2.07[7]). IRC § 1256(g)(9)(C).

(n102)Footnote 60. IRC § 1256(g)(9)(B). Rev Proc 2002-11, 2002-1 CB 526 , provides guidelines for an exchange to follow in order to determine if certain persons trading in securities futures contracts qualify as dealers in such contracts. See Rev Rul 2004-94, 2004-2 CB 491 , and Rev Rul 2004-95, 2004-2 CB 493 , for determinations that Tier 1, Tier 2, and Tier 3 NQLX Market Makers, and Category 1 and 2 One Chicago Market Makers, respectively, are dealers in securities futures contracts.

(n103)Footnote 61. IRC § 1256(e)(1). The definition of hedging transaction can be found in the text dealing with loss deferral, § 9.02[4][d].

(n104)Footnote 62. *IRC § 1256(e)(3), (4)(A)*. The provisions apply to hedging transactions involving property other than stock or securities only if the taxpayer is subject to the at-risk rules of *IRC § 465(a)(1)*. *IRC § 1256(e)(4)(C)*.

(n105)Footnote 63. *IRC § 1256(e)(4)(B)*.

(n106)Footnote 64. *IRC § 1234(c)(1)*.

(n107)Footnote 65. *IRC § 1234A(2)*. The rule does not apply to the retirement of a debt instrument.

(n108)Footnote 66. *IRC § 1256(f)(1)*.

(n109)Footnote 67. *IRC § 1256(f)(3)(A), (B)*. Gains and losses on dealer equity options that are allocable to limited partners or S corporation shareholders are treated as short-term capital gains and losses. *IRC § 1256(f)(4)*.

(n110)Footnote 68. *IRC § 1256(f)(3)(C)*.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.03

§ 9.03 Statutory Stock Options--Options Granted Under Employee Stock Purchase Plans

[1] Requirements and Conditions of Employee Stock Purchase Plans.

No option granted as part of a stock purchase plan can qualify as a statutory stock option entitled to the special treatment afforded by *IRC Section 421(a)* unless (1) the plan provides that options can be granted only to employees of the employer corporation, or of a related (parent or subsidiary) corporation, to purchase stock in any of such corporations,ⁿ¹ and (2) the plan is approved by stockholders of the granting corporation within twelve months before or after the date on which the plan is adopted.ⁿ² In addition to these requirements, *IRC Section 423(b)* sets forth seven other conditions that must be satisfied before a plan can be considered an employee stock purchase plan and the options granted thereunder considered statutory stock options. However, as long as a plan satisfies the two requirements specified above, the remaining requirements can be satisfied by the terms of an offering made under the plan.ⁿ³ But in such case, only options granted as part of the offering will qualify as statutory stock options.ⁿ⁴

The determination of whether a particular option is an option granted under an employee stock purchase plan is made at the time such option is granted.ⁿ⁵ Here consideration must be given not only to the terms of the plan or offering under the plan but also to the terms of the option itself. If the terms of the option are inconsistent with the terms of the plan or the terms of the offering, the option will not be treated as an option granted under an employee stock purchase plan.ⁿ⁶

[a] Stock Ownership Limitation. The terms of the plan must provide that no employee can be granted an option if, immediately after the option is granted, the employee owns stock possessing 5 percent or more of the total combined voting power or value of all classes of stock of the employer corporation or of its parent or subsidiary corporation.ⁿ⁷ For this purpose, the employee is treated as the owner of all of the stock of the corporation, owned, directly or indirectly, by or for his brothers and sisters (of the whole and half-blood), spouse, ancestors, and lineal descendants, and the owner of a proportionate share of the stock owned, directly or indirectly, by or for a corporation, partnership, estate, or trust in which he is a shareholder, partner, or beneficiary.ⁿ⁸ In addition, the employee is deemed to be the owner of any stock that he can purchase under outstanding stock options, whether or not such options qualify for the special tax treatment provided by *IRC Section 421(a)*.ⁿ⁹

If an option is, in fact, granted to a person whose stock ownership exceeds the 5 percent limitation of *IRC Section 423(b)(3)*, no portion of the option will be treated as having been granted under an employee stock purchase plan.ⁿ¹⁰

[b] Eligible Employees. An employee stock purchase plan cannot be discriminatory; options must be granted to all

employees of the corporation except employees who have been employed for less than two years, part-time employees who customarily work no more than twenty hours a week, seasonal employees whose customary employment does not exceed five months a year, officers of the corporation, supervisory personnel, and highly compensated employees.ⁿ¹¹

Options granted in connection with an offering made after September 28, 1979, will not be statutory stock options if otherwise eligible employees are denied participation to any extent because of their continuing participation or eligibility for participation in a prior plan or offering of the employer corporation or related corporation.ⁿ¹² However, a plan which permits all eligible employees to participate, but which requires them to elect to do so, is not discriminatory if it grants options only to those who so elect.ⁿ¹³

[c] Equality of Rights Under Plan. An employee stock purchase plan must give all persons granted options under the plan the same rights and privileges.ⁿ¹⁴ Nevertheless, a plan will not fail to meet this requirement merely because the amount of stock that can be purchased by any employee under the plan is determined on the basis of a uniform relationship to the total compensation, or basic or regular compensation, of employees, or because the plan provides that no employee may purchase more than a maximum amount of stock fixed under the plan.ⁿ¹⁵ Thus, a plan can provide that an employee cannot purchase more than one share of stock for each \$200 of annual gross pay. But it cannot provide for the grant of options based on one share for each \$200 of annual gross pay in excess of \$5,000; such a provision may exclude some employees from participation under the plan.ⁿ¹⁶

A plan permitting any employee to apply sums withheld under an earlier plan towards the purchase of additional stock under the current plan will violate equal rights and privileges unless all eligible employees are permitted to make payments in an amount not less than that which any employee is allowed to carry over, to purchase shares under the current plan.ⁿ¹⁷ A plan will not fail to give equal rights and privileges merely because one or more employees are permitted to so apply sums withheld under an earlier plan if the applied amounts represent fractional shares in the earlier plan.ⁿ¹⁸

An example of the manner in which the equality requirement is applied can be found in the fact situation presented in *Revenue Ruling 69-218*,ⁿ¹⁹ where eligible employees could participate in an offering under the stock purchase plan only if they authorized payroll deductions based on a percentage of salary accumulated over a six-month period. Since all eligible employees could have elected to start payroll deductions at the beginning of the period, the plan satisfied the requirement that all employees granted options must have the same rights and privileges under the plan.

[d] Option Price. An employee stock purchase plan must provide that the option price of options issued under the plan will not be less than the lesser of:

- (1) an amount equal to 85 percent of the fair market value of the stock at the time the option is granted; or
- (2) an amount which, under the terms of the option, may not be less than 85 percent of the fair market value of the stock at the time of exercise.ⁿ²⁰

The option price can be stated either as a percentage or as a dollar amount. If the latter, then the price requirement can be met only by a plan or offering in which the fixed price is not less than 85 percent of the fair market value of the stock at the time of grant. This is required because, at the time of option grant, it is uncertain that the fixed price will not be less than 85 percent of the value of the stock at the time of exercise; the fact that a decline in the value of the stock results in the fixed price being not less than 85 percent of the value of the stock at the time of exercise will not save the option.ⁿ²¹

To illustrate, suppose that an option is granted when the value of the subject stock is \$100 a share. An option price set at 85 percent of the value of the stock at the time of exercise, but not less than \$80 a share, will satisfy the price

requirements; one fixed at 85 percent of value at exercise, but not more than \$80 a share will not. In the first instance, there is assurance that the price cannot be less than 85 percent of the value of the stock at the time of exercise; in the second, there is not.

Any option that does not meet this minimum pricing requirement will not be treated as granted under an employee stock purchase plan even though the terms of the plan or offering satisfy the requirement.ⁿ²² Thus, if such an option is the only one granted to an eligible employee, the offering will fail to meet the coverage requirement of *IRC Section 423(b)(4)*, namely, that all eligible employees receive options that qualify as options granted under an employee stock purchase plan, causing all of the options granted under the offering to be ineligible for the special tax treatment of *IRC Section 421(a)*.ⁿ²³

The grant of an option under an employee stock purchase plan does not constitute a deferral of compensation under *IRC Section 409A*.^{n23.1}

[e] Option Period. An employee stock purchase plan must provide that options granted under the plan cannot be exercised after the expiration of:

- (1) five years from the date of option grant, in which case the terms of the plan must provide that the option price cannot be less than 85 percent of the fair market value of the stock at the time of exercise; or
- (2) twenty-seven months from the date of grant, if the option price is otherwise determinable.ⁿ²⁴

Suppose an option, granted when the stock subject to the option has a value of \$100 a share, provides for an option price of 85 percent of the value of the stock at exercise, but not more than \$90 a share. Is the permissible option period five years or twenty-seven months? The Regulations prescribe the shorter period, irrespective of the price paid on exercise.ⁿ²⁵ This position accords with the statute, since there is no certainty that the option price will not be less than 85 percent of the value of the stock at the time the option is exercised. But the longer option period should be available where the fixed price acts as a floor and not as a ceiling; in such case, the option price could never be less than 85 percent of value at exercise.

Once a plan or offering fails to contain terms that meet the requirements relating to option period, no option granted under the plan or offering will be treated as an option granted under an employee stock purchase plan.ⁿ²⁶ Placing the proper terms in the option itself will not cure the defect.

[f] Purchase Limitation. A further condition, imposed by *IRC Section 423(b)(8)*, requires the plan to provide that no employee can be granted an option that permits his rights to purchase stock under employee stock purchase plans of his employer corporation or its related (parent and subsidiary) corporations "to accrue at a rate which exceeds \$25,000 of fair market value of the stock (determined at the time such option is granted) for each calendar year in which such option is outstanding at any time." In applying this limitation:

- (1) the right to purchase stock under an option is deemed to accrue when the option or any portion thereof first becomes exercisable during the calendar year;
- (2) the right to purchase stock under an option accrues at the rate provided in the option, but in no case can the rate exceed \$25,000 of fair market value of the subject stock (determined at the time the option is granted) for any calendar year; and
- (3) a right to purchase stock that has accrued under one option granted pursuant to the plan cannot be carried over to any other option.

The \$25,000 per year limitation is cumulative; to the extent the amount is not exhausted in one year, it will be added to the amount that can be purchased in a succeeding year in which the option is outstanding.ⁿ²⁷

Example:

Assume that a twenty-seven month option to purchase 750 shares at \$90 a share is granted to an employee on June 1, 1990, when the stock of the corporation has a value of \$100 a share. The employee can purchase up to 250 shares of stock in 1990;ⁿ²⁸ the value of the 250 shares at the time of option grant equals, but does not exceed, \$25,000. In 1991, the employee can purchase the difference between 500 shares and the number of shares purchased under the plan in 1990; in 1992, he is permitted to purchase the difference between 750 shares and the number of shares acquired by exercise of the option in the prior two years.

Suppose the employee does not exercise any portion of the option until 1992 when he purchases 700 shares of stock (\$70,000 in fair market value of stock determined as of the time of option grant). The purchase is applied first against the \$25,000 limitation for the earliest year in which the option was outstanding, and then against the limitation for each succeeding year, in order.ⁿ²⁹ Thus, \$25,000 of the purchase will be attributable to 1990, \$25,000 to 1991, and \$20,000 to 1992. If the optionee does not exercise the balance of the option, he may be granted another option that allows him to purchase up to \$5,000 more stock (based upon the value of the stock at the time of the grant of the new option) in 1992.ⁿ³⁰ But if he is not granted a new option until 1993, he may not carry over the unused portion of the prior option to increase the amount of stock which may be purchased under the second option.ⁿ³¹

The limitation of *IRC Section 423(b)(8)* applies only to options granted under employee stock purchase plans, and does not restrict the amount of stock an employee can purchase under restricted stock options, qualified stock options, or nonstatutory stock options.ⁿ³² Stock purchased under such other options will not limit the amount of stock which can be purchased under an employee stock purchase plan, except to the extent that such stock must be counted for purposes of the 5 percent stock ownership limitation of *IRC Section 423(b)(3)*.ⁿ³³

If the terms of the plan or offering satisfy the requirement of *IRC Section 423(b)(8)*, but the option gives the employee the right to purchase stock in excess of the prescribed limitation, no portion of the option will be considered as having been granted under an employee stock purchase plan.ⁿ³⁴ So, if the employee is not granted another option that does qualify as an option granted under an employee stock purchase plan, the offering under which the option was granted will not satisfy the coverage requirement of *IRC Section 423(b)(4)*, making all of the options granted under the offering ineligible for the special tax treatment afforded by *IRC Section 421*.ⁿ³⁵

[g] Transferability. The plan must prohibit the transfer of the option other than by will or the laws of descent and distribution, and must provide that the option is exercisable, during the lifetime of the employee, only by him.ⁿ³⁶ However, if the option or plan under which it was granted contains a provision allowing the employee to designate the person who may exercise the option after the employee's death, neither the provision, nor a designation pursuant to the provision, disqualifies the option as a statutory option.ⁿ³⁷

An employee can pledge stock purchasable under an option for a loan that is used to pay the option price.ⁿ³⁸ In addition, the employee can transfer the option to a trust if, under the grantor trust rules and applicable state law, the employee is considered the sole beneficial owner of the option while it is held in trust.ⁿ³⁹

[2] Modification, Extension, and Renewal of the Option.

IRC Section 424(h)(1) sets forth the general rule that a modification, extension, or renewal of the option will be considered the granting of a new option. Modification is defined as "any change in the terms of the option which gives the employee additional benefits under the option."ⁿ¹ Thus, a change in terms that shortens the option period is not a

modification; one that provides more favorable payment terms is.ⁿ² However, the term "modification" does not encompass (1) a change in terms attributable to the substitution of a new option or the assumption of the original option by reason of a corporate reorganization, separation, or liquidation, provided (a) the optionee does not receive any new or additional benefits, and (b) the excess of the aggregate fair market value over the aggregate option price of the subject shares immediately after the substitution is not greater than the excess of aggregate value over aggregate option price immediately before the substitution or assumption;ⁿ³ (2) a change in terms that makes the option nontransferable except by will or under the laws of intestacy, and exercisable during the life of the grantee of the option solely by him;ⁿ⁴ or (3) change in terms of an option not immediately exercisable in full to accelerate the time at which the option can be exercised.ⁿ⁵ A change in the number or price of the shares subject to the option merely to reflect a stock dividend or stock split is also not a modification of the option.ⁿ⁶ An amendment that increases the number of shares subject to an option is treated as the grant of a new option, but only to the extent of the increase; the original option is unaffected by the change.ⁿ⁷

An option is extended when the grantor corporation enlarges the time within which the option can be exercised.ⁿ⁸ It is renewed by the granting of the same rights or privileges contained in the original option on the same terms and conditions.ⁿ⁹

A change to an option providing that the optionee may receive an additional benefit under the option at the future discretion of the granting corporation is a modification of the option at the time the option is changed to provide the discretion.^{n9.1} Furthermore, the exercise of such discretion is a modification of the option.^{n9.2} However, it is not a modification for the grantor to exercise discretion specifically reserved under an option with respect to the payment of a cash bonus at the time of exercise, the availability of a loan at exercise, the right to tender previously acquired stock for the stock purchasable under the option, or the payment of employment taxes or required withholding taxes resulting from the exercise of the option.^{n9.3}

An offer to change the terms of an option that remains open less than 30 days is not a modification of the option.^{n9.4} However, if an offer to change the terms of an option remains outstanding for more than 30 days, there is a modification of the option as of the date the offer is made.^{n9.5}

Any inadvertent change to the terms of an option (or change in the terms of the plan under which the option was granted or in the terms of any other agreement governing the arrangement) that is treated as a modification is not considered a modification of the option to the extent the change in the terms of the option is removed by the earlier of the date the option is exercised or the last day of the calendar year in which the change occurred.^{n9.6}

Although the modification, extension, or renewal of a stock option is considered the granting of a new option, one looks to the highest of the following values, and not just to the value of the stock at the time of modification, to determine whether the option price meets the statutory requirement:

- (1) the fair market value of the stock at the time of original grant;
- (2) the fair market value of the stock at the time of modification, extension, or renewal; or
- (3) the fair market value of the stock at the time of any intervening modification, extension, or renewal.ⁿ¹⁰

We have seen that an employee stock purchase plan must meet the coverage requirement of *IRC Section 423(b)(4)*; the failure to grant an eligible employee an option that qualifies as an option granted under an employee stock purchase plan will not permit any of the options granted under the offering to be eligible for *IRC Section 421(a)* treatment. By modifying such an option to bring its terms into compliance with the requirements of *IRC Section 423(b)*, the offering may be "saved" and the options granted thereunder made eligible for the special treatment of *IRC Section 421*.

Conversely, an option granted to an eligible employee may be so modified that it can no longer be treated as an option granted under an employee stock purchase plan; in such case, the entire offering will fall unless the employee is also granted a qualifying option.

[3] Treatment of Options Granted Under Stock Purchase Plans.

[a] Exercise of the Option.

[i] By the Optionee. *IRC Section 423(a)* makes the rule of *IRC Section 421(a)* (no income on exercise) applicable to options granted under employee stock purchase plans meeting the requirements of *IRC Section 423(b)*, provided:

(1) no disposition of the stock acquired on exercise is made within two years after the granting of the option or within one year after the date on which the stock is acquired;ⁿ¹ and

(2) the optionee was an employee of the grantor corporation, a related corporation, a successor corporation (a corporation that issued a substitute option or assumed the original option as part of a corporate reorganization, separation or liquidation to which *IRC Section 424(a)* applies), or a corporation related to such corporation, at all times beginning with the date of the granting of the option and ending no earlier than three months before the date of exercise.

The exercise of an option granted under an employee stock purchase plan does not give rise to an item of tax preference under *IRC Section 57*.

[ii] By the Optionee's Estate. Where an employee dies holding an option with respect to which he could have made a qualifying exercise (one granted preferential treatment by *IRC Section 421(a)*), the exercise of the option by his estate, or by a person acquiring the right to exercise the option by bequest or inheritance or by reason of the employee's death, will not create any income for the exercising party.ⁿ² Moreover, the holding period and employment requirements that must be met by an optionee exercising an option during life need not be met when the option is exercised after his death.ⁿ³

[b] Dispositions of Stock Acquired Through Exercise of the Option.

[i] Effect of a Disqualifying Disposition. The employee who fails to meet the holding period requirement of *IRC Section 423(a)(1)*, realizes ordinary income (in the nature of compensation) in the year of disposition to the extent of the difference between the option price and the fair market value of the stock at the time of exercise of the option.ⁿ⁴ Selling the stock at a loss does not produce a contrary result; in such case, the taxpayer has ordinary income and a capital loss, the capital loss being equal to the difference between the selling price and the value of the stock at the time of exercise. (The basis of the stock is increased by the amount of compensation income.) If the sale is at a gain that exceeds the amount of ordinary income, the excess gain will normally be short-term capital gain. The gain will be long-term if the stock is held for more than one year from the date of exercise, but for less than two years from the date of the granting of the option.

Example:

An employee, granted an option to purchase stock, valued at \$100 a share, for \$90 a share, exercises the option at a time when the stock has a value of \$110 a share. Three months after exercise, the stock is sold for \$120 a share. The employee has ordinary income of \$20 a share, the difference between the \$110 value at the time of exercise and the \$90 option price, and a short-term capital gain of \$10, the difference between \$110 and the \$120 selling price. Had the selling price been \$100, the employee would still have had ordinary income of \$20; but, in addition, he would have realized a short-term capital loss of \$10, the difference will \$110 and \$100.

The term "disposition" is defined by *IRC Section 424(c)* to include "a sale, exchange, gift, or transfer of legal title," but does not encompass a transfer from a decedent to an estate, a transfer by bequest or inheritance, a mere pledge or hypothecation,ⁿ⁵ an exchange made pursuant to a corporate reorganization or separation to which *IRC Sections 354, 355, or 356*, apply, or an exchange governed by *IRC Section 1036* (an exchange of common stock for common stock or preferred stock for preferred stock in the same corporation). Also excluded from the scope of "disposition" is the initial acquisition of the stock in the name of the employee and another as joint tenants with right of survivorship, or a later transfer of stock into such ownership.ⁿ⁶ However, the termination of the joint tenancy (other than by reason of the death of a joint tenant) is a disposition except to the extent that the employee acquires ownership of the stock.ⁿ⁷

Since the holder of an option to sell specified stock need not exercise it, the acquisition of a "put" covering the stock acquired on the exercise of the option does not constitute a disposition, but exercise of the "put" does.ⁿ⁸ In a similar fashion, the Service has ruled that the mere delivery of shares endorsed in blank to a custodian for safekeeping is not a disposition where the optionee remains the registered owner of the stock.ⁿ⁹ Nor, says the Service, will there be a disposition if stock is delivered to a broker so that he may "lend" the shares to customers engaging in short sales, provided the broker satisfies his replacement obligation by delivering stock of the type that would have brought an exchange of the stock within *IRC Section 1036*.ⁿ¹⁰ Finally, no disposition is deemed to occur when the optionee exercises a conversion privilege contained in preferred stock acquired on the exercise of the option and exchanges the stock for common stock in the same corporation.ⁿ¹¹

Generally, a disposition takes place when legal title to the subject stock is actually transferred.ⁿ¹² This follows from the fact that, ordinarily, the obligations of buyer and seller remain executory until title is closed. But suppose they are not. In *Brown v. United States*,ⁿ¹³ the only case to really consider the question, a district court used the doctrine of constructive receipt to find that the disposition occurred when the corporation (whose stock the optionee owned) irrevocably deposited funds in escrow for distribution to shareholders under a plan of liquidation and not some months later when the shareholder delivered his stock to the corporation and received payment. The Ninth Circuit disagreed, and reversed, stating:

"The disqualifying event is not payment, actually or constructively received. The section 421 disposition is not just any disposition. ... We construe the terms' disposition * * * made by him' as manifesting Congress' intent that some affirmative, voluntary act of the option holder-taxpayer is required to constitute a disqualifying disposition."ⁿ¹⁴

The stock actually acquired on the exercise of the option is not the only stock that can form the subject of a disqualifying disposition. Under *IRC Section 425(b)*, stock distributed to the optionee, either in the form of a stock dividend on the acquired shares or as part of a reorganization or *IRC 1036* exchange, will be deemed to have been acquired on the exercise of the option. A sale of the later acquired shares within the prescribed period will be as much of a disqualifying disposition as a sale of the original shares.

[ii] Effect of the Option Price on the Character of Gain Realized in a Qualifying Disposition. Because stock acquired on the exercise of an option granted under an employee stock purchase plan must be retained for one year in order to satisfy the holding period requirement prescribed by *IRC Section 423(a)(1)*, any gain realized on a disposition of the stock after the expiration of the period will generally be treated as long-term capital gain. However, under *IRC Section 423(c)*, if the option price of the acquired stock was less than 100 percent of the value of the stock at the time the option was granted, a disposition of the stock after the required holding period (or the death of the taxpayer at any time while owning the acquired stock) will transform the gain into compensation income to the extent of the lesser of (1) the excess of the fair market value of the stock at the time of disposition (or death) over the amount paid for the stock, or (2) the excess of the fair market value of the stock at the time the option was granted over the option price.ⁿ¹⁵ If the option price is not fixed or determinable at the time the option is granted (eg, an option price of 90 percent of the fair market value of the stock on the day of exercise), then, for the purposes of *IRC Section 423(c)*, the option price is determined by considering the option as having been exercised on the date it was granted.ⁿ¹⁶

The basis of any share disposed of by an individual is increased by an amount equal to the amount of compensation that he is required to include in gross income.ⁿ¹⁷ The rule does not apply if the inclusion of compensation income is occasioned by the death of the owner of the stock; in such case, the fair market value of the share on the date of death (or applicable alternate valuation date) determines the basis of the share in the hands of the decedent's estate or the person who acquired the share by reason of the owner's death.ⁿ¹⁸

Example:

On June 1, 1990, X Corporation grants A, one of its employees, an option (under an employee stock purchase plan) to purchase stock of the corporation at \$90 a share. The stock had a fair market value of \$100 a share. A exercised the option on June 1, 1991, and sold the acquired stock on July 1, 1992, at its fair market value of \$120 a share. A's compensation income would be limited to \$10 a share, the difference between the value at the time of grant (\$100) and the option price (\$90). The basis of each share then would be increased by \$10 a share, the amount included in gross income as compensation, and the new basis of \$100 (\$90 + \$10) a share subtracted from the amount realized of \$120 a share to produce a long-term capital gain of \$20 a share. Had A died on July 1, 1992, still the owner of the acquired stock, the only amount includable in gross income for the taxable year ending with his death would have been the compensation income of \$10 a share. The basis of each share, in such case, would have been \$120, determined under *IRC Section 1014* without regard to the amount includable in gross income as compensation.

If the option had provided for an option price of 90 percent of the fair market value of the stock at the time of exercise, and the fair market value of the stock on June 1, 1991 had been \$110 a share, the following tax consequences would have flowed from the disposition:

- (1) Compensation income of \$10 a share (the difference between the \$100 value of the stock at the time of option grant and \$90, the option price that would have been paid had the option been exercised immediately following its grant);ⁿ¹⁹
- (2) An increase in the original cost basis of each share, \$99 (90 percent of \$110) by \$10, the amount per share includable in gross income as compensation;
- (3) Long-term capital gain of \$11 a share, the excess of the \$120 amount realized over the \$109 basis for the share.

[iii] Dispositions of Stock Acquired by an Estate's Exercise of the Option. Although an estate (or any person acquiring the right to exercise an option by bequest or inheritance or by reason of the death of the option holder) cannot make a disqualifying disposition of the stock acquired on the exercise of the option, any transfer of the stock by the estate or such person is considered a disposition for purposes of *IRC Section 423(c)*, thereby triggering the inclusion of compensation income to the extent required by that provision.ⁿ²⁰ However, the inclusion of compensation income in the gross income of the estate or other person gives rise to a deduction with respect to the estate tax attributable to the inclusion of the value of the option in the gross estate of the deceased employee.ⁿ²¹ The deduction is determined under *IRC Section 691(c)* by treating the option as an item of income in respect of a decedent and the amount of compensation income as an amount included in gross income in respect of such item of income in respect of a decedent.ⁿ²² The following example illustrates the manner in which the deduction is computed:

Example:

On December 31, 1990, an employee was granted an option under an employee stock purchase plan to purchase his employer's stock, then valued at \$100 a share, for \$85 a share. The employee died on May

1, 1993, without having exercised the option; the option was valued at \$45 a share for estate tax purposes. The employee's estate exercised the option on June 1, 1993, and sold the stock for \$150 a share on July 1, 1993. Application of the special rule of *IRC Section 423(c)* would require the estate to include \$15 in gross income as compensation. Assuming that the estate had no other items of income in respect of a decedent, that the estate tax attributable to the inclusion of the option in the gross estate was \$15, and that, during the taxable year of income inclusion, no amounts were paid, credited or distributable to beneficiaries of the estate, the estate's deduction would be \$5. The applicable formula for determining the amount of the deduction is:

$$\frac{\text{Amount included in gross income}}{\text{Items of income in respect of a decedent}} \times \text{Estate tax attributable to inclusion of items of income in respect of a decedent}$$

Substituting the given figures in the formula, we find that

$$\frac{\$15}{\$45} \times \$15 = \$5$$

[c] Special Basis Rules for Stock Acquired by an Estate on the Exercise of the Option. The basis of a share of stock acquired on the exercise of an option by a deceased employee's estate, or by a person acquiring the right to exercise the option, must include so much of the basis of the option as is attributable to such share.²³ To illustrate, if an employee dies holding an option to purchase 100 shares, and if the option had a date of death value of \$500, and the alternate valuation date was not elected, the cost basis of each share of stock acquired under the option will be increased by \$5. A reduction in basis is required if (1) *IRC Section 423(c)* applies because the option price is less than 100 percent of the value of the stock at the time of option grant, and (2) the amount of compensation income that would have been includable in gross income if the employee had exercised the option during life and died holding the acquired shares exceeds the amount that becomes includable on the disposition of the stock by the estate; the excess furnishes the amount of the downward adjustment in basis.²⁴ A final adjustment--an increase in basis--is mandated whenever the amount includable in gross income as compensation under *IRC Section 423(c)* exceeds the per share basis of the option; the increase is in the amount of such excess.²⁵

Example:

On December 31, 1990, when the stock of X Corp was valued at \$100 a share, an employee of the corporation was given an option to purchase 100 shares of stock at \$85 a share. The employee died on March 1, 1993. At that time the fair market value of the stock was \$105 a share and the value of the option, \$1,000 (or the equivalent of \$10 a share). The estate exercised the option and immediately sold the stock for \$98 a share. Applying the adjustment rules described above, we must:

(1) increase the basis of each share by \$10, the per share basis of the option; then

(2) decrease the basis of each share by \$2--the difference between \$15 and (\$100 stock value at grant less \$85 option price), the amount that the deceased employee would have included as compensation income had he exercised the option and died holding the shares, and \$13 (\$98 value at disposition less \$85 option price), the amount that the estate must include in income; and finally

(3) increase the basis of each share by \$3, the amount by which the estate's *IRC Section 423(c)* income (\$13) exceeds the per-share basis of the option (\$10).

The result is a basis of \$96 a share and a capital gain of \$2 a share.

[4] Effect on the Grantor Corporation.

A corporation is not allowed an ordinary and necessary business expense deduction under *IRC Section 162* when it transfers shares pursuant to an individual's exercise of an option granted under an employee stock purchase plan.ⁿ¹ A further consequence is that no amount other than the price paid under the option can be considered as received by the corporation for the transferred shares.ⁿ²

A deduction, equal to the amount of compensation income includable in the gross income of an individual making a disqualifying disposition of the stock acquired under the option, is allowable in the year of the disqualifying disposition.ⁿ³ And it is only a disqualifying disposition that can give rise to the deduction; the inclusion of an amount in gross income as compensation by reason of the application of *IRC Section 423(c)* does not create a deduction for the corporation.ⁿ⁴

FOOTNOTES:

(n1)Footnote 1. *IRC § 423(b)(1)*. The Service has ruled that American Depositary Shares (shares of a non-US company issued under a deposit agreement representing the underlying shares traded in the issuer's home country) qualify as stock for purposes of *IRC § 423*. *Ltr Rul 199931005*.

A partnership owned by an affiliated group parent qualifies as an employer and as a subsidiary corporation. *Ltr Rul 200017048*.

(n2)Footnote 2. *IRC § 423(b)(2)*; *Treas Reg § 1.423-2(c)*.

The degree of shareholder approval required is determined by reference to the applicable provisions of the corporation's charter and by-laws, and the law of the state of incorporation. If they are silent in this regard, the holders of a majority of the voting stock of the corporation must vote to approve the plan.

(n3)Footnote 3. *Treas Reg § 1.423-2(a)(1)*.

(n4)Footnote 4. *Treas Reg § 1.423-2(a)(1)*.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.04

§ 9.04 Statutory Stock Options--The Incentive Stock Option

[1] Requirements and Conditions--The Definition of an Incentive Stock Option.

[a] Employment. To qualify as an incentive stock option, the option must be granted to an individual for a reason connected with his employment by the granting corporation, its parent or subsidiary.ⁿ¹ In addition, to obtain favorable tax treatment at the time of exercise the optionee must continue as an employee of either the corporation granting the option, a parent or subsidiary of such corporation, or a corporation substituting a new option or assuming the old option as part of a corporate reorganization or liquidation, at all times beginning with the date of the granting of the option and ending no earlier than three months before the date of exercise.ⁿ²

The employment relationship is treated as continuing intact while the employee is on military leave, sick leave, or other bona fide leave of absence (such as temporary government service) if the period of the leave does not exceed three months, or if longer, so long as the employee's right to reemployment with the granting corporation (or a related corporation) or a corporation assuming or substituting an option as part of a corporate transaction is guaranteed either by statute or by contract.^{n2.1} If the period of leave exceeds three months and the employee's right to reemployment is not guaranteed, the employment relationship is deemed to terminate on the first day of the month immediately following the three-month period.^{n2.2}

[b] Stock Option Plan. An incentive stock option must be granted under a plan that specifies the maximum aggregate number of shares of stock that can be issued as incentive stock options under the plan and the employees or class of employees eligible to receive options.ⁿ³ The plan must be approved by the stockholders of the granting corporation within twelve months before or after the plan is adopted.ⁿ⁴ Stockholder approval is not required for amendments to an incentive stock option plan that do not increase the aggregate number of shares that can be issued under the plan or change the eligibility of employees who are to receive them.ⁿ⁵

[c] Time Periods for Granting and Exercising the Option. An incentive stock option must be granted within ten years from the date the plan is adopted, or the date the plan is approved by the shareholders, whichever is earlier.ⁿ⁶ It can not be exercised later than ten years after the date it is granted.ⁿ⁷

[d] Option Price. *IRC Section 422(b)(4)* mandates that the option price be not less than the fair market value of the stock on the date the option is granted. (For purposes of the incentive stock option provisions, the fair market value of stock is determined without regard to any restriction other than a restriction which, by its terms, will never lapse.)ⁿ⁸

However, an option which has a price less than value will not be disqualified if there was a good faith attempt to meet the requirement of *IRC Section 422(b)(4)*.ⁿ⁹

The grant of an option under an employee stock purchase plan does not constitute a deferral of compensation under *IRC Section 409A*.^{n9.1}

[e] Stock Ownership and Value Limitations. At the time the option is granted, the grantee cannot own stock possessing more than 10 percent of the total combined voting power of all classes of stock of the employer corporation, or of its parent or subsidiary corporation.ⁿ¹⁰ This condition does not apply if, at the time the option is granted, the option price is at least 110 percent of the fair market value of the stock subject to the option, and the option by its terms is not exercisable after the expiration of five year from the date the option is granted.ⁿ¹¹

In addition, the aggregate fair market value (determined at the time that the option is granted) of the stock with respect to which incentive stock options are first exercisable by the employee in any calendar year under all plans of the employer corporation, or parent or subsidiary corporation, or in any predecessor corporation, cannot exceed \$100,000.ⁿ¹² The aggregate fair market value limit is deemed to have been met if there is a good faith attempt to do so.ⁿ¹³

If the aggregate fair market value of stock with respect to which options are exercisable for the first time by an employee in any calendar year exceeds \$100,000, the options relating to stock in excess of the value limitation are nonqualified stock options.ⁿ¹⁴ In determining which of a series of options qualify as incentive stock options, the rule is applied by taking options into account in the order in which they were granted.

If a single, otherwise qualifying option is granted for stock in excess of \$100,000, the option will be treated in part as an incentive stock option and in part as a nonqualified stock option.ⁿ¹⁵ For example, if the single option for \$150,000 of stock first becomes exercisable in a taxable year, the option is treated as an incentive stock option for \$100,000 of stock and a nonqualifying option for \$50,000 of stock. Pursuant to the exercise of an incentive stock option, the corporation can designate the stock that is treated as acquired by issuing a separate certificate (or certificates) for \$100,000 of stock and identifying the certificate as incentive stock option stock in its stock transfer records. In the absence of such a designation, two-thirds (\$100,000/\$150,000) of each share of stock will be treated as stock acquired pursuant to the exercise of an incentive stock option and one-third as stock acquired pursuant to the exercise of a nonqualifying option.

[f] Transferability of the Option. An incentive stock option cannot, by its terms, be transferable by the optionee other than by will or the laws of descent and distribution, nor can it be exercised during life by anyone other than him.ⁿ¹⁶ If the transfer of an incentive stock option contravenes the prohibition against transfer, the grantees are required to include in gross income, in the taxable year of the transfer, the excess of the amount received upon the transfer over the amount, if any, paid for the option.ⁿ¹⁷

An employee can pledge stock purchasable under an option for a loan that is used to pay the option price.ⁿ¹⁸ In addition, the employee can transfer the option to a trust if, under the grantor trust rules and applicable state law, the employee is considered the sole beneficial owner of the option while it is held in trust.ⁿ¹⁹

[g] Permissible Provisions. An incentive stock option that meets the requirements described above can contain further conditions provided they are not inconsistent with the qualification standards.ⁿ²⁰ In addition, the Code permits the employee to pay for stock acquired on exercise with other stock of the granting corporation, and even to receive cash or property at the time of exercise.ⁿ²¹

[2] Modification, Extension and Renewal of the Option.

The earlier discussion of modificationsⁿ¹ is relevant here as well. *IRC Section 424*, in general, and *IRC Section 424(h)*, in particular, apply with equal force to all statutory options. As before, the crucial feature of any modification,

extension, or renewal of the option is its treatment as a new option.

[3] Treatment of Incentive Stock Option.

[a] Exercise of the Option. The holder of an incentive stock option does not realize any income upon the exercise of the option if there is no disposition of the shares within the prescribed holding period, namely, two years from the date of the granting of the option and one year from the date of acquisition.ⁿ¹ The no-income-on-exercise rule extends to the situation in which the option is exercised after the death of the employee by the estate of the decedent or by a person who acquired the right to exercise the option by reason of the death of the employee. In such case, the holding period and employment requirements imposed on lifetime exercise are waived.ⁿ² Numerous AMT relief provisions, including relief targeted to AMT triggered by exercise of incentive stock options, were included in Tax Extenders and Alternative Minimum Tax Relief Act of 2008 (part of Pub L No 110-343, October 3, 2008). ^{n2.1}

The spread between the option price and the fair market value of the stock at the time of exercise is an item of tax preference for purposes of the alternative minimum tax. The basis of stock acquired by exercise of the option is increased by the amount treated as an item of tax preference.^{n2.2} A disqualifying disposition in a taxable year subsequent to the year of exercise does not permit the taxpayer to avoid the tax preference in the year of exercise. There is no tax preference if exercise and disqualifying disposition occur in the same taxable year.^{n2.3}

The Tax Court has held that a taxpayer's election under *IRC Section 83(b)* with respect to vested and nonvested stock acquired on the exercise of an incentive stock option was valid and required him to treat the spread between the option price and the fair market value of both the vested and nonvested stock as income for alternative minimum tax purposes.^{n2.4}

[b] Dispositions of Stock Acquired Through Exercise of the Option. The combination of the requirement that the stock be held one year after exercise and the fact that the stock is, most likely, a capital asset in the hands of the employee insures that any gain realized on a disposition of the stock will be treated as long-term capital gain.ⁿ³

An early and disqualifying disposition of the stock acquired by exercise of the option produces ordinary income for the employee in the year of disposition.ⁿ⁴ If the amount realized on the disqualifying disposition is less than the fair market value of the stock at the time of exercise, the amount of such income is limited to the gain, if any, realized on the disposition.ⁿ⁵ The treatment of any additional gain is unaffected by the rules governing statutory stock options.

[4] Effect on the Grantor Corporation.

The corporation granting the option is not allowed any deduction for compensation paid if the employee follows the rules prescribed for favored tax treatment.ⁿ¹ If the employee fails to do so and makes a disqualifying disposition, the corporation is entitled to a deduction in the year of disposition, in an amount equal to the compensation income includable in gross income by the employee.ⁿ²

FOOTNOTES:

(n1)Footnote 1. *IRC § 422(b)*. A partnership owned by an affiliated group parent qualifies as an employer and as a subsidiary corporation. *Ltr Rul 200017048* .

(n2)Footnote 2. *IRC §§ 422(a)(2), 424(a)*. Employees who become disabled have one year to exercise the option after leaving employment. *IRC § 422(c)(6)*.

(n3)Footnote 2.1. *Treas Reg § 1.421-1(h)(2)*. A corporate transaction includes (i) a merger, consolidation, acquisition of property or stock, separation, reorganization, or liquidation; (ii) a distribution (excluding an ordinary dividend or stock split or pro rata stock dividend) or change in terms or number of outstanding shares of the corporation; and (iii) any other corporate events prescribed by the Commissioner in published guidance. *Treas Reg §*

1.424-1(a)(3).

(n4)Footnote 2.2. *Treas Reg § 1.421-1(h)(2)*.

(n5)Footnote 3. *IRC § 422(b)(1)*. If a corporation maintains an omnibus plan under which incentive stock options, nonstatutory stock options, and other stock-based awards may be made, the plan must contain a maximum number of shares that may be issued as incentive stock options, but need not state the maximum number of shares that may be issued to nonstatutory options or other stock-based awards. *Treas Reg § 1.422-2(b)(3)(i)*.

(n6)Footnote 4. *IRC § 422(b)(1)*.

(n7)Footnote 5. *Notice 87-49, 1987-2 CB 355 ; Treas Reg § 1.422-2(b)(2)(iii)*. An amendment that increases the maximum aggregate number of shares is considered the adoption of a new plan, requiring shareholder approval. The plan is considered adopted when the shareholders approve the amendment.

(n8)Footnote 6. *IRC § 422(b)(2)*.

Options issued at any time during the 10-year period following adoption of an amendment to the plan that increases the maximum aggregate number of shares that can be issued under the plan satisfy the 10-year period limitation of *IRC § 422(b)(2)*. *Ltr Rul 200519026* .

(n9)Footnote 7. *IRC § 422(b)(3)*. The exercise period is shortened to five years in certain circumstances. See § 9.03[1][e].

(n10)Footnote 8. *IRC § 422(c)(7)*. The option price may be determined in any reasonable manner, including valuation methods prescribed in the estate tax regulations, so long as the minimum price possible under the terms of the option is not less than the fair market value of the stock on the date of grant. *Treas Reg § 1.422-2(e)(1)*.

(n11)Footnote 9. *IRC § 422(c)(1)*. Whether there was a good-faith attempt to set the option price at not less than the fair market value of the stock on the date of grant depends on the relevant facts and circumstances, including whether the stock is publicly traded or not. *Treas Reg § 1.422-2(e)(2)*.

(n12)Footnote 9.1. *Notice 2005-1 , Q & A 4(d)(iii), 2005-1 CB 274* .

(n13)Footnote 10. *IRC § 422(b)(6)*. An individual is considered as owning the stock owned, directly or indirectly, by or for his brothers and sisters, spouse, ancestors, and lineal descendants. *IRC § 424(d)(1)*. Stock owned, directly or indirectly, by a corporation, partnership, or trust, is deemed to be owned proportionately by or for its shareholders, partners, or beneficiaries. *IRC § 424(d)(2)*.

(n14)Footnote 11. *IRC § 422(c)(5)*.

(n15)Footnote 12. *IRC § 422(d)*. The taxpayers in *Montgomery v Commissioner, 127 TC No 3 (2006)* , contended that the \$100,000 limitation is only applied to shares that are not subject to a subsequent disqualifying disposition during the same taxable year in which the shares are acquired. The Tax Court held that the limitation does not exclude shares that are later the subject of a disqualifying distribution.

A disqualifying disposition has no effect on the determination of whether an option exceeds the \$100,000 limitation. *Treas Reg § 1.422-4(b)(6)*.

(n16)Footnote 13. *IRC § 422(c)(1)*.

(n17)Footnote 14. *IRS Notice 87-49, 1987-2 CB 355* .

(n18)Footnote 15. *IRS Notice 87-49, 1987-2 CB 355* .

(n19)Footnote 16. *IRC § 422(b)(5)*. The cancellation of a stock option is not a permissible transfer under *IRC § 422(b)(5)*. See, eg, *TAM 9540003* .

The transfer of a statutory stock option to a spouse in connection with a divorce results in the disqualification of the option under *IRC § 422(b)(5)* and causes the option to be treated thereafter in the same manner as a nonstatutory stock option. *Rev Rul 2002-22, 2002-1 CB 849* . However, the provisions of *IRC § 422(b)(5)* were not violated when a divorce court (1) recognized the spouse's community property interest in incentive stock options, (2) required the employee to exercise the spouse's options only in accordance with the spouse's instructions, and (3) required the employee to designate the spouse as the beneficiary of the spouse's share of the option. *Ltr Rul 200519011* .

(n20)Footnote 17. *Treas Reg § 1.83-7(a)*. However, if the option or plan under which it was granted contains a provision allowing the employee to designate the person who may exercise the option after the employee's death, neither the provision, nor a designation pursuant to the provision, disqualifies the option as a statutory option. *Treas Reg § 1.421-1(b)(2)*.

(n21)Footnote 18. *Id.*

(n22)Footnote 19. *Id.*

(n23)Footnote 20. *IRC § 422(c)(4)(C)*. However, an option will not be an incentive stock option if its terms state that it is not to be treated as such. *IRC § 422(b)*.

(n24)Footnote 21. *IRC § 422(c)(4)(A), (B)*. The receipt of property is allowed only if the employee is subject to the provisions of *IRC § 83* because of the receipt of the property. The operation of *IRC § 83* is discussed at § 9.06[2][d].

(n25)Footnote 1. See § 9.03[2], *supra*. The Service will not rule whether the substitution of a new incentive stock option for an old incentive stock option, or the assumption of an old incentive stock option, by an employer by reason of a corporate transaction constitutes a new option by reason of failing to satisfy the spread test requirement of *IRC § 424(a)(1)* or the ratio test of *Treas Reg § 1.425-1(a)(4)*. The Service will continue to rule on the issue of whether the new incentive stock option or the assumption of the old gives the employee additional benefits not present under the old option within the meaning of *IRC § 424(a)(2)*. *Rev Proc 2010-3, 2010-1 IRB 110, 113-114* (§ 3.01(44)).

(n26)Footnote 1. *IRC §§ 421(a)(1), 422(a)(1)*. The employment requirement mentioned earlier must also be met. *IRC § 422(a)(2)*.

Remuneration received on account of a transfer of stock to any individual pursuant to the exercise of an incentive stock option is excluded from the definition of wages for employment and unemployment tax purposes. *IRC §§ 3121(a)(22), 3306(b)(19)*.

A transfer of stock acquired on the exercise of a statutory stock option (an incentive stock option or an option granted under an employee stock purchase plan) to purchase stock pursuant to the exercise of an incentive stock option will be taxable if the holding period applicable to the transferred stock has not been met. *IRC § 424(c)(3)*.

(n27)Footnote 2. *IRC § 421(c)(1)*. Gain realized on a disposition within one year will be treated as short-term capital gain.

Although the employee's estate can exercise the option more than three months after the termination of the employment relationship, death must occur within three months of such termination if the decedent is not an employee at the time of death. *Treas Reg § 1.421-8(c)(1)*.

(n28)Footnote 2.1. See § 2A.03[1], above.

(n29)Footnote 2.2. *IRC § 57(a)(3)(B)*.

(n30)Footnote 2.3. *Ltr Rul 8821076* .

(n31)Footnote 2.4. *Kadillak v Commr, 127 TC 184 (2006)* , *aff'd 534 F3d 1197 (3d Cir 2008)* .

(n32)Footnote 3. This assumes that there is no disposition within two years from the granting of the option. The taxpayer in *Svoboda v Commr, TC Memo 2006-235* , argued that a taxpayer could comply with the holding period for capital gain treatment either by holding the option for two years after its grant or by holding the stock acquired on exercise of the option for one year after its acquisition. The Tax Court rejected this alternative test.

The transfer of legal title to stock acquired on the exercise of an incentive stock option to a broker as collateral for a margin account is not a disposition where the broker is required to replace the transferred stock with new stock of the corporation of the same kind and amount. *Ltr Rul 8636055* .

Remuneration received on account of a transfer of stock acquired pursuant to the exercise of an incentive stock option is excluded from the definition of wages for employment tax purposes. *IRC § 3121(a)(22)*.

(n33)Footnote 4. *IRC § 421(b)*. A transfer of acquired stock by an insolvent person to a trustee, receiver, or similar fiduciary in an insolvency proceeding is not a disqualifying disposition. *IRC § 422(c)(3)*. Neither is a transfer to a spouse or former spouse that falls within the terms of *IRC § 1041*. *IRC § 424(c)(4)*.

A disposition of stock pursuant to a certificate of divestiture to comply with conflict-of-interest requirements that meets the requirements of *IRC § 1043* is not a disqualifying disposition. *IRC § 421(d)*.

(n34)Footnote 5. *IRC § 422(c)(2)*; S Rep No 97-144, 97th Cong, 1st Sess, 99 note 1 (1981).

The limitation contained in *IRC § 422(c)(2)* does not apply when the disqualifying disposition is a wash sale, a gift, or a sale to a related party governed by *IRC § 267(a)(1)*. *Prop Treas Reg § 1.422A-1(b)(2)*. Thus, the Service has ruled that a transfer of stock to a charitable remainder trust prior to the end of the one-year holding period results in includable gain equal to the difference between the fair market value of the stock at the time of exercise and the option price. *Ltr Rul 9308021* .

(n35)Footnote 1. *IRC § 421(a)(2)*.

(n36)Footnote 2. *IRC § 421(b)*. A payment to the holder of an employee stock option to cancel the option yields a deduction for the corporation under *IRC § 162(a)*; the payment is controlled by *IRC § 83* and not *IRC § 421*. *Ltr Rul 9206004* .

Income realized from disqualifying dispositions of stock acquired pursuant to an incentive stockoption plan constitutes wages for purposes of the *IRC § 41* credit for increasing research activities. *Sun Microsystems, Inc v Commr, TC Memo 1995-69* , *acq, 1997-2 CB 1* .

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.05

§ 9.05 Reporting Requirements With Respect to Statutory Stock Options

A corporation must file an information return for any calendar year in which it transfers a share of stock to any person pursuant to such person's exercise of an incentive stock option.ⁿ¹ A return is required for any calendar year in which the corporation or its agent records the first transfer of legal title of a share of stock acquired by the transferor pursuant to his exercise of an option granted under an employee stock purchase plan with an option price between 85 percent and 100 percent of the value of the subject stock at the time of option grant.ⁿ² In addition, every corporation that is required to file one of the prescribed information returns is also required to furnish a written statement containing the information shown on the return to each person whose name is set forth in the return; this statement must be furnished no later than January 31 of the year following the calendar year for which the return is made.ⁿ³

FOOTNOTES:

(n1)Footnote 1. *IRC § 6039(a)(1)*.

(n2)Footnote 2. *IRC § 6039(a)(2)*.

(n3)Footnote 3. *IRC § 6039(b)*. The statement can consist of a copy of the appropriate return. *Treas Reg § 1.6039-2(a)*. The statement must be furnished upon the transfer of legal title of the stock to the employee who exercises an incentive stock option. When stock is acquired pursuant to an employee stock purchase plan, the statement must be provided for the first transfer of legal title to the stock to the employee. Chief Counsel Advice 200114001.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.06

§ 9.06 Nonstatutory Stock Options

Where an option is granted for any reason connected with the employment of an individual, and the terms of the option fail to satisfy the requirements prescribed for statutory stock options, the rules governing the tax treatment of nonstatutory stock options apply even though (1) the option is granted by someone other than the employer corporation or a related corporation (eg, by a stockholder); (2) it is granted to someone other than the employee, perhaps a member of his family; and (3) it covers stock in a corporation other than the employer corporation or a related corporation.ⁿ¹ But the applicable rules are not limited to options granted to employees; options granted to independent contractors as payment for services are subject to the same treatment.ⁿ² However, the rules regarding nonstatutory options have no application when the option is acquired solely as an investment and is in no way compensatory.ⁿ³ For example, the regulations permit a person to establish that an option having a readily ascertainable fair market value was not acquired as payment of an amount constituting compensation by showing that the amount paid for the option equalled its value.ⁿ⁴ To prove that an option without a readily ascertainable value was not compensatory, the taxpayer must show that, from an examination of all of the surrounding circumstances, there was no reason for the option to have been granted as payment of an amount constituting compensation. This he does by showing that he had neither rendered, nor was obligated to render, substantial services in consideration for the granting of the option.ⁿ⁵

[1] Treatment of Options Having a Readily Ascertainable Value.

[a] Determination of a Readily Ascertainable Value. According to the Regulations, options may have a value when granted,ⁿ¹ but that value is generally not readily ascertainable unless the option is actively traded on an established market.ⁿ² An option not actively traded on an established market can have a readily ascertainable fair market value only if all of the following conditions exist:

- (1) the option is freely transferable by the optionee;
- (2) the option is exercisable immediately in full by the optionee;ⁿ³
- (3) the option or the property subject to the option is not subject to any restriction or condition (other than a lien or other condition to secure payment of the purchase price) which has a significant effect on the fair market value of the option or the subject property; and
- (4) the fair market value of the option privilege is readily ascertainable.ⁿ⁴ The fair market value of the

option is not merely the spread between the option price and the value of the stock subject to the option; it also includes the value of the option privilege--the opportunity to benefit from any appreciation in the subject property without risking any capital.ⁿ⁵ In determining whether an option privilege has a readily ascertainable value and the amount of such value, it becomes necessary to consider:

- (a) whether the value of the property subject to the option can be ascertained,
- (b) the probability of an increase or decrease in the ascertainable value of the subject property, and
- (c) the length of the option period.ⁿ⁶

An interesting comment on the problem of determining whether an option has a readily ascertainable value is provided by *Union Chem. & Materials Corp. v. United States*.ⁿ⁷ Evidence to the effect that the options were worth around \$30,000 to \$35,000 had been introduced in a companion case. The Court of Claims found this insufficient, stating:

"Is this what is meant by a readily ascertainable market value? On the day that the warrants were issued the stock was selling for approximately \$19.75 per share. The option price was \$21 per share ... How valuable then was [the option]? Certainly it was worth something, but exactly how much no one could ascertain."ⁿ⁸

The breadth of opinion that a particular fact situation can engender is shown by *LeVant v. Commissioner*,ⁿ⁹ where each of three judges reached a different conclusion as to the nature of the acquired interest and its value. One judge found that the employee had acquired only a conditional privilege to obtain an option or, at most, a personal, nonassignable option that had no value when granted. The second found the option to be assignable, but held that the taxpayer had failed to sustain his burden of proving a readily ascertainable value. The third judge agreed that the employee had received an assignable option, but dissented on the ground that the option had an ascertainable fair market value.

[b] Grant of the Option. The employee to whom a nonstatutory option with a readily ascertainable fair market value is granted realizes compensation income, at the time of option grant, in an amount equal to the difference between the fair market value of the option and the amount paid therefor.ⁿ¹⁰ The amount includable in gross income increases the basis of the option in the hands of the employee.

[c] Transfer or Exercise of the Option. No amount is includable in gross income as compensation by reason of the transfer or exercise of an option that had a readily ascertainable fair market value when granted.ⁿ¹¹ This rule applies even though the optionee failed to return an amount as compensation in the year of grant and the assessment of a deficiency for that year is barred by the statute of limitations.ⁿ¹²

[d] Disposition of Stock Acquired on the Exercise of the Option. No special tax problems are created by the disposition of stock acquired on the exercise of a nonstatutory stock option having a readily ascertainable fair market value at the time of option grant. The amount of realized gain or loss is computed in the ordinary manner--by comparing the amount realized and the basis of the stock.ⁿ¹³ (The basis of the stock will be the sum of the option price and the taxpayer's basis for the option. In the case in which the employee receives the option without cost to him, the basis of the stock will be the sum of the option price and the amount included in gross income as compensation.) The recognition of gain or loss and its character is likewise determined in accordance with the general rules governing the disposition of property.

[2] Treatment of Options Without a Readily Ascertainable Value.

[a] Grant of the Option. Compensation income is not realized when a nonstatutory stock option without a readily ascertainable fair market value is granted to an employee in connection with his employment.ⁿ¹ Some further action or

event is required before income results.

The grant of a nonstatutory stock option provides for a deferral of compensation subject to *IRC Section 409A*.^{n1.1} However, a nonstatutory stock option does not provide for a deferral of compensation if (1) the exercise price of the option may never be less than the fair market value of the underlying stock on the date the option is granted, (2) the receipt, transfer, or exercise of the stock is subject to taxation under *IRC Section 83*, and (3) the option does not include any feature for deferral of compensation other than the deferral of recognition of income until the later of exercise or disposition of the option.^{n1.2}

[b] Transfer of the Option. If the optionee does not exercise the option, but instead transfers it to another in an arm's-length transaction, he is required to return any gain resulting from the transfer as compensation income.ⁿ² If the transfer is not an arm's-length transaction, the employee still realizes compensation equal in amount to the sum of any money and the fair market value of substantially vested property received in the disposition of the option.ⁿ³ But in the latter instance, the employee will realize additional compensation when the transferee takes action with respect to the option which, if taken by the employee while holding the option, would have resulted in the realization of income by him; the compensation income realized at such later date is reduced by the amount realized on the earlier transfer.ⁿ⁴

Example:

If an employee is granted an option not having a readily ascertainable fair market value which he then transfers to another for \$10 in a transaction not at arm's-length, he realizes \$10 of compensation on account of such transfer. If the transferee then sells the option for \$25 in an arm's length transaction, thereby realizing a \$15 gain (\$25, amount realized, less \$10, cost basis for the option), the employee has additional compensation income of \$5 (\$15, the transferee's gain, less \$10, the prior amount of compensation income).

A different rule applies when the transfer of the option is incident to a divorce. The Service has ruled that *IRC Section 1041* confers nonrecognition treatment on any gain that the transferor might otherwise realize when the options were transferred to the former spouse.^{n4.1} Moreover, the transferor is not required to include in gross income any income resulting from the transferee's exercise of the option; the income must be reported by the transferee.^{n4.2} The ruling does not apply to transfers between spouses that are not incident to a divorce even though *IRC Section 1041* applies to such transfers. It also does not apply to transfers of options that are unvested at the time of transfer. Even though the transferee spouse is the one who must take into account the income generated by the exercise, that income is still treated as wages earned by the transferor for purposes of FICA and FUTA taxes.^{n4.3}

[c] Exercise of the Option. Under *IRC Section 83*, an employee receiving restricted stock on the exercise of an option has compensation income to the extent of the difference between the amount paid for the stock and its fair market value (determined without regard to any restriction other than one which, by its terms, will never lapse) at the time that his rights in the stock are transferable or are not subject to a substantial risk of forfeiture.ⁿ⁵ Thus, only after compensation-income is realized can any appreciation in value be treated as capital gain. And since the holding period for the stock does not begin to run until compensation is realized, the taxpayer must hold the stock for another one year in order to have any additional gain taxed as long-term capital gain.ⁿ⁶

A person's interest in property will always be considered subject to a substantial risk of forfeiture if his right to full enjoyment of the property is conditioned upon his future performance of substantial services.ⁿ⁷ A substantial risk of forfeiture may exist even if the condition does not exist.ⁿ⁸ However, in such case, the question of whether or not the property is subject to a substantial risk of forfeiture depends upon all the facts and circumstances of the particular case.ⁿ⁹ An interest is transferable only if the rights of any transferee are not subject to any substantial risk of forfeiture.ⁿ¹⁰ So, as one can see, in the absence of a substantial risk of forfeiture, compensation income will be realized when the option is exercised.

Ordinarily, the amount of compensation income is the difference between the fair market value of the stock without restrictions and the option price.ⁿ¹¹ But where the stock is subject to a restriction which, by its terms, will never lapse, and which allows the employee to sell the stock only at a price determined under a formula, the price so determined will be considered as the fair market value of the property, unless a different price is established to the contrary by the Commissioner (the burden of proof being on the Commissioner).ⁿ¹² The nonlapsing restriction is viewed as an inherent limitation on the employee's property rights; the employee's income should be determined accordingly.ⁿ¹³ A later cancellation of the restriction will produce additional compensation for the employee in the year of cancellation. The amount then includable is the excess of the fair market value of the stock (without regard to the restriction) at the time of cancellation over the sum of (1) the fair market value of the stock taking the restriction into account immediately prior to the cancellation and (2) the amount, if any, paid for the cancellation.ⁿ¹⁴ This last stated rule will not apply if the taxpayer can establish that the cancellation is not compensatory and that the person who would be entitled to a deduction if it were compensatory will not treat the cancellation as a compensatory transaction.ⁿ¹⁵

Example:

An employee is granted a nonstatutory stock option to purchase shares of his employer's stock for \$80 a share. The option, which had no readily ascertainable fair market value when granted, is exercised at a time when the fair market value of the acquired stock (without regard to any restrictions) is \$110 a share. However, the stock is subject to a restriction that calls for a resale of the stock to the corporation at the price paid by the employee if he fails to remain in the employ of the corporation for a period of two years from the date of exercise. The stock is subject to a further restriction requiring any sale after two-year period to be made only to the corporation at a price equal to the book value of the stock at the time of sale. Since the employee's full enjoyment of the stock is conditioned upon continued performance of substantial services, the rights in the property are subject to a substantial risk of forfeiture, and the employee will not realize any compensation income when the option is exercised. Such income will be realized at the end of the two-year period when the substantial risk of forfeiture terminates, and the amount of income will be the excess of the book value of the stock at that time over the option price. The book value of the stock is considered to be the fair market value of the stock, unless the Commissioner can prove a higher value. Were there no requirement of a resale at book value, the difference between the fair market value of the stock at the end of the two-year period and the option price would provide the measure of compensation includable in the employee's gross income.

A different type of cancellation can also produce income for the employee. If an indebtedness that has been treated as an "amount paid" for purposes of *IRC Section 83* is subsequently canceled, forgiven, or satisfied for an amount less than the amount of the debt, the amount of the debt that is not paid is includable in the income of the employee in the taxable year in which the cancellation, forgiveness, or satisfaction occurs.ⁿ¹⁶

A sale or disposition of the stock in an arm's-length transaction before the employee's rights become transferable or not subject to a substantial risk of forfeiture creates compensation income for the employee in the year that the transaction occurs.ⁿ¹⁷ On the other hand, a gift of the forfeitable property is not a taxable event, but the employee (and not the donee) will be the one taxable on the compensation income realized when the rights in the stock become nonforfeitable.ⁿ¹⁸

The holder of the restricted stock does not realize income if the stock is exchanged for other stock or property subject to substantially the same restrictions and (1) the exchange is made tax-free by the application of *IRC Section 354, 355, 356, or 1036*, or (2) the exchange is pursuant to the exercise of a conversion privilege.ⁿ¹⁹ The stock acquired on the exchange becomes the restricted property subject to *IRC Section 83(a)*, so that the exchange transaction merely defers the realization of compensation until the holder's rights in the new stock become transferable or not subject to a substantial risk of forfeiture.ⁿ²⁰

The employee receiving restricted stock on the exercise of her option may elect (the election to be made not later than

thirty days after the date of acquisition) to realize compensation income in the year of exercise to the extent of the spread between the value of the stock at the time of acquisition (determined without regard to any restriction other than a restriction which, by its terms, will never lapse) and the amount paid for the stock.ⁿ²¹ By so doing, the taxpayer will not be saddled with any additional compensation income and will be able to treat all further appreciation in the value of the stock as capital gain.

The election described in the preceding paragraph is made by filing one copy of a statement containing (a) the name, address, taxpayer identification number, and taxable year of the optionee; (b) a description of the property with respect to which the election is being made; (c) the date of transfer of the property; (d) the restrictions to which the property is subject; (e) the fair market value of the property if unrestricted; (f) the amount paid for the property;ⁿ²² and (g) a statement to the effect that copies have been furnished to the optionee and to any transferee of the property, if the transferee is not the person furnishing the services. An additional copy of the statement must be submitted with the taxpayer's income tax return for the taxable year in which the property was transferred.ⁿ²³

[d] Death of the Optionee Prior to Realizing Compensation Income.ⁿ²⁴ If an option not having a readily ascertainable fair market value is granted to an employee who dies before transferring or exercising the option, income having the character of compensation will be realized by the estate or beneficiary of the person who performed the services.ⁿ²⁵ If an employee dies holding stock that was acquired pursuant to the exercise of an option and the employee's rights in the stock were subject to a substantial risk of forfeiture from the time of acquisition until the time of death, compensation income is properly includable in the gross income of the employee for the taxable year which closes with his death, provided that death eliminates the risk of forfeiture. But if the substantial risk of forfeiture is based on facts and circumstances other than the future performance of substantial services, so that the risk of forfeiture continues after the employee's death, the person receiving the stock will be the one to report income having the character of compensation.

[e] Basis of Stock Acquired on the Exercise of the Option. If a nonstatutory option lacking a readily ascertainable value when granted is exercised by the employee to whom it was granted, his basis for the acquired stock is increased by the amount of compensation includable in his gross income, whether such income is realized at the time of exercise or at some later date.ⁿ²⁶ The stock will continue to reflect that adjustment if transferred to a person whose basis for the stock is the same as the transferor's.ⁿ²⁷ But if the transfer came at death, the basis of the stock is its fair market value on the date of death or applicable alternate valuation date (as determined under *IRC Section 1014*) without any increase whatsoever.

If the option is transferred by the employee in a transaction that is not at arm's length, and the transferee exercises the option, the transferee's basis for the acquired stock is increased by the amount of compensation includable in the gross income of the employee at the time of exercise of the option and acquisition of the property.ⁿ²⁸ However, there is no increase in the basis of the acquired stock where the exercise of the option follows an arm's-length transfer of the option.ⁿ²⁹ The basis of the stock in such case is the sum of the amount paid for the stock and the amount paid for the option.

[3] Effect on the Grantor of the Option.

When the application of *IRC Section 83* produces compensation income for an employee acquiring stock on the exercise of an option granted by his employer after April 22, 1969, *IRC Section 83(h)* allows "as a deduction under section 162, to the [employer], an amount equal to the amount included under [*IRC Section 83(a), (b) or (d)(2)*] in the gross income of the [employee]." ⁿ¹ The provision is far from a model of clarity. Does it stand for the proposition that the employer must be allowed a deduction in an amount equal to the compensation realized by the employee, or does it mean only that the employer is deemed to have paid compensation to the employee, with the availability of a deduction to be determined under the reasonableness criterion of *IRC Section 162*? The latter position appears to be more in keeping with the statutory language.ⁿ² Although *IRC Section 83(h)* states that a deduction "shall be allowed," it makes it

allowable "as a deduction under section 162." By interpreting the provision as one which requires that the compensation meet the test of deductibility imposed by *IRC Section 162*, the reference to that section is given meaning; to hold otherwise would cause the reference to be mere surplusage.ⁿ³

The deduction is allowed in the taxable year of the employer that includes the close of the employee's taxable year in which the compensation is realized.ⁿ⁴ But since *IRC Section 83(h)* applies only when *IRC Section 83* governs the realization of compensation, the employer is entitled to a deduction in the year in which the compensation is deemed to be paid by the employer whenever the employee's compensation results from grant of an option having a readily ascertainable fair market value or from the transfer of an option without a readily ascertainable fair market value.ⁿ⁵

The employer corporation is entitled to a deduction in accordance with the foregoing rules even though the stock transferred to the employee comes from a shareholder of the employer; the transfer by the shareholder is treated as a contribution to the capital of the employer.ⁿ⁶

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.421-6(a)(1)*. *Rev Proc 2002-13*, 2002-1 CB 549 , provides guidance for valuing compensatory stock options for purposes of the golden parachute provisions of *IRC § 280G*. The procedure includes a safe-harbor valuation method that takes into account the volatility of the underlying stock, the exercise price of the option, the value of the stock at the time of valuation, and the term of the option. *Rev Proc 2002-13* , modified, *Rev Proc 2002-45*, 2002-2 CB 40 . *Rev Proc 2003-68*, 2003-2 CB 398 , restates and modifies *Rev Proc 2002-13* , as modified by *Rev Proc 2002-45* .

(n2)Footnote 2. *Treas Reg § 1.61-15(a)*.

(n3)Footnote 3. *Treas Reg § 1.61-15(b)(1)(ii)*. See, eg, *Sun Microsystems, Inc v Commr*, *TC Memo 1993-467* , where warrants were issued to a customer as a sales incentive. The difference between the fair market value of the stock and the option price was deemed to be a sales allowance. The same result was reached in *Convergent Technologies, Inc v Commr*, *TC Memo 1995-320* .

The tax consequences to the recipient of the Sun Microsystems warrants came before the Tax Court in *Sun Computervision International Corp v Commr*, *TC Memo 1996-131* . The court concluded that the approach taken in *Sun Microsystems* was appropriate in resolving the issue, and held that the warrant constituted a trade discount and not a capital asset. Thus, the entire net proceeds of a sale of one of the warrants was properly treated as a reduction in the cost of goods sold.

(n4)Footnote 4. *Treas Reg § 1.61-15(b)(2)*.

(n5)Footnote 5. *Treas Reg § 1.61-15(b)(2)*. This requirement generally prevents an employee from claiming that an option was not granted as payment of an amount constituting compensation.

(n6)Footnote 1. This was recognized by the Supreme Court in *Commr v LoBue*, 351 US 243 (1956) , and in *Commr v Smith*, 324 US 177 (1945) . The *Smith* case held that an option with an option price less than market value at the time of grant could not then have a fair market value.

For purposes of *IRC § 280G* (denying a deduction for an excess "golden parachute" payment), a nonqualified stock option with an ascertainable fair market value at the time the option becomes substantially vested is treated as property that is transferred no later than the time of vesting. Any money or property that is transferred upon the sale or other disposition of the option is not treated as a payment in the nature of compensation. *Prop Treas Reg § 1.280G-1*, Q&A 13.

(n7)Footnote 2. *Treas Reg §§ 1.83-7(b)(1)*; *Wanvig v US*, 295 F Supp 882 (ED Wis 1969) , *affd on other grounds*,

423 F2d 769 (7th Cir 1970) . Warrants issued to an underwriter as compensation for services rendered were found not to have a readily ascertainable value. In so holding in *Weigl v Commr*, 84 TC 1192 (1985) , the Tax Court rejected the taxpayer's contention that the regulations were invalid as applied to independent contractors.

(n8)Footnote 3. *Treas Reg* § 1.83-7(b)(2)(ii). The validity of the "immediately exercisable" requirement was upheld in *Cramer v Commr*, 101 TC 225 (1993) , *affd* 64 F3d 1406 (9th Cir 1995) , *cert denied*, 116 S Ct 2499 (1996) .

(n9)Footnote 4. *Treas Reg* § 1.83-7(b)(2).

(n10)Footnote 5. *Treas Reg* § 1.83-7(b)(3).

(n11)Footnote 6. *Treas Reg* § 1.83-7(b)(3).

(n12)Footnote 7. 296 F2d 221 (Ct Cl 1961) .

(n13)Footnote 8. 296 F2d 225 (Ct Cl 1961) . In *Colton v Williams*, 209 F Supp 381 (ND Ohio 1962) , the court found a readily ascertainable value, although the option price was \$3.25 and a practically contemporaneous public offering had a price of \$3.00 per share. However, the offering was oversubscribed, and there was competent testimony that the stock had a value of \$3.75 per share and that the option had a value of \$1.00 per share based on the market spread and the value of the option privilege.

(n14)Footnote 9. 376 F2d 434 (7th Cir 1967) .

(n15)Footnote 10. *Treas Reg* § 1.83-7(a).

(n16)Footnote 11. Any gain realized on the transfer of the option will ordinarily be capital gain.

(n17)Footnote 12. *Colton v Williams*, 209 F Supp 381 (ND Ohio 1962) . Query whether the basis of the option can be increased by the amount which should have been included in gross income.

(n18)Footnote 13. *IRC* § 1001(a).

(n19)Footnote 1. The Service will not ordinarily rule when compensation is realized by a person who, in connection with the performances of services, is granted a nonstatutory stock option without a readily ascertainable fair market value to purchase stock at a price that is less than the fair market value of the stock on the date the option is granted. *Rev Proc* 2008-3, 2008-1 IRB 110

(n20)Footnote 1.1. *Notice* 2005-1, Q & A 4(d)(i), 2005-1 CB 274 .

(n21)Footnote 1.2. *Notice* 2005-1 , Q & A 4(d)(ii). The right to receive substantially nonvested stock upon the exercise of the option does not constitute a feature for the deferral of income.

With respect to options issued before Jan 1, 2005, the failure to meet the option price requirement will not create a deferral of income if there was a good faith attempt to set the option price at not less than the fair market value of the stock subject to the option at the time the option was granted. *Notice* 2006-4, 2006-3 IRB 307 .

(n22)Footnote 2. *Treas Reg* §§ 1.83-1(b), 1.83-7(a). The same rule has been applied to a situation in which an option that did not have a readily ascertainable fair market value at grant was exchanged for an option that also lacked such a readily ascertainable fair market value. *Ltr Rul* 200418017 .

Regulations except a transfer of the option to a person related to the service provider. For this purpose, a person is related to the service provider if (1) the person and the service provider bear a relationship to each other that is specified in *IRC* §§ 267(b) or 707(b)(1) (substituting 20% for 50% each place it appears), and *IRC* § 267(c)(4) is applied as if the

family of an individual includes the spouse of any member of the family; or (2) the person and the service provider are engaged in trades or businesses under common control (within the meaning of *IRC* § 52(a) and (b)). However, a person is not related to the service provider if the person is the service recipient with respect to the option or the grantor of the option. *Treas Reg* § 1.83-7(a).

Payment received by an employee from his employer on the termination of a qualified stock option was held to be governed by *IRC* § 83 and constituted compensation income. The provisions governing statutory stock options did not apply because the option was never exercised. In addition, the option did not have a readily ascertainable fair market value when granted. *Bagley v Commr*, 85 TC 663 (1965). The same rule has been applied to a situation in which an option that did not have a readily ascertainable fair market value at grant was exchanged for an option that also lacked such a readily ascertainable fair market value. *Ltr Rul* 200418017.

A transfer to a family member, for no consideration, of a nonstatutory stock option, is a completed gift for gift tax purposes on the later of (1) the transfer, or (2) the time when the transferee's right to exercise the option is no longer conditioned on the performance of services by the transferor. *Rev Rul* 98-21, 1998-1 CB 975.

(n23)Footnote 3. *Treas Reg* § 1.83-1(c). No income will be realized if options that are community property are divided as part of a property settlement agreement pursuant to a divorce. *Ltr Rul* 9433010.

A gift of a nonstatutory stock option is a completed gift under *IRC* § 2511 on the later of (i) the transfer, or (ii) the time when the donee's right to exercise the option is no longer conditioned on the performance of services by the transferor. *Rev Rul* 98-21, 1998-1 CB 975.

The methodology for valuing nonpublicly traded compensatory stock options is set forth in *Rev Proc* 98-34, 1998-1 CB 983.

(n24)Footnote 4. *Treas Reg* § 1.83-1(c). The transferee's basis for the property acquired on the exercise of the option will reflect the amount paid for the option and any amount included in the income of the person who performed the services. *Treas Reg* § 1.83-4; *Ltr Rul* 9421013.

No amount is includable in income of the employee if the option is exercised by a former spouse who received the option as part of a division of community property pursuant to a settlement agreement incident to a divorce. *Ltr Rul* 9433010.

For gift tax purposes, a donative transfer of an option is a completed gift on the date the option is transferred rather than on the date the option is exercised. *Rev Rul* 98-21, 1998-1 CB 975; *Ltr Rul* 9722022; see also *Rev Rul* 80-186, 1980-2 CB 280.

(n25)Footnote 4.1. *Rev Rul* 2002-22, 2002-1 CB 849. Under the facts of the ruling, the options were considered marital property subject to equitable distribution in the state in which the parties resided. The same rules will apply if the options are considered to be community property.

(n26)Footnote 4.2. The Service has taken the position that applying the assignment of income doctrine in divorce cases to tax the transferor spouse when the transferee spouse ultimately receives the income from the property transferred in the divorce would frustrate the purpose of *IRC* § 1041 with respect to divorcing spouses.

The Service will apply assignment of income principles to treat income as gross income of the transferor and not the transferee if: (1) the income is attributable to an interest in nonstatutory stock options, (2) the options were transferred incident to a divorce, (3) the transfer was required by a provision of an agreement entered into, or court order issued, before Nov 22, 2002, and (4) the agreement or order specifically provides that the transferor must report gross income attributable to the transferred interest.

(n27)Footnote 4.3. *Rev Rul 2004-60, 2004-1 CB 1051* .

(n28)Footnote 5. *IRC § 83* is inapplicable to the transfer of any option to which *IRC § 421* applies, to the transfer of an option without readily ascertainable fair market value, and to the transfer of property pursuant to the exercise of an option with a readily ascertainable fair market value on the date of grant. *IRC § 83(e)(1), (3), (4)*. Payment received by an employee in exchange for termination of a statutory stock option does not fit within the exception and is governed by *IRC § 83*. *Bagley v Commr, 806 F2d 169 (8th Cir 1986)* . The same holds true for nonqualified options that did not have a readily ascertainable fair market value. *Rupprecht v US, 59 AFTR2d P 87-648 (Cl Ct 1987)* .

The Sixth and Ninth Circuits have held that *IRC § 83* is not limited to stock transfers that are compensatory in nature. It is sufficient that the stock be transferred in connection with the performance of services. *MacNaughton v US, 888 F2d 418 (6th Cir 1989)* ; *Alves v Commr, 734 F2d 478 (9th Cir 1984)* . However, *IRC § 83* was held inapplicable to gain realized on the exercise of warrants issued to nonemployee stockholders who merely guaranteed loans of the issuing corporation; no services were involved. *Centel Communications Co v Commr, 920 F2d 1335 (7th Cir 1990)* .

So long as the sale of stock at a profit within six months after the purchase of the property could subject a person to suit under Section 16(b) of the Securities Exchange Act of 1934, the person's rights in the property are treated as subject to a substantial risk of forfeiture and as not transferable until the earlier of (i) the expiration of the six-month period, or (ii) the first day on which the sale of the property at a profit will not subject the person to such a suit. *IRC § 83(c)(3), Treas Reg § 1.83-3(j)*. The First Circuit is of the opinion that *IRC § 83(c)(3)* lends support to its opinion that a contractual provision calling for a resale to the corporation at original cost if the shareholder wants to dispose of the acquired shares in less than one year from the date of acquisition should be considered substantial as well. *Robinson v Commr, 805 F2d 38 (1st Cir 1986)* , *rev'g 82 TC 444 (1984)* . In *Tanner v Commr, 117 TC 237 (2001)* , *aff'd, 91 AFTR2d 2003-1842 (5th Cir 2003)* , the Tax Court held that a taxpayer and the corporation granting the option could not contractually extend the 6-month period of Section 16(b) of the Securities Exchange Act of 1934 for purposes of *IRC § 83(c)(3)*.

An employee was required to participate in a dividend reinvestment plan as a condition of receiving restricted stock. The dividend stock was subject to the same substantial risk of forfeiture as the nonvested original stock. As a result, the employee was not in constructive receipt of income when the dividends were reinvested. The tax will be due when the stock vests. *GCM 39520* .

An unsuccessful assault on the constitutionality of *IRC § 83* was mounted in *Sakol v Commr, 67 TC 986 (1977)* , *aff'd 574 F2d 694 (2d Cir 1978)* , *cert denied, 439 US 859* . The taxpayer contended, first, that the provision taxed income which was not realized and, second, that the conclusivemeasurement of income without regard to restrictions on transferability was so unreasonable and arbitrary as to amount to a denial of due process. The court dismissed the first argument on the ground that formalistic realization was no longer a requirement for inclusion in income. As to the second, the court said merely that it was unable to conclude that Congress acted arbitrarily in responding to an area of tax avoidance created by the use of restrictions in stock purchase agreements.

The restriction in *Pledger v Commr, 71 TC 618 (1979)* , *aff'd 641 F2d 287 (5th Cir 1981)* , *cert denied, 454 US 964* , was the law-imposed bar on the sale to the public of stock that had not been registered under the Securities Act of 1933. The stock would have been sold in a private placement, but the price would have been subject to a significant discount from the publicly traded price. But see *Grant v US, 62 AFTR2d P 88-5058 (Cl Ct 1988)* , where the taxpayer was required to recognize compensation income under the general rule when half of the unregistered stock was sold in a private placement on the date of exercise at a price less than market value.

Property is transferable for purposes of *IRC § 83* even if there is only one permissible transferee. *Schulman v Commr, 93 TC 623 (1989)* .

The Service will not rule whether a restriction constitutes a substantial risk of forfeiture if the employee is a controlling shareholder. It will also refuse to rule whether a transfer has occurred if the amount of the property involves a nonrecourse obligation. It will ordinarily not rule when compensation is realized by a person who, in connection with the performance of services, is granted a nonstatutory option without a readily ascertainable fair market value to purchase stock at a price that is less than the fair market value of the stock of the date the option is granted. *Rev Proc 2010-3, 2010-1 IRB 110, 111, 115* (§§ 3.01(5); 4.01(4)).

In *Theophilus v Commr*, 85 F3d 440 (9th Cir 1996), the Ninth Circuit held that a corporate officer's contractual obligation to acquire stock in the corporation was property taxable under *IRC* § 83, so that appreciated stock acquired pursuant to the agreement in a later year was not taxable at the time of receipt.

The regulations provide that, if the amount paid for the transfer of property is a nonrecourse loan secured by the property, the transaction may be in substance the same as the grant of an option. *Treas Reg* § 1.83-3(a)(2). The taxpayer in *Hilen v Commr*, *TC Memo 2005-226*, paid for stock acquired on the exercise of the option with a nonrecourse loan from a commercial lender. He argued that he should not have to recognize gain until he made a substantial payment on the debt. The Tax Court held that, because he had paid for the stock in cash, the regulation did not apply and, therefore, he had to recognize gain on the exercise of the option. The Court of Federal Claims reached the same result in *Palahnuk v US*, 97 AFTR2d 1433 (*Fed Cl* 2006), as did the Ninth Circuit in *US v Tuff*, 469 F3d 1249 (9th Cir 2006), the Fifth Circuit in *Cidale v US*, 475 F3d 685 (5th Cir 2007), and the Seventh Circuit in *Racine v Commr*, 493 F3d 777 (7th Cir 2007).

(n29)Footnote 6. *IRC* § 83(f).

(n30)Footnote 7. *Treas Reg* § 1.83-3(c)(1).

(n31)Footnote 8. *IRC* § 83(c)(1). *Treas Reg* § 1.83-3(c)(2), (3).

(n32)Footnote 9. S Rep No 91-552, 91st Cong, 1st Sess, 121 (1969).

(n33)Footnote 10. *IRC* § 83(c)(2).

(n34)Footnote 11. Blockage, a concept that determines the value of traded shares other than by market quotations because of the size of the block of shares involved, is not a restriction within the meaning of *IRC* § 83 and may be taken into account in determining the value of the stock and the amount of compensation income. *Robinson v Commr*, 82 TC 467 (1984). The Tax Court's application of the blockage discount concept to determine the value of the shares involved in *Robinson* can be found at *TC Memo 1985-275*.

The exercise of a nonstatutory stock option by, and the distribution of stock to, an employee on disability leave was a taxable transfer of property under *IRC* § 83, and not the receipt of tax-free disability income. *Fisher v Commr*, 2 F3d 1148 (Table), 72 AFTR2d 93-5914 (1st Cir 1993).

(n35)Footnote 12. *IRC* § 83(d)(1). Congress did not consider restrictions that never lapse to be tax-motivated, i.e., designated to achieve deferral for tax saving purposes. S Rep No 91-552, 91st Cong, 1st Sess, 121 (1969).

A recipient of restricted stock was required to give the issuing corporation a right of first refusal to purchase the stock at a formula price. The corporation had five days to accept the offer, after which the shareholder would be free to sell the shares. Subsequent holders of the stock were not subject to any restrictions. The right of first refusal was held not to be a nonlapse restriction, but merely an arbitrary reduction in price. Thus, the fair market value of the stock as determined on the exchange on which it was traded was the price to be used in determining the fair market value of the stock. In fact, it appears that the Service takes the position that the nonlapse restriction rule should never apply when the fair market value of the stock is easily determined by reference to stock exchange prices. *GCM 39535*.

An employee who received unregistered stock on the exercise of nonstatutory stock options immediately sold half of the acquired shares in a private placement at a price greater than the option price, but less than the price at which publicly held shares of the corporation were traded on the same day. The fact that the shares were not registered did not constitute a nonlapsing restriction. Thus, the taxpayer was required to recognize compensation income equal to the difference between the option price and the mean trading price on the day of exercise. *Grant v US*, 62 AFTR2d P 88-5058 (Cl Ct 1988) .

(n36)Footnote 13. IRC § 83(d)(1).

(n37)Footnote 14. IRC § 83(d)(2).

(n38)Footnote 15. IRC § 83(d)(2).

(n39)Footnote 16. *Treas Reg § 1.83-4(c)*. See, eg, *Ltr Rul 9444003* , where the employee's debt was discharged through full offset of its principal amount against performance bonuses.

In addition to a cancellation of the principal amount of the indebtedness, the employee will realize compensation income if the interest rate is reduced or the debt is changed from recourse to nonrecourse. *Rev Rul 2004-37, 2004-1 CB 583* .

(n40)Footnote 17. IRC § 83(a).

A sale of nonvested property at a loss produces a capital loss, not an ordinary loss. *Wright v Commr, TC Memo 1983-707* , *aff'd*, 756 F2d 1039 (4th Cir 1985) .

Unexercised nonqualified stock options formed part of community assets divided between a husband and wife as part of a divorce settlement. The Service held that the husband would not recognize income as a result of the community property division or upon the wife's exercise of the options transferred to her. The wife would recognize income when she exercised her options. The husband would recognize income when the stock acquired upon the exercise of his options was no longer subject to the transfer restrictions of § 16(b) of the Securities Exchange Act of 1934. *Ltr Rul 8751029* .

(n41)Footnote 18. S Rep No 91-552, 91 Cong, 1st Sess, 122-23 (1969).

(n42)Footnote 19. IRC § 83(g)(1); *Rev Rul 71-80, 1971-1 CB 132* .

(n43)Footnote 20. IRC § 83(g)(2).

(n44)Footnote 21. IRC § 83(b)(1), (2). The election can be revoked only with the consent of the Commissioner. *Treas Reg § 1.83-2(f)*. *Rev Proc 2006-31, 2006-27 IRB 32* , provides guidance concerning the factors that must be present for a taxpayer to receive consent to revoke a ruling previously filed under IRC § 83(b). The revenue procedure also sets out procedures for submitting a request for consent to revoke.

In determining whether a corporation has experienced a change in ownership or control under the golden parachute rules of IRC § 280G, unvested shares of restricted stock for which an election under IRC § 83(b) has been made are treated as outstanding stock. *Rev Rul 2005-39, 2005-2 CB 1* .

In *Ltr Rul 9104039* , the Service ruled that elections made under IRC § 83(b) were of no effect where, pursuant to a rescission of the agreement under which the restricted stock was issued to the employees, the stock was returned to the corporation in the same year that it was issued.

Shares purchased by an employee at fair market value on the date of purchase were subject to restrictions as to their sale. The shares were worth more when the restrictions lapsed, producing ordinary income for the taxpayer. Had he elected the provisions of *IRC § 83(b)*, he could have avoided the effect of *IRC § 83(a)*. *Alves v Commr*, 79 TC 864 (1982), *aff'd*, 734 F2d 478 (9th Cir 1984).

A taxpayer, who received nonstatutory stock options that were deemed not to have a readily ascertainable fair market value under the criteria set forth in *Treas Reg § 1.83-7(b)(2)*, contended that he was unfairly excluded from the application of *IRC § 83* and the ability to make the election to realize compensation upon the receipt of the restricted property. The Claims Court found it unnecessary to reach the question because the taxpayer failed to make the election within the prescribed 30-day period. *Welsh v US*, 52 AFTR2d 83-5113 (Cl Ct 1983).

Dividends received on restricted stock that is not substantially vested but for which an election under *IRC § 83(b)* has been made, are reportable as dividend income and not as compensation. *Rev Proc 83-38*, 1983-1 CB 773. Such payments will be treated as additional compensations absent the election. *Rev Proc 80-11*, 1980-1 CB 616.

A busy executive signed an election that covered three blocks of stock although he believed it applied to only one of the blocks. The Service ruled that the taxpayer's failure to apprise himself of the contents of the election was not a ground for relief under *Treas Reg § 1.83-2(f)*, making the election irrevocable. *Ltr Rul 8511065*.

(n45)Footnote 22. *Treas Reg § 1.83-2(c), (e)*.

(n46)Footnote 23. *Treas Reg § 1.83-2(d)*. The *IRC § 83(b)* election must be made within 30 days after the transfer of the property to the optionee. The period cannot be extended.

(n47)Footnote 24. The methodology to value nonpublicly traded compensatory stock options for estate tax and generation-skipping transfer tax purposes is set forth in *Rev Proc 98-34*, 1998-1 CB 983.

(n48)Footnote 25. *Treas Reg § 1.83-1(d)*. The option will be a right to receive an item of income in respect of a decedent subject to the rules of *IRC § 691*. The income will be includable by the estate or beneficiary of the person who performed the services. See, eg, *Ltr Rul 200012076*, involving the bequest of nonstatutory stock options to a charity.

(n49)Footnote 26. *Treas Reg § 1.83-4(b)(1)*.

(n50)Footnote 27. *Treas Reg § 1.83-4(b)(1)*.

(n51)Footnote 28. *Treas Reg § 1.83-4(b)(1)*.

(n52)Footnote 29. *Treas Reg § 1.83-4(b)(2)*.

(n53)Footnote 1. Income resulting from the exercise of nonstatutory stock options qualifies as wages for purposes of the credit now allowed by *IRC § 41* for increasing research activities. *Apple Computer, Inc & Cons Subs v Commr*, 98 TC 232 (1992), *acq*, 1992-2 CB 1.

The issue in *Venture Funding, Ltd v Commr*, 110 TC 236 (1998), *aff'd in an unpublished opinion* (6th Cir 1999), *cert denied* 530 US 1205, was whether the employer could claim a deduction under *IRC § 83(h)* when the employees failed to include the value of the stock in income. The taxpayer argued that such a deduction should be allowed in the year in which the income was includable. The court looked at the plain language of the provision and held that a deduction was permitted only in the year in which the compensation income was actually reported by the employees.

The Court of Appeals for the Federal Circuit reached a different conclusion and held that the deduction is allowed to the employer in the year that the income must be included by the employee as a matter of law. *Robinson v US*, 335 F3d 1365 (Fed Cir 2003), *cert denied*, 124 S Ct 1044.

(n54)Footnote 2. For purposes of whether a deduction is allowed under *IRC* § 162(m), the grant of a nonstatutory stock option is performance-based compensation governed by *IRC* § 162(m)(4)(C). *Ltr Rul* 200027012 . However, a nonstatutory option will not qualify as performance-based compensation for purposes of *IRC* § 162(m)(4)(C) if the price at which the stock is offered is discounted below the fair market value of the stock on the grant date. See *Treas Reg* § 1.162-27(e)(2)(vi)(A). Furthermore, any attempt to reprice a discounted option grant retroactively, whether before or after its exercise, will be disregarded by the Internal Revenue Service; the requirement that the stock be offered at its fair market value must be met on the date of the grant. Generic Legal Advice Memoranda (GLAM) 2009-006, 2009 *GLAM LEXIS* 6 (July 6, 2009) .

(n55)Footnote 3. The deduction will be allowed if the requirements of either *IRC* § 162 or *IRC* § 212 are met. *Treas Reg* § 1.83-6(a)(1). The regulations impose another condition on the employer's right to deduct, namely, that the employer deduct and withhold the tax due on the amount includable in income.

A corporation sold shares at a discount as part of a loan transaction. Because the purchaser provided no services in consideration for the transfer of the stock, *IRC* § 83 was inapplicable. Therefore, *IRC* § 83(h) posed no additional independent requirement to the deductibility of the discount. *Duncan Inds, Inc v Commr*, 73 TC 266 (1979) .

A corporation that donates an option to purchase shares of its common stock to a charitable organization is entitled to a charitable contributions deduction, in the taxable year the option is exercised, for the excess of the fair market value of the stock on the date of exercise over the exercise price. *Rev Rul* 75-348, 1975-2 CB 75 .

If a majority shareholder of a corporation transfers shares of stock in the corporation to a key employee of a controlled subsidiary as compensation, no gain or loss is recognized by the transferor-shareholder, who is required to allocate his basis in the transferred shares to his remaining shares in the parent. The transfer of the shares is considered to be a contribution of the property to the capital of the corporation by the shareholder and immediately thereafter a transfer of the property by the corporation to the employee. No gain or loss is recognized by the subsidiary on the deemed disposition of the parent's stock. *Treas Reg* §§ 1.83-6(d)(1), 1.1032-3(e), Ex 9. See also *Ltr Rul* 9351029 .

Any consideration paid by the transferee-employee to the transferor-shareholder is deemed to be paid, first, to the corporation, and, then, to the shareholder as a distribution in redemption to which *IRC* § 302 applies. If a portion of the consideration is represented by a promissory note, only the note is part of the distribution; payments of principal and interest under the note are considered to be paid directly by the employee to the shareholder. *Ltr Rul* 9525035 .

A corporation's attempt to deduct the value of stock, transferred as payment for arranging for a public offering of the corporation's stock, was denied to the extent that it represented a capital expenditure incurred in raising capital. *IRC* § 83(h) allows a deduction only when the property is transferred as compensation to the recipient. *Steinberg v Commr*, *TC Memo* 1983-534 .

Where a parent corporation is divided into separate corporations and options in the new corporations are issued to predistribution parent employees in order to provide them with the same value, the new corporations are entitled to a deduction under *IRC* § 83(h) because they were service recipients when part of the parent. *Ltr Rul* 199927004 .

(n56)Footnote 4. *IRC* § 83(h). However, when property is substantially vested on transfer, the deduction is allowed in accordance with the employer's method of accounting. *Treas Reg* § 1.83-6(a)(3).

(n57)Footnote 5. S Rep No 91-552, 91st Cong, 1st Sess, 122 (1969); *IRC* § 83(e)(3).

(n58)Footnote 6. S Rep No 91-552, 91st Cong, 1st Sess, 123-24 (1969).

In *Tilford v Commr*, 75 TC 134 (1980) , the Tax Court held that the principal shareholder of a corporation was entitled to a capital loss deduction for stock sold to employees as inducements to work for the corporation. The court held that

Treas Reg § 1.83-6(d), which requires the shareholder to treat the transfer as a contribution to capital, was invalid as exceeding the statutory authority conferred by *IRC § 83*. The Sixth Circuit reversed the Tax Court decision as erroneous as a matter of law and held the regulation to be consistent with the legislative history and statutory intent of *IRC § 83(h)*. The later opinion is reported at 705 F2d 828 (6th Cir 1983) .

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.07

§ 9.07 Restricted Stock Plans

Part of the discussion in the previous section concerned the tax consequences of the acquisition of restricted stock pursuant to the exercise of a nonstatutory stock option that did not have a readily ascertainable fair market value when granted. The same rules govern the tax effect of a direct transfer of restricted stock from employer to employee or from a recipient of services to an independent contractor furnishing such services.ⁿ¹

Under *IRC Section 83* (discussed in the previous section),ⁿ² the employee can defer the realization of compensation income beyond the time of receipt of the stock only in the event the employee's interest in the acquired stock is subject to a substantial risk of forfeiture. If it is, no amount will be includable in gross income until the property becomes transferable or no longer is subject to a substantial risk of forfeiture, unless the employee elects to realize compensation in the year he acquires the property.

The realization of compensation by the employee gives rise to a potential deduction for the employer corporation.ⁿ³ The availability of the deduction is controlled by the criterion of *IRC Section 162*, to wit, the total compensation paid to the employee during the taxable year (including the amount of compensation produced by the restricted stock) must be reasonable in amount.ⁿ⁴ In cases covered by *IRC Section 83*, the year of deduction is the taxable year of the employer that includes the close of the taxable year of the employee in which she realizes her compensation;ⁿ⁵ in cases that are not, the deduction is allowed for the taxable year in which compensation is deemed to be paid.ⁿ⁶

An additional tax consequence can arise when the restricted stock transferred to the employee is not the employer's own stock. If the deduction taken by the employer exceeds its basis in the transferred stock, the employer must recognize income in the amount of such excess. Conversely, if the basis of the stock is greater than the compensation deduction, the employer is entitled to a loss deduction to the extent of the difference. The legislative history makes it clear that Congress did not intend any change in these rules when it enacted *IRC Section 83*.ⁿ⁷

FOOTNOTES:

(n1)Footnote 1. The stock transferred to the employee is often the stock in an unrelated company, generally a company with good growth potential. See *Cohn v Commr*, 73 TC 443 (1979) (*IRC § 83* applied to receipt of stock by independent contractor).

(n2)Footnote 2. See § 9.06[2][d], *supra*.

(n3)Footnote 3. A parent corporation issued restricted stock to its employees as well as employees of a subsidiary. After a spin-off of the subsidiary, the employees received equal amounts of subsidiary stock with restrictions identical to those on the parent stock in order to preserve their pre-spin-off economic interest in the parent stock. In Rev Rul 2002-1, 2002-1 CB 268, the Service held that both the parent and subsidiary were entitled to claim deductions when the restrictions lapsed for amounts that the employees were required to include in income in the year of lapse.

The Service will not issue a ruling as to which corporation is entitled to the deduction under *IRC § 83(h)* in cases where the corporation undergoes a corporate division if the facts are not similar to those described in *Rev Rul 2002-1*. *Rev Proc 2010-3, 2010-1 IRB 110, 111* (§ 3.01(6)).

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.08

§ 9.08 Phantom Stock Plans

An increasingly popular method of compensating key employees is the phantom stock plan--a plan that does not give the employee any interest in the real stock of the corporation, but which does award her the unit equivalent of shares of the real stock of the corporation. Thereafter, the employee occupies the same financial position as a real shareholder. The phantom stock account is credited with the per-unit equivalent of dividends declared on the corporation's real stock. When a stock split or stock dividend works a change in the real stock, it works a corresponding change in the number of phantom stock units credited to the employee's account. And when the price of real stock changes, the price of phantom stock changes.

The employee is taxed at ordinary income rates when the phantom stock benefits are received--the appreciation in the value of the units and the dividend equivalents; the corporation gets its deduction in the same year and in the same amount.ⁿ¹ Thus, it should be apparent that a phantom stock plan provides the employee with much the same benefits to be derived from actual ownership of the corporation's stock. But the one major advantage of the phantom stock plan is that the employee incurs no out-of-pocket cost other than the payment of income taxes.

FOOTNOTES:

(n1)Footnote 1. A stock appreciation right (a form of phantom stock), issued by a corporation entitled the grantee employee to a cash payment equal to the excess of the fair market value of one share of the common stock of the corporation on the date of exercise of the right over the value of the stock on the day of the grant. No right could be exercised before one year nor after five years, the right being deemed exercised on the fifth anniversary of the grant if not previously exercised. Once the right was exercised, the employee lost all chance of further appreciation in the stock. Held, this was the loss of a valuable right that precluded application of the constructive receipt of income doctrine. No amount had to be reported in income until the right was exercised. *Rev Rul 80-300, 1980-2 CB 165* . A similar result was reached in *Rev Rul 82-121, 1982-1 CB 79* , where an employee was granted nonqualified stock options with related stock appreciation rights. In order to exercise the stock appreciation right, the employee had to surrender the related options and forfeit the right to benefit from any appreciation in stock in excess of the price at which the related option could have been exercised.

CHAPTER 9 Stock Options

1-9 Taxation of Securities Transactions § 9.09

§ 9.09 Stock Compensation of Insiders in Expatriated Corporations

A domestic corporation becomes an expatriated corporation if, pursuant to a plan (or series of related events), (i) the foreign corporation completes after March 4, 2003, the direct or indirect acquisition of substantially all of the properties held directly or indirectly by a domestic corporation, (ii) after the acquisition at least 60 percent of the stock (by vote or value) of the foreign corporation is held by former shareholders of the domestic corporation by reason of holding stock in the domestic corporation, and (iii) after the acquisition, the expanded affiliated group that includes the foreign corporation does not have substantial business activities in the foreign country in which the corporation is organized, when compared with the total business activities of the expanded affiliated group.ⁿ¹ Certain individuals ("disqualified individuals") are subject to a tax of 15 percent of the value of the "specified stock compensation" held (directly or indirectly) by or for the benefit of the individual or a member of the individual's family (as defined in *IRC Section 267*) at any time during the 12-month period beginning on the date that is six months before the expatriation date.ⁿ² A disqualified individual with respect to a corporation is an individual who, at any time during the 12-month period beginning on the date that is six months before the expatriation date is subject to the insider provisions of *Section 16(a)* of the Securities Exchange Act of 1934 with respect to the corporation or any member of the expanded affiliated group that includes the corporation, or would be subject to the insider provisions if the corporation or member were an issuer of equity securities referred to in that section.ⁿ³

Specified stock compensation is defined as payment (or right to payment) granted by the expatriated corporation (or by any member of the expanded affiliated group that includes the corporation) to any person in connection with the performance of services by a disqualified individual for the corporation or member if the value of the payment or right is based on (or determined by reference to) the value or change in value of stock in the corporation or member.ⁿ⁴ However, specified stock compensation does not include any statutory stock option, or any payment or right to payment from a qualified plan that is excluded from the definition of parachute payment under *IRC Section 280G(b)(6)*.ⁿ⁵

The value of specified stock compensation in the case of a stock option (or similar right) or stock appreciation right is the fair value of the option or right.ⁿ⁶ In any other case, the value of the compensation is its fair market value.ⁿ⁷ There are three possible dates on which the determination of value is made: (1) if the specified stock compensation is held on the expatriation date, the value is determined on that date; (2) if the compensation is canceled during the six months before the expatriation date, the value is determined on the day before the cancellation; (3) if the compensation is granted after the expatriation date, the value is determined on the date the compensation is granted.ⁿ⁸ Whether there is specified stock compensation, and the value thereof, is determined without regard to any restriction other than a

restriction that by its terms will never lapse.ⁿ⁹

The tax imposed by *IRC Section 4985(a)* applies to a disqualified individual only if gain (if any) on any stock in the expatriated corporation is recognized in whole or in part by any shareholder because of the acquisition of the property of the expatriated corporation.ⁿ¹⁰ The tax does not apply to any stock option that is exercised on the expatriation date or during the six-month period before that date and to the stock acquired in such exercise, if income is recognized under *IRC Section 83* on or before the expatriation date with respect to the stock acquired by the exercise, or to any other specified stock compensation that is sold, exchanged, distributed, cashed-out, or otherwise paid during the six-month period in a transaction in which income, gain, or loss is recognized in full.ⁿ¹¹

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.01

§ 9A.01 Introduction

The 1980s and early 1990s have brought forth myriad new financial products. The most prevalent are referred to as notional principal contracts, common examples of which include: interest rate swaps, currency swaps, basis swaps, interest rate caps, interest rate floors, commodity swaps, equity swaps, equity index swaps, and similar arrangements.ⁿ¹ The term "notional" is attached to these transactions because the payments under the contract are computed with reference to a principal amount that never changes hands but serves solely as a conceptual benchmark. Businesses use notional principal contracts: (1) to attempt to reduce exposure to adverse changes in interest rates, commodity prices, and currency exchange rates; (2) to obtain access to new capital at better rates than otherwise might be available; and (3) to speculate in interest rate movements for the purpose of asset/liability management.

This chapter examines notional principal contract transactions and the tax consequences that attend such transactions.ⁿ² The Service issued final regulations on October 8, 1993ⁿ³ that govern the tax accounting treatment of notional principal contracts.

Possibly because of recent financial problems resulting from these types of financial products, increasing attention is being given to their tax consequences. The IRS has announced as a priority the finalizing of proposed regulations under *Notice 2004-52*, related to credit default swaps, and *Notice 2008-2*, related to prepaid forward contracts.

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.02

§ 9A.02 Notional Principal Contract Defined

A notional principal contract is a financial instrument that provides for the payment of amounts by one party to another (i.e., a counterparty) at specified intervals calculated by reference to a specified index upon a notional principal amount in exchange for specified consideration or a promise to pay similar amounts.ⁿ¹ A notional principal amount is any specified amount of money or property that when multiplied by a specific index measures the parties' rights and obligations under a contract.ⁿ² The notional principal amount may vary over the term of the contract, provided that it is set in advance or varies based on objective financial information (as defined by *Regulations Section 1.446-3(c)(4)(ii)*).ⁿ³ The notional principal amount serves only as a reference for determining the amount of payments under the contract and, except in the case of certain currency swaps, is not actually borrowed or loaned between the parties.ⁿ⁴ In other words, notional principal contracts do not involve the actual exchange of debt principal. Rather, the parties use an agreed-upon amount (perhaps representing a desired percentage of their underlying debt) to calculate the exchange payments.

Example:

D and *C* agree that *D* will pay *C* annually for a period of five years an amount equal to the product of \$100 million and the London Interbank Offered Rate (LIBOR) on the date that the payment is due, while *C* will pay *D* on the same dates amounts equal to \$100 million multiplied by 8 percent. This agreement is a type of notional principal contract called an interest rate swap. (See § 9A.04, below.)

In this example, *D* and *C* do not actually exchange the underlying principal amount of indebtedness. They simply calculate their payments based on the agreed-upon and identified notional principal amount (\$100 million). As a result, the swap concerns only *D* and *C*, not their respective creditors. *D* remains legally liable to her original lender for the floating-rate payments, while *C* remains liable to his original lender for the fixed-rate payments. The swap changes the effective nature of *D*'s and *C*'s loan payments without altering the underlying agreements with their original creditors.

The specified index used to determine the amount of payment due under a notional principal contract can be based on the following:ⁿ⁵

- (1) any fixed interest rate, price, or amount;

(2) a fixed rate, price, or amount applicable in one or more specified periods followed by one or more different fixed rates, prices, or amounts applicable in other periods;

(3) objective financial or economic information; or

(4) an interest rate index that is regularly used in normal lending transactions between a party to the contract and unrelated persons.

Examples of specific indices include the prime rate, the London Interbank Offering Rate (LIBOR), the consumer price index, a broad-based equity index (e.g., Standard & Poor's 500), and the outstanding balance of a pool of mortgages. Objective financial information is any current, objectively determinable financial information that is not within the control of any of the parties to the contract and is not unique to one of the parties' circumstances (such as one party's dividends, profits, or the value of its stock). An example of objectively determinable financial information is a broadly based equity index or the outstanding balance of a pool of mortgages, but not the value of a party's stock.ⁿ⁶

Any contract described in *IRC Section 1256(b)* (i.e., any regulated futures contract, any foreign currency contract, any nonequity option, any dealer equity option, and any dealer securities futures contract); any futures contract; any forward contract; and any option are *not* notional principal contracts. Any financial instrument or contract that constitutes indebtedness under the general principles of the Internal Revenue Code is also *not* a notional principal contract.^{n6.1} Further, an option or forward contract that entitles or obligates a person to enter into a notional principal contract is not a notional principal contract. However, payments made under such an option or forward contract may be governed by *Regulations Section 1.446-3(g)(3)*.ⁿ⁷

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.03

§ 9A.03 Accounting for Notional Principal Contracts

The net income or net deduction from a notional principal contract for a taxable year is included in or deducted from gross income for that taxable year.ⁿ¹ The net income or net deduction from a notional principal contract for a taxable year equals the total of all periodic and nonperiodic payments that are recognized from that contract for the taxable year.ⁿ² For contracts entered into before December 13, 1993, the preceding rule does not apply. For those contracts, the Service will generally treat a method of accounting for notional principal contracts as clearly reflecting income if it takes payments into account over the life of the contract under a reasonable method, whether or not that method satisfies the rules in the final regulations or in the proposed version of those regulations.ⁿ³

[1] Payments--Basic Netting Rule

Payments made or received with regard to notional principal contracts are classified as:

- (1) periodic;
- (2) nonperiodic;
- (3) termination; or
- (4) embedded loan.

Regulations Section 1.446-3(d) adopts a "netting" approach that requires a taxpayer to take into account its share of ongoing periodic payments and nonperiodic payments and termination payments to determine its gain or loss for the year from its notional principal contract.

Example:

On January 1, *D* and *C*, cash basis, calendar-year taxpayers, enter into a notional principal contract calling for payments on December 31. *D* agrees to make payments to *C* of 7 percent on a notional principal amount of \$10 million, and *C* agrees to make payments to *D* based on the average specified LIBOR multiplied by the \$10 million notional principal amount. In this example, *D* is called the "fixed-rate payor," and *C* is called the "floating-rate payor." The average specified LIBOR for the first year of the contract is 5 percent. If the contract provided for payments on a gross basis, *D*, the fixed

payor, would pay *C*, the floating-rate payor, \$700,000 (.07 x \$10 million), and *C* would be required to pay *D* \$500,000 (.05 x \$10 million). If the payments were made on a net basis, only one payment would be made. *D*, the fixed-rate payor, would pay *C*, the floating-rate payor, \$200,000. Accordingly, *D* would realize a loss of \$200,000, and *C* would have a gain in that amount. However, the amounts they would recognize on their tax returns might differ from these amounts, depending on other factors, such as the time periods covered by the payments, as explained below.

[2] Periodic Payments

With the exception of payments made to purchase or sell a cap or floor (see § 9A.08, below), periodic payments are payments made or received pursuant to a notional principal contract that:

- (1) are payable at intervals of one year or less during the term of the contract;
- (2) are based on a specified index; and
- (3) are based on either a single notional principal amount or a notional principal amount that varies over the term of the contract in the same proportion as the notional principal amount that measures the other party's payments.ⁿ¹

The intervals between payments need not be the same.

All taxpayers, regardless of their method of accounting, must recognize the ratable daily portion of a periodic payment for the taxable year to which that portion relates.ⁿ² The ratable daily portion of a payment attributable to a taxable year is determined by multiplying the amount of the payment by the ratio of the number of days in the period covered by the payment that falls within the taxpayer's taxable year to the number of days in the period covered by the payment.

The amount of a periodic payment may not be readily ascertainable at the end of a taxable year because the value of the specified index will not be fixed until a date that occurs after the end of the taxable year. In that case, the ratable daily portion of a periodic payment that relates to that taxable year is generally based on the specified index that would have applied if the specified index were fixed as of the last day of the taxable year.ⁿ³ If a taxpayer determines that the value of the specified index as of the last day of the taxable year does not provide a reasonable estimate of the specified index that will apply when the payment is fixed, the taxpayer may use a reasonable estimate of the specified index each year. This can only be done, however, if the taxpayer (and any related person that is a party to the contract):ⁿ⁴ (1) uses the same method to make the estimate consistently from year to year, and (2) uses the same estimate for purposes of all financial reports to equity holders and creditors. The taxpayer's treatment of notional principal contracts with substantially similar specified indices will be considered in determining whether the taxpayer's estimate is reasonable. Any difference between the amount that is recognized pursuant to the foregoing rules and the corresponding portion of the actual payment that becomes fixed under the contract is taken into account as an adjustment to the net income or net deduction from the notional principal contract for the taxable year during which the payment becomes fixed.ⁿ⁵

Rules similar to those set forth in the preceding paragraph apply if the amount of a periodic payment is not determinable at the end of a taxable year because the notional principal amount is not fixed until a date that occurs after the end of the taxable year.ⁿ⁶

Example:

Assume the same facts as in the prior example except that (1) the notional principal contract is entered into on July 1, (2) the payment date is the following June 30, (3) the floating rate is LIBOR on the date of payment, (4) *C* and *D* use a 30-day month, 360-day year counting convention, (5) LIBOR on December 31 is 6.8 percent, and the two parties reasonably estimate that LIBOR on June 30 of the following year

will be 6.8 percent, but (6) LIBOR on June 30 of the following year turns out to be 6.9 percent. On December 31, the amount that *D* and *C* are obligated to pay to each other on June 30 is not determinable, but, based on the reasonable estimate that LIBOR will be 6.8 percent on June 30, *D* will be obligated to make a net payment to *C* of \$10,000 (.2 percent x \$10 million x 180/360) on June 30. *C* has net income of \$10,000 for the taxable year; *D* has a net deduction of \$10,000 for the year. On June 30 of the succeeding year when LIBOR is determined to be 6.9 percent, the net payment that the agreement actually requires *D* to make to *C* is only \$5,000 (.1 percent x \$10 million x 180/360). *C* and *D* must, in the second taxable year, adjust the net income and net deduction they recognized in the first year by \$5,000.

[3] Nonperiodic Payments

A nonperiodic payment is any payment made or received with respect to a notional principal contract that is not a periodic payment or termination payment.ⁿ¹ Examples of nonperiodic payments are the premium for a cap or floor agreement (even if paid in installments), the payment for an off-market swap agreement, the prepayment or part or all of one leg of a swap, and the premium for an option to enter into a swap if and when the option is exercised.ⁿ² All taxpayers, regardless of their method of accounting must recognize the ratable daily portion of a nonperiodic payment for the taxable year to which that portion relates.ⁿ³ Generally, a nonperiodic payment must be recognized over the term of a notional principal contract in a manner that reflects the economic substance of the contract.ⁿ⁴

The timing of income recognition and the taking of deductions with respect to nonperiodic payments under the contract must be determined in accordance with the values of the financial instruments that the swap and cap and floor agreements resemble.ⁿ⁵ An option or forward contract that entitles or obligates a person to enter into a notional principal contract is subject to the general rules of taxation for options or forward contracts.ⁿ⁶ Any payment with respect to the option or forward contract is treated as a nonperiodic payment for the underlying notional principal contract. These rules apply regardless of the regular method of accounting used by the parties to the notional principal contract.ⁿ⁷

For contracts entered into before January 14, 1994, the Service will generally treat a method of accounting as clearly reflecting income if it takes payments into account over the life of the contract under a reasonable amortization method.ⁿ⁸ This position supports the Service's premise that either including the entire amount of nonperiodic payments in income in the year of receipt, or deferring it until the termination of the contract, does not clearly reflect income, and, therefore, is an impermissible method of accounting for these payments.ⁿ⁹ In other words, the Service does not want taxpayers to include all of the nonperiodic payment in the year received, but to spread the recognition of income (or deductions) over the life of the contract. This precludes the use of notional principal contracts as a way to accelerate income or to use net operating losses about to expire.

The Service has ruled on the appropriate method for the inclusion as income or as a deduction a nonperiodic payment made pursuant to a notional principal contract where the payment is comprised of noncontingent and contingent components.ⁿ¹⁰ The ruling contains the following example:

Example:

The taxpayer (*T*) enters into a notional principal contract with a counterparty (*CP*) on October 1, 2002, for a term of 18 months. Pursuant to the terms of the contract, *T* agrees to make quarterly payments to *CP* based on three-month LIBOR multiplied by a notional principal amount of \$100 million. In exchange, *CP* agrees that upon expiration of the notional principal contract on March 31, 2004, *CP* will pay *T* 6 percent per year multiplied by a notional principal amount of \$92 million (the fixed payment amount). In addition, the *CP* or *T* will make a payment upon expiration equal to the percentage change in the value of the S&P 500 stock index multiplied by a notional principal amount of \$8 million. If the change is positive (an appreciation amount), *CP* will make a payment to *T*; if the change is negative (a

depreciation amount), T will make a payment to CP. Any depreciation amount payable by T will be netted against the fixed payment amount payable by CP.

The amounts that T pays to CP are periodic payments. T and CP must recognize the ratable daily portion of each periodic payment for the taxable year to which that portion relates.

The amount payable on March 31, 2004, is a nonperiodic payment that T and CP are required to recognize over the term of the notional principal contract in a manner that reflects the economic substance of the contract. In substance, the nonperiodic payment that CP must pay T on expiration equals the sum of a noncontingent component and a contingent component. The noncontingent component is the fixed amount payment or \$8.28 million (the product of 6 percent per year for 18 months and the notional principal amount of \$92 million). The contingent component (the appreciation or depreciation amount) equals the product of the percentage appreciation or depreciation in the value of the S&P 500 stock index and the notional principal amount of \$8 million.

In order to reflect the economic substance of the notional principal contract, each component must be treated separately for purposes of applying the notional principal contract rules in *Regulation Section 1.446-3*. The fixed payment amount due on March 31, 2004, must be recognized over the term of the notional principal contract in a manner consistent with *Regulation Section 1.446-3(f)(2)(ii)* or (iii). This treatment of the fixed payment amount is not affected by the possibility that T will be required to pay a depreciation amount to CP that, under the terms of the contract, will be netted against CP's obligation to pay the fixed payment amount. In addition, T must accrue interest income and CP may accrue interest deductions under *Regulation Section 1.446-3(g)(4)*.

[4] Embedded Loans

A "swap" is a notional principal contract that most often involves one party making periodic payments of a fixed amount and the other party making periodic payments on a variable specified index. Under *Regulations Section 1.446-3(g)(4)*, a notional principal contract consisting of a swap with a "significant" nonperiodic payment is considered to comprise an embedded loan. For tax purposes, such a swap must be treated as two separate transactions consisting of: (1) an on-market, level payment swap, and (2) a loan.ⁿ¹

The loan must be accounted for by the parties to the contract independently of the swap. The time value component associated with the loan is *not* included in the net income or net deduction from the swap. In other words, the time value component is treated as interest for all purposes of the Code.

The final regulations, however, offer no safe harbor or brightline test to determine what amount is a "significant" portion. On the other hand, the Regulations do provide an example at *Regulations Section 1.446-3(g)(6)* Example 3. (See § 9A.04[5][c], below.)

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.04

§ 9A.04 Interest Rate Swaps

[1] Definition

As mentioned above, a swap is a notional principal contract that most often involves one party making periodic payments of a fixed amount (e.g., fixed interest rate) and the other party ("counterparty") making periodic payments on a variable specified index (e.g., prime interest rate). Both parties' payments are determined by reference to the same notional principal amount. The payments by one party to a swap contract may be made on different dates than the payments by the counterparty. If both parties are to make payments on the same date, the swap contract will normally provide for the payments to be offset, so that only the net amount is paid by one party to the other. (See § 9A.03[1], above.)

An interest rate swap is a swap in which the notional principal amount is expressed in dollars and the specified index is an interest rate or interest rate index. A basis swap (or floating swap) is an interest rate swap in which the parties agree to swap payments based on one variable specified index (e.g., prime rate) multiplied by a notional principal amount, which is itself determined with reference to another variable specified index (e.g., six-month Treasury rate).

[2] Uses for Interest Rate Swaps

Interest rate swaps are designed to serve one or more of the following functions:ⁿ¹

- (1) An interest rate swap may facilitate indirect access to capital at more favorable interest rates than those that would otherwise be available. In other words, an interest rate swap lowers a party's effective cost of borrowing.
- (2) An interest rate swap allows borrowers to hedge against fluctuations in interest rates. For example, consider a firm with assets bearing a floating rate of interest and with liabilities bearing a fixed rate of interest. If market interest rates fall, the firm may have difficulty meeting its obligations on the fixed-rate liabilities, because the interest income on the floating-rate assets falls with the decline in market rates.
- (3) An interest rate swap allows for the speculation of interest rate movements for the purposes of asset or liability management. Note that this function is different from the hedging function (described in (2), above) because here the goal is to benefit from movements in market interest rates, rather than simply to

ameliorate, if not neutralize, the effects of interest rate movements.

[a] Lowering a Borrower's Effective Rate of Interest. The first major function seeks to reduce a party's effective cost of borrowing.ⁿ² This results from the fact that the interest rate differential between a high-rated borrower and a low-rated borrower in the floating-rate market tends to be lower than the differential in the fixed-rate market. The low-rated borrower with a variable-rate loan swaps it for a high-rated borrower's fixed-rate loan, generally paying the high-rated borrower some portion of the differential between the rates charged to the low-rated borrowers and high-rated borrowers in the fixed rate market. This gives the low-rated borrower a better rate in the fixed-rate market than he could have obtained otherwise. The payment by the low-rated borrower to the high-rated borrower as part of the swap--if substantial enough--enhances the credit worthiness of the high-rated borrower, thus permitting the latter to borrow in the floating-rate market at a less expensive rate than would normally be charged by a lender.

To illustrate, consider the following situation involving a savings and loan institution.

Example:

Best Savings and Loan (Best) has \$100 million dollars in deposits on which it pays a floating rate of interest equal to the sum of a specified prime rate plus 0.75 percent. Best lives from day to day at the edge of financial disaster. Because the capital market for fixed-rate borrowings is quite sensitive to credit quality, Best would have to pay a high rate of interest for fixed-rate borrowings, perhaps 13 percent a year. On the other hand, a finance company, Capital Finance Company (Capital), because it is somewhat more creditworthy than the savings and loan, can issue bonds in the principal amount of \$100 million dollars bearing interest of 11 percent, a rate fully two percentage points lower than Best's cost of fixed-rate borrowing. Capital can also borrow on a floating-rate basis, but only at a rate equal to prime plus 1/8 percent, only 5/8 percent of a point lower than Best.

Because Capital is more creditworthy than Best, it has an absolute advantage in borrowing money on either interest rate basis. However, Best has a comparative advantage in borrowing at a floating-rate. As a result, Best should borrow at a floating-rate, and Capital should borrow at a fixed-rate. The two entities should then "trade" through the use of a swap. Such a swap might call for Best to make payments of \$11.5 million each year to Capital in return for Capital making annual payments to Best equal to prime on the hypothetical principal amount of \$100 million. Best would effectively be paying 11.5 percent "interest" on a "notional principal amount" of \$100 million and would be receiving "interest" equal to prime applied to the same notional amount of \$100 million.

By entering into the swap, Best can effectively reduce its fixed-rate of interest from 13 percent per year to 12.25 percent (determined by adding the 0.75 percent above prime it must pay to borrow in the Floating - rate market to the 11.5 percent "interest" it must pay to Capital). At the same time, Capital can effectively reduce its floating-rate of interest from prime plus 1/8 percent to prime minus 0.5 percent (calculated by subtracting the 11.5 percent "interest" it receives from Best from the 11 percent interest it must pay on its fixed-rate obligation).ⁿ³

In short, the low-rated borrower (e.g., Best) enters into the interest rate swap because it either lacks access to fixed-rate financing or must pay substantially higher rates to obtain it from a bank. An additional incentive for a high-rated borrower (e.g., Capital) to enter into the interest rate swap is that a low-rated borrower may be required to pay the high-rated borrower a "spread" for access to its lower fixed-rate financing. The spread is an additional amount, expressed as a percentage of the principal amount, that a low-rated borrower is willing to pay the high-rated borrower as an incentive and as additional compensation for entering into the swap. The spread reduces the high-rated borrower's new, variable or floating-rate payments, resulting in a less expensive rate of borrowing in the floating-rate market than would otherwise be available.ⁿ⁴

Another way to view the scenario described above is if interest rates were to rise, the floating-rate payor's payments to the fixed-rate payor would be larger than the fixed-rate payor's payments to the floating-rate payor. On a net basis, the fixed-rate payor would receive money on the swap. Thus, the fixed-rate payor would be "in the money" on this swap, helping the fixed-rate payor ride out the period of higher interest rates. If interest rates were to fall, the fixed-rate payor's payments to the floating-rate payor would be larger than the floating-rate payor's payments to the fixed-rate payor. On a net basis, the floating-rate payor would receive money on the swap. The floating-rate payor would now be "in the money" on this swap.

Recall that a basis swap involves a notional principal amount that is itself determined with reference to a variable index. A basis swap can lower an institution's effective rate of borrowing by permitting the institution to match the index of its floating-rate assets with the index of its floating-rate liabilities. For example, an institution with loan assets fixed to the prime rate with the index of its floating rate loan liabilities based on a higher, specified Treasury rate might use a basis swap to convert its Treasury-rate-based liability payments into prime-rate-based payments.

[b] Hedging Against Fluctuations in Interest Rates. The second function of interest rate swaps is hedging to reduce interest rate risk. This is accomplished by matching fixed-rate assets with fixed-rate liabilities and variable-rate assets with variable-rate liabilities in order to lessen the impact of changing interest rates.ⁿ⁵ Consider a savings institution with a substantial portfolio of fixed-rate mortgages whose depositors are paid at a floating-rate. An increase in interest rates will have no effect on the institution's interest income (assuming no new mortgage loans), but will increase its interest expense. Use of a swap to substitute fixed-rate debt for variable-rate debt, and thereby match fixed-rate assets with fixed-rate liabilities, will benefit the institution by limiting the decrease in its net interest income that otherwise would have resulted from the increase in interest rates.

Example:

Consider the following:

Assets:	\$10 million variable rate at 10 percent	\$ 1,000,000
	90 million fixed-rate at 11 percent	9,900,000
	Total	\$ 10,900,000
		0
Liabilities	\$40 million variable rate at 9 percent	\$ 3,600,000
	60 million fixed-rate at 11 percent	6,600,000
	Total	10,200,000
		0
	Interest income	\$ 700,000

If interest rates were to rise by 2 percent, it would have the following effect on the above balance sheet:

Assets:	\$10 million variable rate at 12 percent	\$ 1,200,000
	90 million fixed-rate at 11 percent	9,900,000
	Total	\$11,100,000
		00
Liabilities	\$40 million variable rate at 11 percent	\$4,400,000
		0
	60 million fixed-rate at 11 percent	6,600,000
	Total	\$ 11,600,000
		0
	Interest income	\$ 1,000,000

Thus, a 2 percent rise in interest rates results in a \$600,000 decrease in interest income. By means of an interest rate swap, the variable rate debt could be reduced by substituting fixed-rate debt. A rise in interest rates would result in a smaller decrease in net interest income than would be the case without a swap. (Conversely, falling interest rates would result in a smaller increase in net interest income than would be the case without a swap.) The substantial amount of fixed-rate assets would be matched to fixed-rate liabilities, rather than variable-rate liabilities and thus a hedge against the risk of interest rate fluctuations would be achieved.

[c] Speculation in Interest Rate Movements A third function of interest rate swaps is to speculate on changes in interest rates for purposes of asset or liability management by reversing or modifying interest rate swaps to take advantage of movements in interest rates.ⁿ⁶ One method of achieving this is by the borrower entering into a second swap transaction that is the mirror image of the first, thereby neutralizing its position.

In a mirror image transaction, the party desiring to enter into the mirror image swap continues to abide by the obligations imposed on it in the original swap transaction, but enters into a second transaction that reverses the position it occupies in the first. For example, if, under the original transaction, the party is making variable-rate interest payments and is receiving fixed-rate interest payments, the party would enter into a new swap transaction with a third party in which it would make fixed-rate payments and receive variable-rate payments. If both variable-rate payments are geared to the same index, they will cancel each other out; the same holds true if the fixed rates are the same. However, if the fixed rate specified in the original swap transaction is different from the one called for by the mirror swap transaction, the second transaction will produce gain for the party if the fixed rate in the mirror swap is less than the fixed rate in the original swap, loss if it is greater.

[3] Tax Treatment of Periodic Payments: Examples

[a] Accrual of Periodic Swap Payments.ⁿ¹ On April 1, 1995, *A* enters into a contract with unrelated party *B* under which for a term of five years, *A* is obligated to make a payment to *B* each April 1, beginning April 1, 1996. The amount of each payment is equal to the London Interbank Offered Rate (LIBOR), as determined on the immediately preceding April 1, multiplied by a notional principal amount of \$100 million. Under the contract, *B* is obligated to make a payment to *A* each April 1, beginning April 1, 1996, in an amount equal to 8 percent, multiplied by the same notional principal amount. *A* and *B* are calendar-year taxpayers that use the accrual method of accounting. On April 1, 1995, LIBOR is 7.80 percent.

The contract is an interest rate swap, and, thus, a notional principal contract. Both LIBOR and the fixed interest rate are specified indices. All of the payments are periodic payments, because each party's payments are based on a specified index, are payable at periodic intervals of one year or less throughout the term of the contract, and are based on a single notional principal amount.

Under the terms of the swap agreement, on April 1, 1996, *B* is obligated to make a payment to *A* of \$8 million (8 percent of \$100 million), and *A* is obligated to make a payment to *B* of \$7,800,000 (7.80 percent of \$100 million), producing a \$200,000 net periodic payment. The ratable daily portions for 1995 are the amounts of those periodic payments attributable to *A*'s and *B*'s taxable year ending December 31, 1995, i.e., from April 1, 1995 (275 days in a contract year of 366 days). The ratable daily portion of the 8 percent fixed leg is \$6,010,929 (275/366 x \$8 million); the ratable daily portion of the floating leg is \$5,860,565 (275/366 x \$7,800,000). The net amount for the taxable year is the difference between the ratable daily portions of the two periodic payments, or \$150,273. The swap produces net income of \$150,273 for *A* in 1995; *B* has a deduction in that amount for the same year. The \$49,727 unrecognized balance of the \$200,000 net periodic payment made on April 1, 1996 is taken into account by *A* and *B* in 1996.

[b] Accrual of Swap Payments on Index Set in Arrears.ⁿ² Assume the same facts as in the preceding example, except that *A*'s obligation to make payments based upon LIBOR is determined by reference to LIBOR on the day each

payment is due. Assume further that LIBOR is 8.25 percent on December 1, 1995, and 8.16 percent on April 1, 1996.

On December 31, 1995, the amount that *A* is obligated to pay on April 1, 1996 is not determinable. Therefore, the ratable daily portion of the periodic payment relating to 1995 will be based on the value of LIBOR as of December 31, 1995 (unless *A* or *B* determines that the value of LIBOR on that date does not reasonably estimate the value of the specified index). This causes the ratable daily portion of the floating leg (accrued from April 1, 1995 to December 31, 1995) to be \$6,198,770 ($275/366 \times 8.25 \text{ percent} \times \$100 \text{ million}$); there is no change in the ratable daily portion of the fixed leg. The net amount for 1995 on the swap is \$187,841 (\$6,198,770 minus \$6,010,929). *B* has net income of \$187,841 for the swap in 1995. *A* has a net deduction of \$187,841 for that year.

On April 1, 1996, *A* makes a net payment to *B* of \$160,000 (\$8,160,000 on the floating leg, determined by the value of LIBOR on the payment date, less \$8 million payment due on the fixed leg). For purposes of determining their net income or net deduction from the swap for the year ended December 31, 1996, *A* and *B* must adjust the net income and net deduction they recognized in 1995 by \$67,623. This amount is the difference between the estimated ratable daily portion of the floating leg of \$6,198,770 and the actual ratable daily portion for that leg of \$6,131,147 ($275/366 \times 8.16 \text{ percent} \times \$8,160,000$).

[c] Accrual of Periodic Swap Payments by Cash Method Taxpayers.ⁿ³ On April 1, 1995, *C* enters into a contract with unrelated party *D* under which, for a period of five years, *C* is obligated to make a fixed payment to *D* each April 1, beginning April 1, 1996, in an amount equal to 8 percent multiplied by a notional principal amount of \$100 million. *D* is obligated to make semiannual payments to *C* each April 1 and October 1, beginning October 1, 1995, in an amount equal to one-half of the LIBOR amount as of the first day of the preceding six-month period multiplied by the notional principal amount. The payments are to be calculated using a 30/360 day convention. *C* is a calendar-year taxpayer that uses the accrual method of accounting. *D* is a calendar-year taxpayer that uses the cash receipts and disbursements method of accounting. LIBOR is 7.80 percent on April 1, 1995 and 7.46 percent on October 1, 1995.

Under the terms of the swap agreement, *D* pays *C* \$3,900,000 ($1/2 \times 7.8 \text{ percent} \times \$100 \text{ million}$) on October 1, 1995, and is obligated to pay *C* \$3,730,000 ($1/2 \times 7.46 \text{ percent} \times \$100 \text{ million}$) on April 1, 1996. *C* is obligated to pay *D* \$8 million on April 1, 1996. The ratable daily portion of the fixed leg attributable to 1995 is \$6 million ($270/360 \times \$8 \text{ million}$). The ratable daily portion of the floating leg attributable to 1995 is \$5,765,000 consisting of the sum of the October 1, 1995 payment of \$3,900,000 and \$1,865,000 ($90/180 \times$ the payment of \$3,730,000 due on April 1, 1996). The net payment for 1995 is \$235,000 (\$6 million less \$5,765,000), creating a net deduction for *C* from the contract for 1995 of \$235,000 and income for *D* from the contract in 1995 of \$235,000. The net unrecognized balance of \$135,000 (\$2 million balance of the fixed leg less \$1,865,000 balance of the floating leg) is included in *C*'s and *D*'s net income or net deduction from the swap for 1996.

[4] Tax Treatment of Nonperiodic Payments

As a general rule, a nonperiodic payment that relates to an interest rate swap must be recognized over the term of the contract by allocating it in accordance with the forward rates of a series of cash-settled forward contracts that reflect the specified index and the notional principal amount.ⁿ¹ For purposes of this allocation, the forward rates used to determine the amount of the periodic payment will be respected, if reasonable. An example of the application of the general rule in the context of a commodity swap can be found in the discussion of commodity swaps at § 9A.05, *below*.

[a] Upfront Interest Rate Swap Payment Amortized Using Alternative Method. Solely for purposes of determining the timing of income and deductions, a nonperiodic payment made or received with respect to an interest rate swap may be allocated to each period of the swap contract using one of the alternative methods described below.ⁿ² The alternative methods cannot be used by a dealer in notional principal contracts for swaps entered into or acquired in its capacity as a dealer.ⁿ³

An upfront payment on a swap (a "prepaid swap") may be amortized by assuming that the nonperiodic payment represents the present value of a series of equal payments made throughout the term of the swap contract (the level-payment method), adjusted as appropriate to take into account increases or decreases in the notional principal amount.ⁿ⁴ The discount rate used in this calculation must be the rate (or rates) used by the parties to determine the amount of the nonperiodic payment. If that rate is not readily ascertainable, the discount rate used must be a rate that is reasonable under the circumstances. Under the level-payment method, an upfront payment is allocated by dividing each equal payment into its principal recovery and time value components. The principal recovery components of the equal payments are treated as periodic payments that are deemed to be made on each of the dates that the swap contract provides for periodic payments by the payor of the nonperiodic payments or, if none, on each of the dates that the swap contract provides for periodic payments by the recipient of the nonperiodic payment. The time value component is needed to compute the amortization of the nonperiodic payment, but is otherwise disregarded.

Example:

ⁿ⁵ On January 1, 1996, *C* enters into an interest rate swap agreement with unrelated counterparty *D* under which, for a term of five years, *C* is obligated to make annual payments at 11 percent and *D* is obligated to make annual payments at LIBOR on a notional principal amount of \$100 million. At the time *C* and *D* enter into the swap agreement, the rate for similar on-market swaps is LIBOR to 10 percent. To compensate for the difference in the LIBOR rate, *D* pays *C* a yield adjustment fee of \$3,790,786 on January 1, 1996. *C* provides *D* with information that indicates that the amount of the yield adjustment fee was determined as the present value, at 10 percent compounded annually, of five annual payments of \$1 million (1 percent of \$100 million). *C* and *D* are calendar-year taxpayers.

Under the level-payment method, the yield adjustment fee is recognized over the life of the agreement by assuming that the \$3,790,786 is repaid in five level payments. Assuming a constant yield to maturity and annual compounding at 10 percent, the ratable daily portions are computed as follows:

	Level Payment	Time Value Component	Principal Component
1996	\$1,000,000	\$ 379,079	\$ 620,921
1997	1,000,000	316,987	683,013
1998	1,000,000	248,685	751,315
1999	1,000,000	173,554	826,446
2000	1,000,000	90,909	909,091
	\$5,000,000	\$1,209,214	\$3,790,786

C also makes swap payments to *D* at 11 percent, while *D* makes swap payments to *C* based upon LIBOR. The net of the ratable daily portions of 11 percent payments by *C*, the LIBOR payments by *D*, and the principal component of the yield adjustment fee paid by *D* determines the annual net income or net deduction from the contract for both *C* and *D*.

[b] Backloaded Interest Rate Swap Payment Amortized Using Alternative Method. Nonperiodic payments on a swap other than an upfront payment can be amortized by treating the contract as if it provided for a single upfront payment (equal to the present value of the nonperiodic payments) and a loan between the parties.ⁿ⁶ The discount rate (or rates) used in determining the deemed upfront payment and the time value component of the deemed loan is the same as the rate (or rates) used in the level-payment method. The single upfront payment is then amortized under the level-payment method described above. The time value component of the loan is not treated as interest, but, together

with the amortized amount of the deemed upfront payment, is recognized as a periodic payment. If both parties make nonperiodic payments, this calculation is done separately for the nonperiodic payments made by each party.

Example:

n7 Assume the same facts as in the preceding example, except that *D* agrees to pay *C* a yield adjustment fee of \$6,105,100 on December 31, 2000. Under the alternative method for payments other than upfront payments, *D* is treated as paying a yield adjustment fee of \$3,790,786 (the present value of \$6,105,100, discounted at a 10 percent rate with annual compounding) on January 1, 1996. Solely for timing purposes, *D* is treated as borrowing \$3,790,786 for *C*. Assuming annual compounding at 10 percent, the time value component is computed as follows:

	Loan Balance	Time Value Component	Principal Component
1996	\$3,790,786	\$379,079	\$ -0-
1997	4,169,865	416,987	-0-
1998	4,586,852	458,685	-0-
1999	5,045,537	504,554	-0-
2000	5,550,091	555,009	6,105,100

The amortization of *D*'s yield adjustment fee is equal to the amortization of a yield adjustment fee of \$3,790,786 paid in advance, increased by the time value component of the \$3,790,786 deemed loan from *C* to *D*. Thus, the amount of *D*'s yield adjustment fee that is allocated to 1996 is \$1 million (the sum of the \$620,921 principal component, as shown in the prior example, and the \$379,079 time value component). The time value components of the \$3,790,786 loan are included in the periodic payments paid by *D*, but are not characterized as interest income or expense. The net of the ratable daily portions of the 11 percent swap payments by *C*, and the LIBOR payments by *D*, added to the principal components set out in the prior example and the time value components shown in this example, determines the annual net income or net deduction from the contract for both *C* and *D*.

[c] Swaps With Significant Nonperiodic Payments: Embedded Loans. If a taxpayer, either directly or indirectly through a related person, reduces risk with respect to a swap by purchasing, selling, or otherwise entering into other notional contracts, futures, forwards, options, or other financial contracts (other than debt instruments), the taxpayer may not use the alternative methods for allocating nonperiodic payments made or received with respect to the swap.ⁿ⁸ Moreover, where such positions are entered into to avoid the appropriate timing or character of income from the contracts taken together, the Service may require that amounts paid to or received by the taxpayer under the swap be treated in a manner that is consistent with the economic substance of the transaction as a whole.

A swap with significant nonperiodic payments is treated as two separate transactions consisting of: (1) an on-market, level payment swap, and (2) a loan.ⁿ⁹ The loan must be accounted for by the parties to the contract independently of the swap. The time value component associated with the loan is not included in the net income or net deduction from the swap, but is recognized as interest for all purposes of the Internal Revenue Code.

Example 1:

n10 On January 1, 1996, unrelated parties *X* and *Y* enter into an interest rate swap contract. Under the terms of the contract, *Y* agrees to make five annual payments to *X* equal to LIBOR times a notional

principal amount of \$100 million. In return, *X* agrees to pay *Y* 6 percent of \$100 million annually, plus \$15,163,147 on January 1, 1996. At the time *X* and *Y* enter into the swap agreement, the rate for similar on-market swaps is LIBOR to 10 percent, and *Y* provides *X* with information that the amount of the initial payment was determined as the present value, at 10 percent compounded annually, of five annual payments from *X* to *Y* of \$4 million (4 percent of \$100 million).

Although *X* and *Y* have characterized this transaction as an interest rate swap, the \$15,163,147 payment from *X* to *Y* is significant when compared with the present value of the total fixed payments due under the contract. Accordingly, the transaction is recharacterized as consisting of both a \$15,163,147 loan from *X* to *Y* that *Y* repays in installments over the term of the agreement, and an interest rate swap between *X* and *Y* in which *X* immediately pays the installment payments on the loan back to *Y* as part of its fixed payments on the swap in exchange for the LIBOR payments by *Y*.

The yield adjustment fee is recognized over the life of the agreement by treating the \$15,163,147 as a loan that will be repaid with level payments over five years. Assuming a constant yield to maturity and annual compounding at 10 percent, *X* and *Y* account for the principal and interest on the loan as follows:

	Level Payment	Interest Component	Principal Component
1996	\$ 4,000,000	\$1,516,315	\$ 2,483,685
1997	4,000,000	1,267,946	2,732,054
1998	4,000,000	994,741	3,005,259
1999	4,000,000	694,215	3,305,785
2000	4,000,000	,363,636	3,636,364
	\$20,000,000	4,836,853	\$15,163,147

In each taxable year, *X* recognizes interest income, and *Y* claims an interest deduction, equal to the interest component of the deemed installment payments on the loan. The amounts treated as interest are not included in the parties' net income or net deduction from the swap contract. The principal components are needed only to compute the interest component of the level payment for the following period, and do not otherwise affect the parties' net income or net deduction from the transaction.

Y also makes swap payments to *X* based on LIBOR, and receives swap payments from *X* at a fixed rate that is equal to the sum of (1) the stated fixed rate, and (2) the rate calculated by dividing the deemed level annual payments on the loan by the notional principal amount. Thus, the fixed rate on the swap in this example is 10 percent (the sum of the stated rate of 6 percent and the rate calculated by dividing the annual loan payment of \$4 million by the notional principal amount of \$100 million, or 4 percent). The swap payments from *X* to *Y* and the LIBOR swap payments from *Y* to *X* are included in the parties' net income or net deduction for each taxable year according to the recognition rules for periodic payments discussed above.

Example 2:

n11 Assume the same facts as in Example 1, except that *X* is obligated to make annual payments at 11 percent on the notional principal amount. To compensate for the difference between the on-market rate

(LIBOR to 10 percent) and the contract rate, Y pays X a yield adjustment fee of \$3,790,786 on January 1, 1996. The amount of the yield adjustment fee is the present value, at 10 percent compounded annually, of five annual payments of \$1 million (1 percent x \$100 million).

In this situation, the yield adjustment fee is not a significant nonperiodic payment, in light of the amount of the fee in proportion to the present value of the total amount of the fixed payments under the contract. Accordingly, no portion of the swap is recharacterized as a loan.

The regulations do not contain specific tests to determine when a nonperiodic payment is significant. However, the two preceding examples, taken from the regulations, do provide some guidance in this regard. In Example 1, the \$15,163,147 nonperiodic payment amounts to 40 percent of \$37,907,867, the present value of all fixed payments required to be made by X under the swap agreement. (The present value, at 10 percent compounded annually, of five annual payments of \$6 million each that X must make to Y is \$22,744,720. When added to the nonperiodic payment of \$15,163,147, the total fixed payments to be made by X becomes \$37,907,867.) In Example 2, the nonperiodic payment of \$3,790,786 that X is to receive from Y amounts to 10 percent of the present value of the fixed payments due from X to Y under the agreement, reduced by the amount of the nonperiodic payment made by Y to X. Thus, 40 percent is significant, while 10 percent is not.

Example 3:

n12 Assume the same facts as in Example 1, except that on January 1, 1996, Y also enters into an interest swap contract with unrelated counterparty Z under which, for a term of five years, Y is obligated to make annual payments at 12 percent, and Z is obligated to make annual payments at LIBOR on a notional principal amount of \$100 million. At the time that Y and Z enter into the swap agreement, the rate for similar on-market swaps is LIBOR to 10 percent. To compensate for this difference, Z pays Y an upfront yield adjustment fee of \$7,581,574, an amount equal to the present value, at 10 percent compounded semiannually, of five annual payments of \$2 million (2 percent of \$100 million).

In substance, the two interest rate swaps are the equivalent of a fixed-rate borrowing by Y of \$22,744,721 (\$15,163,147 from X plus \$7,581,574 from Z). If these positions were entered into to avoid interest character on a net loan position, the Service may recharacterize the swaps as a loan which Y will repay with interest in five annual installments of \$6 million each (the difference between the 12 percent Y pays under the swap with Z and the 6 percent Y receives under the swap with X, multiplied by the \$100 million notional principal amount).

Y recognizes no net income or net deduction from these contracts because, as to Y, there is no notional principal contract income or expense. However, the recharacterization of Y's separate transactions as a loan has no effect on the way X and Z must account for their notional principal contracts.

[5] Tax Characterization of Payments

As discussed in the preceding sections, certain swap transactions are treated as consisting, in part, of a loan between the parties. In the case of a nonperiodic payment on a swap other than an upfront payments, the time value component of the loan is not treated as interest, but is recognized as a periodic payment. On the other hand, where a swap has significant nonperiodic payments, the time value component of the loan portion of the transaction is recognized as interest for all purposes of the Code.

Except for the regulations governing the treatment of swaps with significant nonperiodic payments, there is nothing in the Code or regulations that specifically addresses the treatment of interest rate swaps for federal income tax purposes.

Therefore, as one commentator has suggested:

As new financial products and strategies are developed in the domestic and international capital markets, the tax system attempts to respond by assigning each new product to an appropriate cubbyhole, which in turn determines the tax consequences to users of that product.ⁿ¹

The first question is whether swap payments represent interest.ⁿ²

The generally accepted answer is that they do not.ⁿ³ Interest is defined as "the amount which one has contracted to pay for the use of *borrowed* money."ⁿ⁴ The definition of a notional principal amount expressly states that while the amount measures a party's rights and obligations under the notional principal contract, it does not constitute an amount borrowed or loaned between the parties as part of the contract.ⁿ⁵ Because the notional principal amount is not exchanged by the parties, the payments due under a typical interest rate swap are not compensation for the use or forbearance of money and, therefore, are not interest.ⁿ⁶

Apart from the general agreement that interest swap payments do not constitute interest, the issue of characterization provokes different responses from commentators. Some commentators believe that the payments should be treated as financial services fees and thus produce ordinary income and expense.ⁿ⁷ The view that this characterization is most appropriate for swaps is grounded in the perception that it is consistent both with their form and functions.ⁿ⁸ The mechanics of an interest rate swap involve each party to the transaction assuming the other's credit risk, somewhat similar to a guarantee. Using this as its rationale, the Service has held any payment by one party to another under such an arrangement is compensation for the act of serving as a guarantor of the payor's loan.ⁿ⁹ Thus, the recipient should be in receipt of ordinary income that is not interest income. Because interest rate swaps take place exclusively in the business world, an ordinary and necessary business deduction should be available under *IRC Section 162*.

A second approach views a swap that does not serve a hedging purpose as analogous to a futures or forward contract, and, therefore, as a capital asset with payments and receipts treated accordingly.ⁿ¹⁰ The first problem inherent in this approach is determining the basis of, and amount realized, from the interest rate swap. One way to resolve this issue is to treat outgoing swap payments as creating the purchase price or basis for the swap, and incoming payments as a return on that investment.ⁿ¹¹ The second problem is in fitting any return in excess of, or less than, the created basis into the definitional formula for capital gains and losses. There is no sale or exchange when a swap terminates according to its terms, and, without a sale or exchange, capital gains and losses cannot arise.ⁿ¹²

A further difficulty with the capital transaction characterization lies in the regulations governing accounting for notional principal contracts, discussed above at § 9A.03. Under those regulations, each party to the notional principal contract must recognize the ratable daily portion of a periodic payment for the taxable year to which that portion relates, and include or deduct any net payment, as the case may be, in the taxable year in which the payment is made. Such a requirement is at odds with a theory that would treat outgoing payments as the purchase price of a swap and incoming payments as an amount realized that would first reduce any previously created basis.

Finally, those persons who would treat an interest rate swap as a capital transaction would not attach that characterization to swaps that serve as an interest rate hedge. Thus, for them, the taxpayer's motivation in entering into a swap would be the pivotal factor in classifying the transaction. However, the U. S. Supreme Court's decision in *Arkansas Best Corporation v. Commissioner*,ⁿ¹³ makes motive irrelevant in determining whether a transaction should be treated as a capital transaction or not.

A third approach looks at the hedging nature of some interest rate swaps as insurance, not dealings in property, and treats such swaps as generating ordinary income or loss.ⁿ¹⁴

The conclusion to be reached from this discussion is that payments under an interest rate swap, whether viewed as

financial services income and expense, or as insurance, constitute ordinary income to the recipient and give rise to an ordinary deduction for the payor. The contrary view that the payments stem from capital assets and should be treated accordingly is laden with problems.

[6] Collateral Tax Problems--Unrelated Business Income Tax

For the average taxpayer, there is little additional concern once an interest rate swap payment is characterized as ordinary income other than interest. Suppose, however, that the party receiving the net payment is a tax-exempt organization. The issue then becomes whether the payment constitutes unrelated business taxable income subject to taxation under *IRC Section 511(a)*.

Under *IRC Section 513(a)*, an unrelated trade or business is one the conduct of which is not substantially related to the tax-exempt organization's charitable function. *IRC 512(a)* defines unrelated business taxable income as the gross income derived by a tax-exempt organization from any such unrelated trade or business "regularly carried on" by it, less allowable deductions directly connected with the carrying on of that trade or business. In determining whether a trade or business is regularly carried on by the organization, regard must be taken as to the frequency and continuity with which the activities producing the income are conducted and the manner in which they are pursued.ⁿ¹ This requirement must be applied in light of the purpose of the unrelated business income tax to place exempt organization business activities on the same tax basis as the nonexempt businesses with which they compete.ⁿ²

If it is found that the interest swap transactions entered into by a tax-exempt entity are so frequent and continuous as to constitute a trade or business that is regularly carried on, the inquiry shifts to the nature of that income. Interest income received by a tax-exempt organization is excluded from unrelated business taxable income, as are gains from the sale, exchange, or other disposition of property (with some exceptions).ⁿ³ However, payments made pursuant to an interest rate swap do not constitute interest income unless specifically designated as such as by the regulations. Moreover, the absence of any sale or exchange prevents the payments from falling within the category of gains excluded from unrelated business taxable income.ⁿ⁴

Although no specific statutory exclusion from unrelated business taxable income exists for interest swap payments, the regulations under *IRC Section 512* provide that income from notional principal contracts and all deductions directly connected with such income are to be excluded in computing unrelated business taxable income.ⁿ⁵ The exclusion does not apply to income earned by brokers or dealers, or to organizations that make a market in derivative financial products.ⁿ⁶

[7] Collateral Tax Problems--Foreign Taxpayers and Foreign Income

A second collateral issue concerns any foreign taxpayer who is a party to an interest rate swap. Specifically, what is the source of any income or expense attributable to the swap? This becomes important because a foreign taxpayer is subject to federal income taxation only on income from sources within the United States.ⁿ¹

As a general rule, the source of interest rate swap income (as well as other notional principal contract income) that is denominated in the taxpayer's functional currency is determined by reference to the residence of the taxpayer.ⁿ² The following residence rules apply: (1) an individual's residence is that person's tax home; (2) the residence of a United States corporation, partnership, estate, or trust is the United States; and (3) a foreign entity's residence is a country other than the United States.ⁿ³ The importance of the residence-source rule for foreign taxpayers is the elimination of federal income tax on payments made to them by United States citizens or resident aliens. Therefore, United States payors need not withhold any tax on payments made to foreign counterparties. For the United States taxpayer, payments made by a foreign party under the interest rate swap are sourced in the United States under the residence-source rule. The sourcing of income under these rules can be illustrated by the following example:

Example 1:

D is a United States corporation that uses the United States dollar as its functional currency. *F* is a foreign corporation that uses the currency of the country in which it is incorporated as its functional currency. *F* is not engaged in the conduct of a trade or business in the United States. *D* and *F* enter into an interest rate swap under which *F* assumes *D*'s fixed interest rate liability and *D* assumes *F*'s floating-rate liability. If, under the swap, net payments are made by *D* to *F*, the payments will be foreign-source income to *F* and not subject to federal income tax. If the net payments are made by *F* to *D*, the payments constitute United States-source income to *D*.

If a United States taxpayer has a qualified business unit (a separate trade or business that maintains separate books and records) with a principal place of business in a country outside the United States, the source of notional principal contract income for that United States taxpayer is the foreign country if: (1) the qualified business unit is engaged in the conduct of a trade or business in that country, and (2) the notional principal contract income is properly reflected on the books and records of the qualified business unit.ⁿ⁴ Whether a notional principal contract is properly reflected on the books and records of the qualified business unit is a question of fact, with the degree of participation in the negotiation and acquisition of the notional principal contract being considered in this determination. Participation in connection with the negotiation or acquisition of a notional principal contract may be disregarded if the Service determines that a purpose of the participation by the qualified business unit was to affect the source of notional principal contract income.

Example 2:

Assume the same facts as in Example 1, except that *D* engages in business in a foreign country via a qualified business unit, *S*, and *S* enters into the interest rate swap with *F*. *S* uses the United States dollar as its functional currency. If *D* receives net payments under the swap in any taxable year, the income represents foreign-source income for *D*.

If the income derived from an interest rate swap by a foreign taxpayer arises from the conduct of a United States trade or business by the taxpayer, the income is sourced in the United States if it is effectively connected to the conduct of a United States trade or business for purposes of federal income taxation.ⁿ⁵ In determining whether income is effectively connected with the conduct of a trade or business in the United States, the two principal tests are: (1) the asset-use test, i.e., whether the income is derived from assets used in, or held for use in, the conduct of a trade or business in the United States; and (2) the business activities test, i.e., whether the activities of the trade or business conducted in the United States were a material factor in the realization of the income.ⁿ⁶

Example 3:

Assume the same facts as in Example 1, except that *F* is engaged in the conduct of a trade or business in the United States through a branch office that uses the United States dollar as its functional currency. The branch enters into the interest rate swap with *D* in order to hedge its floating-rate interest risk. The branch receives net payments from *D* pursuant to the swap. The income is considered effectively connected income, taxable to *F*.

As stated above, for a United States taxpayer, income from an interest rate swap has its source in the United States. However, that rule applies only to the source of income, not the manner in which expenses or losses should be allocated for source purposes. The concern here is the effect of such expenses and losses on the amount of the taxpayer's foreign tax credit. According to the regulations, a deduction that is definitely related to a class of gross income must be allocated to that class of income.ⁿ⁷ Thus, for the United States taxpayer, expenses and losses produced by notional principal contract transactions are allocated against United States-source income.

If an interest rate swap has significant nonperiodic payments and is treated as two separate transactions consisting of: (1) an on-market, level payment swap, and (2) a loan, the time value component of the loan is recognized as interest for all purposes of the Code.ⁿ⁸ Any payment treated as an interest payment must be allocated and apportioned according to

Temporary Regulations Section 1.861-9T. The concept underlying that regulation is that, in general, money is fungible and that interest expense is attributable to all activities and property of the taxpayer regardless of the specific purpose for incurring the obligation on which the interest in question is paid.ⁿ⁹ Therefore, the aggregate of deductions for interest is considered related to all income-producing activities and assets of the taxpayer, and allocable to all the gross income that the assets generate, have generated, or could reasonably have been expected to generate.ⁿ¹⁰ Therefore, the deemed interest payments are allocated against the taxpayer's United States-source and foreign-source income in proportion to the taxpayer's United States-source and foreign-source assets.ⁿ¹¹

The general source rule for income and expense for United States taxpayers is modified if a taxpayer, other than a financial services entity or dealer in financial products, enters into a transaction involving a derivative financial product that alters the taxpayer's effective cost of borrowing with respect to an actual liability of the taxpayer.ⁿ¹² Any loss incurred in a transaction involving such a financial product is apportioned in the same manner as interest expense, whether or not the financial product is identified as a liability hedge on the taxpayer's books and records.ⁿ¹³ Any gains derived from such a financial product reduce the taxpayer's total interest expense subject to apportionment, but only if the financial product is identified as a liability hedge. The reduction is accomplished by directly allocating interest expense to the income derived from the financial product.ⁿ¹⁴ If the taxpayer fails to identify the financial product as a liability hedge, income is sourced under the general rule. Thus, any gain on the financial product is treated entirely as United States-source income, while any loss on the financial product is subject to allocation.

A taxpayer can identify a financial product as hedging a particular interest-bearing liability (or group of liabilities) by clearly identifying on its books and records on the same day that it becomes a party to the arrangement that the arrangement is a liability hedge.ⁿ¹⁵ (If that identification occurred at a later date, it would be invalid.) In the case of a partial hedge, the identification applies only to the part of the liability that it hedges. If the taxpayer clearly identifies a financial product as a hedge of an interest-bearing asset (or group of assets), the identification creates a rebuttable presumption that the financial product is not one designed to alter the taxpayer's effective cost of borrowing. A taxpayer can identify a hedge as relating to an anticipated liability, provided that the liability is, in fact, incurred within 120 days following the date of identification; gains and losses that accrue prior to the time that the liability is incurred constitute an adjustment to income expense.

Example 4:

X, a United States taxpayer, is not a financial services entity or regular dealer in derivative financial products. X's functional currency is the United States dollar. In 1995, X incurred \$20,000 of interest expense. On January 1, 1995, X entered into an interest rate swap agreement with Y in order to hedge its interest rate exposure with respect to a preexisting floating-rate liability. On the same day, X identified the agreement as a hedge of the liability. Under the agreement, X is required to pay Y an amount equal to a fixed rate of 10 percent on a notional principal amount of \$100,000. Y is required to pay X an amount equal to a floating rate of interest on the same notional principal amount. Assume that the mechanics of the agreement caused Y to make a net payment of \$2,500 to X. Because X identified the swap as a liability hedge, X can effectively reduce its total allocable interest expense for 1995 from \$20,000 to \$17,500 by allocating \$2,500 of interest expense to the swap income. If X had not properly identified the swap as a liability hedge, the net payment would have been U.S.-source income.

Example 5:

Assume the same facts as in Example 4, except that X did *not* properly identify the swap agreement as a liability hedge on January 1, 1995, and that X was required to make a net payment of \$2,500 to Y. Notwithstanding the absence of proper identification, the payment is allocated and apportioned in the same manner as interest expense.

Although *Temporary Regulations Section 1.861-9T(b)(6)* applies only to liability hedges, any expense or loss (to the extent deductible) incurred in a transaction in which the taxpayer secures the use of funds for a period of time is subject

to allocation if the expense or loss is substantially incurred in consideration of the time value of money, that is, is an interest equivalent.ⁿ¹⁶ The following example illustrates this rule in an interest rate swap in which a lump-sum payment is made at the start of the transaction:

Example 6:

On January 1, 1996, X, a domestic corporation with a United States dollar functional currency, entered into a United States, dollar interest rate swap with Y, a domestic counterparty. Under the terms of the agreement, X agreed to pay Y floating interest rate interest with respect to a notional principal amount of \$1 million for a period of five years. In return, Y agreed to pay X a fixed interest rate of 10 percent on the same notional principal amount for the same period of time. On the same day, Y prepaid the fixed leg of the swap by making a lump-sum payment of \$370,000, representing the present value of five \$100,000 swap payments. Because X secured the use of \$370,000 in the transaction, any net swap expense arising from the transaction represents an expense incurred substantially in consideration of the time value of money. Assuming that the lump-sum payment is not characterized a loan from Y to X, and that X must amortize the \$370,000 lump-sum payment under the principles set forth in *Regulations Section 1.446-3(f)*, any net swap expense incurred by X with respect to the transaction (namely, the excess, if any, of X's annual swap payment to Y over the annual amortization of the \$370,000 lump-sum payment taken into income by X) represents an expense equivalent to interest expense.

Although the preceding example presented the case of a lump-sum payment, the rule illustrated in the example also applies to any transaction in which the swap payments are not substantially contemporaneous if the pricing of the transaction is materially affected by the time value of money.

(n35)Footnote 14. Rudnick & Schenck, "The Tax Treatment of Interest Rate Hedges After *Arkansas Best*," 6 *J Taxn of Investments* 22, 30 (1988).

(n36)Footnote 1. *Treas Reg* § 1.513-1(c)(1).

(n37)Footnote 2. The unrelated business income tax was passed primarily because of Congress' concern that tax exemption would give tax-exempt activities a competitive edge vis-a-vis their taxable business counterparts. HR Rep No 2319, 81st Cong, 2d Sess, pt III(E)(1), 36 (1950), reprinted at 1950-2 CB 409.

(n38)Footnote 3. *IRC* § 512(b)(5).

(n39)Footnote 4. It would seem that, unless the IRS were to treat an interest rate swap as a capital asset, the payment could not be considered an "other disposition."

(n40)Footnote 5. *Treas Reg* § 1.512(b)-1(a)(1). The exclusion does not apply to gains or losses from the sale, exchange, or other disposition of any property, or to gains or losses from the lapse or termination of options to buy or sell securities. However, except for dealer property, these are excluded from unrelated business taxable income by *IRC* § 512(b)(5).

(n41)Footnote 6. *Treas Reg* § 1.512(b)-1(a)(2). An organization makes a market in derivative financial products by regularly and actively offering to enter into positions in such products to the public in the ordinary course of business. *Temp Treas Reg* § 1.954-2T(a)(4)(iii)(B).

(n42)Footnote 1. A second concern is whether a domestic payor must withhold tax on any nonperiodic payment treated as interest under the notional principal contract accounting rules. As a general rule, interest payments to foreign taxpayers that can be designated as portfolio interest are not subject to withholding. *IRC* §§ 871(h), 881(c). However, this rule does not apply to interest paid to a 10 percent or greater shareholder, a related controlled foreign corporation, or to a foreign bank on an extension of credit made under a loan agreement entered into in the ordinary course of the bank's business.

(n43)Footnote 2. *Treas Reg* § 1.863-7(b)(1).

(n44)Footnote 3. *IRC* § 988(a)(3)(B). An individual's tax home is defined as such person's home for purposes of *IRC* § 162(a)(2) (relating to the deduction for traveling expenses while away from home). *IRC* § 911(d)(3). If an individual does not have a tax home as so defined, the residence of the individual is the United States if the person is a US citizen or resident alien and a country other than the United States if the person is not a US citizen or resident alien.

(n45)Footnote 4. *IRC* § 988(a)(3)(B)(ii); *Treas Reg* § 1.863-7(a)(2).

(n46)Footnote 5. *Treas Reg* § 1.863-7(a)(3).

(n47)Footnote 6. For a discussion of the taxation of income effectively connected with a US trade or business see § 20.06[2], below.

(n48)Footnote 7. *Treas Reg* § 1.861-8(b)(2).

(n49)Footnote 8. *Treas Reg* § 1.446-3(g)(4).

(n50)Footnote 9. *Temp Treas Reg* § 1.861-9T(a).

(n51)Footnote 10. *Temp Treas Reg § 1.861-9T(a)*.

(n52)Footnote 11. This assumes that the taxpayer's interest payments are denominated in a functional currency. If the payments are denominated in nonfunctional currency, any portion of the deemed interest expense will be allocated against US-source and foreign source income in the manner mentioned, while any amount of currency exchange gain or loss will constitute US-source income or will be allocated against US-source income as specified in *Treas Reg § 1.988-4*.

(n53)Footnote 12. *Temp Treas Reg § 1.861-9T(b)(6)(i), (iv), (vi)*.

(n54)Footnote 13. *Temp Treas Reg § 1.861-9T(b)(6)(iv)(A)*.

(n55)Footnote 14. *Temp Treas Reg § 1.861-9T(b)(6)(iv)(B)*.

(n56)Footnote 15. *Temp Treas Reg § 1.861-9T(b)(6)(iv)(C)*.

(n57)Footnote 16. *Temp Treas Reg § 1.861-9T(b)(1)*.

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.05

§ 9A.05 Commodity Swaps

[1] In General

Producers and users of commodities can hedge their exposure to price risks through commodity swaps. Since July 1989, banks have been allowed to offer commodity swaps in the United States as an alternative to traditional commodity contracts, such as forwards, futures, and options. A commodity swap is a swap in which the notional principal amount is expressed in units of a commodity and the specified index is a commodity index or commodity price index. Typically, one party agrees to make periodic payments equal to a specified fixed price (e.g., an average of the forward prices at the time the swap contract is entered into) multiplied by the notional principal amount, and the counterparty agrees to make periodic payments equal to a specified index (e.g., the spot price on specified dates in the future) multiplied by the notional principal amount.

Example 1:

A manufacturer of corn products that normally purchases corn on the spot market desires to fix the cost of its corn purchases for a period of three years. The manufacturer enters into an agreement with a bank under which it agrees that on each anniversary date of the agreement, it will pay the bank \$2,700,000, representing the price of 1 million bushels of corn at a fixed price of \$2.70 per bushel. The bank agrees to make an annual payment to the manufacturer equal to 1 million bushels at the spot price for corn on the anniversary date of the agreement. If the spot price is below \$2.70 per bushel, the manufacturer will pay the bank the difference between \$2.70 per bushel and the spot price. If the spot price exceeds \$2.70, the bank owes the manufacturer the difference between the two prices. The swap has enabled the manufacturer to fix a price of \$2.70 per bushel for the three-year period. The bank can hedge its risk by entering into a swap transaction with a corn producer, agreeing to pay the producer the fixed price while the producer agrees to pay the spot price.

As discussed in § 9A.03[3], above, the general rule regarding the tax treatment of a nonperiodic payment under a notional principal contract requires that it be recognized over the term of the contract. This is accomplished by allocating the nonperiodic payment in accordance with the forward rates of a series of cash-settled forward contracts that reflect the specified index and the notional principal amount. The following example illustrates this rule in the context of a commodity swap agreement.

n1 On January 1, 1996, *A* enters into a commodity swap agreement with unrelated counterparty *B* under which, for a term of three years, *A* is obligated to make annual payments based on a fixed price of \$2.35 per bushel multiplied by a notional amount of 100,000 bushels of corn. Under that agreement, *B* is obligated to make annual payments equal to the spot price of corn multiplied by the same notional amount. Assume that on January 1, 1996, the price of a one-year forward contract for corn is \$2.40 per bushel, of a two-year forward contract \$2.55 per bushel, and of a three-year forward contract \$2.75 per bushel. To compensate for the below-market fixed price provided in the swap agreement, *A* pays *B* \$53,530 for entering into the swap. *A* and *B* are calendar-year taxpayers.

	Expected Forward Payment	Time Value Component	Principal Component
1996	\$ 5,000	\$ 4,282	\$ 718
1997	20,000	4,225	15,7 75
1998	40,000	2,963	37,0 37
			—
	\$65,000	\$11,470	\$53, 530
			—

The ratable daily portion of the principal component is added to A's periodic payments in computing its net income or net deduction from the commodity swap for each taxable year. The time value components are needed only to compute the principal components, and are otherwise disregarded.

[2] Tax Consequences

[a] Source, Character, and Timing of Payments. For federal income tax purposes, producers and users should consider the source, character, and timing of commodity swap payments. The source of income is significant for foreign tax credit purposes and for determining whether United States withholding tax could be imposed on payments to foreign parties.ⁿ¹ For users, the character of the gain or loss as ordinary or capital is particularly significant. The timing of income or loss recognition on commodity swap payments could depend on the application of the Code provisions providing for realization or deferral.

Under *Regulations Section 1.863-7(b)*, the source of income from a notional principal contract is determined by the taxpayer's residence. Thus, a United States corporation generally will have United States-source income, while a foreign corporation could have foreign-source income *not* subject to United States withholding tax.ⁿ² The preamble material to this regulationⁿ³ specifies that a commodity swap is treated as a notional principal contract for this purpose.

The typical form of a commodity swap acts as a hedge against price fluctuations in the price of the commodity. If the commodity forms part of the inventory of the taxpayer and if the swap is entered into in the normal course of the taxpayer's trade or business to reduce the risk of price changes, any property that is a part of the transaction is *not* a capital asset.ⁿ⁴ Thus, gain or loss realized on the transaction will be ordinary in nature, because there is no capital asset being sold.

[b] Applicability of Straddle and Mark-to-Market Rules. If commodity swaps involve actively traded personal property, the straddle rules of *IRC Section 1092* may apply. Under *IRC Section 1092*, losses on positions in actively traded personal property are deferred to the extent of unrecognized gains in offsetting positions at year-end.ⁿ⁵ However, *IRC Section 1092(e)* provides an exception for any hedging transaction (as defined in *IRC Section 1256(e)*). To avoid the straddle rules, commodity swaps that qualify for the hedging exception should be identified at the outset of the swap as hedging transactions. Similarly, a timely identification of a hedging transaction will preclude application of the mark-to-market rules of *IRC Section 1256*.ⁿ⁶

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.06

§ 9A.06 Equity Swaps

[1] In General

[a] The Typical Equity Swap. In a typical equity swap, one party (also known as the "equity payor" or "short counterparty") transfers stock in a corporation to a counterparty ("equity recipient," "long counterparty," or "floating rate party") for a period of time in exchange for the equity recipient paying the equity payor the income from an alternative investment (e.g., based on LIBOR). The equity recipient is entitled to an amount equal to the dividends on the stock and the amount, if any, by which the value of the stock increases during the transfer period. The equity payor is entitled to the income from the alternative investment plus the amount of any decrease in the value of the stock during the transfer period. The net difference in cash flow (the difference between dividends on the stock and the income from the alternative investment) will generally be made periodically; the payment representing the change in value of the stock will normally be made at maturity of the equity swap.

The transferor retains the voting rights on the transferred shares. The goal of the transferor is diversification for the period of the swap without capital gains taxation. The premise for successfully avoiding capital gains taxation is that no sale and, thus no taxable event, has occurred.

[b] The Equity Index Swap. The equity index swap involves one party who agrees to make periodic payments for a specified term of amounts based on any increase in value during each period of a specified equity index (e.g., Standard & Poor's 500 Index) and amounts equal to dividends paid on that index. The counterparty agrees to make payments of a floating rate of interest keyed to an interest rate index and amounts based on any decrease during the period of the equity index.

[2] Recognition of Gain or Loss

Although the shares are transferred to the equity recipient, the swap does not confer on the equity recipient the right to vote the stock or other ancillary rights of ownership. Thus, it would appear that the swap should not be considered a sale or exchange of the stock, a prerequisite for the realization of gain. However, *IRC Section 1259* changes that apparent result and treats a constructive sale of an appreciated financial position as giving rise to gain, but not loss, on the date of the constructive sale; the gain is taken into account for the taxable year in which the constructive sale takes place.ⁿ¹

An appreciated financial position includes any position with respect to stock if there would be gain were such position

sold, assigned, or otherwise terminated at its fair market value.ⁿ² A constructive sale of an appreciated financial position occurs whenever a taxpayer (or a related person) enters into an offsetting notional principal contract with respect to the same or substantially identical property, unless the contract is for the sale of stock that is not publicly traded and the contract settles within one year after the date the contract is entered into.ⁿ³

Two consequences other than immediate gain recognition flow from the constructive sale. First, proper adjustment must be made in the amount of any gain or loss subsequently realized with respect to the position for any gain taken into account on the constructive sale.ⁿ⁴ Second, the holding period of the position is determined as if the position were originally acquired on the date of the constructive sale.ⁿ⁵

A transaction that otherwise would cause a constructive sale is disregarded if (a) the transaction is closed on or before the 30th day after the close of the taxable year, (b) the taxpayer holds the appreciated financial position throughout the 60-day period after the transaction is closed, and (c) at no time during the 60-day period is the taxpayer's risk of loss with respect to the position reduced because (i) the taxpayer has an option to sell, is under a contractual obligation to sell, or has made (and not closed) a short sale of substantially identical stock or securities, (ii) the taxpayer is the grantor of an option to buy substantially identical stock or securities, or (iii) as prescribed by regulations, the taxpayer has diminished his risk of loss by holding one or more other positions with respect to substantially similar or related property.ⁿ⁶ If a transaction that is closed is reestablished in a position, the exception applies provided the reestablished position is closed on or before the 30th day after the close of the taxable year, and the 60-day holding period and lack of reduced risk requirements are met.ⁿ⁷

If there is a constructive sale of any appreciated financial position, the position is subsequently disposed of, and at the time of the disposition the transaction resulting in the constructive sale of the position is open with respect to the taxpayer or any related person, then, solely for the purposes of determining whether the taxpayer has entered into a constructive sale of any other appreciated financial positions held by the taxpayer, the taxpayer is treated as entering into the transaction immediately after the disposition.ⁿ⁸

For this purpose, an assignment or other termination is treated as a disposition.

A constructive sale does not include a transaction involving an appreciated financial position that is mark to market, including provisions governed by *IRC Section 475* (mark to market for securities dealers) or *IRC Section 1256* (mark to market for futures contracts, options and currency contracts).ⁿ⁹ It also does not include any contract for sale of an appreciated financial position that is not a marketable security (as defined in *IRC Section 453(f)*) if the contract settles within one year after the date it is entered into.

[3] Character of Payments

The net payments made or received during the year are periodic payments accounted for in the manner described in § 9A.03, *above*. The payments will be treated as ordinary income or expense (rather than capital gain or loss), because they will not be made as part of a sale or exchange of property. Any net expense made by a corporation will be deductible under *IRC Section 162* as an ordinary and necessary expense incurred in a trade or business. Net payments made by an individual should be deductible under *IRC Section 212* either as an expense paid or incurred for the production of income (the anticipated income from the equity swap) or for the management, conservation, or maintenance of property held for the production of income (the shares of stock).ⁿ¹

There is no definitive authority governing the tax consequences of the final payment that reflects the change in value of the shares during the equity swap period. The payment could be characterized as a termination payment (a payment made or received to extinguish or assign all or part of the remaining rights or obligations of any party under a notional principal contract)ⁿ² or as a nonperiodic payment (a payment that is not a periodic payment or a termination payment)ⁿ³ Because the final payment is made at the scheduled maturity of the equity swap, it seems more likely that

the payment is a nonperiodic payment.ⁿ⁴

In the accounting for notional principal contracts and interest rate swaps, the regulations provide that a nonperiodic payment must be taken into account over the term of a notional principal contract in a manner that reflects the economic substance of the contract. Any portion of the nonperiodic payment that is allocated to a particular taxable year is taken into account as an item of ordinary income or expense for that year.ⁿ⁵ However, the regulations deal only with nonperiodic payments that are fixed at the inception of the transaction; no provision is made for contingent payments.ⁿ⁶

One possible method of accounting for a contingent final payment would be to resort to general principles of tax accounting. Under the accrual method of accounting, income and expense are generally taken into account when the right to receive a payment, or the liability to make a payment, becomes fixed and the amount thereof can be determined with reasonable accuracy.ⁿ⁷ Under the cash receipts and disbursements method of accounting, the general rule is that all items that constitute gross income are to be included in gross income for the taxable year in which they are actually or constructively received, while expenditures are to be deducted for the taxable year in which they are actually made.ⁿ⁸

In addition, the economic substance of an equity swap is that one party (the equity recipient) has a long position and the other (the equity payor) a short position in the shares and alternative investment, with the cash settlement of those positions taking place at the end of the transactions. In true long and short positions, gains and losses are taxed when the positions are closed.ⁿ⁹ The principle that tax recognition should reflect economic substance suggests that gain or loss resulting from the equity swap should likewise be accounted for when the long and short positions in the swap are closed.

A second possibility would be to account for the final contingent payment via a method similar to the general rule applicable to fixed nonperiodic payments in a notional principal contract, namely to estimate the amount of the payment and amortize it over the term of the contract.ⁿ¹⁰ At the conclusion of the term of the swap, the difference between the amortized amounts and the actual final payment would be taken into account.

[4] Collateral Tax Problems--Unrelated Business Income Tax

Any periodic payments made to a tax-exempt party to an equity swap will not be treated as unrelated business taxable income unless the entity is acting as a broker, dealer, or market maker in derivative financial products.ⁿ¹ Gain realized on a sale of one of the positions in the swap will generally be excluded from unrelated business taxable income by *IRC Section 512(b)(5)*.ⁿ² However, if the entity receives a termination payment, the exclusion will remain only if the payment can be characterized as capital gain under *IRC Section 1234A* and fall within the ambit of *IRC Section 512(b)(5)*.ⁿ³

[5] Collateral Tax Problems--Foreign Taxpayers and Foreign Income

The income source rules discussed in connection with interest rate swapsⁿ¹ should apply with equal force to equity swaps. The definition of notional principal contract contained in *Regulations Section 1.863-7(a)(1)* is identical to the definition found in *Regulations Section 1.446-3(c)*. The latter provision includes equity swaps and equity index swaps as examples of notional principal contracts. However, when those regulations were proposed, the following language appeared in the preamble:

The Internal Revenue Service is currently considering whether equity and equity index swaps should be treated in the same manner as interest rate and commodity swaps for sourcing and withholding tax purposes.ⁿ²

The *IRC Section 446* notional principal contract regulations were proposed after adoption of the final *IRC Section 863* notional principal contract regulations, leaving the question of sourcing and withholding with respect to equity swaps in

doubt.

[6] Collateral Tax Problems--Dividends Received Deduction

Two questions arise in connection with the dividends received deduction:

- (1) Can a corporate equity payor claim the dividends received deduction if it is obligated to pay over an amount equivalent to those dividends to the equity recipient?
- (2) If the equity recipient is a corporation, is the payment from the equity payor a dividend or some other form of income?

Under *IRC Section 243(a)*, a corporate shareholder is allowed a deduction of at least 70 percent of the amount received as dividends from a domestic corporation.ⁿ¹ *IRC Section 245* permits a similar deduction for the United States-source portion of dividends from a foreign corporation, other than a foreign personal holding company or passive foreign investment company, if the domestic corporation owns at least 10 percent of the stock of the foreign corporation.

IRC Section 246(c) disallows the dividends received deduction in two instances that may be relevant to equity swaps. The first denies the deduction in respect of any dividend on stock held by the taxpayer for 45 days or less (90 days in the case of certain preferred stock dividends).ⁿ² The holding period will be reduced (according to regulations to be prescribed) for any period in which:

- (1) the taxpayer has an option, is under a contractual obligation to sell, or has made (and not closed) a short sale of substantially identical stock or securities;
- (2) the taxpayer is the grantor of an option to buy substantially identical stock or securities (a "put"); or
- (3) under regulations to be prescribed by the Service, the taxpayer's risk of loss has been diminished by the taxpayer holding one or more positions with respect to substantially similar or related property.ⁿ³

Although an equity swap consists of long and short positions, it is not a true short sale. In a short sale, the seller sells stock that he does not own. Because the short seller does not own any stock at the time of the short sale except in the case of a short sale against the boxⁿ⁴ (but rather borrows the stock), he must later repurchase the stock to close out the sale but suffers a loss if the price rises. The short seller makes a profit if the stock's price falls in the time between selling short and closing out the sale. Moreover, the equity payor should not be treated as holding an option to sell or as the grantor of an option to buy substantially identical stock or securities. Finally, the equity payor does not appear to hold another position that diminishes risk with respect to similar or related property. The definitive answer must await the issuance of regulations.

The second instance, and the one that appears to have a greater impact on the equity payor, precludes the deduction to the extent that the taxpayer is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to positions in substantially similar or related property.ⁿ⁵ The issue is whether the payment by the equity payor to the equity recipient of an amount equal to the dividends on the stock is the type of payment contemplated by the disallowance provision. According to the legislative history, the disallowance rule is designed to prevent the double tax benefit that would arise if the taxpayer were allowed to claim the dividends received deduction and an ordinary and necessary business expense deduction under *IRC Section 162*.ⁿ⁶ Allowing the corporate equity payor to claim the dividends received deduction would produce that double tax benefit.

The dividend equivalent amount received by the equity recipient cannot qualify for the dividends received deduction. The equity recipient is not a shareholder of the distributing corporation.

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.07

§ 9A.07 Foreign Currency Swaps

[1] Economic Definition and Uses

Foreign currency swaps involve the exchange of the two parties' periodic payments in different currencies. A simple currency swap consists of two corporations from different countries exchanging their obligations across different currencies. For example, if a United States corporation wants pounds, and a British corporation wants United States dollars, the United States party can loan dollars to the British counterparty, and the British party can loan pounds to the United States party. Over the term of the swap agreement, the United States party makes payments in pounds to the British party for interest on the pound loan, and the British party makes payments in dollars to the United States party for interest on the dollar loan. At the end of the agreed-upon terms of the swap contract, the United States party pays the British party the principal amount in pounds, and the British party pays the United States party the principal amount in dollars.ⁿ¹

One form of foreign currency swap involves a loan in one currency (e.g., Deutsche marks) and the simultaneous purchase or sale of a second currency (e.g., United States dollars), normally via a forward contract--specifically, a private contract to purchase the currency at a future date.

Example:

A bank has deposits on which it must pay interest in Deutsche marks. It has assets that produce income in United States dollars. This creates a foreign currency risk that can be avoided by the bank exchanging marks for dollars in the spot market and, at the same time, entering into a forward contract to sell dollars at a specified future date. The transaction fixes the selling price for the acquired dollars and eliminates the chance of a loss that would occur by a decrease in the value of the dollar as against the mark.

A foreign currency swap can also be combined with an interest rate swap, sometimes referred to as a complex swap. A party that has borrowed in the fixed-rate market in one currency enters into a transaction with a counterparty who has borrowed in the floating-rate market in a different currency. This goal of this transaction is reduction of interest rate risk and foreign exchange rate risk.

A foreign currency swap can also provide inexpensive term financing for a corporation's foreign subsidiaries and affiliates in local currency. A United States parent can provide local currency funding by financing itself in United States dollars, entering into a foreign currency swap, and then lending the foreign currency to the subsidiary or affiliate

at a lower cost than could be achieved in the foreign capital or money market by the foreign entity.ⁿ²

Foreign currency swaps can also be used as an arbitrage mechanism. A company that has a competitive advantage in the fixed-interest rate Deutsche mark capital market, but prefers floating rate United States dollars, could reduce its borrowing costs through a currency swap. The company can borrow in the fixed-rate Deutsche mark capital market and then, through a currency swap, transform the fixed-rate Deutsche marks into floating-rate United States dollars. Obtaining funds in this manner may be cheaper than obtaining the same funds directly in the United States financial markets.ⁿ³

[2] Tax Definition

For tax purposes, a currency swap is defined as a contract involving different currencies between two or more parties to (1) exchange periodic interim payments on or prior to maturity of the contract, and (2) exchange the swap principal amount upon maturity of the contract.ⁿ¹ The swap principal amount is an amount of two different currencies that, under the terms of the currency swap, is used to determine the periodic interim payments in each currency and is exchanged upon maturity of the swap.ⁿ²

An exchange of periodic interim payments is an exchange of one or more payments in one currency specified by the contract for one or more payments in a different currency specified in the contract where the payments in each currency are computed by reference to an interest index applied to the swap principal amount.ⁿ³ A currency swap contract must clearly indicate the periodic interim payments, or the interest index, used to compute the payments, in each currency.

[3] Gain or Loss Recognition

Because foreign currency is treated as personal property, rather than money, for federal income tax purposes, fluctuations in the dollar value of foreign currency in a United States taxpayer's hands result in potentially taxable exchange gain or loss. The amount of any income or loss from a foreign currency swap is generally treated as exchange gain or loss (and not as interest income or expense).ⁿ¹ However, this treatment applies solely for the purpose of determining the realization, recognition, and amount of exchange gain or loss with respect to the currency swap, and not for purposes of determining the source of the gain or loss, or for characterizing the gain or loss as interest. The source of exchange gain or loss is determined by reference to the residence of the taxpayer.ⁿ²

Exchange gain or loss is characterized as ordinary gain or loss and not capital gain or loss.ⁿ³ In addition, exchange loss realized by the holder of a tax-exempt state or local bond is treated as an offset to and reduces total interest income received with respect to the bond.ⁿ⁴ Finally, no gain or loss is recognized by the taxpayer in any hedging transaction in which the currency swap is integrated with certain debt instruments.ⁿ⁵

If a taxpayer enters into a hyperinflationary currency swap after February 14, 2000, the taxpayer realizes exchange gain or loss for the taxable year with respect to the instrument determined by reference to the change in exchange rates between (i) the later of the first day of the taxable year, or the date the instrument was entered into by the taxpayer, or (ii) the earlier of the last day of the taxable year, or the date the instrument is disposed of or otherwise terminated.ⁿ⁶ The rule does not apply if a qualified business unit uses the United States dollar approximate separate transactions method of accounting (DASTM).ⁿ⁷

[4] Timing and Computation of Periodic Interim Payments

As a general rule, the timing and computation of the periodic interim payments must be determined by treating (1) payments made under the swap as payments made pursuant to a hypothetical borrowing that is denominated in the currency in which payments are required to be made (or are determined with reference to) under the swap; and (2) payments received under the swap as payments received pursuant to a hypothetical loan denominated in the currency in

which the payments are received (or are determined with reference to) under the swap.ⁿ¹ The hypothetical issue price of the hypothetical borrowing and loan is the swap principal amount. The hypothetical stated redemption price at maturity is the total of all payments (excluding any exchange of the swap principal at the inception of the contract) provided under the hypothetical borrowing or loan other than periodic interest payments under the principles of *IRC Section 1273*. For purposes of determining economic accrual under the currency swap, the number of hypothetical interest compounding periods of the hypothetical borrowing and loan must be determined pursuant to the semiannual compounding convention unless the currency swap contract indicates otherwise. For purposes of determining the timing and amount of the periodic interim payments, the general economic accrual principles regarding the amortization of interestⁿ² apply to the hypothetical interest income and expense, but not to the time when principal is deemed paid on the hypothetical loan and borrowing.

The amount treated as exchange gain or loss with respect to the periodic interim payments for the taxable year equals the amount of hypothetical interest income and exchange gain or loss attributable to the interest income from the hypothetical borrowing and loan for the year minus the amount of hypothetical interest expense and exchange gain or loss attributable to the interest expense from the hypothetical borrowing and loan for the year.

Example 1:

ⁿ³ A is an accrual-method corporate calendar-year taxpayer with the dollar as its functional currency. On January 1, 1995, A enters into a currency swap with B, a United Kingdom corporation, under which (1) the principal amount is \$150,000 and 100,000 British pounds (£)(the equivalent of \$150,000 on the effective date of the contract assuming a spot rate of £1 = \$1.50 on January 1, 1995); (2) A will make payments equal to 10 percent of the dollar principal amount on December 31, 1995 and December 31, 1996; (3) B will make payments equal to 12 percent of the pound principal amount on December 31, 1995 and December 31, 1996; and (4) on December 31, 1996, A will pay B the \$150,000 principal amount and B will pay A the £100,000 principal amount. Assume that the spot rate is £1 = \$1.40 on December 31, 1995 and £1 = \$1.30 on December 31, 1996. Assume further that the average rate for 1995 is £1 = \$1.45, and for 1996 is £1 = \$1.35.

Solely for determining the realization of gain or loss, A will treat the dollar payments made by it as payments made pursuant to a dollar borrowing with an issue price of \$150,000, a stated redemption price of \$150,000, and a yield to maturity of 10 percent. A will treat the pound payments received as payments received pursuant to a pound loan of £100,000, a stated redemption price of £100,000, and a yield to maturity of 12 percent. Under *Regulations Section 1.988-2(b)*, A is required to compute hypothetical accrued pound interest at the average rate for the accrual period and then determine exchange gain or loss on the day payment is received with respect to the accrued amount. Accordingly, A will accrue \$17,400 in 1995 (£12,000 x \$1.45) and \$16,200 (£12,000 x \$1.35) in 1996. A will also compute hypothetical exchange loss of \$600 on December 31, 1995 (£12,000 x \$1.40) less (£12,000 x \$1.45), and hypothetical exchange loss of \$600 on December 31, 1996 (£12,000 x \$1.30) less (£12,000 x \$1.35). All the hypothetical interest income and exchange loss are characterized and sourced as exchange gain or loss. In addition, A is treated as having paid \$15,000 (\$150,000 x 10 percent) of hypothetical interest on December 31, 1995, and again on December 31, 1996. These hypothetical interest payments are characterized and sourced as exchange loss. Therefore, A will have a net exchange gain of \$1,800 (\$17,400 minus \$600 minus \$15,000) with respect to the periodic interim payments in 1995 and a net exchange gain of \$600 (\$16,200 minus \$600 minus \$16,200) in 1996.

Example 2:

ⁿ⁴ C is an accrual method calendar-year corporate taxpayer with the dollar as its functional currency. On January 1, 1995, when the spot rate is £1 = \$1.50, C enters into a currency swap contract with D, a United Kingdom corporation under which C agrees to make and receive the following payments:

1-9A Taxation of Securities Transactions § 9A.07

Date	C Pays	D Pays
December 31, 1995	\$ 15,000	£ 12,000
December 31, 1996	\$ 41,040	£ 12,000
December 31, 1997	\$ -0-	£ 12,000
December 31, 1998	\$150,000	£112,000

C must treat the dollar periodic payments under the swap as made pursuant to a hypothetical dollar borrowing with an issue price of \$150,000 and a stated redemption price at maturity of \$206,040. The amount of hypothetical interest expense must be amortized in accordance with economic accrual. Thus, D must include and C must deduct periodic interim payments as follows:

	Amount Taken into Account	Adjusted Issue Price
December 31, 1995	\$ 15,000	\$150,000
December 31, 1996	\$ 15,000	\$123,960
December 31, 1997	\$ 12,400	\$136,360
December 31, 1998	\$ 13,640	

[5] Timing and Determination of Exchange Gain or Loss With Respect to the Swap Principal Amount

Exchange gain or loss with respect to the swap principal amount is realized on the day the units of swap principal are exchanged, that is, on the maturity of the contract.ⁿ¹ The gain or loss is determined by subtracting the value on that date of the units of swap principal paid from the value of the units of swap principal received.ⁿ²

Example 3:

Assume the same facts as in Example 1. A will realize an exchange loss of \$20,000 with respect to the exchange of the swap principal amount on December 31, 1996. This is determined by subtracting the units of swap principal paid (\$150,000) from the units of swap principal received (£100,000 x \$1.30 = \$130,000).

Example 4:

Assume the same facts as in Example 2. Gain or loss with respect to the principal payments exchanged on December 31, 1998 is determined on that date, notwithstanding that under the general principles regarding amortization of interest, \$206,040 would have been regarded as a payment of principal on December 31, 1996.

[6] Off--Market Currency Swaps

An "off-market currency swap" is a swap under which the present value of the payments to be made is not equal to that of the payments to be received on the day that the taxpayer enters into or acquires the contract (absent the swap premium or discount). In general, the values will not be equal if the swap exchange rate (the single rate stated in the contract at which the swap principal amounts are determined) is not the spot rate, or the interest indices used to compute the periodic interim payments do not reflect current values, on the day that the taxpayer enters into or acquires the currency swap.ⁿ¹

If a taxpayer that enters into or acquires a currency swap pays a premium to enter into or acquire a currency swap ("swap premium"), or enters into or acquires the currency swap at a discount ("swap discount"), in order to make the

present values of the amounts to be paid equal to the amounts to be received, the premium or discount is amortized in a manner that places the taxpayer in the same position it would have been in had the taxpayer entered into a currency swap under which the present value of the payments to be paid equal the payments to be received. To accomplish this:

- (1) the amount of swap premium or discount attributable to the difference between the swap exchange rate and the spot rate on the date the contract is entered into or acquired is taken into account as income or expense on the date the swap principal amounts are taken into account; and
- (2) the amount of swap premium or discount attributable to the difference in values of the periodic payments are amortized in a manner consistent with economic accrual principles.ⁿ² Any amount taken into account is treated as exchange gain or loss.

Example 5:

ⁿ³ *E* is a calendar-year accrual method corporate taxpayer with the dollar as its functional currency. On January 1, 1995 it enters into a three-year currency swap contract with *F*, a Swiss corporation. The swap principal amount is \$100,000 and the Swiss franc equivalent of such amount is Sf200,000, translated at the swap exchange rate of \$1 = Sf2. There is no initial exchange of the swap principal amount. The interest rates used to compute the periodic interim payments are 10 percent compounded annually for the United States dollar payments and 5 percent compounded annually for the Swiss franc payments. Assume that the average rate for 1995 and the spot rate on December 31, 1995 is \$1 = Sf2.50.

On December 31, 1995, *E* will pay *F* \$10,000 (10 percent of \$100,000), and *F* will pay *E* Sf10,000 (5 percent of Sf200,000). The payments made and received by *E* will produce an exchange loss for *E* of \$6,000 (\$10,000 loss from the periodic interim payment made to *F* less \$4,000 of gain, the value of Sf10,000 received from *F*).

On January 1, 1996, *E* transfers the rights and obligations under the swap contract to *G*, an unrelated calendar-year accrual method corporation that has the dollar as its functional currency. On January 1, 1996, the exchange rate is \$1 = \$2.50, the relevant dollar interest rate is 8 percent compounded annually, and the relevant Swiss franc interest rate is 5 percent compounded annually. Because of the change in exchange and interest rates, the agreement between *E* and *G* to transfer the currency swap requires *E* to pay *G* \$23,560.

E treats the payment as an exchange loss that can be deducted in 1996. The loss is treated as a United States source loss because *E* is a domestic corporation.

For *G*, the portion of the \$23,560 discount that is attributable to the change in exchange rates (\$20,000) is taken into account on December 31, 1997, the date that the swap principal amounts are exchanged. This amount is the present value (discounted at 10 percent, the rate under the currency swap contract used to compute the dollar periodic interim payments) of the financial asset required to compensate *G* for the loss in value of the hypothetical Swiss franc loan resulting from the change in exchange rates between January 1, 1995 and January 1, 1996. This amount is determined by assuming that interest rates did not change from the date that the swap was originally entered into (January 1, 1995), but that the exchange rate is \$1 = Sf2.50. Under this assumption, a taxpayer undertaking the obligation to pay dollars under the currency swap on January 1, 1996, would agree to pay only \$8,000 for Sf10,000 on December 31, 1996 and \$88,800 for Sf210,000 on December 31, 1997. Thus, *G* needs \$2,000 on December 31, 1996 and \$22,000 on December 31, 1997 to compensate for the amount of dollar payments *G* is required to make in exchange for the Swiss francs received on December 31, 1996 and December 31, 1997. The present value of \$2,000 on December 31, 1996 and \$22,000 on December 31, 1997, discounted at the rate for United States dollar payments of 10 percent is \$20,000 (\$1,820 and

\$18,180).

G is also required to amortize the portion of the \$23,560 discount attributable to changes in interest rates under principles of economic accrual over the term of the currency swap. The amount of the discount attributable to those changes (assuming that exchange rates have not changed) is the present value (\$3,560) of the excess (\$2,000 in 1996 and \$2,000 in 1997) of the periodic interim payments G is required to make under the currency swap agreement (\$10,000 in 1996 and \$10,000 in 1997) over the amount that G would be required to pay if the currency swap agreement reflected current interest rates on the date that G acquired the swap contract (\$8,000 in 1996 and \$8,000 in 1997). Under principles of economic accrual, G will include in income, \$1,715 on December 31, 1996, the amount that, when added to the interest (\$285) on \$3,560 computed at the 8 percent rate on the date that G acquired the swap will equal the \$2,000 needed to compensate G for the change in interest rates between January 1, 1995 and January 1, 1996. G will also include in income \$1,850 on December 31, 1997, the amount that when added to the interest (\$150) on the \$1,845 remaining balance of the \$3,560 payment, computed at 8 percent, will equal the \$2,000 needed to compensate G for the change in interest rates.

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.08

§ 9A.08 Interest Rate Caps, Floors and Collars

[1] Definitions and Uses

An interest rate cap is a notional principal contract that generally involves an initial cash payment by one party to a counterparty in exchange for an agreement by the counterparty to make cash payments at specified future dates equal to the product of a notional principal amount and the excess, if any, of a specified interest rate index over a fixed interest rate (the cap rate). In other words, the seller of an interest rate cap agreement receives an initial cash payment and becomes obligated to make cash payments in the future if and when interest rates under the specified index *exceed* the cap rate. Typically, borrowers use interest caps to limit interest rate exposure on the costs of borrowing funds under an adjustable rate loan.

An interest rate floor is the converse of an interest rate cap. It provides that one party will make payments equal to the excess of a fixed interest rate over the specified interest rate index. The seller of the interest rate floor receives an initial cash payment and becomes obligated to make cash payments in the future if and when interest rates under the specified index fall *below* a fixed interest rate (the floor rate). Typically, lenders buy interest rate floors to limit interest rate exposure on earnings from funds loaned at an adjustable rate. Borrowers may sell interest rate floors to receive the premium and so reduce interest rate costs if interest rates do not fall below the floor rate.

An interest rate collar results from the combination of a cap and a floor. In a collar transaction, a party purchases a cap and simultaneously sells a floor, or purchases a floor and simultaneously sells a cap. Ordinarily, the cap and the floor are based on the same notional principal amount and specified index.

[2] Accounting for Interest Rate Caps and Floors

[a] Premium Amortized Using General Rule. As a general rule, a payment to purchase or sell a cap or a floor must be recognized over the term of the agreement by allocating it in accordance with the prices of cash-settled option contracts that reflect the specified index and notional principal amount.ⁿ¹ For purposes of this allocation, the option pricing used by the parties to determine the total amount paid for the cap or floor will be respected, if reasonable. Only the portion of the purchase price that is allocable to the option contract or contracts that expire during a particular period is recognized for that period. Thus, straight-line or accelerated amortization of a cap or floor premium is normally not permitted.

Example 1:

n2 On January 1, 1996, when LIBOR is 8 percent, *L* pays unrelated party *K* \$600,000 for a contract that obligates *K* to make a payment to *L* each quarter equal to one-quarter of the excess, if any, of three-month LIBOR over 9 percent with respect to a notional principal amount of \$25 million. Both *K* and *L* are calendar year taxpayers. *K* provides *L* with a schedule of allocable premium amounts indicating that the cap was priced according to a reasonable variation of the Black-Scholes option pricing formula and that the total premium is allocable to the following periods

Pricing allocation

199 \$ 55,000

6

199 225,000

7

199 320,000

8

\$600,000

The Black-Scholes model is recognized in the financial industry as a standard technique for pricing interest rate cap agreements. Therefore, because *K* has used a reasonable option pricing model, the schedule generated by *K* is consistent with the economic substance of the cap, and may be used by both *K* and *L* for calculating their ratable daily portions of the cap premium. *K* recognizes the ratable daily portion of the cap premium as income in the amounts and taxable years determined under the pricing allocation set forth in the preceding paragraph; *L* recognizes the ratable daily portion as a deduction in the same amounts and taxable years.

Any periodic payments under the cap agreement (payments by *K* to *L* because LIBOR exceeds 9 percent) are included in the parties' net income or net deduction from the contract according to the accounting rules for periodic payments discussed in § 9A.03[2].

Example 2:

n3 The facts are the same as in Example 1, except that the cap is purchased by *L* on November 1, 1995. The first determination under the cap agreement is January 1, 1996 (the last day of the first quarter to which the contract relates). LIBOR is 9.1 percent on December 31, 1995, and 9.15 percent on January 31, 1996.

K and *L* recognize \$9,192 (61 days/365 days x \$55,000) as the ratable daily portion of the nonperiodic payment for 1995, and include that amount in their net income or net deduction from the contract for 1995. If *K*'s pricing model allocated the cap premium to each quarter covered by the contract, the ratable daily portion would be 61 days/92 days multiplied by the premium allocated to the first quarter.

Because the amount of the January 31, 1996 payment is not determinable at the end of 1995 because it is based on the value of the specified index (LIBOR) on January 31, 1996, *K* and *L* calculate the payments using LIBOR as of December 31, 1995. *L* recognizes as income the ratable daily portion of the presumed payment of \$6,250 (1/4 x .1 percent x \$25 million), or \$4,144 (61 days/92 days x \$6,250). *K* reports \$5,048 of net income from the contract for 1995 (\$9,192-\$4,144); *L* reports a net deduction from the contract of \$5,048 for 1995.

On January 31, 1996, *K* pays *L* \$9,375 ($1/4 \times .15$ percent $\times$ \$25 million) under the terms of the cap agreement. For purposes of determining their net income or net deduction from the contract for the year ended December 31, 1996, *K* and *L* must adjust their respective net income and net deduction by \$2,072 ($61 \text{ days}/92 \text{ days} \times [\$9,375 \text{ actual payment under the cap on January 31, 1996, less } \$6,250 \text{ presumed payment under the cap on December 31, 1995}]$).

[b] Alternative Amortization Method for Hedges.

Solely for purposes of determining the timing of income recognition and the taking of deductions, if a cap or floor is entered into primarily to reduce risk with respect to a specific debt instrument or group of instruments held or issued by the taxpayer, the taxpayer can amortize a payment to purchase or sell the cap or floor using an alternative method, adjusted as appropriate to take into account increases or decreases in the notional principal amount.ⁿ⁴ The alternative methods may not be used by a dealer in notional principal contracts for caps or floors entered into or acquired in its capacity as a dealer.ⁿ⁵

[i] Upfront Payments. A premium paid upfront for a cap or a floor may be amortized using the level payment method described in § 9A.04[5].ⁿ⁶

Example 3:

ⁿ⁷ The facts are the same as in Example 1, except that the cap provides for annual payments by *K* and is entered into by *L* primarily to reduce risk with respect to a debt instrument issued by *L*. *L* elects to amortize the cap premium using the alternative level payment method. Accordingly, *L* amortizes the cap premium by assuming that the \$600,000 is repaid in three equal payments of \$241,269, assuming a discount rate of 10 percent. Each payment is divided into a time value component and a principal component:

	Level Payment	Time Value Component	Principal Component
1996	\$241,269	\$ 60,000	\$181,269
1997	241,269	41,873	199,396
1998	241,269	21,934	219,335
	\$723,807	\$123,807	\$600,000

The net of the ratable daily portions of the principal component and the payments, if any, received from *K* comprise *L*'s annual net income or net deduction from the cap. The time value components are needed only to compute the ratable daily portions of the cap premium, and otherwise are disregarded.

[ii] Other Nonperiodic Payments Related to Caps and Floors. Nonperiodic payments on a cap or floor other than an upfront payment are amortized by treating the contract as if it provided for a single upfront payment (equal to the present value of the nonperiodic payments) and a loan between the parties.ⁿ⁸ The discount rate (or rates) used in determining the deemed upfront payment and the time value component of the deemed loan is the same as the rate (or rates) used in the level-payment method. The single upfront payment is then amortized under the level-payment method. The time value component of the loan is not treated as interest, but, together with the amortized amount of the deemed

upfront payment, is treated as a periodic payment. If both parties to the cap or floor make nonperiodic payments, the calculation is done separately for the nonperiodic payments made by each party.

Example 4:

n9 Assume the same facts as in Example 3, except that *L* agrees to pay for the cap in three level installments of \$241,269 (a total of \$723,807) on December 31, 1996, 1997, and 1998. The present value of the three payments, discounted at 10 percent, is \$600,000. For purposes of amortizing the cap premium under the alternative method for nonperiodic payments that are not upfront payments, *L* is treated as having paid \$600,000 for the cap on January 1, 1996, and as borrowing \$600,000 from *K* to be repaid in three annual installments of \$241,269. The time value component of the loan is computed as follows:

	Loan Balance	Time Value Component	Principal Component
1996	\$600,000	\$ 60,000	\$181,269
1997	418,731	41,873	199,396
1998	219,335	21,934	219,335
		\$123,807	\$600,000

L is treated as making periodic payments equal to the amortized principal components from a \$600,000 cap paid in advance (as described in Example 3), increased by the time value components of the \$600,000 loan, a total of \$241,269 each year. The time value components of the \$600,000 loan are included in the periodic payments made by *L*, but are not characterized as interest income or expense. The effect of the alternative method in this situation is to allow *L* to amortize the cap premium in level installments, the same way it is paid. The net of the ratable daily portions of *L*'s deemed periodic payments and the payments, if any, received from *K* comprise *L*'s net income of deduction from the cap.

[iii] Other Nonperiodic Payments Related to Collars. A taxpayer can also treat a cap and a floor that make up a collar as a single notional principal contract and amortize the net nonperiodic payment to enter into the cap and floor over the term of the collar in accordance with the alternative methods prescribed above for caps and floors.ⁿ¹⁰

In accounting for swaps, if a taxpayer reduces risk with respect to the swap by hedging the swap, the taxpayer cannot use an alternative method of accounting for nonperiodic payments. The same rule holds true for interest rate caps and floors.

Example 5:

On July 1, 1996, *S* sells to unrelated counter party *T* three cash settlement European-style put options on Eurodollar time deposits with a strike rate of 9 percent. The options have exercise dates on January 1, 1997, January 1, 1998, and January 1, 1999, respectively. If LIBOR exceeds 9 percent on any of the

exercise dates, *T* will be entitled, by exercising the relevant option, to receive from *S* an amount that corresponds to the excess of LIBOR over 9 percent times \$25 million. *T* pays *S* \$650,000 for the three options. Assume further that *S* is related to *L*, the cap purchaser in Example 1.

S's option agreements with *T* reduce risk with respect to *L*'s cap agreement with *K*. Therefore, *L* cannot use the alternative methods to amortize the premium paid under the cap agreement, but must do so under the general rule described above. The method that *K* can use to account for its agreement with *L* is not affected by the treatment of *L*.

[3] Character of Interest Cap and Floor Payments

The discussion of the character of interest rate swap payments noted that payments made under the notional principal contract are not compensation for the use or forbearance of money, and, thus, could not be treated as interest.ⁿ¹ A second interest-negating factor is the lack of an existing, unconditional, and legally enforceable obligation, that is, an indebtedness.ⁿ² The premium paid to purchase a cap or floor is not the result of an indebtedness. Moreover, any obligation to make payments during the term of the cap or floor agreement is contingent upon interest rates relevant to the fixed rate at the dates specified in the agreement.ⁿ³

The interest swap discussion also noted that payments under the swap might be treated as financial income or expense, and, therefore, constitute ordinary income and deductions. The same analysis applies to caps and floors. Finally, it was asserted that payments made pursuant to an interest rate swap should not be treated as giving rise to capital gain or loss because of the absence of a sale or exchange. The same holds true for interest rate caps and floors.

[4] Collateral Tax Consequences--Source of Payments and Unrelated Business Income Tax

The question of whether payments made pursuant to a notional principal contract should be treated as United States-source payments is discussed in § 9A.04[7], above. Because a cap or floor agreement is a notional principal contract, the rules discussed in that section applies here.

A tax-exempt entity that enters into an interest rate cap or floor agreement might have to face the issue of whether any payments received under the agreement constitute unrelated business taxable income. See § 9A.04[6], above.

[5] Collateral Tax Consequences--Hedging and Straddle Transactions

IRC Section 1221(a)(7) defines a hedging transaction as one that a taxpayer normally enters into in the normal course of the taxpayer's trade or business primarily to manage the risk of interest rate price or currency fluctuations with respect to borrowings made or to be made, or ordinary obligations incurred, or to be incurred, by the taxpayer.ⁿ¹ The first consequence is that property that is part of the hedging transaction is not a capital asset.ⁿ²

A second consequence is that if the interest rate cap or floor is a hedging transaction because it reduces risk, the transaction will not be subject to the loss deferral rules of *IRC Section 1092* applicable to straddles or to the mark-to-market rules of *IRC Section 1256*.ⁿ³

CHAPTER 9A Notional Principal Contracts--Financial Derivatives

1-9A Taxation of Securities Transactions § 9A.09

§ 9A.09 Termination Payments

[1] Defining and Accounting Termination Payments

A payment made or received to extinguish or assign all or a proportionate part of the remaining rights and obligations of any party under a notional principal contract is a termination payment to the party making the payment and the party receiving it.ⁿ¹ Any of the following constitutes a termination payment:

- (1) a payment made between the original parties to the contract (an extinguishment);
- (2) a payment made between one party to the contract and a third party (an assignment);
- (3) any gain or loss realized on the exchange of one notional principal contract for another; or
- (4) any economic benefit that is given or received by a taxpayer in lieu of a termination payment.

Where one party assigns its remaining rights and obligations to a third party, the original nonassigning party realizes gain or loss if the assignment results in a deemed exchange of contracts and a realization event under *IRC Section 1001*.

Except as otherwise provided (e.g., in *IRC Section 453* governing installment payments and *IRC Section 1092*, the loss deferral rules for straddles), a party to a notional principal contract recognizes a termination payment in the year the contract is extinguished, assigned, or exchanged.ⁿ² When the termination payment is recognized, the party also recognizes any other payments that have been made or received pursuant to the notional principal contract, but that have not been recognized. If only a proportionate part of a party's rights and obligations is extinguished, assigned, or exchanged, only that proportion of the unrecognized payment is recognized.

A termination payment made or received by an assignee of a notional principal contract is treated as a nonperiodic payment for the notional principal contract that is in effect after the assignment and is recognized by the assignee under the rules relating to nonperiodic payments.ⁿ³

A payment is not a termination payment if it is made or received by a party in exchange for assigning all or a portion of one leg of a notional principal contract at a time when a substantially proportionate amount of the other leg remains

unperformed and unassigned.ⁿ⁴ The payment is either an amount loaned, an amount borrowed, or a nonperiodic payment, depending on the economic substance of the transaction to each party. This last stated rule applies whether or not the original notional principal contract is terminated as a result of the assignment.

[a] Termination by Extinguishment

Example 1:

ⁿ⁵ On January 1, 1996, A enters into an interest rate swap agreement with unrelated counterparty B under which, for a term of seven years, A is obligated to make annual payments based on 10 percent and B is obligated to make semi-annual payments based on LIBOR and a notional principal amount of \$100 million. A and B are calendar year taxpayers. On January 1, 1998, when the fixed rate on a comparable LIBOR swap has fallen to 9.5 percent, A pays B \$1,895,393 to terminate the swap.

The payment from A to B is a termination payment because it extinguishes the swap contract. Therefore, in 1998, A recognizes a loss of \$1,895,393 while B recognizes a gain of \$1,895,393.

[b] Termination by Assignment

Example 2:

ⁿ⁶ The facts are the same as in Example 1, except that on January 1, 1998, A pays unrelated party C \$1,895,393 to assume all of A's rights and obligations under the swap with B. In return for this payment, C agrees to pay 10 percent of \$100 million annually to B and to receive LIBOR payments from B for the remaining five years of the swap.

The payment from A to C is an assignment and, thus, a termination payment. A recognizes a loss of \$1,895,393 in 1998. Whether B also has a termination payment with respect to the payment from A to C is determined under *IRC Section 1001*.

The assignment payment that C receives from A is a nonperiodic payment for an interest rate swap. Because the assignment payment is not a significant nonperiodic payment, C amortizes the \$1,895,393 over the remaining five-year term of the swap agreement.

[c] Assignment of Swap With Yield Adjustment Fee

Example 3:

ⁿ⁷ The facts are the same as in Example 2, except that on January 1, 1996, B paid A a yield adjustment fee to enter into the seven-year interest rate swap. A and B included the ratable daily portions of that nonperiodic payment in their net income or net deduction from the contract for 1996 and 1997. On January 1, 1998, \$300,000 of the nonperiodic payment has not yet been recognized by A and B.

A recognizes a loss of \$1,595,393 (\$1,895,393 less \$300,000) in 1998. C accounts for the termination in the same way it did in Example 2; the existence of an unamortized payment with respect to the original swap has no effect on C.

[d] Assignment of One Leg of a Swap

Example 4:

ⁿ⁸ On January 1, 1996, D enters into an interest rate swap agreement with unrelated counterparty E under which, for a term of five years, D will make annual payments at 10 percent and E will make annual

payments at LIBOR on a notional principal amount of \$50 million. On January 1, 1997, unrelated party *F* pays *E* \$15,849,327 for the right to receive the four remaining \$5 million payments from *D*. Under the terms of the agreement between *D* and *E*, *D* is notified of the assignment, and *D* is contractually bound thereafter to make its payments to *F* on the appropriate payment dates. *D*'s obligation to pay *F* is conditioned on *E* making its LIBOR payment to *D* on the appropriate payment dates.

Because *E* has assigned to *F* its rights to the fixed payments, but not its floating rate obligations under the notional principal contract, *F*'s payment to *E* is not a termination payment. The economic substance of the transaction between *E* and *F* is a loan that does not affect the way that *D* and *E* account for the notional principal contract.

[2] Character of Payments

Except in the case of a dealer, a notional principal contract will constitute a capital asset in the hands of the taxpayer.ⁿ¹ If the termination or assignment of the notional principal contract is, or is deemed to be, a sale or exchange, gain or loss resulting therefrom will be capital gain or loss.ⁿ² If not, the gain or loss will be an item of ordinary income or deduction.ⁿ³

The characterization is straightforward if the termination payment is an assignment, i.e., a transfer of the notional principal contract to a third party; the transfer should be treated as a sale or exchange producing capital treatment.ⁿ⁴ When the payment is from one of the original parties to another to extinguish the transaction, capital gain treatment comes from *IRC Section 1234A*, which provides that "gain or loss attributable to the cancellation, lapse, expiration, or other termination of (1) a right or obligation (other than a securities futures contract) with respect to property which is ... a capital asset in the hands of the taxpayer ... shall be treated as gain or loss from the sale of a capital asset."ⁿ⁵

CHAPTER 10 Short Sales

1-10 Taxation of Securities Transactions § 10.01

§ 10.01 Introduction

Traditionally, an investor achieves his profit on an investment by purchasing at one price and later selling at a higher price. This works well in a rising market, or when the price of the particular stock is on the rise. Other means of achieving investment gain must be found when the general or specific market is declining. This is the place for the short sale, the sale of stock or securities that the seller does not own.

CHAPTER 10 Short Sales

1-10 Taxation of Securities Transactions § 10.02

§ 10.02 Gains and Losses on Short Sales

[1] The Basic Rules.

A short sale is a sale of securities that are not owned by the seller.ⁿ¹ As described in *Zlotnick v Tie Communications*,ⁿ²

"Short selling is accomplished by selling stock which the investor does not yet own; normally this is done by borrowing shares from a broker at an agreed upon fee or rate of interest. At this point the investor's commitment to the buyer of the stock is complete; the buyer has his shares and the short seller his purchase price. The short seller is obligated, however, however, to buy an equivalent number of shares in order to return the borrowed shares. In theory, the short seller makes this covering purchase using the funds he received from selling the borrowed stock. Herein lies the short seller's potential for profit: if the price of the stock declines after the short sale, he does not need all the funds to make his covering purchase; the short seller then pockets the difference. On the other hand, there is no limit to the short seller's potential loss: if the price of the stock rises, so too does the short seller's loss, and since there is no cap to a stock's price, there is no limitation on the short seller's risk. There is no time limit on this obligation to cover.

'Selling short,' therefore, actually involves two separate transactions: the short sale itself and the subsequent covering purchase."ⁿ³

In a "typical" short sale,ⁿ⁴ the short seller does not realize gain or loss as a result of a sale of borrowed securities, i.e., the first step in the transaction, for though the amount realized has been established, the short seller's cost will not be known until he delivers identical securities to the lender to replace those borrowed. For income tax purposes, a short sale is not deemed consummated until completion of the second step: delivery of the securities to close the short sale.ⁿ⁵ Gain or loss on the short sale is computed by subtracting the basis of the securities delivered from the amount realized on the sale of the borrowed securities. The character of the gain or loss is determined with reference to the securities delivered to close the sale: if the delivered securities were a capital asset in the hands of the taxpayer (i.e., an investor and not a dealer holding the securities primarily for sale to customers), *IRC Section 1233(a)* provides that the gain or loss will be considered gain or loss from the sale or exchange of a capital asset. The holding period (long or short term) is determined by the period during which the taxpayer held the securities delivered to close the short sale.ⁿ⁶

The tax consequences of a short sale to the lender of the securities, typically the short seller's broker, are determined by *IRC Section 1058*. In general, no gain or loss is recognized by the lender⁷ if the lending agreement meets all of the following requirements:⁸

- (1) It provides for the return to the transferor of securities identical to the securities transferred;⁹
- (2) It requires that payments shall be made to the transferor of amounts equivalent to all interest, dividends and other distributions which the owner of the securities is entitled to receive during the period beginning with the transfer of the securities by the transferor and ending with the transfer of identical securities back to the transferor;¹⁰
- (3) It does not reduce the risk of loss or opportunity for gain of the transferor of the securities in the securities transferred;¹¹
- (4) It meets such other requirements as the Secretary may by regulation prescribe.¹²

The nature of the borrower/short seller's obligation to the lender/broker was examined by the US Supreme Court in *Deputy v DuPont*.¹³ The Court held that the borrower's obligation is not "indebtedness," since that term's ordinary meaning only includes an obligation to return borrowed money, not borrowed property; hence, carrying charges paid by the borrower to the lender are not deductible as interest under *IRC Section 163*. By parity of reasoning, a short sale of stock by a tax-exempt organization does not give rise to debt-financed income within the meaning of *IRC Section 514*.¹⁴ On the other hand, the Internal Revenue Service has ruled that, while not indebtedness, the borrower's obligation is a liability which, if assumed by a corporation as part of a tax-free exchange, must be taken into account for purposes of *IRC Sections 357* and *358* in an amount equal to the original proceeds of the short sale.¹⁵ The Service similarly ruled that if the short seller/borrower is a partnership, its obligation is a liability that must be taken into account for purposes of computing a partner's outside basis under *IRC Section 752*, and in computing the amount realized on a sale or exchange of the partnership interest under *IRC Section 752(d)*.¹⁶

In *Kornman & Assoc v US*, the taxpayer argued that *Rev Rul 95-26* and *Rev Rul 95-45* were incorrectly decided because, while the short seller's obligation might be a liability, it is a *contingent* liability the ultimate amount of which cannot reasonably be ascertained until the replacement shares are purchased or otherwise identified and delivered to the lender. As such, the obligation cannot be measured for purposes of determining the amount realized on a sale of the partnership interest for purposes of *IRC Section 752(d)*, nor can it be included in the basis of a partnership interest. The Court of Appeals, while acknowledging the relevance of this observation, ultimately deferred to the reasoning of the Service's rulings. The short seller's liability, at least for purposes of determining gain or loss under *IRC §§ 357, 358* and *752* on the sale or exchange of stock, securities or a partnership interest, can reasonably be fixed at the amount realized by the short seller in the short sale. Adopting the taxpayer's position would endorse the result of the short sale "tax shelter" it had built, where by disregarding the short seller's liability entirely it was able to show \$102.6 million in short-term capital losses as a result of transactions in which the economic loss sustained by the taxpayer was only \$200,000. "We simply find that the Commissioner's desire to define the term 'liability' in a manner that prevents a taxpayer from deducting non-economic losses is imminently (*sic*) reasonable ... "¹⁷

[2] "Selling Short Against the Box": Constructive Sales and the Substantially Identical Property Rule.

The normal short sale contemplates the covering purchase as the taxpayer's first acquisition of the subject stock. However, the taxpayer may own substantially identical shares at the time of the short sale (commonly known as "selling short against the box") or may acquire such shares prior to the covering purchase and closing. Here, in effect, the taxpayer has "hedged his bet" by taking both a long position (represented by the substantially identical shares) and a short position in the same stock. If the rules governing ordinary short sales were likewise applicable to short sales

against the box, a taxpayer would have the ability to convert short-term into a long-term gain, or to realize both a long-term gain and a short-term loss, depending upon the flow of the market following the short sale.

To illustrate, suppose a taxpayer purchases stock at \$30 per share intending to hold his investment until the price reaches \$60 per share. If his investment goal is achieved more than one year after the initial purchase, the gain is long-term. But suppose the desired price is reached within one year. If the general short rule applied, the taxpayer could choose his tax consequences based on the subsequent flow of the market. If the price of the stock were to decline, he would wait until a point in time more than one year from the date of purchase of the original shares, and then use such shares to cover the short sale. Through use of the short sale, the taxpayer would transform short-term gain into long-term gain. If the market price increased, the taxpayer would close the short sale with newly purchased shares, thereby realizing a short-term loss. He would then secure a long-term gain on the sale of the original shares by delaying their disposition until he had held the shares for at least one year.

Before 1997, the only consequence of a short sale against the box was the application of *IRC Sections 1233(b) and 1233(d)*, discussed below. *IRC Section 1259*, added by the Taxpayer Relief Act of 1997, now treats a short sale against the box of stock, a debt instrument, or a partnership interest as a constructive sale requiring the taxpayer to recognize gain (but not loss) on the date of the short sale itself; the gain resulting from the constructive sale is taken into account in determining the amount of gain or loss subsequently realized with respect to the short sale.ⁿ¹ The new rule also treats the acquisition of substantially identical property after the short sale, but before the closing date, as a constructive sale taking place on the date of acquisition.ⁿ² A taxpayer is not treated as having made a constructive sale solely because the taxpayer enters into a contract for the sale of any stock, debt instrument or partnership that is not a marketable security if the contract is settled within one year after the date the contract is entered into.ⁿ³ It does not apply as well to:

(1) any position with respect to debt if:

- (a) the position unconditionally entitles the holder to receive a specified principal amount,
- (b) the interest payments with respect to the position are payable at a fixed rate (or to the extent provided in regulations, at a variable rate), and
- (c) the position is not convertible (directly or indirectly) into the stock of the issuer or any related person;

(2) any hedge with respect to a position just described; or

(3) any position that is marked to market under any provision of the Code or regulations.ⁿ⁴

A transaction that otherwise would cause a constructive sale is disregarded if:

- (1) the transaction is closed on or before the 30th day after the close of the taxable year;
- (2) the taxpayer holds the appreciated financial position throughout the 60-day period after the transaction is closed; and
- (3) at no time during the 60-day period is the taxpayer's risk of loss with respect to the position reduced because:
 - (a) the taxpayer has an option to sell, is under a contractual obligation to sell, or has made

(and not closed) a short sale of substantially identical stock or securities,

(b) the taxpayer is the grantor of an option to buy substantially identical stock or securities, or

(c) as prescribed by regulations, the taxpayer has diminished his risk of loss by holding one or more other positions with respect to substantially similar or related property.ⁿ⁵

If a transaction that is closed is reestablished in a position, the exception applies provided the reestablished position is closed on or before the 30th day after the close of the taxable year, and the 60-day holding period and lack of reduced risk requirements are met.ⁿ⁶

The constructive sale provision is generally effective for constructive sales entered into after June 8, 1997.ⁿ⁷ In the case of a decedent dying after June 8, 1997, if:

(1) a constructive sale occurred on or before that date;

(2) the short sale remained open for not less than two years, and was open at some time during the three-year period ending on the decedent's death; and

(3) the short sale was not closed by September 4, 1997,

the short sale and the constructive sale are treated as property constituting rights to receive an item of income in respect of a decedent.ⁿ⁸

IRC Sections 1233(b) and 1233(d) continue to apply to short sales against the box that are not treated as constructive sales under *IRC Section 1259*.ⁿ⁹ Under the former, any gain realized on the closing of a short sale will be short-term capital gain (even if stock held more than one year is used to close the sale), if on the date of the short sale, the taxpayer has held substantially identical property for less than one year, or if the taxpayer acquires substantially identical property between the date of the short sale and the date the sale is closed.ⁿ¹⁰ In addition, the holding period of the substantially identical property becomes tainted, for it is deemed to begin either on the date of closing of the short sale, or on the date of sale, gift, or other disposition of the shares, whichever occurs first.ⁿ¹¹ The special holding period provision is applied to substantially identical property in the order of its acquisition, and, then, only to the extent of the property sold short.ⁿ¹²

Example:

A taxpayer enters into the following transactions in a particular stock:

January 15, 2000-- Purchases 100 shares for \$1,000

February 15, 2001-- Purchases 100 shares for \$1,200

March 15, 2001-- Sells short 100 shares for \$1,400

September 15, 2001-- Covers the short sale by purchasing 100 shares for \$1,300

The taxpayer's gain will be taxed as short-term capital gain; he owned substantially identical property for less than one year at the time of the short sale. The holding period of the January 2000 shares will be deemed to begin on September 15, 2001 the date on which the short sale was closed. Since

the special holding period provision is inapplicable to substantially identical property in excess of the property sold short, the holding period of the February 2001 shares will be unaffected by the short sale.

IRC Section 1233(d) affects the character of any loss realized on a short sale by decreeing long-term treatment, if on the date of the short sale, the taxpayer has held substantially identical property for more than one year. The holding period of substantially identical property is unaffected when the transaction is governed solely by *IRC Section 1233(d)*. To illustrate:

Example 1:

A taxpayer enters into the following transactions with respect to a particular stock:

January 15, 2000--Purchases 100 shares for \$1,000
 March 15, 2000--Purchases 100 shares for \$1,200
 September 15, 2001--Sells short 100 shares for \$900
 October 15, 2001--Closes the short sale by delivering the shares purchased in January 2000
 November 15, 2001--Sells the remaining 100 shares for \$1,400

The loss of \$100 realized on the closing of the short sale is a long-term capital loss. On the date of the short sale, property substantially identical to that sold short had been held for more than one year. The \$200 gain realized in November 2001 is a long-term capital gain; the holding period of the March 2000 shares was not affected by the short sale.

Example 2:

Assume the same facts as in Example 1, except that the short sale takes place on August 1, 2000 rather than September 15, 2001. The loss realized on the closing of the short sale would still be a long-term capital loss under the rule prescribed by *IRC Section 1233(d)*. However, the gain realized in November would become a short-term capital gain because of the application of *IRC Section 1233(b)*; at the time of the short sale, the taxpayer had held substantially identical property (the shares purchased in March 2000) for less than one year.

In applying *IRC Sections 1233(b)* and *1233(d)*, it should be kept in mind that stock acquired on the exercise of a conversion privilege may take a holding period that includes the period of time that the convertible stock or security was held.ⁿ¹³ So, if a taxpayer purchases convertible preferred stock in March 2000, sells short shares of common stock in October 2001, converts the preferred into common in November 2001, and then closes the short sale at a gain by delivering the shares acquired on the conversion, the gain will be long-term. The holding period of the common will be deemed to have commenced in March 2000, more than one year prior to the short sale.

Under the regulations, property is to be considered substantially identical to other property "according to the facts and circumstances in each case."ⁿ¹⁴ In general, as applied to stocks and securities, the term has the same meaning as the term "substantially identical stock or securities" used in the wash-sale provision, *IRC Section 1091*.ⁿ¹⁵ Thus, stock or securities in one corporation are most often not substantially identical to those of another, but the stock or securities of predecessor and successor corporations in a reorganization may be. Likewise, bonds or preferred stock cannot be considered substantially identical to common stock of the same corporation. However, if the bonds or preferred stock contain a conversion privilege, the "facts and circumstances" may make them substantially identical to the common

stock.

In applying the short sale rules, a taxpayer and his spouse are looked upon as one taxpayer, unless separated by a decree of divorce or decree of separation.ⁿ¹⁶ Thus, a short sale by a husband at the time his wife owns substantially identical property will invoke the special rules of *IRC Section 1233(b)* and *1233(d)*.

[a] Options to Sell and the Substantially Identical Property Rule. We have seen that, in instances in which a short sale is not treated as a constructive sale, *IRC Section 1233(b)* makes it impossible for a taxpayer to convert short-term gain into long-term gain through the medium of a short sale. The same result could be achieved by acquiring an option to sell (a "put") exercisable after the originally acquired shares had been held for at least one year, and then exercising the option by delivering those shares to the optionee. However, *IRC Section 1233(b)* prevents this by treating the acquisition of the option as a short sale, and the exercise of the option, or its lapse, as the closing of the short sale. The rule has no application, and normal capital gains rules apply, if the option and the stock identified as intended to be used in exercising the option are acquired on the same day.ⁿ¹⁷ In such case, if the option is not exercised, its cost is added to the basis of the stock with which the option is identified.ⁿ¹⁸ Furthermore, since the rule announced by *IRC Section 1233(b)* is made applicable only for the purposes of that subsection, it has no effect when the short sale transaction produces a loss.

[b] Arbitrage Operations. The special holding period rule of *IRC Section 1233(b)(2)* is limited when the short sale is entered into as an arbitrage operation, that is, a transaction involving the purchase and sale of stock and securities, or the rights to acquire stock and securities, for the purpose of profiting from a current difference between the price of the asset purchased and the price of the asset sold.ⁿ¹⁹ A transaction qualifies as an arbitrage operation only if the taxpayer identifies the transaction as such on his records as soon as he is able to do so, ordinarily the day of the transaction.ⁿ²⁰ Under *IRC Section 1233(f)(1)*, the rule applies first to substantially identical property acquired for arbitrage operations and held by the taxpayer at the close of business on the day the short sale is made.ⁿ²¹ For this purpose, only property acquired in a transaction properly identified as an arbitrage operation will be deemed acquired for an arbitrage operation.ⁿ²² The holding period of substantially identical property not acquired for arbitrage operations will be affected only to the extent that the amount of property sold short exceeds the amount of substantially identical property acquired for arbitrage operations and held by the taxpayer at the close of business on the day of the short sale. The following example illustrates the operation of *IRC Section 1233(f)(1)*:

Example:

On January 1, a taxpayer acquires 100 shares of convertible preferred stock of X Corporation. The stock is convertible into common stock of X Corporation on a one-for-one basis. On May 1, the taxpayer sells short 100 shares of X Corporation common stock in a transaction intended to be part of an arbitrage operation. On the same day, and as part of the same arbitrage operation, the taxpayer purchases an additional 100 shares of convertible preferred stock. The short sale is closed on June 1 by the purchase and delivery of 100 shares of common stock purchased on that day. Since acquired for arbitrage purposes and held at the close of business on the day of the short sale, the holding period of the preferred stock acquired on May 1 is deemed to commence on June 1, the date the short sale was closed. The holding period of the preferred stock acquired on January 1 will be unaffected; the number of shares sold short does not exceed the number of shares acquired for arbitrage operations. The January stock would similarly be unaffected if the taxpayer converted the May preferred into common stock and used that stock to cover the short sale.

Suppose the taxpayer does not close the short sale, but instead disposes of the assets acquired as part of the arbitrage operation. If the disposition creates a net short position in arbitrage assets, a short sale is deemed to have been made on the date the net short position is created.ⁿ²³ This, in turn, causes a tainting of the holding period of substantially identical property not acquired for arbitrage purposes to the extent that the short sale is deemed so made.ⁿ²⁴ Thus, if in the last example, the taxpayer sold the preferred shares on June 1 without closing the short sale, he would be considered

as having made a short sale on that date. Accordingly, since the preferred shares purchased in January were acquired less than one year prior to the time of the short sale, their holding period would be affected by *IRC Section 1233(b)(2)*, and would not commence until the closing of the short sale or earlier disposition of the shares.

[3] Property That Becomes Substantially Worthless.

If a taxpayer enters into a short sale of property, and the property becomes substantially worthless, the taxpayer must recognize gain in the same manner as if the short sale were closed when the property becomes substantially worthless.ⁿ¹ The statute of limitations with respect to such gain recognition is extended to the earlier of three years after the Service is notified that the position has become substantially worthless, or six years after the filing of the tax return for the year during which the position became substantially worthless.ⁿ²

(n1)Footnote 1. *Provost v US*, 269 US 443 (1926) .

(n2)Footnote 2. 836 F2d 818, 820 (3d Cir 1988) .

(n3)Footnote 3. See *Kornman & Assoc v US*, 527 F3d 443, 450 (5th Cir 2008) ; *Marriott Int'l Resorts, LP v US*, 83 Fed Cl 291, 297-298 (2008) .

(n4)Footnote 4. For purposes of this section, it is assumed that at the time of the short sale the short seller does not own securities that are substantially identical to those borrowed; the covering purchase is thus the investor's first acquisition of the subject securities. It is not unusual, however, for an investor to "lock in" a gain on a long position in a given stock by selling the same stock short in anticipation of a declining market. Special tax rules apply in such a case, as discussed in the next section.

(n5)Footnote 5. *Treas Reg § 1.1233-1(a)(1)*. The short sale remains "open" as long as the short seller has an obligation to replace the borrowed securities, even if that obligation is transferred to a person other than the original lender. See *Rev Rul 2004-15, 2004-1 CB 515* (short sale not consummated, and no gain or loss recognized, when the taxpayer, having borrowed securities from Broker A to make a short sale, borrows substantially identical securities from Broker B to satisfy her obligation to Broker A.) See also *Rev Rul 2003-31, 2003-1 CB 643* (change in the terms of short seller's margin account is not a delivery of the stock which closes a short sale).

(n6)Footnote 6. *Treas Reg § 1.1233-1(a)(3)*. In the typical case under discussion, in which the taxpayer's first acquisition of the securities sold short occurs just prior to closing by delivery of the shares to the lender/broker, an investor will have short-term capital gain or loss as a result of the short sale transaction, regardless of the length of time between the short sale and the closing date.

(n7)Footnote 7. If *IRC § 1058* applies, "the lender will not recognize gain or loss on the exchange of the securities for the obligation of the borrower under the [securities lending] agreement nor will the lender recognize gain or loss on the exchange of the rights under such agreement in return for securities identical to the securities transferred by the lender." *Prop Treas Reg § 1.1058-1(a)*.

(n8)Footnote 8. *IRC § 1058(b)*.

(n9)Footnote 9. The definition of "securities" in *IRC § 1236(c)* applies for purposes of *IRC § 1058*; "any share of stock in any corporation, certificate of stock or interest in any corporation, note, bond, debenture or evidence of indebtedness, or any evidence of an interest in or right to subscribe to or purchase any of the foregoing." See *IRC § 1058(a)*. "Identical securities" means securities of the same class and issue as the securities lent to the borrower. *Prop Treas Reg § 1.1058-1(b)(1)*. *Prop Treas Reg § 1.1058-1(b)(1)* also permits the borrower to return "equivalent securities" to the lender in the event of a recapitalization, reorganization or merger of the issuer during the term of the loan if the agreement so provides.

(n10)Footnote 10. Substitute payments made by an investor/borrower to the broker/lender in lieu of dividends, interest and other distributions are considered fees paid for the temporary use of the securities. *Prop Treas Reg § 1.1058-1(d)*. Thus, payments made in lieu of dividends are not considered dividends for purposes of the dividends received deduction, *IRC § 243*, or for purposes of qualifying for taxation at long-term capital gain rates under *IRC § 1(h)*. See *Prop Treas Reg § 1.1058-1(d)*; *Rev Rul 60-177, 1960-1 CB 9*. Similarly, payments made by a borrower to a lender in lieu of interest on a municipal bond are not tax-exempt in the hands of the lender under *IRC § 103*. *Rev Rul 80-135, 1980-1 CB 18*. All such substitute payments are taken into account by the lender as ordinary income. *Prop Treas Reg § 1.1058-1(d)*.

Substitute payments are deductible by investor/borrowers under *IRC § 212* if they are individuals. See *Rev Rul 72-521, 1972-2 CB 178*. Corporate short sellers, however, may deduct such payments only if they are traders or dealers with respect to the securities sold short. See § 19.05[2].

(n11)Footnote 11. In *Samueli v Commr, 132 TC 37 (2009)*, the Tax Court held that a securities lending agreement did not qualify under *IRC § 1058* because it reduced the lenders' opportunity for gain. The agreement did so by providing, contrary to normal commercial practice, that the lenders could only terminate the loan of the securities on one of three days of an approximate 450-day transaction period, thus "limit[ing] the [lenders'] ability to sell the Securities at any time that the possibility for a profitable sale arose." *Samueli v Commr, 132 TC N at pp 18-19*. Cf *IRC §§ 512(b) and 512(a)(5)(B)* (excluding "payments with respect to securities loans" from the unrelated business taxable income of certain tax-exempt organizations provided the lending agreement provides for (i) reasonable procedures to implement the obligation of the transferee to furnish to the transferor, for each business day during such period, collateral with a fair market value not less than the fair market value of the security, (ii) termination of the loan by the transferor upon notice of not more than 5 business days, and (iii) return to the transferor of securities identical to the transferred securities upon termination of the loan."

(n12)Footnote 12. Treasury has not prescribed additional requirements, but in proposed regulations has provided that in the event the borrower defaults under an agreement meeting the requirements of *IRC § 1058*, whether by failing to return to the lender securities identical to the securities transferred or otherwise, gain or loss is recognized to the lender on the day the borrower fails to return identical securities as required by the agreement, or otherwise defaults under the agreement. *Prop Treas Reg § 1.1058-1(e)*. However, in *Rev Proc 2008-63, 2008-2 CB 946*, one of a series of extraordinary pronouncements made by the Internal Revenue Service in the wake of the "financial meltdown" of mid-2008, see Elliott, "Year in Review: Treasury Provides Certainty and Relief in Economic Crisis," *122 Tax Notes* 47 (Jan. 5, 2009), the Service created an exception in cases where the borrower's default is a direct or indirect result of its bankruptcy, or the bankruptcy of an affiliate. In the case of such a bankruptcy-caused default, and assuming the lending agreement meets the requirements of *IRC § 1058* and requires the borrower to transfer collateral to secure the borrower's obligations under the agreement, *IRC § 1058* will continue to apply and prevent gain or loss recognition provided that, as soon as is commercially practical after the default (but in no event more than 30 days following the default) the lender applies the borrower's collateral (or cash generated by the sale of such collateral) to the purchase of identical securities.

(n13)Footnote 13. *308 US 488 (1940)*.

(n14)Footnote 14. *Rev Rul 95-8, 1995-1 CB 53*.

(n15)Footnote 15. *Rev Rul 95-45, 1995-1 CB 53*.

(n16)Footnote 16. *Rev Rul 95-26, 1995-1 CB 131*

(n17)Footnote 17. *Kornman & Assoc v US, 527 F3d 443, 455 fn 11*. Accord: *Marriott Int'l Resorts, LP v US, 83 Fed Cl 291 (2008)*.

(n18)Footnote 1. *IRC § 1259(a)(1), (2), (c)(1)(A)*. The Code calls the transaction the constructive sale of an appreciated financial position, defined as any position with respect to any stock, debt instrument, or partnership interest if there would be gain were the position sold, assigned, or otherwise terminated at its fair market value. *IRC § 1259(b)(1)*. A position is an interest including a futures or forward contract, short sale, or option. *IRC § 1259(b)(3)*. A forward contract is a contract to deliver a substantially fixed amount of property (including cash) for a substantially fixed price. *IRC § 1259(d)(1)*.

An interest in a trust that is actively traded is treated as stock unless substantially all (by value) of the property is debt that is not an appreciated financial position. *IRC § 1259(e)(2)*.

A shareholder is not treated as having entered into a constructive sale under *IRC § 1259* if the shareholder receives a fixed amount of cash, simultaneously enters into an agreement to deliver on a future date a number of shares of stock that varies significantly depending on the value of the shares on the delivery date, pledges the maximum number of shares for which delivery could be required under the agreement, retains an unrestricted legal right to substitute cash or other shares for the pledged shares, and is not otherwise economically compelled to deliver the pledged shares. *Rev Rul 2003-7, 2003-1 CB 363*. In the ruling, the shareholder retained the right to vote the pledged shares and to receive dividends. The transaction involved in the ruling was a variable prepaid forward contract. At issue, in *Ltr Rul 200604033*, was whether there was a current sale of shares when the taxpayer placed the shares in a pledge account for the benefit of the counterparty who was given all incidents of ownership of the shares. The Service ruled that beneficial ownership of the shares had been transferred so that gain could not be deferred.

(n19)Footnote 2. *IRC § 1259(c)(1)(D)*.

(n20)Footnote 3. *IRC § 1259(c)(2)*, The definition of marketable security is contained in *IRC § 453(f)*.

CHAPTER 11 "When Issued" Securities

1-11 Taxation of Securities Transactions § 11.01

§ 11.01 Introduction

Judicial or regulatory agency approval may be required before a plan of corporate reorganization, calling for the issuance of new securities in exchange for then outstanding securities of the corporation, becomes effective. The time interval between submission of the plan and its ultimate approval or denial may run to several years. In the interim, trading in the securities to be issued under the plan may be commenced on a "when issued" basis. Since the new securities are not in existence, and will never come into existence if the plan fails, the trading vehicle is the "when issued" contract.

This chapter will be concerned with the tax consequences which attend transactions in "when issued" contracts, as well as those which arise when the plan is approved and the new securities are issued, or when the plan is disapproved and the contracts become valueless.

CHAPTER 11 "When Issued" Securities

1-11 Taxation of Securities Transactions § 11.02

§ 11.02 Transactions in "When Issued" Securities

To properly understand the tax consequences of dealing in securities on a "when issued" basis, one must first understand the nature of the transaction. In holding that a delivery of old outstanding stock of a corporation did not constitute performance of a contract to sell "when issued" stock, the Board of Tax Appeals stated:

"Dealings in stock on a 'when issued' basis are not sales of stock, but merely sales of contracts to sell stock which are made on the express condition that no delivery and payment are required unless and until the stock is issued ... Unless and until the stock is issued, no performance is required and if the stock is never issued the contract falls by its own terms. ..."¹

Clearly then, the actual sale of the security takes place only after it is issued. While it is traded on a "when issued" basis, the transactions are in contracts to buy and sell the security, and not in the security itself.

[1] Transactions in "When Issued" Securities by an Owner of Securities in the Reorganized Corporation

Should an owner of outstanding securities in the corporation in reorganization continue to hold the securities until the plan or reorganization is approved, he would become entitled to the new securities to be issued pursuant to the plan. If he were to sell the new securities on a "when issued" basis, the quantum and character of the gain or loss realized on the disposition would depend upon the nature of the reorganization, that is, whether taxable or tax-free.

If the posture of the reorganization is such that it gives rise to a taxable transaction, gain or loss will be realized and recognized to the extent of the difference between the basis of the old securities and the value of the new.² The new shares will assume a basis equal to their value at the time of the exchange, so that any gain or loss realized on a "when issued" sale of the new securities will be measured by the difference between such basis and the agreed upon sales price. If, as is usually the case, the transaction is completed within a relatively short time after the new securities are issued, the gain or loss on their sale will be short-term;³ the holding period of the new securities begins with acquisition.

If the reorganization is of a type afforded nonrecognition treatment by the Code, the new securities take a basis equal to the adjusted basis of the old, making the gain or loss which results from the "when issued" transaction dependent upon the basis of the old securities.⁴ In determining whether the gain or loss is long- or short-term, the period of time the old

securities were held must be added to the holding period of the new.ⁿ⁵

Suppose, however, the taxpayer finds it advantageous to assign his contract to sell "when issued" securities prior to the date of issuance of the new securities. The assignee may be another holder of outstanding securities, or, perhaps, the owner of a contract to buy "when issued" securities. In this case, the taxpayer's gain or loss will be determined, not by reference to his basis in the old securities (that basis will continue to attach to the old securities which the taxpayer still holds), but by computing the difference between his basis in the contract to sell and the consideration received for the assignment.ⁿ⁶ Since the executory contract to sell probably cost the taxpayer nothing, his basis in the contract will be zero,ⁿ⁷ giving him a gain equal to the amount realized on the assignment. His gain will be capital gain, for the contract itself is a capital asset.ⁿ⁸ The gain will be long-term gain if the contract was entered into more than one year prior to its disposition, and short-term, if the contract was held for one year or less.

Finally, the taxpayer may find that his investment objectives dictate retention of the new stock. In order to complete his obligation under the contract to sell, the taxpayer would be required to enter into a contract to buy the subject securities, placing him in the same position as one who did not originally own securities in the reorganized corporation.

[2] Transactions in "When Issued" Securities by a Person Owning No Securities in the Reorganized Corporation

[a] The Basic Rules. Suppose that stock in a corporation in reorganization is selling on a "when issued" basis at \$50 a share. A taxpayer, not an owner of outstanding stock in the reorganized corporation, believing that the price will increase, enters into a contract to buy shares of stock "when issued" at \$50 a share. The price of the stock does, in fact, increase to \$65 a share. If the taxpayer desires to obtain the benefit of the increase, he may (1) dispose of his buy contract at a stated consideration, (2) enter into a contract to sell "when issued" stock, or (3) enter into a contract to sell "when issued" stock and then dispose of both the contract to buy and the contract to sell.

In the first case, the disposition will produce a capital gain, includable in income in the year of disposition,ⁿ⁹ equal to the difference between the taxpayer's basis in the contract and the consideration received by him.ⁿ¹⁰ The gain will be long-term if the interval between the date of contract and the date of assignment is more than one year; otherwise, the gain will be short-term.

Although the taxpayer seals the amount of his gain by his agreement to sell the shares "when issued," he realizes no gain unless and until the reorganization is consummated and the shares are issued.ⁿ¹¹ His acquisition of the newly issued shares pursuant to the buy contract commences the holding period of the stock; his disposition of the shares under the sell contract is the taxable event which ends the holding period and gives rise to the realization of gain.ⁿ¹² Since performance under the contract to sell will, no doubt, come soon after receipt of the shares, the realized gain will be short-term gain.ⁿ¹³

Even though a taxpayer, who holds a contract to buy 100 shares of stock "when issued" at \$50 a share and a contract to sell that stock at \$65 a share, has fixed his potential gain at \$1,500, he has not insured actual realization of the gain--the plan of reorganization may never become operative. For this reason, the taxpayer may decide to convert a contingent future profit into a present realized gain by disposing of both the buy contract and the sell contract for, say, \$1,200. It is clear that if the contracts were acquired at no cost to the taxpayer he has realized an economic gain of \$1,200. However, the tax consequences of the transaction are not so simply resolved.

Of utmost importance is the fact that each of the contracts is considered a separate capital asset, so that the assignment of both contracts in a single transaction is, in reality, two dispositions.ⁿ¹⁴ Accordingly, if a single consideration is received for the dual assignment, it becomes necessary to determine the amount paid for the transfer of each contract in order to determine the gain or loss realized on the disposition of each contract. If the parties to the transaction have themselves stated the consideration allocable to each contract, the stated consideration will be accepted as correct,

unless patently arbitrary or unreasonable.¹⁵ If, as is usually the case, the parties fail to allocate consideration, the amount paid for each contract is determined by apportioning the total consideration on the basis of the value of each contract on the date of disposition.¹⁶

Since, in general, "when issued" stock has an established market value, changes in the price of such stock will cause consequent changes in the value of contracts to buy and sell the stock. Therefore, at any one time, the consideration received for the assignment of both a buy and a sell contract may be attributable solely to the value of the buy contract or to the value of the sell contract, or proportionately to the value of each of the contracts. Clearly, if the consideration is represented by the value of only one of the contracts, the other is, in essence, a liability. Looking at it in another way, the net amount realized represents the value of the valuable contract less an amount attributable to the assignee's assumption of the liability.¹⁷

The foregoing principles may be illustrated by the following examples:

Example 1:

On January 1, a taxpayer enters into a contract to purchase one hundred shares of X Corp. stock "when issued" at \$50 a share. On March 15, he enters into a contract to sell X Corp. stock "when issued" at \$65 a share. Four months later, on July 15, when X Corp. stock is selling on a "when issued" basis at \$70 a share, the taxpayer assigns both contracts for \$1,200. The buy contract has a presumed value of \$2,000 (\$20 a share) since the assignee can enter into a contract to sell X Corp. stock "when issued" at \$70 a share. For the same reason, the taxpayer's contract to sell "when issued" stock at \$65 a share is a liability in the hands of the assignee. The taxpayer will be considered as having sold his buy contract for the fair market value thereof, giving him a short-term capital gain of \$2,000. Disposition of the sell contract will produce a short-term capital loss of \$800, the difference between the fair market value of the buy contract, \$2,000, and the amount received for the assignment, \$1,200. The gain and loss are short-term because the contracts were not held for more than six months.

Example 2:

The facts are the same as those in Example 1, except that when the transfer takes place on July 15, the stock of X Corp. is selling on a "when issued" basis at \$40 a share. Now the sell contract is valuable, and the buy contract, a liability. The value of the contract to sell is \$2,500 (\$25 a share), measured by the difference between the selling price set forth in the contract and the prevailing market price of the "when issued" stock. (It is assumed that the assignee could go into the market and enter into a contract to buy at \$40 a share.) The taxpayer now realizes a short-term capital gain of \$2,500 on his disposition of a capital asset held less than one year. His loss on the disposition of the contract to buy is a short-term loss of \$1,300, the difference between \$2,500, the value of the sell contract, and \$1,200, the consideration received for the assignment.

Example 3:

Again the facts are the same as before, except that when the transfer takes place on July 15, the stock is selling on a "when issued" basis at \$55 a share. In this instance, both the buy contract and the sell contract are valuable. The buy contract is worth \$500; the assignee can enter into a contract to sell at \$55 a share and achieve a \$500 profit. The contract to sell has a value of \$1,000, the profit to be realized if the transferee enters into a contract to purchase "when issued" shares at \$55 a share. The consideration received must, therefore, be allocated between the two contracts. This is done by multiplying the consideration received by the proportion which the value of each contract bears to the total value of both contracts. Thus, the amount realized on the buy contract is:

500

_____ x\$1,200 = \$400

 —
 1,500

while the consideration attributable to the disposition of the sell contract is:

1,000
 _____ x _____ \$1,200 =
 _____ \$800

 —
 1,500

This produces a double gain--a short-term gain of \$400 on the transfer of the buy contract, and a long-term gain of \$800 on the assignment of the contract to sell.

Suppose that the taxpayer is of the opinion that stock selling on a "when issued" basis at \$50 a share will decline in value. If he seeks to turn a profit on the decrease in price of the stock, the taxpayer must first enter into a contract to sell stock "when issued" at \$50 a share. If the stock price falls to \$40 a share, the taxpayer has a potential profit of \$10 a share. To obtain the benefit of this potential profit, he must either dispose of the sell contract for a stated consideration, enter into a contract to buy "when issued" stock at the lower price and hold both contracts until the reorganization is consummated, or enter into the buy contract and then dispose of both contracts. It should be obvious that, except for the order of contracting, the taxpayer has the same options as one who foresees an increase in price and acts accordingly. Consequently, the tax consequences just discussed apply with equal force here.

[b] Variations on the Basic Theme

[i] Paying Another to Assume a "When Issued" Contract Obligation. Assume that *A*, who owns no shares in the corporation in reorganization, believes that the price of the corporation's "when issued" stock, currently traded at \$50 a share, will increase, and, accordingly, enters into a contract to buy 100 shares "when issued" at \$50 a share. Within three months the price has dropped to \$25 a share. In order to prevent any further loss, *A* pays *B* \$2,000 to assume the former's obligations under the buy contract. *A* has a short term capital loss of \$2,000; he held the buy contract for less than one year.¹⁸ The same rule would apply if *A* had originally entered into a contract to sell, the price of the corporation's "when issued" stock increased, and *A* paid *B* a sum of money to be relieved of this obligation under the sell contract.

[ii] Receiving an Amount to Assume the "When Issued" Contract Obligation of Another. In the last example, *B* received \$2,000 in consideration of his assumption of *A*'s obligation under a buy contract. While at first blush it would appear that the receipt of this sum gives rise to ordinary taxable income in the year of receipt, such is not the case. The amount received is a factor to be taken into consideration in fixing the amount of gain or loss realized when *B* performs his obligation under the contract, or when it becomes definite that the reorganization will not be consummated.¹⁹ For example, if *B* were subsequently to enter into a contract to sell 100 shares of stock "when issued" at \$28 a share, and the plan of reorganization were to become operative, *B* would ultimately realize a \$200 loss, arrived at by comparing the total amount realized of \$4,800 (\$2,800, the amount received under the sell contract, plus the \$2,000 received from *A*) with the amount paid for the stock, \$5,000. Whether the loss is long-term or short-term depends on the length of time *B* holds the stock before delivering it in satisfaction of his obligation under the sell

contract.

If the reorganization is not consummated, the \$2,000 received from *A* will constitute ordinary income to *B* in the year that it is established that the reorganization will not become operative.ⁿ²⁰

[iii] Conditional Assignments of "When Issued" Contracts. A taxpayer, who assigns a buy or sell contract to another for a stated consideration but agrees to refund the amount received for the assignment to the assignee if the reorganization is not consummated, realizes no income until the reorganization is approved. This rule is premised on the theory that the disposition is not final until it is certain that the reorganization will in fact occur. Thus, the taxpayer's holding period for the contract will not end with its assignment, but will continue until the sale is deemed final.ⁿ²¹

Since the taxpayer is not required to take the amount realized on the transfer of the contract into income unless and until the reorganization is consummated, his refund of the consideration to the assignee, in the event the reorganization fails, does not result in the realization of a loss for tax purposes. Of course, if the taxpayer had a basis in the contract other than zero (as would be the case if he had purchased the contract from another), he would realize a loss equal to his basis when it is established the reorganization will not be accomplished.

[iv] Satisfying a "When Issued" Contract Obligation by the Assignment of a Corresponding Contract. Suppose that *A*, an individual owning no stock in the corporation in reorganization, enters into a contract to sell *B* 100 shares of the corporation's stock "when issued" at \$50 a share. If *A* were the holder of a buy contract, he could satisfy his obligation to *B* by assigning the buy contract to *B*. The tax consequences of the assignment will be affected by the manner in which *A* acquired the buy contract and the consideration which he receives for its assignment.

For example, suppose that at no cost to him, *A* had acquired a contract to buy "when issued" stock at \$40 a share. If *B* was willing to accept an assignment of the buy contract in full satisfaction of *A*'s obligation to *B* under the sell contract, and if *B* paid *A* \$800 for the assignment, *A* would realize a gain of \$800. Whether the gain is long-term or short-term would depend on the length of time that *A* held the buy contract.

If *A* had purchased the buy contract from another, his gain or loss would be measured by the extent to which the consideration received from *B* on the assignment exceeded the amount paid by *A* to acquire the contract. To illustrate, suppose that following the execution of the sell contract the price of the stock increased rapidly to \$70 a share, so that the contract became a liability in *A*'s hands. *A* finds that *C*, the holder of a contract to buy "when issued" shares at \$50 a share, is willing to sell the contract for \$1,500. *A* acquires the contract and assigns it to *B* in satisfaction of his obligation under the sell contract. Assuming that *A* receives nothing for the assignment, he will realize a \$1,500 capital loss on his transfer of the buy contract to *B*. Once again the length of time that *A* held the buy contract will determine whether the loss is long-term or short-term.ⁿ²²

[v] Worthless "When Issued" Contracts. If the plan of reorganization is not approved, all "when issued" contracts, by their nature, become worthless. A taxpayer who acquired his contract at no cost to him will obviously suffer no loss for tax purposes.ⁿ²³ One who has paid a consideration for the acquisition of a "when issued" contract does have a loss which he may claim as an offset against ordinary income. The loss cannot be a capital loss; the requisite sale or exchange is missing.ⁿ²⁴

[3] Wash Sales of "When Issued" Securities

It will be remembered that the wash sale rules disallow a loss sustained on the disposition of stock or securities if the taxpayer acquires substantially identical stock or securities within thirty days of the sale.ⁿ²⁵ Since a sale of "when issued" securities is deemed made only when the new stock is issued, any loss realized on the transaction will be disallowed if the taxpayer acquires additional new shares through ownership of old shares of the corporation, ownership of buy contracts, or purchase on the open market.ⁿ²⁶

The foregoing may be illustrated by the case of the taxpayer who holds a contract to buy 200 shares of stock "when issued" at \$25 a share and a contract to sell 100 shares of the same stock "when issued" at \$20 a share. Settlement of the buy and sell contracts will result in the acquisition by the taxpayer of 200 shares of stock and his sale at a loss of 100 shares. If the acquisition of the additional 100 shares is accomplished within the prescribed period, the provisions of *IRC Section 1091(a)* will become operative and disallow the loss, unless the sale can be considered the bona fide reduction of a larger holding.ⁿ²⁷

[4] Short Sales and "When Issued" Securities

It was indicated in Chapter 10, that a gain realized on a short sale transaction will be considered a short-term capital gain whenever property substantially identical to that sold short has been held by the taxpayer for less than one year, or is acquired by him prior to the closing of the short sale.ⁿ²⁸ Another provision makes any loss realized on a short sale transaction a long-term loss, if on the date of the short sale the taxpayer has held substantially identical property for more than one year.ⁿ²⁹

Of importance here is the fact that stock and securities dealt with on a "when issued" basis are considered property for the purposes of the special gain and loss provisions of *IRC Section 1223*.ⁿ³⁰ So, if stock or securities traded on a "when issued" basis can be considered substantially identical to outstanding stock or securities in the corporation in reorganization, a short sale of "when issued" stock at a time when the taxpayer holds outstanding stock of the corporation may cause the special short sale rules to apply. Here, as in all short sales, determining whether the properties are substantially identical calls for consideration of all of the facts and circumstances in the case.ⁿ³¹

[5] Identification Problems

Suppose the taxpayer, having acquired 500 shares on the consummation of the reorganization, disposes of 200 of the shares. The taxpayer faces no difficulty in ascertaining the basis and holding period of the transferred shares if (1) they were acquired by reason of his ownership of old shares, and the reorganization was a taxable reorganization,ⁿ³² (2) they were acquired by reason of his ownership of old shares, the reorganization was nontaxable, and the taxpayer acquired his original shares in a single lot, or (3) the shares were acquired pursuant to a single buy contract. Where, however, the old shares were obtained on different days at different prices, and the reorganization is tax-free so that the new shares take a substituted basis and "tacked" holding period, or where the new shares were acquired under a number of buy contracts, the taxpayer is presented with the problem of identifying the securities sold. Unless he can adequately do so, he will be forced to match the sales against the earliest acquired old shares, or the shares acquired pursuant to the earliest acquired buy contract, as the case may be.ⁿ³³

CHAPTER 12 Regulated Investment Companies

1-12 Taxation of Securities Transactions § 12.01

§ 12.01 Introduction

Regulated investment companies ("RICs"), often called mutual funds, "are essentially instruments for gathering together and investing the funds of a relatively large number of investors. ... Ideally, they secure for the investor expert management of his capital and diversification of his holdings, advantages which otherwise the small, nonprofessional investor cannot easily obtain."¹ The benefits to be derived from ownership of an interest in an RIC would be severely limited if the income and distributions of the RIC were taxed in the same manner as the income and distributions of an ordinary business corporation. By providing for a "conduit" theory of taxation, Congress has placed the person who invests his capital in an RIC on equal plane with one who makes direct investments in business enterprises. If the RIC meets the tests prescribed by the Internal Revenue Code, it is effectively taxed only on the income it retains and does not distribute to its shareholders. The income it does distribute retains the character it had in the hands of the RIC, that is, the shareholder treats ordinary income earned and distributed as ordinary income, and capital gains realized and distributed as capital gains.

CHAPTER 12 Regulated Investment Companies

1-12 Taxation of Securities Transactions § 12.02

§ 12.02 Regulated Investment Company Defined

[1] The Basic Definition

A "regulated investment company," as defined by *IRC Section 851(a)* of the Code, is a domestic corporation which is either (1) registered under the Investment Company Act of 1940ⁿ¹ as a management company or unit investment trust,ⁿ² or has in effect an election under the Act to be treated as a business development company, or (2) a common trust fund or similar fund excluded (a) from the definition of "investment company" by Section 3(c)(3) of the Act,ⁿ³ because maintained by a bank as a means of investing funds held by it as a fiduciary, or because created prior to June 22, 1936 by a corporation subject to supervision by federal or state banking authorities, and (b) from the definition of "common trust fund" by *IRC Section 584(a)* of the Code.

[2] Additional Requirements for Qualification

Meeting the statutory definition of *IRC Section 851(a)* is only the first step toward qualification as an RIC for tax purposes.ⁿ¹ The corporation seeking to be taxed as an RIC must also satisfy the conditions and limitations contained in *IRC Section 851(b)* and *IRC Section 852(a)*.

In the case of an RIC having more than one fund, each fund shall be treated as a separate corporation for purposes of taxation (except for the definition of an RIC).ⁿ² A fund is defined as a segregated portfolio of assets, the beneficial interests in which are owned by the holders of a class or series of stock of the RIC that is preferred over all other classes or series of stock in respect of the portfolio.ⁿ³

[a] Election to Be a Regulated Investment Company. Even though a corporation meets all the requirements necessary for achieving RIC status, it will not be considered an RIC unless it affirmatively elects to be one.ⁿ⁴ Only one method of making the election is permitted--the taxpayer must compute its taxable income as an RIC in its return for the first taxable year for which the election is applicable.ⁿ⁵ Once made, the election is irrevocable for the initial taxable year and all succeeding taxable years.ⁿ⁶

[b] Gross Income Requirements. A further limitation concerns the source of the RIC's income. *IRC Section 851(b)(2)* requires that at least 90 percent of the corporation's gross income for the taxable year be derived from (a) dividends,ⁿ⁷ interestⁿ⁸ (including earned original discount on short-term obligations held for less than three months),ⁿ⁹ payments with respect to securities loans (as defined in *IRC Section 512(a)(5)*), and gains from the sale or other

disposition of stock and securities (as defined in Section 2(a)(36) of the Investment Company Act of 1940, as amended) or foreign currencies, or other income (including but not limited to gains from options, futures, or forward contracts) derived with respect to its business of investing in stock, securities, or currencies and (b) net income derived from an interest in a qualified publicly traded partnership.ⁿ¹⁰

Any gain or loss resulting from the sale, exchange, or distribution of property by an RIC after adoption of a plan of complete liquidation is not taken into account.

For the purposes of *IRC Section 851(b)*, gross income includes gains from the sale or other disposition of stock or securities undiminished by losses arising from such transactions.ⁿ¹¹ For purposes of *IRC Section 851(b)(2)*, amounts included in the gross income of a United States shareholder of a controlled foreign corporation under *IRC Section 951(a)(1)(A)(i)*, or *IRC Section 1293(a)* are considered dividends to the extent that a distribution of earnings and profits of the foreign corporation can be excluded from the income of the shareholder because previously taxed to the shareholder. If, by reason of *IRC Section 959(a)(1)*, or *IRC Section 1293(c)*, a distribution of earnings and profits of the foreign corporation is not included in the shareholder's gross income, then the distribution is allocated proportionately between amounts attributable to amounts included under each clause of *IRC Section 951(a)(1)(A)*.ⁿ¹² Custodian fees and sponsor fees received from investors by an RIC will not constitute income to the investment company, where it is clear that the custodian and the sponsor are performing services for the investor, and not the RIC, and that the investor is under a contractual obligation to pay the specified fees.ⁿ¹³

Recent rulings give examples of the scope of RIC income treated as qualifying income.^{n13.1}

[c] Asset Diversification Requirements. At the close of each quarter of the taxable year, the corporation must meet a set of asset diversification requirements.ⁿ¹⁴ These are imposed, in part, to deny RIC tax benefits "to companies which undertake to control the enterprises in which the bulk of their funds are placed."ⁿ¹⁵

The first of these requires that at least 50 percent of the value of the total assets of the company be represented by (1) cash and cash items (including receivables),ⁿ¹⁶ (2) government securities, (3) securities of other RICs, and (4) other securities.ⁿ¹⁷ For the purpose of the calculation, other securities which the RIC owns in any one corporation or issuer are taken into account only if the amount owned (a) is not greater in value than 5 percent of the value of the investment company's total assets, and (b) does not exceed 10 percent of the outstanding voting securities of the issuer.ⁿ¹⁸

The second, applicable even if the 50-percent requirement just described is met, requires that the corporation not have more than 25 percent of the value of its total assets invested in securities (other than government securities or securities of other regulated investment companies) of any one issuer, or of two or more issuers controlled by the taxpayer and engaged in similar or related trades or businesses, or the securities of one or more qualified publicly traded partnerships.ⁿ¹⁹ For the purpose of this second requirement, control means the ownership of 20 percent or more of the total combined voting power of all classes of stock of a corporation entitled to vote.ⁿ²⁰ Two or more issuers will be considered to be engaged in the same or related trades or businesses if they are engaged in a distinct branch of business, trade, or manufacture in which they produce or deal in the same type of product, or render the same kind of service, and the product or service fulfills the same economic need. However, two corporations will not be deemed to be in the same or related trades or businesses merely because they are engaged in the broad field of manufacturing or any other general classification of industry.ⁿ²¹

Example:

At the end of the first quarter of the taxable year, Investment Company X has its total assets invested in the following manner:

Cash	20 percent
Government securities	25 percent
A Corp. securities	5 percent

<i>B Corp.</i> securities	20 percent
<i>C Corp.</i> securities	20 percent
<i>D Corp.</i> securities	10 percent

If the ownership of *A Corp.* securities represents less than 10 percent of the outstanding voting stock of *A Corp.*, the RIC will satisfy the first asset diversification requirement. Since the RIC does not have more than 25 percent of its assets invested in the securities of a single issuer, it will meet the second requirement if it owns less than 20 percent of the voting power of each of the corporations. However, if the RIC owns, say, 22 percent of the outstanding stock of *B Corp.* and 22 percent of the outstanding stock of *C Corp.*, the second requirement will be met only if *B Corp.* and *C Corp.* are not engaged in the same or similar trades or businesses or in related trades or businesses.

One other factor must be considered in connection with the second requirement. In ascertaining the extent of asset investment in the securities of a particular issuer, the Code calls for inclusion of a "proper proportion of the investment of any other corporation, a member of a controlled group, in the securities of [the] issue..."²² A controlled group is here defined as one or more chains of corporations connected through stock ownership with the taxpayer, if (a) 20 percent of the total combined voting power of all classes of stock entitled to vote of each of the corporations, except the taxpayer, is owned directly by one or more of the other corporations, and (b) the taxpayer owns directly 20 percent or more of the total combined voting power of all classes of stock entitled to vote of at least one of the other corporations.²³ Thus, if in the foregoing example, Investment Company *X* owned more than 20 percent of the outstanding voting stock of *B Corp.*, and *B Corp.* owned more than 20 percent of the voting stock of *C Corp.*, Investment Company *X*, *B Corp.*, and *C Corp.* would constitute a controlled group. In determining whether Investment Company *X* had more than 25 percent of its assets invested in *C Corp.*, there would be added to the 20 percent directly invested in *C Corp.* securities, the proper proportion of the investment of *B Corp.* in the securities of *C Corp.* This proper proportion is arrived at by multiplying the percentage of total assets that Investment Company *X* has invested in the securities of *B Corp.* (20 percent) by the percentage of total assets that *B Corp.* has invested in *C Corp.* securities. So, if *B Corp.* had more than 25 percent of its total assets invested in *C Corp.* securities, the second requirement would not be met, for the "proper proportion" would be greater than 5 percent, causing Investment Company *X*'s investment in *C Corp.* securities to be greater than 25 percent.²⁴

Suppose an RIC meets the asset diversification requirements at the end of the first quarter of the taxable year, but fails to do so at the end of the second quarter due to fluctuations in the market values of the securities in its portfolio, or to the fact that the company made distributions to its shareholders. While this situation literally violates the provisions of *IRC Section 851(b)(3)*, it does not result in the loss of status as an RIC.²⁵ That will occur only when the failure to meet the requirements of *IRC Section 851(b)(3)* at the end of a subsequent quarter of the taxable year is due in whole or in part to the acquisition of any security or other property.²⁶ Even then the taxpayer will not lose its status as an RIC for that quarter if the discrepancy between the value of its investments and the asset diversification requirements is eliminated within thirty days of the close of the quarter.²⁷

[d] Income Distribution Requirements. The final requirement does not affect the corporation's status as an RIC. However, it does determine whether the special rules applicable to regulated investment companies will apply for the taxable year. Under *IRC Section 852(a)(1)*, the RIC is required to distribute at least 90 percent of its investment company taxable income (in effect, its ordinary income) for the taxable year and at least 90 percent of the excess of its tax-exempt interest income over the sum of (a) any deductions for expenses relating to such income which are disallowed by *IRC Section 265*²⁸ and (b) any deductions for amortizable bond premium which are disallowed by *IRC Section 171(a)(2)*. In addition, the rules applicable to RIC must have been applicable to the company for all years ending on or before November 8, 1983, or as of the close of the taxable year, the RIC must not have any earnings and profits accumulated in any taxable year to which the rules did not apply.²⁹ If these requirements are not met for the

year in question, the RIC will be taxed in such year as an ordinary corporation.ⁿ³⁰ However, the Service can waive the distribution requirements for any taxable year if the RIC establishes to the satisfaction of the Service that it was unable to meet them because of distributions previously made to meet the requirements of *IRC Section 4982*.

It should be noted that actual distribution to shareholders is not required. It is sufficient if the RIC credits dividends to investors' accounts under a reinvestment arrangement, provided the investors either have an unqualified right to withdraw the dividends at any time, or can obtain the dividends by partially terminating their interest at any time, without substantial limitations or restrictions.ⁿ³¹ In similar fashion, a distribution to a trustee acting for the shareholders will satisfy the requirements of *IRC Section 852(a)(1)*.ⁿ³² The Internal Revenue Service has also issued "temporary guidance" which, under certain conditions and for a limited time, permit a RIC to meet the 90 percent test under *IRC Section 852(a)(1)* by declaring dividends payable largely through a distribution of shares of the RIC's own stock.ⁿ³³

[3] Investment Companies Furnishing Capital to Development Corporations

A venture capital company, a registered management company or registered business development company whose principal business is to provide capital for other companies engaged in the development or exploitation of inventions, technological improvements, or new products and processes not generally available previously, is given partial relief from the provisions of *IRC Section 851(b)(3)(A)*, the 50-percent asset diversification requirement. In ascertaining whether 50 percent of its assets are invested in the specified securities, a venture capital company can include the value of any securities of an issuer, even if the investment company owns more than 10 percent of the voting securities of the issuer, provided the latest acquisition of any securities of such issuer did not cause the *basis* of all the securities of the issuer held by the corporation to exceed 5 percent of the total value of its assets at the time of such acquisition.ⁿ¹ The effect of this qualification on the first asset diversification requirement may be illustrated by the following:

Example:

On March 31, 1987, the end of the first quarter of its taxable year, the value of the total assets of Investment Company X amounted to \$1 million, \$55,000 of which was represented by the value of 1,000 shares of ABC Corporation. Of these shares, 900 had been purchased in 1968 at a cost of \$45,000, and the remaining 100 on December 31, 1986, for \$4,000. The value of the investment company's total assets on December 31, 1986, was also \$1 million. If the investment company is not a venture capital company, its investment in ABC securities cannot be counted towards the 50-percent investment requirement, since the end-of-quarter value of the investment in ABC Corporation securities exceeds the 5-percent limit imposed by *IRC Section 851(b)(3)(A)*. If, however, Investment Company X qualified as a venture capital company, the value of its investment in the securities of ABC Corporation would be counted toward the 50-percent requirement. The key here is that the basis of the investment company's securities in ABC Corporation (\$49,000) did not exceed 5 percent of \$1 million, the value of its assets on December 31, 1986, the date of the latest acquisition of ABC Corporation securities.

The special treatment afforded venture capital companies will not be applicable with respect to the securities of any issuer, if the investment company has continuously held any security of the issuer, or any security of a predecessor company of the issuer, for a period of ten years or more preceding the quarter of the taxable year in question.ⁿ² This does not prevent the investment company from counting the securities of such issuer for the 50-percent investment test, provided the value of the securities is less than 5 percent of the value of the company's total assets and the 10-percent voting securities test is met.

Finally, the special exception will not apply at the close of any quarter of a taxable year, if, at the close of the quarter, more than 25 percent of the value of the investment company's assets is represented by securities of issuers with respect to each of which the investment company holds more than 10 percent of the outstanding voting securities, and in respect to each of which the company has continuously held a security for ten or more years. However, this limitation will not

become effective if the value of the total assets so represented is reduced to 25 percent or less within 30 days of the end of the particular quarter.ⁿ³

[4] Periodic Payment Plans

Prior to 1969, a group of investors subscribing to a periodic payment plan for the accumulation of mutual fund shares was treated by the Internal Revenue Service as an association taxable as a corporation. As a result, if an investor asked for his stock to be delivered to him, gain or loss resulted from the transaction, although the investor merely took down his own shares.ⁿ¹ Present lawⁿ² provides that a unit investment trust that issues a periodic payment plan is not to be treated as a separate tax entity. Instead, the mutual fund shares are deemed to be owned directly by the investors, so that delivery of stock by the custodian to the investor is not a taxable event. Gain or loss will arise only when the investor sells his mutual fund shares.

The provision does not apply in the case of a unit investment trust that is a segregated asset account under the insurance laws or regulations of a state.ⁿ³ Such accounts will continue to be taxed as before.ⁿ⁴

FOOTNOTES:

(n1)Footnote 1. *15 USC §§ 80a-1 to 80b-2.*

(n2)Footnote 2. The Code requires the corporation to be registered at all times during the taxable year. The Service has ruled that, although a corporation registers after the beginning of its taxable year, it will meet the registration requirement if, prior to registration, it transacted no business and was completely inactive. *Rev Rul 56-499, 1956-2 CB 497*.

(n3)Footnote 3. *15 USC § 80a-3(c).*

(n4)Footnote 1. The issuance of both common and preferred stock will not prevent a management company from qualifying as an RIC for tax purposes; the issuance of bearer certificates will. *Rev Rul 78-44, 1978-2 CB 216*; *Rev Rul 74-177, 1974-1 CB 165*.

(n5)Footnote 2. *IRC § 851(g)(1).*

(n6)Footnote 3. *IRC § 851(g)(2).*

(n7)Footnote 4. *IRC § 851(b)(1).* An investment company that does not elect to be an RIC is subject to the accumulated earnings tax. Ltr Ruls 8705092, 8705001.

(n8)Footnote 5. *Treas Reg § 1.851-2(a)* See Ltr Rul 9345016 for an example of an instance in which the Service granted an extension of time to file the election. Shortly before the due date of the return, the advisor hired by the taxpayer to review and file the taxpayer's returns moved its accounting operations to another floor and reassigned responsibility for such review and filing to a different segment of its accounting department.

(n9)Footnote 6. *Id.*

(n10)Footnote 7. An RIC, that is the holder of record of any share of stock on the record date for any dividend payable with respect to the stock, must include the dividend in gross income as of the later of (i) the date on which the share became ex-dividend, or (ii) the date the company acquired the stock. *IRC § 852(b)(9).*

(n11)Footnote 8. For this purpose, gross income includes interest on state and local bonds excluded from gross income by *IRC § 103(a)(1).*

(n12)Footnote 9. *Rev Rul 75-376, 1975-2 CB 267*; *Rev Rul 75-225, 1975-1 CB 191*.

(n13)Footnote 10. The Treasury may, by regulation, exclude from qualifying income foreign currency gains that are not ancillary to the company's principal business of investing in stock or securities (or options and futures with respect to stock or securities). *IRC § 851(b)(3)*.

A qualified publicly traded partnership is a partnership interests in which are traded on an established securities market or are readily tradable on a secondary market (or the substantial equivalent thereof), if 90 percent of its gross income is derived from dividends, interest, payments on securities loans, and gains from the sale or other disposition of stock or securities or foreign currencies, or other income derived with respect to its business of investing in stock, securities, or foreign currencies. *IRC §§ 851(h), 7704(b), and 7704(c)(2)*.

Income derived from a partnership or trust is treated as income described in *IRC § 851(b)(2)* only to the extent the income would have been treated as such if realized directly by the RIC. For purposes of satisfying the requirements of *IRC § 851(b)(2)*, an RIC holding an interest in a partnership will be deemed to own a proportionate share of the assets of the partnership and will be deemed to be entitled to the gross income of the partnership attributable to that share. Ltr Ruls 200025015 , 9507006 .

The Service has ruled that gains realized by an RIC from the sale of real estate must be included in gross income without reduction on account of losses from such transactions. *Rev Rul 85-167, 1985-2 CB 178* . This has the effect of increasing the amount of the company's nonqualified income.

A RIC entered into a derivative contract that provided for a total-return exposure on a commodity index. The RIC did not enter into the contract in connection with a business of investing in stock, securities, or currency, or in order to reduce or hedge the level of risk in such a business. The Service ruled that the contract was not a security for purposes of *IRC § 851(b)(2)*. Therefore, income from the contract was not qualifying income for purposes of *IRC § 851(b)(2)*. *Rev Rul 2006-1, 2006-2 1 CB 261* .

If, in the normal course of business, an RIC receives a reimbursement from its investment advisor, and the reimbursement is includable in the RIC's gross income, the reimbursement is qualifying income under *IRC § 851(b)(2)*. *Rev Rul 92-56, 1992-2 CB 153* . Two earlier rulings, *Rev Rul 74-248, 1974-1 CB 167* , and *Rev Rul 64-247, 1964-2 CB 179* , had held that the refund of excess management fees as a result of litigation did not jeopardize the company's status as an RIC. The Service has declared the two rulings obsolete to the extent they imply that the payments are not qualifying income and that they constitute dividend income.

A fund incurred expenses to rectify errors made by its accounting firm as a result of the firm's negligence. Payments by the firm's liability insurance carrier to compensate the fund were made in the same year that the expenses were incurred. The reimbursement was a return of capital, not includable in gross income under *IRC § 61* or taken into account under *IRC § 851(b)(2)*. Ltr Ruls 9211029, 9211015.

(n14)Footnote 11. *Treas Reg § 1.851-2(b)*; *Rev Rul 63-118, 1963-1 CB 121* .

(n15)Footnote 12. *Treas Reg § 1.851-2(b)(2)*.

(n16)Footnote 13. *Rev Rul 68-377, 1968-2 CB 301* .

(n17)Footnote 13.1. Eg, LTR 200842014, LTR 200846019.

(n18)Footnote 14. *IRC § 851(b)(3)*. The asset diversification requirement must be applied to each entity that purports to be an RIC, and, in a parent-subsidary situation, cannot be applied at the parent level on a combined asset basis. *Rev Rul 84-138, 1984-2 CB 123* .

For purposes of satisfying the requirements of *IRC § 851(b)(3)*, an RIC holding an interest in a partnership will be

deemed to own a proportionate share of the assets of the partnership. *Rev Proc 2005-20, 2005-1 CB 990* ; Ltr Ruls 200025015 , 9507006 . The IRS extended this "look-through" treatment to certain RICs with respect to their interests in Public-Private Investment Partnerships (PPIPs) holding Legacy Securities (mortgage-backed securities originally acquired by the Treasury Department pursuant to its Troubled Asset Relief Program (TARP) under the Emergency Economic Stabilization Act of 2008). *Rev Proc 2009-42, 2009-40 IRB 459* .

(n19)Footnote 15. H Rep No 586, 82d Cong, 1st Sess 34 (1951). The diversification requirement also prevents RICs from concentrating their assets in a small number of companies or in certain forms of assets. *Rev Rul 76-392, 1976-2 CB 249* .

(n20)Footnote 16. Certificates of deposit held by an RIC as short-term investments are cash items for purposes of the asset diversification requirement. *Rev Rul 77-199, 1977-2 CB 195* .

(n21)Footnote 17. Overnight loans of federal funds made by an RIC to commercial banks or savings institutions whose accounts are insured by the FDIC or FSLIC are securities and not cash or cash items. The loans cannot be treated as government securities since they are not federally issued or guaranteed. *GCM 39531* .

For purposes of *IRC § 851(b)(3)*, exchange-traded call options are securities, the issuer of which is the corporation whose stock or securities underlie the option. *Rev Rul 83-69, 1983-1 CB 126* . The same holds true for options on a stock index, positions on stock index futures, and options on stock index futures. *Ltr Rul 8811053* . Futures contracts involving US securities and exchange-traded options on such contracts are treated as government securities. Ltr Ruls 8548016, 8434027.

In valuing other securities for purposes of *IRC § 851(b)(3)*, an RIC need not value call options on (1) stock it holds, (2) bonds convertible into stock if the value of the bonds is within 10 percent of the conversion value at any point, (3) on stock or a stock index, if the company holds call options on the stock or stock index and the exercise price of the held call option is equal to or less than the exercise price on the written call option, or (4) on a narrow-based stock index, if during the life of the call option, the company holds groups of securities that correlate with the index. However, in the last instance, the company must count that portion of the value of the written index option that is not covered by securities owned by the company. *GCM 39565* .

The Service has identified certain stock and debt obligations that qualify as both securities and Government securities for purposes of *IRC § 851(b)(3)*. *Rev Rul 92-89, 1992-2 CB 154* .

Rev Proc 2004-28, 2004-1 CB 984 , describes conditions under which a repurchase agreement (repo) that is collateralized fully can be treated as a government security under *IRC § 851(b)(3)* even if the taxpayer is not treated as the owner of the underlying securities for federal tax purposes.

(n22)Footnote 18. *IRC § 851(b)(3)(A)*. Stock warrants, stock options, stock rights, shareholder voting agreements and convertible debentures do not constitute voting stock for purposes of *IRC § 851(b)*. *Rev Rul 66-339, 1966-2 CB 274* .

Outstanding securities of an issuer include the equity securities of a qualified publicly traded partnership. *IRC § 851(c)(5)*.

(n23)Footnote 19. *IRC § 851(b)(3)(B)*.

(n24)Footnote 20. *IRC § 851(c)(2)*.

(n25)Footnote 21. *Treas Reg § 1.851-2(c)(2) (1957)*. The Regulation is taken from H Rep No 2333, 77th Cong, 2d Sess 122 (1942).

(n26)Footnote 22. *IRC § 851(c)(1)*.

(n27)Footnote 23. *IRC § 851(c)(3)*.

(n28)Footnote 24. See also *Treas Reg § 1.851-5*, Ex (4).

(n29)Footnote 25. *IRC § 851(d)*; *Treas Reg § 1.851-5*, Exs (5) and (6).

IRC § 851(d) applies only to a company that previously has qualified as an RIC. A company seeking to achieve that status cannot rely on the provision as a means of satisfying the asset diversification requirements. *Rev Rul 72-83*, 1972-1 CB 205 .

(n30)Footnote 26. A stock split that caused the portion of an RIC's assets invested in a particular stock to increase to 27 percent was a mere change in the number of shares representing the original investment by the company and not an acquisition for purposes of *IRC § 851(d)*. *Rev Rul 74-133*, 1974-1 CB 165 .

An acquisition includes the receipt of securities of a third party that is the acquiring corporation in a type "C" reorganization with a portfolio company, as well as the receipt of securities of a third party by in-kind distribution from a portfolio company pursuant to an antitrust order. *Rev Rul 63-170*, 1963-2 CB 286 .

(n31)Footnote 27. *IRC § 851(d)*. An RIC may, within the thirty-day period, dispose of the securities of any issuer in order to meet the 5-percent limitation imposed on the ownership of "other securities." *Rev Rul 69-134*, 1969-1 CB 187 .

(n32)Footnote 28. The disallowance provision applies to any RIC that distributes an exempt-interest dividend. The amount of the disallowance is equal to that portion of the otherwise deductible expenses which the exempt income of the company bears to its total income less net capital gains.

(n33)Footnote 29. *IRC § 852(a)(3)*.

(n34)Footnote 30. *Treas Reg § 1.852-1(b)*; *Rev Rul 58-466*, 1958-2 CB 379 .

(n35)Footnote 31. *Rev Rul 65-89*, 1965-1 CB 265 ; *Rev Rul 69-120*, 1969-1 CB 187 .

(n36)Footnote 32. *Cf Rev Rul 69-652*, 1969-2 CB 147 .

(n37)Footnote 33. *Rev Proc 2010-12*, 2010-3 IRB 302, amplifying and superseding *Rev Proc 2009-15*, 2009-1 CB 356, which amplified and superseded *Rev Proc 2008-68*, 2008-52 IRB 1373. The conditions are: (1) that the entire distribution be made by the corporation to its shareholders with respect to its stock; (2) that the stock of the corporation is publicly traded on an established securities market in the United States; (3) that the dividend be declared on or before December 31, 2012, with respect to a taxable year ending on or before December 31, 2011; (4) that shareholders may elect to receive their entire entitlement under the dividend declaration in either stock of the distributing corporation or cash, subject to a "Cash Limitation" on the amount of money that may be distributed in the aggregate to all shareholders which (a) is not less than 10% of the aggregate declared distribution and (b) requires that if too many shareholders elect to receive money, each shareholder electing to receive money will receive a pro rata amount of money corresponding to the shareholder's respective entitlement under the declaration, and in no event less than 10% of the shareholder's entire entitlement under the declaration in money; (5) that the number of shares to be received by any shareholder is determined, over a period of up to two weeks ending as close as practicable to the payment date, based upon a formula utilizing market prices that is designed to equate in value the number of shares to be received with the amount of money that could be received instead; and (6) that, with respect to any shareholder participating in a dividend reinvestment plan ("DRIP"), the DRIP applies only to the extent that, in the absence of the DRIP, the shareholder would have received the distribution in money in accordance with condition (4). *Rev Proc 2010-12*, 2010-3 IRB 302 .

Taxation of Securities Transactions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 12 Regulated Investment Companies

1-12 Taxation of Securities Transactions § 12.03

§ 12.03 Taxation of the Regulated Investment Company

[1] Taxation of Ordinary Income

[a] Applicable Rates. The investment company that achieves RIC status and meets the income distribution requirements of *IRC Section 852(a)(1)* is subject to a tax on its investment company taxable income at the rates and in the manner set forth in *IRC Section 11*.ⁿ¹ (RICs that fail to comply with regulations prescribed for the purpose of ascertaining the actual ownership of its stock are taxed at the highest corporate rate.) In other words, the rates applied are the same as those imposed on the taxable income of an ordinary business corporation. The difference in treatment comes with the way in which taxable income is computed.

[b] Computing Investment Company Taxable Income. Investment company taxable income is no more than the corporation's taxable income,^{n1.1} as normally computed, with the following adjustments:

- (1) The amount of net capital gain is excluded.
- (2) The net operating loss deduction provided by *IRC Section 172*, and the dividends received deductions provided by *IRC Sections 243, 244, and 245*, are not allowed.
- (3) The dividends paid deduction, as defined in *IRC Section 561*, is allowed, but the deduction is computed without regard to capital gains dividends and exempt-interest dividends.ⁿ²
- (4) Issue discount on short-term government obligations issued at a discount and redeemable at maturity without interest will be taxable as it accrues, if the company so elects.
- (5) Gross income does not include 50 percent of the interest received by the RIC with respect to a securities acquisition loan.ⁿ³ A securities acquisition loan is (1) any loan to a corporation or to an employee stock ownership plan to the extent that the proceeds are used to acquire employer securities for the plan or are used to refinance such a loan, or (2) any loan to a corporation (other than one with a commitment period that exceeds seven years) to the extent that, within 30 days, employer securities are transferred to the plan in an amount equal to the proceeds of the loan and the securities are allocable to accounts of plan participants within one year of the date of the loan.ⁿ⁴

(6) The taxable income of an RIC to which an election under *IRC Section 4982(e)(4)* does not apply is computed without regard to any net foreign currency loss attributable to transactions after October of the taxable year, and any such loss is treated as arising on the first day of the next taxable year.ⁿ⁵

(7) To the extent provided in regulations, the taxable income of the RIC (other than one to which an election under *IRC Section 4982(e)(4)* applies) is computed without regard to any net reduction in the value of any stock of a passive foreign investment company with respect to which a mark-to-market election under *IRC Section 1296* is in effect occurring after October 31 of the taxable year, and any such reduction is treated as occurring on the first day of the following taxable year.^{n5.1}

In addition, an open-end investment company is entitled to deduct stock issuance expenses incurred after the initial stock issuance period (90 days pursuant to the Securities Act of 1933) on the theory that the circumstances that permit shareholders of the company to withdraw capital on demand also serve to make the continuous capital-raising efforts of the fund an essential part of its day-to-day business operations.ⁿ⁶

[c] Dividends Paid Deduction. As mentioned above, the RIC computes its taxable income by deducting the dividends, other than capital gains dividends and exempt-interest dividends which it pays during the taxable year.ⁿ⁷ Because it may be difficult for an RIC to determine if it has met the income distribution requirement of *IRC Section 852(a)(1)*, Congress added what is now *IRC Section 855(a)* to provide that a dividend paid after the close of the year will be considered as having been paid during the taxable year if the RIC declares the dividend prior to the time it is required to file its return for the taxable year, and then distributes the amount of the dividend to its shareholdersⁿ⁸ in the 12-month period following the close of the taxable year, but not later than the date of the first regular dividend payment made after the declaration.ⁿ⁹

The election to treat dividends as having been paid in the prior year rests exclusively with the RIC. The election must be made in the return filed for the taxable year, and is made by including the dividend to which the election applies in the dividends paid deduction for the taxable year.ⁿ¹⁰ An election, once made, becomes irrevocable after the expiration of time for filing the return for the taxable year for which the election is made.ⁿ¹¹

The election permitted by *IRC Section 855(a)* can be made only to the extent that earnings and profits of the taxable year to which the election relates exceed the total amount of distributions out of earnings and profits actually made during the taxable year.ⁿ¹² For the purpose of determining available earnings and profits, the amount of actual distributions made during the taxable year does not include any distributions made with respect to an *IRC Section 855(a)* election in effect for a prior year.ⁿ¹³

[2] Taxation of Long-Term Capital Gains

A tax is imposed on the RIC's undistributed net capital gain, i.e., on the excess of the corporation's net long-term capital gain over the sum of its net short-term capital loss and the deduction for capital gains dividends paid during the taxable year.ⁿ¹

A capital gain dividend is defined as any dividend, or part thereof, which is designated by the company as a capital gain dividend in a written notice (Form 2439) mailed to shareholders not later than 60 days after the close of the RIC's taxable year.ⁿ² If the amount designated as a capital gain dividend for a taxable year is greater than the net capital gain for the taxable year, the total capital gain dividend for the year is limited to such gain. If more than one distribution made during the taxable year is designated as a capital gain dividend in whole or in part, then only a proportionate part of each such distribution will be considered a capital gain dividend.ⁿ³ For purposes of the capital gain dividend, the amount of net capital gain for a taxable year, to which an election under *IRC Section 4982(e)(4)* (discussed below) does not apply, is determined without regard to any net capital loss or net long-term capital loss attributable to transactions after October 31, and any such loss is treated as arising on the first day of the next taxable year.ⁿ⁴

Just as in the case of an ordinary dividend, an RIC may elect to treat a capital gain dividend declared and paid after the close of the taxable year as having been paid during the taxable year. The rules that govern the election with respect to ordinary dividends apply with equal force to capital gains dividends.ⁿ⁵ The notice designating the post-year dividend as a capital gains dividend must be given not later than 60 days after the close of the taxable year in which the distribution is made.ⁿ⁶

[3] Exempt-Interest Dividends

Prior to the Tax Reform Act of 1976, there was no provision for flow-through treatment of tax-exempt interest earned by an RIC. As a result, distribution of tax-exempt interest by the RIC produced taxable income for its shareholders. *IRC Section 852(b)(5)*, added by the Act, allows an RIC to pay an exempt-interest dividend if, at the close of each quarter of its taxable year, at least 50 percent of the value of its assets consists of tax-exempt interest obligations issued by states and their political subdivisions.ⁿ¹ The term "exempt-interest dividend" is defined as any dividend (other than a capital gain dividend) paid by an RIC and designated by it as an exempt-interest dividend in a written notice mailed to its shareholders not later than 60 days after the close of its taxable year. If the amount so designated is greater than the excess of the amount of tax-exempt interest received over the amounts disallowed as deductions under *IRC Section 265* (relating to expenses incurred in connection with such income) and *IRC Section 171(a)(2)* (relating to deductions for bond premium amortization), the exempt-interest dividend will be limited to such excess. For purposes of the exempt-interest dividend provisions, 50 percent of the amount of any loan of the RIC that qualifies as a securities acquisition loan is treated as a tax-exempt obligation and 50 percent of the interest received on such loan treated as tax-exempt interest.^{n1.1}

[4] Deduction for Deficiency Dividends

The Tax Reform Act of 1976 added a deficiency dividend procedure to prevent the disqualification of real estate investment trusts which failed to meet the income distribution requirements prescribed for such entities. The Revenue Act of 1978 extended this relief to RICs. Indeed, the later legislation made the same provision applicable to both real estate investment trusts and RICs, with the only difference being the type of adjustment required before the procedure can be employed.ⁿ¹ Therefore, this section will not detail the deficiency dividend procedure. Rather, the reader is referred to the chapter on real estate investment trusts for a discussion of the deduction for deficiency dividends.ⁿ²

A procedure similar to the deficiency dividend procedure becomes applicable if it is determined that a corporation failed to qualify as an RIC for any taxable year without regard to any net reduction in the value of any stock of a foreign investment company with respect to which a mark-to-market election under *IRC Section 1296* is in effect occurring after October 31st of that year.ⁿ³ If the company distributes the accumulated earnings and profits attributable to that year, less an interest charge,ⁿ⁴ as a dividend within 90 days after the determination, the RIC rules will apply to such year.ⁿ⁵ The amount distributed cannot be included in the amount of dividends paid for purposes of the dividends paid deduction for any taxable year.ⁿ⁶

[5] Earnings and Profits of Regulated Investment Companies

Earlier discussion has indicatedⁿ¹ that the computation of earnings and profits of an ordinary business corporation takes into account items which do not enter into the corporation's gross income as well as those which the corporation is not permitted to deduct. The determination of earnings and profits of an RIC is subject to one important exception--current earnings and profits (but not accumulated earnings and profits) are not reduced by any amount which is not allowable as a deduction in computing taxable income.ⁿ² Thus, if the RIC has taxable income of \$200,000 and an excess, nondeductible capital loss of \$50,000, its current earnings and profits are \$200,000, and not \$150,000. In order to coordinate the earnings and profits determination with the excise tax on undistributed income imposed by *IRC Section 4982* (see *infra*), the earnings and profits of an RIC for any year are determined without regard to any net capital loss (or

net foreign currency loss) attributable to transactions after October 31st of that year without regard to any net reduction in the value of any stock of a foreign investment company with respect to which a mark-to-market election under *IRC Section 1296* is in effect occurring after October 31st of that year.ⁿ³ The preceding sentence applies only to the extent that the amount distributed by the company during any calendar year does not exceed the sum of 100 percent of the company's ordinary income for the calendar year and 100 percent of its capital gain net income for the one-year period ending on October 31st of such year.

Since only current earnings and profits are affected by this rule, the maximum amount to be carried forward to the following year and added to accumulated earnings and profits is \$150,000, not \$200,000. On the other hand, if the corporation had no accumulated earnings and profits at the beginning of the year and distributed \$200,000, all chargeable against earnings and profits of the current year, it would start the following year, not with a \$50,000 deficit in accumulated earnings and profits, but with its paid-in capital reduced by \$50,000.ⁿ⁴

It is important to note that every RIC, even one which fails to meet the income distribution requirements of *IRC Section 852(a)(1)* and is taxed in the same manner as an ordinary corporation, is subject to the special rule affecting current earnings and profits.ⁿ⁵

IRC Section 852(a)(2)(B) provides that, at the close of the year, the RIC not have earnings and profits accumulated in any non-RIC year. Any distribution made to comply with *IRC Section 852(a)(2)(B)* is treated as made from earnings and profits that, but for the distribution, would result in a failure to meet those requirements (and allocated to such earnings on a first-in, first-out basis), and, to the extent treated as made from accumulated profits, is not considered to be a distribution for purposes of the dividends paid deduction or the election to treat dividends paid after the close of the taxable year as paid during the taxable year.ⁿ⁶

[6] Record-Keeping Requirements

IRC Section 852(b)(1) imposes the highest rate of corporate tax on any RIC that "fails to comply for the taxable year with regulations prescribed ... for the purpose of ascertaining the actual ownership of its stock." Under Regulations promulgated with respect to an earlier provision that made the requirement a condition for the imposition of the special taxing rules applicable to RICs (*IRC Section 852(a)(2)*, repealed by the Tax Reform Act of 1986), the stockholders statements setting forth the stock actually and constructively owned by the shareholder.ⁿ¹ The information received (including the names of persons who fail to comply with the demand) must be maintained as part of the corporation's permanent records.ⁿ²

[7] Excise Tax on Undistributed Earnings

IRC Section 4982(a) imposes a 4 percent nondeductible excise tax on the excess of the "required distribution" for the calendar year over the "distributed amount" for such year.ⁿ¹ The tax is due by March 15 of the following calendar year. The "required distribution" for any calendar year is the sum of (a) 97 percent of the RIC's ordinary income for the year, (b) 98 percent of the company's capital gain net income for the one-year period ending on October 31st, and (c) the excess of the grossed up required distribution for the preceding calendar year over the distributed amount for such year.ⁿ² (The grossed up required distribution for any calendar year is the sum of the taxable income of the RIC for the year, determined without regard to the deduction for dividends paid, and all amounts from earlier years that are not treated as having been distributed.)ⁿ³ The "distributed amount" for any calendar year is the sum of (a) the deduction for dividends paid (as defined by *IRC Section 561*) during the calendar year, (b) any amount of tax imposed on the company's ordinary income and net capital gain for the year, and (c) the excess (if any) of the distributed amount for the preceding calendar year over the required distribution for such year.ⁿ⁴

The RIC's ordinary income for this purposes is its investment company income (as defined in *IRC Section 852(b)(2)*) determined (a) by taking into account the net capital gain of the company and not taking into account the dividends paid

deduction, (b) by not taking into account any gain or loss from the sale of a capital asset, and (c) by treating the calendar year as the RIC's taxable year.ⁿ⁵

Any foreign currency gain or loss attributable to a Section 988 transaction that is properly taken into account for the portion of a calendar year after October 31st is taken into account in determining the amount of ordinary income of the RIC for the following calendar year.ⁿ⁶

Capital gain net income is determined by treating the one-year period ending on October 31st of any calendar year as the company's taxable year, and for this purpose is defined as the excess of the company's capital gains over its capital losses, reduced (but not below the company's net capital gain) by the amount of any net ordinary loss for the calendar year.ⁿ⁷ The net ordinary loss for the calendar year is the amount that would be the company's net operating loss if ordinary income were computed according to the rules described in the preceding paragraph.

If an RIC has a taxable year that ends with the month of November or December, the company can elect to use its taxable year rather than the one-year period ending on October 31st in determining the amount of capital gain net income and the amount of gain or loss from Section 988 foreign currency transactions (including the amount of such income entering into the computation of the required distribution).ⁿ⁸

For the purposes of applying the above provisions, any deficiency dividend is taken into account at the time it is paid, and any income giving rise to the adjustment is treated as arising at the time the dividend is paid.ⁿ⁹

[8] Transfers by a C Corporation to a Regulated Investment Company or Real Estate Investment Trust

In 2000, the Internal Revenue Service issued temporary regulations governing the treatment of a C corporation that qualified as a RIC or REIT, or transferred assets to a RIC or REIT in a transaction in which the C corporation's basis carried over to the RIC or REIT. Under those regulations, the C corporation was treated as having sold all of its assets at their respective fair market values and immediately liquidated.ⁿ¹ The C corporation could avoid the immediate recognition of gain if it elected to be subject to the rules of *IRC Section 1374* (discussed in § 15.02[1]).ⁿ² The regulations became final on March 18, 2003.^{n2.1}

On January 2, 2002, the Service issued two new temporary regulations regarding such transactions, one for transactions occurring after June 9, 1987, and before January 2, 2002,ⁿ³ and one for transactions taking place after January 1, 2002.ⁿ⁴ The regulations became final on March 18, 2003.^{n4.1} A RIC or REIT can apply the 2000 regulations to transactions that occurred after June 9, 1987, and before January 2, 2002, but cannot rely on certain provisions in those regulations if it is subject to *IRC Section 1374* treatment.ⁿ⁵

Under the regulations for pre-2002 transactions, if property owned by a C corporation becomes the property of a RIC or REIT (the converted property) in a conversion transaction (a transaction in which the C corporation qualifies as a RIC or REIT or transfers property to the RIC or REIT), deemed sale treatment will apply unless the RIC or REIT elects to be subject to the built-in gain rules of *IRC Section 1374*.ⁿ⁶ This means that the C corporation recognizes gain or loss as if it sold the converted property to an unrelated party at fair market value on the deemed sale date.ⁿ⁷ If the C corporation recognizes a net gain on the transaction, the converted property has a basis in the hands of the RIC or REIT equal to the fair market value of the property on the deemed sale date. If the deemed sale results in a net loss, the loss is not recognized and the C corporation's basis in the converted property carries over to the RIC or REIT.ⁿ⁸

The deemed sale rule will not apply to a pre-2002 conversion transaction if the RIC or REIT makes an election to be subject to tax on the net built-in gain in the converted property under the rules of *IRC Section 1374*, as modified by the regulations, as if the RIC or REIT were an S corporation.ⁿ⁹ If property subject to the rules of *IRC Section 1374* owned by a RIC, a REIT, or an S corporation (the predecessor) becomes the property of a RIC or REIT (the successor) in a continuation transaction, the rules of *IRC Section 1374* apply to the successor to the same extent that the predecessor

was subject to those rules with respect to the property, and the 10-year recognition period of the successor with respect to the property is reduced by the portion of the 10-year period of the predecessor that expired before the date of the continuation transaction.ⁿ¹⁰

The first modification applies only to REITs. The prelimitation amount of *Regulations Section 1.1374-2(a)(1)* (limiting an S corporation's net recognized built-in gain by computing taxable income using all rules applicable to C corporations and considering only its recognized built-in gain, recognized built-in loss, and recognized built-in gain carryover) is reduced by the portion of such amount that is subject to tax under *IRC Section 857(b)(4)* (income from foreclosure property), *857(b)(5)* (imposition of tax for failure to meet certain income requirements), *857(b)(6)* (income from prohibited transactions), or *857(b)(7)* (income from redetermined rents, redetermined deductions, and excess interest).ⁿ¹¹ For this purpose, the amount of a REIT's recognized built-in gain that is subject to tax under *IRC Section 857(b)(5)* is computed as follows:

(1) Where the tax is computed by reference to *IRC Section 857(b)(5)(A)*, the amount of built-in gain that is subject to tax under *IRC Section 857(b)(5)* is the tax imposed by that section multiplied by a fraction the numerator of which is the amount of recognized built-in gain (without regard to recognized built-in loss and recognized built-in gain from prohibited transactions) that is not derived from sources referred to in *IRC Section 856(c)(2)*, and the denominator of which is the gross income (without regard to gross income from prohibited transactions) of the REIT that is not derived from sources referred to in *IRC Section 856(c)(2)*.ⁿ¹²

(2) Where the tax under *IRC Section 857(b)(5)* is computed by reference to *IRC Section 857(b)(5)(B)*, the amount of built-in gain that is subject to tax under *IRC Section 857(b)(5)* is the tax imposed by that section multiplied by a fraction the numerator of which is the amount of recognized built-in gain (without regard to recognized built-in loss and recognized built-in gain from prohibited transactions) that is not derived from sources referred to in *IRC Section 856(c)(3)*, and the denominator of which is the gross income (without regard to gross income from prohibited transactions) of the REIT that is not derived from sources referred to in *IRC Section 856(c)(3)*.ⁿ¹³

The taxable income limitation of *Regulations Section 1.1374-2(a)(2)* (limiting built-in gain to an S corporation's taxable income determined by using all rules applying to C corporations with certain modifications) is reduced by an amount equal to the tax imposed under *IRC Sections 856(b)(5), (6) and (7)*.ⁿ¹⁴

The second modification, applicable to RICs and REITs, allows the use of net operating loss carryforwards and capital loss carryforwards arising in taxable years when the corporation generating the loss was not subject to the rules governing regulated investment companies or real estate investment trusts as a deduction against net recognized built-in gain to the extent allowed under *IRC Section 1374*.ⁿ¹⁵ The loss carryforwards must be used as a deduction against net recognized built-in gain for a taxable year to the greatest extent possible before the losses can be used to reduce investment company taxable income for purposes of *IRC Section 852(b)* or real estate investment trust taxable income for purposes of *IRC Section 857(b)* for that year.

A third modification allows minimum tax credits and business credit carryforwards arising in taxable years for which the corporation generating the credit was not subject to the rules governing regulated investment companies or real estate investment trusts to reduce the tax imposed on net recognized built-in gain.ⁿ¹⁶ The credits and credit carryforwards must be used to reduce the tax on net recognized built-in gain for a taxable year to the greatest extent possible before the credit and credit carryforwards can be used to reduce the tax on investment company taxable income or real estate investment trust taxable income.

If a conversion transaction is a qualification of a C corporation as a RIC or REIT, the 10-year recognition period described in *IRC Section 1374(d)(7)* begins on the first day of the RIC's or REIT's first taxable year.ⁿ¹⁷ In the case of

other conversion transactions, the 10-year period begins on the day the property is acquired by the RIC or REIT.

Recognized built-in gains of a RIC or REIT are included in computing investment company taxable income, real estate investment trust taxable income, capital gains for purposes of *IRC Sections 852(b)(3)* and *857(b)(3)*, gross income derived from sources within any foreign country or possession of the United States for purposes of *IRC Section 853*, and the dividends paid deduction for purposes of *IRC Section 852(b)(2)(D)*, *852(b)(3)(A)*, *857(b)(2)(B)*, and *857(b)(3)(A)*.ⁿ¹⁸ The amount of tax imposed on net recognized built-in gain for a taxable year is treated as a loss sustained by the RIC or REIT during the taxable year.ⁿ¹⁹ The character of the loss is determined by allocating the tax proportionately (based on recognized built-in gain) among the items of recognized built-in gain included in net recognized built-in gain. For RICs, the tax imposed on net recognized built-in gain is treated as attributable to the portion of the RIC's taxable year occurring after October 31.

A RIC or REIT that entered into a conversion transaction before January 2, 2002, can make the *IRC Section 1374* election with any federal income tax return filed by the RIC or REIT on or before September 15, 2003, provided that the RIC or REIT has reported consistently with the election for all periods.ⁿ²⁰ An interim election is not necessary if the RIC or REIT can demonstrate that it informed the Service prior to January 2, 2002, of its intent to make the election.ⁿ²¹

The temporary regulations governing conversion transactions occurring after January 1, 2002, follow the previously discussed regulations. However, they include certain changes that are not included in those regulations because the Service was concerned that the changes, if made retroactively, could have an adverse impact on taxpayers that relied on the 2000 temporary regulations.ⁿ²²

The first change makes *IRC Section 1374* treatment the default rule, unless the C corporation elects deemed sale treatment for the conversion transaction.ⁿ²³ The second is the addition of an anti-stuffing rule that requires the C corporation to disregard converted property in computing gain or loss on the conversion transaction if (1) the converted property was acquired by the C corporation in a transaction to which *IRC Section 351* applied or as a contribution to capital; (2) the converted property had an adjusted basis immediately after its acquisition by the C corporation in excess of its fair market value on the date of acquisition; and (3) the acquisition of the converted property by the C corporation was part of a plan a principal purpose of which was to reduce gain recognized by the C corporation on the conversion transaction.ⁿ²⁴

A partnership with C corporation partners is treated as an aggregate for purposes of applying the temporary regulations governing conversion transactions after January 1, 2002. Thus, the regulations provide that they apply to property transferred to a RIC or REIT to the extent of any C corporation's proportionate share of the partnership property.ⁿ²⁵

FOOTNOTES:

(n1)Footnote 1. *IRC § 852(b)(1)*. An RIC that is also a personal holding company and has investment company taxable income and undistributed personal holding company income is liable for tax on its retained income under both *IRC § 541* and *IRC § 852(b)(1)*. *Rev Rul 88-41, 1988-1 CB 253*.

See § 6.03[1] for a discussion of the treatment of net built-in gain assets of a C corporation that become assets of a RIC.

(n2)Footnote 1.1. Costs incurred in developing and launching new RIC's do not qualify as ordinary and necessary expenses under *IRC § 162(a)*. Rather, the expenditures are capital in nature because they provide the RIC with significant, long-term benefits. *FMR Corp & Subs v Commr, 110 TC 402 (1998)*.

(n3)Footnote 2. *IRC §§ 852(b)(2)(A)-(D)*. In addition, the taxable income for a period of less than twelve months will not be placed on an annual basis even though the short taxable year results from a change of accounting period. *IRC § 852(b)(2)(E)*; *Treas Reg § 1.852-3(e)*.

An RIC with both common and preferred shares is permitted a deduction for ordinary dividends paid on either class of stock, as well as for special distributions made with respect to the preferred shares. *Rev Rul 74-177, 1974-1 CB 165* .

(n4)Footnote 3. *IRC § 133(a)*.

(n5)Footnote 4. *IRC § 133(b)*.

(n6)Footnote 5. *IRC § 852(b)(8)*. See § 12.03[7], *infra*, for a discussion of *IRC § 4982(e)(4)*.

(n7)Footnote 5.1. *IRC § 852(b)(10)*.

(n8)Footnote 6. *Rev Rul 73-463, 1973-2 CB 34* .

(n9)Footnote 7. A dividend distribution can be deducted only if it meets the definition of dividend contained in *IRC § 316. IRC § 562(a)*.

(n10)Footnote 8. A distribution to a trustee for shareholders will satisfy the distribution requirement, *Rev Rul 69-652, 1969-2 CB 147* ; as will a distribution in installments. *Rev Rul 69-445, 1969-2 CB 148* .

(n11)Footnote 9. The dividend distribution is taken into account for two purposes--the dividends paid deduction and the income distribution requirement of *IRC § 852(a)(1)*.

(n12)Footnote 10. *Treas Reg § 1.855-1(b)(1)* See Ltr Rul 9345016 for an example of an instance in which the IRS granted an extension of time to file the election. Shortly before the due date of the return, the advisor hired by the taxpayer to review and file the taxpayer's returns moved its accounting operations to another floor and reassigned responsibility for such review and filing to a different segment of its accounting department.

(n13)Footnote 11. *Treas Reg § 1.855-1(b)(2)*.

(n14)Footnote 12. *Treas Reg § 1.855-1(b)(1)*.

(n15)Footnote 13. *Treas Reg § 1.855-1(b)(1)*. A distribution made pursuant to a valid election is considered as paid out of the earnings and profits of the year to which the election relates, and not out of the earnings and profits of the year of distribution.

(n16)Footnote 1. *IRC § 852(b)(3)(A). IRC § 562(c)* does not consider any part of a distribution as a dividend for purposes of the dividends paid deduction unless the dividend is pro rata with no preference to any share of stock as compared with other shares of the same class. However, in the case of a distribution to a shareholder that made an initial investment of at least \$10 million in the regulated investment company, the distribution is not to be treated as non pro rata or preferential solely by reason of an increase in the distribution attributable to reductions in administrative expenses of the company. For this purpose, the shareholder is the legal owner of the shares. See *Rev Rul 89-79, 1989-1 CB 172* , involving master shareholder accounts that invest in an RIC.

A second exception is made in the case of distributions in redemptions of interests in unit investment trusts issuing periodic payment plan certificates, if the conditions of *IRC § 852(d)* are met. See *Treas Reg § 1.852-10(b)(2)* for an example of the operation of *IRC § 852(d)*.

Variations in distributions to shareholders of different qualified groups that exist solely as a result of a waiver or reimbursement of fees or expenses, or the allocation of expenses, in accordance with criteria set forth in *Rev Proc 99-40, 1999-2 CB 565* , do not prevent the distributions from qualifying as dividends under *IRC § 562(c)*.

(n17)Footnote 2. *IRC § 852(b)(3)(C)*. If the determination of a deficiency results in an increase in the amount of

excess net long-term capital gain, the designation with respect to the increase may be made at any time within 120 days after the date of the determination.

The amount which can be designated as a capital gain dividend is reduced by the amount of any capital loss carried over to the taxable year and deducted in that year. *Rev Rul 76-299, 1976-2 CB 211* .

(n18)Footnote 3. *IRC § 852(b)(3)(C)*.

(n19)Footnote 4. *IRC § 852(b)(3)(C)*. An RIC can elect to compute its taxable income for a taxable year without regard to part or all of any post-October capital loss or post-October currency loss for that year; the loss is treated as arising on the first day of the next taxable year. The election to defer will not affect the amount of the RIC's gross income for purposes of *IRC § 851(b)(2)* or (3). *Treas Reg § 1.852-11(f)(1), (4), (5)*.

The earnings and profits of an RIC for any taxable year are determined without regard to any post-October capital loss or currency loss. If the election to defer the loss for taxable income purposes is made, earnings and profits are computed as if the amount of deferred loss had arisen on the first day of the succeeding taxable year. *Treas Reg § 1.852-11(g)(1), (2)*.

(n20)Footnote 5. *Treas Reg § 1.855-1(b)(1)*.

(n21)Footnote 6. *IRC § 855(c)*.

(n22)Footnote 1. *Rev Proc 2005-20, 2005-1 CB 990* , describes conditions under which a RIC that holds a partnership interest is treated, for purposes of eligibility to pay exempt-interest dividends, as if it directly invested in the assets held by the partnership.

(n23)Footnote 1.1. *IRC § 852(b)(5)(C)*.

(n24)Footnote 1. In the case of an RIC, the term "adjustment" means (a) an increase in investment company taxable income determined without regard to the deduction for dividends paid, (b) an increase in the amount of the excess of net capital gain over the deduction for capital gains dividends paid, or (c) a decrease in the deduction for dividends paid (determined without regard to capital gains dividends). *IRC § 860(d)(1)*.

(n25)Footnote 2. See Ch 13.

(n26)Footnote 3. A determination is a final decision or judgment of a court, a closing agreement, or a determination filed by the company that it failed to qualify as an RIC for the year or a statement by the taxpayer attached to its amendment or supplement to a return of tax for the relevant tax year. *IRC §§ 852(e)(5), 860(e)*.

(n27)Footnote 4. The interest charge is calculated at the underpayment rate imposed by *IRC § 6621* for the period that begins on the due date of the return for the year in question and ends on the date the determination is made. *IRC § 852(e)(3)*.

(n28)Footnote 5. *IRC § 852(e)(1), (2)*. The described procedure is not available if the determination contains a finding that the failure to qualify was due to fraud. *IRC § 852(e)(4)*.

(n29)Footnote 6. *IRC § 852(e)(2)(C)*.

(n30)Footnote 1. See Ch 4.

(n31)Footnote 2. *IRC § 852(c)(1)*. The current earnings and profits of an RIC are not reduced by capital losses carried over to the taxable year. *Rev Rul 76-299, 1976-2 CB 211* .

(n32)Footnote 3. *IRC § 852(c)(2)*.

(n33)Footnote 4. *Treas Reg § 1.852-5(b)*.

(n34)Footnote 5. *Treas Reg § 1.852-5(a)*.

(n35)Footnote 6. *IRC § 852(c)(3)*, applicable for taxable years beginning after Dec 31, 2000.

(n36)Footnote 1. Only those shareholders who are record holders of a specified percentage of the stock of the RIC are required to furnish statements. The percentages vary in relation to the number of record owners of stock. *Treas Reg § 1.852-6(c)*. If the shareholder fails to comply with the company's demand, he must furnish essentially the same information as part of his return. *Treas Reg § 1.852-7*.

(n37)Footnote 2. *Treas Reg § 1.852-6(c)*.

(n38)Footnote 1. The provision does not apply to an RIC for any calendar year if, at all times during the year, each shareholder of the company was a qualified pension, profit-sharing or stock bonus plan trust, a tax-exempt organization, or a segregated asset account of a life insurance company held in connection with variable contracts (as defined in *IRC § 817(d)*). Any shares attributable to an investment in the company (not exceeding \$250,000) made in connection with its organization are not taken into account. *IRC § 4982(f)*.

Regardless of the taxable years of a RIC and any partnership in which the RIC is a partner, for purposes of determining the RIC's required distribution for a calendar year under *IRC § 4982(a)*, the RIC must take into account its share of partnership items of income, gain, loss, and deduction as they are taken into account by the partnership. *Rev Rul 94-40, 1994-1 CB 274*, as modified by *Rev Rul 94-40A, 1994-1 CB 276*.

For purposes of taking partnership items into account in determining an RIC's required distribution under *IRC § 4982(a)*, the Service will not challenge the use of a method to account for items from a partnership if: (1) the method takes the items into account under *IRC § 706*; (2) the RIC meets the RIC asset test; and (3) at all times during the 12-month period ending on the last testing date that is within the taxable year, the RIC holds an aggregate interest in profits and capital of the partnership of no more than 50 percent. The consistency requirement applies on a partnership-by-partnership basis. *Rev Proc 94-71, 1994-2 CB 810*.

The asset test is met if, at each testing date during the calendar year, the RIC has less than 35 percent of the value of its total assets represented by interests in partnerships. In general, the testing dates are the close of each quarter of the taxable year of the RIC. Alternatively, the testing dates are the close of January, April, July, and October, if the RIC uses those dates consistently from year to year to satisfy the asset test.

(n39)Footnote 2. *IRC § 4982(b)*.

(n40)Footnote 3. *IRC § 4982(b)(3)*.

(n41)Footnote 4. *IRC § 4982(c)*.

(n42)Footnote 5. *IRC § 4982(e)(1)*. For purposes of determining the ordinary income of an RIC, *IRC § 1296* (governing the mark-to-market election for marketable passive foreign investment company stock) is applied as if the RIC's taxable year ended on Oct 31, and any ordinary gain or loss from an actual disposition of stock in a passive foreign investment company during the portion of the calendar year after Oct 31 is taken into account in determining the RIC's ordinary income for the following calendar year. *IRC § 4982(e)(6)*. If the RIC makes the election under *IRC § 4982(e)(4)* (see the text at N 8), the preceding sentence is applied by substituting the last day of the RIC's taxable year for Oct 31.

(n43)Footnote 6. *IRC § 4982(e)(5)*.

(n44)Footnote 7. *IRC § 4982(e)(2)*.

(n45)Footnote 8. *IRC § 4982(e)(4)*. The election can be revoked only with the consent of the Service.

(n46)Footnote 9. *IRC § 4982(e)(3)*.

(n47)Footnote 1. Temp Treas Reg § 1.337(d)-5T(a)(1), (3).

(n48)Footnote 2. Temp Treas Reg § 1.337(d)-5T(b)(1).

(n49)Footnote 2.1. *Treas Reg § 1.337(d)-5*.

(n50)Footnote 3. Temp Treas Reg § 1.337(d)-6T.

(n51)Footnote 4. Temp Treas Reg § 1.337(d)-7T.

(n52)Footnote 4.1. *Treas Reg §§ 1.337(d)-6, 1.337(d)-7*.

(n53)Footnote 5. *Treas Reg § 1.337(d)-5(d)*. The RIC using the 2000 regulations must apply *Treas Reg § 1.337(d)-6(c)(1)(i)*, *Treas Reg § 1.337(d)-6(c)(2)(i)*, *Treas Reg § 1.337(d)-6(c)(2)(ii)*, and *Treas Reg § 1.337(d)-6(c)(3)* with respect to built-in gains.

(n54)Footnote 6. *Treas Reg § 1.337(d)-6(a)(1)*, *Treas Reg § 1.337(d)-6(a)(2)(ii)*. If the conversion transaction is a qualification of the C corporation as a RIC, the deemed sale date is the end of the last day of the C corporation's last taxable year before the first taxable year in which it qualifies to be taxed as a RIC. *Treas Reg § 1.337(d)-6(b)(3)(i)*. If the conversion is a transfer of property by the C corporation to the RIC, the deemed sale date is the end of the day before the day of transfer. *Treas Reg § 1.337(d)-6(b)(3)(ii)*.

The deemed sale rule does not apply to any conversion transaction to the extent that gain or loss otherwise is recognized. Temp Treas Reg § 1.337(d)-6T(d)(1). It is inapplicable as well to any corporation that qualified to be a RIC or REIT for at least one taxable year, then failed to so qualify for a period not in excess of two taxable years, and then requalifies as a RIC or REIT. *Treas Reg § 1.337(d)-6(d)(2)*.

(n55)Footnote 7. *Treas Reg § 1.337(d)-6(b)(1)*.

(n56)Footnote 8. *Treas Reg § 1.337(d)-6(b)(1)*. Net loss is the excess of aggregate losses over aggregate gains (including items of income), without regard to character.

(n57)Footnote 9. *Treas Reg § 1.337(d)-6(c)(1)(i)*.

(n58)Footnote 10. *Treas Reg § 1.337(d)-6(c)(1)(ii)*.

(n59)Footnote 11. *Treas Reg § 1.337(d)-6(c)(2)(i)(A)*.

(n60)Footnote 12. *Treas Reg § 1.337(d)-6(c)(2)(i)(A) (1)*.

(n61)Footnote 13. *Treas Reg § 1.337(d)-6(c)(2)(i)(A) (2)*.

(n62)Footnote 14. *Treas Reg § 1.337(d)-6(c)(2)(i)(B)*.

(n63)Footnote 15. *Treas Reg § 1.337(d)-6(c)(2)(ii)(A)*.

(n64)Footnote 16. *Treas Reg* § 1.337(d)-6(c)(2)(ii)(B).

CHAPTER 12 Regulated Investment Companies

1-12 Taxation of Securities Transactions § 12.04

§ 12.04 Taxation of Regulated Investment Company Shareholders

[1] Dividends Received

[a] Time of Inclusion in Gross Income. Except for the requirement that an investment company stockholder include certain undistributed capital gains in gross income,ⁿ¹ a shareholder generally includes dividends received from an RIC in gross income for the taxable year in which they are actually received.ⁿ² This rule applies even though the distribution is made with respect to a valid *Section 855(a)* election by the corporation to treat the dividend as having been paid in the prior taxable year.ⁿ³

A special rule governs any dividend declared by an RIC in October, November, or December of any calendar year and payable to shareholders of record on a specified date in such month. The dividend is deemed to be paid by the company and received by the shareholder on December 31st, if the dividend is actually paid by the company during January of the following year.ⁿ⁴ The special rule does not apply for purposes of *IRC Section 855(a)*.ⁿ⁵

[b] Character of the Dividends Received. A distribution received by a shareholder will be considered as ordinary income, unless the RIC designates all or part of the dividend as a capital gain dividend or as an exempt-interest dividend in a written notice to its shareholders no later than 60 days after the close of its taxable year.ⁿ⁶ The amount designated as a capital gain dividends will be treated by the shareholder as long-term capital gain.ⁿ⁷ However, if the aggregate amount designated as capital gain dividends for the taxable year is greater than the excess of the company's net capital gain, the aggregate capital gain dividend for the taxable year is limited to such excess.ⁿ⁸ For example, if an investment company, having 100,000 shares outstanding, designated \$300,000 of distributions as capital gain dividends when in fact the excess of net long-term capital gain over net short-term capital loss was only \$200,000, the capital gain dividend would amount to \$2 per share instead of \$3 per share. The amount designated as an exempt-interest dividend will be treated as an item of excludable income for all purposes of the Code.ⁿ⁹ The extent of the dividend is limited here as well, for it cannot exceed the excess of the amount of tax-exempt interest received over the deductions disallowed by *IRC Sections 265* and *171(a)(2)*.ⁿ¹⁰

[c] Effect on the Dividends Received Deduction. *IRC Section 854* limits the extent to which dividends received from RICs qualify for the maximum rate of tax on dividends provided by *IRC Section 1(h)(11)* or for the dividends received deduction of *IRC Section 243*. Capital gain dividends can never qualify as dividends for those purposes.ⁿ¹¹ Ordinary income dividends can be taken into account in full for purposes of the deduction only if the RIC meets the income distribution requirements of *IRC Section 852(a)(1)* for the taxable year in which the dividend is paid.ⁿ¹² The

dividend must be paid by a domestic corporation.ⁿ¹³ However, distributions from tax-exempt corporations, farmers' cooperative associations, and real estate investment trusts do not qualify as dividends for purpose of the deduction.ⁿ¹⁴ In no event can the amount designated as a dividend by the company exceed the aggregate dividends received by the company for the taxable year.ⁿ¹⁵

If a dividend (other than a capital gain dividend) is received from a RIC, the RIC meets the requirements of *IRC Section 852(a)* for the taxable year during which it paid the dividend, and the qualified dividend income received by the RIC during the taxable year is less than 95-percent of its gross income, then, in computing the maximum tax on dividends under *IRC Section 1(h)(11)*, then, in computing qualified dividend income, there is taken into account only that portion of the dividend designated by the RIC.ⁿ¹⁶ For this purpose, gross income from sales or other dispositions of stock or securities includes only the excess of net short-term capital gain over net long-term capital loss from such sales or dispositions.ⁿ¹⁷ The aggregate amount that can be designated as qualified dividend income cannot exceed the sum of (1) the qualified dividend income of the RIC for the taxable year, and (2) the amount of earnings and profits that were distributed by the RIC during the taxable year and accumulated in a taxable year with respect to which rules did not apply.ⁿ¹⁸

A final limitation is imposed by *IRC Section 854(b)(2)*. No portion of any distribution by an RIC can be treated as a qualified dividend or as a dividend for purposes of the dividends received deduction if it exceeds the amount designated as a dividend by the company in a written notice mailed to shareholders within 60 days after the close of the company's taxable year. If the amount designated by the company is greater than the amount correctly ascertained under *IRC Section 854(b)(1)*, the correct amount controls.ⁿ¹⁹

[2] Undistributed Capital Gains

[a] Extent and Time of Inclusion in Gross Income. Although an RIC is taxed on the undistributed excess of net long-term capital gain over net short-term capital loss, a shareholder will be required to include in his gross income as long-term capital gain so much of the undistributed capital gains as the RIC designates in a written notice mailed to shareholders not later than 60 days after the close of the company's taxable year.ⁿ¹ However, in no event can the amount includable exceed the shareholder's proportionate share of the capital gains subject to tax at the corporate level under *IRC Section 852(b)(3)*.ⁿ²

The designated amount of undistributed capital gains is includable in gross income for the taxable year of the shareholder that includes the last day of the taxable year of the RIC in respect of which the designation is made.ⁿ³ To illustrate, undistributed capital gains realized by a company in a fiscal year ending January 31, 1987, would be includable by a calendar year shareholder in his return for 1987, even though all the gains might have been realized between February 1 and December 31, 1986.

[b] Credit for Taxes Paid. The "conduit" theory of taxation that Congress has provided in the case of RICs would be undermined if a tax on undistributed capital gains were imposed both at the corporate and shareholder levels. This problem is eliminated by *IRC Section 852(b)(3)(D)(ii)* which provides that each shareholder is deemed to have paid the tax imposed on the corporate level on the amount of undistributed capital gain required to be included in his gross income, and which allows the shareholder a credit or refund for the tax which he is deemed to have paid.

[c] Effect on Basis of Shareholder's Stock. The inclusion of undistributed capital gain by the shareholder works an increase in the adjusted basis of his shares in the RIC. The amount of the increase is equal to the amount includable as long-term capital gain less the tax imposed on such amount at the corporate level.ⁿ⁴ Thus, for years prior to 1970, basis was increased by 75 percent of the undistributed capital gains includable in such years. For years after 1974 and before 1979, the increase was 70 percent; for years after 1978 and before 1987, it was 72 percent; for years after 1986 and before 1993, it was 66 percent; for years after 1992 and the first taxable year beginning after August 5, 1997, it was 35 percent. For taxable years beginning after August 5, 1997, the adjustment to basis is equal to the difference between the amount of the includable gain and the tax deemed paid by the shareholder.

[d] Effect on Earnings and Profits of a Corporate Shareholder. If the RIC shareholder is a corporation, the amount of undistributed capital gains includable in its gross income will cause a corresponding increase in its earnings and profits for the taxable year.ⁿ⁵ By the same token, the reduction in earnings and profits by reason of the amount of taxes paid by the corporation must take into account the extent of the corporation's tax liability satisfied by the credit for taxes deemed to have been paid by the shareholder with respect to undistributed capital gains.ⁿ⁶

[3] Special Rule Affecting Loss on the Sale or Exchange of Stock Held Less Than Six Months

The combination of a holding period of less than six months,ⁿ¹ and the inclusion in gross income of either a capital gain dividend or a designated amount of undistributed capital gains, will convert a portion of any loss realized on a sale or exchange of the stock from a short-term capital loss into a long-term loss. The amount so affected can never exceed the amount of capital gain which the shareholder was required to include in gross income.ⁿ²

Example:

On December 10, 1985, a person acquired 100 shares of Investment Company X stock for \$2,500. On December 31, 1985, the investment company distributed a capital gain dividend of \$3 a share to stockholders of record on December 20, 1985. On January 5, 1986, the entire 100 shares were sold for \$2,150. Of the total loss of \$350, \$300 (an amount equal to the capital gain dividend received with respect to the stock and included in gross income) will be treated as a long-term capital loss, and the \$50 balance as a short-term capital loss.

The foregoing discussion assumed that the shareholder did not receive any exempt-interest dividend from the company. If the shareholder did receive such a dividend and then sold the stock within six months of acquisition, any loss realized on the disposition would be disallowed to the extent of the exempt-interest dividend.ⁿ³ The amount so disallowed would reduce the amount of loss treated as long-term capital loss under the rules discussed above.

[4] Election to Allow Shareholders to Claim Foreign Tax Credits of Regulated Investment Companies

An RIC which has more than 50 percent of the value of its assets invested in stock or securities of foreign corporations and which meets the income distribution requirement of *IRC Section 852(a)(1)*, may elect to forego any deduction under *IRC Section 164(a)* or any credit under *IRC Section 901* for foreign taxes paid by it during the taxable year.ⁿ¹ If the election is made, the amount of those taxes will be added to the RIC's dividends paid deduction for the taxable year.ⁿ²

The shareholder of an electing RIC must:

- (1) include in gross income his proportionate share of foreign taxes paid by the RIC;ⁿ³
- (2) treat his proportionate share of such taxes and the portion of any dividend paid by the RIC which represents income derived from foreign sources as gross income from foreign sources;ⁿ⁴ and
- (3) treat his proportionate share of the foreign taxes paid by the RIC as having been paid by him.ⁿ⁵ This permits the shareholder to claim his share of such taxes as either a credit under *IRC Section 901* or a deduction under *IRC Section 164(a)*.ⁿ⁶

The shareholder takes these consequences into account in the taxable year in which distribution is made even though the distribution is pursuant to a *IRC Section 855(a)* election validly made by the corporation.ⁿ⁷

The effect of the election, from the standpoint of the shareholder, is to place him in the same position as a person directly owning stock in foreign corporations.

[a] Notice to Shareholders. The amount that a shareholder is required to treat as his proportionate share of foreign taxes paid and as gross income derived from foreign sources can not exceed the amounts so designated in a written notice mailed to shareholders within 60 days after the close of the company's taxable year.ⁿ⁸ The notice must show the taxes paid to each country and the portion of the dividend which represents income derived from sources within each such country.ⁿ⁹ A copy of the notice must be filed with the company's return in order for the election to be valid.ⁿ¹⁰

[b] Manner of Making the Election. A valid election can be made by the RIC only in the manner specified in the Regulations.ⁿ¹¹ In brief, the RIC is required to file a statement as part of its return in which it sets forth, among other things, the total foreign source income received by it, the total taxes paid by it to foreign countries, and the proportionate share of foreign taxes paid and foreign income received attributable to each share of outstanding stock of the RIC.

The election must be made with respect to all qualifying foreign taxes paid during the taxable year and cannot be made any later than the time prescribed for filing the company's return for the taxable year.ⁿ¹² While a new election must be made each year, once an election is made for a given year it becomes irrevocable.ⁿ¹³

[5] Election to Allow Shareholders to Claim Credits on Tax Credit Bonds

IRC Section 853A, added by the American Recovery and Reinvestment Act of 2009 (ARRA), provides a procedure by which a RIC may elect to pass through credits to which it is entitled (in lieu of interest) on any tax credit bond issued under *IRC Sections 54, 54A or 54AA*.ⁿ¹ The RIC must make an election by which it gives up its right to claim credits with respect to its holdings of tax credit bonds.ⁿ² The RIC must also include in gross income for the taxable year, as interest, an amount equal to the amount it would have included in gross income had it not made the election (i.e., an amount equal to the tax credits to which it would have been entitled).ⁿ³ The RIC is entitled to an offsetting increase in its dividends paid deduction for the taxable year equal to this increase in its gross income.ⁿ⁴

The RIC must also provide a notice to its shareholders, not less than 60 days after the close of its taxable year in a manner to be prescribed by the Secretary, advising each shareholder of (1) his or her proportionate share of the RIC's tax credits for such year in respect of its tax credit bonds, and (2) the equivalent amount of gross income such shareholder must include as interest income on his or her return for such year.ⁿ⁵ Each shareholder of an electing RIC is then required to report the income and is allowed the proportionate share of the RIC's credits on his or her return.ⁿ⁶

[6] Treatment of Certain Load Charges

The purchase price of shares in a mutual fund often includes a sales fee commonly called a load charge. In addition, the purchase of shares in one fund often carries with it the right to sell those shares and reinvest the proceeds in the shares of another, related fund. If the change occurs soon after the initial purchase, the sale will often produce a loss measured in part by the amount of the load charge. Thus, even though there is a continuing investment in the same group of funds, the taxpayer will have realized a capital loss that is potentially deductible in the year of sale.

The ability to convert existing basis into a loss or lesser amount of gain is precluded by *IRC Section 852(f)(1)* if:

- (1) the taxpayer incurs a load charge in acquiring stock in an RIC and thereby acquires a reinvestment right--the right to acquire stock in a mutual fund without the payment of a load charge or with the payment of a reduced load charge;
- (2) the original shares are disposed of before the 91st day after their purchase; and
- (3) the taxpayer exercises the reinvestment right by acquiring stock in the same, or in another, RIC.ⁿ¹

This is accomplished by disregarding the amount of the load charge in determining the basis of the original shares and, accordingly, the gain or loss realized upon the disposition. Instead, the load charge is added to the basis of the newly acquired shares.

FOOTNOTES:

(n1)Footnote 1. See § 12.04[2], *infra*.

(n2)Footnote 2. *Treas Reg* § 1.852-4(a)(1), (3). Dividends which are paid in stock or reinvested in stock pursuant to an option on the part of the shareholder will be taxable dividends. *IRC* § 305(b)(1); *Treas Reg* § 1.305-2(c)(2), Ex 2.

A number of rulings have discussed the problem of determining the owner for tax purposes of mutual fund shares held by a life insurance company as part of a "wrap around" annuity under which the premiums are invested in shares of mutual funds. In general, the policyholder will be treated as the owner if he has investment control and the mutual fund is available to the general public without buying an annuity. *Rev Rul* 81-225, 1981-2 CB 12, clarified by *Rev Rul* 82-55, 1982-1 CB 12 and *Rev Rul* 82-54, 1982-1 CB 11, clarified and amplified by *Rev Rul* 2003-92, 2003-2 CB 350. The investor control theory of *Rev Rul* 81-225 was upheld in *Christoffersen v US*, 749 F2d 513 (8th Cir 1984). Compare *Rev Rul* 2003-91, 2003-2 CB 347, where the policyholder did not possess sufficient incidents of ownership over assets in the mutual funds, so that the holder was not required to include earnings on the assets in the funds in income.

Rev Rul 81-225 and *Rev Rul* 2003-92 have been clarified and amplified to provide that the holder of a variable annuity or life insurance contract is not treated as the owner of an interest in a RIC that funds the variable contract solely because interests in the same RIC are also available to investors described in *Treas Reg* § 1.817-(5)(f)(3) (see § 12A.02). *Rev Rul* 2007-7, 2007-1 CB 468.

(n3)Footnote 3. *IRC* § 855(b).

(n4)Footnote 4. *IRC* § 852(b)(7).

(n5)Footnote 5. For example, an RIC that has a taxable year ending on Nov 30th, may treat the dividend as having been paid before December under *IRC* § 855(a).

(n6)Footnote 6. *IRC* § 852(b)(3)(C). A designation by an RIC with more than one class of stock will be effective for federal income tax purposes only to the extent that it does not exceed the class's proportionate share of that type of income. *Rev Rul* 89-81, 1989-1 CB 226.

(n7)Footnote 7. *IRC* § 852(b)(3)(B).

(n8)Footnote 8. *IRC* § 852(b)(3)(C). In making the designations, permitted by *IRC* §§ 852(b)(3)(C), 852(b)(5)(A), 854(b)(1), 871(k)(1)(C), and 871(k)(2)(C), the RIC may designate the maximum amount permitted under each provision even if the aggregate of all the amounts so designated exceeds the total amount of the RIC's dividend distribution. *Rev Rul* 2005-31, 2005-1 CB 1084.

(n9)Footnote 9. *IRC* § 852(b)(5)(B).

(n10)Footnote 10. *IRC* § 852(b)(5)(A). In making the designations, permitted by *IRC* §§ 852(b)(3)(C), 852(b)(5)(A), 854(b)(1), 871(k)(1)(C), and 871(k)(2)(C), the RIC may designate the maximum amount permitted under each provision even if the aggregate of all the amounts so designated exceeds the total amount of the RIC's dividend distribution. *Rev Rul* 2005-31, 2005-21 IRB 1084.

(n11)Footnote 11. *IRC* § 854(a). This applies only to dividends paid out of long-term capital gains.

(n12)Footnote 12. *IRC* § 854(b)(1)(A). An amount is treated as a dividend received by the RIC only if it would

have qualified for the dividends received deduction if the deduction were available to RICs. *IRC § 854(b)(4)*. In making the designations, permitted by *IRC §§ 852(b)(3)(C), 852(b)(5)(A), 854(b)(1), 871(k)(1)(C), and 871(k)(2)(C)*, the RIC may designate the maximum amount permitted under each provision even if the aggregate of all the amounts so designated exceeds the total amount of the RIC's dividend distribution. *Rev Rul 2005-31, 2005-1 CB 1084*.

(n13)Footnote 13. *IRC § 854(b)(3)(A)*.

(n14)Footnote 14. *IRC § 854(b)(3)(B)(i), (ii)*.

A dividend received from an RIC is subject to the same limitations that are imposed on the recipient investment company. *IRC § 854(b)(3)(C)*.

(n15)Footnote 15. *IRC § 854(b)(1)(C)(i)*.

(n16)Footnote 16. *IRC § 854(b)(1)(B)(i)*. An amount is treated as a dividend only if it is qualified dividend income within the meaning of *IRC § 1(h)(11)(B)*, as discussed in § 2.06[2][a][i]. *IRC § 854(b)(5)*.

(n17)Footnote 17. *IRC § 854(b)(1)(B)(ii)*.

(n18)Footnote 18. *IRC § 854(b)(1)(C)(ii)*.

(n19)Footnote 19. *Treas Reg § 1.854-2*.

(n20)Footnote 1. *IRC § 852(b)(3)(D)(i)*. The designation is made on Form 2439. *Treas Reg § 1.852-9(a)(1)*. If notice is given to a nominee of an actual owner, the nominee is, in turn, required to give notice to the actual owner. *Treas Reg § 1.852-9(b)(1)*.

Under *IRC § 897(h)(1)*, a distribution by a RIC to a foreign taxpayer with respect to any class of stock that is regularly traded on an established securities market located in the US is not treated as gain recognized from the sale or exchange of a US real property interest if the foreign taxpayer did not own more than 5% of the class of stock at any time during the one-year period ending on the date of distribution. The amount of such gain is not included in computing the shareholder's long-term capital gains, but is included in the shareholder's gross income as a dividend from the RIC. *IRC § 852(b)(3)(E)*.

(n21)Footnote 2. *IRC § 852(b)(3)(D)(i)*.

(n22)Footnote 3. *Id.* In determining the proper person to be considered the shareholder, the undistributed capital gain is treated as a cash dividend payable to shareholders of record on the last day of the company's taxable year. The person who would be required to include such a dividend in gross income is the one who must include the undistributed capital gain in gross income. *Treas Reg § 1.852-4(b)(2)(iv)*.

(n23)Footnote 4. *IRC § 852(b)(3)(D)(iii)*.

(n24)Footnote 5. *Treas Reg § 1.852-4(b)(5)*. The earnings and profits of the distributing RIC for the taxable year are reduced by the total amount of the undistributed capital gains designated by the company and includable by its shareholders. The capital account is increased by the amount so designated less the taxes imposed on the gains. No reduction in earnings and profits is caused by the payment of taxes which are deemed paid by shareholders. *Treas Reg § 1.852-2(b)(2)(ii)*.

(n25)Footnote 6. *Treas Reg § 1.852-4(b)(5)*.

(n26)Footnote 1. The holding period principles of *IRC § 246(c)*, discussed at § 4.04[2][a][v], *supra*, are applicable in determining the holding period here.

(n27)Footnote 2. *IRC § 852(b)(4)*. The rule does not apply to losses incurred under a periodic liquidation plan. *IRC § 852(b)(4)(D)*.

(n28)Footnote 3. *IRC § 852(b)(4)(B)*.

(n29)Footnote 1. *IRC §§ 853(a), 853(b)(1)(A)*. The election applies only to taxes actually paid pursuant to an income tax convention, and not to taxes deemed paid by *IRC § 902*. *Treas Reg § 1.853-1(a)*.

The provision does not apply to any tax with respect to which the RIC is not allowed a credit because of the application of *IRC § 901(k)*. *IRC § 853(e)*.

(n30)Footnote 2. *IRC § 853(b)(1)(B)*.

(n31)Footnote 3. *IRC § 853(b)(2)(A)*.

(n32)Footnote 4. *IRC § 853(b)(2)(B)*.

(n33)Footnote 5. *IRC § 853(b)(2)(A)*.

(n34)Footnote 6. *Treas Reg § 1.853-1(a)*.

(n35)Footnote 7. *IRC § 855(d)*.

(n36)Footnote 8. *IRC § 853(c)*.

(n37)Footnote 9. *Treas Reg § 1.853-3*. If the amount designated is greater than the correct amount, the shareholder is limited to the amount correctly ascertained.

(n38)Footnote 10. *Treas Reg § 1.853-4(a)(1)(iii)*.

(n39)Footnote 11. *Treas Reg § 1.853-4(a)(1)*.

(n40)Footnote 12. *Treas Reg § 1.853-4(b)*.

(n41)Footnote 13. *Treas Reg § 1.853-4(b)*.

(n42)Footnote 1. See *IRC § 853A(e)(1)(A)*. Tax credit bonds are discussed in §§ 17.03[14][a]et seq and 17.03[15]. Authority to issue tax credit bonds under *IRC § 54* (clean renewable energy bonds), terminated after December 31, 2008; those bonds have been replaced by "new clean renewable energy bonds," a tax credit bond authorized by *IRC §§ 54A and 54C*.

(n43)Footnote 2. *IRC § 853A(b)(1)*. The Treasury is authorized to issue regulations concerning the manner of making the election, *IRC § 853A(d)*. Congress intends that, at least for any year in which the election is in effect, the election will apply to all tax credit bonds held by the RIC and not on an issue-by-issue basis. See HR Conf Rep 111-16, 111th Cong, 1st Sess (February 12, 2009) at 605.

(n44)Footnote 3. *IRC § 853A(b)(2)(A)*.

(n45)Footnote 4. *IRC § 853A(b)(2)(B)*.

(n46)Footnote 5. *IRC § 853A(c)* and *(d)*.

(n47)Footnote 6. *IRC § 853A(b)*.

(n48)Footnote 1. The rule does not apply to any charge incurred because of the reinvestment of a dividend.

CHAPTER 12A Variable Deferred Annuity Contracts

1-12A Taxation of Securities Transactions § 12A.01

§ 12A.01 Introduction

We saw in the previous chapter that although regulated investment companies (RICs) offer investors diversification and expert management of their investments, RICs are required to distribute a specified portion of their income to their shareholders in order to avoid a tax on the entity. The shareholders must include the amount of the distribution in their respective incomes. Moreover, there is no deferral if the investor sells shares in a mutual fund and then reinvests the proceeds in another fund in the same "family;" gain must be reported in the year of sale.

Diversification and expert management can also be achieved with the purchase of a variable deferred annuity. Issuers of such contracts maintain a number of different investment vehicles and will place the purchaser's funds in whichever portfolio the investor chooses. The benefit of such an investment lies in its deferred tax status. The holder of the annuity is not subject to tax until distributions are actually made, even if changes occur in the investment of the funds within the annuity.

CHAPTER 12A Variable Deferred Annuity Contracts

1-12A Taxation of Securities Transactions § 12A.02

§ 12A.02 Qualification for Tax-Deferred Status

The key to tax deferral for variable annuity contracts lies in the diversification of investments of segregated accounts that underlie the annuity. A variable annuity contract is a contract:ⁿ¹

- (1) that provides for the allocation of all or part of the amounts received under the contract to an account that, pursuant to state law or regulation, is segregated from the general asset accounts of the issuer;
- (2) that provides for the payment of a variable annuity computed on the basis of recognized mortality tables and the investment experience of a segregated asset account or, if the issuing company issues only variable contracts, the company-wide investment experience; and
- (3) under which the amounts paid in, or the amount paid out, reflect the investment return of the segregated asset account. This third requirement is applied without regard to whether there is a guarantee. Obligations under a guarantee that exceed obligations under the contract without regard to the guarantee are accounted for as part of the company's general account.

If a contract ceases to reflect current investment return and current market value, the contract is not treated as meeting the third requirement after such cessation. The investment return and market value of all assets in a segregated account must be allocated in an identical manner to any variable annuity contract invested in any of those assets.ⁿ²

Deferral is further predicated on the condition that each segregated asset account contain investments that are adequately diversified.ⁿ³ This standard is designed to deny annuity treatment for investments that are publicly available to investors and investments that are made, in effect, at the direction of the investor. Thus, annuity treatment is unavailable to variable annuity contracts that (1) are the equivalent to investments in one or a relatively small number of particular assets (eg, stocks, bonds, or certificates of deposits of a single issuer), or (2) invest in one or a relatively small number of publicly available mutual funds or specific properties, or in a nondiversified pool of mortgage type investments.ⁿ⁴

The diversification requirement is tested quarterly on a calendar basis.ⁿ⁵ A segregated asset account that meets the diversification requirement on the last day of the calendar quarter, or within 30 days after the close of the quarter, is adequately diversified for that quarter.ⁿ⁶

A segregated asset account that is not a real property account on its first anniversary (the anniversary of the first date on which an amount is allocated to the account) is considered to be diversified until the first anniversary unless more than 30 percent of the amount allocated as of the last day of a calendar quarter is attributable to contracts entered into more than one year before that date. If the segregated asset account is a real property account, the "start-up period" is five years, with the 30-percent rule applicable if allocated to contracts entered into more than five years before the date.ⁿ⁷

A segregated asset account that satisfies the diversification requirements on the date a plan of liquidation is adopted is considered adequately diversified for the following periods beginning on the date of adoption of the plan: one year if the account is not a real property account; two years if the account is a real property account.ⁿ⁸

Once the diversification requirement is not met, tax deferral is eliminated even if diversification is achieved again in a later period.ⁿ⁹ However, diversification is deemed to exist if the issuer or holder of the variable annuity contract shows the Service that the failure to actually meet the diversification requirement was inadvertent, the investments in the account satisfy the diversification requirements within a reasonable time after discovery of the failure, and the issuer or holder agrees to make such adjustments or pay such amounts as the Service may require with respect to the periods during which the investments in the account were not diversified.ⁿ¹⁰

In addition, a segregated asset account that was diversified at the end of a calendar quarter does not become nondiversified in a subsequent quarter because of a discrepancy between the value of its assets and the diversification requirements, unless the discrepancy exists immediately after the acquisition of any asset and is wholly or partly a result of the acquisition.ⁿ¹¹

The investments of a segregated asset account are considered to be adequately diversified only if no more than 55 percent of the value of the total assets of the account is represented by any one investment, no more than 70 percent is represented by any two investments, no more than 80 percent is represented by any three investments, and no more than 90 percent is represented by any four investments.ⁿ¹² All securities of the same issuer, all interests in the same real property project, and all interests in the same commodity are treated as a single investment. In the case of U.S. government securities, each government agency or instrumentality is treated as a separate issuer.ⁿ¹³

A special rule, applicable in the case of a beneficial interest in a RIC, real estate investment trust, partnership, or grantor trust ("look-through entity"), does not treat the interest as a single investment, but calls for a pro rata portion of each asset of the look-through entity to be treated as an asset of the segregated asset account,ⁿ¹⁴ whenever:

- (1)(a) all of the beneficial interests in the look-through entity are held by one or more segregated asset accounts of one or more insurance companies, and
- (b) public access to the look-through entity is available exclusively through the purchase of a variable contract;
- (2) in the case of a partnership, any interest in the partnership is not registered under federal or state law regulating the offering or sale of securities; or
- (3) in the case of a grantor trust, substantially all of the assets of the trust are represented by Treasury securities.ⁿ¹⁵

Satisfaction of the requirements relating to look-through entities is not prevented by reason of certain beneficial interests in the entity not being held by segregated accounts.ⁿ¹⁶

A safe harbor, provided by *IRC Section 817(h)(2)*, deems diversification adequate if, at the close of the calendar quarter:

- (1) at least 50 percent of value of the assets in the segregated account is represented by:

(a) cash and cash items (including receivables), government securities and securities of RICs, and

(b) other securities limited generally with respect to any one issuer to an amount not greater in value than 5 percent of the value of the total assets of the account and to not more than 10 percent of the outstanding voting securities of the issuer; and

(2) not more than 25 percent of the value of its total assets is invested in the securities (other than government securities and the securities of RICs) of any one issuer, or two or more issuers that the issuing company controls which are engaged in the same, similar, or related trades or businesses.ⁿ¹⁷

A second proviso limits any investments in cash and cash items, government securities, and securities issued by RICs to 55 percent of the value of the assets in the account.

(n2)Footnote 2. *Treas Reg § 1.817-5(e)*.

(n3)Footnote 3. *IRC § 817(h)(1)*. To the extent any segregated asset account with respect to a variable life insurance contract is invested in US Treasury securities, the investments made by the accounts are treated as adequately diversified. *IRC § 817(h)(1)*.

For purposes of determining whether a segregated asset account held by an insurance company is adequately diversified, a segregated asset account that invests in a regulated investment company that, in turn, holds an interest in a second regulated investment company can look through to the individual assets held by both regulated investment companies. *Rev Rul 2005-7, 2005-1 CB 464*.

On September 29, 2008, in order to stabilize money market share prices at \$1, the U.S. Treasury Department announced a temporary guarantee program for money market funds, a program available to insurance-dedicated money market funds as well as to money market funds sold directly to the general public. In response to concerns that this program could create adverse tax consequences for insurance-dedicated money market funds, the IRS issued *Notice 2008-92, 2008-2 CB 1001*, which stated that participation in the program will not be treated as a violation of the diversification requirement. The Notice also held that a fund's participation in the program will not cause the holder of a variable contract supported by a segregated account that invests in the fund to be treated as an owner of the fund.

CHAPTER 12A Variable Deferred Annuity Contracts

1-12A Taxation of Securities Transactions § 12A.03

§ 12A.03 Tax Consequences of Payments Under the Contract

The most important tax consequence to any holder of a variable annuity contract who is a natural person is the deferral of tax on any increase in value of the annuity until payment is made. A holder who is not a natural person is required to treat the income on the contract for any taxable year as income received or accrued during the taxable year.ⁿ¹ The income on the contract is the excess of (1) the sum of the net surrender value of the contract as of the close of the taxable year plus all distributions under the contract received during the taxable year or any prior year, reduced by (2) the sum of the net premiums under the contract for the taxable year and prior taxable years and amounts includable in gross income for prior taxable years with respect to the contract. Where necessary to prevent avoidance of *IRC Section 72(u)(1)*, the Service can substitute "fair market value" for "net surrender value."ⁿ²

The nondeferral rule for holders who are not natural persons does not apply to any annuity contract that:

- (1) is acquired by the estate of a decedent by reason of the decedent's death;
- (2) is held by a qualified employee benefit plan or individual retirement plan;
- (3) is a qualified funding asset (an annuity issued by an insurance company as part of a structured personal injury settlement);ⁿ³
- (4) is purchased by an employer upon the termination of a qualified plan and held by the employer until all amounts under the contract are distributed to the employee for whom it was purchased or the employee's beneficiary; or
- (5) is an immediate annuity.ⁿ⁴ An immediate annuity is one that is purchased for a single premium, has an annuity starting date no later than one year following purchase, and provides for a series of substantially equal periodic payments (to be made not less frequently than annually) during the annuity period.ⁿ⁵

[1] Amounts Not Received as an Annuity

The tax treatment of any amount received under the contract that is not "an amount received as an annuity"ⁿ¹ depends

on the time of receipt. Generally, an amount is received as an annuity if it is received after the annuity starting date, is payable in periodic installments at regular intervals over a period of more than one full year from the annuity starting date, and the total of the amounts payable are determinable at the annuity starting date.ⁿ² However, an exception is made for payments to be received for a definite or determinable period of time under a contract that provides either (1) that the amount of periodic payments may vary in accordance with investment experience, cost of living indices, or other fluctuating criteria, or (2) for specified amounts, the value of which may vary for income tax purposes, such as payments to be made in a foreign currency.ⁿ³ The exception gives rise to the ability to treat a variable annuity as an annuity under *IRC Section 72*.

If the contract holder receives a loan under the contract or assigns or pledges (or agrees to assign or pledge) any portion of the value of the contract, the amount or portion is treated as received under the contract as an amount not received as an annuity.ⁿ⁴ The same holds true for dividends or similar distributions.ⁿ⁵

A gratuitous transfer of the contract results in the transferor being deemed to have received an amount equal to the excess of the cash surrender value of the contract over the investment in the contract as an amount not received as an annuity. The rule does not apply to any transfer to a spouse or former spouse to which *IRC Section 1041* applies.ⁿ⁶

If received before the annuity starting date (the first day of the first period for which an amount is received as an annuity under the contract),ⁿ⁷ the amount is includable in gross income to the extent allocable to income on the contract and excludable to the extent allocable to the investment in the contract.ⁿ⁸ An amount is considered allocable to income on the contract to the extent that it does not exceed the excess of the cash value of the contract (determined without regard to any surrender charge) immediately before the amount is received, over the investment in the contract at the time. Any amount not allocated to income is allocable to investment in the contract.ⁿ⁹

Determination of the amount of investment in the contract begins with a calculation of the aggregate amount of premiums or other consideration paid for the contract. There is then subtracted the amount of any premium refunds or dividends received before the annuity starting date, any other amounts received under the contract before that date that were excludable from gross income, and the value of any refund feature.ⁿ¹⁰ An annuity contract has a refund feature if the expected return under the contract depends in whole or in part on life expectancy, the contract provides for payments to be made to a beneficiary on or after the death of the annuitant, and the payments are in the nature of a refund of the consideration paid.ⁿ¹¹ The amount of any loan or pledge treated as an amount not received as an annuity is not taken into account, except to the extent that the amount is included in gross income.ⁿ¹² If the holder of an annuity transfers it without full and adequate consideration, the investment of the transferee in the contract is increased by the amount required to be included in income by the transferor.ⁿ¹³

If an amount not received as an annuity is received after the annuity starting date, the entire amount is includable in gross income.ⁿ¹⁴

[2] Amounts Received as an Annuity

Normally, until cost is fully recovered, an amount received as an annuity contains both an excludable return of capital and an includable element of income. The excludable portion is determined by use of an exclusion ratio that is calculated by dividing the investment in the contract (as of the annuity starting date) by the expected return under the contract (as of that date).ⁿ¹

When it comes to a variable annuity, the amount of inclusion and exclusion is computed somewhat differently. The investment in the contract is considered to be equal to the expected return under the contract, resulting in an exclusion ratio of 100 percent to be applied to all amounts received as an annuity.ⁿ² The amount of any variable annuity payment treated as an amount received as an annuity is determined by dividing the investment in the contract (adjusted for any refund feature) by the number of payments expected to be received during the annuity period (term certain or life

expectancy). For any taxable year, the amount excluded is the sum of all amounts received as an annuity during the year. All additional amounts are includable in gross income. If the total amount of payments received by the annuitant in a taxable year is less than the amount that could be excluded in that year, the taxpayer can elect, in a succeeding year, to redetermine the amounts to be received as an annuity during the current and succeeding taxable years.ⁿ³

The difference between the portion of the investment in the contract allocable to the taxable year and the total payments actually received in the taxable year prior to the election is divided, in the case of an annuity based on life expectancy, by the applicable life expectancy of the annuitant or annuitantsⁿ⁴ or, in the case of an annuity for a term certain, by the remaining years in the term.

The foregoing rules can be illustrated by the following examples:

Example 1:

A 62-year old taxpayer has a life expectancy of 22.5 years on June 1, 1992, the annuity starting date of a variable annuity contract calling for annual payments purchased in 1990 for \$50,000. A \$2,500 payment under the contract is received on June 1, 1993. The excludable portion of the payment in this case amounts to \$2,273.73, determined by dividing the \$50,000 (the investment in the contract) by 22 (the annuitant's life expectancy adjusted for annual payments).ⁿ⁵

Example 2:

Assume that the taxpayer does not receive a payment under the contract in 1994, but that a payment of \$2,800 is received on June 1, 1995. The annuitant can elect in 1995 to redetermine the amounts to be received as an annuity under the contract as of June 1, 1994. This is done by dividing the difference between what was excludable in 1993 and 1994 (\$4,547.46) and what was actually received (\$2,500) by 20.3 (the annuitant's life expectancy on June 1, 1994, the first year of the election, adjusted for annual payments) and adding the result (\$100.86) to the original exclusion amount. If the election is made, the amount excludable in 1995 and subsequent years is \$2,374.59.

The election described in Example 2 is made by filing with the return a statement that the taxpayer elects to make a redetermination of the amounts excludable from gross income under the annuity contract in accordance with the provisions of *Regulations Section 1.72-4(d)(3)*. The statement must also contain the following information:

- (1) the original annuity starting date and the annuitant's age on that date;
- (2) the date of the first day of the first period for which an amount was received in the current taxable year;
- (3) the investment in the contract originally determined and adjusted for any refund feature; and
- (4) the aggregate of all amounts received under the contract between the date indicated in (1) and the day after the date indicated in (2) to the extent these amounts were excludable from gross income.

[3] Surrender of the Annuity Contract

Any amount received on the surrender, redemption, or maturity of an annuity contract that is not received as an annuity must be included in gross income to the extent that it, when added to amounts previously received that were excludable from gross income (amounts allocable to the investment in the contract), exceeds the aggregate of premiums or other consideration paid.ⁿ¹ However, if the payment is received after the first receipt of an amount as an annuity subsequent to the maturity, redemption, or surrender of the contract, the entire amount is includable in gross income.ⁿ²

In addition, any amount received as an annuity because of the surrender, redemption or modification of a contract is treated either as a periodic payment received for a term different from the one set forth in the contract or as a periodic payment received after a lump-sum distribution, whichever is applicable under the facts of the particular case.ⁿ³ Except in the case of a contract transferred for a valuable consideration, it is immaterial whether the recipient of the amount received on the surrender, redemption, or maturity of the contract is the same person who received prior amounts under the contract that were excludable from gross income.ⁿ⁴

See § 12A.04 for a discussion of the tax consequences of transfers of annuity policies.

[4] Death of the Annuitant

A contract will not be treated as an annuity contract unless it provides that (1) if any holder of the contract dies on or after the annuity starting date and before the entire interest in the contract has been distributed, the remaining portion of the interest will be distributed at least as rapidly as under the method of distribution being used at the holder's death, and (2) if any holder dies before the annuity starting date, the entire interest in the contract will be distributed within five years after the date of death.ⁿ¹ However, if any portion of the annuity is payable to a designated beneficiary over the beneficiary's life or life expectancy and payments begin not later than one year after the annuity holder's death, that portion is deemed to be distributed on the date payments commence.ⁿ² If the designated beneficiary is the spouse of the deceased holder, the rules of *IRC Section 72(s)* are applied by treating the spouse as the holder of the annuity contract.ⁿ³

Payments received under the contract after the death of the annuitant are taxed as income in respect of a decedent. Thus, the amount in excess of the basis of the contract in the hands of the decedent is treated as ordinary income; there is no step-up in basis because of the death of the decedent.ⁿ⁴ However, the recipient is permitted a deduction for any estate tax paid in the decedent's estate attributable to the item of income in respect of a decedent.ⁿ⁵

[5] Penalty for Early Withdrawal

If any amount under an annuity contract is paid to an annuitant prior to attaining age 59½, the annuitant's tax for the taxable year of receipt is increased by an amount equal to 10 percent of the portion of the payment includable in gross income.ⁿ¹ The penalty does not apply if the distribution is:

- (1) due to the death or disability of the annuitant;
- (2) part of a series of substantially equal periodic payments (not less frequently than annually) made for the life or life expectancy of the annuitant or the joint lives or joint life expectancies of the annuitant and a designated beneficiary;
- (3) allocable to investment in the contract before August 14, 1982;
- (4) from a qualified retirement plan or individual retirement account;
- (5) from an immediate annuity account; or
- (6) from a qualified funding asset to which compensation for personal injuries was assigned.ⁿ²

Disability for this purpose means that the person is unable to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment that can be expected to result in death or to be of long-continued and indefinite duration.ⁿ³

A distribution that is exempt from the penalty tax because it is part of a series of substantially equal periodic payments will become subject to the additional tax if the payments are subsequently modified (other than by reason of death or disability) either before the close of the five-year period beginning on the date of the first payment and after the taxpayer attains age 59½, or before the taxpayer attains age 59½. The increase in tax for the first taxable year in which the modification occurs is equal to the tax that would have been imposed but for the exemption, plus interest for the "deferral period"--the period beginning with the taxable year in which the distribution would have been taxed if there were no exemption and ending with the year of modification.ⁿ⁴

CHAPTER 12A Variable Deferred Annuity Contracts

1-12A Taxation of Securities Transactions § 12A.04

§ 12A.04 Transfers and Exchanges of Annuity Contracts

A transfer of an annuity policy for a valuable consideration is a taxable event resulting in the realization of gain or loss. The transferee's investment in the contract is the actual value of the consideration plus premiums and other consideration paid after the transfer, minus any amounts received by the transferee before the annuity starting date to the extent excludable from gross income. The annuity starting date is the first day of the first period for which the transferee receives an amount under the contract.ⁿ¹

On the other hand, *IRC Section 1035* makes an exchange of an annuity contract for another annuity contract a nonrecognition transaction.ⁿ² If the otherwise tax-free exchange is accompanied by the payment to the annuitant of cash or other property ("boot"), any gain ensuing from the transaction is includable in gross income solely to the extent of the boot. No loss is ever recognized.ⁿ³ The taxpayer's basis in the new annuity contract is the same as the basis in the old contract, decreased by the amount of any money received and increased by the amount of any gain recognized.ⁿ⁴

A direct exchange of a portion of an annuity contract will qualify for nonrecognition under *IRC Section 1035*.ⁿ⁵ *Revenue Procedure 2008-24* provided guidelines regarding tax-free exchanges under *IRC Section 1035* in such a situation. Under that Revenue Procedure, the exchange will not qualify for nonrecognition if there is a withdrawal from either annuity within 12 months after the transfer, other than a withdrawal triggered by a life event such as death, divorce, or loss of employment.ⁿ⁶

FOOTNOTES:

(n1)Footnote 1. *IRC § 72(g)*.

(n2)Footnote 2. To the extent provided in regulations, nonrecognition treatment will not extend to any exchange having the effect of transferring property to any person other than a United States person. *IRC § 1035(c)*.

Neither the Code nor the regulations contain a time limit for completion of the exchange. In addition, nonrecognition treatment under *IRC § 1035* is not expressly conditioned upon the relative policy values of the contracts exchanged, so long as no other property or cash is distributed as part of the exchange. *Rev Rul 92-43, 1992-1 CB 288 ; Ltr Rul 9820018*.

An exchange of a fixed annuity contract for a variable annuity contract comes within *IRC § 1035*. *Rev Rul 68-235*,

1968-1 CB 360 . A taxpayer is not entitled to nonrecognition treatment where he surrenders one annuity policy for cash value and then endorses the check to another issuer for another contract at higher interest. *Ltr Rul 8250023* . However, a transfer of a deferred annuity contract issued by a domestic insurance company for one issued by a foreign insurance company qualifies for nonrecognition treatment. *Ltr Rul 9319024* .

A taxpayer, who owned a non-qualified annuity contract, requested the issuer life insurance company to send a check to another life insurance company as consideration for a new annuity to be issued by the second company. The first company refused to do so and, instead, issued the check to the taxpayer who endorsed it to the second company. The Service ruled that the transaction did not constitute a tax-free exchange under *IRC § 1035(a)(3)*. *Rev Rul 2007-24, 2007-1 CB 1283* .

(n3)Footnote 3. *Treas Reg § 1.1035-1(c)*.

(n4)Footnote 4. A taxpayer assigned an entire annuity contract to a second insurance company that deposited the cash surrender value of the assigned contract into a preexisting annuity contract issued by the second company and owned by the same taxpayer. The Service ruled that the assignment was a tax free exchange under *IRC § 1035*. The taxpayer's basis in the preexisting contract issued by the second company included the taxpayer's basis in the assigned contract; the taxpayer's investment in that contract included the taxpayer's investment in the assigned contract. *Rev Rul 2002-75, 2002-2 CB 812* .

(n5)Footnote 5. *Conway v Commr, 111 TC 350 (1998)* , acq 1999-2 CB xvi. See also *Rev Rul 2003-76, 2003-2 CB 355* .

CHAPTER 13 Real Estate Investment Trusts

2-13 Taxation of Securities Transactions § 13.01

§ 13.01 Introduction

The function served by an RIC with regard to investments in stocks and securities is served by a real estate investment trust when the investment medium switches to real estate and real estate mortgages. It follows, then, that approximately the same tax treatment should be provided for real estate investment trusts, and those owning interests therein, as is provided for regulated investment companies and their shareholders. Using this as its premise,ⁿ¹ Congress enacted *IRC Sections 856 through 860* to govern the taxation of real estate investment trusts and their beneficiaries.ⁿ²

CHAPTER 13 Real Estate Investment Trusts

2-13 Taxation of Securities Transactions § 13.02

§ 13.02 Real Estate Investment Trust Defined

[1] The Basic Definition.

IRC Section 856(a) defines a real estate investment trust (REIT) as a corporation, trust, or association that (1) is managed by one or more trustees or directors;ⁿ¹ (2) issues transferable shares or transferable certificates of beneficial interest as evidence of beneficial ownership;ⁿ² (3) would otherwise be taxable as a domestic corporation; (4) is neither a bank, building and loan association, small business investment company, or business development corporation (financial institutions as defined in *IRC Section 582(c)(2)*), or a life insurance subject to taxation under Subchapter L of the Code; (5) is beneficially owned by at least 100 persons;ⁿ³ and (6) is not closely held.ⁿ⁴ The first four mentioned conditions must be met at all times during the taxable year.ⁿ⁵ The fifth must exist during at least 335 days of a taxable year of 12 months, or a proportionate number of days of a short taxable year.ⁿ⁶ The last mentioned condition is satisfied if, during the last half of the trust's taxable year, no five individuals own, directly or indirectly, more than 50 percent in value of the outstanding beneficial interests in the trust.ⁿ⁷ The REIT need not meet the ownership requirements mentioned in (5) and (6) for the first taxable year for which it elects to be taxed as a real estate investment trust.ⁿ⁸

[2] Additional Requirements for Qualification.

[a] Election to Be a Real Estate Investment Trust. No corporation, association, or trust will be considered a REIT for any taxable year unless it has elected to be one for that taxable year or for any prior taxable year.ⁿ¹ Only one method of electing is permitted--the entity must compute taxable income in the manner prescribed for REITs in its return for the first taxable year in which it desires to be taxed as a REIT.ⁿ² The year of election need not be the first year in which the taxpayer could qualify as a REIT.ⁿ³ Once made, the election remains in force until terminated or revoked.ⁿ⁴ Termination is automatic, takes effect whenever the REIT ceases to qualify as such, and stays effective for all succeeding taxable years.ⁿ⁵ Revocation is voluntary, and must be made within the first 90 days of the taxable year for which it is to be effective.ⁿ⁶ It, too, continues to be effective for all succeeding taxable years. Requalification is permitted, but only after a five-year period.ⁿ⁷ However, the waiting period requirement is eliminated in the case of termination if (1) the REIT does not willfully fail to file its tax return for the year in which termination occurs, (2) any incorrect information in the return is not the result of fraud, and (3) the REIT establishes that its failure to qualify as a REIT is due to reasonable cause and not to willful neglect.ⁿ⁸

[b] Gross Income Requirements.

2-13 Taxation of Securities Transactions § 13.02

An entity will not be considered a REIT for any taxable year in which it does not meet both of the following gross income requirements:ⁿ⁹

(1) At least 95 percent of the trust's gross income (excluding gross income from prohibited transactions) must be derived from:

- (a) dividends;
- (b) interest;ⁿ¹⁰
- (c) rents from real property;
- (d) gain from the sale or other disposition of stock, securities, and real property (including interests in real propertyⁿ¹¹ and interests in mortgages on real property)ⁿ¹² that is not held primarily for sale to customers in the ordinary course of business;
- (e) abatements and refunds of real property taxes;
- (f) income and gains derived from foreclosure property;
- (g) commitment fees received as consideration for entering into agreements for the purchase or rental of real property or for the making of mortgage loans;ⁿ¹³ and
- (h) gain from the sale of a real estate asset in a transaction that is not deemed to be a prohibited transaction by reason of *IRC Section 857(b)(6)*.ⁿ¹⁴

(2) At least 75 percent of its gross (excluding gross income from prohibited transactions) income must be derived from:

- (a) rents from real property;
- (b) interest on obligations secured by mortgages on real property or interests in real property;ⁿ¹⁵
- (c) gains from dispositions of real property (including gains from dispositions of interests in real property and interests in mortgages on real property) that is not held primarily for sale to customers in the ordinary course of business;
- (d) dividends or other distributions on, and gain (other than gain from a prohibited transaction) from the disposition of, interests in other qualified real estate investment trusts;
- (e) abatements and refunds of real property taxes;
- (f) income and gains derived from foreclosure property;
- (g) commitment fees;
- (h) gain from the sale or other disposition of a real estate asset in a transaction that is not a prohibited transaction because of the application of *IRC Section 857(b)(6)*; and

(i) qualified temporary investment income.ⁿ¹⁶

Any income derived from a shared appreciation provision is treated as gain recognized on a sale of the secured property.ⁿ¹⁷ The REIT is treated as holding the secured property for the period during which it held the shared appreciation provision (or, if shorter, for the period during which the secured property was held by the owner thereof).ⁿ¹⁸

Thus, at least 75 percent of the REIT's gross income must come from the sources described in (2) above, while an additional 20 percent must be derived from such sources, or from the sources mentioned in (1), or from a combination thereof.^{n18.1} The source of the remaining 5 percent is unimportant, although, for this purpose, any income from discharge of indebtedness is not taken into account.ⁿ¹⁹

If the REIT is a partner in a partnership, the trust is deemed to own its proportionate share of each of the assets of the partnership and to be entitled to the income of the partnership attributable to that share.ⁿ²⁰ For purposes of *IRC Section 856*, the interest of a partner in the partnership's assets is determined in accordance with the partner's capital interest in the partnership. The character of the various assets in the hands of the partnership and items of gross income of the partnership retain the same character in the hands of the partners for all purposes of *IRC Section 856*.

The failure to meet the 75 percent and 95 percent tests will not prove fatal, and the two requirements will be deemed to have been satisfied, if following the entity's identification of the failure to meet either or both of the requirements for any taxable year, a description of each item of its gross income prescribed by the requirements is set forth in a schedule for the taxable year filed in accordance with regulations, and the failure to meet either or both of the tests is due to reasonable cause and not due to willful neglect.ⁿ²¹ (An excise tax is imposed in lieu of disqualification.ⁿ²²) The failure to meet an income source test will be due to reasonable cause if the REIT exercised ordinary business care and prudence in attempting to satisfy the tests at the time it entered into each transaction.ⁿ²³ However, even if the REIT did exercise such care and prudence, a later determination, that the transaction is producing nonqualified income in sufficient amounts to cause an income test to be failed, will require the REIT to use ordinary business care and prudence in an effort to renegotiate the terms of the transaction or alter its portfolio.ⁿ²⁴

[i] Defining Rents From Real Property. In most cases, the greatest share of qualifying gross income will come from rents from real property, defined by *IRC Section 856(d)(1)* as including rents from interests in real property, charges for services customarily furnished or rendered in connection with the rental of real property, whether separately stated or not,ⁿ²⁵ and rent attributable to personal property leased in connection with a lease of real property if the rent attributable to the personal property is not more than 15 percent of the total rent for the year under the lease.ⁿ²⁶ To insure that such income remains passive investment income and that the REIT does not become actively involved in the operation of the property, the Code excludes certain amounts received by the REIT in the form of rentals from the scope of "rents from real property."ⁿ²⁷

The first category of excluded income looks to the manner in which the rent is computed. If the determination of the amount paid to the REIT depends in any way on the income or profits derived by any person from the property, the amount is not included within the term "rents from real property,"ⁿ²⁸ Clearly, the rule is applicable where the entire amount paid is based on income or profits. But should the entire amount received be disqualified where the lease specifies a fixed minimum rental as well as a percentage of the tenant's income or profits in excess of a stated amount? The Regulations so provide,ⁿ²⁹ and no case has held to the contrary.

IRC Section 856(d)(2)(A) adds parenthetically that any amount received or accrued by the REIT "shall not be excluded from the term 'rents from real property' solely by reason of being based on a fixed percentage or percentages of receipts or sales." Seemingly, what is required is that the percentage of receipts or sales be fixed at the inception of the lease,

and that it not be a subterfuge for a rental based on income or profits.ⁿ³⁰

If a REIT leases to a tenant who subleases for a rental based wholly or partially on the income or profits of the subtenant, only a proportionate part of the amount received by the REIT from the tenant will be excluded from the category of "rents from real property."ⁿ³¹ According to the Regulations, in the given fact pattern, the nonqualifying amount would be the lesser of (a) the contingent rent received by the REIT, or (2) an amount determined by multiplying the total rent received by the REIT from its tenant by the fraction:

$$\frac{\text{rent received by prime tenant based on income or profits}}{\text{total rent received by prime tenant.}}^{\text{n32}}$$

Example:

A REIT owns land underlying a shopping center. The REIT rents the land to the owner of the shopping center for an annual rent of \$1 million plus 2 percent of the gross receipts that the prime tenant receives from subtenants. For the taxable year in question, the prime tenant derives total rent from the shopping center of \$10 million. Of that amount, \$2.5 is received from subtenants whose rent is based, in whole or in part, on the income derived from the property. The REIT will receive \$1.2 in total rent, of which \$200,000 is based on a percentage of gross receipts of the prime tenant. The portion of the rent that is disqualified is the lesser of \$200,000 (the rent based on a percentage of gross receipts), or \$300,000 (\$1.2 million multiplied by the fraction \$2.5 million/\$10 million). Accordingly, \$1 million qualifies as "rents from real property"; \$200,000 does not.

The Tax Reform Act of 1986 further limited *IRC Section 852(d)(2)(A)*. Rents received by a REIT from a tenant that derives substantially all of its income from subletting the property leased from the REIT qualify as rents from real property, to the extent the rents paid by the subtenants would have so qualified had they been received directly by the REIT.ⁿ³³

Further indication of the interpretation given to *IRC Section 856(d)(2)(A)* can be found in *Revenue Ruling 69-107*ⁿ³⁴ and *Revenue Ruling 64-50*.ⁿ³⁵ In the former, the lease called for a stated rental for the first twenty-five years of the term and then for a rental equal to a percentage of the appraised value of the property, the property to be appraised and the rent adjusted, if necessary, every ten years. In the latter, the lease incorporated an "escalator" provision subjecting the tenant to the payment of additional rent in the event the cost of furnishing basic services (e.g., heat, water, window washing) increased. In both cases, the amounts received by the trust were held to constitute "rents from real property." The Service reached this conclusion in each instance by inquiring whether the arrangement conformed with normal business practices or whether it was nothing more than a means of basing the rent on income or profits.

The second exclusion, founded on the relationship between the REIT and its lessee, disqualifies any amount received or accrued directly or indirectly from a corporate lessee, if the REIT owns 10 percent or more of the total combined voting power of all classes of stock of the corporation entitled to vote or 10 percent or more of the total value of shares of all classes of stock of the corporation.ⁿ³⁶ If the lessee is not a corporation, the exclusionary rule applies if the REIT owns an interest of 10 percent or more in the assets or net profits of the lessee.ⁿ³⁷ The specified degree of ownership can be either direct or indirect; the attribution rules of *IRC Section 318(a)* apply with one change--attribution will run between a REIT and a person owning 10 percent of the beneficial interests of the trust, not 50 percent as prescribed by *IRC Sections 318(a)(2)(C)* and *318(a)(3)(C)*.ⁿ³⁸ In other words, rents received from property leased to an individual owning 10 percent of the beneficial interests of the REIT, or to a partnership or corporation in which such person has a 10 percent or greater interest, will not be considered "rents from real property."

Since *IRC Section 856(d)(2)(B)* refers to "any amount received or accrued directly or indirectly," the second exclusion may apply even if the REIT has no ownership interest in the prime tenant. For example, assume that the REIT leases property to a tenant at an annual rental of \$60,000 and that the tenant subleases the property at a total rental of \$75,000, of which \$25,000 is paid by a subtenant in which the REIT does own the specified percentage of stock or interest in

assets or net profits. Only \$40,000 of the total rent paid by the tenant to the REIT will qualify as "rents from real property." The balance of \$20,000 (25,000/75,000ths of \$60,000) will be excluded by virtue of *IRC Section 856(d)(2)(B)*.ⁿ³⁹

IRC Section 856(d)(2)(B) does not apply to any amount paid to a REIT by a taxable REIT subsidiary of the REIT if either (1) at least 90 percent of the leased space of the property is leased to persons other than taxable REIT subsidiaries of the REIT and other 10-percent owned persons, to the extent the amounts paid to the REIT as rents from real property are substantially comparable to rents paid by other tenants of the REIT's property for comparable space, or (2) with respect to property that is a qualified lodging facility leased by the REIT to a taxable REIT subsidiary, if the property is operated on behalf of the subsidiary by an eligible independent contractor.ⁿ⁴⁰ A qualified lodging facility is a hotel, motel or other establishment of which more than one half of the dwelling units are used on a transient basis, provided that no gambling activities are connected at or in connection with the facility.ⁿ⁴¹

An independent contractor is an eligible independent contractor if, at the time the contractor enters into a management agreement or similar service contract with the taxable REIT subsidiary, the contractor (or any related party) is engaged in the trade or business of operating qualified lodging facilities for any person who is not a related person with respect to the REIT or taxable REIT subsidiary.ⁿ⁴² A person will not fail to be treated as an independent contractor with respect to a qualified lodging facility because (a) the taxable REIT subsidiary bears the expenses for the operation of the facility pursuant to the management agreement or similar service contract, (b) the taxable REIT subsidiary receives the revenues from the operation of the facility, net of expenses for the operation and fees payable to the operation under the agreement or contract, or (c) the REIT receives income for the person with respect to another property that is attributable to a lease of such other property to the other person that was in effect as of the later of January 1, 1999, or the earliest date that any taxable REIT subsidiary of the REIT entered into a management agreement or similar service contract with the person with respect to the qualified lodging facility.ⁿ⁴³

The third exclusion, contained in *IRC Section 856(d)(2)(C)*, becomes effective if the REIT receives any impermissible tenant service income, that is, with respect to real or personal property, any amount received or accrued directly or indirectly by the REIT for services furnished or rendered by the trust to the tenants of the property, or for managing or operating the property.ⁿ⁴⁴ If the amount of impermissible tenant service income is greater than 1 percent of all amounts received or accrued during the taxable year directly or indirectly by the REIT from the property, all of the income from the property is treated as impermissible tenant service income and does not qualify as rent from real property.ⁿ⁴⁵

In determining the amount of impermissible tenant service income, services furnished or rendered, or management or operation provided, through an independent contractor from whom the trust itself does not derive or receive any income, or through a taxable REIT subsidiary of the trust, are not treated as furnished, rendered, or provided by the trust, while there is not taken into account any amount that would be excluded from unrelated business income under *IRC Section 512(b)(3)*.ⁿ⁴⁶ *IRC Section 512(b)(3)* provides an exclusion in the computation of unrelated business taxable income of all rents from real property and all rents from personal property leased with the real property, if the rents attributable to the personal property are an incidental amount of the total rents received or accrued under the lease, determined at the time the personal property is placed in service.^{n46.1}

While the Code does not set forth the test to be applied in determining whether services rendered to tenants are being rendered by an independent contractor or an employee of the REIT,ⁿ⁴⁷ it does prevent certain persons related to the REIT from being classified as independent contractors. If the otherwise independent contractor owns more than 35 percent of the shares or beneficial interests of the REIT, or if persons owning more than 35 percent of the shares or beneficial interests of the REIT also own more than 35 percent of the contractor, the contractor will not achieve independent contractor status.ⁿ⁴⁸ The attribution rules of *IRC Section 318(a)*, amended so that attribution runs between the REIT and a 10 percent shareholder, and between the REIT and a partner who owns directly or indirectly a 25 percent or greater interest in a partnership, apply in determining whether the 35 percent test is met.ⁿ⁴⁹

Once the threshold question of independent contractor status has been answered, the crucial inquiry is whether the REIT receives or derives any income from the independent contractor.ⁿ⁵⁰ This can only be determined by looking at the nature of the services rendered to the tenant. If the services are of a type usually or customarily rendered or furnished in connection with the mere rental of real property (e.g., collection of trash, furnishing elevator service, maintenance of public hallways, etc.), and the tenant is not separately charged for these services, no apportionment between rents from real property and compensation for these services is necessary; the entire amount will qualify as "rents from real property."ⁿ⁵¹ Furthermore, the cost of providing such incidental services may be borne by the REIT.ⁿ⁵² However, the services must be rendered or furnished through an independent contractor.ⁿ⁵³

If the services rendered to the tenants are other than those usually rendered in connection with the mere rental of real property, the cost of such services must be borne by the independent contractor, a separate charge made therefor, and the entire amount charged to the tenants received and retained by the independent contractor.ⁿ⁵⁴ If the REIT receives any income attributable to the furnishing of such services, none of the amounts received by the trust from tenants of the property (including lease rentals) will qualify as "rents from real property."ⁿ⁵⁵

[ii] Defining Foreclosure Property. Prior to 1975, no allowance was made for the situation in which a default on the part of a REIT's debtor resulted in the trust taking over real property that yielded nonqualified income. As a consequence, inadvertent disqualification of the trust was a distinct possibility. A desire on the part of Congress to prevent this result led to the passage of rules regarding foreclosure property.

IRC Section 856(e)(1) defines foreclosure property as any real property and any personal property incident to such real property acquired by a REIT as the result of the trust having bid in the property at foreclosure, or having otherwise reduced the property to ownership or possession by agreement or process of law, after there was a default (or default was imminent) on a lease of the property or on an indebtedness which the property secured. Excluded from the definition is property acquired by the REIT as the result of indebtedness arising from the sale or other disposition of property held primarily for sale to customers in the ordinary course of business if the property was not originally acquired as foreclosure property. Foreclosure property ceases to be such as of the close of the third taxable year following the taxable year in which the trust acquired the property,ⁿ⁵⁶ unless prior to that date (1) the REIT enters into a lease of the property which yields income that does not qualify as rent from real property; (2) construction, other than completion of an improvement more than 10 percent of which was completed before default became imminent, takes place on the property; or (3) the property is used in a trade or business conducted by the REIT other than through an independent contractor from whom the REIT does not derive or receive any income.ⁿ⁵⁷

For taxable years beginning after December 31, 2000, foreclosure property includes any qualified health care property acquired by a REIT as the result of the termination of a lease (other than a termination by reason of a default, or the imminence of a default, on the lease).ⁿ⁵⁸ Qualified health care property is any real property (including interests therein), and any personal property incident thereto, that is a hospital, nursing facility assisted living facility, congregate care facility, qualified continuing care facility, or other licensed facility that extends medical or nursing or ancillary services to patients, and that prior to becoming foreclosure property was operated by a provider of services eligible to participate in Medicare.ⁿ⁵⁹

Unlike other foreclosure property, a qualified health care property that becomes foreclosure property ceases to be such as of the close of the second taxable year after the year in which the REIT acquired the property.ⁿ⁶⁰ If the REIT establishes to the satisfaction of the Internal Revenue Service that an extension of the three-year grace period is necessary to the orderly leasing or liquidation of the REIT's interest in the property, the Service can grant one or more extensions. However, an extension cannot extend the grace period beyond the close of the sixth year after the taxable year in which the REIT acquired the property.

Foreclosure property is treated as such only if the REIT so elects in a statement attached to a timely filed income tax return for the year in which the property is acquired.ⁿ⁶¹ The REIT can revoke the election for a taxable year by filing

the revocation on or before the due date for the income tax return for the taxable year.ⁿ⁶² Revocation of the election bars an election for any subsequent taxable year.

Since the foreclosure rules are to provide relief in the case of an inadvertent acquisition of property on foreclosure, the rules do not apply with respect to real property acquired under a mortgage or lease entered into or acquired by a REIT with an intent to foreclose or evict.ⁿ⁶³ Nor are the rules to apply where the REIT acquired a mortgage on property when it knew or had reason to know that default would occur.ⁿ⁶⁴

[iii] Defining Interest. *IRC Section 856(f)* follows the rules governing rents to provide that as used in the gross income requirements imposed on REITs, the term "interest" does not include any amount which depends in whole or in part on the income or profits of any person. As in the case of contingent rents, the exclusion is not applicable to the extent (1) the amount received is based on a fixed percentage of receipts or sales, or (2) the debtor derives substantially all of its gross income from leasing substantially all of its interests in the property securing the debt and the rents received by the debtor would qualify as rents from real property if received by the REIT,ⁿ⁶⁵ while an allocation between qualified and nonqualified income is permitted where the exclusion would result solely from the fact that the person indebted to the REIT receives amounts based on the income or profits of another.ⁿ⁶⁶

[c] Asset Diversification Requirements. At the close of each quarter of the taxable year, at least 75 percent of the value of the total assets of the REIT must be represented by real estate assets,ⁿ⁶⁷ cash and cash items (including receivables),ⁿ⁶⁸ and Government securities,ⁿ⁶⁹ while (i) not more than 25 percent of the value of its total assets can be invested in securities other than those which qualify for the 75 percent requirement, and (ii) not more than 20 percent of the value of its total assets is represented by securities of one or more taxable REIT subsidiaries.ⁿ⁷⁰ Except with respect to a taxable REIT subsidiary and securities includable in the 75 percent requirement, the REIT cannot own the securities of any one issuer in an amount (1) greater in value than 5 percent of the value of the total assets of the REIT or (2) representing more than 10 percent of the outstanding securities (by vote and value) of the issuer.ⁿ⁷¹ A safe harbor provides that the following are not taken into account in determining whether the 10-percent of value test has been met: (a) straight-debt securities,ⁿ⁷² (b) any loan to an individual or estate, (c) any Section 467 rental agreement,^{n72.1} (d) any obligation to pay rents from real property, (e) any security issued by a state or any political subdivision thereof, the District of Columbia, a foreign government or any political subdivision thereof, or the Commonwealth of Puerto Rico, but only if the determination of any payment received or accrued under the security does not depend in any way on the profits of any entity not described herein or payments on any obligation issued by such an entity, (f) any security issued by a REIT, and (g) any other arrangement determined by the Service.^{n72.2} Securities issued by a corporation or partnership will not be considered straight debt securities if the REIT holding the securities and any of its controlled taxable REIT subsidiaries hold any securities of the issuer that are not described in the safe harbor, and have an aggregate value greater than 1 percent of the issuer's outstanding securities determined without regard to the REIT's interest in a partnership holding the issuer's securities.^{n72.3} Operation of the asset diversification provisions may be illustrated by the following:

Example:

At the close of a quarter of its taxable year, a REIT has its assets invested as follows:

Real estate assets	70%
Cash	7%
Government securities	8%
Securities of X Corp.	6%
Securities of Y Corp.	4%
Securities of Z Corp.	5%

The REIT meets the first asset diversification requirement since more than 75 percent of its assets

consists of real estate assets, cash, and government securities. The second test cannot be met although the REIT has less than 25 percent of its assets invested in other securities; the ownership of X Corp. securities exceeds 5 percent of the REIT's total assets. If the distribution of the REIT's investment in other securities were:

Securities of X Corp.	5%
Securities of Y Corp.	5%
Securities of Z Corp.	5%

the 25-percent requirement would be met unless the REIT's investment in the securities of any of the three corporations represented more than 10 percent of the outstanding voting securities of such corporation.

A REIT that meets the asset diversification requirements at the close of any quarter of a taxable year will not suffer a loss of status if a change in the market value of its investments causes it to fail to meet such requirements at the end of a subsequent quarter.ⁿ⁷³ If the discrepancy between the value of the investments and the diversification requirements exists immediately after the acquisition of any security or other property and is due wholly or in part to such acquisition, a loss of status will result unless the discrepancy is eliminated within thirty days after the close of the quarter in question.ⁿ⁷⁴ If the discrepancy is due to an increase in value of the securities of one issuer and the acquisition of securities of another, only the "acquisition discrepancy" need be eliminated. If due both to an increase in value in, and an acquisition of, securities of the same issuer, both discrepancies must be eliminated.ⁿ⁷⁵

IRC Section 856(c)(7) provides a *de minimis* rule under which a corporation, trust, or association that fails to meet the requirement that a REIT cannot own the securities of any one issuer in an amount greater than 5 percent of the value of the total assets of the REIT, or representing more than 10 percent (by vote and value) of the issuer, will be considered to have satisfied the requirement for any quarter of its taxable year if (1) the failure is due to the ownership of assets the total value of which does not exceed the lesser of (a) 1 percent of the total value of the REIT's assets at the end of the quarter for which the measurement is done, and (b) \$10 million, and (2)(i) the corporation, trust, or association, following identification of the failure, disposes of assets in order to meet the requirements within six months after the last day of quarter in which identification of the failure occurred, or such other time period and in the manner prescribed by the Service, or (ii) the requirements are otherwise met during the prescribed time period.

If the failure does not satisfy the *de minimis* test, the corporation, trust, or association can still be treated as having satisfied the asset diversification requirements if, following identification of the failure, (i) a description of each asset that causes the failure is set forth on a schedule filed in accordance with prescribed regulations, (ii) the failure is due to reasonable cause and not to willful neglect, (iii) the entity pays the tax described below, and (iv) the entity disposes of the asset set forth on the schedule within six months after the last day of the quarter in which the identification of the failure occurred or such other time period and in the manner prescribed by the Service. The tax imposed is the greater of \$50,000, or the amount determined by multiplying (1) the net income generated by the assets described in the schedule for the period beginning on the first date that the failure to meet the requirements occurs as a result of ownership of the assets and ending on the earlier of the date on which the REIT disposes of the assets or the end of the first quarter when there is no longer a failure to meet the requirements, by (2) the highest corporate tax rate imposed by *IRC Section 11*.

[d] Income Distribution Requirements. Although a REIT may meet the qualifications contained in *IRC Section 856*, it will be taxed as an ordinary corporation and not as a real estate investment REIT in any taxable year unless the dividends paid deduction for the taxable year (exclusive of capital gains dividends) equals or exceeds (a) the sum of 95 percent of the trust's real estate investment trust taxable income for the taxable year (computed without the deduction for dividends paid and by excluding any net capital gain) and 95 percent of the excess of the net income from foreclosure property over the tax on such income, minus (b) any excess noncash income.ⁿ⁷⁶ Excess noncash income is

defined as the excess of (a) the sum of (i) the amounts which the REIT is required to include in income under *IRC Section 467* over the amounts it would have to include under its regular method of accounting, (ii) any income on the disposition of a real estate asset if there is a determination that such income is not eligible for nonrecognition as resulting from a like-kind exchange (*IRC Section 1031*), and the failure to meet the requirements of *IRC Section 1031* was due to reasonable cause and not willful neglect, over (b) 5 percent of the REIT taxable income for the taxable year determined without regard to the deduction for dividends paid and by excluding any net capital gain, (iii) amounts includable in gross income with respect to instruments to which *IRC Section 860E(a)* (relating residual interests in a REMIC) or 1272 (relating to original issue debt instruments) applies, in excess of the amount of money and the fair market value of other property received during the taxable year under such instruments, and (iv) cancellation of indebtedness income.ⁿ⁷⁷

The Service can waive the distribution requirements for any taxable year if the REIT can establish to the satisfaction of the Service that it was unable to meet them due to distributions previously made to meet the requirements of *IRC Section 4981*, discussed in § 13.03[8].

In addition to the income distribution requirements, the REIT must meet the record-keeping requirements discussed below, and either the provisions governing REITs must apply for all taxable years beginning after February 28, 1986, or, as of the close of the taxable year, the REIT has no earnings and profits from any year in which it was not treated as a REIT.ⁿ⁷⁸

[3] Taxable REIT Subsidiary.

A taxable REIT subsidiary is a corporation that is not a REIT in which the REIT directly or indirectly owns stock, and the REIT and the corporation jointly elect that the corporation shall be treated as a taxable REIT subsidiary of the REIT.ⁿ¹ The election, once made, is irrevocable unless both the REIT and the taxable REIT subsidiary consent to its revocation, but neither the election nor any revocation thereof requires the consent of the Service. The definition extends to a corporation (other than a REIT or a qualified REIT subsidiary) in which a taxable REIT subsidiary owns, directly or indirectly, securities possessing more than 35 percent of either the total voting power or the total value of the outstanding securities of the corporation.ⁿ²

A corporation cannot be a taxable REIT subsidiary if (a) it directly or indirectly operates or manages a lodging facility or health care facility, or (b) it directly or indirectly provides to any other person (under a franchise, license, or otherwise) rights to any brand name under which a lodging facility or health care facility is operated.ⁿ³ However, a corporation can be a taxable REIT if it provides rights to an eligible independent contractor to operate a lodging facility if the rights are held by the corporation as a franchisee, licensee, or in a similar capacity, and the lodging facility is either owned by the corporation or is leased to the corporation by the REIT.

[4] Accounting for the Trust's Interest in a Partnership.

Suppose a REIT holds a 25-percent interest in a partnership owning income producing real property. Is the interest in the partnership and the income derived therefrom to be viewed merely as a partnership interest and partnership income, or will the REIT be deemed to own a proportionate share of the partnership assets and the income produced by the assets? The classification of the interest and the income therefrom clearly has an effect on the ability of the REIT to qualify as a REIT under *IRC Section 856*. Under the regulations,ⁿ¹ the REIT will be deemed to own its proportionate share of each of the assets of the REIT and will be deemed to be entitled to the income of the partnership attributable to such interest. The character of the various assets in the hands of the partnership and the character of the items of gross income of the partnership retain the same character in the hands of the partners for all purposes of *IRC Section 856*.ⁿ² Therefore, the REIT would be treated as the owner of 25 percent of the real property and as being entitled to 25 percent of the rents earned from the property by the partnership. If the partnership sells the real property, or the REIT disposes of its partnership interest, any gain from the disposition will be considered gain from the sale or other disposition of real

property held for the shorter of (1) the period that the partnership held the real property, or (2) the period that the REIT was a member of the partnership.ⁿ³

[5] Record Keeping Requirements.

Prior to the Taxpayer Relief Act of 1997, a REIT was required to keep records which disclosed the actual ownership of its outstanding shares or certificates of beneficial interest. Failure to do so caused the trust to be taxed as an ordinary corporation. The 1997 legislation substituted a requirement that the REIT comply with regulations issued by the Internal Revenue Service for the purpose of ascertaining actual ownership of outstanding shares or certificates of beneficial ownership.ⁿ¹ If a REIT fails to comply with the new requirements for a taxable year, it must pay (on notice and demand in the same manner as a tax) a penalty of \$25,000.ⁿ² The penalty is increased to \$50,000 if the failure is due to intentional disregard of the requirement; there is no penalty if the failure is due to reasonable cause and not to willful neglect.ⁿ³ The Service may require a REIT to take such actions as the Service deems appropriate to ascertain actual ownership if the REIT fails to comply with the ascertainment regulations.ⁿ⁴ If the REIT fails to take those actions, an additional penalty will be due after notice and demand by the Service. Regulations promulgated under the repealed provision provided that the trust had to demand from each shareholder of record owning a specified percentage of the outstanding shares of the REIT, a written statement showing the number of shares actually and constructively owned by each actual owner.ⁿ⁵ These statements, together with a list of all shareholders who failed or refused to comply with the demand, had to be retained by the REIT as part of its permanent records.ⁿ⁶

FOOTNOTES:

(n1)Footnote 1. Under *Treas Reg § 1.856-1(d)(1)*, the trustee must have such rights and powers as will meet the centralization of management requirement of *Treas Reg § 301.7701-2(c)*. In essence, this calls for the trustee to exercise continuing exclusive authority over the management of the trust. This authority will be held to exist even though the trust instrument grants the beneficial owners certain rights and powers, eg, the right to elect and remove trustees, the right to approve a sale, merger, or reorganization of the trust, or the right to terminate the trust. *Treas Reg § 1.856-1(d)(1)*; *Rev Rul 70-569, 1970-2 CB 147* ; *Rev Rul 64-259, 1964-2 CB 180* .

The management requirement is not violated by an agreement under which the trustees delegate authority to a corporation to act as the REIT's advisor under a contract that can be terminated by the trustees or the shareholders of the REIT, or where the trustees delegate authority to an advisory company to make loan commitments and investments within specified limits. *Rev Rul 74-471, 1974-2 CB 198* ; *Rev Rul 72-254, 1972-1 CB 207* .

(n2)Footnote 2. Shares or certificates will be considered transferable even though the trust instrument contains provisions which permit the trustee to redeem shares or to refuse to transfer shares in any case where the trustee, in good faith, believes that a failure to redeem shares or that a transfer of shares would result in a loss of status as a REIT. *Treas Reg § 1.856-1(d)(2)*. Furthermore, the trust may have more than one class of shares of beneficial interest, including a class which gives the beneficial owners a preference as to dividends and a preference on liquidation. *Rev Rul 69-610, 1969-2 CB 149* .

The issuance of two classes of stock, one entitling holders to income and the other entitling holders to capital gains from the sale of trust assets, did not prevent the trust from continuing to qualify as a REIT in *Rev Rul 71-405, 1971-2 CB 263* .

The Service will not rule whether a corporation whose stock is "paired" or "stapled" to that of another corporation will qualify as a REIT if the activities of the corporations are integrated. *Rev Proc 2007-3, 2007-1 IRB 108* .

(n3)Footnote 3. Pension trusts and profit-sharing trusts qualifying under *IRC §§ 401(a) and 501(a)* are considered persons for the purposes of the 100 person requirement. *Rev Rul 65-3, 1965-1 CB 267* . Income from the sale of condominiums on property held in trust for joint venturers was ordinary partnership income and not capital gain from a

dividend received in liquidation of a REIT; only five persons held interests in the trust. *Grove v Commr*, 54 TC 799 (1970).

(n4)Footnote 4. A corporation, trust, or association that meets the requirements of *IRC* § 857(f)(1) (see § 13.02[4]), and does not know, or exercising reasonable diligence would not have known, whether the entity failed to meet the requirement that it not be closely held will be treated as having met that requirement for the taxable year. *IRC* § 856(k).

(n5)Footnote 5. *IRC* § 856(b). In Rev Rul 71-218, 1971-1 CB 209, a calendar year corporation transferred all of its assets to an unincorporated association in exchange for transferable certificates of beneficial interest. The transaction qualified as an "F" reorganization. Because of this, the taxable year of the transferor corporation did not end until the last day of the year in which the transfer occurred. As a result, the trust did not meet the conditions of *IRC* § 856(a)(1)-(4) for the entire taxable year and could not qualify as a REIT.

(n6)Footnote 6. *Id.* The days need not be consecutive. *Treas Reg* § 1.856-1(c).

(n7)Footnote 7. *IRC* §§ 542(a)(2), 856(h)(1). The provisions of *IRC* § 544, other than the partnership attribution rules, apply in determining stock ownership.

In determining whether a REIT is closely held, any stock held by a qualified pension trust (one described in *IRC* § 401(a) and exempt from tax under *IRC* § 501(a)) is treated as held directly by its beneficiaries in proportion to their actuarial interests in the pension trust. This rule does not apply if one or more disqualified persons (as defined in *IRC* § 4975(e)(2), with certain exceptions), with respect to the pension trust, hold, in the aggregate, 5 percent or more in value of the interests in the REIT and the REIT has accumulated earnings and profits attributable to any period for which it did not qualify as a REIT. An entity that qualifies as a REIT because of the pension trust rule is not treated as a personal holding company. *IRC* § 856(h)(3).

(n8)Footnote 8. *IRC* § 856(h)(2).

(n9)Footnote 1. *IRC* § 856(c)(1).

(n10)Footnote 2. *Treas Reg* § 1.856-2(b).

(n11)Footnote 3. *Treas Reg* § 1.856-2(b).

(n12)Footnote 4. *Treas Reg* § 1.856-2(b).

(n13)Footnote 5. *IRC* § 856(g)(1). Termination will not occur if a corporation, trust, or association is not a REIT for the taxable year because it failed to comply with any provision governing REITs (other than *IRC* § 856(c)(6) or (7)), if the failures are due to reasonable cause and not due to willful neglect, and the entity pays a penalty of \$50,000 for each such failure. *IRC* § 856(g)(5).

(n14)Footnote 6. *IRC* § 856(g)(2). Notice of revocation is to be given by filing a statement with the district director for the district in which the REIT maintains its principal office. *Treas Reg* § 1.856-8(a).

(n15)Footnote 7. *IRC* § 856(g)(3).

(n16)Footnote 8. *IRC* § 856(g)(4).

(n17)Footnote 9. *IRC* § 856(c)(2), (3). The income of a 100 percent owned subsidiary of the REIT is treated as the income of the REIT for this purpose. *IRC* § 856(i).

One of the principal purposes for the income restrictions imposed on REITs is to ensure that the vast bulk of a REIT's income is from passive sources and not from the active conduct of a trade or business. HR Rep No 2020, 86th Cong, 2d

Sess 6 (1960).

Gain treated as goodwill gain derived from a sale of a REIT's trade or business will be treated as being derived from the same source as the gain recognized on the sale to which the goodwill relates. *Ltr Rul 200726002* .

Foreign currency gain or loss is qualifying income under *IRC § 856(c)(2)* or *856(c)(3)*. See, eg, *Ltr Rul 200519007* .

Rev Proc 2003-65, 2003-2 CB 336 , sets forth a safe harbor under which interest on a loan made by a REIT that is secured either by a partnership interest in a partnership or by the sole member interest in a disregarded entity will be treated as interest on an obligation secured by a mortgage on real property or an interest in real property for purposes of *IRC § 856(c)(3)*.

(n18)Footnote 10. Interest is defined by the regulations as consisting only of "lawful interest for the loan or forbearance of money." *Treas Reg § 1.856-5(a)*. Usurious interest or fees representing charges for services are not considered interest for this purpose.

Except to the extent provided by regulations, any income of a REIT from a hedging transaction (as defined in *IRC § 1221(b)(2)(A)(ii)* or *(iii)*) that is clearly identified pursuant to *IRC § 1221(a)(7)*, including gain from the sale or disposition of a such a transaction, is not gross income for purposes of the 95-percent test to the extent that the transaction hedges any indebtedness incurred or to be incurred by the REIT to acquire or carry real estate assets. *IRC § 856(c)(5)(G)*. Hedging transactions are discussed in *§ 2.04[2][a]*.

A commitment fee paid by a borrower to a REIT is not interest for purposes of *IRC § 856(c)*. *Rev Rul 74-258, 1974-1 CB 170* .

(n19)Footnote 11. The term "real property" means land and improvements thereon (eg, buildings or other permanent structures plus structural components thereof). *Treas Reg § 1.856-3(d)*. The term "interests in real property" includes fee ownership and co-ownership of land and improvements and leaseholds and options to acquire the same. It does not include mineral, oil, or gas royalty interests even though such interests might be interests in real property under local law. *IRC § 856(c)(6)(C)*; *Treas Reg § 1.856-3(c)*; *Rev Rul 64-75, 1964-1 (Part 1) CB 228*.

Foreign real estate acquired with foreign funds is real property for purposes of *IRC § 856(c)*. *Rev Rul 74-191, 1974-1 CB 170* . If *Section 988* gain is recognized with respect to income recognized by a REIT, the gain qualifies under *IRC § 856(c)(2)* or *(3)* to the extent that the qualifying income so qualifies. *Rev Rul 2007-33, 2007-1 CB 1281* .

Notice 2007-42, 2007-1 CB 1288 , provides guidance with respect to the circumstances under which *IRC § 856(c)(2)* or *IRC § 856(c)(3)* characterizes gain under *IRC § 987* as qualifying income for purposes of REIT qualification.

Timberlands and the standing timber thereon constitute real property for purposes of *IRC § 856(c)*. *Ltr Rul 199925015* .

(n20)Footnote 12. A deed of trust on real property is considered a mortgage. *Treas Reg § 1.856-3(b)*.

Security interests in foreign property qualify as mortgages on real property provided such interests are legally equivalent to domestic mortgages or deeds of trust. *Rev Rul 74-191, 1974-1 CB 170* .

(n21)Footnote 13. The determination of the amounts cannot depend either wholly or partially on the income or profits of any person.

(n22)Footnote 14. See *§ 13.03[5]* for a discussion of prohibited transactions.

(n23)Footnote 15. Interest on obligations secured by mortgages includes interest on mortgages originated by the trust, *Rev Rul 65-67, 1965-1 CB 269* ; interest on "straight pass-through" mortgage-backed certificates, *Rev Rul 70-544, 1970-2 CB 6* ; income on participation certificates issued by the Federal Home Loan Mortgage Corporation, *Rev Rul 74-300, 1974-1 CB 169* ; interest on notes secured by stock in a cooperative housing corporation, *Rev Rul 76-101, 1976-1 CB 186* ; interest on hypothecation loans (loans secured by assignment of mortgage notes on real property), *Rev Rul 80-280, 1980-2 CB 207* ; and interest from investments in real estate construction mortgages, but not interest received on unsecured notes and debentures of the Federal National Mortgage Association, the Federal Home Loan Banks, or the Federal Land Banks, *Rev Rul 72-171, 1972-1 CB 208* ; or income from warehousing and interim purchasing of mortgages. Special Ruling, June 18, 1963, 7 CCH 1963 *Stand Fed Tax Rep* P 6559. Interest on a mortgage which covers both real property and personal property must be apportioned. *Treas Reg § 1.856-5(c)(1)*.

(n24)Footnote 16. Qualified temporary investment income is income that is derived from the temporary investment of new capital in stock (or certificates of beneficial interests) or a debt instrument (within the meaning of *IRC § 1275(a)(1)*) and is received during the one-year period beginning on the date that the REIT receives the capital. New capital is defined as any amount received by the REIT in exchange for stock in the REIT (other than amounts received pursuant to a dividend reinvestment plan), or in a public offering of debt obligations of the REIT that have maturities of at least five years. *IRC § 856(c)(5)(D)*.

(n25)Footnote 17. *IRC § 856(j)(1)*. A shared appreciation provision is any provision that is in connection with an obligation held by the REIT and secured by an interest in real property, and that entitles the REIT to receive a specified portion of any gain realized on the sale or exchange of the property (or any gain that would be realized if the property were sold on a specified date) or appreciation in value as of any specified date. *IRC § 856(j)(5)*.

(n26)Footnote 18. *IRC § 856(j)(2)(A)*.

(n27)Footnote 18.1. In *PLR 200614024 (2005)* , the Internal Revenue Service ruled that it would not take into account, for purposes of either the 95 percent or 75 percent tests, income received by an REIT in the form of refundable state income tax credits provided by the state as an incentive to promote the cleanup and development of properties in designated areas that have hazardous waste contamination. The Service determined that leaving these credits out of the income calculation would not interfere with nor impede the policy objectives of Congress in enacting the income tests (*viz*, to assure that a REIT's gross income is composed largely of passive income and not income from an active trade or business, and to equate the treatment of REITs and regulated investment companies (RICs). For similar reasons, the IRS held in *PLR 200916014 (2009)* , that it would not take into account the tax refunds receivable from the state in respect of such tax credits for purposes of the asset diversification test in *IRC § 856(c)(4)(A)* (see *§ 13.02[2][c]*).

(n28)Footnote 19. *IRC § 108(e)(9)*.

(n29)Footnote 20. *Treas Reg § 1.856-3(g)*.

(n30)Footnote 21. *IRC § 856(c)(6)*.

(n31)Footnote 22. See *§ 13.03[4]*.

(n32)Footnote 23. S Rep No 938, Pt I, 94th Cong, 2d Sess 471 (1976).

(n33)Footnote 24. S Rep No 938, Pt I, 94th Cong, 2d Sess 471 (1976).

(n34)Footnote 25. With respect to any particular building, services provided to tenants will be regarded as customary if, in the geographic market within which the building is located, tenants in buildings of a similar class are customarily furnished with the service. S Rep No 938, Pt I, 94th Cong, 2d Sess 471 (1976).

Rev Rul 2004-24, 2004-1 CB 550 , provides instances in which amounts received by the REIT for providing parking

facilities at its rental real properties qualify as rents from real property.

(n35)Footnote 26. The rent attributable to personal property is that amount that bears the same ratio to total rent for the taxable year as the average of the fair market values of the personal property at the beginning and end of the year bears to the average of the aggregate fair market values of the real and personal property at the beginning and end of the year. For taxable years prior to Jan 1, 2001, the ratio used adjusted bases of the property instead of fair market values.

The allocation method does not account for personal property leased by a REIT and then subleased to its tenants. In such case, the arm's-length payment by the REIT to the lessor of the personal property is treated as an amount received by the REIT as rent attributable to personal property. Next, the total rent received by the REIT is reduced by the amount of rent attributable to the sublease of personal property, and then multiplied by the ratio determined under the allocation formula specified in the preceding paragraph. *Ltr Rul 9428033*.

(n36)Footnote 27. Also excluded is any revenue derived from a property interest that does not qualify as a real estate asset, as, for example, a royalty payment under leases that constitute mineral royalty interests. *Rev Rul 64-75, 1964-1 (Part 1) CB 228*.

(n37)Footnote 28. *IRC § 856(d)(2)(A)*.

(n38)Footnote 29. *Treas Reg § 1.856-4(b)(3) (1981)*.

(n39)Footnote 30. *Treas Reg § 1.856-4(b)(3) (1981)*.

(n40)Footnote 31. *IRC § 856(d)(4)*.

(n41)Footnote 32. *Treas Reg § 1.856-4(b)(6)*.

(n42)Footnote 33. *IRC § 856(d)(6)*.

(n43)Footnote 34. *1969-1 CB 189*.

(n44)Footnote 35. *1964-1 (Pt 1) CB 231*.

(n45)Footnote 36. *IRC § 856(d)(2)(B)(i)*.

(n46)Footnote 37. *IRC § 856(d)(2)(B)(ii)*. The fact that a corporation's directors are also the directors of a real estate investment trust to which the corporation pays rent does not itself remove the payment from the category of "rents from real property." *Rev Rul 70-542, 1970-2 CB 148*.

(n47)Footnote 38. *IRC § 856(d)(5)*.

(n48)Footnote 39. *Treas Reg § 1.856-4(b)(4)*.

(n49)Footnote 40. *IRC § 856(d)(8)*. The substantially comparability requirement is met if it is met under the terms of the lease (1) at the time the lease is entered into, (2) at the time of each extension of the lease, including a failure to exercise a right to terminate, and (3) at the time of any modification of the lease between the REIT and the taxable REIT subsidiary if the rent under the lease is effectively increased pursuant to the modification. If the taxable REIT subsidiary is a controlled taxable REIT subsidiary, the term "rents from real property" does not in any event include rent under the lease to the extent of the increase in rent on account of the modification. *IRC § 856(d)(8)(A)(iii)*. A taxable REIT subsidiary is a controlled taxable REIT subsidiary if the REIT owns directly or indirectly stock possessing more than 50 percent by vote or value of the outstanding stock of the subsidiary. *IRC § 856(d)(8)(A)(iv)*.

If the substantially comparable requirement is met at any of the specified times, the requirement is treated as met so

long as there is no increase in the spaced leased to any taxable REIT subsidiary or other 10-percent owned persons. *IRC § 856(d)(8)(A)(v)*. If such an increase occurs during any calendar quarter, the requirements will be treated as met during the quarter and the succeeding quarter if they are met at the close of the succeeding quarter. *IRC § 856(d)(8)(A)(vi)*.

The operation of a property includes the management of the property. *IRC § 856(d)(9)(E)*.

(n50)Footnote 41. *IRC § 856(d)(9)(D)*. The term "lodging facility" includes customary amenities and facilities operated as part of, or associated with, the lodging facility so long as such amenities and facilities are customary for other properties of a comparable size and class owned by persons unrelated to the REIT.

For the six month period beginning Aug 28, 2005, the Service will treat a dwelling unit in a lodging facility as being used on a transient basis if the facility is used to provide temporary housing for victims of Hurricanes Katrina and Rita or for workers assisting in relief activities in the covered disaster area. *Notice 2005-89, 2005-49 IRB 1077*.

(n51)Footnote 42. *IRC § 856(d)(9)(A)*.

(n52)Footnote 43. *IRC § 856(d)(9)(B)*. Certain renewals of existing leases are treated as in effect on either Jan 1, 1999, or an applicable later date. *IRC § 856(d)(9)(C)*.

(n53)Footnote 44. *IRC § 856(d)(7)(A)*. The amount received for services, or management or operations, cannot be valued at less than 150 percent of the REIT's direct cost of the services (or of management or operation). *IRC § 856(d)(7)(D)*.

Although the amount of impermissible tenant service income is excluded from the definition of rent from real property, the amount of such income must be included in the gross income of the REIT for purposes of the 95-percent gross income test of *IRC § 856(c)(2)* or the 75-percent gross income test of *IRC § 856(c)(3)*. *IRC § 856(d)(7)(E)*.

A joint venture between a taxable REIT subsidiary of a REIT and a corporation that qualifies as an independent contractor of the REIT may provide noncustomary services to tenants of the REIT without causing the rents paid by the tenants to the REIT to fail to qualify as rents from real property. *Rev Rul 2003-86, 2003-2 CB 290*.

(n54)Footnote 45. *IRC § 856(d)(7)(B)*. Thus, if the REIT received \$197,000 in rent from a property and \$3,000 in impermissible tenant service income from the same property, the entire \$200,000 would be disqualified. If the trust received \$199,000 in rent and \$1,000 in impermissible tenant service income, only the \$1,000 would be disqualified. See *Rev Rul 98-60, 1998-2 CB 751*.

(n55)Footnote 46. *IRC § 856(d)(7)(C)*. A taxable REIT subsidiary of a REIT provides noncustomary housekeeping services to tenants of the REIT's apartment buildings. The REIT does not separately charge for the services. Because the services are rendered by the taxable REIT subsidiary, the services do not give rise to impermissible tenant service income. *Rev Rul 2002-38, 2002-2 CB 4*.

(n56)Footnote 46.1. Payments for the use or occupancy of space where services are also rendered to the occupant do not constitute rents from real property. *Treas Reg § 1.512(b)-1(c)(5)*. Generally, services are considered rendered to the occupant if they are primarily for the occupant's convenience and are other than those customarily rendered in connection with the rental of space for occupancy only.

(n57)Footnote 47. A corporation that acts as an advisor to a REIT cannot qualify as an independent contractor to manage property, *Rev Rul 74-471, 1974-2 CB 198*; but a subsidiary of the corporation can so qualify if it maintains a separate identity. *Rev Rul 76-534, 1976-2 CB 215*; *Rev Rul 75-136, 1975-1 CB 195*. A corporation wholly owned by one who is a trustee and salaried administrator of a REIT can qualify as an independent contractor. *Rev Rul 77-23, 1977-1 CB 197*.

(n58)Footnote 48. *IRC § 856(d)(3)(A), (B)*. For years after Dec 31, 2000, if any class of stock of either the REIT or the contractor is regularly traded on an established securities market, only persons who own, directly or indirectly, more than 5 percent of that class of stock are taken into account as owning any of the stock of the class for purposes of applying the 35-percent limitation (but all of the outstanding stock of the class is considered in order to compute the denominator for purposes of determining the applicable percentage of ownership).

(n59)Footnote 49. *IRC § 856(d)(5)*.

(n60)Footnote 50. The prohibition against the receipt of income from an independent contractor does not apply to amounts received as rent for space occupied by the contractor in the property which it manages for the REIT. *Rev Rul 66-188, 1966-2 CB 276*.

(n61)Footnote 51. *Treas Reg § 1.856-4(b)(5)(i)*.

(n62)Footnote 52. *Treas Reg § 1.856-4(b)(5)(i)*.

(n63)Footnote 53. *Treas Reg § 1.856-4(b)(5)(i)*.

(n64)Footnote 54. *Treas Reg § 1.856-4(b)(5)(i)*. Any amount representing a separate charge for customary services must also be received and retained by the independent contractor.

(n65)Footnote 55. *Rev Rul 66-189, 1966-2 CB 277*.

(n66)Footnote 56. *IRC § 856(e)(2)*. For taxable years beginning on or before August 5, 1997, foreclosure period retained that status for two years after acquisition. One extension (not to exceed three years) may be granted by the Commissioner if it is established that an extension of the grace period is necessary for the orderly liquidation of the REIT's interest in the property. *IRC § 856(e)(3)*. Prior to enactment of the Taxpayer Relief Act of 1997, one or more extensions could be granted, but the grace period could not exceed six years in total.

Generally, in order to establish the necessity of an extension, the REIT must demonstrate that it has made good faith efforts to renegotiate leases with respect to, or dispose of, the foreclosure property. In certain instances, the REIT may be able to show the need for an extension without having made such efforts, as when it can be demonstrated that, for valid business reasons, construction of the property could not be completed before the expiration of the grace period. *Treas Reg § 1.856-6(g)(2)*.

Where state law allows a mortgagor to redeem foreclosed property within a specified period of time and gives the mortgagor the rights of ownership, including income, during that period, a REIT that purchases the property at the foreclosure sale is not deemed to acquire the property until the end of the period. *Rev Rul 78-3, 1978-1 CB 218*.

(n67)Footnote 57. *IRC § 856(e)(4)(A)-(C)*. Real property is not treated as used in a trade or business by reason of any activities of the REIT with respect to the property to the extent that the activities would not result in amounts received or accrued, directly or indirectly, with respect to the property being treated as other than rents from real property.

In the case of qualified health care property that is foreclosure property, income derived or received from an independent contractor is disregarded to the extent the income is attributable to (i) any lease of property in effect on the date the REIT acquired the qualified health care property (without regard to its renewal after that date so long as the renewal is pursuant to the terms of the lease on that date), or (ii) any lease of property entered into after the date the REIT acquired the property if, on that date, a lease of the property from the REIT was in effect, and under the terms of the new lease, the REIT receives a substantially similar or lesser benefit. *IRC § 856(e)(6)(C)*.

(n68)Footnote 58. *IRC § 856(e)(6)(A)*.

(n69)Footnote 59. *IRC § 856(e)(6)(D)*.

(n70)Footnote 60. *IRC § 856(e)(6)(B)*.

(n71)Footnote 61. *IRC § 856(e)(5); Treas Reg § 1.856-6(c)(3)*. The statement must indicate that the election is made under *IRC § 856(e)* and identify the property to which the election relates. In addition the statement must set forth (i) the name, address, and taxpayer identification number of the REIT; (ii) the date the property was acquired by the REIT; and (iii) a brief description of how the real property was acquired, including the name of the person or persons from whom the property was acquired and a description of the lease or indebtedness with respect to which default occurred or was imminent.

(n72)Footnote 62. *IRC § 856(e)(5)*.

(n73)Footnote 63. *Treas Reg § 1.856-6(b)(3)*.

(n74)Footnote 64. *Treas Reg § 1.856-6(b)(3)*.

(n75)Footnote 65. *IRC § 856(f)(1)(A), (B)*.

(n76)Footnote 66. *IRC § 856(f)(2)*. An approach similar to the one described above for the allocation of contingent rents is used to allocate contingent interest. *Treas Reg § 1.856-5(d)*.

(n77)Footnote 67. "The term 'real estate assets' means real property (including interests in real property and interests in mortgages on real property) and shares (or transferable certificates of beneficial interest) in other real estate investment trusts which meet the requirements of this part." *IRC § 856(c)(5)(B)*.

Air rights over real property are considered interests in real property and real property assets. *Rev Rul 71-286, 1971-2 CB 263*.

Stock or debt instruments representing temporary investments of new capital are treated as real estate assets for the one-year period beginning on the date the REIT receives the capital. New capital is defined as any amount received by the REIT (i) in exchange for stock (or certificates of beneficial interest) in the REIT, or (ii) in a public offering of debt obligations of the REIT that have maturities of at least five years.

A regular or residual interest in a REMIC (see Ch 13A) is treated as an interest in real property, and any amount includable in gross income with respect to such an interest is treated as interest on an obligation secured by a mortgage on real property, but if less than 95 percent of the assets of the REMIC are real estate assets (determined as if the REIT held the assets), the interest in the REMIC is treated as an interest in real property only in the proportion that the assets of the REMIC consists of such interests. In determining whether any interest in a REMIC qualifies under the preceding sentence, any interest held by the REMIC in another REMIC is treated as a real estate asset under principles similar to those in the preceding sentence, except that, if the REMICs are part of a tiered structure, they are treated as a single REMIC. *IRC § 856(c)(5)(E)*.

A "straight pass-through" mortgage-backed certificate is considered a real estate asset, *Rev Rul 70-544, 1970-2 CB 6*, as is a note secured by a mobile home unit set on preengineered block foundations. *Rev Rul 71-220, 1971-1 CB 210*. The mobile home would also be a real estate asset.

The REIT, in *Ltr Rul 200705001*, entered into a repurchase agreement patterned after the form of agreement generally employed in the mortgage backed securities industry. Under the agreement, a party agreed to transfer mortgage loans to the REIT against a transfer of funds by the REIT, with a simultaneous agreement by the REIT to transfer the purchased assets on a given date, against a transfer of funds by the other party. The aggregate amount of the

assigned mortgage loans equaled or exceeded the amount transferred by the REIT. The Service held that the repurchase agreement constituted a real estate asset and was not a security.

(n78)Footnote 68. The Service defines "cash" as cash on hand and time or demand deposits with, or withdrawable accounts in, financial institutions. Therefore, a certificate of deposit is a cash item while a banker's acceptance is not. *Rev Rul 77-199, 1977-1 CB 195 ; Rev Rul 72-171, 1972-1 CB 208 .*

(n79)Footnote 69. *IRC § 856(c)(4)(A)*. A list of qualifying Government securities can be found in *Rev Rul 64-85, 1964-1 (Pt 1) CB 230 .*

United States Treasury obligations acquired by a REIT from a bank under an agreement whereby the REIT agrees to resell the obligations to the bank on a fixed date at the purchase price, plus an agreed amount of interest, do not qualify as an asset for the 75 percent asset test. The asset of the trust is the bank's obligation to repay the purchase price to the REIT, not the government obligations. *Rev Rul 77-59, 1977-1 CB 196 .*

Rev Proc 2003-65, 2003-2 CB 336 , sets forth a safe harbor under which a loan made by a REIT that is secured either by a partnership interest in a partnership or by the sole member interest in a disregarded entity will be treated as a real estate asset for purposes of *IRC § 856(c)(4)(A)* and *856(c)(5)(B)*.

(n80)Footnote 70. *IRC § 856(c)(4)(B)*. The assets of a qualified REIT subsidiary (a wholly-owned subsidiary) of the REIT are treated as the assets of the REIT. *IRC § 856(i)*. A taxable REIT subsidiary cannot be a qualified REIT subsidiary.

Although a qualified REIT subsidiary is otherwise not treated as a corporation separate from the REIT, it is treated as a separate corporation for purposes of (1) federal tax liabilities of the subsidiary for any taxable period that it was treated as a separate corporation, (2) federal tax liabilities of any other entity for which the subsidiary is liable, and (3) refunds or credits of federal tax. *Treas Reg § 1.856-9(a)*.

The 20-percent-of-value test is effective generally for taxable years beginning after Dec 31, 2000.

(n81)Footnote 71. *IRC § 856(c)(4)(B)*. A voting security is any security entitling the owner to vote for the election of directors of the issuing corporation. *IRC § 856(c)(5)(F)*; Investment Company Act of 1940, § 2(a)(42), 15 USC § 80A-2(a)(42).

The 10-percent-of-value test is applicable in taxable years beginning after Dec 31, 2000. There are transitional rules that make the test inapplicable to securities of a corporation held by a REIT on July 12, 1999, securities acquired by the REIT pursuant to a binding contract in effect on that date, and to securities of another corporation acquired in tax-free exchanges and reorganizations. With some exceptions, the transitional rules cease to apply to securities of a corporation if the corporation engages in a substantial new line of business or acquires any substantial asset, or the REIT acquires additional securities of the corporation.

(n82)Footnote 72. Straight debt is any written unconditional promise to pay on demand or a specified date a sum certain in money, if (i) the interest rate (and interest payment dates) are not contingent on profits, the borrower's discretion, or similar factors, (ii) there is no convertibility (directly or indirectly) into stock, and (iii) the creditor is an individual (other than a nonresident alien), an estate, certain trusts as specified in *IRC § 1361(c)(2)*, or a person that is actively and regularly engaged in the business of lending money. *IRC §§ 856(m)(2)(A)* and *1361(c)(5)*. An interest rate (and interest payment dates) are not treated as contingent on profits, the borrower's discretion, or similar factors solely because of the fact that (1) the time of payment of interest or principal is subject to a contingency, but only if (a) the contingency does not have the effect of changing the effective yield to maturity, as determined under *IRC Section 1272*, other than a change that does not exceed the greater of 1/4 of 1 percent or 5 percent of the annual yield to maturity, or (b) neither the aggregate issue price nor the aggregate face amount of the issuer's debt securities held by the REIT

exceeds \$1 million and not more than 12 months of unaccrued interest can be required to be prepaid thereunder, or (2) the time or amount of payment is subject to a contingency upon a default or the exercise of a prepayment right by the issuer of the debt, but only if the contingency is consistent with customary commercial practice. *IRC § 856(m)(2)(B)*.

(n83)Footnote 72.1. A § 467 rental agreement is a rental agreement for the use of tangible personal property under which there is at least one amount allocable to the use of property during a calendar year following the calendar year in which the use occurs, or there are increases in the amount to be paid as rent under the agreement. *IRC § 467(d)*.

(n84)Footnote 72.2. *IRC § 856(m)(1)*. Any debt instrument issued by a partnership and not falling within the safe harbor will not be considered a security (i) to the extent of the REIT's interest as a partner in the partnership, or (ii) if at least 75 percent of the partnership's gross income (excluding gross income from prohibited transactions) is derived from sources described in *IRC § 856(c)(3)* (see § 13.02[2][b]). *IRC § 856(m)(4)*.

(n85)Footnote 72.3. *IRC § 856(m)(2)(C)*. A REIT's interest as a partner in a partnership is not considered a security, and the REIT is deemed to own its proportionate share of each of the assets of the partnership. *IRC § 856(m)(3)(A)*. The REIT's interest in the partnership assets is the trust's proportionate interest in any securities issued by the partnership (determined without regard to the REIT's interest in the partnership or the application of *IRC § 856(m)(4)*), but not including securities falling within the safe harbor, and the value of any debt instrument is the adjusted issue price thereof, as defined in *IRC § 1272(a)(4)* (see § 17.02A[2][a]). *IRC § 856(m)(3)(B)*.

(n86)Footnote 73. *IRC § 856(c)(4)*. The Service has ruled that an increase in a REIT's holdings in a corporation due solely to the corporation's purchase of its stock on the open market should not cause it to lose its status as a REIT. *Ltr Rul 9237022*.

(n87)Footnote 74. *IRC § 856(c)(4)*.

(n88)Footnote 75. *Treas Reg § 1.856-2(d)(4)*, Examples (4) and (5).

(n89)Footnote 76. *IRC § 857(a)(1)*. The distribution percentage will be 90 percent for taxable years beginning after Dec 31, 2000.

Amounts used to amortize mortgages do not reduce the REIT's taxable income for purposes of determining the amount which must be distributed to meet the percentage requirement. Additionally, the requirement will not be satisfied by distribution of a tax-free stock dividend. *Rev Rul 64-292, 1964-2 CB 182*.

(n90)Footnote 77. *IRC § 857(e)*.

(n91)Footnote 78. *IRC § 857(a)(2)*. A distribution made to comply with the requirement that a REIT have no earnings and profits accumulated from any year in which it was not treated as a REIT is treated as made from the earliest earnings and profits accumulated in any taxable year in which the taxpayer was not a REIT rather than the most recently accumulated earnings and profits. *IRC § 857(d)(3)(A)*. Such a distribution is not treated as a distribution in determining the dividends paid deduction allowable to the REIT or the election to treat a dividend paid after the close of the year as made during the taxable year. *IRC § 857(d)(3)(B)*.

For purposes of satisfying *IRC § 857(a)(2)(b)*, an earnings and profits deficit from years in which a trust was taxed as a REIT can be carried forward to offset an earnings and profits surplus in years when the trust was taxed as a C corporation. *Ltr Rul 200403030*.

(n92)Footnote 1. *IRC § 856(l)(1)*.

(n93)Footnote 2. *IRC § 856(l)(2)*. Straight debt is not taken into account in determining the ownership of securities by a taxable REIT subsidiary. Straight debt is defined in *IRC §§ 856(c)(7) and 1361(c)(5)*. See § 13.02[2][c].

(n94)Footnote 3. *IRC § 856(l)(3)*.

(n95)Footnote 1. *Treas Reg § 1.856-3(g)*. The regulations apply where the REIT is a limited partner. *Rev Rul 69-40, 1969-1 CB 188*.

(n96)Footnote 2. Since the character is retained "for all purposes of section 856," the REIT will be deemed to hold real property primarily for sale to customers, and thus not qualify as a REIT, if the partnership holds any property for such purpose.

(n97)Footnote 3. *Treas Reg § 1.856-3(g)*.

(n98)Footnote 1. *IRC § 857(f)(1)*.

(n99)Footnote 2. *IRC § 857(f)(2)(A)*.

(n100)Footnote 3. *IRC § 857(f)(2)(B), (D)*.

(n101)Footnote 4. *IRC § 857(f)(2)(C)*.

(n102)Footnote 5. *Treas Reg § 1.857-8(d)*.

(n103)Footnote 6. *Treas Reg § 1.857-8(e)*.

CHAPTER 13 Real Estate Investment Trusts

2-13 Taxation of Securities Transactions § 13.03

§ 13.03 Taxation of Real Estate Investment Trusts

[1] Taxation of Ordinary Income.

[a] Applicable Rates. The ordinary taxable income of a qualifying REIT is subject to the tax imposed on corporations by *IRC Section 11*.ⁿ¹ Thus, as in the case of a RIC, the benefit derived from being taxed as a REIT comes from the manner in which taxable income of the trust is determined, not from the rate of tax to which the income is subject.ⁿ²

A REIT's net income from foreclosure property is also subject to the rates on corporate income prescribed by *IRC Section 11*, with one exception. The applicable rate is the highest rate specified.ⁿ³

[b] Computing Real Estate Investment Trust Taxable Income. Taxable income, as normally computed, is converted into REIT taxable income through Code imposed adjustments. An exclusion is provided for an amount equal to any net income derived from prohibited transactions and for an amount equal to the REIT's net income from foreclosure property.ⁿ⁴ The dividends received deductions provided in *IRC Sections 243, 244, and 245* are disallowed.ⁿ⁵ (A REIT is denied a net operating loss carryback, but is allowed to carry over net operating losses for a period of eight years.ⁿ⁶) Allowed as deductions are (a) the deduction for dividends paid described in *IRC Section 561*, but computed without regard to the portion of such deduction attributable to the amount excluded from income which is equal to the REIT's income from foreclosure property,ⁿ⁷ and (b) an amount equal to the sum of the excise tax imposed on REITs that fail to meet gross income requirements but are not disqualified because the failure is due to reasonable cause, the excise tax imposed by *IRC Section 856(c)(9)(B)(iii)* when there is more than a *de minimis* failure to meet asset diversification requirements, the tax imposed by *IRC Section 856(g)(1)* in lieu of automatic termination when a failure to meet the requirements for a REIT are due to reasonable cause, and the 100 percent tax imposed on improperly allocated amounts.ⁿ⁸ Finally, the taxable income for a period of less than twelve months need not be placed on an annual basis even though the short taxable year results from a change in accounting period.ⁿ⁹

A REIT's net income from foreclosure property consists of the aggregate of the gains and losses from sales or other dispositions of foreclosure property described in *IRC Section 1221(a)(1)* (property held for sale to customers in the ordinary course of business) and the net gain or loss from operations.ⁿ¹⁰ The latter amount is the difference between (a) the gross income derived from foreclosure property, to the extent such income does not consist of rents from real property; interest on obligations secured by mortgages on real property or interests in real property; gains from dispositions of real property; dividends or other distributions on, and gain from the disposition of interests in other

qualified REITs; and abatements and refunds of real property taxes; and commitment fees; and (b) any deductions that are directly connected with such income.ⁿ¹¹ If there is a net loss from foreclosure property, such loss is taken into account in computing real estate investment trust taxable income under *IRC Section 856(b)(2)*.ⁿ¹²

[c] Dividends Paid Deduction. We have seen that the dividends paid deduction plays a dual role in the taxation of REITs, i.e., as the measuring rod of the income distribution requirement of *IRC Section 857(a)*, and as the vehicle for obtaining the special tax treatment that Congress has granted to qualifying real estate investment trusts. This crucial concept can be simply defined as the amount of dividends paid during the taxable yearⁿ¹³ excluding, for the distribution requirement, any capital gains dividend paid during the year and, for the determination of REIT taxable income, the amount of net income from foreclosure property. But not every dividend can qualify as a dividend paid during the taxable year. This is open only to distributions of property (including money) that meet the definition of dividend found in *IRC Section 316(a)*.ⁿ¹⁴ Thus, since stock in the distributing corporation is excluded from the definition of property as used in *IRC Section 316(a)*, a nontaxable stock dividend distributed by the REIT normally will not enter into the computation of the dividends paid deduction.ⁿ¹⁵ A further limitation requires that no shareholder be given preference over any other shareholder of the same class, and that no class of shares be given preference over any other class except to the extent that a class is entitled to a preference by its terms.ⁿ¹⁶

If the dividends qualifying for the deduction were limited to those actually paid during the taxable year, a faulty estimate of taxable income and the amount to be distributed in order to meet the income distribution requirement would be fatal. To facilitate accurate determination of these amounts, *IRC Section 858(a)* permits a REIT to elect to treat a dividend paid after the close of the year as having been paid during the taxable year,ⁿ¹⁷ provided (1) the dividend is declared prior to the date upon which the trust's return for the taxable year must be filed, and (2) the dividend is distributed to shareholders or holders of beneficial interests within the twelve-month period following the close of the taxable year to which the election relates, but not later than the date of the first regular dividend payment following declaration of the post-year dividend.ⁿ¹⁸

The election must be made in the return filed by the REIT for the prior taxable year and is made by specifying the dollar amount of the dividend and by stating that the post-year dividend is part of the dividends paid for that year.ⁿ¹⁹ However, any distribution made with respect to a valid election for a prior year will be deemed to have been made only in such prior year and not during the payment year.ⁿ²⁰ The election becomes irrevocable after the time for filing the return for the taxable year to which the election relates has expired.ⁿ²¹

The Service in its discretion can grant an extension of time to file the election, provided (1) the time for making such an election is not expressly proscribed by statute; (2) the request for extension is filed with the Service before the time fixed for making the election, or within such time thereafter as the Service may consider reasonable under the circumstances; and (3) it is shown to the satisfaction of the Service that the granting of the extension will not jeopardize the interests of the government.ⁿ²² As a general rule, relief will be granted when the taxpayer acted reasonably and in good faith, and granting relief will not prejudice the interests of the government.ⁿ²³

A taxpayer will have acted reasonably and in good faith if (a) the taxpayer inadvertently failed to make the election because of certain intervening events beyond the taxpayer's control or, because after exercising due diligence (taking into account the taxpayer's experience and the complexity of the return of issue), the taxpayer was unaware of the necessity of the election; (b) the taxpayer reasonably relied on the written advice of the Service; or (c) the taxpayer reasonably relied on a qualified tax professional, and the tax professional failed to make or advise the taxpayer to make the election.ⁿ²⁴ A taxpayer will not be considered to have acted reasonably and in good faith if the taxpayer knew or should have known that the tax professional was not competent to render advice on the election or did not know all of the relevant facts. In addition, good faith and reasonableness will not exist if the taxpayer seeks to alter a tax return position for which an accuracy penalty has been or could have been imposed under *IRC Section 6662* at the time the taxpayer requests relief, and the new position requires the election. A taxpayer also will not have acted reasonably and in good faith if the taxpayer was fully informed of the required election and related tax consequences and chose not to

file the election. Finally, a taxpayer will not have acted reasonably and in good faith if the taxpayer uses hindsight in requesting relief.

The interests of the government are prejudiced if granting relief would result in a taxpayer having a lower tax liability in the aggregate for all years to which the election applies than the taxpayer would have had if the election had been timely made (taking into account the time value of money).ⁿ²⁵ Ordinarily, the Service will not grant relief when the tax years made by the election--had it been timely--are closed by the statute of limitations.

[2] Taxation of Net Long-Term Capital Gains.

The second half of the real estate investment trust taxing scheme concerns the taxation of net capital gains. A REIT is allowed a deduction for capital gain dividends paid,ⁿ¹ so that the REIT is taxed only on net long-term capital gains it does not distribute.

Before a distribution can qualify as a capital gain dividend, it must be so designated by the REIT in a written notice mailed to shareholders or holders of beneficial interests no later than 30 days after the close of the REIT's taxable year (or mailed to its shareholders or holders of beneficial interests with its annual report for the taxable year).ⁿ² If the aggregate amount designated as a capital gain dividend is greater than the excess of net long-term capital gain over net short-term capital loss for the taxable year, the total capital gain dividend for the year will be restricted to such excess and the amount of each distribution designated as a capital gain dividend limited accordingly.ⁿ³ The net capital gain dividend for any taxable year that is not a calendar year must be determined without regard to any net capital loss attributable to transactions after December 31st of such year; the loss is treated as arising on the first day of the next taxable year.ⁿ⁴ If the net capital gain for the taxable year does not exceed the capital gain dividend for the year, the amount of net capital gain is excluded in determining the net operating loss for the year or the amount of any net operating loss for a prior year that is carried through the taxable year to a succeeding year.ⁿ⁵

[3] Deduction for Deficiency Dividends.

We have seen that a REIT is subject to tax as an ordinary corporation if it fails to meet the income distribution requirements for the taxable year. Disqualification is automatic unless the failure results from a post-audit determination that the income of the REIT must be increased or the dividends paid deduction decreased. In such case, the REIT can avail itself of the deficiency dividend procedure permitted by *IRC Section 860* and escape taxation on the amount distributed as a deficiency dividend.

Resort to the relief granted by *IRC Section 860* can be had only after a "determination" resulting in an "adjustment." The first term is defined as a final decision or judgment of a court, a closing agreement under *IRC Section 7121*, or an agreement between the REIT and the Internal Revenue Service relating to the tax liability of the trust, or a statement by the taxpayer attached to its amendment or supplement to a return of tax for the relevant tax year.ⁿ¹ The second is (1) an increase in the REIT's real estate investment trust taxable income, excluding net capital gains and without deduction for dividends paid; (2) an increase in net after-tax income from foreclosure property; (3) an increase in the amount of excess net capital gain over the deduction for capital gains dividends paid; or (4) a decrease in the deduction for dividends paid determined without regard to capital gain dividends.ⁿ²

A distribution qualifies as a deficiency dividend if distributed within ninety days after the determination resulting in the adjustment and before the filing of a claim for deduction.ⁿ³ (The claim for deduction must be filed no later than 120 days after the determination).ⁿ⁴ The amount that can be treated as a deficiency dividend cannot exceed the net adjustment produced by the audit and determination.ⁿ⁵ The distribution relates to the year for which it is paid. It cannot be considered a dividend for the year in which paid or as a post-year dividend paid pursuant to *IRC Section 858*.ⁿ⁶

The interest and penalty provisions attached to the deficiency dividend procedure are designed "to recover lost revenues

to the government as well as to assume that a REIT (1) will be operated as a conduit of income to its shareholders and (2) will not reduce its distributions of income in reliance on the availability of the deficiency dividend procedure."ⁿ⁷ To this end, interest is determined only to the extent the deficiency deduction is allowed, and runs from the due date (without extensions of time) of the return for the year in question until the claim for deduction is filed.ⁿ⁸

If the allowance of the deficiency dividend deduction results in an overpayment tax, the REIT has two years from the date of determination in which to file a claim for refund.ⁿ⁹ The filing of a claim for deduction suspends the running of the statute of limitations on assessments for a period of two years after the date of determination.ⁿ¹⁰ The determination itself stays the collection of the deficiency and of interest and penalties for a period of 120 days except in the case of jeopardy.ⁿ¹¹

There is one final, but very important, note. The procedure is available only if the entire amount of the adjustment is not due to fraud with intent to evade tax or to willful failure to file a return within the required time.ⁿ¹²

[4] Tax Imposed for Failure to Meet Gross Income Requirements.

We have seen that a REIT is not disqualified for failing to meet the gross income source requirements of *IRC Section 856(c)* if the failure is due to reasonable cause and the REIT complies with certain other conditions.ⁿ¹ The cost to the REIT for this is a 100 percent tax on the net income attributable to the greater of the amount by which the REIT failed the 95 percent test or the 75 percent test.ⁿ² To determine such net income, the amount by which the respective test is failed is multiplied by the following fraction:

$$\frac{\text{real estate investment trust taxable income for year in question}}{\text{gross income of REIT for year in question}}$$

The fraction reflects the average profitability of the REIT and provides a simple way to determine the trust's net income from nonqualifying income without requiring an apportionment or allocation of specific deductions.ⁿ⁵

[5] Tax on Income From Prohibited Transactions.

Prior to the Tax Reform Act of 1976, the Code contained a prohibition against a REIT holding property for sale to customers in the ordinary course of business. The Act removed the bar and replaced it with a tax equal to 100 percent of the net income (gain less directly connected deductions) derived from sales or other dispositions of such property.ⁿ¹

The 100 percent penalty tax is inapplicable to the sale of property held primarily for sale if (1) the property has been held by the REIT for at least two years, (2) the total expenditures made by the REIT during the two-year period preceding the sale do not exceed 30 percent of the net selling price, (3) the REIT does not sell more than seven properties (other than sales of foreclosure property or sales to which *IRC Section 1033* (relating to involuntary conversions) applies) during the taxable year, or the aggregate adjusted bases (as determined for the purposes of computing earnings and profits) of property (other than sales of foreclosure property or sales to which *IRC Section 1033* applies) sold during the taxable year does not exceed 10 percent of the aggregate bases of all assets of the REIT at the beginning of the taxable year, or, for sales made after July 30, 2008, the fair market value of property (other than sales of foreclosure property or sales to which *IRC Section 1033* applies) sold during the taxable year does not exceed 10 percent of the fair market value of all assets of the trust as of the beginning of the taxable year,^{n1.1} (4) if not acquired by foreclosure, the property has been held for rental for at least four years, and (5) if the seven-sale requirement is not satisfied, substantially all of the marketing and development expenditures with respect to the property were made through an independent contractor from whom the REIT does not itself derive or receive any income.ⁿ² Failure to meet the requirements of this safe harbor rule does not mean that the sale is automatically deemed to be a prohibited transaction. Rather, the nature of the transaction is to be determined under the facts and circumstances of the case as if

the safe harbor provision had not been enacted.ⁿ³

Each of the four conditions is affected by special rules. For purposes of the four-year holding period requirement, the length of time that the REIT has held property acquired through foreclosure (or deed in lieu of foreclosure), or termination of a lease, includes the period that the REIT held the loan that was foreclosed or was the lessor of the property.ⁿ⁴

The 30 percent expenditure condition is tested by including not only expenditures made directly by the REIT during the four-year period, but also, in the case of property acquired by foreclosure or lease termination, any payment made by or for the mortgagor or lessee after default became imminent.ⁿ⁵ On the other hand, expenditures are not taken into account if they relate to foreclosure property and did not cause the property to lose its status as foreclosure property,ⁿ⁶ or if they are made to comply with governmental standards or regulations or to restore damage caused by fire, storm, or other casualty.ⁿ⁷

For purposes of the seven-sale per year limit, the sale of more than one property to one buyer in one transaction is treated as one sale.ⁿ⁸ In addition, sales with a net selling price (total selling price less related selling expenses) of less than \$10,000 are excluded from the count.ⁿ⁹ If the REIT exceeds the limit, none of the sales is protected by the safe harbor rule.ⁿ¹⁰

For purposes of the rental test, any rental at an insignificant rent or for a use which indicates that the purpose of the rental arrangement was not for the production of rental income is to be disregarded. It is important to note that the "use" test is not overcome by the fact that the rental derived is a fair rent for that use.ⁿ¹¹

Excluded from the definition of prohibited transaction is any sale of property that is a real estate asset if (a) the REIT held the property for at least four years in connection with the trade or business producing timber, (b) the aggregate expenditures made by the REIT, or a partner of the REIT, during the four-year period preceding the sale that (1) are includable in the basis of the property (other than timberland acquisition expenditures), and (2) are directly related to the operation of the property for the production of timber or for the preservation of the property for use as timberland, do not exceed 30 percent of the net selling price of the property, (c) the aggregate expenditures made by the REIT, or a partner of the REIT, during the four-year period preceding the sale that (1) are includable in the basis of the property (other than timberland acquisition expenditures), and (2) are not directly related to the operation of the property for the production of timber, or for the preservation of the property for use as timberland do not exceed 5 percent of the net selling price of the property, (d)(1) during the taxable year the REIT does not make more than seven sales of property (other than sales of foreclosure property or sales pursuant to an involuntary conversion), or (2) the aggregate adjusted bases (as determined for purposes of computing earnings and profits) of property (other than sales of foreclosure property or sales pursuant to an involuntary conversion) sold during the taxable year does not exceed 10 percent of the aggregate bases of all of the assets of the REIT at the beginning of the taxable year, (e) if the requirement of (d)(1) above is not satisfied, substantially all of the marketing expenditures with respect to the property were made through an independent contractor from whom the REIT does not derive or receive any income, and (f) the sales price of the property sold by the trust is not bases in whole or in part of income or profits, including income or profits derived from the sale or operation of the property.ⁿ¹²

[6] Tax on Income From Foreclosure Property.

IRC Section 857(b)(4)(A) imposes the highest corporate tax rate on the net income from foreclosure property of a REIT. The income base is defined by *IRC Section 857(b)(4)(B)* as (1) the excess of gain from the sale or other disposition of foreclosure property held for sale to customers in the ordinary course of business and gross income derived from foreclosure property other than rents, interest on obligation secured by mortgages on real property, gains from dispositions of real property not held for sale to customers in the ordinary course of business, income derived from interests in other qualified REIT, abatements and refunds of real estate taxes, and commitment fees, over (2) the

deductions that are directly connected with the production of that income.

[7] Earnings and Profits of Real Estate Investment Trusts.

A REIT, including one taxed as an ordinary business corporation because it fails to meet the 95 percent income distribution test of *IRC Section 857(a)*, computes its current earnings and profits (but not its accumulated earnings and profits) in a manner slightly different from the one employed by an ordinary corporation. The latter may reduce current earnings and profits by the amount of deductions that are not allowable in computing taxable income, such as excess capital losses. The REIT is not permitted to reduce its earnings and profits for the taxable year by any amount not allowable as a deduction in computing its taxable income for the year.ⁿ¹

A REIT is treated as having sufficient earnings and profits to treat as a dividend any distribution (other than a redemption to which *IRC Section 302(a)* applies) that is treated as a dividend by the REIT, except to the extent that the amount distributed exceeds the required distribution for the year under the *IRC Section 4981* excise tax on undistributed income.ⁿ²

[8] Excise Tax on Undistributed Income.

IRC Section 4981(a) imposes a 4 percent tax on the REIT for each calendar year to the extent that the "required distribution" for the year exceeds the "distributed amount" for the year.ⁿ¹ The "required distribution" for any calendar year is the sum of (1) 85 percent of the REIT's ordinary income for the year, (2) 95 percent of the REIT's capital gain net income for the year, and (3) the excess of the grossed up required distribution for the preceding calendar year over the distributed amount for such year.ⁿ² The grossed up required distribution for any calendar year is the sum of the taxable income for the year and all amounts from earlier years that are not treated as having been distributed for purposes of the excise tax.ⁿ³

The REIT's ordinary income for purposes of the excise tax is its REIT taxable income determined (1) without taking into account the dividends paid deduction, (2) by not taking into account any gain or loss from the sale of any capital asset, and (3) by treating the calendar year as the REIT's taxable year.ⁿ⁴ The amount of the REIT's capital gain net income is reduced by any net ordinary loss--the amount that would be its net operating loss for the calendar year determined in accordance with the preceding sentence.ⁿ⁵

The "distributed amount" for any taxable year is the sum of (1) the deduction for dividends paid during the year (computed without regard to the portion of the deduction attributable to the exclusion of net income from foreclosure property), (2) any tax imposed on the REIT's real estate investment trust taxable income or net capital gain, and (3) the excess of the distributed amount for the preceding calendar year over the grossed up required distribution for that year.ⁿ⁶ The amount of dividends paid during the year is determined without regard to the provisions of *IRC Section 858*.ⁿ⁷

For purposes of the excise tax, any deficiency dividend is taken into account when paid, and any income giving rise to the adjustment that triggers the dividend is treated as arising when the dividend is paid.ⁿ⁸

[9] 100 Percent Tax on Improperly Allocated Amounts.

A 100 percent tax is imposed for each taxable year of a REIT if the amount of interest, rent, or other deductions of a taxable REIT subsidiary of the REIT is determined to be other than at arm's length ("redetermined rents," "redetermined deductions," and "excess interest").ⁿ¹ The tax is effective for years beginning after December 31, 2000, and applies in lieu of any distribution, apportionment, or allocation under *IRC Section 482*.ⁿ²

Redetermined rents are rents from real property to the extent the amount of the rents would be reduced on distribution,

apportionment, or allocation under *IRC Section 482* to clearly reflect income as a result of services furnished or rendered by a taxable REIT subsidiary to a tenant of the REIT.ⁿ³ However, the following are not treated as redetermined rents:

- (1) *De minimis* amounts (amounts treated as impermissible tenant income with respect to property to the extent the amounts do not exceed 1 percent of amounts received by the REIT with respect to the property);ⁿ⁴
- (2) There is specified evidence that charges to unrelated parties are substantially comparable;ⁿ⁵
- (3) Certain charges by the subsidiary are separately stated;ⁿ⁶ and
- (4) The subsidiary's gross income from the service is not less than 150 percent of the its direct cost in furnishing the service.ⁿ⁷

In addition, the Service can waive the tax if the REIT establishes to the satisfaction of the Service that rents charged to tenants were established on an arm's-length basis even though a taxable REIT subsidiary of the REIT provided services to the tenants.ⁿ⁸

Redetermined deductions are deductions (other than redetermined rents) of a taxable REIT subsidiary to the extent the amount of the deductions would be decreased on distribution, apportionment, or allocation under *IRC Section 482* to clearly reflect income as between the subsidiary and the REIT.ⁿ⁹ Excess interest is any deduction for interest payments by a taxable REIT subsidiary to the REIT to the extent that the interest payments are in excess of a rate that is commercially reasonable.ⁿ¹⁰

The Service is required to prescribe regulations to carry out the purposes of the foregoing rules.ⁿ¹¹ Until such regulations are prescribed, a REIT and any of its taxable REIT subsidiaries can base their allocations on any reasonable method.

FOOTNOTES:

(n1)Footnote 1. *IRC § 857(b)(1)*. See § 6.03[1] for the treatment of net built-in gain assets of a C corporation that become assets of a REIT.

(n2)Footnote 2. The taxation of regulated investment companies is discussed in Ch 12.

(n11)Footnote 11. *IRC § 857(b)(4); Treas Reg § 1.857-3(a)*. A deduction is directly connected with gross income if

it has a proximate and primary relationship to the earning of such income, e.g., real property taxes and the earning of gross income from real property. *Treas Reg § 1.857-3(b)*.

(n12)Footnote 12. *Treas Reg § 1.857-3(c)*.

(n13)Footnote 13. *IRC § 561(a)(1)*. In determining the amount of dividends under *IRC § 316* for purposes of the dividends paid deduction, the earnings and profits of the REIT are increased by the total amount of gain on the sale or exchange of real property by the trust during the taxable year. *IRC § 562(e)*.

(n14)Footnote 14. *IRC § 562(a)*. The dividend definition of *IRC § 316* applies to distributions by a REIT. *Treas Reg § 1.856-1(e)(7)*.

(n15)Footnote 15. *Cf* Rev Rul 64-292, 1964-2 CB 182 . However, in response to the 2008 crisis in financial markets, which caused potentially catastrophic liquidity problems for many REITs and RICs, the Internal Revenue Service provided temporary administrative relief by devising a procedure by which REITs and RICs may receive a dividends paid deduction for distributions of their stock so long as their shareholders have the option of electing to receive cash instead of stock, even though shareholders' right to receive cash is subject to a "Cash Limitation" which limits the total amount of cash required to be distributed to 10 percent (or more) of the aggregate declared distribution. The procedure is valid for dividend distributions (including deficiency dividend distributions under *IRC § 860*) declared on or after January 1, 2008 and before December 31, 2012 with respect to taxable years ending on before December 31, 2011. See Rev Proc 2010-12, 2010-3 IRB 302, amplifying and superseding *Rev Proc 2009-15*, 2009-4 IRB 356, which amplified and superseded *Rev Proc 2008-68*, 2008-52 IRB 1373; Ch 12, § 12.02[2][d], fn 33.

(n16)Footnote 16. *IRC § 562(c)*; *Treas Reg § 1.562-2*.

(n17)Footnote 17. The dividend is deemed paid during the taxable year both for the purpose of determining whether the REIT has met the 95 percent income distribution requirement and for the purpose of computing real estate investment trust taxable income. *Treas Reg § 1.858-1(a)*.

(n18)Footnote 18. The entire amount of a dividend paid in installments will be deemed paid during the taxable year if all installments are paid prior to the first regular dividend payment after declaration of the post-year dividend. *Rev Rul 64-30*, 1964-1 (Pt 1) CB 232.

(n19)Footnote 19. *Treas Reg § 1.858-1(b)(1)*.

(n20)Footnote 20. *Treas Reg § 1.858-1(b)(1)*.

(n21)Footnote 21. *Treas Reg § 1.858-1(b)(4)*. The election cannot be made unless the return is timely filed or the REIT receives an extension of time to file. *Rev Rul 76-176*, 1976-1 CB 189 .

(n22)Footnote 22. *Treas Reg § 301.9100-1*.

(n23)Footnote 23. *Rev Proc 92-85*, § 5, 1992-2 CB 490 , modified by *Rev Proc 93-28*, 1993-2 CB 344 .

(n26)Footnote 1. *IRC § 857(b)(3)(A)*.

(n27)Footnote 2. *IRC § 857(b)(3)(C)*. A *IRC § 858* election may be made with respect to capital gain dividends. *Treas Reg § 1.858-1(a)(3)*. The notice designating the dividend as a capital gain dividend must be sent not later than 30 days after the close of the year in which the distribution is made (or mailed to its shareholders or holders of beneficial

interests with its annual report for the taxable year). *IRC § 858(c)*.

If there is an increase in the amount of net capital gain because of a determination leading to a deficiency dividend, the designation notice must be sent within 120 days of the determination producing such increase.

The amount of any capital loss carried over and deducted in the taxable year reduces the amount that can be designated as a capital gain dividend. *Rev Rul 76-299, 1976-2 CB 211* .

(n28)Footnote 3. *IRC § 857(b)(3)(C)*.

(n29)Footnote 4. *IRC § 857(b)(3)(C)*.

(n30)Footnote 5. *IRC § 857(b)(3)(D)*.

(n31)Footnote 1. *IRC § 860(e)*.

(n32)Footnote 2. *IRC § 860(d)(2)*.

(n33)Footnote 3. *IRC § 860(f)(1)*.

(n34)Footnote 4. *IRC § 860(g)*.

(n35)Footnote 5. *IRC § 860(f)(2)*. For example, if the REIT originally reported income of \$10,000 for 1987 and paid a dividend of \$9,000 and it was then determined that the trust had \$12,000 of real estate investment trust income, the deficiency dividend would be limited to 90 percent of \$2,000 or \$1,800.

(n36)Footnote 6. *IRC § 860(f)(3)*. The shareholder reports the dividend as income when received.

(n37)Footnote 7. S Rep No 938, Pt I, 94th Cong, 2d Sess 465 (1976).

(n38)Footnote 8. *IRC § 860(c)(1)(C)*.

(n39)Footnote 9. *IRC § 860(c)(2)*.

(n40)Footnote 10. *IRC § 860(h)(1)*.

(n41)Footnote 11. *IRC § 860(h)(2)*.

(n42)Footnote 12. *IRC § 860(i)*.

(n43)Footnote 1. See § 13.03[2][b], *supra*.

(n44)Footnote 2. *IRC § 857(b)(5)*.

(n45)Footnote 3. For this purpose, REIT taxable income is determined (1) without regard to the deductions for dividends paid or for the tax imposed on the failure to meet income source requirements, (2) without regard to any net operating loss deduction, and (3) by excluding any net capital gain.

(n46)Footnote 4. Gross income is determined by excluding gross income from prohibited transactions, certain gross income and gain from foreclosure property, long-term capital gains, and short-term capital gain to the extent of any short-term capital loss.

(n47)Footnote 5. S Rep No 938, Pt I, 94th Cong, 2d Sess 472 (1976).

(n48)Footnote 1. *IRC § 857(b)(6)*. Losses from prohibited transactions are not taken into account in determining the amount of net income derived from prohibited transactions. *IRC § 857(b)(6)(C)*.

(n49)Footnote 1.1. See Rev Proc 2008-69 for a method for applying the prohibited transactions safe harbor for a taxable year that begins on or before July 30, 2008 and ends on or after July 31, 2008.

(n50)Footnote 2. *IRC § 857(b)(6)(C)*. Property securing a shared appreciation provision is treated as property held for sale to customers in the ordinary course of business if it is such in the hands of the persons holding the property or it would be if held by the REIT. *IRC § 856(j)(2)(B)*. In order to coordinate the shared appreciation rules with the prohibited transactions safe harbor, the REIT will be treated as having sold the secured property when it recognizes any income from the shared appreciation provision, and any expenditures made by the holder of the secured property are treated as made by the REIT. *IRC § 856(j)(3)*.

For purposes of *IRC § 857(b)(6)(C)*, if a REIT is treated as having sold secured property, the trust will be treated as having held the property for at least four years if the secured property is sold or otherwise disposed of pursuant to a Title 11 (bankruptcy) case, the seller is under the jurisdiction of the bankruptcy court in the case, and the disposition is required by the court or is pursuant to a plan approved by the court. The preceding provision does not apply if the secured property was acquired by the seller with the intent to evict or foreclose, or the trust had reason to know that default on the shared appreciation obligation would occur. *IRC § 856(j)(4)*.

(n51)Footnote 3. *IRC § 857(b)(6)(F)*.

(n52)Footnote 4. *IRC § 857(b)(6)(E)(i)*.

(n53)Footnote 5. *IRC § 857(b)(6)(E)(ii)*. Advances made on loans calling for additional advances at various times are not treated as expenditures unless default on the loan is imminent. S Rep No 1263, 95th Cong, 2d Sess 179 (1978).

(n54)Footnote 6. *IRC § 857(b)(6)(E)(iii)*.

(n55)Footnote 7. *IRC § 857(b)(6)(E)(iv), (v)*.

(n56)Footnote 8. *IRC § 857(b)(6)(E)(vi)*.

(n57)Footnote 9. *IRC § 857(b)(6)(E)(vii)*. Unless excluded under the \$10,000 exception, sales are counted regardless of whether the transaction results in gain or loss. S Rep No 1263, 95th Cong, 2d Sess 180 (1978).

(n58)Footnote 10. *IRC § 857(b)(6)(E)(vii)*. Unless excluded under the \$10,000 exception, sales are counted regardless of whether the transaction results in gain or loss. S Rep No 1263, 95th Cong, 2d Sess 180 (1978).

(n59)Footnote 11. *IRC § 857(b)(6)(E)(vii)*. Unless excluded under the \$10,000 exception, sales are counted regardless of whether the transaction results in gain or loss. S Rep No 1263, 95th Cong, 2d Sess 180 (1978).

(n60)Footnote 12. *IRC § 857(b)(6)(C)*.

(n61)Footnote 1. *IRC § 857(d)(1)*; *Treas Reg § 1.857-7*; *Rev Rul 76-299, 1976-2 CB 211*. An example of the operation of a similar provision relating to regulated investment companies can be found in § 12.03[3].

(n62)Footnote 2. *IRC § 857(d)(2)*.

(n63)Footnote 1. The tax must be paid by March 15 of the following year. *IRC § 4981(d)*.

Regardless of the taxable years of a REIT and any partnership in which the REIT is a partner, for purposes of determining the REIT's required distribution for a calendar year under *IRC § 4981(a)*, the REIT must take into account

its share of partnership items of income, gain, loss, and deduction as they are taken into account by the partnership. *Rev Rul 94-40, 1994-1 CB 274*, as modified by *Rev Rul 94-40A, 1994-1 CB 276*.

For purposes of taking partnership items into account in determining an REIT's required distribution under *IRC § 4981(a)*, the Service will not challenge consistent use of a method, if that method takes the items into account under *IRC § 706* and, in addition, the REIT either files income tax returns on a calendar year basis or files on a fiscal year basis and meets an asset test. *Rev Proc 94-71, 1994-2 CB 810*.

The asset test is met if, at all times during the calendar year, the REIT holds an aggregate interest in profits and capital of the partnership of no more than 50 percent, and, at each testing date within the calendar year, the REIT has less than 35 percent of the value of its total assets represented by interests in partnerships that do not have the calendar year as their accounting period for federal income tax purposes. The testing dates are the close of each quarter of the taxable year of the REIT. The REIT can treat an interest in a fiscal year partnership as an interest in a calendar year partnership if the REIT's taxable year did not affect that partnership's taxable year under *IRC § 706(b)* and the REIT maintains adequate books and records to demonstrate this fact.

(n64)Footnote 2. *IRC § 4981(b)(1), (2)*.

(n65)Footnote 3. *IRC § 4981(b)(3)*.

(n66)Footnote 4. *IRC § 4981(e)(1)*.

(n67)Footnote 5. *IRC § 4981(e)(2)*.

(n68)Footnote 6. *IRC § 4981(c)(1), (2)*.

CHAPTER 13 Real Estate Investment Trusts

2-13 Taxation of Securities Transactions § 13.04

§ 13.04 Taxation of Shareholders or Holders of Beneficial Interests

[1] Dividends Received.

[a] Ordinary Income Dividends. Shareholders of REITs generally include ordinary income dividend distributions in income in the year received; this includes distributions made pursuant to an election by the trust to treat the dividend as a dividend paid in the prior taxable year.ⁿ¹ However, any dividend declared by a REIT in October, November, or December of any calendar year, and payable to shareholders of record on a specified date in any of those months are deemed to have been received by the shareholder and paid by the REIT on December 31st (or earlier, if *IRC Section 858* applies), if the REIT actually pays the dividend during January of the following year.ⁿ² It should be noted that the distribution is not considered a dividend for purposes of the dividends received deduction of Section 243.ⁿ³

For purposes of *IRC Section 1(h)(11)* (relating to the maximum rate of tax on dividends), if a dividend (other than a capital gain dividend) is received from a REIT, and the REIT meets the requirements of *IRC Section 856(a)* for the taxable year in which it is paid, then in computing qualified dividend income, there is taken into account only that portion of the dividend designated by the REIT.^{n3.1} The aggregate amount that can be designated as qualified dividend income cannot exceed the sum of (i) the qualified dividend income of the REIT for the taxable year, received from a REIT, under *IRC Section 857(b)(1)* and the application of those regulations, (ii) the excess of the sum of the real estate investment trust taxable income computed under *IRC Section 857(b)(2)* for the preceding taxable year and the income subject to tax by reason of the application of the regulations under *IRC Section 337(d)* for the preceding taxable year over the taxes payable by the REIT under *IRC Section 857(b)(1)* and the application of those regulations for the preceding taxable year, and (iii) the amount of any earnings and profits that were distributed by the REIT for the taxable year and accumulated in a taxable year with respect to which the rules did not apply.^{n3.2} The amount of any distribution by a real estate investment trust that can be taken into account as a qualified dividend cannot exceed the amount so designated by the REIT in a written notice to its shareholders mailed not later than 60 days after the close of its taxable year.^{n3.3}

In the case of a closely held REIT, any person owning at least 10 percent of the vote or value of the REIT is required to accelerate the recognition of year-end dividends attributable to the closely held REIT, for purposes of the person's estimated tax payments.ⁿ⁴ A closely held REIT is one in which at least 50 percent of the vote or value is owned by five or fewer persons.ⁿ⁵

[b] Capital Gain Dividends. A capital gain dividend, including one paid after the close of the taxable year under a

valid *IRC Section 858* election and one paid as part of a deficiency dividend is includable in the shareholder's gross income in the year of actual distribution as long-term capital gain.ⁿ⁶ For a dividend to be treated as a capital gain dividend, it must be designated as such by the trust in a written notice mailed to shareholders not later than 30 days after the close of the REIT's taxable year (or mailed to its shareholders or holders of beneficial interests with its annual report for the taxable year) or, in the case of a deficiency dividend, within 120 days of the date of the determination.ⁿ⁷ If the amount designated in the notice is greater than the net capital gain for the year, the shareholder's capital gain dividend cannot exceed his proportionate share of such excess.ⁿ⁸

For taxable years beginning after August 5, 1997, a REIT can elect to retain and pay income tax on net long-term capital gains it receives during the taxable year. If the election is made, each REIT shareholder must include in income as long-term capital gains for the shareholder's taxable year in which the last day of the trust's taxable year falls, the amount that the trust designates as long-term capital gain in respect of the shareholder's shares.ⁿ⁹ The designation must be made in a written notice mailed to the REIT's shareholders within 60 days after the close of the REIT's taxable year (or mailed to shareholders or holders of beneficial interests with its annual report for the taxable year), but the amount includable by any shareholder cannot exceed that part of the amount subject to tax under *IRC Section 857(b)(3)(A)(ii)* as a capital gain dividend if all of the amount had been distributed to the shareholder as a capital gain dividend at the close of the REIT's taxable year.

In determining the income tax liability of the shareholder for the taxable year, the shareholder is deemed to have paid the capital gain tax imposed by *IRC Section 857(b)(3)(A)(ii)* on the amount required to be included in the shareholder's long-term capital gain for the year; the shareholder is allowed a credit or refund for the tax deemed to have been paid.ⁿ¹⁰ The adjusted basis of the shares with respect to which the undistributed long-term capital gain is included in the shareholder's income is increased by the difference between the amount of the includable gain and the capital gains tax deemed paid by the shareholder.ⁿ¹¹

If a shareholder does not own more than 5 percent of the stock of a publicly traded REIT, so that distributions by the REIT are not treated as gain from the sale or exchange of a United States real property interest, the amount that would be included in computing long-term capital gains for the shareholder is not included in computing the shareholder's long-term capital gain, but is included in the shareholder's gross income as a dividend from the REIT.ⁿ¹²

The earnings and profits of the REIT and any shareholder that is a corporation are to be appropriately adjusted in accordance with regulations to be prescribed.ⁿ¹³

[2] Special Provision Affecting Losses Realized on the Sale of Shares Held for Six Months or Less.

Since the price of shares sold ex-dividend generally decreases in an amount equal to the dividend, an advantageous tax result--long-term capital gain and short-term capital loss--would be achieved if a taxpayer could purchase shares before the ex-dividend date of a capital gain dividend and sell them immediately thereafter. However, *IRC Section 857(b)(8)* makes this result impossible whenever the shares are held for six months or less,ⁿ¹ by treating the loss sustained on their sale as a long-term capital loss to the extent that the shareholder is required to treat any distribution from the trust as a long-term capital gain.ⁿ² Thus, if the capital gain dividend amounted to \$1 per share, the first \$1 of loss per share would be transformed from a short-term capital loss into a long-term capital loss.

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.857-6(a)*; *IRC § 858(b)*. Deficiency dividends are also includable in the year of receipt, and are includable in full even though the trust does not have sufficient earnings and profits at the time of distribution.

Since the current earnings and profits of a REIT are not reduced by any amount not allowed as a deduction in computing taxable income, earnings and profits should always be sufficient to cover the distribution.

IRC § 301 applies to distributions of property by a REIT in the same manner as it does to those of a domestic corporation. *Treas Reg § 1.856-1(e)(1)*.

(n2)Footnote 2. *IRC § 857(b)(9)*.

(n3)Footnote 3. *IRC §§ 243(c)(2); 857(c)(1)*.

CHAPTER 13 Real Estate Investment Trusts

2-13 Taxation of Securities Transactions § 13.05

§ 13.05 Stapled Real Estate Investment Trusts

In 1984, Congress enacted *IRC Section 269B(a)(3)* to require that, in applying the tests for REIT status, all stapled entities were to be treated as one entity. A grandfather provision provided that certain then-existing stapled REIT's were not subject to the new provision.ⁿ¹

The IRS Restructuring and Reform Act of 1998 generally changed that result for real property interests acquired after March 26, 1998 (nonqualified real property interests).ⁿ²

The effect of the change is that all of the income and activities of the stapled REIT group with respect to a nonqualified real property interest will be attributed to the REIT under the one-entity rule of *IRC Section 269B(a)(3)*. This may mean that income received by a member of the stapled REIT group will not be treated as qualifying income under the 75- or 95-percent tests, with the result that REIT status might be lost.

The stapled REIT group consists of an exempt REIT (a REIT that, standing alone, would qualify as a REIT), all entities that are stapled entities with respect to the exempt REIT and all entities that are 10-percent subsidiaries of the exempt REIT or any such stapled entity.ⁿ³ A 10-percent subsidiary is an entity in which the exempt REIT or a stapled entity directly or indirectly holds at least a 10-percent interest.ⁿ⁴ However, a C corporation cannot be considered a 10-percent subsidiary of an exempt REIT.ⁿ⁵

The term "nonqualified real property interest" does not include (a) any improvement to land owned or leased by the exempt REIT or any member of the stapled REIT group, and (b) any repair to, or improvement of, any improvement owned or leased by the exempt REIT or a member of the stapled REIT group, if such ownership or leasehold interest is a qualified real property interest.ⁿ⁶ A qualified real property interest is any interest in real property other than a nonqualified property interest. Act, § 7002(b)(6). This rule does not apply to any improvement place in service after December 31, 1999, that is part of a change in use of the property to which the improvement relates unless the cost of the improvement does not exceed 200 percent of the cost of the property, or, if the property is substituted basis property, the fair market value of the property at the time of acquisition.ⁿ⁷ The term "nonqualified real property interest" also does not include (i) any lease of a qualified real property interest, if the lease is not otherwise such an interest, or (ii) any renewal of a lease that is a qualified real property interest, but only if the rent on any such lease or renewal does not exceed an arm's-length rate.ⁿ⁸ Finally, the term does not include any interest in real property acquired solely as a result of a direct or indirect contribution, distribution or other transfer of the interest from the exempt REIT or any member of

the stapled REIT group to the REIT or any member, but only to the extent that the aggregate of the interests of the exempt REIT and all stapled entities in the interest is not increased by reason of the transfer.ⁿ⁹

An exempt REIT or a stapled entity is treated as holding its proportionate share of each interest in real property held by any 10-percent subsidiary of the exempt REIT or stapled entity.ⁿ¹⁰ Generally, this means that any interest in real property held by a 10-percent subsidiary will be treated as a nonqualified real property interest held by the exempt REIT or stapled entity.ⁿ¹¹ However, if the subsidiary was a 10-percent of the exempt REIT or stapled entity on March 26, 1998, and at all times thereafter, an interest held by the subsidiary that would have been treated as a qualified interest if held directly by the exempt REIT will be so treated, but any increase in the ownership interest in the subsidiary after March 26, 1998, will cause the increase in the real property interest held by the exempt REIT or stapled entity to be treated as a nonqualified real property interest.ⁿ¹²

Special rules are provided for Umbrella Partnership Real Estate Investment Trusts (UPREIT's). If, as of March 26, 1998, (i) an exempt REIT or stapled entity held directly or indirectly at least 60 percent of the capital or profits interest in a partnership, and (ii) 90 percent or more of the profits interests in the partnership (other than interests held by the exempt REIT or stapled entity) are, or will be, redeemable or exchangeable for consideration determined by reference to shares in the exempt REIT or stapled entity (or both), 100 percent of the real property interests, mortgages, activities, and gross income of the partnership will be treated as interests, activities, and gross income of the exempt REIT or stapled entity that owns the partnership interest.ⁿ¹³ The provision also applies to an interest in a partnership formed after March 26, 1998, if the partnership was formed to mirror the stapling of an exempt REIT and a stapled entity in connection with an acquisition agreed to or announced on or before March 26, 1998.ⁿ¹⁴

Special rules apply where a member of a stapled REIT group holds a nonqualified obligation that is secured by an interest in real property, where either the exempt REIT or a stapled entity engages in certain activities with respect to the property. In such case, the REIT gross income provisions are applied by treating the exempt REIT as having impermissible tenant service income equal to the sum of the interest income from the nonqualified obligation and all gross income received by a member of the REIT group from the activity.ⁿ¹⁵ Thus, the income will not qualify under the 75- and 95-percent gross income tests, so that REIT status might be lost.

A nonqualified obligation is defined as any obligation secured by an interest in real property if the income of any member of the stapled REIT group for services furnished with respect to the property would be impermissible tenant service income were the property held, and the services furnished by, the exempt REIT.ⁿ¹⁶ An exception is provided for any obligation with interest that does not exceed an arm's-length rate, provided the interest payments would be treated as interest under the REIT rules.ⁿ¹⁷ A further exception applies to mortgages held by a member of the stapled REIT group on March 26, 1998, and the interest payable on the obligation is not changed to a rate that exceeds an arm's-length rate unless the change is pursuant to the terms of the obligation in effect on March 26, 1998.ⁿ¹⁸ The exception for existing mortgages ceases to apply if the mortgage is refinanced and the principal amount of the mortgage is increased.

FOOTNOTES:

(n1)Footnote 1. Deficit Reduction Act of 1984, § 136(c)(3). In a stapled REIT structure, both the shares of a REIT and a C corporation may be traded, but are subject to a provision that they cannot be sold separately. *IRC § 269B(c)(2), (3).*

(n2)Footnote 2. IRS Restructuring and Reform Act of 1998 ("Act"), § 7002(a), (b)(1). Real property interests held by an exempt REIT or stapled entity will not be treated as nonqualified real property interests if the REIT was a real estate investment trust as of March 26, 1998, and at all times thereafter, and the stapled entity was a stapled entity with respect to the REIT on that date and at all times thereafter. Act, § 7002(b)(5).

(n3)Footnote 3. Act, § 7002(e)(3).

(n4)Footnote 4. Act, § 7002(e)(4)(A). A 10-percent interest means (i) in the case of an interest in a corporation, ownership of 10 percent (by vote or value) of the stock of the corporation, (ii) in the case of an interest in a partnership, ownership of 10 percent of the capital or profits in the partnership, and (iii) in any other case, ownership of 10 percent of the beneficial interest in the entity. Act, § 7002(e)(4)(C).

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.01

§ 13A.01 Introduction

The Tax Reform Act of 1986 added rules governing a new form of entity known as a real estate mortgage investment conduit (REMIC). A REMIC is formed for the purpose of holding a fixed pool of mortgages secured by interests in real property. As a general rule, the REMIC is not treated as a separate taxable entity. Rather, the income of the REMIC is allocated to, and taken into account by, the holders of interests therein.ⁿ¹

An entity that issues multiple class real estate mortgage-backed securities, but does not qualify as a REMIC, is treated as a taxable mortgage pool (TMP), and taxed accordingly.ⁿ²

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.02

§ 13A.02 Real Estate Mortgage Investment Conduit Defined

[1] In General.

A REMIC is defined in *Internal Revenue Code Section 860D(a)* as an entity

- (1) that has made an election to be treated as a REMIC under *Internal Revenue Code Section 860D(b)* that is effective for the taxable year and all prior taxable years;
- (2) that uses the calendar year as its taxable year;
- (3) in which all of the interests are either "regular interests" or "residual interests;"
- (4) that has only one class of residual interests, and all distributions to such interests (if any) are made on a *pro rata* basis;
- (5) that has made reasonable arrangements designed to ensure that none of its residual interests are held by "disqualified organizations" (as defined in *Internal Revenue Code Section 860E(5)*); and
- (6) substantially all the assets of which, from the close of the 3rd month beginning after its "startup day," and at all times thereafter, consist of "qualified mortgages" and "permitted investments."

The first two requirements are discussed in this section 13A.02[1]. Requirements (3) through (5), relating to investor interests, are discussed in the following section 13A.02[2]. Finally, the sixth requirement, the asset test, is discussed in *section 13A.02[3]*.

A REMIC may be a corporation, a partnership, or any other form of entity. A REMIC may also be a segregated pool of assets within an entity.ⁿ¹ Formation of a REMIC as a segregated pool of assets requires that the sponsor first identify the assets constituting the REMIC, (for example, through the execution of an indenture with respect to the assets), and then issue regular and residual interests in the REMIC.ⁿ² A sponsor is a person who directly or indirectly exchanges qualified mortgages and related assets for regular and residual interests in a REMIC.ⁿ³

The election to be a REMIC is made by timely filing, for the first taxable year of its existence, Form 1066, U.S. Real Estate Mortgage Investment Conduit Income Tax Return.ⁿ⁴ The REMIC's first taxable year begins on its "startup day" and, since a REMIC must use the calendar year as its taxable year, ends on the following December 31.ⁿ⁵ Once made, the election is irrevocable for that taxable year and all succeeding taxable years.ⁿ⁶

The term "startup day" means the day on which the REMIC issues all of its regular and residual interests. A sponsor may, however, contribute property to a REMIC in exchange for regular and residual interests over any period of 10 consecutive days, and the REMIC may designate any one of those days as its startup day. The day so designated is the startup day, and all interests are treated as issued on that day.ⁿ⁷

[2] Interests in a REMIC.

A REMIC must have one or more classes of "regular" interests and a single class of "residual" interests.

A "regular" interest in a REMIC must (1) be issued on the startup day with fixed terms; (2) be designated as a regular interest; (3) unconditionally entitle the holder to receive a specified principal amount or other similar amount, and (4) provide that interest or similar payments, if any, are payable at or before maturity, and are based on either (a) a fixed rate of interest (or, to the extent allowed in the Regulations, a variable rate of interest,) or (b) consist of a specified portion of the interest payments on the REMIC's qualified mortgages which does not vary during the period that the interest is outstanding.ⁿ⁸

A regular interest will be considered to have fixed terms on the startup day if the REMIC's organizational documents irrevocably specify on that date (i) the principal amount (or other similar amount) of the regular interest, (ii) the interest rate or rates used to compute any interest payments on the regular interest, and (iii) the latest possible maturity date of the interest.ⁿ⁹

An interest will be deemed to be designated as a regular interest if it is so identified on the REMIC's timely filed first tax return along with the terms and conditions of the interest and other information required by the Regulations.ⁿ¹⁰

Although a regular interest may be issued in the form of debt, stock, an interest in a partnership or trust, or any other form permitted by state law, it must in all events entitle the holder to a specified amount that would, were the regular interest issued in debt form, be identified as the principal amount of the debt.ⁿ¹¹ Moreover, regardless of the form in which it is issued, a regular interest is treated as debt for all Federal income tax purposes.ⁿ¹²

Although the statute provides that a regular interest must "unconditionally" entitle the holder to receive a specified principal amount or similar amount, the Regulations allow some flexibility.ⁿ¹³ The following types of contingencies may be provided for without disqualifying an interest as a regular interest.ⁿ¹⁴

(i) A contingency which affects the timing (but not the right to or amount of) principal payments depending on the extent of prepayments on some or all of the REMIC's qualified mortgages, or the amount of income earned on the REMIC's permitted investments, or the payment of expenses incurred by the REMIC.ⁿ¹⁵

(ii) A contingency which affects the amount or timing of payments of principal or interest on account of defaults on qualified mortgages and permitted investments, unanticipated expenses incurred by the REMIC, or lower than expected returns on permitted investments.

(iii) A contingency which requires a particular interest to bear, before other regular interests or the residual interest, losses resulting from cash flow shortfalls that are due to defaults or delinquencies on qualified mortgages or permitted investments, unanticipated expenses incurred by the REMIC, lower

than expected returns on permitted investments, or prepayment interest shortfalls.

(iv) A contingency which by the terms of the regular interest results in the deferral of interest payments.

(v) A contingency in which the amount of interest payments is affected by prepayments of the underlying mortgages.

(vi) Any contingency affecting the amount or timing of payments of principal or interest if there is only a remote likelihood that the contingency will occur. The Regulations give as an example a provision that makes full payment of principal and interest on an interest contingent upon the absence of significant cash flow shortfalls due to the operation of the Soldiers and Sailors Civil Relief Act, 50 U.S.C. *app.* 526 (1988) (period of military service may not be included computing any limitations period or any period provided by law for the redemption of real property sold or forfeited to enforce an obligation).

The statute itself provides for an additional contingency--an interest will not be disqualified as a regular interest solely because the specified principal amount (or accrued interest) may be reduced as a result of the nonoccurrence of one or more contingent payments with respect to any reverse mortgage loan held by the REMIC, provided that on the startup day the sponsor reasonably believes that all principal and interest due under the regular interest will be paid at or prior to the liquidation of the REMIC.ⁿ¹⁶ The Joint Committee on Taxation's explanation of this provision states that for this purpose a "reverse mortgage loan" is one that (1) is secured by an interest in real property; (2) provides for one or more advances of principal to the obligor (each such advance giving rise to a "balance increase"), provided such advances are principally secured by an interest in the same real property as that which secures the loan; (3) may provide for a contingent payment at maturity based upon the value or appreciation in value of the real property securing the loan; (4) provides for an amount due at maturity that cannot exceed the value, or a specified fraction of the value, of the real property securing the loan; (5) provides that all payments under the loan are due only upon the maturity of the loan; and (6) matures after a fixed term or at the time the obligor ceases to use as a personal residence the real property securing the loan.ⁿ¹⁷

A call premium entitling the holder of an interest to an additional payment contingent on the period of time the interest has been outstanding will disqualify that interest as a regular interest.ⁿ¹⁸ In addition, an interest in a REMIC may not qualify as a regular interest if the amount of interest (or other similar amount) payable to the holder is disproportionately high relative to the principal amount of the interest.ⁿ¹⁹ Interest payments are considered disproportionately high by the Regulations if the issue price of the interest exceeds 125 percent of the principal amount.ⁿ²⁰

The Regulations provide that it is permissible for a regular interest in a REMIC to provide for interest payments based on a variable interest rate provided the rate is either a "qualified floating rate" set at a "current value" (as those terms are defined for purposes of *Internal Revenue Code Section 1275*), or a "weighted average rate."ⁿ²¹ A qualified floating rate is one in which "variations in the value of the rate can reasonably be expected to measure contemporaneous variations in the cost of newly borrowed funds..."ⁿ²² and the rate is set at a "current value" as long as the rate on any day is set at a value "no earlier than 3 months prior to the first day on which that value is in effect and no later than 1 year following that first day."ⁿ²³ A weighted average rate is a rate based on a weighted average of the interest rates on some or all of the qualified mortgages held by the REMIC, provided that the qualified mortgages taken into account all bear interest either at a fixed rate or at a variable rate as defined above.ⁿ²⁴ The Regulations also permit a "variable interest rate" to be based on any of several specified variations on a qualified floating or weighted average interest rate.ⁿ²⁵

Finally, interest payments may be based on a combination of fixed, variable, or fixed and variable rates. For example, different fixed rates may be applied in different accrual or payment periods, or a fixed rate may be applied in some periods and a variable rate in others, or different variable rates may be applied in different periods.ⁿ²⁶

In addition to being determined by a fixed rate or a permissible variable rate of interest, interest payments to the holder of a regular interest may be based on a specified portion of the interest payments made on the REMIC's qualified mortgages. In that case, two requirements must be satisfied.

First, the specified portion payable to the interest holder can be expressed as (A) a fixed percentage of the interest that is payable at either a fixed or permissible variable rate on some or all of the REMIC's qualified mortgages, or (B) a fixed number of basis points of the interest payable on some or all of the REMIC's qualified mortgages, or (C) the interest payable at a fixed or permissible variable rate on some or all of the REMIC's qualified mortgages in excess of a fixed number of basis points or in excess of a permissible variable rate.ⁿ²⁷

Second, the portion payable to the interest holder is established as of the startup day and cannot vary over the period that begins on the startup day and ends on the day the holder of the regular interest is no longer entitled to receive payments; provided that a portion will not be treated as varying over time solely because an interest holder's entitlement is dependent on the absence of defaults or delinquencies on the REMIC's qualified mortgages.ⁿ²⁸

Example:

A sponsor transferred a pool of fixed rate mortgages to a REMIC in exchange for two classes of certificates. The fixed interest rate payable on the mortgages varies from mortgage to mortgage, but all rates are between 8 and 10 percent. Class A certificate holders are entitled to receive all principal payments on the mortgages and interest on outstanding principal at 7 percent. Class B certificate holders are entitled to receive all interest on the mortgages in excess of the interest paid to the Class A certificates. The Class B certificates are subordinate to the Class A certificates, so that cash flow shortfalls due to defaults or delinquencies on the mortgages will be borne first by the Class B certificate holders. Interest paid to the holders of the Class B certificates qualifies as a "specified portion of the interest payments on qualified mortgages" because, although the portion of the interest payable varies from mortgage to mortgage, the interest payable can be expressed as a fixed percentage of the interest payable on each particular mortgage. Moreover, the portion of the interest payable to the Class B certificate holders is not treated as varying over time solely because payments on the Class B certificates may be reduced as a result of defaults or delinquencies on the mortgages.ⁿ²⁹

A residual interest in a REMIC is defined simply as an interest in a REMIC which is issued on the startup day, which is not a regular interest, and which is designated as a residual interest.ⁿ³⁰ As with regular interests, a REMIC designates its residual interests by identifying them as such in the tax return for its first taxable year along with their terms and conditions and other information required by the Regulations.ⁿ³¹

There are only three definitional requirements that apply specifically to residual interests. First, there may be only one class of residual interests.ⁿ³² Second, all distributions made with respect to residual interests must be pro rata; however, a residual interest need not entitle the holder to any distributions from the REMIC.ⁿ³³ Third, the REMIC must make reasonable arrangements (a) to ensure that its residual interests are not held by "disqualified organizations" listed in *Internal Revenue Code Section 860E(e)(5)* (chiefly, governmental agencies and tax-exempt organizations not subject to the unrelated business income tax), and (b) to provide the IRS and persons subject to the transfer tax imposed by Section 860E(e)(3) with information needed to compute that tax.ⁿ³⁴ The REMIC will be deemed to have made reasonable arrangements to ensure that its residual interests are not held by disqualified organization if: (1) the residual interest is in registered form,ⁿ³⁵ and (2) the REMIC's organizational documents clearly and expressly prohibit a disqualified organization from acquiring beneficial ownership of a residual interest, and notice of the prohibition is provided through a legend on the document that evidences ownership of the residual interest or through a conspicuous statement in a prospectus or private offering document used to offer the residual interest for sale.ⁿ³⁶ The REMIC will

be deemed to have made reasonable arrangements to ensure that the information necessary to compute the Section 860E(e)(3) tax is made available if its organizational documents require it to provide the Internal Revenue Service and persons liable for the Section 860E(e)(3) tax a computation showing the present value of the total "anticipated excess inclusions" with respect to the transferred residual interest for periods after the transfer.

A REMIC may only have regular and residual interests. The Regulations make clear that certain rights are not interests in a REMIC and therefore are not inconsistent with this requirement. The non-exclusive list includes:

- (i) Payments for services. The right to receive payments that represent reasonable compensation for services provided to the REMIC in the ordinary course of its operation is not an interest in the REMIC even if the payments are based on a specified percentage of interest payments due on qualified mortgages or as a specified percentage of earnings from permitted investments.ⁿ³⁷
- (ii) Stripped interests. Stripped bonds or stripped coupons not held by the REMIC are not interests in the REMIC even if they and the REMIC's qualified mortgages were created from the same mortgage obligation. Further, if an obligation with a fixed principal amount provides for interest at a fixed or variable rate and for certain contingent payment rights (e.g., a shared appreciation provision or a percentage of mortgagor profits provision), and the owner of the obligation contributes the fixed payment rights to a REMIC and retains the contingent payment rights, the retained contingent payment rights are not an interest in the REMIC.ⁿ³⁸
- (iii) Reimbursement rights under credit enhancement contracts.ⁿ³⁹ A credit enhancer's right to be reimbursed for amounts advanced to a REMIC pursuant to the terms of a credit enhancement contract is not an interest in the REMIC even if the credit enhancer is entitled to receive interest on the amounts advanced.ⁿ⁴⁰
- (iv) Rights to acquire mortgages. The right to acquire or the obligation to purchase mortgages and other assets from a REMIC pursuant to a clean-up call,ⁿ⁴¹ or a qualified liquidation,ⁿ⁴² or on conversion of a convertible mortgageⁿ⁴³ (as defined in *Treasury Regulation Section 1.860G-2(d)(5)*), is not an interest in the REMIC.ⁿ⁴⁴

In addition, the Regulations disregard any "de minimis" interests in a REMIC, defined as an interest created on the startup day to facilitate the creation of the REMIC, which has a fair market value of less than the lesser of \$1,000 or 1/1,000 of one percent of the aggregate fair market value of all the regular and residual interests in the REMIC, and which is not specifically designated as an interest in the REMIC.ⁿ⁴⁵

[3] The Asset Test.

Substantially all the assets of a REMIC must consist of either "qualified mortgages" or "permitted investments." This test must be met at the close of the third month ending after the REMIC's startup day (the day on which the REMIC issues or is deemed to have issued all of its regular and residual interests)ⁿ⁴⁶ and at all times thereafter. If the REMIC owns assets that are not qualified mortgages or permitted investments, and the aggregate of the adjusted bases of those assets is less than one percent of the aggregate of the adjusted bases of all of the REMIC's assets, those assets will be regarded as "de minimis" and will not prevent the REMIC from satisfying the "substantially all" requirement.ⁿ⁴⁷

[a] Qualified Mortgages.

In general, a "qualified mortgage" is any obligationⁿ⁴⁸ that is principally secured by an interest in real property, provided that the obligation is transferred to the REMIC on the startup day (with two exceptions, noted below) in exchange for regular or residual interests.ⁿ⁴⁹ The term qualified mortgage is also defined to include a "qualified

replacement mortgage," which is an obligation that would have been a qualified mortgage had it been transferred to the REMIC in exchange for a regular or residual interest in the REMIC on the startup day, and is in fact received by the REMIC either (1) in exchange for another obligation within the 3-month period beginning on the startup day, or (2) in exchange for a "defective obligation." within the 2-year period beginning on the startup day.ⁿ⁵⁰ A defective obligation is an obligation with one or more of the following defects:

- (i) The mortgage is in default, or a default with respect to the mortgage is reasonably foreseeable.
- (ii) The mortgage was fraudulently procured by the mortgagor.
- (iii) The mortgage was not in fact principally secured by an interest in real property.
- (iv) The mortgage does not conform to a customary representation or warranty given by the sponsor or prior owner of the mortgage regarding the characteristics of the mortgage, or the characteristics of the pool of mortgages of which the mortgage is a part.ⁿ⁵¹

Finally, a qualified mortgage is defined to include any regular interest in another REMIC, if the REMIC holding such interest acquired it on its startup day in exchange for its own regular or residual interests.ⁿ⁵²

The Regulations provide that for purposes of the requirement that qualified mortgage (other than a regular interest in a REMIC) be principally secured by an interest in real property, the terms "interests in real property" and "real property" have the same meanings in the REMIC provisions that they have in the real estate investment trust (REIT) provisions.ⁿ⁵³ Examples of obligations that are principally secured by an interest in real property include: "mortgages, deeds of trust, and installment land contracts; mortgage pass-thru certificates guaranteed by GNMA, FNMA, FHLMC, or CMHC (Canada Mortgage and Housing Corporation); other investment trust interests that represent undivided beneficial ownership in a pool of obligations principally secured by interests in real property and related assets that would be considered to be permitted investments if the investment trust were a REMIC, and provided the investment trust is classified as a trust [for tax purposes];ⁿ⁵⁴ and obligations secured by manufactured housing treated as single family residences under [the Internal Revenue Code]ⁿ⁵⁵ (without regard to the treatment of the obligations or the properties under state law)."ⁿ⁵⁶ However, obligations (other than regular interests in a REMIC) secured by other obligations are not principally secured by interests in real property even if the underlying obligations are secured by interests in real property, and therefore cannot be qualified mortgages.ⁿ⁵⁷

An obligation is considered "principally secured" by an interest in real property, and therefore to meet the primary qualification for being a "qualified mortgage," only if it meets either the "80-percent test" or an "alternative test."ⁿ⁵⁸ The 80 percent test is met if the fair market value of real property securing the obligation was at least equal to 80 percent of the adjusted issue price of the obligation at the time the obligation originated or at the time the obligation was contributed to the REMIC by its sponsor.ⁿ⁵⁹ The alternative test is met if substantially all of the proceeds of the obligation were used to acquire or improve or protect an interest in real property and, at the origination date, such interest was the only security for the obligation.ⁿ⁶⁰ Under a safe harbor established by the Regulations, an obligation will be deemed to be "principally secured" by an interest in real property if, at the time the sponsor contributed the obligation to the REMIC, the sponsor reasonably believed that the obligation met either the 80 percent test or the alternative test.ⁿ⁶¹ If the REMIC later discovers that the obligation did not in fact meet one or the other of those tests, the obligation becomes a defective obligation and may lose its status as a qualified mortgage.ⁿ⁶²

The status of an obligation as a qualified mortgage may be lost if a "significant modification" is made with respect to the obligation. Adopting the "deemed exchange" approach to significant modifications in a debt instrument taken in the regulations under Code Section 1001,ⁿ⁶³ the REMIC Regulations treat any significant modification to an obligation as an exchange of obligations--the old unmodified obligation for the new modified obligation.ⁿ⁶⁴ As the Regulations point out, this can have two important consequences to the REMIC. First, if the significant modification occurs before the

obligation is transferred to the REMIC, the 80 percent and alternative tests must be applied to the obligation as though it originated not on the date the obligation first came into existence but on the date it was significantly modified.ⁿ⁶⁵ Second, and of potentially greater importance, if a significant modification is made after the obligation is transferred to the REMIC, and the post-modification obligation is not a qualified replacement mortgage,ⁿ⁶⁶ the modified obligation will not be a qualified mortgage (since it will not have been transferred to the REMIC on its startup day in exchange for regular or residual interests) and the disposition of the pre-modification obligation in the deemed exchange will be a prohibited transaction under *Internal Revenue Code Section 860F(a)(2)*.ⁿ⁶⁷

The Regulations ameliorate the potentially draconian consequences of modifying a qualified mortgage by providing that certain common modifications will not be considered significant for purposes of the REMIC rules even if they would be considered significant under the standards of the Section 1001 Regulations.ⁿ⁶⁸ The following changes in the terms of an obligation will not be considered significant and therefore will not trigger the consequences described above on the occurrence of a "deemed exchange."ⁿ⁶⁹

- (i) Changes in the terms of the obligation occasioned by default or a reasonably foreseeable default;
- (ii) Assumption of the obligation;ⁿ⁷⁰
- (iii) Waiver of a due-on-sale clause or a due-on-encumbrance clause;
- (iv) Conversion of an interest rate by a mortgagor pursuant to the terms of a convertible mortgage;
- (v) A modification that releases, substitutes, adds, or otherwise alters a substantial amount of the collateral for, a guarantee on, or other form of credit enhancement for, a recourse or nonrecourse obligation, so long as the obligation continues to be principally secured by an interest in real property following the release, substitution, addition, or other alteration as determined under *Treasury Regulation Section 1.860G-2(b)(7)(ii)* or *(iii)*, discussed below; and
- (vi) A change in the nature of the obligation from recourse (or substantially all recourse) to nonrecourse (or substantially all nonrecourse), or from nonrecourse (or substantially all nonrecourse) to recourse (or substantially all recourse), so long as the obligation continues to be principally secured by an interest in real property following such a change, also as determined under *Treasury Regulation Section 1.860G-2(b)(7)(ii)* or *(iii)*.ⁿ⁷¹

If a modification alters the security for an obligation as described in (v) above, or changes the recourse or nonrecourse nature of an obligation as described in (vi) above, the obligation must satisfy one of two tests to show that it continues to be principally secured by an interest in real property. Under *Treasury Regulation Section 1.860G-2(b)(7)(ii)*, the fair market value of the interest in real property securing the modified obligation must be at least 80 percent of the adjusted issue price of the modified obligation, both determined as of the modification date. This 80 percent test will be considered satisfied if the servicer reasonably believes it to be satisfied.ⁿ⁷² If this test is not satisfied, the obligation will still be considered principally secured by an interest in real property under *Treasury Regulation Section 1.860G-2(b)(7)(iii)* if the fair market value of the interest in property that secures the obligation immediately after the modification equals or exceeds the fair market value of the interest in real property that secured the obligation immediately before the modification.ⁿ⁷³

The release by a REMIC of a lien on an interest in real property securing a qualified mortgage may also cause the obligation to lose its qualified mortgage status.ⁿ⁷⁴ However, the Regulations provide two ways the REMIC can avoid this result.

First, obligation will retain its qualified mortgage status if the REMIC releases its lien in a

modification that (A) either is not a significant modification under Code Section 1001 and the regulations thereunder or is not considered a significant modification for purposes of the REMIC provisions pursuant to the exceptions listed in *Treasury Regulation Section 1.860G-2(b)(3)*, and (B) following the modification the obligation is considered principally secured by an interest in real property as redefined in *Treasury Regulation Section 1.860G-2(b)(7)(ii)* or (iii) above.

Second, the obligation will retain its qualified mortgage status if (A) the mortgagor pledges substitute collateral that consists solely of government securities; (B) the mortgage documents allow such a substitution; (C) the lien is released to facilitate the disposition of the property or any other customary commercial transaction, and not as part of an arrangement to collateralize a REMIC offering with obligations that are not real estate mortgages; and (D) the release is not made within 2 years of the startup day.ⁿ⁷⁵

Finally, an obligation may lose its qualified mortgage status if the REMIC discovers that it is a defective obligation, and the defect, had it been discovered before the startup day, would have prevented the obligation from being a qualified mortgage. The Regulations give the REMIC 90 days from the date of discovery to either cause the defect to be cured or to dispose of the defective obligation within the 90 day period.ⁿ⁷⁶ If the REMIC does neither, the defective obligation will cease to be a qualified mortgage at the end of the 90 day period.ⁿ⁷⁷

The Regulations treat certain contractual rights associated with qualified mortgages as part of the qualified mortgages to which they relate for purposes of the asset test, and not as separate disqualifying assets.ⁿ⁷⁸ The rights so treated are those held by the REMIC in connection with credit enhancement contracts, purchase agreements with respect to convertible mortgages, and agreements to make up prepayment interest shortfalls.

Credit enhancement contracts are defined as any arrangement whereby a person agrees to guarantee full or partial payment of the principal or interest payable on a qualified mortgage or on a pool of such mortgages, or full or partial payment on one or more classes of regular interests or on the single class of residual interests, in the event of defaults or delinquencies on qualified mortgages, unanticipated losses or expenses incurred by the REMIC, or lower than expected returns on cash flow investments.ⁿ⁷⁹ In addition, any collateral supporting a credit enhancement contract is not treated as a separate asset of the REMIC solely because it supports the guarantee represented by that contract.ⁿ⁸⁰

A purchase agreement is a contract between the holder of a convertible mortgage and a third party under which the holder agrees to sell and the third party agrees to buy the mortgage for an amount equal to its current principal balance plus accrued but unpaid interest if and when the mortgagor elects to convert the terms of the mortgage.ⁿ⁸¹ Under a convertible mortgage, as defined in the Regulations, the obligor has the right at one or more times during the term of the mortgage to elect to convert from one interest rate to another, provided the new rate is determined pursuant to the terms of the instrument and intended to approximate a market rate of interest for newly originated mortgages at the time of the conversion.ⁿ⁸²

The Regulations define a prepayment interest shortfall, with respect to any mortgage that prepays, as an amount which, for the accrual period in which the mortgage prepays, equals the excess of the interest that would have accrued on the mortgage during that accrual period had it not prepaid, over the interest that did accrue from the beginning of that accrual period up to the date of the prepayment.ⁿ⁸³ The agreement by a mortgage servicer or other third party to make payments to the REMIC to make up such prepayment interest shortfalls is not treated as a separate asset of the REMIC.ⁿ⁸⁴

[b] Permitted Investments.

"Permitted investments" fall into three separate categories: (1) "cash flow investments;" (2) "qualified reserve assets;" and (3) "foreclosure properties."ⁿ⁸⁵

A "cash flow investment" means any investment of payments received under qualified mortgages for a temporary period before distribution to holders of interests in the REMIC.ⁿ⁸⁶ The temporary period over which cash flow investments may be held may not exceed 13 months.ⁿ⁸⁷ If the investment is held as part of a commingled fund or account, the REMIC may employ any reasonable method of accounting for purposes of determining the period over which the amount received under qualified mortgages has been held in the account. For example, the first-in, first-out method of accounting is a reasonable method for determining whether all or part of the account satisfies the 13 month limitation.ⁿ⁸⁸

Payments received under qualified mortgages include--

- (A) Payments of interest and principal on qualified mortgages, including prepayments of principal and payments under credit enhancement contracts;ⁿ⁸⁹
- (B) Proceeds from the disposition of qualified mortgages;
- (C) Cash flows from foreclosure property and proceeds from the disposition of such property;
- (D) A payment by a sponsor or prior owner in lieu of the sponsor's or prior owner's repurchase of a defective obligation that was transferred to the REMIC in breach of a customary warranty; and
- (E) Prepayment penalties required to be paid under the terms of a qualified mortgage when the mortgagor prepays the obligation.ⁿ⁹⁰

A "qualified reserve asset" is any intangible asset held for investment as part of a "qualified reserve fund,"ⁿ⁹¹ defined in turn as a reasonably required reserve to (1) provide for the full payment of expenses of the REMIC, or amounts due on regular interests, in the event of defaults on qualified mortgages or lower than expected returns on cash flow investments,ⁿ⁹² or (2) provide a source of funds for the purchase of qualified mortgages that may be purchased by a REMIC after the startup day as provided in *Internal Revenue Code Section 860G(a)(3)(A)(ii)* and *(iii)*.ⁿ⁹³ The aggregate fair market value of the assets held in a qualified reserve fund may not exceed 50 percent of the fair market value of all the assets in the REMIC on the startup day, and the reserve must be promptly and appropriately reduced when the amount held in the reserve is no longer reasonably required for the purposes for which a qualified reserve fund may be held.ⁿ⁹⁴ The Regulations create a presumption that the amount of a reserve is reasonable (and an excessive reserve is presumed to have been promptly and appropriately reduced) if it does not exceed either (1) the amount required by a nationally recognized independent rating agency as a condition of providing the rating for REMIC interests desired by the sponsor, or (2) the amount required by a third party insurer or guarantor as a condition of providing credit enhancement, provided such insurer or guarantor does not own, directly or indirectly (within the meaning of *Internal Revenue Code Section 267(c)*) an interest in the REMIC.ⁿ⁹⁵

In contrast to a qualified reserve fund, an "outside reserve fund" maintained to pay expenses of a REMIC or make payments to REMIC interest holders is not a permitted investment and indeed is not treated as an asset of the REMIC at all. In order to qualify as an outside reserve fund, the REMIC's organizational documents must clearly and expressly provide that the reserve fund is an outside reserve fund and not an asset of the REMIC, identify the owner(s) of the reserve fund, either by name or by description of the class (such as subordinated regular interest holders) whose membership comprises the owners of the fund, and provide that, for Federal tax purposes, amounts transferred by the REMIC to the fund are treated as amounts distributed by the REMIC to the designated owner(s) or transferees of the designated owner(s).ⁿ⁹⁶

A "foreclosure property," the final category of permitted investments, is a property that would be considered foreclosure property in the hands of a REIT,ⁿ⁹⁷ and which is acquired in connection with the default or imminent default of a

qualified mortgage held by the REMIC.ⁿ⁹⁸

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.860D-1(c)(1)*.

(n2)Footnote 2. *Treas Reg § 1.860D-1(c)(2)*.

(n3)Footnote 3. *Treas Reg § 1.860F-2(b)(1)*.

(n4)Footnote 4. *Treas Reg § 1.860D-1(d)(1)(i)*. (n5)Footnote 5. Thus, unless the REMIC's "startup day" is January 1, its first year will be a short taxable year. See *Treas Reg § 1.860D-1(b)(6)*.

(n6)Footnote 6. *Treas Reg § 1.860D-1(d)*.

(n7)Footnote 7. *Treas Reg § 1.860G-2(k)*.

(n8)Footnote 8. *IRC § 860G(a)(1)*.

(n9)Footnote 9. *Treas Reg § 1.860G-1(a)(4)*.

(n10)Footnote 10. *Treas Reg § 1.860G-1(a)(1)*; see also *Treas Reg §§ 1.860D-1(d)(2); § 13A.02[1], n 3, supra* .

(n11)Footnote 11. *Treas Reg § 1.860G-1(b)(4)*.

(n12)Footnote 12. *Treas Reg § 1.860G-1(b)(6)*. Thus, a regular interest is subject to *IRC §§ 1271 through 1288*, relating to bonds and other debt instruments, including *IRC § 1272(a)(6)*, which relates specifically to accrual of original issue discount on regular interests in a REMIC.

(n13)Footnote 13. *IRC § 860G(a)(1)(A)*. See also *Treas Reg § 1.860G-1(a)(5)* which provides, as a general rule, that neither the principal amount nor the latest possible maturity date of the interest may be contingent.

(n14)Footnote 14. *Treas Reg § 1.860G-1(b)(3)*.

(n15)Footnote 15. See also *IRC § 860G(a)(1)*(flush language).

(n16)Footnote 16. *IRC § 1.860G(a)(1)* (flush language). The Joint Committee on Taxation's "Bluebook" on the Jobs Creation Act of 2004, which added this language to *IRC § 860G(a)(1)*, states that the sponsor's belief will be presumed to be reasonable if, as of the startup day, the regular interest receives an investment grade rating from at least one nationally recognized statistical rating agency. See General Explanation of Tax Legislation Enacted in the 108th Congress (Jt Comm on Taxation May, 2005) (hereafter "Bluebook") at p 396.

(n17)Footnote 17. Bluebook, p. 397. At the same time Congress modified the definition of a regular interest to accommodate reverse mortgage loans, it also modified the definition of qualified mortgage to include reverse mortgage loans in that category. See *IRC § 860G(a)(3)(A)(iii)*; § 13A.02[3][a], note 49. See also *IRC § 860G(a)(7)(B)(ii)*, also modified by the Jobs Creation Act of 2004, which provides that a REMIC may hold as a permitted investment a reserve

to fund balance increases to reverse mortgage loans.

(n18)Footnote 18. *Treas Reg § 1.860G-1(b)(1)*. However, an interest in a REMIC will not fail to qualify as a regular interest solely because the REMIC's organization documents provide that the REMIC must allocate among and pay to its regular interest holders any customary prepayment penalties that the REMIC receives with respect to its qualified mortgages. *Treas Reg § 1.860G-1(b)(2)*.

(n19)Footnote 19. *Treas Reg § 1.860G-1(b)(5)(i)*. If the holder of the regular interest is entitled to interest payments consisting of a specified portion of interest payments on the REMIC's qualified mortgages, as opposed to interest payments computed at a fixed or variable (or combination of the two) interest rate on the interest's principal amount, however, it does not matter whether the interest payments are disproportionately high relative to the specified principal amount. *Treas Reg § 1.860G-1(b)(5)(ii)*.

(n20)Footnote 20. The issue price of an interest in a REMIC is determined under *IRC § 1273(b)* as if the interest were a debt instrument and, if the interest is issued for property, as though the requirements of *IRC § 1273(b)(3)* were met (thus making the fair market value of the property the issue price). *IRC § 860G(a)(10)*; *Treas Reg § 1.860G-1(d)*. Thus, if a class of interests is publicly offered, the issue price of an interest in that class is the initial offering price to the public at which a substantial amount of the class is sold. If initial offering price to the public at which a substantial amount of the class is sold. If the interest is in a class that is not publicly offered, the issue price is the price paid by the first buyer of that interest regardless of the price paid for the remainder of the class. If the interest is in a class that is retained by the sponsor, the issue price is the interest's fair market value on the "pricing date" (as defined in *Treas Reg § 1.860F-2(b)(3)(iii)* (date on which the terms of the REMIC's regular and residual interests, and the prices at which its regular interests will be sold, are fixed), if any, or, if none, the startup day, regardless of whether property exchanged for the interest is publicly traded.

(n21)Footnote 21. *Treas Reg § 1.860G-1(a)(3)*.

(n22)Footnote 22. *Treas Reg § 1.1275-5(b)(1)*; *Treas Reg § 1.860G-1(a)(3)(i)*.

(n23)Footnote 23. *Treas Reg § 1.1275-5(a)(4)*; *Treas Reg § 1.860G-1(a)(3)(i)*.

(n24)Footnote 24. *Treas Reg § 1.860G-1(a)(3)(ii)(A)*. In computing the weighted average rate, the REMIC may make the interest rate on some or all of the qualified mortgages subject to a cap or floor, or reduce the interest rate on one or more qualified mortgages by a number of basis points or a fixed percentage, or calculate a weighted average rate that is net of any servicing spread, credit enhancement fees, or other expenses of the REMIC. *Treas Reg § 1.860G-1(a)(3)(ii)(B)*.

(n25)Footnote 25. A qualified floating rate or weighted average rate may be manipulated by multiplying such a rate by a fixed multiplier, increasing or decreasing the rate by a constant number of basis points, or both. *Treas Reg § 1.860G-1(a)(3)(iii)*. It may also be subject to a cap (ceiling) or floor establishing a maximum or minimum interest rate or the maximum or minimum number of basis points by which the rate may increase or decrease from one accrual or payment period to another, or over the entire term of the interest. *Treas Reg § 1.860G-1(a)(3)(iv)*. The Regulations also permit the use of "funds-available caps," defined as a limit on the total amount of interest payable in any accrual or payment period based on the total amount available for distribution, including both principal and interest received by the REMIC on some or all of its qualified mortgages as well as amounts held in a reserve fund. *Treas Reg § 1.860G-1(a)(3)(v)(A)*. An allowable "funds-available cap" does not include a cap used as a "device to avoid the standards" imposed by the Regulations on variable interest rates employed in regular interests, however. Whether a cap works as such a device is question to be determined by a "facts and circumstances test," including (1) whether the rate of the interest payable to the e regular interest holders is below the rate payable on the REMIC's qualified mortgages on the startup day, and (2) whether, historically, the rate of interest payable to the regular interest holders has been consistently below that payable on the qualified mortgages. *Treas Reg § 1.860G-1(a)(3)(v)(B)*.

The Regulations provide an example in which a REMIC, holding qualified mortgages that are commercial mortgages on which interest payments are based on the gross profits of the mortgagors, issues regular interests with a variable rate set at 400 percent of the one-year LIBOR rate, subject to a cap equal to current funds available for distribution. It is given that, initially, 400 percent of the LIBOR rate exceeds the weighted average rate payable on the mortgages, and that historical data suggest a significant possibility that this will continue to be the case in the future. The Regulations conclude that the cap in these circumstances is being used as a device to pass through to the holders of the regular interests contingent interest based on mortgagor profits. Consequently, the rate paid on such interests is not considered an acceptable "variable rate." *Treas Reg § 1.860G-1(a)(3)(ii)(C)* (Ex 2).

(n26)Footnote 26. *Treas Reg § 1.860G-1(a)(3)(vi)*. Of course, each variable rate used must be permissible under *Treas Reg § 1.860G-1(a)(3)*.

(n27)Footnote 27. *Treas Reg § 1.860G-1(a)(2)(i)*.

(n28)Footnote 28. *Treas Reg §§ 1.860G-1(a)(2)(ii) and (iii)*.

(n29)Footnote 29. See *Treas Reg § 1.860G-1(a)(2)(vi)*(Examples 1 and 3).

(n32)Footnote 32. *IRC § 860D(a)(3)*; *Treas Reg § 1.860G-1(c)*.

(n33)Footnote 33. *Id.*

(n34)Footnote 34. *IRC § 860D(a)(6)*; *Treas Reg § 1.860D-1(b)(4)*. *IRC § 860E(e)(3)* imposes a tax on a transferor that transfers a residual interest in a REMIC to a disqualified organization. See § 13A.05[3] below.

(n35)Footnote 35. See *Treas Reg § 5f.103-1(c)*.

(n36)Footnote 36. *Treas Reg § 1.860D-1(b)(5)(i)*.

(n37)Footnote 37. *Treas Reg § 1.860D-1(b)(2)(i)*.

(n38)Footnote 38. *Treas Reg § 1.860D-1(b)(2)(ii)*.

(n39)Footnote 39. A credit enhancement contract is a guarantee of payment of the REMIC's qualified mortgages or of interests in the REMIC. See *Treas Reg § 1.860G-2(c)(2)* and § 13A.02[3] below.

(n40)Footnote 40. *Treas Reg § 1.860D-1(b)(2)(iii)*.

(n41)Footnote 41. A "clean-up call" is the redemption of a class of regular interests when, by reason of prior payments with respect to those interests, the administrative costs associated with servicing that class outweigh the benefits of maintaining the class. *Treas Reg § 1.860G-2(j)(1)*.

(n42)Footnote 42. A "qualified liquidation" is defined in *IRC § 860F(a)(4)* as the liquidation of a REMIC pursuant to a plan of liquidation in which all the REMIC's assets are sold and the proceeds used to pay claims or distributed within a 90-day period.

(n43)Footnote 43. A convertible mortgage is one which gives the obligor the right to convert from one interest rate to another. *Treas Reg § 1.860G-2(d)(5)*.

(n44)Footnote 44. *Treas Reg § 1.860D-1(b)(2)(iv)*.

(n45)Footnote 45. *Treas Reg § 1.860D-1(b)(1)(ii)*.

(n46)Footnote 46. See § 13A.02[1], *supra*.

(n47)Footnote 47. *Treas Reg § 1.860D-1(b)(3)(ii)*. Since the "less than one percent" test is only a safe harbor, a REMIC that does not meet the safe harbor test is not precluded from demonstrating in some other way that it meets the "substantially all" test. *Id.* See also § 13A.02[3][a] below, discussing certain contractual and other rights of a REMIC that are not considered separate "other assets" for purposes of the asset test.

(n48)Footnote 48. For purposes of the asset test, an obligation may provide for contingent payments as long as it also provides for total noncontingent payments at least equal to the obligation's issue price. Thus, an instrument issued for \$100x that provides for noncontingent principal payments of \$100x, interest payments at a fixed rate, and contingent payments based on a percentage of the mortgagor's gross receipts, is considered an obligation for purposes of the asset test. *Treas Reg § 1.860G-2(a)(7)*.

(n49)Footnote 49. *IRC § 860G(a)(3)(A)*. A qualified mortgage need not be transferred to the REMIC on the startup day if (1) it is purchased by the REMIC pursuant to a fixed-price contract in effect on the startup day within the 3-month period beginning with the startup day, or (2) to the extent it represents an increase in the principal amount of an obligation described in (i) or (ii) above which (I) is attributable to an advance made to the obligor pursuant to the original terms of a reverse mortgage loan or other obligation, (II) occurs after the startup day, and (III) is purchased by the REMIC pursuant to a fixed price contract in effect on the startup day.

(n50)Footnote 50. *IRC § 860G(a)(3)(B)*.

(n51)Footnote 51. *Treas Reg § 1.860G-2(f)(1)*. Note that a defective obligation may still be a qualified mortgage. For example, if a sponsor represented that all mortgages transferred to a REMIC had a 10 percent interest rate but it was later discovered that one mortgage had a 9 percent interest rate, the 9 percent mortgage would be a defective obligation but the defect would not affect the status of that obligation as a qualified mortgage.

(n52)Footnote 52. *IRC § 860G(a)(3)(C)*.

(n53)Footnote 53. See *Treas Reg § 1.860G-2(a)(4)*, incorporating the definitions of "interest in real property" and "real property" found at *Treas Reg §§ 1.856-3(c)* and *(d)*, respectively. See also Chapter 13, § 13.02[2][b], n.11.

(n54)Footnote 54. See *Treas Reg § 301.7701-4(c)*.

(n55)Footnote 55. See *IRC § 25(e)(10)*.

(n56)Footnote 56. *Treas Reg § 1.860G-2(a)(5)*. In addition, an obligation secured by stock held by a person as a tenant-stockholder (as defined in *IRC § 216*) in a cooperative housing association is designated as an interest in real property. *IRC § 860G(a)(3)* (flush language). In addition, if a REMIC acquires obligations originated by the United States or any State (including a political subdivision, agency or instrumentality of the United States or any State), and more than 50 percent of such obligations are principally secured by an interest in real property, then all such obligations are to be treated as principally secured by an interest in real property. *IRC § 860G(a)(3)* (flush language). A stripped bond or stripped coupon (within the meaning of *IRC §§ 1286(e)(2)* and *(3)*) qualifies as an obligation that is principally secured by an interest in real property if the bonds (as defined in *IRC § 1286(e)(1)*) from which such stripped bonds or stripped coupons arose so qualifies. *Treas Reg § 1.860G-2(a)(9)*. See also Chapter 17, § 17.02[4][c].

(n57)Footnote 57. *Treas Reg § 1.860G-2(a)(6)*. Thus, a collateralized mortgage obligation issued by an issuer that is not a REMIC is not an obligation principally secured by an interest in real property. In addition, a residual interest in

a REMIC (as defined in *IRC § 860G(a)(2)*) is not considered an obligation principally secured by an interest in real property. *Id.*

(n58)Footnote 58. *Treas Reg § 1.860G-2(a)(1).*

(n59)Footnote 59. *Treas Reg § 1.860G-2(a)(1)(i).* The fair market value of the real property securing the obligation must be reduced by the amounts of any liens on the property that are senior to or in parity with the real property interest being tested. *Treas Reg § 1.860G-2(a)(2).*

(n60)Footnote 60. *Treas Reg § 1.860G-2(a)(1)(ii).* For purposes of the alternative test, loan guarantees made by the United States or any state (or any political subdivision, agency, or instrumentality thereof) are not treated as additional security for the obligation. In addition, the fact that the borrower is personally liable on the obligation does not mean that the obligation is secured by property other than real property.

(n61)Footnote 61. *Treas Reg § 1.860G-2(a)(3)(i).* A sponsor may base a reasonable belief on representations and warranties made by the originator of the obligation, or on evidence that the originator typically made mortgage loans in accordance with an established set of parameters, and that any mortgage loan originated in accordance with those parameters would have satisfied either the 80 percent or alternative tests. *Treas Reg § 1.860G-2(a)(3)(ii).*

(n62)Footnote 62. *Treas Reg § 1.860G-2(a)(3)(iii).*

(n63)Footnote 63. See *Treas Reg § 1.1001-3(b)*; Chapter 1, § 1.02[3][a][ii].

(n64)Footnote 64. *Treas Reg § 1.860G-2(b)(1).* Except as noted below, the term "significant modification" has the same meaning in the REMIC Regulations as it has for purposes of *IRC § 1001* and the regulations thereunder. *Treas Reg § 1.860G-2(b)(2).*

(n65)Footnote 65. *Treas Reg § 1.860G-2(b)(1)(ii).*

(n66)Footnote 66. See n 45, *supra*. Unless the obligation is modified within 3 months of the startup day, it will not be a qualified replacement mortgage unless, before modification, it was a defective obligation.

(n67)Footnote 67. See § 13A.04[1] below for a discussion of the tax on prohibited transactions of a REMIC.

(n68)Footnote 68. See *Treas Reg § 1.860G-2(b)(3)*. T.D. 9463, 2009-40 IRB 442, adopted final regulations, effective on and after September 16, 2009, expanding the list of permitted exceptions to the "significant modification" rule as explained hereafter to include modifications that are often made to commercial mortgages, including changes in collateral, guarantees and credit enhancement of an obligation, and changes to the recourse nature of an obligation.

(n69)Footnote 69. See *Treas Reg § 1.860G-2(b)(4).*

(n70)Footnote 70. An obligation is considered assumed for this purpose in any of the following circumstances: (i) The buyer of the mortgaged property acquires the property subject to the mortgage, without assuming any personal liability; (ii) The buyer becomes liable for the debt but the seller also remains liable; or (iii) The buyer becomes liable for the debt and the seller is released by the lender. *Treas Reg § 1.860G-2(b)(5).*

(n71)Footnote 71. *Treas Reg § 1.860G-2(b)(3).*

(n72)Footnote 72. The servicer must base the reasonable belief on (i) a current appraisal performed by an independent appraiser, (ii) an appraisal obtained in connection with the origination of the obligation, updated where appropriate for the passage of time and other changes that may have affected the value of the property, (iii) the sales price of the interest in the case of a substantially contemporaneous sale in which the buyer assumed the seller's obligations under the mortgage, or (iv) some other commercially reasonable valuation method. Moreover, the servicer must not

actually know or have reason to know that this 80 percent test has not been satisfied. *Treas Reg § 1.860G-2(b)(7)(ii)*.

(n73)Footnote 73. Fair market value in both cases must be established by a current appraisal, an original (and updated) appraisal, or some other commercially reasonable method, and the servicer must not actually know or have reason to know that this criterion has not been satisfied. *Treas Reg § 1.860G-2(b)(7)(iii)*. The alternative test is consistent with the fact that if an obligation meets the "principally secured" test and otherwise meets the requirements for a "qualified mortgage" on the startup day, it does not lose that status solely because the collateral thereafter declines in value.

(n74)Footnote 74. *Treas Reg § 1.860G-2(a)(8)*.

(n75)Footnote 75. *Id.*

(n76)Footnote 76. See *Treas Reg § 1.860G-2(f)(2)*.

(n77)Footnote 77. *Id.* However, the REMIC may exchange the defective obligation for a qualified replacement mortgage even after the 90 day "cure or sell" period, provided the exchange is made within a two year period following the startup day as prescribed in *IRC § 860G(a)(4)(B)*.

(n78)Footnote 78. See *Treas Reg §§ 1.860G-2(c), (d) and (e)*.

(n79)Footnote 79. *Treas Reg § 1.860G-2(c)(2)*. A credit enhancement contract includes arrangements to make advances to a REMIC to cover delinquent payments on qualified mortgages, to pay taxes, insurance payments, or other expenses with respect to real property securing the REMIC's qualified mortgages if the mortgagor fails to do so, or to level out the stream of cash flows to the REMIC or provide for the orderly administration of the REMIC. *Treas Reg §§ 1.860G-2(c)(3)(i), (ii) and (iii)*. The person agreeing to make such advances may be the REMIC sponsor, a mortgage servicer, or other third party, and may be either required or permitted by the contract to make such advances. *Treas Reg §§ 1.860G-2(c)(2) and (3)*.

(n80)Footnote 80. *Treas Reg §§ 1.860G-2(c)(1)*.

(n81)Footnote 81. *Treas Reg § 1.860G-2(d)(3)*.

(n82)Footnote 82. *Treas Reg § 1.860G-2(d)(4)*.

(n83)Footnote 83. *Treas Reg § 1.860G-2(e)*.

(n84)Footnote 84. *Id.*

(n85)Footnote 85. *IRC § 860G(a)(5)*.

(n86)Footnote 86. *IRC § 860G(a)(6)*. The Regulations add that the investments must be passive investments earning a return in the nature of interest, and that distributions to holders of interests in the REMIC must be made on "regularly scheduled date[s]." *Treas Reg § 1.860G-2(g)(1)(i)*.

(n87)Footnote 87. *Treas Reg § 1.860G-2(g)(1)(iii)*.

(n88)Footnote 88. *Id.*

(n89)Footnote 89. The Regulations provide that a guarantee arrangement does not fail to qualify as a credit enhancement contract solely because the guarantor, in the event of a default on a qualified mortgage, has the option of immediately paying to the REMIC the full amount of mortgage principal due on acceleration of the defaulted mortgage, or paying principal and interest to the REMIC according to the original payment schedule for the defaulted mortgage, or

according to some other deferred payment schedule. In the event that the guarantor elects to make deferred payments, such payments will be treated as received under a qualified mortgage even if the mortgage is foreclosed upon and the guarantor, pursuant to subrogation rights set out in the guarantee arrangement, is entitled to receive immediately the proceeds of foreclosure.

(n90)Footnote 90. *Treas Reg § 1.860G-2(g)(1)(ii)*.

(n91)Footnote 91. *IRC § 860G(a)(7)(A)*. An asset need not generate any income to be a qualified reserve asset. *Treas Reg § 1.860G-2(g)(3)(i)*.

(n92)Footnote 92. *IRC § 860G(a)(7)(B)(i)*. The Regulations expand the purposes for which a qualified reserve fund may be used to include providing for prepayment interest shortfalls (as defined in *Treas Reg § 1.860G-2(e)* and *§ 13A.02[3][a]* above) or any contingency that could be provided for under a credit enhancement contract (as defined in *Treas Reg §§ 1.860G-2(c)(2)* and *(3)* and *§ 13A.02[3][a]* above).

(n93)Footnote 93. *IRC § 860G(a)(7)(B)(ii)*. A qualified mortgage may be purchased after the startup day under *IRC § 860G(a)(3)(A)(ii)* if an obligation, principally secured by an interest in real property, is purchased within 3 months after the startup day pursuant to a fixed price contract in effect on the startup day. A qualified mortgage may also be acquired after the startup day if it is attributable to an advance made to an obligor under a reverse mortgage loan or similar obligation previously acquired by the REMIC as a qualified mortgage.

(n94)Footnote 94. *IRC § 860G(a)(7)(B)* (flush language). In determining whether the amount of a reserve is reasonable, it is appropriate to consider the credit quality of the qualified mortgages, the extent and nature of any guarantees relating to either the qualified mortgages or the regular and residual interests, the expected amount of expenses of the REMIC, and the expected availability of proceeds from qualified mortgages to pay the expenses. *Treas Reg § 1.860G-2(g)(3)(ii)(A)*.

(n95)Footnote 95. *Treas Reg § 1.860G(g)(3)(ii)(B)*. The Regulations dilute the effect of the presumption, however, by providing that it may be rebutted if the reserve amounts required by the rating agency or third party guarantor or insurer are not "commercially reasonable" in light of the factors described in *Treas Reg § 1.860G(g)(3)(ii)(A)* (n. 89 above). *Treas Reg § 1.860G(g)(3)(ii)(C)*.

(n96)Footnote 96. *Treas Reg § 1.860G(h)*.

(n97)Footnote 97. See *IRC § 856(e)*. In general, foreclosure property in the case of a REIT is defined as real property acquired as a result of having bid in such property at foreclosure or having otherwise reduced such property to ownership or possession by agreement or process of law after a default on an indebtedness which such property secured. The requirement in *IRC § 856(e)(5)* that the REIT make an election to have otherwise eligible property treated as foreclosure property is not applicable to a REIT. *IRC § 860G(a)(8)(A)*.

(n98)Footnote 98. *IRC § 860G(a)(8)*. See also *§ 13A.04[3]* below (tax imposed by *IRC § 860G(c)* on REMIC's income from foreclosure property).

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.03

§ 13A.03 Transfers of Property to a Real Estate Mortgage Investment Conduit

[1] Treatment of Transferors.

No gain or loss is recognized to the transferor on the transfer of property to a REMIC in exchange for regular or residual interests in the REMIC.ⁿ¹ Upon such a transfer, the adjusted bases of the interests received in the transaction are equal in the aggregate to the adjusted basis of the property transferred, with the aggregate allocated among the regular and residual interests received in proportion to their fair market values.ⁿ² If the issue price of any interest received in the transaction exceeds its adjusted basis in the hands of the transferor immediately after the transfer, such excess is includable currently in the gross income of the holder under rules similar to those governing market discount bonds, if the interest is a regular interest, or ratably over the anticipated period during which the REMIC will be in existence, if it is a residual interest.ⁿ³ If the basis of the interest exceeds its issue price, the excess, in the case of a regular interest, is treated as amortizable bond premium, and, in the case of a residual interest, is deductible ratably over the anticipated period during which the REMIC will be in existence.ⁿ⁴

[2] Basis to the Real Estate Mortgage Investment Conduit.

The basis of any property received by a REMIC in exchange for an interest in the REMIC is its fair market value immediately after the transfer.ⁿ¹

FOOTNOTES:

(n1)Footnote 1. *IRC § 860F(b)(1)(A)*.

(n2)Footnote 2. *IRC § 860F(b)(1)(B)*. The aggregate adjusted basis is increased by the amount of any organizational expenses incurred by the sponsor in the transaction. *Ltr Rul 9141002* .

(n3)Footnote 3. *IRC § 860F(b)(1)(C)*. The treatment of market discount bonds is the subject of *§ 17.02[4][e]*, *infra* .

The issue price of any interest in a REMIC is determined under *IRC § 1273(b)* in the same manner as if the interest were a debt instrument, except that if the interest is issued for property, *IRC § 1273(b)(3)* applies in all events. *IRC § 860G(a)(10)*. The rules of *IRC § 1273(b)* are discussed in *§ 17.02[4][c]*, *infra*.

(n4)Footnote 4. *IRC § 860F(b)(1)(D)*. See § 17.02[5], *infra*, for a discussion of amortization of bond premium.

(n5)Footnote 1. *IRC § 860F(b)(2)*.

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.04

§ 13A.04 Taxation of Real Estate Mortgage Investment Conduits

IRC Section 860A sets forth the general rule that a REMIC is not subject to taxation. Although the REMIC is a pass-through entity with its income taxable to the holders of interests therein, it is not to be treated as a corporation, partnership, or trust for income tax purposes.ⁿ¹

[1] Tax on Prohibited Transactions.

Under *IRC Section 860F(a)(1)*, a REMIC is required to pay a tax equal to 100 percent of its net income from prohibited transactions. The net income derived from prohibited transactions is the excess of the gross income therefrom over the allowable deductions that are directly connected with such transactions, except that no item attributable to a prohibited transaction for which there was a loss is taken into account.ⁿ²

For this purpose, a prohibited transaction is defined as (1) the disposition of any qualified mortgage transferred to the REMIC other than (a) the substitution of a qualified replacement mortgage for a qualified mortgage (or the repurchase in lieu of substitution of a defective obligation), (b) a disposition incident to the foreclosure, default, or imminent default of the mortgage, (c) the bankruptcy or insolvency of the real estate mortgage pool, or (d) a qualified liquidation (a sale of all of the noncash assets of the REMIC pursuant to a plan of complete liquidation within a period beginning on the date of adoption of the plan and ending at the close of the 90th day thereafter, followed by a distribution of the proceeds thereof, less cash retained to meet claims, to the holders of interests in the REMIC within the same time periodⁿ³); (2) the receipt of income from any asset that is not a qualified mortgage or permitted investment; (3) the receipt by the real estate mortgage pool of any compensation for services; and (4) gain from the disposition of any cash flow investment other than pursuant to a qualified liquidation.ⁿ⁴

[2] Distributions of Property.

Gain is recognized to a REMIC on the distribution of property with respect to any regular or residual interest, as if the REMIC had sold the property to the distributee at its fair market value.ⁿ¹ The distributee's basis in the property is its fair market value.ⁿ²

[3] Tax on Income from Foreclosure Property.

IRC Section 860G(c) subjects a REMIC to tax at the highest corporate rate on its net income from foreclosure property,

that is, on the amount that would be the REMIC's net income from foreclosure property under *IRC Section 857(b)(4)(B)* if the REMIC were a REIT.

[4] Tax on Contributions After Startup Date.

A tax equal to 100 percent of any amount contributed to a REMIC after the startup day is imposed by *IRC Section 860G(d)*. The tax does not apply to any contribution that is made in cash and is (a) a contribution to facilitate a clean-up call or a qualified liquidation, (b) a payment in the nature of a guarantee, (c) a contribution during the three-month period beginning on the startup day, (d) a contribution to a qualified reserve fund by any holder of a residual interest in the REMIC, or (e) any other contribution permitted by the regulations. The tax is also inapplicable to a REMIC with a startup day before July 1, 1987.

FOOTNOTES:

(n1)Footnote 1. The REMIC is treated as a partnership for procedure and administration purposes (Subtitle F of the Code). *IRC § 860F(e)*. Any return required because of this must include the amount of daily accruals determined under *IRC § 860E(c)* and be signed by the REMIC.

The Treasury is authorized to prescribe regulations that will require a REMIC to withhold on amounts paid to nonresident aliens and foreign corporations. HR Rep No 841, 99th Cong., 2d Sess. II-229, II-230 (1986).

(n2)Footnote 2. *IRC § 860F(a)(3)*.

(n3)Footnote 3. *IRC § 860F(a)(4)*.

(n4)Footnote 4. *IRC § 860F(a)(2)*. A disposition required to prevent a threatened default on a regular interest resulting from a default on one or more qualified mortgages or to facilitate a clean-up call is not a prohibited transaction. *IRC § 860F(a)(5)*.

A borrower seeking to refinance a mortgage with a new lender on terms substantially different from the old loan asked the company acting as the master servicer for a REMIC to assign the old loan to the new lender. Such an assignment, coupled with a modification of the old loan and its consolidation with the new one, is customary in New York State in order to avoid the mortgage recording tax imposed by New York on new loans. The old mortgagee is paid only the amount of the outstanding principal and interest on the old loan. The Service has held that the transaction does not constitute a disposition of the old loan, but rather is a payment of the mortgage by the borrower. *Ltr Rul 9414014*. Congress did not intend the payment by an obligor on a debt instrument to be a disposition for purposes of the prohibited transaction provisions. Conf Rep No 841, 99th Cong, 2d Sess II-229, at II-231, note 11 (1986).

(n5)Footnote 1. *IRC § 860F(c)(1)*.

(n6)Footnote 2. *IRC § 860F(c)(2)*.

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.05

§ 13A.05 Taxation of Investors' Interests

[1] Taxation of Holders of Regular Interests.

Holders of regular interests in a REMIC are taxed as if the interest were a debt instrument.ⁿ¹ In the case of regular interests that are not debt instruments, the amount of the fixed unconditional payment is treated as the stated principal amount of the instrument, and the periodic payments (the amounts that are basis on the fixed unconditional payment) are treated as stated interest payments.ⁿ²

According to the legislative history, regular interests are to be treated as if they were debt instruments for all purposes of the Code.ⁿ³ For example, regular interests will be treated as market discount bonds when the revised issue price of the regular interest exceeds the holder's basis in the interest,ⁿ⁴ while the REMIC will be subject to the reporting requirements of *IRC Section 1275* with respect to the regular interests. In addition, regular interests, are to be treated as evidences of indebtedness under *IRC Section 582(c)(1)*, so that gain or loss from the sale or exchange of such interests by certain financial institutions is not capital gain or loss.

In determining the amount of income to be reported, the holder of a regular interest is required to account for the income attributable to the interest on the accrual method, regardless of the method of accounting otherwise used by the holder.ⁿ⁵ Thus, holders of regular interests generally take into account that portion of the REMIC's income that would be taken into account by an accrual basis taxpayer holding a debt instrument with terms equivalent to the terms of the regular interest. In the event that the amount so determined exceeds the income of the REMIC, there is no diminution of the required inclusion for such holders.ⁿ⁶

The amount of taxable original issue discount that the holder of a regular interest is required to include in income for an accrual period is based on the increase in the present value of the remaining payments on the debt instrument, taking into account payments includable in the instrument's stated redemption price at maturity received on the regular interest during the period.ⁿ⁷ The present value calculation is made at the beginning of each accrual period (1) using the yield to maturity of the instrument at the time of its issuance (determined on the basis of compounding at the close of each accrual period and properly adjusted for the length of the accrual period), calculated on the assumption that certain prepayment assumptions, specified in the regulations, will occur, and (2) taking into account any prepayments that have occurred before the end of the accrual period.ⁿ⁸

Gain or loss on the disposition of a regular interest is treated as ordinary income to the extent of any unaccrued original issue discount. This amount is equal to the excess (if any) of (a) the amount that would have been includable in gross income of the taxpayer with respect to the interest if the yield thereon were 110 percent of the applicable federal rate (determined under *IRC Section 1274(d)*)ⁿ⁹ as of the beginning of the taxpayer's holding period, over (b) the amount actually includable in gross income with respect to the interest by the taxpayer.ⁿ¹⁰

[2] Taxation of Holders of Residual Interests.

The holder of a residual interest in a REMIC takes into account his daily portion of the taxable income or net loss of the REMIC for each day during the taxable year on which the holder held the interest.ⁿ¹ The amount so taken into account is treated as ordinary income or loss.ⁿ² The daily portion of income or loss is determined by allocating to each day in any calendar quarter a ratable portion of the taxable income or net loss of the REMIC for such quarter, and by allocating the amounts so allocated among the holders of residual interests in proportion to their respective holdings on such day.ⁿ³

The taxable income of the REMIC for this purpose is determined under the accrual method of accounting and except as provided in regulations, in the same manner as for an individual, except that (1) all regular interests in the REMIC are treated as indebtedness of the REMIC, (2) market discount on any market discount bonds is included in gross income for the taxable years to which it is attributable as determined on the basis of a constant rate of accrual rather than a ratable accrual and without the deferral of net direct business expense allocable to accrued market discount, (3) any item of income, gain, loss, or deduction allocable to a prohibited transaction is not taken into account, and (4) the deduction for (a) depletion with respect to oil and gas wells, (b) personal exemptions, (c) state, local and foreign taxes, (d) charitable contributions, (e) net operating losses, and (f) additional itemized deductions for individuals (other than for expenses incurred in the production of income) are not allowed and (5) the amount of any net income from foreclosure property is reduced by the amount of tax imposed by *IRC Section 860(G)(c)*.ⁿ⁴ The net loss of a REMIC is the excess of the deductions allowed in computing the taxable income of the REMIC (determined with the foregoing modifications) over its gross income.ⁿ⁵

A distribution by a REMIC is not included in the gross income of the holder of a residual interest to the extent it does not exceed the adjusted basis of the interest.ⁿ⁶ If a distribution exceeds such basis, the excess is treated as gain from the sale or exchange of the interest.ⁿ⁷

The basis of a residual interest in a REMIC is increased by the amount of taxable income taken into account by the holder of the interest.ⁿ⁸ It is decreased (but not below zero) by any distributions with respect to the interest and by net losses taken into account by the holder.ⁿ⁹

The extent of the holder's basis is important not only to determine if a distribution will result in gain, but also because the amount of loss that can be taken into account with respect to any holder cannot exceed the adjusted basis of the holder's residual interest as of the close of the calendar quarter (determined without regard to the adjustment to basis for the loss).ⁿ¹⁰ The disallowed loss can be carried forward indefinitely.ⁿ¹¹

Under *IRC Section 860E*, the taxable income of any holder of a residual interest in a REMIC for any taxable year cannot be less than the excess inclusion for the taxable year.ⁿ¹² The excess inclusion is the excess of the amount of the net income of the REMIC that the holder takes into account for any calendar quarter, over the sum of the daily accruals for the residual interest.ⁿ¹³ The daily accrual is determined by allocating to each day in a calendar quarter a ratable portion of the product of the adjusted issue price of the residual interest at the beginning of the accrual period, and 120 percent of the long-term federal rate.ⁿ¹⁴ The adjusted issue price of the residual interest is equal to the initial issue price (an amount equal to the money paid for the interest, or the fair market value of the interest if issued in exchange for property) increased by the amount of daily accruals for prior calendar quarters, and decreased (but not below zero) by the amount of any distributions prior to the end of the calendar quarter.ⁿ¹⁵

IRC Section 860E(a)(3) sets forth rules for coordinating the provisions that govern excess inclusions with the net operating loss provisions of *IRC Section 172*. *IRC Section 860E(a)(3)(A)* provides that any excess inclusion for a taxable year is not taken into account in determining the net operating loss for that year.ⁿ¹⁶ Under *IRC Section 860E(a)(3)(B)*, any excess inclusion for a taxable year is not taken into account in determining taxable income for purposes of a net operating loss that is carried back or carried over.ⁿ¹⁷

If the holder of a residual interest is a nonresident alien or foreign corporation, amounts includable in the gross income of the holder are taken into account, for both inclusion and withholding purposes, only when paid (or when the interest is disposed of).ⁿ¹⁸ The Treasury is given authority to issue regulations that will call for the amounts to be taken into account earlier than payment, where necessary to prevent tax avoidance.ⁿ¹⁹

The wash sale rules of *IRC Section 1091* apply to disallow losses realized on the disposition of a residual interest, where the seller of the interest acquires any residual interest in any REMIC, or any interest in a TMP that is comparable to a residual interest, during the period beginning six months before the disposition of the residual interest and ending six months thereafter.ⁿ²⁰

[3] Tax on Transfers of Residual Interests.

A tax is imposed under *IRC Section 860E(e)(1)* on any transfer of a residual interest in a REMIC to a disqualified organization--the United States, a state or political subdivision thereof, a foreign government, an international organization, a tax-exempt organization (other than a farmers' cooperative) not subject to the tax on unrelated business income, or a cooperative engaged in furnishing electric energy, or providing telephone service, to persons in rural areas.ⁿ¹ The amount of tax is equal to the product of the present value of the total anticipated excess inclusions with respect to the transferred interest after the transfer multiplied by the highest corporate tax rate.ⁿ² Liability for the payment of the tax rests upon the transferor, unless the transfer is through an agent for the disqualified corporation, in which case the tax must be paid by the agent.ⁿ³ The person otherwise liable for the tax is relieved of liability if the transferee furnishes to such person an affidavit that it is not a disqualified organization and, as of the time of the transfer, the person does not have actual knowledge that the affidavit is false.ⁿ⁴ The Service can waive the tax if, within a reasonable time after the transfer, steps are taken to end the interest of the disqualified organization, and there is paid to the Service such amounts as it requires.ⁿ⁵

A pass-through entity (regulated investment company, REIT, common trust fund, partnership, trust, estate, or Subchapter T cooperative) is assessed a similar tax under *IRC Section 860E(e)(6)* if a disqualified organization is a record holder of an interest in the entity at any time during its taxable year.ⁿ⁶ Here, however, the tax is imposed solely on the amount of the excess inclusions for the year allocable to the interest held by the disqualified organization, and is deductible against the amount included in the gross income of the entity with respect to the residual interest involved. Relief from payment of the tax is allowed if the record holder of the interest furnishes the pass-through entity with an affidavit that the holder is not a disqualified organization and that the pass-through entity does not have actual knowledge that the affidavit is false.

A transfer of a noneconomic residual interest is disregarded for all federal tax purposes if a significant purpose of the transfer was to enable the transferor to impede the assessment or collection of tax.ⁿ⁷ A significant purpose to impede assessment or collection exists if, at the time of the transfer, the transferor either knew or should have known (had "improper knowledge") that the transferee would be unwilling or unable to pay taxes due on its share of the taxable income of the REMIC. A transferor is presumed not to have improper knowledge if (1) at the time of transfer, the transferor conducted a reasonable investigation of the financial condition of the transferee and, as a result of the investigation, the transferor found that the transferee had historically paid its debts as they came due and found no significant evidence to indicate that the transferee would not continue to do so; (2) the transferee represents to the transferor that it understands that, as the holder of the noneconomic residual interest, the transferee may incur tax

liabilities in excess of any cash flows generated by the interest and that the transferee intends to pay taxes associated with holding the interest as they become due; (3) the transferee represents that it will not cause income from the noneconomic residual interest to be attributable to a foreign establishment or fixed base (within the meaning of an applicable income tax treaty) of the transferee or another United States taxpayer; and (4) the transfer satisfies a formula test or an asset test.ⁿ⁸ Under the formula test, the present value of the anticipated tax liabilities associated with holding the residual interest cannot exceed the sum of (1) the present value of any consideration given to the transferee to acquire the interest, (2) the present value of the expected future distributions on the interest, and (3) the present value of the anticipated tax savings associated with holding the interest as the REMIC generates losses.ⁿ⁹ For purposes of this test, the transferee is assumed to pay tax at the highest rate imposed on corporations, and present values are computed using a discount rate equal to the federal short-term rate prescribed by *IRC Section 1274(d)(1)* for the month of transfer and the compounding period used by taxpayer.ⁿ¹⁰

Three requirements must be satisfied in order to meet the asset test. First, at the time of the transfer, and at the close of each of the transferee's two fiscal years preceding the transfer, the transferee's gross assets for financial reporting purposes must exceed \$100 million and its net assets for such purposes must exceed \$10 million.ⁿ¹¹ Second, the transferee must be an eligible corporation that makes a written agreement that any subsequent transfer of the interest will be to another eligible corporation that satisfies the reasonable investigation and representation requirements mentioned above.ⁿ¹² Third, the facts and circumstances known to the transferor on or before the date of transfer must not reasonably indicate that the taxes associated with the residual interest will not be paid.ⁿ¹³ In applying the asset test, (1) the gross assets and net assets of a transferee do not include the obligation of any person related to the transferee (as defined in *IRC Section 860L(g)*) or any other asset if a principal purpose for holding or acquiring the asset is to permit the transferee to satisfy the asset test;ⁿ¹⁴ and (2) a transfer is not to an eligible corporation if there is a direct or indirect transfer of a residual interest to a foreign permanent establishment of a domestic corporation or if the transferor knows, or has reason to know, that the transferee will not honor the restrictions on subsequent transfers of the residual interest.ⁿ¹⁵

A residual interest is a noneconomic residual interest unless, at the time of the transfer (a) the present value of the expected future distributions on the residual interest at least equals the product of the present value of the anticipated excess inclusions and the highest corporate tax rate for the year in which the transfer occurs; and (b) the transferor reasonably expects that, for each anticipated excess inclusion, the transferee will receive distributions from the REMIC at or after the time at which the taxes accrue on the anticipated excess inclusion in an amount sufficient to satisfy the accrued taxes.ⁿ¹⁶

A transfer of a residual interest that has tax avoidance potential is disregarded for all federal tax purposes if the transferee is a foreign person.ⁿ¹⁷ A residual interest has tax avoidance potential for this purpose unless, at the time of the transfer, the transferor reasonably expects that, for each excess inclusion, the REMIC will distribute to the transferee an amount that will equal at least 30 percent of the excess inclusion, and that each such amount will be distributed at or after the time at which the excess inclusion accrues and not late than the close of the calendar year following the calendar year of accrual.ⁿ¹⁸

FOOTNOTES:

(n1)Footnote 1. *IRC § 860B(a)*.

(n2)Footnote 2. HR Rep No 841, 99th Cong, 2d Sess II-231 (1986).

(n3)Footnote 3. *Id.*

(n4)Footnote 4. HR Rep No 841, 99th Cong, 2d Sess II-231 (1986).

(n5)Footnote 5. *IRC § 860B(b)*. According to the legislative history, periodic payments of interest (or similar amounts) are to be treated as accruing pro rata between the dates that the payments are to be made. HR Rep No 841,

99th Cong, 2d Sess II-231 (1986).

(n6)Footnote 6. *IRC 860B(b)*. According to the legislative history, periodic payments of interest (or similar amounts) are to be treated as accruing pro rata between the dates that the payments are to be made. HR Rep No 841, 99th Cong, 2d Sess II-231 (1986).

(n7)Footnote 7. *IRC § 1272(a)(6)(A), (C)*.

(n8)Footnote 8. *IRC § 1272(a)(6)(B)*.

(n9)Footnote 9. The determination of the applicable federal rate is made without regard to *IRC § 1274(d)(2)*, which prescribes the lowest three-month rate for sales and exchanges.

(n10)Footnote 10. *IRC § 860B(c)*.

(n11)Footnote 1. *IRC § 860C(a)(1)*. The holder of REMIC residual interests cannot use an inventory method of accounting under *IRC § 471* to account for such interests. *Rev Rul 95-81, 1995-2 CB 70*.

As a general rule, all taxpayers, regardless of their overall method of accounting must recognize an inducement fee (a fee paid to induce a person to become the holder of a noneconomic residual interest in a REMIC) over the remaining expected life of the REMIC in a manner that reasonably reflects the after-tax costs and benefits of holding the noneconomic residual interest. *Treas Reg § 1.446-6(c)*. Certain safe harbors alter the application of this rule. *Treas Reg § 1.446-6(e)*. If any portion of an inducement fee has not been recognized in full by the holder as of the time the holder transfers, or otherwise ceases to be the holder for federal tax purposes of, the residual interest, the holder must include the unrecognized portion of the inducement fee at that time. *Treas Reg § 1.446-6(d)*.

(n12)Footnote 2. *IRC § 860C(e)(1)*.

(n13)Footnote 3. *IRC § 860C(a)(2)*. See *Temp Treas Reg § 1.67-3T(b)* for the treatment of allocable investment expenses of pass-through interest holders, as defined in *Temp Treas Reg § 1.67-3T(a)(2)*.

(n14)Footnote 4. *IRC § 860C(b)(1)*. A REMIC is not subject to the investment interest limitation of *IRC § 163(d)*. *Treas Reg § 1.860C-2(b)(2)*. In addition, *IRC § 265* (disallowing a deduction for expenditures relating to tax-exempt income) is applied as if the REMIC were a financial institution. *Treas Reg § 1.860C-2(b)(5)*. Discussions of the investment interest limitation and expenses relating to tax-exempt income can be found in Ch 19.

(n15)Footnote 5. *IRC § 860C(b)(2)*.

(n16)Footnote 6. *IRC § 860C(c)(1)*.

(n17)Footnote 7. *IRC § 860C(c)(2)*.

(n18)Footnote 8. *IRC § 860C(d)(1)*.

(n19)Footnote 9. *IRC § 860C(d)(2)*.

(n20)Footnote 10. *IRC § 860C(e)(2)(A)*.

(n21)Footnote 11. *IRC § 860C(e)(2)(B)*.

(n22)Footnote 12. *IRC § 860E(a)(1)*. The excess inclusion for a taxable year is not taken into account in determining the amount of any net operating loss for, or the amount of any net operating loss carryback or carryover from, the year.

The alternative minimum taxable income of any holder of a residual interest in a REMIC for any taxable year cannot be less than the excess inclusion for the taxable year. In addition any excess inclusion is disregarded for purposes of computing the alternative tax net operating loss. *IRC § 860E(a)(6)*.

The provision does not apply to financial institutions to which *IRC § 593* applies. *IRC § 860E(a)(2)*. The financial institution and each qualified subsidiary are treated as a single corporation. A qualified subsidiary is one in which all of the stock, and substantially all of the indebtedness, of which is held by the financial institution, and which is organized and operated exclusively in connection with the organization and operation of one or more REMICs. *IRC § 860E(a)(4)*.

All members of an affiliated group filing a consolidated return are treated as one taxpayer for the purposes of *IRC § 860E(a)*, except that the exception for financial institutions is applied separately with respect to each corporation that is a member of the group and to which *IRC § 593* applies.

If the residual interest is held by a tax-exempt interest, the income is treated as unrelated business income. *IRC § 860E(b)*. If the interest is held by a REIT, a portion of the dividends paid by the REIT will be treated as excess inclusions by the REIT shareholders. *IRC § 860E(d)*. Similar rules apply to interests held by RIC's, common trust funds, or Subchapter T cooperatives.

Excess inclusion income allocated to a charitable remainder trust is not unrelated business taxable income to the trust. *Rev Rul 2006-58, 2006-2 CB 876*.

(n23)Footnote 13. *IRC § 860E(c)(1)*.

(n24)Footnote 14. *IRC § 860E(c)(2)(A)*.

(n25)Footnote 15. *IRC § 860E(c)(2)(B)*.

(n26)Footnote 16. If, during the same taxable year, a taxpayer recognizes an excess inclusion and incurs a net operating loss, the excess inclusion cannot be offset by the net operating loss and is not taken into account in determining the amount of the net operation loss that can be carried to another taxable year. *Rev Rul 2005-68, 2005-42 CB 853*.

(n27)Footnote 17. If a net operating loss is carried back or carried over to a taxable year in which an excess inclusion is recognized, the excess inclusion cannot be offset by the carryback or carryover and is not included in the calculation of taxable income for net operating loss absorption purposes. *Id.*

(n28)Footnote 18. *IRC § 860G(b)*. The legislative history indicates that withholding on the disposition of the interest is to be similar to withholding on disposition of debt instruments that have original issue discount. HR Rep No 841, 99th Cong, 2d Sess II-236 (1986).

If a foreign person transfers a residual interest to a US person or a foreign holder in whose hands the income from a residual interest would be effectively connected income, and if the transfer has the effect of allowing the transferor to avoid tax on accrued excess inclusions, the transfer is disregarded and the transferor continues to be treated as the owner of the interest for tax liability and withholding purposes. *Treas Reg § 1.860G-3(a)(4)*.

(n29)Footnote 19. A domestic partnership must separately state its allocable share of REMIC taxable income or loss. If a domestic partnership allocates all or some portion of its allocable share of REMIC taxable income to a foreign partner, the amount allocated to the foreign partner must be taken into account by that partner for purposes of *IRC §§ 871(a), 881, 1441, and 1442* as if the amount were received on the last day of the partnership's taxable year, except to the extent that some or all of the amount is required to be taken into account by the foreign partner at an earlier time as a

result of a distribution by the partnership to the partner, a disposition of the partnership's residual interest in the REMIC, a disposition of the foreign partner's interest in the partnership, or any other reduction in the foreign partner's allocable share of the portion of the REMIC net income or deduction allocated to the partnership. *Temp Treas Reg § 1.860G-3T(b)(1)*.

A foreign person that is a shareholder of a REIT or RIC, a participant in a common trust fund, or a patron of a Subchapter T cooperative to whom excess inclusion income is allocated by any of those entities must account for REMIC excess inclusions on a similarly accelerated basis. *Temp Treas Reg § 1.860G-3T(b)(2)*.

(n30)Footnote 20. *IRC § 860F(d)*.

(n31)Footnote 1. *IRC § 860E(e)(5)*. A charitable remainder trust is a disqualified organization for purposes of *IRC § 860E*. *Rev Rul 2006-58, 2006-2 CB 876*.

(n32)Footnote 2. *IRC § 860E(e)(2)*. The present value of the anticipated excess inclusions is determined by discounting the anticipated excess inclusions from the end of each remaining calendar quarter in which those excess inclusions are expected to accrue to the date the disqualified organization acquires the residual interest. The discount rate for this present value computation is the applicable federal rate specified in *IRC § 1274(d)(1)* that would apply to a debt instrument that was issued on the date the disqualified organization acquired the residual interest and whose term ended on the close of the last quarter in which excess inclusions were expected to accrue with respect to the residual interest. *Treas Reg § 1.860E-2(a)(4)*.

(n33)Footnote 3. *IRC § 860E(e)(3)*.

(n34)Footnote 4. *IRC § 860E(e)(4)*.

(n35)Footnote 5. *IRC § 860E(e)(7)*.

(n36)Footnote 6. A pass-through entity that has excess inclusion income allocable to a charitable remainder trust is subject to tax under *IRC § 860E(e)(6)*. *Rev Rul 2006-58, 2006-2 CB 876*.

(n37)Footnote 7. *Treas Reg § 1.860E-1(c)(1)*.

(n38)Footnote 8. *Treas Reg § 1.860E-1(c)(4)*.

(n39)Footnote 9. *Treas Reg § 1.860E-1(c)(7)*. A direct or indirect transfer of the residual interest to a foreign permanent establishment or fixed base of a domestic transferee is not eligible for the formula test.

(n40)Footnote 10. *Treas Reg § 1.860E-1(c)(8)*. If the transferee has been subject to the alternative minimum tax in the preceding two years and will compute its taxable income in the current year using the alternative minimum tax, the transferee can use the alternative minimum tax rate applicable to corporations.

(n41)Footnote 11. *Treas Reg § 1.860E-1(c)(5)(i)*.

(n42)Footnote 12. *Treas Reg § 1.860E-1(c)(5)(ii)*. An eligible corporation is any domestic C corporation other than a corporation that is exempt from, or not subject to, tax, a RIC or REIT, a REMIC, or a cooperative. *Treas Reg § 1.860E-1(c)(6)(i)*.

(n43)Footnote 13. The consideration given to the transferee to acquire the noneconomic residual interest is only one factor to be considered. However, if the amount of consideration is so low that under any set of reasonable assumptions a reasonable person would conclude that the taxes associated with holding the residual interest will not be paid, then the transferor is deemed to know that the transferee cannot or will not pay. In determining whether the amount is too low, the specific terms of the formula test need not be used.

(n44)Footnote 14. A related person is any person that bears a relationship to the transferee enumerated in *IRC* § 267(b) or *IRC* § 707(b)(1), using 20% instead of 50% where it appears under those provisions. *Treas Reg* § 1.860E-1(c)(6)(ii).

(n45)Footnote 15. *Treas Reg* § 1.860E-1(c)(5)(ii).

(n46)Footnote 16. *Treas Reg* § 1.860E-1(c)(2). The computation of the present values in this situation follows the procedure outlined in N 29, *supra*.

(n47)Footnote 17. *Treas Reg* § 1.860G-3(a)(1). The provision does not apply if the transferee's income is effectively connected with a US trade or business. *Treas Reg* § 1.860G-3(a)(3).

(n48)Footnote 18. *Treas Reg* § 1.860G-3(a)(2)(i). A safe harbor regarding reasonable expectation is contained in *Treas Reg* § 1.860G-3(a)(2)(ii).

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.06

§ 13A.06 Compliance and Reporting Requirements

[1] Information Required to be Furnished to the Internal Revenue Service.

Every REMIC (other than one whose regular interests are all owned by another REMIC) and every issuer of a collateralized debt obligation must file Form 8811 with the Service on or before the 30th day after (1) the startup date in the case of a REMIC, or (2) the issue date in the case of a collateralized debt obligation.ⁿ¹ A new form must be filed on or before the 30th day after any change in the information previously provided. In addition, every REMIC must file an annual tax return on Form 1066.ⁿ²

[2] Information Required to be Furnished to Holders of Interests in the REMIC.

Amounts includable in the gross income of the holder of a regular interest in a REMIC are treated as interest that is paid when it is includable in gross income under *IRC Section 860B(b)* for purposes of the reporting requirements imposed by *IRC Section 6049*.ⁿ¹ The rules normally applicable to the reporting of interest and original issue discount are expanded to require reporting to corporations, registered dealers in commodities and securities, REITs, common trust funds, entities registered under the Investment Company Act of 1940, and certain tax-exempt charitable trusts.ⁿ² In addition to reporting interest and original issue discount, the REMIC is required to report sufficient information to allow holders to compute the accrual of any market discount or amortization of any premium.ⁿ³

A REMIC must report the following information quarterly to each person who held a residual interest in the REMIC during the quarter: (1) the residual holder's share of income or loss of the REMIC for the calendar quarter; (2) the amount of excess inclusion with respect to the holder's residual interest; (3) for the holder of a residual interest that is also a pass-through interest holder, the allocable investment expenses for the quarter;ⁿ⁴ and (4) the percentage of the REMIC's assets that consist of loans that are qualifying real property loans under *IRC Section 593*, assets described in *IRC Section 7701(a)(19)(C)* (describing assets that must be held by domestic savings and loan associations), and real estate assets defined in *IRC Section 856(c)(6)(B)* (real estate assets of an REIT).ⁿ⁵

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.6049-7(b)(1)*. Any REMIC in existence prior to July 1, 1989, was required to file the form by July 31, 1989.

(n2)Footnote 2. *Treas Reg § 1.860F-4(b)*. The due date of the return is determined by treating the REMIC as a

partnership filing on a calendar year basis.

(n3)Footnote 1. *IRC § 6049(d)(7)(A)*. The information must be reported on Form 1099. *Treas Reg § 1.6049-7(b)(2)*.

(n4)Footnote 2. *IRC § 6049(d)(7)(B)*.

(n5)Footnote 3. *IRC § 6049(d)(7)(C)*.

(n6)Footnote 4. A pass-through interest holder is defined as (1) an individual (other than a nonresident alien whose income with respect to the interest in the REMIC is not effectively connected with the conduct of a trade or business in the US), (2) a person, including a trust or estate, that computes its income in the same manner as an individual, or (3) a pass-through entity (such as a partnership or S corporation) if one or more of its partners, shareholders or other interest holders is (i) a pass-through entity, or (ii) a person described in (1) or (2). *Temp Treas Reg § 1.67-3T(a)(2)(i)(A)(1)-(3)*.

(n7)Footnote 5. *Treas Reg § 1.860F-4(e)(1)*. The information is provided on Schedule Q attached to Form 1066.

CHAPTER 13A Real Estate Mortgage Investment Conduits and Taxable Mortgage Pools

2-13A Taxation of Securities Transactions § 13A.07

§ 13A.07 Taxable Mortgage Pools

Congress intends that REMICs are to be the exclusive means of issuing multiple class real estate mortgage-backed securities without the imposition of two levels of taxation.ⁿ¹ To this end, the 1986 legislation provides that a taxable mortgage pool (TMP) is a taxable corporation that is not an includable corporation for purposes of filing consolidated returns.ⁿ²

A TMP is defined as any entity other than a REMIC if (1) substantially all of the assets of the entity consist of debt obligations (or interests in debt obligations) and more than 50 percent of such obligations (or interests) consist of real estate mortgages (asset composition test), (2) the entity is the obligor under debt instruments with two or more maturities, and (3) the terms of the debt instruments on which the entity is the obligor provide for payments that bear a relationship to the debt obligations (or interests) held by the entity.ⁿ³ Whether substantially all of the assets of an entity consist of debt obligations (or interests therein) is based on all the facts and circumstances.ⁿ⁴ However, if less than 80 percent of the assets of an entity consist of debt obligations (or interests therein), then less than substantially all of the assets of the entity consist of debt instruments (or interests therein).ⁿ⁵

The equity interest of an entity in a partnership, S corporation, trust, REIT, or other pass-through arrangement is deemed to have the same composition as the assets of the pass-through arrangement.ⁿ⁶ Thus, if an entity's interest in a REIT has a basis of \$100,000, and the assets of the REIT consist of equal portions of real estate mortgages and other real estate assets, the entity is treated as holding \$50,000 of real estate mortgages and \$50,000 of other real estate assets.

A credit enhancement contract (or any collateral supporting it) is not treated as a separate asset for purposes of the asset composition test, but, rather, is treated as part of the asset to which it relates.ⁿ⁷ A credit enhancement contract is any arrangement whereby a person agrees to guarantee full or partial payment of the principal or interest payable (1) on a debt obligation (or interest therein) or on a pool of such obligations (or interests), or (2) on one or more of the classes of debt obligations under which an entity is the obligor, because of defaults or delinquencies on debt obligations, unanticipated losses or expenses incurred by the entity, or lower than expected returns on investments.ⁿ⁸

Real estate mortgages that are seriously impaired are not treated as debt obligations for purposes of the asset composition test.ⁿ⁹ Whether a mortgage is seriously impaired is based on all the facts and circumstances including, but not limited to: the number of days delinquent, the loan-to-value ratio, the debt service coverage (based on the operating income from the property), and the debtor's financial position and stake in the property. Generally, no single factor is

determinative of whether a loan is seriously impaired, but, unless an entity is receiving or anticipates receiving payments with respect to a mortgage, a single family residential real estate mortgage is seriously impaired if payments on the mortgage are more than 89 days delinquent, while a multi-family or commercial real estate mortgage is seriously impaired if payments on the mortgage are more than 59 days delinquent.ⁿ¹⁰

For purposes of the asset composition test, real estate mortgages (or interests therein) include all: (1) obligations (including participations or certificates of beneficial ownership therein) that are principally secured by an interest in real property; (2) regular or residual interests in a REMIC; and (3) stripped bonds and stripped coupons, if the bonds from which the stripped bonds or stripped coupons arose would have qualified as real estate mortgages or interests therein.ⁿ¹¹ The concept of real property and interests in real property that apply in the case of a REIT apply here as well.ⁿ¹²

An interest is principally secured by an interest in real property if it satisfies one of two tests.ⁿ¹³ Under the first--the 80-percent test, an obligation is principally secured by an interest in real property if the fair market value of the interest in real property securing the obligation was at least 80 percent of the adjusted issue price of the obligation on the issue date of the obligation.ⁿ¹⁴ For purposes of the 80-percent test, the fair market value of the real property interest is first reduced by the amount of any lien on the interest that is senior to the obligation being tested, and is reduced further by a proportionate amount of any lien that is in parity with the obligation being tested.ⁿ¹⁵

Under the second--the alternative test, an obligation is principally secured by an interest in real property if substantially all of the proceeds of the obligation were used to acquire, improve, or protect an interest in real property that, at the issue date, is the only security for the obligation.ⁿ¹⁶ For this purpose, loan guarantees made by federal, state, local governments, or agencies, or other third-party credit enhancement, are not viewed as additional security. An obligation is not considered to be secured by property other than real property solely because the obligor is personally liable on the obligation.

An obligation secured only by real estate mortgages (or interests therein) is treated as an obligation secured by an interest in real property to the extent of the value of the real estate mortgages or interests therein.ⁿ¹⁷ An obligation secured by both real estate mortgages (or interests therein) and other assets is treated as an obligation secured by an interest in real property to the extent of both the value of the real estate mortgages (or interests therein) and the value of so much of the other assets that constitute real property. Thus, a collateralized mortgage obligation may be an obligation principally secured by an interest in real property.

Debt obligations have two or more maturities if they have different stated maturities or if the holders of the obligations possess different rights concerning the acceleration of, or delay in, the maturities of the obligation.ⁿ¹⁸ Debt obligations that are allocated credit risk unequally do not have, for that reason alone, two or more maturities.ⁿ¹⁹

Payments on debt obligations on which an entity is the obligor (liability obligations) bear a relationship to payments on debt obligations an entity holds as assets (asset obligations) if, under the terms of the liability obligations (or underlying arrangement), the timing and amount of payments on the liability obligations are, in large part, determined by the timing and amount of payments (or projected payments) on the asset obligations.ⁿ²⁰ For purposes of the relationship test, any payment arrangement that achieves a substantially similar result is treated as satisfying the test.ⁿ²¹ Payments on liability obligations of an entity do not bear a relationship to payments on asset obligations of the entity if: (1) the entity's organizational documents manifest clearly that the entity is formed for the primary purpose of liquidating its assets and distributing proceeds of liquidation; (2) the entity's activities are all reasonably necessary to and consistent with the accomplishment of liquidating assets; (3) the entity plans to satisfy at least 50 percent of the total issue price of each of its liability obligations having a different maturity with proceeds from liquidation and not with scheduled payments on its asset obligations; and (4) the terms of the entity's liability obligations (or underlying arrangements) provide that, within three years of the time it first acquires assets to be liquidated, the entity either liquidates, or begins to pass through without delay all payments it receives on its asset obligations (less reasonable allowances for expenses)

as principal payments on its liability obligations in proportion to the adjusted issue prices of the liability obligations.ⁿ²²

An entity that otherwise would be treated as a TMP may elect to be a REIT, if it can meet the requirements for such entities.ⁿ²³ If it does, a portion of the income of the REIT will be treated in the same manner as income subject to the special rules governing excess inclusions by holders of a residual interest in a REMIC.ⁿ²⁴ In addition, the dividends paid to the shareholders of the REIT will be subject to the same rules.ⁿ²⁵

A portion of an entity that meets the definition of a TMP can be treated as such.ⁿ²⁶ A portion of an entity includes all assets that support one or more of the same issues of debt obligations.ⁿ²⁷ An asset supports a debt obligation if, under the terms of the debt obligation (or underlying arrangement), the timing and amount of payments on the debt obligation are, in large part, determined, directly or indirectly, by the timing and amount of payments (or projected payments) on the assets or group of assets that includes the asset. A portion does not include assets that are unlikely to produce any significant cash flows for the holders of the debt obligations.ⁿ²⁸

An asset that qualifies as a credit enhancement contract (or an asset that serves the same function as a credit enhancement contract) is not included in a portion as a separate asset.ⁿ²⁹ An asset is not included in a portion solely because the holders of the debt obligations have recourse to the holder of the asset.ⁿ³⁰

A portion of an entity is treated as the obligor of all debt obligations supported by the assets in that portion.ⁿ³¹

FOOTNOTES:

(n1)Footnote 1. HR Rep No 841, 99th Cong, 2d Sess II-239 (1986). The regulations state that the purpose of the TMP provisions is to prevent income generated by a pool of real estate mortgages from escaping federal income taxation when the pool is used to issue multiple class mortgage-backed securities. *Treas Reg § 301.7701(i)-1(a)*.

(n2)Footnote 2. *IRC § 7701(i)(1)*. The TMP provisions apply to entities or portions of entities that qualify for REMIC status but do not elect to be taxed as REMICs, as well as to certain entities or portions of entities that do not qualify for REMIC status. *Treas Reg § 301.7701(i)-1(a)*.

An entity that is classified as a TMP may not elect to be an S corporation or maintain S corporation status. *Treas Reg § 301.7701(i)-4(c)(1)*.

(n3)Footnote 3. *IRC § 7701(i)(2)(A)*. An entity must use the federal income tax basis of an asset in determining whether it meets the asset composition test. *Treas Reg § 301.7701(i)-1(c)(1)*.

An entity is classified as a TMP on the first testing day that it meets the definition of a TMP. Once an entity is so classified, that classification continues through the day the entity retires its last related debt obligation. *Treas Reg § 301.7701(i)-3(c)(1)*. A testing day is any day on or after Sept 6, 1995, on which an entity issues a related debt obligation (an obligation whose payments bear a relationship to payments on debt obligations that the entity holds as assets) that is significant in amount. *Treas Reg § 301.7701(i)-3(b)(3), (c)(2)*.

For purposes of determining whether an entity meets the definition of a TMP, the Commissioner can disregard or make adjustments to a transaction (or series of transactions) if the transaction (or series) is entered into with a view to achieving the same economic effect of an arrangement subject to the provisions of *IRC § 7701(i)* while avoiding the application of that section. *Treas Reg § 301.7701(i)-1(g)(1)*.

An entity cannot be classified as a TMP if (i) the entity is a state, territory, possession of the US, the District of Columbia, or any political subdivision thereof, or is empowered to issue obligations on behalf of one of the foregoing; (2) the entity issues the debt obligations in the performance of a governmental purpose; and (iii) the entity holds the remaining interests in all assets that support those debt obligations until the debt obligations issued by the entity are

retired. *Treas Reg* § 301.7701-4(a)(1).

(n4)Footnote 4. *Treas Reg* § 301.7701(i)-1(c)(2)(i).

(n5)Footnote 5. *Treas Reg* § 301.7701(i)-1(c)(2)(ii).

(n6)Footnote 6. *Treas Reg* § 301.7701(i)-1(c)(3).

(n7)Footnote 7. *Treas Reg* § 301.7701(i)-1(c)(4)(i).

(n8)Footnote 8. *Treas Reg* § 301.7701(i)-1(c)(4)(ii).

(n9)Footnote 9. *Treas Reg* § 301.7701(i)-1(c)(5)(i).

(n10)Footnote 10. *Treas Reg* §§ 301.7701(i)-1(c)(5)(i), 301.7701(i)-1(c)(5)(ii)(A). Whether an entity anticipates receiving payments with respect to a mortgage is based on all the facts and circumstances. *Treas Reg* § 301.7701(i)-1(c)(5)(ii)(A). However, an entity is treated as not having anticipated receiving payments on the mortgage if 180 days after the testing day, and despite making reasonable efforts to resolve the mortgage, the entity is not receiving payments and has not entered into any agreement to receive payment. *Treas Reg* § 301.7701(i)-1(c)(5)(ii)(C).

(n11)Footnote 11. *Treas Reg* § 301.7701(i)-1(d)(1). Stripped bonds and stripped coupons are discussed in § 17.02[4][c].

(n12)Footnote 12. *Treas Reg* § 301.7701(i)-1(d)(2)(i). Manufactured housing is treated as real property provided the properties qualify as single family residences, without regard to the treatment of the properties under state law. *Treas Reg* § 301.7701(i)-1(d)(2)(ii).

(n13)Footnote 13. *Treas Reg* § 301.7701(i)-1(d)(3)(i).

(n14)Footnote 14. *Treas Reg* § 301.7701(i)-1(d)(3)(ii)(A).

(n15)Footnote 15. *Treas Reg* § 301.7701(i)-1(d)(3)(i).

(n16)Footnote 16. *Treas Reg* § 301.7701(i)-1(d)(3)(ii)(B).

(n17)Footnote 17. *Treas Reg* § 301.7701(i)-1(d)(3)(ii)(A). The provisions of the regulation apply only to obligations issued after Dec 31, 1991.

(n18)Footnote 18. *Treas Reg* § 301.7701(i)-1(e)(1).

(n19)Footnote 19. *Treas Reg* § 301.7701(i)-1(e)(2). Credit risk is the risk payments of principal or interest will be reduced or delayed because of a default on an asset that supports the debt obligation.

(n20)Footnote 20. *Treas Reg* § 301.7701(i)-1(f)(1). Payments on asset obligations include: (i) a payment of principal or interest on an asset obligation, including a prepayment of principal under a credit enhancement contract and a payment from a settlement at a discount that is not substantial; (ii) a payment from a settlement at a substantial discount, if the settlement is arranged prior to the issuance of the liability obligations; and (iii) a payment from the foreclosure on, or sale of, an asset obligation, if arranged prior to the issuance of the liability obligations. *Treas Reg* § 301.7701(i)-1(f)(2).

(n21)Footnote 21. *Treas Reg* § 301.7701(i)-1(f). An example of such an arrangement is one where the timing and amount of payments on liability obligations are determined assets (or an index or other type of model) that have an expected payment by reference to a group of experience similar to that of the asset obligations.

(n22)Footnote 22. *Treas Reg § 301.7701(i)-1(f)(3)*.

(n23)Footnote 23. HR Rep No 841, 99th Cong, 2d Sess II-240 (1986).

(n24)Footnote 24. *IRC § 7701(i)(3)*.

(n25)Footnote 25. *IRC § 7701(i)(3)*.

CHAPTER 13B Financial Asset Securitization Investment Trusts

2-13B Taxation of Securities Transactions § 13B.01

§ 13B.01 Introduction

Securitization is the process of converting one type of asset into another and generally involves the use of an entity separate from the underlying assets. In the case of securitization of debt instruments, the instruments created in the securitization generally have different maturities and characteristics than the debt instruments that are securitized. In 1996, Congress created a new type of statutory entity, a financial asset securitization investment trust ("FASIT"), to facilitate the securitization of debt obligations such as credit card receivables, home equity loans, and auto loans.ⁿ¹ A FASIT generally will not be taxable;ⁿ² its taxable income and net loss will flow through to the owner of the FASIT.

FOOTNOTES:

(n1)Footnote 1. The legislation was contained in § 1621 of the Small Business Job Protection Act of 1996. It took effect on Sept 1, 1997. See generally, Nirenberg, Burke & Kopp, "FASITS--The Small Business Act's New Securitization Vehicle," *85 J Tax'n* 278 (1996) .

(n2)Footnote 2. *IRC § 860H(a)* provides that "a FASIT as such shall not be subject to taxation... (and shall not be treated as a trust, partnership, corporation, or taxable mortgage pool)."

CHAPTER 13B Financial Asset Securitization Investment Trusts

2-13B Taxation of Securities Transactions § 13B.02

§ 13B.02 Financial Asset Securitization Investment Trust Defined

A FASIT is any entity (a) for which an election to be treated as a FASIT applies for the taxable year, (b) all of the interests in which are regular interests or the ownership interest, (c) that has only one ownership interest and that interest is held by an eligible corporation (the "owner"), (d) as of the close of the third month beginning after the day of its formation and at all times thereafter, substantially all of the assets of which (including assets treated as held by the entity under *IRC Section 860I(b)(2)*) consist of permitted assets, and (e) that is not a regulated investment company.ⁿ¹ A segregated pool of assets can be a FASIT if the initial assets of the pool are clearly identified, such as through an indenture, and changes in the assets of the pool are clearly identified, such as through instruments of conveyance or release.ⁿ² Notwithstanding the foregoing, a FASIT cannot be an entity created or organized under the law of a foreign country or a possession of the United States, an entity any of the income of which is or ever has been subject to net tax by a foreign country or a possession of the United States, or a segregated pool of assets any of the income of which at any time is subject to net tax by a foreign country or possession of the United States.ⁿ³

Any entity or segregated pool of assets meeting the requirements of the preceding paragraph can elect to be treated as a FASIT.ⁿ⁴ The election applies to the taxable year for which it is made and all subsequent taxable years unless revoked with the consent of the Service.ⁿ⁵ If an entity ceases to be a FASIT at any time during the taxable year, it will not be treated as a FASIT after the date of cessation.ⁿ⁶ Rules similar to the rules of *IRC Section 860D(b)(2)(B)* (governing the inadvertent termination of a REMIC) will apply to inadvertent failures to qualify or remain qualified as a FASIT.ⁿ⁷

[1] Permitted Assets

The permitted assets of a FASIT consist of (1) cash or cash equivalents, (2) any debt instrument (bond, debenture, note, or certificate or other evidence of indebtedness) under which interest payments (or other similar amounts), if any, at or before maturity (a) are payable on a fixed rate (or to the extent provided in regulations, at a variable rate), or (b) consist of a specified portion of the interest payments on qualified mortgages and such portion does not vary during the period the interest is outstanding, or any contract to acquire such a debt instrument, (3) foreclosure property, (4) any asset (a) that is an interest rate or foreign currency notional principal contract, letter of credit, insurance, guarantee against payment defaults, or other similar instrument permitted by the Service, and (b) that is reasonably required to guarantee or hedge against the FASIT's risks associated with being the obligor on interests issued by the FASIT, or any contract to acquire such an asset, (5) any regular interest in another FASIT, and (6) any regular interest in a REMIC.ⁿ¹

A debt instrument is permitted property if it is:

- (i) a fixed rate debt instrument, including a debt instrument having more than one payment schedule for which a single yield can be determined under *Regulations Section 1.1272-1(c)* or (d);
- (ii) a variable rate debt instrument within the meaning of *Regulations Section 1.1275-5*, if the debt instrument provides for interest at a qualified floating rate within the meaning of *Regulations Section 1.1275-5(b)*;
- (iii) a REMIC regular interest;
- (iv) a FASIT regular interest (including a FASIT regular interest issued by another FASIT in which the owner or a related person holds an ownership interest);
- (v) an inflation-indexed debt instrument as defined in *Regulations Section 1.1275-7*;
- (vi) any receivable generated through an extension of credit under a revolving credit account, such as a credit card account;
- (vii) a stripped bond or stripped coupon (as defined in *IRC Section 1286(e)(2)* and (3)), if the debt instrument is created under one of the foregoing categories of debt instruments; and
- (viii) a certificate of trust representing a beneficial interest in a debt instrument described above.ⁿ²

A debt instrument is not a permitted debt instrument if it can be converted into or exchanged for an ownership interest, or if payments on the instrument are determined by reference or contingent upon the value of any asset that is not a permitted asset.ⁿ³ A debt instrument also is not a permitted asset if it is in default on the date acquired by the FASIT, unless the owner has a reasonable expectation that all delinquent payments will be paid within 90 days after the instrument is first held by the FASIT.ⁿ⁴

Generally, the permitted assets of a FASIT cannot include any debt instrument issued by the owner or by any related person, or any direct or indirect interest in the debt instrument.ⁿ⁵ The prohibition extends (i) to a debt instrument that is guaranteed by the owner (or a related person) and, based upon all of the facts and circumstances existing at the time the guarantee is given, or at the time the FASIT acquires the debt instrument, the owner or related person is, in substance, the primary obligor on the debt instrument; and (ii) to a debt instrument that is issued by a person other than the owner or a related person if the timing or amount of payments on the instrument are determined by reference to, or contingent on, the timing or amount of payments made on a debt instrument issued by the owner or a related person.ⁿ⁶

A debt instrument is not a permitted asset if the instrument is a partial interest such as a stripped bond or stripped coupon in a debt instrument that is not a permitted debt instrument.ⁿ⁷ Foreign debt is not a permitted asset if the debt instrument is traded on an established securities market and the interest is subject to tax on a gross basis.ⁿ⁸

Foreclosure property is property that would be treated as such if acquired by a real estate investment trust and that is acquired in connection with the default or imminent default of a debt instrument held by the FASIT unless the security interest in the property was created for the principal purpose of permitting the FASIT to invest in the property.ⁿ⁹ In the case of property other than real property or personal property incident to real property, regulations can provide for a reduction in the grace period and extensions thereof applicable in the case of foreclosure property held by a real estate investment trust.ⁿ¹⁰

A hedge or guarantee is a permitted hedge only if it is reasonably required to offset any differences that one of four risk

factors may cause between the amount or timing of receipts on assets that the FASIT holds (or expects to hold) and the amount or timing of payments on regular interests the FASIT has issued (or expects to issue).ⁿ¹¹ The specified risk factors are fluctuations in market rates; fluctuations in currency exchange rates; the credit quality of, or default on, the FASIT's assets or debt instruments underlying the FASIT's assets; and the receipt of payments on the FASIT's assets earlier or later than originally anticipated. The hedge or guarantee cannot reference an asset other than a permitted asset.ⁿ¹² It also cannot reference an index, economic indicator, or financial average that is not both widely disseminated and designed to correlate closely with changes in one of the four specified risk factors. (However, the hedge or guarantee need not be associated with any of the FASIT's assets or regular interests, or any group of its assets or regular interests, if the hedge or guarantee offsets one of the specified risks.)ⁿ¹³ Lastly, a hedge or guarantee is not a permitted hedge if, at the time it is entered into, it in substance creates an investment in the FASIT.ⁿ¹⁴

Generally, a hedge or guarantee issued by the owner is not a permitted asset. An exception is made for a hedge contract if (a) the owner or related person regularly provides, offers, or sells substantially similar contracts in the ordinary course of its trade or business; (b) on the date the contract is acquired by the FASIT (and on any later date that it is substantially modified) its terms are consistent with the terms that would apply in the case of an arm's-length transaction between unrelated parties; and (c) the owner maintains records that show the terms of the contract are consistent with the terms that would apply in the case of an arm's-length transaction, and explain how the owner or related person determined the consideration for the hedge contract.ⁿ¹⁵ A guarantee contract is a permitted asset only if it is a credit enhancement contract, and the value of all guarantee contracts issued by the owner and related persons is less than 3 percent of the value of all the FASIT's assets.ⁿ¹⁶

Two additional rules apply in determining whether assets are permitted assets. Under the first, a lender's position in a contract or agreement in the nature of a line of credit (other than a contract or agreement that is originated by the FASIT) can be a permitted asset.ⁿ¹⁷ The contract or agreement is not subject to the gain recognition rules of *IRC Section 860I(a)* at the time the contract or agreement is transferred to the FASIT; extensions of credit under the contract or agreement are.

The second relates to transfers of permitted hedges or permitted debt instruments to a FASIT.ⁿ¹⁸ An owner or related person cannot transfer a hedge or debt instrument traded on an established securities market for less than fair market value. A hedge or debt instrument that is not traded on an established securities market cannot be transferred for less than 90 percent of its value.

[2] Financial Asset Securitization Investment Trust Interests

The Code provides for three interests in a FASIT—a regular interest, a high-yield interest, and an ownership interest. A regular interest in a FASIT is any interest that is issued by a FASIT on or after the startup date with fixed terms and that is designated as a regular interest if (1) the interest unconditionally entitles the holder to receive a specified principal amount (or other similar amount), (2) interest payments (or other similar amounts), if any, with respect to the interest are determined on a fixed rate, or, except as otherwise provided by the Service, at a variable rate specified in regulations, (3) the interest does not have a stated maturity (including options to renew) greater than 30 years (or such longer period as may be permitted by regulations), (4) the issue price of the interest does not exceed 125 percent of its state principal amount, and (5) the yield to maturity is less than the applicable federal rate in effect under *IRC Section 1274(d)* for the calendar month in which the obligation is issued plus five percentage points.ⁿ¹ An interest will not fail to meet the first requirement merely because the timing (but not the amount) of the principal payments (or other similar amounts) may be contingent to the extent that payments on debt instruments held by the FASIT are made in advance of anticipated payments and on the amount of income from permitted assets.

A high-yield interest is a regular interest that would be treated as such except for the fact that it fails to meet one or more of the clauses in the first, fourth, or fifth requirements, or fails to meet the second requirement but only if interest payments (or other similar amounts), if any, with respect to the interest consist of a specified portion of the interest

payments on permitted assets and the portion does not vary during the period the interest is outstanding.ⁿ²

An ownership interest is any interest issued by a FASIT after the startup date that is designated as an ownership interest and that is not a regular interest.ⁿ³

FOOTNOTES:

(n1)Footnote 1. *IRC § 860L(a)(1)*. Substantially all of the assets held by a FASIT consist of permitted assets if the total adjusted bases of the permitted assets is more than 99 percent of the total adjusted bases of all of the assets held by the FASIT, including those assets deemed to be held under *IRC § 860I(b)(2)*. *Prop Treas Reg § 1.860H-2(a)*. The asset requirement does not apply during the period of a qualified liquidation of a FASIT.

An eligible corporation is defined as any domestic C corporation other than (i) a corporation that is exempt from, or is not subject to, federal income taxation, (ii) a regulated investment company or real estate investment trust, (iii) a REMIC, or (iv) a cooperative. *IRC § 860L(a)(2)*.

(n2)Footnote 2. *Prop Treas Reg § 1.860H-1(a)(2)(i)*.

(n3)Footnote 3. *Prop Treas Reg § 1.860H-1(a)(3)*.

(n4)Footnote 4. *IRC § 860L(a)(3)*. The election must be made by an eligible corporation. *Prop Treas Reg § 1.860H-1(b)(1)*. If the FASIT is an entity, the eligible corporation making the election must hold one or more interests in the entity, and one of those interests must be the interest designated as the FASIT's ownership interest. If it is a segregated pool of assets, the eligible corporation must be the first taxpayer to be treated as the owner of the resulting FASIT.

(n5)Footnote 5. *IRC § 860L(a)(3)*. The election is made by a statement attached to the original federal income tax return of the eligible corporation's taxable year in which the FASIT's startup day occurs; the election cannot be made on an amended return. *Prop Treas Reg § 1.860H-1(b)(3)*. The contents of the statement and the required signatures are specified in *Prop Treas Reg § 1.860H-1(b)(4)* and (5), respectively.

(n6)Footnote 6. *IRC § 860L(a)(4)*.

(n7)Footnote 7. *IRC § 860L(a)(5)*. See § 13A.02 for a discussion of *IRC § 860D(b)(2)(B)*.

(n8)Footnote 1. *IRC §§ 860G(a)(1)(B), 860L(c)(1), 1275(a)(1)*.

(n9)Footnote 2. *Prop Treas Reg § 1.860H-2(b)(1)*. A person is related to another person if the related person bears a relationship specified in *IRC § 267(b)* or *707(b)(1)* (using a 20 percent threshold instead of 50 percent) or the persons are engaged in trades or businesses under common control within the meaning of *IRC § 52(a)* and (b). *IRC § 860L(g)*.

(n10)Footnote 3. *Prop Treas Reg § 1.860H-2(b)(3)(i)*

(n11)Footnote 4. *Prop Treas Reg § 1.860H-2(b)(3)(ii)*.

(n12)Footnote 5. *IRC § 860L(c)(2)*; *Prop Treas Reg § 1.860H-2(b)(3)(iii)*. By statute, the prohibition does not extend to cash or cash equivalents--the US dollar, other currency received as a payment on a permitted asset or required to make payments on regular interests, a permitted debt instrument with a remaining maturity of 270 days or less and rated as investment quality by a national rating organization not related to the issuer, and shares in US dollar denominated money market funds. *Prop Treas Reg § 1.860H-2(c)*. By regulation it does not apply to a fixed rate or variable rate debt instrument that would be a permitted asset if not issued by the owner or a related person, if the instrument has an original stated maturity of 270 days or less, is rated as investment quality by a national rating organization not related to the issuer, and is acquired as a temporary investment of cash awaiting either reinvestment in

permitted assets or distribution to the owner or to holders of regular interests. *Prop Treas Reg § 1.860H-2(b)(2)*.

(n13)Footnote 6. *Prop Treas Reg § 1.860H-2(b)(3)(iv)*, (v). A guarantee includes any promise to pay in the case of the default or imminent default of any debt instrument.

(n14)Footnote 7. *Prop Treas Reg § 1.860H-2(b)(3)(vi)*.

(n15)Footnote 8. *Prop Treas Reg § 1.860H-2(b)(3)(vii)*. The prohibition does not apply if the tax is in the nature of a prepayment on a tax imposed on a net basis.

(n16)Footnote 9. *IRC § 860L(c)(3)(A)*. The election to treat property as foreclosure property required in the case of a real estate investment trust is not required of a FASIT.

(n17)Footnote 10. *IRC § 860L(c)(3)(B)*. The subject of foreclosure property for real estate investment trusts can be found in § 13.02[2][b][ii].

If foreclosure property qualifies as another type of permitted asset, the FASIT can hold the property beyond the grace period. *Treas Reg § 1.860H-2(f)*. However, immediately after the grace period ends, the taxpayer must recognize gain, if any, as if the property had been contributed to the FASIT on that date. In addition, after the close of the grace period, disposition of the property is subject to the prohibited transactions tax imposed under *IRC § 860L(e)* without the benefit of the exception for foreclosure property.

(n18)Footnote 11. *Prop Treas Reg § 1.860H-2(d)(1)*.

(n19)Footnote 12. *Prop Treas Reg § 1.860H-2(d)(2)*.

(n20)Footnote 13. *Prop Treas Reg § 1.860H-2(d)(3)*.

(n21)Footnote 14. *Prop Treas Reg § 1.860H-2(d)(4)*.

(n22)Footnote 15. *Prop Treas Reg § 1.860H-2(e)(1)*.

(n23)Footnote 16. *Prop Treas Reg § 1.860H-2(e)(2)*.

(n24)Footnote 17. *Prop Treas Reg § 1.860H-2(g)*.

(n25)Footnote 18. *Prop Treas Reg § 1.860H-2(h)*.

(n26)Footnote 1. *IRC §§ 163(i)(1)(B), 860G(a)(1)(B)(i), 860L(b)(1)(A)*. The startup date is the date designated in the election to be a FASIT as the startup day of the FASIT. The day is the beginning of the first taxable year of the FASIT. *IRC § 860L(d)(1)*.

The issue price of a FASIT regular interest not issued for property is its purchase price. If issued for property, the issue price is the fair market value of the regular interest on the issue date. *Prop Treas Reg § 1.860H-4(a)*.

(n27)Footnote 2. *IRC § 860L(b)(1)(B)*.

(n28)Footnote 3. *IRC § 860L(b)(2)*. An ownership interest is treated as a security for purposes of the wash sale rule of *IRC § 1091*. *IRC §§ 860F(d), 860L(f)(1)*.

CHAPTER 13B Financial Asset Securitization Investment Trusts

2-13B Taxation of Securities Transactions § 13B.03

§ 13B.03 Treatment of Interests in a Financial Asset Securitization Investment Trust

[1] Holder of the Ownership Interest

[a] Taxation of the Holder of the Ownership Interest. In determining the taxable income of the owner, (1) all assets, liabilities, and items of income, gain, deduction, loss, and credit of a FASIT are treated as assets, liabilities and items of the owner, (2) the constant yield method (including the rules of *IRC Section 1272(a)(6)*, relating to the determination of the daily portions of original issue discount where the principal of a debt instrument is subject to acceleration) is applied under an accrual method of accounting in determining all interest, acquisition discount, original issue discount and market discount, and all premium deductions or adjustments with respect to each debt instrument of the FASIT, (3) any item of income, gain, or deduction allocable to a prohibited transaction is not taken into account, and (4) when taken into account by the owner, tax-exempt interest accrued by the FASIT is treated as ordinary income.ⁿ¹

For any taxable year the owner cannot offset income or gain from the FASIT ownership interest (including gain or loss from the sale of the ownership interest) with any non-FASIT losses.ⁿ² Any net operating loss carryover of the owner in a FASIT is computed by disregarding any income arising by reason of a disallowed loss.ⁿ³

For purposes of the alternative minimum tax, the taxable income of the owner is determined without regard to the minimum FASIT income.ⁿ⁴ In addition, the alternative minimum taxable income of the owner for any taxable year cannot be less than the FASIT income for that year, and minimum FASIT income is disregarded in computing the alternative minimum tax net operating loss deduction.ⁿ⁵

[b] Transfers of Property to a Financial Asset Securitization Investment Trust by the Holder of the Ownership Interest. If property is sold or contributed to a FASIT by the owner (or by a related person), gain, if any, will be recognized to the owner (or related person) in an amount equal to the excess of the property's value on the date of sale or contribution over its adjusted basis on that date.ⁿ⁶ (The gain recognition rule also applies to transfers by the owner to holder of regular interests in the FASIT.)ⁿ⁷ Property acquired by a FASIT from a person other than the owner (or a related person) is treated as having been acquired by the owner for an amount equal to the FASIT's cost of acquiring the property, and as having been sold by the owner to the FASIT at its value on the acquisition date.ⁿ⁸ If property held by the owner (or by a related person) supports any regular interest in the FASIT gain will be recognized to the owner (or related person) in the same manner as if the property had been sold to the FASIT at its value on the earliest date that the property supports the regular interest.ⁿ⁹ Gain recognition also is required when the FASIT acquires foreclosure property and holds it beyond the grace period.ⁿ¹⁰ Gain required to be recognized under the foregoing rules

must be recognized notwithstanding any other provision of the Code, although regulations can provide that gain otherwise recognized can be deferred until the earliest date on which the property acquired by the FASIT supports any regular interest in the FASIT or any indebtedness of the owner (or of any related person).ⁿ¹¹ The basis of any property on which gain is recognized is increased by the amount of gain so recognized.ⁿ¹²

In determining the amount of gain, the value of any debt instrument that is not traded on an established securities market is the sum of the present values of the reasonably expected payments under the instrument as of the date of gain recognition, discounted at a rate equal to 120 percent of the applicable federal rate, compounded semiannually.ⁿ¹³ The value of any other property is its fair market value.ⁿ¹⁴ For purposes of determining the value of a pool of revolving loan accounts having the same terms, each extension of credit (other than the accrual of interest) is treated as a separate debt instrument and payments are applied to the earliest credit extension.ⁿ¹⁵

In the case of the owner in a pre-effective date FASIT (any FASIT for which the election to be such is in existence on August 31, 1997), gain will not be recognized on property deemed contributed to the FASIT under *IRC Section 860L(d)(2)* (property held by the FASIT on the startup date), nor will gain be recognized under *IRC Section 860I* on property contributed to the FASIT until the property ceases to be properly allocable to a pre-FASIT interest.ⁿ¹⁶ Property will be allocated to a pre-FASIT interest (any interest in a pre-effective date FASIT that was issued before the startup date, other than any interest held by the owner in the FASIT) in such manner as the Service may prescribe, except that all property in a FASIT will be treated as properly allocable to pre-FASIT interests if the fair market value of all such property does not exceed 107 percent of the aggregate principal amount of all outstanding pre-FASIT interests.

[c] Income From Prohibited Transactions. The owner is required to pay a tax equal to 100 percent of the net income derived from a prohibited transaction, defined as (1) the receipt of any income from an asset that is not a permitted asset, (2) the disposition of a permitted asset (other than foreclosure property) except in a permitted disposition, (3) the receipt of any income derived from a loan originated by the FASIT, and (4) the receipt of income representing a fee or compensation for services (other than fees for a waiver, amendment, or consent under permitted assets (other than foreclosure property) held by the FASIT).ⁿ¹⁷ A permitted disposition is any disposition of a permitted asset (1) arising from complete liquidation of a class of regular interests (a qualified liquidation), (2) incident to the foreclosure, default, or imminent default of the asset, (3) incident to the bankruptcy or insolvency of the FASIT, (4) necessary to avoid a default on any indebtedness of the FASIT attributable to a default (or imminent default) on an asset of the FASIT, (5) to facilitate a clean-up call, or (6) to substitute a permitted debt instrument for another such instrument if the FASIT were treated as a REMIC and permitted assets (other than cash or cash equivalents) were treated as qualified mortgages.ⁿ¹⁸ A permitted disposition also includes one made in order to reduce over-collateralization where a principal purpose was not to avoid recognition of gain arising from an increase in its market value after its acquisition by the FASIT. Deductions directly attributable to prohibited transactions are allowed in computing net income from such transactions, except that no item attributable to any prohibited transaction for which there was a loss can be taken into account.ⁿ¹⁹

[2] Holders of Regular Interests

A holder of a regular interest in a FASIT, including a high-yield interest, is taxed in the same manner as a holder of any debt instrument, except that the holder is required to account for income relating to the interest under an accrual method of accounting, irrespective of the method of accounting normally used by the holder.ⁿ¹

If, during the same period, a foreign resident holds a regular interest in a FASIT (either directly or through a vehicle not subject to federal income tax), and the FASIT holds a debt instrument issued by a conduit debtor, any interest paid or accrued on the debt instrument is deemed to be received or accrued by the foreign resident directly from the conduit debtor.ⁿ² The amount treated as received directly from the conduit debtor is limited to the lesser of the income received or accrued by the foreign resident with respect to the FASIT regular interest, or the amount paid or accrued by the

conduit debtor with respect to the debt instrument.ⁿ³ A conduit debtor must be either a United States resident or a foreign resident that can deduct interest expense incurred in carrying on a United States trade or business.ⁿ⁴ The foreign resident must be (i) a 10-percent shareholder of the debtor; (ii) a controlled foreign corporation, but only if the debtor is a related person within the meaning of *IRC Section 864(d)(4)*; or (iii) related to the debtor within the meaning of *IRC Section 267(b)* or *707(b)(1)*.ⁿ⁵

[3] Holders of High-Yield Interests

If a high-yield interest is held by a disqualified holder (a holder other than an eligible corporation or a FASIT), the gross income of the holder does not include any income (other than gain) attributable to the interest, and amounts not so includable must be included in the gross income of the most recent holder of the interest that is not a disqualified holder; the income is includable at the time it would have been had the holder not been a disqualified holder.ⁿ¹ The rule does not apply to a high-yield interest held by a disqualified holder if the holder is a dealer in securities who acquired the interest exclusively for sale to customers in the ordinary course of business (and not for investment).ⁿ² An excise tax is imposed at the highest corporate rate if the dealer ceases to be a dealer in securities or if the holding is for investment purposes.ⁿ³ However, as a general rule, a dealer is not treated as holding the interest for investment before the end of a 31-day grace period.ⁿ⁴

If a pass-through entity (a regulated investment company, real estate investment trust, common trust fund, partnership, trust, estate or cooperative)ⁿ⁵ issues either debt or equity instruments (1) that are secured by regular interests in a FASIT, and bear a yield to maturity greater than both (a) the yield on the regular interests and (b) the applicable federal rate plus five percentage points (determined on the date the pass-through entity acquires the regular interests in the FASIT), and (2) the pass-through entity issued the debt or equity with a principal purpose of avoiding the rule that high-yield interests be held by corporations, an excise tax is imposed on the pass-through entity at a rate equal to the highest corporate rate on the income of the holder of any such instrument attributable to the regular interests.ⁿ⁶

Holders of high-yield interests are not allowed to use net operating losses to offset any income derived from the high-yield debt.ⁿ⁷ Any net operating loss carryover is computed by disregarding any income arising by reason of the disallowed loss.ⁿ⁸

FOOTNOTES:

(n1)Footnote 1. *IRC § 860H(b)*.

(n2)Footnote 2. *IRC § 860J(a)*. *IRC § 860E(a)(1)*, the rule that limits a taxpayer's ability to offset REMIC excess inclusions against net operating losses, applies here as well. See § 13A.05[2] for a discussion of *IRC § 860E(a)(1)*.

All members of an affiliated group filing a consolidated return are treated as one taxpayer in applying this rule and the others in *IRC § 860J*. *IRC § 860J(d)*.

(n3)Footnote 3. *IRC § 860J(b)*.

(n4)Footnote 4. *IRC § 860J(c)(1)*.

(n5)Footnote 5. *IRC § 860J(c)(2), (3)*.

(n6)Footnote 6. *IRC § 860I(a)(1)*. All property held by the FASIT on the startup day is treated as contributed to the entity on that day by the owner. *IRC § 860L(d)(2)*.

If any security that was sold or contributed to a FASIT by the owner was required to be marked-to-market under *IRC § 475* by the holder, *IRC § 475* will continue to apply to the security, except that in applying *IRC § 475* while the security is held by the FASIT, the fair market value of the security for purposes of *IRC § 475* cannot be less than its

value under *IRC § 860I(d)*. *IRC § 860L(f)(2)*.

Under authority granted to the Service to change this result, *Prop Treas Reg § 1.860H-6(d)(1)* provides that mark-to-market accounting does not apply to any permitted asset while it is held or deemed held by a FASIT.

If an owner transfers a permitted asset to a FASIT and the asset would have been marked to market if the taxable year had ended immediately before the transfer, then immediately before the transfer the owner must mark the asset to market and take gain into account as if the taxable year had ended at that point. *Prop Treas Reg § 1.860H-6(d)(2)*. Additional gain may be required if the asset is a debt instrument.

(n7)Footnote 7. *Prop Treas Reg § 1.860I-1(a)*.

(n8)Footnote 8. *IRC § 860I(a)(2)*. Except in the case of property traded on an established securities market, property transferred by a related person to a FASIT or its regular interest holders is treated as having been transferred by the related person to the owner for the property's fair market value, and then transferred by the owner to the FASIT. *Prop Treas Reg § 1.860I-1(g)*.

(n9)Footnote 9. *IRC § 860I(b)*. Property is support property if the owner or a related person (i) pledges the property to pay a FASIT regular interest or identifies the property as providing security for such payments, (ii) sets aside the property for transfer to a FASIT under an agreement or understanding, or (ii) holds an interest in the property that is subordinate to the FASIT's interest therein. *Prop Treas Reg § 1.860I-1(b)*.

(n10)Footnote 10. *Prop Treas Reg § 1.860I-1(a)(1)(iii)*.

(n11)Footnote 11. *IRC §§ 860I(c)(1), 860I(e)(1)*. Any regulations providing deferral of gain recognition must also provide adjustments to other FASIT provisions to the extent appropriate in the context of such deferral. *IRC § 860I(c)(2)*.

(n12)Footnote 12. *IRC § 860I(e)(2)*.

(n13)Footnote 13. *IRC § 860I(d)(1)(A)*. Reasonably expected payments on an instrument must be determined in a commercially reasonable manner and may take into account reasonable assumptions concerning early payments, late payments, nonpayments, and loan servicing costs; no other assumptions may be considered. *Prop Treas Reg § 1.860I-2(c)(1)*. The assumptions must be consistent with a set of categories in the order specified in *Prop Treas Reg § 1.860I-2(c)(2)*.

(n14)Footnote 14. *IRC § 860I(d)(1)(B)*.

(n15)Footnote 15. *IRC § 860I(d)(2)*.

(n16)Footnote 16. A pre-FASIT interest is an interest in a pre-effective date FASIT that was issued before Feb 4, 2000; was outstanding on the date the FASIT election goes into effect; and is considered debt of the owner under general income tax principles. *Prop Treas Reg § 1.860L-3(a)(2)*.

(n17)Footnote 17. *IRC § 860L(e)(1), (2)*. An exception to this rule relates to income from the disposition of an asset that, when first acquired by the FASIT, was a permitted asset because it was an interest rate or foreign currency hedge, but was not such at the time of disposition. The exception extends to dispositions of contract rights to acquire such assets. *IRC § 860L(e)(3)(D)*.

(n18)Footnote 18. *IRC § 860L(e)(3)*; see also *IRC § 860F(a)(2)*.

(n19)Footnote 19. *IRC §§ 860F(a)(3), 860L(e)(4)*.

(n20)Footnote 1. *IRC § 860H(c).*

(n21)Footnote 2. *Prop Treas Reg § 1.860H-5(a).*

(n22)Footnote 3. *Prop Treas Reg § 1.860H-5(c).*

(n23)Footnote 4. *Prop Treas Reg § 1.860H-5(b).*

(n24)Footnote 5. *Prop Treas Reg § 1.860H-5(b).* For this purpose, a 10-percent shareholder is a person who owns 10 percent or more of the total combined voting of all classes of stock of the corporation conduit debtor, or, if the instrument is issued by a partnership, a person who owns 10 percent or more of the capital or profits interest in the partnership. *IRC § 871(h)(3)(B).*

(n25)Footnote 1. *IRC § 860K(a), (c).* Thus, the transferor of the high-yield interest will continue to be taxed on the interest unless the transferee provides the transferor with an affidavit that the transferee is not a disqualified person, or the Service determines that the high-yield interest is no longer held by a disqualified person and a corporate tax has been paid on the income from the high-yield interest while it was held by a disqualified person. *IRC §§ 860E(e)(4), (7), 860K(b).* *Prop Treas Reg § 1.860E-2(a)(7)(ii).*

(n26)Footnote 2. *IRC § 860K(d)(1).*

(n27)Footnote 3. *IRC § 860K(d)(2)(A).* The excise tax is imposed on income of the dealer attributable to the interest for periods after the date of the change in the dealer's status or purpose in holding the interest.

(n28)Footnote 4. *IRC § 860K(d)(2)(B).*

(n29)Footnote 5. *IRC § 860E(e)(6)(B).*

(n30)Footnote 6. *IRC § 860K(e)(1), (2).*

CHAPTER 13B Financial Asset Securitization Investment Trusts

2-13B Taxation of Securities Transactions § 13B.04

§ 13B.04 Cessation of a Financial Asset Securitization Investment Trust

If a FASIT ceases to be such at any time during the taxable year, it will not be treated as a FASIT after the date of cessation.ⁿ¹ Rules similar to those of *IRC Section 860D(b)(2)(B)* (governing the inadvertent termination of a REMIC) will apply to inadvertent failures to qualify or remain qualified as a FASIT.ⁿ²

The consequences of cessation are as follows:

(1) The FASIT cannot reelect FASIT treatment without the permission of the Internal Revenue Service.ⁿ³ The proper classification of the former FASIT is determined under general income tax principles. Immediately after the cessation, the former FASIT holds the FASIT's assets with a fair market value basis. Any election made (other than the FASIT election), and any method of accounting adopted with respect to those assets continue to be binding. If the former FASIT is a segregated pool of assets, the person holding legal title to the pool is responsible for complying with any tax filing or reporting requirement arising from the pool's operation.

(2) The owner is treated as exchanging the assets of the FASIT for an amount equal to their value.ⁿ⁴ Gain realized on the exchange is treated as gain from a prohibited transaction and the owner is subject to the tax imposed on such transactions without exception. Loss, if any, is disallowed. The determination of gain or loss is made on an asset-by-asset basis.

The owner must recognize cancellation of indebtedness income whenever the adjusted issue prices of the regular interests outstanding before the cessation exceed their fair market value.ⁿ⁵ The owner cannot take any deduction for acquisition premium.

If the owner retains a continuing economic interest in the assets of the former FASIT, the characterization of the interest is made according to general income tax principles.ⁿ⁶ The owner holds the interest with a fair market basis.

(3) Holders of regular interest are treated as exchanging their interests for interests in the former FASIT.ⁿ⁷ Those interests are classified under general income tax principles. Gain must be recognized if the new interest is not classified as debt, or if it is debt that is materially different; no loss can be recognized. The basis of the new interest equals the basis of the old interest increased by any gain that

was recognized.

If the Service finds that the cessation was inadvertent, it can treat the FASIT as continuing or allow a reelection of FASIT status.ⁿ⁸ For this to occur, the Service must find that (1) the cessation was inadvertent, (2) within a reasonable time after discovering the event resulting in the cessation, steps were taken to regain FASIT status, and (3) the former FASIT and each person having an interest in it agree to such adjustments as the Service may require.ⁿ⁹

FOOTNOTES:

(n1)Footnote 1. *IRC § 860L(a)(4)*. The FASIT ceases to be such if it revokes its election with the consent of the Service, or it if fails to qualify as a FASIT and the Service does not find the failure to be inadvertent. *Prop Treas Reg § 1.860H-3(a)*.

(n2)Footnote 2. *IRC § 860L(a)(5)*. See § 13A.02.

(n3)Footnote 3. *Prop Treas Reg § 1.860H-3(c)(1)*.

(n4)Footnote 4. *Prop Treas Reg § 1.860H-3(c)(2)(i)*.

(n5)Footnote 5. *Prop Treas Reg § 1.860H-3(c)(2)(ii)*. The determination is made on a regular interest by regular interest basis.

(n6)Footnote 6. *Prop Treas Reg § 1.860H-3(c)(2)(iii)*.

(n7)Footnote 7. *Prop Treas Reg § 1.860H-3(c)(3)*.

(n8)Footnote 8. *Prop Treas Reg § 1.860H-3(d)(1)*.

(n9)Footnote 9. *Prop Treas Reg § 1.860H-3(d)(2)*.

CHAPTER 13B Financial Asset Securitization Investment Trusts

2-13B Taxation of Securities Transactions § 13B.05

§ 13B.05 Anti-abuse Rules

IRC Section 860L(h) gives the Service the authority to prescribe regulations to carry out the purpose of the FASIT provisions, "including regulations to prevent the abuse of the purposes of [the FASIT provisions] through transactions which are not primarily related to securitization of debt instruments by a FASIT." According to the Service, implicit in the intent of the FASIT provisions are the following requirements:

- (1) Assets to be securitized through a FASIT are primarily permitted debt instruments.
- (2) The source of principal and interest payments on a FASIT's regular interests is primarily the principal and interest payments on permitted debt instruments held by the FASIT.
- (3) No FASIT provision may be used to achieve a tax result that cannot be achieved without the provision unless the provision clearly contemplates that result.ⁿ¹

If a principal purpose of forming or using a FASIT is inconsistent with the intent of the FASIT provisions, the Service may make appropriate adjustments with respect to the FASIT and any arrangement or transaction involving the FASIT.ⁿ² These adjustments include:

- (1) Disregarding a FASIT election.
- (2) Treating assets of a FASIT as held by a person other than the owner.
- (3) Allocating FASIT income, loss, deduction, or credit to a person other than the owner.
- (4) Disallowing any item of FASIT income, loss, deduction, or credit.
- (5) Treating the ownership interest as held by a person other than the nominal owner.
- (6) Treating a FASIT regular interest as other than a debt instrument.
- (7) Treating a regular interest held by any person as having the same tax characteristics as one or more

assets held by the FASIT.

Whether there has been an abuse is determined on all of the facts and circumstances, including a comparison of the purported business purpose for the transaction and the claimed tax benefits resulting therefrom.ⁿ³

CHAPTER 14 The Taxpayer as a Member of a Partnership

2-14 Taxation of Securities Transactions § 14.01

§ 14.01 Introduction

Corporations, estates, and trusts are taxable entities; a partnership is not.ⁿ¹ Instead, liability is imposed on the persons carrying on the business as partners, with each being required to take into account his proportionate share of the partnership's income and deduction items whether or not there is actual distribution of the partner's distributive share during the taxable year.ⁿ² The effect of this conduit theory of taxation on the treatment of securities transactions between partnership and third parties, and between partnership and partners is the central theme of this chapter.

FOOTNOTES:

(n1)Footnote 1. *IRC § 701*. The partnership is still required to file an information return. *IRC § 6031*. For a more detailed discussion, see Rabkin & Johnson, 3 *Federal Income, Gift and Estate Taxation*, Ch 16. The taxpayer faced with the task of filing partnership returns should consult Fiore & Orenstein, *How to Save Time and Taxes Preparing the Federal Partnership Return*.

A multi-member limited liability company (LLC) that does not elect to be taxed as a corporation is treated as a partnership. *Treas Reg § 301.7701-3(b)(1)(i)*.

(n2)Footnote 2. *IRC §§ 701, 702; Treas Reg § 1.702-1(a)*.

CHAPTER 14 The Taxpayer as a Member of a Partnership

2-14 Taxation of Securities Transactions § 14.02

§ 14.02 Tax Consequences to the Partner of Partnership Transactions in Securities

In computing his taxable income for the year, each partner must take into account his distributive share of the combined net amount of long-term capital gains and losses and his distributive share of the combined net amount of short-term capital gains and losses of the partnership.ⁿ¹ Whether the gain or loss is capital or ordinary, long-term or short-term, is determined at the partnership level.ⁿ² Thus, if gain is derived from a sale of stock held for more than six months by a partnership that is not a dealer in securities, the gain will be treated as long-term capital gain by all partners, even those who are dealers in their separate capacities and those who have held their partnership interests for less than six months.ⁿ³

Example:

Axel, a 50-percent partner of the AB partnership, realizes the following gains and losses in his individual capacity:

Long-term capital gain	\$8,000
Long-term capital loss	4,000
Short-term capital gain	5,000
Short-term capital loss	7,000

The partnership has the following gains and losses from sales of securities held for investment:

Long-term capital loss	\$2,000
Short-term capital gain	3,000
Short-term capital loss	1,000

Therefore, Axel must add \$1,000 of the partnership's \$2,000 long-term capital loss and \$1,000 of the partnership's \$2,000 net short-term capital gain to his gains and losses for the year. This gives him a net long-term capital gain of \$3,000 (\$8,000 - \$5,000) and a net short-term capital loss of \$1,000 (\$7,000 - \$6,000).

A partner must also take into account his proportionate share of other partnership income, including dividends and

interest.ⁿ⁴ Here, too, the character of the income to the partner is determined as though the partner had realized the income directly from the same source from which it was realized by the partnership.ⁿ⁵ Thus, if a partnership receives 20 percent of its income in the form of dividends from domestic corporations, 20 percent of each corporate partner's distributive share will qualify for the dividends received deduction of *IRC Section 243*.ⁿ⁶ In similar fashion, all partners can exclude from gross income so much of their distributive shares as consist of tax-exempt interest, while a nonresident alien partner is not taxed on any portion of his distributive share which represents income received by the partnership from foreign sources.ⁿ⁷

Just as a partner is required to take into account his distributive share of the partnership's income, so must he take into account his allocable share of the firm's deductions, treating them as if incurred by him in the same manner as incurred by the partnership.ⁿ⁸ If an expense is a trade or business expense at the partnership level, it remains a trade or business expense, deductible under *IRC Section 162*, when taken into account by the partners. This may give rise to a deduction which otherwise would be unavailable to the partner. For example, a dealer in securities is permitted a deduction for commissions paid on the sale of securities; a trader or investor is not.ⁿ⁹ Therefore, if the partnership is a securities dealer, each partner can deduct his distributive share of such commissions, whether or not he is a dealer in his own right.^{n9.1}

The requirement that a partner take into account his distributive share of partnership deductions may not always give him an extra deduction. The Regulations provide that "each partner shall aggregate the amount of his separate deductions or exclusions and his distributive share of partnership deductions ... separately stated in determining the amount allowable to him of any deduction ... as to which a limitation is imposed."ⁿ¹⁰ As an illustration:

Example:

Suppose that a partner individually incurs \$15,000 of investment interest expense in a year in which he has \$10,000 of net investment income. Suppose further that the partnership incurs investment interest expense of \$10,000 and has no investment income. If the partner's distributive share of the partnership's investment interest expense is \$5,000, so that his total investment expense for the year is \$20,000, he will be allowed a deduction of only \$10,000; all of the partner's aggregate investment interest expense in excess of \$10,000 is disallowed under *IRC Section 163(d)*.ⁿ¹¹

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.702-1(a)(1), (2)*. Thus, a partner's share of partnership gains can offset losses realized in his individual capacity. *Neuberger v Commr, 311 US 83 (1940)*.

The Service has determined that it is appropriate for a partner of an electing large partnership to take into account separately the partner's distributive share of the partnership's dividends received that are qualified dividend income. *Notice 2004-5, 2004-1 CB 489*.

(n2)Footnote 2. *IRC § 702(b)*. The provision states that

"The character of any item of income, gain, loss, deduction, or credit included in a partner's distributive share ... shall be determined as if such item were realized directly from the source from which realized by the partnership, or incurred in the same manner as incurred by the partnership."

See generally Wolfman, "Level for Determining Character of Partnership Income--'Entity' v' Conduit' Principle in Partnership Taxation," *NYU 19th Inst on Fed Tax* 287 (1961).

(n3)Footnote 3. *Cf Barham v US, 301 F Supp 43 (MD Ga 1969)*, *affd per curiam 429 F2d 40 (5th Cir 1970)*; *Grove v Commr, 54 TC 799 (1970)*; *Rev Rul 68-79, 1968-1 CB 310*.

(n4)Footnote 4. *IRC § 702(a)(5), (8), (9); Neuberger v Commr, N 1.*

(n5)Footnote 5. *IRC § 702(b).*

(n6)Footnote 6. *Rev Rul 56-233, 1956-1 CB 51* . The partner uses the date on which the partnership received the dividends as his date of receipt.

(n7)Footnote 7. *Craik v US, 31 F Supp 132 (Ct Cl 1940)* .

(n8)Footnote 8. *IRC §§ 702(a)(8), 702(b).*

(n9)Footnote 9. *Treas Reg § 1.263(a)-2(e); Spreckels v Commr, 315 US 626 (1942)* . See Chs 18 and 19.

(n10)Footnote 9.1. On the other hand, if the partnership is not a dealer, then whether or not its investment expenses are deductible under *IRC § 212* depends on whether the partnership entered the transaction for the purpose of making a profit. For this purpose, only the controlling partner's intent is attributed to the partnership. Thus, where the managing partner's primary motivation in entering a transaction was to avoid taxes, the partnership's operational expenses were not deductible by the partnership's non-controlling partners, even though they paid for and bore the economic burden of the expenses (while the managing partner did not) and, unlike the managing partner, expected to make an economic profit. *Klamath Strat Inv Fund v US, 568 F3d 537, 551 (5th Cir 2009)* .

(n11)Footnote 10. *Treas Reg § 1.702-1(a)(8)(iii).*

(n12)Footnote 11. *IRC § 163(d)* limits the deduction of investment interest expense to net investment income and out-of-pocket expenses in excess of rentals derived from property subject to a net lease. See Ch 19.

CHAPTER 14 The Taxpayer as a Member of a Partnership

2-14 Taxation of Securities Transactions § 14.03

§ 14.03 Securities Transactions Between Partner and Partnership

[1] Contributions of Securities in Exchange for Partnership Interests.

[a] Recognition of Gain or Loss. Under the general rule of *IRC Section 721(a)*, no gain or loss is recognized either to a partnership or to any of its partners when securities are contributed to the partnership in exchange for a partnership interest.ⁿ¹ Under a special rule contained in *IRC Section 721(b)*, any *gain* realized on such a transfer will be recognized if the partnership would be treated as an investment company were it incorporated.ⁿ² In either case, no distinction is here drawn between a contribution made to a partnership in the process of formation and one made to an already existing concern.ⁿ³

[b] Basis and Holding Period of the Contributed Securities. The partnership's basis for the contributed securities is the same as the adjusted basis of the securities to the partner at the time that he made the contribution increased by the amount of gain recognized to the partner at such time.ⁿ⁴ Because the securities take a substituted basis, at least in part, the partnership's holding period for the property includes the period during which it was held by the contributing partner.ⁿ⁵ However, the nature of any gain or loss realized by the partnership on the sale or exchange of the contributed securities will be determined solely by reference to the character of the property in the hands of the partnership.ⁿ⁶

[c] Basis of the Contributing Partner's Interest. The basis to a partner of a partnership interest acquired by a contribution of securities is the same as the adjusted basis of the securities at the time of contribution, increased by the amount of gain recognized to the partner at that time.ⁿ⁷ If the contributed property is subject to an indebtedness or the partnership assumes a liability of the partner, the basis of the contributing partner's interest must be reduced by the amount of the debt assumed by the other partners;ⁿ⁸ the assumption of the debt is treated as a distribution of money to the contributing partner and an additional contribution by the assuming partners.ⁿ⁹ Gain to the contributing partner will result if the assumed debt exceeds the basis of the property in the hands of the partner,ⁿ¹⁰ but the adjusted basis of his partnership is not increased by the amount of such gain.ⁿ¹¹

A partner's holding period for his partnership interest begins when he first acquires it.ⁿ¹² No change in that holding period will result from subsequent contributions by the partner to the partnership. In other words, the partner cannot have a split holding period for his partnership interest.

[2] Sales or Exchanges of Securities--General Rule.

If, rather than contributing the securities, the partner sells them to his partnership, he engages in a transaction with the partnership other than in his capacity as a partner.ⁿ¹³ In such case, the transaction is considered as occurring between the partnership and one who is not a partner, and, therefore, the general nonrecognition rule of *IRC Section 721(a)* cannot apply.ⁿ¹⁴ This assumes that the transaction between partnership and partner is a true sale, and not a contribution in disguise; the controlling factor is the substance of the transaction, not its form.ⁿ¹⁵

[3] Sales or Exchanges of Securities--Transactions With Controlled Partnerships

[a] Where the Transaction Results in a Loss. *IRC Section 707(b)(1)* bars the deduction of losses from sales or exchanges of property between (1) a partnership and a partner owning more than 50 percent of the capital interest or profits interest in the partnership, or (2) two partnerships in which the same persons own more than 50 percent of the capital or profits interest.^{n15.1} Both direct and indirect ownership are taken into account; the rules for constructive ownership of stock contained in *IRC Section 267(c)* apply in determining the extent of a partner's interest in capital or profits.ⁿ¹⁶ In this regard, the Regulations provide that ownership of a capital interest or profits interest in a partnership may be attributed to a person who is not a member of the partnership, but only for the purpose of reattributing that interest to one who is a partner.ⁿ¹⁷

Example:

John, Tim, and a trust are equal partners in a partnership. John's wife, Pat is the sole beneficiary of the trust. The trust's one-third interest will be attributed to Pat and then to John. Since the trust interest is attributed to Pat solely for the purpose of further attributing ownership of the interest to John any loss sustained by Pat on a sale or exchange of property with the partnership will not be disallowed by *IRC Section 707*. However, under the Regulations to *IRC Section 267*, any sale or exchange between a partnership and a person other than a partner "shall be considered as occurring between the other person and the members of the partnership separately."ⁿ¹⁸ This means that any loss realized by Pat will be disallowed to the extent that the sale to the partnership is deemed made to a related person as defined in *IRC Section 267*.

As is the case when *IRC Section 267* applies to disallow a loss in a transaction between shareholder and controlled corporation, gain realized on a later sale of the property by the transferee need be recognized only to the extent that it exceeds the disallowed loss.ⁿ¹⁹

[b] Where the Transaction Results in a Gain. The disallowance rule of *IRC Section 707(b)(1)* closely approximates the one prescribed by *IRC Section 267(a)* for loss transactions between a shareholder and his controlled corporation. The same cannot be said for transactions which result in a gain. Under *IRC Section 1239*, a shareholder must treat any gain recognized on a sale or exchange of property to a controlled corporation as ordinary income only if the sale or exchange is of property which in the hands of the transferee corporation "is property of a character subject to the allowance for depreciation provided in section 167."ⁿ²⁰ But if the sale or exchange is between a partnership and a partner owning more than 50 percent of the capital interest or profits interest in the partnership or between two partnerships in which the same persons own more than 50 percent of the capital or profits interest,ⁿ²¹ the gain will be converted into ordinary income whenever the property is not a capital asset in the hands of the transferee.ⁿ²² Thus, gain realized on a sale of stock by an investor to a controlled partnership dealing in securities will enter gross income as ordinary income rather than capital gain; the stock in the hands of the partnership would not qualify as a capital asset since it would constitute property held for sale to customers.ⁿ²³

FOOTNOTES:

(n1)Footnote 1. The rule applies with equal force when property other than securities is contributed to the partner ship. Indeed, gain or loss will not be recognized even if the contribution consists of property subject to depreciation recapture or installment obligations. *IRC §§ 1245(b)(3), 1250(d)(3); Treas Reg § 1.721-1(a)*.

Regulations can provide that *IRC § 721(a)* will not apply to gain realized on a transfer to a partnership if the gain,

when recognized, will be includable in the gross income of a person who is not a US person. *IRC § 721(c)*.

If a corporate partner contributes its own stock in exchange for a corporate interest, there is no gain or loss to the corporation upon the contribution. If the partnership later exchanges the stock in a taxable transaction in which gain is realized, the gain will be allocated to the partners in accordance with *IRC § 704*. However, under *IRC § 1032*, the corporate partner will not recognize the gain allocated to it with respect to the exchange of the stock. Moreover, under *IRC § 705*, the corporate partner increases its basis in its partnership interest by an amount equal to its share of the gain. *Rev Rul 99-57, 1999-2 CB 678*.

Regulations have been issued to prevent inappropriate increases or decreases in the adjusted basis of a corporate partner's interest in a partnership resulting from the partnership's disposition of the corporate partner's stock. Where (1) a corporation acquires an interest in a single partnership that owns stock in that corporation (or the partnership subsequently acquires stock in the corporation in an exchanged basis transaction); (2) the partnership does not have an election under *IRC § 754* in effect for the year of acquisition; and (3) the partnership later sells the stock, the increase (or decrease) in the corporation's adjusted basis in its partnership interest resulting from the sale or exchange of the stock equals the amount of gain (or loss) that the corporate partner would have recognized (absent *IRC § 1032*) if, for the year in which the corporation acquired the interest, an election under *IRC § 754* had been in effect. *Treas Reg § 1.705-2(b)(1)*. The purpose of the regulations cannot be avoided through the use of tiered partnerships or other arrangements. *Treas Reg § 1.705-2(c)(1)*.

(n2)Footnote 2. A partnership will be treated as an investment fund if, after the exchange, over 80 percent of the value of its assets, excluding cash and nonconvertible debt obligations, are held for investment and are readily marketable stock or securities or interests in regulated investment companies or real estate investment trusts. *Treas Reg § 1.351-1(c)(1)*. See the discussion of transfers to corporate investment funds in § 3.02[4].

(n3)Footnote 3. *Treas Reg § 1.721-1(a)*.

(n4)Footnote 4. *IRC § 723*. There is no increase in the basis of the property if the property is subject to an encumbrance greater than basis and the partner recognizes gain as a result of *IRC §§ 731 and 752(b)*. *Rev Rul 84-15, 1984-1 CB 158*.

(n5)Footnote 5. *IRC § 1223(2); Treas Reg § 1.723-1*.

(n6)Footnote 6. *Cf Oliver v Commr, TC Memo 1954-34, affd 218 F2d 352 (5th Cir 1955)*.

(n7)Footnote 7. *IRC § 722*.

(n8)Footnote 8. *Treas Reg § 1.722-1*. Generally, there will be no reduction in the basis of the partner's interest after an assumption by the partnership of a liability of the partner if: (1) the trade or business with which the liability is associated is transferred to the partnership assuming the liability as part of the transaction, or (2) substantially all of the assets with which the liability are associated are contributed to the partnership assuming the liability. *Temp Treas Reg § 1.752-6T*.

(n9)Footnote 9. *Treas Reg § 1.722-1*.

(n10)Footnote 10. *Treas Reg § 1.722-1*.

(n11)Footnote 11. *Rev Rul 84-15, 1984-1 CB 158*.

(n12)Footnote 12. *Lehman v Commr, 7 TC 1088 (1946), acq 1950-2 CB 3, affd 165 F2d 383 (2d Cir 1948), cert denied 334 US 819*.

(n13)Footnote 13. *Treas Reg § 1.721-1(a)*; *Treas Reg § 1.707-1(a)*. The purchase of securities by a partner from his partnership is also a transaction in which the partner is treated as if he were not a member of the partnership.

A transfer of partnership property to a partner in satisfaction of a guaranteed payment under *IRC § 707(c)* is a sale or exchange, not a distribution. *Rev Rul 2007-40, 2007-1 CB 1426*.

(n14)Footnote 14. *IRC § 707(a)*; *Treas Reg § 1.721-1(a)*; see, eg, *Davis v Commr, TC Memo 1970-170*.

(n15)Footnote 15. A facts and circumstances test is employed to determine whether a transaction between partner and partnership is to be characterized as a sale or a contribution. *Treas Reg § 1.707-3(b)(2)*. If within a two-year period, a partner transfers property to the partnership and the partnership transfers money or other consideration to the partner, the transfer is presumed to be a sale unless the factors clearly establish that it is not. *Treas Reg § 1.707-3(c)(1)*. Transfers made more than two years apart are presumed not to be sales. *Treas Reg § 1.707-3(d)*.

In *Otey v Commr, 70 TC 312*, *affd per curiam 634 F2d 1046 (6th Cir 1980)*, a transfer of property to a partnership followed by an early withdrawal of funds was held to be a contribution to capital and a distribution to equalized partners' capital accounts, and not a sale.

(n16)Footnote 15.1. The partners' bases in their partnership interests are decreased to reflect the disallowed loss. *Rev Rul 96-10, 1996-4 IRB 26*.

(n17)Footnote 16. *IRC § 707(b)(3)*; see Ch 2. The attribution rule of *IRC § 267(c)(3)*, relating to attribution between partners, is inapplicable.

(n18)Footnote 17. *Treas Reg § 1.707-1(b)(3)*.

(n19)Footnote 18. *Treas Reg § 1.267(b)-1(b)*.

(n20)Footnote 19. *IRC §§ 707(b)(1), 267(d)*. See Ch 2. The partners' bases in their partnership interests are increased to reflect the gain that is not recognized. *Rev Rul 96-10, 1996-1 CB 138*.

(n21)Footnote 20. *IRC § 1239(a)*. *IRC § 1239(a)* also applies to a sale or exchange of depreciable property between a person and a partnership in which the person owns more than 50 percent of the capital or profits interest. *IRC § 1239(b)(1)(A), (c)(1)(B)*.

(n22)Footnote 21. The attribution rules of *IRC Section 267(c)* must be taken into account in determining the ownership of a capital or profits interest in a partnership. *IRC § 707(b)(3)*; see, eg, *Rev Rul 67-105, 1967-1 CB 167*; see also *Burde v Commr, 352 F2d 995 (2d Cir 1965)*, *cert denied 383 US 966*; *Soffron v Commr, 35 TC 787 (1961)*.

(n23)Footnote 22. *IRC § 707(b)(2)*.

(n24)Footnote 23. *IRC § 1221(1)*.

CHAPTER 14 The Taxpayer as a Member of a Partnership

2-14 Taxation of Securities Transactions § 14.04

§ 14.04 Distributions of Securities by Partnerships

[1] Consequences to the Partner

[a] Treatment of Gains and Losses

[i] Current Distributions. As a general rule, a partner recognizes neither gain nor loss when the partnership transfers securities to him as part of a current distribution, that is, a distribution not in liquidation of the distributee's entire partnership interest.ⁿ¹ In the ordinary distribution, gain is recognized only if money is distributed and the amount of money exceeds the adjusted basis of the partner's interest in the partnership immediately before the distribution.ⁿ² If the money distributed is less than the partner's adjusted basis, or if no money is distributed, the distribution has only one consequence to the partner--to reduce the adjusted basis of his partnership interest (but not below zero) by the amount of money and the basis to the partner of property other than money received on the distribution.ⁿ³

IRC Section 737 contains an exception to the nonrecognition of gain upon a nonliquidating distribution in instances in which the distributee partner has precontribution gain. The amount of gain to be recognized is equal to the lesser of (1) the excess of (a) the fair market value of the property (other than money) received in the distribution over (b) the adjusted basis of the distributee partner's interest in the partnership immediately before the distribution reduced (but not below zero) by the amount of money received in the distribution, or (2) the net precontribution gain of the partner.^{n3.1} Gain so recognized is in addition to any gain recognized under *IRC Section 731*. The character of the gain is determined by reference to the proportionate character of the net precontribution gain.

The distributee partner's net precontribution gain is the net gain (if any) that would have been recognized by the distributee partner under *IRC Section 704(c)(1)(B)* if all property that (1) had been contributed to the partnership by the distributee partner within five years of the distribution, and (2) is held by the partnership immediately before the distribution, had been distributed to another partner.^{n3.2} (Under *IRC Section 704(c)(1)(B)*, if property contributed by a partner is distributed to other partners within five years of contribution, the contributing partner must recognize gain or loss in an amount equal to the gain or loss that the partner would have had to take into account by reason of the variation between basis and fair market value at the time of contribution had the property had been sold by the partnership on the date of distribution.ⁿ⁴ The provision is inapplicable if other property of like kind (within the meaning of *IRC Section 1031*) is distributed to the contributing partner not later than the earlier of the 180th day after the original distribution or the due date of the contributing partner's tax return for the year in which the original distribution was made.)ⁿ⁵

If any portion of the distributed property consists of property that had been contributed by the distributee partner to the partnership, that property is not taken into account in determining the amount of gain recognized under *IRC Section 737(a)* and the amount of net precontribution gain.^{n5.1} If the distributed property consists of an interest in an entity, the preceding sentence does not apply to the extent that the value of the interest is attributable to property contributed to the entity after the interest had been contributed to the partnership.

If a distribution to a partner consists of marketable securities, then, for purposes of *IRC Sections 731(a)* and *737*, the marketable securities are treated as money to the extent of their fair market value on the date of distribution.^{n5.2} However, the amount of the value of the distributed marketable securities taken into account must be reduced (but not below zero) by the excess (if any) of (a) the distributee partner's distributive share of the net gain that would be recognized if all of the marketable securities of the same class and issuer as the distributed securities held by the partnership were sold (immediately before the transaction to which the distribution relates) by the partnership for fair market value, over (b) the distributee partner's distributive share of the net gain attributable to the marketable securities of the same class and issuer as the distributed securities held by the partnership immediately after the same transaction, at the same fair market value.^{n5.3}

Marketable securities are financial instruments and foreign currencies that are, as of the date of distribution, actively traded (within the meaning of *IRC Section 1092(d)(1)*) and include:

- (1) any interest in a common trust fund, or regulated investment company that is offering for sale or has outstanding any redeemable security (as defined in Section 2(a)(32) of the Investment Company Act of 1940) of which it is the issuer;
- (2) any financial instrument that, pursuant to its terms or any other arrangement, is readily convertible into, or exchangeable for, money or marketable securities;
- (3) any financial instrument the value of which is determined substantially by reference to marketable securities;
- (4) except to the extent provided in regulations, any interest in a precious metal that, as of the date of distribution, is actively traded, unless the metal was produced, used, or held in the active conduct of a trade or business by the partnership;
- (5) interests in any entity if substantially all (90 percent or more) of the assets of the entity at the time of distribution consist of marketable securities or money; and
- (6) any interest in an entity to the extent the value of the interest is attributable to marketable securities or money, provided the securities and money amount to 20 percent or more, but less than 90 percent, of the entity's assets.^{n5.4}

The marketable securities-as-money rule does not apply to a distribution of a marketable security to a partner if (i) the security was contributed to the partnership by the distributee partner, except to the extent that the value of the distributed security is attributable to marketable securities or money contributed (directly or indirectly) to the entity to which the distributed security relates, (ii) the property was not a marketable security when acquired by the partnership, or (iii) the partnership is an investment partnership and the distributee partner is an eligible partner thereof.^{n5.5} In addition, the rule does not apply to the distribution of a marketable security that was acquired by the partnership in a nonrecognition transaction where the value of any marketable securities or money exchanged by the partnership in the nonrecognition transaction is less than 20 percent of the value of all of the assets exchanged by the partnership in the nonrecognition transaction, the distributed security is actively traded on the date of distribution, and the security is

distributed within five years of either the date on which the security was acquired by the partnership or, if later, the date on which the security became marketable.^{n5.6} Finally, *IRC Section 731(c)(1)* will not apply to the distribution of a marketable security acquired by the partnership in a nonrecognition transaction in exchange for a security the distribution of which would have been excepted from the scope of *IRC Section 731(c)(1)*.^{n5.7}

An anti-stuffing rule prevents the exceptions contained in *Regulations Section 1.731-2(d)(1)* from applying to the extent that 20 percent or more of the value of the distributed security is attributable to marketable securities or money contributed (directly or indirectly) by the partnership to the entity to which the distributed security relates after the security was acquired by the partnership (other than marketable securities contributed to the partnership by the distributee partner).^{n5.8}

An investment partnership is defined as any partnership that has never been engaged in a trade or business and substantially all of the assets (by value) consist of (1) money, (2) stock in a corporation, (3) notes, bonds, debentures, or other evidences of indebtedness, (4) interest rate, currency, or equity notional contracts, (5) foreign currencies, (6) interests in or derivative financial instruments (including options, forward or futures contracts, short positions, and similar financial instruments) in any of those assets, or in any commodity traded on or subject to the rules of a board of trade or commodity exchange, and (7) any combination of the foregoing.^{n5.9} A partnership is not treated as engaged in a trade or business by reason of (a) any activity undertaken as an investor, trader, or dealer in any asset described in the preceding sentence, including the receipt of commitment fees, break-up fees, guarantee fees, director's fees, or similar fees that are customary in and incidental to any activities of the partnership as an investor, trader, or dealer in such assets, (b) reasonable and customary management services (including the receipt of reasonable and customary fees in exchange for such management services) provided to an investment partnership in which the partnership holds a partnership interest; and (c) reasonable and customary services provided by the partnership in assisting the formation, capitalization, expansion, or offering of interests in a corporation (or other entity) in which the partnership holds or acquires a significant equity interest (including the provision of advice or consulting services, bridge loans, guarantee of obligations, or service on a company's board of directors), provided that the anticipated receipt of compensation for any services does not represent a significant purpose for the partnership's investment in the entity and is incidental to the investment in the entity.^{n5.10} A partnership (upper-tier partnership) is treated as engaged in any trade or business engaged in by, and as holding (instead of a partnership interest) a proportionate share of the assets of, any other partnership (lower-tier partnership) in which the upper-tier partnership holds a partnership interest.^{n5.11} This last stated rule does not apply if the upper-tier partnership does not participate in the management of the lower-tier partnership, and the interest held by the upper-tier partnership is less than 20 percent of the total profits and capital interests in the lower-tier partnership.^{n5.12}

An eligible partner of an investment partnership is one who, before the date of distribution, did not contribute to the partnership any property other than assets that can be held by an investment partnership.^{n5.13} A partner who contributed to a partnership an interest in another partnership is treated as contributing a proportionate share of the assets of the other partnership.^{n5.14}

The basis of the distributee partner's interest in the partnership is determined under *IRC Section 733* as if no gain were recognized by the partner on the distribution by reason of *IRC Section 731(c)*.^{n5.15}

[ii] Liquidating Distributions. A change in the character of the distribution from current distribution to liquidating distribution does not work a corresponding change in the general rule governing gain. Recognition is prescribed only when the distribution consists in whole or in part of money in an amount in excess of the adjusted basis of the partner's interest in the firm immediately before the distribution.ⁿ⁶ Nonrecognition will continue to be the general rule for losses unless the liquidating distribution consists solely of money, unrealized receivables and inventory items, in which case, loss will be recognized to the extent of the excess of the partner's adjusted basis for his interest in the partnership over the sum of (1) any money distributed, and (2) the basis in the hands of the partner of any unrealized receivables and inventory items.ⁿ⁷

The effect of a second provision, *IRC Section 736*, must be considered whenever the distribution is in liquidation of the interest of a retiring partner or deceased partner. Under that section, payments made to the retiring partner or to a deceased partner's successor in interest are divided into two segments, one being treated as a distribution made in exchange for the partner's interest in partnership assets (other than unrealized receivables and good will, except to the extent that the partnership agreement provides for a payment with respect to good will),ⁿ⁸ and the other as a distributive share of partnership income or a guaranteed payment.ⁿ⁹ The amount of the payment attributable to unrealized receivables and good will and the amount considered as a distributive share of partnership income or a guaranteed payment will be treated as ordinary income. The portion of the payment deemed to be made in exchange for the interest in partnership assets will be taxed in accordance with the rules governing partnership distributions.

IRC Section 736 clearly applies when the liquidating distribution consists solely of money. But does it apply when the distribution is made wholly or partially in kind, say, in the form of a distribution of securities? The issue is whether such a distribution can be looked upon as a "payment." The better view is that it can.ⁿ¹⁰ Indeed, a provision in the proposed Regulations, which would have excluded distributions of property from the definition of payment,ⁿ¹¹ did not find its way into the finally adopted version, leading one to the conclusion that certainly the Government views a distribution of property as an *IRC Section 736* payment. Thus, if a retired partner's interest is liquidated by a distribution of stock held by the partnership for investment, and he receives no money or an amount of money less than the adjusted basis of his partnership interest, he will not recognize gain or loss with respect to the portion of the distribution considered to be made in exchange for his interest in partnership property. He will, of course, be in receipt of ordinary income to the extent that the distribution is treated as payment of a distributive share of partnership income or as a guaranteed payment.ⁿ¹²

The previous discussion assumed the existence of a true liquidating distribution. But not every transaction that takes the form of a distribution will be taxed as such. The Regulations except from the scope of *IRC Section 731* the situation in which there is a contribution of property to a partnership followed within a short period of time by a distribution of other property to the contributing partner, or by a distribution of the contributed property to another partner; the transaction is treated as an exchange rather than a distribution;ⁿ¹³ This principle was applied in *Revenue Ruling 57-200*ⁿ¹⁴ to deny nonrecognition of gain. In that instance, two individuals each owned a one-half interest in the *P* partnership and one-half interests in corporations *X* and *Y*. To accomplish a desired severance of their business relationship, each individual transferred his stock in the corporations to the partnership, which was then terminated by a distribution of all of the *X* stock and some of the partnership assets to one partner and all of the *Y* stock and the remaining partnership assets to the other. The Service characterized the transaction by saying:

"The transfer of the capital stock of several corporations to a partnership, where the taxpayers who own such stock are also partners in the partnership, followed immediately by a distribution in complete liquidation of the partnership assets, constitute steps of a single integrated transaction resulting in a taxable exchange of stock interests between the individual partners."ⁿ¹⁵

[iii] Disproportionate Distributions of Inventory Securities. Under *IRC Section 751(b)(1)*, a provision enacted in order to prevent the conversion of potential ordinary income into capital gain,ⁿ¹⁶ a distribution to a partner of (1) substantially appreciated inventory (or of unrealized receivables)--*Section 751* propertyⁿ¹⁷--in exchange for all or part of his interest in other partnership property, or (2) other partnership property in exchange for all or part of his interest in the partnership's substantially appreciated inventory (or its unrealized receivables), must be treated as a sale or exchange between the distributee and the partnership as constituted immediately after the distribution, and not as a distribution governed by *IRC Section 731*.ⁿ¹⁸ However, *IRC Section 751(b)(1)* does not apply to a distribution of property that the distributee partner contributed to the partnership or to any part of the distribution treated, under *IRC Section 736(a)*, as a payment to a retiring partner or to a deceased partner's successor in interest of a distributive share of partnership income or a guaranteed payment.ⁿ¹⁹ Furthermore, *IRC Section 751(b)(1)* will not apply to the extent that a distribution consists of the distributee partner's share of *Section 751* property or his share of other property; in such case, the distribution of

Section 751 property is not in exchange for his interest in other partnership property, nor is the distribution of other partnership property in exchange for his interest in Section 751 property.ⁿ²⁰ To illustrate:

Example:

If a partnership has Section 751 property with a value of \$50,000 in which partner Amanda has a 30-percent interest, and it distributes \$10,000 of the property to Amanda who continues to retain a 30-percent interest in the \$40,000 of Section 751 property remaining in the partnership after the distribution, only \$3,000 of the Section 751 property received by Amanda will be considered to be a distribution of her share of such property; the remaining \$7,000 will be governed by *IRC Section 751(b)*. The \$3,000 figure is determined by taking Amanda's share of the partnership's Section 751 property before the distribution, \$15,000 (30 percent of \$50,000), and subtracting \$12,000, her share of such property after the distribution (30 percent of \$40,000).ⁿ²¹

A partnership's inventory will have substantially increased in value if, at the time of distribution, the total fair market value of all of its inventory items exceeds (1) 120 percent of the aggregate adjusted basis of such property in the hands of the partnership, and (2) 10 percent of the fair market value of all partnership property other than money.ⁿ²² The determination as to whether a partnership's inventory has substantially appreciated in value is made with reference to the aggregate of all partnership inventory items and not just those that are distributed to the partner.ⁿ²³ Thus, Section 751(b)(1) will apply if the partnership's inventory items as a whole are substantially appreciated in value, even though the distributed items are not.ⁿ²⁴ Conversely, Section 751(b)(1) will not apply to a distribution of specific inventory items having a value which is more than 120 percent of their adjusted bases, if the aggregate of the partnership inventory items does not meet the test of substantial appreciation set down by the Code.ⁿ²⁵

For the purposes of *IRC Section 751*, a partnership's inventory is made up of the following items:

- (1) Stock in trade of the partnership, or other property of a kind which would properly be included in the inventory of the partnership if on hand at the close of the taxable year, or property held by the partnership primarily for sale to customers in the ordinary course of its business.ⁿ²⁶
- (2) Any other property which, on sale or exchange by the partnership, would be considered property other than a capital asset and other than property described in *IRC Section 1231*.ⁿ²⁷ Thus, accounts receivable acquired on the sale of stock in trade (e.g., inventory securities) constitute inventory items of the partnership.ⁿ²⁸
- (3) Any other property retained by the partnership after the distribution, which if held by the distributee partner would be property of the type described in the preceding three paragraphs.ⁿ²⁹

Application of *IRC Section 751(b)* can be illustrated by the following examples:

Example 1:

The ABC partnership, a dealer in securities, agrees to liquidate the entire one-third interest of Bob, one of its partners. At the time of distribution, the balance sheet of the partnership is as follows:

As-sets	Adjusted basis	Market Value
Cash		\$ 30,000
	30,000	
Inventory securities	60,000	78,000

2-14 Taxation of Securities Transactions § 14.04

Capital assets (Investment securities)	90,000	102,000
	—	—
	—	—
	—	—
	—	—
	—	—
	—	—
	—	—
Total	\$180,000	\$210,000
<i>Liabilities and capital</i>		
Liabilities	\$60,000	\$60,000
Capital		
Partner A	40,000	50,000
Partner B	40,000	50,000
Partner C	40,000	50,000
	—	—
	—	—
	—	—
	—	—
	—	—
	—	—
	—	—
Total	\$180,000	\$210,000

The distribution to Bob consists of cash of \$20,000 and capital assets (investment securities) having a value of \$30,000. The partnership also agrees to assume Bob's share of partnership liabilities; *IRC Section 752(b)* treats this as the distribution of money.³⁰ Since Bob's partnership interest is being liquidated, the distribution is subject to the provisions of *IRC Section 736*. However, because, in this case, the payment does not exceed the partner's interest in partnership property (one third of \$210,000),

no part of the payment will be considered a distributive share or guaranteed payment under *IRC Section 736(a)*. Therefore, the entire distribution is for an interest in property under *IRC Section 736(b)*, and, to the extent applicable, subject to the rules of *IRC Section 751*.

The partnership's inventory is substantially appreciated in value. Its value of \$78,000 exceeds 120 percent of its adjusted basis (120 percent of \$60,000 is \$72,000) and also exceeds 10 percent of the fair market value of all partnership property other than money (10 percent of \$180,000 is only \$18,000).

Since *IRC Section 751(b)(1)* is applicable, Bob, who received more than his proportionate share of partnership property other than inventory, is considered to have sold his proportionate share of the inventory for \$26,000 (one third of \$78,000), thereby realizing ordinary income of \$6,000 (\$26,000 less \$20,000, one third of the adjusted basis of the inventory in the hands of the partnership).

The remainder of the distribution is not governed by *IRC Section 751(b)(1)*.ⁿ³¹ Before the distribution, Bob's basis for his partnership interest was \$60,000 (\$40,000, plus \$20,000, his share of partnership liabilities).ⁿ³² This basis must be reduced by \$20,000, the basis of the inventory securities which Bob is deemed to have sold to the partnership.ⁿ³³ Thus, Bob has a basis of \$40,000 for the remainder of his partnership interest. Whether or not gain or loss is recognized under *IRC Section 731* depends on the nature of the property received by the distributee partner. Here, Bob received no more than his share of capital assets, but did receive more than his share of partnership money (\$40,000, including the \$20,000 in liabilities assumed by the partnership). Therefore, the proceeds of the sale of the inventory must consist of money and form a part of the money received by Bob. Since the proceeds are treated separately, they must be deducted from the money distribution.ⁿ³⁴ Consequently, the remainder of Bob's interest is liquidated by a distribution of \$44,000, \$30,000 in capital assets and \$14,000 in money (\$40,000 less \$26,000, the "sale price" of the inventory). Under this set of facts, Bob will not recognize any part of the \$4,000 gain (\$44,000 distribution less \$40,000 basis) he realizes on the portion of the distribution falling outside of *IRC Section 751(b)*; the money received by him is less than the basis of his partnership interest.ⁿ³⁵

Example 2:

Assume the same facts as in Example 1, except that the liquidating distribution to Bob consists of inventory securities having a value of \$30,000, capital assets having a value of \$10,000, and cash of \$10,000. Thus, Bob receives exactly his share of cash, more than his share of inventory and less than his share of capital assets. He also is deemed to have received \$20,000 in money by virtue of the assumption by the partnership of Bob's share of partnership liabilities.

IRC Section 751(b)(1)(A) is applicable in this instance, causing the \$4,000 excess distribution of substantially appreciated inventory to be treated as having been received by Bob in exchange for a portion of his interest in capital assets. Bob's basis for that portion is \$3,529 ($90,000/120,000$ ths of \$4,000);ⁿ³⁶ his gain on the exchange is, therefore, \$471.

The balance of the distribution, \$66,000 (\$30,000 in money and liabilities assumed, \$10,000 in capital assets, and \$26,000 in inventory securities) does not come within *IRC Section 751(b)*. Since Bob's basis for the remainder of the partnership interest is \$56,471 (his predistribution basis of \$60,000, including his share of partnership liabilities, less \$3,529, the basis of the property treated as sold by him to the partnership), Bob realizes a gain of \$9,529 which he does not recognize under the general rule of *IRC Section 731(a)(1)*.

Example 3:

Assume the same facts as in Example 1, except that the distribution consists of inventory securities with

a value of \$26,000 and cash of \$24,000. *IRC Section 751(b)(1)* does not apply to any part of the distribution since Bob receives his share of inventory and his share of other property of the partnership. The entire distribution falls within *IRC Section 731*.

[b] Basis of the Distributed Securities

[i] Distributions Other Than in Liquidation of a Partner's Interest. A distributee partner's basis for securities distributed to him in a nonliquidating distribution is their adjusted basis in the hands of the partnership immediately before the distribution.ⁿ³⁷ There is one limitation--the basis of the distributed securities cannot exceed the adjusted basis of the distributee partner's interest in the partnership reduced by any money distributed in the same transaction.ⁿ³⁸ There is also one exception; the carryover basis rule does not apply to the extent that a distribution is treated as a sale or exchange of property under *IRC Section 751(b)*.ⁿ³⁹

If the aggregate basis of the property received by the distributee is limited to the adjusted basis of the partner's interest in the partnership, and the distribution consists of more than one class of securities, or of securities and other property, an allocation of basis is made necessary. The method prescribed by *IRC Section 732(c)* calls for the aggregate basis to be allocated first to any unrealized receivables and inventory items (whether or not substantially appreciated in value) in an amount equal to the adjusted bases of such properties to the partnership.ⁿ⁴⁰ If the remaining basis adjustment is a decrease, it is allocated among properties with unrealized depreciation in proportion to their respective amounts of unrealized depreciation (to the extent of each property's depreciation), and then in proportion to their respective adjustments (taking into account the adjustments already made).ⁿ⁴¹ A remaining basis adjustment that is a decrease arises when the partnership's total adjusted basis in the distributed properties exceeds the amount of the partner's basis in its partnership interest, and the latter amount is the basis to be allocated among the distributed properties.

Example 1:

A partnership distributes securities to a partner in a distribution that is not a liquidation of the partner's interest; the securities are not marketable and are not inventory or unrealized receivables in the hands of the partnership. Security A has a basis to the partnership of \$1,000 and a fair market value of \$8,000. Security B has a basis to the partnership of \$2,000 and a fair market value of \$2,000. The partner's basis in its partnership interest is \$11,000. The basis of the securities in the hands of the distributee partner will be the same as in the hands of the partnership.

Example 2:

Assume the same facts as in Example 1, except that Security A has a basis to the partnership of \$3,000 and a fair market value of \$3,000, Security B has a basis of \$3,000 and a fair market value of \$1,000, and the partner's basis in its partnership interest is \$4,000. This requires that basis first be allocated to the extent of the partnership's basis in the property, or \$3,000 to each distributed property. Because the partner's basis in its interest is only \$4,000, a downward adjustment of \$2,000 (\$6,000 less \$4,000) is required. The entire amount of the \$2,000 downward adjustment is allocated to Security B. Thus, the basis of Security A in the hands of the distributee partner is \$3,000, while the basis of Security B in the partner's hands is \$1,000.

If marketable securities are distributed and gain is recognized under *IRC Section 731(c)*, the basis of those securities is their basis determined under *IRC Section 732*, increased by the amount of such gain.ⁿ⁴² Any such increase is allocated to the distributed marketable securities in proportion to their respective amounts of unrealized appreciation before the increase.ⁿ⁴³

A special rule applies with respect to certain distributions by a partnership to a corporate partner. If (1) a corporate partner receives a distribution of stock in another corporation (the "distributed corporation"), (2) the corporate partner has control of the distributed corporation immediately after the transfer or at any time thereafter, and (3) the partnership's adjusted basis in the stock immediately before the distribution exceeded the corporate partner's adjusted

basis in the stock immediately after the distribution, then an amount equal to the excess is applied to reduce the basis of property held by the distributed corporation at that time (or at the time that the corporate partner acquires control).ⁿ⁴⁴ However, the amount of the reduction cannot exceed the amount by which the sum of the aggregate bases of the property and the amount of money of the distributed corporation exceeds the corporate partner's adjusted basis in the stock of the distributed corporation, nor can any reduction in the basis of any property exceed the adjusted basis of such property (determined without regard to the reduction).ⁿ⁴⁵

Example 3:

C Corp.'s basis for its interest in *P Partnership* is \$800,000. *P*'s basis for 100 percent of the stock in *D Corp.* is \$1 million. *D*'s assets consist of a parcel of real property with a basis of \$900,000 and cash of \$100,000. *P* distributes all of the stock of *D* to *C* in a nonliquidating distribution. *C*'s basis in the *D* stock is \$800,000, the basis of *C*'s partnership interest because it is less than *P*'s basis in the *D* stock.ⁿ⁴⁶ The basis of the parcel of real property must be reduced by \$200,000, the excess of *P*'s adjusted basis in the *D* stock immediately before the distribution over *C*'s basis in the *D* stock immediately after the distribution.

Example 4:

Assume the same facts as in Example 3, except that the cash held by *D* is only \$50,000. The reduction in the basis of the real property will be reduced by \$150,000, the amount by which the sum of the basis of the real property and the amount of money of the distributed corporation exceeds the corporate partner's adjusted basis in the stock of the distributed corporation.

If the amount of any reduction exceeds the aggregate adjusted bases of the property of the distributed corporation, the excess is recognized by the corporate partner as long-term capital gain, with a corresponding increase in the corporate partner's adjusted basis in the stock of the distributed corporation.ⁿ⁴⁷

A corporation is considered to have received a distribution from a partnership of stock it acquires (other than in a distribution from a partnership) if the basis of the stock is determined under the basis rules for current distributions or distributions in liquidation of a partner's interest.ⁿ⁴⁸ For example, if a partnership distributes stock to two corporate partners, neither of which has control of the distributed corporation, and the two corporations merge with the survivor obtaining control of the distributed corporation, the stock of the distributed corporation is treated as received in a partnership distribution; the basis reduction rule will apply.

A special rule applies in the case of tiered corporations. If the property held by a distributed corporation is stock in a corporation that the distributed corporation controls, *IRC Section 732(f)* operates to reduce the basis of the property of the controlled corporation.ⁿ⁴⁹ The provision is reapplied to any property of the controlled corporation that is stock in a corporation that it controls.

[ii] Distributions in Liquidation of the Partner's Interest. The basis of property (other than money) distributed by a partnership to a partner in liquidation of the partner's interest in the partnership is an amount equal to the adjusted basis of his partnership interest reduced by any money distributed in the same transaction.ⁿ⁵⁰ This rule will not apply to the extent that the distribution is treated as a sale or exchange of property under *IRC Section 751*.ⁿ⁵¹

Here, too, an allocation of basis is required whenever the distribution consists of different classes of securities or different property. However, in the case of a liquidating distribution, any remaining basis adjustment after the allocation to inventory and unrealized receivables can be either an increase or a decrease. Any remaining basis adjustment, if an increase, is allocated among properties with unrealized appreciation in proportion to their respective amounts of unrealized appreciation (to the extent of each property's appreciation, and then in proportion to their respective fair market values).ⁿ⁵²

Example 5:

Assume the same facts as in Example 1, except that the distribution is in liquidation of the partner's

interest. Basis is first allocated to the properties in the amount of their respective adjusted bases to the partnership (\$1,000 to Security A and \$2,000 to Security B). The remaining basis adjustment is an increase of \$8,000 (the partner's \$11,000 basis less the \$3,000 basis already allocated to the properties). Basis is then allocated to Security A in the amount of \$7,000, its unrealized appreciation; there is no allocation to Security B because it has no unrealized appreciation. The remaining \$1,000 of basis is allocated in proportion to the assets' fair market values--\$800 to Security A (for a total basis of \$8,800) and \$200 to Security B (for a total basis of \$2,200).

Example 6:

Assume the same facts as in Example 5, except that the distribution is a liquidating distribution. The basis allocation will be the same as in Example 5.

[c] The Partner's Holding Period for the Distributed Securities. As a general rule, the partner's holding period for securities received in a partnership distribution includes the period for which they were held by the partnership.ⁿ⁵³ And, if the securities had been contributed to the partnership by the distributee partner, his original holding period is "tacked" as well.ⁿ⁵⁴ However, if the securities are inventory securities, there is a special holding period that begins on the date of distribution and runs for five years. Any gain or loss on the sale or exchange of the securities by the distributee partner within the five-year period will be taxed as ordinary gain or loss and not as capital gain or loss.ⁿ⁵⁵

[2] Gain or Loss to the Partnershipⁿ⁵⁶

By virtue of *IRC Section 731(b)*, no gain or loss is recognized to a partnership on a distribution of property, including money, to a partner. This rule applies to both current and liquidating distributions, but it does not apply to the extent that a disproportionate distribution is treated as a sale or exchange under *IRC Section 751(b)*.

The effect of a disproportionate distribution on partnership gain or loss can be illustrated with the help of the examples discussed in § 14.04[1][a][iii].

Example 1:

The gist of the transaction from the partnership side is a purchase of Arthur's share of the partnership inventory for \$26,000. Since, in this case, the entire consideration for the purchase consisted of money (the partnership distributed \$40,000 in money--\$20,000 in cash and \$20,000 in assumed liabilities), the partnership would realize no capital gain or loss on the portion of the distribution treated as a sale or exchange under *IRC Section 751(b)*. Nor would the partnership realize any ordinary income, for it did not give up any Section 751 property in the distribution. The only consequence to the partnership would be a change in the basis of the inventory. (The new basis of the inventory would be \$66,000. The predistribution basis of the inventory, \$60,000, is first reduced by \$20,000, the basis of Arthur's share of the inventory, since the partnership is treated as having distributed his share of the inventory to him, and then increased by \$26,000, the partnership's cost of repurchasing the inventory.)

Example 2:

Under *IRC Section 751(b)*, the distribution of inventory securities is considered a distribution to the extent of \$26,000 (the partner's share of inventory securities) and a sale to the extent of \$4,000. This produces ordinary income for the partnership in the amount of \$923; the \$4,000 of inventory had a basis of \$3,077 ($60,000/78,000 \times \$4,000$). The partnership recognizes no gain or loss on the portion of the distribution which is not treated as a sale or exchange. The partnership would have to adjust the basis of the capital assets which it is deemed to have purchased from Arthur with the appreciated inventory. Again, this entails a reduction in basis in an amount equal to the basis of the capital assets which Arthur is deemed to have sold to the partnership, followed by an increase in basis in the amount of the purchase price (\$90,000 - \$3,529 + \$4,000, or \$90,471).

Example 3:

Here the partner received his share of the appreciated inventory securities and his share of other property of the partner. This bars the application of *IRC Section 751(b)*, the distribution is governed wholly by *IRC Section 731*, and no gain or loss is recognized to the partnership.

FOOTNOTES:

(n1)Footnote 1. *IRC § 731(a)*. This is a logical extension of the rule that a partnership's income is taxable to its partners when earned.

The Service has determined that, in order to carry out the purposes of the repeal of the *General Utilities* doctrine, a partnership distribution to a corporate partner of the stock of the corporation (or the stock of any member of the affiliated group of which the partner is a member) should be treated as a redemption of the partner's stock with property consisting of its partnership interest. The Service will issue regulations that *IRC § 311(b)*, and not *IRC § 731*, will govern such transactions, and that gain (but not loss) with respect to the partnership interest will be recognized. *Notice 89-37, 1989-1 CB 679*.

(n2)Footnote 2. *IRC § 731(a)(1)*. The gain is treated as gain from the sale or exchange of the partnership interest of the distributee partner. *IRC § 731 (a)*; *Rev Rul 56-5, 1956-1 CB 630*.

For purposes of the passive activity loss rules of *IRC § 469*, if a partner receives a distribution of money in excess of its adjusted basis in its partnership interest and recognizes gain under *IRC § 731(a)*, the gain is treated as gain from the sale or exchange of a partnership interest under *Treas Reg § 1.469-2T(e)(3)*. *Rev Rul 95-5, 1995-1 CB 100*.

(n3)Footnote 3. *IRC § 733*. The partner's basis for property distributed in kind is determined under *IRC § 732*, discussed in § 14.04[1][b][i].

(n4)Footnote 3.1. *IRC § 737(a)*. The adjusted basis of the partner's interest in the partnership is increased by the amount of gain recognized; the increase is treated as occurring immediately before the distribution. *IRC § 737(c)(1)*. This increase is not taken into account in determining the amount of gain recognized on a distribution of marketable securities governed by *IRC § 731(c)*. *Treas Reg § 1.731-2(g)(2)(iii)*.

Appropriate adjustments are made to the adjusted basis of the partnership in the contributed property to reflect the amount of gain recognized. *IRC § 737(c)(2)*.

(n5)Footnote 3.2. *IRC § 737(b)*.

(n6)Footnote 4. The character of the gain or loss is determined by reference to the character that would have resulted if the property had been sold by the partnership to the distributee.

(n7)Footnote 5. *IRC § 704(c)(2)*. The like kind property is treated as contributed property to the extent of the value thereof.

(n8)Footnote 5.1. *IRC § 737(d)*.

(n9)Footnote 5.2. *IRC § 731(c)(1)*. Marketable securities contributed to a partnership are treated as property other than money in determining the contributing partner's net precontribution gain under *IRC § 737(b)*.

(n10)Footnote 5.3. *IRC § 731(c)(3)(B)*. A partner's distributive share of net gain is determined (i) by taking into account any basis adjustments under *IRC § 743(b)* with respect to that partner; (ii) without taking into account any special allocations adopted with a principal purpose of avoiding the effect of *IRC § 731(c)*; and (iii) without taking into account any gain or loss attributable to a distributed security to which *IRC § 731(c)* does not apply. *Treas Reg § 1.731-2(b)(3)*.

(n11)Footnote 5.4. *IRC § 731(c)(2)(A), (B); Treas Reg § 1.731-2(c)(2), (3)(i), (ii)*. A discussion of *IRC § 1092(d)(1)* can be found in Ch 9.

The value of the assets of an entity is determined without regard to any debt that may encumber or otherwise be allocable to those assets, other than debt that is incurred to acquire an asset with a principal purpose of avoiding or reducing the effect of *IRC § 731(c)*. *Treas Reg § 1.731-2(c)(4)*.

A financial instrument includes stocks and other equity interests, evidences of indebtedness, options, forward or future contracts, notional principal contracts, and derivatives. *IRC § 731(c)(2)(C)*.

(n12)Footnote 5.5. *IRC § 731(c)(3)*. The exception for a security that was not marketable when contributed applies only if the entity to which the security relates had no outstanding marketable securities on that date, the security is actively traded on the date of distribution, and the security was held by the partnership for at least six months before the security became marketable and the security was distributed within five years of the date on which it became marketable. *Treas Reg § 1.731-2(d)(1)*.

(n13)Footnote 5.6. *Treas Reg § 1.731-2(d)(1)*.

(n14)Footnote 5.7. *Treas Reg § 1.731-2(d)(3)*.

(n15)Footnote 5.8. *Treas Reg § 1.731-2(d)(2)*. Money contributed by the partnership does not include any money deemed contributed by the partnership as a result of *IRC § 752*.

(n16)Footnote 5.9. *IRC § 731(c)(3)(C)(i)*.

(n17)Footnote 5.10. *IRC § 731(c)(1)(C)(ii); Treas Reg § 1.731-2(e)(3)*.

(n18)Footnote 5.11. *IRC § 731(c)(3)(C)(iv)(I)*.

(n19)Footnote 5.12. *Treas Reg § 1.731-2(e)(4)*.

(n20)Footnote 5.13. *IRC § 731(c)(3)(C)(iii)(I)*. An eligible partner cannot be the transferor or transferee in a nonrecognition transaction involving the transfer of any portion of an interest in a partnership with respect to which the transferor was not an eligible partner. *IRC § 731(c)(3)(C)(iii)(II)*.

(n21)Footnote 5.14. *IRC § 731(c)(3)(C)(iv)(II)*.

(n22)Footnote 5.15. *IRC § 731(c)(5)*.

(n23)Footnote 6. *Treas Reg § 1.731-1(a)*.

(n24)Footnote 7. *IRC § 731(a)(2)*; but see *Cora-Texas Mfg Co v US*, 222 F Supp 527 (ED La 1963), *affd per curiam* 341 F2d 578 (5th Cir 1965) where a distribution to a corporate partner of its own stock gave rise to a recognized loss; the stock had a predetermined and fixed value and could not be reissued.

The terms "unrealized receivables" and "inventory items" are defined in *IRC § 751(c)* and *IRC § 751(d)(2)* respectively.

(n25)Footnote 8. *IRC § 736(b)(2)* prescribes this result by stating that a payment in exchange for an interest in partnership property cannot include any amount paid for unrealized receivables and good will.

(n26)Footnote 9. A distributive share is determined with regard to the income of the partnership, a guaranteed payment is not. *IRC § 736(a)*.

(n44)Footnote 27. *IRC* § 751(d)(2).

(n45)Footnote 28. *Treas Reg* § 1.751-1(d)(2)(ii). Stock in a DISC and stock in controlled foreign corporations constitute unrealized receivables *IRC* § 751(c).

(n46)Footnote 29. *IRC* § 751(d)(3). Property actually distributed to the partner does not come within the scope of *IRC* § 751(d)(3). *Treas Reg* § 1.751-1(d)(2)(iii).

(n47)Footnote 30. The deemed distribution is treated as an advance or drawing of money and is taken into account

at the end of the partnership taxable year. *Rev Rul 94-4, 1994-1 CB 195* .

(n48)Footnote 31. Instead, *IRC § 731* will apply.

(n49)Footnote 32. *IRC § 752(a)*.

(n50)Footnote 33. *Treas Reg § 1.751-1(g)*, Ex (2)(d)(2).

(n51)Footnote 34. *Treas Reg § 1.751-1(g)*, Ex (2)(d)(2).

(n52)Footnote 35. *IRC § 731(a)(1)*.

(n53)Footnote 36. *Treas Reg § 1.751-1(b)(2)(iii)*.

(n54)Footnote 37. *IRC § 732(a)(1)*. A special election regarding basis is available to a distributee partner who acquired his interest from other partners not more than two years before the distribution. *IRC § 732(d)*, discussed in Rabkin & Johnson, 3 *Federal Income, Gift and Estate Taxation*, § 16.12 (Matthew Bender).

(n55)Footnote 38. *IRC § 732(a)(2)*.

(n56)Footnote 39. *IRC § 732(e)*.

(n57)Footnote 40. *IRC § 732(c)(1)(A)(i)*.

(n58)Footnote 41. *IRC § 732(c)(1)(A)(ii), (3)*.

(n59)Footnote 42. *IRC § 731(c)(4)(A)*.

(n60)Footnote 43. *IRC § 731(c)(4)(B)*.

(n61)Footnote 44. *IRC § 732(f)(1)*, effective with respect to distributions made after July 14, 1999. However, in the case of a corporation that is a partner in a partnership as of July 14, 1999, *IRC § 732(f)(1)* will apply to any distribution made (or treated as made) after June 30, 2001, except that, if a distribution is made after Dec 17, 1999 and before July 1, 2001, *IRC § 732(f)(1)* will apply only if the corporate partner so elects.

IRC § 732(f)(1) does not apply to any distribution of stock in the distributed corporation if the corporate partner does not have control immediately after the exchange immediately after the distribution, and the corporate partner establishes to the satisfaction of the Service that the distribution was not part of a plan or arrangement to acquire control of the distributed corporation. *IRC § 732(f)(2)*.

Control for purposes of *IRC § 732(f)(1)* means the ownership by the corporate partner of stock that possesses at least 80 percent of the total voting power of the stock of the distributed corporation, and has a value equal to at least 80 percent of the total value of the stock of the distributed corporation. *IRC §§ 732(f)(5), 1504(a)(2)*.

(n62)Footnote 45. *IRC § 732(f)(3)*.

(n63)Footnote 46. *IRC § 732(a)(2)*.

(n64)Footnote 47. *IRC § 732(f)(4)*.

(n65)Footnote 48. *IRC § 732(f)(6)*.

(n66)Footnote 49. *IRC § 732(f)(7)*.

(n67)Footnote 50. *IRC* § 732(b). The *IRC* § 732(d) election may also be available in the case of a liquidating distribution.

The basis adjustment rules of *IRC* § 732(f) apply to a liquidating distribution to a corporate partner of stock in a controlled corporation. See the discussion above.

(n68)Footnote 51. *IRC* § 732(e).

(n69)Footnote 52. *IRC* § 732(c)(1)(B), (2).

(n70)Footnote 53. *IRC* § 735(b).

(n71)Footnote 54. *Treas Reg* § 1.735-1(b).

(n72)Footnote 55. *IRC* § 735(a)(2).

(n73)Footnote 56. A full discussion of the partnership's basis for the property retained by it after the distribution is beyond the scope of this book. Generally, "the basis of partnership property shall not be adjusted as the result of a distribution of property to a partner. ..." *IRC* § 734(a). All that happens is that the partnership reduces its basis for a particular class of property by the basis of any property of the same class distributed to the partner. However, there may be a different result if the partnership has elected the optional adjustment to basis provided by *IRC* § 754. See Janin, "Current and Liquidating Distributions and Partnership Elections Under Section 754," *NYU 15th Inst on Fed Tax* 95 (1957).

CHAPTER 15 The Taxpayer as an S Corporation Shareholder

2-15 Taxation of Securities Transactions § 15.01

§ 15.01 Introduction

In 1954, Congress passed legislation permitting noncorporate businesses to elect to be taxed as corporations. At the same time, a Senate provision, which would have permitted a corporation to forego payment of any tax and required the shareholders to report the corporate income as their own, was not enacted into law. Such legislation did pass in 1958, making it possible for a business to select the form of business organization desired without the necessity of taking into account major differences in tax consequence.ⁿ¹

As first enacted, the basic scheme of Subchapter S was the elimination of tax at the corporate level and the inclusion of a proportionate share of the corporation's undistributed taxable income in the gross income of each shareholder owning stock on the last day of the corporation's taxable year. Losses sustained by the corporation similarly passed through to, and could be deducted by, its shareholders, based on each shareholder's pro rata share of ownership in the corporation during the taxable year. Specific items of income or deduction other than long-term capital gains did not pass through.

A belief "that partnership-like rules which pass items of income and loss through to the corporation's shareholders with distributions being generally a return of the shareholder's investment is a simpler and more rational taxing scheme"ⁿ² led to the enactment of the Subchapter S Revision Act of 1982. With some exception, the rules governing S corporations and their shareholders parallel those prescribed for partnerships and partners.

The discussion in this chapter will focus on the effect of a Subchapter S election on the corporation and its shareholders. It will not touch upon the requirements for electing Subchapter S treatment or upon the conditions that must be met if a corporation desires to remain an S corporation.ⁿ³

CHAPTER 15 The Taxpayer as an S Corporation Shareholder

2-15 Taxation of Securities Transactions § 15.02

§ 15.02 Effect of the Election on the Corporation

[1] Taxes Imposed on the Corporation.

The essential feature of a Subchapter S election is, with limited exceptions, the elimination of all income taxes on the corporation's income.ⁿ¹

The first of the exceptions arises whenever, for any taxable year, an S corporation that was once a C corporation has a net recognized built-in gain.ⁿ² The tax imposed on such gain is determined by applying the highest tax rate specified in *IRC Section 11* to the net recognized built-in gains for the taxable year.ⁿ³ The corporation will be allowed to continue to utilize any unexpired net operating loss, capital loss, or business credit carryforward in computing the amount of tax on net recognized built-in gains.ⁿ⁴

The corporation's net recognized built-in gain is the amount that would be its taxable income (except as provided for net operating loss carryforwards) if only recognized built-in gains and losses were taken into account.ⁿ⁵ If the corporation became an S corporation after March 30, 1988, the amount of net recognized built-in gain for any year cannot exceed its taxable income determined without regard to any of the deductions allowed by *IRC Sections 241 through 250* (other than the deduction for amortization of organizational expenses permitted by *IRC Section 248*) or the net operating loss deduction; any net recognized built-in gain not subject to tax because of this limitation is carried forward and treated as recognized built-in gain or loss in the succeeding year.

The corporation's built-in gain or loss is the amount of gain or loss that arose prior to its conversion to an S corporation; it becomes recognized if the corporation disposes of an asset with built-in gain or loss within ten yearsⁿ⁶ after the S election took effect.ⁿ⁷ Gains and losses on sales or distributions by the corporation are presumed to be built-in gains and losses, unless the corporation can establish that the asset was not held at the beginning of the ten-year period or that all or part of the gain or loss arose after the conversion. However, any asset acquired after the conversion date in a tax-free exchange for an asset held on that date is subject to the rules of *IRC Section 1374*.ⁿ⁸ The total taken into account during the ten-year period cannot exceed the aggregate net unrealized built-in gain of the corporation at the time of the conversion; the amount taxable in any year is limited to the excess of the corporation's net unrealized built-in gain over its net recognized built-in gains for prior years in the ten-year recognition period.ⁿ⁹

The regulations further limit the amount of an S corporation's net recognized built-in gain for any taxable year to the

least of:

- (1) its taxable income determined by using all rules applying to C corporations and considering only its recognized built-in gain, recognized built-in loss, and recognized built-in gain carryover (pre-limitation amount);
- (2) its taxable income determined by using all rules applying to C corporations as modified by *IRC Section 1375(b)(1)(B)* (taxable income limitation); and
- (3) the amount by which its net unrealized built-in gain exceeds its net recognized built-in gain for all prior taxable years (net unrealized built-in gain limitation).ⁿ¹⁰

If an S corporation's pre-limitation amount for any taxable year exceeds its net recognized built-in gain for that year, the S corporation's net recognized built-in gain consists of a ratable portion of each item of income, gain, loss and deduction included in the pre-limitation amount.ⁿ¹¹ If an S corporation's net recognized built-in gain for any taxable year is equal to its taxable income limitation, the amount by which its pre-limitation amount exceeds its taxable income limitation is a recognized built-in carryover included in its pre-limitation amount for the succeeding taxable year. The recognized built-in gain carryover consists of that portion of each item of income, gain, loss, and deduction not included in the S corporation's net recognized built-in gain for the year in which the carryover arises.ⁿ¹²

Example:

A Corp. is a calendar year C corporation that elects to become an S corporation on January 1, 1996. A has a net unrealized built-in gain of \$200,000 and no net operating loss or capital loss carryforwards. In 1996, A has:

- (1) a pre-limitation amount of \$80,000 (consisting of ordinary income of \$60,000 and capital gain of \$20,000);
- (2) a taxable income limitation of \$38,400; and
- (3) a net unrealized built-in gain limitation of \$200,000.

A's net recognized built-in gain for 1996 is \$38,400, the least of the three limitations. Under the allocation rule, A's net recognized built-in gain for 1996 consists of a ratable portion of each item of income and gain in the pre-limitation amount, namely, recognized built-in ordinary income of \$28,800 ($\$38,400 \text{ taxable income} / \$80,000 \text{ pre-limitation amount} \times \$60,000 \text{ built-in ordinary income}$) and recognized built-in capital gain of \$9,600 ($\$38,400 \text{ taxable income} / \$80,000 \text{ pre-limitation amount} \times \$20,000 \text{ built-in capital gain}$). A has a recognized built-in gain carryover to 1997 of \$41,600 ($\$80,000 \text{ pre-limitation amount less } \$38,400 \text{ net recognized built-in gain for 1996}$), consisting of \$31,200 of recognized built-in ordinary income and \$10,400 of recognized built-in capital gain. The ten-year period is a calendar period measured from the first day the corporation is an S corporation or the day an S corporation acquires assets in a transaction in which its basis in the assets is determined in whole or in part by reference to the basis of the assets in the hands of a C corporation. *Treas Reg § 1.1374-1(d)*.

For purposes of the built-in gains tax, any item of income that is properly taken into account for any taxable year during the ten-year recognition period but is attributable to periods before the first taxable year that the corporation was an S corporation is treated as a recognized built-in gain for the taxable year in which it is properly taken into account.ⁿ¹³ Thus, the term "disposition" includes not only sales or exchanges but other income recognition events that effectively dispose of or relinquish the taxpayer's right to claim or receive income, e.g., the collection of accounts receivable by a cash basis taxpayer.ⁿ¹⁴ Amounts that are allowable as a deduction during the recognition period but are attributable to

periods before the conversion to S corporation status are treated as recognized built-in losses in the year of deduction.ⁿ¹⁵ The amount of net unrealized built-in gain is adjusted for amounts treated as recognized built-in gains or losses pursuant to the foregoing rules.

If a corporation sells an asset before or during the recognition period and reports the income from the sale under the installment method during or after the recognition period, the income is subject to tax under *IRC Section 1374*.ⁿ¹⁶ For purposes of this rule, the taxable income limitation is equal to the amount by which the S corporation's net recognized built-in gain would have been increased from the year of sale to the earlier of (1) the year the income is reported under the installment method or (2) the last year of the recognition period, assuming all income from the sale had been reported in the year of sale, and all provisions of *IRC Section 1374* applied. If the corporation sells the asset before the recognition period, the income from the sale that is not reported before the recognition period is treated as having been reported in the first year of the recognition period.ⁿ¹⁷

The tax generally does not apply to corporations that have always been S corporations.ⁿ¹⁸ However, the built-in gain tax will apply to such a corporation if it acquires an asset and its basis in the asset is determined in whole or in part by reference to the basis of the asset in the hands of a C corporation.ⁿ¹⁹ In such case, each acquisition of assets from a C corporation is subject to a separate determination of the amount of net built-in gain.

If *IRC Section 1374(d)(8)* applies to an S corporation's acquisition of assets, some or all of the stock of the corporation from which the assets were acquired was taken into account in the computation of net unrealized built-in gain for a pool of assets of the S corporation, and some or all of such stock is redeemed or canceled in the transaction, then, the net unrealized built-in gain is adjusted to eliminate any effect that any built-in gain or built-in loss in the redeemed or canceled stock (other than stock for which a loss is claimed under *IRC Section 165*) had on the initial computation of net unrealized built-in gain for that pool of assets.ⁿ²⁰ This adjustment to net unrealized built-in gain is made only to reflect built-in gain or built-in loss in the redeemed or canceled stock that has not resulted in recognized built-in gain or recognized built-in loss during the recognition period.ⁿ²¹

The built-in gain rule clearly affects a corporation that employs the first-in, first-out (FIFO) inventory method and sells appreciated inventory within the ten-year period. A last-in, first-out (LIFO) method corporation can escape the effect of the tax if it does not invade LIFO layers during the period. *IRC Section 1363(d)* forces any LIFO-method C corporation electing to be an S corporation to include "the LIFO recapture amount" (the excess of the value of its inventory under the FIFO method over the value under the LIFO method) in income in its last taxable year as a C corporation.ⁿ²² The increased tax is payable in four annual installments, the first due on the due date (determined without regard to extensions) for the return for the corporation's last C corporation taxable year. The remaining installments must be paid before the due dates (without regard to extensions) for the succeeding three taxable years. No interest is payable if the payments are timely.

A C corporation that does not include a LIFO recapture amount in gross income for the last taxable year before its S election becomes effective may be liable for a 20-percent accuracy-related penalty under *IRC Section 6662*.ⁿ²³ A corporation that fails to make a LIFO recapture installment payment by its required due date may be liable for a failure to pay penalty under *IRC Section 6651*. In addition, the corporation may be liable for interest under *IRC Section 6601*. The failure to pay, or late payment of, a LIFO recapture installment payment does not cause the remaining unpaid installments to become due immediately.

The second tax applies only if, at the end of the taxable year, an S corporation has earnings and profits remaining from years in which it was a C corporation (a regularly taxed corporation subject to the provisions of Subchapter C) and has passive investment incomeⁿ²⁴ amounting to more than 25 percent of its gross receipts for the year. (The corporation's Subchapter S election will terminate if the corporation's passive investment income exceeds 25 percent of gross receipts for three consecutive taxable years and the corporation has accumulated earnings and profits at the close of each of those taxable years.)ⁿ²⁵ The impost here is 35 percent (the highest corporate rate) of the corporation's excess net

passive income (its net passive income multiplied by a fraction the numerator of which is the amount by which the passive investment income for the taxable year exceeds 25 percent of the gross receipts for that year and the denominator of which is the passive investment income for the year).ⁿ²⁶ However, the amount of excess net passive income cannot exceed the corporation's taxable income for the year, determined without regard to the special deductions allowed to corporations under *IRC Sections 241 through 250* (except for the deduction for amortization of organizational expenses sanctioned by *IRC Section 248*) and the net operating loss deduction. To illustrate:

Example:

For a given taxable year, an S corporation has \$140,000 of gross receipts, \$60,000 of passive income, and \$15,000 in expenses directly connected with such income. Its excess net passive income is \$18,750, determined by multiplying net passive income of \$45,000 by the fraction, 25,000/60,000. (The numerator of the fraction is the amount by which passive investment income exceeds 25 percent of gross receipts; the denominator is passive income.) The tax on excess net passive investment income is \$6,563 (35 percent of \$18,750).

The Service can waive the tax if the S corporation can establish to the satisfaction of the government that it determined in good faith that it had no accumulated earnings and profits at the close of the taxable year, and, during a reasonable time after it was determined that it did have earnings and profits at the close of the year, the earnings and profits were distributed.ⁿ²⁷

The corporation can avoid the tax on excess passive income and the three-year termination rule by electing, with the consent of its shareholders, to distribute all of its accumulated earnings and profits as a dividend to its shareholders.ⁿ²⁸

Finally, an S corporation that claimed an investment credit for property acquired when it was a C corporation will be visited with the increase in tax mandated by *IRC Section 47* if it makes an early disposition of that property.ⁿ²⁹

Under *IRC Section 6655(g)(4)*, an S corporation that becomes obligated for any of the above taxes must make installment payments of its estimated tax liability.ⁿ³⁰

[2] Computation of the Corporation's Taxable Income.

Pursuant to *IRC Section 1363(b)*, an S corporation's taxable income is computed "in the same manner as ... an individual," except that:

- (1) items of income, loss, deduction, or credit the separate treatment of which could affect the tax liability of any shareholder must be separately stated;
- (2) the deductions for personal exemptions, foreign taxes, charitable contributions, and depletion, the net operating loss deduction, and the deductions provided in *IRC Sections 211 through 220* are not available;
- (3) the amortization of organizational expenditures under *IRC Section 248* is allowed as a deduction; and
- (4) the restrictions on corporate use of certain tax benefits prescribed by *IRC Section 291* will continue to apply to an S corporation if it or any predecessor corporation was a C corporation for any of the three immediately preceding years.

S Corporations with one or more "qualified subchapter S subsidiaries" ("QSubs") are required to consolidate with those subsidiaries when filing a return. Under the "deemed liquidation" rule, a QSub is not treated as a separate corporation, and all of its assets, liabilities and items of income, deduction and credit are treated as assets, liabilities and items of the parent S corporation.ⁿ¹ A QSub is any domestic subsidiary that (1) is 100 percent owned by the S Corporation, (2) the

S Corporation elects to treat as a QSub, and (3) would not be ineligible to make an election to be taxed as an S Corporation.ⁿ²

The Regulations make a limited exception to the deemed liquidation rule, pursuant to authority expressly granted by Congress, for S Corporations and QSubs that are banks: "Any special rules applicable to banks under the Internal Revenue Code" will "continue to apply separately to the bank parent or bank subsidiary as if the deemed liquidation of any QSub ... had not occurred."ⁿ³ In *Vainisi v Commr*,ⁿ⁴ the Internal Revenue Service argued that this exception justified denying a deduction for 20 percent of the amount deducted by a QSub bank for interest on indebtedness incurred to purchase or carry qualified tax exempt bonds pursuant to *IRC Section 291(a)(3)*, an anti-corporate tax preference provision normally applicable only to C corporations. *IRC Section 1363(b)(4)*, referred to above, provides that an S corporation can also be subject to Section 291, but only if it (or a predecessor) was a C corporation in any of the three preceding taxable years. The Court of Appeals for the Seventh Circuit rejected the Service's attempt to use its regulation to apply Section 291 to an S Corporation (or QSub) that had elected S Corporation status more than three years previously, finding no evidence that Congress intended to allow the Service to administratively overrule *IRC Section 1363(b)(4)* when it authorized administrative exceptions to the deemed liquidation rule, and concluding moreover that the language of *Treasury Regulation Section 1.1361-4(a)(3)* did not purport to overrule that statutory provision.

Elections affecting the computation of items derived from an S corporation are generally made at the corporate level.ⁿ⁵ However, each shareholder must separately make the elections called for by *IRC Section 617* (deduction and recapture of certain mining exploration expenditures) and *IRC Section 901* (the foreign tax credit).ⁿ⁶

The rules prescribed by Subchapter C will usually apply to S corporations unless the result would be inconsistent with the treatment of the S corporation as a pass-through entity.ⁿ⁷ A further exception decrees that an S corporation in its capacity as a shareholder of another corporation is to be treated as an individual.ⁿ⁸ For example, an S corporation would handle dividends received from other corporations under the provisions of *IRC Section 301* governing noncorporate distributees and would be precluded from claiming a deduction for dividends received under *IRC Section 243*.

[3] The Corporation's Taxable Year.

An S corporation is generally required to adopt a taxable year that ends on December 31 unless it can establish a business purpose for a different taxable year.ⁿ¹ A deferral of income to shareholders is not a business purpose.

However, *IRC Section 444* permits an S corporation to elect a different taxable year if the adopted year results in a deferral period of not longer than three months.ⁿ² The deferral period is the number of months between the close of the taxable year and the close of the taxable year otherwise required.ⁿ³ For example, if a taxable year ending October 31 is elected and a taxable year ending December 31 is otherwise required, the deferral period of the taxable year ending October 31 is two months.

The election is made at the entity level and carries with it the "required payment" imposed by *IRC Section 7519* for each year that the election is in effect.ⁿ⁴ The required payment for an applicable election year (any year of the corporation for which the election is in effect) is equal to the excess of (a) the product of the applicable percentage of the adjusted highest Section 1 tax rate multiplied by the corporation's net base-year income over (b) the net required payment balance (the excess, if any, of the required payments for all preceding applicable election years over the aggregate amount allowable as a refund to the entity for all preceding applicable election years).ⁿ⁵ The adjusted highest Section 1 rate is the highest tax rate imposed by *IRC Section 1* at the end of the year preceding the election year, plus one percentage point.ⁿ⁶ If the required payment for any applicable election year is negative, the corporation is entitled to a refund.ⁿ⁷

The corporation's net base year income is equal to the sum of the deferral ratio multiplied by the corporation's net income for the base year,ⁿ⁸ plus the excess of (i) the deferral ratio multiplied by the aggregate amount of applicable payments made during the base year, over (ii) the aggregate amount of applicable payments made during the deferral period of the base year.ⁿ⁹ The deferral ratio is the ratio that the number of months in the deferral period of the base year bears to the number of months in the corporation's taxable year. The corporation's net income cannot be less than zero and is determined by taking into account all items (other than credits and tax-exempt income) passed through to shareholders pursuant to *IRC Section 1366(a)*.ⁿ¹⁰ If the corporation was a C corporation for the base year, its taxable income for that year is deemed to be its net income for the year. Applicable payments are amounts paid by an S corporation that are includible in the gross income of its shareholders, other than gains from the sale or exchange of property between the shareholder and the corporation and dividends paid by the S corporation.ⁿ¹¹

An entity does not need to make a required payment if the total of required payments for the current and all preceding applicable election years does not exceed \$500.ⁿ¹² An amount not required to be paid is not considered to be part of the required payment for the preceding applicable election year for the purpose of determining the amount of the required payment for the current election year. For example, assume that a corporation's required payment for each of its first and second applicable election years is \$400. The corporation will not make a required payment for the first year, but will have to make a required payment of \$800 for the second year.

Any required payment is treated as a tax for purposes of determining interest. However, interest is not payable to a corporation that has a negative required payment.ⁿ¹³

A penalty of 10 percent of the underpayment is imposed for failure to make a timely payment of any amount required by *IRC Section 7519*. In addition, the required payment is treated as a tax for purposes of the negligence and fraud penalties of *IRC Sections 6662* and *6663*.

The effect of the *IRC Section 444* election and *IRC Section 7519* payment can be illustrated by the following example:

Example:

An S corporation has a fiscal year that ends on September 30. It has net income of \$100,000 for the year ended September 30, 2002, and \$200,000 for the following year. The corporation does not make any applicable payments to its shareholders.

The required payment for the fiscal year ending in 2002 is \$9,650. The corporation's net income of \$100,000 is multiplied by a deferral ratio of 3/12 (three months in the deferral period, 12 months in the taxable year) and then by 38.6 percent (the adjusted highest Section 1 rate for 2002).

The required payment for 2003 is \$9,650. The corporation's net income of \$200,000 is multiplied by the deferral ratio of 3/12 and then by 38.6 percent (\$19,300), yielding \$9,650. The \$2,250 required payment for 2002 is then subtracted to produce the required payment for 2003.

FOOTNOTES:

(n1)Footnote 1. *IRC § 1363(a)*. The exemption from tax extends to the environmental tax imposed on corporations by *IRC § 59A*. *Rev Rul 89-82, 1989-1 CB 23*.

(n2)Footnote 2. *IRC § 1374(a)*. In *Ltr Rul 200004032*, the Service held that an S corporation's charitable contribution of real estate did not result in gain or loss recognition under *IRC § 1374*.

(n3)Footnote 3. *IRC § 1374(b)(1), (4), (c)(2)*. The only credit that can be taken is the credit for certain uses of gasoline, special fuels, and lubricating oil allowed by *IRC § 34*. *IRC § 1374(b)(3)(A)*.

(n4)Footnote 4. *IRC § 1374(b)(2), (3)(B).*

(n5)Footnote 5. *IRC § 1374(d)(2).*

(n6)Footnote 6. *IRC § 1374(d)(7)(B)* temporarily shortens the recognition period from ten to seven years for purposes of calculating an S corporation's net recognized built-in gain in any taxable year beginning in 2009 or 2010. Thus, for example, if a corporation converted to S corporation status in 2002, and held an asset with a built in gain in that year, a disposition of that asset in 2010 will not be subject to the *IRC § 1374* tax. Unless the rule of *IRC § 1374(d)(7)(B)* is extended, however, if the corporation waits until its next taxable year, beginning in 2011, to sell the asset, the built-in gain will again be taxable since the recognition period reverts to ten years after 2010.

(n7)Footnote 7. *IRC § 1374(d)(3), (4), (7).*

A loss attributable to the basis of redeemed stock that is taken into account pursuant to the rules of *Prop Treas Reg § 1.302-5* is allowed as a deduction against net recognized built-in gain of the S corporation for the taxable year, if the loss arose in a year in which the corporation was a C corporation. *Prop Treas Reg § 1.1374-5(a)*. The rule will be applicable to redemptions occurring after the regulation becomes final.

The Service has ruled that income derived from timber, coal, and iron ore during the recognition period constitutes normal operating income and is not recognized built-in gain within the meaning of *IRC § 1374(d)(3)*. *Rev Rul 2001-50, 2001-2 CB 343*. In so ruling, the Service stated that there is no indication that Congress intended the capital gain rate benefits provided by *IRC § 631* to change that result.

(n8)Footnote 8. *IRC § 1374(d)(6).*

(n9)Footnote 9. *IRC § 1374(c)(2), (d)(1).*

(n10)Footnote 10. *Treas Reg § 1.1374-2(a)*. In determining its taxable income for pre-limitation amount and taxable income limitation purposes, a corporation must use the accounting method it uses for tax purposes as an S corporation. *Treas Reg § 1.1374-2(d)*.

(n11)Footnote 11. *Treas Reg § 1.1374-2(b).*

(n12)Footnote 12. *Treas Reg § 1.1374-2(c).*

(n13)Footnote 13. *Treas Reg § 1.1374-4(b)(1)*. *Treas Reg § 1.1374-4(d)(1)* treats an *IRC § 481(a)* adjustment (an adjustment required because of a change in accounting method) taken into account in the recognition period as recognized built-in gain or loss to the extent the adjustment relates to items attributable to periods before the beginning of the recognition period. The Tax Court reached the same conclusion in *Argo Sales Co v Commr*, 105 TC 86 (1995), involving a year prior to the effective date of the regulation.

(n14)Footnote 14. *IRC § 1374(d)(5); Frank J. Leou, M.D., P.A. v Commr*, TC Memo 1994-393.

(n15)Footnote 15. *Treas Reg § 1.1374-4(b)(2).*

(n16)Footnote 16. *Treas Reg § 1.1374-4(h)(1).*

(n17)Footnote 17. *Treas Reg § 1.1374-4(h)(2)*. If the limitation applies, the excess of the amount reported under the installment method over the amount subject to tax under the limitation is treated as if it were reported in the succeeding taxable year or years within the recognition period. The amount reported in a later year is reduced to the extent that the amount not subject to tax under the limitation was not subject to tax because the S corporation had an excess of recognized built-in loss over recognized built-in gain in the taxable year of the sale and succeeding years in

the recognition period. *Treas Reg § 1.1374-4(h)(3)*.

(n18)Footnote 18. *IRC § 1374(c)(1)*.

(n19)Footnote 19. *IRC § 1374(d)(8)*. *IRC § 1374(d)(8)* applies to any transaction described in that section that occurs after Dec 27, 1994, regardless of the date of the corporation's election to be an S corporation. *Temp Treas Reg § 1.1374-8T(a)(2)*.

(n20)Footnote 20. *Treas Reg § 1.1374-3(b)(1)*. A pool of assets is defined as (i) the assets held by the corporation on the first day it became an S corporation, if the corporation was previously a C corporation; or (ii) the assets of the S corporation acquired from a C corporation in an *IRC § 1374(d)(8)* transaction. *Treas Reg § 1.1374-3(b)(4)*.

(n21)Footnote 21. *Treas Reg § 1.1374-3(b)(2)*.

(n22)Footnote 22. The rules relating to (a) the prohibition on adjustments of earnings and profits of an S corporation (*IRC § 1371(c)(1)*) and (b) the requirement to reduce the basis of stock of the S corporation by reason of nondeductible expenses (*IRC § 1367(a)(2)(D)*) do not apply to the LIFO recapture tax. *IRC § 1363(d)(5)*.

Except as provided in regulations, the corporation is not treated as a member of an affiliated group with respect to the amount of the LIFO recapture amount.

Rev Proc 94-61, 1994-2 CB 775, sets forth procedures for reporting the LIFO recapture amount.

As part of a restructuring, a C corporation that was a holding company elected S corporation status. Newly formed S corporation subsidiaries of the corporation contributed assets and cash to limited partnerships in exchange for general partnership interests, and liabilities to the limited partnerships in exchange for limited partnership interests. The subsidiaries were then liquidated, leaving the corporation with the limited partnership interests. In *Coggin Automotive Corp v Commr*, 115 TC 349 (2000), the Tax Court applied the aggregate approach of partnerships to hold that corporation owned a pro rata share of the partnerships' inventories. This triggered application of *IRC § 1363(d)*. The Eleventh Circuit reversed on the ground that the holding company never owned any LIFO inventory that required recapture when it became an S corporation. The appellate opinion is reported at 292 F3d 1326 (11th Cir 2002).

(n23)Footnote 23. *Notice 2003-4, 2003-1 CB 294*.

(n24)Footnote 24. The term "passive investment income" means gross receipts derived from royalties, rents, dividends, interest and annuities. *IRC § 1362(d)(3)(C)(i)*. It does not include interest on obligations acquired from sales of inventory, interest earned by a lending or finance company that meets the requirements of *IRC § 542(c)(6)*, or amounts received on the complete liquidation of a corporation in which the S corporation owned more than 50 percent of each class of stock. *IRC §§ 1362(d)(3)(C)(ii), 1375(b)(3)*. If an S corporation holds stock in a C corporation and that stock (a) possesses at least 80 percent of the total voting power of the stock of the C corporation, and (b) has a value equal to at least 80 percent of the total value of the stock of the C corporation, passive investment income does not include dividends from the C corporation attributable to the earnings and profits of the C corporation derived from the active conduct of a trade or business. *IRC §§ 1362(d)(3)(C)(iv), 1504(a)(2)*.

In the case of a bank (as defined in *IRC § 581*), a bank holding company (within the meaning of § 2(a) of the Bank Holding Company Act of 1956), or a financial holding company within the meaning of § 2(p) of that Act), passive investment income does not include (i) interest income earned by the bank or company, or (ii) dividends on assets required to be held by the bank or company, including stock in the Federal Reserve Bank, the Federal Home Loan Bank, or the Federal Agricultural Mortgage Bank or certificates issued by a Federal Intermediate Credit Bank. *IRC § 1362(d)(3)(C)(v)*.

The term "rents" means amounts received for the use of, or right to use, property. The term does not include rents derived in the active trade or business of renting property. Rents are so derived only if, based on all the facts and circumstances, the corporation provides significant services or incurs substantial costs in the rental business. Generally significant services are not provided in connection with net leases. Factors for determining whether significant services are performed or substantial costs are incurred include the number of employees providing services and the types and amounts of costs incurred. *Treas Reg § 1.1362-2(c)(5)(ii)(B)(2)*; *Ltr Rul 9411015* ; *Ltr Rul 9409010* ; *Ltr Rul 9129015* .

(n25)Footnote 25. *IRC § 1362(d)(3)*. If a corporation was an electing small business corporation under Subchapter S for any taxable year beginning before Jan 1, 1983, and the corporation is an S corporation for its first taxable year beginning after Dec 31, 1996, the amount of the corporation's accumulated earnings and profits (as of the beginning of that first taxable year) will be reduced by an amount equal to the portion (if any) of the accumulated earnings and profits that were accumulated in any taxable year beginning before Jan 1, 1983, for which the corporation was an electing small business corporation. Small Business Job Protection Act of 1996, § 1311.

(n26)Footnote 26. *IRC § 1375(a), (b)*. The *IRC § 34* credit is the only credit allowed against the tax. *IRC § 1375(c)*. The amount of passive net income is determined by not taking into account any recognized built-in gain or loss of the S corporation for any taxable year in the recognition period. *IRC § 1375(b)(4)*.

(n27)Footnote 27. *IRC § 1375(d)*. The request for waiver is made to the district director. *Treas Reg § 1.1375A-1(d)(2)*.

(n28)Footnote 28. *IRC § 1368(e)(3)*; *IR 83-91, 1983-32 IRB 31*.

(n29)Footnote 29. *IRC § 1371(d)(2)*.

(n30)Footnote 30. No installment payments of estimated tax are due if the amount of the tax is less than \$500. *IRS Ann 90-44, 1990-13 IRB 25* .

(n31)Footnote 1. *IRC § 1361(b)(3)*; *Treas Reg § 1.1361-4(a)(2)*.

(n32)Footnote 2. *IRC § 1361(b)(3)(B)*.

(n33)Footnote 3. *Treas Reg § 1.1361-4(a)(3)*. Authority for the regulation is in *IRC § 1361(b)(3)(A)*, which prefaces the deemed liquidation rule with the statement "Except as provided in regulations prescribed by the Secretary ... " Apart from treating a QSub bank as a separate entity for purposes of applying "special rules applicable to banks under the Internal Revenue Code," *Treas Reg § 1.1361-4(a)(3)* provides that in all other respects taxable income should be calculated under the deemed liquidation rule.

(n34)Footnote 4. *599 F3d 567 (7th Cir 2010)* , *rev'g 132 TC 1 (2009)* .

(n35)Footnote 5. *IRC § 1363(c)(1)*.

(n36)Footnote 6. *IRC § 1363(c)(2)*.

(n37)Footnote 7. *IRC § 1371(a)(1)*. No carryforward or carryback of a loss arising in a year in which a corporation is a C corporation can be carried to a year in which it is an S corporation, but the S corporation years are counted in determining the maximum number of years to which an item can be carried. *IRC § 1371(b)(1), (3)*. No carryback or carryforward arises at the corporate level for a taxable year for which the corporation is an S corporation. *IRC § 1371(b)(2)*.

A loss attributable to unutilized basis of redeemed shares is treated as a carryforward arising in a taxable year for which the corporation was a C corporation. Therefore, it cannot be carried to a taxable year for which the corporation is

an S corporation. *Prop Treas Reg §§ 1.302-5(a), 1.1371-1(a)*.

The Tax Court held that a suspended passive activity loss incurred by a closely held C corporation that later elects to be an S corporation cannot be deducted by the S corporation in the year in which the corporation disposes of its entire interest in the activity generating the loss. *St Charles Inv Co v Commr*, 110 TC 46 (1998). The Tenth Circuit reversed. In its opinion, the "except as otherwise stated in this section" language of *IRC § 469(b)* prevents the application of unenumerated exceptions to the statute. Because the restrictions on carryforwards contained in *IRC § 1371* are not mentioned in *IRC § 469*, they have no effect on the operation of *IRC § 469(b)*. Thus, the deductibility of suspended passive activity losses is subject only to the provisions of *IRC § 469*. The appellate opinion is reported at 232 F3d 773 (10th Cir 2000).

(n38)Footnote 8. *IRC § 1371(a)(2)*.

(n39)Footnote 1. *IRC § 1378(a), (b)*.

(n40)Footnote 2. *IRC § 444(b)(2)*. The election is made on Form 8716 and must be filed with the appropriate IRS Service Center by the earlier of (i) the 15th day of the fifth month following the month that includes the first day of the taxable year for which the election will first be effective, or (ii) the due date (without regard to extensions) of the income tax return resulting from the election. *Temp Treas Reg § 1.444-3T(b)(1)*.

The election is not required if the corporation can show a business purpose for a different taxable year. A corporation that has filed a business-purpose request can also file a back-up election to take effect if the Service denies its business-purpose request. The words "BACK-UP ELECTION" should appear at the top of Form 8716. *Temp Treas Reg § 1.444-3T(b)(4)*.

See generally, Godshalk, "A Section 444 Election: Who, What, When and Why," 38 *Tax Notes* 1537 (1988).

(n41)Footnote 3. *IRC § 444(b)(4)*.

(n42)Footnote 4. *IRC § 444(c)(1), (d)(1)*. The election remains in effect until the corporation changes its taxable year or otherwise terminates the election. A change to a calendar year can be made without the Service's consent. *IRC § 444(d)(2)*.

No election can be made with respect to an S corporation that is part of a tiered structure, other than a tiered structure consisting only of partnerships or S corporations (or both), all of which have the same taxable year. *IRC § 444(d)(3)*. An S corporation is considered a member of a tiered entity if a deferral entity owns any portion of the corporation. *Temp Treas Reg § 1.444-2T(b)(1)*. A trust is normally a deferral entity. *Temp Treas Reg § 1.444-2T(b)(2)*. However, a trust that is treated as an electing small business trust under *IRC § 1361(e)* is not a deferral entity. *Treas Reg § 1.444-4(a)*. The same holds true with respect to a trust that is described in *IRC § 401(a)* or *IRC § 501(c)(3)*, and is exempt from taxation under *IRC § 501(a)*. *Treas Reg § 1.444-4(b)*.

See generally Bailey, "Tax Years of Partnerships, S Corporations, and Personal Service Corporations: The Mechanics of Sections 444, 7519 and 280H," 13 *Rev of Taxn of Individuals* 229 (1989).

(n43)Footnote 5. *IRC § 7519(b)*.

(n44)Footnote 6. *IRC § 7519(b)*.

(n45)Footnote 7. *IRC § 7519(c)*. The refund is payable on the later of April 15th of the year in which the required payment becomes negative or 90 days after a claim for refund is filed.

The corporation is also entitled to a refund of the net required payment balance if the election under *IRC § 444* is terminated or the entity is liquidated. The refund in this case is payable on the later of April 15th of the year following the calendar year of termination or liquidation, or 90 days after a refund claim is filed.

(n46)Footnote 8. The base year with respect to any applicable election year is the preceding taxable year of the S corporation. *IRC § 7519(e)*.

(n47)Footnote 9. *IRC § 7519(d)(1)*.

(n48)Footnote 10. *IRC § 7519(d)(2)*. Any limitation on the amount of any pass-through item that may be taken into account in computing the shareholder's taxable income is disregarded.

(n49)Footnote 11. *IRC § 7519(d)(3)*.

(n50)Footnote 12. *IRC § 7519(a)(2)*.

(n51)Footnote 13. *IRC § 7519(f)(3)*. A payment is timely if made on or before April 15 of the calendar year following the calendar year in which the applicable election year begins (or such later year as may be prescribed by the Service). *IRC § 7519(f)(2)*.

CHAPTER 15 The Taxpayer as an S Corporation Shareholder

2-15 Taxation of Securities Transactions § 15.03

§ 15.03 Effect of the Election on the Shareholders of an S Corporation

[1] Pass-Through of Items to Shareholders.

Each shareholder of the S corporation takes into account the shareholder's pro rata share of each item of the corporation's income, loss, deduction, or credit for the shareholder's taxable year in which the taxable year of the S corporation ends.ⁿ¹ Generally, a shareholder's pro rata share of any item for any taxable year is determined on a per-share, per-day basis.ⁿ² However, if any shareholder terminates the shareholder's interest in the corporation and all affected shareholders and the corporation agree, the pro rata shares are applied to the affected shareholders as if the taxable year consisted of two taxable years, the first of which ends on the date of termination.ⁿ³ Items taken into account by members of a shareholder's family may be adjusted as necessary to reflect reasonable compensation for services rendered or capital furnished to the corporation.ⁿ⁴

The items fall into two categories--separately stated items that can affect the liability of any shareholder and nonseparately computed income or loss.ⁿ⁵ The consequences of the pass-through of separately treated items can be illustrated by the following examples:ⁿ⁶

(1) Capital gains and losses pass through to the shareholder as such and are not offset by ordinary losses at the corporate level;

(2) *IRC Section 1231* gains and losses (gains and losses on certain property used in a trade or business) are passed through separately and aggregated with the shareholder's other *IRC Section 1231* gains and losses. Under prior law, an S corporation's *IRC Section 1231* gains were added to the corporation's capital gains and passed through as such;

(3) The charitable contributions of an S corporation are not subject to the 10 percent of taxable income deduction limit imposed on corporations by *IRC Section 170(b)(2)*. Instead, the contributions pass through and are added to the shareholder's personal contributions, and become subject to the individual percentage limitations on deductibility;

(4) Tax-exempt interest earned by an S corporation passes through to the shareholders retaining that character and increases the shareholders' bases in their S corporation stock. A subsequent distribution of

the tax-exempt interest is nontaxable and merely reduces basis;

(5) Items excludable from income under *IRC Section 108(a)* (income from discharge of indebtedness), unlike tax-exempt interest income, do not pass through to shareholders of an S corporation as "items of income (including tax-exempt income)" under *IRC Section 1366(a)(1)* and do not increase shareholder basis under *IRC Section 1367(a)(1)*.ⁿ⁷ Effective for discharges of indebtedness occurring after October 11, 2001, if an S corporation excludes discharge of indebtedness income under *IRC Section 108(a)*, the S corporation's "deemed operating loss" (i.e., the S corporation's "suspended" losses that exceed its shareholders' bases in the corporation's stock and debt and would normally be carried over to the next taxable year) must be reduced at the corporate level under *IRC Section 108(b)(2)*.ⁿ⁸

(6) Contributions to the capital of an S corporation do not pass through as "items of income (including tax-exempt income)" to shareholders, and do not increase shareholder basis.ⁿ⁹ The Supreme Court held in the early years of the income tax that, contributions to capital do not constitute income to a corporation within the meaning of *IRC Section 61*.ⁿ¹⁰ Since contributions to capital are not income, not even tax-exempt income, they do not constitute items of income for purposes of *IRC Section 1366(a)(1)* and *IRC Section 1367(a)(1)*. Stated another way, *IRC Section 118* excludes (not exempts) contributions to capital from income while, *IRC Sections 103* (tax-exempt interest) and *108* (cancellation of indebtedness income) establish exemptions for items that, in the absence of those sections, would constitute items of gross income.ⁿ¹¹

(7) Foreign taxes paid by an S corporation pass through as such to the shareholders, who, individually, must elect to claim them as deductions or credits on their own returns.ⁿ¹² However, because an S corporation is ineligible for the foreign tax credit for taxes paid by a foreign corporation in which the S corporation is a shareholder, there is no pass-through for those taxes;ⁿ¹³

(8) Items involved in the determination of credits (eg, the basis of property for purposes of computing the amount of qualified investment eligible for the investment tax credit) must be computed separately and passed through to the corporation's shareholders;

(9) Domestic losses and foreign losses pass through separately. Moreover, if an S corporation has foreign losses and domestic income, or vice versa, each passes through separately without aggregation at the corporate level;

(10) Depletion on an S corporation's interest in minerals is passed through to the shareholders as a separate item. This mirrors the treatment that has long obtained with respect to partnership interests;

(11) Although, generally, limitations on the amount of deduction, exclusion, or credit available to shareholders of an S corporation is determined solely at the shareholder level, a number of items are subject to limitations at both the corporate and shareholder levels, namely, the expensing of certain depreciable property (*IRC Section 179*) and the amortization of reforestation expenditures (*IRC Section 194*).

A conduit theory determines the character of items realized by the corporation and included in the shareholder's pro rata share of such items.ⁿ¹⁴ In general, this leads to characterization at the entity level.ⁿ¹⁵ Thus, for example, an expenditure which is a trade or business expense for the corporation remains so for the shareholder, even though it would not be deductible if incurred by the shareholder directly. In like fashion, items of tax preference for the corporation become items of tax preference for the shareholder.

The regulations contain two special exceptions to the general rule that character of items is determined at the corporate

level. If an S corporation is formed or availed of by any shareholder for a principal purpose of selling or exchanging contributed property that in the hands of the shareholder would not have produced capital gain if sold or exchanged by the shareholder, any gain recognized by the corporation on a sale or exchange of the property is treated as ordinary income.ⁿ¹⁶ If the corporation is formed or availed of for a principal purpose of selling or exchanging property that in the hands of the contributing shareholder would have produced a capital loss if sold or exchanged by the shareholder, any loss recognized by the corporation on a sale or exchange of the property is treated as a capital loss to the extent that, immediately before the contribution, the adjusted basis of the property in the hands of the shareholder exceeded the fair market value of the property.ⁿ¹⁷

[2] Calculating Basis in S Corporation Stock and Debt.

A shareholder's pro rata share of an S corporation's net operating loss passes through to the shareholder's individual return subject to the limitation that it may not exceed the sum of the shareholder's adjusted basis in the corporation's stock plus the shareholder's adjusted basis in any indebtedness owed to the shareholder by the corporation.ⁿ¹ Losses disallowed to the shareholder by reason of the basis limitation are deemed incurred by the corporation in its next taxable year, and continue to be carried forward indefinitely until the basis of the shareholder's stock or debt increases sufficiently to absorb the suspended loss.ⁿ² Termination of the corporation's S election results in a permanent disallowance of the suspended losses, unless the shareholder takes advantage of a post-termination grace period to increase the basis of his stock by a sufficient amount to deduct the suspended losses.ⁿ³

The rules generally applicable in calculating the basis of property for purposes of determining gain or loss are also applicable in determining the basis of stock or debt in an S corporation.ⁿ⁴ In addition, adjustments to basis must be made as of the close of each taxable year of the S corporation to reflect each shareholder's pro rata share of the S corporation's items of income, loss, and deduction, as well as any nontaxable distributions made with respect to such stock.ⁿ⁵ Basis is first increased by the shareholder's pro rata share of all income items of the corporation, whether or not taxable,ⁿ⁶ and then decreased (but not below zero) in the following order: (1) by nontaxable distributions received by the shareholder with respect to the stock, (2) by noncapital and nondeductible expense items,ⁿ⁷ and (3) by the corporation's other loss or deduction items.ⁿ⁸

Once basis in S corporation stock is reduced to zero, corporate losses can only flow through to the shareholder's individual return if and to the extent the shareholder has a basis "in any indebtedness of the S corporation to the shareholder."ⁿ⁹ If so, the S corporation's losses will pass through to the individual return of the shareholder and decrease the basis of corporate indebtedness held by that shareholder until that basis also reaches zero.ⁿ¹⁰ Once the basis of corporate debt is reduced under *IRC Section 1367(b)(2)(A)* (whether or not it is reduced to zero), any "net increase" in a subsequent taxable year (*i.e.*, in general, "net increase" means the amount by which the shareholder's pro rata share of income items described in *IRC Section 1367(a)(1)* exceeds his pro rata of deduction and other items described in *IRC Section 1367(a)(2)*) must be used to increase the shareholder's basis in the indebtedness, until the original basis of the indebtedness is restored.ⁿ¹¹

The restoration rule may be illustrated as follows. Suppose that A, the sole shareholder in an S corporation using the calendar year as its taxable year, advances \$1,000 to the corporation on January 1, 2010 in return for the corporation's promissory note. If the corporation has a \$600 net loss in 2010, and the basis of A's stock in the S corporation has been reduced to zero in previous years, the \$1,000 loan allows the \$600 loss to pass through to A's individual return, which in turn reduces the basis of the S corporation's note in A's hands from \$1,000 to \$400. If in 2011 the corporation has a net increase of \$200, and the note remains unpaid at the end of the year, an adjustment increasing the basis of the note by \$200, from \$400 to \$600, is made at the close of the taxable year under *IRC Section 1367(b)(2)(B)*. No adjustment is made to the basis of A's stock.

Under the regulations, if the basis of shareholder indebtedness is reduced and the indebtedness is later wholly or partially retired or otherwise disposed of before the end of a taxable year in which a "net increase" occurs, any

restoration of basis that would ordinarily be required as of the close of the corporation's taxable year is instead made effective immediately prior to the disposition of, or receipt of the first repayment on, the debt during the taxable year.ⁿ¹² Further, if the basis of indebtedness has been reduced and has not been fully restored when it is first paid or disposed of, "the disposition or repayment is a recognition event effective immediately before the indebtedness is disposed of or repaid (in whole or in part)."ⁿ¹³ Under existing case law, "the general rule...for payments on a debt where the face amount of the debt is in excess of its basis, is that the payments thereon each include income in proportion to a fraction, the numerator of which is the difference between the face amount and the basis of the debt and the denominator of which is the face amount of the debt."ⁿ¹⁴ So, in the example above, had the S corporation made a \$500 partial payment on its indebtedness to A before the end of 2011, the \$200 increase in basis adjustment normally made at the end of the taxable year would instead be made retroactive to the date on which A received the payment. Under the regulations and case law, A would realize income of \$200 on the \$500 partial payment of the \$1,000 promissory note in 2011 (\$400 total potential gain)ⁿ¹⁵ /\$1,000 face value x \$500 payment = \$200), and A will have a \$300 basis in the corporation's remaining \$500 indebtedness to him. If the S corporation has a \$300 net increase in the following year, 2012, \$200 of that amount must be used to fully restore A's basis in the remaining corporate indebtedness to \$500, after which \$100 may be used to increase the basis of A's stock from zero to \$100.

If an S corporation shareholder holds several notes from the corporation, the following rules apply:

- (1) If the corporation has a loss for the taxable year and the shareholder's basis in his stock is zero, the loss reduces the basis of each indebtedness in the same proportion as the basis of each indebtedness bears to the aggregate bases of all corporate indebtedness to the shareholder.ⁿ¹⁶
- (2) If in a year subsequent to the loss year the corporation has net income, the income is used to restore the basis of each note in the proportion that the amount of prior unrestored basis reductions made to that note bears to the prior unrestored basis reductions made to all of the shareholder's outstanding notes. However, if any of the shareholder's notes which have had a reduction in basis is repaid in whole or in part during the year, any available increase in basis must be applied first to increase the basis of the repaid note(s) to the extent necessary to offset any gain that would otherwise be realized on the repayment. Any remaining amount increases proportionately the basis of the other notes held by the shareholder at the close of the year which have had basis reductions.ⁿ¹⁷
- (3) Nothing in the regulations requires that repayments be applied ratably to each outstanding indebtedness or in any particular order. For example, it is possible to repay a corporate note that has not had a reduction in basis before repaying one that has.

Different rules may apply when an S corporation shareholder loans money to the corporation on open account. All advances made on open account are treated as a single indebtedness and all advances and repayments of advances made during the year are netted at the end of the year to determine the net advance or net repayment on the open account for that year.ⁿ¹⁸ For example, suppose A loans his wholly owned S corporation \$5,000 in 2009 on open account, that the basis of the debt is reduced to zero as a result of the corporation's losses in 2009, and that in 2010 (1) the S corporation repays the \$5,000 debt in full on February 1, 2010, (2) A makes an open account advance of \$6,000 on December 1, 2010, and (3) the S corporation has a loss of \$1,000 in 2010. Had the original \$5,000 advance been made as a separate written indebtedness, the \$5,000 repayment on February 1, 2010 would be a recognition event on which A would realize a \$5,000 gain. However, under the open account regulations the February 1 repayment has no tax significance but rather is put into suspense until the close of the year, at which time it is netted against the later \$6,000 open account advance, resulting in a net additional open account advance for the year of \$1,000. The \$1,000 increase in basis of open account indebtedness is available to offset the corporation's \$1,000 loss for the year, reducing the basis of the open account indebtedness to zero at the close of the year.

The tax avoidance potential of the open account netting rule was brought home to the Internal Revenue Service by the

Tax Court's decision in *Brooks v Comm'r*.ⁿ¹⁹ In response, the Treasury has amended the regulations to limit the amount of indebtedness that may be treated as "open account" to no more than \$25,000 at the close of any taxable year.ⁿ²⁰ If at the close of any taxable year an S corporation's open account indebtedness exceeds \$25,000, in all subsequent years the entire aggregate amount of such indebtedness will thereafter be treated for purposes of the regulations as indebtedness evidenced by a separate written instrument.ⁿ²¹

Unlike the Subchapter K basis rules applicable to partnerships and other passthrough entities, subchapter S does not permit an S corporation shareholder to add a pro rata share of the S corporation's third party indebtedness to his outside basis.ⁿ²² To qualify as "indebtedness of the S corporation to the shareholder" for purposes of the basis limitation in *IRC Section 1366(d)(1)(B)*, the indebtedness must have been incurred as the result of the shareholder's "actual economic outlay" to or on behalf of the S corporation that made the shareholder "poorer in a material sense."ⁿ²³ The "economic outlay" requirement stems from the Tax Court's reading of the legislative history of Subchapter S, which speaks of allowing basis only to the extent of the shareholder's "investment" in the corporation.ⁿ²⁴ The Tax Court concluded that the word 'investment' indicated an intent to limit basis to that shareholder's "actual economic outlay" in the S corporation, a test that is now universally applied by all the courts of appeal that have considered it, as well as the Tax Court.ⁿ²⁵ No economic outlay is made if a loan is made by a third party lender and the shareholder merely guarantees it,ⁿ²⁶ or pledges his own assets as collateral for the loan,ⁿ²⁷ or purchases a subordinated participation interest in the loan.ⁿ²⁸ In short--

"[N]o form of indirect borrowing, be it a guaranty, surety, accommodation, co-making or otherwise, gives rise to indebtedness from the corporation to the shareholders until and unless the shareholders pay part or all of the existing obligation. Before that crucial act, "liability" may exist, but not debt to the shareholders."ⁿ²⁹

On the other hand, an S corporation shareholder may claim basis in a loan originating from a third party by structuring the transaction so that the loan is made first to the shareholder and then re-loaned by the shareholder to the S corporation (i.e., a "back to back" loan).ⁿ³⁰ Indeed, an existing shareholder-guaranteed loan from a third party in which the shareholder has no basis may be restructured into a basis-creating shareholder loan by substituting the shareholder as the borrower in place of the S corporation.ⁿ³¹

In *Rev Rul 75-144* the Internal Revenue Service allowed a shareholder to substitute for his S corporation as borrower on a loan when the original lender was a third party bank, but the Service has challenged similar restructurings when the lender is related to the shareholder and the S corporation. In one such case, *Underwood v Comm'r*,ⁿ³² the Court distinguished *Rev Rul 75-144* on the ground that a bank or other independent lender stands ready to enforce the shareholder's substituted obligation, ensuring that an economic outlay will eventually be made by the shareholder. When a related party holds the shareholder's obligation, it remains unclear whether the shareholder will ever cause the related corporation to enforce the note, leaving open the possibility that the shareholder might never make the economic outlay that is a prerequisite to acquiring basis. *Underwood* did not hold that the economic outlay test could never be satisfied when a related party is the lender, however, and in *Bhatia v Comm'r*,ⁿ³³ the Tax Court, after noting that there is "a heavy burden on shareholders who seek to rearrange the indebtedness of related closely held S corporations," added that "the existence of such a relationship is not necessarily fatal if other elements are present which clearly establish the bona fides of the transactions and their economic impact."ⁿ³⁴

A shareholder's basis is adjusted downward when an S corporation makes a deductible charitable contribution. The purpose of this adjustment is to avoid giving the shareholder a double deduction.

Prior to the Pension Protection Act of 2006 ("PPA"), that downward basis adjustment was equal to the fair market value of the contributed property. PPA provided that this reduction would only be in an amount equal to the basis of the contributed property rather than the fair market value, for 2006 and 2007. The Tax Extenders and Alternative Minimum Tax Relief Act of 2008 (part of Pub L No 110-343, October 3, 2008) extended this shareholder-favorable rule so that it

now applies through 2009.ⁿ³⁵

If any person acquires stock in an S corporation by reason of the death of a decedent or by bequest, devise, or inheritance, *IRC Section 691* (income in respect of a decedent) must be applied with respect to any item of income of the S corporation in the same manner as if the decedent had held directly his pro rata share of such item.ⁿ³⁶ The basis determined under *IRC Section 1014* of any stock in an S corporation must be reduced by the portion of the value of stock that is attributable to items constituting income in respect of a decedent.ⁿ³⁷

[3] Treatment of Distributions.

Distributions of cash or property by an S corporation without accumulated earnings and profits are tax free to the extent of the shareholder's basis and serve to reduce the shareholder's basis in his stock.ⁿ¹ If the amount of the distribution exceeds the basis of the stock, the excess is treated as gain from the sale or exchange of the stock, normally capital gain.ⁿ²

A distribution by an S corporation with accumulated earnings and profits will be treated as made by an S corporation with no earnings and profits up to the amount of its "accumulated adjustment account" (post-1982 gross income less deductible expenses, not previously distributed), unless the corporation and all shareholders to whom distributions are made during the taxable year consent to forego application of the accumulated adjustment account rule.ⁿ³ Any excess (or all of the distribution if the election mentioned in the preceding sentence is made) will be treated as a dividend to the extent of the corporation's accumulated earnings and profits, with the remainder of the distribution used, first, to reduce basis to zero, and then to produce gain.ⁿ⁴ If the distributions during the taxable year exceed the amount in the accumulated adjustments account at the close of the taxable year, the account is allocated among the distributions in proportion to their respective sizes.ⁿ⁵

In determining the treatment of distributions, the applicable provisions are applied by taking into account (to the extent proper) the adjustments to the basis of the shareholder's stock described in *IRC Section 1367*, and the adjustments to the accumulated adjustments account required by *IRC Section 1368(e)(1)*.ⁿ⁶ In the case of any distribution made during any taxable year, the adjusted basis of the stock is determined with regard to the adjustments provided in *IRC Section 1367(a)(1)* for the taxable year.ⁿ⁷

Post-1982 earnings of an S corporation are not earnings and profits for distribution purposes. In other words, a corporation will not have earnings and profits attributable to any year beginning after 1982 if a Subchapter S election is in effect for that year. However, the corporation can have earnings and profits attributable to:

- (1) taxable years after 1982 for which an election was not in effect;
- (2) taxable years beginning prior to 1983 for which an election was in effect; and
- (3) a corporate acquisition which results in a carryover of earnings and profits under Section 381.

Any distribution of *money* during the "post-termination transition period" is applied against and reduces the adjusted basis of the stock to the extent that the amount of the distribution does not exceed the accumulated adjustments account.ⁿ⁸ This permits such distributions to remain tax free. However, the corporation can elect not to have the stated rule apply, provided all shareholders to whom distributions are made during the "post-termination transition period" consent to the election.ⁿ⁹

An S corporation that elected Subchapter S status before the 1982 Act and did not distribute all of its previously taxed income will continue to be governed by the old rules governing the distribution of such income.ⁿ¹⁰ Thus, post-1982 distributions of pre-1983 previously taxed income will be tax free to the extent cash distributions exceed current

earnings.

FOOTNOTES:

(n1)Footnote 1. *IRC § 1366(a)(1)*. The meaning of "shareholder" for purposes of Subchapter S is a matter of federal law, that is, whether beneficial or record ownership is required. The question of whether a particular shareholder is of the kind required is a matter of state law. *Pahl v Commr, 150 F3d 1124 (9th Cir 1998)*.

The corporation's method of accounting determines the year in which the income or deduction is taken into account by the shareholder. See, eg, *Hoffman v Commr, TC Memo 1989-154*, where cash basis shareholders were required to report as income the face amount of promissory notes received by an accrual method S corporation on the sale of inventory.

The Supreme Court held in *Bufferd v Commissioner, 113 S Ct 927 (1993)* that the Service could adjust a shareholder's return based on an adjustment to an S corporation's return even though the statute of limitations had run on the corporation's return. The decision involved a year that preceded enactment of *IRC §§ 6241-6245*, which set forth S corporation audit procedures and call for determination of the corporation's tax items in a unified proceeding at the corporate level. However, the procedures do not apply to S corporations with five or fewer shareholders (*Temp Treas Reg § 301.6241-1T(c)(2)(ii)*). Before *Bufferd* the lower courts disagreed as to the proper result when the statute of limitations had run with respect to the corporation. Compare *Kelley v Commissioner, 877 F2d 756 (9th Cir 1989)*, with *Felhaber v Commissioner, 94 TC 863 (1990)*, *Brody v Commissioner, TC Memo 1991-78*, and *Aries v Commr, TC Memo 1991-41*.

As part of a unified proceeding, the Service sent Final Notices of S Corporation Administrative Adjustment in which the income of the corporation was reallocated from shareholders of record to nonshareholders. In *Hang v Commr, 95 TC 74 (1990)*, the Tax Court held that the determination of shareholder status was not within the scope of judicial review in an S corporation proceeding.

A shareholder of two S corporations filed for personal bankruptcy before the end of the corporations' taxable years. At issue in *Williams v Commr, 123 TC 144 (2004)*, was whether the shareholder or his individual bankruptcy estate was entitled to claim losses generated by the corporations in the year of bankruptcy. The Tax Court held that the provisions of *IRC § 1398* must be considered before applying the rules of *IRC § 1377* to S corporation shareholders in bankruptcy. Because the taxpayer did not receive or accrue any items of income or loss before he filed for bankruptcy, all of the losses flowed through to the bankruptcy estate. Under *IRC § 1398(e)(2)*, the taxpayer could have elected to bifurcate the year into prepetition and postpetition years, but did not.

(n2)Footnote 2. *IRC § 1377(a)(1)*. A shareholder who disposes of stock in an S corporation is treated as the shareholder for the day of disposition. A shareholder who dies is treated as the shareholder for the day of the shareholder's death. *Treas Reg § 1.1377-1(a)(2)(ii)*.

(n3)Footnote 3. *IRC § 1377(a)(2)(A)*. The term "affected shareholder" means the shareholder whose interest is terminated and all shareholders to whom the terminated shareholder transferred shares during the taxable year. If the terminated shareholder transferred shares to the corporation, the term includes all persons who were shareholders during the year. *IRC § 1377(a)(2)(B)*.

An S corporation makes a terminating election by attaching a statement to its timely filed original or amended return (Form 1120S) for the taxable year in which the shareholder's entire interest is terminated. The election statement must include: (1) a declaration by the S corporation that it is electing under *IRC § 1377(a)(2)* and *Treas Reg § 1.1377-1(b)(5)* to treat the taxable year as if it consisted of two separate taxable years; (2) information setting forth when and how the shareholder's entire interest was terminated; (3) the signature on behalf of the S corporation of an authorized officer of the corporation under penalties of perjury; and (4) a statement by the corporation that the corporation and each affected shareholder consents to the S corporation making the terminating election. *Treas Reg § 1.1377-1(b)(5)(i)*.

(n4)Footnote 4. *IRC § 1366(e)*.

(n5)Footnote 5. *IRC § 1366(a)(1)*. Nonseparately computed income or loss is defined as gross income less deductions, less all separately computed items. *IRC § 1366(a)(2)*.

A corporate general partner claimed an interest deduction when it was a C corporation. It later recovered the deduction when it was an S corporation. Held, the tax benefit rule required inclusion in income by the S corporation shareholders. *Ltr Rul 9202002*. Discharge of indebtedness income that is not included in income because of an S corporation's insolvency is not a separately stated item of tax-exempt income that passes through to the corporation's shareholders or increases the basis of their stock in the corporation. *TAM 9541006*.

(n6)Footnote 6. The amount of pass-through for built-in gain is reduced by the amount of any tax payable under *IRC § 1374*. A similar reduction results with respect to passive investment income if the corporation is subject to the tax imposed by *IRC § 1375*. *IRC § 1366(f)(2), (3)*.

(n7)Footnote 7. See *IRC § 108(d)(7)(A)*, added by § 402 of the Job Creation and Worker Assistance Act of 2002. The 2002 legislation reversed the Supreme Court's decision in *Gitlitz v Comm'r*, 531 US 206 (2001), which had allowed the exclusion under *IRC § 108(a)* of income from the discharge of an S corporation's indebtedness at less than face value to pass through to its shareholders and increase their basis, effectively allowing them to deduct losses financed by the indebtedness even though neither they nor their S corporation would ever have to pay it.

(n8)Footnote 8. See *IRC § 108(d)(7)(B)*; *IRC § 1367(d)*; Prop Treas Reg § 108-7(d), REG-102822-08, 73 FR 45656 (2008).

(n9)Footnote 9. *Nathel v Commr*, 131 TC 262 (2008), *aff'd* 2010 US App LEXIS 11244 (2d Cir 2010).

(n10)Footnote 10. See *Edwards v The Cuba RR Co*, 268 US 628 (1925). See also *Treas Reg § 1.118-1*.

(n11)Footnote 11. *Nathel v Commr*, 131 TC 262 (2008), *aff'd* 2010 US App LEXIS 11244 (2d Cir 2010).

(n12)Footnote 12. Rules concerning the source of income and the amount of creditable taxes apply at the shareholder level.

(n13)Footnote 13. A corporation electing out of Subchapter S will be subject to the special foreign loss recapture rules of *IRC § 904(f)* if it passed through foreign losses to its shareholders while an S corporation.

(n14)Footnote 14. *IRC § 1366(b)* Because of this, an S corporation that has a nonbusiness bad debt deduction must state the deduction separately as a short-term capital loss under *IRC § 166(d)* *Rev Rul 93-36, 1993-1 CB 187*

(n15)Footnote 15. However, the Service has ruled that shareholders of an S corporation that sold stock at a loss could not claim the loss as an ordinary loss under *IRC § 1244* *Ltr Rul 9130003*.

(n16)Footnote 16. *Treas Reg § 1.1366-1(b)(2)* The rule applies as well to a group of shareholders who contribute the property to the corporation.

(n17)Footnote 17. *Treas Reg § 1.1366-1(b)(3)*.

(n18)Footnote 1. *IRC § 1366(d)(1)*.

(n19)Footnote 2. *IRC § 1366(d)(2)(A)*. Normally, this loss carryover is personal to the shareholder and may not be transferred to any other person, including a purchaser of the shares to which the losses are attributable. See *IRC § 1366(d)(2)(A)*; *Treas Reg § 1.1366-2(a)(5)(i)*. However, when an S corporation shareholder transfers shares to his spouse (or former spouse if the transfer is incident to a divorce) in a transaction to which the nonrecognition provisions

of IRC § 1041 apply (see § 1.02[4][c]), and losses allocable to such shares remain suspended because the transferor does not have sufficient basis to claim a deduction, the unused losses allocable to the transferred shares as of the close of the taxable year of the transfer are deemed to have been incurred by the S Corporation in the year following the transfer and effectively become suspended losses allocable to the shares in the hands of the transferee spouse. *IRC* § 1366(d)(2)(B); *Treas Reg* § 1.1366-2(a)(5)(ii) and (iii).

(n20)Footnote 3. The statute refers to the grace period as the "post-termination transition period" or PTTP. *IRC* § 1366(d)(3). The PTTP generally begins on the day after the last day of the last taxable year of the corporation as an S Corporation and ends one year later (but may end as late as the due date of the S Corporation's return for its last taxable year, including extensions, if that is later). *IRC* § 1377(b)(1)(A). If the IRS subsequently makes audit adjustments to the S Corporation's return(s) that increase basis in the shareholders' stock, additional 120-day PTTPs are available following the audit but only to allow shareholders to utilize the increases in basis resulting from the audit to make tax-free distributions from the corporation. See *IRC* §§ 1377(b)(1)(B) & (C) and 1377(b)(3)(A); H Rep 108-696, 108th Cong, 2d Sess (2004).

(n21)Footnote 4. See *IRC* § 1011(a); *Treas Reg* § 1.1367-1(a)(2); *Estate of Bean v Comm'r*, 268 F 3d 553, 559 (8th Cir 2004). For example, basis may be determined by the cost of acquiring the stock by purchase (*IRC* § 1012), or by fair market value at the date of the decedent's death for stock acquired by bequest or inheritance (*IRC* § 1014), or with reference to the stock's basis in the hands of the transferor in the case of a gift (*IRC* § 1015) or transfer from a spouse or former spouse (*IRC* § 1041(b)), or determined with reference to the basis of property given up in exchange in the case of stock received in a tax-free reorganization (*IRC* § 358(a)). See generally § 1.05.

(n22)Footnote 5. *IRC* § 1367(a). When an S corporation shareholder disposes of stock in the corporation, a pro rata portion of the adjustments normally made at the end of the S corporation's taxable year must be made to the shareholder's basis in such stock as of the date of disposition. *Treas Reg* § 1.1367-1(d)(1).

(n23)Footnote 6. See *IRC* §§ 1367(a)(1) and 1366(a)(1). The excess of the shareholder's pro rata share of the corporation's deductions for depletion over the basis of the properties subject to depletion also increases basis. *IRC* § 1367(a)(1)(C).

(n24)Footnote 7. The deduction must be permanently disallowed and not merely deferred. *Treas Reg* § 1.1367-1(c)(2). Examples of items that reduce basis include illegal bribes and kickbacks nondeductible under *IRC* § 162(f), expenses and interest relating to tax-exempt income nondeductible under *IRC* § 265, losses incurred in transactions with related parties disallowed by *IRC* § 267, and the portion of meals and entertainment expenses disallowed by *IRC* § 274.

(n25)Footnote 8. See *Treas Reg* § 1.1367(f). The ordering rules apply to taxable years beginning on or after August 18, 1998. A shareholder may make an election, binding in the current and future taxable years unless the IRS consents to its revocation, to decrease basis on account of loss and deduction items before decreasing basis on account of noncapital, nondeductible items, providing the shareholder agrees that, if there is insufficient basis in the shareholder's stock and debt to offset against the shareholder's pro rata share of nondeductible items in the current year, the amount not used to effect a basis decrease will be carried forward (and retain its character as a nondeductible item) to the subsequent taxable year. *Treas Reg* § 1.1367(g).

(n26)Footnote 9. *IRC* § 1367(b)(2)(A).

(n27)Footnote 10. *Id.*

(n28)Footnote 11. *IRC* § 1367(b)(2)(B).

(n29)Footnote 12. *Treas Reg* § 1.1367-2(d)(1).

(n30)Footnote 13. *Id.*

(n31)Footnote 14. See *Smith v Comm'r*, 48 TC 872, 879 (1967) , *affd* 424 F2d 219 (9th Cir 1970) ; *Cornelius v Comm'r*, 494 F2d 465 (5th Cir 1974) .

(n32)Footnote 15. Total potential gain is the \$1,000 face value of the note minus A's \$600 basis (increased from \$400 to \$600 by the retroactive restoration of the \$200 "net increase" for the year).

(n33)Footnote 16. *Treas Reg* § 1.1367-2(b)(3).

(n34)Footnote 17. *Treas Reg* § 1.1367-2(c)(2).

(n35)Footnote 18. *Treas Reg* § 1.1367-2(d)(2).

(n36)Footnote 19. *TC Memo 2005-204* . In *Brooks*, the netting of year-end open account advances against beginning of the year repayments allowed the taxpayer not only to avoid gain recognition on the repayments but to enjoy passthrough deductions of S corporation losses in the millions of dollars.

(n37)Footnote 20. *Treas Reg* § 1.1367-2(a)(2)(ii).

(n38)Footnote 21. *Treas Reg* §§ 1.1367-2(a)(2)(ii) and 1.1367-2(d)(2)(ii).

(n39)Footnote 22. Compare *IRC* § 752(a) (increase in partner's share of partnership liabilities treated as a contribution of money to the partnership). The exclusion of corporate debt to third parties from shareholder basis limits the S corporation's ability to pass through losses to its individual shareholders and is thus a disadvantage relative to other passthrough entities.

(n40)Footnote 23. *Perry v Commissioner*, 54 TC 1293, 1296 (1970) .

(n41)Footnote 24. See S Rep 1983, 85th Cong, 2d Sess. 219-220 (1958).

(n42)Footnote 25. See *Russell v Comm'r*, *Tax Ct Memo 2008-246* (n 5). See, eg, *Maloof v Comm'r*, 456 F3d 645 (6th Cir 2006) ; *Grosjean v Comm'r*, 248 F3d 572 (7th Cir 2001) ; *Bergman v US*, 174 F3d 928 (8th Cir 1999) ; *Sleiman v Comm'r*, 187 F3d 1352 (11th Cir 1999) , *Spencer v Comm'r*, 110 TC 62 (1998) , *affd without published opinion* 194 F3d 1324 (11th Cir 1999) ; *Reser v Comm'r*, 112 F3d 1258 (5th Cir 1997) ; *Uri v Comm'r*, 949 F2d 371 (10th Cir 1991) ; *Estate of Leavitt v Comm'r*, 875 F2d 420 (4th Cir 1989) .

(n43)Footnote 26. See, eg, *Sleiman v Comm'r*, 187 F3d 1352 (11th Cir 1999) .

(n44)Footnote 27. See, eg, *Estate of Bean v Comm'r*, 268 F3d 553 (8th Cir 1999) , But see *Selfe v US*, 778 F2d 769 (11th Cir 1985) , in which the Eleventh Circuit suggested that a pledge of assets might be considered an economic outlay since the pledged asset is then "not available as collateral for other investments." No other court has treated a pledge as an economic outlay, but the Eleventh Circuit recently reaffirmed its view in *Rose v Comm'r*, 2008 US App LEXIS 9287 (11th Cir 2008) .

(n45)Footnote 28. *Grosjean v Comm'r*, 248 F3d 572 (7th Cir 2001) .

(n46)Footnote 29. *Raynor v Commissioner*, 50 TC 762, 770-771 (1968) . For a time S corporation shareholders had reason to hope that the Eleventh Circuit's opinion in *Selfe v US*, 778 F2d 769 (11th Cir 1985) , in at least some circumstances, would allow them to treat a loan guarantee as a contribution to capital, increasing the basis of their stock (but not the debt itself) by the amount of the loan. The *Selfe* opinion acknowledged the possibility that, in substance, the lender was really loaning money to the shareholder/guarantor, who in turn contributed the money to the corporation as a contribution to capital. See *Plantation Patterns, Inc. v Comm'r*, 462 F2d 712 (5th Cir 1972) . However, other courts of

appeal (and the Tax Court) distinguished and disagreed with *Selfe*, refusing to look behind the form in which the parties had cast the transaction (loan by lender to corporation, guarantee by shareholder to lender), finding in every case that the lender intended to do exactly what it did: make a loan to the corporation rather than the shareholder. The Eleventh Circuit ultimately joined the other circuits by effectively limiting *Selfe* to its "unusual set of facts," *Sleiman v Comm'r*, 187 F3d 1352 (11th Cir 1999), (including the unique fact that the loan in *Selfe* had been initially made to the shareholder, and only later converted by the bank into a loan to the corporation).

(n47)Footnote 30. See *Bolding v Comm'r*, 117 F3d 270 (5th Cir 1997); *Raynor v Comm'r*, 50 TC 762 (1968); *Gleason v Comm'r*, TC Memo 2006-191; *Miller v Comm'r*, TC Memo 2006-125; *Ruckriegel v Comm'r*, TC Memo 2006-78; *Yates v Comm'r*, TC Memo 2001-280; *Culnen v Comm'r*, TC Memo 2000-139, rev'd on other grounds 28 Fed Appx 116 (3d Cir 2002). But see *Oren v Comm'r*, 357 F3d 854 (8th Cir 2004), where the S corporation shareholder had one of his wholly owned corporations loan money to him, which he reloaned another of his wholly owned S corporations, which re-loaned the money back to the original related lender. Affirming the Tax Court, *Oren v Comm'r*, TC Memo 2002-172, the court of appeals agreed that these transactions "had no economic substance and, thus, were not real economic outlays;" the court added that any basis that might have been created by these transactions would be disallowed by the "at risk" rules, IRC § 465(b)(2), since the shareholder "was protected from personal loss by the circular nature of the loan transactions."

(n48)Footnote 31. See *Miller v Commissioner*, TC Memo 2006-125; *Gilday v Comm'r*, TC Memo 1982-242; *Rev Rul 75-144*, 1975-1 CB 277. Care must be taken that the S corporation's debt is actually cancelled, however, for if the S corporation remains liable to the third party lender the transaction will be treated as no different than a shareholder guarantee notwithstanding the addition of the shareholder as a borrower. *Hitchins v Comm'r*, 103 TC 711 (1994).

(n49)Footnote 32. 535 F2d 309 (5th Cir 1976).

(n50)Footnote 33. TC Memo 1996-429.

(n51)Footnote 34. *Bhatia v Comm'r*, TC Memo 1996-429. See also *Rose v Comm'r*, 2008 US App LEXIS 9287 (11th Cir 2008); *Hitchins v Commissioner*, 103 TC 711, 717 (1994); *Bergman v United States*, 174 F3d 928 (8th Cir 1999). Taxpayers have been successful carrying their "heavy burden" in the Tax Court in two debt restructuring cases involving related party lenders, *Culnen v Comm'r*, TC Memo 2000-139 and *Yates v Comm'r*, TC Memo 2001-280, and partially successful in a third. *Ruckriegel v Comm'r*, TC Memo 2006-78. See Lipman, "S Corporation Loss Limitations: The Tax Court Provides Potential Hope for Related Party Debt Restructurings," 22 Va Law Rev 67 (2002).

(n52)Footnote 35. IRC § 1367(a)(2).

(n53)Footnote 36. IRC § 1367(b)(4)(A).

(n54)Footnote 37. IRC § 1367(b)(4)(B).

(n55)Footnote 1. IRC §§ 1368(b)(1), 1367(a)(2)(A).

(n56)Footnote 2. IRC § 1368(b)(2). For purposes of the passive activity loss rules of IRC § 469, if an S corporation shareholder receives a distribution of money in excess of its adjusted basis in its stock in the corporation and recognizes gain under IRC § 1368(b)(2), the gain is treated as gain from the sale or exchange of the S corporation stock under *Treas Reg* § 1.469-2T(e)(3). *Rev Rul 95-5*, 1995-1 CB 100.

(n57)Footnote 3. IRC § 1368(c)(1), (3), (e)(1), (3). No adjustment is made for federal taxes attributable to the period that the corporation was a C corporation. A distribution taxed to a shareholder under IRC § 1368(b)(2) reduces the accumulated adjustment account of an S corporation with accumulated earnings and profits. *Treas Reg* § 1.1368-2(a)(3)(iii).

In applying *IRC § 1368(e)(1)* to distributions made during the taxable year, the amount in the accumulated adjustments account is determined without regard to any net negative adjustment for the taxable year. The net negative adjustment for any taxable year is the excess (if any) of the reductions in the account for the taxable year (other than for distributions), over the increases in the account for the year. *IRC § 1368(e)(1)(C)*.

The election to reverse the order of distribution to allow a distribution of earnings and profits before accumulated S corporation earnings is made by attaching a statement to a timely filed original or amended return for the taxable year. *Treas Reg § 1.1368-1(f)(5)*. The statement must state that the corporation is making an election under *Treas Reg § 1.1368-1(f)*, identify the election, and be signed under penalties of perjury by an officer of the corporation and each shareholder who receives a distribution. There may be circumstances in which substantial compliance will suffice, namely where there is a clear expression of the electing party's intention to elect and an unequivocal agreement to accept the benefits and burdens of the election. The court in *Thurman v Commr*, *TC Memo 1998-233*, refused to allow the taxpayer to use substantial compliance because the taxpayer never filed an election with any return.

The size of the accumulated adjustment account is determined at the end of the year, not at the time of distribution. *Ltr Rul 8842024*.

If any stock is redeemed in a transaction entitled to capital gain under either *IRC § 302(a)* or *303(a)*, the accumulated adjustments account is reduced by an amount equal to the percentage of the total shares of the corporation that are redeemed in the transaction. *IRC § 1368(e)(2)*. If stock is redeemed in a transaction that is treated as a distribution under *IRC § 301*, the entire redemption amount is treated as a distribution that reduces the corporation's accumulated adjustment account. *Rev Rul 95-14, 1995-61 CB 169*.

(n58)Footnote 4. *IRC § 1368(c)(2)*.

(n59)Footnote 5. *IRC § 1368(c)(3)*.

(n60)Footnote 6. *IRC § 1368(d)*.

(n61)Footnote 7. *IRC § 1368(d)*.

(n62)Footnote 8. *IRC § 1371(e)(1)*.

(n63)Footnote 9. *IRC § 1371(e)(2)*.

(n64)Footnote 10. *IRC § 1379(c)*.

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.01

§ 16.01 Introduction

We saw in earlier chapters (Chapters 14 and 15) that a partner must take into account separately his proportionate share of the partnership's income and deduction items, and that an S corporation shareholder must do the same with respect to the income and deduction items of the corporation. The same does not hold true for the beneficiary of an estate or trust who does not have additional income to report merely because the estate or trust earns income during the taxable year. Instead, the income is reportable only if the beneficiary receives a distribution or is entitled to receive income currently, and, then, only if the estate or trust has distributable net income for the current year.

The purpose of this inquiry will be the effect on beneficiary and entity of the distribution of securities by an estate or trust. In addition, we will examine the tax consequences of the distribution of securities of the employer corporation by an employees' trust. Finally, the tax consequences of the operation of, and participation in, common trust funds will be discussed.

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.02

§ 16.02 The Conduit Approach of Subchapter J

[1] In General.

By virtue of *IRC Section 641(a)*, "the tax imposed by section 1(e) shall apply to the taxable income of estates or of any kind of property held in trust" Thus, unlike partnerships, estates and trusts are treated as taxable entities separate and apart from their beneficiaries. As taxable entities, they compute taxable income in roughly the same manner as individual taxpayers,ⁿ¹ the major difference being the deduction available to estates and trusts for amounts distributed to beneficiaries.ⁿ² The latter deduction lies at the heart of the conduit approach to taxation taken by Subchapter J. It reflects the notion that trust income should be subject to tax only once--either at the trust level or at the beneficiary level.ⁿ³ In this way, income passed through to a beneficiary is taxed to the beneficiary; income retained by the estate or trust is taxed to it.

[2] The Concept of Distributable Net Income.ⁿ¹

Under the 1939 Code, a distribution was deductible by the estate or trust and taxable to the beneficiaries only if it could be traced to the income of the estate or trust for the current year. The 1986 Code eliminates the need to identify the source of the distribution. Instead, it employs a measuring device--the concept of distributable net income--to impose an outside limit on the amount deductible by the estate or trust and taxable to the beneficiary. The concept serves a qualitative function as well; the distribution is deemed to consist of "the same proportion of each class of items entering into the computation of distributable net income as the total of each class bears to the total distributable net income of the estate or trust" ⁿ² In other words, if there is tax-exempt interest in the distributable net income of the estate or trust, a portion of the distribution enters the beneficiary's hands as tax-exempt interest which he can exclude from gross income.

The distributable net income of an estate or trust for any given year is its taxable income with the following modifications:

(1) No deduction is allowed under either *IRC Section 651* or *661* on account of distributions made to beneficiaries.ⁿ³

(2) The personal exemption provided by *IRC Section 642(b)* (\$600 in the case of an estate, \$300 in the case of a trust required to distribute income currently, and \$100 in the case of all other trusts) cannot be

taken as a deduction.ⁿ⁴

(3) Capital gains are excluded to the extent that they are allocated to corpus and not (a) paid, credited, or required to be distributed to any beneficiary during the taxable year, or (b) paid, permanently set aside, or to be used for charitable purposes.ⁿ⁵ Thus, in the ordinary course of events, capital gains will be subject to tax in the estate or trust. However, gain from the sale or exchange of qualified small business stock is not taken into account to the extent excludable from gross income under *IRC Section 1202*.ⁿ⁶

(4) Capital losses are excluded except to the extent such losses are taken into account in determining the amount of capital gains paid, credited, or required to be distributed to any beneficiary during the taxable year.ⁿ⁷

(5) A trust that distributes current income only is required to exclude extraordinary dividends and taxable stock dividends which the trustee, acting in good faith, does not pay or credit to any income beneficiary because of his determination that such dividends are allocable to corpus under the terms of the trust and the applicable local law.ⁿ⁸

(6) Distributable net income includes the amount of tax-exempt interest (interest excluded from gross income under *IRC Section 103*) received by the estate or trust in excess of the expenses of the estate or trust which are allocable to such interest and would have been deductible under *IRC Section 212* were it not for the disallowance rule of *IRC Section 265*.ⁿ⁹

(7) If the estate claims a charitable deduction under *IRC Section 642(c)*, the amount of tax-exempt interest includable in distributable net income will be further reduced to the extent that the income which is paid, permanently set aside, or to be used for charitable purposes is deemed to consist of tax-exempt interest. In addition, proper adjustment must be made for any exclusion allowable to the estate or trust under *IRC Section 1202*.

(8) If the trust is a foreign trust:

(a) distributable net income includes the amount of the trust's gross income from sources outside the United States, reduced by disbursements allocable to such income but not deductible because of the provisions of *IRC Section 265(a)(1)*;ⁿ¹⁰

(b) the amount of gross income from sources within the United States must be determined without regard to *IRC Section 894*, which excludes from gross income items exempted from taxation by treaty;ⁿ¹¹ and

(c) distributable net income includes the excess of capital gains over capital losses.ⁿ¹² (Distributable net income is not decreased if capital losses exceed capital gains for the year.)ⁿ¹³

Example:

Assume that a trust required to distribute all of its income currently has the following items of income and deduction for the taxable year:

Dividends from domestic corporations	\$15,000
Extraordinary dividends allocated to corpus by the trustee acting in good faith	10,000
Taxable interest	5,000

2-16 Taxation of Securities Transactions § 16.02

Tax-exempt interest	5,000
Long-term capital gains allocable to corpus	5,000
Commissions and other expenses charged to corpus	2,500

The income which the trust must distribute to the income beneficiary is \$25,000, consisting of \$15,000 in domestic dividends, \$5,000 in taxable interest and \$5,000 in tax-exempt interest.ⁿ¹⁴ However, distributable net income is only \$22,500, computed as follows:

Dividends from domestic corporations	\$15,000
Taxable interest	5,000
Tax-exempt interest	\$5,000
Less: Expenses allocable thereto	500 ⁿ¹⁵
	4,500
	\$24,500
Less: Commissions and expenses (\$2,500 less \$500 allocable to tax-exempt interest) ⁿ¹⁶	2,000
Distributable net income	\$22,500

If the \$2,000 of expenses allocable to taxable income is apportioned ratably to the dividends and taxable interest, distributable net income will consist of \$13,500 of dividends, \$4,500 of taxable interest, and \$4,500 of tax-exempt interest.

In determining the distributable net income of \$22,500, no deductions were allowed for distributions made to the income beneficiary or for the personal exemption of the trust; the capital gains allocable to corpus were excluded; the extraordinary dividends were likewise excluded since they were allocated to corpus in good faith; and the tax-exempt interest was included after being reduced by the amount of expenses allocable to such interest.

(n1)Footnote 1. *IRC § 641(b)*. See generally 4 Rabkin & Johnson, *Federal Income, Gift and Estate Taxation*, Ch 54; Michaelson, *Income Taxation of Estates and Trusts* (rev ed 1970); Kamin, Surrey & Warren, "The Internal Revenue Code of 1954: Trusts, Estates and Beneficiaries," *54 Colum L Rev* 1237 (1954).

(n2)Footnote 2. *IRC §§ 651(a), 661(a)*.

(n3)Footnote 3. Gelband, "Taxation of Trust Income," *NYU 24th Inst on Fed Tax* 233, 234 (1966).

(n4)Footnote 1. Comprehensive discussions of distributable net income can be found in *How to Save Time and Taxes Preparing Fiduciary Income Tax Returns*, Ch 9 (Matthew Bender) and 2 *Modern Estate Planning* Ch 6 (Matthew Bender); Ferguson, Freeland & Ascher, *Federal Income Taxation of Estates, Trusts and Beneficiaries* 4:1-4:44 2d ed (1993).

(n5)Footnote 2. *IRC § 662(b)*. The rule applies unless the governing instrument specifically allocates different classes of income to different beneficiaries.

IRC § 662(b) applies to estates and to trusts which are not required to distribute income currently or which distribute income and corpus ("complex" trusts). *IRC § 652(b)* prescribes the same rule for "simple" trusts, trusts required to distribute all of their income currently and which do not distribute anything other than current income.

(n6)Footnote 3. *IRC § 643(a)(1)*.

(n7)Footnote 4. *IRC § 643(a)(2)*.

(n8)Footnote 5. *IRC § 643(a)(3)*. Capital gains are not considered as paid, credited, or required to be distributed to a beneficiary unless they are allocated to income under the terms of the governing instrument or local law; allocated to corpus and actually distributed to beneficiaries during the taxable year under the terms of the governing instrument upon the happening of a specific event; or utilized in determining the amount that is distributed or required to be distributed. *Treas Reg § 1.643(a)-3(a)*. In line with this, capital gains realized by a trust on distribution of securities to a beneficiary in satisfaction of an annuity (trust income being insufficient to fund the required payment) were held to be excludable from distributable net income because none of the specified conditions for inclusion were met. *Rev Rul 68-392, 1968-2 CB 284*.

Capital gains allocated to income by the trustee under authority granted in the trust instrument to allocate receipts between income and principal are includable in distributable net income. *Ltr Rul 8728001*.

In *Rev Rul 92-84, 1992-2 CB 216*, the Service held that gain derived from the sale of S corporation stock by a qualified Subchapter S trust (QSST) was taxable to the beneficiary of the trust, even though the gain was allocable to corpus under local law. The trust was treated as the owner of the stock. *Rev Rul 92-84* has been rendered obsolete by the promulgation of *Treas Reg § 1.1361-1*, providing that the income beneficiary of a QSST should not be treated as the owner of the consideration received by the QSST upon its disposition of S corporation stock. Therefore, any gain recognized on the sale of the S corporation stock is the gross income of the trust. In addition, the trust can use the installment method to report any gain realized on the sale if the sale otherwise qualifies as an installment sale.

(n9)Footnote 6. See § 2.06[2][a][ii] for a discussion of *IRC § 1202*.

(n10)Footnote 7. *IRC § 643(a)(3)*.

(n11)Footnote 8. *IRC § 643(a)(4)*.

(n12)Footnote 9. *IRC § 643(a)(5)*. A discussion of this provision of *IRC § 265* can be found in Ch 19.

Under the Regulations, a portion of the deductions not directly attributable to a specific class of income must be allocated to nontaxable income. *Treas Reg §§ 1.652(b)-3(b), 1.661(b)-2.*

(n13)Footnote 10. *IRC § 643(a)(6)(A).*

(n14)Footnote 11. *IRC § 643(a)(6)(B).*

(n15)Footnote 12. *IRC § 643(a)(6)(C).*

(n16)Footnote 13. *IRC § 643(a)(6)(C).*

(n17)Footnote 14. *IRC § 643(b).*

(n18)Footnote 15. The allocation is based on the proportion of the tax-exempt interest, \$5,000, to the entire amount of income to be distributed currently, \$25,000.

A corporate distribution that is not out of earnings and profits, and reduces the basis of the stock with respect to which it is made, cannot be included in the formula for allocating expenses of the trust to tax-exempt income. The distribution is not included in the computation of distributable net income even if the trustee distributes it to the income beneficiary of the trust. *Rev Rul 80-165, 1985-1 CB 134.*

(n19)Footnote 16. The excess of the deductions that are not attributable to any specific class of income over the amount allocable to tax-exempt income may be allocated to any item of income included in computing distributable net income. *Treas Reg § 1.652(b)-3(b).*

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.03

§ 16.03 Specific Bequests of Securities

[1] Effect on the Beneficiary

The gross income of a beneficiary does not include the value of any securities acquired in a transfer which qualifies as a bequest of specific property under *IRC Section 663(a)(1)*.ⁿ¹ In order to so qualify, (1) the identity of the specific property must be ascertainable under the terms of the testator's will at the time of his death,ⁿ² (2) the terms of the will must provide for payment of the bequest all at once or in not more than three installments,ⁿ³ and (3) the terms of the will must not require that the bequest be payable only out of the income of the estate, whether from the income for the year of payment or from the income accumulated from a prior year.ⁿ⁴ If the transfer does not meet the requirements of *IRC Section 663(a)(1)*, it will be treated as an estate distribution subject to the general distribution rules of Subchapter J.ⁿ⁵

The basis to the beneficiary of specifically bequeathed securities is their fair market value on the date of the decedent's death or applicable alternate valuation date.ⁿ⁶ The beneficiary's holding period for the securities commences with the date of death even though he does not come into possession of the property until some later date.ⁿ⁷

[2] Effect on the Estate

The transfer of property from estate to beneficiary is not a taxable event giving rise to the realization of gain or loss, unless the distribution is in satisfaction of a right to receive a specific dollar amount or to receive specific property other than that distributed.ⁿ⁸ However, if the transfer qualifies as a specific bequest under *IRC Section 663(a)(1)*, the estate is barred from claiming the amount of the distribution as a deduction under *IRC Section 661* (relating to deductions for distributions made to beneficiaries).ⁿ⁹

FOOTNOTES:

(n1)Footnote 1. *IRC § 102(a)*. A gift of specific property made under the terms of the trust instrument will also be excluded from gross income.

Interest required by state law to be paid to a beneficiary when distribution of a specific legacy is delayed is not part of the gift and must be included in the beneficiary's income. *Rev Rul 73-311, 1973-2 CB 44*.

(n2)Footnote 2. *Treas Reg § 1.663(a)1(b)(1)*. This prevents a residuary legacy or a gift of the remainder of a trust

from being treated as a specific bequest. Treas Reg § 1.663(a)1(b)(2)(iii).

A bequest of "assets, in cash or in kind or partly in each" with a fair market value at the date of distribution equal to a specified dollar amount, is a bequest of a specific sum of money under *IRC § 663(a)*. *Rev Rul 86-105, 1986-2 CB 82* .

A bequest that required the decedent's executor to distribute in kind a specified dollar amount of a certain stock, but no more than all of such stock owned by the decedent, did not qualify as a specific bequest; only the kind of property, not the amount thereof, was ascertainable under decedent's will at the time of his death. *Rev Rul 72-295, 1972-1 CB 197* .

(n3)Footnote 3. *IRC § 663(a)(1)*; Treas Reg §§ 1.663(a)1(a), 1.663(a)1(b)(2)(iv), 1.663(a)1(c).

(n4)Footnote 4. *IRC § 663(a)(1)*; *Treas Reg § 1.663(a)-1(b)(2)(i)*.

(n5)Footnote 5. Treas Reg § 1.662(a)3(a); see § 16.05[1].

(n6)Footnote 6. *IRC § 1014(b)(1)*.

(n7)Footnote 7. *Treas Reg § 1.1014-4(a)(2)*; *McFeely v Commr, 296 US 102 (1935)* ; see § 2.05[2][a].

(n8)Footnote 8. *Treas Reg § 1.661(a)-2(f)(1)*; *Rev Rul 55-117, 1955-1* , CB 233; see also *Rev Rul 68-666, 1968-2 CB 283* , where the Service ruled that gain realized on securities sold by the executor of an estate in compliance with the request of the beneficiaries of a specific bequest of the securities was not includable in the gross income of the estate.

(n9)Footnote 9. The estate can claim a deduction for interest paid on account of late payment of specific bequests. *Rev Rul 73-322, 1973-2 CB 44* .

Taxation of Securities Transactions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.04

§ 16.04 Distributions of Securities in Satisfaction of Pecuniary Legacies

[1] Effect on the Beneficiary

The payment of a legacy stated in terms of a fixed sum of money can be classified as a bequest, excludable from gross income under *IRC Section 102*, if the requirements of *IRC Section 663(a)(1)* are met. The conditions for qualification are the same as those prescribed for bequests of specific property, with one exception--in a bequest of a specific sum of money, the thing that must be ascertainable under the terms of the testator's will as of the date of his death is the amount of money to be paid to the beneficiary.ⁿ¹ A change in payment medium from cash to securities does not produce a corresponding change in tax consequence; the beneficiary still has nothing to include in gross income. The transaction is looked upon as the equivalent of a cash distribution to the beneficiary, followed by his use of the funds to purchase the securities from the estate.ⁿ²

If the securities were owned by a decedent, or if they were purchased by the estate, the basis of the securities in the hands of the beneficiary will be their cost, i.e., the amount or portion of the pecuniary legacy satisfied by the distribution in kind.ⁿ³ This result should obtain irrespective of the value of the securities at the time of distribution; the beneficiary's cost is the value of the thing given up, not the value of the thing received.ⁿ⁴ Thus, if a beneficiary agrees to accept stock worth \$95,000 in payment of a legacy of \$100,000, his basis for the stock should be \$100,000. The beneficiary's holding period for the acquired securities begins on the day following the date of acquisition and does not relate back to the decedent's death.

[2] Effect on the Estate

A taxable event occurs whenever an estate distributes property in kind to a beneficiary in satisfaction of a fixed pecuniary legacy.ⁿ⁵ If the property was owned by a decedent, or if it was purchased by the estate, the measure of gain or loss is the difference between the amount satisfied and the basis to the estate of the distributed property. In such case, the value of the property plays no part in determining the extent of the gain or loss realized by the estate; its amount realized is the value of what it receives and not the value of what it gives up.

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.663(a)-1(b)(1)*. This rule holds true for payments of fixed sums from trusts, eg, a required payment of \$10,000 to a beneficiary at age 25. *Treas Reg § 1.663(a)-1(c)(2)*, Ex (1)(iii).

A pecuniary legacy need not be stated in terms of a fixed sum of money. A prime example of this is the bequest to a spouse of an amount equal to one-half of the adjusted gross estate. See Rev Proc 64-19, 1964-1 CB 682 .

(n2)Footnote 2. Cf Rev Rul 67-74, 1967-1 CB 194 .

Taxation of Securities Transactions

Copyright 2010, Matthew Bender & Company, Inc., a member of the LexisNexis Group.

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.05

§ 16.05 n1 Distributions of Securities in Satisfaction of Residuary Legacies or of Payments Due to Trust Beneficiaries

[1] Effect on the Beneficiary's Incomen2

A bequest of the residuary of an estate is not considered a bequest of a sum of money or of specific property within the meaning of *IRC Section 663(a)(1)*.ⁿ³ Therefore, any transfer of cash or property by an estate, in satisfaction of all or part of a residuary legacy, must be treated as an estate distribution subject to the rules of Subchapter J, and not as a bequest excludable from gross income under *IRC Section 102*.

Under *IRC Section 662(a)*, the beneficiary of an estate must include in gross income any amounts (other than amounts treated as bequests under *IRC Section 663(a)(1)*)ⁿ⁴ paid, credited, or required to be distributed to him during the taxable year of the estate. However, the amount so includable may not exceed the beneficiary's proportionate share of the distributable net income of the estate. What we have, then, is a scheme of taxation that treats any distribution by an estate as a distribution of current income to the extent of the estate's distributable net income for the year. This is not unlike the rules respecting dividends, to wit, that every distribution made by a corporation is deemed to be out of earnings and profits to the extent thereof.ⁿ⁵ And, as in the case of dividends, the label placed upon the distribution by local law or proper accounting practice will have no bearing on the tax consequences of the distribution; a payment charged to corpus on the records of the estate will still be treated as income, provided it does not exceed the amount of distributable net income for the taxable year.ⁿ⁶

The determination of a beneficiary's share of distributable net income is made according to an established order of priority and not merely by reference to the amount received by the beneficiary. This order of priority, or "tier" system, allocates distributable net income first to those beneficiaries who are entitled to receive income currently under the terms of the will and applicable local law.ⁿ⁷ Any distributable net income then remaining is allocated to the "second tier," that is, to all other beneficiaries who received distributions of income or principal from the estate during the taxable year.ⁿ⁸ The distributable net income so allocated is apportioned ratably among the beneficiaries in the respective tiers.ⁿ⁹ Thus, before one is required to treat all distributions as coming out of current income, the distributable net income of the estate must exceed the sum of the distributions it made and was required to make during the taxable year.

The operation of *IRC Section 662* can be illustrated by the following examples:

Example 1:

During the taxable year, an estate, which is not required to distribute any of its current income, has the following items of income and deduction:

Dividends from domestic corporations	
.....	\$20,000
Taxable interest.....	5,000
Tax-exempt interest.....	5,000
Long-term capital gains allocable to corpus	
.....	5,000
Commissions and other expenses chargeable to corpus	
.....	3,000

The estate's distributable net income for the year is \$27,000, computed as follows:

Dividends from domestic corporations		\$20,000
Taxable interest		5,000
Tax-exempt interest		\$5,000
Less Expenses allocable thereto	500	4,500
: (5,000/30,000ths of \$3000)		
		\$29,500
Less Commissions and expenses		2,500
: (\$3,000 less \$500 allocable to tax-exempt interest)		
Distributable net income		\$27,000

During the year, A, B, and C, the residuary legatees, each received \$10,000 in securities from the estate. Since there are no further beneficiaries, each of the distributees is deemed to be the recipient of \$9,000 current income and \$1,000 of corpus. Moreover, since the character of the income in the hands of the beneficiary is the same as in the hands of the estate, each beneficiary will be treated as having received \$1,500 (1/3 of \$4,500) of tax-exempt interest and \$7,500 of taxable income.¹¹

Example 2:

Assume the same facts as in Example 1, except that the will also requires the payment of \$18,000 of income to A each year. Now, the first \$18,000 of distributable net income must be allocated to A, the sole "first-tier" distributee, and only the balance of \$9,000 apportioned equally to A, B, and C. Thus, because of the first-tier distribution to A, each of the other residuary legatees receives only \$3,000 of distributable net income, of which \$500 (3,000/27,000ths of \$4,500) is tax-exempt interest. The \$21,000 of distributable net income allocated to A is broken down into \$3,500 of tax-exempt interest and \$17,500 of taxable income.

The foregoing example assumed that the value of the securities and their basis in the hands of the trust were the same.

For distributions made after December 31, 1983, the amount of the distributions for purposes of *IRC Section 662* is the lesser of: (1) the basis of the property in the hands of the trust immediately before the distribution, adjusted for any gain or loss recognized to the trust on the distribution; or (2) the fair market value of the property.ⁿ¹² However, if the trust elects to recognize gain to the extent it would have had the property been sold to the beneficiary at its fair market value, the amount of the distribution will be such fair market value.ⁿ¹³

[2] The Beneficiary's Basis and Holding Period

[a] When Distributable Net Income Equals or Exceeds the Value of the Distributed Securities. Prior to 1984, the basis of property distributed in kind in a distribution governed by the provisions of Subchapter J was its fair market value at the time it was paid, credited, or required to be distributed, to the extent such value was included in the gross income of the beneficiary.ⁿ¹⁴ Thus, it can be seen that whenever distributable net income was at least as great as the amount of the distributed property and consisted entirely of items of taxable income, the full value of the distribution was includable in gross income and provided the measure of the beneficiary's basis for the property. For example, if an estate, having distributable net income of \$25,000, distributed securities worth \$20,000 to a residuary legatee, and the distribution was the only one made or required to be made by the estate during the taxable year, the securities would have had a basis of \$20,000 in the hands of the beneficiary; \$20,000 was also the amount which the beneficiary included in gross income (assuming that distributable net income consisted solely of taxable income items). Since the basis was equal to fair market value, the beneficiary's holding period for the securities commenced on the day following acquisition.

The basis for distributions made after December 31, 1983, is the adjusted basis of the property in the hands of the estate immediately before the distribution, adjusted for any gain or loss recognized by the estate on the distribution.ⁿ¹⁵ Therefore, if the trust made the distribution described in the previous paragraph after 1983, the basis of the securities in the hands of the beneficiary would be \$20,000 only if that were the basis in the hands of the estate. However, the fair market value of the property will continue to serve as the basis of the property in the hands of the beneficiary if the estate elects to recognize gain or loss on the distribution.ⁿ¹⁶

The holding period for distributions made after 1983 will depend on whether or not the estate elects to recognize gain or loss on the distribution. If it does not, the tacking provisions of *IRC Section 1223(2)* will apply, and the period for which the estate held the property will be added to the beneficiary's holding period. If the election is made, the beneficiary will assume a new holding period beginning the day after the distribution.

[b] When Distributable Net Income Is Less Than the Value of the Distributed Securities. Suppose that, before 1984, an estate, having distributable net income of \$15,000, transferred securities with a basis of \$20,000 and a value of \$25,000 to its sole residuary legatee. Clearly, the basis of the securities in the hands of the beneficiary could not be \$25,000, since a basis equal to fair market value was permitted only to the extent that the value of the property was included in the beneficiary's gross income;ⁿ¹⁷ and here it was included only to the extent of \$15,000, the distributable net income of the estate. Just as clear was the fact that the beneficiary's basis could not be the estate's basis, for, then, no effect would be given to the inclusion of a part of the value of the property in gross income. The regulations solved the problem by providing that to the extent that the value of property distributed in kind was not included in the gross income of the beneficiary, its basis in the hands of the beneficiary was governed by the rules in *IRC Sections 1014* (governing the basis of property acquired from a decedent) and *1015* (governing the basis of property acquired by gift).ⁿ¹⁸ Thus, the basis in the hands of the beneficiary could never be less than the estate's basis for the securities (a situation that would obtain whenever distributable net income was zero) or more than the fair market value of the securities. Where the estate had distributable net income, but in an amount less than the value of the distributed securities, the beneficiary's basis was the estate's basis adjusted by multiplying the unrealized appreciation or depreciation in value of the securities by a fraction, of which the amount includable in gross income was the numerator, and the fair market value of the distributed securities was the denominator.ⁿ¹⁹ Applying this rule, we find that, in our case, the basis of the securities in the hands of the beneficiary would be \$23,000, computed as follows:

Basis of the securities to the estate			\$20,000
Adjustment	\$15,000		
		x	\$5,000
			3,000
	25,000		
			\$23,000
			Beneficiary's basis

It has been suggested that a less obscure route to the same result is one that proceeds on the assumption that 15/25ths of the property has been purchased and 10/25ths acquired as a transfer of property with a substituted basis.ⁿ²⁰ Using this approach, the beneficiary's basis of \$23,000 would consist of a cost basis of \$15,000 (15/25ths of \$25,000) and a substituted basis of \$8,000 (10/25ths of \$20,000, the estate's basis for the securities).

The combination of a cost basis and a substituted basis for the same item of property produced a split holding period.ⁿ²¹ The beneficiary was permitted to include the estate's holding period in his own to the extent that his basis for the securities was determined by reference to the estate's basis.ⁿ²² To the extent that the securities had a cost basis, they had a holding period that began on the day following distribution. Thus, if the securities were sold within one year of their receipt by the beneficiary, 15/23rds of the gain or loss would be short-term, while 8/23rds would be long-term.

The rules applicable to distributions made after 1983 produce the same result here as when distributable net income is equal to or greater than the value of the distributed securities. Absent an election, the beneficiary's basis will be the same as the estate's and the holding period will be tacked.

[c] When Distributable Net Income Includes Tax-Exempt Income. Our discussion of basis for pre-1984 distributions proceeded on the assumption that the items comprising the estate's distributable net income were all subject to federal income taxation. Suppose, however, that the opposite situation obtains--the estate's distributable net income consisted entirely of tax-exempt income. If the estate were to distribute securities with a basis of \$40,000 and a value of \$50,000 to its sole residuary legatee, the effect on him would be the same as when distributable net income was zero; he would have had nothing to include in gross income,ⁿ²³ and his basis for the stock would be the estate's basis, \$40,000.ⁿ²⁴

Now suppose that distributable net income was composed of \$30,000 of taxable income and \$20,000 of tax-exempt income. Looked at logically, since the amount includable in the beneficiary's gross income was only \$30,000, he was in exactly the same position as the beneficiary who received a distribution of securities worth \$50,000 from an estate having distributable net income of \$30,000, consisting entirely of taxable income items. In other words, the basis of the securities could not be \$30,000, for that was less than the basis he would have if distributable net income were zero. Nor could it be \$50,000, for that would fail to take into account the fact that a portion of the value of the distribution was excluded from the gross income of the beneficiary. The obvious conclusion was a split basis, that is, a cost basis for a part of the property and a basis determined under *IRC Section 1014*ⁿ²⁵ for the remainder. Under the facts given, the beneficiary would have had a cost basis of \$30,000 (three fifths of the value of the property and the amount includable in gross income), and a substituted basis of \$16,000 (two fifths of \$40,000, the estate's basis for the securities), or a total of \$46,000. The same figure could be obtained by starting with the estate's basis, \$40,000, and then adding thereto an amount that reflected the difference between the basis and the fair market value of that portion of the property deemed to have been included in the gross income of the beneficiary. The amount of the adjustment was again determined by use of the following formula:

$$\frac{\text{amount included in gross income}}{\text{fair market value of the property}} \times \text{unrealized appreciation} \quad n26$$

Substituting, we get:

$$\$30,000 \times \$10,000 = \$6,000$$

$$\begin{array}{r} \text{-----} \\ \text{-----} \\ \text{-----} \\ - \\ \$50,000 \end{array}$$

The divisible basis carried with it a split holding period, one part of which commenced with the acquisition of the securities by the beneficiary and one part of which included the period during which the securities were held by the estate.ⁿ²⁷

If the distribution is made after 1983, the existence of tax-exempt income in distributable net income does not affect the determination of basis or holding period. Basis still carries over and holding period is tacked unless the fiduciary elects to recognize gain or loss on the distribution.

[d] When the Distribution Consists of Mixed Property

[i] Entire Distribution in Kind.ⁿ²⁸ Assume that, prior to 1984, an estate having distributable net income of \$30,000, no part of which consisted of tax-exempt items, distributed the following items of property to its sole residuary beneficiary:

	Estate's Basis	Fair Market Value
A Corp stock	\$25,000	\$25,000
B Corp stock	15,000	25,000
Bond	15,000	10,000
	-----	-----
	-----	-----

	-	
	\$55,000	\$60,000

The situation is one we have seen before--an amount includable in the beneficiary's gross income less than the value of the distributed property--so that once again there would be a need to adjust the estate's basis to arrive at the basis of the property in the hands of the beneficiary. The adjusting fraction remained the same. The numerator was the value of the property included in gross income; the denominator was the total value of the distributed property.ⁿ²⁹ In the above case, this worked out to \$30,000/\$60,000 or one half. Applying this to the unrealized appreciation or depreciation of each item of property, the following result was reached:

	Unrealized		Basis to
Basis to	Appreciation	Adjust-	Benif-
Estate	(or Depreci-	ment	ciary

2-16 Taxation of Securities Transactions § 16.05

	ation)			
A Corp Stock	\$25,000	\$--0--	\$--0--	\$25,000
B Corp Stock	15,000	10,000	+5,000	20,000
Bond	15,000	(5,000)	-2,500	12,500
Total	\$55,000	\$ 5,000	\$ 2,500	\$57,500

It will be noted that the basis of the A Corp stock to the beneficiary was the same as its basis to the estate. However, this did not mean that the beneficiary's holding period for the stock was determined solely under *IRC Section 1223(2)*, for, although his basis was equal to the estate's basis, he was deemed to have acquired a portion of each share of stock by purchase. The cost basis attributable to each item of property received was:

A Corp stock	25,000	x	\$30,000 = \$12,500
	<u>60,000</u>		
B Corp stock	25,000	x	\$30,000 = \$12,500
	<u>60,000</u>		
Bond	10,000	x	\$30,000 = \$ 5,000
	<u>60,000</u>		

Thus, since each item of property had a cost basis and a substitute basis,ⁿ³⁰ the beneficiary had a dual holding period for each item.

If the distribution takes place after 1983, the basis to the beneficiary would be the same as in the hands of the estate, namely, A Corp stock, \$25,000, B Corp stock, \$15,000, and the bond, \$15,000, unless the estate elected to recognize gain, in which case the B Corp stock would have a basis of \$25,000, and the bond a basis of \$10,000.ⁿ³¹

We have been considering distributions made to a single residuary beneficiary. The results are no different when there are multiple residuary legatees and the distribution is pro rata. Nor will there be any change in result if the estate makes a non-pro rata distribution pursuant to an authorization contained in the will or in the applicable local law. However, there will be an additional tax consequence if the distribution is not pro rata and both the instrument and local law are silent as to the authority of the executor to make a non-pro rata distribution in kind. In such case, the distribution will be viewed as the equivalent of a pro rata distribution followed by an exchange of property between the residuary legatees.ⁿ³²

Example:

Suppose that, before 1984, an estate, which had no distributable net income, distributed stock with a basis of \$10,000 and a value of \$15,000 to A, one of the residuary legatees, and bonds with a basis of \$16,000 and a value of \$15,000 to B, the other residuary beneficiary. Suppose further that the executor

had no authority to make non-pro rata distributions in kind, but did so upon the request and agreement of the residuary legatees. Since there was no distributable net income, neither beneficiary had anything to include in gross income, with the result that each was deemed to receive stock with a basis of \$5,000 and bonds with a basis of \$8,000. However, inasmuch as *A* received only stock, he, in substance, exchanged his pro rata share of the bonds for *B*'s pro rata share of the stock. Because of this, *A* realized a loss of \$500 (basis of bonds, \$8,000, less value of stock received, \$7,500). *B*, in turn had a gain of \$2,500; he exchanged stock having a basis of \$5,000 for bonds worth \$7,500.ⁿ³³

[ii] Distribution Partly in Kind and Partly in Cash. No problem with respect to basis was encountered before 1984 when an estate distributed cash and securities and the estate had distributable net income equal to or greater than the total amount of the distribution. Since the entire value of the securities was includable in the beneficiary's gross income (assuming, of course, that distributable net income was composed only of taxable income items), his basis for the securities was their fair market value. (There was also no difficulty if the transfer of securities qualified as a bequest of specific property. *IRC Section 102* excludes the value of the bequest from gross income; *IRC Section 1014* determined the beneficiary's basis for the property.)ⁿ³⁴

But what was the basis of the securities if the amount of the distribution (the value of the property and the cash) exceeded distributable net income? This depended on what portion of the value of the securities was considered taxable, for, as we have seen, the basis of the property in the hands of the beneficiary was its fair market value "to the extent such value is included in the gross income of the beneficiary."ⁿ³⁵ The Code was silent in this regard, but the regulations provided that if the amount of cash and property distributed to the beneficiary exceeded the amount includable in his gross income for the year, the value of the property other than cash was normally considered as includable in his gross income only to the extent that the amount includable exceeded the cash distributed to the beneficiary.ⁿ³⁶ Thus, if the estate had distributable net income of \$30,000 (or if it had, say, distributable net income of \$40,000, composed of taxable items of \$30,000 and tax-exempt interest of \$10,000), and it distributed \$20,000 in cash and securities with a basis of \$15,000 and a fair market value of \$20,000, the beneficiary had to include the entire amount of the cash, but only \$10,000 of the value of the property in his gross income.ⁿ³⁷ This gave him a cost basis of \$10,000 for one-half of the property and a substituted basis for the remaining half, or a total basis of \$17,500 (\$10,000 + 1/2 of \$15,000, the estate's basis for the securities).

Did the regulations prescribe an inflexible rule? If so, then what was the reason for the use of the word "normally"? But, since the regulations did not say in what circumstances some other rule should be applied, it may be that the rule had to be applied absolutely, even though the language in which it is cast was permissive.

The basis of property received in a mixed distribution after 1983 is unaffected by the presence of cash. The general rule that the basis of the property carried over from estate to beneficiary applies in this instance as well.

[3] Effect on the Estate.

It has already been seen that an estate is precluded from taking a distributions deduction when it transfers securities to a beneficiary and the transfer qualifies as a bequest of specific property under *IRC Section 663(a)(1)*.ⁿ³⁸ It has also been seen that the estate does not realize gain or loss by reason of the distribution, unless it is made in satisfaction of a right to receive a distribution in a specific dollar amount or in specific property other than that distributed, is a distribution where the fiduciary elects to recognize gain or loss, or, solely with respect to gain, is in satisfaction of a requirement to distribute income currently.ⁿ³⁹ The discussion in this subsection will focus on the consequences to the estate of a distribution that is subject to the general rules of Subchapter J.

[4] Additional Considerations in the Year of Termination if the Estate Has a Capital Loss Carryover.

Suppose that, for a given year, an estate has long-term capital gains of \$5,000 and short-term capital losses of \$10,000.

Its loss deduction is limited to \$8,000, the amount of the gains plus \$3,000.ⁿ¹ In addition, the estate is entitled to carry over the disallowed portion of the losses, \$2,000, to subsequent years. But if this is the final year of the estate's existence, there will be no subsequent year. However, this does not mean that the loss carryover evaporates with the termination of the estate, for *IRC Section 642(h)* provides:

"If on the termination of an estate or trust, the estate or trust has--

(1) ... a capital loss carryover under section 1212, ...

...

then such carryover ... shall be allowed as a deduction, in accordance with regulations prescribed by the Secretary, to the beneficiaries succeeding to the property of the estate or trust."ⁿ²

If the beneficiary is an individual (or some other noncorporate taxpayer) the capital loss carryover has the same character in his hands as in the hands of the estate.ⁿ³ If the beneficiary is a corporation, the loss carryover is a short-term loss irrespective of whether it would have been a long-term or short-term capital loss in the hands of the estate.ⁿ⁴

The first taxable year to which the loss can be carried over is the taxable year of the beneficiary in which or with which the estate terminates.ⁿ⁵ The noncorporate beneficiary can carry over the loss indefinitely;ⁿ⁶ the corporate beneficiary can carry the loss over for four additional years.ⁿ⁷ Thus, if the estate terminates on December 31, 2000, and one of its beneficiaries is a corporation that reports on a calendar year basis, the corporation can use its share of the capital loss carryover of the estate in 2000, 2001, 2002, 2003, and 2004.

To illustrate:

Example:

On December 31, 2000, an estate distributes all of its assets equally to its two residuary legatees, A, an individual, and X Corporation, and then terminates its existence. On the date of termination, the estate has a long-term loss carryover of \$4,000, and a short-term loss carryover of \$4,000. A, a calendar year taxpayer, has \$10,000 of ordinary income, \$2,000 of long-term capital gain, and \$1,000 of long-term loss for the taxable year 2000. X Corporation, also a calendar year taxpayer, realizes \$2,000 in short-term gains during 2000.

The pass-through of one half of the estate's unused capital loss carryover gives A \$3,000 (\$1,000 + \$2,000) of long-term capital losses to apply against his long-term capital gain of \$2,000, leaving him with a net long-term capital loss of \$1,000. In addition, A will pick up \$2,000 of the estate's short-term capital loss and be allowed to deduct an additional \$3,000 against ordinary income.

X Corporation will use \$2,000 of its \$4,000 share of the unused capital losses of the estate to offset 2000 capital gains. The balance is carried over as a short-term loss to 2001, and, if necessary, to 2002, 2003, and 2004, but not beyond.

FOOTNOTES:

(n1)Footnote 1. The discussion in this section will be cast in terms of distributions from an estate. However, the provisions of Subchapter J apply with equal force to distributions by a trust to its beneficiaries.

(n2)Footnote 2. See generally Ferguson, Freeland & Ascher, *Federal Income Taxation of Estates, Trusts, and Beneficiaries* 6:1-6:132 2d ed (1993).

(n3)Footnote 3. *Treas Reg* § 1.663(a)-1(b)(2)(iii).

(n4)Footnote 4. *Treas Reg* § 1.662(a)-1.

(n5)Footnote 5. *IRC* § 316(a). The subject of dividend distributions is covered in chapter 4.

(n6)Footnote 6. *Treas Reg* § 1.662(a)-3(b).

(n7)Footnote 7. *IRC* § 662(a)(1). The term "income required to be distributed currently" includes any amount required to be paid out of income or corpus to the extent it is paid out of current income.

(n8)Footnote 8. *IRC* § 662(a)(2).

(n9)Footnote 9. *IRC* § 662(a)(1), (2). In determining whether the total amount of a first-tier distribution exceeds distributable net income, the computation of the latter is made without taking into account any charitable deduction to which the estate is entitled under § 642(c). Any apportionment within the first tier is made by attributing to the beneficiary the same fractional part of distributable net income as the amount of income required to be distributed currently to him bears to the amount of income required to be distributed currently to all beneficiaries.

(n10)Footnote 10. *IRC* § 662(b). The amount treated as income by the beneficiary is deemed to consist of the same proportion of each class of items entering into the computation of distributable net income as the total of each class bears to the total distributable net income of the estate, unless the will specifically allocates different classes of income to different beneficiaries. In applying § 662(b), distributable net income is computed without regard to the portion of any charitable deduction claimed by the estate that is not attributable to income of the taxable year.

(n11)Footnote 11. If the taxable year of a beneficiary is different from that of the estate, the amount to be included in the gross income of the beneficiary is based upon the distributable net income of the estate and the amount paid or required to be paid during the taxable year of the estate ending within the beneficiary's taxable year. *IRC* § 662(c). For example, suppose a calendar year taxpayer is a beneficiary of an estate with a taxable year ending on January 31, 1970. Distributions made to the beneficiary between February 1 and December 31, 1969 will be includable in his gross income for 1970. If the final year of the estate is a short year ending, say, on June 30, 1970, the distributions made between February 1 and June 30 will likewise be includable in 1970. *Rev Rul* 71-180, 1971-1 CB 204 .

(n12)Footnote 12. *IRC* § 643(e)(2). The provision does not apply to any distribution governed by *IRC* § 663. *IRC* § 643(e)(4).

(n13)Footnote 13. *IRC* § 643(e)(3). The election is made on the tax return of the estate for the year of distribution, and, once made, can be revoked only with the consent of the Service.

(n14)Footnote 14. *Treas Reg* § 1.661(a)-2(f)(3).

(n15)Footnote 15. *IRC* § 643(e)(1).

(n16)Footnote 16. The basis of the property in the hands of the estate will have been increased by the amount of gain or decreased by the amount of loss recognized by the estate resulting in a basis equal to fair market value.

(n17)Footnote 17. *Treas Reg* § 1.661(a)-2(f)(3).

(n18)Footnote 18. *Treas Reg* § 1.661(a)-2(f)(3).

(n19)Footnote 19. *Rev Rul* 64-314, 1964-2 CB 167 .

(n20)Footnote 20. Freeland, "Estate Distributions in Kind," 23 *Tax L Rev* 59 (1967).

(n21)Footnote 21. For discussion of split holding period in another context, see Ch 2.

(n22)Footnote 22. *IRC § 1223(2)*.

(n23)Footnote 23. *IRC § 662(b)*.

(n24)Footnote 24. *Treas Reg § 1.661(a)-2(f)(3)*.

(n25)Footnote 25. If the distribution were from a trust, the basis of the part not acquired by purchase would be determined under *IRC § 1015*.

(n26)Footnote 26. *Rev Rul 64-314, 1964-2 CB 167*. A downward adjustment was required if the fair market value of the securities was less than the estate's basis therefore.

(n27)Footnote 27. 30/46ths of the property would have a new holding period; the remainder would have a "tacked" holding period.

(n28)Footnote 28. Distributions of depreciable property may trigger the recapture provisions of *IRC §§ 1245 and 1250*. See Freeland, "Estate Distributions in Kind," *23 Tax L Rev 59, 78-84 (1967)*.

(n29)Footnote 29. *Rev Rul 64-314, 1964-2 CB 167*.

(n30)Footnote 30. The substituted basis of each item would be:

A Corp. stock	\$12,500
B Corp. stock	7,500
Bond	7,500

(n31)Footnote 31. The amount of the distribution, assuming no election, would be \$50,000, measured by the basis of the stock and the fair market value of the bond (because less than basis).

(n32)Footnote 32. Cf *Rev Rul 69-486, 1969-2 CB 159*.

(n33)Footnote 33. The same result would be obtained after 1983, since the basis in the hands of the beneficiaries would be the estate's basis, absent an election to recognize gain or loss.

(n34)Footnote 34. See § 16.03[1].

(n35)Footnote 35. *Treas Reg § 1.661(a)-2(f)(3)*.

(n36)Footnote 36. *Treas Reg § 1.661(a)-2(f)(3)*.

(n37)Footnote 37. See, eg, *Rev Rul 64-314*, N 19 *supra*.

(n38)Footnote 38. See § 16.03[2].

(n39)Footnote 39. *IRC § 643(e)(3)*; *Treas Reg § 1.661(a)-2(f)(1)*. If the distribution is in discharge of an obligation to distribute income currently, the estate is deemed to have sold the property at fair market value on the date of distribution.

(n40)Footnote 1. *IRC § 1211(b)(1)*; see Ch 2. This assumes that taxable income exceeds \$3,000.

(n41)Footnote 2. "The phrase 'beneficiaries succeeding to the property of the estate or trust' means those beneficiaries upon termination of the estate or trust who bear the burden of any loss for which a carryover is allowed, or of any excess of deductions for which a deduction is allowed, under section 642(h)." *Treas Reg § 1.642(h)-3(a)*. This excludes specific legatees or devisees, pecuniary legatees, and other nonresiduary beneficiaries. It also excludes the recipient of a specific sum of money payable out of the residuary, except to the extent it is not payable in full. *Treas Reg § 1.642(h)-3(c)*. In the case of a trust, it generally refers to a remainderman who receives all or a fractional part of the trust corpus. *Treas Reg § 1.642(h)-3(d)*. The phrase does not include anyone purchasing an interest in a testamentary trust. *Nemser v Commr*, 66 TC 780 (1976) , *affd* 556 F2d 558 (2d Cir 1977) , *cert denied*, 434 US 855 .

Under *IRC § 642(h)(2)*, the beneficiaries succeeding to the property of the estate or trust are entitled to a deduction if the estate has deductions (other than the charitable deduction and personal exemption) in excess of gross income for the year of termination. However, the excess deduction can be used in computing taxable income only; it cannot be used in computing adjusted gross income. *Treas Reg § 1.642(h)-2(a)*. Thus, it is available only to beneficiaries who itemize deductions. On the other hand, a beneficiary succeeding to the capital loss carryover of an estate or trust can take the loss into account in computing adjusted gross income and taxable income. *Treas Reg § 1.642(h)-1(b)*.

(n42)Footnote 3. *Treas Reg § 1.642(h)-1(b)*.

(n43)Footnote 4. *Treas Reg § 1.642(h)-1(b)*.

(n44)Footnote 5. *Treas Reg § 1.642(h)-1(b)*.

(n45)Footnote 6. *IRC § 1212(b)*.

(n46)Footnote 7. Corporations can carry capital losses forward for only five years. *IRC § 1212(a)*; see Ch 2. Because of this, capital losses carried over by an estate to any taxable year of the estate are treated as if they were incurred in its last taxable year. *Treas Reg § 1.642(h)-1(b)*; *Treas Reg § 1.642(h)-1(c)*, Ex (2).

The regulations contain a statement that, for the purpose of determining the number of years to which a carryover may be carried, the last taxable year of the estate (whether or not a short taxable year), and the first taxable year of the beneficiary to which the loss is carried, each constitute a taxable year. This is no longer important in the case of capital loss carryovers (an individual has an unlimited carryover; a corporate beneficiary considers the loss as having been incurred in the year of termination), but still is in the case of net operating loss carryovers of both individuals and corporations. The Second Circuit held the regulation invalid in a case concerned with a capital loss carryover passed through to an individual beneficiary at a time when the carryover period of individuals was limited. *Dorfman v Commr*, 394 F2d 651 (2d Cir 1968) .

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.06

§ 16.06 n1 Distributions by Qualified Employees' Trusts

[1] Distributions of Securities of the Employer Corporation.

[a] In General. Under *IRC Section 402(a)*, the beneficiary of a qualified employees' trust (an employees' trust described in *IRC Section 401(a)* and exempt from taxation under *IRC Section 501(a)*) is taxed only in the year that amounts are distributed or made available to him.ⁿ¹ If property (including securities) is distributed by the trust, the measure of the distribution is ordinarily the fair market value of the property.ⁿ² However, if any part of the distribution consists of securities of the employer corporation, two special rules apply. If the employees' trust is a contributory trust (one to which both employer and employee make contributions), and the distribution is not a lump-sum distribution, the amount of the distribution does not include that portion of the net unrealized appreciation in such securities as is attributable to the employee's contributions.ⁿ³ If the distribution is a lump-sum distribution that includes securities of the employer corporation, the amount of the distribution is attributable to contributions by the employer.ⁿ⁴ For this purpose, only stock, and bonds or debentures issued with interest coupons attached or in registered form, qualify as "securities."ⁿ⁵ In contrast, the term "securities of the employer corporation" is not given restrictive meaning, for it includes securities of a parent or subsidiary of the employer corporation.ⁿ⁶

The amount of net unrealized appreciation in securities of the employer corporation is the excess of the market value of such securities at the time of distribution over their basis to the trust.ⁿ⁷ If the distribution consists in part of securities which have depreciated in value, the amount of net unrealized appreciation is limited to the net increase in value (aggregate appreciation less aggregate depreciation) of all of the securities of the employer corporation included in the distribution.ⁿ⁸ Moreover, for this purpose, two or more distributions made by a trust to an employee in a single year are treated as a single distribution.ⁿ⁹

For the purpose of determining the net unrealized appreciation on a distributed security of the employer corporation, the basis of the security is computed in accordance with whichever of the following four rules is applicable:

- (1) If the security was earmarked for the account of a particular employee at the time it was purchased by the trust, the basis of the security is its cost.ⁿ¹⁰
- (2) If all of the securities acquired by the trust during the taxable year are allocated among the accounts of all participating employees, the basis of any single security is the average cost to the trust of all securities of the same type purchased during the year.ⁿ¹¹

(3) If (a) neither (1) nor (2) is applicable; (b) all or a specified portion of the trust fund is invested in one particular type of security of the employer corporation; and (c) during the period that the distributee participated in the plan, none of such securities has been sold except to pay benefits under the plan or to enable the trustee to obtain funds with which to exercise rights; then the basis of the distributed securities is the total amount credited to the account of the distributee (or the portion thereof available for investment in such securities), reduced by the amount which could have been invested in such securities, but was not on the date of distribution.ⁿ¹²

(4) In all other cases, the basis is the average cost to the trust of all securities of the type distributed that the trust has on hand at the time of distribution, or that the trust had on hand on a specified inventory date that does not precede the date of distribution by more than twelve calendar months. The average cost can be determined either on a first-in, first-out basis (considering the securities most recently purchased to be those on hand), or by means of a moving average.ⁿ¹³

After the basis of the securities to the trust and the amount of net unrealized appreciation have been determined, the portion of the next unrealized appreciation attributable to the contributions made by the employee must then be ascertained. In doing so, only the amount actually contributed by the employee is taken into account; the employee's contribution does not include any part of the increment in the trust fund expended in the purchase of the securities.ⁿ¹⁴ If the distribution consists solely of securities of the employer corporation, the amount of the contribution which can be identified as having been used in the purchase of a particular security is allocated to that security; the portion of the contribution that cannot be so identified is allocated ratably to the distributed securities.ⁿ¹⁵ If only a part of the distribution consists of securities of the employer corporation, "appropriate allocation of a portion of the employee's contribution to [the cash or other property also distributed] shall be made unless such allocation is inconsistent with the terms of the plan or trust."ⁿ¹⁶

The following example illustrates the foregoing principles:

Example:

A qualified employees' trust distributes ten shares of Class B stock of the employer corporation to a participating employee. Each share has an average cost of \$200, consisting of employee contributions of \$120 and employer contributions of \$80, and on the date of distribution has a fair market value of \$300. The portion of the net unrealized appreciation attributable to the contributions of the employee with respect to each of the shares of stock is \$60, computed as follows:

Value of each share of stock	\$300
Employer contributions	80
Employee contributions	120
Total contributions	200
Net unrealized appreciation	\$100
Portion of net unrealized appreciation attributable to employee contributions (129/200ths of \$100) ⁿ¹⁷	\$ 60

The employee will realize gain when he disposes of the distributed securities in a taxable transaction.ⁿ¹⁸ His basis for the securities is the sum of (1) his contributions, (2) the employer's contributions (taxable as ordinary income in the year the securities are distributed), and (3) the portion of net unrealized appreciation attributable to contributions made by the employer (also taxable as ordinary income in the year of distribution).ⁿ¹⁹ Thus, in the last example, the employee's

basis for each share would be \$240 (\$120 plus \$80 plus \$40).

[b] Lump-Sum Severance Distributions. *IRC Section 402(d)(4)(A)* defines a lump-sum distribution as the distribution or payment within one taxable year of the recipient of the balance to the credit of the employee that becomes payable (1) on account of the employee's death; (2) after the employee attains age 59½; (3) on account of the employee's separation from service; or (4) after the employee has become disabled.

A 10-percent penalty is assessed on any distribution prior to age 59½.ⁿ²⁰ However, the penalty does not apply to distributions that are (1) made after the death of the employee, (2) attributable to the employee's being disabled, (3) part of a series of substantially equal periodic payments (not less frequently than annually) made for the life (or life expectancy) of the employee or the joint lives (or joint life expectancies) of the employee and his beneficiary, (4) made to an employee after separation from service after attaining age 55, (5) applicable dividends paid with respect to applicable employer securities as defined in *IRC Section 404(k)* or (6) made after December 31, 1999, on account of an Internal Revenue Service levy on a qualified retirement account or IRA.ⁿ²¹ Moreover, the excise does not attach to any portion of the distribution that is not taxable, i.e., it does not apply to the amount of any unrealized appreciation in employer securities distributed to the taxpayer.

Additional exclusions from the 10-percent excise tax include distributions for certain medical expenses, distributions to alternate payees under qualified domestic relations orders, distributions to unemployed individuals for health insurance premiums, distributions for higher education expenses, and distributions for first home purchases.ⁿ²² There are limitations on the amount of the distribution that can qualify for the exception.

The impact of the ordinary income treatment of lump-sum distributions is lessened in part by a minimum distribution allowance of \$10,000 or one half of the amount of the distribution, whichever is less, reduced by 20 percent of the amount by which the distribution exceeds \$20,000.ⁿ²³ Thus, the maximum allowance is obtained when the distribution amounts to \$20,000. A distribution equal to or greater than \$70,000 eliminates the allowance entirely.

As mentioned above, lump-sum distributions are eligible for taxation under a special averaging rule if the taxpayer (individual, estate, or trust) so elects.ⁿ²⁴ However, unless the taxpayer attained age 50 by January 1, 1986, the election is allowed only if the lump-sum distribution is received on or after the employee has attained 59½ years of age and has participated in the plan for at least five taxable years before the taxable year in which the distribution is made.ⁿ²⁵ The election must be made for each taxable year in which it is to apply and must be made before the expiration of the period for making a claim for credit or refund for the taxable year.ⁿ²⁶ The election can be revoked only by filing an amended tax return containing a statement revoking the election and by the payment of any tax attributable to the revocation.ⁿ²⁷ Revocation of the election does not prevent the making of a new election within the applicable time period.ⁿ²⁸

A further consequence of the election arises whenever the lump-sum distribution is received on account of the death of an employee. In such case, *IRC Section 2039(f)(1)* requires inclusion of the distribution in the deceased employee's gross estate. The recipient treats the amount as income in respect of a decedent, giving rise to a deduction under *IRC Section 691(c)* for estate taxes attributable to the included amount. However, by virtue of *IRC Section 691(c)(5)*, the amount of such deduction reduces the amount of the distribution subject to the ten-year averaging.

The effect of the election is to treat the distribution as though it were the only income of the taxpayer for the distribution year and to do so on a five-year averaging basis.ⁿ²⁹ This is done by first computing an initial separate tax, a process that assumes that taxable income is an amount equal to one fifth of the excess of the total taxable amount of the lump-sum distribution for the taxable year over the minimum distribution allowance (defined by *IRC Section 402(d)(1)(C)* as an amount equal to the lesser of \$10,000 or one half of the total taxable amount of the lump-sum distribution, reduced by 20 percent of the amount by which such total taxable amount exceeds \$20,000) and that the taxpayer is subject to the rates imposed on single taxpayers. The resulting tax is then multiplied by five and the total

added to the employee's tax liability on all other income. The following example illustrates the mechanics of the new law:

Example:

An employee became a participant in a qualified noncontributory plan on January 1, 1981. He severed his service with the company on December 31, 1988, when he was 60, and received a lump-sum distribution in 1989 of \$90,000, part of which consisted of stock in the employer corporation with a fair market value of \$20,000 and a basis of \$10,000. The employee's other income consisted of a \$20,000 salary. Itemized deductions amounted to \$6,000. The employee was married, but had no children. The total taxable amount of the distribution for purposes of applying the averaging provision would be \$80,000 (\$90,000 less \$10,000 unrealized appreciation in employer securities).ⁿ³⁰ Taxable income for purposes of the tax would be \$16,000 (one fifth of the excess of the total taxable amount over the minimum distribution allowance).ⁿ³¹ The tax on this amount at single taxpayer rates yields a tax of \$2,400. This amount is then multiplied by five producing a tax of \$12,000.

The tax on the balance of the employee's income would be:

Salary	\$20,000
Less: Itemized deductions and personal exemptions	10,000
Taxable income	\$10,000
Tax on other income	1,500
Tax on lump-sum distribution	12,000
Total tax	\$13,500

The foregoing example assumed that the employee elects to take just a lump-sum distribution. If, in addition, the employee chooses to take a nontransferable annuity, an adjustment in the tax on the ordinary income portion of the distribution is called for inasmuch as the payments under the annuity will be taxed when received. In essence, the adjustment consists of a five-year averaging tax calculated on the value of the annuity alone (reduced by the minimum distribution allowance attributable to the annuity), which tax is then subtracted from the tax computed on the ordinary income element of the lump-sum distribution.ⁿ³²

Example:

Assume the same facts as given above, except that part of the distribution consisted of a nontransferable annuity contract valued at \$8,000. Computation of the tax on the ordinary income component would take the following form:

(1) Compute the tax on the aggregate distribution	\$12,000
(2) Subtract tax on annuity of \$8,000	
(a) Tax would be five times the tax on one fifth of the value of the annuity	
(b) Tax on \$1,600 equals \$240	
(c) Five times \$240 equals	\$1,200
Adjusted tax on lump-sum distribution	\$10,800

IRC Section 402(c)(1) permits a tax-free rollover (an exclusion from income) of any portion of an "eligible rollover

distribution"--any distribution to an employee of all or any portion of the balance to the credit of the employee in a qualified trust, except (1) a distribution that is one of a series of substantially equal periodic payments made either for the life of the employee or for a period of ten years or more, or (2) a distribution to a person over age 70½ required by *IRC Section 401(a)(9)*ⁿ³³ provided, within 60 days of the distribution, the employee transfers the property received, less the amount of the employee's contributions, to an individual retirement account,ⁿ³⁴ an individual retirement annuity,ⁿ³⁵ or to the qualified plan of another employer.ⁿ³⁶ (*IRC Section 402(c)(6)* allows the rollover of proceeds derived from a sale of property other than money received in a lump-sum distribution. *IRC Section 402(c)(9)* permits the spouse of a deceased employee to reinvest any lump-sum distribution received on account of the death of the employee in an individual retirement account.) The rollover into an individual retirement account or annuity has the effect of locking in the account or annuity.ⁿ³⁷ There can be no withdrawal of the amount in the account prior to age 59½ without a 10-percent excise on the amount of the premature distribution, unless that distribution is rolled over into another individual retirement account within 60 days.ⁿ³⁸ Moreover, a borrowing from the account results in the disqualification of the plan.ⁿ³⁹

In addition, amounts received from an individual retirement account or annuity are taxed as ordinary income.ⁿ⁴⁰ There is no capital gain component even if the original distribution was attributable, in part, to pre-1974 participation years. Moreover, the five-year averaging election available for the ordinary income component of a lump-sum distribution is inapplicable in the case of a distribution from an individual retirement account or annuity, or to any distribution following a partial eligible rollover distribution.

A post-1992 eligible rollover distribution from a qualified plan directly to the employee is subject to a 20-percent withholding tax, even though the distribution is, in fact, rolled over within the prescribed 60-day period.ⁿ⁴¹ However, no withholding is required if the trustee of the plan transfers the funds to the trustee of the rollover vehicle (a trustee-to-trustee transfer). The plan administrator must provide a written explanation to the employee of the distribution options (including a trustee-to-trustee transfer) within a reasonable period of time prior to the eligible rollover distribution.ⁿ⁴²

A rollover of a partial distribution by an employee stock ownership plan (ESOP) to meet diversification requirements is also permitted if the employee so elects.ⁿ⁴³ In this case, the employee is not prohibited from electing income averaging for a subsequent lump-sum distribution.

FOOTNOTES:

(n1)Footnote 1. For a general discussion of qualified employees' trusts, see 3 Rabkin & Johnson, *Federal Income, Gift and Estate Taxation*, Ch 15 (Matthew Bender).

(n2)Footnote 1. The extent to which the distribution is taxable is determined in accordance with the annuity rules of *IRC* § 72.

(n3)Footnote 2. *Treas Reg* § 1.402(a)-1(a)(1)(iii).

(n4)Footnote 3. *IRC* § 402(e)(4)(A).

There is no statutory provision permitting a loss deduction when the value of the portion attributable to the employee's contribution is less than the amount of the contribution. *Rev Rul* 71-251, 1971-1 CB 129 . There is also no deduction when an employee receives a distribution of stock in corporations other than the employer corporation and the stock has a value less than the employee's contribution. *Rev Rul* 72-15, 1972-1 CB 114 . A different result was reached in *Rev Rul* 72-305, 1972-2 CB 43 , where the participant received a cash distribution of his entire interest in an amount less than his aggregate contribution under the plan, and in *Rev Rul* 72-328, 1972-2 CB 296 , where the distribution in satisfaction of the employee's interest consisted of worthless stock in the employer corporation. *Rev Ruls* 71-251 and 72-15 were distinguished on the ground that the transactions in those rulings were not closed and completed transactions and would

not be considered as such until the employee disposed of the distributed stock or it became worthless.

(n5)Footnote 4. *IRC § 402(e)(4)(B)*. For this purpose, a lump-sum distribution is the distribution or payment within one taxable year (1) on account of the employee's death, (2) after the employee attains age 59½, (3) on account of the employee's separation from service, or (4) after the employee has become disabled. *IRC § 402(e)(4)(D)*.

(n6)Footnote 5. *IRC § 402(e)(4)(E)(i)*.

(n7)Footnote 6. *IRC § 402(e)(4)(E)(ii)*. A parent corporation is any corporation (other than the employer corporation) in an unbroken chain of corporations ending with the employer corporation, provided each of the corporations in the chain (other than the employer corporation) owns stock possessing 50 percent or more of the total combined voting power of all classes of stock in one of the other corporations in such chain. *IRC § 424(e)*. The definition of "subsidiary corporation" is the same with one exception--the chain begins with the employer corporation. *IRC § 424(f)*.

Shares of a successor corporation into which the employer corporation was merged were exchanged for shares of the employer corporation. Distribution of the new stock was a distribution of "securities of the employer corporation." *Rev Rul 73-312, 1973-2 CB 142*.

(n8)Footnote 7. *Treas Reg § 1.402(a)-1(b)(2)(i)*. The use of a unit basis in determining the value of an employee's interest in a trust was approved in *Rev Rul 68-32, 1968-1 CB 171*.

In a distribution of S corporation stock by an employee stock ownership plan (ESOP) to a participant, the stock's net unrealized appreciation is determined using the ESOP's adjusted basis in the stock. *Rev Rul 2003-27, 2003-1 CB 597*.

(n9)Footnote 8. *Treas Reg § 1.402(a)-1(b)(2)(i)*.

(n10)Footnote 9. *Treas Reg § 1.402(a)-1(b)(2)(i)*.

(n11)Footnote 10. *Treas Reg § 1.402(a)-1(b)(2)(ii) (a)*. If the security was contributed to the trust, so that a basis other than cost is reflected in the account of the employee, such other basis is properly used as the basis of the security.

(n12)Footnote 11. *Treas Reg § 1.402(a)-1(b)(2)(ii) (b)*.

(n13)Footnote 12. *Treas Reg § 1.402(a)-1(b)(2)(ii) (c)*. A temporary investment of funds government obligations pending an investment in securities of the employer corporation will not make this basis computation method inapplicable. *Rev Rul 66-57, 1966-1 CB 89*.

In *Rev Rul 55-354, 1955-1 CB 396* (applying Section 165(b) of the 1939 Code), the Service approved a method of determining the basis of the distributed securities that included the increase or decrease in the value of a participating employee's account at the time of a conversion from one optional investment account to another as part of the total amount credited to the participant's account.

(n14)Footnote 13. *Treas Reg § 1.402(a)-1(b)(2)-(ii)(d)(1)*. The following example illustrates the moving average method:

On December 31, 1987, the trust had on hand 1,000 shares of Class B stock of the corporation purchased at a total cost of \$50,000. In 1988, the trust distributed 100 shares to a participating employee and purchased 100 new shares at a cost of \$8,000. In 1989, it distributed 20 shares to E. The average cost of the shares distributed to E is \$53, computed as follows:

Shares	Total Cost	Average Cost

2-16 Taxation of Securities Transactions § 16.06

On hand Dec. 31, 1987	1,000	\$50,000	\$50
Distributed during 1988 (at an average cost of \$50)	- 100	- 5,000	--
	900	\$45,000	
Purchased during 1988	+ 100	+ 8,000	--
	1,000	\$53,000	\$53

(n15)Footnote 14. *Treas Reg § 1.402(a)-1(b)(3)(ii); Rev Rul 80-258, 1980-2 CB 137 .*

(n16)Footnote 15. *Treas Reg § 1.402(a)-1(b)(3)(iv).*

(n17)Footnote 16. *Treas Reg § 1.402(a)-1(b)(3)(iv).*

(n18)Footnote 17. *Treas Reg § 1.402(a)-1(b)(3)(iii).*

(n19)Footnote 18. Net unrealized appreciation that is not included in income at the time of distribution is considered long-term capital gain when it is realized in a later taxable transaction. *Notice 98-24, 1998-1 CB 929 .*

The taxpayer involved in *Ltr Rul 199919039* was able to avoid all tax on the net unrealized appreciation by transferring the stock to a charitable remainder trust.

(n20)Footnote 19. *Treas Reg § 1.402(a)-1(b)(1)(i) (b)*; *Treas Reg § 1.402(a)-1(b)(3)(vi)*. In *Rev Rul 57-514, 1957-2 CB 261* , the Service held that all of the shares of stock received by the employee had the same basis (aggregate basis divided by number of shares received) even though they had varying costs for the purpose of determining net unrealized appreciation.

(n21)Footnote 20. *IRC § 72(t)(1).*

(n22)Footnote 21. *IRC § 72(t)(2)(A)*. An employee is separated from service when he is no longer an employee for payroll tax purposes. *Ltr Rul 8721106 .*

The taxpayers in *Aronson v Commr, 98 TC 283 (1992)* , sought to avoid the penalty on premature distributions by claiming that their individual retirement accounts were involuntarily distributed to them when the savings and loan association in which the accounts were maintained failed. The Tax Court refused to grant the relief. The taxpayers could have avoided the tax by rolling the accounts over to new accounts within 60 days.

(n23)Footnote 22. *IRC § 72(t)(2)(B), (C), (D), (E), and (F).*

(n24)Footnote 23. *IRC § 402(d)(1)(B), (C).*

(n25)Footnote 24. *IRC § 402(d)(4)(B)*. Only one election can be made by any taxpayer with respect to any employee.

(n26)Footnote 25. *IRC § 402(d)(4)(B), (F).*

(n27)Footnote 26. *(B)-1 Temp Treas Reg § 11.402(e)(4) (B)-1(c)(1)*. The election is made by filing Form 4972 as part of the taxpayer's return for the year. *(B)-1 Temp Treas Reg § 11.402(e)(4) (B)-1(c)(2)*.

(n28)Footnote 27. *Temp Treas Reg § 11.402(e)(4)(B)-1(c)(3).*

(n29)Footnote 28. *Temp Treas Reg § 11.402(e)(4)(B)-1(c)(3)*.

(n30)Footnote 29. *IRC § 402(d)(1)(A), (B)*. If an employee had attained age 50 before January 1, 1986, the recipient of the lump-sum distribution with respect to the employee can elect to use ten-year averaging, but must do so at the rates applicable for 1986, taking into account the zero bracket amount then in effect.

(n31)Footnote 30. *IRC § 402(d)(4)(D)*. The employee's basis in the employer's securities would be \$10,000.

The taxpayer can elect to waive the special treatment for net unrealized appreciation in employer securities with respect to a lump-sum distribution. The waiver is made on the tax return on which the distribution is required to be included because of the waiver. An election to waive does not preclude an election for income averaging. HR Rep No 795, 100th Cong, 2d Sess 166 (1988).

(n32)Footnote 31. The minimum distribution allowance would be zero, determined by subtracting 20 percent of \$60,000 (the excess of \$80,000 over \$20,000) from \$10,000 (the lesser of \$10,000 or one half of the total taxable amount).

(n33)Footnote 32. *IRC § 402(d)(2)*.

(n34)Footnote 33. *IRC § 402(c)(4)*.

(n35)Footnote 34. *IRC § 408(a)* describes individual retirement accounts.

The 60-day period does not include any period during which the amount transferred to the employee is a "frozen deposit." It cannot end earlier than ten days after the amount ceases to be a frozen deposit. A frozen deposit is one that cannot be withdrawn because of (1) the bankruptcy or insolvency of a financial institution, or (2) any requirement imposed by the state in which the institution is located by reason of the bankruptcy or insolvency (or threat thereof) of any financial institution in the state. *IRC § 402(c)(7)*.

According to the Service, no relief is available if a clerical error causes the transfer of funds to occur after the expiration of the 60-day period. *Ltr Rul 9211035* ; *Ltr Rul 8824047* . The Tax Court reached a different conclusion in *Wood v Commr*, 93 TC 114 (1989) . However, in *Wood*, the taxpayer delivered the qualified plan payout check to the bank with instructions to deposit it in an individual retirement account opened that day.

The Tax Court originally took the position that distributions from a retroactively disqualified plan can be rolled over tax free to an individual retirement account to the extent of predisqualification contributions and earnings. *Baetens v Commr*, 82 TC 152 (1984) . The Sixth Circuit reversed, holding that the status of the plan at the time of distribution controls. 777 F2d 1160 (6th Cir 1985) . The Fifth and Seventh Circuits also take the position that the tax status of the plan at the time of distribution controls. *Benbow v Commr*, 774 F2d 740 (7th Cir 1985) , *rev'g* 82 TC 941 (1984) ; *Woodson v Commr*, 651 F2d 1094 (5th Cir 1981) . The Tax Court reconsidered its position in *Fazi v Commr*, 102 TC 695 (1994) and will no longer adhere to its prior holding in *Baetens*, except in cases appealable to the Second Circuit, the only circuit that permits tax-free rollovers of predisqualification contributions and accumulations. See *Greenwald v Commr*, 366 F2d 538 (2d Cir 1966) .

The Tax Court has also held that a tax-free rollover to an individual retirement account requires that the account be one that was established for the individual employee who received the distribution from the employee's trust. *Rodoni v Commr*, 105 TC 29 (1995) . In *Rodoni*, the taxpayer turned the distribution over to his wife who deposited the distribution in individual retirement accounts she established. Although the parties were in the midst of a divorce proceeding, the distribution to the spouse was not made pursuant to a qualified domestic relations order.

(n36)Footnote 35. See *IRC § 408(b)*.

(n37)Footnote 36. The amount that can be rolled over tax free is limited to the portion that would have been includable in income absent the special rollover provision. *IRC § 402(c)(2)*.

(n38)Footnote 37. The election to rollover the distribution is irrevocable. *Barnes v Commr, TC Memo 1994-95* .

(n39)Footnote 38. *IRC §§ 72(t), 408(d)(3)*. A distribution that is not rolled over is taxable in the year received, even if the 60-day period does not expire until the subsequent taxable year. *Welander v Commr, 92 TC 866 (1989)* .

A taxable distribution to a beneficiary of a decedent's individual retirement account is income in respect of a decedent under *IRC § 691, Rev Rul 92-47, 1992-1 CB 198* .

A rollover contribution from a distribution of money must consist only of money. *Lemishow v Commr, 110 TC 110 (1998)* .

(n40)Footnote 39. *IRC § 72(t)*.

(n41)Footnote 40. *IRC § 408(d)*.

(n42)Footnote 41. *IRC § 3405(c)*. For example, if the amount in the qualified plan is \$100,000, the trustee of the plan is required to withhold \$20,000, causing the distribution to the employee to be limited to \$80,000. If all that is rolled over is the \$80,000, the employee has a \$20,000 taxable distribution, and may be subject to the 10 percent penalty on early withdrawals if under age 59½. The employee can avoid taxation on the distribution by adding \$20,000 of his own funds to the rollover.

Since the withholding tax is applied only to eligible rollover distributions, it has no effect on those distributions that cannot qualify as such. Also excepted are distributions not includable in income (other than net unrealized appreciation on employer securities) and distributions to any beneficiary other than a surviving spouse. Temp Treas Reg § 1.402(c)-2T, Q & A-3(b), Q & A-10(b).

Additional guidance with respect to rollovers and the 20 percent withholding tax can be found in *IRS Notice 93-3, 1993-1 CB 293* .

(n43)Footnote 42. *IRC § 402(f)*. Under IRS Notice 93-26, 1993-1 CB 308 , if a participant, after having received the notice, affirmatively elects to make or not make a direct rollover, the reasonable time period requirement will not be violated solely because the election is implemented less than 30 days after the notice is given.

(n44)Footnote 43. The election is irrevocable. *Barrett v Commr, TC Memo 1992-611 ; Hall v Commr, TC Memo 1991-133* .

CHAPTER 16 The Taxpayer as the Beneficiary of an Estate or Trust

2-16 Taxation of Securities Transactions § 16.07

§ 16.07 Common Trust Funds

[1] Defined.

According to *IRC Section 584(a)*, a common trust fund is a fund maintained by a bank (1) exclusively for the collective investment and reinvestment of moneys contributed to the fund by the bank in its capacity (a) as a trustee, executor, administrator, or guardian, or (b) as a custodian of an account established under a state law substantially similar to the Uniform Gifts to Minors Act, and (2) in conformity with rules and regulations of the Board of Governors of the Federal Reserve System or the Comptroller of the Currency pertaining to the collective investment and reinvestment of contributions to the fund.ⁿ¹ Two or more banks that are members of the same affiliated bank are treated as one bank during the period of their affiliation.

[2] Admission and Withdrawal of Participants.

[a] Effect on the Common Trust Fund. No gain or loss is realized by a common trust fund by the admission or withdrawal of a participant.ⁿ¹ The basis of the assets and the period for which they have been held by the common trust fund are unaffected by a participant's admission or withdrawal.ⁿ²

[b] Effect on the Participant. A participant treats admission into the common trust fund as the purchase of, or exchange for, the participating interest.ⁿ³ The withdrawal of any participating interest by a participant is treated as a sale or exchange of the withdrawn interest.ⁿ⁴

A participant is not deemed to have withdrawn any part of a participating interest in the common trust fund so as to have completed a closed transaction because of the segregation and administration of the trust fund for the benefit of all participants.ⁿ⁵ Any income or loss arising from the administration and liquidation of the segregated investment constitutes income or loss to the common trust fund apportionable among the participants for whose benefit the investment was segregated.ⁿ⁶

When a participating interest is transferred by a bank, or by two or more banks that are members of the same affiliated group (within the meaning of *IRC Section 1504*), as a result of the combination of two or more common trust funds or the division of a single common trust fund, the transfer to the surviving or divided common trust fund is not considered to be an admission or withdrawal if (1) the combining, divesting, and resulting common trust funds have a diversified portfolio within the meaning of *IRC Section 368(a)(2)(F)(ii)*, and (2) in the case of a division, each participant's interest

in each of the resulting common trust funds is substantially the same as was the participant's pro rata interest in the dividing fund.ⁿ⁷ However, in the case of the division of a common trust fund maintained by two or more banks that are members of the same affiliated group resulting from the termination of the affiliation, the division will be treated as meeting the substantially same interest requirement if the written plan of operation of the resulting common trust funds is substantially identical to the plan of operation of the divided common trust fund, each of the assets of the divided common trust fund is distributed substantially pro rata to each of the resulting common trust funds, and each participant's aggregate interest in the assets of the resulting common trust funds is substantially the same as was the participant's pro rata interest in the assets of the dividing common trust fund.ⁿ⁸

The participant's gain or loss upon withdrawal of a participating interest or portion thereof is measured by the difference between the amount received upon the withdrawal and the adjusted basis of the withdrawn interest.ⁿ⁹ The amount realized by the participant on the withdrawal is the sum of money plus the fair market value of any property (other than money) received by the participant.ⁿ¹⁰ The basis of the withdrawn interest is equal to the sum of money and property (other than money) contributed by the participant to the common trust fund to acquire the interest, increased by the income of the common trust fund properly allocated to the participant for a taxable year of the common trust fund and not distributed to the participant prior to withdrawal, and reduced by the net amount of net short-term capital loss, net long-term capital loss, and ordinary net loss of the common trust fund allocable to the participant with respect to the withdrawn interest.ⁿ¹¹

[3] Taxation of Common Trust Funds and Participants.

A common trust fund is neither subject to tax on its income nor treated as a corporation.ⁿ¹ Instead, each participant in the fund must include the participant's proportionate share of the net short-term capital gains and losses, net long-term capital gains and losses, and ordinary taxable income or ordinary net loss of the common trust fund, whether or not distributed and whether or not distributable.ⁿ² The proportionate share of each participant's short-term capital gains and losses, long-term capital gains and losses, and ordinary taxable income or ordinary net loss is determined under the method of accounting adopted by the bank in accordance with the written plan by which the common trust fund is established and administered, provided the method clearly reflects the income of each participant.ⁿ³ Items of income and deductions are allocated to the periods between valuation dates established by the plan within the taxable year in which they are realized.ⁿ⁴ Ordinary taxable income or ordinary net loss, short-term capital gains and losses, long-term capital gains and losses, and any tax withheld at the source are computed for each period. The participants' proportionate shares of income and losses for each period are then determined.ⁿ⁵

The taxable income of a common trust fund is computed in the same manner and on the same basis as in the case of an individual, except that: (1) no charitable deduction is allowed; (2) capital gains and losses are segregated and no capital loss carryover is allowed; and (3) after segregating capital gains and losses, the ordinary taxable income or ordinary net loss of the common trust fund is computed.ⁿ⁶ The common trust fund must use the calendar year as its taxable year.ⁿ⁷ If the taxable year of the common trust fund is different from that of a participant, the inclusion by the participant for the participant's taxable year is based upon the taxable income of the common trust fund for any taxable year ending within or with the taxable year of the participant.ⁿ⁸

The foregoing rules can be illustrated by the following example:

Example:

The plan of a common trust fund provides for quarterly valuation dates and for the computation and distribution of income (other than capital gains) on a quarterly basis. The participants in the common trust fund, all with equal interests are:

First quarter: A, B, C, and D.

Second quarter: A, B, C, and E.

Third and fourth quarters: A, B, F, and G.

The common trust fund's ordinary taxable income, short-term capital gain, and long-term capital gain for the taxable year are as follows:

Quarter	Ordinary taxable income	Short-term capital gain	Long-term capital gain
First	\$ 40,000	\$ 40,000	\$ 20,000
Second	60,000	20,000	40,000
Third	40,000	40,000	20,000
Fourth	80,000	20,000	40,000
Total	\$220,000	\$120,000	\$120,000

Each participant's quarterly share of ordinary taxable income, short-term capital gain and long-term capital gain is:

Quarter	Ordinary taxable income	Short-term capital gain	Long-term capital gain
First	\$ 10,000	\$ 10,000	\$ 5,000
Second	15,000	5,000	10,000
Third	10,000	10,000	5,000
Fourth	20,000	5,000	10,000

resulting in the participant's having to include the following amounts in income for the taxable year:

Participant	Ordinary taxable income	Short-term capital gain	Long-term capital gain
A	\$ 55,000	\$ 30,000	\$ 30,000
B	55,000	30,000	30,000
C	25,000	15,000	15,000
D	10,000	10,000	5,000
E	15,000	5,000	10,000
F	30,000	15,000	15,000
G	30,000	15,000	15,000

[4] Transfers by Common Trust Funds to Regulated Investment Companies.

If a common trust fund transfers substantially all of its assets to one or more regulated investment companies in exchange solely for stock in the transferee company or companies, and the stock is distributed by the common trust fund to the participants in the fund in exchange for their interests in the fund, no gain or loss will be recognized by the common trust fund on the transfer or distribution, and no gain or loss will be recognized by any participant by reason of the exchange.ⁿ¹ As a general rule, in determining whether the transfer is solely in exchange for stock in one or more regulated investment companies, the assumption by the transferee of a liability of the common trust fund is disregarded.ⁿ² However if the aggregate of the assumed liabilities exceed the aggregate adjusted bases of the

transferred property, gain will be recognized to the common trust fund in an amount equal to the excess.ⁿ³

If no gain or loss is recognized on the transaction, the basis of any asset received by a transferee regulated investment company is the same as it would be in the hands of the common trust fund.ⁿ⁴ The basis of the stock received by participants in the exchange is the same as that of the property exchanged, allocated, in the case of multiple transferees, among the stock of each regulated investment company on the basis of respective fair market values.ⁿ⁵

When excess liabilities result in the recognition of gain, the basis of the assets received by the regulated investment company is increased by the amount of gain recognized;ⁿ⁶ any adjustment to the basis of a participant's interest in the common trust fund as a result of the recognition of gain is treated as occurring immediately before the exchange by the participants.ⁿ⁷

FOOTNOTES:

(n1)Footnote 1. A bank is defined as a bank or trust company incorporated and doing business under the laws of the United States or of any state, a substantial part of the business of which consists of receiving deposits and making loans and discounts, or of exercising fiduciary powers similar to those permitted to national banks by the Comptroller of the Currency, and which is subject by law to supervision and examination by state or federal authority having supervision over banking institutions. The term also includes a domestic building and loan association. *IRC § 581*.

The Service will not ordinarily rule whether a common trust fund plan meets the requirements of *IRC § 584(a)*. *Rev Proc 2010-3, 2010-1 IRB 110, 117 (§ 4.01(35))*. For plan drafting guidance, see *Rev Proc 92-51, 1992-1 CB 988*.

(n2)Footnote 1. *IRC § 584(e)*.

(n3)Footnote 2. *Treas Reg § 1.584-4(a)*.

(n4)Footnote 3. *IRC § 584(e)*.

(n5)Footnote 4. *IRC § 584(e)*.

(n6)Footnote 5. *Treas Reg § 1.584-4(a)*. If an investment is withdrawn in kind from a common trust fund for the benefit of all participants in the fund at the time of withdrawal, and the investment is not distributed ratably in kind, the investment must be segregated and administered or realized upon for the benefit ratably of all participants in the common trust fund at the time of withdrawal. *12 CFR § 9.18(b)(7)*.

(n7)Footnote 6. *Treas Reg § 1.584-4(a)*.

(n8)Footnote 7. *Treas Reg § 1.584-4(a)*. A common trust fund meets the diversification requirements of *IRC § 368(a)(2)(F)(ii)* if not more than 25 percent of the value of its total assets is invested in the stock and securities of any one issuer and not more than 50 percent of its total assets is invested in the stock of five or fewer issuers. In making this determination, all members of a controlled group (within the meaning of *IRC § 1563(a)*) are treated as a single issuer, and a fund that holds stock in a regulated investment company, a real estate investment trust, or a diversified investment company is treated as holding its proportionate share of the assets held by the company or trust. Under present law, a common trust fund cannot treat Government securities held by it as part of its total assets. *IRC § 368(a)(2)(F)(iv)*. Prop *Treas Reg § 1.584-4(a)* will change that rule and treat Government securities as part of the common trust fund's assets, unless acquired to meet the diversification requirement.

(n9)Footnote 8. *Treas Reg § 1.584-4(a)*.

(n10)Footnote 9. *Treas Reg § 1.584-4(b)*.

(n11)Footnote 10. *Treas Reg § 1.584-4(b)*.

(n12)Footnote 11. *Treas Reg § 1.584-4(b), (c), (d)*. The income of the common trust fund includes wholly tax-exempt income, net short-term and long-term capital gains, and ordinary net or taxable income.

(n13)Footnote 1. *IRC § 584(b)*.

(n14)Footnote 2. *IRC § 584(c)*. Any tax withheld at the source from income of the common trust fund is deemed to have been withheld proportionately from the participants to whom the income is allocated. *Treas Reg § 1.584-2(b)(2)*.

(n15)Footnote 3. *Treas Reg § 1.584-2(c)(1)*.

(n16)Footnote 4. *Treas Reg § 1.584-2(c)(2)*.

(n17)Footnote 5. *Treas Reg § 1.584-2(c)(2)*. A tax-exempt organization that is a participant in a common trust fund must treat any amount of income or loss of the common trust fund as unrelated trade or business income or loss if it would have been such were it realized directly by the organization. *Treas Reg § 1.584-2(c)(3)*.

The Service has announced that it will challenge the purported tax benefits of a transaction involving the use of a common trust fund that invests in economically offsetting gain and loss positions in foreign currencies and allocates the gain to one or more tax indifferent parties and the losses to another taxpayer. *Notice 2003-54, 2003-2 CB 363*.

(n18)Footnote 6. *IRC § 584(d); Treas Reg § 1.584-3*. A common trust fund is not allowed a net operating loss deduction; the deduction is allowed to the participants. *IRC § 584(g)*.

(n19)Footnote 7. *IRC § 584(i)*.

(n20)Footnote 8. *IRC § 584(f)*.

(n21)Footnote 1. *IRC § 584(h)(1)*. Nonrecognition treatment will not apply to any common trust fund that would not meet the requirements of *IRC § 368(a)(2)(F)(ii)* if it were a corporation. In determining whether the diversification requirements have been met, Government securities are not treated as securities in applying the 25 percent- and 50 percent-tests and are not excluded from the computation of total assets under *IRC § 368(a)(2)(F)(iv)*. *IRC § 584(h)(4)*.

(n22)Footnote 2. *IRC § 584(h)(3)(A)*.

(n23)Footnote 3. *IRC § 584(h)(3)(B)(i)(I), (ii)*. In determining the amount of the liability assumed, the rules of *IRC § 357(d)* apply. *IRC § 584(h)(3)(C)*.

(n24)Footnote 4. *IRC § 584(h)(2)(A)*.

(n25)Footnote 5. *IRC § 584(h)(2)(B)*. The holding period will be tacked under *IRC § 1223(1)*. *Ltr Rul 9839035*.

(n26)Footnote 6. *IRC § 584(h)(3)(B)(i)(II)*. If the transfer is to two or more regulated investment companies the basis increase is allocated among the companies on the basis of the respective fair market values of the assets received by each.

(n27)Footnote 7. *IRC § 584(h)(3)(B)(i)(III)*.

CHAPTER 16A Employee Stock Ownership Plans

2-16A Taxation of Securities Transactions § 16A.01

§ 16A.01 Introduction

An Employee Stock Ownership Plan (ESOP) is a qualified plan designed to give employee participants an ownership interest in their employer through the plan's investment in the employer's securities. In addition, an ESOP can serve the following objectives: create a ready market for stock of retiring owners of company stock who generally wish to convert their stock into cash; solve post-death liquidity problems of substantial stockholders; increase corporate growth through increased employee motivation; increase cash flow when the employer corporation maintains another qualified retirement plan; serve as an anti-takeover device; and finance the acquisition of another corporation.ⁿ¹

This chapter will discuss the requirements of an ESOP and the tax consequences of an ESOP. It will not cover the taxation of distributions from an ESOP to a participant thereof.ⁿ²

CHAPTER 16A Employee Stock Ownership Plans

2-16A Taxation of Securities Transactions § 16A.02

§ 16A.02 Requirements of an Employee Stock Ownership Plan

[1] Employee Stock Ownership Plan Defined

An ESOP is a defined contribution plan¹ that is either a qualified stock bonus plan or a combination qualified stock bonus² and qualified money purchase plan that is designed to invest primarily in qualifying employer securities,³ and meets the requirements specified in the regulations.⁴ A plan cannot be treated as an ESOP unless it satisfies the provisions of *IRC Sections 409(h)* (right to demand distribution in company stock and to put securities not readily tradable to the employer) and 409(o) (ESOP distribution and payment requirements), and, if applicable, *IRC Sections 409(n)* (prohibited allocation rules) and 664(g) (gratuitous transfer of qualified employer securities). If the employer has a registration-type class of securities (as defined in *IRC Section 409(e)(4)*), the plan must meet the requirements of *IRC Section 409(e)* (voting rights). Effective for plan years beginning after 2004, an ESOP must also comply with *IRC Section 409(p)* (ESOP established by an S corporation must prohibit the allocation of employer securities held by the ESOP to disqualified individuals during nonallocation years). These requirements are discussed below.

IRC Section 409(l)(1) defines the term "employer securities" as common stock issued by the employer that is readily tradable on an established securities market. If such common stock does not exist, the term is defined as common stock issued by the employer having a combination of voting power and dividend rights equal to or exceeding the class of common stock of the employer having the greatest voting power and the class of common stock having the greatest dividend rights.⁵ Noncallable preferred stock is treated as employer securities if the stock is convertible at any time into common stock that qualifies as employer securities at a conversion price that (as of the date of acquisition by the ESOP) is reasonable.⁶ Employer securities also include stock issued by a corporation that is a member of the same controlled group as the employer.⁷

[2] Formal Requirements

The regulatory requirements begin with the necessity that a plan must be formally designated as an ESOP in order to be one.¹ Next, the terms of the ESOP must formally provide participants with certain protections and rights with respect to plan assets acquired with the proceeds of an exempt loan.²

The terms of an ESOP must also formally provide that these protections and rights are nonterminable.³ Thus, if a plan holds or has distributed securities acquired with the proceeds of an exempt loan and either the loan is repaid or the plan ceases to be an ESOP, these protections and rights must continue to exist under the terms of the plan. However, the

protections and rights will not fail to be nonterminable merely because they are not exercisable under Regulations Section 54.4975-7(b)(11) and (12), relating to put options. For example, if after a plan ceases to be an ESOP, securities acquired with the proceeds of an exempt loan cease to be publicly traded, the 15-month period during which a put option must be exercised includes the time when the securities are publicly traded.

A plan satisfies the regulatory requirements as of the date that it is designated as an ESOP if it is amended retroactively to meet, and in fact does meet, the requirements at any of the following times:

- (1) 12 months after the date on which the plan is designated as an ESOP;
- (2) 90 days after a determination letter is issued with respect to the qualification of the plan as an ESOP, but only if the determination is requested within 12 months after the date on which the plan is designated as an ESOP; or
- (3) a later date approved by the district director.ⁿ⁴

[3] Additional Regulatory Requirements

[a] Investment Primarily in Qualifying Employer Securities. A plan constitutes an ESOP only if the plan specifically states that it is designed to invest primarily in qualifying employer securities.ⁿ¹ Thus, a stock bonus plan or a money purchase pension plan constituting an ESOP may invest part of its assets in other than qualifying employer securities, in which case the plan will be treated the same as other stock bonus plans or money purchase pension plans qualified under *IRC Section 401(a)* with respect to those investments.

[b] Suspense Account. All assets acquired by an ESOP with the proceeds of an exempt loan under *IRC Section 4975(d)(3)* must be added to and maintained in a suspense account.ⁿ² They are to be withdrawn from the suspense account by treating all securities in the account as if they were encumbered.ⁿ³ Assets in the suspense account are assets of the ESOP.

[c] Allocation to Accounts of Participants. An ESOP must provide a definite plan for allocating contributions made to the plan among the participants.ⁿ⁴ As of the end of each year, the ESOP must consistently allocate in the participants' accounts non-monetary units representing participants' interests in assets withdrawn from the suspense accounts.ⁿ⁵ Income with respect to securities acquired by an exempt loan must be allocated as income of the plan except when the ESOP provides for the use of that income to repay the loan.ⁿ⁶ If a portion of a participant's account is forfeited, qualifying employer securities allocated to the account must be forfeited only after other assets.ⁿ⁷

Generally, qualifying employer securities acquired by the ESOP must be allocated in accordance with the rules governing other qualified defined contribution plans.ⁿ⁸ However, if the securities are acquired with the proceeds of an exempt loan, they must be placed in a suspense account as mentioned above.

[d] Distributions. In general, when it comes to distributions, the portion of an ESOP consisting of a stock bonus plan or money purchase plan is not to be distinguished from other such plans under *IRC Section 401(a)*.ⁿ⁹ Thus, for example, benefits distributed from a stock bonus plan are distributable only in stock of the employer. Benefits distributed from a money purchase plan may be distributable in qualifying employer securities, but need not be. If securities acquired with the proceeds of an exempt loan available for distribution consist of more than one class, a distributee must receive substantially the same proportion of each class, unless the distribution is from the portion of the ESOP consisting of a stock bonus plan.ⁿ¹⁰

Income paid with respect to qualifying employer securities acquired by an ESOP in taxable years beginning after December 31, 1974, may be distributed at any time after receipt by the plan to participants on whose behalf the securities have been allocated.ⁿ¹¹ However, if an ESOP is a stock bonus plan, income held by the plan for two years or

longer must be distributed in the form of stock of the employer.

[e] Loans. *IRC Sections 4975(a) and (b)* impose an excise tax on any disqualified person who engages in a prohibited transaction with a qualified plan.ⁿ¹² Included in the list of prohibited transactions is any lending of money or other extension of credit between a plan and a disqualified person.ⁿ¹³ However, *IRC Section 4975(d)(3)* provides an exemption from the excise tax for any loan (exempt loan) to a leveraged ESOP if (i) the loan is primarily for the benefit of participants and beneficiaries of the plan, and (ii) the loan is at a reasonable rate of interest, and any collateral that is given to a disqualified person by the plan consists only of qualifying employer securities.

The regulations contain other conditions for an exempt loan. At the time the loan is made, the interest rate for the loan and the price of securities to be acquired by the loan proceeds should not be such that plan assets are drained off.ⁿ¹⁴ The terms of the loan must, at the same time the loan is made, be at least as favorable as the terms of a comparable term loan resulting from arm's-length negotiations between independent parties.ⁿ¹⁵

The proceeds of an exempt loan must be used within a reasonable time after their receipt by the borrowing ESOP only for any or all of the following purposes: to acquire qualifying employer securities; to repay such loan; or to repay a prior exempt loan.ⁿ¹⁶ No security acquired with the proceeds of an exempt loan may be subject to a put, call, or other option, or buy-sell or similar arrangement while held by and when distributed from a plan, whether or not the plan is then an ESOP.ⁿ¹⁷

An exempt loan must be without recourse against the ESOP.ⁿ¹⁸ The only assets that can be used as collateral for an exempt loan are qualifying employer securities acquired with the proceeds of the loan and those that were used as collateral on a prior exempt loan repaid with the proceeds of the current exempt loan. No person entitled to payment under the exempt loan can have any rights to assets of the ESOP other than (i) collateral given for the loan; (ii) contributions (other than contributions of employer securities) that are made under an ESOP to meet its obligations under the loan, and (iii) earnings attributable to the collateral and the investment of such contributions. The loan must be provide for the release from encumbrance of the plan assets used as collateral for the loan in accordance with a schedule that is at least as quick as one of two methods, namely, the principal-and-interest method or the principal-only method.ⁿ¹⁹

Payment made with respect to an exempt loan by the ESOP during a plan year cannot exceed the sum of contributions made and earnings received during the plan year and prior years, less payments made in prior years.ⁿ²⁰ If there is a default in the exempt loan, the value of plan assets transferred in satisfaction of the loan must not exceed the amount of the default. If the lender is a disqualified person, the amount of plan assets that can be transferred is limited to the extent of the failure of the ESOP to meet the payment schedule of the loan.ⁿ²¹

[4] Special Statutory Requirements

[a] Voting Rights. If the employer has a class of securities required to be registered under Section 12 of the Securities Exchange Act of 1934, or a class of securities that would be required to be registered except for the exemption from registration provided by Section 12(g)(2)(H) of that Act, each participant in the plan must be permitted to direct the manner in which the securities allocated to the participant's account should be voted.ⁿ¹ If the ESOP does not have a registration-type class of securities, each participant is entitled to vote on any corporate matter that involves the voting of shares for approval or disapproval of a corporate merger or consolidation, recapitalization, reclassification, liquidation, dissolution, sale of substantially all assets of a trade or business, or such other similar transactions as may be prescribed in the regulations.ⁿ²

[b] Right to Demand Employer Securities--Put Option. *IRC section 409(h)(1)(A)* requires an ESOP to give a participant entitled to a distribution from the plan the right to demand that the participant's benefits be distributed in the form of employer securities.ⁿ³ If the employer is (i) a corporation whose charter or bylaws restrict the ownership of substantially all outstanding employer securities to employees or to a trust qualified under *IRC Section 401(a)*, or (ii) an

S corporation, the ESOP may distribute all benefits in cash without giving participants the right to demand stock or distribute employer securities subject to a requirement that the securities may be resold to the employer under the put option described below.ⁿ⁴

If the employer securities distributed to the participant are not readily tradable on an established market, the participant must have the right to require that the employer repurchase employer securities under a fair valuation formula (the put option).ⁿ⁵

The put option period must be at least 60 days following the date of distribution of the stock. If the put option is not exercised during that period, there must be an additional exercise period of at least 60 days in the following plan year.ⁿ⁶ If employer securities are distributed to the employee as part of a total distribution and the employee exercises the put option, the amount to be paid for the employer securities may be paid in substantially equal periodic payments at least annually over a period beginning not later than 30 days after the exercise of the put option and not exceeding five years.ⁿ⁷ If payments are made in installments, there must be adequate security provided and reasonable interest paid on the unpaid balance.ⁿ⁸ If an employer is required to repurchase employer securities as part of an installment distribution, the employer must pay the option price within 30 days of exercise of the put option.ⁿ⁹

[c] Prohibited Allocations. Under *IRC Section 1042*, a taxpayer can elect nonrecognition treatment for certain sales of stock to an ESOP. *IRC Section 409(n)(1)* provides that no portion of the plan attributable to employer securities acquired by the ESOP in a sale to which *IRC Section 1042* applies may accrue (or be allocated directly or indirectly) to the electing taxpayer, any individual related to the taxpayer (within the meaning of *IRC Section 267(b)*), or any other shareholder owning more than 25 percent of (i) any class of stock of the employer corporation or a corporation that is a member of the same controlled group, or (ii) the total value of any class of outstanding stock of the corporation.ⁿ¹⁰ A person is not treated as a 25-percent shareholder if the person fails to meet the stock ownership limitation at any time during the one-year period ending on the date of sale to the ESOP, or on the date on which the qualified securities are allocated to participants in the plan.ⁿ¹¹

The prohibition against allocation for the benefit of the electing taxpayer and related individuals begins on the date of sale of the securities and ends on the later of (a) ten years after the date of sale, or (b) the date of the allocation attributable to the final payment of the acquisition indebtedness incurred in connection with the sale.ⁿ¹² The prohibition against allocation to a more-than-25-percent shareholder is indefinite.

A violation of the prohibited allocation under *IRC Section 409(n)(1)* produces two consequences. First, the person to whom the allocation is made is taxed immediately on the gain realized on the sale.ⁿ¹³ Second, an excise tax of 50 percent of the amount involved is imposed on the employer corporation.ⁿ¹⁴

A second prohibited allocation, effective for plan years beginning after December 31, 2004, requires that an ESOP created by an S corporation provide that no portion of the plan assets attributable to (or allocable in lieu of) employer securities can accrue (or be allocated directly or indirectly) under any qualified plan maintained by the S corporation for a disqualified person during a nonallocation year.ⁿ¹⁵ There is a prohibited allocation if there is either an impermissible accrual or an impermissible allocation.^{n15.1} There is an impermissible accrual to the extent (and only to the extent) that employer securities consisting of stock in an S corporation owned by the ESOP and any assets attributable thereto are held under the ESOP for the benefit of a disqualified person during a nonallocation year.^{n15.2} An impermissible allocation is any allocation for a disqualified person directly or indirectly under any plan of the employer qualified under *IRC Section 401(a)* that occurs during a nonallocation year to the extent that a contribution or other annual addition is made, or the disqualified person otherwise accrues additional benefits under the ESOP or any other plan of the employer qualified under *IRC Section 401(a)* (including a release and allocation of assets from a suspense account) that, for the nonallocation year, would otherwise have been added to the account of the disqualified person under the ESOP and invested in employer securities consisting of stock in an S corporation owned by the ESOP but for a provision in the ESOP to comply with *IRC Section 401(p)*.^{n15.3}

A nonallocation year is any plan year of an ESOP that holds shares of stock in an S corporation if, at any time during the plan year, disqualified persons own at least 50 percent of the outstanding shares of the S corporation.ⁿ¹⁶ In addition, the Service, in revenue rulings, notices, and other guidance published in the Internal Revenue Bulletin, may provide that a nonallocation year occurs in any case in which the principal purpose of the ownership structure of an S corporation constitutes and avoidance or evasion of *IRC Section 409(p)*.^{n16.1} For any year so treated as a nonallocation year, the Service may treat any person as a disqualified person.

A person is a disqualified person if (i) the aggregate number of deemed-owned shares of the person and members of the person's family is at least 20 percent of the number of deemed-owned shares of stock in the S corporation, or (ii) if not a member of the preceding group, the number of the person's deemed-owned shares is at least 10 percent of the number of deemed-owned shares of stock in the corporation.ⁿ¹⁷ A person's deemed-owned shares include employer stock allocated to the person under the ESOP and the person's share of unallocated employer stock held by the ESOP.ⁿ¹⁸

The attribution rules of *IRC Section 318(a)* generally apply for purposes of *IRC Section 409(p)*. However, here members of an individual's family include (a) the individual's spouse, (b) an ancestor or lineal descendant of the individual or the individual's spouse, (c) a brother or sister of the individual or the individual's spouse, and any lineal descendant of the sibling, and (d) the spouse of any person described in (b) or (c).ⁿ¹⁹ In addition, the normal option attribution rule does not apply, but special attribution provisions apply with respect to "synthetic equity."

If a person owns a synthetic equity in the S corporation, stock on which the synthetic equity is based is treated as outstanding stock in the corporation and deemed-owned shares of the person holding the synthetic equity if such treatment results in the treatment of any person as a disqualified person, or the treatment of any year as a nonallocation year.ⁿ²⁰ Synthetic equity is defined as any stock option, warrant, restricted stock, deferred issuance stock right, or similar interest or right that gives the holder the right to acquire or receive stock of the S corporation in the future.ⁿ²¹ Except to the extent provided in regulations, synthetic equity also includes a stock appreciation right, phantom stock unit, or similar right to a future cash payment based on the value of the stock or appreciation in value.

Synthetic equity also includes a right to acquire stock or other similar interests in a related entity if the interests in the related entity are the only significant assets of the S corporation and the S corporation is the only significant owner of the related entity.^{n21.1} A related entity is one in which the S corporation holds an interest and which is a partnership, a trust, an eligible entity that is disregarded as an entity that is separate from its owner under *Regulation Section 301.7701-3*, or a qualified Subchapter S subsidiary.^{n21.2} Synthetic equity does not include rights to acquire goods or services at fair market value in the ordinary course of business.^{n21.3} However, it does include any nonqualified deferred compensation for services rendered to the S corporation, or a related entity.^{n21.4}

If there is a prohibited allocation under *IRC 409(p)*, the value of the allocation is includable in the income of the disqualified person to whom it was made.ⁿ²² In addition, the S corporation is liable for an excise tax equal to 50 percent of the allocation, or, if any synthetic equity is owned by a disqualified person during a nonallocation year, the corporation is liable for another 50 percent excise tax based on the value of the shares on which the synthetic equity is based.ⁿ²³

An ESOP may prevent a nonallocation year or a prohibited allocation during a nonallocation year by permitting assets (including S corporation securities) allocated to the account of a disqualified person (or a person reasonably expected to become a disqualified person) to be transferred into a separate portion of the plan that is not an ESOP or to another plan of the employer that satisfies the requirements of *IRC Section 401(a)* (and that is not an ESOP).^{n23.1} The nondiscrimination requirement normally applicable to qualified plans need not be met with respect to the transferred assets.^{n23.2}

[d] Distributions and Payments. An ESOP must provide that, at the election of the participant, the distribution of

the participant's account balance must commence not later than one year after the close of the plan year (1) in which the employee retires at the normal retirement age, dies, or becomes disabled, or (2) the fifth plan year following the plan year in which the employee separates from service (unless reemployed before that year).ⁿ²⁴ The plan must also provide that, unless the participant elects otherwise, the distribution of the participant's account balance will be in substantially equal periodic payments (not less frequently than annually) over a period not longer than five years, unless the participant has an account balance of more than \$800,000.ⁿ²⁵ If the employee has an account balance of that magnitude, the distribution is extended by one year (but not more than five additional years) for each \$160,000 or fraction thereof by which the balance exceeds \$800,000.ⁿ²⁶

[e] Investment Diversification Election. An ESOP must allow each qualified participant to elect to diversify by directing the investment of at least 25 percent of the participant's account balance in the plan in other investments within 90 days after the close of each plan year in the qualified election period.ⁿ²⁷ A qualified participant is an employee who has completed at least 10 years of participation in the plan and is at least 55 years of age.ⁿ²⁸ The qualified election period is the six-plan-year period beginning with the later of the first plan year in which the employee becomes a qualified participant or the first plan year beginning after December 31, 1986.ⁿ²⁹

There are two methods to meet the diversification requirement.ⁿ³⁰ First, the portion of the participant's account subject to the diversification requirement can be distributed to the employee within 90 days after the period during which the election can be made. Second, the plan can offer at least three investment options other than employer stock to the qualified participant, and, within 90 days after the period during which the election can be made, invest the portion of the participant's account covered by the election in accordance with the election.ⁿ³¹

Employer securities acquired by or contributed to an ESOP on or before December 31, 1986, are not subject to the diversification requirement.ⁿ³² However, dividends paid to an ESOP after 1986 with respect to those exempted securities are subject to diversification if paid in cash or other property that is used to acquire employer securities. Employer securities actually acquired by or contributed to an ESOP after 1986, will be deemed to have been acquired by or contributed to the ESOP on or before December 31, 1986, in the following circumstances:ⁿ³³

- (1) Cash or other assets derived from the disposition of employer securities in a corporate reorganization or acquisition attempt (whether or not successful) are used to purchase other employer securities and the period of time between disposition and reinvestment does not exceed 90 days.ⁿ³⁴
- (2) Employer securities were acquired with cash contributions made to the ESOP on or before December 31, 1986, if the contributions were used to purchase the employer securities within 60 days after the date of contribution.
- (3) Employer securities were acquired with earnings and dividends paid in cash to the ESOP on or before December 31, 1986, if the earnings and dividends were used to purchase the employer securities within 60 days from the date of payment to the ESOP.
- (4) Employer securities were purchased with the proceeds of an exempt loan received by the ESOP in cash on or before December 31, 1986, if the proceeds were invested in employer securities within 60 days of the receipt of the proceeds by the ESOP.
- (5) Employer securities were purchased with amounts transferred to the ESOP on or before December 31, 1986, after a reversion of a qualified plan to the employer, if the securities were purchased 90 days after the transfer (or such longer period as the Service may prescribe).

If the fair market value (determined at the plan valuation date immediately preceding the first day on which a qualified participant can make a diversification election) of employer securities acquired by or contributed to an ESOP after

1986, and allocated to the participant's account is \$500 or less, those employer securities will be considered a *de minimis* amount that is not subject to the diversification requirement.ⁿ³⁵ An ESOP may elect to use a *de minimis* amount of less than \$500. In determining whether the allocated amount is *de minimis*, employer securities held in accounts of all ESOPs maintained by the employer corporation and members of the controlled group of corporations that includes the employer corporation are considered to be held by the same plan. If the fair market value of the employer securities acquired by or contributed to the plan after 1986 and allocated to a qualified participant's account exceeds the *de minimis* amount for any year of a participant's qualified election period, then all shares allocated to the account of the qualified participant that were acquired or contributed after 1986 are subject to the diversification requirement in each remaining year of a participant's qualified election period.ⁿ³⁶

The portion of a qualified participant's account subject to the diversification election in all years during the qualified election period, other than the final year of the period, is equal to: 25 percent of the total number of shares of employer securities acquired by or contributed to the ESOP after 1986 that have ever been allocated to the qualified participant's account on or before the most recent plan allocation date, less the number of shares of employer securities distributed, transferred, or diversified pursuant to a post-1986 election.ⁿ³⁷ For a qualified participant's final diversification election, "50 percent" is substituted for "25 percent" in determining the amount subject to the diversification election.

The shares of employer securities that are diversified pursuant to a diversification election need not consist of securities acquired by or contributed to the ESOP after 1986.ⁿ³⁸ This is the case even though the determination of the number of shares that must be available for diversification is limited to shares acquired by or contributed to the ESOP after 1986. However, the shares of employer securities that are diversified pursuant to a diversification election must consist of employer securities that, immediately before the election, are subject to the put option requirement of *IRC Section 409(h)*. If the ESOP permits participants to receive distributions of employer securities that have been held by the plan for at least 84 months in circumstances other than those described in *IRC Section 409(d)(1)-(3)* (applicable to ESOPs that were formed under the former tax credit ESOP rules), *IRC Section 401(a)(28)(B)* overrides the 84-month rule of *IRC 409(d)* only to the extent that the shares of employer securities allocated to a qualified participant and diversified pursuant to a diversification election actually consist, first, of employer securities that have satisfied the 84-month rule and, then, of employer securities that continue to be subject to the 84-month rule and have been held by the plan for longer periods of time than other employer securities subject to the 84-month rule.

An ESOP can permit diversification of amounts in excess of those required by *IRC Section 401(a)(28)(B)*.ⁿ³⁹ However, amounts in excess of the minimum amount required to be available for diversification under *IRC Section 401(a)(28)(B)* are not treated as available for diversification or as diversified. Thus, employer securities subject to *IRC Section 409(d)* and in excess of the minimum amount required to be available for diversification may not be diversified to the extent that such securities may not be distributed under *IRC Section 409(d)*. In addition, amounts subject to the put option requirements of *IRC Section 409(h)* in excess of the minimum amount required to be available for diversification remain subject to the requirements of *IRC Section 409(h)* even if such amounts are diversified.

Amounts that are required to be available for diversification and are diversified by means of distribution generally are treated as amounts that are not held by an ESOP.ⁿ⁴⁰ Thus, a distribution in satisfaction of a diversification election is not subject to the right to demand employer securities under *IRC 409(h)* and may be made notwithstanding the 84-month holding period requirement under *IRC 409(d)*. However, a distribution in satisfaction of a diversification election is subject to the put option requirement of *IRC § 409(h)* to the extent the distribution consists of employer securities. A distribution in satisfaction of a diversification election does not fail to satisfy the rules of *IRC § 411(d)(6)* (accrued benefit cannot be decreased by plan amendment) merely because it is not available in the form of employer securities or is available only as a single-sum distribution.

A distribution or transfer in satisfaction of a diversification election is eligible for the special exception for ESOP benefits under the qualified joint and survivor annuity rules of *IRC Section 401(a)(11)*.ⁿ⁴¹ Finally, a distribution in satisfaction of a diversification election must satisfy *IRC Section 411(a)(11)* concerning the consent of the participant to

a distribution, but is not subject to the rules under *IRC Section 401(a)*, restricting the distribution of plan benefits before the termination of employment (in the case of a pension plan) or the occurrence of other events (in the case of a profit-sharing plan).

Amounts that have been diversified by giving a qualified participant three distinct investment options also are treated as amounts that are not held by an ESOP.ⁿ⁴² Thus, *IRC Section 409(h)* does not apply to a distribution of such amounts, nor is *IRC Section 411(d)(6)* violated if the amounts are not available for distribution in the form of employer securities. If the ESOP is a money purchase pension plan, amounts that have been previously diversified in accordance with the three distinct investment option alternative may not be distributed prior to the participant's separation from service and do not qualify for the special ESOP benefit exception to the qualified joint and survivor rule under *IRC Section 401(a)(11)(C)*.

[f] Independent Appraiser. Under *IRC Section 401(a)(28)(C)*, all valuations of employer securities acquired after 1986 that are not readily tradable on an established securities market must be made by an independent appraiser. The term "independent appraiser" means any appraiser meeting requirements similar to those contained in the regulations under *IRC Section 170(a)(1)* (the charitable deduction provision).ⁿ⁴³

FOOTNOTES:

(n1)Footnote 1. A defined contribution plan is a plan in which benefits are based solely on the amount contributed to the participant's account, any income, expenses, gains, and losses allocated to the account, and any forfeitures of accounts of other participants that may be allocated to the participant's account. *IRC § 414(i)*.

(n2)Footnote 2. A stock bonus plan is a plan to provide employees benefits similar to those of profit-sharing plans, except that the benefits are distributed in the employer's stock and benefits are not necessarily dependent upon profits. *Treas Reg §§ 1.401-1(a)(2)(iii), 1.401-1(b)(1)(iii)*.

(n3)Footnote 3. A qualifying employer security is an employer security as defined in *IRC § 409(l)*. *IRC § 4975(e)(8)*.

(n4)Footnote 4. *IRC § 4975(e)(7)*. A plan is qualified if it meets the conditions specified in *IRC § 401(a)*.

(n5)Footnote 5. *IRC § 409(l)(2)*.

(n6)Footnote 6. *IRC § 409(l)(3)*.

(n7)Footnote 7. For this purpose, a "controlled group of corporations" has the meaning given to that term by *IRC § 1563(a)*, determined without regard to *IRC § 1563(a)(4)* and *IRC § 1563(e)(3)(C)*. *IRC § 409(l)(4)*. However, the common parent need own only 50% of the voting power of all classes of stock and at least 50% of each class of stock in a first-tier subsidiary for that subsidiary (and all other corporations below it in the chain that would meet the 80% test of *IRC § 1563(a)* if the first-tier subsidiary were the common parent) to be treated as members of the controlled group. If the common parent owns directly all of the voting power of all classes of stock and all of the nonvoting stock in a first-tier subsidiary, the first-tier subsidiary need only own directly 50% of the voting and nonvoting stock in a second-tier subsidiary of the common parent for the corporations in the chain to be treated as includable corporations.

In the case of limited partnerships that were wholly owned by a parent corporation and its subsidiaries who elected to be classified as associations taxable as corporations under *Treas Reg § 301.7701-2(b)(2)*, the Service ruled that the partnerships were to be treated as members of the same controlled group as the parent, so that the parent corporation's stock held by an ESOP maintained by the parent constituted employer securities with respect to the employees of the partnerships. This meant that those employees could participate in the ESOP. Ltr Rul 200008040 .

In the case of limited liability companies (LLC's) owned by members of a controlled group of corporations that did

not elect to be treated as corporations pursuant to *Treas Reg* § 301.7701-3(b), the Service ruled that they were to be disregarded as entities separate from their corporate owners. This meant that the LLC's could not be part of the controlled group. However, a disregarded entity's assets and liabilities are considered to be the assets and liabilities of the entity's owner. This led to the conclusion that the employees of the LLC's owned by the members of the controlled group were to be treated as employees of the corporations so that the common stock of the parent company owned by an ESOP maintained by one of its subsidiaries constituted employee securities with respect to the employees of the LLC's. Ltr Rul 200116051 .

(n32)Footnote 21. *Treas Reg § 54.4975-7(b)(6)*.

(n33)Footnote 1. *IRC § 409(e)(1), (2), (4)*. A corporation must register securities if it has total assets exceeding \$1 million and 750 or more shareholders. The specified exemption applies to any interest or participation in collective trust funds maintained by a bank or in a separate account maintained by an insurance company if the interest or participation is issued in connection with a qualified stock bonus, pension, profit sharing, or employee annuity plan.

(n34)Footnote 2. *IRC § 409(e)(3)*. A plan meets the requirements of *IRC § 409(e)(3)* with respect to an issue if the plan permits each participant one vote with respect to the issue, and the trustee votes the shares held by the plan in the proportion determined by that vote. *IRC § 409(e)(5)*.

An ESOP does not fail to comply with the pass-through voting requirements of *IRC § 409(e)(2)* or (3) merely because the trustee of the ESOP votes shares of stock allocated to participants' or beneficiaries' accounts for which no directions regarding voting are timely received from the participants or beneficiaries. *Rev Rul 95-57, 1995-2 CB 62*.

(n35)Footnote 3. A plan can provide that benefits may be distributed in cash or in the form of employer securities. *IRC § 409(h)(2)(A)*. There is no demand right with respect to that portion of the participant's account that the employee elects to have reinvested under *IRC § 401(a)(28)(B)*, dealing with diversification of investments, discussed below. There is also no demand right if employer stock held by the ESOP is not considered employer securities. *Ltr Rul 200010060*.

(n36)Footnote 4. *IRC § 409(h)(2)(B)*.

(n37)Footnote 5. *IRC § 409(h)(1)(B)*. The fair valuation formula requires the use of an independent appraiser. *IRC § 401(a)(28)(C)*,

The put option requirement does not apply if the employer is a bank that is prohibited by law from redeeming or purchasing its own securities and participants have a right to receive a distribution in cash. *IRC § 409(h)(3)*.

(n38)Footnote 6. *IRC § 409(h)(4)*.

(n39)Footnote 7. *IRC § 409(h)(5)(A)*. A total distribution is a distribution within one taxable year of the balance in the distributee's account.

(n40)Footnote 8. *IRC § 409(h)(5)(B)*. The Code does not define adequate security for this purpose. However, the Service believes that the definition of adequate security in the regulations to *IRC § 503* should apply for this purpose. *TAM 9438002*. Those regulations provide that adequate security means something in addition to and supporting a promise to pay, that is so pledged that it may be sold, foreclosed upon, or otherwise disposed of in default of repayment of the loan, and that the value and liquidity of which security is such that it may reasonably be anticipated that loss of principal or interest will not result from the loan. *Treas Reg § 1.503(b)-1(b)(1)*.

(n41)Footnote 9. *IRC § 409(h)(6)*.

(n42)Footnote 10. The amount of stock ownership is determined using the attribution rules of *IRC § 318(a)* without regard to the employee trust exception of *IRC § 318(a)(2)(B)(i)*.

An allocation can be made to a lineal descendant of the electing taxpayer if the aggregate amount allocated does not exceed more than 5% of the amount sold in the transaction. *IRC § 409(n)(3)(A)*. The exception does not apply to lineal descendants of a more-than-25-percent shareholder.

(n43)Footnote 11. *IRC § 409(n)(3)(B)*.

(n44)Footnote 12. *IRC § 409(n)(1), (3)(C)*.

(n45)Footnote 13. *IRC § 409(n)(2)(A)*.

(n46)Footnote 14. *IRC §§ 409(n)(2)(B), 4979A(a)(1), (c)(1)*.

(n47)Footnote 15. *IRC § 409(p)(1)*. The provision is effective for plan years beginning after March 14, 2001, for any ESOP established after that date or any ESOP established on or before March 14, 2001, if the employer maintaining the plan was not an S corporation of that date.

For purposes of the effective date of *IRC § 409(p)*, an ESOP is not established until it is adopted by an employer for the purpose of enabling its employees to participate in a more than insubstantial manner in the ownership of the employer's business and to provide its employees with more than insubstantial benefits under the ESOP. *Rev Rul 2003-6, 2003-1 CB 286*.

(n48)Footnote 15.1. *Treas Reg § 1.409(p)-1(b)(2)(i)*.

(n49)Footnote 15.2. *Treas Reg § 1.409(p)-1(b)(2)(ii)*.

(n50)Footnote 15.3. *Treas Reg § 1.409(p)-1(b)(2)(iii)*.

(n51)Footnote 16. *IRC § 409(p)(3)(A)*. An ESOP can be a shareholder in an S corporation. *IRC § 1361(c)(6)*. S corporation stock held by an ESOP is not treated as an interest in an unrelated trade or business under *IRC §§ 512(e)(1)(A) and 512(e)(3)*. *Ltr Rul 200029055*.

(n52)Footnote 16.1. *Treas Reg § 1.409(p)-1(c)(3)(ii)*. Using this authority, the Service has ruled that a nonallocation year occurs and the individual is a disqualified person in any case in which (i) the shares of an S corporation are employer securities held by an ESOP, (ii) the profits of the S corporation generated by the business activities of a specific individual are accumulated and held for the benefit of that individual in a qualified S subsidiary or similar entity (such as a limited liability company), (iii) the profits are not paid to the individual as compensation within 2 1/2 months after the end of the year in which earned, and (iv) the individual has rights to acquire shares of stock (or similar interests) representing 50% or more of the value of the stock of the subsidiary or similar entity. *Rev Rul 2004-4, 2004-1 CB 414*.

(n53)Footnote 17. *IRC § 409(p)(4)(A)*. In the case of a 20% deemed-owned shareholder, any member of that shareholder's family is treated as a disqualified person if not otherwise treated as a disqualified person under *IRC 409(p)(4)(A)*. *IRC § 409(p)(4)(B)*.

(n54)Footnote 18. *IRC § 409(p)(4)(C)*. A person's share of unallocated S corporation stock held by the ESOP is determined using the same proportions as the most recent allocation of stock.

(n55)Footnote 19. *IRC § 409(p)(3)(B), (4)(D)*. An individual is treated as owning deemed-owned shares of the

individual. This attribution rule is applied after the rules relating to synthetic stock.

(n56)Footnote 20. *IRC § 409(p)(5)*. Synthetic equity is treated as owned by a person in the same manner as stock is treated as owned under *IRC §§ 318(a)(2) and (3)*.

(n57)Footnote 21. *IRC § 409(p)(6)(C)*.

(n58)Footnote 21.1. *Treas Reg § 1.409(p)-1(f)(2)(iii)*. Whether an asset is the only significant asset of the S corporation or the S corporation is the only significant owner of the related entity depends on the relevant facts and circumstances.

(n59)Footnote 21.2. *Treas Reg § 1.409(p)-1(f)(3)*.

(n60)Footnote 21.3. *Treas Reg § 1.409(p)-1(f)(2)(iii)*.

(n61)Footnote 21.4. *Treas Reg § 1.409(p)-1(f)(2)(iv)*.

(n62)Footnote 22. *IRC § 409(p)(2)*. In addition, the plan ceases to be an ESOP. *Treas Reg § 1.409(p)-1(b)(2)(iv)(B)*.

(n63)Footnote 23. *IRC § 4979A(a)(3), (4), (c)(2)*.

(n64)Footnote 23.1. *Treas Reg § 1.409(p)-1(b)(2)(v)(A)*. If the transfer involves S corporation securities, the recipient plan is subject to tax on unrelated business income under *IRC § 512*.

(n65)Footnote 23.2. *Treas Reg § 1.409(p)-1(b)(2)(v)(B)*.

(n66)Footnote 24. *IRC § 409(o)(1)(A)*. The consent of the participant's spouse may be required. See *IRC §§ 401(a)(11), 417*.

(n67)Footnote 25. *IRC § 409(o)(1)(C)(i)*. For this purpose, the account balance does not include any employer securities acquired with the proceeds of a securities acquisition loan until the end of the plan year in which the loan is repaid in full. *IRC § 409(o)(1)(B)*.

(n68)Footnote 26. *IRC § 409(o)(1)(C)(ii)*. The \$100,000 and \$500,000 amounts are subject to cost-of-living adjustments at the same time and in the same manner as the dollar limits for defined benefit and defined contribution plans under *IRC § 415(d)*. *IRC § 409(o)(2)*. The amounts for 2008 are \$185,000 and \$935,000, respectively.

(n69)Footnote 27. *IRC § 401(a)(28)(B)(i)*. During the last year of the election period, the plan must offer the participant the right to direct investment of at least 50% of the account balance.

An ESOP satisfies the diversification of investments requirement with respect to a qualified participant for a given year when the plan has made available to the participant a distribution of the participant's account subject to the diversification election regardless of whether the participant actually receives a distribution of employer securities. *Notice 88-56, 1988-1 CB 540*, Q & A-15.

(n70)Footnote 28. *IRC § 401(a)(28)(B)(iii)*.

(n71)Footnote 29. *IRC § 401(a)(28)(B)(iv)*.

(n72)Footnote 30. *IRC § 401(a)(28)(B)(ii)*.

(n73)Footnote 31. The ESOP need only offer the three distinct investment opportunities; a qualified participant

does not have to actually elect to diversify. *Notice 88-56*, Q & A-15.

The plan can also offer the option to direct the plan to transfer the portion of the participant's account subject to the diversification election to another qualified defined contribution plan of the employer that offers at least three distinct investment options, provided the transfer is made no later than 90 days after the last day of the qualified election period. *Notice 88-56*, Q & A-13.

(n74)Footnote 32. *Notice 88-56*, Q & A-1. Unless an ESOP separately accounts for employer securities acquired by or contributed to a plan after December 31, 1986, it is presumed that employer securities allocated to participants' accounts after December 31, 1986, consist of employer securities acquired by or contributed to the ESOP after December 31, 1986, and employer securities acquired by or contributed to the ESOP on or before December 31, 1986. *Notice 88-56*, Q & A-4.

(n75)Footnote 33. *Notice 88-56*, Q & A-3.

(n76)Footnote 34. The period can be extended by the Service but no extensions will be granted unless applied for within 90 days after the disposition.

(n77)Footnote 35. *Notice 88-56*, Q & A-7.

(n78)Footnote 36. *Notice 88-56*, Q & A-8.

(n79)Footnote 37. *Notice 88-56*, Q & A-9. The resulting number of shares can be rounded to the nearest whole number.

(n80)Footnote 38. *Notice 88-56*, Q & A-10.

(n81)Footnote 39. *Notice 88-56*, Q & A-11.

(n82)Footnote 40. *Notice 88-56*, Q & A-14.

(n83)Footnote 41. *Notice 88-56*, Q & A-14.

(n84)Footnote 42. *Notice 88-56*, Q & A-16.

(n85)Footnote 43. An appraiser is independent if requirements similar to those found under *IRC 170(a)(1)* and *Treas Reg § 1.170A-13(c)(5)* for a "qualified appraiser" are satisfied. Ann 92-182, 1992-52 *IRB* 45. According to Ann 94-101, 1994-35 *IRB* 53, an appraiser is not independent if (a) the appraiser is the taxpayer that maintains the ESOP (or a member of the controlled group of corporations that includes the taxpayer); (b) the appraiser is a party to the transaction in which the ESOP acquired the property; (c) the appraiser is employed by the taxpayer maintaining the ESOP (or a member of the same controlled group) or by a party to the transaction in which the ESOP acquired the property; or (d) the appraiser is regularly used by any entity described above and does not perform a majority of his or her appraisals for entities other than those described above.

CHAPTER 16A Employee Stock Ownership Plans

2-16A Taxation of Securities Transactions § 16A.03

§ 16A.03 Tax Consequences of Employee Stock Ownership Plans

[1] Contributions by the Employer Corporation.

Contributions by an employer corporation to an ESOP are deductible in the year that they are actually made to the plan.ⁿ¹ The contribution can be made in cash or in the form of the corporation's own stock. If stock of the employer corporation is used to fund the contribution, the corporation does not recognize any gain or loss because of the contribution, even if the contributed stock is treasury stock.ⁿ²

The employer contribution is limited to 25 percent of the compensation paid or accrued during the taxable year to beneficiaries under the plan.ⁿ³ Any excess contribution can be carried forward to succeeding years.ⁿ⁴ If contributions are made to more than one plan, the contributions must be aggregated when applying the limitation.ⁿ⁵ In computing the limitation, the amount of annual compensation taken into account cannot exceed \$200,000.ⁿ⁶

The \$200,000 limitation is to be adjusted annually for inflation in increments rounded to the next lowest multiple of \$5,000, using the calendar quarter beginning July 1, 2001, as the base period.ⁿ⁷

[a] Dividends on Employer Securities. A C corporation is allowed an additional deduction for the amount of any "applicable dividend" paid in cash with respect to employer securities held by an ESOP maintained by it or by a member of a controlled group of corporations.ⁿ⁸ An applicable dividend is one that:

- (1) is paid in cash to the participants in the plan or their beneficiaries;
- (2) is paid to the plan and distributed in cash to participants in the plan or their beneficiaries within 90 days after the close of the plan year in which paid;
- (3) is, at the election of the participants or their beneficiaries, payable as described above or paid to the plan and reinvested in qualifying employer securities; or
- (4) is used to make payments on a loan that was used to pay for the stock on which the dividend is paid.ⁿ⁹

A dividend paid on stock that has been allocated to a participant and then used to repay a loan will not be an applicable

dividend unless the participant is allocated additional stock with a fair market value not less than the amount of the dividend.ⁿ¹⁰

In order for dividends subject to an election to be applicable dividends, a participant must be given a reasonable opportunity before a dividend is paid or distributed to the participant to make the election.ⁿ¹¹ In addition, a participant must have a reasonable opportunity to change a dividend election at least annually. If there is a change in the plan terms governing the manner in which dividends are paid or distributed to participants, a participant must be given an opportunity to make an election under the new plan terms prior to the date on which the first dividend subject to the new plan terms is paid or distributed. An ESOP does not fail to comply with these requirements solely because it provides that, if a particular participant fails to make an affirmative dividend election, one of the options offered to participants is treated as a default election.

The deduction is allowable in the taxable year of the corporation in which the dividend is paid or distributed to a participant or his beneficiary.ⁿ¹² If the dividend is reinvested in qualifying employer securities at the election of the participant, the dividend is treated as paid in the year in which the dividend is reinvested or the election is made, whichever is later.ⁿ¹³ If the dividend is used to repay a loan, the deduction is allowable in the year of repayment.ⁿ¹⁴

Earnings on dividends held in the plan do not constitute dividends under *IRC Section 404(k)* and are not deductible under that section.ⁿ¹⁵ Investment losses attributable to the dividends, or the reduction of the dividend amount paid to the ESOP by the corporation through tax withholding (eg, by a foreign corporation with respect to dividends paid by a foreign corporation) or other means, reduce the amount of the dividend that is available for reinvestment or distribution and, thus, the amount deductible under *IRC Section 404(k)*.ⁿ¹⁶

For taxable years beginning on or after January 1, 2002, an ESOP must provide that a participant is fully vested in any dividend with respect to which the participant is offered a reinvestment election.ⁿ¹⁷ An ESOP can comply with this requirement by providing that participants are fully vested in dividends with respect to which the election is offered, without regard to whether the participant is vested in the stock on which the dividend is paid. Alternatively, an ESOP can comply with the vesting requirement by offering the election only to vested participants.ⁿ¹⁸ In addition, an ESOP may provide that the same election is offered to all participants, including both active participants and participants who are no longer active participants in the ESOP, and the corporation is allowed a deduction with respect to all dividends subject to the election.ⁿ¹⁹

The Service can disallow the deduction if it determines that the dividend constitutes, in substance, an avoidance or evasion of taxation.ⁿ²⁰ This includes the authority to disallow a deduction for unreasonable dividends.ⁿ²¹ With respect to dividends reinvested under the reinvestment election, a dividend paid on common stock that is primarily and regularly traded on an established securities market (within the meaning of *Regulations Section 54.4975-7(b)(1)(iv)*) is presumed to be a reasonable dividend. In the case of a corporation with no outstanding common stock (determined on a controlled group basis) that is primarily and regularly traded on an established market, a determination regarding whether the dividend is reasonable is made by comparing the dividend rate on the stock held by the ESOP with the dividend rate of comparable corporations whose stock is primarily and regularly traded on an established securities market.ⁿ²²

Payments in redemption of stock held by an ESOP that are used to make distributions to terminating ESOP participants constitute an avoidance or evasion of taxation under *IRC Section 404(k)(5)(A)* and are not applicable dividends.ⁿ²³ In addition, any deduction for such payments is disallowed by *IRC Section 162(k)*.^{n23.1}

An ESOP has to be amended to provide for the reinvestment election within a remedial amendment period ending not prior to the last day of the first plan year beginning on or after January 1, 2005.ⁿ²⁴ The availability of the remedial amendment period is conditioned on the timely adoption of a good faith plan amendment by the end of the plan year in which the first taxable year of the corporation for which the deduction is sought ends.ⁿ²⁵

[b] Leveraged Employee Stock Ownership Plans. If an employer corporation's contributions to a leveraged ESOP---an ESOP that has borrowed funds to purchase qualifying employer securities---is used to pay interest on an ESOP's securities acquisition loan, the deduction for the employer corporation is unlimited.ⁿ²⁶ In order to secure the deduction for the year of contribution, the contribution to the ESOP must be made by the due date (including extensions) of the employer's tax return for the year.

IRC Section 415(c)(1) limits the amount of an annual addition to a participant in a plan to the lesser of \$40,000 or 100 percent of the participant's compensation. Annual additions consist of (a) employer contributions, (b) employee contributions, and (c) forfeitures.ⁿ²⁷ However, if not more than one-third of the employer contributions to a leveraged ESOP are allocated to highly compensated employees (within the meaning of *IRC Section 414(q)*), the limitation does not apply to (i) forfeitures of employer securities that were acquired with the proceeds of a ESOP securities loan, or (ii) employer contributions used to pay interest on a securities loan and charged against the participant's account.ⁿ²⁸

[2] Gain Deferral Election.

No gain is recognized on a sale of qualified securities to an ESOP if the seller so elects and (i) immediately after the sale, the ESOP owns at least 30 percent of (a) each class of outstanding stock of the employer corporation (other than certain preferred stock), or (b) the total value of all outstanding stock of the corporation (other than certain preferred stock), and (ii) within a period beginning three months before the sale and ending twelve months thereafter, the seller purchases qualified replacement securities.ⁿ¹ The employer corporation must also file a verified written statement consenting to the application of *IRC Sections 4978* (tax on certain dispositions by the ESOP) and *4979A* (tax on prohibited allocations).ⁿ² Nonrecognition is not available if the seller is a C corporation, or an underwriter who sells securities to the ESOP as part of the underwriter's trade or business as an underwriter.ⁿ³

Qualified securities are employer securities (as defined in *IRC 409(l)*) that meet the following requirements:

- (1) the securities must be issued by a domestic C corporation;
- (2) for at least one year before and immediately after the sale, the issuing corporation (and each member of the same controlled group) has no stock outstanding that is readily tradable on an established securities market;
- (3) at the time of the sale, the securities had been held by the seller for at least three years (determined as of the date of the sale); and
- (4) the securities were not received by the seller in a distribution from a qualified retirement plan or a transfer pursuant to an option or other right granted by the employer corporation to acquire its stock.ⁿ⁴

The term "qualified replacement property" means any security issued by a domestic operating company that did not have passive investment income greater than 25 percent of its gross receipts for the taxable year preceding the year of sale, and is not the corporation that issued the stock that was sold to the ESOP (or a member of the same controlled group).ⁿ⁵ For this purpose, a security means (a) stock in a corporation, (b) a right to subscribe for, or to receive, stock in a corporation, or (c) a bond, debenture, note, or certificate, or other evidence of indebtedness, issued by a domestic corporation.ⁿ⁶

To be an operating corporation, more than 50 percent of the corporation's assets must be used in the active conduct of a trade or business at the time the security is purchased or before the end of the 15-month replacement period.ⁿ⁷ Banks (as defined in *IRC § 581*) and insurance companies subject to tax under Subchapter L are treated as operating corporations.ⁿ⁸ In determining whether a corporation is a domestic operating corporation, (i) if the corporation issuing

the qualified replacement property owns stock representing control of one or more other corporations, (ii) one or more other corporations own stock representing control of the issuing corporation, or (iii) both, then all the corporations will be treated as one corporation.ⁿ⁹

The nonrecognition election must be made by the taxpayer in a statement of election attached to the taxpayer's income tax return filed no later than the due date (with extensions) for the year of sale.ⁿ¹⁰ The statement of election must provide that the taxpayer elects to treat the sale of securities as a sale of qualified securities under *IRC Section 1042(a)*, and contain the following information:

- (1) a description of the qualified securities sold, including the type and number of shares;
- (2) the date of sale of the qualified securities;
- (3) the adjusted basis of the qualified securities;
- (4) the amount realized on the sale;
- (5) the identity of the ESOP to which the qualified securities were sold; and
- (6) if the sale was part of a single, interrelated transaction under a prearranged agreement between taxpayers involving other sales of qualified securities, the names and taxpayer identification numbers of the other taxpayers under the agreement and the number of shares sold by them.

The seller's basis in qualified replacement property is reduced by the amount of gain not recognized under *IRC Section 1042(a)*.ⁿ¹¹ If more than one item of qualified replacement property is purchased, the basis of each item is reduced by an amount determined by multiplying the total gain not recognized by a fraction, the numerator of which is the cost of the item, and the denominator of which is the total cost of all of the qualified replacement property.ⁿ¹²

Gain will be recognized to the extent of the previously unrecognized gain when the electing seller disposes of qualified replacement property.ⁿ¹³ However, no gain need be recognized on a transfer of qualified replacement property (a) in a tax-free reorganization under *IRC Section 368* unless the electing seller owns stock representing control in the acquiring or acquired corporation and the property is substituted basis property in the hands of the transferee, (b) by reason of the death of the electing taxpayer, (c) by gift, or (d) in any transaction to which another election under *IRC Section 1042(a)* applies.ⁿ¹⁴ If a taxpayer owns stock representing control of a corporation that issued qualified replacement property, the taxpayer is treated as having disposed of the qualified replacement property if the corporation disposes of a substantial portion of its assets other than in the ordinary course of its trade or business.ⁿ¹⁵

A special three-year statute of limitations is applied whenever there is an election under *IRC Section 1042(a)*. The period begins whenever the Service receives (i) a notarized statement of purchase of qualified replacement property, (ii) a written statement of the taxpayer's intention not to purchase qualified replacement property within the replacement period, or (iii) a written statement of the taxpayer's failure to purchase qualified replacement property within the replacement period.ⁿ¹⁶

[a] Excise Taxes. The election of nonrecognition treatment under *IRC Section 1042* has the potential of triggering two excise tax provisions. One, *IRC Section 4979A*, applies if there is a prohibited allocation of qualified securities, and is discussed in § 16A.02[4][c]. The second, *IRC Section 4978*, applies if there is a disposition of qualified securities before the end of the minimum three-year holding period.

Under *IRC Section 4978*, if during the three-year period after an ESOP acquired qualified securities in a sale with

respect to which an election under *IRC Section 1042* was made, the ESOP disposes of any qualified securities and (1) the total number of shares held by the ESOP after the disposition is less than the total number of shares held immediately after the sale, or (2) except to the extent provided in regulations, the value of the qualified securities held by the ESOP after the disposition is less than 30 percent of the total value of all employer securities after the disposition, a tax equal to 10 percent of the amount realized is imposed on the employer.ⁿ¹⁷ The amount realized taken into account in determining the amount of tax cannot exceed the portion allocable to qualified securities acquired in the sale to which *IRC Section 1042* applied. This is determined as if the securities were disposed of (1) first from the qualified securities acquired during the three-year period ending on the date of disposition, on a first-in, first-out basis, and (2) then from any other employer securities.ⁿ¹⁸ The amount realized on any distribution to an employee for less than fair market value is determined as if the qualified security had been sold to the employee at fair market value.ⁿ¹⁹

The excise tax does not apply to any distribution or sale of qualified securities made because of (i) the death of the employee, (ii) the retirement of the employee after attaining 59 1/2 years of age, (iii) the disability of the employee (within the meaning of *IRC Section 72(m)(7)*), or (iv) the separation of the employee from service for any period that results in a one-year break in service.ⁿ²⁰ Furthermore, any exchange of qualified securities in a tax-free exchange is not treated as a disposition for purposes of the imposition of the excise tax.ⁿ²¹ Finally, the provision does not apply to any disposition to meet the diversification requirements of *IRC Section 401(a)(28)*.ⁿ²²

[3] Qualified Gratuitous Transfers of Qualified Employer Securities.

IRC Section 664(g) permits the transfer of qualified employer securities to an ESOP by a charitable remainder trust if (a) the transferred securities passed to the charitable remainder trust from a decedent dying before January 1, 1999, (b) no deduction under *IRC Section 404* is allowable with respect to the transfer, (c) the plan contains the provisions discussed below; (d) the plan treats the securities as being attributable to employer contributions without regard to the limitations otherwise applicable to such contributions under *IRC Section 404*, and (e) the employer whose employees are covered by the plan files a verified written statement consenting to the application of *IRC Sections 4978* and *4979A* with respect to the employer.ⁿ¹ In addition, (1) the plan must have been in existence on August 1, 1996, (2) at the time of the transfer, the decedent and members of the decedent's family did not own (directly or indirectly) more than 10 percent of the value of the stock of the employer corporation, and (3) immediately after the transfer, the ESOP owns at least 60 percent of the value of the outstanding stock of the corporation.ⁿ²

The plan must provide the following:

- (1) the qualified employer securities transferred to it are allocated to plan participants in a manner consistent with *IRC Section 401(a)(4)*;
- (2) plan participants are entitled to direct the plan as to the manner in which the securities that are entitled to vote and are allocated to the account of each participant are to be voted;
- (3) an independent trustee votes any securities not allocated to plan participants;
- (4) each participant who is entitled to a distribution from the plan has the right to demand that benefits be distributed in the form of employer securities and that a put option with respect to employer securities that are not traded on an established market be granted;
- (5) the transferred securities are held in a suspense account under the plan to be allocated each year, up to the limitation under *IRC Section 415(c)*, after first allocating all annual additions for the limitation year, up to the limitations under *IRC Sections 415(c)* and (e); and
- (6) on termination of the plan, all securities that are not allocated to plan participants as of the

termination are to be transferred to, or for the use of, an organization described in *IRC Section 170(c)*.ⁿ³

The independent trustee cannot be a member of the decedent's family or a 5-percent shareholder.ⁿ⁴

If any portion of the assets of an ESOP attributable to securities acquired by the plan in a qualified gratuitous transfer are allocated to the account of a person related to the decedent (within the meaning of *IRC Section 267(b)*) or a member of the decedent's family, or to any person who is a 5-percent shareholder of the employer corporation, the plan is treated as having distributed the amount so allocated to such person.ⁿ⁵ This results in that person having to include the amount of the distribution in income. In addition, a tax equal to 50 percent of the amount involved is imposed on the employer corporation.ⁿ⁶

FOOTNOTES:

(n1)Footnote 1. *IRC § 404(a)(1)*. No deduction is allowed for a mere accrual of the amount of the contribution. A deposit into a temporary depository or escrow fund also does not meet the actual payment requirement. *Rev Rul 55-310, 1955-1 CB 45*.

A payment is deemed to have been made on the last day of the preceding taxable year if the payment is on account of that year and is made by the due date for filing the return for the year (including extensions). *IRC § 404(a)(6)*.

(n2)Footnote 2. *IRC § 1032*.

(n3)Footnote 3. *IRC § 404(a)(3)(A)(i)(I)*, effective for taxable years beginning after Dec 31, 2001. For years prior to Jan 1, 2002, the limitation for contributions to an ESOP that was a qualified stock bonus plan was 15%.

(n4)Footnote 4. *IRC § 404(a)(3)(A)(ii)*. Amounts carried over to subsequent years are subject to the 25% limitation. *IRC § 404(a)(7)(B)*.

(n5)Footnote 5. *IRC § 404(a)(3)(A)(iv), (v)*.

(n6)Footnote 6. *IRC 401(a)(17)(A)*, effective for taxable years beginning after Dec 31, 2001. For years beginning after 1993, and ending before 2002, the maximum compensation amount was \$150,000. It was \$200,000 for plan years beginning before 1994. All amounts were adjusted for inflation.

(n7)Footnote 7. *IRC §§ 401(a)(17)(B), 404(l)*.

(n8)Footnote 8. *IRC § 404(k)(1), (3)*. In order to satisfy the requirements of *IRC § 404(k)(1)* and (3), the ESOP must be designated as an ESOP no later than the record date for the dividend; a retroactive designation does not suffice. *Notice 2002-2, 2002-1 CB 285*, Q & A-10.

A plan is not treated as in violation of the requirements of *IRC §§ 401, 409, or 4975(e)(7)*, or as engaging in a prohibited transaction under *IRC § 4975(d)(3)*, merely by paying or distributing an applicable dividend. *IRC § 404(k)(5)(B)*. The distribution of amounts not attributable to dividends from a participant's account does not constitute a payment or distribution under *IRC § 404(k)(2)* and could be treated as violating the requirements of *IRC § 401, 409, or 4975*. *Notice 2002-2*, Q & A-5.

In addition, a plan is not treated as violating the requirements of *IRC §§ 401, 409, or 4975(e)(7)*, or as engaging in a prohibited transaction under *IRC § 4975(d)(3)*, merely by reason of a distribution with respect to S corporation stock that constitutes qualifying employer securities, that in accordance with the plan provisions is used to make payments on a loan described in *IRC § 4975(d)(3)* the proceeds of which were used to acquiring the qualifying employer securities (whether or not allocated to participants). The preceding sentence does not apply in the case of a distribution that is paid with respect to any employer security that is allocated to a participant unless the plan provides that employer securities

with a fair market value of not less than the amount of the distribution are allocated to the participant for the year that (but for the preceding sentence) the distribution would have been allocated to the participant. *IRC § 4975(f)(7)*.

The Service has ruled that no deduction is allowable under *IRC § 404(k)(1)* for payments in redemption of stock held by an ESOP that are used to make distributions to terminating ESOP participants because such payments fall within the provisions of *IRC § 162(k)(1)* (disallowing a deduction for any amount paid or incurred by a corporation in connection with the reacquisition of its stock - See § 5.05[3]). *Rev Rul 2001-6, 2001-1 CB 491* . Although the Court of Appeals for the Ninth Circuit disagreed with *Rev Rul 2001-6* in *Boise Cascade Corp v US*, 329 F3d 751 (9th Cir 2003) , the Service believes *Boise Cascade* was wrongly decided and continues to litigate the issue. Chief Counsel Notice 2004-38 . Its record since then has noticeably improved, with the Courts of Appeals for the Third Circuit, the Eighth Circuit, and the Tax Court, endorsing the Government's position. *Conopco, Inc v US*, 572 F3d 162 (3rd Cir 2009) ; *General Mills, Inc v US*, 554 F3d 727 (8th Cir 2009) ; *Ralston Purina Co v Commr*, 131 TC 29 (2008) , *affd sub nom Nestle Purina Petcare Co v Commr*, 594 F3d 968 (8th Cir 2010) .

(n9)Footnote 9. *IRC § 404(k)(2)(A)*. The participants' election to reinvest the dividend in qualifying employer securities applies only to dividends paid or distributed in tax years beginning after Dec 31, 2001.

The payment or reinvestment of dividends does not constitute an employer contribution, employee contribution, or forfeiture under *IRC § 415(c)(2)*. Therefore, the dividends are not annual additions subject to the annual addition limitation of *IRC § 415(c)(1)*.

(n10)Footnote 10. *IRC § 404(k)(2)(B)*.

(n11)Footnote 11. *Notice 2002-2* , Q & A-3.

(n12)Footnote 12. *IRC § 404(k)(4)(A)*.

(n13)Footnote 13. *IRC § 404(k)(4)(B)*. An election is not considered made until the date the election becomes irrevocable. *Notice 2002-2* , Q & A-4.

(n14)Footnote 14. *IRC § 404(k)(4)(C)*.

(n15)Footnote 15. *Notice 2002-2* , Q & A-5. The guidance provided by Q & A-5 is not applicable for deductions taken in taxable years beginning before Jan 1, 2003.

(n16)Footnote 16. *Notice 2002-2* , Q & A-5.

(n17)Footnote 17. *Notice 2002-2* , Q & A-9.

(n18)Footnote 18. *Id*, citing *Treas Reg § 1.401(a)(4)-4(b)(2)(ii)(2)(B)*.

(n19)Footnote 19. *Notice 2002-2* , Q & A-12.

(n20)Footnote 20. *IRC § 404(k)(5)(A)*.

(n21)Footnote 21. *Notice 2002-2* , Q & A-11.

(n22)Footnote 22. *Id*. The comparison entails an examination of relevant corporate characteristics such as industry, size of the corporation, earnings, debt-equity structure, and dividend history.

(n23)Footnote 23. *Treas Reg § 1.404(k)-3*; *Rev Rul 2001-6, 2001-1 CB 491* .

(n24)Footnote 23.1. The Ninth Circuit allowed the deduction in *Boise Cascade Corp v US*, 329 F3d 751 (9th Cir

2003) . Notwithstanding the position of the Ninth Circuit, the Service has issued regulations under *IRC § 162(k)* that continue to deny the availability of the deduction. *Treas Reg § 1.162(k)-1(a)*. The disallowance provision does not apply to deductions for any of the following: interest, any amount properly allocable to indebtedness and amortized over the term of the indebtedness, dividends paid, or amounts paid or incurred in connection with the redemption of any stock in a regulated investment company that issues only stock that is redeemable upon the demand of the shareholder. *Treas Reg § 1.162(k)-1(a)*.

(n25)Footnote 24. *Notice 2002-2* , Q & A-13.

(n26)Footnote 25. *Id*; *Notice 2001-42*, 2001-2 CB 70 . An amendment does not fail to be a timely good faith amendment solely because it does not address the vesting of dividends with respect to which an election is provided. However, the plan must operate in accordance with the guidance provided by *Notice 2002-2* .

(n27)Footnote 26. *IRC § 404(a)(9)(B)*. Prior to 2002, the deduction limit for contributions made to a stock bonus plan ESOP was 15% of compensation paid or accrued during the taxable year to employees under the plan. However, *IRC § 404(a)(9)(A)* increased the limit to 25% if the contribution was used to repay principal on the securities loan. *IRC § 404(a)(9)(A)* is no longer important because the deduction limitation has been increased to 25% of compensation for all plans.

(n28)Footnote 27. *IRC § 415(c)(2)*.

(n29)Footnote 28. *IRC § 415(c)(6)*.

(n30)Footnote 1. *IRC § 1042(a), (b)(1)(A), (2), (c)(3)*. The excepted preferred stock must be nonvoting and nonconvertible, not participate in corporate growth to any significant extent, and have redemption and liquidation rights that do not exceed the issue price of the stock (except for a reasonable redemption or liquidation premium). *IRC § 1504(a)(4)*.

The 30% ownership test is applied after application of *IRC § 318(a)(4)* (option attribution rule).

(n31)Footnote 2. *IRC § 1042(b)(3)*.

(n32)Footnote 3. *IRC § 1042(c)(5), (7)*.

(n33)Footnote 4. *IRC § 1042(b)(4), (c)(1)*; *Temp Treas Reg § 1.1042-1T*, Q & A-1(b).

The term "readily tradable on an established securities market" generally has the same meaning as "publicly traded" under *Treas Reg § 54.4975-7(b)(1)(iv)*, referring to a security that is listed on a national securities exchange registered under § 6 of the Securities Exchange Act of 1934 or that is quoted on a system sponsored by a national securities association registered under § 15A(b) of the Securities Exchange Act. *Ltr Rul 200052014* ; *Ltr Rul 9036039* .

(n34)Footnote 5. *IRC § 1042(c)(4)(A)*.

(n35)Footnote 6. *IRC §§ 165(g)(2), 1042(c)(4)(D)*.

(n36)Footnote 7. *IRC § 1042(c)(4)(B)(i)*.

(n37)Footnote 8. *IRC § 1042(c)(4)(B)(ii)*.

(n38)Footnote 9. *IRC § 1042(c)(4)(C)(i)*. Control, here, has the meaning given to it in *IRC § 304(c)*, disregarding any qualified replacement property of the taxpayer with respect to the sale being tested. *IRC § 1042(c)(4)(C)(ii)*.

(n39)Footnote 10. *IRC § 1042(c)(6)*; *Temp Treas Reg § 1.1042-1T*, Q & A-3. If the taxpayer has purchased

qualified replacement property at the time of the election, the taxpayer must attach a notarized statement of purchase to the statement of election.

Gain recognition was not allowed in *Estate of Clause v Commr*, 122 TC 115, because the taxpayer did not file the election within the required time period. The taxpayer argued that there had been substantial compliance with the requirements. The court answered by stating that there is no defense of substantial compliance for failure to comply with the essential requirements of the governing statute.

The election to defer gain is a statutory election. Except for the automatic six-month extension under *Treas Reg* § 301.9100-2(b), no other extension can be granted. See, eg, *Ltr Rul* 200519030.

(n40)Footnote 11. *IRC* § 1042(d). The basis of qualified replacement property acquired from a decedent is determined under *IRC* § 1014. *Ltr Rul* 9109024.

The holding period of the qualified securities sold by the taxpayer is tacked onto the holding period of the qualified replacement property. *IRC* § 1223(12).

(n41)Footnote 12. If the qualified replacement property is a debt instrument, the reduction in basis is not treated as market discount under *IRC* § 1278(a)(2)(A)(ii).

(n42)Footnote 13. *IRC* § 1042(e)(1). A transfer of qualified replacement property to a grantor trust will not cause the recapture of deferred gain. *Ltr Rul* 9130027.

(n43)Footnote 14. *IRC* § 1042(e)(3). If a taxpayer who creates a grantor retained annuity trust (GRAT) is treated as the owner of the qualified replacement property held in the GRAT under the grantor trust rules, the transfer of the qualified replacement property to the GRAT is not a disposition of the property under *IRC* § 1042(e). *Ltr Rul* 200709011.

(n44)Footnote 15. *IRC* § 1042(e)(2). Control is determined by applying the rules of *IRC* § 304(c).

(n45)Footnote 16. *IRC* § 1042(f); *Temp Treas Reg* § 1.1042-1T, Q & A-5.

(n46)Footnote 17. *IRC* § 4978(a), (b)(1), (c)(1). *IRC* § 4978 also imposes an excise tax on premature dispositions of qualified employer securities acquired in a qualified gratuitous transfer under *IRC* § 664(g) (see § 16A.03[3]). However, the value of the employer securities held by the ESOP after the disposition cannot be less than 60% of the total value of all employer securities.

(n47)Footnote 18. *IRC* § 4978(b)(2). If the excise tax does not apply because of one of the exceptions specified in *IRC* § 4978(d), the disposition is treated as made from employer securities in the opposite order from the one described in the text.

(n48)Footnote 19. *IRC* § 4978(b)(3).

(n49)Footnote 20. *IRC* § 4978(d)(1).

(n50)Footnote 21. *IRC* § 4978(d)(2).

(n51)Footnote 22. *IRC* § 4978(d)(4).

(n52)Footnote 1. *IRC* § 664(g)(1).

(n53)Footnote 2. *IRC* § 664(g)(2). The decedent's family includes only the decedent's ancestors, spouse, lineal descendants of the decedent and of the decedent's parents and spouse, and spouses of those lineal descendants. Legally

adopted children are treated as children by blood. *IRC § 2032A(e)(2)*.

Indirect ownership by the decedent or the decedent's family is determined under all of the provisions of *IRC § 318(a)*. Ownership by the ESOP is determined after application of *IRC § 318(a)(4)*.

(n54)Footnote 3. *IRC § 664(g)(3)*. If, upon the termination of the ESOP, securities not allocated to plan participants are not transferred to an organization described in *IRC § 170(c)*, a tax is imposed on the employer corporation in an amount equal to the amount of tax that would be imposed if the securities were not transferred to the ESOP, plus interest. *IRC § 664(g)(6)*.

(n55)Footnote 4. A person is a 5% shareholder if, at any time during the one-year period ending on the date of acquisition of qualified employer securities by the ESOP, the person owns (directly or indirectly through application of *IRC § 318(a)*) 5% of the outstanding stock of the employer corporation or a member of the same controlled group. The exception for attribution from an qualified employee trust is disregarded when applying *IRC § 318(a)*. *IRC § 664(g)(5)(B)*.

(n56)Footnote 5. *IRC § 664(g)(5)(A)*.

(n57)Footnote 6. *IRC § 4979A(a)(2), (c)(1)*. See § 16A.03[2][a] for a discussion of the excise tax imposed by *IRC § 4978* in the case of a premature disposition of employer securities acquired in a qualified gratuitous transfer.

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions 17.syn

§ 17.syn Synopsis to Chapter 17: Transactions in Bonds and Other Debt Instruments

§ 17.01 Taxable Interest Bonds

[1] Interest Income--Year of Inclusion.

[a] Accrual Basis Taxpayers.

[b] Cash Basis Taxpayers.

[i] General Rule.

[ii] Constructive Receipt.

[c] Assignment of Income Problems.

[d] Bonds Purchased "Flat."

[2] Amortization of Bond Premium.

[a] The Election to Amortize Bond Premium.

[b] Determining the Amount of Amortizable Bond Premium.

[c] The Operation of Section 171.

§ 17.02 Tax-Exempt Interest Bonds

[1] State and Local Bonds--In General.

[2] Private Activity Bonds.

[a] The Scope of Section 141.

[b] Exempt Facility Bonds.

[i] In General.

[ii] Enterprise Zone Facility Bonds.

[c] Mortgage Revenue Bonds.

[d] Qualified Small Issue Bonds.

[e] Qualified Student Loan Bonds.

[f] Qualified Redevelopment Bonds.

[g] Qualified 501(c)(3) Bonds.

[h] Qualified New York Liberty Bonds.

[i] Qualified Gulf Opportunity Zone Bonds.

[3] Arbitrage Bonds.

[4] Qualified Scholarship Funding Bonds.

[5] Advance Refundings.

[6] Volunteer Fire Department Bonds.

[7] Pooled Financing Bonds.

[8] Hedge Bonds.

[9] Issuer Reporting Requirements.

[10] Tax-Exempt Bonds Issued by Indian Tribal Governments.

[11] Amortization of Bond Premium on Tax-Exempt Bonds.

[12] Qualified Tax Credit Bonds.

[a] General Rules--*IRC Section 54A*.

[b] Qualified Forestry Conservation Bonds--*IRC Section 54B*.

[c] New Clean Renewable Energy Bonds--*IRC Section 54C*.

[d] Qualified Energy Conservation Bonds--*IRC Section 54D*.

[e] Qualified Zone Academy Bonds--*IRC Section 54E*.

[f] Qualified School Construction Bonds--*IRC Section 54(F)*.

[g] Direct Pay Tax Credit Bonds--*IRC Section 6431*.

[13] Build America Bonds--*IRC Section 54AA*.

[14] Recovery Zone Bonds--*IRC Section 1400U*.

[15] Reacquisition and Reissuance by State and Local Governments of Their Own Bonds.

[16] United States Series EE Savings Bonds.

§ 17.03 Bonds With Original Issue Discount

[1] Original Issue Discount Defined.

[2] Tax Treatment of Original Issue Discount Bonds.

[a] In General.

[b] Contingent Payment Debt Instruments.

[c] Tax-Exempt Contingent Payment Debt Instruments.

[d] Variable Rate Debt Instruments.

[e] Integration of Qualifying Debt Instruments.

[f] Inflation-Indexed Debt Instruments.

[3] Reporting Requirements for Issuers of Original Issue Discount Bonds.

§ 17.04 Disposition of Taxable and Tax-Exempt Bonds

[1] General Rule: Capital Gain or Loss.

[2] Disposition of Bonds in Bearer Form.

[3] Disposition of Bonds with Accrued Interest.

[4] Disposition of Bonds with OID.

[5] Disposition of Bonds with Market Discount.

[6] Partial Dispositions: Stripped Bonds and Bond Coupons.

§ 17.05 Losses From Worthless Obligations

[1] Obligations in Registered Form or With Interest Coupons.

[2] Other Worthless Obligations.

§ 17.06 Transactions by a Corporation in Its Own Obligations

[1] Purchase or Retirement of Securities--General Rule.

[2] Purchase or Retirement of Securities for More Than the Issue Price.

[3] Purchase or Retirement of Securities at Less Than the Issue Price.

[a] The Kirby Lumber Rule--Cancellation of Indebtedness Income.

[b] Exceptions to the Kirby Lumber Rule.

[i] Cancellation of Indebtedness Intended as a Gift.

[ii] Contributions to Capital.

[iii] Issuance of Stock or Other Debt in Exchange for the Canceled Debt.

[iv] Statutory Exclusion of Cancellation of Indebtedness Income: *IRC Section 108*.

[4] Returns Relating to Cancellation of Indebtedness by Certain Entities.

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions § 17.01

§ 17.01 Taxable Interest Bonds

[1] Interest Income--Year of Inclusion.

[a] Accrual Basis Taxpayers. It will be remembered that a dividend distribution becomes part of the gross income of the shareholders "when the cash or other property is unqualifiedly made subject to their demands."ⁿ¹ Thus, as a general rule, a dividend is income when received, whether the recipient uses the cash method or accrual method of accounting.

A different rule governs the inclusion of interest by an accrual basis taxpayer who must account for the income in the year in which it accrues, that is, in the taxable year "when all the events have occurred which fix the right to receive such income and the amount thereof can be determined with reasonable accuracy."ⁿ² But even though interest has accrued and the amount thereof accurately determined, there will be no income to include in the year of accrual where collection has become doubtful, as when the debtor has become insolvent or been placed in receivership.ⁿ³ In such case, the interest is returned as income when collectability is assured,ⁿ⁴ a situation which is likely to occur when collection is actually made.

A second departure from the rules governing the reporting of income by an accrual basis taxpayer comes when the debtor pays the interest before it is due. Prepayments are included in gross income for the year in which they are received by the taxpayer, notwithstanding that the accrual of interest is properly made in a subsequent year.ⁿ⁵

[b] Cash Basis Taxpayers.

[i] General Rule. Interest received by a cash basis taxpayer is includable in gross income when actually or constructively received.ⁿ⁶ The payment need not be made in cash; but if made in property, income is received only to the extent that the property received has a fair market value. Thus, in *Andrews v. Commr*,ⁿ⁷ the receipt of scrip in payment of an existing interest obligation was income to the taxpayers since the scrip had an established fair market value, while in *Laing v. Commr*,ⁿ⁸ the payment of accrued interest by the distribution of worthless bonds produced no income for the recipient. However, where the taxpayer received new corporate notes having a face amount equal to the original debt and the unpaid interest thereon, but with a fair market value no greater than the principal of the debt, no income was received until the obligations were satisfied and the interest due paid in cash.ⁿ⁹ Finally, there are instances in which the receipt of a new obligation covering the old debt plus past due interest has been held not to result in income on the ground that the new note represented nothing more than an extension of the prior debt.ⁿ¹⁰

[ii] Constructive Receipt. Income is constructively received by a cash basis taxpayer if "it is credited to his account, set apart for him, or otherwise made available so that he may draw upon it any time, or so that he could have drawn upon it during the taxable year if notice of intention to withdraw had been given."¹¹ Thus, interest coupons which have matured and are payable, but have not been cashed, are constructively received in the year they mature, unless the obligor had no funds available for the payment of interest during that year.¹² The fact that the taxpayer is physically unable to cash the coupons, say, because of illness, does not change this result.¹³

Holders of certificates of deposit, bonus passbook accounts, or other deposit arrangements involving the deferral of interest for more than one year, must report the interest when credited unless the holder will suffer a penalty for early withdrawal.¹⁴ Any amount forfeited constitutes a loss incurred in a transaction for profit and should be deducted as such.¹⁵

Six-month time deposits that extend beyond the end of the taxable year stand on a different footing. Although the Service first used the doctrine of constructive receipt to hold that a portion of the interest was reported in each of the taxable years in which the six-month term fell, it now takes the position that the existence of a substantial penalty for early withdrawal prevents application of the doctrine and causes all of the income to be earned at maturity.¹⁶ However, if interest is credited throughout the term of the certificate and can be withdrawn without penalty even though the principal cannot, the interest must be included in gross income for the taxable year in which it is credited or made available for withdrawal.¹⁷

An interesting situation--receipt, but not actual or constructive receipt--was presented in *Bates v. Commissioner*,¹⁸ a case involving a deposit of unmatured coupons for collection. The deposit was made in late December of one year; the coupons were to mature on the first day of the succeeding year. The taxpayer reported interest income for the year of deposit pointing to the fact that the bank had credited her account in that year. The Board of Tax Appeals agreed with the Commissioner that the subsequent year was the proper year of inclusion; the action by the bank in crediting the taxpayer's account before maturity was viewed as a loan by the bank to its depositor.

[c] Assignment of Income Problems.

"The sole question for decision is whether the gift, during the donor's taxable year, of interest coupons detached from the bonds, delivered to the donee and later in the year paid at maturity, is the realization of income taxable to the donor."

Thus did Justice Stone begin his opinion in *Helvering v. Horst*,¹⁹ one of the most famous cases in the assignment of income anthology and, for that matter, in all of tax litigation. He concluded by saying:

"When, by the gift of the coupons, [the taxpayer] has separated his right to interest payments from his investment and procured the payment of interest to his donee, he has enjoyed the economic benefits of the income in the same manner and to the same extent as though the transfer were of earnings and in both cases the import of the statute is that the fruit is not to be attributed to a different tree from that on which it grew."²⁰

Horst was not concerned with the proper year of inclusion, only with the proper taxable entity; the delivery of the coupons and the payment of interest to the donee occurred in the same year. But suppose they occur in different years. Is the income includable by the donor in the year of gift or in the year in which the donee collects the interest? The answer depends on the taxpayer's method of accounting. If the taxpayer is an accrual basis taxpayer, the interest is includable as it accrues; if a cash basis taxpayer, it is income in the year that it is paid.²¹

The taxpayer cannot completely escape taxation even when there is a gift of the "tree," that is, a gift of the bond itself. Unlike dividends which become income on the date on which the shareholder becomes entitled to the dividend, usually

the record date, interest accrues ratably over the interest period. An assignment of the bond or other evidence of indebtedness between interest dates produces income for the taxpayer to the extent of the interest accrued from the last payment date to the date of assignment.ⁿ²² The year in which the assignor must report this income will again be determined by his method of accounting.

[d] Bonds Purchased "Flat."

The taxpayer who purchases bonds which are in default as to the payment of interest generally purchases them "flat," that is, at a single price with no attempt made to segregate the cost of the bond from the amount of interest in arrears. Because of this, a payment made on account of the past due interest is treated as a return of capital, not as taxable interest income.ⁿ²³ But interest which accrues after the date of purchase will be taxable as interest income in the year accrued or received, depending on the taxpayer's method of accounting.ⁿ²⁴

Does the "flat" purchase doctrine apply where the liability of the obligor to pay interest was contingent? The Third Circuit, in a case involving interest in arrears which could be paid only if interest was paid on certain collateral bonds, held that the payment of the back interest constituted taxable income to the recipient.ⁿ²⁵ The court found support for its position in the fact that a deduction for the interest could not have been taken by an accrual basis taxpayer until the liability therefore was fixed. The Fifth Circuit disagreed.ⁿ²⁶ It thought a decision that declined to make a distinction based upon an inapplicable analogy (whether or not a deduction could be taken) to be better reasoned, and so applied the "flat" purchase rule in a situation in which the back interest could be paid only "if, as, and when earned."

What of the recovery of non-contingent interest accrued before the "flat" purchase, when the recovery exceeds the amount paid for the security by the taxpayer? The Service originally held the excess recovery to be ordinary income, inasmuch as the gain produced thereby was neither gain derived from a sale or exchange of the bond nor an amount received upon the retirement of the bond.ⁿ²⁷ The Government now takes a different position--the excess recovery is treated as an amount received on the retirement of the bond and, thus, as an amount received on the sale or exchange of the bond. And this result obtains "regardless of any expectancy that the principal or face amount of the bonds ultimately will be collected."ⁿ²⁸

Interest which accrues after the acquisition is always taxable as ordinary income, a situation that prevails even when the interest is realized through a sale to a third party rather than by a payment from the obligor.ⁿ²⁹ (Viewed from the purchaser's side, the acquisition is probably a "flat" purchase, permitting him to recover tax-free all of the interest accrued to the date of purchase by him.)

An allocation problem is presented when the amount received on the sale is more than the taxpayer's adjusted basis, but less than the sum of (1) the principal of the bonds, (2) the unpaid portion of the interest in default at the time of purchase, and (3) the interest accrued following purchase. This was the situation presented to the Tax Court in *Jaglom v. Commissioner*,ⁿ³⁰ where proceeds of \$59,747.50 had to be spread across the right to receive a principal sum of \$50,000, unpaid interest in arrears at acquisition of \$2,604.17, and post-acquisition interest of \$11,854.83, or a total of \$64,459. The court found it appropriate to treat \$ 10,988.24 of the amount received from the sale of bonds as ordinary income, arriving at this amount by means of the following formula:

Unpaid interest accrued after purchase	Total recovery on sale of bonds
$\frac{\text{Principal amount of bond} + \text{unpaid portion of interest in default at time of purchase} + \text{unpaid interest accrued after purchase}}{\text{Total recovery on sale of bonds}}$	

[2] Amortization of Bond Premium.

[a] The Election to Amortize Bond Premium. Bond premium is the additional amount a purchaser pays when he acquires a bond at a cost in excess of the face value or call value of the bond, a situation that may occur when the interest rate on the bond exceeds the yield on similar securities in the current market. When a bond is purchased at a premium, the actual interest received is not a true reflection of the bond's yield, but represents, in part, a return of the premium. Because of this, the Code permits a taxpayer, corporate or individual, purchasing wholly taxable bonds at a premium to elect to amortize the premium over the life of the bond.ⁿ¹ This election only relates to taxable interest bonds; there can be no deduction for amortization when the interest on the bond is wholly exempt from tax.ⁿ²

A slightly different treatment applies to taxable obligations acquired after December 31, 1987 (or, if the taxpayer elects, after October 22, 1986). The amount of any bond premium on such obligations must be allocated among the interest payments under rules similar to those in *IRC Section 171(b)(3)* (discussed in § 17.02[5][c]), and in lieu of a deduction, the amount of any premium allocated to any interest payment is applied against (and operates to reduce) the amount of the interest payment.ⁿ³

The regulations recognize only one method of electing to amortize bond premium--the taxpayer must claim a deduction for the premium in his return filed for the first taxable year to which the election is to apply.ⁿ⁴ (This is done by attaching a statement showing the computation of the deduction.ⁿ⁵) The election applies to all wholly taxable bonds owned by the taxpayer at the beginning of the year of election and thereafter acquired by him, and is binding for all subsequent years unless revocation is permitted by the Commissioner.ⁿ⁶ If a holder elects to amortize bond premium and holds a bond acquired before the taxable year in which the election is made, the holder cannot amortize amounts that would have been amortized in prior years had an election been in effect for those prior years.ⁿ⁷

[b] Determining the Amount of Amortizable Bond Premium. In general, bond premium is the excess of the basis for determining loss on the sale or exchange of the bond over the amount payable at maturity, or if the bond is callable, at the earlier call date.ⁿ⁸ However, the computation of bond premium can be made with reference to the earlier date only "if it results in a smaller amortizable bond premium attributable to the period of earlier call date."ⁿ⁹

A holder determines bond premium on a variable rate debt instrument by reference to the stated redemption price at maturity of the equivalent fixed rate debt instrument constructed for the variable rate debt instrument.ⁿ¹⁰ The holder also allocates any bond premium among the accrual periods by reference to the equivalent fixed rate debt instrument. The holder constructs the equivalent fixed rate debt instrument, as of the date the holder acquires the variable rate debt instrument, by using the principles of *Section 1.1275-5(e) of the regulations*, discussed in § 17.02A[2][d].

A holder determines bond premium on an inflation-indexed debt instrument by assuming that there will be no inflation or deflation over the remaining term of the instrument.ⁿ¹¹ The holder also allocates any bond premium among the accrual periods by assuming that there will be no inflation or deflation over the remaining term of the instrument. The bond premium allocated to an accrual period offsets qualified stated interest allocable to the period. If the bond premium allocated to an accrual period exceeds the qualified stated interest allocable to the period, the excess is treated as a deflation adjustment under the rules applicable to inflation-indexed debt instruments.

Special rules apply to determine the yield and remaining payment schedule of bonds subject to contingencies, if the timing and amounts of the payments that comprise the payment schedule are known as of the date the holder acquires the bond (the acquisition date).ⁿ¹² These rules do not apply merely because there is a possibility of impairment of a payment (or payments) by insolvency, default, or similar circumstances.

If, based on all the facts and circumstances as of the acquisition date, a single remaining payment schedule is more likely than not to occur, this remaining payment schedule is used to determine and amortize bond premium.ⁿ¹³ However, the existence of a mandatory sinking fund provision is ignored.ⁿ¹⁴

Special operating rules come into play if the holder or the issuer has an unconditional option or options, exercisable on

one or more dates during the remaining term of the bond, to alter the bond's remaining payment schedule, namely:

- (1) The issuer is deemed to exercise or not exercise an option or combination of options in the manner that minimizes the holder's yield on the obligation. However, the issuer of a taxable bond is deemed to exercise or not exercise a call option or combination of call options in the manner that maximizes the holder's yield on the bond.ⁿ¹⁵
- (2) A holder is deemed to exercise or not exercise an option or combination of options in the manner that maximizes the holder's yield on the bond.ⁿ¹⁶
- (3) If both the issuer and the holder have options, the above rules are applied to the options in the order that they may be exercised.ⁿ¹⁷

If a contingency actually occurs or does not occur, contrary to the assumption originally made, the bond is treated as retired and reacquired on the date of the change in circumstances for an amount equal to the adjusted acquisition price of the bond as of that date.ⁿ¹⁸ If, however, the change in circumstances results in a substantially contemporaneous pro rata prepayment, the pro rata prepayment is treated as a payment in retirement of a portion of the bond.ⁿ¹⁹ Finally, if a change in circumstances results from an issuer's call of a taxable bond or a partial call that is a pro rata prepayment, the holder may deduct as bond premium an amount equal to the excess of the holder's adjusted acquisition price of the bond over the greater of (a) the amount received on redemption, and (b) the amounts that would have been payable under the bond (other than qualified stated interest) if no change in circumstances had occurred.ⁿ²⁰

The premium on a convertible bond can be amortized if the option to convert rests with the holder and the bond is convertible into stock of the issuer, stock or debt of a related party (within the meaning of *IRC Section 267(b)* or *IRC Section 707(b)(1)*), or into cash or other property in an amount equal to the approximate value of the stock or debt.ⁿ²¹ However, the amount of bond premium taken into account cannot include any amount attributable to the conversion features of the bond.ⁿ²² The value of the conversion feature of a particular bond can be determined under any reasonable method.ⁿ²³ For example, the holder of the bond can determine the value of the conversion option by comparing the price of the bond in question with the price of bonds of similar character, but without conversion features, sold on the open market.ⁿ²⁴

There can be no premium to amortize unless the instrument involved is a "bond," a term defined by *IRC Section 171(d)* as "any bond, debenture, note, or certificate or other evidence of indebtedness, but does not include any such obligation which constitutes stock in trade of the taxpayer or any such obligation of a kind which would properly be included in the inventory of the taxpayer if on hand at the close of the taxable year, or any obligation held by the taxpayer primarily for sale to customers in the ordinary course of his trade or business."ⁿ²⁵ Thus, since bonds held by a dealer are not bonds for purposes of *IRC Section 171*, a dealer is not permitted to amortize bond premiumⁿ²⁶ except when the bonds are held for investment and not as inventory. The regulations also exclude a bond described in *IRC Section 1272(a)(6)(C)* (regular interests in a REMIC, qualified mortgages held by a REMIC, and certain other debt instruments, with payments subject to acceleration), a bond to which *Section 1.1275-4 of the regulations* applies (relating to certain debt instruments that provide for contingent payments), and a bond held by a holder that has made an election under *Section 1.1272-3* to treat all interest on the bond as original issue discount.ⁿ²⁷

[c] The Operation of Section 171. *IRC Section 171(b)(2)* provides that "the amortizable bond premium of the taxable year shall be the amount of the bond premium attributable to such year." For bonds issued after September 27, 1985, amortizable bond premium is determined on the basis of the taxpayer's yield to maturity using the basis of the obligation, and compounding at the close of each accrual period, as defined in *IRC Section 1272(a)(5)*.ⁿ²⁸ If the amount payable on an earlier call date is used in determining the amortizable bond premium attributable to the period before the call date, the bond is treated as maturing on the call date for the amount so payable and then reissued on such date for the amount so payable.ⁿ²⁹

The bond premium allocable to an accrual period is determined under a three-step process.ⁿ³⁰ Within an accrual period, the bond premium allocable to the period accrues ratably.

The first step is to determine the holder's yield, namely, the discount rate that, when used in computing the present value of all remaining payments to be made on the bond (including payments of qualified stated interest), produces an amount equal to the basis in the bond under *Regulations Section 1.171-1(e)*, discussed above.ⁿ³¹ For this purpose, the remaining payments include only payments to be made after the date the holder acquires the bond. The yield is calculated as of the date the holder acquires the bond, must be constant over the term of the bond, and must be calculated to at least two decimal places when expressed as a percentage.

The second step is to determine the holder's accrual period for the bond.ⁿ³² This determination is made in the same manner as the determination of the accrual period for original issue discount.ⁿ³³

The third step calls for determining the bond premium allocable to the accrual period.ⁿ³⁴ The premium so allocable is the excess of the qualified stated interest allocable to the accrual period over the product of the holder's adjusted acquisition price at the beginning of the accrual period and the holder's yield.ⁿ³⁵

If the bond premium allocable to an accrual period exceeds the qualified stated interest allocable to the accrual period, and the bond is a taxable bond, the excess is treated by the holder as a bond premium deduction for the accrual period. However, the amount of the deduction is limited to the amount by which the holder's total interest inclusions on the bond in prior accrual periods exceed the total amount treated by the holder as a bond premium in those periods.ⁿ³⁶ If the bond premium allocable to the accrual period exceeds both the sum of the qualified stated interest allocable to the period and the deduction mentioned in the preceding sentence, the excess is carried forward to the next accrual period and is treated as bond premium allocable to that period.ⁿ³⁷

In addition to the deduction under *IRC Section 171*, the amount of bond premium attributable to the taxable year is applied as an adjustment to the basis of the bond pursuant to *IRC Section 1016(a)(5)*. Thus, it can be seen that no gain or loss will be realized if the taxpayer elects to amortize bond premium and holds the bond to maturity or its earlier call date; the basis of the bond will equal the amount paid on redemption. (This assumes that the election is made for the taxable year in which the bond is acquired; if made in a later year, there is no adjustment to basis on account of the unamortized premium attributable to the period between acquisition and election.) If the election to amortize were not made, there would be no basis adjustment and the difference between the shareholder's cost for the bond and the amount received on redemption would be treated as a capital loss. Clearly, then, the election to amortize bond premium will almost always produce the better tax result, inasmuch as it offsets ordinary income rather than capital gains.

The foregoing rules can be illustrated by the following examples, each of which assumes (1) a calendar year taxable year; (2) the use of the cash receipts and disbursements method of accounting in the first two examples and the accrual method in the third; (3) a 30-day month; and (4) a 360-day year:

Example 1:

On March 1, 2000, A paid \$2,200,000 for a \$2 million taxable bond, payable at maturity on March 1, 2007, and providing for the payment of qualified stated interest of \$200,000 on March 1 of each year. A decided to use an annual accrual period ending on March 1 of each year. Payments on the bond other than interest amount to \$200,000, causing the amount of bond premium to be \$200,000.

Based upon the remaining payment schedule and A's basis in the bond, A's yield to maturity is approximately 8.07 percent, compounded annually.ⁿ³⁸ The bond premium allocable to the accrual period ending on March 1, 2001 is the excess of the \$200,000 qualified state interest allocable to the

period over \$177,637 (the product of the \$2,200,000 adjusted acquisition price at the beginning of the period and A's yield, compounded annually), or \$22,363. Thus, A need only include in income \$177,637 of the qualified stated interest payment received on March 1, 2001. A's basis in the bond is reduced by the \$22,363 amortizable bond premium on March 1, 2001.

Example 2:

The facts are the same as in Example 1, except that A decided to use semiannual accrual periods ending on March 1 and September 1 of each year. This causes A's yield to maturity to be approximately 7.92 percent, compounded semiannually. The bond premium allocable to the period ending September 1, 2000 is the excess of the \$100,000 qualified stated interest allocable to the period over \$87,094 (the product of the \$2,200,000 adjusted acquisition price at the beginning of the period and A's yield adjusted for the length of the period), or \$12,906. Although the accrual period ends on September 1, 2000, the qualified stated interest of \$100,000 and the bond premium or \$12,906 are not taken into account until March 1, 2001. However, the basis of the bond is adjusted on September 1, 2000 to reflect the amount of bond premium allocable to the six-month period (\$2,200,000 less \$12,906, or \$2,187,094).

Because the time between payments of qualified stated interest contains more than one accrual period, the adjusted acquisition price at the beginning of the second accrual period must be adjusted for the accrued but unpaid interest. Thus, the adjusted acquisition price on September 1, 2000 (\$2,187,094) must be increased by \$100,000. The bond premium allocable to the period ending March 1, 2001 is the excess of the \$100,000 qualified interest payment allocable to the period over the product of the \$2,287,094 adjusted acquisition price at the beginning of the period and the yield to maturity taking into account the length of the accrual period, or \$9,458. Although A received an interest payment of \$200,000 on March 1, 2001, the amount that A must include in income is only \$177,636 (\$200,000 qualified stated interest, less \$12,906 bond premium allocable to the first accrual period and \$9,458 bond premium allocable to the second accrual period). It should be noted that, except for a miniscule difference due to rounding off to the nearest dollar, the amount and timing of income is the same as in Example 1.

Example 3:

Assume the same facts as in Example 1, except that A uses the accrual method of accounting. Because the accrual period ending March 1, 2001 extends beyond the end of A's taxable year, the amount of qualified stated interest and the amount of bond premium must be allocated between two taxable years.

The qualified stated interest for the first taxable year (2000) is \$152,778 ($\$200,000 \times 10/12$). The bond premium allocable to the first taxable year is \$18,636 ($\$22,363 \times 10/12$). For that year A's interest income from the bond is \$134,142 (\$152,778 stated interest less \$18,636 bond premium). A's basis in the bond is reduced by \$18,636 in 2000. The remaining amounts of qualified stated interest and bond premium for the accrual period ending March 1, 2001 are taken into account for the taxable year ending December 31, 2001.

Where the amortizable bond premium of a bond with a call date has been computed with reference to the maturity date and not the earlier call date, and the bond is in fact called before maturity, the taxpayer is allowed an ordinary deduction for any unamortized premium.ⁿ³⁹ This has the effect of placing the taxpayer in the position he would have been in had he fully amortized the bond to maturity.

The foregoing discussion has assumed that the purchase of the bond at a premium was a bona fide transaction. It is axiomatic that there can be no deduction for amortization of bond premium where the transaction is so lacking in substance that it is a mere sham.ⁿ⁴⁰ For example, the purchase of a bond at a premium, followed by a sale to the taxpayer's wife at a higher price six months and one day later, and then by a sale from wife to taxpayer less than two

months thereafter, netted the taxpayer in *Lieb v. Commissioner*,ⁿ⁴¹ an amortization deduction just for the premium on the original purchase.

(n12)Footnote 12. *Treas Reg § 1.451-2(b)*. The holder of a long-term savings certificate, who loses his right to all accrued interest if he makes a premature withdrawal, constructively receives income in the year in which the original term of the certificate expires. *Rev Rul 73-220*, 1973-1 CB 297 . The taxpayer holding an unmatured short-term savings certificate on the last day of a taxable year is in constructive receipt of income in the amount he would have received if he redeemed the certificate on the last day of such year. *Rev Rul 73-221*, 1973-1 CB 298 ; see also *Rev Rul 66-45*, 1966-1 CB 95 .

(n13)Footnote 13. *Loose v US*, 74 F2d 147 (8th Cir 1934) ; but see *Suhr v Commr*, 4 BTA 1198 (1926) where the taxpayer was not required to include interest until received since the bonds and coupons were located in Germany and could not be obtained until the end of World War I.

(n14)Footnote 14. *Treas Reg § 1.451-2(a)(2)*. A penalty exists if a withdrawal of funds during the taxable year would result in the receipt of substantially less earnings than would be realized if the deposit remained intact until

maturity.

(n15)Footnote 15. *Rev Rul 73-511, 1973-2 CB 402* . The deduction reduces gross income to arrive at adjusted gross income. *IRC § 62(a)(11)*.

(n16)Footnote 16. *Rev Rul 80-157, 1980-1 CB 186* , superseding *Rev Rul 79-72, 1979-1 CB 278* ; *Treas Reg § 1.451-2(a)(2)*.

(n17)Footnote 17. *Rev Rul 80-157* , N 16, *supra*.

(n18)Footnote 18. *4 BTA 1079 (1926)* .

(n19)Footnote 19. *311 US 112 (1940)* .

(n20)Footnote 20. *311 US at 120 (1940)* . The same result was reached in *Rev Rul 58-275, 1958-1 CB 22* , where the taxpayer held a refunded bond and "back-interest" coupons issued by the Japanese government in replacement of certain defaulted bonds and interest. Since the coupons represented interest income that was due the taxpayer, a gift of the coupons was an anticipatory assignment of that interest.

(n21)Footnote 21. *Rev Rul 58-275, 1958-1 CB 22* ; *Rev Rul 72-312, 1972-1 CB 22* .

If the gift is of matured coupons, the proper year of inclusion is the year in which the cash basis taxpayer had a right to collect the interest (the year of constructive receipt).

(n22)Footnote 22. *Austin v Commr, 161 F2d 666 (6th Cir 1947)* , *cert denied 332 US 767* ; *Rev Rul 72-312, 1972-1 CB 22* . A contrary result was reached in *Commr v Timken, 141 F2d 625 (6th Cir 1944)* , where the taxpayer gave a charity a note issued by his brother. The interest then accrued on the note could not have been paid by the brother, but was paid in the two years following the year of gift. The no-income result was based on the ground that, in view of the brother's financial condition at the time of gift, the taxpayer had not received an economic benefit in the year of gift. The result seems unsound, especially in light of the short period between gift and payment of interest.

(n58)Footnote 28. *IRC § 171(b)(3)(A)*. If a bond is acquired after May 6, 1986, in exchange for property and the bond has a substituted basis, the basis of the bond is limited to its fair market value. A similar rule applies if the bond is transferred to another who must retain the transferor's basis (as in the case of a gift). *IRC § 171(b)(4)(A)*. The last-mentioned rule does not apply to a bond-for-bond exchange that is part of a tax-free reorganization. *IRC § 171(b)(4)(B)*.

A distribution by a partnership of a taxable bond, issued by an unrelated corporation, to a partner in liquidation of a partnership interest is an exchange for purposes of *IRC § 171(b)(4)*. Therefore, for purposes of *IRC § 171(b)*, the partner's basis in the bond is limited to the bond's fair market value immediately after the exchange. The partner's basis in the bond for other purposes is determined under *IRC § 732*. *Rev Rul 95-24, 1995-1 CB 14*.

In the case of bonds issued on or before Sept 27, 1985, the amount of amortization depends on whether the taxpayer regularly employs a reasonable method of amortizing bond premiums.

(n59)Footnote 29. *IRC § 171(b)(3)(B)*.

(n60)Footnote 30. *Treas Reg § 1.171-2(a)(3)*.

(n61)Footnote 31. *Treas Reg § 1.171-2(a)(3)(i)*.

(n62)Footnote 32. *Treas Reg § 1.171-2(a)(3)(ii)*.

(n63)Footnote 33. See *Treas Reg § 1.1272-1(b)(1)(ii)*.

(n64)Footnote 34. *Treas Reg § 1.171-2(a)(3)(iii)*.

(n65)Footnote 35. The adjusted acquisition price of a bond at the beginning of the first accrual period is the holder's basis. Thereafter, the adjusted acquisition price is the holder's basis decreased by the amount of any bond premium allocable to an accrual period and the amount of any payment previously made on the bond other than a payment of qualified stated interest. *Treas Reg § 1.171-2(b)*.

(n66)Footnote 36. *Treas Reg § 1.171-2(a)(4)(i)(A)*. The deduction is not subject to the 2-percent floor on miscellaneous itemized deductions.

(n67)Footnote 37. *Treas Reg § 1.171-2(a)(4)(i)(B)*.

(n68)Footnote 38. The yield to maturity is approximate because it has been rounded to two decimal places. The

dollar amounts in the examples use the correct yield, with the amounts rounded to the nearest dollar.

(n69)Footnote 39. *IRC § 171(b)(2)*. A taxpayer, who had not amortized all of the premium not attributable to the conversion feature of a convertible bond, was not allowed to deduct the unamortized portion in the year that the bond was converted into common stock. The application of § 171(b)(2) was limited to the situation in which the bond was called by the issuer. *Ades v Commr*, 38 TC 501 (1962) , *affd per curiam* 316 F2d 734 (2d Cir 1963) .

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions § 17.02

§ 17.02 Tax-Exempt Interest Bonds

[1] State and Local Bonds--In General.

Interest on state and local bonds--obligations issued by a state or political subdivision thereof, or by the District of Columbia or any possession of the United States,ⁿ¹ is excluded from gross income by Section 103(a).ⁿ² For this purpose, a political subdivision denotes any governmental division delegated the right to exercise part of the sovereign power of a state or possession of the United States.ⁿ³ Thus, the term "political subdivision" may include special assessment districts,ⁿ⁴ bridge and tunnel authorities,ⁿ⁵ turnpike authorities,ⁿ⁶ as well as public corporations formed to promote public purposes (e.g., rapid transit or other community improvements).ⁿ⁷

To be exempt, the interest must be interest on an obligation issued in the exercise of the borrowing power of the states.ⁿ⁸ Therefore, the exemption does not extend to interest on a tax refundⁿ⁹ or to interest on a condemnation award.ⁿ¹⁰ Moreover, it might not apply even though the interest is derived from an obligation issued by a local government unit; for example, interest on bonds issued by New York City and guaranteed by the federal government under title I of the New York City Loan Guarantee Act of 1978 is taxable.ⁿ¹¹ But this does not mean that interest will automatically be taxable because the obligation is issued by a private corporation formed to facilitate borrowing. If the obligation can still be considered as issued in the exercise of the borrowing power of a state or local government, the interest derived therefrom will be exempt.ⁿ¹² (*IRC Section 7478* allows the issuer of prospective obligations to petition the Tax Court for a declaratory judgment in a case of actual controversy involving a determination by the Service, or the failure of the Service to make a determination whether the obligations will be tax exempt.ⁿ¹³ The declaratory judgment cannot be issued unless the issuer has exhausted all available administrative remedies within the Service.)

The exclusion provided by *IRC Section 103* is applicable only when the item received can be classified as interest or its equivalent.ⁿ¹⁴ Thus, bond discount earned to maturity is interest, but a redemption premium, or a payment on account of interest in arrears when a bond is purchased "flat," is not.ⁿ¹⁵

Interest on a registration-required bond cannot be tax-exempt unless the bond is in registered form.ⁿ¹⁶ A registration-required bond is any bond other than a bond which (1) is not of a type offered to the public, or (2) has a maturity at issue, of not more than 1 year.ⁿ¹⁷

An obligation is in registered form if one of the following 3 requirements is met:ⁿ¹⁸

(1) The obligation is registered as to both principal and any stated interest with the issuer (or its agent) and transfer of the obligation may be effected only by surrender of the old instrument and either the reissuance by the issuer of the old instrument to the new holder or the issuance by the issuer of a new instrument to the new holder.

(2) The right to the principal of, and stated interest on, the obligation may be transferred only through a book entry system maintained by the issuer (or its agent). An obligation is transferable through a book entry system if the ownership of an interest in the obligation is required to be reflected in a book entry, whether or not physical securities are issued. A book entry is a record of ownership that identifies the owner of an interest in the obligation.ⁿ¹⁹

(3) The obligation is registered as to both principal and any stated interest with the issuer (or its agent) and may be transferred through both of the methods described in paragraphs (1) or (2) above.

An obligation not registered in accordance with the rules described above is in bearer form.ⁿ²⁰

A number of special exceptions affect the application of the interest exclusion. The first limits the exemption to obligations that meet the rules prescribed by the Code.ⁿ²¹ Bonds issued before 1984 were sometimes made tax exempt by the act authorizing their issuance.ⁿ²²

The second, with some exceptions,ⁿ²³ removes tax-exempt status from municipal obligations that are federally guaranteed.ⁿ²⁴ An obligation is federally guaranteed if (1) the payment of principal or interest on the obligation is guaranteed in whole or in part by the United States (or an agency or instrumentality thereof), or (2) 5 percent or more of the proceeds of the issue of which the obligation is a part is to be used to make loans that are guaranteed or is to be invested in federally insured deposits or accounts.ⁿ²⁵

By far the most important exceptions are those relating to private activity bonds that are not qualified bonds and arbitrage bonds. A discussion of private activity bonds and arbitrage bonds follows.

[2] Private Activity Bonds.

[a] The Scope of Section 141.ⁿ¹ With certain exceptions, private activity bonds cannot be categorized as obligations issued by a governmental unit,^{n1.1} causing the interest on such bonds to be fully taxable.ⁿ² Under *IRC Section 141*, an obligation is a private activity bond when either (1) (a) more than 10 percent of the proceeds of the issue of which the obligation is a part are to be used, directly or indirectly, in a trade or business carried on by a person other than a governmental unitⁿ³ (the "private business use" test),ⁿ⁴ and (b) the payment of the principal of or interest on, more than 10 percent of the issue the bond is, directly or indirectly (i) secured by any interest in property used in a private trade or business, (ii) secured by any interest in payments in respect of such property, or (iii) to be derived from payments made in respect of property or borrowed money used for a private business use (the "private security or payment" test)ⁿ⁵ or (2) more than 5 percent of the proceeds of the issue, or \$5 million if less, are used to make loans to persons other than governmental units (the "private loan financing test").ⁿ⁶

According to the regulations, a bond is a private activity bond if the issuer reasonably expects, as of the issue date, that the issue will meet either the private business use test or the private loan financing test over the entire stated term of the issue.ⁿ⁷ In general, the reasonable expectations test must take into account reasonable expectations about events and actions over the entire term of the lease.ⁿ⁸ An action that is reasonably expected as of the issue date, to occur after the issue date and to cause either of the tests to be met may be disregarded if:

(1) the issuer expects, as of the issue date, that the financed property will be used for a governmental

purpose for a substantial period before the action;

(2) the issuer is required to redeem all nonqualifying bonds (regardless of the amount of disposition proceeds actually received) within six months of the date of the action;

(3) the issuer does not enter into any arrangement with a nongovernmental person, as of the issue date, with respect to that specific action; and

(4) the mandatory redemption of the bonds meets all of the conditions for remedial action under *Regulations Section 1.141-12(a)*.ⁿ⁹

A bond is also a private activity bond if the issuer takes a deliberate action, subsequent to the issue date, that causes either the private business use test or the private loan financing test to be met.ⁿ¹⁰ A deliberate action is any action taken by the issuer that is within its control and occurs when the issuer enters into a binding contract with a nongovernmental person for the use of the financed property that is not subject to any material contingencies.^{n10.1} However, an action is not treated as a deliberate action if it would be treated as an involuntary or compulsory conversion under *IRC Section 1033*, or it is taken in response to a regulatory directive made by the federal government.^{n10.2} In addition, remedial action, as defined in *Regulations Section 1.141-12* can prevent a deliberate action from causing an issue to meet the private business use or private loan financing tests.^{n10.3}

In determining whether an issue meets the private security or payment test, the present value of the payments or property taken into account is compared to the present value of the debt service to be paid over the term of the issue.ⁿ¹¹ Present values are determined using the yield on the issue as the discount rate and by discounting all amounts to the issue date.^{n11.1} For a fixed yield issue, yield is determined on the issue date and is not adjusted to take into account subsequent events.^{n11.2} The yield on a variable yield issue is determined over the term of the issue.^{n11.3}

Both direct and indirect payments made by a nongovernmental person using the proceeds of an issue are taken into account as private payments to the extent allocable to the proceeds used by that person and only to the extent that they are made for the period of time that proceeds are used for a private business purpose.^{n11.4} Payments for the use of proceeds include payments (whether or not to the issuer) in respect of property financed (directly or indirectly) with those proceeds, even if not made by a private business user. Payments are not made in respect of financed property if those payments are not directly allocable to other property being directly used by the person making the payments and those payments represent fair market value compensation for that other use.

Payments with respect to proceeds that are used for a private business use are not taken into account to the extent that the present value of those payments exceeds the present value of the debt service on those proceeds.^{n11.5} Payments for the use of proceeds do not include the portion of any payment that is properly allocable to the payment of ordinary and necessary expenses directly attributable to the operation and maintenance of the financed property used by that person.^{n11.6}

Payments of debt service on an issue to be made from the proceeds of a refunding issue are taken into account as private payments in the same proportion that the present value of the payments for the refunding issue bears to the present value of the debt service to be paid on the refunding issue.^{n11.7} This rule does not apply to deliberate actions that occur more than three years after the retirement of the prior issue that are not reasonably expected on the issue date of the refunding issue.

Private payments for the use of property are allocated to the source or different sources of funding of property based upon all of the facts and circumstances, including whether an allocation is consistent with the purposes of *IRC Section 141*.^{n11.8} As a general rule, a private payment is allocated to a source of funding based upon the nexus between the funding and both the financed property and the source of funding. Payments for the use of a discrete facility are

allocated to the source or different sources of funding of that discrete property.^{n11.9}

Under the private security test, property that is the security for, or the source of, the payment of debt service on an issue need not be financed with the proceeds of an issue.^{n11.10} However, private security (other than financed property and private payments) for an issue is taken into account only to the extent it is provided, directly or indirectly, by a user of the financed property. Generally, property or payments from the disposition of that property that are taken into account as private security are allocated to each issue secured by the property or payments on a reasonable basis that takes into account bondholders' rights to the payments or property upon default.^{n11.11}

For purposes of the private security or payment test, generally applicable taxes are not treated as payments from a nongovernmental person and are not payments in respect of property used for a private business use.^{n11.12} A generally applicable tax is defined as an enforced contribution exacted pursuant to legislative authority in the exercise of the taxing power that is imposed and collected for the purpose of raising revenue to be used for governmental purposes.^{n11.13} It must have a uniform tax rate that is applied to all persons of the same classification in the appropriate jurisdiction and a generally applicable manner of determination and collection.^{n11.14} A special charge or special charge or special assessment is not a generally applicable tax.^{n11.15}

Any transaction that is generally characterized as a loan for federal income tax purposes is a loan for purposes of the private loan financing test.^{n11.16} In addition, a loan may arise from the direct lending of bond proceeds or may arise from transactions that provide indirect benefits that are the economic equivalent of a loan.

A prepayment for property or services, including a prepayment for property or services that is made after the date the contract is entered into, is treated as a loan for purposes of the private loan financing test if a principal purpose for prepaying is to provide a benefit of tax-exempt financing to the seller.ⁿ¹² A prepayment is not treated as a loan for purposes of the private loan financing test if (1) prepayments on substantially the same terms are made by a substantial percentage of persons who are similarly situated to the issuer but who are not beneficiaries of tax-exempt financing (customary payment); (2) the prepayment is made within 90 days of the reasonably expected date of delivery of all of the property or services for which the prepayment is made; or (3) the prepayment is made to acquire a supply of natural gas or electricity. The determination of whether a prepayment is a customary payment is generally based on all the facts and circumstance. In addition, a prepayment is treated as a customary payment if it is made for certain maintenance, repair, or extended warranty purposes.

Special 5 percent private business use and private security tests are applied if the amount of private use being financed with an issue is unrelated or disproportionate to a governmental use also being financed.ⁿ¹³ The related use restriction can be illustrated by the following example:

Example:

County X issues \$20 million of bonds for the construction of a new school building and decides to use \$18 million of the proceeds for the construction of the new building and \$2 million for the construction of a privately owned cafeteria in the county's office building. More than 5 percent of the proceeds are being devoted to a use that is not related to the governmental use (school construction) being financed with the bonds; the interest on the bonds is taxable. Had only \$1 million been used to finance construction of the cafeteria, the related use restriction would have been satisfied since the amount of unrelated use financing would not have exceeded 5 percent.

The interplay of the related use restriction and the private loan financing test can be seen in the following example:

Example:

County Y issues \$50 million of bonds for construction of a new public safety building (\$32 million) and for improvements to an existing courthouse (\$15 million). The county also decides to use \$3 million of

the bond proceeds for renovation of an existing privately operated cafeteria in the courthouse. County Y's use of the \$3 million for the cafeteria does not cause the interest on the bonds to be taxable. The expenditures for the cafeteria are treated as being derived first from the permitted related private use portion (\$2.5 million) and then from the unrestricted private use portion (\$500,000).

In determining whether the private business activity, private security or payment, or private loan financing tests are met, the portion of the proceeds of an issue that, if issued as a separate issue would be treated as a qualified 501(c)(3) bond, are not taken into account if the issuer elects to treat such portion as a qualified 501(c)(3) bond.ⁿ¹⁴

Incidental uses of a facility are disregarded in determining whether the private business tests are met.ⁿ¹⁵ A use of a facility by a person is an incidental use if (a) the use does not involve the transfer to the person of possession and control over space that is separated from other area of the facility by walls, partitions or other physical barriers, (b) the use is not related to another use of the facility by the same person, other than the type of use described in (a), and (c) all incidental uses do not involve the use of more than 2 1/2 percent of the facility. A newsstand in a common area of an office building is an example of an incidental use that can be disregarded for purposes of the private business test.

Proceeds of an issue to be used to finance any qualified improvement are not treated as proceeds devoted to a private business use.ⁿ¹⁶ An improvement is a qualified improvement if:

- (1) The building was placed in service more than one year before the construction or acquisition of the improvement is begun;
- (2) No portion of the improved facility or any payments in respect thereof are taken into account under *IRC Section 141(b)(2)(A)* (the private security interest test);
- (3) The improvement does not result in the enlargement of the facility;
- (4) No more than 15 percent of the facility is used for any private business use; and
- (5) The improvement is not made to any interior space occupied exclusively for any private business use.

Use as a member of the general public (general public use) is not private business use.^{n16.1} Use of financed property by nongovernmental persons in their trades or businesses is treated as general public use only if the property is intended to be available, and, in fact, is reasonably available for use on the same basis by natural persons not engaged in a trade or business.

The regulations provide three special rules for use by nongovernmental persons under short-term arrangements. The first provides that an arrangement is not treated as general public use if the term of use of the arrangement, including renewal options, is greater than 200 days.^{n16.2} The second states that use by a nongovernmental person under an arrangement (other than one resulting in ownership of financed property by a nongovernmental person) that is not available for use on the same basis by natural persons not engaged in a trade or business is not private business use if the use under the arrangement, including renewal options, is not longer than 100 days.ⁿ¹⁷ The third applies to an arrangement (other than an arrangement resulting in the use of financed property by a nongovernmental person) that is a negotiated arm's length arrangement and provides for compensation at fair market value.ⁿ¹⁸ The term of use in the last case cannot be longer than 50 days.^{n18.1}

IRC Section 141(d) treats a bond issue as a private activity bond issue if the amount of the proceeds of the issue used by a governmental unit to acquire nongovernmental use property exceeds the lesser of 5 percent of the proceeds or \$5 million. A nongovernmental output facility is defined as property that, after October 13, 1987 and before its acquisition by a governmental unit, was used or held for use by a person other than a state or local government in connection with

an output facility within the meaning of *IRC Section 141(b)(4)* (other than a facility for the furnishing of water).

Two exceptions are provided. Nongovernmental output property does not include any property to be used in connection with an output facility 95 percent or more of the output of which will be consumed in a qualified service area of the acquiring governmental unit or in a qualified annexed area of such unit. An acquisition meets the qualified service area exception if it consists of the acquisition of nongovernmental property by a state or local governmental unit to meet existing or increased demands within a service area throughout which the acquiring entity has provided the same type of service for at least ten years immediately preceding the date of acquisition. The exception does not apply where the increase in demand arises from sales outside the existing service area through direct arrangements or through wheeling arrangements with another provider.

The qualified annexed area exception permits the acquisition of existing nongovernmental output property where a governmental unit served by an existing governmental output authority annexes contiguous property in a general governmental purpose annexation and seeks to expand its electric, gas, or other output service to the annexed territory as part of the annexation. An annexation is for general governmental purposes if it involves the transfer of voter registration and property tax rolls as well as responsibility for extension of general governmental services (e.g., police and fire protection) on the same basis as those services are provided to other residents of the governmental unit.

The second exception applies only if (1) the annexed area is no greater than 10 percent of the geographic area of the governmental unit, or (2) the output capacity of the governmental unit increases by not more than 10 percent as a result of the acquisition of output property to service the annexed area. Both determinations are made as of the last day of the calendar year immediately before the year in which the annexation occurs. Once an area is annexed, it becomes a general service area for purposes of applying the exception to later general purpose annexations. Finally, the exception is available only where service in the annexed area is made available directly to all members of the general public by the acquiring governmental output authority.

The two exceptions generally apply only to governmental authorities that satisfy a ten-year minimum service requirement on actually providing service to their service areas. An existing service area does not include any area that was not actively served during at least a substantial part of the last year. If a joint action agency is the acquiring agency, the rules and exceptions of *IRC Section 141(d)* are applied at the governmental unit member level.

Bonds that are treated as private activity bonds solely because of *IRC Section 141(d)* are not subject to the restrictions on land and existing property contained in *IRC Sections 147(c)* and *(d)*, and can qualify as exempt facility bonds providing facilities furnishing of electric energy or gas even if the furnishing is not local as required by *IRC Section 142(a)(8)*.

The exemption of *IRC Section 103(a)* extends to private activity bonds that are "qualified bonds." Under *IRC Section 141(e)*, a bond is a qualified bond if it is either (a) an exempt facility bond, (b) a qualified mortgage bond, (c) a qualified veterans' mortgage bond, (d) a qualified small issue bond, (e) a qualified student loan bond, (f) a qualified redevelopment bond, or (g) a qualified 501(c)(3) bond, and meets the applicable volume cap requirements of *IRC Section 146* and other requirements of *IRC Section 147*, discussed below.

IRC Section 146 imposes a ceiling on the amount of private activity bonds (other than qualified veterans' mortgage bonds, qualified 501(c)(3) bonds, and exempt facility bonds issued to provide airports, docks, and wharves, environmental enhancements of hydroelectric generating facilities, and qualified public educational facilities; and 75 percent of any exempt facility bond used to provide high-speed intercity rail facilities)¹⁹ that each state can issue during a calendar year; interest on obligations issued in excess of the limitation is not tax exempt. The annual bond limitation for a state is equal to the greater of (1) an amount equal to \$90 for the year multiplied by the state population, or (2) \$273,775,000.²⁰ There is a cost-of-living adjustment for each calendar year after 2002.²¹ For purposes of the limitation, the District of Columbia is treated as a state. Any possession having a population less than that of the least

populous state receives an annual limitation equal to the product of (1) the fraction, the numerator of which is \$225,000,000, and the denominator of which is the population of the least populous state, and (2) the population of the possession for the calendar year.ⁿ²² For calendar year 2008 there is an increase in the annual bond volume cap but such increase can only be used for "qualified housing issues."ⁿ²³ The state ceiling is increased by an amount equal to \$11,000,000,000 multiplied by a fraction: (i) the numerator is the state ceiling for the state for calendar year 2008 (determined without regard to the increase in *IRC Section 146(d)(5)(A)*), and (ii) the denominator is the sum of the state ceilings determined under clause (i) for all states.ⁿ²⁴ A "qualified housing issue" is an issue for qualified residential rental projects under *IRC Section 142(a)(7)*, or a qualified mortgage issue (determined by substituting a 12-month origination period for the 42-month origination period under *IRC section 143(a)(2)(D)(i)*).ⁿ²⁵

Each state's annual ceiling is allocated equally between (i) state agencies authorized to issue private activity bonds and (ii) local jurisdictions having such authority.ⁿ²⁶ The volume cap for any single local jurisdiction is an amount that bears the same ratio to 50 percent of the state ceiling for the year that the population of the jurisdiction bears to the population of the entire state.ⁿ²⁷ If an area is within the jurisdiction of two or more governmental units, the area is treated as only within the jurisdiction of the unit having jurisdiction over the smallest geographic area unless such unit agrees to surrender all or part of that jurisdiction to the unit with overlapping jurisdiction that has the next smallest geographical area.ⁿ²⁸ The state legislature can adopt a different formula for allocating the ceiling among governmental units or other authorities empowered to issue tax-exempt private activity bonds.ⁿ²⁹

If an issuing authority's private activity bond limit for a calendar year exceeds the amount of private activity bonds issued during the year, the authority can carry forward any portion of the unused limit to each of the three following calendar years.ⁿ³⁰ The election, which is irrevocable, must specify the carryforward purpose for which the carryforward is elected and specify the portion of the carryforward to be allocated to each such purpose.ⁿ³¹ (A carryforward purpose is defined as the purpose for issuing exempt facility bonds, qualified mortgage bonds or mortgage credit certificates, qualified student loan bonds, or mortgage credit certificates).ⁿ³²

A special allocation of the volume cap is required if the nonqualified amount with respect to an issue (the lesser of the proceeds of the issue to be used for any private business use or the proceeds of the issue with respect to which there are payments meeting the private security or payment test)ⁿ³³ exceeds \$15 million, but does not exceed the amount that would cause a bond that is part of the issue to be treated as a private activity bond. Unless the issuer allocates a portion of its volume cap equal to the excess of the nonqualified amount over \$15 million, the bond will be treated as a private activity bond.ⁿ³⁴ If the proceeds of an issue are to be used with respect to more than one project (a "multi-project issue"), the rule is applied by treating the portion of the proceeds of the multi-project issue to be used with respect to each project as a single issue.ⁿ³⁵ However, if any bond issued as part of the multi-project issue is treated as a private activity bond, all bonds issued as part of the issue will be treated as private activity bonds.

Refunding issues are exempt from the volume limitations if they do not exceed the outstanding amount of the refunded bonds.ⁿ³⁶ For qualified student loan bonds, the refunding issue exception applies only if the maturity date of the refunding obligation is not later than the later of the average maturity date of the bonds to be refunded, or 17 years after the refunded obligation was issued.ⁿ³⁷ For qualified mortgage bonds, the maturity of the refunding bonds must not be later than the later of the average maturity date of the refunded bonds, or 32 years after the date the original obligation was issued.ⁿ³⁸

IRC Section 147 prevents private activity bonds from being treated as qualified bonds in the following instances:

- (1) The bond is held by a person who is a substantial user of the facilities or a related person.ⁿ³⁹ For this purpose a related person is defined as (a) two or more persons if the relationship would result in the disallowance of losses under *IRC Section 267* or *707(b)*, (b) two or more corporations that are members of the same controlled group of corporations,ⁿ⁴⁰ (c) a partnership and each of its partners (and their spouses and minor children), and an S corporation and each of its shareholders (and their spouses and

minor children).ⁿ⁴¹

(2) The average maturity of the obligations forming a part of the issue exceeds 120 percent of the average reasonably expected economic life of the facilities financed by the issue.ⁿ⁴²

(3) The proceeds are used to acquire farmland, other than where the principal user is a first-time farmerⁿ⁴³ and the financed acquisition cost does not exceed \$250,000. For land not used for farming, the restriction applies if 25 percent or more of the net proceeds of the issue are to be devoted to the acquisition, unless the land is acquired for certain environmental purposes.ⁿ⁴⁴

(4) The proceeds are used to acquire existing property. This restriction does not apply if the property is a building and expenditures to rehabilitate the building equal or exceed 15 percent of the portion of the cost of the building financed by the issue. For property other than buildings, the rehabilitation expenditures must equal the portion of the issue proceeds used to purchase the property.ⁿ⁴⁵

(5) The proceeds are used to provide an airplane, skybox or other private luxury box, health club facility, facility used primarily for gambling, or a store whose principal business is the sale of alcoholic beverages for off-premises consumption.ⁿ⁴⁶

(6) The bond fails to meet the approval requirement. To meet this requirement, the issue of which the bond is a part must have been approved by (a) the governmental unit that issued the bond or on whose behalf the bond was issued, and (b) each governmental unit having jurisdiction over the area in which any facility to be financed by the proceeds is located (except that if more than one governmental unit has jurisdiction over the entire area in which the facility is located, only one unit need approve the issue).ⁿ⁴⁷ An issue is deemed to have been approved if it is approved by the applicable elected representative of the governmental unit after a public hearing following reasonable public notice, or by voter referendum.ⁿ⁴⁸ No approval is required for refunding bonds unless the average maturity date of which the refunding issue is a part is later than the average maturity date of the bonds to be refunded by the issue.ⁿ⁴⁹ The determination of maturity date is made in accordance with the provisions of *IRC Section 147(b)(2)(A)*.

IRC Section 147(f)(4) contains special rules for public approval of qualified scholarship funding bonds and volunteer fire department bonds. In the case of the former, the requirement is satisfied by a government unit that requested organization of the qualified scholarship funding corporation, or requested it to exercise power. If the corporation was requested to act by more than one local government, the public approval requirement may be satisfied by the state in which the corporation operates. The unit that requested the volunteer fire department to furnish firefighting services is the governmental unit that must satisfy the requirement.

(7) The issuance costs financed by the issue of which the bond is a part exceed 2 percent of the proceeds of the issue (3.5 percent for an issue of qualified mortgage bonds or qualified veterans's mortgage bonds if the proceeds of the issue do not exceed \$20 million).ⁿ⁵⁰

The first four limitations do not apply to qualified mortgage bonds, qualified veterans' mortgage bonds, and qualified student loan bonds.ⁿ⁵¹ The substantial user, farmland acquisition, and used property acquisition limitations do not apply to qualified 501(c)(3) bonds.ⁿ⁵²

[b] Exempt Facility Bonds.

[i] In General. Under *IRC Section 142*, interest received on a private activity bond will be exempt from federal

income taxes if 95 percent or more of the net proceeds of the issue are used to provide: (1) projects for residential rental property if, at all times during the qualified project period,ⁿ⁵³ the project meets certain requirements relating to occupancy by individuals of low or moderate income;ⁿ⁵⁴ (2) airports, docks, wharves, mass commuting facilities, or storage or training facilities directly related to the foregoing;ⁿ⁵⁵ (3) sewage or solid waste disposal facilities;ⁿ⁵⁶ (4) facilities for the furnishing of electric energy or gas solely within an area consisting of a city and one contiguous county (or two contiguous counties); (5) facilities for the furnishing of water; (6) qualified hazardous waste facilities; (7) facilities for furnishing heating and cooling facilities to an area consisting of a city and one contiguous county; (8) high-speed intercity rail facilities;ⁿ⁵⁷ and (9) environmental enhancements of hydroelectric generating facilities; (10) qualified public educational facilities;ⁿ⁵⁸ (11) qualified green building and sustainable design projects;ⁿ⁵⁹ or (12) qualified highway or surface freight transfer facilities.ⁿ⁶⁰ For this purpose, the net proceeds of an issue are the proceeds of the issue reduced by amounts in a reasonably required reserve or replacement funds, but not by proceeds used to pay issuance costs.ⁿ⁶¹

No bond can be issued as part of an issue with respect to a facility for the local furnishing of electric energy or gas on or after August 20, 1996, unless (a) the facility will (i) be used by a person who is engaged in the local furnishing of that energy source on January 1, 1997, and (ii) be used to provide service within the area served by that person on January 1, 1997 (or within a county or city any portion of which is within that area), or (b) the facility will be used by a successor interest to that person for the same use and within the same service area.ⁿ⁶² In the case of a facility financed with bonds issued before August 20, 1996, that would cease to be tax-exempt by reason of the failure to meet the local furnishing requirement as a result of a service area expansion, the bonds will not cease to be tax-exempt bonds if the person engaged in the local furnishing by the facility makes an election in which the person (or its predecessor in interest) agrees that (1) the election is made with respect to all of the person's facilities for the local furnishing of electric energy or gas, (2) no tax-exempt bond can be issued on or after August 20, 1996, with respect to all of the person's facilities, (3) any expansion of the service area is not financed with the proceeds of any exempt facility bond issued for a facility for the furnishing of electric energy or gas and is not treated as a nonqualifying use under *IRC Section 142(f)(2)*, and (4) all of the outstanding bonds used to finance the facilities for the person are redeemed not later than six months after the earliest date on which the bonds can be redeemed or the date of the election, whichever is later.ⁿ⁶³

[ii] Enterprise Zone Facility Bonds. The Omnibus Budget Reconciliation Act of 1993 added a new category of exempt facility bond, namely any bond issued as part of an issue 95 percent or more of the net proceeds of which are to be used to provide any enterprise zone facility.ⁿ⁶⁴ For this purpose, an enterprise zone facility is any qualified zone property the principal user of which is an enterprise zone business, and any land that is functionally related and subordinate to such property.ⁿ⁶⁵

Qualified zone property is defined as any property to which the cost recovery rules of *IRC Section 168* or *179* apply if:

- (1) the property was acquired by the taxpayer by purchase after the date on which the designation of the empowerment zone or enterprise zone took effect;
- (2) the original use of the property in an empowerment zone or enterprise zone commences with the taxpayer; and
- (3) substantially all (at least 85 percent) of the use of the property is in an empowerment zone or enterprise zone and is in the active conduct of a qualified business by the taxpayer in the zone.ⁿ⁶⁶

An enterprise zone business is either a qualified business entity or a qualified proprietorship.ⁿ⁶⁷ A corporation or partnership will be a qualified business entity for any taxable year in which (1) every trade or business of the entity is the active conduct of a qualified business within an empowerment zone or enterprise zone, (2) at least 50 percent (80 percent for taxable years beginning before August 5, 1997) of the total gross income of the entity is derived from the active conduct of the business, (3) a substantial portion of the use of the tangible property of the entity (whether owned

or leased) is within an empowerment zone or enterprise zone, (4) a substantial portion of the intangible property of the entity is used in, and exclusively related to, the active conduct of the business, (5) a substantial portion of the services performed by the entity's employees are performed in the empowerment zone or enterprise zone, (6) at least 35 percent of its employees are residents of an empowerment zone or enterprise zone, (7) less than 5 percent of the average of the aggregate unadjusted bases of the property of the entity consists of collectibles⁶⁸ (other than collectibles that are held primarily for sale in the ordinary course of the business), and (8) less than 5 percent of the average of the aggregate adjusted bases of the property of the entity is attributable to nonqualified financial property.⁶⁹ The requirements for a qualified proprietorship--a qualified business carried on by an individual--are the same, except that the individual is not limited to carrying on businesses solely within an empowerment zone or enterprise zone.⁷⁰

A qualified business is, generally, any trade or business, except that it cannot be a (a) trade or business consisting predominantly of the development or holding of intangibles for sale or license, (b) trade or business operating a private or commercial golf course, country club, massage parlor, hot tub facility, suntan facility, racetrack or other facility used for gambling, or any store the principal business of which is the sale of alcoholic beverages for consumption off premises, and (c) farming business if, at the close of the preceding taxable year, the sum of the aggregate unadjusted bases (or fair market value, if greater) of the assets owned by the taxpayer and the aggregate value of assets leased by the taxpayer, that are used in the business, exceed \$500,000.⁷¹ The rental to others of real property located in an empowerment zone or enterprise zone can be a qualified business if the property is not residential real property and at least 50 percent of the gross rental from the real property is from enterprise zone businesses.⁷² The rental to others of tangible personal property can also qualify, but only if at least 50 percent of the rental of such property is by enterprise zone businesses or by residents of an empowerment zone or enterprise zone.⁷³

IRC Section 1397C(f) provides a special rule for a business entity or proprietorship that uses real property located within an empowerment zone and real property located outside the empowerment zone. If the amount of real property located within the empowerment zone is substantial compared to the amount of real property located outside the zone, and the latter is contiguous to the property within the zone, then all of the services performed by employees, all business activities, all tangible property, and all intangible property of the business entity or proprietorship that occur or are located on either parcel of real property are treated as occurring or situated in the empowerment zone.

A business will not fail to be treated as an enterprise zone business during the "startup period" if (1) as of the beginning of the startup period, it is reasonably expected that the business will be an enterprise zone business at the end of the period, and (2) the business makes bona fide efforts to be an enterprise zone business.⁷⁴ In addition, a business will not fail to be treated as an enterprise zone business for any taxable year beginning after the "testing period" by reason of failing to meet any requirement imposed on a qualified business entity or qualified proprietorship if at least 35 percent of the employees of the business for the year are residents of an empowerment zone or enterprise community.⁷⁵ The startup period is, with respect to any property being provided for any business, the period before the first taxable year beginning more than two years after the later of (1) the date of issuance of the issue providing such property, or (2) the date such property is first placed in service after the date of issuance or three years from the date of issuance, whichever is earlier.⁷⁶ The testing period consists of the first three taxable years after the startup date.⁷⁷

For purposes of the requirement that 35 percent of the employees of an enterprise zone business be residents of the enterprise zone, the issuer and the principal user can rely on a certification signed by the employee under penalties of perjury, if the certification provides to the principal user the address of the employee's principal residence, the employee is required to notify the principal user of a change in the employee's principal residence, and neither the issuer nor the principal user has actual knowledge that the principal residence set forth in the certification is not the employee's principal residence.⁷⁸ If an issue fails to comply with the 35 percent requirement because an employee who initially lived in the zone moves out of the zone, that employee is deemed to reside in the zone if that employee was a bona fide resident of the zone at the time of the certification, that employee continues to perform services for the principal user in an enterprise zone business and substantially all of the services are performed in the zone, and a resident of the zone is hired by the principal user for the next available comparable (or lesser) position.⁷⁹

An issue that fails to meet one or more of the requirements set forth for enterprise zone facility bonds will be treated as meeting those requirements if the issuer and any principal user in good faith attempted to meet the requirements throughout the compliance period, and the failure is corrected within one year after being discovered.ⁿ⁸⁰

In the case of a pooled financing bond program or a loan recycling program, the compliance requirements for enterprise zone facility bonds apply on a loan-by-loan basis.ⁿ⁸¹ If a loan fails to meet those requirements, within six months of noncompliance, an amount equal to the outstanding loan principal must be prepaid and the issuer must (a) reloan the amount of the prepayment, or (b) use the prepayment to redeem an amount of outstanding enterprise zone facility bonds equal to the outstanding principal amount of the loan that no longer meets those requirements.ⁿ⁸²

A pooled financing bond program is a program in which the issuer of enterprise zone facility bonds, in order to provide loans to enterprise zone businesses, lends the proceeds of the enterprise zone facility bonds to a bank or similar intermediary (intermediary lender) which must then relend the proceeds to two or more enterprise zone businesses.ⁿ⁸³ A loan recycling program is a program in which (1) the issuer reasonably expects, as of the issue date of the enterprise zone facility bonds, that loan repayments from principal users will be used to make additional loans during the zone designation period, (2) repayments of principal on loans (including prepayments) received during the zone designation period are used within six months of the date of receipt either to make new loans to enterprise zone businesses or to redeem enterprise zone facility bonds that are part of the issue, and (3) repayments of principal on loans (including prepayments) received after the zone designation period are used to redeem enterprise zone facility bonds that are part of the issue within six months of the date of receipt.ⁿ⁸⁴

The tax exemption for enterprise zone facility bonds will not apply to any issue if the aggregate amount of outstanding enterprise zone facility bonds allocable to any person (taking into account the issue) exceeds \$3 million with respect to any one empowerment zone or enterprise community, or \$20 million with respect to all empowerment zones and enterprise communities.ⁿ⁸⁵ The aggregate amount of outstanding enterprise zone facility bonds allocable to any person is determined under rules similar to *IRC Section 144(a)(10)* (see § 17.03[3][d]), taking into account only enterprise zone facility bonds.ⁿ⁸⁶

Except as noted below, enterprise zone facility bonds are treated as exempt facility bonds and all regulations generally applicable to exempt facility bonds apply to enterprise zone facility bonds.ⁿ⁸⁷ For this purpose, enterprise zone businesses are treated as meeting the public use requirement. *IRC Sections 147(c)(1)(A)* (relating to limitations on financing the acquisition of land), *147(d)* (relating to financing the acquisition of existing property), and *142(b)(2)* (relating to limitations on financing office space) do not apply to enterprise zone facility bonds. An issue of enterprise zone facility bonds, the proceeds of which are to be used as part of a loan recycling program, satisfies the maturity limitation of *IRC Section 147(b)* if each loan satisfies the requirements of that section (determined by treating each loan as a separate issue), and the term of the issue does not exceed 30 years.ⁿ⁸⁸

Bonds issued after the zone designation period to refund enterprise zone facility bonds (other than an advance refunding) are treated as enterprise zone facility bonds if the refunding issue and the prior issue, treated as a single combined issue, would meet all of the requirements for enterprise zone facility bonds, except the limitation of the amount of bonds that can be issued.ⁿ⁸⁹ The maturity limitation of *IRC Section 147(b)* is applied to a refunding issue by taking into account the issuer's reasonable expectations about the economic life of the financed property as of the issue date of the prior issue and the actual weighted average maturity of the combined refunding issue and prior issue.ⁿ⁹⁰

No deduction is allowed for interest on any financing provided from an enterprise zone facility bond to the extent that the interest accrues during the period beginning on the first day of the calendar year that includes the date on which (1) substantially all of the facility with respect to which the financing was provided ceases to be used in an empowerment zone or enterprise community, or (2) the principal user of the facility ceases to be an enterprise zone business.ⁿ⁹¹ The foregoing rule does not apply solely by reason of the termination or revocation of a designation as an empowerment

zone or an enterprise community, or to any cessation resulting from bankruptcy.ⁿ⁹²

IRC Section 1391(g), added by the Taxpayer Relief Act of 1997, permits the Secretaries of Housing and Urban Development (HUD) and Agriculture to designate an additional 20 areas as empowerment zones before January 1, 1999. *IRC Section 1391(h)(1)*, added by the Community Renewal Tax Relief Act of 2000, permits the designation of an additional nine areas, of which not more than seven may be designated in urban areas and not more than two designated in rural areas.ⁿ⁹³ A bond for a new empowerment zone facility is not treated as a private activity bond for purposes of the *IRC Section 146* volume cap, nor is the limitation imposed by *IRC Section 1394(c)* on the aggregate amount of enterprise zone facility bonds allocable to any person applicable.ⁿ⁹⁴ Instead the aggregate face amount of bonds that may be designated as new empowerment zone facility bonds with respect to any new empowerment zone is limited to (a) \$60 million, if the zone is in a rural area; (b) \$130 million, if the zone is in an urban area and the zone has a population of less than 100,000; and (c) \$230 million, if the zone is in an urban area and the zone has a population of at least 100,000.ⁿ⁹⁵ Any refunding of a new empowerment zone facility bond is not taken into account in applying the limitations specified in the preceding sentence if the amount of the refunding bonds does not exceed the amount of the refunded bond, and the refunded bond is redeemed not more than 90 days after the issuance of the refunding bond.ⁿ⁹⁶

An empowerment zone facility bond is an exempt facility bond under the provisions of *IRC Section 1394(a)* if (1) in the case of an obligation issued before January 1, 2002, only empowerment zones designated under *IRC Section 1391(g)* were taken into account under *IRC Sections 1397C* and *1397D*, and (2) in the case of an obligation issued after December 31, 2001, all empowerment zones (other than the District of Columbia Enterprise Zone) were taken into account under those sections.ⁿ⁹⁷

ARRA of 2009 authorizes the creation of a new kind of economic zone, "recovery zones," and two new types of bonds to finance improvements in these zone. One is a new category of exempt facility bond, the Recovery Zone Facility Bond. The second, the Recovery Zone Economic Development Bond, pays interest that is fully taxable but features a direct reimbursement by the federal government of 45 percent of the issuer's interest costs. Both types of recovery zone bond are discussed in *Section 17.03[15]*.

[c] Mortgage Revenue Bonds. Prior to 1978, most state housing finance agency bonds were issued to provide multi-family housing. A significant increase in the use of tax-exempt bonds for housing, especially owner-occupied housing, created concern in Congress and led to the enactment of the Mortgage Subsidy Bond Act of 1980. The Tax Reform Act of 1986 changed the designation of the obligations to mortgage revenue bonds, and added *IRC Section 143* to govern the treatment of the two mortgage revenue bonds on which interest is tax-free--qualified mortgage bonds and qualified veterans' mortgage bonds.

A qualified mortgage bond is one issued as part of a qualified mortgage issue, if all of the proceeds of the issue (exclusive of issuance costs and a reasonably required reserve) are to be used to finance owner-occupied residences,ⁿ⁹⁸ the issue does not meet the private business tests of *IRC Section 141(b)*, and the issue meets the following requirements:ⁿ⁹⁹

(1) Every residence for which owner financing is provided under the issue must be a single-family residenceⁿ¹⁰⁰ which can reasonably be expected to become the principal residence of the mortgagor within a reasonable time after financing is provided and must be located within the jurisdiction of the issuing governmental unit (the residence requirement).ⁿ¹⁰¹

(2) At least 95 percent of the lendable proceeds are used to finance the residence of mortgagors who had no present ownership interest in their principal residences at any time during the three-year period ending on the date the mortgage is executed (the three-year requirement).ⁿ¹⁰² For purposes of this requirement, any proceeds of an issue used to provide financing for targeted area residences,ⁿ¹⁰³ for any qualified home improvement loan,ⁿ¹⁰⁴ for qualified rehabilitation loans, for financing land possessed

under a contract for deed by a mortgagor and the construction of any residence thereon and, in the case of bonds issued after December 20, 2006, and before January 1, 2008, financing of any residence for a veteran who has not previously qualified for and received such financing are taken into account.ⁿ¹⁰⁵

(3) All owner-financing provided under the issue is provided for mortgagors whose family income is not greater than 115 percent of the applicable median family income, i.e., the greater of the area median gross income for the area, or the statewide median gross income for the state, in which the residence is located.ⁿ¹⁰⁶ In the case of financing provided for targeted area residences, one third of the financing can be provided without the income limitation if the remainder of the financing is for mortgagors whose family income is not greater than 140 percent of the applicable median family income.ⁿ¹⁰⁷ If the residence for which financing is provided under the issue is in a high housing cost area (any statistical area in which the housing cost/income ratio is greater than 1.2), the income limitation can be increased to a percentage of area median gross income (not greater than 140 percent) equal to 115 percent of the amount by which the housing cost/income ratio for the area exceeds 0.2.ⁿ¹⁰⁸ The housing cost/income ratio for any area is determined by dividing the applicable housing price ratio for the area by the ratio that the area median gross income for the area bears to the median gross income for the United States.ⁿ¹⁰⁹

(4) The acquisition costⁿ¹¹⁰ of each residence financed from the bond proceeds cannot exceed 90 percent (110 percent in targeted areas)ⁿ¹¹¹ of the average purchase price of the same type of residence (one-family, two-family, three-family, four-family, unit in a condominium or share in a cooperative housing corporation) purchased in the statistical area (a standard metropolitan statistical area or a county not within a standard metropolitan statistical area)ⁿ¹¹² in which the residence is located. The average price is based on sales during the most recent twelve-month period for which sufficient information is available, and is computed separately for new and used residences (the purchase requirement).ⁿ¹¹³ The requirement does not apply to qualified home improvement loans.ⁿ¹¹⁴

If a residence is located in a high housing cost area, the interest of a governmental unit in the residence by reason of financing provided under a qualified program is not taken into account, and the acquisition cost of the residence is its actual cost reduced by the amount of such financing.ⁿ¹¹⁵ A qualified program is any governmental program, which provides mortgage loans (other than first mortgage loans) or grants, (i) that restricts (throughout the nine-year period beginning on the date the financing is provided) the resale of the residence to a purchaser qualifying under *IRC Section 143* and to a price determined by an index that reflects less than the full amount of any appreciation in the residence's value, or (ii) that provides for deferred or reduced interest payments on the financing and grants the governmental unit a share in the appreciation in the residence, but only if the financing is not provided directly or indirectly through the use of any tax-exempt private activity bond.ⁿ¹¹⁶

(5) If an issuing jurisdiction includes a targeted area, at least 20 percent of the lendable proceeds of the issue must be made available (with reasonable diligence) for financing of target area residences for at least one year after financing via the bond proceeds first becomes available (the targeted area portion requirement).ⁿ¹¹⁷ However, the amount made available need not exceed 40 percent of the average annual principal amount of mortgages executed during the immediately preceding three years for single-family owner occupied residences in targeted areas within the jurisdiction of the issuing authority.ⁿ¹¹⁸

(6) The effective rate of interest on the mortgages provided under the issue cannot exceed the yield to maturity on the issue by more than 1.125 percentage points.ⁿ¹¹⁹ Two special statutory rules are to be used in determining the effective rate on any mortgage. First, all fees, charges, and other amounts borne by the mortgagor attributable to the mortgage or to the bond issue are taken into account.ⁿ¹²⁰ Two items are specifically excepted, namely, any expected rebate of arbitrage profits, and any application fee,

survey fee, credit report fee, insurance charge, or similar amount (but not origination fees, points, or similar amounts) to the extent usual and reasonable in the area in cases where owner financing is not provided through the use of qualified mortgage bonds.ⁿ¹²¹ Second, it is to be assumed that the mortgage prepayment rate will be the rate set forth in the most recent mortgage maturity experience table published by the Federal Housing Administration for the state or local area in which the residences are located, and that prepayments of principal are received on the last day of the month in which the issuer reasonably expects to receive such prepayments.ⁿ¹²²

A second arbitrage restriction applicable to qualified veterans' mortgage bonds, limits the amount of original proceeds, investment proceeds and mortgage principal repayments that may be invested in higher yield nonpurpose investments. Although investment in nonpurpose investments is permitted, the sum of the excess of the net amount earned on all such investments over the amount that would have been earned if the investments had been at a rate equal to the yield on the issue plus any income attributable to the excess on the bonds must be paid or credited to the mortgagors "as rapidly as may be practicable."ⁿ¹²³

(7) The final requirement is, in fact, two requirements. No part of the proceeds can be used to acquire or replace existing mortgages,ⁿ¹²⁴ unless the replaced loan is a construction period loan or a bridge loan or similar temporary initial financing, the financing is for a qualified rehabilitation, or the financing is for land possessed under a contract for deed agreement.ⁿ¹²⁵ Furthermore, a mortgage made from proceeds of a qualified issue can be assumed only if the residence requirement, the three-year requirement, and the purchase requirement are met at the time of the assumption.ⁿ¹²⁶

(8) Repayments of principal on financing provided by the issue must be used not later than the first semiannual period beginning after the date the prepayment (or complete repayment) is received to redeem bonds that are part of the issue.ⁿ¹²⁷ The requirement does not apply to amounts received within ten years after the date of issuance of the issue (or, in the case of a refunding bond, the date of issuance of the original bond).

Two good faith tests are imposed with respect to the requirements. An issue meets the first three-mentioned requirements only if the issuer in good faith attempted to meet all such requirements before the mortgages were issued, 95 percent or more of the lendable proceeds have been invested in mortgages that meet the requirement, and any failure to meet the requirements is corrected within a reasonable time after the failure is first discovered.ⁿ¹²⁸ The issue is deemed to meet the remaining requirements (other than the new mortgage requirement) if the issuer in good faith attempted to meet them and any failure to do so is due to inadvertent error after taking reasonable steps to comply.ⁿ¹²⁹

A qualified veterans' mortgage bond is more easily defined. It is one, (a) issued as part of an issue 95 percent of the proceeds of which are used to provide residences for veterans, (b) the payment of the principal and interest on which is secured by the general obligation of a state, (c) meets the residence and arbitrage requirements, (d) the proceeds of which are not used to acquire or replace existing mortgages (other than construction period loan, bridge loan or similar temporary initial financing, or, in the case of a qualified rehabilitation, any existing mortgage), and (e) that is part of an issue that does not meet the private business tests of *IRC Section 141(b)*.ⁿ¹³⁰

The authority to issue qualified veterans' mortgage bonds is limited to programs that issued such bonds before June 22, 1984.ⁿ¹³¹ Loans made with the proceeds of qualified veterans' mortgage bonds issued after June 22, 1984 are limited to veterans who served on active duty before January 1, 1977, and who applied for the financing before the later of 30 years after the veteran left active service or January 1, 1985.ⁿ¹³²

The Code also imposes a volume limitation on the amount of qualified veterans' mortgage loans that a state can issue during any calendar years. This limit is based on a specially computed annual average of qualified veterans' mortgage

bonds issued by the state from January 1, 1979 until June 22, 1984.ⁿ¹³³ Bonds issued in excess of the limit are not tax-exempt.

A state has the ability to elect to trade in all or part of its authority to private activity bonds that it can otherwise issue during the calendar year under its volume cap.ⁿ¹³⁴ If the state does so, it generally can issue mortgage credit certificates in an amount equal to 25 percent of the amount of qualified mortgage bond authority that it trades in.ⁿ¹³⁵

A home purchaser receiving a mortgage credit certificate is entitled to a nonrefundable income tax credit equal to a specified percentage of the interest paid during the taxable year on the mortgage on the purchaser's principal residence.ⁿ¹³⁶ The specified percentage cannot be less than 10 percent or more than 50 percent, but if the rate exceeds 20 percent, the credit allowable in any taxable year is limited to \$2,000.ⁿ¹³⁷ The allowable credit reduces the interest deduction otherwise available under *IRC Section 163*. If the credit allowable exceeds the taxpayer's tax liability for the year, the excess can be carried over to the next three years.ⁿ¹³⁸

Eligibility for mortgage credit certificates is generally limited to the same individuals who are eligible for qualified mortgage bonds. Thus, the recipient of the credit certificate must usually be a first-time home buyer, the purchase price of the residence cannot exceed 90 percent (110 percent in targeted areas) of the average area purchase price, the residence must be the principal residence of the buyer, and the mortgage must be a new mortgage.ⁿ¹³⁹ In addition, at least 20 percent of mortgage credit certificates under each program must be made available for financing in targeted areas for at least one year. A state or locality may establish more stringent criteria for participation in a mortgage credit certificate program, but cannot restrict mortgage credit certificates to loans made by a particular lender or to residences in a particular development.ⁿ¹⁴⁰ At least 90 days before any certificate is to be issued, the issuing authority must give public notice of the eligibility requirements for the certificates and the methods of their issuance.ⁿ¹⁴¹

The issuer of a qualified mortgage certificate can reissue a certificate in place of an existing mortgage credit certificate to the holder of that certificate provided:ⁿ¹⁴²

- (1) The reissued certificate is issued with respect to the same property to which the existing certificate relates.
- (2) The reissued certificate entirely replaces the existing certificate (that is, the holder cannot retain the existing certificate with respect to any portion of the outstanding balance of the certified mortgage indebtedness specified on the existing certificate).
- (3) The certified mortgage indebtedness specified on the reissued certificate does not exceed the remaining outstanding balance of the certified mortgage indebtedness specified on the existing certificate.
- (4) The reissued certificate does not increase the certificate credit rate specified in the existing certificate.
- (5) The reissued certificate does not result in the tax credit that otherwise would have been allowable to the holder under the existing certificate for any taxable year. The holder of a reissued certificate determines the tax credit that otherwise would have been allowable by multiplying the interest that was scheduled to have been paid on the refinanced loan by the certificate rate of the existing certificate. In the case of a series of refinancings, the tax credit that otherwise would have been allowable is determined from the amount of interest that was scheduled to have been paid on the original loan and the certificate rate of the original certificate.

If the refinanced loan is a fixed interest rate loan, the interest that was scheduled to be paid on the refinanced loan is determined using the scheduled interest method. The scheduled interest method determines the amount of interest for

each taxable year that was scheduled to have been paid in the taxable year based on the terms of the refinanced loan including any changes in the interest rate that would have been required by the terms of the refinanced loan and any payments of principal that would have been required by the terms of the refinanced loan (other than repayments required as a result of any refinancing of the loan).

If the refinanced loan is a variable interest rate loan, the interest that was scheduled to be paid on the refinanced loan is determined using either the scheduled interest method or the hypothetical method. The hypothetical method determines the amount of interest treated as having been scheduled to be paid for a taxable year by constructing an amortization schedule for a hypothetical self-amortizing loan with level payments. The hypothetical loan must have a principal amount equal to the outstanding balance of the certified mortgage indebtedness specified on the existing certificate, a maturity equal to that of the refinanced loan, and interest equal to the annual percentage rate of the refinancing loan that is required to be calculated for the Federal Truth in Lending Act.

A holder must consistently apply the scheduled interest method or the hypothetical interest method for all taxable years beginning with the first taxable year the tax credit is claimed by the holder based upon the reissued certificate.

Any person who makes a loan covered by a mortgage credit certificate must file a report with the Service identifying the certificate's issuer and recipient and giving such other information that the regulations will require.ⁿ¹⁴³ A lender who fails to file the report is subject to a \$200 penalty unless the failure is due to reasonable cause. A \$1,000 penalty is imposed if the report contains negligent misstatements; the penalty is \$10,000 if there is fraud.ⁿ¹⁴⁴

IRC Section 143(k)(9) provides that limited equity cooperative housing is to be treated as residential housing and not as owner-occupied housing, if the cooperative corporation so elects at the time of issuance of bonds to finance the housing. This prevents the bonds from being classified as mortgage revenue bonds, but the bonds can still be treated as private activity bonds used to finance a qualified residential rental project if the limitations applicable to such bonds are met. To qualify for financing as a qualified residential real estate project, (1) the cost of any stock in the cooperative must not exceed the amount paid for the stock by the original shareholder (adjusted for cost-of-living increases), increased by amounts paid for improvements on the stockholder's dwelling and by payments attributable to the stockholder to amortize the principal of the corporation's acquisition or development indebtedness, and (2) the assets of the cooperative in excess of the combined transfer values of outstanding stock in the cooperative (reduced by any liabilities) must be used only for public or charitable purposes or directly to benefit the cooperative, and must not be used directly to benefit any stockholder.

The election to be eligible for financing as multifamily residential rental property is irrevocable and applies only if bonds are issued before January 1, 1990, and the cooperative continues to qualify as a limited equity cooperative throughout the period any tax-exempt bonds are outstanding.

A further consequence of the election affects tenant-shareholders directly. They are not entitled to a deduction for their ratable share of interest and taxes paid by the cooperative.

Special rules allow for the refinancing of qualified subprime loans with qualified mortgage bonds that are issued by December 31, 2010.ⁿ¹⁴⁵ *IRC Section 143(k)(12)(A)* provides an exception to the general requirement that no part of the qualified mortgage issue proceeds can be used to acquire or replace existing mortgages. Further, for qualified subprime loan refinancing the general 42-month loan origination period under *IRC Section 143(a)(2)(D)(i)* is shortened to 12 months; the rule under *IRC Section 143(d)* limiting borrowers to those who had no ownership interest in a home in the preceding three years is inapplicable; and the purchase price limitation under *IRC Section 143(e)* applies based on the market value of the residence at the time of refinancing in lieu of the acquisition cost.ⁿ¹⁴⁶ A qualified subprime loan is an adjustable rate single-family residential mortgage loan made after December 31, 2001, and before January 1, 2008, that the bond issuer determines would be reasonably likely to cause financial hardship to the borrower if not refinanced.ⁿ¹⁴⁷ Issuers can make decisions regarding financial hardship to the borrower based on reasonable estimates

made in good faith.ⁿ¹⁴⁸

For qualified subprime loan refinancings to be funded from qualified mortgage bonds that have received an allocation of General Volume Cap (as opposed to 2008 Housing Act Volume Cap), an issuer may make proceeds of such bonds available for use for qualified subprime loan refinancings during the permitted 12-month origination period for such loans, and then either redeem bonds from unused proceeds or make such proceeds available for regular qualified mortgage loans under section 143 for the balance of the permitted 42-month origination period for such loans under the general rules for qualified mortgage bonds under section 143(a)(2)(D) before redemption of bonds from unused proceeds. Qualified mortgage bonds that receive an allocation of 2008 Housing Act Volume Cap must apply all unused proceeds to the redemption of bonds after the 12-month period as provided in section 146(d)(5)(B)(ii)(II), as added by section 3021(a) of the 2008 Housing Act.ⁿ¹⁴⁹

IRC Section 143(m) imposes a recapture requirement if a taxpayer disposes of a residence that was financed by proceeds from a qualified mortgage bond issue, or on which a mortgage certificate credit was taken ("federally-subsidized indebtedness"), within nine years from the date of the loan or the date the taxpayer became liable (the "testing date"), whichever is earlier.ⁿ¹⁵⁰ Generally, any disposition--sale, exchange, or gift--triggers recapture.ⁿ¹⁵¹ Subject to three exceptions, recapture occurs without regard to exclusion provisions such as *IRC Section 121*.ⁿ¹⁵²

Under the first exception, the death of an assisted mortgagor terminates that mortgagor's liability for recapture; the liability of other surviving mortgagors is not affected.ⁿ¹⁵³ The second exception excludes from current recapture any involuntary conversion of a residence due to fire, storm, or other casualty, if the taxpayer repairs or rebuilds the residence; liability for recapture continues with respect to the repaired house. Under the third exception, no recapture is recognized on an inter vivos disposition of an interest in a house to a spouse or former spouse (including a transfer incident to a divorce) but the transferee steps into the shoes of the transferor with respect to liability for recapture and determination of the recapture period. There is also no recapture tax imposed on a refinancing or other prepayment of an assisted loan within the nine-year recapture period unless the mortgagor also disposes of the house. The mortgagor continues to be liable for recapture if the house is disposed of within the nine-year period.

The recapture amount with respect to any indebtedness is an amount equal to 6.25 percent of the highest principal amount of the indebtedness for which the taxpayer was liable ("maximum special subsidy amount") multiplied by a holding period percentage determined in accordance with the following table:

If, after the testing date, the disposition occurs during:	The holding period percentage is:
Year 1	20
Year 2	40
Year 3	60
Year 4	80
Year 5	100
Year 6	80
Year 7	60
Year 8	40
Year 9	20

and by an income percentage. The latter is the percentage (but not greater than 100 percent) that:

(1) the excess of:

(a) the modified adjusted gross income¹⁵⁴ of the taxpayer for the taxable year in which the disposition occurs, over

(b) the adjusted qualifying income¹⁵⁵ for the taxable year,

bears to

(2) \$5,000.¹⁵⁶

Finally, the increase in the taxpayer's tax for the year of disposition is limited to the lesser of the recapture amount or 50 percent of the gain realized on the disposition of the taxpayer's interest in the residence. For this purpose, gain realized is equal to the excess of the amount realized on the disposition over the taxpayer's adjusted basis in the house, determined without regard to *IRC Section 1033(b)* or *1034(e)* (as in effect on August 4, 1997). Adjusted basis reflects selling costs and the value of permanent improvements. The fair market value of the house is treated as the amount realized from dispositions other than at arm's length or pursuant to gift.

Example:

H and *W* purchase a house on June 15, 2001, receiving a \$50,000 qualified mortgage bond-financed loan. At the time of the purchase, the applicable income limit for *H* and *W* (who have no children) is \$20,000. On September 1, 2004, *H* and *W*, who still have no children, sell the house at a gain of \$15,000 and purchase a new house.

In the year of sale, *H* and *W*'s modified adjusted gross income is \$35,000. The maximum special subsidy amount is \$3,125 (6.25 percent of \$50,000). The holding period percentage is 60 percent; the income percentage is 100 percent.¹⁵⁷ Therefore, the recapture tax is \$1,875, since that amount is less than 50 percent of the gain realized on the sale.

Issuers of qualified mortgage bonds and mortgage credit certificates must provide a written statement at the settlement informing the mortgagor of the potential recapture and then, within 90 days thereafter, provide a written statement specifying the federally subsidized amount with respect to the indebtedness and the amount of adjusted qualifying income for each year in the recapture period.¹⁵⁸

[d] Qualified Small Issue Bonds. By virtue of a special exception for certain small issues provided by *IRC Section 144(a)*, the exclusion provided by *IRC Section 103(a)* continues with respect to interest received on any obligation forming a part of an issue of industrial development bonds where (1) the aggregate authorized face amount of the issue is \$1 million or less, and (2) 95 percent of the proceeds of the issue are to be used either for the acquisition, construction, reconstruction, or improvement of land or depreciable property, or to redeem part or all of a prior issue used for those purposes.¹⁵⁹ There is still another condition. The face amount of outstanding prior small issues must be taken into account in determining whether a subsequent issue of \$1 million or less (whether issued by the same issuer or a different issuer) qualifies for the special exception of *IRC Section 144* whenever (a) the proceeds of the prior issues and the subsequent issue will be used primarily in connection with facilities located in the same incorporated municipality or in unincorporated areas of the same county and (b) the principal user of the facilities will be the same person or two or more related persons.¹⁶⁰ However, the face amount of any outstanding obligation which is to be redeemed from the proceeds of the later issue need not be taken into account.¹⁶¹ To illustrate:

Example:

County *C* and Corporation *Y* enter into an arrangement under which the county will issue \$1 million of

bonds, and use the proceeds to purchase land in Village V and construct a factory to be leased by Y for twenty years. The interest on the bonds is tax-exempt because of the special exception of *IRC Section 144(a)*.

At a later date, Corporation Y proposes to Village V that the latter build a \$400,000 warehouse for use by the corporation under terms similar to the factory arrangement. On the issue date of the new bond issue, \$750,000 of the prior issue is still outstanding. Although, standing alone, the subsequent issue would qualify as a small issue, it cannot when the face amount of the outstanding prior issue is added to the face amount of the new bonds. This is required inasmuch as the factory and warehouse are both located in Village V, and Y is principal user of both facilities.

The \$1 million small issue exception is not available for any industrial development bonds issued as part of a single issue with any other tax-exempt obligations other than those issued under the small issue provisions.ⁿ¹⁶² Thus, if a convention or trade show facility costing \$16 million is to be financed by industrial development bonds, the interest on the obligations will be tax free only if issued pursuant to the exempt purpose exception. Any attempt to qualify a portion of the issue under the small issue exception will cause the interest on that portion to be taxable.

At the election of the issuing governmental unit, the dollar limitation on the small issue exception can be raised from \$1 million to \$10 million.ⁿ¹⁶³ But in testing whether the issue comes within the larger dollar limit, there must be taken into account not only the face amount of outstanding prior small issues which are taken into account in determining whether a \$1 million dollar issue qualifies under *IRC Section 144(a)*, but also certain capital expenditures made during the six-year period beginning three years before and ending three years after the issue date of the \$10 million dollar issue. The included capital expenditures are those financed otherwise than out of proceeds of outstanding prior small issues and made with respect to facilities (a) located (as of the date of issue) in the same municipality or in unincorporated areas in the same county as the facilities to be financed by the new issue, and (b) used principally by the person who will use the new facility or by related persons.ⁿ¹⁶⁴ Notwithstanding, certain capital expenditures are not to be taken into account in determining the \$10 million limit, to wit:

- (1) capital expenditures to replace property destroyed or damaged by fire, storm, or other casualty, but only to the extent that the expenditure does not exceed the fair market value of the property replaced;
- (2) capital expenditures required by a change in any federal, state, or local law of general application enacted after the date of issue, or by a change in any rules or regulations issued under such law;
- (3) in the case of an issue 95 percent of the proceeds of which are used to finance an urban development action grant facility, capital expenditures of \$10 million or less;ⁿ¹⁶⁵
- (4) subject to a limitation of \$1 million with respect to any issue, capital expenditures required by circumstances which could not be reasonably foreseen on the date of issue, or arising out of a mistake of law or fact (e.g., a mistake pursuant to which an item is treated as a repair and deducted rather than capitalized); and
- (5) expenditures for research wages or supplies which the taxpayer elects to deduct currently.ⁿ¹⁶⁶

Unlike a \$1 million issue whose status as a small issue is determined solely by facts which exist on the date of issue, the \$10 million issue can qualify as a small issue on such date and then become disqualified by reason of a subsequent capital expenditure. To prevent a retroactive loss of exemption, and, thus, retroactive taxation of interest income, *IRC Section 144(a)(4)(D)* provides that "no bond issued as part of such issue shall be treated as qualified small issue bond by reason of any [capital] expenditure for any period before the date on which such expenditure is paid or incurred." In

other words, the loss of tax exemption for the interest on the previously qualified obligation begins with the date on which the expenditure, which causes the issue to cease to qualify under the \$10 million limit, is made.

Small issues will not qualify as tax-exempt bonds if more than 25 percent of the proceeds of an issue are used to provide a facility used for retail food and beverage services, automobile sales or service, or recreation or entertainment, or if any part of the proceeds is used to provide a private or commercial golf course, country club, massage parlor, skating facility, racquet sports facility, hot tub facility, suntan facility, or racetrack.ⁿ¹⁶⁷

The Code places an aggregate limit on the face amount of industrial development bonds that can be allocated to any test-period beneficiary. Pursuant to *IRC Section 144(a)(10)*, the small issue exception will not apply to any issue if the aggregate face amount of industrial development bonds allocated to the test-period beneficiary exceeds \$40 million after the issue. A test-period beneficiary is defined as an owner or principal user of facilities being financed by the issue at any time during the three-year period beginning on the later of the date the facilities are placed in service or the date of the issue.

The Code also limits the purposes to which the proceeds of an issue can be applied. Interest on small issue bonds will not be tax exempt if any portion of the proceeds is used to acquire depreciable farm property with respect to which the principal user is or will be the same person or two or more related persons, and the acquisition cost exceeds \$250,000.ⁿ¹⁶⁸

If a bond is purported to be a qualified small issue bond when issued, but the capital expenditure limitations are later exceeded, no deduction will be allowed for interest that accrues on the financing during the period the bond is not a qualified small issue bond.ⁿ¹⁶⁹

Because of a sunset provision, the small issue exception now applies only when 95 percent all of the proceeds of the issue are to be used to provide a manufacturing facility or farmland.ⁿ¹⁷⁰

[e] Qualified Student Loan Bonds. Under *IRC Section 144(b)(1)*, a qualified student loan bond is (1) a bond issued by a qualified governmental unit or by a qualified scholarship funding corporation, if 90 percent of the proceeds of the issue of which the bond is a part are used to make loans in connection with GSL and PLUS programs of the United States Department of Education, or (2) an obligation that is part of an issue of which 95 percent of the proceeds are used to make or finance loans under certain state supplemental loan programs including any program of general application approved by a state if loans under the program are limited to the difference between the cost of attending and other forms of student assistance.ⁿ¹⁷¹ Loans financed by qualified student loan bonds must be made to students enrolled in institutions within the issuing state, or to students attending institutions elsewhere who are residents of the issuing state.

A bond is not treated as a qualified student loan bond if the issue of which the bond is a part meets the private business use and private security tests of *IRC Section 141(b)*. For this purpose, the "use" by a Section 501(c)(3) educational institution solely by reason of its administration of a student loan program does not affect the tax-exempt status of the issue, provided the use does not constitute an unrelated trade or business of the institution.

[f] Qualified Redevelopment Bonds. *IRC Section 144(c)* defines a qualified redevelopment bond as a bond that is part of an issue (1) 95 percent or more of the net proceeds of which are to be used for redevelopment purposes in a designated blighted area, (2) is issued pursuant to a state law that authorizes the issuance of such bonds for redevelopment purposes in blighted areas and a redevelopment plan that is adopted before the issuance of the bonds local general governmental unit having jurisdiction over the blighted area, (3) either the payment of the principal and interest on the issue is primarily secured by taxes of general applicability imposed by a general purpose governmental unit, or any increase in real property tax revenues (attributable to increases in assessed value) by reason of carrying out the redevelopment is reserved exclusively for debt service on the issue (and similar issues) to the extent the increase

does not exceed the debt service, (4) each interest in real property located in the blighted area that is acquired by a governmental unit with the proceeds of the issue and is transferred to a person other than a governmental unit is transferred for fair market value, and (5) no owner or user of property located in the financed area (the portion of the designated blighted area with respect to which the proceeds of the issue are to be used) is subject to a charge or fee that similarly situated owners or users of comparable property located outside the area are not subject, and the assessment method or rate of real property taxes with respect to property located in the financed area does not differ from the method or rate with respect to comparable property located outside the area.ⁿ¹⁷²

The term "redevelopment purposes" means (1) the acquisition (by a governmental unit having the power to exercise eminent domain) of real property located in the blighted area, (2) the clearing and preparation for redevelopment of the acquired land, (3) the rehabilitation of the real property, and (4) the relocation of occupants of the real property.ⁿ¹⁷³ Qualified redevelopment bonds cannot be used to construct new buildings or similar structures in a redevelopment area.ⁿ¹⁷⁴

The designation of blighted area is to be based on state statutory criteria that take into account all relevant factors, including the presence of excessive vacant land on which structures were previously located, abandoned or vacant buildings, substandard structures, vacancies, and delinquencies in the payment of real property taxes.ⁿ¹⁷⁵ The assessed value of real property in all of the blighted areas designated by a general purpose local government unit cannot exceed 20 percent of the assessed value of all real property located within the jurisdiction of the governmental unit; the percentage with respect to any area is determined at the time the area is designated.ⁿ¹⁷⁶ Previously designated areas cease to be taken into account, for purposes of the 20 percent test, if no qualified redevelopment bonds remain outstanding with respect to the area.

A designated blighted area must satisfy one of two minimum size requirements:

- (1) The area must be comprised of at least 100 compact and contiguous acres; or
- (2) The area is comprised of between 10 and 100 compact and contiguous acres, and no more than 25 percent of the bond-financed land in the area is to be provided to any one person or related persons.ⁿ¹⁷⁷ The 25-percent rule is not considered to be violated if more than 25 percent of financing is to be made available to one person (or related persons) on a short term interim basis for use in redevelopment activities and the redevelopment property is to be transferred with reasonable speed to persons satisfying the 25-percent requirement.ⁿ¹⁷⁸

A bond will not be a qualified redevelopment bond if (1) more than 25 percent of the net proceeds of the issue are used to provide any facility the primary purpose of which is retail food and beverage service, automobile sales or service, or the providing of recreation or entertainment, or (2) any of the proceeds of the issue are to be used to provide any private or commercial golf course, country club, massage parlor, hot tub facility, suntan facility, racetrack or other gambling facility, or liquor store.ⁿ¹⁷⁹

[g] Qualified 501(c)(3) Bonds. A private activity bond is a qualified 501(c)(3) bond if (1) all of the property that is to be provided by the net proceeds of the issue is to be used as a tax-exempt organization described in *IRC Section 501(c)(3)*, and (2) not more than 5 percent of the net proceeds of the issue are to be used for any private business use, or secured by any property used for a private business use or payment with respect to such property.ⁿ¹⁸⁰ For bonds issued on or before August 5, 1997, the Code placed a \$150 million limit on the aggregate amount of qualified 501(c)(3) bonds, other than qualified hospital bonds,ⁿ¹⁸¹ that could be issued by a 501(c)(3) organization that was a principal user of the facilities being financed by the issue at any time during the three-year period beginning on the later of the date the facilities were placed into service, or the date of the issue; there is no limitation with respect to bonds issued after August 5, 1997, as part of an issue 95 percent or more of the net proceeds of which are used to finance capital expenditures incurred after that date.ⁿ¹⁸²

A bond will not be a qualified 501(c)(3) bond if any portion of the net proceeds of the issue of which the bond is a part is used directly or indirectly to provide residential rental property for family units.ⁿ¹⁸³ This rule does not apply if the portion of the issue is used to provide (a) residential rental property for family units if the first use of the property is pursuant to the issue, (b) qualified residential rental projects as defined in *IRC Section 142(d)*, or (c) property that is to be substantially rehabilitated in a rehabilitation beginning within the two year period ending one year after the date of the acquisition of the property.ⁿ¹⁸⁴

A bond will not be treated as a qualified 501(c)(3) bond if the issuer so elects, and the issue can be treated as an exempt-facility bond or qualified redevelopment bond. In such case, the financing will be subject to the private activity volume cap.ⁿ¹⁸⁵

[h] Qualified New York Liberty Bonds. *IRC Section 1400L(d)*, added by the Job Creation and Worker Assistance Act of 2002, authorizes the issuance of up to \$8 billion of a new exempt facility bond--the qualified New York Liberty Bond.ⁿ¹⁸⁶ A qualified New York Liberty Bond is a bond that is part of an issue if: (1) 95 percent or more of the net proceeds of the issue are to be used for qualified project costs; (2) the bond is issued by New York State or a political subdivision thereof; (3) the Governor of New York State or the Mayor of New York State designates the bond as a New York Liberty Bond; and (4) the bond is issued after March 9, 2002, and before January 1, 2005.ⁿ¹⁸⁷

Limitations are placed on the face amounts of bonds that can be issued for certain purposes.ⁿ¹⁸⁸ Bonds used for costs for property located outside the New York Liberty Zone cannot exceed \$2 billion.ⁿ¹⁸⁹ Bonds issued for residential rental property are limited to \$1.6 billion. No more than \$800 million can be issued for costs with respect to property used for retail sales of tangible property and functionally related and subordinate property. No bonds can be issued for costs relating to movable fixtures or equipment.ⁿ¹⁹⁰ The specified limitations are allocated proportionately between the bonds designated by the Governor and those designated by the Mayor in proportion to the respective amounts designated by each.

The qualified project costs for which the bonds can be issued are the costs of acquisition, construction, reconstruction, and renovation of (a) nonresidential real property and residential rental property (including fixed tenant improvements) located in the Liberty Zone; (b) public utility property (electric, water, sewage, gas and telecommunication lines) located in the Liberty Zone; and (c) nonresidential real property (including fixed tenant improvements) located in New York City outside the Liberty Zone, if the property is part of a project that consists of at least 100,000 square feet of usable office or other commercial space located in a single building or multiple adjacent buildings.ⁿ¹⁹¹

A number of special rules apply to qualified New York Liberty Bonds. First, the bonds are not subject to the annual volume cap on the amount of bonds that New York State can issue.ⁿ¹⁹² Second, if existing property is to be acquired with the proceeds of the bonds, rehabilitation expenses must equal or exceed 50 percent of the cost of acquiring the building.ⁿ¹⁹³ Third, the two-year exception to the arbitrage bond rebate requirements for proceeds that are used to finance construction that meets certain spending requirements applies.ⁿ¹⁹⁴ Finally, repayments of bond-financed loans may not be used to make additional loans, but must be used to retire outstanding bonds.ⁿ¹⁹⁵

Certain bonds for facilities located in New York City can be advance refunded one additional time after March 1, 2002, and before January 1, 2005.ⁿ¹⁹⁶ The bonds are those bonds for which all advance refunding authority was exhausted before September 12, 2001, and with respect to which the advance refunding bond is the only other outstanding bond with respect to the refunded bond.ⁿ¹⁹⁷ To be eligible for the additional advance refunding, at least 90 percent of the refunded bonds must have been used to finance facilities located in New York City, and the bonds must be: (1) a state or local bond that is a general obligation bond of New York City; (2) a state or local bond other than a private activity bond issued by the New York Municipal Water Finance Authority (NYCMWFA) or the Metropolitan Transportation Authority (MTA); or (3) a qualified *IRC Section 501(c)(3)* bond that is a qualified hospital bond issued by or on behalf of New York State or New York City.ⁿ¹⁹⁸

The maximum amount of advance refunding that may be issued under this special authority is \$9 billion, with the Governor and Mayor each able to designate \$4.5 million as advance refunding bonds.ⁿ¹⁹⁹ The advance refunding bonds must meet all of the requirements of *IRC Section 148* (arbitrage bonds) and *IRC Section 149(d)* (other than the number of advance refundings allowed under *IRC Section 149(d)*).ⁿ²⁰⁰

[i] Qualified Gulf Opportunity Zone Bonds. The existence of major disaster areas following devastating hurricanes in 2005 (Hurricanes Katrina, Rita, and Wilma) prompted Congress to pass legislation authorizing the issuance of tax-exempt Gulf Opportunity Zone Bonds.ⁿ²⁰¹ Depending on the purpose for which the bonds are issued, they can be treated either as exempt facility bonds or qualified mortgage bonds.ⁿ²⁰²

Gulf Opportunity Bonds are considered exempt facility bonds if (i) 95 percent or more of the net proceeds of the issue of which the bonds are a part are to be used for qualified project costs of projects located in the Gulf Opportunity Zone, (ii) the bond is issued by Alabama, Louisiana, or Mississippi, or a political subdivision thereof, (iii) the bond is issued to fund projects approved by the governor of the state (or the state bond commission where state law requires commission approval), (iv) the bond is issued after December 21, 2005, and before January 1, 2011, and (v) no part of the proceeds of the issue can be used to provide any private or commercial golf course, country club, massage parlor, hot tub facility, suntan facility, racetrack or other facility used for gambling, or any store the principal business of which is the sale of alcoholic beverages for off-premises consumption.ⁿ²⁰³

Qualified project costs include the cost of acquisition, construction, reconstruction, and renovation of nonresidential real property (including fixed improvements associated with the property) and public utility property, and the cost of any residential rental project.ⁿ²⁰⁴ Bond proceeds cannot be used to finance movable fixtures and equipment.ⁿ²⁰⁵

Gulf Opportunity Zone Bonds are treated as qualified mortgage bonds if the bonds of the issue meet the requirements of a qualified mortgage issue and the other requirements of a Gulf Opportunity Zone Bond specified above.ⁿ²⁰⁶ Under *IRC Section 1400N(a)(5)(B)*, the residences financed by the issue must be owner-occupied and be located in the Gulf Opportunity Zone. They are treated as targeted area residences, with certain modifications. The normal rule applicable to targeted area residences, allowing one-third of mortgages to be made without regard to any income limits does not apply, so that 100 percent of the mortgages must be made to mortgagors whose family income is 140 percent or less than the applicable family income. In addition, the amount of a qualified home improvement loan that can be financed with bond proceeds is increased from \$15,000 to \$150,000.ⁿ²⁰⁷

For purposes of the qualified mortgage bond provisions and the Gulf Opportunity Zone Bonds rules, any qualified Gulf Opportunity Zone repair or reconstruction is treated as a qualified rehabilitation.ⁿ²⁰⁸ A qualified Gulf Opportunity Zone repair or reconstruction involves the repair of any damage caused by Hurricane Katrina, Hurricane Rita or Hurricane Wilma to a building located in the Gulf Opportunity Zone, the Rita Gulf Opportunity Zone, or the Wilma Gulf Opportunity Zone (or reconstruction of any such building in the case of the destruction of the building) if the expenditures for the work are 25 percent or more of the mortgagor's adjusted basis in the residence determined as of the completion of the work, or, if later, the date on which the mortgagor acquires the residence.ⁿ²⁰⁹ The provision applies only to owner-financing provided before January 1, 2011.ⁿ²¹⁰

The issuance of Gulf Opportunity Zone Bonds is subject to the following additional rules:

1. Repayments of principal on financing provided by an issue of Gulf Opportunity Zone Bonds cannot be used to make additional loans, except as otherwise permitted for a qualified mortgage issue by *IRC Section 143*.
2. The issuance of such bonds is not subject to the volume cap for private activity bonds contained in *IRC Section 146*.

3. *IRC Section 147(d)(2)*, providing a restriction on the acquisition of existing property, is applied using a minimum requirement of 50 percent (instead of 15 percent) of the cost of acquiring the building being devoted to rehabilitation.

4. The exception from the arbitrage bond rebate rules for proceeds used to finance certain construction expenditures is applied to Gulf Opportunity Zone Bonds used to finance qualified project costs; the bonds are treated as a construction issue for purposes of *IRC § 148(f)(4)(C)*.

5. Interest on Gulf Opportunity Zone Bonds is not a preference item for purposes of the alternative minimum tax.ⁿ²¹¹

The maximum aggregate face amount of bonds that can be designated under *IRC § 1400N(a)* with respect to a state cannot exceed the product of \$2,500 multiplied by the portion of the state population that is in the Gulf Opportunity Zone (as determined on the basis of the most recent census estimate of resident population released by the Bureau of the Census before August 28, 2005).ⁿ²¹²

[3] Arbitrage Bonds.

By virtue of *IRC Section 103(b)(2)*, interest, which would have been excluded from gross income pursuant to the general rule of *IRC Section 103(a)*, will be subject to federal income taxation if the particular obligation is classified as an arbitrage bond.

State and local obligations are classified as arbitrage bonds if any portion of the proceeds therefrom are reasonably expected (at the time of issuance of the bond) to be used to acquire higher yielding investments (or to replace funds that were used to acquire such investments).ⁿ¹ Investments are higher yielding if the investment property is either a security,ⁿ² an obligation, an annuity contract, or investment-type property (but not a tax-exempt bond unless it is a specified private activity bond as defined for alternative minimum tax purposes by *IRC Section 57(a)(5)(C)*), or, in the case of a bond other than a private activity bond, any residential rental property for family units that is not located within the jurisdiction of the issuer and that is not acquired to implement a court ordered or approved housing desegregation plan, and the property produces a yield over the term of the issue that is materially higher than the yield on the issue.ⁿ³ Investment-type property includes any property, other than investment property described above, that is held principally as a passive vehicle for the production of income.ⁿ⁴ For this purpose, production of income includes any benefit based on the time value of money.ⁿ⁵ Investment-type property also includes the investment element of a contract that is a hedge and that contains a significant investment element because a payment by the issuer relates to an obligation by the hedge provider to make a payment at a later date.ⁿ⁶

The determination of the yield of an issue is made on the basis of the issue price, within the meaning of *IRC Sections 1273 and 1274* (see § 17.02A[1]).ⁿ⁷ A bond is not to be treated as an arbitrage bond solely because the proceeds may be invested temporarily in securities or other obligations until needed for the purposes for which the bond was issued.ⁿ⁸

The temporary period cannot exceed six months if the proceeds of the issue are to be used to make or finance loans (other than nonpurpose investments)ⁿ⁹ to two or more persons.ⁿ¹⁰ The period is extended to two years with respect to any portion of the issue used to make or finance loans for construction expenditures.ⁿ¹¹ The period is three months with respect to proceeds from the sale or repayment of any loan that are to be used to make or finance any loan.ⁿ¹² None of the temporary period rules applies to a qualified mortgage bond or qualified veterans' mortgage bond.ⁿ¹³

The regulations provide for additional temporary periods. A three-year period, beginning on the issue date, applies to the proceeds of an issue allocated to expenditures for capital projects if the issuer reasonably expects to meet three tests. The first, the expenditure test, is met if at least 85 percent of the net sale proceeds of the issue are allocated to

expenditures on the capital projects by the end of the three-year period. The second, the time test, is met if the issuer incurs within six months of the issue date a substantial binding obligation to a third party to expend at least five percent of the net sale proceeds of the issue on capital projects. (An obligation is not binding if it is subject to contingencies within the issuer's or a related party's control.) The final test, the due diligence test, is met if completion of the capital projects and the allocation of the net proceeds to expenditures proceed with due diligence.ⁿ¹⁴

Proceeds of a pooled financing issue reasonably expected to be used to finance purpose investments qualify for a temporary period of six months while held by the issuer before being loaned to a conduit borrower.ⁿ¹⁵ Any otherwise available temporary period for proceeds held by a conduit borrower is reduced by the period of time during which the issuer held the proceeds before the loan was made. If all or a portion of a pooled financing issue qualifies as a construction issue, the temporary period is two years.ⁿ¹⁶

The temporary period for proceeds from the sale or repayment of any loan that are reasonably expected to be used to make or finance new loans is three months.ⁿ¹⁷ Any temporary period for proceeds held by a conduit borrower under a new loan is determined by treating the date the new loan is made as the issue date and by reducing the temporary period by the period the amounts were held by the issuer following the last repayment.ⁿ¹⁸

Proceeds of an issue that are reasonably expected to be allocated to restricted working capital expenditures within 13 months after the issue date qualify for a temporary period of 13 months beginning on the issue date. If the issuer reasonably expects to use tax revenues arising from tax levies for a single fiscal year to redeem or retire an issue, and the issue matures by the earlier of two years after the issue date or 60 days after the last date for payment of those taxes without interest or penalty, the 13-month temporary period is extended until the maturity date of the issue.ⁿ¹⁹

Replacement proceeds qualify for a temporary period of 30 days beginning on the date the amounts are first treated as replacement proceeds.ⁿ²⁰ Amounts in a bona fide debt service fund for an issue qualify for a temporary period of 13 months.ⁿ²¹ Unless another temporary period is specified in the regulations, investment proceeds qualify for a temporary period of one year beginning on the date of receipt.ⁿ²²

A bond also will not be an arbitrage bond solely because the proceeds of the issue may be invested in higher yielding investments that are part of a reasonably required reserve or replacement fund, provided that the amount which can be so invested is limited to 10 percent of the total proceeds of the issue, unless the taxpayer can establish that a higher amount is necessary.ⁿ²³ A bond will be treated as an arbitrage bond if the amount of the proceeds placed in a reserve or replacement fund exceeds 10 percent of the issue (or the higher established amount).ⁿ²⁴

Lastly, a bond is not an arbitrage bond solely because a portion of the proceeds of the issue are invested in higher yielding investments, if the amount so invested does not exceed the lesser of 5 percent of the proceeds of the issue of \$100,000.ⁿ²⁵ This "minor portion" exception is in addition to the amount that can be placed in temporary investments, or in reserve or replacement funds.

Yield on an investment is computed under the economic accrual method, with the same compounding interval and financial conventions used to compute the yield on the issue.ⁿ²⁶ The yield on an investment allocated to an issue is the discount rate that produces an amount equal to the present value of all unconditionally payable payments for the investment.

For purposes of the yield restriction rules of *IRC Section 148(a)* and *Regulations Section 1.148-2*, yield is computed separately for each class of investments.ⁿ²⁷ The yield on each individual investment within the class is blended with the yield on other individual investments within the class by treating those investments as a single investment; the yields on investments that are not within the same class are not blended. Each of the following is a separate class of investments: (i) each category of yield restricted purpose investment and program investment that is subject to a different definition of materially higher yield under *Regulations Section 1.148-2(d)(2)*; (ii) yield-restricted nonpurpose

investments; and (iii) all other nonpurpose investments.ⁿ²⁸

In computing the yield on investments allocable to an issue that are to be held beyond the reasonably expected redemption date of the issue, the investments are treated as sold for an amount equal to their value on that date.ⁿ²⁹ In computing the yield on investments that are held beyond an applicable temporary period, the investments are treated as purchased for an amount equal to their fair market value at the end of the temporary period.ⁿ³⁰

The value of an investment (including a payment or receipt on the investment) on any date must be determined using one of the following valuation methods consistently for all purposes of *IRC Section 148* to that investment on that date: (a) for a plain par investment, the outstanding stated principal amount; (b) for a fixed rate investment, present value; or (c) for any other investment, fair market value.ⁿ³¹ Any yield-restricted investment must be valued at present value.ⁿ³² Generally, an investment must be valued at fair market value on the date that it is first allocated to an issue or first ceases to be allocated to an issue as a consequence of a deemed acquisition or deemed disposition.ⁿ³³

An allocation of gross proceeds of an issue to a payment or receipt on an investment generally is not adjusted to take into account administrative costs (costs or expenses paid, directly or indirectly, to purchase, carry, sell, or retire the investment).ⁿ³⁴ However, adjustment is made for a nonpurpose investment for costs that are qualified administrative costs--reasonable, direct administrative costs, other than carrying costs, such as separately stated brokerage or selling commissions, but not legal and accounting fees, recordkeeping, custody, or general overhead costs (eg, employee salaries and office expenses).ⁿ³⁵ Adjustment is also made in the case of purpose investments for costs directly or indirectly paid to purchase, carry, sell, or retire the investment, and costs of issuing, carrying, or repaying the issue, and underwriter's discounts.ⁿ³⁶

Amounts are replacement proceeds of an issue if the amounts have a sufficiently direct nexus to the issue or to the governmental purpose of the issue to conclude that the amounts would have been used for that governmental purpose if the proceeds were not used or to be used for that governmental purpose. *Treas Reg § 1.148-1(c)(1)*.

Regulations provide that bonds of an issue are arbitrage bonds if an abusive arbitrage device is used in connection with an issue.ⁿ³⁷ An action is an abusive arbitrage device if the action has the effect of (i) enabling the issuer to exploit the difference between tax-exempt and taxable interest rates to obtain a material financial advantage, and (ii) overburdening the tax-exempt bond market.ⁿ³⁸ An action overburdens the tax-exempt bond market if it results in issuing more bonds, issuing bonds earlier, or allowing bonds to remain outstanding longer than is reasonably necessary to accomplish the governmental purposes of the bonds.ⁿ³⁹

The Code limits the amount of the proceeds of a private activity bond issue (other than qualified 501(c)(3) bonds) that can be invested in nonpurpose investments with a materially higher yield than the yield on the issue. Except for an initial temporary period until the proceeds of an issue are needed for the governmental purpose of the issue, and except for temporary investment periods related to debt service, the amount of proceeds of an issue that can be invested in higher yielding nonpurpose investments cannot exceed 150 percent of the annual debt service on the bonds and the aggregate amount invested in such investments must be appropriately reduced as the amount of outstanding bonds of the issue is reduced (or in the case of a qualified mortgage bond or qualified veterans' mortgage bond, as the mortgages are repaid).ⁿ⁴⁰

Arbitrage (the sum of the excess of the amount earned on nonpurpose investments over the amount that would have been earned if the nonpurpose investment had been invested at the same yield as the issue, plus any income attributable to such excess) earned on investments in nonpurpose obligations must be paid to the federal government every five years.ⁿ⁴¹ Each installment must consist of at least 90 percent of the amount earned to the payment date, with any remaining balance paid within 60 days after the bonds are retired.ⁿ⁴² At the election of the issuer, a series of issues redeemed during a six-month period (or such longer period as the Service may prescribe) can be treated as one issue for purposes of the due date of the last installment if no bond that is part of any issue in the series has a maturity of more

than 270 days or is a private activity bond. In the case of a tax and revenue anticipation bond, the last installment need not be made until eight months after the date of issuance of the issue of which the bond is a part. No rebate is required if the gross arbitrage earnings for a bond year are less than \$100,000, or if the proceeds of the issue are expended for governmental purposes within six months from the date of issue.ⁿ⁴³ However, in the latter case, the rebate requirements must be met after the six-month period with respect to earnings on amounts in any reasonably required reserve or replacement fund.

There are three additional statutory exceptions to the rebate requirement. First, an additional six months in which to spend the proceeds of an issue for governmental purposes is allowed in the case of governmental bonds and qualified 501(c)(3) bonds, if all but 5 percent of the proceeds of the issue are spent for governmental purposes within the initial six-month period.ⁿ⁴⁴ The period is extended to two years if (1) at least 75 percent of the net proceeds of the issue are to be used for construction expenditures with respect to property that is owned by a governmental unit or Section 501(c)(3) organization, and (2) the following percentages of the net proceeds are spent for the governmental purpose of the issue during the specified time periods from the date of issuance: at least 10 percent within six months, at least 45 percent within one year, at least 75 percent within 18 months, and at least 100 percent within two years.ⁿ⁴⁵

Second, no rebate is required on bonds used to finance activities of governmental units if the unit reasonably expects to issue no more than \$5 million in governmental bonds during the calendar year when the issuance occurs and at least 95 percent of the net proceeds of the issue are to be used for local governmental activities of the issuer (or of a governmental unit the jurisdiction of which is entirely within the jurisdiction of the issuer).ⁿ⁴⁶ In determining whether the \$5 million limit is reasonably expected to be exceeded, (1) an issuer and all entities issuing bonds on its behalf are treated as one issuer, (2) bonds issued by a governmental unit on behalf of other governmental units with general taxing powers not subordinate to the unit are treated as not issued by the unit, (3) all bonds issued by a subordinate entity are treated as issued by the entity to which it is subordinate, and (4) an entity formed or availed of to avoid the purposes of the \$5 million limit and all other entities benefiting thereby are treated as one issuer. (Private activity bonds issued by the governmental unit are neither counted nor eligible for the rebate requirement exception).

Governmental units with general taxing powers may, in advance of the issuance date, irrevocably elect to allocate to a subordinate entity part or all of the \$5 million amount of governmental bonds that they can issue in a calendar year. To qualify, the subordinate entity cannot issue bonds in excess of the amount that could be issued if the allocating entity had directly issued the bonds. In addition, the allocation must bear a reasonable relationship to the benefits received by the allocating unit. In the case of entities subordinate to more than one allocating governmental unit with general taxing powers, only the proportionate part of the bonds represented by the benefit received by each allocating unit may be treated as issued by the unit. Absent qualifying allocations, the entire amount of the bonds issued by the multi-jurisdictional issuers will be treated as issued by each governmental unit to which the issuer is subordinate.

Current refunding bonds are not considered in determining whether an issuer qualifies for the small-issuer rebate exception if the amount of the refunding issue does not exceed the outstanding (redeemed) principal amount of the refunded bond. Advance refunding bonds are taken into account in determining whether an issuer reasonably expects to issue \$5 million or more in bonds in the same manner as new money bonds.

Current and advance refunding bonds are themselves eligible for the \$5 million rebate exception only if (a) the refunded bonds qualified for, and were taken into account under, the \$5 million exception when issued, (b) the aggregate face amount of the issue of which the refunding bond is a part does not exceed \$5 million, (c) except in the case of refunded issues having a weighted average maturity of three years or less, the weighted average maturity of the refunded bonds, and (d) no bond that is a part of the refunding issue has a maturity in excess of 30 years (measured from the date of issuance of the original bonds).

The \$5 million amounts mentioned in *IRC Section 148(f)(4)(D)* are increased by the lesser of \$10 million or so much of the aggregate face amount of the bonds as are attributable to financing the construction of public school facilities.ⁿ⁴⁷

Third, the rebate requirement does not apply to qualified student loan bonds issued before January 1, 1989, in connection with the federal GSL and PLUS programs. In this case the rebate requirement does not apply to arbitrage profits earned during the initial 18-month temporary period permitted for such bonds, if the proceeds of the issue are used to make or finance qualified student loans before the end of the 18-month period, and the arbitrage profits are used to pay the reasonable administrative and issuance costs associated with the issue that were financed with the proceeds of the issue and for which the issuer was not reimbursed.ⁿ⁴⁸ Amounts paid by student loan borrowers as interest are not to be taken into account in determining whether an issuer is reimbursed for costs. In addition, amounts earned under the exception can be taken into account in determining yield on GSL and PLUS bonds.

Regulations provide that an issue meets the rebate requirement if all of the following requirements are met:ⁿ⁴⁹

- (1) the gross proceeds of the issue are allocated to expenditures for a governmental purpose in accordance with the following schedule measured from the issue date: at least 15 percent within six months; at least 60 percent within 12 months; and 100 percent within 18 months;ⁿ⁵⁰
- (2) the rebate requirement is met for all amounts not required to be spent in accordance with the 18-month expenditure schedule (other than earnings on a bona fide debt service fund); and
- (3) all of the gross proceeds of the issue qualify for the initial temporary period under *Regulations Section 1.148-2(e)(2)*.

The Code contains a special safe-harbor exception that treats the net proceeds of tax and revenue anticipation notes as having been spent for the exempt purpose of the borrowing within six months, if, during the period beginning on the date of issuance of the issue and ending on the earlier of the date six months after the date of issuance or the date of computation of cumulative cash flow deficit the cumulative cash-flow deficit of the governmental unit issuing the notes has exceeded 90 percent of the proceeds of the issue.ⁿ⁵¹ For this purpose, cumulative cash-flow deficit is defined as the excess of the amount the governmental unit spends during the relevant period over the sum of all amounts (other than the issue process) that are available for payment of the expenses during the period.ⁿ⁵²

The Treasury can waive the loss of tax-exemption on an issue (if no bond in the issue is a private activity bond other than a qualified 501(c)(3) bond) where an error in the amount rebated, or a late payment occurs, if the error is not due to willful neglect. In such case, a penalty of 50 percent of the amount not paid, plus interest at the underpayment rate specified in *IRC Section 6621* is imposed, unless the Treasury waives the penalty.ⁿ⁵³

[4] Qualified Scholarship Funding Bonds.

Pursuant to *IRC Section 150(d)(1)*, a qualified scholarship funding bond is treated as a tax-exempt state or local bond. An obligation qualifies as such if issued by a nonprofit corporation that is (1) established and operated exclusively for the purpose of acquiring student loan notes incurred under the Higher Education Act of 1966; (2) organized at the request of a state or political subdivision thereof, or requested to exercise such power by the state or political subdivision; and (3) required by its charter and bylaws or by state law either to devote its net income to the purchase of additional student loan notes or to pay over its income to the state or to a political subdivision thereof.ⁿ¹

Any qualified scholarship funding bond outstanding on the date of the issuer's election outlined below (and any bond or series of bonds issued to refund such a bond) will not fail to be a tax-exempt bond because the issuer ceases to meet the requirements of *IRC Section 150(d)(2)* if: (1) all of the student loan notes of the issuer and other assets pledged to secure the repayment of qualified scholarship funding bond indebtedness of the issuer are transferred to another corporation within a reasonable period after the election; (2) the transferee corporation assumes or otherwise provides for payment of all of the qualified scholarship funding bond indebtedness of the issuer within a reasonable time after the

election is made; (3) to the extent permitted by law, the transferee corporation assumes all of the responsibilities, and succeeds to all of the rights, of the issuer under the issuer's agreements with the Secretary of Education in respect of student loans; (4) immediately after the transfer, the issuer, together with any other issuer that has made an election in respect of the transferee, hold all of the senior stock in the transferee corporation; and (5) the transferee corporation is not a tax-exempt organization.ⁿ² In addition, within a reasonable time after the transfer, (1) the issuer must be a tax-exempt organization described in *IRC Section 501(c)(3)*, (2) the issuer must no longer meet the requirements of *IRC Section 150(d)(2)*, and (3) at least 80 percent of the members of the board of directors of the issuer must be independent members.ⁿ³

Senior stock is stock (a) that participates pro rata and fully in the equity value of the corporation with all other common stock of the corporation but which has the right to payment of liquidation proceeds prior to payment of liquidation proceeds in respect of other common stock of the corporation; (b) that has a fixed right upon liquidation and upon redemption, to an amount equal to the greater of (i) the fair market value of the stock on the date of liquidation or redemption, or (ii) the fair market value of all assets transferred in exchange for the senior stock and reduced by the amount of all liabilities of the electing transferor corporation assumed by the transferee corporation in the transfer; (c) the holder of the stock has the right to require the transferee corporation to redeem on the stock not later than 10 years after the date on which the election was made and pursuant to which the stock was issued; and (d) during the time the stock is outstanding, there is not outstanding any equity interest in the corporation having liquidation, redemption, or dividend rights in the corporation that are superior to the stock.ⁿ⁴ An independent member of the board of directors of the issuer is one who (except for services as a member of the board) receives no compensation directly or indirectly for services performed for the transferee corporation, or for services as a member of the board or directors or as an officer of the transferee corporation.ⁿ⁵

Once made, the election can be revoked only with the consent of the Commissioner.ⁿ⁶

[5] Advance Refundings.

Interest on a bond issued to advance refund a governmental bond or a qualified 501(c)(3) bond is tax-exempt; interest on bonds issued to refund a private activity bond (other than a qualified 501(c)(3) bond) is not.ⁿ¹ A bond is treated as issued to advance refund another bond if it is issued more than 90 days before the redemption of the refunded bond.ⁿ²

The Code imposes the following requirements on permitted advance refunding bonds:

(1) The refunding bond must be the first advance refunding of an original bond issued after 1985, or the first or second refunding of an original bond issued before 1986.

(2) In the case of refunded bonds issued before 1986, the refunded bond must be redeemed not later than the earliest date on which the bond may be redeemed at par or at a premium of 3 percent or less, but not earlier than the 90th day after the refunding bond is issued.

(3) In the case of refunded bonds issued after 1985, the refunded bond must be redeemed not later than the earliest date on which the bond may be redeemed, but not earlier than the 90th day after the refunding bond is issued.

(4) The initial temporary period during which proceeds of the issue can be invested without running afoul of the arbitrage rules must end (a) with respect to the refunding bond, not later than 30 days after it is issued, and (b) with respect to the refunded bond, on the date of issuance of the refunding bond.

(5) The portion of the proceeds of the refunded bond that can be invested in higher yielding nonpurpose investments without regard to the arbitrage yield restrictions cannot exceed (a) the amount so invested as part of a reasonably required reserve or replacement fund, or during an allowable temporary

period, and (b) the amount that is equal to the lesser of 5 percent of the proceeds of the issue of which the refunded bond is a part or \$100,000 (to the extent allocable to the refunded bond).ⁿ³

The second and third requirements apply only if the issuer may realize present value debt service savings (determined without regard to administrative expenses) in connection with the issue of which the refunding bond is a part.ⁿ⁴

A permitted advance refunding bond will not be treated as such if a device is employed in connection with the issuance of the bond to obtain a material financial advantage (based on arbitrage) apart from savings attributable to lower interest rates.ⁿ⁵

A special rule, contained in *IRC Section 1400N(b)*, allows one additional advance refunding after December 21, 2005, and before January 1, 2011, for any bond issued by Alabama, Louisiana, or Mississippi, or a political subdivision thereof, if (i) the bond was outstanding on August 28, 2005, (ii) the governor of the state designates the advance refunding bond for purposes of the provision, (iii) no advance refundings of the bond otherwise would be allowed on or after August 28, 2005, (iv) the advance refunding bond is the only other outstanding bond with respect to the refunded bond, and (v) the arbitrage requirements of *IRC Section 148* are met with respect to all bonds issued under *IRC Section 1400N(b)*.ⁿ⁶ The maximum aggregate face amount of bonds that can be designated cannot exceed \$4.5 billion in the case of Louisiana, \$2.25 billion in the case of Mississippi, and \$1.125 billion in the case of Alabama.ⁿ⁷

[6] Volunteer Fire Department Bonds.

Pursuant to *IRC Section 150(e)(1)*, a bond of a volunteer fire department is treated as a bond of a political subdivision of a state if (a) the department is a qualified volunteer fire department with respect to an area within the jurisdiction of the political subdivision, and (b) 95 percent of the proceeds of the issue of which the bond is a part are to be used for the acquisition, construction, reconstruction, or improvement of a firehouse (including land that is functionally related and subordinate thereto) or fire truck used or to be used by the department. A qualified volunteer fire department is one that is organized and operated to provide fire fighting or emergency medical services for persons in an area (within the jurisdiction of the political subdivision) that is not provided with any other fire fighting services, and that is required by written agreement by the political subdivision to furnish fire fighting services in the area.ⁿ¹ Bonds that qualify are not treated as private activity bonds except for purposes of the public approval requirement of *IRC Section 147(f)* and the rules relating to advance refundings contained in *IRC Section 149(d)*.ⁿ²

[7] Pooled Financing Bonds.

IRC § 149(f) prescribes additional requirements for the exclusion from income of interest on any pooled financing bond--a bond issued as part of an issue if more than \$5 million of the proceeds of the issue are reasonably expected at the time of issuance to be used (or are intentionally used) directly or indirectly to make or finance loans to two or more ultimate borrowers.ⁿ¹ Pooled financing bonds do not include private activity or qualified veterans' mortgage bond issues subject to the state volume cap, or to refunding issues exempted from volume limits by *IRC Section 146(i)*. For this purpose, the term "loan" does not include a nonpurpose investment or the use of proceeds by an agency of the issuer unless the agency is a political subdivision or instrumentality of the issuer.ⁿ² If only a portion of the proceeds of an issue is reasonably expected to be used (or is intentionally used) as a pooled financing bond vehicle, the two portions of the issue are treated as separate issues in determining whether the pooled financing bond part meets the requirements of *IRC Section 149(f)*.

Interest on a pooled financing bond will continue to be exempt from tax if the issuer reasonably expects that as of the close of the one-year period beginning on the date of issuance of the issue, at least 30 percent of the proceeds of the issue will have been used directly or indirectly to make or finance loans to ultimate borrowers, and as of the close of the three-year period beginning on the date of issuance of the issue, at least 95 percent of the net proceeds of the issue will have been used to make or finance loans to ultimate borrowers, the payment of legal and underwriting costs associated

with the bonds is not contingent, and at least 95 percent of the reasonably expected legal and underwriting costs associated with the issuance of the issue are paid within 180 days after issuance.ⁿ³ Expectations as to changes in interest rates or in federal tax law cannot be taken into account in determining whether expectations are reasonable.

The requirement of *IRC Section 149(f)* is met with respect to an issue if the issuer receives prior to the issuance loan commitments identifying the ultimate potential borrowers of at least 30 percent of the net proceeds of the issue, except if the issuer is a state (or an integral part of a state) issuing pooled financing bonds to make or finance loans to subordinate governmental units of the state, or is a state-created entity providing financing for water-infrastructure projects through the federally-sponsored state revolving fund program.ⁿ⁴ The requirement of the provision is met if to the extent that less than the percentage of the proceeds required to be used under *IRC Section 149(f)(2)* is used by the close of the applicable period, the issuer uses an amount of proceeds equal to the excess of the amount required to be used, over the amount actually used by the close of the period, to redeem outstanding bonds within 90 days after the end of the period.ⁿ⁵

[8] Hedge Bonds.

Interest on any hedge bond will not be tax exempt unless, with respect to the issue of which the bond is a part, (1) the issuer reasonably expects that, beginning with the date the bonds are issued, the spendable proceeds of the issue will be spent for the governmental purposes of the issue as follows: 10 percent within one year, 30 percent within two years, 60 percent within three years, and 85 percent within five years, and (2) the payment of legal and underwriting costs associated with the issuance of the bonds is not contingent and at least 95 percent of such costs are paid not later than 180 days after the date of issuance.ⁿ¹ At the request of an issuer, the Service can treat the five-year spending schedule as met with respect to any portion of the proceeds that is to be used for a construction project having a construction period in excess of five years if it is reasonably expected that the proceeds will be spent over a reasonable construction schedule specified in the request.ⁿ²

A hedge bond is defined as any bond that is part of an issue unless the issuer reasonably expects that 85 percent of the spendable proceeds of the issue will be used to carry out the governmental purposes of the issue within the three-year period beginning on the date of issuance, not more than 50 percent of the proceeds of the issue are invested in nonpurpose investments having a substantially guaranteed yield for four years or more.ⁿ³ A hedge bond does not include any bond that is part of an issue of which 95 percent of the net proceeds is invested in tax-exempt state and local bonds that are not private activity bonds.ⁿ⁴

A refunding bond will be treated as a tax-exempt hedge bond only if the original bond was so treated.ⁿ⁵ However, if the original bond was issued before September 15, 1989, interest on a refunding bond will be tax exempt if (1) the average maturity date of the refunding bond issue is not later than the average maturity date of the refunded issue, and the amount of the refunding bond does not exceed the outstanding amount of the original bond, or (2) the issuer reasonably expected that 85 percent of the spendable proceeds of the original issue would be used to carry out the governmental purposes of the issue within the five-year period beginning on the date of original issuance but did not reasonably expect that 85 percent of the proceeds would be so spent within three years of that date, and at least 85 percent of the spendable proceeds of the original issue (and all prior original issues used to fund the governmental purpose of such issue) were spent before the issuance of the refunding bonds.

[9] Issuer Reporting Requirements.

Interest on a state or local bond will not be tax exempt unless the issuer submits a statement containing the following information to the Treasury not later than the 15th day of the second calendar month after the close of the calendar quarter in which the bond is issued:

- (1) the name and address of the issuer;

- (2) the date of issue, the amount of net proceeds of the issue, the stated interest rate, term, and face amount of each bond that is a part of the issue, the amount of issuance costs of the issue, and the amount of reserves of the issue;
- (3) where required, the name of the applicable elected representative who approved the issue, or a description of the voter referendum, by which the issue was approved;
- (4) the name, address, and employer identification number of (a) each initial principal user of any facility provided with the proceeds of the issue, (b) the common parent of any affiliated group of corporations (within the meaning of *IRC Section 1504(a)*) of which the initial principal user is a member, and (c) if the issue is treated as a separate issue under *IRC Section 144(a)(6)(A)*, any person treated as a principal user under *IRC Section 144(a)(6)(B)*;
- (5) a description of any property to be financed from the proceeds of the issue;
- (6) a certification by a state official designated by state law (or by the governor if there is no such official) that the bond meets the volume cap requirement for private activity bonds; and
- (7) such other information as the Treasury may require.ⁿ¹

The third and fourth items of information do not have to be furnished if the bond is not a private activity bond.

[10] Tax-Exempt Bonds Issued by Indian Tribal Governments.

IRC Section 7871(c)(1) provides that Indian tribal governments may issue tax-exempt bonds if substantially all of the proceeds of the issue are used in the exercise of essential governmental functions.ⁿ¹ As a general rule, they cannot issue tax-exempt private activity bonds.ⁿ² However, *IRC Section 7871(c)(3)*, applicable to obligations issued after October 13, 1987, provides a limited exception for certain private activity bonds.

For a bond to qualify under the exception, no person other than the issuing Indian tribal government may use the proceeds (or be responsible for debt service on the bonds) in a manner that violates the private business use and private payment tests that generally determine whether a bond is a private activity bond. Additionally, no person other than the issuing tribal government may be a principal user of the bond proceeds or bond-financed property in a manner that is violative of the restrictions on participation in qualified small-issue bonds by franchisors, etc. At least 95 percent of the bond proceeds must be used to finance acquisition, construction, or improvement of depreciable property that is part of a manufacturing facility and is located on Indian tribal land that has been held in trust by the United States for the issuing tribe for at least five years immediately preceding issuance of the bonds and at all times when the bonds are outstanding. Finally, an employment test must be satisfied.

The latter test is met if the aggregate face amount of bonds outstanding at the close of each calendar year that begins more than two years after the date of issuance is not be more than 20 times greater than the aggregate wages paid to enrolled members of the issuing tribe (and their spouses) for services rendered at the facility. If the employment requirement is not satisfied, the bonds become taxable on January 1 of the year following the year in which noncompliance is found, unless the issuer redeems bonds in an amount sufficient to meet the test within 90 days.

Bonds issued under the exception are treated as qualified small issue bonds. However, the bonds are not subject to the state volume cap normally imposed on private activity bonds.

[11] Amortization of Bond Premium on Tax-Exempt Bonds.

As a general rule, no deduction for amortization of bond premium is allowed when the interest on the bond is excludable from gross income.ⁿ¹ (However, the taxpayer is required to adjust, i.e., decrease his basis in the bond "to the extent of the amortization of bond premium disallowable as a deduction pursuant to section 171(a)(2).")ⁿ² The one exception comes when the holder of the municipal bond is a dealer in securities and the bond is held primarily for sale to customers in the ordinary course of business.ⁿ³

[12] Qualified Tax Credit Bonds.

[a] General Rules--*IRC Section 54A.*

Qualified tax credit bonds are special purpose bonds, generally issued by state or local governments, the interest on which is paid by the federal government through the mechanism of giving nonrefundable tax credits to holders of the bonds in lieu of interest.ⁿ¹ Unlike interest paid by state and local governments, however, the interest paid by the federal government through the tax credit mechanism is not exempt from federal income tax but must be included by the holders in their gross income as taxable interest.ⁿ²

An *IRC Section 54A* tax credit accrues quarterly, on March 15, June 15, September 15 and December 15 of each year.ⁿ³ The total credit allowed for the taxable year is the sum of the quarterly credits to which the taxpayer is entitled by reason of holding the qualified tax credit bond on one or more of these "credit allowance dates" during the year.ⁿ⁴ The Section 54A credit is nonrefundable,ⁿ⁵ but any unused credit may be carried forward by the taxpayer to succeeding taxable years.ⁿ⁶ Moreover, under regulations to be issued by the Treasury, the holder of any qualified tax credit bond may strip (separate) entitlement to the credit from the ownership of the bond, and the credit will be allowed to whoever holds the instrument evidencing entitlement to the credit and not to the holder of the bond.ⁿ⁷ This should enlarge the market for state and local bonds by making them more attractive to tax-exempt entities, like pension funds and foreign governments, which will be able to strip the tax credits and sell them to US taxpayers who can use them.

*Notice 2010-28*ⁿ⁸ provides interim guidance for holders of tax credit bonds on which taxpayers can rely pending the issuance of regulations under *IRC Section 54A*.ⁿ⁹ The holder's entitlement to a tax credit by reason of holding a tax credit bond on the credit allowance date is treated as a payment of interest on a debt obligation (considered qualified stated interest for original issue discount (OID) purposes) to the same extent that a payment of stated interest in cash to the holder in the same amount and on the same date would have been so treated.ⁿ¹⁰ The credit is recognized as interest income as of the credit allowance date, if the taxpayer is on a cash method of accounting, but accrued as earned if the taxpayer is on the accrual method.ⁿ¹¹

The amount of the annual credit on a qualified tax credit bond is determined by multiplying the face value of the bond by a rate determined by the Treasury immediately prior to issuance of the bond,ⁿ¹² that is estimated to permit issuance of the bond, given its specific maturity or redemption date, without discount and without interest cost to the issuer.ⁿ¹³

A "qualified tax credit bond," must satisfy six requirements. First, it must fit the definition of one of the five types of bonds in *IRC Section 54A(d)(1)*, each of which imposes its own separate requirements.ⁿ¹⁴ Second, the issuer must reasonably expect (a) that 100 percent of the "available project proceeds"ⁿ¹⁵ will be spent for one or more "qualified purposes"ⁿ¹⁶ within 3 years from the date the bonds are issued, and (b) that there will be a binding commitment with a third party to spend at least 10 percent of the proceeds within 6 months of issuance.ⁿ¹⁷ If the issuer does not spend 100% of the proceeds of the issue on qualified purposes within a 3-year "expenditure period,"ⁿ¹⁸ all nonqualified bonds must be redeemed by the issuer within 90 days. The amount of nonqualified bonds required to be redeemed is to be determined in the same manner as under *IRC Section 142*.ⁿ¹⁹

Third, the issuer must submit reports to the IRS similar to those required by *IRC Section 149(e)* for tax-exempt bonds.ⁿ²⁰

Fourth, the bond issue must satisfy the arbitrage requirements applicable to tax-exempt bonds generally as set forth in *IRC Section 148*,ⁿ²¹ applied in the light of the following special rules:

(A) A tax credit bond issue cannot be treated as having failed to meet the arbitrage requirements by reason of any investment of available project proceeds during the expenditure period; and

(B) A tax credit bond issue cannot be treated as having failed to meet the arbitrage requirements by reason of having a sinking fund that is funded (i) at a rate not more rapid than equal annual installments, (ii) in a manner reasonably expected to result in an amount that is not greater than what is necessary to repay the issue, provided that (iii) the yield on the fund is not greater than the discount rate used by the IRS in setting the maximum term for the issue.ⁿ²²

Fifth, the term of the bond may not exceed the maximum term for tax credit bonds as determined by the IRS during the month preceding the month in which the bonds were issued.ⁿ²³ The maximum term is the term estimated to result in the present value of the obligation to pay the principal on the bond being equal to 50 percent of the face amount of the bond, rounded to the next highest whole year.ⁿ²⁴

The sixth and final requirement of *IRC Section 54A* is that the issuer certify that State and local law requirements governing conflicts of interest, as well as any additional conflict of interest rules that may be prescribed by the Treasury Department, are satisfied with respect to the bond issue.ⁿ²⁵

[b] Qualified Forestry Conservation Bonds--*IRC Section 54B*.

Qualified forestry conservation bonds (QFCBs) must be part of a bond issue with respect to which (1) 100 percent of the available project proceeds are to be used for qualified forestry conservation purposes, (2) the bonds are issued by a qualified issuer,ⁿ²⁶ and (3) the bonds are designated by the issuer for purposes of *IRC Section 54B*.ⁿ²⁷

QFCBs are used to fund acquisitions of private forest land that will be donated to and conserved by federal or state forest conservation agencies. Thus, the only qualified purpose for which a QFCB can be issued is the acquisition by a state or local government, or a Section 501(c)(3) organization, from an unrelated person, of forest and forest land, provided the following four requirements are met.ⁿ²⁸

(1) Some portion of the acquired land is adjacent to United States Forest Service (USFS) land.ⁿ²⁹

(2) At least half of the land acquired will be transferred to the USFS at no net cost to the United States. Not more than half of the land acquired may either remain with, or be conveyed to, a State.ⁿ³⁰

(3) All of the land acquired must be subject to a native fish habitat conservation plan approved by the United States Fish and Wildlife Service.

(4) The amount of acreage acquired with the available project proceeds of the QFCB issue must total at least 40,000 acres.ⁿ³¹

There is a \$500 million national limitation on the amount of bonds that can be designated QFCBs.ⁿ³² The Secretary of the Treasury has discretion to determine an appropriate allocation of this national limitation among prospective qualified issuers, as long as the allocation proceeds in a manner that ensures that all of the national limitation is allocated within 24 months of the section's enactment (i.e., by June 18, 2010).ⁿ³³ The Internal Revenue Service solicited applications for allocations of the national limitation in *Notice 2008-70*.ⁿ³⁴ Section 9 (2) of that Notice provides that if the IRS receives applications for allocations in excess of the national limitation, or receives competing

applications not all of which can be fulfilled (because, for example, they relate in whole or in part to the same land), it will make allocations to qualified issuers "in a manner consistent with the recommendations of the USFS."ⁿ³⁵

An unusual provision in *IRC Section 54B* gives a qualified issuer who receives an allocation to issue QFCBs an election to take 50 percent of its allocation in cash in lieu of issuing QFCBs, provided it uses the cash to acquire forest land subject to the same requirements of *IRC Section 54B(e)* that apply to use of the available project proceeds of an issue of QFCBs.ⁿ³⁶ If the election is made, cash is provided by the federal government by treating the issuer as having made a payment (the "deemed payment") of tax under Chapter 1 of the Internal Revenue Code (whether or not the issuer is subject to tax under that Chapter) equal to 50 percent of the allocation made to the issuer, for the taxable year preceding the taxable year in which the allocation was received.ⁿ³⁷ In order to receive the payment, the qualified issuer must certify to the IRS that if it fails to use any portion of the deemed payment for a qualified purpose under *IRC Section 54B*, the issuer will be liable to the United States in an amount equal to such portion, plus interest at the overpayment rate under *IRC Section 6621*, for the period from the date such portion was refunded to the issuer to the date it is paid.ⁿ³⁸ If an issuer makes an election to take the deemed payment, it may issue no bonds pursuant to its allocation and the IRS may not reallocate its allocation for any other purpose.ⁿ³⁹

[c] New Clean Renewable Energy Bonds--*IRC Section 54C.*

New clean renewable energy bonds (New CREBs), as the name implies, are the successor to an earlier version, clean renewable energy bonds (CREBs), issued under *IRC Section 54*.ⁿ⁴⁰ The principal difference between New CREBs and CREBs is that the amount of the annual interest credit on a new CREB is reduced to 70 percent of the full "applicable credit rate."ⁿ⁴¹

The only qualified purpose for a New CREB is to provide funds to governmental bodies, public power providers,ⁿ⁴² or cooperative electric companies for capital expenditures to acquire one or more qualified renewable energy facilities.ⁿ⁴³ A "qualified renewable energy facility" is any qualified facility described in *IRC § 45(d)* (determined without regard to any placed in service date, and excluding certain coal production facilities):ⁿ⁴⁴ viz, a wind facility, a closed-loop biomass facility, a geothermal or solar energy facility, a small irrigation power facility, a landfill gas facility, a trash combustion facility, a qualified hydropower facility, or a marine and hydrokinetic renewable energy facility. Every New CREB must be part of an issue (1) in which 100 percent of available project proceeds are used for this qualified purpose, (2) that is issued by a "qualified issuer,"ⁿ⁴⁵ and (3) that is designated for purposes of *IRC Section 54C*.ⁿ⁴⁶

A total of \$2.4 billion of New CREBs may be issued under Section 54C.ⁿ⁴⁷ This allocation is to be divided in equal thirds between projects for public power providers, governmental bodies, and cooperative electric companies.ⁿ⁴⁸ So long as allocations conform to this division, the choice of qualified projects to be funded by New CREB allocations is left to the discretion of the Treasury Department.ⁿ⁴⁹

[d] Qualified Energy Conservation Bonds--*IRC Section 54D.*

Qualified Energy Conservation Bonds (QECBs) are intended to assist State and local governmentsⁿ⁵⁰ in developing programs to conserve energy, particularly in the fields of transportation and building construction. The following are the five types of "qualified energy conservation purposes" that may be funded by a QECB (as listed in *IRC Section 54D(f)(1)*):

- (A) Capital expenditures incurred for purposes of (i) reducing energy consumption in publicly-owned buildings by at least 20 percent, (ii) implementing green community programs (including the use of loans, grants, or other repayment mechanisms to implement such programs), (iii) rural development involving the production of electricity from renewable energy resources, or (iv) any qualified facility as determined under *IRC Section 45(d)* (overlapping, to this extent, the qualified purpose of a New CREB, but apparently without limitation in a QECB as to the type of entity that may acquire such a facility).

(B) Expenditures with respect to research facilities and research grants, to support research in (i) development of nonfossil fuels such as cellulosic ethanol, (ii) technologies for the capture and sequestration of carbon dioxide produced through the use of fossil fuels, (iii) increasing the efficiency of existing technologies for producing nonfossil fuels, (iv) automobile battery technologies and technologies to reduce fossil fuel consumption in transportation, or (v) technologies to reduce energy use in buildings.

(C) Mass commuting facilities and related facilities that reduce consumption of energy, including expenditures to reduce pollution from vehicles used for mass commuting.

(D) Demonstration projects designed to promote the commercialization of (i) green building technology, (ii) conversion of agricultural waste for use in the production of fuel or otherwise, (iii) advanced battery manufacturing technologies, (iv) technologies to reduce peak use of electricity, or (v) technologies for the capture and sequestration of carbon dioxide emitted from combusting fossil fuels in order to produce electricity.

(E) Public education campaigns to promote energy efficiency.

A QCEB can be a "private activity bond,"ⁿ⁵¹ but no allocation to any State or large local government may be re-allocated to issuers in a manner that results in 30 percent or more of the allocation being used for private activity bonds.ⁿ⁵² Moreover, any QCEB that is a private activity bond may only be used to fund capital expenditures.ⁿ⁵³

In addition to using 100 percent of the available project proceeds for qualified conservation purposes as set forth above, a QCEB must be issued by a State or local government, which must designate the bond for purposes of *IRC* § 54D.ⁿ⁵⁴ A total of \$3.2 billion of bonds nationwide may be so designated (the "national limitation"),ⁿ⁵⁵ The national allocation is to be allocated to the States in proportion to population.ⁿ⁵⁶ If a State has within it a "large local government" (i.e., a municipality or county with a population of 100,000 or more), a portion of the State's allocation must be allocated to the large local government(s), unless the latter reallocates its portion back to the State.ⁿ⁵⁷

[e] Qualified Zone Academy Bonds--*IRC* Section 54E.

A "qualified zone academy" (hereafter, "academy") is a public school (or academic program within a public school) established by and operated under the supervision of an eligible local education agencyⁿ⁵⁸ to provide education or training below the college level, which: (1) is designed in cooperation with business to enhance the academic curriculum, increase graduation and employment rates, and better prepare students for college and the workforce; (2) is subject to the same academic standards and assessments as other schools administered by the eligible local education agency, (3) has a comprehensive education plan approved by the eligible local education agency, and (4) is either (a) located in an empowerment zone or enterprise community, or (b) at least 35 percent of the students attending the school are reasonably expected to be eligible for free reduced-cost lunches under the school lunch program established under the National School Lunch Act.ⁿ⁵⁹

Qualified Zone Academy Bonds (QZABs) were originally authorized as a means of financing academies meeting these requirements in Section 226 the Tax Relief Act of 1997,ⁿ⁶⁰ which added *IRC* Section 1397E to the Code. Authority to issue QZABs under *IRC* Section 1397E was terminated by Section 313 of the Tax Extenders and Alternative Minimum Tax Relief Act of 2008 (the 2008 Act), which also added new *IRC* Section 54E providing for QZABs with revised program provisions in lieu of the provisions under *IRC* Section 1397E, effective for obligations issued after October 3, 2008.ⁿ⁶¹ The provisions of *IRC* § 54E are similar to those of *IRC* § 1397E, however, and, except as otherwise provided in *IRS Notice 2009-30*, or to the extent inconsistent with *IRC* Sections 54A and 54E, both final and temporary regulations issued under *IRC* Section 1397E (Treasury Regulation Section 1.1397-1 and Temporary Treasury

Regulation Section 1.1397-1T) will also apply to QZABs issued under *IRC Section 54E*.ⁿ⁶² Moreover, the two-year carryforward of unused limitation amounts provided in *IRC Section 1397E(e)(4)* will be recognized under the carryover provisions of *IRC Section 54E(c)(4)*.ⁿ⁶³

A QZAB for purposes of *IRC Section 54E* is defined as a bond issued as part of an issue if (1) 100 percent of the available project proceeds are used for a qualified purpose,ⁿ⁶⁴ (2) the bond is issued by the State or local government within the jurisdiction of which the qualified zone academy is located, and (3) the issuer (a) designates the bond for purposes of *IRC Section 54E*, (b) certifies that it has written assurances that the "private business contribution requirement" will be met with respect to the academy, and (c) certifies that it has the written approval of the eligible local education agency for such bond issuance.ⁿ⁶⁵ To meet the private business contribution requirement, private entities must make written commitments to make "qualified contributions" having a present value (as of the date of issuance of the issue) of not less than 10 percent of the proceeds of the issue.ⁿ⁶⁶ The qualified contributions must consist of:

- (A) Equipment for use in the qualified zone academy.
- (B) Technical assistance in developing curriculum or in training teachers in order to promote appropriate market driven technology in the classroom.
- (C) Services of employees as volunteer mentors.
- (D) Internships, field trips, or other educational opportunities outside the academy for students, or
- (E) Any other property or service specified by the eligible local education agency.ⁿ⁶⁷

The annual national limitation on QZABs is \$400 million for 2008, \$1.4 billion for each of calendar years 2009 and 2010, and (except for allocations carried over under *IRC Section 54E(c)(4)*), zero thereafter.ⁿ⁶⁸ The national allocation is to be allocated among the States by the Treasury Department on the basis of the States' respective populations of individuals below the poverty line (as defined by the Office of Management and Budget), and each State's allocation is to be reallocated to qualified zone academies by the State education agency within such State.ⁿ⁶⁹ If in any calendar year a State's share of the national limitation for the year exceeds the amount of QZABs issued with respect to academies within the State during that year, the limitation amount for the following calendar year is increased by the amount of such excess, and any amount remaining unused in that year can be carried forward to one more calendar year.ⁿ⁷⁰

[f] Qualified School Construction Bonds--*IRC Section 54(F)*.

By far the most important of the *IRC Section 54A* qualified tax credit bonds, in terms of the amount of bonds authorized, are qualified school construction bonds (QSCBs), which have a national limitation for 2009 and 2010 of \$11 billion in each year (but a zero allocation thereafter).ⁿ⁷¹ The requirements that a QSCB must fulfill (apart from those in *IRC § 54A*) are also the shortest and simplest.

- (1) 100 percent of the available project proceeds of an issue of QSCB bonds must be used for the construction, rehabilitation, or repair of a public school facility.ⁿ⁷²
- (2) The bond must be issued by a State or local government within the jurisdiction of which the school is located.
- (3) The issuer must designate the bond for purposes of *IRC Section 54(F)*.

The remainder of *IRC Section 54(F)* is devoted to allocation issues. The initial allocation, among the States, is made by the Treasury Department in proportion to the respective amounts each State is eligible to receive under Section 1124 of the Elementary and Secondary Education Act of 1965 in the most recent fiscal year ending before the calendar year for which the allocation is being made. However, the Treasury must then make a second allocation of the national limitation, allocating 40 percent of that limitation to "large local educational agencies,"ⁿ⁷³ using the respective amounts of federal aid each agency was eligible to receive under the Elementary and Secondary Education Act of 1965 in the preceding fiscal year as the basis of allocation among these agencies. The allocation made to each State in the first allocation must be reduced by the aggregate of allocations made to large local educational agencies within such State under the second allocation, unless an agency receiving an allocation reallocates that amount back to the State.ⁿ⁷⁴ Amounts allocated to a State (and not reallocated to large local educational agencies within the State) are to be allocated by the State education agency (or such other agency as is authorized under State law to make such allocation) to issuers within the State.ⁿ⁷⁵

As in the case of QZABs, provision is made for the carryover of any excess of the amount allocated to any State for a calendar year over the amount of QSCBs actually issued during that year pursuant to the State's allocation, and such excess increases whatever volume cap is allocated to the State in the following calendar year.ⁿ⁷⁶ Unlike QZABs, however, the carryover is only available in the next calendar year and not the next two years.ⁿ⁷⁷

[g] Direct Pay Tax Credit Bonds--*IRC Section 6431.*

In 2010, Congress amended *IRC Section 6431* to give issuers of most qualified tax credit bondsⁿ⁷⁸ the option, previously available only to issuers of Build America and certain recovery zone bonds,ⁿ⁷⁹ of having their interest costs paid directly by the federal government in lieu of allowing federal tax credits to bondholders.ⁿ⁸⁰ The option is exercised by the issuer's making an irrevocable election under *IRC Section 6431(f)(3)(B)* to receive reimbursement of interest payments on the bonds from the federal government, in which case no credit under *IRC Section 54A* will be allowed to holders of the bonds.ⁿ⁸¹

The amount of interest reimbursed, in the case of qualified zone academy bonds (QZABs) and qualified school construction bonds (QSCBs), is the lesser of the interest actually payable on the bonds and the interest that would have been payable if interest payments on the bonds were calculated at the "applicable credit rate."ⁿ⁸² The applicable credit rate is the rate, determined under *IRC Section 54A(b)(3)*, at which a federal tax credit would have been allowed to holders of the qualified tax credit bonds if the issuer had not elected the direct reimbursement option.ⁿ⁸³ In other words, the federal government's reimbursement will not exceed the tax credits it would have owed to holders of the bonds had the direct payment option not been exercised. In the case of new clean renewable energy bonds (New CREBs) issued under *IRC Section 54C* or qualified energy conservation bonds (QECBs) issued under *IRC Section 54D*, the maximum reimbursement is equal to 70 percent of the lesser of actual interest or the interest that would have been payable at the applicable credit rate.ⁿ⁸⁴

The direct payment option is available for qualified tax credit bonds issued after March 18, 2010.ⁿ⁸⁵ Unlike Build America and recovery zone bonds, the January 1, 2011 deadline for issuing bonds eligible to elect direct reimbursement of interest costs under *IRC Section 6431* does not apply to Direct Pay Tax Credit Bonds.ⁿ⁸⁶

[13] Build America Bonds--*IRC Section 54AA.*

Build America Bonds offer prospective issuers of tax-exempt obligations an option, available for a limited time, to issue taxable bonds on which 35 percent of the interest will be paid by the federal government in the form either of a tax credit to the holder or a credit directly to the issuer.ⁿ¹ In contrast to *IRC Section 54A* tax credit bonds, which must be issued for a specific purpose authorized by the statute, and subject to national, state and local limitations as to the amounts that may be issued, Build America Bonds may be issued for any governmental purpose for which a tax-exempt bond may be issued, and are not subject to dollar limitations or allocations.

The definition of a Build America Bond can be briefly stated: any obligation the interest on which would be excludable from gross income under *IRC Section 103* can be a Build America Bond provided the issuer makes an irrevocable election to have *IRC Section 54AA* apply to the bond and issues it before January 1, 2011.ⁿ² *IRC Section 54AA(d)(2)* then prescribes three "applicable rules" to be followed in applying this brief definition. One of the rules, the only additional requirement or restriction on the definition, provides that a bond will not be treated as a Build America Bond if it is issued with more than a de minimis amount of premium over its face value.ⁿ³ A second and more favorable rule provides that, for purposes of determining the bond's compliance with the requirements imposed on tax-exempt obligations by *IRC Section 149(b)*, which prevent a federally guaranteed bond from qualifying for tax-exempt interest under *IRC Section 103*, a Build America Bond shall not be treated as federally guaranteed by reason of the credit allowed to the holder (or the issuer) of the bond.ⁿ⁴ The third rule, also favorable, provides that for purposes of applying the arbitrage rules in *IRC Section 148*, the yield on Build America Bonds shall be determined without taking into account the interest credit allowed to the bondholder (or to the issuer) under *IRC Section 54AA(a)*.ⁿ⁵

Although Build America Bonds use a tax credit mechanism to pay interest, as *IRC Section 54A* tax credit bonds do, there are important distinctions between the two. Most significantly, the amount of the tax credit on a Build America Bond is not determined by applying a credit rate sufficient to allow the issuer to issue the bond without discount or interest expense; rather, the credit on a Build America Bond is a flat 35 percent of whatever interest is paid by the issuer.ⁿ⁶ Thus, the tax credit that a taxpayer may claim with respect to a Build America Bond is determined simply by multiplying the interest payment that the bondholder is entitled to receive from the issuer (i.e., the bond coupon interest payment) by 35 percent.ⁿ⁷ Also unlike a *IRC Section 54A* tax credit bond, the credit does not accrue on quarterly fixed dates,ⁿ⁸ but accrues on every "interest payment date"; i.e., any date on which the holder of record of the Build America Bond is entitled to a payment of interest on the bond.ⁿ⁹

In most other ways, the tax credit mechanism works in the same manner for both *IRC Section 54A* tax credit bonds and *IRC Section 54AA* Build America Bonds. In both cases, the taxpayer's annual credit is the sum of the credits accrued during the year through ownership of the bond on each "credit allowance date" (*Section 54A* bonds) or "interest payment date" (*Section 54AA* bonds) during the taxable year.ⁿ¹⁰ Credits on both kinds of bonds are nonrefundable and subject to a limitation equal to the holder's liability for regular income tax and alternative minimum tax for the year, less the sum of nonrefundable credits allowable for the year (except credits on other tax credit bonds).ⁿ¹¹ Any unused credit for a taxable year on either type of bond may be carried to the succeeding taxable year and added to any credit allowable for that taxable year, again subject to the tax liability limitation.ⁿ¹² Finally, the rules requiring *Section 54A* credits to be included in the gross income of the holder, as well as the special rules applicable to holders that are subchapter S corporations, partnerships, and real estate investment trusts, and the rule allowing credit stripping, are all incorporated by reference in *IRC Section 54AA*.ⁿ¹³

Finally, an issuer may, if it makes an irrevocable election to do so, issue a Build America Bond as a "qualified bond," which converts the bond into a fully taxable bond so far as the holder is concerned but entitles the issuer to receive a credit equal to 35 percent of its interest costs directly from the US Treasury.ⁿ¹⁴ The tax credit mechanism in this case is not *IRC Section 54AA* but *IRC Section 6431*, which allows the issuer a fully refundable credit, payable contemporaneously with each interest payment date under the bond, equal to 35 percent of the interest payable under the bond on such date.ⁿ¹⁵

The only additional restriction imposed on Build America Bonds that are "qualified bonds," apart from making the irrevocable election, is that 100 percent of the excess of the "available project proceeds" over any "amounts in a reasonably required reserve" may only be used to finance capital expenditures.ⁿ¹⁶ "Available project proceeds" has the same meaning it is given in *IRC Section 54A(e)(4)*: the sale proceeds of the issue less the amount (not more than 2 percent of such proceeds) used to pay issuance costs plus the amount of any investment proceeds earned on investments of the proceeds. Although a "reasonably required reserve" is defined in *IRC Section 54AA(g)(2)(A)(ii)* with reference to its meaning in *IRC Section 150(a)(3)* (where the term is used but not defined), the IRS has announced that "in

determining a reasonably required reserve fund for purposes of this provision, the rules under *IRC Section 148(d)(2)* apply."ⁿ¹⁷

[14] Recovery Zone Bonds--IRC Section 1400U.

Recovery zone bonds, like Build America Bonds, are authorized by ARRA of 2009.ⁿ¹ There are two types. The first, "Recovery Zone Economic Development Bonds" (RZEDBs), is actually a Build America Bond issued for "qualified economic development purposes."ⁿ² Unlike Build America Bonds issued under *IRC Section 54AA*, however, RZEDBs issued under *IRC Section 1400U* do not give the issuer the option of providing a tax credit to the holder of the bond. Rather, RZEDBs are treated as "Qualified Bonds"ⁿ³ for which a refundable credit is allowed to the issuer under *IRC Section 6431*, except that the amount of the credit is 45 percent of the interest on the bond rather than 35 percent as on Qualified Bonds issued under *IRC Section 54AA*.ⁿ⁴ A second difference between Build America Bonds generally and RZEDBs is that the latter (like tax credit bonds) may only be issued pursuant to an allocation, determined in this case by a national limitation of \$10 billion allocated to States and large municipalities in accordance with their rates of unemployment in a manner discussed below.ⁿ⁵

An RZEDB, as noted above, is any Build America Bond, issued before January 1, 2011, as part of an issue in which 100 percent of the excess of the available project proceeds (as defined in *IRC Section 54A*) over the amounts in a reasonably required reserve (within the meaning of *IRC Section 150(a)(3)*) are to be used for qualified economic development purposes.ⁿ⁶ A "qualified economic development purpose" means an expenditure for purposes of promoting development or other economic activity in a "recovery zone," including--

- (1) capital expenditures paid or incurred with respect to property located in such zone,
- (2) expenditures for public infrastructure and construction of public facilities, and
- (3) expenditures for job training and educational programs.ⁿ⁷

A "recovery zone" is any area

- (1) designated by the issuer as having significant poverty, unemployment, rate of home foreclosures, or general distress,
- (2) designated by the issuer as economically distressed by reason of the closure or realignment of a military installation pursuant to the Defense Base Closure and Realignment Act of 1990, or
- (3) for which a designation as an empowerment zone or renewal community is already in effect.ⁿ⁸

The issuer must also designate the bond as an RZEDB for purposes of *IRC Section 1400U-2*, but not in excess of the limitation allocated to the issuer under *IRC Section 1400U-1*.ⁿ⁹

The second type of recovery zone bond, known as a "Recovery Zone Facility Bond" (RZFB), is a new category of exempt facility bond--a type of private activity bond that qualifies for an exception to the general rule that private activity bonds do not qualify as tax-exempt obligations under *IRC Section 103*.ⁿ¹⁰ An RZFB is defined in *IRC Section 1400U-3(b)* as any bond issued as part of an issue if (a) 95 percent of the net proceeds (as defined in *IRC Section 150(a)(3)*) of such issue are to be used for "recovery zone property;" (b) the bond is issued before January 1, 2011, and (c) the issuer designates the bond as an RZFB for purposes of *IRC Section 1400U-3*.ⁿ¹¹

The term "recovery zone property" means any property subject to depreciation to which IRC Section 168 applies (or would apply but for *IRC Section 179*) if (1) such property was constructed, reconstructed, renovated, or acquired by purchase by the taxpayer after the date on which the designation of the recovery zone took effect; (2) the original use of such property in the recovery zone commences with the taxpayer; and (3) substantially all of the use of such property is in the recovery zone and is in the active conduct of a qualified business by the taxpayer in such zone.ⁿ¹² The term "qualified business" means any trade or business except that the rental to others of real property located in a recovery zone is treated as a qualified business only if the property is not residential rental property (as defined in *IRC Section 168(e)(2)*) and does not include any trade or business consisting of the operation of any facility described in *IRC Section 144(c)(6)(B)* (i.e., any private or commercial golf course, country club, massage parlor, hot tub facility, suntan facility, racetrack or other facility used for gambling, or any store the principal purpose of which is the sale of alcoholic beverages for consumption off premises).ⁿ¹³

RZFBs are subject to the general rules applicable to issuance of private activity bonds the interest on which is exempt from tax under *IRC Section 103* (e.g., in *IRC Section 147*) with the following exceptions: (1) RZFBs are not subject to the aggregate annual State private activity bond volume limits in *IRC Section 146*, but rather are subject to the limits imposed by *IRC Section 1400U-1*; and (2) the general requirement in *IRC Section 147(d)* that any use of the proceeds of an issue to acquire property be restricted to property the first use of which commences with such acquisition does not apply.ⁿ¹⁴

The national limitations on RZEDBs (\$10 billion) and RZFBs (\$15 billion) are allocated separately but in the same manner. The national limitation is first allocated among the States in the proportion that each State's 2008 State employment decline bears to the aggregate of the 2008 State employment declines for all the States.ⁿ¹⁵ Each State's 2008 State employment decline is the excess of the number of individuals employed in the State in December, 2007 over the number employed in the State in December, 2008.ⁿ¹⁶ The Treasury Department is then to adjust each State's allocation to the extent necessary to ensure that no State receives less than 0.9 percent of the RZEDB national limitation (or less than 0.9 percent of the RZFB national limitation).ⁿ¹⁷ After the State allocations are determined, each State reallocates its allocation among the counties and large municipalities in the Stateⁿ¹⁸ in the proportion that each county or large municipality's "2008 employment decline" bears to the aggregate of the 2008 employment declines for all the counties and municipalities in the State.ⁿ¹⁹ The employment decline in any large municipality or county is the difference between the number of employed individuals in such municipality or county on December, 2007 compared to December, 2008, just as in the case of the States, except that employed individuals in a large municipality which is located within a county are to be counted in both months by the municipality and not by the county.ⁿ²⁰ A large municipality or county may waive any portion of an allocation made to it by a State.ⁿ²¹

[15] Reacquisition and Reissuance by State and Local Governments of Their Own Bonds.

In general, the acquisition of a tax-exempt bond by or on behalf of its issuer followed by a later reissuance of the same bond is treated as a retirement of the old bond and issuance of a new bond.ⁿ¹ Similarly, a "significant modification" of the terms of an outstanding tax-exempt bond, within the meaning of *Treasury Regulation Section 1.1001-3*, will result in a deemed exchange of the pre-modification "old bond" for a "new bond."ⁿ² In either case, the new bond will not be tax-exempt unless it meets, as of its re-issue date, the various program requirements for a new issue of tax-exempt bonds.ⁿ³

The Internal Revenue Service re-examined these rules in light of the 2008 crisis in the financial markets which made it necessary in some cases for state and local government issuers temporarily to acquire their own bonds to facilitate liquidity and stability in the markets for those bonds, or to modify the terms of the bonds to preserve their marketability. *Notice 2008-41*ⁿ⁴ was released to provide guidance to issuers of tax exempt bonds on reacquisition/reissuance issues pending final resolution of those issues in regulations to be issued under *IRC Section 150*, and to provide temporary administrative relief in certain cases.

The Service had previously considered reacquisition/reissuance issues in *Notice 88-130*ⁿ⁵ in the context of tax-exempt "tender option bonds" with short-term interest features tied to current market rates necessary to remarket the bonds at par.

"Tender option bonds have ongoing tender options or put options associated with the interest rate-setting mechanism which allow bondholders to tender their bonds for purchase at par at specified intervals, typically every seven days. Tender option bonds generally have creditworthy third party liquidity facilities from banks or other liquidity providers to support the tender options and may have credit enhancement from bond insurers or other providers. Tender option bonds also may have interest mode conversion options which grant to the issuer or a conduit borrower an option to change the interest rate mode on the bonds from a tender option mode to another short-term interest rate modeⁿ⁶ or to a fixed interest rate to maturity. At the time of a conversion to another interest rate mode, tender option bonds typically are subject to a mandatory tender for purchase but a bondholder may be allowed to elect to retain the bonds. Upon the exercise of ongoing tender options associated with the short-term interest rate-setting mechanism for tender option bonds and upon any mandatory or optional tender upon conversion of the interest rate on the bonds to another interest rate mode, a remarketing agent or a liquidity provider typically will acquire the bonds subject to the tender at par and resell the bonds either to the same bondholders or to others willing to purchase such bonds."ⁿ⁷

Notice 88-130, later supplanted by *Notice 2008-27* and then *Notice 2008-41*, created a safe harbor allowing issuers to acquire and remarket tender option bonds, and modify them by switching to other short-term interest rate modes if authorized to do so by the original bond documents, without triggering the "negative consequences" of a deemed retirement followed by a "new" issue of the bond.ⁿ⁸ The safe harbors apply only to a "qualified tender bond," which as redefined in *Notice 2008-41*ⁿ⁹ is a tax exempt bond with all of the following features:

- (1) For each interest rate mode preauthorized under the terms of the bond considered separately, the bond bears interest during the allowable term of that interest rate mode at either a fixed interest rate, a variable interest rate that constitutes a "qualified floating rate"ⁿ¹⁰ (including, without limitation, interest rates determined by reference to eligible interest rate indexes, tender option-based interest rate measures, or a Dutch auction process), or a variable interest rate that constitutes an "eligible objective rate" for a variable rate debt instrument that is a tax-exempt bond.ⁿ¹¹
- (2) Interest on the bond is unconditionally payable at periodic intervals at least annually.
- (3) The final maturity date on the bond is no longer than the lesser of (a) 40 years after the issue date of the bond, or (b) the latest date that is reasonably expected as of the issue date of the issue of which the bond is a part to be necessary to carry out the governmental purpose of the issue of which the bond is a part.ⁿ¹²
- (4) The bond is subject to an optional tender right or mandatory tender requirement which allows or requires a bondholder to tender the bond for purchase in one or more prescribed circumstances under the terms of the bond.

A qualified tender bond will not be treated as reissued or retired solely as a result of a change in its interest rate mode, provided the change is a "qualified interest rate mode change" as defined in *Notice 2008-41*.ⁿ¹³ To so qualify, the change (1) must be authorized under the terms of the bond as it was originally issued, and (2) must require that the bond be purchased and resold at a price equal to par upon conversion to a new interest rate mode, except that if the conversion is to an interest rate mode that is a fixed interest rate for the remaining term of the bond to maturity, the bond may be resold at a market premium or a market discount from the stated principal amount of the bond.ⁿ¹⁴

A tender right in a qualified tender bond, whether optional or mandatory, must similarly meet the requirements of a "qualified tender right," as defined in *Notice 2008-41*,ⁿ¹⁵ to qualify for the safe harbor. To do so, it (1) must be authorized under the terms of the bond upon its original issuance; (2) must allow (optional tender) or require (mandatory tender) the bondholder to tender the bond for purchase on at least one tender date before the final maturity date; (3) must entitle a tendering bondholder to receive a purchase price equal to par (which may include any accrued interest); and (4) the terms of the tender right must require the issuer or its remarketing agent to use at least best efforts to remarket the bond purchased pursuant to the tender right.

Notice 2008-41 describes the safe harbor as follows:

(1) A qualified tender bond will not be treated as reissued or retired solely as a result of a qualified interest rate mode change or existence or exercise of any qualified tender right.

(2) In applying *Treasury Regulation Section 1.1001-3* to modifications of tax exempt bonds, any interest rate variance directly resulting from a qualified interest rate mode change will not be treated as a modification under *Treasury Regulation Section 1.1001-3*, and thus such interest rate variances need not be tested under the change in yield rule for determining significant modifications under *Treasury Regulation Section 1.1001-3(e)(2)*.ⁿ¹⁶

However, a governmental issuer which reacquires a qualified tender bond is allowed to hold the bonds for only a temporary period.ⁿ¹⁷ Under its terms, the safe harbor allows qualified tender bonds acquired by their governmental issuerⁿ¹⁸ pursuant to a qualified tender right to be held for a maximum period of 90 days (180 days if the bond was acquired on or before December 31, 2010ⁿ¹⁹) from their purchase.ⁿ²⁰ A sale by the governmental issuer to a third-party guarantor, third party liquidity facility provider or conduit borrower (other than a conduit borrower that is a governmental issuer) terminates the issuer's holding period for purposes of the safe harbor; moreover, such third party guarantors, liquidity facility providers, and conduit borrowers are not considered purchasers by or on behalf of the governmental issuer for this purpose. Thus, for example, a governmental issuer may hold a bond purchased on or before December 31, 2010 pursuant to the exercise of a qualified tender right for 179 days while using best efforts as required by the terms of the bond documents to resell the bond and, if unsuccessful, resell the bond to a third party guarantor, third-party liquidity facility, or other independent third party before the expiration of the 180-day period, which may later resell it at a subsequent date without triggering a deemed reissuance of the bond.ⁿ²¹ An issuer that holds a reacquired qualified tender bond beyond the safe harbor period is treated as though it retired the bond immediately after the end of such period and, in accordance with the general rule, the bond's status as a tax-exempt bond upon resale will depend on its meeting the requirements applicable to the issuance of a new tax-exempt bond at that time.

The safe harbor for governmental issuer purchases of qualified tender bonds was extended by *Notice 2008-88* to cover, in addition, "tax-exempt commercial paper," defined as commercial paper which may be treated as part of a single issue under *Treasury Regulation 1.150-1(c)(4)(ii)*. Under that regulation, all commercial paper (short-term bonds having a maturity of 270 days or less) issued under a commercial paper program to finance the same governmental purpose pursuant to a single master legal document may be treated as part of a single issue, provided such commercial paper is issued within 18 months of the program's deemed issue date, the first date on which the aggregate amount of commercial paper issued under the program exceeds the lesser of \$50,000 or 5 percent of the aggregate issue price of the commercial paper in the program. Commercial paper issued after the 18 month period may also be treated as part of a commercial paper program if it is issued to refund commercial paper that is part of the program, provided (1) there is no increase in the principal amount outstanding under the program and (2) the program does not have a term in excess of either 30 years or the period reasonably necessary for the governmental purposes of the program.ⁿ²²

Notice 2008-41 states that issuers of tax-exempt bonds may rely on its provisions "for any actions taken with respect to tax-exempt bonds on or after November 1, 2007 and before the effective date of any future regulation under [IRC]

Section 150 that implement [sic] the guidance with respect to any particular applicable provision in this notice or other public guidance that withdraws or supersedes any particular applicable provision in this notice."²³ In addition, "issuers may also continue to rely on *Notice 88-130* until the effective date of such future regulations." However, *Notice 2008-88*, which extended the safe harbor for qualified tender bonds in *Notice 2008-41* to include tax-exempt commercial paper, and extended the deadline for reacquisitions eligible for the 180-day safe harbor holding period, appears to have set a deadline of December 31, 2009 (subsequently extended by Section 3.2 of *Notice 2010-7* to December 31, 2010) on the amnesty for reacquisitions of both qualified tender bonds and tax-exempt commercial paper. "Solely for purposes of [IRC] § 103 and [IRC] §§ 141 through 150, the Treasury Department and the IRS will treat a tax-exempt "qualified tender bond" ... or "tax-exempt commercial paper" ... that is purchased by its "governmental issuer" ... on a temporary basis as continuing in effect without resulting in a reissuance or retirement of the purchased tax-exempt bond if, irrespective of when the governmental issuer purchases the bond ... , the governmental issuer holds the bond until not later than December 31, 2009 [extended to December 31, 2010 by *Notice 2010-7*]. Subsequent to the end of this period, a governmental issuer generally may not hold its own bond without causing a reissuance or retirement of such bond under the general rules in § 3.1 of *Notice 2008-41* and other applicable law."²⁴

After December 31, 2010, it would appear that governmental issuers that reacquire their own tax-exempt bonds will have to rely upon the provisions of Treasury Regulation Section 1001-3 to avoid the negative consequences of a reacquisition or modification of their tax-exempt bonds, as demonstrated in the following examples from *Notice 2008-41* .²⁵

Example 1:

On July 1, 2007, a municipality (the "Issuer") issued \$1 million in tax exempt bonds bearing interest at an auction interest rate and maturing in 40 years (the "Bonds"). The Bonds are recourse obligations that are secured by the issuer's underlying primary A-rated investment grade credit. The Bonds are secured further by credit enhancement under a bond insurance policy provided by a AAA-rated bond insurer. Pursuant to the terms of the Bonds, the auction interest rate on the Bonds resets every 7 days. The terms of the Bonds grant the issuer the option to convert the interest rate mode on the Bonds from an auction rate mode to either a 7-day tender option rate mode or to a long-term fixed interest rate to maturity, subject to a mandatory tender of the Bonds upon such a conversion. The Bonds are qualified tender bonds as defined in Section 3.2 of *Notice 2008-41* .

On January 3, 2008, the auction interest rate on the Bonds is set at 10 percent as a consequence of a downgrade in the bond insurer's credit rating from a AAA rating to a AA rating and associated market disruption. On January 10, 2008, the issuer amended the terms of the Bonds to replace the now AA-rated bond insurance with a AAA-rated bank letter of credit as credit enhancement, but otherwise made no other changes to the terms of the Bonds. On January 10, 2008, the auction rate on the Bonds floated down to 3% primarily as a result of the change in credit enhancement on the Bonds.

The amendment to the terms of the Bonds to change the credit enhancement is a modification to a recourse debt instrument that must be tested for significance under the change in security or credit enhancement rule in *Treasury Regulation Section 1.1001-3(e)(4)(iv)*. Because the change in security or credit enhancement did not cause a change in payment expectations on the Bonds (i.e., the Bonds had an investment grade payment expectation before and after the change in credit enhancement), this change in credit enhancement is not a significant modification of the Bonds under Treasury Regulation Section 1001-3, and thus does not cause a reissuance of the Bonds under *IRC Section 103* and *IRC Sections 141 through 150*. Further, the fact that the market impact of the change in credit enhancement caused the floating interest rate on the Bonds to float down from 10% to 3% is not required to be tested under the 25-basis point change in yield rule for significant modifications under *Treasury Regulation Section 1.1001-3(e)(2)* because the Issuer made no change to the interest rate-setting mechanism under the terms of the Bonds.

Example 2:

Assume the same facts as in Example 1 above, except that, instead of amending the terms of the existing Bonds (the "Old Bonds") to change the credit enhancement, on January 10, 2008 the Issuer issued new bonds with new CUSIP numbers (the "New Bonds") and did an actual exchange of the New Bonds for the Old Bonds. The New Bonds are not backed by any bond insurance or other credit enhancement. The New Bonds without the bond insurance have an A credit rating. There are no other differences between the New Bonds and the Old Bonds. The result would be the same as in Example 1 and no reissuance of the Bonds would occur. Treasury Regulation Section 1001-3 applies the same significant modification standard to amendments to the terms of an existing debt instrument and to actual exchanges of an existing debt instruments for a different debt instrument.

[16] United States Series EE Savings Bonds.

Interest derived from obligations issued by the United States is generally subject to federal income tax.ⁿ¹ This state of affairs did not always exist. Interest on obligations issued before September 1, 1917 was wholly exempt from tax; interest on Treasury bonds issued after that date and before March 1, 1941 was partially exempt. However, all United States obligations issued prior to March 1, 1941 have either matured or been called.ⁿ²

Series EE United States Savings Bonds are a limited exception to the rule. Under *IRC Section 135(a)*, such "qualified United States savings bonds" may be redeemed tax-free if, during the taxable year, an amount equal to the redemption proceeds is devoted to the payment of "qualified higher education expenses," namely, tuition and fees for the taxpayer, the taxpayer's spouse, or dependents of the taxpayer at an eligible educational institution.ⁿ³

The exclusion is available only for "qualified bonds"--Series EE and Series I savings bonds purchased after December 31, 1989, by an individual who was at least 24 years old at the time of purchase and owns the bonds either individually or jointly with a spouse. No exclusion is permitted for "gift bonds"--bonds purchased by one person and placed in the name of another.ⁿ⁴ There is also no exclusion allowed if the taxpayer is a married individual and files a separate return.ⁿ⁵

If the redemption proceeds exceed the tuition and fees paid by the taxpayer, the amount excludable from gross income is determined by multiplying the interest portion of the proceeds by the fraction:

$$\frac{\text{Qualified education expenses paid during year}}{\text{Total amount of qualified bonds redeemed during year}}.$$
ⁿ⁶

The exclusion granted by *IRC Section 135* is reduced above certain income levels, as indexed.ⁿ⁷ For MAGI between these amounts, the interest exclusion is reduced in the same ratio as the excess MAGI over the threshold amount bears to \$30,000 (in the case of a joint return) or \$15,000 (for other returns).ⁿ⁸

The operation of *IRC Section 135* can be illustrated by the following examples:

Example 1:

A husband and wife, who file a joint return in 2009 and have \$45,000 in MAGI, receive \$4,000 in principal and \$4,000 in interest. In the same year, they pay \$9,000 in tuition and fees for a child attending college. Since the amount of qualified higher education expenses exceeds the proceeds of the redemption, the entire \$4,000 in interest is excludable from gross income.

Example 2:

Assume the same facts as in Example 1, except that the amount of tuition and fees is only \$6,000. In this case, the exclusion is limited to \$3,000 (\$4,000 interest multiplied by the fraction: \$6,000 qualified expenses/\$8,000 redemption proceeds).

Example 3:

Assume the same facts as in Example 1 except that MAGI is \$119,900. Here, the interest exclusion is limited to \$2,000. The otherwise excludable amount (\$4,000) is cut in half by applying the fraction: \$15,000 excess MAGI/\$30,000.

(n82)Footnote 11. *IRC § 103(f)*. The guarantee is effective only with respect to obligations issued to employee pension funds or agencies of New York City or New York State, and terminates when the obligation is sold by the fund or agency. Nonexempt status attaches to the obligation only during the period that the guarantee is effective.

(n83)Footnote 12. *Norfolk Natl Bank of Commerce & Trust Co v Commr, 66 F2d 48 (4th Cir 1933) .*

(n84)Footnote 13. The procedures governing requests for both a ruling that a prospective issuer wants to be subject to the declaratory judgment provisions of *IRC 7478* and a ruling that the prospective issuer does not desire to be reviewable are contained in *Rev Proc 96-16, 1996-1 CB 630 .*

(n85)Footnote 14. A number of cases have dealt with interest collected by banks under arrangements cast in the form of a purchase of bonds by the bank with a right in the bank to require their repurchase by the seller. The transaction (known as a repurchase agreement or "repo") is likely to be viewed as a secured loan with the bonds pledged as collateral, causing the interest to be treated as interest paid by the borrower and, therefore, as taxable income. *American Natl Bank v US, 467 F2d 1098 (6th Cir 1972) ; Union Planters Natl Bank v US, 426 F2d 115 (6th Cir 1970) , cert denied 400 US 827 ; American Natl Bank v US, 421 F2d 442 (5th Cir 1970) , cert denied 400 US 819 ; Third Natl Bank v US, 27 AFTR2d 71-818 (MD Tenn 1971) , affd on other grounds 454 F2d 689 (6th Cir 1972) ; Rev Rul 74-27, 1974-1 CB 24 .*

Union Planters Natl Bank and *Rev Rul 74-27* were distinguished in *Rev Rul 82-144, 1982-2 CB 34 ,* in which a municipal bond fund purchased "puts" covering tax-exempt securities at a price independent of the amount that the fund had paid for the securities. The purpose of the options was to increase the liquidity of the obligations in order to provide cash to meet the demand of the fund's shareholders who could withdraw their investments at any time. The mutual fund was considered the owner of the tax-exempt obligations even though it shifted the risk of loss with respect to the bonds by the purchase of the options.

(n86)Footnote 15. *Rev Rul 72-587, 1972-2 CB 74* ; *Clyde C Pierce Corp v Commr, 120 F2d 206 (5th Cir 1941)* ; *R O Holton & Co v Commr, 44 BTA 202 (1941)* .

(n87)Footnote 16. *IRC § 103(b)(3); IRC § 149(a)(1)*.

The requirement that tax-exempt bonds be in registered form is constitutional. *S Carolina v Baker, 485 US 505 (1988)* .

(n88)Footnote 17. *IRC § 149(a)(2)*. Bonds issued prior to March 19, 2012 will not be treated as registration-required bonds if they are foreign targeted obligations described in *IRC § 163(f)(2)(B)*, viz: (1) there are arrangements reasonably designed to ensure that the obligation will be sold (or resold in connection with the original issue) only to a person who is not a United States person; (2) interest is payable only outside the United States and its possessions, and (3) the face of the obligation contains a statement that any United States person who holds the obligation will be subject to limitations under the United States income tax laws. *IRC § 149(a)(3)*. The exception of such foreign targeted obligations from registration requirements is repealed, for purposes of both the denial of tax exemption for interest on registration-required bonds not in registered form (*IRC § 149(a)*), and the denial of a deduction for interest on registration-required obligations not in registered form (*IRC § 163(f)*), for bonds issued after March 18, 2012. See Sections 502(a) and 502(f) of the Hiring Incentives to Restore Employment Act of 2010, Pub L No 111-147, *124 Stat 71 (2010)* (the HIRE Act of 2010").

(n89)Footnote 18. *Treas Reg § 5f.103-1(c)*.

(n90)Footnote 19. The IRS has announced that obligations transferable under a "dematerialized book entry system," in which bonds are not represented by physical certificates and transfers are made only by book entries, qualify as "in registered form" even though holders can obtain physical certificates in bearer form in the "extraordinary event" that the clearing organization responsible for the book entries goes out of business without a successor to continue to operate the book entry system. See Notice 2006-99, *2006-2 CB 907* . The IRS policy has been codified in *IRC § 163(f)(3)*. See Section 502(c) of the HIRE Act of 2010 (effective after March 18, 2012).

(n91)Footnote 20. *Treas Reg § 5f.103-1(e)(1)*..

(n92)Footnote 21. *IRC § 103(m)* (applicable to obligations issued before Aug 16, 1986), *IRC § 149(c)(1)* (applicable to obligations issued after Aug 15, 1986). A number of non-Code obligations are excepted from the limitation. *IRC § 103(m)(3)* (applicable to obligations issued before Aug 16, 1986), *IRC § 149(c)(2)* (applicable to obligations issued after Aug 15, 1986).

(n93)Footnote 22. See, eg, *Rev Rul 82-56, 1982-1 CB 17* , holding that interest on bonds that are exempt from federal income tax under the Federal Housing Act is excludable from gross income without regard to *IRC § 103*.

(n94)Footnote 23. *IRC § 149(b)(3)*.

(n95)Footnote 24. *IRC § 103(h)(1)* (applicable to obligations issued before Aug 16, 1986), *IRC § 149(b)(1)* (applicable to obligations issued after Aug 15, 1986).

(n96)Footnote 25. *IRC § 103(h)(2)* (applicable to obligations issued before Aug 16, 1986), *IRC § 149(b)(2)* (applicable to obligations issued after Aug 15, 1986).

Payments of principal and interest on state and local bonds will not be considered federally guaranteed solely by reason of the fact that the debt service reserve fund for the bonds (or principal and interest on the bonds) may be funded with capitalization grants under the EPA State Water Pollution Control Revolving Fund Program. IRS Notice 88-54, *1988-1 CB 539* . The same holds true for bonds insured, reinsured, or guaranteed by Connie Lee Insurance Company, a wholly owned subsidiary of the College Construction Loan Insurance Association. IRS Notice 88-114, *1988-2 CB 449* .

Treasury's 2008 temporary program which, provides funds from its Exchange Stabilization Fund to money market funds to enable the money market funds to maintain stable \$1 per share net asset values, will not cause any violation of the restrictions against federal guarantees of tax-exempt bonds under *IRC § 149(b)* for any tax-exempt bonds held by tax-exempt money market funds participating in the program. *Notice 2008-81, 2008-2 CB 852* .

(n97)Footnote 1. The provisions of *IRC § 141* apply to obligations issued after Aug 15, 1986; private activity obligations issued before that date are governed by *IRC § 103(b)*, as it read prior to the Tax Reform Act of 1986.

(n98)Footnote 1.1. A governmental unit includes an instrumentality of a state or local government. *Treas Reg § 1.141-1(b)*. *Rev Rul 57-128, 1957-1 CB 311* , sets forth the following factors to be considered in determining whether an entity is an instrumentality of a governmental unit: (1) whether the organization is used for a governmental purpose and performs a governmental function; (2) whether performance of its function is on behalf of one or more states or political subdivisions; (3) whether there are any private interests involved, or whether the state or political subdivisions involved, have the powers and interests of an owner; (4) whether control and supervision of the organization is vested in a public authority or authorities; (5) whether express or implied statutory authority or other authority is necessary for the creation or use of the instrumentality, and whether this authority exists; and (6) the degree of financial autonomy of the entity and the source of its operating expenses.

(n99)Footnote 2. *Rev Proc 93-19, 1993-1 CB 526* , sets forth the circumstances under which the Service will issue advance rulings that facilities operated by a nonexempt person are not used in the trade or business of that person.

Rev Proc 93-17, 1993-1 CB 507 , provides a safe harbor under which a change of use of proceeds of an issue of state and local bonds from a qualified use to a nonqualified use will not be treated as causing the interest on the bonds to be includable in gross income. To satisfy the safe harbor, the following requirements must be met:

- (1) As of the date of the issue, the issuer and all conduit borrowers reasonably expected to use the proceeds of the issue for a qualified use for the entire term of the issue.
- (2) The proceeds of the issue were used for a qualified use for at least five years after the later of the date of the issue or the date on which the facility with respect to which the change of use occurred was placed in service.
- (3) Any agreements between the new user and the original user are bona fide and arm's length, and the new user pays consideration equal to the fair market value for the facility.
- (4) No circumstances are present that indicate an attempt to avoid directly or indirectly the requirements of *IRC §§ 103 and 141* or the conditions of *Rev Proc 93-17* .
- (5) The issuer must take one of the remedial actions described in *Rev Proc 93-17* , including redemption of the nonqualified bonds, alternative qualified use of disposition proceeds of a facility in an amount at least equal to the proceeds allocable to the nonqualified bonds, or alternative qualified use of the facilities.

For a situation in which the change from qualified use to nonqualified use did not cause interest to be taxable even though the safe harbor was not met, see *Ltr Rul 9535037* .

Rev Proc 97-15, 1997-1 CB 635 , provides a program under which an issuer of state or local bonds may request a closing agreement with respect to outstanding bonds (1) to prevent the interest on those bonds from being includable in the gross income of bondholders, or (2) to prevent the interest on those bonds from being treated as an item of tax

preference for purposes of the alternative minimum tax, in each case as a result of an action subsequent to the issue date that causes the bonds to fail to meet the requirements of a tax-exempt bond relating to the use of the proceeds of the issue.

(n100)Footnote 3. *IRC § 141(a), (b)(1), (2), (6)*. If 5% more of the proceeds of the issue are to be used to finance an output facility (other than a water furnishing facility), the maximum amount of bond financing that can be used for a private business use is \$15 million. *IRC § 141(b)(4)*. The \$15 million amount is reduced by the aggregate nonqualified amounts of all prior tax-exempt issues 5% or more of the proceeds of which are or will be used with respect to the facility (or any other facility that is a part of the same project). In applying the \$15 million output limitation to an issue, a tax-exempt bond of an earlier issue is taken into account if (i) the earlier bond is outstanding on the issue date of the later issue, (ii) the earlier bond will not be redeemed within 90 days of the issue date of the later issue in connection with the refunding of the earlier bond by the later issue, and (iii) 5% or more of the sale proceeds of the earlier issue financed an output facility that is part of the same project as the output facility that is financed by 5% or more of the proceeds of the later issue. *Treas Reg § 1.141-8(a)(2)(ii)*.

Any activity carried on by a person other than a natural person is treated as a trade or business. *Treas Reg § 1.141-3(a)(1)*.

Rev Proc 97-13, 1997-1 CB 632, sets forth the conditions under which a management contract does not result in private business use. *Rev Proc 97-14, 1997-1 CB 634*, sets forth the conditions under which a research agreement does not result in private business use.

(n101)Footnote 4. In general, the amount of private business use of property is determined according to the average percentage of private business use of the property during the period that begins on the later of the issue date of the obligations or the date the property is placed in service, and ends on the earlier of the last date of the reasonably expected life of the property or the latest maturity date of any bond of the issue financing the property (determined without regard to any optional redemption dates). *Treas Reg § 1.141-3(g)(1), (2)(i)*.

Generally, the amount of private business use of a refunding issue is determined under *Treas Reg § 1.141-3(g)*, based on the measurement period for that issue (for example, without regard to any private business use that occurred prior to the issue date of the refunding issue). *Treas Reg § 1.141-13(b)(2)(i)*. However, in applying the private business use test to a refunding issue that refunds a prior issue of government bonds, the amount of business use of the refunding issue is the amount of private business use (a) during the combined measurement period; or (b) at the option of the issuer, during the measurement period for the refunding issue, but only if, without regard to the reasonable expectations test of *Treas Reg § 1.141-2(d)* (discussed below), the prior issue does not satisfy the private business use test, based on a measurement period that begins on the first day of the combined measurement period and ends on the issue date of the refunding issue. *Treas Reg § 1.141-13(b)(2)(ii)(A), (B)*. The combined measurement period is the period that begins on the first day of the measurement period as defined in *Treas Reg § 1.141-3(g)* for the prior issue (or, in the case of a series of refundings of government bonds, the first issue of government bonds in the series) and ends on the last day of the measurement period for the refunding issue. *Treas Reg § 1.141-13(b)(2)(iii)*.

(n102)Footnote 5. The private payment portion of the test takes into account the payment of the debt service on the issue that is directly or indirectly to be derived from payments (whether or not to the issuer or any related party) in respect of property, or borrowed money, used or to be used for a private business use. The private security portion of the test takes into account the payment of debt service on the issue that is directly or indirectly secured by any interest in property used or to be used for a private business use or payments in respect of property used or to be used for a private business use. *Treas Reg § 1.141-4(a)(1)*. Payments taken into account as private payments and payments or property taken into account as private security are aggregated, but the same payments are not taken into account as both private security and private payments. *Treas Reg § 1.141-4(a)(2)*.

(n103)Footnote 6. *IRC § 141(c)(1)*. The private loan financing test does not apply to a loan that enables the

borrower to finance any governmental tax or assessment of general application for a specific essential governmental function, or if the loan is a nonpurpose investment, ie, investment property acquired with the proceeds of an issue, but not in order to carry out the governmental purpose of the issue. *IRC §§ 141(c)(2), 148 (f)(6)(A)*.

In determining whether the private loan financing test is met, the amount actually loaned to a nongovernmental person is not discounted to reflect the present value of the loan repayments. *Treas Reg § 1.141-5(b)*.

The Tax Court has held that a municipality cannot use time value of money principles in determining the amount of bond proceeds used to make or finance loans to private persons. *City of New York v Commr, 103 TC 481 (1994)*, *aff'd 70 F3d 143 (DC Cir 1995)*. The Regulations also provide that, in determining whether the private loan financing test is met, the amount actually loaned to a private person is not discounted to reflect the present value of the loan repayments. *Treas Reg § 1.141-5(b)*.

(n104)Footnote 7. *Treas Reg § 1.141-2(d)(1)*.

(n105)Footnote 8. *Treas Reg § 1.141-2(d)(2)(i)*.

(n106)Footnote 9. *Treas Reg § 1.141-2(d)(2)(ii)*. Remedial actions include the redemption or defeasance of nonqualified bonds, alternative use of disposition proceeds, or alternative use of the financed facility. *Treas Reg § 1.141-12(d), (e), (f)*.

(n107)Footnote 10. *Treas Reg § 1.141-2(d)(1)*.

(n108)Footnote 10.1. *Treas Reg § 1.141-2(d)(3)(i), (e)*.

(n109)Footnote 10.2. *Treas Reg § 1.141-2(d)(3)(ii)*.

(n110)Footnote 10.3. *Treas Reg § 1.141-2(f)*.

(n111)Footnote 11. *Treas Reg § 1.141-4(b)(2)(i)*. Debt service does not include any amount paid or to be paid from sale proceeds or investment proceeds. *Treas Reg § 1.141-4(b)(2)(ii)(A)*. Moreover, debt service is adjusted to take into account payments and receipts that adjust the yield on an issue for purposes of *IRC § 148* (relating to arbitrage bonds). *Treas Reg § 1.141-4(b)(2)(ii)(B)*.

If the amount of private business use of a refunding issue is determined based on the measurement period for that issue in accordance with *Treas Reg § 1.141-13(b)(2)(i)* or *Treas Reg § 1.141-13(b)(2)(ii)(B)* (discussed above), then the amount of private security and private payments allocable to the refunding issue is determined under *Treas Reg § 1.141-4* by treating the refunding issue as a separate issue. *Treas Reg § 1.141-13(c)(1)*. If the amount of business use of a refunding issue is based on the combined measurement period in accordance with *Treas Reg § 1.141-13(b)(2)(A)*, then the amount of private security and private payments is determined under *Treas Reg § 1.141-4* by treating the refunding issue and all earlier issues taken into account in determining the combined measurement period as a combined issue. *Treas Reg § 1.141-13(c)(2)*.

(n112)Footnote 11.1. *Treas Reg § 1.141-4(b)(3)(iii)(A)*.

(n113)Footnote 11.2. *Treas Reg § 1.141-4(b)(3)(iii)(B)*.

(n114)Footnote 11.3. *Treas Reg § 1.141-4(b)(3)(iii)(C)*.

(n115)Footnote 11.4. *Treas Reg § 1.141-4(c)(2)(i)(A)*.

(n116)Footnote 11.5. *Treas Reg § 1.141-4(c)(2)(i)(B)*.

(n117)Footnote 11.6. *Treas Reg § 1.141-4(c)(2)(i)(C)*.

(n118)Footnote 11.7. *Treas Reg § 1.141-4(c)(2)(ii)*.

(n119)Footnote 11.8. *Treas Reg § 1.141-4(c)(3)(i)*. For this purpose, different sources of funding may include different tax-exempt issues, taxable issues, and amounts that are not derived from a borrowing, such as revenues of an issuer (equity).

If a payment is made for the use of property financed with two or more sources of funding (e.g., equity and a tax-exempt issue), that payment must be allocated to those sources of funding in a manner that reasonably corresponds to the relative amounts of those sources of funding that are expended on that property. *Treas Reg § 1.141-4(c)(3)(iii)*.

A private payment for the use of property made under an arrangement that is entered into in connection with the issuance of the bonds that finance the property generally is allocated to that issue. *Treas Reg § 1.141-4(c)(3)(iv)*.

(n120)Footnote 11.9. *Treas Reg § 1.141-4(c)(3)(ii)*.

(n121)Footnote 11.10. *Treas Reg § 1.141-4(d)(2)*. Special rules govern the pledge or unexpended proceeds, property or payments securing the payment of debt service, and payments in respect of property used, or to be used, for a private business. *Treas Reg § 1.141-4(d)(3), (4), (5)*.

(n122)Footnote 11.11. *Treas Reg § 1.141-4(d)(6)*.

(n123)Footnote 11.12. *Treas Reg § 1.141-4(e)(1)*.

(n124)Footnote 11.13. *Treas Reg § 1.141-4(e)(2)*.

(n125)Footnote 11.14. A tax does not have a generally applicable manner of determination and collection to the extent that one or more taxpayers make any impermissible agreement relating to the payment of those taxes. *Treas Reg § 1.141-4(e)(4)(i)*. Examples of impermissible agreements and permissible agreements can be found in *Treas Reg §§ 1.141-4(e)(4)(ii)* and *1.141-4(e)(4)(iii)*, respectively.

(n126)Footnote 11.15. *Treas Reg § 1.141-4(e)(3)*.

(n127)Footnote 11.16. *Treas Reg § 1.141-5(c)(1)*. A loan that is a nonpurpose investment (e.g., a temporary investment of proceeds in U.S. obligations) generally is not treated as a loan under the private loan financing test. *Treas Reg § 1.141-5(c)(2)(i)*.

(n128)Footnote 12. *Treas Reg § 1.141-5(c)(2)(ii)*.

(n129)Footnote 13. *IRC § 141(b)(3)(A)*. The determination of whether a private use is related to a governmental use also being financed with the proceeds is to be made on a case-by-case basis. HR Rep No 841, 99th Cong, 2d Sess II-691 (1986). The determination of whether a private use is disproportionate to the governmental use to which the private use relates is determined by comparing the amount of bond proceeds used for the two uses; the private use is disproportionate to the related governmental use to the extent it exceeds such use in amount. *IRC § 141(b)(3)(B)*.

(n130)Footnote 14. *IRC § 141(b)(9)*.

(n131)Footnote 15. *Treas Reg § 1.141-3(d)(5)*.

(n132)Footnote 16. *Treas Reg § 1.141-3(d)(6)*.

(n133)Footnote 16.1. *Treas Reg § 1.141-3(c)(1)*. Generally, use under an arrangement that provides priority rights

of other preferential benefits is not use on the same basis as the general public. *Treas Reg § 1.141-3(c)(2)*.

(n134)Footnote 16.2. *Treas Reg § 1.141-3(c)(2)*. The 200-day period applies to any bond sold on or after Nov 20, 2001, and may be applied to any bond outstanding on Nov 20, 2001, to which *Treas Reg § 141-3* applies.

(n135)Footnote 17. *Treas Reg § 1.141-3(d)(3)(i)*. The arrangement must be one that would be treated as general public use, except that it is not available for use on the same basis by natural persons not engaged in a trade or business because generally applicable and uniformly applied rates are not reasonably available to such persons. In addition, the property cannot be financed for a principal purpose of providing that property for use by the nongovernmental person.

The 100-day period applies to any bond sold on or after Nov 20, 2001, and may apply to any bond outstanding on Nov 21, 2001, to which *Treas Reg § 1.141-3* applies.

(n136)Footnote 18. *Treas Reg § 1.141-3(d)(3)(ii)*. The property cannot be financed for a principal purpose of providing that property for use by the nongovernmental person.

(n137)Footnote 18.1. The 50-day period applies to any bond sold on or after Nov 20, 2001, and may apply to any bond outstanding on Nov 21, 2001, to which *Treas Reg § 1.141-3* applies.

(n138)Footnote 19. *IRC § 146(g), (h)*.

(n139)Footnote 20. *IRC § 146(d)(1); Rev Proc 2009-50, 2009 IRB LEXIS 652, *13-14*. The proper population figures to be used for calculating the volume cap under *IRC § 146* for calendar year 2010 can be found in *Notice 2010-21, 2010-12 IRB 451*.

(n140)Footnote 21. *IRC § 146(d)(2)*. The adjustment is made by multiplying the dollar amounts by the cost-of-living adjustment determined under *IRC § 1(f)(3)* for the calendar year, using calendar year 2001 as the base year.

(n141)Footnote 22. *IRC § 146(d)(4)*.

(n142)Footnote 23. *IRC § 146(d)(5)*.

(n143)Footnote 24. *IRC § 146(d)(5)(A)*. See Notice 2008-79 for a list of the allocations of the additional 2008 volume cap to the states, the District of Columbia, and possessions of the United States.

(n144)Footnote 25. *IRC § 146(d)(5)(B)*.

(n145)Footnote 26. If more than one state agency is authorized to issue tax-exempt private activity bonds, all such agencies are treated as a single agency. *IRC § 146(b)(2)*.

(n146)Footnote 27. *IRC § 146(c)(1)*.

(n147)Footnote 28. *IRC § 146(c)(2)*.

(n148)Footnote 29. *IRC § 146(e)(1)*. The deadline for allocating any portion of the state ceiling is the earlier of (1) Feb 15 of the calendar year following the year in which the state ceiling arises, or (2) the date of issue of the bonds issued pursuant to an allocation of the portion of the state ceiling. *Notice 2003-41, 2003-2 CB 49*.

(n149)Footnote 30. *IRC § 146(f)(1), (3)*. The carryforward election must be filed with the Service by the earlier of (1) Feb 15 of the calendar year following the year in which the state ceiling represented by the volume cap arises, or (2) the date of issuance of the bonds issued pursuant to the assignment of a portion of the volume cap. *Notice 2003-42, 2003-2 CB 49*. An issuing authority that fails to make a timely carryforward election is granted an automatic extension

of six months from the due date of the election if the authority meets the requirements set forth in *Rev Proc 2005-30, 2005-1 CB 1148*.

The amount of volume cap an issuing authority uses during the year, and therefore the amount remaining for carryforward should be determined by reference to the issue price of the bonds. *Rev Rul 83-154, 1983-2 CB 33*; *Ltr Rul 9431007*.

(n150)Footnote 31. *IRC § 146(f)(2), (4)*.

(n151)Footnote 32. *IRC § 146(f)(5)*. Issuing enterprise zone facility bonds is a carryforward purpose. *Treas Reg § 1.1394-1(m)(3)*.

(n152)Footnote 33. *IRC § 141(b)(8)*.

(n153)Footnote 34. *IRC § 141(b)(5)*.

(n154)Footnote 35. *Notice 87-69, 1987-2 CB 378*.

(n155)Footnote 36. *IRC § 146(i)(1)*.

(n156)Footnote 37. *IRC § 146(i)(2)*.

(n157)Footnote 38. *IRC § 146(i)(3)*.

(n158)Footnote 39. *IRC § 147(a)(1)*.

(n159)Footnote 40. The *IRC § 1563(a)* definition of controlled group applies, except that only 50 percent stock ownership is required for control.

(n160)Footnote 41. *IRC § 147(a)(2)*.

(n161)Footnote 42. *IRC § 147(b)(1)*.

(n162)Footnote 43. A first-time farmer is an individual who has not at any time had any direct or indirect ownership interest in substantial farmland in the operation of which the individual materially participated, and has not received financing in excess of \$250,000. *IRC § 147(c)(2)(C)*. Substantial farmland means any parcel of land unless such parcel is smaller than 30 percent of the median size of a farm in the county in which the parcel is located and the fair market value of the land does not at any time held by the individual exceed \$125,000. *IRC § 147(c)(2)(E)*.

(n163)Footnote 44. *IRC § 147(c)*. In no event can the amount of financing provided to a first-time farmer for used depreciable personal property exceed \$62,500.

The acquisition by a first-time farmer of land or personal property from a related person (as defined in *IRC § 144(a)(3)*) is not treated as an acquisition from a related party if (i) the acquisition price is for the fair market value of the land or property, and (ii) subsequent to the acquisition, the related party does not have a financial interest in the farming operation with respect to which the bond proceeds are to be used. *IRC § 147(c)(2)(G)*.

(n164)Footnote 45. *IRC § 147(d)*.

(n165)Footnote 46. *IRC § 147(e)*. The proceeds of a qualified 501(c)(3) bond can be used to provide a health club facility. *IRC § 147(h)(2)*.

A helicopter is not an airplane within the meaning of *IRC § 147(e)*. *Rev Rul 2003-116, 2003-2 CB 1083*.

(n166)Footnote 47. *IRC § 147(f)(1), (2)(A)*. If the issue is to finance facilities at an airport or high-speed intercity rail facilities that is operated by the governmental unit issuing the bonds, such governmental unit is the only one deemed to have jurisdiction over the airport or high-speed intercity rail facilities. *IRC § 147(f)(3)*.

If there has been public approval for a plan for financing a facility, it continues to be effective for any bonds that are issued pursuant to the plan within three years after the date of the first issue pursuant to the approval, if substantially all of the proceeds of the later issue are to be used to finance the facility or to refund previous financing under the plan. *IRC § 147(f)(2)(C)*.

A political subdivision of a state issued bonds without obtaining public approval, as required by the state constitution. The state supreme court held that the bonds were not valid obligations because of the lack of voter approval. This led the Service to rule that interest on the bonds was not tax-exempt. *Rev Rul 87-116, 1987-2 CB 44*. See *Prop Treas Reg § 1.147(f)-1* for guidance on the public approval requirement.

(n167)Footnote 48. *IRC § 147(f)(2)(B)*. The term "applicable elected representative" means (a) an elected legislative body of a governmental unit, or (b) the chief elected executive officer, the chief elected state legal officer of the executive branch, or any other elected official designated by the chief elected executive officer or by state law as the approving official. If the office of any elected official described in (b) is vacated and an individual is appointed by the chief elected executive officer of the governmental unit and confirmed by the elected legislative body of the unit (if any) to serve the remaining term of the elected official, the individual is treated as the elected official for the remainder of the term. If a governmental unit has no applicable elected official, the applicable elected representative of the next higher governmental unit from which the lower unit derives its authority will serve as such for the unit without an official. *IRC § 147(F)(2)(E)*.

(n168)Footnote 49. *IRC § 147(f)(2)(D)*.

(n169)Footnote 50. *IRC § 147(g)*.

(n170)Footnote 51. *IRC § 147(h)(1)*.

(n171)Footnote 52. *IRC § 147(h)(2)*.

(n172)Footnote 53. The "qualified project period" begins on the first day that 10 percent of the units in the project are occupied and ends on the later of (1) the date which is 15 years after the date on which 50 percent of the units are occupied, (2) the first day on which no tax-exempt private activity bond issued with respect to the project is outstanding, or (3) the date on which any assistance provided with respect to the project under Section 8 of the US Housing Act of 1937 terminates. *IRC § 142(d)(2)*.

(n173)Footnote 54. A project is a qualified residential rental project if the requirements of one of two alternative tests are met. The issuer must choose one of the tests at the time of issuance of the bonds for the project. The 20-50 test is met if 20 percent or more of the residential units in the project are occupied by individuals whose income is 50 percent or less of area median gross income. The 40-60 test is met if 40 percent (25 percent in New York City) of the residential units in the project are occupied by individuals whose income is 60 percent or less of area gross income. *IRC § 142(d)(1), (6)*. *Rev Proc 2004-39, 2004-2 CB 49*, sets forth procedures for determining whether a residential rental project is in compliance with the applicable set-aside requirements contained in *IRC § 142(d)* during the qualified project period.

A facility will not be residential real property if it makes available continual or frequent nursing, medical, or psychological services to its residents. *Rev Rul 98-47, 1998-2 CB 399*.

The determination of a person's income and area median gross income is made pursuant to standards set by the

Secretary of the Treasury in a manner consistent with Section 8 of the US Housing Act of 1937. If an occupant satisfies the test when he or she first occupies the premises, the occupant will be treated as a qualifying individual as long as he or she continues to reside in the project, even though the occupant later has income that exceeds the applicable income limit. The last-stated rule will cease to apply to any resident whose income exceeds 140 percent (170 percent in a deep rent skewed project) of the applicable income limit if, after the annual determination of a resident's income, but before the next annual determination, any residential unit of comparable or smaller size in the project (any low-income unit in a deep skewed rent project) is occupied by a new resident whose income exceeds the applicable limit (40 percent in a deep skewed rent project). *IRC § 142(d)(3)(B), (4)(A)*. If the owner of the project elects, and the project meets the following tests, a project will be a deep skewed rent project: (a) at least 15 percent of the low-income units (units that must be occupied by persons who meet the applicable income limit) are occupied by persons whose income is 40 percent or less of area median gross income, (b) the gross rent for each low-income unit does not exceed 30 percent of the applicable income limit that applies to occupants of the unit, and (c) the gross rent for each low-income unit does not exceed one third of the average gross rent of units of comparable size not occupied by low-income individuals. *IRC § 142(d)(4)(B)*.

(n174)Footnote 55. All of the described property financed by the issue must be owned by a governmental unit. Property leased by a governmental unit will be treated as owned by it if the lessee makes an irrevocable election not to claim depreciation with respect to the property, the lease term is not more than 80 percent of the reasonably expected economic life of the property, and the lessee has no option to purchase the property other than at fair market value (as of the time the option is exercised). *IRC § 142(b)*.

The described property or a high-speed intercity rail facility will not be treated as an exempt facility if it is to be used for a private business use and is (a) a lodging facility, (b) a retail facility (including a food and beverage facility) in excess of a size necessary to serve passengers and employees at the exempt facility, (c) any retail facility (other than parking) for passengers or the general public located outside the exempt facility terminal, (d) any office building for individuals who are not employees of a governmental unit or of the operating authority for the exempt facility, or (e) an industrial part or manufacturing facility. *IRC § 142(c)(2)*.

(n175)Footnote 56. See *Treas Reg § 1.142(a)(5)-1(b)(1)* for the definition of sewage facility.

(n176)Footnote 57. A high-speed rail intercity facility that is not owned by a governmental unit will be treated as an exempt facility only if the owner irrevocably elects not to claim any depreciation deduction or credit with respect to the property financed by the issue. *IRC § 142(i)(2)*.

A bond that is part of an issue to finance a high-speed intercity rail facility will not be considered an exempt facility bond unless any proceeds not used within a three-year period of the date of issuance are used, not later than six months after the close of the period, to redeem bonds that are part of the issue. *IRC § 142(i)(3)*.

(n177)Footnote 58. A qualified public educational facility is a school facility that is part of a public elementary or secondary school, and is owned by a private, for-profit corporation pursuant to a public-private partnership agreement with a state or local educational agency. *IRC § 142(k)(1)*.

An issue is not treated as one used to provide qualified educational facilities if the aggregate face amount of bonds issued by the state pursuant thereto (when added to the aggregate face amount of bonds previously issued during the calendar year) exceeds an amount equal to the greater of (i) \$10 multiplied by the state population, or (ii) \$5 million. *IRC § 142(k)(5)*. The proper population figures to be used for calculating the 2000 calendar year limitation under *IRC § 142(k)(5)* are contained in *Notice 2002-56, 2002-2 CB 319*.

(n178)Footnote 59. A qualified green building and sustainable design project is any project that is designated by the Secretary of the Treasury, after consultation with the Administrator of the Environmental Protection Agency, as a qualified green building and sustainable design project and that meets certain other requirements. *IRC § 142(l)*.

A bond is an exempt facility bond for this purpose if it is issued after Dec 31, 2004, and before Oct 1, 2009.

(n179)Footnote 60. A qualified highway or surface freight transfer facility is one that receives federal assistance under Title 23, United States Code, and is either (1) a surface transportation project, (2) a project for an international bridge or tunnel for which an international entity authorized under federal or state law, or (3) a facility for the transfer of freight from truck to rail or rail to truck. *IRC § 142(m)(1)*. There is a \$15 billion aggregate limit on tax-exempt financing for facilities. *IRC § 142(m)(2)*.

(n180)Footnote 61. *IRC § 150(a)(3); Rev Rul 90-51, 1990-1 CB 22*.

The Service will not ordinarily rule whether an issue of private activity bonds meets the requirements of *IRC § 142* if (1) the portion of the proceeds used to finance a facility in which an owner or lessee (or a related person) is a user of the facility both after the bonds are issued and at any time before they were issued, and (2) the portion used to pay issuance costs and nonqualified costs amounts to more than 5 percent of the net proceeds. *Rev Proc 2010-3, 2010-1 IRB 110, 115-116 (§ 4.01(8))*.

(n181)Footnote 62. *IRC § 142(f)(3)*.

(n182)Footnote 63. *IRC § 142(f)(4)*.

(n183)Footnote 64. *IRC § 1394(a)*. See, generally, Ballard & Schakel, "EZ Bonds Will Not Be Easy," 62 *Tax Notes* 1321 (1994).

(n184)Footnote 65. *IRC § 1394(a), (b)(1)*.

(n185)Footnote 66. *IRC §§ 1394(b)(2), 1397D(a); Treas Reg § 1.1394-1(l)*. Any reference in *IRC § 1397C* to empowerment zones is treated as including references to enterprise communities. *IRC § 1394(b)(3)(B)(i)*.

(n186)Footnote 67. *IRC §§ 1394(b)(3), 1397C(a)*. A portion of a trade or business can be an enterprise zone business if it would qualify as such were it separately incorporated. *IRC § 1394(b)(3)(D)*.

(n187)Footnote 68. A collectible is any work of art, rug or antique, metal or gem, stamp or coin, alcoholic beverage, or other tangible property specified by the Service for purposes of *IRC § 408(m)(2)*.

(n188)Footnote 69. *IRC § 1397C(b)*. Nonqualified financial property is defined as debt, stock, partnership interests, options, futures contracts, forward contracts, warrants, notional principal contracts, annuities, and other similar property specified in regulations, but does not include (i) reasonable amounts of working capital held in cash, cash equivalents, or debt instruments with a term of 18 months or less, or (ii) accounts or notes receivable acquired in the ordinary course of business for services rendered or from the sale of inventory or property held for sale to customers. *IRC § 1397C(e)*.

(n189)Footnote 70. *IRC § 1397C(c)*. The proprietor is considered an employee for this purpose.

(n190)Footnote 71. *IRC § 1397C(d)(1), (4), (5)*. See Ltr Rul 200006016 for an example of a corporation whose business activities consist predominantly of the development or holding of intangibles for sale or license.

(n191)Footnote 72. *IRC § 1397C(d)(2)*. The lessor of property may rely on a lessee's certification that the lessee is an enterprise zone business.

(n192)Footnote 73. *IRC § 1397C(d)(3)*.

(n193)Footnote 74. *IRC § 1394(b)(3) (B)(ii)*.

(n194)Footnote 75. *IRC § 1394(b)(3)(B)(iii)*. The rule does not apply to any business that is not a qualified business by reason of *IRC § 1397C(d)(1), (4), or (5)*. See the text accompanying N 50.8.

In the case of a District of Columbia Enterprise Zone, *IRC § 1394(b) (3)(b)(iii)* is applied without regard to the employee residency requirement.

(n195)Footnote 76. *IRC § 1394(b)(3)(C)(i)*.

(n196)Footnote 77. *IRC § 1394(b)(3)(C)(ii)*.

(n197)Footnote 78. *Treas Reg § 1.1394-1(e)(1)*.

(n198)Footnote 79. *Treas Reg § 1.1394-1(e)(2)*.

(n199)Footnote 80. *IRC § 1394(e)(1); Treas Reg § 1.1394-1(b)(3)(i)(B)*. In order to satisfy the good faith requirement, the principal user must at least annually demonstrate to the issuer the principal user's monitoring of compliance with *IRC § 1394(a) and (b)*. *Treas Reg § 1.1394-1(b)(3)(iii)*.

The good faith exception does not apply to the requirement that a qualified business cannot be a trade or business operating a private or commercial golf course, country club, massage parlor, hot tub facility, suntan facility, racetrack or other facility used for gambling, or any store the principal business of which is the sale of alcoholic beverages for consumption off premises. *Treas Reg § 1.1394-1(b)(3)(ii)*.

(n200)Footnote 81. *Treas Reg §§ 1.1394-1(f), 1.1394-1(n)(3)*.

(n201)Footnote 82. *Treas Reg § 1.1394-1(m)(4)*.

(n202)Footnote 83. *Treas Reg § 1.1394-1(g)(2)(ii)*.

(n203)Footnote 84. *Treas Reg § 1.1394-1(m)(2)(ii)*.

(n204)Footnote 85. *IRC § 1394(c)(1)*. Whether an issue satisfies the aggregate amount limitations is determined as of the issue date of the issue, based on the issue price of the issue and the adjusted issue price of outstanding enterprise zone facility bonds. *Treas Reg § 1.1394-1(g)(1)*.

The aggregate amount limitations for an issue for a pooled financing bond program are determined with regard to the amount of the actual loans to enterprise zone businesses rather than the amount lent to intermediary lenders. *Treas Reg § 1.1394-1(g)(2)(i)*. This applies only to the extent the proceeds of those enterprise zone facility bonds are loaned to one or more enterprise zone businesses within 42 months of the issue date of the enterprise zone facility bonds or are used to redeem enterprise zone facility bonds of the issue within that 42-month period.

The limitation on the amount of bonds issued by the District of Columbia Enterprise Zone from Jan 1, 1998 through Dec 31, 2007 is increased from \$3 million to \$15 million. *IRC § 1400A*.

(n205)Footnote 86. *IRC § 1394(c)(2)*.

(n206)Footnote 87. *Treas Reg § 1.1394-1(m)(1)*.

(n207)Footnote 88. *Treas Reg § 1.1394-1(m)(2)(i)*.

(n208)Footnote 89. *Treas Reg § 1.1394-1(o)(1)*.

(n209)Footnote 90. *Treas Reg § 1.1394-1(o)(2)*.

(n210)Footnote 91. *IRC § 1394(e)(2)*. *IRC § 1394(e)(2)* does not apply during any period in which the issue is deemed to comply with the requirements of *IRC § 1394* under the deemed compliance provisions of *Treas Reg § 1.1394-1(b)(3)*. *Treas Reg § 1.1394-1(n)(2)*.

(n211)Footnote 92. *IRC § 1394(e)(3), (4)*.

(n212)Footnote 93. The designation may be made before Jan 1, 2002. It will remain in effect during the period beginning Jan 1, 2002, and ending on Dec 31, 2009. *IRC § 1391(h)(2)*.

(n213)Footnote 94. *IRC § 1394(f)(1)*. The bond must be designated as a new empowerment zone facility bond by the local government that nominated the area to which the bond relates. *IRC § 1394(f)(2)(A)*. Bonds to which *IRC § 1394(f)(1)* applies are not taken into account in applying the aggregate amount limitation of *IRC § 1394(c)*. *IRC § 1394(f)(2)(C)(i)*.

(n214)Footnote 95. *IRC § 1394(f)(2)(B)*.

(n215)Footnote 96. *IRC § 1394(f)(2)(C)(ii)*.

(n216)Footnote 97. *IRC § 1394(f)(3)*.

(n217)Footnote 98. The issue will not qualify as a qualified mortgage issue unless all proceeds of the issue required to be used to finance owner-occupied residences are so used within the 42-month period beginning on the date of issuance of the issue (or, in the case of a refunding bond, within the 42-month period beginning on the date of issuance of the original bond) or, to the extent not so used within the period, are used within the period to redeem bonds that are part of the issue, and no portion of the proceeds of the issue are used to make or finance any loan (other than one that is a nonpurpose investment within the meaning of *IRC § 146(f)(6)(A)*) after the close of the period. *IRC § 143(a)(2)(D)(i)*. Amounts less than \$250,000 need not be used to redeem bonds. *IRC § 143(a)(2)(D)(ii)*.

(n218)Footnote 99. *IRC § 143(a)(1), (2)(A)*.

(n219)Footnote 100. A single-family residence includes any structure containing no more than four family residences, one unit of which is occupied by the owner of the units, and which were first occupied at least five years before the mortgage is executed, an individual unit in a condominium, or a share in a cooperative housing corporation. *IRC § 143(k)(7), (8)*.

The residence can be a new two-family residence if the residence is a targeted area residence and the family income of the mortgagor is not greater than 140 percent of the applicable median family income. *IRC § 143(f)(3)(B)*. The "applicable median family income" is the greater of the median gross income for the area in which the residence is located or the median gross income for the state in which the residence is located. *IRC § 143(f)(4)*.

(n220)Footnote 101. *IRC § 143(c)*.

(n221)Footnote 102. *IRC § 143(d)(1)*. The three-year requirement does not apply to any financing provided with respect to a residence located in an area determined by the President to warrant assistance from the federal government under the Robert T. Stafford Disaster Relief and Emergency Assistance Act if the financing is provided within two years after the date of the disaster declaration. The foregoing applies to bonds issued after December 31, 1996 and before January 1, 1999. *IRC § 143(k)(11)*.

(n222)Footnote 103. A targeted area residence is one located in a census tract in which 70 percent or more of the families have income which is 80 percent or less of the statewide median family income or in an area of chronic economic distress (an area designated as such by the state and approved as such by the Secretary of the Treasury and the Secretary of Housing and Urban Development). *IRC § 143(j)*.

(n223)Footnote 104. A qualified home improvement loan cannot exceed \$15,000 and must be used for alterations, repairs and improvements on an existing residence by the owner thereof, but only if the work substantially protects or improves the basic livability or energy efficiency of the property. *IRC § 143(k)(4)*.

(n224)Footnote 105. *IRC § 143(d)(2)*. A qualified rehabilitation loan is defined as any owner financing provided in connection with a qualified rehabilitation or the acquisition of a residence with respect to which there has been a qualified rehabilitation, provided the mortgagor is the first resident of the structure after completion of the rehabilitation. A rehabilitation of a building is qualified if:

- there is a period of at least 20 years between the date on which the building was first used and the date rehabilitation work begins;
- 50 percent or more of the existing external walls of the building are retained as external walls, 75 percent or more of the existing external walls are retained as internal or external walls, and 75 percent or more of the existing internal structural framework is retained; and
- the expenditures for the rehabilitation amount to at least 25 percent of the mortgagor's adjusted basis determined as of the completion of the rehabilitation or, if later, the date on which the mortgagor acquires the residence. *IRC § 143(k)(5)*.

(n225)Footnote 106. *IRC § 143(f)(1), (4)*.

(n226)Footnote 107. *IRC § 143(f)(3)*. The income requirement will be determined under the targeted area rule in the case of financing obtained within two years after a disaster declaration.

(n227)Footnote 108. *IRC § 143(f)(5)(A), (B), (C)*. The multiplier will be 100 percent and the overall limitation will be 120 percent for a mortgagor having a family of fewer than three individuals. *IRC § 143(f)(6)*. Nationwide average purchase prices for new and existing residences located in the US are set forth in *Rev Proc 2009-18, 2009-1 CB 670*.

(n228)Footnote 109. *IRC § 143(a)(5)(D)*. The applicable housing price ratio for any area is the new housing price ratio or the existing housing price ratio, whichever results in the housing cost/income ratio being closer to 1. The housing cost ratio in each case is the ratio that the average purchase price for residences in the area bears to the average purchase price for residences in the United States.

Rev Proc 2007-31, 2007-1 CB 1225, provides guidance concerning the US and area median gross income figures that are to be used by issuers of qualified mortgage bonds and issuers of mortgage credit certificates in computing the housing cost/income ratio. Issuers can continue to rely on the U.S. and area median gross income figures specified in *Rev Proc 2006-20, 2006-1 CB 841*, with respect to bonds originally sold and nonissued bond amounts elected not later than May 17, 2007 if commitments to provide financing or purchases, if the purchase precedes the financing commitment, are made not later than Jul 18, 2007. Otherwise, *Rev Proc 2006-20* is obsolete.

(n229)Footnote 110. The term "acquisition cost" means the cost of acquiring the residence as a completed residential unit, but does not include usual and reasonable settlement or financing costs, the value of services performed by the mortgagor or members of his family in completing the structure, or the cost of land (other than land acquired under a contract for deed) owned by the mortgagor for at least two years before the date on which construction begins. *IRC § 143(k)(3)*.

(n230)Footnote 111. The acquisition cost requirement will be determined under the targeted area rule for financing acquired within two years after a disaster declaration. The three-year requirement does not apply to any financing provided with respect to a residence located in an area determined by the President to warrant assistance from the

federal government under the Robert T. Stafford Disaster Relief and Emergency Assistance Act if the financing is provided within two years after the date of the disaster declaration. The foregoing applies to bonds issued after December 31, 1996 and before January 1, 1999. *IRC § 143(k)(11)*.

(n231)Footnote 112. *IRC § 143(k)(2)*.

(n232)Footnote 113. *IRC § 143(d)(2), (3)*.

(n233)Footnote 114. *IRC § 143(d)(6)*.

(n234)Footnote 115. *IRC § 143(k)(10)(A)*.

(n235)Footnote 116. *IRC § 143(k)(10)(B)*.

(n236)Footnote 117. *IRC § 143(h)(1)*.

(n237)Footnote 118. *IRC § 143(h)(2)*.

(n238)Footnote 119. *IRC § 143(g)(1), (2)(A)*. The issue price is the initial offering price to the public or a private party (excluding bond houses and brokers) at which a substantial amount of bonds were sold. *IRC §§ 143(g)(2)(C)(i), 1273(b)(1)*.

(n239)Footnote 120. *IRC § 143(g)(2)(B)(i)*. Points or similar charges paid by the seller of the property are treated as borne by the mortgagor as are amounts paid by any person in excess of the usual and reasonable acquisition costs incurred where financing is not provided through qualified mortgage bonds. *IRC § 143(g)(2)(B)(ii)*.

(n240)Footnote 121. *IRC § 143(g)(2)(B)(iii)*. Amounts paid for Federal Housing Administration, Veterans' Administration, or similar private mortgage insurance on an individual's mortgage, or amounts paid for pool mortgage insurance on a pool of mortgages, are not taken into account so long as the amounts do not exceed the amounts charged in the area with respect to a similar mortgage, or pool of mortgages, that is not financed with mortgage revenue bonds. *Treas Reg § 1.148(g)-1(b)(2)(iii)(B)*.

(n241)Footnote 122. *IRC § 143(g)(2)(B)(iv)*.

(n242)Footnote 123. *IRC § 143(g)(3)(A)*. In determining the amount earned on nonmortgage investments, any gain or loss on the disposition of such investments must be taken into account. *IRC § 143(g)(3)(B)*. If the excess of the effective rate on the mortgages over the yield on the issue is less than 1.125 percent, the refund to the mortgagors is reduced by the amount which would result by treating the excess as being equal to 1.125 percent. *IRC § 143(g)(3)(C)*.

In lieu of refunding arbitrage and investment gains to mortgagors, the issuer can elect before issuing the obligations to pay the gains to the US. *IRC § 143(g)(3)(D)*.

(n243)Footnote 124. *IRC § 143(i)(1)(A)*. There is an exception for refinancing of qualified subprime loans with qualified mortgage bonds issued by December 31, 2010.

(n244)Footnote 125. *IRC § 143(i)(1)(B)*. The contract for deed exception applies to land possessed under a contract for deed by a mortgagor (1) whose principal residence is located on the land, and (2) whose family income is not more than 50 percent of applicable median family income as defined in *IRC § 143(f)(4)*. A contract for deed is a seller-financed contract for the conveyance of land under which legal title does not pass to the purchaser until the purchase price is fully paid to the seller, and the seller's remedy for nonpayment is forfeiture rather than foreclosure. *IRC § 143(i)(1)(C)*.

(n245)Footnote 126. *IRC § 143(i)(2)*.

(n246)Footnote 127. *IRC § 143(a)(2)(A)(iv)*. The rule does not require amounts less than \$250,000 to be used to redeem bonds. *IRC § 143(a)(2)(D)(ii)*.

(n247)Footnote 128. *IRC § 143(a)(2)(B)*.

(n248)Footnote 129. *IRC § 143(a)(2)(C)*. Good faith is met here if the issuer takes all reasonable steps to insure that the issue complies with the requirements.

(n249)Footnote 130. *IRC § 143(b)*.

(n250)Footnote 131. *IRC § 143(l)(2)*.

(n251)Footnote 132. *IRC § 143(l)(4)*. In the case of Alaska, Oregon, and Wisconsin, a qualified veteran must apply for financing before the date that is 25 years after the last date on which the veteran served on active duty.

(n252)Footnote 133. The average is determined by taking the aggregate amount of bonds issued in the lowest year, and dividing the sum by the number of years (not exceeding five) after 1979 that the state issued qualified veterans' mortgage bonds. *IRC § 143(l)(3)(B)*. The state veterans limit for Alaska, Oregon, and Wisconsin is \$5 million for calendar year 2006, \$10 million for 2007, \$15 million for 2008, \$20 million for 2009, and \$25 million thereafter.

(n253)Footnote 134. *IRC § 146(n)*.

(n254)Footnote 135. *IRC § 25(d)(2)*.

(n255)Footnote 136. *IRC § 25(a)(1)*. No credit is allowed if the interest is paid to a related person within the meaning of *IRC § 144(a)(3)(A)*. *IRC § 25(e)(6)*. The certificate remains in effect until it is revoked by the issuing authority or the residence is sold. A certificate is invalid if the financing is not obtained prior to the close of the second taxable year after the year in which the issuing authority elected to issue mortgage credit certificates. *IRC § 25(e)(3)*.

(n256)Footnote 137. *IRC § 25(a)(2)*.

(n257)Footnote 138. *IRC § 25(e)(1)*.

(n258)Footnote 139. *IRC § 25(c)*. The loan can also be a qualified home improvement loan or a qualified rehabilitation loan. *IRC § 25(b)(2)*.

(n259)Footnote 140. The regulations can specify the extent to which the particular lender prohibition can be waived. The issuing authority can allocate a block of certificates to a particular development if the developer supplies to the buyer and the issuing authority that the price is no higher than it would have been without the use of a mortgage credit certificate. *IRC § 25(c)(2)(A)(v), (vii)*.

(n260)Footnote 141. *IRC § 25(e)(5)*.

(n261)Footnote 142. *Treas Reg § 1.25-3(p)(1),(3)*.

(n262)Footnote 143. *IRC § 25(g)*.

(n263)Footnote 144. *IRC § 6709*.

(n264)Footnote 145. *IRC § 143(k)(12)*.

(n265)Footnote 146. *IRC § 143(k)(12)(B)*. See also *Notice 2008-79*.

(n266)Footnote 147. *IRC § 143(k)(12)(C)*.

(n267)Footnote 148. *Notice 2008-79* .

(n268)Footnote 149. *Notice 2008-79* .

(n269)Footnote 150. Federally subsidized indebtedness excludes qualified home improvement loans.

The recapture rules apply generally to financing provided, and mortgage credit certificates issued, after Dec 31, 1990. The recapture provisions apply to the assumption of a loan, or relending of proceeds derived from repayment of any prior loan, originally made from proceeds of qualified mortgage bonds issued under *IRC § 143* after Aug 15, 1986. *Rev Rul 91-3, 1991-1 CB 31* .

Issuers of qualified mortgage bonds used to finance the purchase of a residence after Dec 31, 1990, must report the name, residence address and social security number of the purchaser. The reporting requirement is designed as a means of effectively enforcing *IRC § 143(m)*. *IRS Notice 90-70, 1990-2 CB 351* .

(n270)Footnote 151. H Rep No 100-795, 100th Cong, 2d Sess 441 (1988). A disposition that is accompanied by a mortgage assumption or mortgage credit certificate transfer is a recapture event. H Rep No 100-795, 100th Cong, 2d Sess 442 (1988).

(n271)Footnote 152. H Rep No 100-795, 100th Cong, 2d Sess 441 (1988).

(n272)Footnote 153. If two or more persons hold interests in a residence and are jointly liable for the federally subsidized indebtedness, the recapture amount is determined separately with respect to their separate interests in the residence.

(n273)Footnote 154. Modified adjusted gross income is adjusted gross income for the taxable year in which disposition occurs increased by any tax-exempt income received by the taxpayer in that year. It does not include gain realized on the disposition.

(n274)Footnote 155. Adjusted qualifying income is the product of (1) the highest family income that (as of the date the financing was provided) would have met the income requirements with respect to the residents, and (2) 1.05 percent to the nth power, where "n" equals the number of full years during the period beginning on the date the financing was provided and ending on the date of disposition.

(n275)Footnote 156. The percentage is rounded to the nearest whole percentage point.

(n276)Footnote 157. The property was held for three full years making 1.05 to the nth power 1.05^[3] and adjusted qualifying income \$23,153 (\$20,000 x 1.157625). Since modified adjusted gross income exceeds adjusted qualifying income by more than \$5,000, the income percentage must be 100 percent.

(n277)Footnote 158. *IRC § 143(m)(7)*. *Rev Proc 91-8, 1991-1 CB 417* , provides issuers of qualified mortgage bonds safe harbor guidelines for complying with the *IRC § 143(m)(7)* reporting requirements.

(n278)Footnote 159. The small issue exemption does not apply to any obligation which is issued as a part of an issue if 5 percent of the proceeds of which are to be used directly or indirectly to provide residential real property for family units. *IRC § 144(a)(5)*.

All industrial development bonds issued to finance a single project are treated as a single issue and any person who is a principal user with respect to any of the issues is treated as a principal user with respect to the aggregated issue. *IRC § 144(a)(9)*.

(n279)Footnote 160. Under *IRC § 144(a)(3)*, one person is related to another if:

"the relationship between such persons would result in the disallowance of losses under section 267 or 707(b), or

"such persons are members of the same controlled group of corporations (as defined in section 1563(a), except that 'more than 50 percent' shall be substituted for 'at least 80 percent' each place it appears therein)."

(n280)Footnote 161. *IRC § 144(a)(2)*.

(n281)Footnote 162. *IRC § 144(a)(7)*.

(n282)Footnote 163. *IRC § 144(a)(4)(A)*.

If the issue involved is a refinancing issue, the election can be made only if all of the prior issues being redeemed are issues which qualified as small issues under *IRC § 144(a)(1)*. *IRC § 144(a)(4)(E)*.

(n283)Footnote 164. *IRC §§ 144(a)(4)(A)(ii), (B)*.

If the issue involved is a refinancing issue, capital expenditures are taken into account only for the purpose of determining whether those prior issues that were made under an *IRC § 144(a)(4)(A)* election qualified, and would have continued to qualify under *IRC § 144(a)(1)* but for the redemption. *IRC § 144(a)(4)(E)*.

(n284)Footnote 165. *IRC § 144(a)(4)(F)*. The provision does not apply to bonds issued after Sept 30, 2006.

(n285)Footnote 166. *IRC § 144(a)(4)(C)*. In addition, with respect to bonds issued after Sept 30, 2006, capital expenditures not exceeding \$10 million are not taken into account in applying *IRC § 144(a)(4)(A)(ii)*. *IRC § 144(a)(4)(G)*.

(n286)Footnote 167. *IRC § 144(a)(8)*.

(n287)Footnote 168. *IRC § 144(a)(11)*.

(n288)Footnote 169. *IRC § 150(b)(6)*.

(n289)Footnote 170. *IRC § 144(a)(12)*. The sunset rule does not apply to any bond or series of bonds issued to refund a bond issued before Dec 31, 1986, if (1) the average maturity date (determined in accordance with *IRC § 147(b)(2)(A)*) of the issue of which the refunding bond is a part is not later than the average maturity date of the bonds to be refunded by the issue, (2) the amount of the refunding bond does not exceed the outstanding amount of the refunded bond, and (3) the net proceeds of the refunding bond are used to redeem the refunded bond not later than 90 days after the issuance of the refunding bond.

The maturity date requirement for refunding bonds issued before July 1, 1987, is satisfied if the bond has a maturity date not later than the maturity date of the refunded bond.

(n290)Footnote 171. For purposes of determining other forms of student assistance, loans made pursuant to § 428B(a)(1) of the Higher Education Act of 1965 (relating to parent loans), and loans made pursuant to subpart C.I of Title VII of the Public Health Service Act (relating to certain student assistance) are not taken into account.

(n326)Footnote 207. *IRC §§ 1400N(a)(5)(B), 1400T*.

(n327)Footnote 208. *IRC § 1400N(a)(7)(A)*.

(n328)Footnote 209. *IRC § 1400N(a)(7)(B)*.

(n329)Footnote 210. *IRC § 1400N(a)(7)(C)*.

(n330)Footnote 211. *IRC § 1400N(a)(5)(C)-(G)*. The provisions of *IRC § 1400N(a)(5)* will not apply to the portion of an issue which (if issued as a separate issue) would be treated as a qualified bond or as a bond that is not a private activity bond, if the issuer elects to so treat that portion. *IRC § 1400N(a)(6)*.

(n331)Footnote 212. *IRC § 1400N(a)(3)(A)*. *Notice 2006-21*, 2006-1 CB 643 , sets forth the population figures to be used by each state in determining the maximum aggregate face amount of bonds that can be issued.

(n332)Footnote 1. *IRC § 148(a)*. A bond is treated as an arbitrage bond if the issuer intentionally uses any portion of the proceeds of the issue to acquire higher yielding investments or to replace bonds that were used to acquire such investments.

IRC § 148 was enacted to minimize the arbitrage benefits from investing gross proceeds of tax-exempt bonds in higher yielding investments and to remove the arbitrage incentives to issue more bonds, to issue bonds earlier, or to leave bonds outstanding longer than is otherwise reasonably necessary to accomplish the governmental purposes for which the bonds were issued. *Treas Reg § 1.148-0(a)*.

Generally, a yield produced by an investment acquired to carry out the governmental purpose of an issue (purpose investment) is materially higher than the yield on the issue if the yield on the purpose investment is more than one eighth of one percentage point higher than the yield on the issue. *Treas Reg § 1.148-2(d)(2)(i)*. The yield produced by purpose investments that are acquired program obligations (obligations that carry out the purpose of a governmental loan program that meets certain requirements) is materially higher than the yield on the issue if the yield on the former is more than one and one-half percentage points higher than the yield on the latter. *Treas Reg § 1.148-2(d)(2)(ii)*. The permitted arbitrage spread on guaranteed student loans that are acquired program obligations is increased to two percentage points. *Treas Reg § 1.148-2(d)(2)(iv)*. No yield limitation applies for investments that are tax-exempt bonds that are not alternative minimum tax bonds treated as investment property under *IRC § 148(b)(3)*. *Treas Reg §*

1.148-2(d)(2)(v).

Under a reverse purchase agreement, a city transferred US Treasury Notes for cash to a securities dealer who retransferred the notes to the city at the end of a specified period of time for the same amount of cash involved in the original transfer and retained the interest that accrued on the notes during the period. The city invested the cash that it received for the notes in a local government investing pool that paid a higher rate of interest than the notes. Held, the city did not comply with the arbitrage yield restrictions, and the interest retained by the dealer was not excludable from gross income. *Rev Rul 79-108, 1979-1 CB 75*.

(n333)Footnote 2. The *IRC § 165(g)* definition of security applies. Thus, (a) stock or the right to subscribe or receive stock, and (b) bonds, debentures, notes, certificates, other evidences of indebtedness issued by corporation, or by a government, with interest coupons or in registered form, are securities for this purpose.

(n334)Footnote 3. *IRC § 148(b)*. The Service plans to issue regulations providing that certain types of investments other than tax-exempt bonds will not be treated as investment property. It is anticipated that the regulations will provide that the term "investment property" does not include (a) any tax-exempt bond, (b) any obligation issued by the United States pursuant to the Demand Deposit State and Local Government program (demand deposit SLGS), and (c) certain temporary investments relating to demand deposit SLGS and tax-exempt bonds. In addition, stock of a regulated investment company will be treated as a tax-exempt bond, if it (a) has one class of stock authorized and outstanding, (b) to the extent practicable, invests all of its assets in tax-exempt bonds, and (c) at least 98 percent (i) of its gross income is derived from interest on or gains from the disposition of tax-exempt bonds, or (ii) of the weighted average value of its assets is represented by investments in tax-exempt bonds. *Notice 87-22, 1987-1 CB 466*. The rules contained in the notice can be relied upon until the regulations are issued.

A prepayment for property can be investment-type property if a principal purpose for prepaying is to receive an investment return from the time the prepayment is made until the time payment otherwise would be made. *Treas Reg § 1.148-1(b)*. See *City of Columbus, Ohio v Commr*, 106 TC 325 (1996), where, in a declaratory judgment action, the Tax Court held that the yield resulting from a prepayment was materially higher than the yield on bonds that the municipality proposed to issue to fund the prepayment. The Sixth Circuit remanded the case for the Tax Court to address the issue of whether the taxpayer's satisfaction of a debt to the State of Ohio could be deemed a prepayment for property. The appellate court's opinion is at 112 F3d 1201 (DC Cir 1997). On remand, the Tax Court held that the bonds were not arbitrage bonds because they were not used to acquire "investment type property." The opinion on remand is reported as *TC Memo 1998-135*.

Rev Proc 95-47, 1995-2 CB 417, sets forth the conditions under which an issuer of state or local bonds may make payments to the US to reduce the yield on investments purchased with the proceeds of advanced refunding bonds on a date when the issuer is unable to purchase SLGS because the Department of the Treasury has suspended sales of SLGS.

(n335)Footnote 4. *Treas Reg § 1.148-1(e)(1)*.

(n336)Footnote 5. A prepayment for property and services, including a prepayment for property and services that is made after the date that the contract to by the property or services is entered into, also gives rise to investment-type property if a principal purpose for repaying is to receive an investment return from the time the payment is made until the time the payment otherwise would be made.

A prepayment does not give rise to investment-type property if (i) prepayments on substantially the same terms are made by a substantial percentage of persons who are similarly situated to the issuer but who are not beneficiaries of tax-exempt financing (customary payment); (ii) the prepayment is made within 90 days of the reasonably expected date of delivery to the issuer of all of the property for which the payment is made; or (iii) the prepayment is made to acquire a supply of natural gas or electricity. The determination of whether a payment is a customary payment generally is based on all the facts and circumstances. A prepayment will be considered a customary payment if made for certain

maintenance, repair, or extended warranty purposes. *Treas Reg § 1.148-1(e)(2)*.

(n337)Footnote 6. *Treas Reg § 1.148-1(e)(3)*.

(n338)Footnote 7. *IRC § 148(h)*. A safe harbor for establishing the fair market value for guaranteed investment contracts and investments purchased for a yield restricted defeasance escrow can be found in *Treas Reg § 1.148-5(d)(6)(iii)*. The essence of the safe harbor is a bid solicitation procedure.

(n339)Footnote 8. *IRC § 148(c)(1)*.

(n340)Footnote 9. A nonpurpose investment is defined as investment property that is acquired with the gross proceeds of an issue, and is not acquired in order to carry out the governmental purpose of the issue. *IRC § 148(f)(6)*. The taxpayer in *Harbor Bancorp & Subs v Commr*, 105 TC 260 (1995), urged the Tax Court to construe the term "nonpurpose investment" to exclude any unauthorized investment. The court refused to do so on the ground that the statute does not provide such an exclusion. The Ninth Circuit affirmed the decision of the Tax Court. 115 F3d 722 (9th Cir 1997), *cert denied*, 118 S Ct 1035.

(n341)Footnote 10. *IRC § 148(c)(2)(A)*.

(n342)Footnote 11. *IRC § 148(c)(2)(C)*.

(n343)Footnote 12. *IRC § 148(c)(2)(B)*. For this purpose, a nonpurpose investment is not treated as a loan.

(n344)Footnote 13. *IRC § 148(c)(2)(D)*.

(n345)Footnote 14. *Treas Reg § 1.148-2(e)(2)*. The three-year temporary period is also applicable to the proceeds of qualified mortgage bonds and qualified veterans' mortgage bonds, by substituting qualified mortgage loans for each place that the original regulation refers to capital projects.

The three-year period is extended to five years if the proceeds are expected to be allocated to a capital project involving a substantial amount of construction proceeds, the issuer satisfies the expenditure test by substituting five years in each place that three years appears, and both the issuer and a licensed architect or engineer certify that the longer period is necessary to complete the project.

(n346)Footnote 15. *Treas Reg § 1.148-2(e)(4)(i)*.

(n347)Footnote 16. *Treas Reg § 1.148-2(e)(4)(iii)*.

(n368)Footnote 37. *Treas Reg § 1.148-10(a)(1)*.

(n369)Footnote 38. *Treas Reg § 1.148-10(a)(2)*.

(n370)Footnote 39. *IRC § 10(a)(4)*. The Service has provided a safe harbor under which an issue of tax or revenue anticipation bonds will not be treated as outstanding longer than is necessary to accomplish the governmental purpose of the bonds under *Treas Reg § 1.148-10(a)(4)* if the final maturity date of the issue is not later than the end of the applicable temporary period under *Treas Reg § 1.148-2(e)(3)(i)* or *(ii)* for which proceeds of the issue qualify. *Rev Proc 2002-31, 2002-1 CB 916*

(n371)Footnote 40. *IRC § 148(d)(3)(B)*.

(n372)Footnote 41. *IRC § 148(f)(2), (3)*.

Ann 89-66, 1989-23 *IRB* 57, contains a plain-language overview of the arbitrage rebate rules to assist small issuers of state and local bonds.

The rebate requirement does not apply to qualified mortgage bonds and qualified veterans' mortgage bonds.

The amount rebated is not included in gross income; no deduction is allowed for the amount of the rebate. *IRC § 148(f)(5)*.

(n373)Footnote 42. The method of computing rebatable arbitrage can be found in *Treas Reg § 1.148-3(j)*.

(n374)Footnote 43. *IRC § 148(f)(4)(A), (B)*. When no bond of an issue is a private activity bond, the amount earned on a bona fide debt service fund is not subject to any dollar limitation if the average maturity of the issue (determined in accordance with *IRC § 147(b)(2)(A)*) is at least five years and the rates of interest on bonds that are part of the issue do not vary during the term of the issue.

Rev Proc 90-11, 1990-1 CB 469, contains guidance for issuers concerning the filing of (1) a request for an extension of time to pay a correction amount of arbitrage rebate; (2) an explanation of an innocent failure to meet a requirement for payment of an arbitrage rebate; or (3) a request for a ruling regarding any other failure to meet a requirement for an arbitrage repayment.

The portion of an issue used to reimburse an issuer for expenditures made prior to the issue (a reimbursement bond) is not subject to the arbitrage rebate provisions. The rule is applicable generally to bonds that are not private activity bonds, with the exception of qualified 501(c)(3) bonds and private activity bonds the proceeds of which are used to finance a facility that is owned by a governmental unit.

(n375)Footnote 44. *IRC § 148(f)(4)(B)(ii)*. For bonds issued on or before Aug 5, 1997, the additional six-month period was available if all but the lesser of 5 percent of the proceeds of the issue, or \$100,000 was spent for governmental purposes within the initial six-month period. The regulations also provide that an issue is deemed to meet the rebate requirements if gross proceeds of the issue are allocated to expenditures for a governmental purpose of the issue in accordance with the following 18-month schedule: (i) at least 15 percent within six months; (ii) at least 60 percent within 12 months; and (iii) 100 percent within 18 months. *Treas Reg § 1.148-7(d)*.

(n376)Footnote 45. *IRC § 148(f)(4)(C)(ii)*. The 100 percent test is deemed to be met if all of the net proceeds are spent within three years from the date of issuance and the failure to do so within two years is due to a reasonable retainage (not to exceed 5 percent of the net proceeds of the issue).

The rebate requirements will be treated as met even though the issuer fails to meet the percentage-time expenditure tests if the issuer elects to pay the penalty prescribed by *IRC § 148(f)(4)(C)(vii)* or pays a penalty at the end of each six-month period equal to 1.5 percent of the amount of net proceeds not spent as required. The issuer can also elect to terminate the penalty if certain conditions are met. *IRC § 148(f)(4)(C)(viii), (ix)*. The procedures for making all elections and paying the penalties can be found in *Rev Proc 92-22, 1992-1 CB 736*.

If the spending requirements of *IRC § 148(f)(4)(C)(ii)* are met with respect to the available construction proceeds of a construction issue, the rebate requirement does not apply to earnings on a bona fide debt service fund of the issue. *IRC § 148(f)(4)(C)(xvii)*.

The Code does not provide any exception to the payment of all or a portion of the penalty in lieu of rebate if construction delays are caused by subsequent events outside the control of the issuer, nor does it allow the Service to waive any portion of the penalty in such cases. *Ltr Rul 9526002*.

Rev Proc 92-83, 1992-2 CB 487, contains guidance for issuers of tax-exempt bonds seeking to obtain refunds of arbitrage rebates.

(n377)Footnote 46. *IRC § 148(f)(4)(D)*.

(n378)Footnote 47. *IRC § 148(f)(4)(D)(vii)*. For bonds issued after Dec 31, 1997, and before Jan 1, 2002, the amount of increase was \$5 million.

(n379)Footnote 48. *IRC § 148(f)(4)(D)*.

(n380)Footnote 49. *Treas Reg § 1.148-7(d)(1)*. The 18-month exception does not apply to an issue any portion of which is treated as meeting the two-year exception discussed above. *Treas Reg § 1.148-7(d)(4)*.

(n381)Footnote 50. An issue does not fail to satisfy the spending requirement for the third spending period as a result of a reasonable retainage if the reasonable retainage is allocated to expenditures within 30 months of the issue date. *Treas Reg § 1.148-7(d)(2)*.

(n390)Footnote 6. *IRC § 150(d)(3)(G)*.

(n391)Footnote 1. *IRC § 149(d)(1), (2)*; *Treas Reg § 149(d)-1(g)*.

(n392)Footnote 2. *IRC § 149(d)(5)*. A refunding that occurred before 1986 will be considered an advance refunding only if the refunding bond was issued 180 days before the redemption of the refunded bond. *IRC § 149(d)(6)(A)*.

Bonds are advance refunding bonds if the issuer loans proceeds of the bonds to a governmental unit, and within 90 days of the date the loan is made, but more than 90 days after the issue date of the bonds, the governmental unit uses the proceeds to redeem outstanding tax-exempt obligations of the governmental unit. *Rev Rul 2003-78, 2003-29 IRB 76*. The theory underlying the ruling is that the governmental unit is considered to be an obligor of the bonds.

(n393)Footnote 3. *IRC § 149(d)(3)(A)*. A bond issued before 1986 will be treated as advance refunded no more than once before March 15, 1986. *IRC § 149(d)(6)(B)*.

(n394)Footnote 4. *IRC § 149(d)(3)(B)*.

(n395)Footnote 5. *IRC § 149(d)(4)*.

(n396)Footnote 6. *IRC § 1400N(b)* will not apply to any advance refunding of a bond that is part of an issue the proceeds of which were used (or will be used) to provide any private or commercial golf course, country club, massage parlor, hot tub facility, suntan facility, racetrack or other facility used for gambling, or any store the principal business

of which is the sale of alcoholic beverages for off-premises consumption. *IRC § 1400N(b)(6)*.

(n397)Footnote 7. *IRC § 1400N(b)(4)*.

(n398)Footnote 1. *IRC § 150(e)(2)*. Other fire fighting services provided in an area are disregarded in determining whether an organization is a qualified volunteer fire department if the other fire fighting services are provided by a qualified volunteer fire department and both have been continuously providing fire fighting services to the area since Jan 1, 1981.

(n399)Footnote 2. *IRC § 150(e)(3)*.

(n400)Footnote 1. *IRC § 149(f)(1), (4)*. The provision applies generally to bonds issued after Oct 21, 1988. In the case of a bond issued to refund a bond issued before Oct 22, 1988: (1) if the three-year loan origination period would otherwise expire before Oct 22, 1989, the period expires on Oct 21, 1990; (2) if the period expires after Oct 22, 1989, the portion of the proceeds of the issue of which the refunded bond is a part that is available on the date of issuance of the refunding bond to provide loans is treated as the proceeds of a separate issue issued after Oct 21, 1989, for purposes of applying *IRC § 149(f)*.

(n401)Footnote 2. *IRC § 149(f)(7)*.

(n402)Footnote 3. *IRC § 149(f)(2)*.

(n403)Footnote 4. *IRC § 149(f)(4)*.

(n404)Footnote 5. *IRC § 149(f)(5)*.

(n405)Footnote 1. *IRC § 149(g)(1), (2)*. The rule is effective for bonds issued after Sept 14, 1989. However, bonds issued before Oct 15, 1989 are not covered by the provisions if the bonds were sold before Sept 15, 1989.

Expectations as to changes in interest rates or in the income tax laws cannot be taken into account in determining whether expectations regarding hedge bonds are reasonable. *IRC § 149(g)(4)(B)*.

(n406)Footnote 2. *IRC § 149(g)(4)(A)*.

(n407)Footnote 3. *IRC § 149(g)(3)(A)*. A nonpurpose investment is one that is acquired with the proceeds of an issue, but is not acquired in order to carry out the governmental purposes of the issue.

(n408)Footnote 4. *IRC § 149(g)(3)(B)*. Amounts in a bona fide debt service fund and investment earnings held for not more than 30 days pending reinvestment or bond redemption are treated as invested in tax-exempt bonds that are not private activity bonds.

Qualified § 501(c)(3) bonds are not private activity bonds for this purpose.

(n409)Footnote 5. *IRC § 149(g)(3)(C)*.

(n410)Footnote 1. *IRC § 149(e)(1), (2); Treas Reg § 1.149(e)-1*. An extension of time to file the statement can be granted if the failure to file the statement in timely fashion is not due to willful neglect. *IRC § 149(e)(3)*.

Issuers of small issue bonds--those with issue prices of less than \$100,000--have the choice of filing a separate return for any small issue. *Treas Reg § 1.149(e)-1(c)(2)*.

Rev Proc 2002-48, 2002-2 CB 531, provides guidance to issuers of state and local bonds for requesting an extension of time to file, or for amending, the information required by *IRC § 149(e)*.

(n411)Footnote 1. An essential governmental function does not include any function that is not customarily performed by state and local governments with general taxing powers. *IRC § 7871(e)*.

(n412)Footnote 2. *IRC § 7871(c)(2)*.

(n413)Footnote 1. *IRC § 171(a)(2)*. This is due to the fact that the premium reflects the receipt of tax-exempt interest by the investor.

If the bond premium allocable to an accrual period exceeds the qualified stated interest allocable to the accrual period, the excess is a nondeductible loss. In the case of a regulated investment company, the excess bond premium reduces its tax-exempt interest income on other tax-exempt obligations held during the accrual period. *Treas Reg § 1.171-2(a)(4)(ii)*.

(n414)Footnote 2. *IRC § 1016(a)(5)*. See *Treas Reg §§ 1.171-2(c)*, Ex 4; 1.1016-5(b)(3).

(n415)Footnote 3. See Ch 18.

(n416)Footnote 1. The specific types of qualifying bonds are designated in *IRC § 54A(d)*. These are currently: (A) qualified forestry conservation bonds; (B) new clean renewable energy bonds; (C) qualified energy conservation bonds; (D) qualified zone academy bonds; and (E) qualified school construction bonds. The particular characteristics of each type of qualifying tax credit bond are discussed in §§ 17.03[14][b]thru [f]; this subsection discusses the rules common to all types.

(n417)Footnote 2. *IRC § 54A(f)*.

(n418)Footnote 3. *IRC § 54A(b)(1)*. In statutory terms, a credit equal to "25 percent of the annual credit determined with respect to the [qualified tax credit] bond" is determined on each "credit allowance date;" i.e., each of the dates referred to above. *IRC § 54A(e)(1)*.

(n419)Footnote 4. *IRC § 54A(a)*. Provision is made for pro rata adjustments to the quarterly credit for quarters in which the bond is issued, redeemed or matures. *IRC § 54A(b)(4)*. There are also special rules for holders that are pass-thru or special entities. Thus, if a qualified tax credit bond is owned by a partnership or S corporation, the allocation of the credit to partners or shareholders is treated as a distribution *IRC § 54A(g)*. If the owner of the bond is a real estate investment trust (REIT), the credit is required to be distributed (and will be allowed) to beneficiaries of the trust under rules to be prescribed by the Treasury. *IRC § 54A(h)*. If the owner of the bond is a regulated investment company (RIC), the RIC may elect to pass through to each shareholder that shareholder's proportionate share of the *IRC § 54A* credits to which the RIC is entitled, along with gross income attributable to such credits. *IRC § 853A*.

(n420)Footnote 5. That is, it may not exceed in any year the sum of the holder's liability for regular income tax and alternative minimum tax for that year, less the sum of nonrefundable credits allowable for the year (other than tax credits on other qualified tax credit bonds or on "Build America" bonds under *IRC § 54AA*, discussed *infra*). *IRC § 54A(c)(1)*.

(n421)Footnote 6. *IRC § 54A(c)(2)*.

(n422)Footnote 7. *IRC § 54A(j)*.

(n423)Footnote 8. 2010-15 IRB 541 .

(n424)Footnote 9. See § 17.04[5], *infra*, for a discussion of the rules announced in Notice 2010-28 that are applicable to transactions in which tax credits are stripped from qualified tax credit bonds.

(n425)Footnote 10. Notice 2010-28 , § 3.02(a)(2). See Ch 2, § 2.07[1][b] and [c] and § 17.03[1] and [2] of this

Chapter for the definition and significance of qualified stated interest in the context of the OID provisions.

(n426)Footnote 11. *Notice 2010-28*, § 3.02(a)(3).

(n427)Footnote 12. *IRC § 54A(b)(2)*. The rate must be determined as of the first day on which there is a binding, written contract for the sale or exchange of the bond. *IRC § 54A(b)(3)*.

(n428)Footnote 13. *IRC § 54A(b)(3)*. The Internal Revenue Service has announced that these rates (referred to in the statute as "applicable credit rates") will be calculated based on estimates of the yields on outstanding bonds from market sectors selected by the Treasury Department in its discretion that have an investment grade rating between A and BBB for bonds of a similar maturity for the business day immediately preceding the sale date of the qualified tax credit bond. *Notice 2009-15*, 2009-6 *IRB* 449. In the case of new clean renewable energy bonds (*IRC § 54C*) and qualified energy conservation bonds, (*IRC § 54D*), the applicable credit rate will be reduced to 70% of the rate so estimated. See *IRC §§ 54C(b)* and *54D(b)*; *IRS 2009 IRB LEXIS 168*, *Notice 2009-33*; *IRS Notice 2009-29*, 2009-16 *IRB* 849.

(n429)Footnote 14. *IRC § 54A(d)*.

(n430)Footnote 15. "Available project proceeds" are defined as the excess of the proceeds from the sale of the bond issue over the issuance costs financed by the issue (not to exceed 2 percent of the sales proceeds), plus the proceeds from any temporary investments of such available project proceeds. *IRC § 54A(e)(4)*.

(n431)Footnote 16. As defined in the Code section governing the particular type of tax credit bond being issued. See *IRC § 54A(d)(2)(C)*. If the issuer receives reimbursement for an expenditure (the "original expenditure") out of the proceeds, the reimbursement will be treated as made for a "qualified purpose" if (i) the original expenditure was made for a qualified purpose, (ii) the original expenditure was made after the issuer received an allocation of bond limitation from the Treasury, (iii) before making the original expenditure, the issuer declared its intent to obtain reimbursement out of the proceeds of a qualified tax credit bond issue, (iv) within 60 days after the original expenditure, the issuer adopts an official intent to reimburse the expenditure out of the bond proceeds, and (v) the reimbursement is accomplished within 18 months from the date the original expenditure was made. *IRC § 54A(d)(2)(D)*.

(n432)Footnote 17. *IRC § 54A(d)(2)(A)*.

(n433)Footnote 18. The "expenditure period" begins on the date the bond is issued, but includes any additional time beyond three years allowed by the IRS in an authorized extension of the expenditure period. *IRC § 54A(d)(2)(B)(ii)*. To obtain an extension, the issuer must establish that its failure to spend all of the proceeds within three years was due to reasonable cause and that expenditures for qualified purposes will continue to proceed with due diligence. *IRC § 54A(d)(2)(B)(iii)*.

(n434)Footnote 19. *IRC § 54A(d)(2)(B)(i)* and see also *Treas Reg § 1.142-2(e)*.

(n435)Footnote 20. *IRC § 54A(d)(3)* and see *IRC § 149(e)(2)* and *Treas Reg § 1.149(e)-1*. The information reporting requirements of *IRC § 149(e)* are discussed in § 17.03[10].

(n436)Footnote 21. See § 17.03[4].

(n437)Footnote 22. *IRC § 54A(d)(4)*. In the case of an otherwise qualified forest conservation bond, the requirement that the sinking fund not be funded more rapidly than equal annual installments is disregarded. *IRC § 54B(g)*.

(n438)Footnote 23. *IRC § 54A(d)(5)(A)*.

(n439)Footnote 24. *IRC § 54A(d)(5)(B)*. For purposes of calculating present value, the discount rate prescribed in the statute is the average annual interest rate of tax-exempt obligations having a term of 10 years or more which are

issued during the month. However, interim guidance issued by the IRS indicates that it intends to use a rate equal to 110 percent of the long-term adjusted federal rate ("AFR"), compounded semiannually, for the month in which the bond is sold. See IRS Notice 2009-29, 2009-16 IRB 849, 850, § 3.03; IRS Notice 2009-30, 2009 IRB 852, 854, § 3.03; IRS 2009 IRB LEXIS 168, Notice 2009-33, § 9(c) and (d); IRS 2009 IRB LEXIS 162, Notice 2009-35, § 3.03. The IRS similarly used the long-term AFR rate in determining the maximum term of Qualified Zone Academy Bonds when such bonds were authorized under IRC § 1397E, see *Treas Reg § 1.1397E-1(d)*, even though IRC § 1397E(d)(3), like IRC § 54A(d)(5), called for the discount rate to be based on the average interest rate on tax-exempt obligations. Apparently the IRS considers the AFR to be a fair approximation of the statutory rate and one that is considerably more accessible.

(n440)Footnote 25. IRC § 54A(d)(6).

(n441)Footnote 26. A qualified issuer means a State or any political subdivision or instrumentality thereof or a section 501(c)(3) organization (as defined in IRC § 150(a)(4)). IRC § 54B(f).

(n442)Footnote 27. IRC § 54B(a). Under IRC § 54B(b), the maximum aggregate face amount of bonds which may be designated by any issuer may not exceed the limitation amount allocated to the issuer by the Treasury Department under IRC § 54B(d). The allocation methodology is discussed below.

(n443)Footnote 28. See IRC § 54B(e).

(n444)Footnote 29. For purposes of this requirement, a parcel of land is adjacent to USFS land if (a) it touches any unit of the National Forest System, as defined in 16 USC § 1609(a); (b) shares a common boundary with any unit of the National Forest System, or (c) is located within the boundaries of a unit of the National Forest System. If at least one portion of the land acquired is adjacent to USFS Land in one of these senses, it is irrelevant that other non-contiguous acquired parcels are not adjacent to it. IRS Notice 2008-70, 2008-36 IRB 575, 576.

(n445)Footnote 30. As to the first part of this requirement, "no net cost to the United States" means that the transferor must cover all costs directly incident to the transfer of the land to the USFS (for example, any survey costs, title insurance, transfer taxes, recordation fees, etc.) but not indirect costs such as USFS salary and overhead and expenses for travel, legal review and clearance. IRS Notice 2008-70 at 576. The second part means that whatever portion of the land is not transferred to the USFS must be either retained by the State that acquired the land, conveyed by that State to one or more other States, or, if the land was not acquired by a State, conveyed to one or more States. *Id.* Not later than six months after the acquisition of the land, the portion(s) required to be transferred to the USFS or to a State must either have been transferred to the ultimate recipient, or be the subject of an appropriately recorded contract to transfer the land which meets certain minimum requirements and is effective to vest in the ultimate recipient equitable title under State or Federal law. IRS Notice 2008-70 at 579.

(n446)Footnote 31. See IRC § 54A(a)(1); Notice 2008-70 at 578.

(n447)Footnote 32. IRC § 54B(c).

(n448)Footnote 33. IRC § 54B, along with IRC § 54A, was enacted by section 15316 of the Food, Conservation and Energy Act of 2008, Pub L No 110-246, 122 Stat 1651 (June 18, 2008).

(n449)Footnote 34. 2008-2 CB 575. As required by IRC § 54B(d)(2), the solicitation was made within 90 days of the date of enactment.

(n450)Footnote 35. Notice 2008-70, *supra*, 2008-2 CB at 581.

(n451)Footnote 36. IRC § 54B(h).

(n452)Footnote 37. The IRS is not allowed to use the deemed payment as an offset or credit against any tax

liability of the issuer but may only refund the deemed payment to the issuer, *IRC § 54B(h)(2)(A)*, without interest. *IRC § 54B(h)(2)(B)*.

(n453)Footnote 38. *IRC § 54B(h)(3)(A)*.

(n454)Footnote 39. *IRC § 54B(h)(3)(B)*.

(n455)Footnote 40. *IRC § 54*, enacted by Section 1303 of the Energy Tax Incentives Act of 2005, Pub L No 109-58, *119 Stat 594 (2005)* (2005 Act), initially provided for a national volume cap on CREBs of \$800 million, with a deadline of December 31, 2007 for issuing the CREBs. Section 202 of the Tax Relief and Health Care Act of 2006, Pub L No 109-432, *120 Stat. 2922 (2006)* (2006 Act) increased the cap to \$1.2 billion, and extended the deadline to December 31, 2008. Section 107 of the Energy Improvement and Extension Act of 2008, Division B of Pub L No 110-343, *122 Stat 3765 (2008)* (the "2008 Energy Act"), which added *IRC § 54C* and New CREBs to the Code, also provided a final extension of the deadline for issuing original CREBs to December 31, 2009, see *IRC § 54(m)*, while leaving the national volume cap at \$1.2 billion.

(n456)Footnote 41. The "applicable credit rate," it will be recalled, is the rate that allows issuance of the bonds without discount and without interest cost to the qualified issuer. *IRC § 54A(b)(3)*. Qualified energy conservation bonds are also limited to a reduced tax credit equal to 70 percent of the applicable credit rate. See *IRC § 54D(b)*.

Other differences between New CREBs and original CREBs arise from the fact that New CREBs are now governed, in part, by *IRC § 54A*. For example, the *IRC § 54A* rules make it possible for issuers of New CREBs to make unrestricted investments of available project proceeds during the three year expenditure period, and to invest in sinking funds within prescribed limitations, and holders of New CREBs are permitted to strip the right to credits from ownership of the bond and sell them separately. See IRS Notice 2009-33, § 2.01; § 17.03[14][a].

(n457)Footnote 42. Public power providers, defined as "a State utility with a service obligation, as such terms are defined in section 217 of the Federal Power Act," were not eligible to receive such funds from CREBs.

(n458)Footnote 43. *IRC § 54C(a)(1)*.

(n459)Footnote 44. *IRC § 54C(d)(1)*.

(n460)Footnote 45. In addition to public power providers, cooperative electric companies, and governmental bodies, qualified issuers include a "clean renewable energy bond lender" (an entity in existence on February 1, 2002 that is owned by, or has outstanding loans to, 100 or more cooperative electric companies, or any affiliated entity which is controlled by such lender) and a not-for-profit electric utility which has received a loan or loan guarantee under the Rural Electrification Act.

(n461)Footnote 46. *IRC § 54C(a)*.

(n462)Footnote 47. This is the "national limitation" on New CREBs. Initially set at \$800 million in *IRC §§ 54C(c)(2)* by the 2008 Energy Act, an additional authorization of \$1.6 billion was made by section 1111 of Title 1 of Division B of the American Recovery and Reinvestment Act of 2009, Pub L No 111-5, *123 Stat 115 (2009)* ("ARRA of 2009"), adding *IRC § 54C(c)(4)* to the Code.

(n463)Footnote 48. *IRC § 54C(c)(2)(A),(B), and (C)*.

(n464)Footnote 49. Subject to one further requirement: once the Treasury (IRS) identifies qualified projects eligible for funding through allocations to public power providers, it is to make the actual allocations, to the maximum extent practicable, in the ratio that the volume cap for public power providers bears to the total cost of public power provider projects approved by the Treasury. In other words, if \$800 million in New CREB allocations is available to

public power providers, but the Treasury finds that projects costing \$1 billion are appropriate for New CREB funding, instead of taking an all-or-nothing approach the Treasury is to make allocations to each project covering 80 percent of each project's cost.

(n465)Footnote 50. Including Indian tribal governments. See *IRC § 54D(h)*.

(n466)Footnote 51. For the definition of "private activity bond," see *IRC § 141* and § 17.03[3][a]. The interest on such bonds, even if issued by a State or local government, are generally not exempt from tax under *IRC § 103*. See *IRC § 103(b)(1)*. As noted above, however, the credit on tax credit bonds is not exempt from tax but is fully includible in gross income. *IRC § 54A(f)*.

(n467)Footnote 52. *IRC § 54D(e)(3)*. In applying this rule, a bond issued for the purpose of providing loans, grants, or other repayment mechanisms for capital expenditures to implement green community programs is not to be treated as a private activity bond. *IRC § 54D(e)(4)*.

(n468)Footnote 53. *IRC § 54D(f)(2)*.

(n469)Footnote 54. *IRC § 54D(a)*.

(n470)Footnote 55. *IRC § 54D(d)*.

(n471)Footnote 56. *IRC § 54D(e)(1)*.

(n472)Footnote 57. *IRC § 54D(e)(2)*. The large local government's share of the State allocation is determined by the ratio of its population to the population of the entire State. *IRC § 54D(e)(2)(A)*. A county that has within it a municipality that is a large local government, and is therefore entitled to a portion of the State allocation, must deduct the population of that municipality from its own county population in determining whether it is also entitled to a share of the State allocation. *IRC § 54D(g)(2)*.

(n473)Footnote 58. Defined as a "local education agency" within the meaning of section 9101 of the Elementary and Secondary Education Act of 1965. *IRC § 54E(d)(2)*.

(n474)Footnote 59. *IRC § 54E(d)(1)*.

(n475)Footnote 60. Pub L No 105-34, 111 Stat 788 (1997).

(n476)Footnote 61. See IRS Notice 2009-30, 2009-16 IRB 852, 853 .

(n477)Footnote 62. See Notice 2009-30 , § 2.01. As was the case with New CREBs versus CREBs, the differences between 1397E QZABs and 54E QZABs result mostly from the application to 54E QZABs of the uniform tax credit rules in *IRC § 54A*. For example, instead of requiring that 95 percent of the proceeds of a QZAB issue be spent within a 5-year period, § 54E QZABs are required to spend 100 percent of "available project proceeds" within a 3-year period. See *IRC § 54A(d)(1)* and compare *IRC § 1397E(f)(1)(A)*. Also, exceptions to the arbitrage rules for investments made during the expenditure period and sinking funds under *IRC § 54A* were not available under *IRC § 1397E*. Moreover, the credit on § 54E bonds is determined quarterly rather than annually as in § 1397E QZABs, and there is no provision for credit stripping in *IRC § 1397E* as there is in *IRC § 54A(i)*. The national limitation amount for QZABs under § 54A is also significantly greater for 2009 and 2010 than it was under § 1397E (\$1.4 billion vs. \$400 million).

(n478)Footnote 63. *IRC § 54E(c)(4)(C)*.

(n479)Footnote 64. Qualified purposes are (A) rehabilitating or repairing the public school facility in which the academy is established, (B) providing equipment for use at such academy, (C) developing course materials for education to be provided at such academy, and (D) training teachers and other school personnel in such academy. *IRC §*

54E(d)(3).

(n480)Footnote 65. *IRC § 54E(a)*.

(n481)Footnote 66. *IRC § 54E(b)* Private entities include any person other than the United States, a state or local government, or an agency or instrumentality thereof or related party with respect thereto. *Treas Reg § 1.1397E-1(c)(2)*. The term "proceeds" means sale proceeds as defined in *Treas Reg § 1.48-1(b)*. *Temp Treas Reg § 1.1397E-1T(a)(2)(ii)(B)*. In determining the "present value" of qualified contributions, a reasonable discount rate must be used. The applicable credit rate on the QZAB should be considered reasonable for this purpose. See *Treas Reg § 1.1397E-1(c)(1)*.

(n482)Footnote 67. *IRC § 54E(d)(4)*. Cash received from a private entity (other than cash received indirectly from a person that is not a private entity as part of a plan to avoid the private business contribution requirement) constitutes a qualified contribution. Services of the employees of the eligible local education agency do not. *Treas Reg § 1.1397E-1(c)(3)*.

(n483)Footnote 68. *IRC § 54E(c)(1)*; *IRS Notice 2009-30*.

(n484)Footnote 69. *IRC § 54E(c)(2)*. The state by state allocations for 2010 were announced in *Notice 2010-22, 2010-10 IRB 435*.

(n485)Footnote 70. *IRC § 54E(c)(4)(A)* and *(B)*. In applying the carryover rule, unused allocations are to be treated as used on a first-in, first-out basis. *IRC § 54E(c)(4)(B)*.

(n486)Footnote 71. *IRC § 54(F)(c)*. The QSCB is also the latest qualified tax credit bond to be created by Congress, authorized by the addition of 54F to the Code by section 1521 (a) of ARRA of 2009.

(n487)Footnote 72. Part of the proceeds of such an issue may also be used to acquire land on which such a facility is to be constructed. *IRC § 54F(a)(1)*.

(n488)Footnote 73. Large local educational agencies qualifying for allocations are to be determined by the Treasury in two steps. Qualifying first are the 100 local educational agencies with the largest numbers of children aged 5 through 17 who are from families living below the poverty level. *IRC § 54(F)(d)(E)(i)*. Next, the Treasury is to add not more than 25 local educational agencies chosen by the Secretary of Education (not including any of the 100 selected in the first step) as being in particular need of assistance based on a low level of resources for school construction, a high level of enrollment growth, or such other factors as the Treasury deems appropriate. *IRC § 54(F)(d)(E)(ii)*; *Notice 2009-35*, § 2.02.

(n489)Footnote 74. *IRC § 54(F)(d)(2)(C)* and *(D)*.

(n490)Footnote 75. *IRC § 54(F)(d)(1)*. The statute also provides special rules for making allocations to possessions of the United States (other than Puerto Rico) and for Indian schools. *IRC §§ 54(F)(d)(3)* and *(4)*.

(n491)Footnote 76. *IRC § 54(F)(e)*. A carryover is also made available to Indian tribal governments with respect to excess allocations of QSCBs for Indian schools. No carryover is allowed for excess allocations to a large local educational agency, unless such excess was reallocated back to the State.

(n492)Footnote 77. *Id.*

(n493)Footnote 78. Only qualified forestry conservation bonds (QFCBs) authorized by *IRC § 54B* are not eligible for the direct interest reimbursement option. However, an issuer that receives an allocation to issue QFCBs may elect instead to receive 50 percent of the allocation in the form of a direct cash payment from the federal government for use in purchasing forest land. See § 17.02[12][b], *supra*.

(n494)Footnote 79. See §§ 17.02[13] and [14], *infra*, for a discussion of Build America and recovery zone bonds.

(n495)Footnote 80. See § 301 of the Hiring Incentives to Restore Employment Act, Pub L No 111-147, 124 Stat 71 (2010) (the HIRE Act"), adding IRC § 6431(f) to the Code.

(n496)Footnote 81. Notice 2010-35, 2010-19 IRB 660 , provides guidance on the refundable tax credit payment procedures for this option, required elections, information reporting, and other interim guidance. The irrevocable election to receive reimbursement of interest must be made on the books and records of the issuer on or before the issue date of the bonds. Notice 2010-35, § 4. A new IRS Form 8038-TC must be filed at least 30 days before filing requests for reimbursement of interest costs on Form 8038-CP. Notice 2010-35, § 5.

(n497)Footnote 82. IRC § 6431(f)(1)(C).

(n498)Footnote 83. As provided by IRC § 54A(b)(3), this is the rate which the Secretary estimates would permit issuance of bonds with the same maturity or redemption date without discount and without interest cost to the bond issuer, assuming federal tax credits at such rate were allowed to holders of the bonds. See § 17.02[12][a], fn 9, for a description of the manner in which the IRS has announced applicable credit rates will be calculated.

(n499)Footnote 84. IRC § 6431(f)(2). The lower reimbursement rate is consistent with the lower federal tax credits allowed to holders of CREBs and QECBs when the direct reimbursement option is not exercised by the issuer.

(n500)Footnote 85. The effective date of new IRC § 6431(f) is the date of enactment of the HIRE Act. See § 301(c)(1) of Pub L No 111-147.

(n501)Footnote 86. IRC § 6431(a), IRC § 6431(f)(1)(B).

(n502)Footnote 1. IRC § 54AA(a) and (b). If the credit is issued to the issuer rather than the holder, the bond must also be a "qualified bond;" i.e., a Build America Bond in which the available project proceeds, less amounts in a reasonably required reserve, are used exclusively for capital expenditures. See IRC § 54AA(g), discussed further below. Whether a qualified bond or not, current statutory provisions require that all Build America Bonds be issued before January 1, 2011. IRC §§ 54AA(d)(1)(B) and 54AA(g).

(n503)Footnote 2. IRC § 54AA(d)(1).

(n504)Footnote 3. IRC § 54AA(d)(2)(C). Whether the amount of premium is "de minimis" is to be determined under rules similar to IRC § 1273(a)(3). That subsection provides that original issue discount on a bond will be disregarded if the difference between the stated redemption price at maturity over the issue price is less than 1/4 of 1 percent of the stated redemption price at maturity multiplied by the number of complete years to maturity.

(n505)Footnote 4. IRC § 54AA(d)(2)(A).

(n506)Footnote 5. This rule applies whether the credit is given to the holder of the bond, see IRC § 54AA(d)(2)(B), or the issuer, see IRC § 6431(c).

(n507)Footnote 6. Compare IRC § 54A(b)(3) with IRC § 54AA(b).

(n508)Footnote 7. See HR Conf Rep 111-16, 111th Cong, 1st Sess (February 12, 2009) at 594 and at 593, n 146 (original issue discount is not treated as a payment of interest for purposes of determining the credit); cited in IRS Notice 2009-26, 2009-16 IRB 833, 834 , § 2.2). The Conference Committee anticipates that "Because the credit that the taxpayer claims is also included in income ... State and local issuers will issue bonds paying interest at rates approximately equal to 74.1 percent of comparable taxable bonds ... For example, if a taxable bond of comparable risk pays a \$1,000 coupon and sells at par, then if a State or local issuer issues an equal-sized bond with coupon of \$741, such a bond should also sell at par. The taxpayer who acquires the latter bond will receive an interest payment of \$741

and may claim a credit of \$259 (35 percent of \$741). The credit and the interest payment are both included in the taxpayer's income. Thus, the taxpayer's taxable income from this instrument would be \$1,000. This is the same taxable income that the taxpayer would recognize from holding the comparable taxable bond. Consequently the issuer's bond should sell at the same price as would the taxable bond." HR Conf Rep 111-16 at 594.

(n509)Footnote 8. See *IRC Section 54A(e)(1)*.

(n510)Footnote 9. See *IRC § 54AA(e)*.

(n511)Footnote 10. See *IRC §§ 54A(a)* and *54AA(a)*.

(n512)Footnote 11. *IRC § 54A(c)(1)* and *IRC § 54AA(c)(1)*.

(n513)Footnote 12. *IRC § 54A(c)(2)* and *IRC § 54AA(c)(2)*.

(n514)Footnote 13. See and *IRC § 54AA(f)* and *IRC §§ 54A(f),(g),(h)*, and *(i)*. See also *IRC § 853A* (providing for an election by which RICs may pass through credits on both § 54A and § 54AA bonds to their shareholders).

(n515)Footnote 14. See IRS Notice 2009-26 at 835 , § 2.3. As noted above, the Conference Committee expects that an issuer will be able to set interest rates on tax credit Build America Bonds at a level that is 74.1 percent of the rate it would have to pay if the bonds were fully taxable, giving the issuer an effective subsidy of 25.9 percent of its interest cost. The fact that the subsidy to the issuer is less than the 35 percent credit is due to the fact that the holder must include the full amount of interest (including the credit) on the bond in his gross income. By electing to take the credit itself, however, the issuer can increase the subsidy to the full 35 percent, reducing the issuer's net interest cost in the hypothetical case given in n. 7 (a Build America Bond with the same risk as a taxable bond yielding \$1,000 annually) from \$741 to \$650. HR Conf Rep 111-16 at 594-595.

(n516)Footnote 15. The Conference Report indicates that the refund may be paid by the Treasury either in advance or as reimbursement. HR Conf Rep 111-16 at 595. The IRS has announced that, in 2009, it will issue refunds up to 45 days in advance on fixed rate bonds, and will pay refunds on a reimbursement basis for variable rate bonds. *IRS Notice 2009-26 at 836* , § 3.1. Issuers are required to file Form 8038-CP by the 45th day before the applicable interest payment date, in the case of fixed rate bonds, or by the 45th day after the applicable interest payment date in the case of variable rate bonds. *Id.*

(n517)Footnote 16. *IRC § 54AA(g)(2)(A)*. The House Conference Committee report looks to *Treas Reg § 1.150-1(b)* for a definition of "capital expenditures" (generally, an amount properly chargeable to capital account "under general Federal income tax principles"), and provides that for purposes of determining whether proceeds are used for capital expenditures an issuer should be treated as though it were a corporation subject to taxation under Subchapter C. H R Conf Rep. 111-16 at 594, n 147. An eligible financing of capital expenditures includes a reimbursement of capital expenditures under the reimbursement rules contained in *Treas Reg § 1.150-2*. However, qualified bonds may not be issued to refinance capital expenditures in "refunding issues (as defined in *Treas Reg § 1.150-1*)." For this purpose, an issue of qualified bonds used to reimburse otherwise-eligible capital expenditures that were paid or incurred after the effective date of ARRA of 2009, and that were financed originally with temporary short-term financing issued after such effective date, will not be treated as a "refunding issue." *IRS Notice 2009-26 at 835* , § 2.3.

(n518)Footnote 17. *IRS Notice 2009-26 at 835* , § 2.3). *IRC § 148(d)(2)* provides, for purposes of applying the arbitrage rules and specifically the rule under *IRC § 148(d)(1)* allowing higher yielding investments in a reasonably required reserve or replacement fund, that "a bond issued as part of an issue shall be treated as an arbitrage bond if the amount of the proceeds from the sale of such issue which is part of any reserve or replacement fund exceeds 10 percent of the proceeds of the issue (or such higher amount which the issuer establishes is necessary to the satisfaction of the Secretary)." "Accordingly, a Build America Bond (Direct Payment) will be an arbitrage bond if the amount of the sale proceeds of such an issue that is part of any reserve or replacement fund exceeds 10 percent of the proceeds. As such,

the interest on such bond would not be tax-exempt under *IRC § 103* and thus would not be a qualified bond for purposes of this provision. [HR Conf Rep. 111-16 at 596, n 150.]" *IRS Notice 2009-26 at 835* , § 2.3.

(n519)Footnote 1. See § 1531 of Title I of Division B of ARRA 2009.

(n520)Footnote 2. *IRC § 1400U-2(b)*.

(n521)Footnote 3. *IRC § 1400U-2(b)*.

(n522)Footnote 4. *IRC § 1400U-2(a)*.

(n523)Footnote 5. See *IRC §§ 1400U-2(b)(2)* and *1400U-1*.

(n524)Footnote 6. *IRC § 1400U-2(b)(1)(A)*. See §§ *17.03[14][a]* and *17.03[15]* for a discussion of "available project proceeds" and "reasonably required reserve."

(n525)Footnote 7. Although RZEDBs must qualify as Build America Bonds, they do not need to be "Qualified Bonds" within the meaning of *IRC § 54AA(g)*, even though they are "treated" as Qualified Bonds for purposes of obtaining the direct credit under *IRC § 6431*. Thus, the proceeds of an RZEDB are not limited to use for capital expenditures.

(n526)Footnote 8. *IRC § 1400U-1(b)*.

(n527)Footnote 9. *IRC §§ 1400U-2(b)(1)(B)* and *1400U-2(b)(2)*.

(n528)Footnote 10. See § *17.03[3][b]*. See also HR Conf Rep. 111-16, 111th Cong, 1st Sess (Feb 12, 2009) at 601.

(n529)Footnote 11. The amount of bonds an issuer may designate as RZFBs may not exceed that issuer's allocated share of the national limitation on RZFBs, which is \$15 billion, *IRC § 1400U-1(a)(4)(B)*. *IRC § 1400U-3(b)(2)*. The method of allocation is discussed below. See *IRC § 1.1400U-1*.

(n530)Footnote 12. *IRC § 1400U-3(c)(1)*. Rules similar to the rules of *IRC §§ 1397D(a)(2)* and *1397D(b)*, regarding substantial renovations and sale and leasebacks of property, respectively, are to apply for purposes of determining whether property qualifies as "recovery zone property." *IRC § 1400U-3(c)(3)*.

(n531)Footnote 13. *IRC § 1400U-3(c)(2)*.

(n532)Footnote 14. *IRC § 1400U-3(d)*; HR Conf Rep 111-16 at 601.

(n533)Footnote 15. *IRC § 1400U-1(a)(1)(A)*.

(n534)Footnote 16. *IRC § 1400U-1(a)(2)*.

(n535)Footnote 17. *IRC § 1400U-1(a)(1)(B)*.

(n536)Footnote 18. A "large municipality" is one with a population of 100,000 or more. *IRC § 1400U-1(a)(3)(B)*.

(n537)Footnote 19. *IRC § 1400U-1(a)(3)(A)*.

(n538)Footnote 20. *IRC § 1400U-1(a)(3)(C)*.

(n539)Footnote 21. *IRC § 1400U-1(a)(3)(A)*.

(n540)Footnote 1. See Notice 88-130, *1988-2 CB 543* , § 1.1; *Notice 2008-41, 2008-1 CB 742, 743* , § 2 ("Subject

to limited exceptions, a debt instrument generally is treated as retired or extinguished when, among other circumstances, an issuer acquires its own debt because a merger of the interests of the issuer and the holder occurs.")

(n541)Footnote 2. See Chapter 1, § 1.02[3][a][ii].

(n542)Footnote 3. See Notice 2008-41, 2008-1 CB 742, 744 , § 3.1. See also *Notice 2008-41, 2008-1 CB 742, 743-744* , § 2:

" ... A reissuance of an issue of tax-exempt bonds may result in various negative consequences to a bond issuer, including, among other things, changes in yield for purposes of the arbitrage investment restrictions, acceleration of arbitrage rebate payment obligations, deemed terminations of integrated interest rate swaps under the qualified hedge rules for arbitrage purposes, new public approval requirements for qualified private activity bonds, and change in law risk.

* * *

A borrowing, whether taxable or tax-exempt, that is treated as retiring or reissuing a separate borrowing, generally constitutes an issue of refunding bonds which are viewed as financing the same governmental purpose or project as the original bonds (or "stepping into the shoes") of the original bonds) and trigger consequences involving the need to retest certain tax-exempt bond program requirements.

Tax-exempt bonds that are treated as retired through a debt extinguishment without a link to another borrowing, such as potentially an issuer's purchase of its own tax-exempt bonds using equity or other non-borrowed funds, may trigger additional consequences, including the potential[ly] adverse consequence of generally limiting the ability to refinance those extinguished bonds later with tax-exempt refunding bonds for the same governmental purpose as the original bonds."

(n543)Footnote 4. See fn 1, *supra*. *Notice 2008-41* clarified, amended, supplemented and superseded *Notice 2008-27, 2008-1 CB 543*, the IRS's previous guidance on these issues.

(n544)Footnote 5. See fn 1, *supra*.

(n545)Footnote 6. Another interest rate mode used is an auction rate mode in which the interest rate is reset at predetermined intervals (generally under one year) using a modified Dutch auction process in which the issuer of the bonds may participate in certain circumstances. Auction rate bonds generally trade at par and are callable at par on any interest payment date at the option of the issuer. Unlike bonds in a tender option mode, bonds in an auction rate mode have no ongoing tender options or put options to support the interest rate-setting process. A third type of interest rate mode is a variable rate which floats periodically in accordance with various market-based interest-rate setting mechanisms. Issuers often include multi-modal interest rate features in the preauthorized terms of the bond documents which provide issuers with the flexibility to change interest rate modes under conditions set forth in the bond documents. See Notice 2008-41, 2008-1 CB 742, 743-744 .

(n546)Footnote 7. See Notice 2008-41, 2008-1 CB 742, 743 .

(n547)Footnote 8. See fn 3, *supra*.

(n548)Footnote 9. See Notice 2008-41, 2008-1 CB 742, 744 , § 3.2(1).

(n549)Footnote 10. As defined in *Treas Reg § 1.1275-5(b)*. In general, a variable interest rate is a qualified floating rate if variations in the value of the rate can reasonably be expected to measure contemporaneous variations in the cost of newly borrowed funds in the currency in which the debt instrument is denominated. See § 17.02A[2][d], *supra*.

(n550)Footnote 11. Under *Treas Reg § 1.1275-5(c)(1)*, an objective rate is any rate determined using a single fixed formula based on objective financial or economic information. However, under *Treas Reg § 1.1275-5(c)(5)*, a rate can only be an "objective rate" in the case of a tax-exempt obligation if it is a "qualified inverse floating rate" (i.e., a rate that varies inversely with contemporaneous variations in a qualified floating rate (*Treas Reg § 1.1275-5(c)(3)*) or is a "qualified inflation rate" (i.e., a rate that measures contemporaneous changes in inflation based on a general inflation index).

(n551)Footnote 12. The 120 percent weighted average economic life of financed facilities test under *IRC § 147(b)* can be used as a safe harbor for this purpose.

(n552)Footnote 13. See Notice 2008-41, 2008-1 CB 742, 744-745 , § 3.2(2).

(n553)Footnote 14. Notice 2008-41, 2008-1 CB 742, 745 , § 3.1.

(n554)Footnote 15. See Notice 2008-41, 2008-1 CB 742, 745 , § 3.2(3)(a)).

(n555)Footnote 16. Notice 2008-41 (Section 3.1), 2008-1 CB 742, 744 . The safe harbor is effective for purposes of *IRC §§ 103 and 141-150* only. It does not, for example, apply for purposes of determining whether discount on a remarketed qualified tender bond should be treated as original issue discount or market discount for purposes of *IRC §§ 1271-1288*. See "Bond Lawyers Comment on State and Local Bonds Reissuance Standards," 2008 TNT 134-15 (July 10, 2008); Notice 2008-88, 2008-2 CB 933 , § 3.3 (no inference should be drawn regarding any other Federal tax issues affecting tax-exempt bonds or any other security).

(n556)Footnote 17. Recall that a qualified tender right must, in accordance with the terms of the bond instrument, require the issuer (or its remarketing agent) to use best efforts to resell the tendered bond.

(n557)Footnote 18. Defined in Notice 2008-41 as an issuer of a tax-exempt bond that is a governmental unit or an agency or instrumentality thereof. Notice 2008-41 (Section 3.2(b)(4)), 2008-1 CB 742, 745 .

(n558)Footnote 19. Notice 2008-41, 2008-1 CB 742 originally allowed a 180 period only to qualified tender bonds purchased by the governmental issuer before October 1, 2008. Notice 2008-41, 2008-1 CB 742, 745, § 3.2(b)(3). The purchase date was extended to December 31, 2009 by Notice 2008-88, 2008-2 CB 933 , § 3.2, and extended again, to December 31, 2010, by Notice 2010-7, 2010-3 IRB 296 , § 3.2.

(n559)Footnote 20. Since the bond is still considered outstanding during the safe harbor period, the governmental issuer may refund the reacquired bond with a refunding bond during this period upon a failed remarketing. Notice 2008-41, 2008-1 CB 742, 745 , § 3.2(3)(b).

(n560)Footnote 21. Notice 2008-41, 2008-1 CB 742, 745 , § 3.2(b)(3)).

(n561)Footnote 22. *Treas Reg § 1.150-1(c)(4)(ii)*. A program will be deemed to satisfy the maximum term requirement if the weighted average maturity of the issue does not exceed 120 percent of the weighted average expected economic life of the property financed by the issue.

(n562)Footnote 23. Notice 2008-41 , § 8.

(n563)Footnote 24. Notice 2008-88 , § 3.1. Literally construed, this language would require governmental issuers who reacquired tender option bonds or tax-exempt commercial paper under the terms of the Notice 2008-41 safe harbor to dispose of such reacquired bonds by December 31, 2010, regardless of the amount of time left in their safe harbor holding period. At best, it would appear to end on December 31, 2010 the exception for qualified tender bonds initially created by Notice 88-130, 1988-2 CB 543 (and extended to tax-exempt commercial paper by Notice 2008-88) even using a 90-day (or, under Notice 88-130, 30 -day) safe harbor holding period.

(n564)Footnote 25. See Notice 2008-41, *2008-1 CB* 742, 746 , § 7, Examples 1 and 2.

(n565)Footnote 1. Obligations of the US are not subject to state and local income or property taxes. *31 USC* § 742.

(n566)Footnote 2. The last pre-March 1, 1941 issue was called for redemption in 1962. Treasury Department Release, Aug 14, 1962, *27 Fed Reg* 8124 (1962) .

(n567)Footnote 3. *IRC* § 135(a), (c)(2). Contributions to qualified tuition programs and education IRAs also qualify. The amount of qualified educational expenses taken into account is net of any scholarships, fellowships, employer provided educational assistance amounts, and other tuition reduction benefits and does not include expenses for any course involving sports, games, or hobbies other than as part of a degree program. The amount of qualified educational expenses must also be reduced by the amount of expenses taken into account in determining the Hope and lifetime learning credits and the amount of expenses taken into account in determining the exclusion for distributions from a qualified tuition program or an education IRA. *IRC* § 135(d)(2).

The bonds must be redeemed by the owner, rather than being transferred to the educational institution. HR Rep No 1104, 100th Cong, 2d Sess 141 (1988).

(n568)Footnote 4. *IRC* § 135(c)(1). HR Rep No 1104, 100th Cong, 2d Sess 141 (1988). However, the taxpayer can designate any individual (including a child) as a beneficiary of the bond (payable at death). *IRS Notice* 90-7, *1990-1 CB* 304.

(n569)Footnote 5. *IRC* § 135(d)(3).

(n570)Footnote 6. *IRC* § 135(b)(1). The taxpayer would be well advised, however, to defer if possible redeeming a portion of the bonds to a year in which the redemption proceeds will be fully shielded from taxation by qualified educational expenses.

(n571)Footnote 7. For taxable years beginning in 2010, the exclusion begins to phase out for married couples filing jointly with modified adjusted gross income (MAGI) above \$105,100 and for other filers with MAGI above \$70,100. The exclusion is completely phased out for taxpayers with MAGI of \$135,100 or more for joint returns and \$85,100 or more for other returns. See Rev Proc 2009-50, *2009 IRB LEXIS* 652, *12-13 .

(n572)Footnote 8. *IRC* § 135(b)(2)(A).

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions § 17.03

§ 17.03 Bonds With Original Issue Discount

[1] Original Issue Discount Defined.

We have already seen how the Internal Revenue Code imputes interest into a loan transaction when the parties fail to provide adequate stated interest in the contract or debt instrument.ⁿ¹ That discussion primarily concerned sales of property made in exchange for a wholly or partially deferred consideration, which in some cases results in the substitution of interest income for what otherwise would have been reported as capital gain on the property sold. The focus of the following discussion is not on the character of income received in a debt-financed sale of property, but on the method by which the seller or any other holder of a debt instrument (whether acquired for cash or property) takes imputed interest into income, and a purchaser or other issuer of a debt instrument amortizes or deducts the imputed interest over time.ⁿ²

This section is principally concerned with the tax treatment of original issue discount or "OID," which arises when the issuer of a debt instrument accepts less than the instrument's face value at maturity as the issue price.ⁿ³ It is thus distinguishable from market discount, which arises when a debt instrument is issued at par but thereafter sells on the open market at less than par due to independent market forces.ⁿ⁴ After briefly reviewing the meaning of terms used in the Code's OID provisions (*IRC Sections 1271-1275*),ⁿ⁵ this section will examine the tax treatment of OID.

OID is defined as the excess of a debt instrument's stated redemption price at maturity over its issue price.ⁿ⁶ The stated redemption price at maturity is sum of all payments provided by the debt instrument other than qualified stated interest payments.ⁿ⁷ Accordingly, the stated redemption price at maturity will be the same as the stated principal amount or face value of the debt instrument as long as all payments under the instrument are either fixed payments of principal or "qualified stated interest" payments; *i.e.*, interest that is unconditionally payable at least annually at a single fixed rate.ⁿ⁸ Interest is unconditionally payable only if reasonable legal remedies exist to compel timely payment, or the debt instrument provides terms and conditions that make the likelihood of late payment (other than a late payment that occurs within a reasonable grace period) or nonpayment a remote contingency.ⁿ⁹ Remedies or other terms and conditions are not taken into account if the lending transaction does not reflect arm's-length dealing and the holder does not intend to enforce the remedies or other terms and conditions.ⁿ¹⁰

The "issue price" of publicly offered debt instruments not issued for property is the initial offering price to the public (excluding bond houses and brokers) at which a substantial amount of the instruments comprising the issue was

sold.ⁿ¹¹ If the bonds are privately placed and not issued for property, the issue price is determined on a bond-by-bond basis, and is the amount paid for the particular obligations by the first buyer thereof.ⁿ¹² For this purpose, property includes services and the right to use property, but does not include money.ⁿ¹³ Notwithstanding the difference in the statutory language of issue price between publicly offered and privately issued instruments issued for money, the regulations fix the issue price of each debt instrument in an issue at the first price at which a substantial amount of the debt instrument is sold for money.ⁿ¹⁴

A special rule applies to Treasury securities. Generally, the issue price of an issue of Treasury securities is the average price of the securities sold; the issue date of the issue is the first settlement date of a substantial amount of the securities.ⁿ¹⁵ Additional Treasury securities issued in a qualified reopening are part of the same issue as the original Treasury securities and have the same issue price and issue date, and (with respect to holders) the same adjusted issue price as the original Treasury securities.ⁿ¹⁶ A qualified reopening on or after March 13, 2001, is a reopening that occurs not more than one year after the original Treasury securities that were first issued to the public, or a reopening in which the additional Treasury securities are issued with no more than a *de minimis* amount of OID.ⁿ¹⁷ For a reopening of Treasury securities that occurred before March 13, 2001, a qualified reopening is one that occurs not more than one year after the original Treasury securities were issued to the public.ⁿ¹⁸ However, for a reopening of Treasury securities (other than Treasury Inflation-Indexed Securities) that occurred before November 5, 1999, an additional requirement of a qualified reopening was that it was intended to alleviate an acute, protracted shortage of the original Treasury securities.

Generally, two or more debt instruments that are not Treasury securities are treated as part of the same issue if (1) they have the same credit and payment terms, (2) are issued either pursuant to a common plan or as part of a single transaction or a series of related transactions, (3) are issued within a period of 13 days beginning on the date on which the first debt instrument that would be part of the issue is issued to a person other than a bond house, broker, or similar person or organization acting in the capacity of an underwriter, placement agent, or wholesaler, and (4) are issued on or after March 13, 2001.ⁿ¹⁹ However, additional debt instruments issued in a qualified reopening are part of the same issue as the original debt instruments.ⁿ²⁰ As a result, the additional debt instruments have the same issue date, the same issue price, and (with respect to holders) the same adjusted issue price as the original debt instruments.

A qualified reopening is a reopening of original debt instruments if the reopening occurs within six months after the issue date of the original debt instruments or the additional debt instruments are issued with no more than a *de minimis* of OID.ⁿ²¹ For both reopenings, the original debt instruments must be publicly traded. For the six-month reopening, an additional requirement is that, on the date on which the price of the additional debt instruments is established (or, if earlier, the announcement date), the yield of the original debt instruments (based on their fair market value) is not more than 110 percent of the yield of the original debt instruments on their issue date (or, if the original debt instruments were issued with no more than a *de minimis* amount of OID, the coupon rate).ⁿ²²

For this purpose, original debt instruments are debt instruments comprising any single issue of outstanding debt instruments.ⁿ²³ Additional debt instruments are debt instruments that are part of a single issue of debt instruments, are not part of the same issue as the original debt instruments, and have terms that are in all respects identical to the terms of the original debt instruments as of the reopening date.ⁿ²⁴

If a substantial amount of the debt instruments in an issue is traded on an established securities market and is issued for property, the issue price of each debt instrument in the issue is the fair market value of the debt, determined as of the issue date (the first date on which a substantial amount of the traded debt instruments in the issue is issued).ⁿ²⁵

If a substantial amount of the debt instruments in an issue (a) is issued for stock or securities that are publicly traded, or (b) is issued for property (other than stock or securities) of a kind regularly traded on an established market, the issue price of the instrument is the fair market value of the property.ⁿ²⁶

In other cases in which obligations are issued for property, the issue price may be the redemption price at maturity, the stated principal amount, or the imputed principal amount (the present value of all payments due under the instrument).ⁿ²⁷

IRC Section 1274 determines the issue price of a debt instrument issued for property when neither the debt instrument nor the property is publicly traded. Under that section, no interest is imputed if the debt instrument calls for the unconditional payment of interest at a rate that is at least equal to a safe harbor or test rate based on the "applicable federal rate" or AFR.ⁿ²⁸ If there is adequately stated interest--the safe-harbor rate is satisfied--the issue price of the obligation is its stated principal amount.ⁿ²⁹ If not, its issue price will be an imputed principal amount calculated by discounting all payments due under the instrument by a rate equal to the AFR.ⁿ³⁰ However, in a potentially abusive situation (where, for example, the debt instrument is part of a tax shelter as defined in *IRC Section 6662(d)(2)(C)(ii)*) the imputed principal amount will be equal to the fair market value of the property for which the obligation was given.ⁿ³¹

If an obligation is issued as part of an investment unit consisting of the debt instrument and an option, security, or other property, the issue price for the entire unit is determined as if it were a debt instrument. That issue price is then allocated to each element of the unit on the basis of relative fair market values, with the issue price of the debt instrument included in the unit being its allocated price.ⁿ³²

If the debt instrument is issued pursuant to a plan of reorganization for another debt instrument, and the amount that would be the issue price of the new instrument is less than the adjusted price of the old instrument, the issue price of the new obligation is deemed to be equal to the adjusted issue price of the old one.ⁿ³³

[2] Tax Treatment of Original Issue Discount Bonds.

[a] In General.

The tax treatment of original issue discount bonds depends on the status of the issuer and the date of issuance. The holder of a bond issued by a corporation on or before May 27, 1969, takes OID into account when the bond is retired at maturity or sold prior to maturity.ⁿ¹ For corporate bonds issued after May 27, 1969 and before July 2, 1982 (and to bonds issued thereafter pursuant to a written commitment binding on July 1, 1982), *IRC Section 1272(b)* requires the holder to include the monthly portion of OID in income on a ratable basis over the life of the bond. The ratable portion is determined by dividing the OID by the number of complete months from the date of original issue--the date on which the issue was first sold to the public at the issue price, or if sold privately for money, the date on which each bond was sold by the issuer--to the stated maturity date of the obligation.ⁿ² A complete month "commences with the date of original issue and the corresponding day of each succeeding month. ... "ⁿ³

A subsequent purchaser of the bond must report the amount of OID not previously included by prior holders. However, if the subsequent holder's cost for the bond is in excess of (1) the issue price of the bond, and (2) the portion of the OID previously includable in income by any other holder of the bond, such excess reduces the amount of unearned discount otherwise includable in gross income.ⁿ⁴ If the subsequent holder purchases the bond at a premium, the purchaser is not required to include any OID in gross income.ⁿ⁵

Example 1:

On January 1, 1981, A purchased a newly issued 20-year \$10,000 corporate bond for \$6,400. The instrument did not provide for the payment of interest prior to maturity. For A, the ratable monthly portion of OID was \$15. A sold the bond to B on January 1, 1984 for \$7,450. B's cost exceeded \$6,940 (the sum of (i) \$6,400 the original issue price of the bond, and (ii) \$540, the amount of OID included in income by A during the three-year period that A held the bond) by \$510. This reduced the unreported

OID of \$3,060 to \$2,550, making *B*'s ratable monthly portion of OID only \$12.50.

The holder of an original issue discount debt instrumentⁿ⁶ that is a capital asset in the hands of the holder and is issued after July 1, 1982, must include in income "an amount equal to the sum of the daily portions of the original issue discount for each day during the taxable year on which [the] holder held [the] debt instrument."ⁿ⁷ Certain debt instruments are excepted from the ambit of this rule, namely, (1) tax-exempt obligations; (2) United States Savings Bonds; (3) obligations issued by natural persons before March 2, 1984; (4) loans by a natural person to another natural person if not made in the course of a trade or business and if the aggregate of loans by the lender to the borrower does not exceed \$10,000; and (5) obligations with a maturity date of not more than one year after the issue date.ⁿ⁸

The daily accrual of income called for by the Code is accomplished by allocating to each day in any accrual period its ratable portion of the increase in the adjusted issue price of the debt instrument during the accrual period.ⁿ⁹ This increase is found by multiplying the adjusted issue priceⁿ¹⁰ at the beginning of the period by the yield to maturity (determined on the basis of compounding at the close of each accrual period) and then subtracting the interest payable on the instrument during the accrual period. The steps in determining the amount of OID includable in income for the taxable year are: (1) determine the debt instrument's yield to maturity; (2) determine the accrual periods; (3) determine the OID allocable to each accrual period; (4) determine the daily portions of OID; and (5) add together the daily portions of OID for each day during the taxable year on which the taxpayer held the debt instrument.ⁿ¹¹

Example 2:

On January 1, 1997, *A* pays *X Corp.* \$600,000 for a five-year bond that is to be redeemed at maturity for \$1 million. The bond does not provide for stated interest payments. The amount of OID is \$400,000 the difference between the stated redemption price at maturity (\$1 million) and the issue price (\$600,000). The yield to maturity is approximately 10.48 percent, compounded semiannually. (The yield to maturity is the discount rate that, when used in computing the present value of all principal and interest payments to be made under the debt instrument, produces an amount equal to the issue price of the debt instrument; the yield must be constant over the term of the debt instrument.)ⁿ¹² The amount of interest for each year is determined by multiplying the adjusted issue price by the yield to maturity, as shown in the following table. This interest is includable in the income of the holder and deductible by the borrower.

Year	Interest	Adjusted Issue Price
1	\$64,540	\$664,540
2	71,482	736,022
3	79,171	815,193
4	87,687	902,880
5	97,120	1,000,000

A subsequent holder of the bond is allowed a reduction in the amount includable in income if the purchase price exceeds the issue price plus the daily portions of original issue discount for all days before the date of purchase.ⁿ¹³ This reduction also occurs on a daily basis, the amount of the offset determined by multiplying the daily portion by a fraction, the numerator of which is the excess price and the denominator of which is the sum of the daily portions for the debt instrument for all days after the date of purchase and ending on the stated maturity date.ⁿ¹⁴

IRC Section 1272(a)(6) prescribes a special rule for determining the daily portion of regular interests in a REMIC (see Chapter 13A), qualified mortgages held by a REMIC, any other debt instrument on which payments may be accelerated by reason of prepayments of other obligations securing the debt instrument, or any pool of debt instruments the yield on which may be affected by reason of prepayments (or to the extent provided in regulations, by reason of other events).

The present value calculation for such interests and instruments is made by (1) using the yield to maturity determined at the time of issuance (determined on the basis of compounding at the close of each accrual period and properly adjusted for the length of the accrual period), calculated on the assumption that, as prescribed by regulations, certain prepayments will occur, and (2) taking into account any prepayments that have occurred before the close of the accrual period.ⁿ¹⁵

Accounting for OID in a case governed by *IRC Section 1274* can be illustrated by the following example:

Example 3:

Seller sells property to Buyer for \$5 million under a three-year note with interest at 5 percent, payable annually. Assume that the applicable federal short-term rate at the time of the transaction is 6 percent, compounded semi-annually. The includable and deductible OID equals the interest on the issue price at a rate of 6 percent compounded semiannually, less the amount of stated interest paid during the year. Thus:

Year	Adjusted Issue Price	Yield at 12%	Stated Interest	OID
1	\$4,854,700	\$295,600	\$250,000	\$45,600
2	4,900,300	298,400	250,000	48,400
3	4,948,700	301,300	250,000	51,300
		\$895,300	\$750,000	\$145,300

The OID rules can affect the timing of interest income inclusion and interest expense deduction even though the debt instrument provides for sufficient stated interest, as the following example illustrates:

Example 4:

Seller sells nonpublicly traded property to Buyer for \$5 million. The purchase price is represented by a three-year note bearing interest at 6 percent, compounded semiannually. The entire purchase price (\$5 million) and all of the interest (\$970,261) are payable at the end of the three-year period. The applicable federal short-term rate is 6 percent. Since the interest rate called for in the note equals the safe-harbor rate, there is adequate stated interest. However, the interest must be accrued annually, as follows:

Year	Adjusted Issue Price	Yield at 12%	OID
1	\$5,000,000	\$304,500	\$304,500
2	5,304,500	323,044	323,044
3	5,627,544	342,717	342,717
		\$970,261	\$970,261

Although *IRC Section 1272* does not apply to a short-term obligation--a debt instrument that has a fixed maturity date not more than one year from the date of issuance¹⁶--*IRC Section 1281* requires certain holders of such an obligation (other than a tax-exempt short-term obligation) to include in gross income the sum of the daily portions of the acquisition discount (the excess of the stated redemption price at maturity over the taxpayer's basis¹⁷) for each day during the taxable year on which the taxpayer held the obligation, while any interest on the obligation (other than interest taken into account in determining the amount of acquisition discount) must be included in income as it accrues.ⁿ¹⁸ Normally the daily portion is determined by dividing the discount amount by the number of days beginning after the day on which the taxpayer acquired the obligation and continuing up to and including the day of maturity.ⁿ¹⁹ However, the taxpayer can elect to accrue economically at a constant interest rate on the basis of the taxpayer's yield to

maturity, compounding daily.ⁿ²⁰ The amount included in gross income increases the basis of the short-term obligation.ⁿ²¹

IRC Section 1281 applies generally just to short-term obligations held by: (1) any taxpayer using an accrual method of accounting; (2) a taxpayer for sale to customers in the ordinary course of the taxpayer's trade or business; (3) a bank;ⁿ²² (4) a regulated investment company or common trust fund; or (5) a taxpayer who identifies the obligation as being part of a hedging transaction under *IRC Section 1256(e)(2)*.ⁿ²³ The provision also applies to any stripped bond or stripped coupon held by the person who stripped the bond or coupon (or by any other person whose basis is determined by reference to the basis in the hands of the stripping person). In addition, *IRC Section 1281* will apply to any obligation held by pass-thru entities (eg, partnerships, corporations, limited liability companies, or trusts) that are formed or availed of for purposes of avoiding the provisions of the section, or to any short-term obligation acquired by a pass-thru entity during a period beginning with the first taxable year in which 20 percent or more of the value of the interests in the pass-thru entity are held for at least 90 days by persons subject to the provisions of *IRC Section 1281* or by other pass-thru entities to which the section applies.ⁿ²⁴

A taxpayer, not otherwise subject to *IRC Section 1281*, can elect to be subject to its provisions.ⁿ²⁵ If the election is made, it applies to all short-term obligations acquired by the taxpayer on or after the first day of the first taxable year to which the election applies. Once made, the election cannot be revoked.

The rules governing corporate original issued discount bonds issued after July 1, 1982, apply with equal force to government bonds except tax-exempt bonds, United States savings bonds, and short-term government obligations (obligations issued on a discount basis and payable without interest no later than one year from the date of issue).ⁿ²⁶

A cash-basis taxpayer, holding a noninterest-bearing government obligation issued at a discount and redeemable for fixed amounts at stated intervals is not required to include the annual increase in the redemption price in income for the taxable year.ⁿ²⁷ Instead, the time for reporting the income comes when the bond is redeemed.ⁿ²⁸ Moreover, inclusion of the accrued discount can be deferred further if the obligation is held beyond maturity, or exchanged for another nontransferable obligation of the United States in a tax-free exchange governed by *IRC Section 1037*.ⁿ²⁹

The taxpayer can elect to change this treatment and report the yearly increase in redemption price as income received in such year.ⁿ³⁰ If the election is made, it applies to all obligations owned by the taxpayer at the beginning of the taxable year to which the election first applies, and to all obligations thereafter acquired, and is binding for all subsequent years unless the Commissioner permits a change to a different method.ⁿ³¹ The amount includable in income in the first year to which the election applies is not limited to the increase in redemption price for that year; the taxpayer who holds noninterest-bearing discount obligations at the beginning of the year of election is also required to report the previous increase in redemption price of those obligations (the increase occurring between the date of acquisition and the first day of the election year) as income in such year.ⁿ³² Furthermore, if the previously acquired obligation is a nontransferable, noninterest-bearing obligation acquired in exchange for a savings bond, the taxpayer's year of election income includes not only the increase in redemption price of the obligation then held, but also the increase in redemption price of the savings bond between the date of its acquisition and the date of exchange.ⁿ³³

There is one category of noninterest-bearing government obligations issued on a discount basis as to which the election cannot be made, namely, those with a maturity date not exceeding one year from the date of issue, eg, Treasury bills. Under *IRC Section 454(b)*, "the amount of discount at which such obligation is sold shall not be considered to accrue until the date on which such obligation is paid at maturity, sold, or otherwise disposed of." The rule of *IRC Section 454(b)* must be considered in light of the discussion above of *IRC Section 1281*; *IRC Section 454(b)* will not apply if *IRC Section 1281* is operative.

[b] Contingent Payment Debt Instruments.

The Code is silent regarding the proper treatment of obligations that call for contingent payments. This gap is filled by *Regulations Section 1.1275-4*.ⁿ³⁴ However, the regulations do not define what a contingent payment is, other than by excepting certain debt instruments from the scope of the rules.

Regulations Section 1.1275-4 does not apply to: (1) a debt instrument that has an issue price equal to the stated redemption price at maturity pursuant to *IRC Section 1273(b)(4)* (a nonpublicly traded debt instrument issued for property that is not publicly traded and to which *IRC Section 1274* does not apply); (2) a variable rate debt instrument; (3) a debt instrument subject to *Regulations Section 1.1272-1(c)* (a debt instrument that provides for an alternative payment schedule (or schedules) applicable upon the happening of a contingency or contingencies); (4) a foreign currency debt instrument subject to *IRC Section 988*, except as provided therein or in regulations thereunder; (5) a debt instrument to which *IRC Section 1272(a)(6)* applies (certain interests in or mortgages held by a REMIC and certain other debt instruments with payments subject to acceleration); (6) a debt instrument (other than a tax-exempt obligation) described in *IRC Section 1272(a)(2)* (e.g., United States savings bonds, certain loans between natural persons, and short-term taxable obligations); (7) state-sponsored prepaid tuition plans; or (8) an inflation-indexed debt instrument.ⁿ³⁵

A payment is not contingent merely because of the possibility of impairment by insolvency, default, or similar circumstances, or if, as of the issue date, the contingency is either remote or incidental.ⁿ³⁶ Furthermore, a debt instrument does not provide for contingent payments merely because it contains a right to convert the debt into the stock of the issuer, into the stock or debt of a related party (within the meaning of *IRC Section 267(b)* or *707(b)(1)*), or into cash or other property in an amount equal to the approximate value of such stock or debt.ⁿ³⁷

The regulations employ a noncontingent bond method for all contingent payment debt instruments that are publicly traded or issued for money or publicly traded property.ⁿ³⁸ Under the noncontingent bond method, interest on a debt instrument must be taken into account whether or not the amount of any payment is fixed or determinable in the taxable year. The amount of interest that is taken into account for each accrual period is determined by constructing a projected payment schedule for the debt instrument and applying rules similar to those for accruing OID on a noncontingent debt instrument. If the actual amount of a contingent payment is not equal to the projected amount, appropriate adjustments are made to reflect the difference.

The computation of income, deductions, gain, and loss under the noncontingent bond method requires the following steps.ⁿ³⁹ First, the issuer must determine the comparable yield for the debt instrument as of the instrument's issue date. Then, the issuer must determine a projected payment schedule for the debt instrument as of the instrument's issue date. Next, the daily portions of interest on the debt instrument for a taxable year are determined under normal OID rules; no amount of interest on a contingent debt instrument is qualified stated interest, but must be treated as OID.ⁿ⁴⁰ Finally, adjustments are made to reflect differences between projected and actual contingent payments as described below.

The comparable yield for a debt instrument is the yield at which the issuer would issue a fixed rate debt instrument with terms and conditions similar to those of the contingent payment debt instrument (the comparable fixed rate debt instrument), including the level of subordination, term, timing of payments, and general market conditions.ⁿ⁴¹ For example, if a *Regulations Section 1.1275-6* hedge (or the substantial equivalent) is available, the comparable yield is the yield on the synthetic fixed rate debt instrument that would result if the issuer entered into the *Regulations Section 1.1275-6* hedge. If a *Regulations Section 1.1275-5* hedge (or similar equivalent) is not available, but similar fixed rate debt instruments of the issuer trade at a price that reflects a spread above a benchmark rate, the comparable yield is the sum of the value of the benchmark rate and the spread. In determining the comparable yield, no adjustments are made for the riskiness of the contingencies or the liquidity of the debt instrument. The comparable yield must be a reasonable yield for the issuer and must not be less than the applicable federal rate for the term of the debt instrument.

A rate equal to the applicable federal rate (based on the overall maturity of the debt instrument) is presumed to be the comparable yield if the debt instrument provides for one or more contingent payments not based on market information

and the instrument is part of an issue that is marketed or sold in substantial part to persons for whom the inclusion of interest will not have a substantial effect on their federal tax liability.ⁿ⁴² A taxpayer can overcome the presumption only with clear and convincing evidence that the comparable yield for the debt instrument should be a specific yield that is higher than the applicable federal rate. The presumption cannot be overcome with appraisals or other valuations of nonpublicly traded property. Evidence used to overcome the presumption must be specific to the issuer and must not be based on comparable issuers or general market conditions.

The projected payment schedule includes each noncontingent payment and the projected amount of each contingent payment due on the instrument.ⁿ⁴³ The schedule is determined as of the issue date and remains fixed throughout the term of the debt instrument (except for a contingent payment that becomes fixed more than six months before it is due). In determining the projected amount of contingent payments, the regulations divide the payments into two categories: market-based payments (payments based on market information)ⁿ⁴⁴ and other (or non-market-based) payments.

If a contingent payment is a market-based payment, the projected amount of the contingent payment is the forward price of the payment, that is, an amount one party would agree, as of the issue date, to pay an unrelated party for the right to the payment on the settlement date (eg, the date the contingent payment is to be made).ⁿ⁴⁵ For example, if the right to a contingent payment is substantially similar to an exchange-traded option, the forward price is the spot price of the option (the option premium) compounded at the applicable federal rate from the issue date to the date the contingent payment is due. If a contingent payment is non-market based, the amount of the projected payment is the expected value of the contingent payment as of the issue date.ⁿ⁴⁶

If the projected payment schedule does not produce the comparable yield, the schedule must be adjusted to do so.ⁿ⁴⁷ For example, the adjusted amounts of non-market-based payments must reasonably reflect the relative expected values of the payments and must not be set to accelerate or defer income or deductions. If the debt instrument contains both market-based and non-market-based payments, adjustments are generally made first to the non-market-based payments because more objective information is available for market-based payments.

The projected payment schedule used by the issuer to compute interest accruals and adjustments determines the accruals and adjustments of the holder.ⁿ⁴⁸ The issuer must provide the projected payment schedule to the holder in a manner consistent with the issuer disclosure rules of *Regulations Section 1.1275-2(e)*.ⁿ⁴⁹ If the issuer does not create a projected payment schedule for a debt instrument or the payment schedule set by the issuer is unreasonable, the holder of the debt instrument must determine the comparable yield and the projected payment schedule for the debt, and explicitly disclose this fact and the reason why the holder set its own schedule (eg, why the projected payment schedule prepared by the issuer is unreasonable). Unless otherwise prescribed by the Commissioner, the disclosure must be made on a statement attached to the holder's timely filed return for the taxable year that includes the acquisition date of the debt instrument

The issuer's determination of the comparable yield and projected payment schedule will be respected unless the schedule is unreasonable.ⁿ⁵⁰ A comparable yield or projected payment schedule will generally be considered unreasonable if the schedule is set with a purpose to overstate, understate, accelerate or defer interest accruals on the debt instrument. In determining whether a comparable yield or projected payment schedule is unreasonable, consideration will be given to whether the treatment of the debt instrument will have a significant effect on the issuer's or holder's federal tax liability. For example, if an issuer markets a debt instrument to a holder not subject to federal taxation, the comparable yield will be closely scrutinized and will not be respected unless contemporary documentation shows that the yield is not too high.

The following example illustrates the determination of a comparable yield and a projected payment schedule that uses market-based payments:

Example 1:

On December 31, 1996, A Corp. issues for \$2 million a 10-year debt instrument providing for annual interest payments at 6 percent beginning in 1997, and for a payment at maturity of \$2 million plus the excess, if any, of the price of 20,000 shares of publicly traded stock in an unrelated corporation over \$700,000, or less the excess, if any, of \$700,000 over the price of 20,000 shares of the stock on the maturity date. On the issue date, the forward price to purchase 20,000 shares of stock on the maturity date is \$700,000.

The debt instrument's comparable yield is the yield on the synthetic debt instrument that would result if A Corp. entered into a *Regulations Section 1.1275-6* hedge. In this instance, a *Regulations Section 1.1275-6* hedge is a forward contract to purchase 20,000 shares of the stock on the maturity date. If A Corp. entered into this hedge the resulting synthetic debt instrument would yield 6 percent, compounded annually. This causes the comparable yield on the debt instrument to be 6 percent, compounded annually.

The projected payment schedule for the debt instrument consists of 10 annual payments of \$120,000 and a projected amount for the contingent payment due at maturity. Because the right to the contingent payment is market-based, the projected amount of the contingent payment is the forward price of the payment. The right to the payment is substantially similar to a right to a payment of \$2 million coupled with a cash-settled forward contract for the purchase of 20,000 shares of stock for \$700,000 on the maturity date. Because the forward price to purchase 20,000 shares of stock on the maturity date is \$700,000, the amount to be received or paid under the forward contract is projected to be zero. Thus, the projected amount of the contingent payment at maturity is limited to the \$2 million base price.

If, on the issue date, the forward price to purchase the 20,000 shares of stock on the maturity date is \$740,000, the resulting synthetic debt instrument would yield 6.15 percent, compounded annually, producing a comparable yield for the debt instrument of 6.15 percent, compounded annually. The projected payment for the debt instrument consists of 10 yearly payments of \$120,000 and a projected amount for the contingent payment of \$2,040,000, consisting of the \$2 million base price and the excess of \$40,000 of the forward price of the stock over the purchase price of the stock under the forward contract.

If the forward price to purchase the stock on the maturity date is less than \$700,000, the comparable yield will be less than 6 percent. The projected payment schedule will continue to consist of 10 annual payments of \$120,000, but the projected amount for the contingent payment at maturity will be reduced below \$2 million by the amount of the excess of the purchase price of the stock under the forward contract over the forward price of the stock.

The following example illustrates the determination of the comparable yield and projected payment schedule with non-market-based contingent payments:

Example 2:

A corporation issues a four-year \$2 million debt instrument that has a stated principal amount of \$2 million payable at maturity and provides for the payment on December 31 of each year of \$40,000 plus 5 percent of the issuer's gross receipts, if any, for the year. The issuer has outstanding fixed rate debt instruments with maturities of 2 to 10 years that trade at a price that reflects an average of 100 basis points over Treasury bonds. The outstanding debt instruments have terms and conditions similar to the issued debt instrument. The applicable federal rate for a four-year debt instrument (mid-term rate) on the date of issue is 6.5 percent, compounded annually; no *Regulations Section 1.1275-6* hedge is available

for the debt instrument. The interest inclusions attributable to the debt instrument are expected to have a substantial effect on the holder's federal tax liability.

The comparable yield for the debt instrument is 7.5 percent, compounded annually. This is equal to the value on the issue date of the benchmark rate--the applicable federal rate for a four-year debt instrument--plus the spread of 100 basis points.

The issuer anticipates that it will have no gross receipts in the year the debt instrument is issued, but that it will have gross receipts that will grow each year during the remaining three years of the term of the instrument. Based upon business projections, the corporation believes that it is not unreasonable to expect that its gross receipts in year 2 and each year thereafter will grow by between 6 and 12 percent over the prior year. The issuer must take these expectations into account in establishing a projected payment schedule that results in a yield of 7.5 percent, compounded annually. The issuer could reasonably set the following projected payment schedule for the debt instrument:

Year	Non contingent Payment	Contingent Payment
1	\$40,000	\$0
2	40,000	140,000
3	40,000	151,200
4	2,040,000	167,700

Because it is unlikely that a contingent payment will actually equal the amount of the projected payment, the proposed regulations provide for adjustments under the noncontingent bond method. If the amount of the actual contingent payment is more than its projected amount, the difference is a positive adjustment on the date of payment; if less, the adjustment is a negative adjustment on that date.ⁿ⁵¹

As a first step, positive and negative adjustments with respect to a contingent debt obligation are netted for each taxable year in which payments are made under the obligation. The amount by which total positive adjustments on a debt instrument in a taxable year exceed total negative adjustments produces a net positive adjustment that is treated as additional interest for the taxable year.ⁿ⁵²

The amount by which total negative adjustments on a debt instrument exceed the total positive adjustments on the debt instrument in a taxable year results in a net negative adjustment that is treated as follows:

(1) A net negative adjustment first reduces the amount of interest for the taxable year that the taxpayer would otherwise take into account using the projected payment schedule.ⁿ⁵³

(2) If the net negative adjustment exceeds the interest for the taxable year that the taxpayer would otherwise take into account, the excess is treated as ordinary loss by the holder and ordinary income by the issuer.ⁿ⁵⁴ However, the amount treated as ordinary loss by the holder is limited to the amount by which the holder's total interest inclusions on the debt instrument exceed the total amount of the holder's net negative adjustments treated as ordinary loss in prior taxable years. The amount treated as ordinary income by the issuer is limited to the amount by which the issuer's total interest deductions on the debt instrument exceed the total amount of the issuer's net negative adjustments treated as ordinary income in prior taxable years.

(3) Any net negative adjustment that remains is carried forward and treated as a negative adjustment on the first day of the succeeding year.ⁿ⁵⁵ Any negative adjustment for a taxable year in which the debt

instrument is sold, exchanged, or retired reduces the amount realized by the holder on the disposition.ⁿ⁵⁶ If an obligation is retired, the issuer must treat any negative adjustment carryover as ordinary income.

Under the noncontingent bond method, the adjusted issue price of a debt instrument, the holder's basis in the debt instrument, and the amount of any contingent payment treated as made on the scheduled retirement of the debt instrument, are determined using the projected payment schedule rather than actual payments.ⁿ⁵⁷ Thus, the adjusted issue of the debt instrument is equal to the debt instrument's issue price, increased by the interest previously accrued on the debt instrument in accordance with the projected payment schedule (without any positive or negative adjustment to reflect differences in actual and projected payments), and decreased by the amount of any noncontingent payment and the projected amount of any contingent payment previously made on the debt instrument.ⁿ⁵⁸ A holder's basis in a debt instrument is increased by the interest previously accrued by the holder on the debt instrument in accordance with the projected payment schedule (without adjustment), and decreased by the amount of any noncontingent payment and the projected amount of any contingent payment previously made on the debt instrument to the holder.ⁿ⁵⁹

In determining the amount realized by a holder and the repurchase price paid by an issuer on the scheduled retirement of a debt instrument, a holder is treated as receiving, and the issuer is treated as paying, the projected amount of any contingent payment due at maturity.ⁿ⁶⁰ However, the amount realized on a scheduled retirement may be reduced by a negative adjustment carryover in the taxable year of the retirement, as discussed above. An unscheduled retirement of a debt instrument (or the receipt of a pro rata prepayment that is treated as a retirement of a portion of a debt instrument) is treated as a sale or exchange of the debt instrument (or a pro rata portion of the debt instrument) by the holder to the issuer for the amount paid by the issuer to the holder.ⁿ⁶¹

Example 3:

On December 31, 1996, A, a calendar year taxpayer, purchases a debt instrument at original issue for \$20,000. The debt instrument's comparable yield is 10 percent, compounded annually; the projected payment schedule provides for payments of \$10,000 (consisting of a noncontingent payment of \$7,500 and a projected amount of \$2,500) on December 31, 1997, and \$13,200 (noncontingent payment of \$12,000 and projected amount of \$1,200) on December 31, 1998. The debt instrument is a capital asset in A's hands.

Based upon the projected payment schedule, A's total daily portions of interest are \$2,000 (10 percent of issue price of \$20,000) for 1997. The payment actually made on December 31, 1997 is \$7,500, instead of the projected amount of \$10,000. Due to this, A has a negative adjustment of \$2,500 on December 31, 1997. Because A has no positive adjustments for 1997, A has a net negative adjustment of \$2,500 for 1997. This reduces to zero the \$2,000 daily portions of interest that A would otherwise include in income in 1997. The remaining \$500 of the net negative adjustment is a negative adjustment carryforward that results in a negative adjustment of \$500 on January 1, 1998.

The adjusted issue price of the debt instrument and A's adjusted basis in the debt instrument are increased by the daily portions of interest for 1997, namely, \$2,000, even though A does not include this amount in income because of the net negative adjustment for 1997. Furthermore, the adjusted issue price of the debt instrument and A's basis in the debt instrument are decreased on December 31, 1997 by the \$10,000 projected payment on that date, yielding an adjusted issue price and adjusted basis of \$12,000 (\$20,000 plus \$2,000 less \$10,000) for the debt instrument on January 1, 1998.

Based on the projected payment schedule, A's total portions of interest for 1998 are \$1,200 (10 percent of adjusted issue price of \$12,000). The payment actually made on December 31, 1998 is \$14,000, not the projected amount of \$13,200. A has a positive adjustment of \$800 on December 31, 1998. Because A has a negative adjustment of \$500 on January 1, 1998 due to the net negative

adjustment carryforward from 1997, A has a net positive adjustment of \$300 for 1998. Thus, A has interest income of \$1,500 for 1998 (\$300 net positive adjustment plus \$1,200 total daily portions of interest taken into account by A in 1998).

A's adjusted basis in the debt instrument immediately before the payment at maturity on December 31, 1998 is \$13,200 (\$12,000 plus \$1,200 total daily portions of interest for 1998). For purposes of determining the amount realized by A on retirement of the debt instrument, A is deemed to have received the projected amount of the payment on December 31, 1998 (\$13,200), not the actual amount (\$14,000). Because A's adjusted basis in the debt instrument immediately before retirement is \$13,200, A recognizes no gain or loss on retirement.

Example 4:

Assume the same fact as in Example 3, except that A sells the debt instrument for \$12,600 on January 1, 1998, when A's adjusted basis in the instrument is \$12,000. Because A has a negative adjustment of \$500 on the debt instrument in 1998 (due to the negative adjustment carryforward from 1997), and no positive adjustments on the debt instrument for 1998, A has a net negative adjustment for 1998 of \$500. The entire amount of the net negative adjustment for 1998 becomes a negative adjustment carryforward for that year and reduces the amount realized by A on the sale of the debt instrument from \$12,600 to \$12,100. Accordingly, A has a gain on the sale of \$100 (\$12,100 amount realized less \$12,000 adjusted basis); the gain is treated as ordinary interest income.ⁿ⁶²

Example 5:

Assume the same facts as in Example 3, except that the payment actually received by A on December 31, 1998 is \$12,300, not the projected \$13,200. This gives A a negative adjustment of \$900 on December 31, 1998 to go along with the negative adjustment of \$500 on January 1, 1998. Because A has no positive adjustments for 1998, A has a net negative adjustment of \$1,400 for 1998. Of this amount, \$1,200 reduces to zero the \$1,200 daily portions of interest that A would otherwise include in income in 1998; the remaining \$200 is a negative adjustment carryforward for 1998 that reduces the amount realized on the retirement of the debt instrument.

A is initially treated as having received \$13,200 on retirement (see Example 3). However, this amount must be reduced by the \$200 negative adjustment carryforward for 1998, producing an amount realized of \$13,000 and a loss of \$200 (\$13,200 adjusted basis, as determined in Example 5, less \$13,000 amount realized). A must treat this loss as a capital loss.ⁿ⁶³

Some special rules apply when a holder's basis in a debt instrument is not the same as the adjusted issue price of the instrument (as when a subsequent holder purchases the debt instrument for more or less than its adjusted issue price). In such case, the holder still accrues interest and makes adjustments based on the projected payment schedule determined as of the issue date of the debt instrument, but also must reasonably allocate any difference between the adjusted issue price and the basis to daily portions of interest or projected payments over the remaining term of the debt instrument.ⁿ⁶⁴ If the holder's basis exceeds the debt instrument's adjusted issue price, the amount allocated to a daily portion of interest or to a projected payment is treated as a negative adjustment on the date the daily portion accrues or the payment is made; the holder's adjusted basis in the debt instrument is reduced by the amount treated as a negative adjustment.ⁿ⁶⁵ If the holder's basis is less than the adjusted issue price of the instrument, the amount allocated to a daily portion of interest or to a projected payment is treated as a positive adjustment on the date the daily portion accrues or the payment is made; the holder's adjusted basis in the debt instrument is increased by the amount of the positive adjustment.ⁿ⁶⁶ In either case, the rules for accruing premium and discount found in *IRC Sections 171, 1272(a)(7), 1276, and 1281* do not apply.ⁿ⁶⁷

Example 6:

On July 1, 1998, A, a calendar year taxpayer, pays \$28,100 for a debt instrument that matures on December 31, 1999, and was originally issued on December 31, 1996 at an issue price of \$20,000. Under the terms of the instrument, the issuer agrees to pay on the maturity date the sum of \$20,000 plus the increase, if any, in the price of a specified commodity from the issue date to the maturity date. The comparable yield for the debt instrument is 10.25 percent, compounded semiannually, and the projected payment schedule for the debt instrument (determined as of the issue date) provides for a single payment at maturity of \$27,000. At the time of purchase, the debt instrument has an adjusted issue price of \$23,240, assuming semiannual accrual periods ending on December 31 and June 30. Assume that the increase in value of the debt instrument over its adjusted issue price is due to an increase in the expected amount of the contingent payment and not to a decrease in market interest rates.

A's \$28,100 basis in the debt instrument on July 1, 1998 exceeds the adjusted issue price of the instrument on that date (\$23,240) by \$4,860. A allocates this difference to the contingent payment due at maturity. This allocation is reasonable because the increase in the value of the debt instrument over its adjusted issue price is due to an increase in the expected amount of the contingent payment.

Based on the projected payment schedule, the \$23,240 adjusted issue price of the instrument on July 1, 1998, and the projected yield of 10.25 percent compounded semiannually, \$1,200 of interest accrues on the debt instrument from July 1, 1998 to December 31, 1998. A has no net negative or positive adjustments for 1998 and, therefore, includes \$1,200 of total daily portions of interest in income in 1998; A's basis in the debt instrument is increased from \$28,100 to \$29,300.

Assume that the payment actually made on December 31, 1999 is \$28,000 rather than the projected payment of \$27,000. This causes A to have a positive adjustment of \$1,000 on December 31, 1999. Because of the allocation of the excess of basis over the adjusted issue price of the debt instrument to the contingent payment, A has a negative adjustment of \$4,860 on December 31, 1999, resulting in a net negative adjustment for 1999 of \$3,860. This net negative adjustment reduces the \$2,560 total daily portions of interest that A would otherwise include in income in 1999 to zero. Because A included \$1,200 in interest in 1998, \$1,200 of the remaining \$1,300 net negative adjustment is treated as an ordinary loss for 1999. The remaining \$100 of the net negative adjustment is a negative adjustment carryforward for 1999 that reduces the amount realized on the retirement of the debt instrument from \$27,000 to \$26,900.

A's basis in the debt instrument on December 31, 1999 is \$27,000 (\$28,100 original basis, plus total daily portions of interest of \$1,200 for 1998 and \$2,560 for 1999, less the negative adjustment of \$4,860). This causes A to realize a capital loss of \$100 on the retirement of the debt instrument.

Example 7:

On January 1, 1999, B, a calendar year taxpayer, pays \$18,200 for a debt instrument that provides for annual interest of 7 percent payable semiannually on June 30 and December 31 of each year, and for the payment on December 31, 2001 of \$20,000 plus or minus \$200 times the positive or negative difference, if any, between a specified amount and the value of an index on December 31, 2001. However, the payment at maturity cannot be less than \$13,000. The debt instrument was originally issued on December 31, 1996, for an issue price of \$20,000. The comparable yield for the debt instrument is 9.8 percent, compounded semiannually, and the projected payment schedule provides for semiannual payments of \$700 and a contingent payment at maturity of \$23,500. Assuming accrual periods ending on June 30 and December 31 of each year, the debt instrument has an adjusted issue price of \$21,200 on January 1, 1999.

B's basis in the debt instrument on January 1, 1999 is \$18,200. *B* must allocate the \$3,000 difference between that basis and the \$21,200 adjusted issue price of the debt instrument on January 1, 1999 to daily portions of interest or to projected payments. The allocated amounts will be positive adjustments taken into account at the time the daily portions accrue or the payments are made.

Assume that, because of a decrease in the relevant index, the expected value of the contingent payment has decreased by about 9 percent. Based on forward prices on January 1, 1999, *B* determines that approximately \$2,100 of the difference between basis and adjusted issue price is allocable to the contingent payment. *B* allocates the remaining \$900 to daily portions of interest on a pro rata basis (that is, the amount allocated to an accrual period equals the product of \$900 and a fraction, the numerator of which is the total daily portions of interest for the accrual period and the denominator of which is the total daily portions remaining on the debt instrument on January 1, 1999). The allocation is reasonable.

Assume alternatively that, based on yields of comparable debt instruments and *B's* purchase price for the debt instrument, *B* determines that an appropriate yield for the debt instrument is 13 percent, compounded semiannually. Using this determination, *B* allocates \$1,115 of the difference between basis and adjusted issue price to daily portions of interest as follows: \$303.80 to the daily portions of interest for the taxable year ending December 31, 1999; \$368 to the daily portions of interest for the taxable year ending December 31, 2000; and \$443.20 to the daily portions of interest for the taxable year ending December 31, 2001. *B* allocates the remaining \$1,885 to the contingent payment at maturity. The allocation is reasonable.

A second set of special operating rules concerns interest accruals and adjustments when the amount of a contingent payment becomes fixed more than six months before the payment is due.ⁿ⁶⁸ The amount of the adjustment attributable to the payment is equal to the difference between the present value of the amount that is fixed and the present value of the projected amount of the contingent payment.ⁿ⁶⁹ The present value of each amount is determined by discounting the amount from the date the payment is due to the date the payment is fixed using a discount rate equal to the comparable yield on the debt instrument. The adjustment is treated as a positive or negative adjustment, as appropriate, on the date the contingent payment becomes fixed. The amount of any positive adjustment increases the adjusted issue price of the instrument and the holder's adjusted basis in the instrument; the amount of any negative adjustment works a decrease in both adjusted issue price and basis.ⁿ⁷⁰

Once the contingent payment becomes fixed, the payment is no longer treated as a contingent payment, the projected payment schedule for the debt instrument is modified prospectively to reflect the fixed amount of the payment, an accrual period ends on the day the contingent payment becomes fixed, and a new accrual period begins on the day after the day on which the contingent payment becomes fixed.ⁿ⁷¹

Example 8:

On December 31, 1996, *C*, a calendar year taxpayer, purchases a debt instrument at original issue for \$20,000. The instrument matures on December 31, 2002 and calls for the payment of \$20,000 at that time. The instrument also provides for payments on December 31, 1999 and December 31, 2002 of an amount equal to the excess of the average daily value of an index for the six-month period ending on September 30 of the preceding year over a specified amount. *C* uses annual accrual periods.

The debt instrument's comparable yield is 10 percent, compounded annually, and the instrument's projected payment schedule consists of a payment of \$5,000 on December 31, 1999 and a payment of \$28,800 on December 31, 2002. *C* includes \$2,000 of daily portions of interest in income in 1997. *C's*

adjusted basis in the debt instrument and the debt instrument's adjusted issue price on December 31, 1997 is \$22,000.

According to the projected payment schedule, *C* should include \$2,200 of total daily portions of interest in income in 1998. Assume, however, that on September 30, 1998, the payment due on December 31, 1999 is fixed at \$6,000 rather than \$5,000. This gives rise to an adjustment on September 30, 1998 equal to the difference between the present value of the \$6,000 fixed amount and the present value of the \$5,000 projected payment. These present values are determined by discounting each amount from December 31, 1999 (the date the payment is due) to September 30, 1998 (the date the payment is fixed), using a discount rate equal to 10 percent, compounded annually. The present value of the fixed payment is \$5,326 and the present value of the projected payment is \$4,438. Therefore, *C* has a positive adjustment of \$888 (\$5,326 less \$4,438) on September 30, 1998.

C's accrual period ends on September 30, 1998, the date the contingent payment due on December 31, 1999 is fixed. The daily portions of interest on the debt instrument from January 1, 1998 to September 31, 1998 total \$1,630. *C*'s adjusted basis in the instrument and its adjusted issue price are increased by \$2,518 (\$1,630 daily portions of interest plus \$888 positive adjustment) to \$24,518. For purposes of all future accrual periods, including the new accrual that begins on October 1, 1998 and ends on December 31, 1998, the debt instrument's projected payment schedule is modified to reflect a fixed payment of \$6,000 on December 31, 1999. Based on the new adjusted issue price of the instrument and the new projected payment schedule, the yield on the debt instrument does not change.

Based on the modified projected payment schedule, \$591 of interest accrues during the accrual period that begins on October 1, 1998 and ends on December 31, 1998. Because *C* has no other adjustments during 1998, the \$888 positive adjustment on September 30, 1998 is a net positive adjustment, and, thus, additional interest for 1998. *C*'s total interest inclusion for 1998 is \$3,109 (\$1,630 plus \$888 plus \$591). *C*'s adjusted basis in the debt instrument and the instrument's adjusted issue price on December 31, 1998 are increased from \$24,518 to \$25,109 to reflect the total daily portions of interest for the October 1, 1998 to December 31, 1998 accrual period.

C has no adjustments in 1999. Based on the modified projected payment schedule, *C* includes \$2,511 total daily portions of interest in income. (*C* would have included \$2,420 under the original projected payment schedule.) On December 31, 1999, *C*'s adjusted basis in the debt instrument and the adjusted issue price of the debt instrument are increased by the \$2511 daily portions of interest included in income in 1999, and reduced by \$6,000, the amount of the fixed payment on December 31, 1999.

If a taxpayer has an option to put or call the debt instrument, to exchange the debt instrument for other property, or to extend the maturity date of the debt instrument, the projected payment schedule is determined by using the principles of *Regulations Section 1.1272-1(c)(5)*.ⁿ⁷² Under that provision, the issuer will be deemed to exercise or not exercise an option in a manner that minimizes the yield on the debt instrument, and a holder will be deemed to exercise or not exercise an option in a manner that maximizes the yield on the debt instrument. If an option to put, call, or exchange the debt instrument is assumed to be exercised under the principles of *Regulations Section 1.1272-1(c)(5)*, it is generally reasonable to assume that the option is exercised immediately before it expires. If the option is exercised at an earlier time, it is treated as a sale or exchange of the debt instrument.

If all the remaining contingent payments on a debt instrument become fixed substantially contemporaneously, any positive or negative adjustment on the instrument is spread over the remaining term of the instrument in a reasonable manner.ⁿ⁷³ For this purpose, a payment is treated as a fixed payment if all remaining contingencies with respect to the payment are remote or incidental.

The regulations provide a method for contingent payment debt instruments not subject to the noncontingent bond

method. In general, the method applies to a debt instrument that is not publicly traded, is issued in a sale or exchange of nonpublicly traded property, and has an issue price determined under *IRC Section 1274*.ⁿ⁷⁴

Under the method, the payments on the "overall" debt instrument are divided into noncontingent payments and contingent payments.ⁿ⁷⁵ The noncontingent payments are treated as a separate debt instrument and are taxed under the general OID rules.ⁿ⁷⁶ However, no interest payments on the separate debt instrument are qualified stated interest payments, and the *de minimis* rules do not apply to the separate debt instrument. The issue price of the separate debt instrument is the issue price of the overall debt instrument determined under *IRC Section 1274*.

In general, a contingent payment is not taken into account until the payment is made.ⁿ⁷⁷ A contingent payment is treated as principal in an amount equal to the present value of the payment, calculated by discounting the payment at the test rate from the date that the payment is made to the issue date.ⁿ⁷⁸ The amount in excess of the portion treated as a payment of principal is considered a payment of interest.ⁿ⁷⁹

Example 9:

On January 1, 1997, A sells unencumbered real property to B. As consideration for the sale, B pays A \$2 million in cash and issues A a debt instrument that matures on December 31, 2001. The debt instrument provides for a payment of principal at maturity of \$10 million and a contingent payment of interest on December 31 of each year equal to a fixed percentage of the gross rents that B receives from the property in that year. Assume that the debt instrument is not issued in a potentially abusive situation. Assume further that, on January 1, 1997, the applicable federal short-term rate is 5 percent, compounded semiannually, and the applicable federal mid-term rate is 6 percent, compounded semiannually.

The stated principal amount of the debt instrument is \$10 million. The right to the noncontingent payment is treated as a separate debt instrument with an imputed principal amount and issue price of \$7,224,400 (the present value, as of the issue date, of the \$10 million noncontingent payment due at maturity, calculated using a discount rate equal to the applicable federal mid-term rate, compounded semiannually). Thus, the \$2,775,600 difference between the issue price and the stated principal amount of the debt instrument is OID.

Assume that the amount of contingent interest that is fixed and payable on December 31, 1997 is \$400,000. This payment is treated as consisting of a principal payment of \$380,700, the present value of the payment, determined by discounting the payment at a test rate of 5 percent (the applicable federal short-term rate), compounded semiannually from the date the payment is fixed to the issue date; the remainder of the payment, \$19,300, is treated as interest includable by A and deductible by B in their respective taxable years in which December 31, 1997 falls. The remaining contingent payments on the debt are accounted for in like fashion, using a test rate of 5 percent, compounded semiannually, for the contingent payments due on December 31, 1998 and December 31, 1999, and a test rate of 6 percent, compounded semiannually, for the contingent payments due on December 31, 2000 and December 31, 2001.

If a contingent payment on a debt instrument not subject to the noncontingent bond method becomes fixed more than six months before the payment is due, the issuer and holder are treated as if the issuer had issued a separate debt instrument on the date the amount of the payment becomes fixed, maturing on the date the payment is due.ⁿ⁸⁰ This separate debt instrument is treated as a debt instrument to which *IRC Section 1274* applies. The stated principal amount of this separate debt instrument is the amount of the payment that becomes fixed. An amount equal to the issue price is characterized as interest or principal under the rules set forth in the paragraph preceding Example 9, and accounted for in the year in which the payment becomes fixed, as if this amount had been paid by the issuer to the holder on the date

that the amount of the payment became fixed. To determine the issue price of the separate debt instrument, all payments under the separate debt instrument are discounted at the test rate from the maturity date of the separate debt instrument to the date the payment becomes fixed.ⁿ⁸¹

Example 10:

The facts are the same as in Example 9, except that the contingent payment of interest that is fixed at \$400,000 on December 31, 1997, is not payable until the maturity date, December 31, 2001. The treatment of the noncontingent payment is the same as in Example 9.

Because the \$400,000 payment fixed on December 31, 1997 is not payable until the maturity date, a separate debt instrument with a maturity date of December 31, 2001 (the date the payment is due) is deemed to be issued on December 31, 1997 (the date the payment is fixed). The stated principal amount of this separate debt instrument is \$400,000, the amount that became fixed on December 31, 1997. The imputed principal amount and issue price of the separate instrument is \$306,600, the present value as of December 31, 1997, of the \$400,000 payment, calculated by using a discount rate equal to the test rate of the overall debt instrument (6 percent, compounded semiannually). An amount equal to the issue price of the separate debt instrument is treated as an amount paid on December 31, 1997. The amount of the deemed payment characterized as principal is \$291,800, the present value, as of January 1, 1997 (the issue date of the overall debt instrument) of the deemed payment, determined by using a discount rate of 5 percent, compounded semiannually. The amount of the deemed payment treated as interest is \$14,800 (the difference between the imputed principal amount and issue price of \$306,600 and \$291,800, the portion of the deemed payment treated as principal), and is includable in gross income by *A* and deductible by *B* in their respective years in which December 31, 1997 occurs.

Just as in the case of debt instruments subject to the noncontingent bond method, the regulations dealing with debt instruments not subject to the noncontingent bond method contain rules for a holder whose basis in a debt instrument is different from the instrument's adjusted issue price. The rules do not apply if the holder is reporting income under the installment method.ⁿ⁸²

The holder must allocate basis to the right to receive noncontingent payments (the noncontingent component of the debt instrument) and to any separate debt instruments that arise when a contingent payment becomes fixed more than six months before the payment is due in an amount up to the adjusted issue price of the noncontingent component and the adjusted issue prices of the separate debt instruments; the remaining basis, if any, is allocated to the right to receive contingent payments (the contingent component of the debt instrument).ⁿ⁸³ Any difference between the holder's basis in the noncontingent component and the adjusted issue price of the noncontingent component, and any difference between the holder's basis in a separate debt instrument and the adjusted issue price of the separate debt instrument, is taken into account under the rules for market discount, premium, and acquisition premium that apply to a noncontingent debt instrument.ⁿ⁸⁴

For the contingent component, amounts received by the holder that are treated as principal payments reduce the holder's basis in the contingent component.ⁿ⁸⁵ If the holder's basis in the contingent component is reduced to zero, any additional principal payments on the contingent component are treated as gain from the sale or exchange of the debt instrument. Any basis remaining on the contingent component after the final contingent payment is made increases the holder's basis in the noncontingent component. If there are no remaining noncontingent payments, the remaining basis is treated as a loss on the sale or exchange of the debt instrument.

The Service has ruled that the noncontingent bond method applies to a debt instrument that is convertible into stock of the issuer and provides for one or more contingent cash payments.ⁿ⁸⁶ The tax consequences discussed in the ruling are

based upon the following example:

Example 11:

On January 1, 2002, X Corporation issues for \$6.25 million a 20-year debt instrument with a stated principal amount of \$10 million. Except for the contingent interest payments described below, the debt instrument does not provide for any stated interest. The debt instrument is convertible at any time into a number of shares of X Corporation common stock having a value, on the date of issue of the debt instrument, that is significantly less than \$6.25 million. The debt instrument is part of an issue that is not marketed or sold in substantial part to persons for whom the inclusion of interest from the instrument in the issue is not expected to have a substantial effect on their United States tax liability.

The debt instrument provides that, beginning after January 1, 2005, interest ("contingent interest") is payable for any six-month period ending on June 30 or December 31 if the average market price of the instrument for a measurement period before the applicable six-month period is greater than 120 percent of the instrument's accreted value (the issue price of the instrument plus the economic accrual to any date of determination of a portion of the difference between the issue price and the stated principal amount at maturity). The amount of contingent interest that is payable is equal to the greater of (1) the regular cash dividend per share of X Corporation common stock for the six-month period multiplied by the number of shares into which the debt instrument may be converted, or (2) a given percent of the average market price of the debt instrument for the measurement period. The contingent interest is neither a remote nor incidental contingency within the meaning of *Regulation Section 1.1275-2(h)*.

On or after January 1, 2005, X Corporation has the option to redeem the debt instrument for cash in an amount equal to the instrument's accreted value as of the redemption date. In addition, the holder of the debt instrument has the option to put the instrument to the corporation on January 1, 2005, or January 1, 2012, for an amount equal to the instrument's accreted value as of each such date. If the holder exercises the option, X Corporation can satisfy its obligation with cash, shares of X Corporation's common stock, or a combination of cash and shares. Taking into account the likelihood of conversion of the debt instrument and the likelihood that the instrument will be put by the holder, it is not substantially certain that a substantial amount of the principal or interest on the debt instrument will be required to be paid in stock or will be payable in stock at the option of the issuer.

After having ruled that the noncontingent bond method applies to the type of debt instrument issued by X Corporation, the Service then stated that the yield at which the corporation would issue a comparable fixed rate nonconvertible debt instrument is the yield to be used to determine the instrument's comparable yield and the accruals of interest on it. The Service also ruled that the debt instrument is not a disqualified debt instrument under *IRC Section 163(l)*,ⁿ⁸⁷ and that *IRC Section 249* does not affect the corporation's ability to deduct periodic interest accruals on the instrument.ⁿ⁸⁸ However, if the debt instrument is converted into X Corporation stock having a value in excess of the debt instrument's adjusted issue price, *IRC Section 249* may preclude a deduction of the excess.

[c] Tax-Exempt Contingent Payment Debt Instruments.

The noncontingent bond method described in § 17.02A[2][b] is generally, but not entirely, applicable to tax-exempt obligations that provide for contingent payments.ⁿ⁸⁹ The first exception relates to the tax-exempt nature of the obligation; the daily portions of interest are not included in gross income by the holder.ⁿ⁹⁰

The regulations divide tax-exempt obligations into two categories: (1) certain tax-exempt obligations with interest-based or revenue-based payments, and (2) all other tax-exempt obligations.ⁿ⁹¹ Different modifications to the noncontingent bond method apply to the two categories.

A tax-exempt obligation provides for interest-based payments if the obligation would otherwise qualify as a variable rate debt instrument except that: (1) the obligation provides for more than one fixed rate; (2) the obligation provides for one or more caps, floors, or governors (or similar restrictions) that are fixed as of the issue date; (3) the interest on the obligation is not compounded or paid at least annually; or (4) the obligation provides for interest at one or more rates equal to the product of a qualified floating rate and a fixed multiple greater than zero and less than .65, increased or decreased by a fixed rate.ⁿ⁹² A tax-exempt obligation provides for revenue-based payments if the obligation: (1) is issued to refinance (including a series of refinancings) an obligation (in a series of refinancings, the original obligation), the proceeds of which were used to finance a project or enterprise; and (2) would otherwise qualify as a variable rate debt instrument except that it provides for stated interest payments at least annually based on a single fixed percentage of the revenue, value, change in value, or other similar measure of the refinanced project or enterprise.ⁿ⁹³

The following modifications to the noncontingent bond method apply to any tax-exempt obligation with interest-based or revenue-based payments:ⁿ⁹⁴

- (1) All daily portions of interest and any net positive adjustment is treated as interest that is tax-exempt under *IRC Section 103*.
- (2) A net negative adjustment reduces the amount of tax-exempt interest the holder would otherwise account for on the obligation for the taxable year. If the net negative adjustment exceeds this amount, the excess is a nondeductible, noncapitalizable loss, except as indicated in the next paragraph. If a regulated investment company has such a loss, the company must use the loss to reduce its tax-exempt interest on other tax-exempt obligations held during the taxable year.
- (3) Any gain recognized on the sale, exchange, or retirement of the obligation is gain from the sale or exchange of the obligation; this means that the gain will be capital gain if the obligation is a capital asset in the hands of the holder. Any loss recognized on disposition is treated as a net negative adjustment. However, the holder can claim a loss from the sale or exchange of the obligation to the extent the holder has not received in cash or property the sum of the holder's original investment in the obligation and any amounts includable in income because the holder's basis in the obligation is less than the obligation's adjusted issue price.

The following modifications to the noncontingent bond method apply if the tax-exempt obligation does not provide for interest-based or revenue based payments:ⁿ⁹⁵

- (1) The comparable yield for the obligation is the greater of the obligation's yield, determined without regard to the contingent payments, and the tax-exempt applicable federal rate that applies to the obligation.
- (2) The daily portions of interest are interest that is tax-exempt under *IRC Section 103*.
- (3) A net positive adjustment on the obligation is treated as gain to the holder from the sale or exchange of the obligation in the taxable year of the adjustment. A net negative adjustment on the obligation is treated as a loss to the holder from the sale or exchange of the obligation in the year of the adjustment.
- (4) Any gain or loss recognized on the sale, exchange, or retirement of the obligation is gain or loss from the sale or exchange of the obligation, producing capital gain or loss if the obligation is a capital asset in the hands of the holder.

The following special rules apply to all tax-exempt contingent payment obligations where the holder's basis in the

obligation is different from the adjusted issue price of the obligation:ⁿ⁹⁶

- (1) If the holder's basis exceeds the adjusted issue price, the holder, upon acquiring the obligation, must allocate the difference to daily portions of interest on a yield to maturity basis over the remaining term of the obligation. The amount allocated to a daily portion of interest is not deductible by the holder, but the holder's basis in the obligation is reduced by the amount allocated to a daily portion of interest on the date the daily portion accrues.
- (2) If the holder's basis is less than the adjusted issue price, the holder must make the same allocation, but now the allocated amount is includable in income by the holder as ordinary income on the date the daily portion of interest accrues. The holder's adjusted basis is increased by the amount includable in income on the date the daily portion accrues.
- (3) The rules for accruing premium and discount in *IRC Sections 171, 1276, and 1288* do not apply.

[d] Variable Rate Debt Instruments.

A variable rate debt instrument is one that meets the following conditions:ⁿ⁹⁷

- (1) The issue price of the debt instrument must not exceed the total noncontingent principal payments by more than an amount equal to the lesser of (i) .015 multiplied by the product of the total noncontingent payments and the number of complete years to maturity from the issue date (or, in the case of an installment obligation, the weighted average maturity); or (ii) 15 percent of the total noncontingent principal payments.
- (2) The debt instrument must provide for stated interest (compounded or paid at least annually) at (a) one or more qualified floating rates; (b) a single fixed rate and one or more qualified floating rates; (c) a single objective rate; or (d) a single fixed rate and a single objective rate that is a qualified inverse floating rate.
- (3) The debt instrument must provide that a qualified floating rate or objective rate in effect at any time during the term of the instrument is set at the current value of that rate, that is, the value of the rate on any day that is no earlier than three months prior to the first day on which that value is in effect and no later than one year following that fixed date.
- (4) The debt instrument must not provide for any contingent principal payments.

A variable rate is a qualified floating rate if variations in the value of the rate can reasonably be expected to measure contemporaneous variations in the cost of newly borrowed funds in the currency in which the debt instrument is denominated.ⁿ⁹⁸ The rate may measure contemporaneous variations in borrowing costs for the issuer of the debt instrument or issuers in general. If a debt instrument provides for two or more qualified floating rates that can reasonably be expected to have approximately the same values throughout the term of the instrument, the qualified floating rates together constitute a single qualified floating rate. Two or more qualified floating rates will be conclusively presumed to meet the requirements of the preceding sentence if the values of all rates on the issue date are within .25 percentage points (25 basis points) of each other.

Example 1:

A issues a debt instrument that provides for annual payments of interest at a rate equal to the value on the one-year London Interbank Offered Rate (LIBOR) at the end of each year. Because variations in the

value of one-year LIBOR over the term of the debt instrument can reasonably be expected to measure contemporaneous variations in the cost of newly borrowed funds over that term, the rate is a qualified floating rate.

Example 2:

A issues a debt instrument that provides for annual payments of interest at a rate equal to 2 percent plus the current value, at the end of each year, of the average yield of one-year Treasury securities. As in Example 1, the rate is a qualified floating rate because variations in the value of the interest rate can reasonably be expected to measure contemporaneous variations in the cost of newly borrowed funds.

Example 3:

A issues a debt instrument that provides for a rate of interest that is periodically adjusted to equal the current interest rate of B Bank's commercial paper. The rate is a qualified floating rate; variations in the value of the rate can reasonably be expected to measure contemporaneous variations in the cost of newly borrowed funds.

Generally, a multiple of a qualified floating rate is not a qualified floating rate.ⁿ⁹⁹ However, a variable rate is a qualified floating rate if it is equal to either (i) the product of a qualified floating rate and a qualified fixed multiple that is greater than .65 but not more than 1.35; or (ii) the product of a qualified floating rate and a fixed multiple that is greater than .65 but not more than 1.35, increased or decreased by a fixed rate.ⁿ¹⁰⁰

Example 4:

A issues a debt instrument with annual interest payments at a rate equal to twice the value of one-year LIBOR as of the payment date. Although the value of one-year LIBOR is a qualified floating rate, the interest rate of twice that value is a multiple that exceeds 1.35 of a qualified floating rate, and, thus, cannot be a qualified floating rate.

A variable rate is not a qualified floating rate if the maximum or minimum stated interest rate, or increase or decrease in the stated interest rate, (cap, floor, or governor) is subject to restrictions.ⁿ¹⁰¹ Nevertheless, a variable rate subject to the following restrictions will be a qualified floating rate: (i) a cap, floor, or governor that is fixed throughout the term of the debt instrument; (ii) a cap or similar restriction that is not reasonably expected as of the issue date to cause the yield on the debt instrument to be significantly less than the expected yield determined without the cap; (iii) a floor or similar restriction that is not reasonably expected as of the issue date to cause the yield on the debt instrument to be significantly more than the expected yield determined without the floor; or (iv) a governor or similar restriction that is not reasonably expected as of the issue date to cause the yield on the debt instrument to be significantly more or less than the expected yield without the governor.

An objective rate is a rate (other than a qualified floating rate) that is determined using a single fixed formula and that is based on objective financial or economic information.ⁿ¹⁰² Under this definition, an objective rate generally includes a rate that is based on one or more qualified floating rates or on the yield of actively traded personal property (within the meaning of *IRC Section 1092(d)(1)*). An objective rate does not include a rate that is based on information that is within the control of the issuer (or a related party within the meaning of *IRC Section 267(b)* or *707(b)(1)*), such as dividends, profits, or the value of the issuer's stock; it does include a rate based on the credit quality of the issuer.

Example 5:

A issues a debt instrument that provides for annual interest payments at the end of each year at a rate equal to the percentage increase, if any, in the value of an index for the year immediately preceding the

payment. The rate is an objective rate because it is based on objective financial information.

Example 6:

A issues a debt instrument that provides for annual interest payments equal to 20 percent of A's net profits during the year immediately preceding the payment. The rate is not an objective rate because it is based on objective information that is unique to the issuer's circumstances.

Example 7:

A issues a debt instrument that provides for annual interest payments at the end of each year at a rate equal to 4 percent plus the annual percentage change in a general inflation index. Under the proposed regulations, the rate is an objective rate because it is based on objective economic information.

An objective rate is treated as a qualified inverse floating rate if (i) the rate is equal to a fixed rate minus a qualified floating rate; and (ii) the variations in the rate can reasonably be expected to inversely reflect contemporaneous variations in the cost of newly borrowed funds, disregarding any caps, floors, or governors.ⁿ¹⁰³ In the case of a tax-exempt obligation, a variable rate is an objective rate only if it is a qualified inverse floating rate or a qualified inflation rate.ⁿ¹⁰⁴ A rate is a qualified inflation rate if the rate measures contemporaneous changes in inflation based on a general inflation index, such as the Consumer Price Index.

Example 8:

A issues a debt instrument that provides for annual interest payments at the end of each year at a rate equal to 12 percent minus the value of one-year LIBOR as of the payment date. On the issue date, the value of one-year LIBOR is 6 percent. Because the rate can reasonably be expected to inversely reflect contemporaneous variations in the cost of newly borrowed funds, the rate is a qualified inverse floating rate. If the value of one-year LIBOR on the issue date was 11 percent rather than 6 percent, the rate would not be a qualified inverse floating rate because the rate could not reasonably be expected to inversely reflect contemporaneous variations in the cost of newly borrowed funds.

Example 9:

On January 1, 1997, a municipality issues a tax-exempt debt instrument that provides for annual interest payments at the end of each year at a rate of 4 percent plus the annual percentage change in the Consumer Price Index. However, the rate cannot be less than zero. The rate is a qualified inflation rate because it is based on a general inflation index.

A variable rate of interest on a debt instrument is not an objective rate if it is reasonably expected that the average value of the rate during the first half of the instrument's term will be either significantly less or significantly greater than the average value of the rate during the final half of the instrument's term.ⁿ¹⁰⁵

In ascertaining whether a variable rate debt instrument to which *IRC Section 1274* applies provides for adequate stated interest, the imputed principal amount of a variable debt instrument that provides for stated interest at a qualified floating rate or rates is determined by assuming that the instrument provides for a fixed rate of interest for each accrual period to which a qualified floating rate applies.ⁿ¹⁰⁶ The assumed fixed rate for each accrual period is the greater of (a) the value of the applicable qualified floating rate as of the first date on which there is a binding written contract that substantially sets forth the terms under which the sale or exchange is ultimately consummated; or (b) the value of the applicable qualified floating rate as of the date on which the sale or exchange occurs.

Example 10:

On January 1, 1997, A sells B nonpublicly traded property. In partial consideration for the sale, B issues a debt instrument in the principal amount of \$2 million, payable in 5 years. The debt instrument provides for interest payable monthly at a rate of one percentage point above the average prime rate of C Bank for the month preceding the month of the interest payment. Assume that the test rate applicable to the debt instrument is 6.5 percent, compounded monthly. Assume further that one percentage point above the prime lending rate of C Bank on the date of sale is 8 percent, compounded monthly, which is greater than one percentage point above the prime lending rate of C Bank on the first date on which there is a binding written contract that substantially sets forth the terms under which the sale is consummated.

The debt instrument is a variable rate debt instrument that provides for stated interest at a qualified floating rate. The debt instrument is treated as if it provided for a fixed rate of interest equal to 8 percent, compounded monthly. Because this rate is greater than the test rate of 6.5 percent, compounded monthly, the debt instrument provides for adequate stated interest.

If, as a result of interest rate restrictions (such as a cap), the expected yield of the debt instrument taking the restrictions into account is significantly less than the expected yield of the debt instrument without regard to the restrictions, the interest payments on the debt instrument (other than fixed interest payments) are treated as contingent payments.ⁿ¹⁰⁷ The imputed principal amount of a variable rate debt instrument that provides for stated interest at a single objective rate is also determined by treating the interest payments as contingent payments.ⁿ¹⁰⁸

Example 11:

On July 1, 1997, A sells nonpublicly traded property to B in return for a debt instrument of \$20 million, payable on July 1, 2007. The instrument provides for interest to be paid on each July 1 during the term of the instrument, at the federal short-term rate for June of the same year, but with an interest rate cap of 9 percent, compounded annually. Assume that, as of the date the test rate of interest for the debt instrument is determined, the federal short-term rate is 8.5 percent, compounded annually, and that, as a result of the interest rate cap, the expected yield of the debt instrument is significantly less than the expected yield without the interest rate cap. The variable payments will be treated as contingent payments.

The amount and accrual of OID and qualified stated interest on a variable rate debt instrument depends on the stated interest provision. If the instrument provides for stated interest at a single qualified floating rate or objective rate that is payable in cash or in property (other than a debt instrument of the issuer), or that will be constructively received under *IRC Section 451*, at least annually, all stated interest with respect to the debt instrument is qualified stated interest, and the amount of OID, if any, is determined under the rules applicable to fixed rate instruments by assuming that the variable rate is a fixed rate equal to (a) in the case of a qualified floating rate or qualified inverse floating rate, the value, as of the issue date, of the qualified floating rate or qualified inverse floating rate; or (b) in the case of an objective rate (other than a qualified inverse floating rate), a fixed rate that is reasonably expected for the debt instrument.ⁿ¹⁰⁹ If a variable rate debt instrument does not provide for stated interest at a single qualified floating rate or objective rate that is unconditionally payable in cash or property and does not provide for interest payable at a fixed rate (other than an initial fixed rate), the amount of interest and OID accruals are determined by the following process:ⁿ¹¹⁰

(1) Determine the fixed rate substitute for each variable rate provided under the debt instrument. The fixed rate substitute for each qualified floating rate provided for in the debt instrument is the value of each rate as of the issue date. If, however, a variable rate debt instrument provides for two or more qualified floating rates with different intervals between interest adjustment dates, the fixed rate substitutes for the rates must be based on intervals that are equal in length. The fixed rate substitute for a qualified inverse floating rate is the value of the qualified inverse floating rate as of the issue date. The

fixed rate substitute for an objective rate (other than a qualified inverse floating rate) is a fixed rate that reflects the yield that is reasonably expected for the debt instrument.

(2) Construct the equivalent fixed rate debt instrument. The equivalent fixed rate debt instrument has terms that are identical to those provided under the variable rate debt instrument, except that the equivalent fixed rate debt instrument provides for the fixed rate substitutes determined above instead of the qualified floating rates or objective rate provided under the variable rate debt instrument.

(3) Determine the amount of qualified stated interest and OID with respect to the equivalent fixed rate debt instrument. The amount of qualified stated interest and OID, if any, are determined for the equivalent fixed rate debt instrument under the rules applicable to fixed rate debt instruments and are taken into account as if the holder held the equivalent fixed rate debt instrument.

(4) Make appropriate adjustments for actual variable rates. Qualified stated interest or OID allocable to an accrual period must be increased (or decreased) if the interest actually accrued or paid during an accrual period exceeds (or is less than) the interest assumed to be paid during the accrual period under the equivalent fixed rate debt instrument. The increase or decrease is an adjustment to qualified stated interest for the accrual period if the equivalent fixed rate debt instrument provides for qualified stated interest and the increase or decrease is reflected in the amount actually paid during the accrual period. Otherwise, the increase or decrease is an adjustment to OID for the accrual period.

Example 12:

On January 1, 1997, A purchases at original issue for \$180,000, a variable rate debt instrument that matures on January 1, 1999 and has a stated principal amount of \$200,000, payable at maturity. The instrument provides for annual payments of interest on January 1 of each year, beginning January 1, 1998. The amount of interest payable is the value of annual LIBOR on the payment date. The value of annual LIBOR on January 1, 1997 and January 1, 1998 is 5 percent, compounded annually. The value of annual LIBOR on January 1, 1999 is 7 percent compounded annually. A uses annual accrual periods.

The equivalent fixed rate debt instrument for the variable rate debt instrument is a two-year debt instrument that has an issue price of \$180,000 and a stated principal amount of \$200,000. The equivalent fixed rate debt instrument provides for interest payments of \$10,000 at the end of each year.

The equivalent fixed rate debt instrument has \$20,000 of OID; it provides for qualified stated interest payments of \$10,000 annually. Thus, the equivalent fixed rate debt instrument has a yield of 10.82 percent, compounded annually. The amount of OID allocable to the first annual accrual period is \$9,476 ($(\$180,000 \times 10.82 \text{ percent}) - \$10,000$), and the amount of OID allocable to the second annual accrual period is \$10,524 ($\$200,000 - \$189,476$). The \$4,000 difference between the \$14,000 interest payment actually made at maturity and the \$10,000 payment assumed to be made at maturity under the equivalent fixed rate debt instrument is treated as additional qualified stated interest for the period.

If a variable rate debt instrument provides for stated interest either at one or more floating rates or at a qualified inverse floating rate and, in addition, provides for stated interest at a single fixed rate (other than an initial fixed rate), the first three steps in the OID and interest determination process described above are modified by treating the debt instrument as if it provided for a qualified floating rate (or qualified inverse floating rate, if the debt instrument provides for such a rate) rather than the fixed rate. The replacement rate must be such that the fair market value of the variable rate debt instrument as of the issue date would be approximately the same as the fair market value of an otherwise identical debt instrument that provides for a qualified floating rate (or qualified inverse floating rate) instead of the fixed rate.ⁿ¹¹¹

Example 13:

On January 1, 1997, A purchases at original issue, for \$200,000, a variable rate debt instrument with a stated principal amount of \$200,000 that matures on January 1, 2003. The debt instrument provides for payment of interest on each January 1 during the term of the instrument. The interest rate for the first four years is 5 percent, compounded annually. For the last two years, the interest rate is the value of one-year LIBOR, as of the payment date, plus 300 basis points (3 percent). On January 1, 1997, the value of one-year LIBOR is 3 percent, compounded annually. On January 1, 1997, the variable rate debt instrument has approximately the same fair market value as an otherwise identical debt instrument that provides for an interest rate equal to the value of one-year LIBOR, as of the payment date, for the first four years.

The variable rate debt instrument is treated as if it provided for an interest rate equal to the value of one-year LIBOR, as of the payment date, for the first four years of the term of the instrument. The equivalent fixed rate debt instrument for the variable rate debt instrument is a six-year debt instrument that has an issue price and stated principal amount of \$200,000 and provides for interest payments of \$6,000 for the first four years and \$12,000 for the last two years.

The equivalent fixed rate debt instrument has OID of \$12,000 because a portion of the interest (300 basis points) is not a qualified stated interest payment. The \$12,000 of OID is allocated over the six-year term of the debt instrument. The difference between the \$10,000 actually paid in the first four years and the \$6,000 assumed to be paid on the equivalent fixed rate debt instrument in those years is an adjustment to qualified stated interest, as is any difference between the amount actually paid in the last two years and the \$12,000.

If a variable rate debt instrument provides for stated interest at a fixed rate for an initial period, and further provides that on the date immediately following the end of the initial interval (effective date), the stated interest rate will be a rate determined under a procedure (eg, an auction procedure) so that the fair market value on the effective date will be a fixed rate (reset value), the accrual of OID is calculated by treating the variable rate instrument as (a) maturing on the date immediately preceding the effective date for an amount equal to the reset value; and (b) reissued on the effective date for an amount equal to the reset value.ⁿ¹¹²

[e] Integration of Qualifying Debt Instruments.

Regulations Section 1.1275-6 provides for the integration of a qualifying debt instrument with a hedge or combination of hedges if the combined cash flows of the components are substantially equivalent to the cash flows on a fixed or variable rate debt instrument. The purpose of the rules is to permit a more appropriate determination of the character and timing of income, deductions, gains, or losses that would be permitted by a separate accounting for the components. The rules affect only the taxpayer who holds or issues the qualifying debt instrument and enters into the hedge.

A qualifying debt instrument is either a contingent payment debt instrument or variable rate debt instrument (including an integrated transaction), other than (a) a tax-exempt obligation, (b) a debt instrument to which *IRC Section 1276(a)(6)* applies (certain interests held in, or mortgages held by, a REMIC, and certain other debt instruments with payments subject to acceleration), and (c) contingent debt instruments issued for nonpublicly traded property.ⁿ¹¹³ An integrated transaction consists of a qualifying debt instrument and a "Section 1.1275-6 hedge" if all of the following requirements are satisfied:ⁿ¹¹⁴

- (1) The taxpayer satisfies a special identification requirement on or before the date the taxpayer enters into the hedge.ⁿ¹¹⁵

(2) None of the parties to the hedge are related within the meaning of *IRC Section 267(b)* or *707(b)(1)* or, if the parties are related, the party providing the hedge uses, for federal income tax purposes, a mark-to-market method of accounting for the hedge and all similar or related transactions.

(3) Both the qualifying debt instrument and the hedge are entered into by the same individual, partnership, trust, estate, or corporation (regardless of whether the corporation is a member of an affiliated group of corporations that files a consolidated return).

(4) With respect to a foreign person engaged in a United States trade or business that issues or acquires a qualifying debt instrument or enters into a Section 1.1275-6 hedge, all items of income and expense associated with the instrument or hedge (other than interest that is deductible by a foreign corporation under *Regulations Section 1.882-5*) would have been effectively connected with the United States trade or business throughout the term of the synthetic debt instrument had Proposed *Regulations Section 1.1275-6* not applied.

(5) The qualifying debt instrument, any other debt instrument that is part of the same issue as the qualifying debt instrument, or the hedge cannot have been part of an integrated transaction entered into by the taxpayer that has been terminated or otherwise legged out within the 30 days immediately preceding the date that would be the issue date of the synthetic debt instrument.

(6) The qualifying debt instrument is issued or acquired by the taxpayer on or before the date of the first payment on the *Regulations Section 1.1275-6* hedge, whether or not received by the taxpayer (including a payment made to purchase the hedge). If the qualifying debt instrument is issued or acquired by the taxpayer after, but substantially contemporaneously with, the date of the first payment on the hedge, the qualifying debt instrument is treated as meeting the requirements of the preceding sentence.

(7) Neither the *Regulations Section 1.1275-6* hedge nor the qualifying debt instrument was, with respect to the taxpayer, part of a straddle prior to the issue date of the synthetic debt instrument.

A Section 1.1275-6 hedge is any financial instrument such that the combined cash flows of the financial instrument and the qualifying debt instrument permit the calculation of a yield to maturity, or the right to the combined cash flows would qualify as a variable rate debt instrument that pays interest at a qualified floating rate or rates (except for the requirement that the interest payments be stated as interest).ⁿ¹¹⁶ However, a taxpayer cannot treat a debt instrument it issues as a Section 1.1275-6 hedge of a debt instrument it holds, and cannot treat a debt instrument it holds as a Section 1.1275-6 hedge of a debt instrument it issues.ⁿ¹¹⁷

For this purpose, a financial instrument is a spot, forward, or futures contract, an option, a notional principal contract, a debt instrument, or a similar instrument, or combination or series of financial instruments; stock is not a financial instrument.ⁿ¹¹⁸

The Service can treat a qualifying debt instrument and a financial instrument entered into by the taxpayer or a related party as an integrated transaction if the combined cash flows on the qualifying debt instrument and financial instrument are substantially the same as the combined cash flows required for the financial instrument to be a Section 1.1275-6 hedge.ⁿ¹¹⁹ The circumstances under which the Service can require integration include, but are not limited to the following: (1) a taxpayer fails to identify a qualifying debt instrument and the Section 1.1275-6 hedge under the required identification rules; (2) a taxpayer issues or acquires a qualifying debt instrument and a related party enters into the Section 1.1275-6 hedge; (3) a taxpayer issues or acquires a qualifying debt instrument and enters into the Section 1.1275-6 hedge with a related party; and (4) the taxpayer legs out of an integrated transaction and within 30 days enters into a new Section 1.1275-6 hedge with respect to the same qualifying debt instrument or other debt instrument that is

part of the same issue.ⁿ¹²⁰

A taxpayer legs into an integrated transaction when a Section 1.1275-6 hedge is entered into after the date the qualifying debt instrument is issued or acquired by the taxpayer, and the requirements for an integrated transaction are satisfied on the date the hedge is entered into (leg-in date).ⁿ¹²¹ If a taxpayer legs into an integrated transaction, the taxpayer treats the qualifying debt instrument under the applicable rules for accruing interest and OID up to the leg-in date, with the day before the leg-in date being considered the end of an accrual period.ⁿ¹²² As of the leg-in date, the qualifying instrument is subject to the tax treatment of integrated transactions discussed below. If the taxpayer legs into an integrated transaction with a principal purpose of deferring or accelerating income or deductions on the qualifying debt instrument, the Service can (a) treat the qualifying debt instrument as sold for its fair market value on the leg-in date; or (b) refuse to allow the taxpayer to integrate the qualifying debt instrument and the Section 1.1275-6 hedge.ⁿ¹²³

If a taxpayer has integrated a qualifying debt instrument and a Section 1.1275-6 hedge, legging out means that, prior to the maturity of the synthetic debt instrument, the taxpayer disposes of or otherwise terminates all or a part of the qualifying debt instrument or Section 1.1275-6 hedge, the hedge ceases to meet the requirements for a Section 1.1275-6 hedge, or the taxpayer fails to meet any of the requirements of an integrated transaction.ⁿ¹²⁴ If the Service treats a qualifying debt instrument and a financial instrument as an integrated transaction, as described above, the Service can treat the taxpayer as not legging out. If, in a single nonrecognition transaction, a taxpayer disposes, or ceases to be primarily liable on, the qualifying debt instrument and the *Regulations Section 1.1275-6* hedge, the taxpayer is not treated as legging out, but, rather, the integrated transaction is treated under the rules governing the nonrecognition transaction.ⁿ¹²⁵

If the Service has integrated a qualifying debt instrument and financial instrument, legging out means that, prior to the maturity of the synthetic debt instrument, the requirements for integration either by the Service or the taxpayer are not met, and the Service agrees to allow the taxpayer to be treated as legging out.ⁿ¹²⁶

If a taxpayer legs out (or is treated as legging out) of an integrated transaction, the following rules apply:ⁿ¹²⁷

- (1) The transaction is treated as an integrated transaction during the time the transaction meets the requirements of an integrated transaction.
- (2) Immediately after the taxpayer legs out, the taxpayer is treated as selling or otherwise terminating the synthetic debt instrument for its fair market value and any income, deduction, gain, or loss is realized and recognized at that time.ⁿ¹²⁸ However, if a taxpayer legs out of an integrated transaction by disposing of or otherwise terminating a *Regulations Section 1.1275-6* hedge within 30 days of legging into the integrated transaction, any loss or deduction is not allowed. In such case, appropriate adjustments are made to the qualifying debt instrument for any disallowed loss; the adjustments are taken into account on a yield to maturity basis over the remaining term of the qualifying debt instrument.
- (3) If, immediately after the taxpayer legs out, the taxpayer holds or remains primarily liable on the qualifying debt instrument, adjustments are made to reflect any difference between the fair market value and the adjusted issue price of the debt instrument. If, immediately after the taxpayer legs out, the taxpayer is a party to a *Regulations Section 1.1275-6* hedge, the *Regulations Section 1.1275-6* hedge is treated as entered into at its fair market value.
- (4) If a holder of a contingent payment debt instrument legs into an integrated transaction with respect to the instrument and subsequently legs out, any gain recognized according to the rules described in the preceding two paragraphs is treated as income to the extent determined under the principles of *Regulations Section 1.1275-4(b)(8)(iii)(B)* (character of gain on the sale of a debt instrument all of the payments on which have been fixed). If the synthetic debt instrument would qualify as a variable rate

debt instrument, the equivalent fixed rate debt instrument determined under *Regulations Section 1.1275-5(e)* is used for this purpose.

An integrated transaction is generally treated as a single transaction by the taxpayer during the period that the transaction qualifies as an integrated transaction.ⁿ¹²⁹ With some exceptions discussed below, while a qualifying debt instrument and a Section 1.1275-6 hedge are part of an integrated transaction, neither the instrument nor the hedge is subject to the rules that would apply on a separate basis to each, including *IRC Section 1092* (governing the treatment of losses in straddles) or *Regulations Section 1.446-4* (accounting for hedge transactions). The rules that would govern the synthetic debt instrument generally govern the treatment of the integrated transaction. For example, the integrated transaction may be subject to *IRC Section 263(g)*, or, if the synthetic debt instrument would be part of a straddle, to *IRC Section 1092*. Generally, the synthetic debt instrument would be subject to the rules governing instruments with OID, as well as stripped bonds, with terms as follows:

- (1) The issue date of the synthetic debt instrument is the first date on which the taxpayer entered into all of the components of the synthetic debt instrument.
- (2) The term of the synthetic debt instrument is the period beginning on the issue date of the synthetic debt instrument and ending on the maturity date of the qualifying debt instrument.
- (3) The issue price of the synthetic debt instrument is the adjusted issue price of the qualifying debt instrument on the issue date of the synthetic debt instrument. If, as a result of entering into the *Regulations Section 1.1275-6* hedge, the taxpayer pays or receives one or more payments that are substantially contemporaneous with the issue date of the synthetic debt instrument, the payments reduce or increase the issue price as appropriate.
- (4) The adjusted issue price of the synthetic debt instrument is its issue price increased by the amount of any OID previously included in income and decreased by any payment made on the debt instrument other than a payment of qualified stated interest.
- (5) No amounts payable on the synthetic debt instrument are treated as qualified stated interest under the OID rules (*Regulations Section 1.1273-1(c)*).
- (6) If the synthetic debt instrument is a borrowing, the instrument's stated redemption price at maturity is the sum of all amounts paid or to be paid on the qualifying debt instrument and the Section 1.1275-6 hedge, reduced by amounts received or to be received on the hedge and any amounts treated as qualified stated interest on the synthetic debt instrument. If the synthetic debt instrument is held by the taxpayer, the instrument's stated redemption price at maturity is the sum of all amounts received or to be received on the qualifying debt instrument and the Section 1.1275-6 hedge, reduced by any amounts paid or to be paid on the hedge. If an amount paid or received on the *Regulations Section 1.1275-6* hedge is taken into account to determine the issue price of the synthetic debt instrument, the amount is not taken into account to determine the synthetic debt instrument's stated redemption price at maturity.
- (7) The source of interest income from the synthetic debt instrument is determined by reference to the source of income of the qualifying debt instrument under *IRC Sections 861(a)(1)* and *862(a)(1)* (see § 20.06[1][a][i]). For purposes of *IRC Section 904* (limitations on the foreign tax credit, discussed in § 20.02[4][e]), the character of interest from the synthetic debt instrument is determined by reference to the character of the interest income from the qualifying debt instrument. Interest expense is allocated and apportioned according to regulations under *IRC Section 861* or under *Regulations Section 1.882-5*.
- (8) Interest income resulting from the synthetic debt instrument entered into by a foreign person engaged

in a United States trade or business that issues or acquires a qualifying debt instrument or enters into a Section 1.1275-6 hedge is treated as effectively connected with a United States trade or business. Interest expense of such a foreign person is allocated and apportioned under *Regulations Section 1.882-5*.

(9) The synthetic debt instrument is not treated as a short-term obligation for purposes of *IRC Section 1272(a)(2)(C)*.

(10) If the Service requires integration, appropriate adjustments are made to the treatment of the synthetic debt instrument and, if necessary, the qualifying debt instrument and financial instrument. For example, the Service may treat a financial instrument that is not a Section 1.1275-6 hedge as such a hedge. The issue date of the synthetic debt instrument is the date determined appropriate by the Service to require integration.

The regulations provide for the retention of separate transaction rules in two instances. The first situation comes into play if a foreign person enters into an integrated transaction that gives rise to United States source interest income not effectively connected with a trade or business. In such case, the provisions of *IRC Section 871(a)* (taxation of nonresident aliens), 881 (taxation of foreign corporations), 1441 (withholding of tax on nonresident aliens), 1442 (withholding of tax on foreign corporations), and 6049 (information returns required of persons making interest payments) are applied to the qualifying debt instrument and the Section 1.1275-6 hedge on a separate basis.ⁿ¹³⁰ For example, if a United States corporation issues a qualifying debt instrument and enters into an interest rate swap that is a Section 1.1275-6 hedge, the source of the interest on the qualifying debt instrument will generally be United States source income because the obligation is issued by a domestic corporation, while the source of payments received on the swap by a foreign person not engaged in a trade or business in the United States will be determined by reference to the taxpayer's residence.ⁿ¹³¹

The second exception looks to the relationship between issuer and holder. Because the rules relating to integrated transaction affect only the taxpayer holding or issuing the qualifying debt instrument, any provisions of the Internal Revenue Code that govern the relationship between the issuer and holder of the qualifying debt instrument are applied on a separate basis.ⁿ¹³² For example, if the qualifying debt instrument is a contingent payment debt instrument, the issuer must provide the projected payment schedule to the holder.

If a taxpayer enters into a *Regulations Section 1.1275-6* hedge with a member of the same consolidated group (the counterparty) and the *Regulations Section 1.1275-6* hedge is part of an integrated transaction for the taxpayer, the *Regulations Section 1.1275-6* hedge is not treated as an intercompany transaction for the taxpayer for purposes of *Regulations Section 1.1502-13*.ⁿ¹³³ If the taxpayer legs out of an integrated treatment, the taxpayer and the counterparty are each treated as having disposed of the position in the *Regulations Section 1.1275-6* hedge. If the *Regulations Section 1.1275-6* hedge remains in existence after the leg-out date, the *Regulations Section 1.1275-6* hedge is treated under rules that would normally apply to the transaction.

The following examples illustrate the integrated transaction rules:

Example 1:

On January 1, 1997, A Corp., a domestic corporation, issues a five-year debt instrument for \$20,000. The instrument provides for annual payments of interest at a rate equal to the value of one-year LIBOR and for a principal payment of \$20,000 at maturity. On the same day, A Corp. enters into a five-year interest rate swap agreement with an unrelated party under which A Corp. pays 6 percent and receives a one-year LIBOR on a notional principal amount of \$20,000. Payments on the swap are fixed and made on the same days as payments on the debt instrument. On January 1, 1997, A Corp. identifies the debt instrument and interest rate swap as an integrated transaction.

The transaction is an integrated transaction. The debt instrument is a variable rate debt instrument and, thus, a qualifying debt instrument. The swap is a Section 1.1275-6 hedge because it is a financial instrument and a yield to maturity on the combined cash flows of the swap and the debt instrument can be calculated.

The synthetic debt instrument is a five-year debt instrument that has an issue price of \$20,000 and provides for annual interest payments of \$1,200 and a principal payment at maturity of \$20,000. No amounts payable on the synthetic debt instrument are treated as qualified interest payments. The synthetic debt instrument is deemed to have a stated redemption price at maturity of \$26,000 (the sum of all amounts to be paid on the qualifying debt instrument and the swap, reduced by amounts to be received on the swap and the annual interest payments on the synthetic debt instrument). Therefore, the synthetic debt instrument has \$6,000 of OID.

Example 2:

On January 1, 1997, *B Corp.* receives \$20,000 for a debt instrument that matures on December 31, 1999. The debt instrument has a stated principal amount of \$20,000 payable at maturity, and also provides for a payment at maturity equal to \$200 times the increase, if any, in the value of a nationally known composite index of stocks from January 1, 1997 to December 31, 1999. On January 1, 1997, *B Corp.* pays \$5,000 to an unrelated party for an option that pays \$200 times the increase, if any, in the stock index from January 1, 1997 to the maturity date. *B Corp.* properly identifies the debt instrument and option as an integrated transaction.

The transaction qualifies as an integrated transaction. The debt instrument is a contingent payment debt instrument and, thus, a qualifying debt instrument. The option is a Section 1.1275-6 hedge because it is a financial instrument and a yield to maturity on the combined cash flows of the option and the debt instrument can be calculated.

The issue price of the synthetic debt instrument is \$20,000 reduced by the \$5,000 payment for the option. Thus, the synthetic debt instrument is a three-year debt instrument with an issue price of \$15,000. The stated redemption price at maturity is \$20,000, so that the synthetic debt instrument has \$5,000 of OID.

Example 3:

On December 31, 1996, *C Corp.* pays \$2 million for a debt instrument that matures on December 31, 2006. The instrument provides for yearly payments of interest at a rate 6 percent and for a payment at maturity of \$2 million, increased by the excess, if any, of the price of 2,000 units of a commodity on December 31, 2006, over \$700,000, and decreased by the excess, if any, of \$700,000 over the price of 2,000 units of the commodity on the maturity date. The projected payment at maturity, determined under the contingent payment debt instrument regulations, is \$2,040,000. On December 31, 1999, *C Corp.* enters into a cash settled forward contract with an unrelated party to sell 2,000 units of the commodity on December 31, 2006 for \$900,000, and properly identifies the transaction as an integrated transaction. Assume one-year accrual periods.

The debt instrument is a qualifying debt instrument because it is a contingent payment debt instrument. The forward contract entered into on December 31, 1999 is a Section 1.1275-6 hedge.

Therefore, C Corp. legged into an integrated transaction on December 31, 1999. Prior to that date, the tax consequences attending the debt instrument are determined under the contingent payment debt regulations.

The issue price of the synthetic debt instrument is equal to the \$2,009,608 adjusted issue price of the qualifying debt instrument on the leg-in date. The term of the synthetic instrument is from December 31, 1999 to December 31, 2006. The synthetic debt instrument provides for yearly interest payments of \$120,000 and a principal payment at maturity of \$2,200,000 (\$2 million plus \$900,000 less \$700,000). No amounts payable on the synthetic debt instrument are qualified stated interest payments. The stated redemption price at maturity of the synthetic debt instrument is \$3,040,000 (the sum of all amounts to be received by C on the qualifying debt instrument and the Section 1.1275-6 hedge, reduced by all amounts to be paid by C on the hedge. Thus, the synthetic debt instrument has \$1,030,392 of OID.

[f] Inflation-Indexed Debt Instruments.

Inflation-indexed debt instruments are not subject to the regulations governing contingent payment debt instruments.ⁿ¹³⁴ They are governed instead by the rules in *Treasury Regulation 1.1275-7*, which cover all inflation-indexed debt instruments except (1) a debt instrument (other than a tax-exempt obligation) described in *IRC Section 1272(a)(2)* (eg, United States savings bonds, certain loans between natural persons, and other short-term taxable obligations), and (2) debt instruments issued by qualified state tuition programs.ⁿ¹³⁵ An inflation-indexed debt instrument as defined in the regulations is one that satisfies the following conditions:ⁿ¹³⁶

- (1) The debt instrument is issued for United States dollars and all payments on the instrument are denominated in United States dollars.
- (2) Except for a minimum guarantee payment, each payment on the debt instrument is indexed for inflation and deflation. A payment is so indexed if the amount of the payment is equal to (a) the amount that would be payable if there was no inflation or deflation over the term of the debt instrument, multiplied by (b) a ratio, the numerator of which is the value of the reference index for the date of payment and the denominator of which is the value of the reference index for the issue date.

The reference index is an index used to measure inflation and deflation over the term of a debt instrument.ⁿ¹³⁷ To qualify as a reference index, (i) the value of the index must be reset once a month to a current value of a single qualified inflation index, (ii) the reset must occur on the same day of each month (the reset date), and (iii) the value of the index for any date between reset dates must be determined through straight-interpolation.ⁿ¹³⁸ A qualified inflation index is a general price or wage index that is updated and published at least monthly by an agency of the United States Government (eg, the CPI-U published by the Bureau of Labor Statistics).ⁿ¹³⁹

A minimum guarantee payment is an additional payment made at maturity on a debt instrument if the total amount of inflation-adjusted principal paid on the instrument is less than the instrument's stated principal amount. The amount of the additional payment must not be more than the excess, if any, of the debt instrument's stated principal amount over the total amount of inflation-adjusted principal paid on the instrument. An additional payment is not a minimum guarantee payment unless the qualified inflation index used to determine the reference index is either the CPI-U or an index designated for this purpose by the Commissioner in the Federal Register or the Internal Revenue Bulletin.

- (3) No payment on the debt instrument is subject to a contingency other than (a) the inflation contingency, (b) a minimum guarantee payment, or (c) payments under one or more alternate payment schedules if the payments under each payment schedule are indexed for inflation and deflation and a payment schedule can be determined under *Regulations Section 1.1272-1(c)* (assuming that no inflation or deflation will occur over the term of the instrument).

Qualified stated interest and inflation adjustments on inflation-indexed debt instruments can be accounted for under the coupon-bond method if (a) the debt instrument is issued at par (the difference between its issue price and principal amount for the issue date is less than the de minimis amount, and (b) all stated interest on the debt instrument is qualified stated interest--the interest is unconditionally payable in cash, or is constructively received, at least annually at a single fixed rate.ⁿ¹⁴⁰ Interest is payable at a single fixed rate if the amount of each interest payment is determined by multiplying the inflation-adjusted principal amount for the payment date by the single fixed rate.ⁿ¹⁴¹

Under the coupon bond method, qualified stated interest is taken into account under the taxpayer's regular method of accounting.ⁿ¹⁴² The amount of accrued but unpaid qualified stated interest as of any date is determined by using the principles of *Regulations Section 1.446-3(e)(2)(ii)*.ⁿ¹⁴³ For example, if the interval between interest payment dates spans two taxable years, a taxpayer using an accrual method of accounting determined the amount of accrued qualified stated interest for the first taxable year by reference to the inflation-adjusted principal amount at the end of the first taxable year.

An inflation adjustment is taken into account under the coupon bond method for each taxable year in which the debt instrument is outstanding.ⁿ¹⁴⁴ The amount of the inflation adjustment is equal to the sum of the inflation-adjusted principal amount at the end of the relevant period (taxable year or the portion of the taxable year during which the taxpayer held the debt instrument) and the principal payments made during the period, minus the inflation-adjusted principal amount at the beginning of the period.ⁿ¹⁴⁵ A positive inflation adjustment is OID and is treated in the manner discussed in § 17.03[2][a].ⁿ¹⁴⁶

A negative inflation adjustment (a deflation adjustment) reduces the amount of interest otherwise includable in income by a holder with respect to the debt instrument for the taxable year.ⁿ¹⁴⁷ If the amount of the deflation adjustment exceeds the interest otherwise includable in income by the holder for the taxable year, the excess is treated as an ordinary loss by the holder for the taxable year. However, the amount treated as an ordinary loss is limited to the amount by which the holder's total interest inclusions on the debt instrument in prior years exceed the total amount treated by the holder as an ordinary loss on the debt instrument in prior years. If the deflation adjustment exceeds the interest otherwise includable in income by the holder for the taxable year and the amount treated as an ordinary loss for the taxable year, the excess is carried forward to reduce the amount of interest otherwise includable in income by the holder in subsequent taxable years.

A deflation adjustment reduces the interest (qualified stated interest and OID) otherwise deductible by the issuer with respect to the debt instrument for the taxable year.ⁿ¹⁴⁸ If the amount of the deflation adjustment exceeds the interest otherwise deductible by the issuer for the taxable year, the excess is treated as ordinary income for the taxable year. However, the amount treated as ordinary income is limited to the amount by which the issuer's total interest deductions on the debt instrument in prior taxable years exceed the total amount treated by the issuer as ordinary income in prior taxable years. If the deflation adjustment exceeds the interest otherwise deductible by the issuer for the taxable year and the amount treated as ordinary income for the taxable year, the excess is carried forward to reduce the interest otherwise deductible by the issuer for subsequent taxable years. If there is any excess remaining upon the retirement of the debt instrument, the issuer takes the excess amount into account as ordinary income.

A minimum guarantee payment is ignored until payment is made, and is then treated as interest on the date it is paid.ⁿ¹⁴⁹

Example 1:

On October 15, 1997, A pays \$200,000 at the time of original issue of a debt instrument that is indexed to the CPI-U for inflation and deflation. The debt instrument matures on October 15, 1999, has a stated principal amount of \$200,000, and a stated interest rate of 6 percent, compounded semiannually, payable

on April 15 and October 15 of each year; the amount of each interest payment is determined by multiplying the inflation-adjusted principal amount for each payment date by the stated interest rate, adjusted for the accrual period. The debt instrument also provides for a single payment of the inflation-adjusted principal amount at maturity and for the payment of a minimum guarantee amount, if required. A is a calendar year, cash receipts and disbursements method taxpayer.

Assume the relevant reference index values:

October 15, 1997:	100
January 1, 1998:	101
April 15, 1998:	102
October 15, 1998:	104
January 1, 1999:	98

Because A does not receive any payments of interest on the debt in 1997, A has no qualified stated interest income for that year. However, A must take into account the inflation adjustment for 1997 as OID in 1997. The inflation-adjusted principal amount for January 1, 1998 is \$202,000 (\$200,000 x 101/100), yielding an inflation adjustment for 1997 of \$2,000 (\$202,000 inflation-adjusted principal amount for January 1, 1998 less the \$200,000 principal amount for the issue date).

On April 15, 1998, A receives an interest payment of \$6,120 (\$200,000 x 102/100 x .06/2); on October 15, 1998, A receives a payment of \$6,240 (\$200,000 x 104/100 x .06/2). Thus, A's qualified stated interest income for 1998 is \$12,360. A must also take into account the inflation adjustment for 1998. The inflation-adjusted principal amount for January 1, 1999 is \$196,000 (\$200,000 x 98/100), producing a negative inflation adjustment (and a deflation adjustment) for 1998 of \$6,000 (inflation-adjusted principal amount of \$196,000 for January 1, 1999, less the inflation-adjusted principal amount of \$202,000 for January 1, 1998). The deflation adjustment reduces the interest income otherwise includable by A for 1998 to \$6,360 (qualified stated interest income of \$12,360 minus deflation adjustment of \$6,000).

A different method, the discount bond method, must be used to account for OID on an inflation-indexed debt instrument that does not qualify for the coupon bond method.ⁿ¹⁵⁰ Under the discount bond method, no interest is qualified stated interest.ⁿ¹⁵¹ The amount of OID that accrues on the debt instrument under the discount bond method is determined as follows:ⁿ¹⁵² First, determine the debt instrument's yield to maturity under the rules of *Section 1.1272-1(b)(1)(i) of the regulations*, with the payment schedule of the debt instrument determined as if there was no inflation or deflation over the term of the debt instrument. Second, determine the accrual periods using the rules of *Section 1.1272-1(b)(1)(ii) of the regulations*, but with no accrual period longer than one month. Third, determine the percentage change in the reference period during the accrual period. This change is equal to the ratio of the value of the reference index at the end of the period to the value of the reference index at the beginning of the period, minus one. Fourth, determine the OID allocable to an accrual period (n) by using the following formula:

$$\text{OID}(n) = \text{AIP}(n) \times [r + \text{inf}(n) + (r \times \text{inf}(n))]$$

in which r is the yield of the debt instrument, $\text{inf}(n)$ is the percentage change in the reference index for period (n), and $\text{AIP}(n)$ is the adjusted issue price at the beginning of period (n). Finally, determine the daily portions of OID and take those into account under the rules generally applicable to OID obligations, i.e., the holder includes in income the daily portions of OID for each day during the taxable year on which the holder held the instrument, while the issuer is allowed a deduction as provided in *IRC Section 163(e)*. However, if the daily portions are negative amounts, they are deflation adjustments taken into account in the same manner as under the coupon bond method.

Example 2:

On November 15, 1997, A, a cash basis, calendar-year taxpayer, purchases at original issue, for \$182,806, a zero-coupon debt instrument that is indexed for inflation and deflation. The principal amount of the debt instrument for the issue date is \$200,000. The instrument provides for a single payment on the maturity date, November 15, 2000. The amount of the payment will be determined by multiplying \$200,000 by a fraction, the numerator of which is the CPI-U for September, 2000, and the denominator of which is the CPI-U for September 1997, but cannot be less than \$200,000.

The coupon bond method does not apply to the debt instrument because its principal amount for the issue date (\$200,000) exceeds its issue price (\$182,806) by \$17,194, more than the *de minimis* amount of \$1,500 (one-fourth of one percent of \$200,000 times three, the number of complete years to maturity). Therefore, the discount bond method must be used to determine the amount of OID.

Assume that A chooses monthly accrual periods ending on the fifteenth day of each month. The yield of the debt instrument, determined as if there were no inflation or deflation over the term of the instrument, and based on the issue price of \$182,806 and an assumed payment of \$200,000 at maturity, is 3 percent, compounded monthly.

Assume that the CPI-U for September, 1997 is 160, for October, 1997 is 161.2, and for November, 1997 is 161.7. The value of the reference index for November 15, 1997 is 160, the value of the CPI-U for September, 1997. The value of the reference index for December 15, 1997 is 161.2, and for January 15, 1998 is 161.7. The percentage change in the reference index from November 15, 1997 to December 15, 1997 (inf1) is 0.0075 ($161.2/160-1$); the percentage change from December 15, 1997 to January 15, 1998 (inf2) is 0.0031 ($161.7/161.2-1$).

The yield of the debt instrument (r) for the accrual period beginning on November 15, 1997 and ending on December 15, 1997 is .0025 (3 percent/12). Substituting in the formula produces OID allocable to the accrual period ending on December 15, 1997 of \$1,831.ⁿ¹⁵³ The adjusted issue price of the debt instrument on December 15, 1997 is \$184,637 (\$182,806 + \$1,831). The yield of the debt instrument (r) for the accrual period ending on January 15, 1998 is, again, .0025 (3 percent/12). The percentage change in the reference index for the period (inf2) is .0031. Substituting in the formula using an adjusted issue price of \$184,637 results in OID allocable to the accrual period of \$1,035. Because the accrual period spans two taxable years, only \$518 of this amount ($\$1035/30 \text{ days} \times 15 \text{ days}$) is allocable to 1997. Thus, A must include \$2,349 of OID in income for 1997.

A holder's adjusted basis in an inflation-indexed debt instrument is increased by the amount of OID included in the holder's gross income and decreased by the amount of any payment from the issuer to the holder under the debt instrument other than qualified stated interest.ⁿ¹⁵⁴ In addition, the basis of an inflation-indexed debt instrument must be decreased by the amount of any deflation adjustment the holder takes into account to reduce the amount of interest otherwise includable in income or treats as an ordinary loss with respect to the instrument during the taxable year; the decrease occurs when the deflation adjustment is taken into account.

A holder determines the amount of acquisition premium or market discount on an inflation-indexed debt instrument by reference to the adjusted issue price of the instrument on the date the holder acquires the instrument.ⁿ¹⁵⁵ A holder determines the amount of bond premium on an inflation-indexed debt instrument by assuming that the amount payable at maturity is equal to the instrument's inflation-adjusted principal amount for the day the holder acquires the instrument. Any premium or market discount is taken into account over the remaining term of the debt instrument as if there were no further inflation or deflation.

[3] Reporting Requirements for Issuers of Original Issue Discount Bonds.

Within 30 days after the issue date of an issue, the issuer of a publicly traded OID obligation is required to make an information return on the form prescribed by the Service (presently Form 8281).ⁿ¹ The reporting rules do not apply to debt instruments excepted from the OID rules by *IRC Section 1272(a)(2)*, debt instruments issued by natural persons, certificates of deposit, REMIC regular interests or other debt instruments subject to *IRC Section 1272(a)(6)*, or stripped bonds or coupons.ⁿ² An issuer who fails to meet the filing requirement is subject to a penalty of 1 percent of the aggregate issue price of the issue up to a maximum of \$50,000 per issue, unless the failure is due to reasonable cause and not willful neglect.ⁿ³

The issuer of any instrument that is not publicly offered, is issued in physical form, and has OID, must legend the instrument by stating on its face that it was issued with OID.ⁿ⁴ In addition, the issuer must either: (i) set forth on the face of the debt instrument the issue price, the amount of OID, the issue date, the yield to maturity, and, in the case of a debt instrument subject to the noncontingent bond method, the comparable yield and projected payment schedule; or (ii) provide the name or title and either the address or telephone number of a representative of the issuer who will, beginning no later than ten days after the issue date, promptly make such information available to holders who request it. The issuer can satisfy the legend requirement at the time the debt is first issued in physical form, but need not do so before the first holder of the debt instrument disposes of the instrument.ⁿ⁵ The penalty for failure to legend is \$50 for each instrument unless due to reasonable cause and not willful neglect.ⁿ⁶

FOOTNOTES:

(n1)Footnote 1. See Ch 2, § 2.07[1]; *IRC §§ 1271-1275*.

(n2)Footnote 2. Unlike the discussion in Chapter 2, this section covers transactions in which debt obligations are issued for money or publicly traded property, as well as debt issued in exchange for nonpublicly traded property.

(n3)Footnote 3. See *IRC § 1273(a)(1)*; discussion at § 2.07[1][c][i].

(n4)Footnote 4. Such market forces may affect the price of debt instruments originally issued at a discount as well, so that a bond may have both original issue and market discount. The two types of discount are nevertheless treated differently for tax purposes, as explained in § 17.04[2], *infra*.

(n5)Footnote 5. For a more extensive discussion of the meaning and application of these terms, see Chapter 2, § 2.07[1].

(n6)Footnote 6. *IRC § 1273(a)(1)*.

(n7)Footnote 7. *Treas Reg § 1.1273-1(b)*.

(n8)Footnote 8. See *IRC § 1273(a)(2)*; *Treas Reg §§ 1.1273-1(b) and (c)*.

(n9)Footnote 9. See S Rep No 169 (Vol I), 98th Cong., 2d Sess 255 (1984) ("[I]n general, interest will be considered payable unconditionally only if the failure to timely pay interest results in an acceleration of all amounts under the debt obligation or similar consequences."), quoted in *Rev Rul 95-70, 1995-2 CB 124*. "If the terms of the debt instrument do not provide the holder with the right to compel payment, they must provide for a penalty that inures directly to the benefit of the holder and ... is large enough to ensure that, at the time the debt instrument is issued, it is reasonably certain that, absent insolvency, the issuer will make interest payments when due. *Rev Rul 95-70, supra*. Thus, the Service concluded in *Rev Rul 95-70* that a provision in a debt instrument that prohibited the issuer from paying dividends while interest was past due was not a sufficient penalty, and interest was therefore not payable "unconditionally," because, while the suspension of dividends was likely to result in a "significant decline" in the issuer's stock, the penalty did not inure directly to the benefit of the holders of the debt instrument. In a second situation

considered in *Rev Rul 95-70*, the issuer, in addition to the dividend restriction referred to above, the debt instrument required the issuer to pay a "penalty" rate on interest in arrears of 10 percent per annum, as compared with bond's stated rate of 8 percent. The Service held that this too was an insufficient penalty, although it inured to the benefit of the bonds' holders, because "it is possible that there may be circumstances in which the benefit of deferring is worth the additional cost." The Service did acknowledge, however, that, depending on the facts and circumstances, a "penalty rate" which increased the stated yield of the bond by 12 percentage points or more might be sufficient to assure that interest payments are reasonably certain to be paid when due.

(n10)Footnote 10. *Treas Reg § 1.1273-1(c)(1)(ii)*.

(n11)Footnote 11. *IRC § 1273(b)(1)*. The substantial amount requirement "is intended primarily to cover any attempt to rig an artificial price in order to obtain more favorable tax treatment." HR Rep No 1337, 83d Cong, 2d Sess, A-277 (1954). The term "initial offering price" includes the aggregate payments made by the purchaser under the purchase agreement, including modifications thereof. *IRC § 1273(c)(1)*.

The issue price of a convertible debt instrument includes the amount paid for the option to convert the instrument into stock or another debt instrument of either the issuer or a related party (within the meaning of *IRC § 267(b)* or *IRC § 707(b)(1)*), or into cash or other property in an amount equal to the approximate value of the stock or debt instrument. *Treas Reg § 1.1273-2(j)*.

If a portion of the initial issue price is allocable to pre-issuance accrued interest, and the instrument provides for a payment of stated interest on the first payment date within one year of the issue date that equals the amount of the pre-issuance accrued interest, the instrument's issue price may be computed by subtracting from the normally computed issue price the amount of pre-issuance accrued interest. *Treas Reg § 1.1273-2(m)*.

(n12)Footnote 12. *IRC § 1273(b)(2)*. The price paid by the first buyer consists of the aggregate payments made by that buyer under the purchase agreement. *IRC § 1273(c)(1)*.

(n13)Footnote 13. *IRC § 1273(b)(5)*.

(n14)Footnote 14. *Treas Reg § 1.1273-2(a)(1)*.

(n15)Footnote 15. *Treas Reg § 1.1275-2(d)(1)*. For an issue of Treasury securities sold from Nov 1, 1998, to March 13, 2001, the issue price of the issue is the price of the securities sold at auction.

(n16)Footnote 16. *Treas Reg § 1.1275-2(d)(2)(i)*, effective for qualified reopenings that occurred on or after March 25, 1992. Additional Treasury securities are Treasury securities with terms that are identical in all respects to the terms of the original Treasury securities. *Treas Reg § 1.1275-2(d)(2)(ii)(A)*. Original Treasury securities are securities comprising any issue of outstanding Treasury securities. *Treas Reg § 1.1275-2(d)(2)(ii)(B)*.

(n17)Footnote 17. *Treas Reg § 1.1275-2(d)(2)(ii)(C)*. OID is *de minimis* whenever it is less than one-fourth of one percent (0.0025) of the redemption price at maturity times the number of complete years to maturity. *IRC § 1273(a)(3)*. The holder of a debt instrument can either disregard *de minimis* OID or elect to treat *de minimis* OID as OID, and to include in gross income all interest that accrues on the instrument by using the constant yield to maturity method described in *Treas Reg § 1.1272-3(c)*. Under this method, the debt instrument is treated as if (i) the instrument is issued for the holder's adjusted basis immediately after its acquisition by the holder; (ii) the instrument is issued on the holder's acquisition date; and (iii) none of the interest payments provided for in the instrument is a qualified stated interest payment.

(n18)Footnote 18. *Treas Reg § 1.1275-2(d)(2)(ii)(D)*.

(n19)Footnote 19. *Treas Reg § 1.1275-1(f)(1)*. For debt instruments issued on or after April 4, 1994, and before

March 13, 2001, two or more debt instruments are part of the same issue if they have the same credit and payment terms, and are sold reasonably close in time either pursuant to a common plan or as part of a single transaction or a series of related transactions. *Treas Reg* § 1.1275-1(f)(2).

(n20)Footnote 20. *Treas Reg* § 1.1275-1(k)(1).

(n21)Footnote 21. *Treas Reg* § 1.1275-1(k)(3). The provisions of *Treas Reg* § 1.1275-1(k)(3) do not apply to reopenings of tax-exempt obligations or contingent payment debt instruments.

(n22)Footnote 22. *Treas Reg* § 1.1275-1(k)(1).

(n23)Footnote 23. *Treas Reg* § 1.1275-1(k)(2)(i).

(n24)Footnote 24. *Treas Reg* § 1.1275-1(k)(2)(ii). The reopening date is the issue date of the additional debt instruments. *Treas Reg* § 1.1275-1(k)(2)(iii).

(n25)Footnote 25. *Treas Reg* § 1.1273-2(b)(1), (2). The issue date of a group of debt instruments issued for money is the first settlement date or closing date on which a substantial amount of the debt instruments is sold. *Treas Reg* § 1.1273-2(a)(2).

(n26)Footnote 26. *IRC* § 1273(b)(3). Publicly-traded property generally includes exchange listed property, property traded on a board of trade or an interbank market, property appearing on a quotation medium that provides a reasonable basis to determine fair market value, and debt instruments for which price quotations are readily available. *Treas Reg* § 1.1273-2(f).

Commodities traded on a board of trade that has been designated as a contract market constitute property traded on an established market. *Ltr Rul* 199901008 .

The issue date is the first date on which a substantial part of the debt instruments in the issue is issued for traded property. *Treas Reg* § 1.1273-2(c)(2).

(n27)Footnote 27. *IRC* §§ 1273(b)(4), 1274(a)(1), (2). See generally Davis, "Buying and Selling Property: The Determination and Treatment of Imputed Interest," 44 *NYU Inst on Fed Tax* Ch 33 (1986).

(n28)Footnote 28. The AFR itself is a rate, published monthly by the IRS, based on the average market yield on outstanding marketable obligations of the US over a one-month period. See *IRC* § 1274(d); *Treas Reg* § 1.1274-4(b). The calculation of the test rate based on the applicable AFR is explained in Ch 2, § 2.07[1][c][i].

(n29)Footnote 29. *IRC* § 1274(a)(1)(A). The "stated principal amount" of the debt instrument is the aggregate amount of all payments due under the instrument, excluding the amount of any stated interest and any payment from a buyer-borrower to a seller-lender designated as interest or points. *Treas Reg* § 1.1274-2(b).

(n30)Footnote 30. *IRC* § 1274(a)(2), (b)(1), (2). The OID resulting therefrom is includable in income ratably under the terms of *IRC* § 1272. See § 17.03[2].

(n31)Footnote 31. *IRC* § 1274(b)(3).

(n32)Footnote 32. *IRC* § 1273(c)(2).

(n33)Footnote 33. *IRC* § 1275(a)(4). The adjusted issue price is the original issue price increased by the portion of any original issue discount previously reported in income.

(n34)Footnote 1. *IRC* § 1271(c)(2).

(n35)Footnote 2. *IRC §§ 1272(b)(2), 1275(a)(2)*. If a debt instrument is not publicly offered and is sold for property, the date of original issue is the date on which the instrument was issued in a sale or exchange.

(n36)Footnote 3. *IRC § 1272(b)(3)*. For example, if the bond is originally issued on June 15th, the second complete month begins on July 15th and so on. If there is no corresponding day in a succeeding month, the commencement date in that month is the last day of the month.

A fractional month allocation of the amount of OID includable in income is required when the acquisition does not occur on the commencement of a complete month, or when there is a fractional part of the month falling between the commencement of a complete month and the end of the taxable year.

(n37)Footnote 4. *IRC § 1272(b)(4)*. A purchase is defined as any acquisition of a debt instrument where the basis is not determined in whole or in part by reference to the adjusted basis of the instrument or other evidence of indebtedness in the hands of the person from whom acquired. *IRC § 1272(d)(1)*.

(n38)Footnote 5. *IRC § 1272(c)(1)*.

(n39)Footnote 6. For this purpose, the term "debt instrument" includes a bond, debenture, note, certificate, or other evidence of indebtedness. *IRC § 1275(a)(1)(A)*.

(n40)Footnote 7. *IRC § 1272(a)(1)*. A holder who purchases a bond at a premium is not subject to this rule. *IRC § 1272(c)(1)*.

The basis of the instrument is increased by the amount included in income pursuant to *IRC § 1272(a)(1)*. *IRC § 1272(d)(2)*.

Holders of debt instruments having OID must accrue OID so long as they hold the debt instruments regardless of the financial condition of the issuer; there is no 'doubtful collectibility' exception from OID accrual. *TAM 9538007*.

The holder of a debt instrument includes any *de minimis* OID (other than *de minimis* OID treated as stated interest, such as *de minimis* OID attributable to a teaser rate or interest holiday) in income as stated principal payments are made. The amount includable in income with respect to each principal payment equals the product of the total amount of *de minimis* OID on the debt instrument and a fraction, the numerator of which is the amount of principal payment made and the denominator of which is the stated principal amount of the instrument. *Treas Reg § 1.1273-1(d)(5)*. A taxpayer can use the principal-reduction method of accounting to account for *de minimis* OID. *Rev Proc 97-39, 1997-2 CB 485*.

(n41)Footnote 8. *IRC § 1272(a)(2)*. The exception for loans between natural persons does not apply if the loan has as one of its principal purposes the avoidance of any federal tax. *IRC § 1272(a)(2)(E)(ii)*.

A husband and wife are treated as one person for purposes of the natural person loan exception unless the spouses lived apart at all times during the taxable year in which the loan was made. *IRC § 1272(a)(2)(E)(iii)*.

(n42)Footnote 9. *IRC § 1272(a)(3)*. The term "accrual period" means any six-month period (or shorter period from the date of original issue of the debt instrument) that ends on a day in the calendar year corresponding to the maturity date of the instrument or the date six months before such maturity date. *IRC § 1272(a)(5)*.

(n43)Footnote 10. The adjusted issue price at the beginning of any accrual period is the sum of the original issue price of the debt instrument plus the OID allocated to all prior accrual periods. *IRC § 1272(a)(4)*.

(n44)Footnote 11. *Treas Reg § 1.1272-1(b)(1)*; see *Treas Reg § 1.1272-1(j)*, Examples 1-10.

(n45)Footnote 12. *Treas Reg § 1.1272-1(b)(1)(i)*.

(n46)Footnote 13. *IRC § 1272(a)(7)*.

(n47)Footnote 14. *IRC § 1272(a)(7)*.

(n48)Footnote 15. If a taxpayer is required by *IRC § 1272(a)(6)(C)* to change its method of accounting for its first taxable year beginning after Aug 5, 1997, the change is treated as initiated by the taxpayer with the consent of the Service, and the net amount of the adjustments required to be taken into account by the taxpayer under *IRC § 481* must be taken into account ratably over the four-year period beginning with that first taxable year. Taxpayer Relief Act of 1997, § 1004(b)(2).

(n49)Footnote 16. *IRC § 1272(a)(2)*. *Treas Reg § 1.1273-1(c)(5)* states that no payments of interest are treated as qualified stated interest of a debt instrument with a term that is not more than one year from the date of issue. The Service is studying whether the provision should apply to stated interest payable at maturity on short-term tax-exempt bonds. Until the Service provides further guidance, taxpayers can treat such interest either as includable in the stated redemption price at maturity or as stated interest. However, a taxpayer must treat stated interest payable at maturity on all short-term tax-exempt bonds in a consistent manner. *Notice 94-84, 1994-2 CB 559*, applicable to tax-exempt bonds issued after April 4, 1994.

(n50)Footnote 17. *IRC § 1283(a)(2)*.

(n51)Footnote 18. Unless the taxpayer elects otherwise, the described rule will apply to OID instead of acquisition discount if the obligation is a nongovernmental obligation.

(n52)Footnote 19. *IRC § 1283(b)(1)*. OID on tax-exempt original issue discount bonds with a maturity of one year or less accrues in the manner provided in *IRC § 1283(b)*.

(n53)Footnote 20. *IRC § 1283(b)(2)*.

(n54)Footnote 21. *IRC § 1283(d)(1)*.

(n55)Footnote 22. The Tax Court has held, in a case of first impression, that *IRC § 1281* does not apply to short-term loans made by a bank in the ordinary course of its business. *Security Bank Minnesota v Commr*, 98 TC 33 (1992), *aff'd* 994 F2d 432 (8th Cir 1993). The Service will deny any request for a change in accounting method or any claim for refund based on *Security Bank Minnesota* filed by a taxpayer outside the Eighth Circuit. *Notice 95-57, 1995-2 CB 337*. Cash method banks located in the Eighth Circuit will be granted permission to make the change. *Rev Proc 97-37, 1997-2 CB 455*.

The Tax Court reaffirmed its position in *US Bancorp v Commr*, *TC Memo 1998-381*, and *Security State Bank v Commr*, 111 TC 210 (1998), *aff'd* 214 F3d 1254 (10th Cir 2000), *acq in part* 2001-5 IRB 431.

(n56)Footnote 23. *IRC § 1281(b)(1)*.

(n57)Footnote 24. *IRC § 1281(b)(2)*.

(n58)Footnote 25. *IRC § 1282(b)(2)*. A taxpayer making the election need not defer interest deductions in the manner provided by *IRC § 1282(a)*. See the discussion in § 19.05[1][f].

(n59)Footnote 26. *IRC § 1272(a)(2)(A), (B), (C)*.

(n60)Footnote 27. *IRC § 454(a)*.

(n61)Footnote 28. The entire increment on a jointly held bond (one registered in the names of two persons as co-owners) purchased with the funds of one of the co-owners is income to the one whose funds were used even though

the proceeds of the redemption are kept by the other co-owner. *Rev Rul 54-143, 1954-1 CB 12* . Had the purchaser caused the bond to be reissued in the sole name of the co-owner, the increment in value to the time of gift would have been income to the purchaser in the year of gift. *Rev Rul 55-278, 1955-1 CB 471* ; *cf Rev Rul 54-327, 1954-2 CB 50* .

A reissuance in the sole name of the original purchaser is not a taxable transaction. *Rev Rul 68-61, 1968-1 CB 346* . The same holds true for a reissuance in the name of another where done by mistake and the mistake is caught and rectified immediately. *Rev Rul 70-428, 1970-2 CB 5* .

(n62)Footnote 29. *IRC § 454(c)*. The rule does not apply if the taxpayer is a corporation, or if, after maturity, a savings bond is exchanged for a current income obligation.

For a discussion of *IRC § 1037*, see Ch 8.

(n63)Footnote 30. *IRC § 454(a)*. The election must be made in the taxpayer's return for the taxable year, provided that return is filed on or before its due date. *Treas Reg § 1.454-1(a)(iii)*; *Rev Rul 55-655, 1955-2 CB 253* . The amount that accrues in any taxable year to which the election applies is measured by the actual increase in the redemption price occurring that year. This amount does not accrue ratably between the dates on which the redemption price changes. *Treas Reg § 1.454-1(a)(2)*.

(n64)Footnote 31. *IRC § 454(a)*. *Rev Proc 97-37, 1997-2 CB 455* , sets forth the procedure to expedite the Service's consent to a reversal of a cash basis taxpayer's earlier election to report the annual increase in redemption value as income.

An election made by an executor is not binding on a testamentary trust to which the bonds are transferred, even though the executor is also the trustee of the trust. *Rev Rul 58-435, 1958-2 CB 370* . If not reported on the final return of the decedent, the increment will be income in respect of a decedent. *Rev Rul 64-104, 1964-1 CB 223* . *Rev Rul 58-435* and *Rev Rul 64-104* were distinguished in *Rev Rul 68-145, 1968-1 CB 203* , on the ground that they dealt with situations in which no one sought to make the election provided by *IRC § 454(a)* on the final return of the decedent.

A transfer of the bonds by the decedent's estate before redemption will cause the income to be returnable by the estate in the year of transfer. See, eg, *Ltr Rul 9507008* . If the bonds are distributed to a tax-exempt organization under the residuary clause in a will, the interest received will be exempt from tax. *Ltr Rul 9845026* . If the tax-exempt organization is a private foundation, the income will be included in the computation of gross investment income under *IRC § 4940(c)(2)*. *Rev Rul 80-118, 1980-1 CB 254* .

A purchaser of savings bonds, registered in her name and the name of her son as co-owners, never reported the annual increment in value as income, because the level of her entire income did not require her to file a return. The Tax Court concluded that the failure to file a return amounted to an election to report the interest when the bonds matured or were redeemed. *Apkin v Commr, 86 TC 692 (1986)* .

(n65)Footnote 32. *IRC § 454(a)*.

(n66)Footnote 33. *IRC 454(a)*; *Treas Reg § 1.454-1(a)(2)*. Where the taxpayer holds a current income obligation acquired in exchange for a savings bond, the amount included in gross income for the year of election is the increase in redemption price of the bond between its acquisition and its exchange. *Treas Reg § 1.454-1(a)(3)*.

(n67)Footnote 34. Proposed regulations apply the rules of *Treas Reg § 1.1275-4* to contingent payment debt instruments denominated in a nonfunctional currency. See *Prop Treas Reg § 1.988-6*, discussed in § 20.09[3].

(n68)Footnote 35. *Treas Reg § 1.1275-4(a)*.

2-17 Taxation of Securities Transactions § 17.03

(n69)Footnote 36. *Treas Reg § 1.1275-4(a)(3), (5)*. A contingency is remote if there is a remote likelihood that the contingency will or will not occur. A contingency is incidental if the potential amount of the payment under any reasonably expected market conditions is insignificant relative to the total expected payments on the debt instrument.

(n70)Footnote 37. *Treas Reg § 1.1275-4(a)(4)*. See the end of this section for a discussion of convertible debt instruments that provide for contingent cash payments.

(n71)Footnote 38. *Treas Reg § 1.1275-4(b)(1), (2)*.

(n72)Footnote 39. *Treas Reg § 1.1275-4(b)(3)*.

(n73)Footnote 40. *Treas Reg § 1.1275-4(b)(5)*.

(n74)Footnote 41. *Treas Reg § 1.1275-4(b)(4)(i)(A)*.

(n75)Footnote 42. *Treas Reg § 1.1275-4(b)(4)(i)(B)*.

(n76)Footnote 43. *Treas Reg § 1.1275-4(b)(4)(ii)*. Under the rules of *IRC § 6001*, taxpayers must maintain adequate contemporaneous records to support the projected payment schedule.

(n77)Footnote 44. *Treas Reg § 1.1275-4(b)(4)(iii)*. Market information is any information on which an objective rate can be based under *Treas Reg § 1.1275-5(c)(1) or (2)* (see § 17.03[2][d]).

(n78)Footnote 45. *Treas Reg § 1.1275-4(b)(4)(ii)(A)*.

(n79)Footnote 46. *Treas Reg § 1.1275-4(b)(4)(ii)(B)*.

(n80)Footnote 47. *Treas Reg § 1.1275-4(b)(4)(ii)(C)*.

(n81)Footnote 48. *Treas Reg § 1.1275-4(b)(4)(iv)*.

(n82)Footnote 49. *Treas Reg § 1.1275-2(e)* requires the issuer to provide the relevant information to the holder in a reasonable manner, such as providing the name or title and either the address or telephone number of a representative of the issuer who will make the information available to the holders.

(n83)Footnote 50. *Treas Reg § 1.1275-4(b)(4)(v)*.

(n84)Footnote 51. *Treas Reg § 1.1275-4(b)(6)(i)*. A holder treats a negative adjustment and an issuer treats a positive adjustment as a loss with respect to a position in a straddle if the debt instrument is a position in a straddle and the contingency (or any portion thereof) to which the adjustment relates would be part of the straddle if entered into as a separate position. *Treas Reg § 1.1275-4(b)(9)(vi)*.

(n85)Footnote 52. *Treas Reg § 1.1275-4(b)(6)(ii)*.

(n86)Footnote 53. *Treas Reg § 1.1275-4(b)(6)(iii)(A)*. A net negative adjustment is not subject to *IRC § 67* (the 2-percent floor on miscellaneous itemized deductions). *Treas Reg § 1.1275-4(b)(6)(iii)(D)*.

(n87)Footnote 54. *Treas Reg § 1.1275-4(b)(6)(iii)(B)*.

(n88)Footnote 55. *Treas Reg § 1.1275-4(b)(6)(iii)(C)*.

(n89)Footnote 56. *Treas Reg § 1.1275-4(b)(6)(iii)(C)*.

(n90)Footnote 57. *Treas Reg § 1.1275-4(b)(7)(i)*. The Service views this as appropriate because positive and

negative adjustments are used to take into account the difference between actual amounts and projected amounts of contingent payments. The difference would be counted twice if adjusted issue price, adjusted basis, and the amount deemed paid on retirement, were based on the actual amounts of contingent payments rather than the projected amounts. 59 *Fed Reg* 64884, 64888 (Dec 16, 1994) .

(n91)Footnote 58. *Treas Reg* § 1.1275-4(b)(7)(ii).

(n92)Footnote 59. *Treas Reg* § 1.1275-4(b)(7)(iii).

(n93)Footnote 60. *Treas Reg* § 1.1275-4(b)(7)(iv).

(n94)Footnote 61. *Treas Reg* § 1.1275-4(b)(7)(v). A pro rata prepayment is a payment on a debt instrument made prior to maturity that (a) is not made pursuant to the instrument's payment schedule, and (b) results in a substantially proportional reduction of each payment remaining to be paid on the instrument. *Treas Reg* § 1.1275-2(f)(2).

Treas Reg § 1.1275-4(b)(7)(v) does not contain any reference to a reduction in the amount realized on an unscheduled retirement because of the existence of a negative adjustment carryover in the year of retirement; *Treas Reg* § 1.1275-4(b)(7)(iv) contains such a reference.

(n95)Footnote 62. *Treas Reg* § 1.1275-4(b)(8)(i).

(n96)Footnote 63. *Treas Reg* § 1.1275-4(b)(8)(ii).

(n97)Footnote 64. *Treas Reg* § 1.1275-4(b)(9)(i)(A). If a contingent payment debt instrument is exchange listed property, it is reasonable for a holder of the instrument to allocate any difference between the holder's basis and the adjusted issue price of the debt instrument pro rata to daily portions of interest over the remaining term of the instrument. *Treas Reg* § 1.1275-4(b)(9)(i)(E).

(n98)Footnote 65. *Treas Reg* § 1.1275-4(b)(9)(i)(B).

(n99)Footnote 66. *Treas Reg* § 1.1275-4(b)(9)(i)(C).

(n100)Footnote 67. *Treas Reg* § 1.1275-4(b)(9)(i)(D).

(n101)Footnote 68. *Treas Reg* § 1.1275-4(b)(9)(ii). A payment is treated as a fixed payment if all remaining contingencies with respect to the payment are remote or incidental.

(n102)Footnote 69. *Treas Reg* § 1.1275-4(b)(9)(ii)(A).

(n103)Footnote 70. *Treas Reg* § 1.1275-4(b)(9)(ii)(D).

(n104)Footnote 71. *Treas Reg* § 1.1275-4(b)(9)(ii)(B), (C). Because the projected payment schedule for the debt instrument is modified to reflect the fixed amount of the payment, no adjustment is made when the contingent payment is actually made.

(n105)Footnote 72. *Treas Reg* § 1.1275-4(b)(9)(iii)(A).

(n106)Footnote 73. *Treas Reg* § 1.1275-4(b)(9)(ii)(G).

(n107)Footnote 74. *Treas Reg* § 1.1275-4(c)(1). The provisions of *IRC* § 1274 are discussed in Ch 2, § 2.07[1][c].

(n158)Footnote 125. *Treas Reg § 1.1275-6(d)(2)(i)(C)*. For example, if the holder of an integrated transaction is acquired in a tax-free merger, the holder is treated as disposing of the synthetic debt instrument in the merger, and not as having legged out.

(n159)Footnote 126. *Treas Reg § 1.1275-6(d)(2)(i)(B)*.

(n160)Footnote 127. *Treas Reg § 1.1275-6(d)(2)(ii)(A)-(E)*.

(n161)Footnote 128. A corporation purchased two privately-placed debt instruments from unrelated issuers for \$1 million each. The purchase occurred after the effective date of the integration rules of *Treas Reg § 1.1275-6*. The first note had a 10-year term and provided for quarterly interest payments of 5.7 percent compounded quarterly. The note also provided for contingent payments based on an event that will occur (or not occur) with a probability of 50 percent (the reset event). The reset event did not depend on actively traded personal property. If the reset event occurred, the interest rate doubled; if not, the interest was reset at zero. The second note had the same terms as the first, except that the consequences of the contingency were reversed.

At the time the notes were purchased, it could be expected that, as a result of the reset, one note would increase significantly in value while the other would decrease by the same amount. The expected tax loss on the note that decreased in value significantly exceeded any reasonably expected economic loss on the two notes.

The reset event did not occur, so that the interest rate on the first note was reset at zero while the interest rate on the second note doubled. The corporation sold the first note for its fair market value on the following day and claimed a loss.

The Service held that the notes qualified for integration as of the issue date. Upon the sale of the first note, the requirements for integration were no longer met, and the corporation was treated as legging out of the integrated transaction under *Treas Reg § 1.1275-6(d)(2)(ii)*. Thus, immediately before the note was sold, the corporation was treated as disposing of the synthetic debt instrument for its fair market value, causing it to then realize and recognize any gain or loss on the deemed disposition. As a result, the corporation could not recognize the claimed loss on the sale of the first note while not recognizing the gain on the second. *Rev Rul 2000-12, 2000-1 CB 744*.

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions § 17.04

§ 17.04 Disposition of Taxable and Tax-Exempt Bonds

[1] General Rule: Capital Gain or Loss.

Since a bond or other evidence of indebtedness is usually a capital asset, its sale or exchange is an event which normally gives rise to the realization of capital gain or loss.

The retirement of debt instruments by their issuer is not a "sale or exchange";ⁿ¹ nevertheless, it is treated as a sale or exchange by statute.ⁿ² Although deemed "sale or exchange" treatment on retirement was for many years limited to debt instruments issued by corporations, governments, or political subdivisions of governments, it was extended in 1997 to debt instruments issued by a natural person if such instruments are either issued after June 8, 1997 or purchased (regardless of the date of issuance) after that date.ⁿ³ Thus, capital gain or loss is the general rule for retirements as well as sales or exchanges of debt instruments.

The exemption accorded the interest on a state or municipal obligation does not extend to gain realized on the sale of that obligation. A constitutional challenge to the imposition of tax on gain from the sale of a municipal bond was mounted in *Willcuts v. Bunn*,ⁿ⁴ but was dismissed with this language:

"In the case of obligations of a state or of its political subdivisions, the subject held to be exempt from federal taxation is the principal and interest of the obligations. ... These obligations constituted the contract made by the State, or by its political agency pursuant to its authority, and a tax upon the amounts payable by the terms of the contract has therefore been regarded as bearing directly upon the exercise of the borrowing power of the government.

"But it does not follow, because a tax on the interest payable on state and municipal bonds is a tax on the bonds and therefore forbidden, that the Congress cannot impose a nondiscriminatory excise tax upon the profits derived from the sale of such bonds. The sale of the bonds by their owners, after they have been issued by the State or municipality, is a transaction distinct from the contracts made by the government in the bonds themselves, and the profits on such sales are in a different category of income from that of the interest payable on the bonds."ⁿ⁵

Under the general rule, therefore, gain on the sale, exchange or retirement of a tax-exempt bond is normally taxed as either long-term or short-term capital gain, depending on the length of the taxpayer's holding period. In similar fashion,

a realized loss is treated as a capital loss.

In certain cases, exchanges of taxable and even tax-exempt bonds can be effected tax-free. The conversion of a taxable bond into stock of the obligor is not a taxable event if the conversion privilege is embodied in the original debt instrument.ⁿ⁶ An exchange of corporate securities pursuant to a plan of reorganization may be one in which no gain or loss is recognized or in which gain is recognized only in part.ⁿ⁷ The exchange of bonds issued under the Second Liberty Bond Act can be achieved without the recognition of gain if the provisions of *IRC Section 1037* are met.ⁿ⁸ Finally, the receipt of a new instrument might be viewed as nothing more than the continuation of the debt represented by the one surrendered, a transaction that is not a taxable event.ⁿ⁹

We turn now to other exceptions to the general rule--situations in which all or part of the amount realized by the taxpayer on the sale, exchange or retirement of a debt obligation is taxed as ordinary income, usually interest, and not capital gain.

[2] Disposition of Bonds in Bearer Form.

IRC Section 1287(a) denies capital gain treatment with respect to the entire gain, if any, from the sale, exchange or retirement of any "registration required obligation" which is not in registered form. Every obligation is a registration required obligation (including any obligation issued by a governmental entity) unless it is (1) issued by a natural person, (2) is not of a type offered to the public, or (3) has a maturity at issue of not more than one year.ⁿ¹ An obligation is generally treated as issued in registered form if the issuer or its agent maintains a registration of the identity of the owner of the obligation and the obligation can be transferred only through this registration system.ⁿ² Both terms, "registration required obligation" and "registered form," have the same meaning in *IRC Section 1287(a)* as in *IRC Section 163(f)*, which denies an interest deduction to an issuer of a registration required obligation that is not in registered form.ⁿ³

[3] Disposition of Bonds with Accrued Interest.

"When bonds are sold between interest dates, part of the sales price represents interest accrued to the date of the sale and must be reported as interest income."ⁿ¹ The proceeds of the disposition, less the portion treated as interest, are then taken into account for the purpose of determining the bondholder's gain or loss. The amount paid by the buyer to the seller as interest becomes a capital amount to be recovered tax-free before any interest received by the buyer is includable in gross income.ⁿ² To illustrate:

Example:

On February 1, A buys a \$1,000 bond, bearing interest at 6 percent payable on January 1 and July 1, for \$1,010 plus \$5 accrued interest. He sells the bond to B on May 1 for \$1,045. A must treat \$15 of that amount as interest income. Although a total of \$20 of interest accrued on the bond from January 1 to the date of sale, the \$5 of accrued interest paid by A to his seller reduces the amount includable. A also has a short-term capital gain of \$15, determined by subtracting his cost basis, \$1,010, from the amount realized, \$1,025 (\$1,045-\$20). B holds the bond until July 1, when he receives an interest payment of \$30 from the obligor. Of this amount, only \$10 need be reported as interest income; the other \$20 is treated as a recovery of capital.

Prior to 1968, this principle might not have controlled in all events. An early Solicitor's Opinionⁿ³ ruled that accrued interest would be income to the vendor when the agreement of sale stipulated a payment of the agreed price plus accrued interest; otherwise the purchaser would report all of the income when received by him.ⁿ⁴ However, in 1968, the Opinion was ruled obsolete and not determinative with respect to future transactions.ⁿ⁵ Thus, it appears that the rule should be applied, without exception, in every case in which a bond is sold between interest dates.

The determination of the amount of gain or loss in a disposition of a tax-exempt obligation follows the method used in the case of taxable obligations. A sale between interest dates calls for an allocation of the amount received. The portion representing interest accrued to the date of sale is segregated from the selling price, and excluded from gross income, unless the obligation is an industrial development bond or an arbitrage bond; the balance of the selling price is the amount used in determining the taxpayer's gain or loss.ⁿ⁶ The same holds true for bonds issued at a discount. The earned discount is treated as the equivalent of interest exempt from taxation under *IRC Section 103(a)*.ⁿ⁷

If a tax-exempt bond is purchased "flat,"ⁿ⁸ payments on account of interest in arrears at the time of purchase, whether received directly from the obligor or indirectly through a sale to a third party, are not interest, but rather a return of capital. Payments made on account of interest accrued after purchase are treated as interest. So, if upon the disposition of a tax-exempt bond, the taxpayer receives more than his adjusted basis for the bond, the portion representing post-acquisition interest from the remainder of the proceeds of sale is nontaxable and excluded from the amount realized in determining gain or loss.

[4] Disposition of Bonds with OID.

The holder of an original issue discount bond is required to accrue as income the portion of OID earned during each taxable year in which the bond is held.ⁿ¹ Two consequences flow from this. First, the basis of the obligation in the hands of the holder is increased by the amount of OID included in gross income.ⁿ² Second, in accordance with the general rule, any gain realized on the sale, exchange, or retirement of the bond, if held for more than one year, will normally be long-term capital gain. To illustrate:

Example:

On January 1, 1997, Taxpayer purchased a 10-year \$10,000 corporate bond for \$9,500. He sells the bond on January 1, 1998, for \$9,600. Assume Taxpayer was required to include \$50 of OID in income in 1997; this raised Taxpayer's basis for the bond to \$9,550, reducing the gain realized in the sale by \$50. The remaining \$50 gain is long-term gain in its entirety.

However, gain on the disposition of a bond issued with OID will be treated as ordinary income rather than capital gain in an amount not exceeding the unrecognized OID if at the time of original issue the issuer intended to call the bond before maturity.ⁿ³ The regulations define the term "intention to call before maturity" to mean a written or oral agreement, or understanding not provided for in the debt instrument, between the issuer and the original holder of the obligation that the former will redeem the obligation before maturity.ⁿ⁴ In the case of debt instruments that are part of an issue, the agreement or understanding must be between the issuer and the original holders of a substantial amount of the debt instruments in the issue.ⁿ⁵ An intention to call before maturity can exist even if the intention is conditional (eg, the issuer's decision to call depends on the financial condition of the issuer on the potential call date) or is not legally binding.ⁿ⁶

Since OID is a form of interest, it is not includible in the income of the holder of a tax-exempt bond at any time.ⁿ⁷ Nevertheless, a taxpayer that purchases a tax-exempt bond with original issue discount must be allowed to increase the basis of the bond as OID accrues or risk being taxed on exempt interest income if the bond is sold before maturity.ⁿ⁸ Such adjustments to basis are provided for in *IRC Section 1288(a)(2)*, which allows the tax-exempt bondholder to make the same adjustments to basis in the same manner as those allowed to holders of taxable bonds that must include OID in income under *IRC Section 1272(a)*.

The holder of a short-term obligation, an obligation maturing not more than one year from the date of issuance (eg, commercial paper), will by definition be ineligible for long-term capital gain treatment on the sale or retirement of the obligation when long-term capital gain treatment requires a holding period of more than one year. In addition, under

IRC Section 1271(a)(3), gain on the disposition of a "short-term government obligation" is considered ordinary income, not capital gain, up to the amount of the seller's "ratable" share of the "acquisition discount" on such obligation. The seller's "acquisition discount" is the excess of the obligation's stated redemption price at maturity over the seller's basis in the obligation, while the ratable share of that discount (the measure of the amount treated as ordinary income) is the amount which bears the same ratio to the discount as the number of days during which the taxpayer held the obligation bears to the total number of days from the date the taxpayer acquired the obligation to (and including) its maturity date.⁹ *IRC Section 1273(a)(3)* applies almost exclusively to Treasury bills; although "short term government obligations" are initially defined as all obligations with a fixed maturity date not more than 1 year from the date of issue that are issued by the United States or its possessions, or by a State or any political subdivision thereof, or of the District of Columbia, tax-exempt obligations are then removed from the definition.¹⁰

IRC Section 1271(a)(4) extends the rule just described to short-term nongovernment bonds and tax-exempt obligations. As in the case of short-term government bonds, the holder can irrevocably elect to determine acquisition discount on an economic accrual basis.¹¹

Any gain recognized by a holder on the sale, exchange, or retirement of a contingent payment debt instrument subject to the noncontingent bond method¹² is interest income.¹³ Any loss recognized by the holder on the sale, exchange, or retirement of the debt instrument is an ordinary loss to the extent that the holder's total interest inclusions on the debt instrument exceed the total net negative adjustments on the debt instrument the holder took into account as ordinary loss.¹⁴ Any additional loss is treated as loss from the sale, exchange, or retirement of the debt instrument, and, thus, as a capital loss if the debt instrument is a capital asset in the hands of the holder. If, at the time of the sale, exchange, or retirement of the debt instrument, there are no remaining contingent payments due on the debt instrument, any gain or loss recognized by the holder is treated as gain or loss from the sale, exchange or retirement of the debt instrument.¹⁵

Example 1:

On January 1, 1998, A, a calendar year taxpayer, sells a contingent payment debt instrument, in which A has an adjusted basis of \$24,000, for \$27,000. A has a negative adjustment carryforward of \$1,000 for 1997 that results in a negative adjustment of \$1,000 on January 1, 1998. A has no positive adjustments on the debt instrument on January 1, 1998. The \$1,000 negative adjustment on January 1, 1998 results in a negative adjustment carryforward for 1998, and reduces the amount realized by A on the sale of the debt instrument from \$27,000 to \$26,000. This produces a gain for A of \$2,000 (\$26,000 amount realized minus \$24,000 basis) that A must treat as interest income.

Example 2:

On December 31, 1996, B, a calendar year taxpayer, purchases a debt instrument at original issue for \$20,000. The debt instrument is a capital asset in B's hands. The instrument provides for a single payment of \$20,000 on December 31, 1998 (the maturity date of the instrument), plus an amount equal to the increase, if any, in the price of a specified commodity over the term of the instrument. The comparable yield on the debt instrument is 9.54 percent, compounded annually, and the projected payment schedule provides for a payment of \$24,000 on December 31, 1998. Based upon the projected payment schedule, the total daily portions of interest would be \$1,900 for 1997 and \$2,100 for 1998.

Assume that B sells the debt instrument for \$21,000 on December 31, 1997. On that date, B has an adjusted basis in the debt instrument of \$21,900 (\$20,000 original basis plus total daily portions of interest of \$1,900 for 1997). Thus, B realizes a \$900 loss on the sale of the debt instrument. The entire loss is an ordinary loss. The amount of the loss is less than B's interest inclusions on the debt instrument and B had no negative adjustments on the instrument.

Assume, alternatively, that B realizes \$19,800 on the sale of the instrument on December 31, 1997. This produces a

\$2,100 loss, consisting of an ordinary loss of \$1,900 (the amount of B's interest inclusions on the debt instrument) and a capital loss of \$200.

If the debt instrument that is sold, exchanged, or retired is one that is not subject to the noncontingent bond method, the holder must allocate the amount received first to the noncontingent component and to any separate debt instruments that result from a contingent payment being fixed more than six months before it is due; the amount so allocated cannot exceed the total of the adjusted issue price of the noncontingent component and the adjusted issue prices of any separate debt instruments.ⁿ¹⁶ The remaining amount received, if any, is allocated to the contingent component. The amount allocated to the noncontingent component and any separate debt instruments is treated as an amount realized from the sale, exchange, or retirement of the noncontingent component or separate debt instrument.ⁿ¹⁷ The amount allocated to the contingent component is treated as a contingent payment that is made on the date of disposition and is characterized as interest and principal according to the rules governing contingent payments received on debt instruments not subject to the noncontingent bond method.ⁿ¹⁸

[5] Disposition of Bonds with Market Discount.

Market discount arises when the value of a debt instrument decreases after issuance. Prior to the Tax Reform Act of 1984, capital gain treatment was accorded to the appreciation in value attributable to market discount. Such treatment still obtains for obligations issued before July 19, 1984 and purchased before May 1, 1993. For market discount bonds issued after July 18, 1984, or issued before that date but purchased after April 30, 1993, the gain that would have been capital gain is treated as ordinary income to the extent of the accrued market discount on the bond.ⁿ¹ The amount of ordinary income is treated as interest except (1) when the bond is a tax-exempt bond purchased after April 30, 1993, and (2) for purposes of determining the tax on income of nonresident aliens and foreign corporations not effectively connected with a U.S. trade or business.ⁿ²

A market discount bond is defined as any bond, debenture, note, certificate or other evidence of indebtedness (but not (1) a short-term obligation with a fixed maturity date not exceeding one year from the date of issue; (2) a tax-exempt obligation if purchased before May 1, 1993; (3) a U.S. savings bond; or (4) an installment obligation to which *IRC Section 453B* applies), with a stated redemption price in excess of the basis of the bond immediately after its acquisition by the taxpayer.ⁿ³ For original issue discount bonds acquired at a market discount, the stated redemption price is deemed to be equal to the sum of the issue price of the bond plus the aggregate amount of the original issue discount includable in the gross income of all holders for periods before the acquisition by the holder in question.ⁿ⁴ As in the case of original issue discount, market discount is considered to be zero if it is less than one quarter of one percent of the stated redemption price at maturity multiplied by the number of complete years to maturity after the holder acquired the bond.ⁿ⁵

IRC Section 1278(a)(1)(D) makes it clear that a bond acquired at original issue (or acquired with a transferred basis from a person who acquired it at original issue) is not a market discount bond. The rule does not apply if the bond is acquired at original issue at less than its issue price, or if it is issued in a tax-free reorganization in exchange for a market discount bond (unless the market discount bond was issued on or before July 18, 1984, and the new bond has the same term and interest rate as the other bond).

The amount of accrued market discount taken into account on the disposition of a market discount bond is a linear computation that determines the amount that bears the same ratio to market discount on the bond as the number of days that the taxpayer held the bond bears to the number of days after the date the taxpayer acquired the bond up to and including the date of maturity.ⁿ⁶ In lieu of this ratable accrual, the taxpayer can accrue market discount under the constant interest method that is provided for the amortization of original issue discount bonds issued after July 1, 1982.ⁿ⁷ The election is made on a bond-by-bond basis and, once made, is irrevocable.ⁿ⁸

Pursuant to *IRC Section 1276(a)(3)*, any partial principal payment on a market discount bond must be included in

income as ordinary income to the extent the payment does not exceed the accrued market discount on the bond. In such case, the accrued market discount to be taken into account by reason of a disposition of the bond or the receipt of additional partial principal payments, is reduced accordingly.

If a market discount bond is transferred in a nonrecognition transaction, the transferor will be taxed on accrued market discount only to the extent he receives "boot," unless the transaction is an incorporating transfer governed by *IRC Section 351*, in which case the general accrued market discount rules apply.ⁿ⁹ If the transferee's basis is determined by reference to the basis of the bond in the hands of the transferor (transferred basis property), the transferee is treated as having acquired the bond on the date acquired by the transferor for an amount equal to the transferor's basis increased by any original issue discount or market discount included in the gross income of the transferor.ⁿ¹⁰ If the taxpayer transfers a market discount bond in a nonrecognition transaction, and the basis of the property received in exchange is determined by reference to the basis of the transferred property (exchanged basis property), the property received is treated as if it were a market discount bond with any accrued market discount on the transferred bond attaching to the new property.ⁿ¹¹ Thus, on disposition of the property, any gain realized will be ordinary income to the extent of the attached discount.

A taxpayer can elect to include accrued market discount in gross income currently, determining the amount of the accrual either under the linear method or the constant interest method.ⁿ¹² If the election is made, the rule requiring ordinary income treatment upon disposition is inapplicable to bonds acquired by the taxpayer on or after the first day of the taxable year to which the election applies.ⁿ¹³

[6] Partial Dispositions: Stripped Bonds and Bond Coupons.

A "stripped bond" is one originally issued as a coupon bond from which the holder has removed one or more coupons that have not yet become payable.ⁿ¹ A "stripped coupon" is any coupon relating to a stripped bond, and, for purchases after July 1, 1982, need not be evidenced by an actual coupon.ⁿ²

Congress enacted the predecessor of *IRC Section 1286* in 1982, to address the tax issues raised by bond stripping transactions.ⁿ³ Those issues are illustrated by a transaction in which, after detaching the interest coupons from a \$100,000 US Government 20-year coupon bond, the holder sells the corpus for \$8,000. Taking the position that gain or loss in this transaction should be calculated by deducting the seller's basis in the bond (\$100,000) from the amount realized for the bond corpus (\$8,000) would create a \$92,000 loss to the seller. While an offsetting gain would ultimately be recognized by the purchaser of the bond, the deferral period in this case could be as long as 20 years.ⁿ⁴ Congress addressed both the basis allocation issue, requiring the seller in a stripping transaction to allocate basis among the sold and retained components of the bond in accordance with their respective fair market values, and the deferral issue, requiring the purchaser to take the purchase discount into income over the life of the bond as though it were original issue discount rather than deferring income until the bond's sale or redemption.

When a bondholder strips one or more coupons from a bond and, after July 1, 1982, disposes of the bond or any stripped coupons, the seller must include in gross income the sum of (1) any interest accrued on the bond before the date of disposition and not previously accounted for as income, and (2) the accrued market discount on the bond determined as of the time the coupon or bond was disposed of (to the extent the discount had not been included in income previously).ⁿ⁵ This works an increase in the seller's basis which must then be allocated among the items (bond or coupons) retained and the items disposed of according to their relative fair market values. The seller then computes gain or loss on the items disposed of using this adjusted basis.

Any retained item in the hands of the seller (whether a stripped bond or stripped coupon) is deemed to have been purchased by the seller on the date of disposition for an amount equal to the allocated adjusted basis. The importance of this is that, pursuant to *IRC Section 1286(a)*, any stripped coupon in the hands of a purchaser is treated as a bond originally issued on the purchase date with an OID equal to the excess, if any, of the stated redemption price at maturity

(or, in the case of a coupon, the amount payable on the due date of the coupon), over the ratable share of the purchase price of the bond or coupon.ⁿ⁶ Any OID thus resulting is subject to the inclusion rules prescribed by *IRC Section 1272*.

The treatment of any stripped tax-exempt obligation depends on the date of purchase of the obligation. If purchased before June 11, 1987,ⁿ⁷ *IRC Section 1286(d)* (prior to its amendment by the Technical and Miscellaneous Revenue Act of 1988) applies and the amount of OID determined with respect to the stripped bond or coupon is the amount that produces a yield to maturity (as of the purchase date) equal to the lower of (1) the coupon rate of interest on the obligation before the separation of coupons, or (2) the yield to maturity (on the basis of the purchase price) of the stripped obligation or coupon. The amount of OID so determined is taken into account in determining the adjusted basis of the holder under *IRC Section 1288*. The basis of the bond or coupon is increased by interest accrued but not paid before the time the bond is disposed of (and not previously reflected in basis).

For obligations purchased or sold after June 10, 1987, the amount of OID that exceeds the "tax-exempt portion" is treated as OID on a taxable obligation and, therefore, is includable in gross income. The tax-exempt portion of the OID is the amount by which the stated redemption price at maturity (or the amount payable on the due date of a coupon) exceeds an issue price that would produce a yield to maturity as of the purchase date equal to the lower of (1) the coupon rate of interest on the obligation from which the coupons were separated (or, if the taxpayer elects, the original yield to maturity), or (2) the yield to maturity (on the basis of the purchase price) of the stripped obligation or coupon.

*Notice 2010-28*ⁿ⁸ provides interim guidance for holders of qualified tax credit bonds on the tax treatment of coupon stripping transactions, which in general follow the rules prescribed in *IRC § 1286*.ⁿ⁹ A "stripping transaction" is defined as a transaction that results in a separation in ownership between a "credit coupon" (i.e., any right to receive a tax refund with respect to a qualified tax credit bond) for any credit allowance date that has not yet occurred and any right to receive cash (either stated principal or stated interest on the bond) that has not yet become payable, but does not include a transaction in which such a separation reflects a pro rata division of all pre-transaction future rights.ⁿ¹⁰ The purchaser of a credit coupon will not be permitted to claim the associated tax refund unless the qualified tax credit bond which was the subject of the stripping transaction was part of a "strippable issue;" that is, was part of a bond issue meeting all of the following requirements:ⁿ¹¹

1. Designation requirement. The issuer, on or before the date of issue, included a statement in the bond documents that the issue is strippable.
2. Identification requirement. The issuer identified the issue as a strippable issue in the first information return it filed with the IRS under *IRC Section 54A(d)(3)*.
3. Registration requirement. The qualified tax credit bond is issued in registered form. For this purpose, registered form means that all rights to stated principal, stated cash interest, and tax credits under the bond may be transferred only through book entry on the registration books of the issuer or its agent or nominee, which entries are maintained in a manner that makes all the entries available for inspection by the IRS.
4. CUSIP number requirement. A CUSIP number is assigned to the issue, a separate CUSIP number is assigned to all rights to receive tax credits on each credit allowance date,ⁿ¹² and at least one separate CUSIP number is assigned to all rights to receive cash (whether stated principal or stated interest) with respect to the issue.

The stripped credit coupon with respect to which a tax credit is claimed must be either a whole coupon or a proportional share of a whole credit coupon. Any other division of a whole credit coupon, effected through a partnership, trust or other investment arrangement that in substance creates a variable share in the credit coupon, will result in disallowance of any tax credit with respect to that interest.ⁿ¹³ Moreover, to receive a tax credit the stripped coupon must be held by the taxpayer in an account with a broker unless and until the IRS, in published guidance, authorizes the holding of

stripped coupons in other types of accounts.ⁿ¹⁴

The tax consequences of a stripping transaction in qualified tax credit bonds are determined under *IRC Sections 1286(a), (b) and (e)*, in the same manner as a stripping transaction involving taxable interest bonds.ⁿ¹⁵ Accordingly, the seller of a stripped coupon must (a) include in gross income any accrued interest and market discount on the qualified tax credit bond as of the date of the stripping transaction, (b) increase the basis of the bond (including its credit coupons) by the amount taken into gross income, (c) allocate the increased basis among the rights retained by the seller and the rights disposed in the stripping transaction in accordance with the respective fair market values of each component, (d) recognize gain or loss on the credit coupon stripped from the bond, and (e) treat each of the rights retained as having been purchased on the date the stripped coupon is sold for an amount equal to its allocated basis.ⁿ¹⁶ The purchaser of the stripped coupon is deemed, for OID purposes, to have purchased a zero coupon bond with a stated redemption price at maturity equal to the amount payable on the due date of the coupon and an issue price equal to the basis allocated to the credit coupon in the stripping transaction;ⁿ¹⁷ the discount is taken into income in accordance with OID rules.ⁿ¹⁸

Notice 2010-28 adds an additional "aggregation" rule: If, on a single date, a taxpayer purchases (including a "deemed purchase" under *IRC Section 1286*) as part of a single transaction or series of related transactions, more than one component (stated principal, stated cash interest or credit coupons) of a qualified tax credit bond that has been subject to a stripping transaction, then for purposes of the OID and related rules in *IRC Sections 1271 through 1286*, the taxpayer must treat the components so purchased as a single debt instrument (the "aggregated debt instrument") that was newly issued on the purchase date, and none of the payments on the aggregated debt instrument will be deemed to be qualified stated interest. However, if the taxpayer purchases all of the then-outstanding components of a qualified tax credit bond, the resulting aggregated debt instrument is treated as if it had not been subject to a previous stripping transaction and payments on the instrument may be regarded as qualified stated interest.ⁿ¹⁹

The following example illustrates the operation of the stripping transaction rules in *Notice 2010-28*.ⁿ²⁰

Example:

On December 15, 2011, City X issues qualified school construction bonds which carry a credit rate of 10% compounded quarterly and a maturity date of December 15, 2013. Assume these City X qualified tax credit bonds qualify as a "strippable issue" within the meaning of *Notice 2010-28*. S, a cash method calendar year taxpayer, purchases a City X bond with a stated principal amount of \$ 6,000 for \$6,000 cash on December 15, 2011. On the same date S sells one of the \$150 credit coupons, due December 15, 2013, to P, a cash method calendar year taxpayer, for \$123.75, its fair market value on December 15, 2011. After the stripping transaction, S holds the right to receive \$6,000 at maturity as well as the first 7 credit coupons (the "8 retained components"), and P holds only the credit coupon coming due on December 15, 2013.

IRC Section 1286(b)(4) treats S as having purchased the 8 retained components on the date of the stripping transaction, December 15, 2011, and under *Notice 2010-28*'s aggregation rule, the 8 retained components are treated as an aggregated debt instrument that is newly issued on that date. Because no interest had accrued on the City X bond as of the date of the stripping transaction, S does not include accrued interest in income under *IRC Section 1286(b)(1)(A)* and does not increase the basis of the City X bond under *IRC Section 1286(b)(2)*. Pursuant to *IRC Section 1286(b)(3)*, S must allocate its \$6,000 basis in the qualified tax credit bond between the credit coupon S sold to P and S's retained aggregate debt instrument, based on their respective fair market values. Assuming that the fair market value of S's aggregate debt instrument is \$5,877.10 and the fair market value of the December 15, 2013 credit coupon is \$123.75, S's basis in the aggregated debt instrument is \$5,876.27 (\$6,000 basis x [\$5,877.10/\$6,000.85]) and S's basis in the December 15, 2013 credit coupon sold to P is \$123.73 (\$6,000 basis x [\$123.75/\$6,000.85]).

As a result of the foregoing, S realizes gain of \$0.02 on the sale of the credit coupon (\$123.75 sales price less \$123.73 basis allocated to the credit coupon). The aggregated debt instrument created by *Notice 2010-28* 's aggregation rule is deemed newly issued on December 15, 2011 with a stated redemption price at maturity of \$7,050 (\$6,000 + [7 x \$150]) and an issue price equal to the basis allocated to the aggregated debt instrument of \$5,876.27. Under the aggregation rule, no payment on the aggregated debt instrument is qualified stated interest. The aggregated debt instrument therefore has OID of \$1,173.73 (\$7,050-\$5,876.27). Although S generally uses the cash method of accounting, S must include the OID in income as it accrues on a constant yield basis over the term of the aggregated debt instrument in accordance with *IRC Section 1272* and the regulations thereunder.

P is required by *IRC Section 1286(a)* to treat the purchase of the stripped credit coupon as the purchase of a zero coupon bond that is issued on the date of purchase (December 15, 2011). The stripped credit coupon has a stated redemption price at maturity of \$150 and an issue price of \$123.75, resulting in OID of \$26.25 (\$150-\$123.75). Although P generally uses the cash method of accounting, P must include the OID in income as it accrues on a constant yield basis over the term of the credit coupon in accordance with *IRC Section 1272* and the regulations thereunder. P's basis in the stripped credit coupon is increased by the amount of OID included in P's income, so that, by the maturity date of the coupon on December 15, 2013, P's basis in the coupon will equal the \$150 tax credit to which P becomes entitled on that date.

(n8)Footnote 8. See § 8.07[3].

(n9)Footnote 9. See § 8.07[4][a][ii].

(n10)Footnote 1. "Registration required obligation" generally has the same meaning in *IRC § 1287(b)(1)* as in *IRC § 163(f)(2)* (denying an interest deduction to the issuer of any registration required obligation not in registered form. There is one difference: while obligations targeted for sale only to purchasers who are not US persons constitute a fourth exception to the definition of registration required obligations for purposes of the denial of interest deductions, see *IRC § 163(f)(2)(B)*, that exception does not apply for purposes of the denial of capital gains treatment under *IRC § 1287*. See *IRC § 1287(b)(2)*. However, the exception for foreign targeted obligations in *IRC § 163(f)(2)(B)* has been repealed for obligations issued after March 18, 2012, so that the coverage of *IRC §§ 163(f)* and *1287* will be identical after that date. See Ch 19, § 19.05[1][d].

(n11)Footnote 2. See *Treas Reg § 5f.103-1(c)*; Joint Committee on Taxation, Technical Explanation of the Revenue Provisions Contained in Senate Amendment 3310, the "Hiring Incentives to Restore Employment Act," Under Consideration by the Senate (JCX-4-10), Feb 23, 2010, 49. Among other things, if a registration required obligation issued by a state or local government is not "in registered form," interest on the obligation will not be tax exempt. See § 17.02[1][a], *supra*, which discusses the meaning of "in registered form" in that context, but applies for purposes of *IRC § 1287* as well.

(n12)Footnote 3.

(n13)Footnote 1. *Treas Reg § 1.61-7(d)*. The same would be true if the bond was called between interest dates. *Letter Ruling, Feb 7, 1949, P-H 1949 Fed Taxes P 76,191*.

An adjustment to the conversion price to reflect interest accrued on a convertible bond to the date of conversion represents income to the taxpayer. *Letter Ruling, Jan 12, 1956, P-H 1956 Fed Taxes P 76,140*.

A taxpayer exchanged a note having a basis and face value of \$10,000 for a \$10,000 bond worth \$9,424.

Although there was unpaid interest on the note of \$636, no interest income was realized on the exchange since the amount realized was less than the principal amount of the note. The taxpayer realized a loss of \$576 on the transaction, and assumed a basis of \$9,424 for the bond. *Rev Rul 73-328, 1973-2 CB 296*.

The proceeds of a sale of interest coupons may not necessarily be treated as interest. *Lloyd v Commr, 154 F2d 643 (3d Cir 1946)*, *cert denied, 329 US 717* (sale of detached coupons on refunding bonds; proceeds many times greater than amount of interest obligor required to pay in year of sale); *Rev Rul 58-536, 1958-2 CB 21*; *Rev Rul 55-73, 1955-1 CB 236* (sale of coupons representing commissions to brokers).

(n19)Footnote 7. *Rev Rul 73-112, 1973-1 CB 47*. A premium paid to redeem a discount bond at a premium is not "interest" and is taxable. *Rev Rul 72-587, 1972-2 CB 74*.

(n20)Footnote 8. See § 17.01[1][d].

(n21)Footnote 1. *IRC § 1272(a)*. Holders of tax-exempt obligations, United States savings bonds, and "short-term obligations" (any debt instrument which has a fixed maturity date not more than 1 year from date of issue) are not subject to the requirement that OID be accrued ratably throughout the term of a debt instrument, and the OID accrual rule does not apply to most loans between natural persons. *IRC § 1272(a)(2)*.

(n22)Footnote 2. *IRC § 1272(d)(2)*.

(n23)Footnote 3. *IRC § 1271(a)(2)*.

(n24)Footnote 4. *Treas Reg § 1.1271-1(a)(1)*.

(n25)Footnote 5. *Treas Reg § 1.1271-1(a)(1)*.

(n26)Footnote 6. *Treas Reg § 1.1271-1(a)(1)*.

(n27)Footnote 7. See *IRC § 1272(a)(2)(A)*; *Rev Rul 73-112, 1973-1 CB 47*.

(n28)Footnote 8. Suppose, for example, a taxpayer acquires at issuance, for \$50,000, a \$100,000 zero coupon tax-exempt bond maturing in 10 years. If held until maturity, the taxpayer will collect the \$50,000 in OID without payment of any tax. If instead the taxpayer were to sell the bond after holding it for two years, at its then present value of \$59,000, the entire gain of \$9,000 (\$59,000 sales price less \$50,000 basis) would be taxable, albeit at capital gains rates. Assuming the \$9,000 represents OID, an adjustment to basis for accrued OID would prevent that result.

(n29)Footnote 9. *IRC § 1271(a)(3)(C)* and *(D)*. Alternatively, the seller may irrevocably elect to calculate the ratable share of the discount accruing while the seller held the obligation using (i) the seller's yield to maturity based on the seller's cost of acquiring the obligation, and (ii) compounding daily. *IRC § 1271(a)(3)(E)*.

(n30)Footnote 10. *IRC § 1271(a)(3)(B)*.

(n31)Footnote 11. *IRC § 1271(a)(4)(D)*.

(n32)Footnote 12. See § 17.03[2][b], *infra*.

(n33)Footnote 13. *Treas Reg § 1.1275-4(b)(8)(i)*.

(n34)Footnote 14. *Treas Reg § 1.1275-4(b)(8)(ii)*.

(n35)Footnote 15. *Treas Reg § 1.1275-4(b)(8)(iii)*. For this purpose, a contingent payment that is fixed within the six-month period ending on the due date of the payment is treated as a contingent payment even after the payment is fixed. *Treas Reg § 1.1275-4(b)(9)(ii)*.

(n36)Footnote 16. *Treas Reg § 1.1275-4(c)(6)*.

(n37)Footnote 17. *Treas Reg § 1.1275-4(c)(6)(i)*.

(n38)Footnote 18. *Treas Reg § 1.1275-4(c)(6)(ii)*.

(n39)Footnote 1. *IRC § 1276(a)(1)*. A person disposing of a market discount bond in any transaction other than a sale, exchange, or involuntary conversion is treated as realizing an amount equal to the fair market value of the bond. *IRC § 1276(a)(2)*.

(n40)Footnote 2. *IRC § 1276(a)(4)*.

(n41)Footnote 3. *IRC § 1278(a)(1), (2)(A), (3)*.

(n42)Footnote 4. *IRC § 1278(a)(2)(B)*.

(n43)Footnote 5. *IRC § 1278(a)(2)(C)*.

(n44)Footnote 6. *IRC § 1276(b)(1)*.

(n45)Footnote 7. *IRC § 1276(b)(2)(A)*. The bond is treated as having been issued on the date acquired by the taxpayer for an issue price equal to the basis of the taxpayer immediately after its acquisition.

(n46)Footnote 8. *IRC § 1276(b)(2)(C)*.

(n47)Footnote 9. *IRC § 1276(d)*.

(n48)Footnote 10. *IRC § 1276(c)(1)*.

(n49)Footnote 11. *IRC § 1276(c)(2)*.

(n50)Footnote 12. *IRC § 1278(b)(1)*. The basis of the bond in the hands of the taxpayer is increased by the amount includable in gross income. *IRC § 1278(b)(4)*.

The income is treated as interest for all purposes unless (i) the bond is a tax-exempt bond purchased after Apr 1, 1993, or (ii) the bondholder is a nonresident alien or foreign corporation, and the income is not effectively connected with the conduct of a US trade or business.

(n51)Footnote 13. The election which applies to the taxable year for which it is made and all subsequent years can be revoked only with consent. *IRC § 1278(b)(3)*.

The procedure for electing to include market discount in current income or to use a constant interest rate to determine accrued market discount before disposing of bonds under *IRC § 1276(b)* is contained in *Rev Proc 92-67, 1992-2 CB 429*. The provisions of this revenue procedure and of *Rev Proc 92-20, 1992-1 CB 685*, must be followed to properly revoke the election.

(n52)Footnote 1. *IRC § 1286(e)(2)*.

(n53)Footnote 2. *IRC § 1286(e)(3)*. A coupon is defined as any right to receive interest on a bond. *IRC § 1286(e)(5)*.

(n54)Footnote 3. The stripped bond rules were originally added to the Code as *IRC § 1232B* by section 232 of the Tax Equity and Fiscal Responsibility Act of 1982, Pub L 97-248 (TEFRA). Section 1232B became *IRC § 1286* (with minor technical changes) as part of the codification of OID rules in the Deficit Reduction Act of 1984, Pub L 98-369 (DEFRA).

(n55)Footnote 4. See Jt Comm on Taxation, General Explanation of the Revenue Provisions of the Tax Equity and Fiscal Responsibility Act of 1982 (HR 4961, 97th Cong; Pub L 97-248 (1982), p 164.

(n56)Footnote 5. *IRC § 1286(b)*. Mortgage loans become stripped bonds when they are sold if the seller retains a right to receive interest other than as compensation for servicing the mortgages. *Rev Rul 91-46, 1991-2 CB 358*.

(n57)Footnote 6. The ratable shares of the purchase price of bond coupons are determined according to the respective fair market values on the date of purchase. If the OID determined under *IRC § 1286(a)* with respect to the purchase of a stripped bond or stripped coupon is less than the amount computed under *IRC § 1273(a)(3)*, the amount of OID with respect to the purchase is considered to be zero. Temp Treas Reg § 1.1286-1T(a). For this purpose, (1) the term "stated redemption price at maturity," when applied to a stripped bond, has the meaning given to the term by *IRC § 1273(a)(2)* (see § 17.03[1]) and, when applied to a stripped coupon, means the amount payable on the due date of the coupon, and (2) the number of complete years to maturity is the number of full years from the date the stripped bond or stripped coupon is purchased to final maturity.

(n58)Footnote 7. If a person held a tax-exempt obligation or coupon in stripped form on June 10, 1987 for sale in the ordinary course of the person's trade or business, pre-1988 law continues to apply to any sale of the obligation or coupon and to the obligation or coupon while held by the person.

(n59)Footnote 8. *2010-15 IRB 541*.

(n60)Footnote 9. See *IRC § 54A(i)* authorizing the Treasury to issue regulations under which ownership of a qualified tax credit bond may be separated from the right to receive tax credits with respect to such bond (*IRC § 54A(i)(1)*), with tax consequences as prescribed in *IRC § 1286. IRC § 54A(i)(2)*.

(n61)Footnote 10. *Notice 2010-28* , § 3.03(b).

(n62)Footnote 11. *Notice 2010-28* , §§ 3.03(c) and 3.03(d)(1).

(n63)Footnote 12. Thus, a qualified tax credit bond that matures with a single payment of principal two years after issuance requires a CUSIP number for the bond itself, a CUSIP number for each of the quarterly credit allowance dates (a total of 8), and a CUSIP number for the scheduled principal payment at maturity. See *Notice 2010-28* , § 3.03(f) (Example 1).

(n64)Footnote 13. *Notice 2010-28* , § 3.03(d)(2).

(n65)Footnote 14. *Notice 2010-28* , § 3.03(d)(3).

(n66)Footnote 15. *Notice 2010-28* , § 3.03(e). See § 17.04[5] for a discussion of *IRC § 1286* and stripping transactions generally.

(n67)Footnote 16. See *IRC § 1286(b)*.

(n68)Footnote 17. See *IRC § 1286(a)*.

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions § 17.05

§ 17.05 Losses From Worthless Obligationsⁿ¹

[1] Obligations in Registered Form or With Interest Coupons.

If a security is a capital asset and was issued before 1983, the loss produced when it becomes worthless is treated as a capital loss sustained on the last day of the taxable year, regardless of the time during the year when worthlessness actually occurred; if the security is not a capital asset, the loss is an ordinary one.ⁿ¹ For this purpose, the term "security" includes "a bond, debenture, note, or certificate, or other evidence of indebtedness, issued by a corporation or by a government or political subdivision thereof, with interest coupons or in registered form."ⁿ²

It will be noted that the statute uses the term "interest coupons." Does this require that there be more than one? The Court of Claims was presented with this problem in *Allied Chem. Corp. v. United States*,ⁿ³ the obligation in question being a corporate note with a six-month maturity and with a single interest coupon attached. The taxpayer, seeking to achieve a bad debt deduction rather than a capital loss, rested its argument that the note was not a security on the plural form found in the statute. The court disagreed, stating:

"The word 'coupons' embraces many, a few, or only one coupon. The plural was used to embrace all notes with coupons attached, irrespective of how many coupons there might be. There is no indication it was intended to exclude a note with only one coupon."ⁿ⁴

The term "registered form" also needs definition. In the case of a bond, the phrase has been held to mean one registered upon the books of the obligor or of a transfer agent, the purpose being to protect the holder by treating transfers which are not registered as invalid transfers.ⁿ⁵ Thus, if the obligation is evidenced by a numbered certificate issued in the name of the creditor, and is transferable only on the books of the obligor or its agent, it is likely that the obligation will be found to be in registered form.

For obligations issued after December 31, 1982, there can be no loss deduction at all unless the bond is in registered form or is an obligation that issued by a natural person, is not offered to the public, or has a maturity (at issue) of not more than one year.ⁿ⁶ An obligation will be treated as in registered form if the right to principal and interest is transferable only through a book entry consistent with regulations prescribed by the Treasury.ⁿ⁷

One of the most difficult tasks comes in ascertaining the year in which worthlessness occurs, for that is the only year in which the loss will be allowed. This is established by some identifiable event, some one circumstance or set of

circumstances present during the taxable year which shows that the obligation is no longer of value.ⁿ⁸ But therein lies the problem--there is no one circumstance or indicia of worthlessness that is automatically determinative of worthlessness. For example, in one case, worthlessness may occur in the year in which the corporation is adjudicated a bankrupt,ⁿ⁹ while in another, it may occur even earlier, say, when the corporation becomes hopelessly insolvent.ⁿ¹⁰ Perhaps the best way for the taxpayer to ensure that he takes the loss in the proper year is to follow the advice given by Judge Augustus Hand:

"In cases like this the taxpayer is at times in a very difficult position in determining in what year to claim a loss. The only safe practice, we think, is to claim a loss for the earliest year when it may possibly be allowed and to renew the claim in subsequent years if there is any reasonable chance of its being applicable to the income for those years."ⁿ¹¹

Thus, if the taxpayer wants to ensure his loss deduction, he should consider claiming his loss when the debtor is in default in the payment of interest or principal, when a receiver has been appointed, when the obligor's liabilities exceed its assets, when the bonds become unmarketable, when foreclosure of a prior lien is sought, when the debtor is unable to meet its debts as they come due, or when bankruptcy proceedings are filed. Since none of these factors is necessarily determinative of worthlessness, the deduction should be taken in each succeeding year until the proper year of worthlessness is established by a consideration of all of the pertinent evidence.

The foregoing discussion assumes that the taxpayer holding the bond has paid the full purchase price therefor. Does it make a difference if he has not? The answer is yes, if he is a cash basis taxpayer. In such event, his loss in the year of worthlessness is limited to the amount of the purchase price already paid, on the theory that this is the extent of the loss that he has then sustained.ⁿ¹² However, he is entitled to deduct the remainder of the loss when the balance of the price is paid, but that loss will be an ordinary loss and not a capital loss; *IRC Section 165(g)* is inapplicable because the security did not become worthless in the year in which the additional loss was sustained, but in a prior year.

[2] Other Worthless Obligations.

If the obligation held by the taxpayer was issued before 1983 and is not in registered form or lacks interest coupons, or was issued after 1982 and is not a registered-required obligation, the loss is treated as a bad debt, with its allowance as a deduction governed by *IRC Section 166*.ⁿ¹ Pursuant to that provision, losses on debts held by corporations are allowable as deductions against ordinary income.ⁿ² Moreover, the corporation can take a deduction in a year in which the debt becomes partially worthless (if the Commissioner is satisfied that the debt is recoverable only in part),ⁿ³ or it can wait and deduct the entire loss in the year in which the debt becomes wholly worthless.ⁿ⁴

The noncorporate taxpayer is accorded the same treatment only when the debt is a business debt. Otherwise, the deduction is allowed just in the year in which the debt becomes totally worthless, and, then, not as an offset against ordinary income, but as a short-term capital loss.ⁿ⁵

Pursuant to *IRC Section 166(d)(2)*, a debt is a nonbusiness debt when it is not "a debt created or acquired in connection with a trade or business;" or "a debt the loss from the worthlessness of which is incurred in the taxpayer's trade or business." Thus, it would seem, that the move from short-term capital loss to ordinary deduction requires nothing more than a showing of the connection between the debt and the taxpayer's trade or business. But this is more easily said than done in light of the Supreme Court's decision in *Whipple v. Commissioner*.ⁿ⁶

The taxpayer in *Whipple* was a promoter, with interests ranging from construction and construction supply to real estate and oil, from food service to soft drink bottling. It was in connection with the latter that the loans in question were made. The taxpayer had acquired a bottling franchise which he transferred to a controlled corporation. In succeeding years, he made sizable cash advances to the corporation in an attempt to keep the business going, but its singular lack of success eventually produced a bad debt for the taxpayer of almost \$57,000. A deduction of this debt as a business bad

debt was challenged by the Commissioner.

The argument in support of an ordinary deduction claimed that a taxpayer who organizes, acquires, finances, and takes an active role in the management of corporations, is considered to be in a business separate and distinct from the business of the corporations. The Supreme Court responded:

"Devoting one's time and energies to the affairs of a corporation is not of itself, and without more, a trade or business of the person so engaged. Though such activities may produce income, profit or gain in the form of dividends or enhancement in the value of an investment, this return is distinctive to the process of investing and is generated by the successful operation of the corporation's business as distinguished from the trade or business of the taxpayer himself. When the only return is that of an investor, the taxpayer has not satisfied his burden of demonstrating that he is engaged in a trade or business since investing is not a trade or business and the return to the taxpayer, though substantially the product of his services, legally arises not from his own trade or business but from that of the corporation. Even if the taxpayer demonstrates an independent trade or business of his own, care must be taken to distinguish bad debt losses arising from his own business and those actually arising from activities peculiar to an investor concerned with, and participating in, the conduct of the corporate business."ⁿ⁷

The decision in *Whipple* does not mean that a promoter can never claim a business bad debt deduction for losses incurred in connection with his promoting activities. However, to do so, the promoter must show that he is in the business of promoting--of dealing in enterprises--and not merely in the business of investing.ⁿ⁸

There is little doubt that an ordinary deduction can be secured when the taxpayer can establish that he is in the business of making loans, something that requires more than just isolated or sporadic transactions.ⁿ⁹ But is a deduction permitted when the taxpayer is neither in the business of lending money nor of promoting enterprises? *Whipple* once again supplies the answer, for while the Supreme Court refused to disturb the determination of the lower courts regarding the taxpayer's activities as a promoter, it was concerned with his position as the owner and lessor of the real estate and bottling plant, i.e., with his business of being a landlord. (The Government did not dispute that these activities constituted a trade or business, but argued that the loans were not made as a part of *Whipple's* real estate business either.) For this reason, the Court remanded the cause to determine whether the loss from the worthless debt was proximately related to that business.

Thus, we find that a loss on a loan made to a tenant in order to keep it as a tenant, and thereby to protect the lease, can be a business bad debt; a loan made to a tenant for another purpose cannot.ⁿ¹⁰ In similar fashion, a loan made to a publisher by a writer in order to ensure an outlet for the taxpayer's work and to promote his reputation,ⁿ¹¹ or to a supplier to ensure a continued source of supply of materials or goods, will be treated as a business loan, and the loss as a business bad debt;ⁿ¹² but if the loan is not made to enhance or protect the taxpayer's business, the debt will be a nonbusiness debt.ⁿ¹³

Finally, it is well settled that a loan made to an employer by an employee may be a business loan if required as a condition of continued employment or if otherwise proximately related to the taxpayer's trade or business as an employee.ⁿ¹⁴ Because of the need to find that employment was the primary motivation for the loan,ⁿ¹⁵ it will be virtually impossible for a controlling or dominant stockholder to claim that a loan made by him to the corporation was made to protect his job.ⁿ¹⁶

If the loss results from a payment made by the taxpayer as a guarantor, endorser or indemnitor, and the guaranty arose in the course of the taxpayer's trade or business, the payment is treated as a worthless business debt.ⁿ¹⁷ A noncorporate taxpayer who agrees to act as a guarantor, and does not do so in the course of the taxpayer's trade or business, will be allowed to deduct the loss as a nonbusiness bad debt, but only if the guaranty is entered into in a transaction for profit.ⁿ¹⁸ In neither case can the taxpayer claim a deduction under *IRC Section 162*, *IRC Section 163*, or *IRC Section*

165.n19 Moreover, there must be an enforceable legal duty upon the taxpayer to make the payment, but legal action need not have been brought against the taxpayer.n20

Prior to the Tax Reform Act of 1986, individual taxpayers who incurred losses on deposits in a financial institution were generally limited to deducting the loss as a bad debt under *IRC Section 166*. *IRC Section 165(l)(1)*, added by the 1986 Act, permits a "qualified individual" to treat a reasonably estimated loss on a deposit in a "qualified financial institution" as a casualty loss sustained during the taxable year.

A qualified individual is one who is *not* (i) a 1 percent or more shareholder in the financial institution, (ii) an officer of the institution, or (iii) a person related to an officer or 1 percent or more shareholder.n21 A qualified financial institution is generally a bank, credit union, or similar institution chartered or supervised under federal or state law.

IRC Section 165(l)(5), enacted in 1988, allows a qualified individual who incurs a reasonably estimated loss on a deposit that is not federally insured to claim the loss as an ordinary loss. However, the aggregate amount of loss in any one financial institution to which the ordinary loss election can apply in any taxable year cannot exceed \$20,000 (\$10,000 in the case of married taxpayer filing a separate return); the limitation must be reduced by the amount of any insurance proceeds that can reasonably be expected to be received under state law.

The casualty loss and ordinary loss election are alternative elections. A taxpayer may make only one of the elections with respect to reasonably estimated losses on deposits in any particular institution for any taxable year.

FOOTNOTES:

(n1)Footnote 1. See § 2.07[2][d], *supra*, for the treatment of worthless obligations of an affiliate; see § 2.07[2][b], *supra*, for a discussion of losses incurred by small business investment companies.

(n2)Footnote 1. *IRC § 165(g)(1)*; *Treas Reg § 1.165-5(b)*. The section does not apply to any loss due to the worthlessness of a security reflected in the inventories of a dealer. *Treas Reg § 1.165-5(g)*. Nor does it apply to the worthlessness of a security held by a bank. *IRC § 582(a)*.

If a domestic corporation took a loss under *IRC § 165* with respect to a security that became worthless because of the expropriation, intervention, seizure, or similar taking by a foreign government or property to which the security was related, and the value of the security is restored in whole or in part by reason of a recovery of money or other property in respect of the property to which the security was related, the restored value must be included in gross income for the taxable year in which the restoration occurs. *IRC § 80(a)*. However, no restoration is required unless the loss resulted in a reduction in the taxpayer's tax for any taxable year. *IRC § 80(b)*. The amount included is treated as ordinary income unless the loss produced a capital loss, in which case the restoration is treated as long-term capital gain. *IRC § 80(c)*.

(n3)Footnote 2. *IRC § 165(g)(2)(C)*.

(n4)Footnote 3. 305 F2d 433 (Ct Cl 1962) .

(n5)Footnote 4. 305 F2d 441, 442 (Ct Cl 1962) .

(n6)Footnote 5. *Gerard v Helvering*, 120 F2d 235 (2d Cir 1941) ; *Funk v Commr*, 35 TC 42 (1960) , *acq* 1961-2 CB 4 ; *Est of Martin v Commr*, 7 TC 1081 (1946) . A bond will be registered if it refers to itself as being registered and as being transferable only on the books of the corporate obligor, even though the corporation does not keep a formal register of its obligations. *Oestreicher v Commr*, 20 TC 12 (1953) , *acq* 1953-2 CB 5 .

(n7)Footnote 6. *IRC §§ 165(j)(1), (2)(A), 163(f)(2)(A)*. Regulations may provide that *IRC § 165(j)(1)* will not apply with respect to obligations held in connection with a foreign trade or business or by a broken dealer for sale to customers in the ordinary course of business, the holder complies with such reporting requirements regarding

ownership, transfers and payments as the regulations will require, or the holder promptly surrenders the obligation to the issuer for the issuance of a new obligation in registered form. See § 17.03[2] for the definition of registered form. *IRC § 165(j)(3)*.

(n8)Footnote 7. *IRC §§ 165(j)(2)(B), 163(f)(3)*.

(n9)Footnote 8. The factors which establish the worthlessness of bonds are much the same as those which establish the worthlessness of stock. See generally Worthy, "Stock Losses: Establishing Worthlessness," *NYU 22nd Inst on Fed Tax* 289 (1964).

In *Boehm v Commr*, 326 US 287 (1945), the taxpayer argued that the test to be employed in determining worthlessness was a subjective test. The Supreme Court countered with this statement:

"The standard for determining the year of deduction of a loss is ... a flexible, practical one, varying according to the circumstances of each case. The taxpayer's attitude and conduct are not to be ignored, but to codify them as the decisive factor in every case is to surround the clear language of [Section 165(g)] and the Treasury interpretations with an atmosphere of unreality. ... " 326 US at 293 (1945) .

A primary requisite of establishing worthlessness is to prove that the stock or security had value at the beginning of the taxable year in question. See, eg, *DeMann v Commr*, *TC Memo* 1993-206 .

(n10)Footnote 9. See, eg, *Cammack v US*, 113 F2d 547 (8th Cir 1940) (worthless bad debt). The bad debt Regulations state that bankruptcy is generally an indication of worthlessness of at least part of an unsecured and unpreferred debt. *Treas Reg § 1.166-2(c)(1)*.

(n11)Footnote 10. Eg, *Montgomery v US*, 23 F Supp 130 (Ct Cl 1938), *cert denied* 307 US 632 (bonds worthless although obligor remained in existence). In *Montgomery v US*, 23 F Supp 130 (Ct Cl 1938) *Jarvis v Heiner*, 39 F2d 361 (3d Cir 1930), the corporation was adjudicated a bankrupt in 1921, but was not found to be insolvent until 1922; the latter year was the proper year in which to deduct the loss. See also *Treas Reg § 1.166-2(c)(2)* relating to bad debts and stating that "the mere fact that bankruptcy proceedings instituted against the debtor are terminated in a later year, thereby confirming that the debt is worthless, shall not authorize the shifting of the deduction under section 166 to such later year."

(n12)Footnote 11. *Young v Commr*, 123 F2d 597, 600 (2d Cir 1941) .

(n13)Footnote 12. *Jenkins v Bitgood*, 101 F2d 17 (2d Cir 1939), *cert denied* 307 US 636; *Estate of Spruance v Commr*, 43 BTA 221 (1941), *acq* 1941-1 CB 10, *revd on other grounds* 127 F2d 572 (5th Cir 1942); *Rev Rul* 74-80, 1974-1 CB 117. A loss sustained on bonds purchased with borrowed funds is deductible in the year of worthlessness.

(n14)Footnote 1. The debt must be a bona fide debt. *Treas Reg § 1.166-1(c)*. See, eg, *WF Young, Inc v Commr*, 120 F2d 159 (1st Cir 1941), where the creditor lent the money without expectation of repayment. See also *Stahl v US*, 441 F2d 999 (DC Cir 1970), where a taxpayer lent securities to a securities firm for use as part of its capital account. The securities were to be returned on a given date, subject to the claims of creditors of the firm. The firm sold the securities and then went bankrupt. The taxpayer claimed an ordinary loss under *IRC § 165(c)*; the Commissioner treated the loss as a nonbusiness bad debt. The court held for the taxpayer, viewing the original transaction as a bailment rather than one that created a debtor-creditor relationship.

No bad debt deduction can be taken with respect to an installment note received by a taxpayer who does not elect out of the installment method. Since no portion of the gain is includable in income until a payment is received, there is no basis upon which a bad debt deduction can be predicated. *Lombard v Commr*, *TC Memo* 1994-154 .

A loan that is unenforceable because it bears a usurious interest rate cannot be the source of a bad debt deduction. *Tharp v Commr, TC Memo 1972-10* .

The fact that a creditor-parent takes over the assets of a wholly-owned debtor subsidiary in a statutory merger and continues to operate the subsidiary's business as a branch does not preclude the parent from taking a bad debt deduction. *Ltr Rul 9403010* .

(n15)Footnote 2. *Charles Schneider & Co, v Commr, TC Memo 1973-130* , *affd* 500 F2d 148 (8th Cir 1973) , *cert denied* 420 US 908 .

(n16)Footnote 3. *IRC § 166(a)(2)*.

A deduction for partial worthlessness is allowed only to the extent that the debt is charged off during the taxable year. *IRC § 166(a)(2)*; *Treas Reg § 1.166-3(a)(2)(i)*. If a deduction for partial worthlessness is disallowed in the year of charge-off, it may be allowed in a later year. *Treas Reg § 1.166-3(a)(2)(ii)*.

The Tax Court has held that a corporation is entitled to a deduction for a partially worthless debt even though the corporation's actions contributed to the worthlessness. *ABC Beverage Corp v Commr, TC Memo 2006-195* .

(n17)Footnote 4. *IRC § 166(a)(1)*. The determination of worthlessness requires a consideration of "all pertinent evidence, including the value of the collateral, if any, securing the debt and the financial condition of the debtor." *Treas Reg § 1.166-2(a)*. Bankruptcy is generally an indication that at least part of the debt is worthless. *Treas Reg § 1.166-2(c)(1)*.

Legal action to enforce the debt is unnecessary where the surrounding circumstances indicate that the debt is uncollectible and that a judgment would probably be returned unsatisfied. *Treas Reg § 1.166-2(b)*. But merely obtaining a judgment is insufficient if there is evidence to show that the debtor had property on which execution could be had. *Straub Distrib Co v Commr, TC Memo 1971-46* .

(n18)Footnote 5. *IRC § 166(d)(1)*.

The recovery of a bad debt is includable in income as a short-term capital gain. *Deely v Commr, 73 TC 1081 (1980)* .

(n19)Footnote 6. *373 US 193 (1963)* . See generally, O'Neill, "What Constitutes 'Trade of Business' for Bad Debt Purposes: Stockholder, Employee, Promoter; Investment vs. Loan," *30 NYU Inst on Fed Tax* 283 (1972); Knickerbocker, "What Constitutes a Trade or Business for Bad Debt Purposes: 'Stockholder' as a Business," *NYU Inst on Fed Tax* 113 (1965); Note, "Bad Debts: Limitations of the 'Promoter Doctrine,'" *13 Buff L Rev* 635 (1964); Waterman, "Aspects of the Bad Debt--Loss Dichotomy," *18 Tax L Rev* 121 (1962).

(n20)Footnote 7. *373 US at 202* .

(n21)Footnote 8. *Giblin v Commr, 227 F2d 692 (5th Cir 1955)* ; *Newman v Commr, TC Memo 1989-63* ; *Elliott v US, 268 F Supp 521 (D Ore 1967)* ; *Farrar v Commr, TC Memo 1988-385* . The majority of cases find the taxpayer to be an investor, not a promoter. See, eg, *Millsap v Commr, 387 F2d 420 (8th Cir 1968)* ; *US v Clark, 358 F2d 892 (1st Cir 1966)* , *cert denied* 385 US 817 ; *Estate of Campbell v Commr, 343 F2d 462 (2d Cir 1965)* .

(n22)Footnote 9. Compare *Carpenter v Erickson, 255 F Supp 613 (D Ore 1966)* with *Barish v Commr, 31 TC 1280 (1959)* .

(n23)Footnote 10. See eg, *Goldman v Commr, TC Memo 1962-36* , where the purpose behind the loan to a corporation owned by the taxpayer's son was to keep the corporation going, not to keep it as a tenant. A similar result was reached in *Ninberg v Commr, TC Memo 1967-109* where the taxpayer guaranteed a loan made to his own

corporation for the same purpose.

(n24)Footnote 11. *Funk v Commr*, 35 TC 42 (1960) , acq 1961-2 CB 4 . In *Martin v Commr*, 25 TC 94 (1955) , acq 1956-1 CB 4 , a loan, made by an actor to a corporation he formed to make one movie to promote his career, was held to be a business debt. But in *Blauner v Commr*, TC Memo 1967-156 , a debt to a corporation was held to be a nonbusiness bad debt because the taxpayer's career could not be advanced further; he was about to achieve the top executive spot in the corporation.

A loan made to protect a business reputation can be a business loan, *Milbank v Commr*, 51 TC 805 (1969) , acq 1970-1 CB xvi, as can one to protect a credit rating, *Smith v Commr*, 55 TC 260 (1970) . The Fifth Circuit vacated the decision in *Smith* and remanded the case for reconsideration in light of the Supreme Court's decision in *Generes*. On remand, the Tax Court found that loans made to the corporation while it was a functioning entity were motivated by a desire to make the business profitable and, thus, were investment-oriented and nonbusiness. Advances made after the cessation of operations were dominantly motivated by a desire to protect the taxpayer's credit rating and constituted business loans. The later Tax Court opinion is reported at 60 TC 316 (1973) . The Commissioner has acquiesced in the decision. 1973-2 CB 3 .

(n25)Footnote 12. *Dorminey v Commr*, 26 TC 940 (1956) , acq 1957-1 CB 4 . Loans to obtain sales outlets have also been held to be business loans. Eg, *Brenhouse v Commr*, 37 TC 326 (1961) , acq 1962-2 CB 4 ; *Levine v Commr*, 31 TC 1121 (1959) , acq 1959-2 CB 5 ; *Kertes v Commr*, TC Memo 1962-158 .

A business bad debt deduction was allowed in *Estate of Saperstein*, TC Memo 1970-209 , for loans made to a basketball league that the taxpayer had formed to ensure his team access to major playing sites, maintain the team in the national spotlight, and serve as a source of competition.

(n26)Footnote 13. See, eg, *Spillers v Commr*, 407 F2d 530 (5th Cir 1969) .

(n27)Footnote 14. Compare *Trent v Commr*, 291 F2d 669 (2d Cir 1961) and *Rosati v Commr*, TC Memo 1970-343 , both allowing the loss as a business bad debt, with *Stratmore v US*, 420 F2d 461 (3d Cir 1970) , cert denied 398 US 951 , and *Niblock v Commr*, 417 F2d 1185 (7th Cir 1969) , denying a business bad debt deduction where the loans were not motivated by employment.

(n28)Footnote 15. *US v Generes*, 405 US 93 (1972) . Prior to the decision in *Generes*, the Second and Fifth Circuits had used a significant motivation test. *Weddle v Commr*, 325 F2d 849 (2d Cir 1963) ; *US v Generes*, 427 F2d 279 (5th Cir 1970) . The Seventh Circuit employed the primary motivation test. *Niblock v Commr*, 417 F2d 1185 (7th Cir 1969) .

Note, "Characterization of Shareholder-Creditor Bad Debt: United States v Generes Sounds the Knell for Deductions from Ordinary Income," 26 Vand L Rev 105 (1973).

(n29)Footnote 16. *Millsap v Commr*, 387 F2d 420 (8th Cir 1968) ; *Kelly v Patterson*, 331 F2d 753 (5th Cir 1964) . In *Generes*, 427 F2d 279 (5th Cir 1970) the taxpayer was a 44 percent shareholder.

(n30)Footnote 17. *Treas Reg* § 1.166-9(a). No deduction will be allowed for a payment made on a guaranty of a corporate debt if the facts and circumstances indicate that the payment constitutes a contribution to capital by a shareholder. *Treas Reg* § 1.166-9(c).

The *Generes* test applies to payments made pursuant to a guaranty, ie, treated as a business bad debt only if the dominant motive for the guaranty and payment was protection of the taxpayer's business. See, eg, *Smartt v Commr*, TC Memo 1993-65 .

The right of a guarantor to claim a bad debt deduction in the year of payment, regardless of the solvency or financial status of the original debtor, applies only where the guarantor has no right of subrogation against, and no right of reimbursement from, the original debtor. *Treas Reg § 1.166-9(a)*; *Intergraph Corp v Commr*, 106 TC 312 (1996) , *affd in an unpublished opinion* (11th Cir 1997).

A thorough discussion of the taxation of guarantees can be found in Miller, "Federal Income Tax Consequences of Guarantees: A Comprehensive Framework for Analysis," 48 *Tax Lawyer* 103 (1994).

(n31)Footnote 18. *Treas Reg § 1.166-9(b)*.

(n32)Footnote 19. *Treas Reg § 1.166-9(b)*.

A taxpayer sought to deduct his payment as a guarantor as a theft loss under *IRC § 165(e)*. The Tax Court held that the loss could be deducted only as a nonbusiness bad debt. *Parekh v Commr*, *TC Memo 1998-151* .

As long as the borrower's obligation is worthless at the time of payment, it does not matter that it did not become worthless in the same year that payment is made. However, the Tax Court has held that actual payment by a guarantor, even if an accrual method taxpayer, is required before a deduction can be taken under *IRC § 166*. *Black Gold Energy Corp v Commr*, 99 TC 482 (1992) , *affd without published opinion* 33 F3d 62 (10th Cir 1994) .

Where a guarantor substitutes a personal note for that of the primary obligor in satisfaction of the guarantor's guarantee, the substitution does not constitute an outlay that gives rise to a deduction until the note is paid. *Alexander v Commr*, *TC Memo 1995-334* .

(n33)Footnote 20. *Treas Reg § 1.166-9(d)*.

(n34)Footnote 21. A related person includes a sibling (whether by the whole or half blood), spouse, aunt, uncle, nephew, niece, ancestor, or lineal descendant, or any person described in *IRC § 267(b)*.

CHAPTER 17 Transactions in Bonds and Other Debt Instruments

2-17 Taxation of Securities Transactions § 17.06

§ 17.06 Transactions by a Corporation in Its Own Obligations

[1] Purchase or Retirement of Securities--General Rule.

A corporation realizes no gain or loss on the purchase or retirement of its bonds if it pays the same amount for the bonds that it received when they were issued. The redemption at maturity of a bond issued at a premium or at a discount will also not be an occasion for recognizing gain or loss. The premium will have been amortized and included in the corporation's income over the life of the bond;ⁿ¹ the discount will have been deducted on a ratable basis.ⁿ² If the repurchase occurs before the entire premium has been reported as gross income, the corporation will be required to include the excess of the unamortized premium over the repurchase price as income in the year of repurchase.ⁿ³ If the purchase price exceeds the issue price and the previously deducted discount, the excess is available as a deduction.ⁿ⁴

At issue in *National Alfalfa Dehydrating & Milling Co. v. Commissioner*,ⁿ⁵ was whether an amortization deduction was available when a corporation issued \$50 face amount debentures in exchange for \$50 par value preferred stock claimed to have a fair market value of \$33 a share. The Supreme Court held that it was not.

Although the Court appears to have based its decision on a lack of proof as to value, and, thus, as to whether the taxpayer incurred any additional cost in acquiring capital, the Service has argued that *National Alfalfa* establishes an absolute rule that no discount can occur when a corporation issues bonds for its own stock. This view is premised on the fact that the transaction is nothing more than an adjustment of the corporation's capital account. The Service would require that the taxpayer acquire new capital before any discount could arise.ⁿ⁶

The Second Circuit does not apparently interpret *National Alfalfa* as denying an amortization deduction in all cases in which debentures are issued in exchange for old securities.ⁿ⁷ It found that deductible discount can arise when the original consideration received by the company and the face amount of the newly issued securities are not equal. The Fifth Circuit agreed with the Second Circuit's reasoning.ⁿ⁸ The controlling test for the Fifth Circuit is whether the corporation incurred some cost in acquiring the use of capital, not whether additional capital was acquired.ⁿ⁹

[2] Purchase or Retirement of Securities for More Than the Issue Price.

Where a bond is called and redeemed at more than its issue price because of the addition of a call premium, the amount of the premium is deductible as an expense in the year that the bonds are retired.ⁿ¹ If the bonds were not issued at a price equal to their face value, the amount deductible is the excess of the repurchase price, including the call premium,

over the original issue price decreased by the amount of premium returned as income prior to repurchase, or increased by the amount of discount deducted prior thereto.ⁿ²

An exception to the foregoing rule is made in the case of a convertible bond. By virtue of Section 249(a), added by the Tax Reform Act of 1969:

"No deduction shall be allowed to the issuing corporation for any premium paid or incurred upon the repurchase of a bond, debenture, note, or certificate or other evidence of indebtedness which is convertible into the stock of the issuing corporation, or a corporation in control of, or controlled by, the issuing corporation, to the extent the repurchase price exceeds an amount equal to the adjusted issue price plus a normal call premium on bonds or other evidences of indebtedness which are not convertible."ⁿ³

A repurchase premium is the excess of the price paid or incurred to repurchase the obligation over its adjusted issue price.ⁿ⁴ For convertible obligations purchased after March 2, 1998, a call premium specified in dollars under the terms of an obligation is considered to be a normal call premium on a nonconvertible obligation if the call premium applicable when the obligation is repurchased does not exceed an amount equal to the interest (including OID) that otherwise would be deductible for the taxable year of repurchase (determined as if the obligation were not repurchased).ⁿ⁵

[3] Purchase or Retirement of Securities at Less Than the Issue Price.

[a] The Kirby Lumber Rule--Cancellation of Indebtedness Income.ⁿ¹ An issuer realizes income from discharge of indebtedness upon the repurchase of a debt instrument for an amount less than its adjusted issue price; the amount of the income is equal to the excess of the adjusted issue price over the repurchase price.ⁿ² An earlier version of this statement met with the approval of the Supreme Court in *United States v. Kirby Lumber Co.*,ⁿ³ a simple case in which the corporation issued its own bonds at par, and then acquired some of them in the open market at less than par.

A few years later, the principle of *Kirby Lumber* was held applicable in a case in which the taxpayer had not originally issued the bonds, but had assumed the obligation of their repayment when it acquired the assets of the issuer.ⁿ⁴ The Supreme Court could find nothing in those facts to distinguish the case from *Kirby Lumber*. But while the debt need not be original with the taxpayer, it apparently must be traceable to an increment in the debtor's assets if the repurchase of the debt at a discount is to produce income for the debtor.ⁿ⁵

[b] Exceptions to the Kirby Lumber Rule.

[i] Cancellation of Indebtedness Intended as a Gift. Can the portion which would normally be included in gross income under the *Kirby Lumber* doctrine be excluded from gross income on the theory that the creditor made a gift of the difference to the corporation? In a 1943 decision, *Helvering v. American Dental Co.*,ⁿ⁶ the Supreme Court answered this affirmatively, the majority opinion ending with these words:

"The fact that the motives leading to the cancellations were those of business or even selfish, if it be true, is not significant. The forgiveness was gratuitous, a release of something to the debtor for nothing, and sufficient to make the cancellation here gifts within the statute."ⁿ⁷

American Dental was not a case which involved the repurchase of bonds at a discount. The claim of gift under those circumstances was not adjudicated by the Supreme Court until 1949, when it considered *Commissioner v. Jacobson*,ⁿ⁸ and held that the taxpayer had realized income on the repurchase. The Court could not find that any bondholder was acting from any interest other than his own. Therefore, it concluded that

It is conceivable, although hardly likely, that a bondholder, in the ordinary course of business and without any express release of his debtor, might have sold part of his claims on the bonds he held at the

full face value of those parts and then have made a gift of the rest of his claims on those bonds to the same debtor 'for nothing.' It is that kind of extraordinary transaction that the respondent asks us, as a matter of law, to read into the simple sales which actually took place and from which he derived financial gains. We are unable to do so on the findings before us.

The situation in each transaction is a factual one. It turns upon whether the transaction is in fact a transfer of something for the best price available or is a transfer or release of only a part of a claim for cash and the balance 'for nothing.' The latter situation is more likely to arise in connection with a release of an open account for rent or for interest, as was found to have occurred in *Helvering v. American Dental Co.*, ... than in the sale of outstanding securities [.]⁹

Jacobson did not overrule *American Dental*. Thus, it is still possible to have the spread between issue price and repurchase price treated as a gift by creditor to debtor. But, as *Jacobson* indicates, the chances of this happening in a business setting are rare, indeed.

[ii] Contributions to Capital. Regulations under *IRC Section 61(a)* provide that a gratuitous forgiveness of a debt owed a shareholder by his corporation is a transaction which amounts to a contribution to the capital of the corporation to the extent of the principal of the debt.¹⁰ However, *IRC Section 108(e)(6)*, added by the Bankruptcy Tax Act of 1980, limits the extent of the contribution to capital to the shareholder's basis in the debt. If the forgiven amount exceeds the shareholder's adjusted basis in the debt, the excess must be accounted for as income from discharge of indebtedness.¹¹

[iii] Issuance of Stock or Other Debt in Exchange for the Canceled Debt.¹² Case law has long held that a corporation did not realize income when the consideration for the acquisition of its bonds was its stock.¹³ The theory on which these cases proceeded viewed the exchange as a substitution of one liability for another, and, thus, as the equivalent of no cancellation at all.

As originally enacted as part of the Bankruptcy Tax Act of 1980, *IRC Section 108* continued this nonrecognition of income rule with two exceptions.¹⁴ The normal debt discharge rules (discussed in the succeeding subsection) applied if only a nominal or token amount of stock was issued for the debt instruments,¹⁵ or if the bonds were held by an unsecured creditor and, as part of a "workout,"¹⁶ the creditor received stock having a value which was less than one half the amount of stock that the creditor would receive if all of the corporation's unsecured creditors had received a pro rata amount of stock in cancellation or satisfaction of the debt.¹⁷

The Tax Reform Act of 1984 removed the nonrecognition of income rule by enacting *IRC Section 108(e)(10)*, under which the debtor corporation is treated as having satisfied the indebtedness with money equal to the fair market value of the stock. This produces income for the corporation to the extent that the principal of the debt exceeds the fair market value of the stock, except in the case of a debtor corporation in a Title 11 bankruptcy proceeding or to the extent the corporation is insolvent.¹⁸ The exceptions do not apply in the case of any debt instrument issued, and stock transferred, after October 9, 1990, in satisfaction of any indebtedness if the stock transferred to the creditor is "nominal or token," or is "disqualified stock"--stock with a stated redemption price that either has a fixed redemption date, is callable by the issuer, or is puttable by the holder.¹⁹

Regulations provide facts and circumstances that are relevant and are to be taken into account in determining whether stock is nominal or token.²⁰ If common and preferred stock are issued for indebtedness, the determination is made separately with respect to each. Moreover, the separate determination whether common stock issued for unsecured indebtedness is nominal or token is made on an aggregate basis with respect to all common stock issued for unsecured debt in the bankruptcy or insolvency workout.²¹ A similar determination is made for preferred stock.²²

The common stock-for-debt exception does not apply to an unsecured indebtedness discharged for common stock if the

individual common stock ratio does not equal at least one-half of the group common stock ratio.ⁿ²³ The individual common stock ratio is the value of common stock issued for an unsecured indebtedness to the amount of the unsecured indebtedness allocated to that common stock. The amount of unsecured indebtedness allocated to the common stock is the adjusted issue price of the indebtedness for which the stock is issued, reduced by the amount of other consideration transferred in the exchange, including (a) the amount of any money; (b) the issue price (determined under *IRC Section 1273* or *1274*) of any new indebtedness; (c) the amount of any indebtedness allocated to preferred stock; and (d) the value of any other property, including any disqualified stock.ⁿ²⁴ The group common stock ratio is determined in the same manner except that it looks to the aggregate values of the common stock and indebtedness.ⁿ²⁵

The determination of the common stock ratio can be illustrated by the following example:

Example:

X Corporation has three outstanding unsecured debts, each with a \$200,000 adjusted issue price. In a bankruptcy proceeding, the first indebtedness is exchanged for cash of \$100,000 and \$40,000 in common stock, the second for \$20,000 in cash, and the third for \$10,000 in common stock. The individual common stock ratio for the first indebtedness is 40 percent, determined by comparing the value of the common stock issued for the indebtedness (\$40,000) to the amount of unsecured indebtedness allocated to the stock (\$200,000 less \$100,000 cash received). There is no individual common stock ratio for the second indebtedness because no stock was received in exchange for the debt. The individual common stock ratio for the third indebtedness is 5 percent (\$10,000 stock, \$200,000 indebtedness).

The group common stock ratio is 10.4 percent, determined by comparing the value of all of the common stock received (\$50,000) with the total amount of unsecured indebtedness allocated to the stock (\$600,000 issue price less \$120,000 cash received). The stock-for-debt exception applies only to the first indebtedness; it is the only one in which the individual common stock ratio equals at least one-half of the group common stock ratio.

The individual preferred stock ratio must be equal to at least one-half of the group preferred stock ratio for the stock-for-debt exception to apply to the receipt of preferred stock.ⁿ²⁶ The individual preferred stock ratio is the value of the preferred stock issued for an unsecured indebtedness to the amount of the indebtedness allocated to the preferred stock. Here, the amount of unsecured indebtedness allocated to the stock is the lesser of the lowest redemption price or lowest liquidation preferenceⁿ²⁷ of the preferred stock (determined at the time of issuance). However, in no event can the allocable indebtedness be less than the fair market value of the preferred stock or greater than the adjusted issue price of the unsecured indebtedness.ⁿ²⁸

The Omnibus Budget Reconciliation Act of 1993 repealed *IRC Section 108(e)(10)* for stock transferred after December 31, 1994, in satisfaction of any indebtedness. However, the repeal did not change the basic rule contained in that provision, namely, that the transferring debtor corporation is treated as having satisfied the indebtedness with an amount of money equal to the fair market value of the stock; the rule is now found in an amended *IRC Section 108(e)(8)* and applies to both recourse and nonrecourse indebtedness.^{n28.1} Moreover, the 1993 change does not apply to any title 11 or similar case (as defined in *IRC Section 368(a)(3)(A)*) filed on or before December 31, 1993.

In those cases for which the stock-for-debt exception remains applicable after 1993, the Service will not treat the issuance of common stock for outstanding unsecured indebtedness in a title 11 case or insolvency workout as nominal or token if the stock to total stock ratio is equal to at least 15 percent.^{n28.2} The stock to total stock ratio is the ratio of (i) the value of all common stock issued for unsecured indebtedness in the title 11 case or insolvency workout to (ii) the value of all stock of the corporation outstanding after the title 11 case or insolvency workout (including preferred stock and disqualified stock).

Suppose, instead, that the consideration for the acquisition consists of new obligations of the corporation rather than its stock. Before the enactment of *IRC Section 1275(a)(4)* in 1984, the result turned on the amount of the new debt. If the face amount of the new bonds was equal to or greater than the issue price of the acquired obligations, all that was deemed to have occurred was a change in the instrument evidencing the liability, with the result that income was not then realized by the corporation.ⁿ²⁹ However, when the principal amount of the new debt was less than the old, the transaction was deemed to have produced income for the corporation on the ground that income would have been created had the corporation sold the new obligations for cash and then used the proceeds to retire the older obligations.ⁿ³⁰

IRC Section 108(e)(11) was added to the Code as part of the Omnibus Budget Reconciliation Act of 1990 and provides that, for the purpose of determining the amount of cancellation of indebtedness income derived in a debt-for-debt transaction, the debtor is treated as having satisfied the indebtedness with an amount of money equal to the issue price of the new debt instrument.ⁿ³¹ The provision was renumbered in 1993 and is now *IRC Section 108(e)(10)*. For this purpose the issue price of the new obligation is determined under the general rule applicable to debt instruments issued for property, discussed in § 17.02[4][c][i].

The 1990 legislation repealed *IRC § 1275(a)(4)*, but left unanswered the proper treatment of a debt-for-debt transaction occurring after enactment of the Tax Reform Act of 1984 and before the addition of what is now *IRC Section 108(e)(10)*. *IRC Section 1275(a)(4)* seemed to suggest that there should have been no cancellation of indebtedness income where the issue price of new debt received in a reorganization was less than that of the old, for it provided that, in such a case, "the issue price of the debt instrument so issued shall be treated as equal to the adjusted issue price of the old debt instrument." The answer may not be so simple.

Suppose that an outstanding debt with a face amount of \$1,000 and a value of \$800 was exchanged for a debt with a principal amount of \$850 and a value of \$800. A literal application of *IRC Section 1275(a)(4)* would have yielded no cancellation of indebtedness income, but would have created amortizable bond premium of \$150 issuer (the difference in the face amounts of the old and new debt) and market discount for the holder of the new debt of \$50 (the difference between \$850 and \$800); the market discount would be includable in the holder's income at maturity.ⁿ³²

The Service apparently took the position that cancellation of indebtedness income should have arisen whenever the fair market value of the new debt was less than the adjusted issue price of the debt for which it was exchanged.ⁿ³³ This was achieved, as in pre-*IRC Section 1275(a)(4)* days, by a comparison of the face amounts of the old and new debt. *IRC Section 1275(a)(4)* then would have been applied according to its terms, but with an adjustment made for the amount of cancellation of indebtedness income. Thus, in the previous example, the exchange would have created \$150 of cancellation of indebtedness income, which would have reduced the \$1,000 issue price determined under *IRC Section 1275(a)(4)* to \$850. There would not have been any amortizable bond premium, but the holder would still have had to report \$50 of market discount at maturity.

[iv] Statutory Exclusion of Cancellation of Indebtedness Income: *IRC Section 108*.^{n33.1} *IRC Section 108(a)(1)* permits a corporation to exclude income realized from the discharge of an indebtedness on which it is liable, if the discharge occurs in a bankruptcy case,ⁿ³⁴ outside of bankruptcy while the debtor is insolvent,ⁿ³⁵ or the indebtedness discharged is either qualified farm indebtedness or, in the case of a taxpayer other than a C corporation, the indebtedness discharged is qualified real property business indebtedness.ⁿ³⁶ An ordering process gives precedence to a discharge in bankruptcy over an insolvency or qualified farm indebtedness discharge, while an insolvency discharge is given precedence over the discharge of qualified farm indebtedness or qualified real property business indebtedness.ⁿ³⁷ This ensures a uniformity of treatment (e.g., all bankrupt debtors governed by the same rules regardless of the type of debt discharged) while preserving the "fresh start" approach underlying bankruptcy policy.ⁿ³⁸

The exclusion from gross income in a bankruptcy case is automatic. However, the amount of discharged debt excluded

from gross income must be applied to reduce the debtor's tax attributes in the following order:

- (1) Any net operating loss for the discharge year and any net operating loss carryover to such year.
- (2) Carryovers to or from the year of discharge of the amount allowable as the general business credit. No portion of a carryover attributable to the employee stock ownership credit is taken into account.
- (3) The amount of the minimum tax credit available under *IRC Section 53(b)* as of the beginning of the taxable year immediately following the taxable year of the discharge.
- (4) Any net capital loss for the year of discharge and any net capital loss carryover to the year.
- (5) The basis of the taxpayer's property.
- (6) Any passive activity loss or credit carryover of the taxpayer under *IRC Section 469(b)* for the taxable year of the discharge.
- (7) Any carryover to or from the taxable year of discharge of the foreign tax credit.ⁿ³⁹

The reduction is on a dollar for dollar basis, except in the case of the credit and passive loss carryovers, where the reduction is 33 1/3 cents for each dollar excluded, and is made after the determination of the taxpayer's income tax for the year of discharge.ⁿ⁴⁰ The reduction in the amount of net operating loss or capital loss or carryovers of such losses is made first in the loss for the discharge year and then in the carryovers in the order of the taxable year from which each carryover arose.ⁿ⁴¹ The reduction in the credit carryovers is made in the order in which the carryovers are taken into account in determining the tax for the year of discharge.ⁿ⁴²

In lieu of the reductions described above, the corporation can elect to apply any portion of the excluded amount to the reduction under *IRC Section 1017* in the basis of the taxpayer's depreciable property (including, if the taxpayer so elects, real property held for sale to customers in the ordinary course of a trade or business).ⁿ⁴³ However, the elected amount cannot exceed the aggregate adjusted bases of the depreciable property held by the taxpayer at the beginning of the taxable year following the year of discharge, for that is the time specified for the making of the reduction in basis.ⁿ⁴⁴ The order of reduction is set forth in regulations.ⁿ⁴⁵

The tax treatment of an insolvency debt discharge depends upon the solvency of the debtor at the time of discharge. If the debtor is insolvent, the rules applicable in the case of bankruptcy discharge apply, but only to the extent of the insolvency (the extent to which liabilities exceed the fair market value of assets immediately before the discharge).ⁿ⁴⁶ A solvent taxpayer must report the discharged amount in income.ⁿ⁴⁷

The amount excluded under a qualified farm indebtedness discharge cannot exceed the sum of the adjusted tax attributes of the taxpayer and the aggregate adjusted bases of qualified property (property used or held for use in a trade or business or for the production of income) held by the taxpayer as of the beginning of the taxable year following the year in which discharge occurs.ⁿ⁴⁸ For this purpose, the term "adjusted tax attributes" means the sum of the attributes described above, other than the basis of the taxpayer's property, determined by taking into account \$3 for each \$1 of general business credit or foreign tax credit carryover.ⁿ⁴⁹ The adjusted basis of any qualified property and the amount of adjusted tax attributes are determined after any reduction resulting from an insolvency discharge.ⁿ⁵⁰

The exclusion of an amount of discharged qualified farm indebtedness requires the same reductions in tax attributes as the bankruptcy and insolvency discharges. Any amount applied to reduce basis can only reduce the basis of qualified property held by the taxpayer and must be applied in the following order: first, depreciable property; next, land used or held for use in the trade or business of farming; and finally, other qualified property.ⁿ⁵¹

Generally, the amount excluded under a qualified real property business indebtedness cannot exceed the excess (if any) of (i) the outstanding principal amount of such indebtedness immediately before discharge, over (ii) the fair market value of the real property securing the indebtedness at the time of discharge, reduced by the outstanding principal amount of any other qualified real property business indebtedness secured by the property at that time.ⁿ⁵² However, an overall limitation prevents the amount excluded from exceeding the aggregate adjusted bases of depreciable real property held by the taxpayer immediately before the discharge (other than depreciable real property acquired by the taxpayer in contemplation of the discharge).ⁿ⁵³ The amount excluded from gross income is applied to reduce the basis of the depreciable real property of the taxpayer.ⁿ⁵⁴

In the case of a partnership, *IRC Sections 108(a), 108(b), 108(c), and 108(g)*, are applied at the partner level.ⁿ⁵⁵ However, for an S corporation, those provisions are applied at the corporate level.ⁿ⁵⁶

Gain on a subsequent disposition of any reduced basis property will be subject to the recapture rules of *IRC Section 1245* (for depreciable personal property), or *IRC Section 1250* (in the case of depreciable realty). This is accomplished by treating the reduction as a deduction for depreciation, and by treating any property not usually subject to depreciation (inventory real property which the debtor elects to treat as depreciable property) as *Section 1245* property.ⁿ⁵⁷ This is designed "to ensure that ordinary income treatment eventually will be given to the full amount of basis reduction. ..."ⁿ⁵⁸

Although the debt discharge transaction will normally involve just debtor and creditor, the Code takes into account the acquisition of an indebtedness by a party related to the debtor-corporation and provides that such acquisition is to be deemed an acquisition by the debtor to the extent required by *IRC Sections 61(a)(12)* and *108*.ⁿ⁵⁹ For this purpose, the term related party includes a member of a controlled group of corporations of which the debtor is a member, or trade or business under common control with the debtor, a partnership controlled by the debtor or a partner in such a partnership, an individual owning, directly or indirectly, more than 50 percent in value of the outstanding stock, and another corporation if more than 50 percent of the outstanding stock of it and the debtor-corporation are owned, directly or indirectly by the same individual.ⁿ⁶⁰

Suppose that a related party acquires the debtor's indebtedness from an unrelated party in exchange for a new indebtedness of the related party. If the old debt could be acquired at a discount, and the new debt issued at a price equal to the acquisition price, the combination of *IRC Section 108(e)(4)* and *IRC Section 108(e)(11)* would effectively eliminate any cancellation of indebtedness income for the debtor. The regulations foreclose that possibility by providing that the amount of income realized by the debtor must be measured by reference to the holder's cost of acquiring the indebtedness, provided the holder acquires the debt "by purchase" on or less than six months before the acquisition date.ⁿ⁶¹ A purchase occurs if the indebtedness in the hands of the holder is not substituted basis property within the meaning of *IRC Section 7701(a)(42)* (eg, if the holder has a cost basis under *IRC Section 1012* or a fair market value basis under *IRC Section 301(d)*). Where the holder's basis is not established by purchase within the six-month period, the measuring standard becomes the fair market value of the debt.

Income is also realized by a debtor when debt is acquired in anticipation of becoming a related party. These indirect acquisitions occur if (1) the holder acquired the debt less than six months before becoming related to the debtor, (2) on the date the holder becomes related to the debtor, indebtedness of the debtor represents more than 25 percent of the fair market value of the total gross assets of the holder or more than 25 percent of the fair market value of the total gross assets of the holder group, or (3) the holder acquired the debt six months or more before the date the holder became related to the debtor, but less than 24 months before that date.ⁿ⁶²

Section 1231(a) of the American Recovery and Reinvestment Act of 2009ⁿ⁶³ added *IRC Section 108(i)* to provide, on a temporary basis, a new category of specially treated discharge of indebtedness income which, though not excluded from income under *IRC Section 108(a)*, may be deferred for a significant period at the election of the taxpayer without

reducing tax attributes or the basis of depreciable property.ⁿ⁶⁴ An election to defer may only be made with respect to discharge of indebtedness income realized in connection with the "reacquisition" of an "applicable debt instrument" during the calendar years 2009 or 2010, and requires that the income deferred be taken into account ratably over a five-year period commencing, for calendar year taxpayers, with the year 2014.ⁿ⁶⁵ A separate election must be made for each applicable debt instrument reacquired during the year which gives rise to discharge of indebtedness income the taxpayer wishes to defer, and the election must be included with the taxpayer's return for the taxable year in which the reacquisition occurs.ⁿ⁶⁶ Once made, the election is irrevocable ⁿ⁶⁷ and supersedes any exclusions for the deferred discharge of indebtedness income that might otherwise be applicable under *IRC Sections 108(a)(1)(A), (B), (C) or (D)*.ⁿ⁶⁸

A "reacquisition" includes any acquisition of an applicable debt instrument by the debtor (issuer) or a "related person" (within the meaning of *IRC Section 108(e)(4)*), whether the acquisition is made for cash, debt (including modification of a debt instrument),ⁿ⁶⁹ corporate stock, or a partnership interest, and also includes a contribution of a debt instrument to the capital of a corporation and the complete forgiveness of indebtedness by the holder of an applicable debt instrument.ⁿ⁷⁰ An "applicable debt instrument" is broadly defined to mean "a bond, debenture, note, certificate, or any other instrument or contractual arrangement constituting indebtedness issued by a C corporation or any other person in connection with the conduct of a trade or business by such person."ⁿ⁷¹

If an applicable debt instrument is reacquired by issuing a debt instrument in exchange, and there is original issue discount (OID) with respect to the debt instrument so issued, OID accruing in taxable years prior to the commencement of the five-year income recognition period (but not in excess of the amount of discharge of indebtedness income deferred) must also be deferred and the aggregate amount of accrued OID deducted ratably over the five-year income recognition period.ⁿ⁷²

The deferral of discharge of indebtedness income (and related OID deductions, if any) terminates, and any remaining deferred income and deductions must be recognized, in any taxable year in which the electing taxpayer liquidates or sells substantially all of its assets, ceases business, or dies.ⁿ⁷³

IRC Section 108(i) may be elected by any taxpayer, including an individual or a pass-thru entity such as an S corporation or a partnership.ⁿ⁷⁴ The procedures for making a Section 108(i) election are set forth in *Rev Proc 2009-37*.ⁿ⁷⁵

In the case of a partnership, a special rule requires that any deferred discharge of indebtedness income be allocated to the partners immediately before the discharge and allocated to the distributive shares of each partner under *IRC Section 704* as though the income had been recognized.ⁿ⁷⁶ Any decrease in partnership liabilities as a result of the discharge is not taken into account for purposes of *IRC Section 752* to the extent it would cause the partner to recognize gain under *IRC Section 731*; instead, partnership liabilities are deemed to be decreased at the time and to the extent discharge of indebtedness income is recognized under *IRC Section 108(i)*.ⁿ⁷⁷

[4] Returns Relating to Cancellation of Indebtedness by Certain Entities.

Any applicable entity that discharges at least \$600 of the total indebtedness of any person during any calendar year must file an information return on Form 1099-C with the Internal Revenue Service.ⁿ¹ For this purpose, a discharge of indebtedness is deemed to have occurred if, and only if, there has occurred one of the identifiable events described below, whether or not an actual discharge of indebtedness has occurred on or before the date on which the identifiable event has occurred.ⁿ² The return must include the following information:

- (1) the name, address and taxpayer identification number of each person for whom there was an identifiable event during the year;

- (2) the date on which the identifiable event occurred;
- (3) the amount of indebtedness discharged;
- (4) an indication whether the identifiable event was a discharge of indebtedness in a bankruptcy, if known; and
- (5) any other information required by Form 1099-C or its instructions, or current revenue procedures.ⁿ³

For this purpose, an indebtedness is any amount owed to an applicable financial entity, including stated principal, fees, stated interest, penalties, administrative costs, and fines.ⁿ⁴ The amount of indebtedness discharged may represent all, or only a part, of the total amount owed to the applicable financial entity.

An applicable entity is an executive, judicial, or legislative agency, or an applicable financial entity.ⁿ⁵

An applicable financial entity is defined as (i) a bank or trust company chartered under the laws of the United States or of any state, (ii) a mutual savings bank, cooperative bank, domestic building and loan association, or other savings institution chartered and supervised as a savings and loan or similar association under federal or state law, (iii) a credit union, (iv) the Federal Deposit Insurance Corporation, the Resolution Trust Corporation, the National Credit Union, and any other federal executive agency and successor of the foregoing, (v) any other corporation that is a direct or indirect subsidiary of a bank, building and loan association, savings and loan association, or credit union, if, by virtue of being affiliated with such entity, the subsidiary is subject to supervision and examination by a federal or state agency that regulates such entities, and (vi) any organization in which the lending of money is a significant trade or business.ⁿ⁶

Proposed regulations provide that the lending of money is a significant trade or business if money is lent on a regular and continuing basis.ⁿ⁷ There are three safe harbors under which organizations will not be considered to have a significant trade or business of lending money. The first safe harbor applies to an organization that was not required to report under *IRC Section 6050P* in the previous calendar year if its gross income from lending money in the most recent test year (the most recent taxable year ending before July 1 of the previous calendar year) is less than both 15 percent of the organization's gross income and \$5 million.ⁿ⁸ The second applies to an organization that was required to report under *IRC Section 6050P* for the previous calendar year if, for each of the three most recent test years, its gross income from lending money is less than both 10 percent of the organization's gross income and \$3 million.ⁿ⁹ The third applies to certain newly formed organizations. Except for an entity that is formed or availed of for the principal purpose of holding loans acquired by an applicable entity, an organization that does not have a test year is considered not to have a significant trade or business of lending money even if the organization lends money on a regular and continuing basis.ⁿ¹⁰

In addition to the safe harbors, the proposed regulations provide a general exception to information reporting for entities whose principal trade or business is the sale of nonfinancial goods or the provision of nonfinancial services. Such businesses are not considered to have a significant trade or business of lending money with respect to lending or credit extended as part of the purchase by customers of those goods and services.ⁿ¹¹

As mentioned above, indebtedness is discharged, for purposes of the reporting requirement, on the date of the occurrence of a specified identifiable event.ⁿ¹² The identifiable events are:ⁿ¹³

- (1) a discharge in bankruptcy under title 11 of the United States Code (bankruptcy);
- (2) a cancellation or extinguishment of an indebtedness that renders a debt unenforceable in a receivership, foreclosure, or similar proceeding in a federal or state court (other than a discharge in bankruptcy);

- (3) a cancellation or extinguishment of an indebtedness upon the expiration of the statute of limitations for collection of an indebtednessⁿ¹⁴ or upon the expiration of a statutory period for filing a claim or commencing a deficiency judgment proceeding;
- (4) a cancellation or extinguishment of an indebtedness pursuant to an election of foreclosure remedies by a creditor that statutorily extinguishes or bars the creditor's right to pursue collection of the indebtedness;
- (5) a cancellation or extinguishment of an indebtedness that renders a debt unenforceable pursuant to a probate or similar proceeding;
- (6) a discharge of indebtedness pursuant to an agreement between an applicable financial entity and a debtor to discharge indebtedness at less than full consideration;
- (7) a discharge of indebtedness pursuant to a decision by the creditor, or the application of a defined policy of the creditor, to discontinue collection activity and discharge debt;ⁿ¹⁵ or
- (8) the expiration of the nonpayment test period, if it occurs after December 31, 1997.ⁿ¹⁶

A number of situations are excepted from the reporting requirement. First, reporting is required in the case of a discharge in bankruptcy only if the creditor knows from information included in the reporting entity's books and records pertaining to the indebtedness that the debt was incurred for business or investment purposes.ⁿ¹⁷ Second, the discharge of an amount of indebtedness that is interest need not be reported.ⁿ¹⁸ Third, in the case of a lending transaction, no reporting is required if the discharge is of an amount other than stated principal.ⁿ¹⁹ Fourth, no reporting is required in the case of a deemed discharge under *IRC Section 108(e)(4)* (relating to the acquisition of an indebtedness by a person related to the debtor), unless the disposition of the indebtedness by the creditor was made with a view to avoiding the reporting requirements.ⁿ²⁰ Fifth, the release of a co-obligor is not required to be reported if the remaining debtors continue to be liable for the full amount of the unpaid indebtedness.ⁿ²¹ Lastly, because a guarantor is not a debtor for purposes of the reporting requirement, there is no need to report with respect to a guarantor, whether or not there has been a default and demand for payment made upon the guarantor.ⁿ²²

In the case of a multi-debtor indebtedness of \$10,000 or more incurred on or after January 1, 1995, a reporting entity is subject to reporting requirements for each debtor discharged from the indebtedness.ⁿ²³ If a multi-debtor indebtedness is incurred prior to January 1, 1995, or thereafter in an amount less than \$10,000, reporting is required only with respect to the primary (or first-named) debtor. In addition, only one return of information is required if the reporting entity knows, or has reason to know that co-obligors were husband and wife living at the same address when an indebtedness was incurred, and does not know or have reason to know that such circumstances have changed at the date of discharge of the indebtedness.

If indebtedness is owned (or treated as owned for federal income tax purposes) by more than one creditor, each creditor that is an applicable entity must comply with the reporting requirements with respect to any discharge of indebtedness of \$600 or more allocable to that creditor.ⁿ²⁴ A creditor will be considered to have complied with the reporting requirement if a lead bank, fund administrator, or other designee of the creditor complies on its behalf in a reasonable manner, such as by filing a single return reporting the aggregate amount of indebtedness discharged, or by filing a return with respect to the portion of the discharged indebtedness allocable to the creditor. Any reasonable method may be used to determine the portion of the discharged indebtedness allocable to each creditor.

Every applicable entity required to make such a return must also furnish the person whose debt was discharged a written statement showing the name and address of the entity required to make the return, and the information required to be

shown on the return with respect to that person.ⁿ²⁵ The statement must be furnished to the person no later than January 31 of the year following the calendar year of discharge. Any applicable entity required to file a return must also retain a copy of the return, or have the ability to reconstruct the data required to be included on the return, for at least four years from the date the return is required to be filed.ⁿ²⁶

IRC Sections 6721 and 6722 impose penalties for failure to file the information returns required under *IRC Section 6050P*.ⁿ²⁷ No penalty is imposed on an applicable entity required to make the prescribed return if it is shown that the failure is due to reasonable cause and not to willful neglect.ⁿ²⁸

FOOTNOTES:

(n1)Footnote 1. *Treas Reg § 1.61-12(c)(2)*.

(n2)Footnote 2. *Treas Reg § 1.163-3(a)(1)*. For the computation of discount (or premium) on serial bonds, see *Rev Rul 70-353, 1970-2 CB 39*. If the bonds were issued by a corporation prior to March 1, 1913, the premium represented income in the year of issue.

If bonds that were issued at a discount are converted into stock, any unamortized bond discount loses its character as such and may not be deducted as interest. *Rev Rul 72-348, 1972-2 CB 97*.

(n3)Footnote 3. *Treas Reg § 1.61-12(c)(3)*.

(n4)Footnote 4. *Treas Reg § 1.163-3(c)(1)*.

(n5)Footnote 5. *417 US 134 (1974)*.

(n6)Footnote 6. The Service apparently seized upon a portion of a statement in the Court's opinion that "when viewed from the corporation's perspective, ... there has been no new capital acquired and no additional cost incurred in retaining the old capital." *Id at 152*.

(n7)Footnote 7. *Cities Service Co v US, 522 F2d 1281 (2d Cir 1974)*, cert denied *423 US 827*.

(n8)Footnote 8. *Gulf, Mobile & Ohio RR v Commr, 579 F2d 892 (5th Cir 1978)*.

(n9)Footnote 9. Discount deductions were denied in *National Can Corp v US, 687 F2d 1107 (7th Cir 1982)*, and *Honeywell Inc v Commr, 87 TC 624 (1986)*, because the difference in fair market values of the stock and debentures on the date of exchange was attributable to a conversion feature of the bonds.

Taxpayer's subsidiary issued debentures convertible into the common stock of the taxpayer. At a later date, the subsidiary called the debentures for redemption, thereby prompting most of the debenture holders to convert their debentures into the taxpayer's common stock. The debentures were then redeemed by the subsidiary for cash in an amount equal to the principal of the debentures with accrued interest. The taxpayer claimed a capital loss measured by the amount by which the fair market value of the taxpayer's stock exceeded the principal of the exchanged debentures. The Tax Court in *Reynolds Metals Co v Commr, 105 TC 304 (1995)*, *affd 114 F3d 1177 (4th Cir 1997)*, held that the taxpayer was not entitled to the loss deduction. In the court's opinion, there were two elements involved in the issuance of the taxpayer's stock: (1) the acquisition of the debentures and the right to obtain reimbursement from the subsidiary; and (2) the discharge of the conversion obligation under the indenture under which the debentures were issued. On this basis, the excess of the fair market value of the issued shares over the principal amount of the debentures would be attributable to the conversion feature and the balance to the debentures. The taxpayer's basis in the debentures would be limited to their principal amount, yielding no gain or loss on their redemption. The portion attributable to the conversion feature would be considered a capital contribution by the taxpayer to the subsidiary.

(n10)Footnote 1. *Treas Reg § 1.163-3(c)(1)*. A corporation does not need to net bond premium and bond discount

arising from redemptions and repurchases in the same year. The premium may be deductible under *IRC* § 163; the gain on repurchase may be excludable under *IRC* § 108. *Rev Rul* 70-368, 1970-2 CB 39. The effect of an exclusion under *IRC* § 108 is discussed in § 17.05[3][b][iv].

(n11)Footnote 2. *Treas Reg* § 1.163-3(c)(1).

(n12)Footnote 3. The various aspects of *IRC* § 249 are discussed in *Clark Equip Co v US*, 912 F2d 113 (6th Cir 1990). The court in *Clark Equipment* held that a conversion was a repurchase for purposes of *IRC* § 249.

The adjusted issue price is the issue price as defined in *IRC* §§ 1271(b) and 1274 (see § 17.02[4][c][i]), increased by any discount deducted before repurchase or decreased by any premium previously amortized. *IRC* § 249(b)(1). A normal call premium on a convertible obligation is "an amount equal to a normal call premium on a nonconvertible obligation which is comparable to the convertible obligation." *Treas Reg* § 1.249-1(d)(1). A call premium specified in dollars will be considered normal if it does not exceed one year's interest increased by the amount of discount deductible under *IRC* § 163 or decreased by the amount of bond premium includable under *IRC* § 61. *Treas Reg* § 1.249-1(d)(2). The one year's interest safe harbor does not apply unless there is a call right in the obligation. *Ltr Rul* 9526004.

Control for the purposes of *IRC* § 249(a) means the ownership of at least 80 percent of the voting stock and 80 percent of the total number of shares of all other classes of stock in a corporation. *IRC* §§ 249(b)(2), 368(c).

Prior to the passage of *IRC* § 249, the Service had contended that the excess premium was not deductible, *Rev Rul* 67-409, 1967-2 CB 62; the courts did not agree. *Southwest Grease & Oil Co v US*, 435 F2d 675 (10th Cir 1971); *Roberts & Porter, Inc v Commr*, 307 F2d 745 (7th Cir 1962); *Head Ski Co v US*, 323 F Supp 1383 (D Md 1971) *affd per curiam* 454 F2d 732 (4th Cir 1972); *Universal Tractor-Equipment Corp v US*, 19 AFTR2d 1337 (ED Va 1967). The Service has announced that, in cases which do not come within the ambit of *IRC* § 249, amounts expended by taxpayers on the call of convertible obligations will be deductible, provided the taxpayers can show facts substantially similar to those in *Roberts & Porter*, *Head Ski*, and *Southwest Grease & Oil*, *Rev Rul* 74-210, 1974-1 CB 48, revoking *Rev Rul* 67-409.

Roberts & Porter and *Head Ski* were distinguished in *Richmond, Fredricksburg & Potomac RR v Commr*, 62 TC 174 (1974), *affd* 528 F2d 917 (4th Cir 1975), and no deduction was allowed for a premium paid in redemption of guaranteed stock which, unlike convertible bonds, gave holders a present right to share in earnings.

As part of a plan in a voluntary Chapter 11 bankruptcy proceeding, a corporation issued stock to a class of creditors that included convertible debenture holders. The value of the stock exceeded the amount of the debt. In TAM 200143001, the Service stated that the premium paid to the debenture holders was deductible as interest provided the premium was not attributable to the conversion feature in the debentures.

(n13)Footnote 4. *Treas Reg* § 1.249-1(c).

(n14)Footnote 5. *Treas Reg* § 1.249-1(d)(2).

(n15)Footnote 1. See also Chs 1 and 2. An excellent article is Eustice, "Cancellation of Indebtedness and the Federal Income Tax: A Problem of Creeping Confusion," 14 *Tax L Rev* 225 (1959).

(n16)Footnote 2. *Treas Reg* § 1.61-12(c)(2)(ii). A corporation repurchased bonds that had been issued in exchange for preferred stock in a tax-free recapitalization. The repurchase price was greater than the amount received by the corporation on the issuance of the stock but less than the face value of the bonds. Since the repurchase price was greater than the issue price, the corporation did not realize any cancellation of indebtedness income. *US Steel Corp v US*, 848 F2d 1232 (Fed Cir 1988).

(n17)Footnote 3. 284 US 1 (1931) .

The Kirby Lumber rule was applied in *Gillin v US*, 423 F2d 309 (Ct Cl 1970) , where a loan of Canadian funds immediately converted into US dollars was repaid with Canadian funds purchased with a lesser amount of US dollars.

(n18)Footnote 4. *Helvering v American Chicle Co*, 291 US 426 (1934) .

(n19)Footnote 5. *Commr v Rail Joint Co*, 61 F2d 751 (2d Cir 1932) ; *Fashion Park, Inc v Commr*, 21 TC 600 (1954) , nonacq 1955-1 CB 7 ; see also *Bradford v Commr*, 233 F2d 935 (6th Cir 1956) . The failure of the courts to apply Kirby Lumber in these cases is criticized in Del Cotto, "Debt Discharge Income: Kirby Lumber Co Revisited Under the 'Transitional Equity' Rule of Hillsboro," 38 Buffalo L Rev 777 (1990).

(n20)Footnote 6. 318 US 322 (1943) .

(n21)Footnote 7. 318 US at 331 (1943) .

(n22)Footnote 8. 336 US 28 (1949) .

(n23)Footnote 9. 336 US at 51 (1949) .

(n24)Footnote 10. *Treas Reg § 1.61-12(a)*. Prior to 1980, there was a conflict of authority as to whether a forgiveness of interest was also a contribution to capital. Compare *Commr v Auto-Strop Safety Razor Co*, 74 F2d 226 (2d Cir 1934) and *George Hall Corp v Commr*, 2 TC 146 (1943) , non-acq 1972-1 CB 3 , with *Helvering v Jane Holding Corp*, 109 F2d 933 (8th Cir 1940) , cert denied 310 US 653 .

Rev Rul 76-316, 1976-2 CB 22 , limited the amount of the contribution to capital to the principal portion of the debt.

(n25)Footnote 11. See § 17.05[3][b][iv] for a discussion of the treatment of discharge of indebtedness income.

(n26)Footnote 12. The following discussion of discharge of indebtedness income resulting from the exchange of a debt instrument for stock or other debt, as well as the preceding discussion of forgiveness of debt as a contribution to capital (see § 17.05[3][b][ii] above), should be read in the light of new *IRC § 108(i)*, added by the American Recovery and Reinvestment Act of 2009, which temporarily provides an election to defer the reporting of income arising from such transactions if the discharge takes place in 2009 or 2010. *IRC § 108(i)* is discussed in § 17.05[3][b][iv].

(n27)Footnote 13. *Commr v Capento Sec Corp*, 140 F2d 382 (1st Cir 1944) , affg 47 BTA 691 (1942) ; *Liquid Carbonic Corp v Commr*, 34 BTA 1191 (1936) ; but see *Claridge Apartments Co v Commr*, 138 F2d 962 (7th Cir 1943) , revd on other grounds 323 US 141 (1944) .

No deduction was allowed for interest set aside but never paid on bonds that were converted into stock. Since the conversion rate was constant whether or not there was interest owing, the conversion was the equivalent of a discharge of the obligation to pay interest. *Columbia Gas System, Inc v US*, 334 F Supp 1279 (SDNY 1971) , affd 473 F2d 1244 (2d Cir 1973) . A similar result was reached in *Tandy Corp v US*, 626 F2d 1186 (5th Cir 1980) , where accrued interest and premium on bonds converted to stock were canceled.

(n28)Footnote 14. The 1980 legislation treated the stock received by the creditor as § 1245 property and considered any amount allowed the creditor as a bad debt deduction or as an ordinary loss on the exchange, reduced by any gain realized on the exchange, as a deduction for depreciation subject to recapture as ordinary income under *IRC § 1245*. *IRC § 108(e)(7)(A)*.

(n29)Footnote 15. The stock issued for debt in *Ltr Rul 8837001* amounted to about 15 percent of the total consideration and about 10 percent of the debt canceled in the exchange. This was held not to be a nominal or token

amount of stock.

(n30)Footnote 16. A "workout" is a transaction or series of transactions involving a significant restructuring of the debt of a corporation in financial difficulty.

(n31)Footnote 17. *IRC § 108(e)(8)*, as in effect prior to the Omnibus Budget Reconciliation Act of 1993.

(n32)Footnote 18. A corporation under the jurisdiction of a court in a Title 11 case issued preferred stock with a redemption price and liquidating preference of \$300,000 to a creditor owed \$500,000. Held, the stock-for-debt exception applied only to the extent of the redemption price and liquidating preference. *Rev Rul 90-87, 1990-2 CB 32*.

(n33)Footnote 19. The disqualified stock rule does not apply to any stock transferred, in satisfaction of any indebtedness if the transfer (a) is in a title 11 or similar case filed on or before Oct 9, 1990, (b) is pursuant to a written binding contract in effect on Oct 9, 1990, and at all times thereafter before the transfer, (c) is pursuant to a tender offer or exchange offer described in documents filed with the Securities and Exchange Commission on or before Oct 9, 1990, or (d) is pursuant to a transaction that was described in a written public announcement before Oct 9, 1990, and was the subject of both a prior filing and a subsequent pre-Jan 1, 1991 filing with the Securities and Exchange Commission.

Stock that is disqualified stock is not considered to be stock in determining whether stock issued for indebtedness is nominal of token.

(n34)Footnote 20. *Treas Reg § 1.108-1(b)*.

(n35)Footnote 21. *Treas Reg § 1.108-1(b)*. Common stock is all stock other than preferred stock and disqualified stock. *Treas Reg § 1.108-1(d)(1)*.

(n36)Footnote 22. *Treas Reg § 1.108-1(b)*. Preferred stock is any stock (other than disqualified stock) that has a limited or fixed redemption price or liquidation preference, and, upon issuance, does not have a right to participate in corporate growth in any material way. A right to participate in corporate growth is not established by the fact that the redemption price or liquidation preference exceeds the fair market value of the preferred stock. *Treas Reg § 1.108-1(d)(4)*.

(n37)Footnote 23. *Treas Reg § 1.108-1(c)(1)(i)*.

(n38)Footnote 24. *Treas Reg § 1.108-1(c)(1)(ii)*.

(n39)Footnote 25. *Treas Reg § 1.108-1(c)(1)(iii)*.

(n40)Footnote 26. *Treas Reg § 1.108-1(c)(2)(i)*.

(n41)Footnote 27. A liquidation preference exists if the stock's right to share in liquidation proceeds is limited and preferred. *Treas Reg § 1.108-1(d)(3)*.

(n42)Footnote 28. *Treas Reg § 1.108-1(c)(2)(ii)*.

(n43)Footnote 28.1. If a debtor partnership transfers a capital or profits interest in the partnership in satisfaction of an indebtedness, the partnership is treated as having satisfied the indebtedness with an amount of money equal to the fair market value of the interest. In addition, any discharge of indebtedness income recognized by the partnership is included in the distributive share of taxpayers who were the partners in the partnership immediately before the discharge.

The question presented in TAM 9830002 was whether *IRC § 108(e)(6)* or *108(e)(8)* applied to a situation in which a debtor contemporaneously issued stock to each of three creditors in cancellation of its separate debts to them, where the

creditors were (1) the corporation that theretofore owned all of the debtor's stock, (2) the corporation that owned all of the debtor's parent's stock, and (3) the corporation that, in turn, owned all of that second corporation's stock. Held, *IRC § 108(e)(8)* applied because the debtor issued stock in return for the cancellation of each of the debts; the cancellation was not a contribution to the capital of the debtor.

(n44)Footnote 28.2. *Rev Proc 94-26, 1994-1 CB 612* , effective with respect to any issuance of stock for indebtedness: (1) pursuant to a plan confirmed by the court in a title 11 case after May 17, 1994; or (2) if there is no title 11 case, pursuant to an insolvency workout in which all issuances of stock for indebtedness occur after May 17, 1994. In both instances, the case had to be filed on or before Dec 31, 1993.

(n45)Footnote 29. *Cf Great Western Power Co v Commr, 297 US 543 (1936)* .

(n46)Footnote 30. *Commr v Stanley Co, 185 F2d 979 (2d Cir 1951)* ; *Commr v Coastwise Transp Corp, 71 F2d 104 (1st Cir 1934)* , *cert denied 293 US 595* . However in *Pennsylvania Elec Co v US, 135 F Supp 416 (Ct Cl 1955)* , the court treated the excess of the value of the new bonds over the issue price of the old as a capital contribution by a creditor parent to a debtor subsidiary.

(n47)Footnote 31. The transitional rules affecting transactions involving disqualified stock, discussed above, apply with equal force to debt-for-debt exchanges.

(n48)Footnote 32. Query, whether amortizable bond premium can arise without an actual outlay of cash. See *Treas Reg § 1.61-14(c)*.

(n49)Footnote 33. For a discussion of the Service's position, see Sheppard, "Debt-For-Debt Exchanges," *48 Tax Notes* 954 (1990).

(n50)Footnote 33.1. See American Bar Association Section of Taxation, "Report of the Section 108 Real Estate and Partnership Task Force," *46 Tax Lawyer* 209 (1992). See also Burke, "Partnership Debt-Equity Exchanges: Kirby Lumber and Subchapter K," *47 Tax Lawyer* 13 (1993).

(n51)Footnote 34. The Code actually employs the term "title 11 case," defined as "a case under title 11 of the US Code (relating to bankruptcy), but only if the taxpayer is under the jurisdiction of the court in such case and the discharge of indebtedness is granted by the court or is pursuant to a plan approved by the court." *IRC § 108(d)(2)*. The mere fact that a bankruptcy court assumes jurisdiction over a corporation and the trustee undertakes to manage the corporation's affairs in bankruptcy does not constitute discharge of indebtedness income under *IRC § 108(a)*; there must be a specific order or approval of the bankruptcy plan. *Friedman v Commr, TC Memo 1998-196* .

(n52)Footnote 35. The insolvency exception applies only to the extent the income is produced by a cancellation of indebtedness. For example, if an insolvent taxpayer conveys property with a basis of \$8,000 and a fair market value of \$11,000 to a creditor in payment of a \$12,000 debt, the \$3,000 difference between basis and value will be gain that is realized and recognized as derived from a disposition of property; the remaining \$1,000 will be cancellation of indebtedness income subject to the rules of *IRC § 108(a)(1)*. *Rev Rul 90-16, 1990-1 CB 12* . Apparently, the Service will limit the application of *Rev Rul 90-16* to instances in which the debt involved is recourse debt. If nonrecourse, *IRC § 108(a)(1)* will not apply even if the debt exceeds the fair market value of the property. *Ltr Rul 9302001* .

A bifurcated analysis of the tax consequences was found to be warranted in *Frazier v Commr, 111 TC 243 (1998)* . The facts of the case were unusual. The lender's bid (the only bid) at the foreclosure sale was higher than the actual fair market value of the property at the time. The Tax Court used the fair market value as the amount realized on the sale, giving rise to a realized loss on the property portion of the transaction. The taxpayers realized cancellation of indebtedness income that they could exclude because they were insolvent. Of interest is the fact that the Service argued that *Rev Rul 90-16* should not be applied.

The taxpayers in *Gehl v Commr*, 102 TC 784 (1994), *affd in an unpublished disposition* (8th Cir 1995), transferred appreciated property to a creditor in partial satisfaction of a debt; the remainder of the debt was forgiven. The taxpayers were insolvent both before and after the transfer. The excess of the fair market value of the property over its basis was held to be gain from dealings in property and properly includable in income pursuant to *IRC § 61(a)(3)*, and did not constitute cancellation of indebtedness income. The Service conceded that the forgiven portion of the debt was cancellation of indebtedness income that could be excluded from income by reason of the insolvency of the taxpayers.

A similar result was reached in *Moore v Commr*, *TC Memo 1994-446*, where the a partnership interest was transferred in exchange for cash, a note, and the assumption of the taxpayer's obligations on the partnership's debt.

A transfer of property in exchange for a mortgage discharge produced capital gain rather than cancellation of indebtedness income in *Correra v Commr*, *TC Memo 1997-356*. The Fifth Circuit reached the same result in 2925 *Briarpark Ltd v Commr*, 163 F3d 313 (5th Cir 1999), on the ground that *IRC § 61(a)(3)*, not *IRC § 61(a)(12)*, should apply when the transaction relieves the taxpayer-owner of (1) the obligation to repay the debt, and (2) title to the property.

(n53)Footnote 36. A debt is treated as qualified farm indebtedness if (i) the indebtedness was incurred directly in connection with the operation by the taxpayer of the trade or business of farming, and (ii) at least 50 percent of the taxpayer's gross receipts for the three taxable years preceding the year of discharge is attributable to the trade or business of farming. *IRC § 108(g)(2)*.

Qualified real property business indebtedness is indebtedness (other than qualified farm indebtedness) that (a) was incurred or assumed by the taxpayer in connection with real property used in a trade or business and is secured by that property; (b) was incurred or assumed before Jan 1, 1993, or is qualified acquisition indebtedness; and (c) with respect to which the taxpayer makes an election (on the taxpayer's return for the year of discharge) to treat the indebtedness as qualified real property business indebtedness. *IRC §§ 108(c)(3), 108(d)(9)*. The required election can be revoked only with the consent of the Service. The election is made on a completed Form 982 attached to a timely-filed (including extensions) federal income tax return for the taxable year in which the taxpayer has excludable discharge of indebtedness income. *Treas Reg § 1.108(c)-1(b)*.

Indebtedness is qualified acquisition indebtedness if it was incurred or assumed to acquire, construct, reconstruct, or substantially improve business real property. *IRC § 108(c)(4)*. A refinancing of the indebtedness can be qualified real property business indebtedness, but only to the extent it does not exceed the amount of the indebtedness being refinanced.

The "in connection with" requirement for qualified real property business indebtedness is satisfied if the debt is secured by real property used in a trade or business at the time the debt is incurred. *TAM 200014007*.

The discharge, whether of qualified farm indebtedness or qualified real property business indebtedness, must be by a qualified person--generally a person actively and regularly engaged in the business of lending money and any federal, state, or local government or agency or instrumentality thereof. *IRC §§ 46(c)(8)(D)(iv), 108(g)(1)*.

(n54)Footnote 37. *IRC § 108(a)(2)*.

(n55)Footnote 38. S Rep No 1035, 96th Cong, 2d Sess 10 (1980).

(n56)Footnote 39. *IRC § 108(b)(1), (2)*. If a taxpayer realizes cancellation of indebtedness income that is excluded from gross income under *IRC § 108(a)* either during or after a taxable year in which the taxpayer is the distributor or transferor of assets in a transaction described in *IRC § 381(a)*, any tax attributes to which the acquiring corporation succeeds, including the basis of property acquired by the acquiring corporation in the transaction, must reflect the reductions required by *IRC § 108(b)*. For this purpose, all attributes listed in *IRC § 108(b)(2)* immediately prior to the

transaction described in *IRC § 381(a)*, but after the determination of tax for the year of distribution or transfer of assets, including basis of property, will be available for reduction under *IRC § 108(b)(2)*. However, the basis of stock or securities of the acquiring corporation, if any, received by the taxpayer in exchange for the transferred assets will not be available for reduction under *IRC § 108(b)(2)*. *Treas Reg § 1.108-7(c)*.

An S corporation, with excluded discharge of indebtedness income, reduces the listed tax attributes after items of income, loss, deduction, or credit have been passed through to its shareholders. Moreover, if the corporation had a net operating loss for a year in which it was a C corporation, there is no reduction in any net operating loss carried forward from that year; *IRC § 1371(b)(1)* prevents the carryforward. *TAM 9541001*.

(n57)Footnote 40. *IRC § 108(b)(3), (4)(A)*.

(n58)Footnote 41. *IRC § 108(b)(4)(B)*.

(n59)Footnote 42. *IRC § 108(b)(4)(C)*.

(n60)Footnote 43. *IRC §§ 108(b)(1), (b)(5)(A), 1017(b)(3)(E)(i)*.

The elections must be made on Form 982 attached to the taxpayer's return for the year in which discharge occurs, or such other time as the regulations permit. Once made, they can be revoked only with consent. *IRC §§ 108(d)(9), 1017(b)(3)(E)(ii)*.

If the taxpayer establishes to the satisfaction of the Service reasonable cause for failure to file the election with the original return, the taxpayer may file the election with an amended return or claim for refund. *Temp Treas Reg § 7a.1(d)(1)*.

Stock held by a parent will be treated as depreciable property if the parent and subsidiary file a consolidated return for the discharge year and the subsidiary agrees to reduce its basis in its depreciable property or inventory real property. *IRC § 1017(b)(3)(D)*.

(n61)Footnote 44. *IRC §§ 108(b)(5)(B), 1017(a)*. If a taxpayer realizes cancellation of indebtedness income that is excluded from gross income under *IRC § 108(a)* either during or after a taxable year in which the taxpayer is the distributor or transferor of assets in a transaction described in *IRC § 381(a)*, the basis of property acquired by the acquiring corporation in the transaction, must reflect the reductions required by *IRC § 1017*. For this purpose, the basis of property of the distributor or transferor corporation immediately prior to the transaction described in *IRC § 381(a)*, but after determination of tax for the year of distribution or transfer of assets, will be available for reduction under *IRC § 108(b)(2)*. However, the basis of stock or securities of the acquiring corporation, if any, received by the taxpayer in exchange for the transferred assets will not be available for reduction under *IRC § 108(b)(2)*. *Treas Reg § 1.1017-1(b)(4)*.

(n62)Footnote 45. *Treas Reg § 1.1017-1*.

(n63)Footnote 46. *IRC § 108(d)(3)*. A reduction in the principal amount of nonrecourse debt that exceeds the fair market value of the property securing the debt results in discharge of indebtedness income. *Rev Rul 91-31, 1991-1 CB 19*. However, the amount by which the nonrecourse debt is undersecured is taken into account in determining whether, and to what extent, a taxpayer is insolvent, but only to the extent that the excess nonrecourse debt is discharged. *Rev Rul 92-53, 1992-2 CB 48*.

The Ninth Circuit has held that a taxpayer claiming to be insolvent must prove by a preponderance of the evidence that he or she will be called upon to pay an obligation claimed to be a liability, and that the total amount of liabilities so proved exceed the fair market value of the taxpayer's assets. *Merkel v Commr, 192 F3d 844 (9th Cir 1999)*.

According to the Service, assets that are exempt from the claims of creditors under state law must be taken into account in determining whether a taxpayer is insolvent. *Ltr Rul 199935002* ; *Ltr Rul 199932013* . The Tax Court agrees. *Carlson v Commr*, 116 TC 87 (2001) .

(n64)Footnote 47. *IRC § 108(e)(5)* permits a debt reduction to be treated as a purchase price adjustment if (i) the debt of a purchaser of property is reduced, and (ii) the discharge would otherwise result in includable cancellation of indebtedness income. If the creditor is not the seller, any debt reduction produces income unless the discharge results from an infirmity that can be traced back to the original sale. *Rev Rul 92-99, 1992-2 CB 48* . The Service will not challenge a bankrupt or insolvent partnership's treatment of a reduction of an indebtedness as a purchase price adjustment if the transaction would have qualified as such absent the insolvency or bankruptcy. *Rev Proc 92-92, 1992-2 CB 505* .

The reductions to tax attributes mentioned earlier apply to amounts excluded from gross income under *IRC § 108(a)*. Although a reduction in basis is logical when the cancellation of indebtedness is excluded from income under *IRC § 108(e)(5)*, there is nothing in the Code that explicitly mandates the adjustment

Ltr Ruls 9338049 and *9338029* both involved the formation of a transitory subsidiary corporation to redeem the parent corporation's stock from a shareholder with funds borrowed from a bank. In each case, the subsidiary then merged into the parent, which then sought a reduction in the amount of the bank loan. The Service ruled that the transitory corporation would be ignored and the reduction in the debt would be treated as a purchase price reduction under *IRC § 108(e)(5)*.

Cancellation of indebtedness income is characterized as passive income for purposes of the passive activity loss rules of *IRC § 469* to the extent the proceeds of the discharged debt were used in a passive activity when the discharge occurred. *Rev Rul 92-92, 1992-2 CB 103* .

(n65)Footnote 48. *IRC § 108(g)(3)(A), (C)*.

(n66)Footnote 49. *IRC § 108(g)(3)(B)*.

(n67)Footnote 50. *IRC § 108(g)(3)(D)*.

(n68)Footnote 51. *IRC § 1017(b)(4)*.

(n69)Footnote 52. *IRC § 108(c)(2)(A)*. See generally, Taggart, "Revenue Reconciliation Act of 1993--Real Estate Indebtedness," 23 *Real Est L J* 48 (1994).

The outstanding principal amount means the principal amount of indebtedness together with all additional amounts owed that, immediately before the discharge, are equivalent to principal, in that interest on such amounts would accrue and compound in the future, except that outstanding principal amount cannot include amounts that would be deductible if paid and will be adjusted to account for unamortized premium and discount with respect to the indebtedness discharged. *IRC § 108(e)(2), (3)*; *Treas Reg § 1.108-6(a)*.

(n70)Footnote 53. *IRC § 108(c)(2)(B)*.

(n71)Footnote 54. *IRC §§ 108(c)(1)(A), 1017(a), 1017(b)(3)(F)*.

(n72)Footnote 55. *IRC § 108(d)(6)*. A partnership must consent to reduce its partners' shares of the partnership's depreciable property if requested by (1) partners who directly or indirectly own an aggregate of more than 80 percent of the partnership's capital and profits interests, or (2) five or fewer partners who own directly or indirectly an aggregate of more than 50 percent of the partnership's capital and profits interests. *Treas Reg § 1.1017-1(g)(2)(ii)(C)*.

The legislative history underlying the exclusion of income arising from the cancellation of qualified real property business indebtedness provides that, in the case of discharge of indebtedness of a partnership, the determination of whether the debt is qualified real property business indebtedness is made at the partnership level. HR Rep No 111, 103d Cong, 1st Sess 622-625 (1993).

A cancellation of partnership indebtedness that cannot be excluded from a partner's income is a deemed distribution of money under *IRC § 752(b)*. The deemed distribution occurs on the last day of the partnership's taxable year. *Rev Rul 94-4, 1994-1 CB 195 ; Rev Rul 92-97, 1992-2 CB 124 .*

The election to exclude the discharge of qualified real property business indebtedness income is made by the partners, on a partner by partner basis. See, eg, *Ltr Rul 9840026 .*

In *Babin v Commr, 23 F3d 1032 (6th Cir 1994)* , *cert denied 115 S Ct 421* , a case predating the enactment of *IRC § 108*, an insolvent partner received no distribution of income based on a forgiveness of the partnership's indebtedness, and, thus, was not entitled to increase the adjusted basis of his partnership interest.

(n73)Footnote 56. *IRC § 108(d)(7)(A)*. For discharges of indebtedness after Oct 11, 2001, the discharge of indebtedness income cannot be taken into account under *IRC § 1366(a)* in order to increase the basis of an S corporation shareholder's stock. See *§ 15.03[1]*. For purposes of the reduction in the net operating loss for the taxable year of discharge and any net operating loss carryover to that taxable year, any loss or deduction that is disallowed for the taxable year of discharge under *IRC § 1366(d)(1)* (loss in excess of shareholder's basis in stock and debt) is treated as a net operating loss for that taxable year. *IRC § 108(d)(7)(B)*. The preceding sentence does not apply to any excluded income resulting from the discharge of qualified real property business indebtedness.

(n74)Footnote 57. *IRC § 1017(d)(1)*. The computation of the amount of straight-line depreciation taken into account under *IRC § 1250(b)* is made as if there had been no reduction under *IRC § 1017*. *IRC § 1017(d)(2)*.

(n75)Footnote 58. S Rep No 1035, 96th Cong, 2d Sess 10, 16 (1980).

(n76)Footnote 59. *IRC § 108(e)(4)(A)*; *Treas Reg § 1.108-2(a), (f)*. Under *Treas Reg § 1.108-2(g)*, if the debtor realizes income from the discharge of indebtedness resulting from the acquisition by the related party, the debt is treated as a new debt issued by the debtor to the related party on the acquisition date. See, eg, *Rev Rul 2004-79, 2004-2 CB 106 .*

(n77)Footnote 60. *IRC § 108(e)(4)(A), (C), 267(b)(2), (3)*.

(n78)Footnote 61. *Treas Reg § 1.108-2(f)*. The rules do not apply to a direct or indirect acquisition of indebtedness with a stated maturity date on or before the date that is one year after the date of acquisition, provided the debt is retired on or before its maturity date. The rules also do not apply to a securities dealer who acquires the indebtedness in the ordinary course of business and disposes of it within a period consistent with the holding of the indebtedness for sale to customers in the ordinary course of business. *Treas Reg § 1.108-2(e)*.

See also *Rev Rul 91-47, 1991-2 CB 16* , where a person unrelated to the debtor formed a corporation to acquire the debt and shortly thereafter sold the new corporation's stock to the debtor. According to the Service, such a transaction produces a cancellation of indebtedness income for the debtor.

(n79)Footnote 62. *Treas Reg § 1.108-2(b)*. The acquisition of corporate debt by a beneficiary of a decedent creditor's estate or by a beneficiary of a revocable trust that became irrevocable upon the creditor's death in the situation where (1) the beneficiary is related to the corporate debtor, (2) the decedent creditor was also related to the corporate debtor, but (3) the estate or trust is not related to the corporate debtor, is not a direct acquisition within the meaning of

Treas Reg § 1.108-2(b). *Rev Proc 2000-33*, 2000-2 CB 257 .

(n80)Footnote 63. Pub L No 111-5.

(n81)Footnote 64. See *IRC § 108(i)*.

(n82)Footnote 65. For fiscal year taxpayers, the income recognition period begins in the fifth taxable year following the taxable year in which the reacquisition occurs if it occurs in 2009, or the fourth taxable year following the taxable year of reacquisition if the reacquisition occurs in 2010. *IRC § 108(i)(1)(A)* and *(B)*.

(n83)Footnote 66. The election must clearly identify the instrument with respect to which the election is being made, the amount of discharge of indebtedness income being deferred, and such other information as the Secretary may prescribe. *IRC § 108(i)(5)(B)(i)*. The Secretary also has authority to require reporting of information with respect to the election in subsequent taxable years. *IRC § 108(i)(7)(B)*

(n84)Footnote 67. *IRC § 108(i)(5)(B)(ii)*.

(n85)Footnote 68. *IRC § 108(i)(5)(C)*. These exclusions, as discussed above, are for discharge of indebtedness income (A) that occurs in a title 11 case, (B) that occurs while the debtor is insolvent, (C) that is qualified farm indebtedness, or (D) that is qualified real property business indebtedness.

(n86)Footnote 69. See *Treas Reg § 1.1001-3*.

(n87)Footnote 70. *IRC § 108(i)(4)*.

(n88)Footnote 71. *IRC § 108(i)(3)*. The statute basically adopts the definition of debt instrument found in *IRC § 1275(a)(1)*. See *Treas Reg § 1.1275-1(d)* ("[D]ebt instrument means any instrument or contractual arrangement that constitutes indebtedness under general principles of Federal income tax law (including, for example, a certificate of deposit or a loan).")

(n89)Footnote 72. *IRC § 108(i)(2)*. The OID deferral rule can also apply where the debtor reacquires its debt for cash. If the taxpayer issues a debt instrument and uses the proceeds of the issuance "directly or indirectly" to reacquire an outstanding debt, the newly issued debt instrument is treated as if it were issued in satisfaction of the retired debt instrument (debt-for-debt exchange) and any OID on the newly issued debt becomes subject to the OID deferral rule. (If only a portion of the proceeds of the new debt instrument is applied to retire existing indebtedness on which discharge of indebtedness income is realized and deferred, the OID deferral rule will apply to a ratable portion of the new debt instrument's OID (eg, if half of the proceeds are used to acquire the outstanding debt, a deduction for half the new instrument's OID will be deferred under the rule). *IRC § 108(i)(2)(B)*; HR Conf Rep 111-16, 111th Cong, 1st Sess (Feb 12, 2009), at 565.

(n90)Footnote 73. *IRC § 108(i)(5)(D)(i)*. The Treasury has the authority to prescribe, by regulation, rule or other guidance, additional events that will cause the "acceleration of deferred items" (as the termination of deferral is described in the statute) in "similar circumstances" to those described in *IRC § 108(i)(5)(D)*. *IRC § 108(i)(7)*. One area in which Treasury is expected to provide guidance is whether income recognition should be accelerated when the taxpayer sells its business in a tax-free reorganization, and whether in these circumstances the deferred items could be carried over under *IRC § 381*. See 2009 TNT 46-2 (March 12, 2009).

The House Conference Report on *IRC § 108(i)* states that in a Title 11 case, deferred items are accelerated (i.e., deferral is terminated) only where the taxpayer liquidates, sells substantially all its assets, or ceases to do business, but are not accelerated where a taxpayer "reorganizes and emerges from the title 11 case." Where deferral is terminated in a title 11 case, "any deferred items are taken into income as of the day before the petition is filed." HR Conf Rep 111-16 at 565.

(n91)Footnote 74. The election is made at the entity level by the S corporation, partnership or other pass-thru entity. *IRC § 108(5)(A)(iii)*.

(n92)Footnote 75. *2009-36 IRB 309*. In general, an *IRC § 108(i)* election is made by attaching a statement with the information required by *Rev Proc 2009-37* to the taxpayer's (or pass-thru entity's) timely filed (including extensions) federal income tax return for the taxable year in which the reacquisition of the applicable debt instrument occurs. (§ 4.01(1)(a)). *Rev Proc 2009-37* also grants an automatic extension of 12 months in which to file the *IRC § 108(i)* election. (§ 4.01(2)). The election may defer all or only a portion of the discharge of indebtedness income arising from the reacquisition of an applicable debt instrument, and if only a portion is deferred under *IRC § 108(i)*, the taxpayer may elect to exclude the remainder from income under *IRC § 108(a)(1)(A), (B), (C) or (D)*. (§ 4.04(1)). Separate elections are required for each reacquisition of an applicable debt instrument, but a taxpayer may treat two or more applicable debt instruments that are part of the same issue and reacquired during the same taxable year as one applicable debt instrument for purposes of making an election. (§ 4.03) The taxpayer is not required to combine reacquisitions of applicable debt instruments of the same issue within the same taxable year in a single election, however, and may choose instead, for example, to elect deferral of all discharge of indebtedness income with respect to one reacquisition while deferring none or only a portion of the discharge of indebtedness income from another reacquisition, even if the applicable debt instruments are of the same issue and the reacquisitions are made in the same taxable year. (§ 4.04(2)). Finally, the taxpayer may file a protective *IRC § 108(i)* election that will be triggered if the taxpayer's assumption that the reacquisition of an applicable debt instrument did not give rise to discharge of indebtedness income is challenged by the IRS. (§ 4.11).

Rev Proc 2009-37 also requires that taxpayers who make an *IRC § 108(i)* election attach an annual information statement to their returns for every subsequent year until the deferred income is fully reported. (§ 5.01). The information required includes a statement with respect to each applicable debt instrument as to the amount of tax-deferred income and deferred original issue discount (OID) deductions (if any) taken into account in the current year, the amounts remaining to be taken into account in future years, and whether such income and OID have been taken into account as the result of an acceleration event as described in *IRC § 108(i)(5)(D)* has taken place. (§ 5.02).

(n93)Footnote 76. *IRC § 108(i)(6)*. The Secretary has authority to prescribe additional rules for the application of *IRC § 108(i)* to partnerships, S corporations and other pass-thru entities, including rules regarding allocation of deferred OID deductions. *IRC § 108(i)(7)(C)*.

(n94)Footnote 77. *IRC § 108(i)(6)*. In the case of any partner, shareholder or other owner of an interest in a pass-thru entity, in addition to the events which terminate deferral at the entity level as described in *IRC § 108(i)(5)(D)(i)*, *supra*, deferral also terminates with respect to any partner, shareholder or other owner of an interest in a pass-thru entity when the interest is sold, exchanged or redeemed. *IRC § 108(i)(5)(D)(ii)*.

(n95)Footnote 1. *IRC § 6050P(a), (b); Treas Reg § 1.6050P-1(a)(1)*. Generally, the Form 1099-C must be filed with the IRS office designated in the instructions for Form 1099-C on or before February 28 of the year following the calendar year in which the identifiable event occurs. *Treas Reg § 1.6050P-1(a)(4)(i)*. However, indebtedness discharged in bankruptcy must be reported for the later of the calendar year in which the amount of discharged indebtedness first becomes ascertainable, or the calendar year in which the identifiable event occurs. *Treas Reg § 1.6050P-1(a)(4)(ii)*.

Multiple discharges of indebtedness of less than \$600 are not required to be aggregated unless the separate discharges are pursuant to a plan. *Treas Reg § 1.6050P-1(a)(2)*. However, discharged indebtedness must be reported whether or not the debtor is subject to tax on the discharged debt under *IRC § 61 or 108* or otherwise by applicable law. *Treas Reg § 6050P-1(a)(3)*.

The Service will not issue rulings as to whether amounts reduced pursuant to the terms of a debt instrument are reportable under *IRC § 6050P* until the Service resolves the issue through publication of a revenue ruling, revenue procedure, regulations, or otherwise. *Rev Proc 2010-3, 2010-1 CB 110, 120*, (§ 5.16).

(n96)Footnote 2. *Treas Reg § 1.6050P-1(a)(1)*.

(n97)Footnote 3. *IRC § 6050P(a)*; *Treas Reg § 1.6050P-1(a)(1)*.

(n99)Footnote 5. *IRC § 6050P(c)(1)*. The term "executive, judicial, or legislative agency" is defined as a department, agency, court, court administrative office, or instrumentality in the executive, judicial, or legislative branch of Government, including government corporations. *31 USC § 3701(a)(4)*.

(n100)Footnote 6. *IRC § 6050P(c)(2)*. Any return required to be made by a governmental agency (whether as an applicable entity or applicable financial entity) is made by the officer or employee appropriately designated for that purpose. *IRC § 6050P(c)(3)*.

(n101)Footnote 7. *Prop Treas Reg § 1.6050P-2(a)*. Lending money includes acquiring an indebtedness, and gross income from such an acquired indebtedness is treated as gross income from lending money, without regard to whether the indebtedness was originated by either an applicable entity or a related party. *Prop Treas Reg § 1.6050P-2(e)*.

(n102)Footnote 8. *Prop Treas Reg § 1.6050P-2(b)(1)*. Gross income from lending money includes income from interest, fees, penalties, merchant discount, interchange and gains arising from the sale of an indebtedness. *Prop Treas Reg § 1.6050P-2(d)*.

(n103)Footnote 9. *Prop Treas Reg § 1.6050P-2(b)(2)*.

(n104)Footnote 10. *Prop Treas Reg § 1.6050P-2(b)(3)*. If an entity (the transferee entity) is formed or availed of by an applicable entity for the purpose of holding indebtedness acquired or originated by the applicable entity, then the transferee entity has a significant trade or business of lending money. *Prop Treas Reg § 1.6050P-1(e)(2)(v)*.

(n105)Footnote 11. *Prop Treas Reg § 1.6050P-2(c)*.

(n106)Footnote 12. *Treas Reg § 1.6050P-1(b)(1)*. If a discharge of indebtedness occurs before the date on which an identifiable event occurs, the discharge may, at the creditor's discretion, be reported. *Treas Reg § 1.6050P-1(b)(3)*.

(n107)Footnote 13. *Treas Reg § 1.6050P-1(b)(2)(i)*.

(n108)Footnote 14. In the case of an expiration of the statute of limitations for collection of an indebtedness, an identifiable event occurs only if, and at such time as, a debtor's affirmative statute of limitations defense is upheld in a final judgment or decision of a judicial proceeding, and the period for appealing the judgment or decision has expired. *Treas Reg § 1.6050P-1(b)(2)(ii)*.

(n109)Footnote 15. A creditor's defined policy includes both a written policy of the creditor and the creditor's established business practice. *Treas Reg § 1.6050P-1(b)(2)(iii)*.

(n110)Footnote 16. *Treas Reg § 1.6050P-1(b)(2)(iv)*. There is a rebuttable presumption that this type of identifiable event has occurred during the calendar year if a creditor has not received a payment on an indebtedness at any time during a period of 36 months increased by the number of calendar months during all or part of which the creditor was precluded from engaging in collection activity by a stay in bankruptcy or similar bar under state or local law. The presumption may be rebutted by the creditor if the creditor (or a third-party collection agency on behalf of the creditor) has engaged in significant bona fide collection activity (more than merely nominal or ministerial collection action, such as an automated mailing) at any time during the 12-month period ending at the close of the calendar year, or if facts and circumstances existing as of January 31 of the calendar year following expiration of the 36-month period indicate that the indebtedness has not been discharged. Facts and circumstances indicating that an indebtedness has not been discharged include the existence of a lien relating to the indebtedness against the debtor (to the extent of the value

of the security), or the sale or packaging for sale of the indebtedness by the creditor. In *PLR 200802012*, the Internal Revenue Service acknowledged a situation where the reporting rules of *IRC § 6050P* would not apply. In that private ruling, the writing off of amounts owed to the taxpayer was not considered an "identifiable event" that required reporting, because it arose from a settlement required by statute rather than by voluntary agreement.

(n111)Footnote 17. *Treas Reg § 1.6050P-1(d)(1)(i)*. Indebtedness is considered incurred for business purposes if it is incurred in connection with the conduct of any trade or business other than the trade or business of performing services as an employee. Indebtedness is considered incurred for investment purposes if it is incurred to purchase property held for investment, as defined in *IRC § 163(d)(5)*.

(n112)Footnote 18. *Treas Reg § 1.6050P-1(d)(2)*.

(n113)Footnote 19. *Treas Reg § 1.6050P-1(d)(3)*. A lending transaction is any transaction in which a lender loans money to, or makes advances on behalf of, a borrower (including revolving credits and lines of credit).

CHAPTER 18 The Taxpayer as a Dealer in Securities

2-18 Taxation of Securities Transactions § 18.01

§ 18.01 Introduction

A person can engage in securities transactions either as an investor or trader, or as a dealer in securities. The policy considerations affecting the tax consequences of securities transactions are obviously not the same when the taxpayer enters the transaction as a dealer rather than as an investor. For one thing, when held for resale by a dealer, securities become the dealer's inventory or stock in trade, and are thus removed from the status of capital assets. The dealer's expenses can no longer be viewed merely as capital expenditures recoverable through the medium of basis; they constitute a cost of doing business, and, therefore, call for different treatment. The way in which the tax treatment of a dealer differs from that of an investor or trader is the subject of this chapter.

CHAPTER 18 The Taxpayer as a Dealer in Securities

2-18 Taxation of Securities Transactions § 18.02

§ 18.02 "Dealer in Securities" Defined

The Regulations define a dealer in securities as:

"[A] merchant of securities whether an individual, partnership, or corporation, with an established place of business, regularly engaged in the purchase of securities and their resale to customers; that is, one who as a merchant buys securities and sells them to customers with a view to the gains and profits that may be derived therefrom."¹

The definition points up the salient difference between a dealer and a trader in securities--the presence of a merchandising function. The dealer purchases securities as stock in trade, with the expectation of turning a profit, not because of a rise in the market value of the securities, but because the dealer can secure a market of buyers who will purchase the securities at a price greater than cost.^{1.1} The trader performs no merchandising function, but rather buys and sells for investment or speculation, seeking a profit through a change in value during the interval between purchase and sale. Not even that degree of activity sufficient to cloak the buying and selling of securities with the mantle of a trade or business can transform the trader into a dealer.² That can only happen when the trader becomes a merchant in securities.

The merchant analogy has led the Supreme Court and others to decree dealer status for stock exchange specialists, at least with respect to the securities in which they specialize.³ This conclusion rests on the fact that the stocks carried by specialists "are their real stock in trade necessary for making a market and required for sale to customers [other members of the stock exchange] in connection with the performances of that function."⁴ Similarly, a bank maintaining a separate securities department can be a dealer, at least in part, even though other departments of the bank hold securities for investment.⁵

Conversely, the absence of merchant-like activities makes a stock exchange member,⁶ or brokerage firm partner,⁷ trading for her own account a trader and not a dealer. And even a specialist can qualify as an investor, a status that is more easily achieved when the securities involved are not those in which she specializes, but one that may be secured even with respect to the securities in which she does specialize.⁸

No hard and fast test for determining dealer status can be devised; each case must be decided on its own facts.⁹ However, the foregoing cases serve as a guide to the fact situations that have led courts to conclude that a person is or is

not a dealer.

CHAPTER 18 The Taxpayer as a Dealer in Securities

2-18 Taxation of Securities Transactions § 18.03

§ 18.03 Sales of Securities by Dealers

By definition, the sale of any security forming part of a dealer's inventory will produce gain or loss that is ordinary in nature.ⁿ¹ The amount of gain or loss will depend on the method of inventory valuation employed by the dealer--cost, cost or market whichever is lower, or market value.ⁿ²

[1] Sales of Investment Securities.

Suppose a dealer holds certain securities for investment account, and not for resale to customers. Does dealer status taint the capital asset quality which normally attaches to investment securities, or is capital treatment available?

The answer must be couched in conditional terms. Gain realized by a dealer on the sale or exchange of a security will take on ordinary income characteristics unless (1) before the close of the day on which it is acquired (or such earlier date as regulations will prescribe), the security is clearly identified in the dealer's records as a security held for investment, and (2) the security is not, at any time after the close of such day (or such earlier date), held primarily for sale to customers in the ordinary course of the dealer's trade or business.ⁿ¹ If the security is acquired pursuant to the exercise of an option, the security will be deemed held for investment only if, before the close of the day the option is acquired, the option is identified as being held for investment.ⁿ² Any loss sustained by a dealer on the sale or exchange of a security will be a capital loss, if the security was ever identified as an investment security.ⁿ³ Thus, while a change in status from investment security to inventory security will affect the character of realized gain, it will in no way change the character of realized loss.ⁿ⁴

A security is clearly identified as being held for investment "when there is an accounting separation of the security from other securities ..."ⁿ⁵ An accounting separation is achieved "by making appropriate entries in the dealer's books of account to distinguish the security from inventories and to designate it as an investment."ⁿ⁶ In addition, some further identification, such as the certificate number of the particular security, should accompany the appropriate entry.ⁿ⁷

The separation between investment securities and inventory must be reflected not only in the dealer's books and records, but also in his method of disposing of investment securities. Too many contacts between investment account and inventory account may lead to the inference that the taxpayer acquired the "investment securities" with the intent of funneling the securities through his normal avenues of sale, and not for investment.ⁿ⁸

[2] Short Sales.

The general short sale rule considers the gain or loss from a short sale as gain or loss from the sale or exchange of a capital asset, to the extent that the property used to cover the short sale is a capital asset.ⁿ¹ It would seem, therefore, that a dealer could insure the realization of gain on investment securities held for less than one year, and in so doing, convert short-term gain into long-term gain, merely by entering into a short sale of inventory securities and then closing the short sale with the investment securities after they have been held for more than one year. However, if a short sale is made by a dealer in securities at a time when substantially identical securities have been held in the dealer's investment account for less than one year, the special holding period provision of *IRC Section 1233(b)(2)* will apply and make long-term gain unavailable,ⁿ² unless the short sale is closed within 20 days from the date of sale.ⁿ³ Here, as in the case of the ordinary investor, the acquisition of a "put," an option to sell, is deemed a short sale, and the exercise or lapse of the option considered the closing of the short sale.ⁿ⁴

[3] Wash Sales.

Insofar as an individual is concerned, the wash sale rules affect losses incurred in a transaction entered into for profit, as well as losses incurred in the taxpayer's trade or business, unless the taxpayer is a dealer in stock or securities and the loss is sustained in a transaction made in the ordinary course of that business.ⁿ¹ Thus, an individual dealer in securities will not be concerned with *IRC Section 1091*, unless the transaction involves securities held for investment.

A corporate dealer in securities is protected from *IRC Section 1091* application if it is a dealer in stock or securities and the loss is incurred in the ordinary course of its business as a dealer.ⁿ²

[4] Sales of "Puts" and "Calls".

The definition of security contained in *IRC Section 1236(c)* includes the right to purchase a security. Thus, any gain or loss realized by a dealer on the sale or exchange of a "call," or purchase option, would be subject to the same rules as a sale of the underlying security. So, if the option were clearly identified as being held for investment, and the identification were made within the permissible period, any gain realized on the sale of the option would be capital gain.

It should be noted that an option to sell is not included in the *IRC Section 1236(c)* definition. This should not defeat the ability of a dealer to treat the "put" as an investment security and thereby obtain capital treatment. Since the underlying security fits the statutory definition, and, therefore, can be considered a capital asset if held for investment, the option should in all probability be infused with capital characteristics, and any gain or loss realized on its disposition treated as capital gain or loss under *IRC Section 1234(a)*.

FOOTNOTES:

(n1)Footnote 1. *IRC §§ 1221(a)(1), 1222.*

IRC § 1221(a)(6), discussed in § 2.04[1], excludes from capital asset status any commodities derivative financial instrument held by a commodities derivatives dealer, unless it is established to the satisfaction of the Service that the instrument has no connection to the activities of the dealer as a dealer, and the instrument is clearly identified in the dealer's records as having no such connection before the close of the day on which it was acquired, originated, or entered into (or such other time as regulations prescribe).

(n2)Footnote 2. *Treas Reg § 1.471-5.* A dealer may also use the LIFO method. *Rev Rul 60-321, 1960-2 CB 166 .*

Dealers holding Treasury securities and other United States securities in inventory in accordance with the regulations can transfer such securities to a book-entry system maintained by a Federal Reserve Bank without becoming subject to the rules regarding identification of securities, found in *Treas Reg § 1.1012-1(c)(7)*. *Rev Rul 71-15, 1971-1 CB 149 .* The term "other United States securities" is defined as "a transferable bond, note, certificate of indebtedness, bill,

debenture, or similar obligation which is subject to the provisions of 31 CFR Part 306 or other comparable Federal regulations and which is issued by (1) any department or agency of the Government of the United States, or (2) the Federal National Mortgage Association, the Federal Home Loan Bank, the Federal Land Banks, the Federal Intermediate Credit Banks, the Banks of Cooperatives, or the Tennessee Valley Authority."

Since the dealer holds an inventory of securities, the accrual method of accounting must be employed. *Treas Reg* § 1.446-1(c)(2)(i); *Rev Rul* 74-280, 1974-1 CB 121 .

(n3)Footnote 1. *IRC* § 1236(a). For the purposes of the section, a "security" is defined as "any share of stock in any corporation, certificate of stock or interest in any corporation, note, bond, debenture, or evidence of indebtedness, or any evidence of an interest in or right to subscribe to or purchase any of the foregoing. *IRC* § 1236(c).

A registered floor specialist who acquires the stock in which he is registered as part of his duties on a national securities exchange has until the close of the seventh business day following acquisition to identify the stock as being held for investment and to remove the stock from inventory. *IRC* § 1236(d).

See *Rev Rul* 79-80, 1949-1 CB 86 , for instances in which *IRC* § 1236 may apply to securities acquired by a dealer because of order errors and securities differences.

Identification of a security as held for investment under *IRC* § 1236(a) will not serve to identify the security as held for investment, or as not for sale, for purposes of the mark-to-market accounting rules prescribed for dealers in securities by *IRC* § 475. *Rev Rul* 93-76, 1993-2 CB 235 , as modified and clarified by *Rev Rul* 94-7, 1994-1 CB 151 . See § 18.05 for a discussion of the mark-to-market rules.

(n4)Footnote 2. *IRC* § 1236(e).

(n5)Footnote 3. *IRC* § 1236(b).

(n6)Footnote 4. *Treas Reg* § 1.1236-1(b). A transfer from an investment account to a margin account of securities held as collateral by a dealer who did not relinquish control or title did not change the status of the securities. *Rev Rul* 73-403, 1973-2 CB 308 .

(n7)Footnote 5. *Treas Reg* § 1.1236-1(d)(1). The failure to identify stock purchased for investment does not turn the stock into inventory stock. The stock retains its character as investment stock; the failure to identify merely removes the dealer's right to capital treatment with respect to such stock. *Stephens, Inc v US*, 321 F Supp 1159 (ED Ark 1970) . The Eighth Circuit agreed with the district court on this point, but found that the taxpayer was not a dealer. 464 F2d 53 (8th Cir 1972) , cert denied, 409 US 1118 .

The Service will not rule whether specialty stock allocated to an investment account by a registered specialist on a national securities exchange is a capital asset. *Rev Proc* 2007-3, 2007-1 IRB 108 .

(n8)Footnote 6. *Treas Reg* § 1236-1(d)(1). At least one case has held that the use of serial numbers for shares is not necessary, if there is an adequate showing of the number of shares transferred to the investment account and a suitable legend placed on the stock certificates. *Ellis, Holyoke & Co v Commr*, TC Memo 1970-10 .

(n9)Footnote 7. Other means of further identification are set forth in *Rev Rul* 64-160, 1964-1 CB (Part 1) 306 , modifying *Rev Rul* 59-332, 1959-2 CB 190 ; and *Rev Rul* 67-419, 1967-2 CB 265 . *Rev Rul* 64-160 has been modified to allow the criteria set forth therein for identifying stock held for investment to apply to any security, as defined in *IRC* § 1236(c). *Rev Rul* 76-489, 1976-2 CB 250 .

Identification of a particular book-entry security in a dealer's books of account by reference to the lot number that the

dealer has assigned to the lot at the time of purchase of the security is a method of identification that satisfies the requirements of *Treas Reg § 1.1236-1(d)(1)*. *Rev Rul 73-37, 1973-1 CB 374*, amplifying *Rev Rul 71-15, 1971-1 CB 149*, and *Rev Rul 71-21, 1971-1 CB 221*. See also *Rev Rul 73-31, 1973-1 CB 216*.

(n10)Footnote 8. See, eg, *Tellier v Commr, TC Memo 1963-212*, *aff'd on this issue, 342 F2d 690 (2d Cir 1965)*, *aff'd on other grounds 383 US 687 (1966)*.

(n11)Footnote 1. *IRC § 1233(a)*. Short sales are the subject of Ch 10.

(n12)Footnote 2. See § 10.02[2].

(n13)Footnote 3. *IRC § 1233(e)(4)(A)*.

(n14)Footnote 4. *IRC §§ 1233(e)(4)(B), 1233(b)*.

(n15)Footnote 1. Wash sales are discussed in § 2.07[3].

(n16)Footnote 2. *IRC § 1091(a)*.

CHAPTER 18 The Taxpayer as a Dealer in Securities

2-18 Taxation of Securities Transactions § 18.04

§ 18.04 Expenses of Dealers in Securities

Expenditures incurred by a dealer in securities for such items as rent, salaries, and professional services are deductible as ordinary and necessary business expenses under *IRC Section 162*. This holds true not only for those activities which constitute the taxpayer a dealer, but, as well, for any activities of an investment nature which qualify as a trade or business. In addition, expenses incurred in connection with investment activities which are too minimal to be deemed a trade or business may if the dealer is an individual, be deducted under *IRC Section 212*, as an expense incurred in connection with the production of income. Thus, insofar as normal trade or business expenses are concerned, the dealer and trader are treated alike.ⁿ¹ The balance of this section will focus on instances in which a dealer is treated differently from a trader or investor.

[1] Expenses Incurred in Purchasing or Selling Securities

Commissions paid in the acquisition of securities are nondeductible, whether the taxpayer be dealer or investor.ⁿ¹ The situation changes when the commissions are paid in connection with the sale of a security. Such commissions still do not provide a deduction from ordinary income for a taxpayer who is not a securities dealer; they are merely an offset against the selling price, and, thus, reduce the amount of gain realized, or increase the amount of loss realized, on the transaction.ⁿ² The dealer is placed in a preferred position; the commissions can be treated as an ordinary and necessary business expense.ⁿ³ It should be noted that a deduction is available to a dealer only when acting as such. A dealer who steps outside that role, is relegated to the same position as a trader or investor.

An additional selling expense is incurred whenever a state or local governmental unit imposes a stock transfer tax. Prior to 1964, such taxes were deductible as taxes under *IRC Section 164*. Since then, deduction is permitted only to the extent that the transfer tax is either an ordinary and necessary business expense, deduction of which is permitted by *IRC Section 162*, or an investment expense made deductible by *IRC Section 212*.ⁿ⁴

[2] Expenses Relating to Tax-Exempt Income
