DATA CAPTURE SERVICES

Optimize the Delivery of Loan Information

LPS Desktop is one of the mortgage industry's leading providers of document capture software and enterprise input management, both of which are designed to optimize the delivery of mission-critical loan information into an organization. We transform paper documents and electronic files into accurate and valuable data that can be stored and quickly accessed, thereby speeding daily operations, reducing costs and exceeding normal due diligence, compliance and regulatory controls.

Data Capture Services (DCS)

- DCS uses a high-end electronic data-capture software system that gathers information from virtually any paper or electronic source.
- Complemented by a highly trained and seasoned data entry staff, DCS can deliver validated and formatted data to any system with industry leading accuracy.
- Customized enterprise solutions that readily integrate with Electronic Content Management (ECM), Enterprise Resource Planning (ERP) and legacy systems, among others.

When and where can DCS be used?

- Loan boarding
- Service bureau data extraction, normalization and conversion
- Appraisals and broker price opinions
- Insurance and tax documents
- Court notifications
- Recording information

Don't depend on OCR alone to meet your document capture needs

OCR technology requires high-quality images with excellent character contrast and clarity. Segmentation into single characters represents a critical recognition failure point for forms processing organizations. Imperfect text or degraded images may cause even the most sophisticated OCR systems to return significant reductions in accuracy. After OCR data is pulled, additional data and manual data entry may be needed. LPS' highly trained staff can easily and effectively meet the demands of your processes.

LPS Desktop solves expensive OCR shortcomings with Full Service Coverage

The DCS server manages all modules, client workloads and workflow processes, leading to reduced operating costs with a 60-to 90-day implementation.

LENDER PROCESSING SERVICES

DCS software is comprised of a variety of modules

Whatever your data capture needs are – from turnkey solutions and services for Fortune 500 organizations to cost-effective packages standardized for smaller companies – LPS Data Capture Services' technology will speed up operations, deliver the highest accuracy rates and enhance efficiency and competitiveness.

- Perform or extract significant data validation for business needs
- Enable distributed electronic data capture of structured, unstructured and semi-structured documents from any scanner, fax machine, file system or multi-function scan device
- Clean scanned documents using tools that remove speckles, de-skew images, adjust page orientation and more
- Automatically identify each scanned document based on user-defined business rules, regardless of the number of pages each document contains
- Leverage OCR, Intelligent Character Recognition (ICR) and Optical Mark Recognition (OMR) technologies to extract data
- Validate data based upon user-defined business rules
- Enable users to export validated data in a wide range of formats, including:
  – XML, PDF, JPG, TIFF, ASCII and more

- Deliver to Document Management, Enterprise Content Management (ECM) and other imaging systems:
  – Documentum Content Server
  – Microsoft SharePoint
  – IBM Commonstore for SAP
  – File NET
  – IBM Content Manager
- Feed formatted and normalized data to your data/process environment

Most clients will not have any capitalization costs typically associated with "in-sourcing" of OCR technology

Solutions are customized to a client's individual needs. Factors such as the volume of documents captured and classified, the number of unique field extractions required and the condition of the source documents must be established before specific pricing can be provided. This task is accomplished by providing you with "Proof of Concept" and "Discovery for Statement of Work" reports.
